PREFACE

This collection of sources of information about oceanography is compiled for teachers, students, and the many others interested in this complex, interesting, and recently popular subject. It combines two pamphlets printed in July and November 1965 that were used to answer the many inquiries received by the Committee on Oceanography of the National Academy of Sciences.

This book divides "sources" into *places* to which one can write in search of information and *publications* that can be found in libraries or obtained through the mail. Many of the publications listed are available from the places listed. To reduce the bulk of this book, abbreviations of places are used extensively in the section on publications; the reader should check the places section for complete addresses.

Most of the agencies, laboratories, and organizations listed in the first section will provide free material describing their programs and activities. However, please *do not* send form letters asking for "everything you have about oceanography." Some, including this writer, respond only reluctantly, if at all, to such requests. Personal letters, describing the writer's particular field of interest, stating what he plans to do with the information requested, and saying that he has at least checked the references in his local library before resorting to stamp and pen, will get better results.

Comments on the usefulness of the listings in this book and suggestions for additions or deletions will be appreciated.

Thanks are due to the many individuals who verified or corrected the entries for their organizations and to those listed below

who have added to the usefulness of this compilation by helpful suggestions, additions, and criticism.

John Dermody	Bill Pierson	Tex Trendwell
Mary Sears	Bert Walford	Les Scattergood
Dick Rigby	Paul Sund	Faith Turnbull

This book was prepared as a staff activity of the Committee on Oceanography, National Academy of Sciences–National Research Council. The Committee operates under the joint sponsorship of the Office of Naval Research, the Atomic Energy Commission, the Department of the Interior, the National Science Foundation, the Environmental Science Services Administration, and the U.S. Coast Guard.

SECTION I

PLACES

INDUSTRIES

The 1967 edition of this book contained the addresses of more than 180 industries with oceanographic interests. Today, a truly comprehensive list would contain at least twice as many names. In fact, several such tabulations have been prepared,* including the following:

Hydrospace Buyers Guide
Oceanology International Yearbook/Directory
Ocean Master
Offshore Drilling & Construction Contractor's Directory
UST Handbook
World Space Directory

The pages that follow omit many major industries that have a relatively small direct involvement in oceanography and highlight others that are heavily committed in this field. While this compilation is not a "Who's Who" in ocean industry, it does list many of the small, specialized ocean industries and most of the larger industries.

*See Publications Section for addresses, prices, etc.

ORGANIZATIONS

Though there is some minor overlap between this list of organizations and the preceding list of laboratories, the government and private organizations listed in this section are primarily engaged in planning and administration rather than in "doing" oceanography. Educational materials about oceanography are available from many of these organizations, as described in the following section, and most of the organizations publish technical material, journals, or special reports. Some of these are listed in the Section on Scientific and Technical Journals.

Initials in parentheses following each address identify the organizations whose full names and addresses are spelled out elsewhere in this book. Though they are common shorthand designations, these initials are not part of the formal addresses at the organizations.

SECTION II

PUBLICATIONS

EDUCATIONAL MATERIAL

A wide variety of oceanography career materials that can be obtained from government agencies, private organizations, and oceanographic laboratories are described briefly in this section.

When writing to any of the organizations, the most satisfactory response can be expected if it is clear that the writer has a special interest in the material requested and has not sent a "shotgun" request to a "shopping list" of agencies asking for "all the information you have about oceanography." Be specific and show that you have done some homework about the topic of interest before you resort to stamp and pen. A return-addressed, stamped, business-letter-size envelope will usually be appreciated.

Full addresses of the organizations identified by initials are in the previous section.

LABORATORY PROGRAMS

Many oceanographic laboratories supply pamphlets, brochures, etc., describing their programs. Many also have excellent advice on how to prepare for a career in oceanography. Included prominently in this group are the Rosenstiel School of Marine and Atmospheric Sciences (Fla.); the Virginia Institute of Marine Sciences; the Texas Agriculture and Mechanical College, Department of Oceanography; the Department of Oceanography at the University of Washington; the Department of Oceanography at The John Hopkins University (Md.); the Scripps Institution of Oceanography (Calif.); and the Graduate School of Oceanography at the University of Rhode Island.

GENERAL INQUIRIES

Because of their broad responsibilities and interests, some of the government agencies and private organizations listed in the previous section respond to general inquiries. Of special note are the National Council on Marine Resources and Engineering Development, National Oceanographic Data Center, the Ocean Center, American Society for Oceanography, International Oceanographic Foundation, Marine Technology Society, National Oceanography Association, and the Marine Sciences Affairs Staff.
