## PERSONAL DATA PRIVACY AND SECURITY ACT OF 2007

---

MAY 23, 2007.—Ordered to be printed

---

Mr. LEAHY, from the Committee on Judiciary,  
submits the following

### R E P O R T

together with

### ADDITIONAL VIEWS

[To accompany S. 495]

[Including cost estimate of the Congressional Budget Office]

The Committee on the Judiciary, to which was referred the bill (S. 495), to prevent and mitigate identity theft, to ensure privacy, to provide notice of security breaches, and to enhance criminal penalties, law enforcement assistance, and other protections against security breaches, fraudulent access, and misuse of personally identifiable information, reports favorably thereon with amendments, and recommends that the bill, with amendments, do pass.

## I. PURPOSE OF THE PERSONAL DATA PRIVACY AND SECURITY ACT OF 2007

### A. SUMMARY

Advanced technologies, combined with the realities of the post-9/11 digital era, have created strong incentives and opportunities for collecting and selling personal information about ordinary Americans. Today, private sector and governmental entities alike routinely traffic in billions of electronic personal records about Americans. Americans rely on this data to facilitate financial transactions, provide services, prevent fraud, screen employees, investigate crimes, and find loved ones. The government also relies upon this information to enhance national security and to combat crime.

The growing market for personal information has also become a treasure trove that is both valuable and vulnerable to identity thieves. As a result, the consequences of a data security breach can be quite serious. For Americans caught up in the endless cycle of watching their credit unravel, undoing the damage caused by security breaches and identity theft can become a time-consuming and life-long endeavor. In addition, while identity theft is a major privacy concern for most Americans, the use and collection of personal data by government agencies can have an even greater impact on Americans' privacy. The loss or theft of government data can potentially expose ordinary citizens, government employees and members of the armed services alike to national security and personal security threats.

Despite these well-known dangers, the Nation's privacy laws lag far behind the capabilities of technology and the cunning of identity thieves. The Personal Data Privacy and Security Act of 2007 is a comprehensive, bipartisan privacy bill that seeks to close this privacy gap, by establishing meaningful national standards for providing notice of data security breaches, and addressing the underlying problem of lax data security, to make it less likely for data security breaches to occur in the first place.

### B. THE GROWING PROBLEM OF DATA SECURITY BREACHES AND IDENTITY THEFT

According to the Privacy Rights Clearinghouse, more than 150 million records containing sensitive personal information have been involved in data security breaches since 2005.<sup>1</sup> Since the Personal Data Privacy and Security Act was first reported by the Judiciary Committee in November 2005, there have been at least 436 data security breaches in the United States, effecting millions of American consumers.<sup>2</sup> For example, in January 2007, mega retailer TJX disclosed that it suffered the largest data breach in U.S. history—effecting at least 45.7 million credit and debit cards.<sup>3</sup> The TJX data breach follows many other commercial data breaches, collectively effecting millions of Americans, including data security breaches at ChoicePoint and Lexis Nexis.<sup>4</sup>

<sup>1</sup> See Privacy Rights Clearinghouse Chronology of Data Breaches, [www.privacyrights.org](http://www.privacyrights.org). A copy of this chronology appears in the Appendix to this report.

<sup>2</sup> *Id.*

<sup>3</sup> "Breach of data at TJX is called the biggest ever, Stolen numbers put at 45.7 million," Boston Globe, March 29, 2007.

<sup>4</sup> See generally, Appendix.

Federal government agencies have also suffered serious data security breaches. In May 2006, the Department of Veterans Affairs lost an unsecured laptop computer hard drive containing the health records and other sensitive personal information of approximately 26.5 million veterans and their spouses.<sup>5</sup> In April 2007, the United States Department of Agriculture (“USDA”) admitted that it posted personal identifying information on about 63,000 grant recipients on an agency website and acknowledged that as many as 150,000 people whose personal details were entered into a federal government database over the past 26 years could have been exposed by that website.<sup>6</sup> And, in May, 2007, the Transportation Security Administration (“TSA”) reported that the personal and financial records of 100,000 TSA employees were lost after a computer hard drive was reported missing from the agency’s headquarters, exposing the Department of Homeland Security to potential national security risks.<sup>7</sup>

The steady wave of data security breaches in recent years is a window into a broader, more challenging trend. Insecure databases are now low-hanging fruit for hackers looking to steal identities and commit fraud.

The current estimates of the incidence of identity theft in the United States vary, but they are all disturbingly high. According to a recent report on identity theft by the Federal Trade Commission, annual monetary losses due to identity theft are in the billions of dollars.<sup>8</sup> In fact, American consumers collectively spend billions of dollars to recover from the effects of identity theft, according to the FTC.<sup>9</sup> Identity theft also has a significant negative impact on our Nation’s businesses. The FTC recently found that businesses suffer the most direct financial harm due to this illegal conduct, because consumers are often not held personally responsible for fraudulent charges.<sup>10</sup>

Because data security breaches adversely affect many segments of the American community, a meaningful solution to this growing problem must carefully balance the interests and needs of consumers, business and the government.

### C. THE PERSONAL DATA PRIVACY AND SECURITY ACT OF 2007

The Personal Data Privacy and Security Act of 2007 takes several meaningful and important steps to balance the interests and needs of consumers, business and the government in order to better protect Americans sensitive personal data. This legislation is supported by a wide range of consumer, business and government organizations, including, the American Federation of Government Employees, Business Software Alliance, the Center for Democracy & Technology, Consumer Federation of America, Consumers Union, Cyber Security Industry Alliance, Microsoft, the National Associa-

tion of Credit Management, Vontu, TraceSecurity and the United States Secret Service.

### *1. Access and Correction*

First, to provide consumers with tools that enable them to guard against identity theft, S. 495 gives consumers the right to know what sensitive personal information commercial data brokers have about them. In addition, S. 495 extends the protections afforded under the Fair and Accurate Credit Transactions Act (“FACTA”), by allowing consumers to correct their personal information if it is inaccurate. Under circumstances where a business entity makes an adverse decision based on information provided to it by a data broker, S. 495 also requires that the business entity notify the consumer of the adverse decision and provide the consumer with the information needed to contact the data broker and correct the information. The right of consumers to access and correct their own sensitive personal data is a simple matter of fairness. The principles of access and correction incorporated in S. 495 have precedent in the credit reporting industry context and these principles have been adapted to the data broker industry.

### *2. Data Security Program*

Second, the bill recognizes that, in the Information Age, any company that wants to be trusted by the public must earn that trust by vigilantly protecting the information that it uses and collects. The bill takes important steps to accomplish this goal, by requiring that companies that have databases with sensitive personal information on more than 10,000 Americans establish and implement a data privacy and security program. There are exemptions to this requirement for companies already subject to data security requirements under the Gramm-Leach-Bliley Act and the Health Information Portability and Accountability Act.

### *3. Notice*

Third, because American consumers should know when they are at risk of identity theft, or other harms, because of a data security breach, the bill also requires that business entities and federal agencies promptly notify affected individuals and law enforcement when a data security breach occurs. Armed with such knowledge, consumers can take steps to protect themselves, their families, and their personal and financial well-being. The trigger for notice to individuals is “significant risk of harm,” and this trigger includes appropriate checks and balances to prevent over-notification and underreporting of data security breaches.

In this regard, S. 495 recognizes that there are harms other than identity theft that can result from a data security breach, including harm from other financial crimes, stalking and other criminal activity. Consequently the bill adopts a trigger of “significant risk of harm,” rather than a weaker trigger of “significant risk of identity theft,” for the notice to individuals requirement in the legislation.<sup>11</sup>

<sup>11</sup> A notice trigger based upon “significant risk of identity theft” would weaken the notice provisions in S. 495 and such a standard would also fail to adequately protect consumers. First, the weaker “significant risk of identity theft” standard only requires notification of consumers when a business entity or federal agency affirmatively finds that there is a significant risk of the specific crime of identity theft. In addition, as discussed above, there are other harms that could result from data security breaches, such as stalking, physical harm, or threats to national

There are exemptions to the notice requirements for individuals for national security and law enforcement reasons, as well as an exemption to this requirement for credit card companies that have effective fraud-prevention programs.<sup>12</sup>

In addition, to strengthen the tools available to law enforcement to investigate data security breaches and to combat identity theft, S. 495 also requires that business entities and federal agencies notify the Secret Service of a data security breach within 14 days of the occurrence of the breach. This notice will provide law enforcement with a valuable head start in pursuing the perpetrators of cyber intrusions and identity theft. The bill also empowers the Secret Service to obtain additional information about the data breach from business entities and federal agencies to determine whether notice of the breach should be given to consumers and other law enforcement agencies. This mechanism gives businesses and agencies certainty as to their legal obligation to provide notice and prevents them from sending notices when they are unnecessary, which overtime, could result in consumers ignoring such notices.

Since 1984, Congress has provided statutory authority for the Secret Service to investigate a wide range of financial crimes, including offenses under 18 U.S.C. § 1028 (false identification fraud), § 1029 (access device fraud) and § 1030 (computer fraud). In the last two decades, the Secret Service has conducted more than 733,000 financial fraud and identity theft investigations involving these statutes, leading to the prosecution of more than 116,000 individuals.<sup>13</sup> Pursuant to the notice requirements in the bill, the Secret Service's Criminal Intelligence Section would analyze, coordinate and monitor all data breach investigations reported to it by victim companies. When the Criminal Intelligence Section receives notification of a data breach, this section would immediately analyze the information and refer the case to the appropriate field office and/or electronic/financial crimes task force, for investigation and prosecution. Throughout this process, the Criminal Intelligence Section would further stand ready to support the victim company, investigating field office or task force, and prosecuting U.S. Attorney's Office as needed. The Criminal Intelligence Section would also coordinate with the Computer Crime and Intellectual Property Sections ("CCIPS") of the Department of Justice to ensure proper and timely response through the federal judicial system, regardless of where the data breach occurred. In addition, the Criminal Intelligence Section would have the additional responsibility of notifying

---

security, that are not addressed or covered under a notice standard based solely on the risk of identity theft.

<sup>12</sup>In his additional views, Senator Sessions incorrectly states that S. 495 will result in over notification of consumers and in a lack of clarity for business. To the contrary, the bill contains meaningful checks and balances, including the risk assessment and financial fraud provisions in Section 312, to prevent over-notification and the underreporting of data security breaches. The risk assessment provision in Section 312(b), furthermore, provides businesses with an opportunity to fully evaluate data security breaches when they occur, to determine whether notice should be provided to consumers. In addition, the bill compliments and properly builds upon other federal statutes governing data privacy and security to ensure clarity for business in this area. For example, to avoid conflicting obligations regarding the bill's data security program requirements, Section 301(c) specifically exempts financial institutions that are already subject to, and complying with, the data privacy and security requirements under GLB, as well as HIPPA-regulated entities. The bill also builds upon existing federal laws and guidance, such as the data security protections established by the Office of the Comptroller of the Currency for financial institutions and the access and correction provisions in the Fair Credit Reporting Act and the Fair and Accurate Credit Transactions Act, to clarify the obligations of business.

<sup>13</sup>See Secret Service White Paper, "Data Broker Legislation—S. 495," May 2007.

federal law enforcement and state attorneys general as mandated by the legislation.

The bill also recognizes the benefits of separating the notice obligations of owners of personally identifiable information and third parties who use and manage personally identifiable information on the owner's behalf. The bill imposes an obligation on third parties that suffer a data security breach to notify the owners or licensees of the personally identifiable information, who would, in turn, notify consumers. If the owner or licensee of the data gives notice of the breach to the consumer, then the breached third party does not have to give notice. The bill also states that it does not abrogate any agreement between a breached entity and a data owner or licensee to provide the required notice in the event of a breach. Separating the notice obligations between data owners and licensees, and third parties, will encourage data owners and licensees to address the notice obligation in agreements with third parties and will help to ensure that consumers will receive timely notice from the entity with which they have a direct relationship and would recognize upon receiving such notice, in the event of a data security breach. However, this notice can only be effective if the entity which suffers the breach, and any other third parties, provide to the entity who will give the notice complete and timely information about the nature and scope of the breach and the identity of the entity breached.

#### *4. Enforcement*

Fourth, this legislation also establishes tough, but fair, enforcement provisions to punish those who fail to notify consumers of a data security breach, or to maintain a data security program. The bill makes it a crime for any individual, who knows of the obligation to provide notice of a security breach, and yet, intentionally and willfully conceals the breach, and the breach causes economic harm to consumers. Violators of this provision are subject to a criminal fine under Title 18, or imprisonment of up to 5 years, or both. This provision is no more onerous than criminal provisions for other types of fraudulent conduct which causes similar harm to individuals.

The bill also contains strong civil enforcement provisions. The bill authorizes the Federal Trade Commission ("FTC") to bring a civil enforcement action for violations of the data security program requirements in the bill and to recover a civil penalty of not more than \$5,000 per violation, per day and a maximum penalty of \$500,000 per violation.<sup>14</sup> In addition, the bill authorizes State Attorneys General, or the U.S. Attorney General, to bring a civil enforcement action against violators of the notice requirements in the bill and to recover a civil penalty of not more than \$1,000 per individual, per day and a maximum penalty of \$1,000,000 per violation, unless the violation is willful or intentional.

#### *5. Preemption*

The legislation also carefully balances the need for federal uniformity in certain data privacy laws and the important role of States as leaders on privacy issues. Section 304 of the bill (relation

---

<sup>14</sup>Double penalties may be recovered for intentional or willful violations of this provision.

to other laws) preempts state laws with respect to requirements for administrative, technical, and physical safeguards for the protection of sensitive personally identifying information. These requirements, which are referred to in this Section, are the same requirements set forth in Section 302 of the bill.

Section 319 of the bill (effect on federal and state laws) also preempts state laws on breach notification. However, in recognition of the important role that the States have played in developing breach notification, the bill carves out an exception to preemption for state laws regarding providing consumers with information about victim protection assistance that is provided for by the State.

In addition, Section 319 of the bill provides that the notice requirements in S. 495 supersede “any provision of law of any State relating to notification of a security breach, except as provided in Section 314(b) of the bill.” The bill’s subtitle on security breach notification applies to “any agency, or business entity engaged in interstate commerce,” and the term “agency” is defined in the bill by referencing section 551 of title 5, United States Code, which pertains to federal governmental entities. As a result, the security breach notification requirements in the bill have no application to State and local government entities, and the Committee does not intend for this provision to preempt or displace state laws that address obligations of State and local government entities to provide notice of a security breach.

#### 6. *Government Use*

Finally, the bill establishes important new checks on the government’s use of personal data. In April 2007, the Government Accountability Office (“GAO”) released a new report on government data breaches that highlighted the importance of protecting government computer equipment containing personally identifiable information and of federal agencies responding effectively to data security breaches that pose privacy risks.<sup>15</sup> To address these concerns, the bill requires that federal agencies consider whether data brokers can be trusted with government contracts that involve sensitive information about Americans before awarding government contracts. The bill also requires that Federal agencies audit and evaluate the information security practices of government contractors and third parties that support the information technology systems of government agencies. In addition, the bill requires that Federal agencies adopt regulations that specify the personnel allowed to access government data bases containing personally identifiable information and adopt regulations that establish the standards for ensuring, among other things, the legitimate government use of sensitive personal information.

## II. HISTORY OF THE BILL AND COMMITTEE CONSIDERATION

### A. HEARINGS

#### 1. *April 13, 2005*

On April 13, 2005, the Judiciary Committee held a hearing on “Securing Electronic Personal Data: Striking a Balance between Privacy and Commercial and Governmental Use.” This hearing ex-

<sup>15</sup> See GAO Report on “Privacy: Lessons Learned About Data Breach Notification,” April 2007.

amined the practices and weaknesses of the rapidly growing data broker industry and, in particular, how data brokers were handling the most sensitive personal information about Americans. The hearing also explored how Congress could establish a sound legal framework for future data privacy legislation that would ensure that privacy, security, and civil liberties will not be pushed aside in the new Digital Age.

The following witnesses testified at this hearing: Deborah Platt Majoras, Chairman of the Federal Trade Commission; Chris Swecker, Assistant Director for the Criminal Investigative Division at the Federal Bureau of Investigation; Larry D. Johnson, Special Agent in Charge of the Criminal Investigative Division of the U.S. Secret Service; William H. Sorrell, President of the National Association of Attorneys General; Douglas C. Curling, President, Chief Operating Office, and Director of ChoicePoint, Inc.; Kurt P. Sanford, President & CEO of the U.S. Corporate & Federal Markets LexisNexis Group; Jennifer T. Barrett, Chief Privacy Officer of Axiom Corp.; James X. Dempsey, Executive Director of the Center for Democracy & Technology; and Robert Douglas, CEO of PrivacyToday.com.

## *2. March 21, 2007*

On March 21, 2007, the Judiciary Committee's Subcommittee on Terrorism, Technology and Homeland Security held a hearing on "Identity Theft: Innovative Solutions for an Evolving Problem." This hearing examined the problem of identity theft and legislative solutions to this problem, and discussed the need for federal legislation on data breach notification. The following witnesses testified at this hearing: Ronald Tenpas, Associate Deputy Attorney General, United States Department of Justice; Lydia Parnes, Director Bureau of Consumer Protection Federal Trade Commission; James Davis, Chief Information Officer and Vice Chancellor for Information Technology, University of California, Los Angeles; Joanne McNabb, Chief California Office of Privacy Protection; and Chris Jay Hoofnagle, Senior Staff Attorney, Samuelson Law, Technology & Public Policy Clinic, School of Law (Boalt Hall) University of California, Berkeley.

## B. LEGISLATION

Chairman Patrick Leahy and Ranking Member Arlen Specter introduced the Personal Data Privacy and Security Act of 2007 on February 6, 2007. This bipartisan, comprehensive privacy bill is co-sponsored by Senators Schumer, Feingold, Cardin, Sanders and Brown.

This legislation is very similar to the Personal Data Privacy and Security Act of 2005, S. 1789, which then-Chairman Specter and Ranking Member Leahy introduced on September 29, 2005. The Judiciary Committee favorably reported that legislation on November 17, 2005, by a bipartisan vote of 13 to 5.

On April 25, 2007, S. 495 was placed on the Judiciary Committee's agenda. The Committee considered this legislation on May 3, 2007.

During the Committee's consideration of S. 495, six amendments to the bill were offered and five of those amendments were adopted by the Committee:

First, the Committee adopted, without objection, a bipartisan manager's amendment to S. 495 which Chairman Leahy offered on behalf of himself and Senator Specter. The manager's amendment adds several additional privacy enhancements to the bill, including: (1) a definition of encryption and provision to encourage business entities to utilize encryption technology to protect personal data by establishing a presumption that no significant risk of harm exists when sensitive personal data is encrypted with appropriate safeguards; (2) a provision to expressly exempt debit cards and other financial account records from the financial fraud prevention exemption in the bill, to address the TJX data security breach situation where millions of debit card numbers were stolen and consumers had no right to force their financial institutions to immediately restore any funds stolen from the checking and savings accounts linked to these debit cards; (3) a provision to clarify that notice of the occurrence of a security breach must be given to the Secret Service within 14 days of the breach and that the Secret Service has 10 business days to review any certification seeking an exemption from the notice to individuals requirements under the bill to enhance the ability of law enforcement to investigate data security breaches; and (4) a provision requiring that the GAO provide a follow-up report to its April 2006 report to Congress on the federal agency use of data brokers.

The Committee also adopted, without objection, an amendment offered by Senator Feinstein to (1) narrow the exemption for public records under the bill to ensure that notice to individuals is provided for data security breaches involving harvested data; (2) broaden the notice provisions under the bill to cover hard copy or paper data; and (3) to require that the Secret Service must review any certification by a business entity (and may review any certification by an agency) to use the national security exemption to the notice requirements under the bill and to give the Secret Service more authority to obtain additional information before approving this exemption; (4) changing the threshold for providing advance notice to consumer credit reporting agencies following a data security breach to breaches affecting more than 5,000 individuals; and (5) clarifying that the bill's notice provisions only preempt state laws that apply to entities that are actually covered by the bill.

The Committee also adopted, without objection, two amendments offered by Senator Schumer. The first amendment creates an Office of Federal Identity Theft Protection within the FTC, to provide direct assistance to victims of identity theft. The Office of Federal Identity Theft Protection will, among other things, help consumers to restore their credit and access remedies under State and Federal laws and provide consumers with a uniform certification to establish that they have been victims of identity theft and are eligible for assistance. The second amendment requires that data brokers must be able to track who has access to records containing sensitive personal information and to verify that their customers who seek to access sensitive personal information are accessing this information for a legal purpose.

In addition, the Committee adopted, without objection, an amendment offered by Senator Cardin to require that companies that use information provided by a data broker, and then take an adverse action based upon that information, notify the consumer

adversely affected by the information and provide the consumer with an opportunity to access and correct the information. This amendment is based upon similar requirements in the Fair Credit Reporting Act.

The Committee rejected by voice vote an amendment offered by Senator Coburn which would change the trigger for notification in S. 495 from “significant risk of harm” to “significant risk of identity theft.”

Lastly, the Committee adopted, by voice vote, an amendment offered by Senator Whitehouse to exempt bankruptcy debtors from Section 707(b)(2) means testing under the Bankruptcy Abuse Prevention and Consumer Protection Act, if the debtor’s financial problems were caused by identity theft. The narrowly-tailored amendment requires that, to be eligible for this exemption, the identity theft must result in at least \$20,000 in debt in one year, 50 percent of the debtor’s bankruptcy claims, or 25 percent of the debtor’s gross income for a 12-month period.

The Committee favorably reported S. 495, as amended, by voice vote.

### III. SECTION-BY-SECTION SUMMARY OF THE BILL

#### TITLE I—ENHANCING PUNISHMENT FOR IDENTITY THEFT AND OTHER VIOLATIONS OF DATA PRIVACY AND SECURITY

##### *Section 101—Organized criminal activity in connection with unauthorized access to personally identifiable information*

Section 101 amends 18 U.S.C. § 1961(1) to add intentionally accessing a computer without authorization to the definition of racketeering activity.

##### *Section 102—Concealment of security breaches involving personally identifiable information*

Section 102 makes it a crime for a person who knows of a security breach requiring notice to individuals under Title III of this Act, and of the obligation to provide such notice, to intentionally and willfully conceal the fact of, or information related to, that security breach. Punishment is either a fine under Title 18, or imprisonment of up to 5 years, or both.

##### *Section 103—Review and amendment of federal sentencing guidelines related to fraudulent access to or misuse of digitized or electronic personally identifiable information*

Section 103 requires the U.S. Sentencing Commission to review and, if appropriate, amend the federal sentencing guidelines for persons convicted of using fraud to access, or to misuse, digitized or electronic personally identifiable information, including sentencing guidelines for the offense of identity theft or any offense under 18 U.S.C. §§ 1028, 1028A, 1030, 1030A, 2511 and 2701.

##### *Section 104—Effects of identity theft on bankruptcy proceedings*

Section 104 amends 11 U.S.C. §§ 101 and 707(b) to exempt debtors from Section 707(b)(2) means testing under the Bankruptcy Abuse Prevention and Consumer Protection Act, if the debtor’s financial problems were caused by identity theft. This Section requires that, to be eligible for this exemption, the identity theft

must result in at least \$20,000 in debt in one year, 50 percent of the debtor's bankruptcy claims, or 25 percent of the debtor's gross income for a 12-month period. The purpose of this provision is to ensure that victims who incur debts due to identity theft have all available protections under the bankruptcy code.

#### TITLE II—DATA BROKERS

Title II addresses the data brokering industry that has come of age, prompted by technology developments and changes in marketplace incentives. Data brokers collect and sell billions of private and public records about individuals, including personal, financial, insurance, medical and “lifestyle” data, as well as other sensitive information, such as details on neighbors and relatives, or even digital photographs of individuals. Companies like ChoicePoint, LexisNexis and Acxiom, which are generally regarded as leaders in this industry, use this information to provide a variety of products and services, including fraud prevention, identity verification, background screening, risk assessments, individual digital dossiers and tools for analyzing data.

Although some of the products and services offered by data brokers are subject to existing privacy and security protections aimed at credit reporting agencies and the financial industry under the Fair Credit Reporting Act (“FCRA”) and Gramm-Leach-Bliley (“GLB”), many are not subject to such protections. In addition, there has been insufficient oversight of the industry's practices, including the accuracy and handling of sensitive data. These concerns have been highlighted by numerous reports of harm caused by inaccurate data records. This Title draws from the principles in FCRA and GLB to close these loopholes.

##### *Section 201—Transparency and accuracy of data collection*

Section 201 applies disclosure and accuracy requirements to data brokers that engage in interstate commerce and offer any product or service to third parties that allows access to, or use, compilation, distribution, processing, analyzing or evaluating of personally identifiable information. Section 201 requirements are not applicable to products and services already subject to similar disclosure and accuracy provisions under FCRA and GLB, and implementing regulations.

Section 201 requires data brokers to disclose to individuals, upon their request and for a reasonable fee, all personal electronic records pertaining to that individual that the data broker maintains for disclosure to third parties. Section 201 also requires data brokers to establish a fair process for individuals to dispute, flag or correct inaccuracies in any information that was not obtained from a licensor or public record. Modeled after Section 611 of FCRA, Section 201 requires data brokers to: (1) investigate disputed information within 30 days; (2) notify any data furnishers who provided disputed information and identify such data furnishers to the individual disputing the information; (3) provide notice to individuals on dispute resolution procedures and the status of dispute investigations, including whether the dispute was determined to be frivolous or irrelevant, whether the disputed information was confirmed to be accurate, or whether the disputed information was deleted as inaccurate; and (4) allow individuals to in-

clude a statement of dispute in the electronic records containing the disputed personal information. If the information was obtained from a licensor or public record, the data broker must provide the individual with contact information for the source of the data.

Section 201 also provides that, under circumstances where a person or business takes an adverse action regarding a consumer, which is based in whole or in part on data maintained by a data broker, the person or business must notify the consumer in writing of the adverse action and provide contact information for the data broker that furnished the information, a copy of the information at no cost and the procedures for correcting such information.

*Section 202—Enforcement*

A data broker that violates the access and correction provisions of Section 201 is subject to penalties of \$1,000 per violation per day with a maximum penalty of \$250,000 per violation. A data broker that intentionally or willfully violates these provisions is subject to additional penalties of \$1,000 per violation per day, with a maximum of an additional penalty of \$250,000 per violation.

The Federal Trade Commission (“FTC”) will enforce Section 202 and may bring an enforcement action to recover penalties under this provision. States have the right to bring civil actions under this Section on behalf of their residents in U.S. district courts, and this section requires that States provide advance notice of such court proceedings to the FTC, where practicable. The FTC also has the right to stay any state action brought under this Section and to intervene in a state action.

*Section 203—Relation to State laws*

Section 203 preempts State laws with respect to the access and correction of personal electronic records held by data brokers.

*Section 204—Effective date*

Section 204 provides that Title II will take effect 180 days after the date of the enactment of the Personal Data Privacy and Security Act.

TITLE III—PRIVACY AND SECURITY OF PERSONALLY IDENTIFIABLE INFORMATION

SUBTITLE A—A DATA PRIVACY AND SECURITY PROGRAM

*Section 301—Purpose and applicability of data privacy and security program*

Section 301 addresses the data privacy and security requirements of Section 302 for business entities that compile, access, use, process, license, distribute, analyze or evaluate personally identifiable information in electronic or digital form on 10,000 or more U.S. persons. Section 301 exempts from the data privacy and security requirements of Section 302 businesses already subject to, and complying with, similar data privacy and security requirements under GLB and implementing regulations, as well as examination for compliance by Federal functional regulators as defined in GLB, and HIPPA regulated entities.

*Section 302—Requirements for a data privacy and security program*

Section 302 requires covered business entities to create a data privacy and security program to protect and secure sensitive data. The requirements for the data security program are modeled after those established by the Office of the Comptroller of the Currency for financial institutions in its Interagency Guidelines Establishing Standards for Safeguarding Customer Information, 12 C.F.R. § 30.6 Appendix B (2005).

A data privacy and security program must be designed to ensure security and confidentiality of personal records, protect against anticipated threats and hazards to the security and integrity of personal electronic records, protect against unauthorized access and use of personal records, and ensure proper back-up storage and disposal of personally identifiable information. In addition, Section 302 requires a covered business entity to: (1) regularly assess, manage and control risks to improve its data privacy and security program; (2) provide employee training to implement its data privacy and security program; (3) conduct tests to identify system vulnerabilities; (4) ensure that overseas service providers retained to handle personally identifiable information, but which are not covered by the provisions of this Act, take reasonable steps to secure that data; and (5) periodically assess its data privacy and security program to ensure that the program addresses current threats. Section 302 also requires that the data security program include measures that allow the data broker (1) to track who has access to sensitive personally identifiable information maintained by the data broker and (2) to ensure that third parties or customers who are authorized to access this information have a valid legal reason for accessing or acquiring the information.

*Section 303—Enforcement*

Section 303 gives the FTC the right to bring an enforcement action for violations of Sections 301 and 302 in Subtitle A. Business entities that violate sections 301 and 302 are subject to a civil penalty of not more than \$5,000 per violation, per day and a maximum penalty of \$500,000 per violation. Intentional and willful violations of these sections are subject to an additional civil penalty of \$5,000 per violation, per day and an additional maximum penalty of \$500,000 per violation. This section also grants States the right to bring civil actions on behalf of their residents in U.S. district courts, and requires States to give advance notice of such court proceedings to the FTC, where practicable. There is no private right of action under this subtitle.

*Section 304—Relation to other laws*

Section 304 preempts state laws relating to administrative, technical, and physical safeguards for the protection of sensitive personally identifying information. The requirements referred to in this Section are the same requirements set forth in Section 302.

## SUBTITLE B—SECURITY BREACH NOTIFICATION

*Section 311—Notice to individuals*

Section 311 requires that a business entity or federal agency give notice to an individual whose sensitive personally identifiable infor-

mation has been, or is reasonably believed to have been, compromised, following the discovery of a data security breach. The notice required under Section 311 must be made without unreasonable delay. Section 311(b) requires that a business entity or federal agency that does not own or license the information compromised as a result of a data security breach notify the owner or licensee of the data. The owner or licensee of the data would then provide the notice to individuals as required under this Section. However, agreements between owners, licensees and third parties regarding the obligation to provide notice under Section 311 are preserved.

#### *Section 312—Exemptions*

Section 312 allows a business entity or federal agency to delay notification by providing a written certification to the U.S. Secret Service that providing such notice would impede a criminal investigation, or damage national security. This provision further requires that the Secret Service must review all certifications from business entities (and may review certifications from agencies) seeking an exemption from the notice requirements based upon national security or law enforcement, to determine if the exemption sought has merit. The Secret Service has 10 business days to conduct this review, which can be extended by the Secret Service if additional information is needed. Upon completion of the review, the Secret Service must provide written notice of its determination to the agency or business entity that provided the certification. If the Secret Service determines that the exemption is without merit, the exemption will not apply. Section 312 also prohibits federal agencies from providing a written certification to delay notice, to conceal violations of law, prevent embarrassment or restrain competition.

Section 312(b) exempts a business entity or agency that conducts a risk assessment after a data breach occurs, and finds no significant risk of harm to the individuals whose sensitive personally identifiable information has been compromised, from the notice requirements of Section 311, provided that: (1) the business entity or federal agency notifies the Secret Service of the results of the risk assessment within 45 days of the security breach and (2) the Secret Service does not determine within 10 business days of receipt the notification that a significant risk of harm does in fact exist and that notice of the breach should be given. Under Section 312(b) a rebuttable presumption exists that the use of encryption technology, or other technologies that render the sensitive personally identifiable information indecipherable, and thus, that there is no significant risk of harm.

Section 312(c) also provides a financial fraud prevention exemption from the notice requirement, if a business entity has a program to block the fraudulent use of information—such as credit card numbers—to avoid fraudulent transactions. Debit cards and other financial instruments are not covered by this exemption.

#### *Section 313—Methods of notice*

Section 313 provides that notice to individuals may be given in writing to the individual's last known address, by telephone or via email notice, if the individual has consented to email notice. Media notice is also required if the number of residents in a particular

state whose information was, or is reasonably believed to have been compromised exceeds 5,000 individuals.

*Section 314—Content of notification*

Section 314 requires that the notice detail the nature of the personally identifiable information that has been compromised by the data security breach, a toll free number to contact the business entity or federal agency that suffered the breach, and the toll free numbers and addresses of major credit reporting agencies. Section 314 also preserves the right of States to require that additional information about victim protection assistance be included in the notice.

*Section 315—Coordination of notification with credit reporting agencies*

Section 315 requires that, for situations where notice of a data security breach is required for 5,000 or more individuals, a business entity or federal agency must also provide advance notice of the breach to consumer reporting agencies.

*Section 316—Notice to law enforcement*

Section 316 requires that business entities and federal agencies notify the Secret Service of the fact that a security breach occurred within 14 days of the breach, if the data security breach involves: (1) more than 10,000 individuals; (2) a database that contains information about more than 1 million individuals; (3) a federal government database; or (4) individuals known to be government employees or contractors involved in national security or law enforcement. The Secret Service is responsible for notifying other federal law enforcement agencies, including the FBI, and the relevant State Attorneys General within 14 days of receiving notice of a data security breach.

*Section 317—Enforcement*

Section 317 allows the Attorney General to bring a civil action to recover penalties for violations of the notification requirements in Subtitle B. Violators are subject to a civil penalty of up to \$1,000 per day, per individual and a maximum penalty of \$1 million per violation, unless the violation is willful or intentional.

*Section 318—Enforcement by State Attorneys General*

Section 318 allows State Attorneys General to bring a civil action in U.S. district court to enforce Subtitle B. The Attorney General may stay, or intervene in, any state action brought under this subtitle.

*Section 319—Effect on Federal and State law*

Section 319 preempts state laws on breach notification, with the exception of state laws regarding providing consumers with information about victim protection assistance that is available to consumers in a particular State. Because the breach notification requirements in the bill do not apply to state and local government entities, this provision does not preempt state or local laws regarding the obligations of state and local government entities to provide notice of a data security breach.

*Section 320—Authorization of appropriations*

Section 320 authorizes funds for the Secret Service as may be necessary to carry out investigations and risk assessments of security breaches under the requirements of Subtitle B.

*Section 321—Reporting on risk assessment exemptions*

Section 321 requires that the Secret Service report to Congress on the number and nature of data security breach notices invoking the risk assessment exemption and the number and nature of data security breaches subject to the national security and law enforcement exemptions.

*Section 322—Effective date*

Subtitle B takes effect 90 days after the date of enactment of the Personal Data Privacy and Security Act.

## SUBTITLE C—OFFICE OF FEDERAL IDENTITY PROTECTION

*Section 331—Office of Federal Identity Protection*

Section 331 establishes an Office of Federal Identity Protection within the FTC, to assist consumers with identity theft issues and concerns, including helping consumers correct their personal information and retrieve stolen information. The Office of Federal Identity Protection's activities will also include, providing a website dedicated to assisting consumers with identity theft matters, providing a toll free number to assist consumers, providing guidance and information on obtaining pro bono legal services for victims of identity theft, and issuing certifications to victims of identity theft that can be used to, among other things, establish eligibility for fraud alert and reporting protections under the Fair Credit Reporting Act.

## TITLE IV—GOVERNMENT ACCESS TO AND USE OF COMMERCIAL DATA

*Section 401—General Services Administration review of government contracts*

Section 401 requires the General Services Administration (GSA), when issuing contracts for more than \$500,000, to review and consider government contractors' programs for securing the privacy and security of personally identifiable information, contractors' compliance with such programs, and any data security breaches of contractors' systems and the responses to those breaches.

In addition, GSA is required to include penalties in contracts involving personally identifiable information for (1) failure to comply with Subtitle A (Data Privacy and Security Programs) and Subtitle B (Security Breach Notification) of Title III of this Act and (2) knowingly providing inaccurate information. Section 401 also requires that GSA include a contract requirement that government contractors exercise due diligence in selecting service providers that handle personally identifiable information and that government contractors take reasonable steps to select service providers that maintain appropriate data privacy and security safeguards.

*Section 402—Requirement to audit information security practices of contractors and third party business entities*

Section 402 amends 44 U.S.C. §3544 to require that federal agencies audit and evaluate the information security practices of government contractors and third parties that support the information technology systems of government agencies.

*Section 403—Privacy impact assessment of Government use of commercial information services containing personally identifiable information*

Section 403(a) updates the E-Government Act of 2002 to require federal departments and agencies that purchase or subscribe to personally identifiable information from a commercial entity, to conduct privacy impact assessments on the use of those services. In addition, Section 403(b) requires federal departments and agencies that use such services to publish a description of the database, the name of the provider and the contract amount.

Section 403 also requires that federal departments and agencies adopt regulations that specify the personnel allowed to access government databases containing personally identifiable information and the standards for ensuring, among other things, the legitimate government use of such information, the retention and disclosure of such information, and the accuracy, relevance, completeness and timeliness of such information. Section 403 further provides that federal departments and agencies must include in contracts for more than \$500,000 and agreements with commercial data services, penalty provisions for circumstances where a data broker delivers personally identifiable information that it knows to be inaccurate, or has been informed is inaccurate and is in fact inaccurate. Section 403(c) also requires that data brokers that engage service providers, who are not subject to the data security program requirements of the bill, exercise due diligence in retaining these service providers to ensure that adequate safeguards for personally identifiable information are in place.

Section 403(d) directs the Government Accountability Office to conduct a follow-up study and report to Congress on federal agency use of commercial databases, including the impact of such use on privacy and security, sufficiency of privacy and security protections, and the extent to which commercial data providers are penalized for privacy and security failures.

*Section 404—Implementation of Chief Privacy Officer requirements*

Section 522 of the Transportation, Treasury, Independent Agencies, and General Government Appropriations Act, 2005 requires each agency to create a Chief Privacy Officer. Section 404 facilitates the efficient and effective implementation of this requirement by directing the Department of Justice to implement this provision by designating a Department-wide Chief Privacy Officer, whose primary role is to fulfill the duties and responsibilities of Chief Privacy Officer. In addition, the DOJ Chief Privacy Officer will report directly to the Deputy Attorney General.

Section 404 also stipulates responsibilities for the DOJ Chief Privacy Officer that are tailored to the mission of the Department and the requirements of this Act. Specifically, this Section directs the Chief Privacy Officer to: (1) oversee DOJ's implementation of the

privacy impact assessment requirement under Section 402; (2) promote the use of law enforcement technologies that sustain, rather than erode, privacy protections and ensure technologies relating to the use, collection and disclosure of personally identifiable information preserve privacy and security; and (3) coordinate implementation with the Privacy and Civil Liberties Oversight Board, established in the Intelligence Reform and Terrorism Prevention Act of 2004.

#### IV. CONGRESSIONAL BUDGET OFFICE COST ESTIMATE

MAY 17, 2007.

Hon. PATRICK J. LEAHY,  
*Chairman, Committee on the Judiciary,*  
*U.S. Senate, Washington, DC.*

DEAR MR. CHAIRMAN: The Congressional Budget Office has prepared the enclosed cost estimate for S. 495, the Personal Data Privacy and Security Act of 2007.

If you wish further details on this estimate, we will be pleased to provide them. The CBO staff contact is Susan Willie.

Sincerely,

PETER R. ORSZAG.

Enclosure.

#### *S. 495—Personal Data Privacy and Security Act of 2007*

Summary: S. 495 would establish new federal crimes relating to the unauthorized access of sensitive personal information. The bill also would require most government agencies or business entities that collect, transmit, store, or use personal information to notify any individuals whose information has been unlawfully accessed. In addition, S. 495 would require data brokers to allow individuals access to their electronic records and publish procedures for individuals to respond to inaccuracies. Finally, the bill would establish the Office of Federal Identity Protection (OFIP) within the Federal Trade Commission (FTC) to assist victims of identity theft to restore the accuracy of their personal information.

Assuming appropriation of the necessary amounts, CBO estimates that implementing the provisions of S. 495 would cost \$30 million in 2008 and \$335 million over the 2008–2012 period. Enacting S. 495 could increase civil and criminal penalties and thus could affect federal revenues and direct spending, but CBO estimates that such effects would not be significant in any year. Further, enacting S. 495 could affect direct spending by agencies not funded through annual appropriations. CBO estimates, however, that any changes in net spending by those agencies would be negligible.

S. 495 contains intergovernmental mandates as defined in the Unfunded Mandates Reform Act (UMRA), but CBO estimates that the cost of complying with the requirements would be small and would not exceed the threshold established in UMRA (\$66 million in 2007, adjusted annually for inflation).

S. 495 would impose several private-sector mandates as defined in UMRA. The bill would impose data security standards and procedures, and notification requirements on certain private-sector entities. In addition, it would require data brokers to provide individ-

uals with their personally identifiable information if requested, and to change the information if it is incorrect. Finally, the bill would require any entity taking an adverse action against an individual based on information maintained by a data broker to notify the individual of that action. Because of uncertainty about the number of entities that are already in compliance with the data security and notification mandates, CBO cannot estimate the incremental cost of complying with those mandates. Further, the number of requests for information and the incidence of adverse actions that would occur under the bill are uncertain. Consequently, CBO cannot determine whether the aggregate direct cost of mandates in the bill would exceed the annual threshold established by UMRA for private-sector mandates (\$131 million in 2007, adjusted annually for inflation).

Estimated cost to the Federal Government: The estimated budgetary impact of S. 495 is shown in the following table. The costs of this legislation fall within budget functions 370 (commerce and housing credit), 750 (administration of justice), and 800 (general government).

	By fiscal year, in millions of dollars—				
	2008	2009	2010	2011	2012
CHANGES IN SPENDING SUBJECT TO APPROPRIATION					
FTC Office of Federal Identity Protection:					
Estimated Authorization Level .....	33	66	69	73	76
Estimated Outlays .....	30	63	69	72	76
Other Provisions:					
Estimated Authorization Level .....	3	5	7	7	7
Estimated Outlays .....	1	3	7	7	7
Total Changes:					
Estimated Authorization Level .....	36	71	76	80	83
Estimated Outlays .....	31	66	76	79	83

Basis of Estimate: For this estimate, CBO assumes that the bill will be enacted during fiscal year 2007, that the necessary amounts will be provided each year, and that spending will follow historical patterns for similar programs.

*Spending subject to appropriation*

S. 495 would require most government agencies or business entities that collect, transmit, store, or use personal information to notify any individuals whose information has been unlawfully accessed. The bill also would establish the Office of Federal Identity Protection within the FTC to help victims of identity theft correct their personal records. CBO estimates that implementing the provisions of S. 495 would cost \$335 million over the 2008–2012 period, assuming appropriation of the necessary amounts.

**Security Breach Notification.** In the event of a security breach of government information likely to involve personal information, S. 495 would require government agencies to notify an individual whose information may have been compromised. The legislation defines personal information as a combination of a person’s name or financial information with any additional unique identifier. Notification would be in the form of individual notice (written notice to a home mailing address or via e-mail) as well as through the mass media and credit-reporting agencies if the security breach affects more than 5,000 individuals. The legislation also would re-

quire the agency to provide affected individuals with a description of the accessed information, a toll-free number to contact the agency, the names and toll-free telephone numbers of the major credit-reporting agencies, and information regarding state victim assistance protections.

The Federal Information Security Management Act of 2002 sets requirements for securing the federal government's information systems, including the protection of personal privacy. The National Institute of Standards and Technology develops information security standards and guidelines for other federal agencies, and the Office of Management and Budget (OMB) oversees information technology security policies and practices. OMB estimates that federal agencies spend around \$5.5 billion a year to secure the government's information systems.

S. 495 would codify the current practices of the federal government regarding data security and security breach notification procedures. While existing laws generally do not require agencies to notify affected individuals of data breaches, agencies that have experienced security breaches have generally provided such notification. Therefore, CBO expects that codifying this practice would probably not lead to a significant increase in spending. Nonetheless, the federal government is also one of the largest providers, collectors, consumers, and disseminators of personnel information in the United States. Although, CBO cannot anticipate the number of security breaches, a significant breach of security involving a major collector of personnel information, such as the Internal Revenue Service or the Social Security Administration, could involve millions of individuals and there would be significant costs to notify individuals of such a security breach.

S. 495 also would require a business entity or agency—under certain circumstances—to notify the Secret Service that a security breach has occurred. The bill also would permit entities or agencies to apply to the Secret Service for exemption from the bill's notice requirements if the personal data was encrypted or similarly protected or if notification would threaten national security. Based on information from the Secret Service, CBO estimates that any additional investigative or administrative costs to that agency would likely be less than \$500,000 annually, subject to the availability of appropriated funds.

**Federal Trade Commission.** The bill would establish the Office of Federal Identity Protection (OFIP) within the FTC. The OFIP would be responsible for providing individuals with information and assistance when their personal information has been stolen or compromised. Individuals would be able to request assistance that would include accessing remedies available under federal law, restoring the accuracy of personal information, and retrieving stolen information. FTC would be required to develop regulations to enable the OFIP to help restore stolen or otherwise compromised information.

Under current law, the FTC provides general assistance to individuals who call a toll-free number with questions about identity theft or who believe they are the victim of identity theft. Counselors are trained to provide information regarding steps consumers must take to restore the accuracy of their personal information; FTC has entered into a contract with an independent call cen-

ter to provide assistance and be reimbursed based on the time of each call. This toll-free system received approximately 200,000 complaints in 2006, as well as about 90,000 calls for general information.

By requiring the FTC to develop customer-service teams to provide a higher level of assistance than is offered under current law, CBO expects that the amount of time counselors spend with each individual would increase significantly. Under the bill, counselors, rather than the individual, would be expected to take the necessary steps to restore the accuracy of an individual's personal information and any records containing that information that were stolen or compromised. To accomplish this, counselors would spend more time on the phone with individuals collecting relevant information and make additional calls to creditors and credit-reporting agencies to alert them to the compromised information in their records. Currently, counselors spend an average of eight minutes per call answering questions and suggesting follow-up actions the individual must take to correct his or her personal information. The FTC has estimated that S. 495 would increase the amount of time counselors spend on the phone from eight minutes to more than two hours (including calls to an individual and calls to creditors and credit-reporting agencies). CBO expects that call volume also would increase as individuals become aware of the additional assistance available. Assuming appropriation of the necessary amounts, CBO estimates that the additional time counselors spend on the phone with individuals, creditors, and credit-reporting agencies would cost about \$30 million in 2008 and \$310 million over the 2008–2012 period.

Other provisions of the bill would require the FTC to develop and enforce provisions that would require data brokers to allow individuals to access their personal information and provisions that would require companies to assess the vulnerability of their data systems. FTC would be authorized to collect civil penalties for violations of those new regulations. CBO estimates that implementing those provisions would have no significant effect on spending.

**Other Provisions.** S. 495 also would require several reports to the Congress by federal agencies concerning data security issues. The legislation would require agencies to conduct additional privacy impact assessments on commercially purchased private-sector data that contains personally identifiable information. Under the bill, the Government Accountability Office would report to the Congress on federal agencies' use of private-sector information. In addition, the General Services Administration (GSA) would provide additional security assessments for certain government contracts involving personally identifiable information. This would largely involve payroll processing, emergency response and recall, and medical data. Based on information from OMB and GSA, CBO estimates that the additional staff to fulfill those tasks and reporting requirements under the legislation would cost \$7 million annually when fully implemented. For this estimate, we assume that the implementation process would take about three years.

#### *Direct spending and revenues*

S. 495 would establish new federal crimes relating to the unauthorized access of sensitive personal information. Enacting the bill

could increase collections of civil and criminal fines for violations of the bill's provisions. CBO estimates that any additional collections would not be significant because of the relatively small number of additional cases likely to be affected. Civil fines are recorded as revenues. Criminal fines are recorded as revenues, deposited in the Crime Victims Fund, and subsequently spent without further appropriation.

Estimated impact on state, local, and tribal governments: S. 495 contains intergovernmental mandates as defined in UMRA. Specifically, S. 495 would:

- Preempt state laws in 35 states regarding the treatment of personal information;
- Place certain procedural requirements and limitations on state attorneys general and state insurance authorities; and
- Preempt state or local law by requiring state and local jurisdictions to accept a certification by the Office of Federal Identity Protection to grant individuals access to business records used in fraudulent transactions.

The preemptions would impose no costs on states. CBO estimates that the costs to attorneys general of complying with the procedural requirements would be small and would not exceed the threshold established in UMRA (\$66 million in 2007, adjusted annually for inflation).

Estimated impact on the private sector: S. 495 would impose several private-sector mandates as defined in UMRA. The bill would:

- Require certain entities to establish and maintain a data privacy and security program;
- Require entities engaged in interstate commerce to notify individuals if a security breach occurs in which such individuals' sensitive, personally identifiable information is compromised;
- Require data brokers to provide individuals with their personally identifiable information and to change the information if it is incorrect; and,
- Require any entity taking an adverse action against an individual based on information obtained from a database maintained by a data broker to the individual of that action.

Because of uncertainty about the number of entities that are already in compliance with the data security and notification mandates, CBO cannot estimate the incremental cost of complying with those mandates. Further, the number of requests for information and the incidence of adverse actions that would occur under the bill are uncertain. Consequently, CBO cannot determine whether the aggregate direct cost of mandates in the bill would exceed the annual threshold established by UMRA for private-sector mandates (\$131 million in 2007, adjusted annually for inflation).

#### *Data privacy and security requirements*

Subtitle A of title III would require certain business entities engaging in interstate commerce that involves collecting, accessing, transmitting, using, storing, or disposing of sensitive, personally identifiable information in electronic or digital form on more than 10,000 individuals to establish and maintain a data privacy and security program. The bill would direct the FTC to develop rules that identify privacy and security requirements for business entities.

Business entities would be required to conduct risk assessments to identify possible security risks in establishing the program. They also would have to conduct periodic vulnerability testing on their programs. Additionally, entities would have to train their employees.

Some entities would be exempt from the requirements of subtitle A. These include certain financial institutions that are subject to the data security requirements under the Gramm-Leach-Bliley Act and entities that are subject to the data security requirements of the Health Insurance Portability and Accountability Act.

The per-entity cost of the data privacy and security requirements would depend on the rules to be established by the FTC, the size of the entity, and the amount of sensitive, personally identifiable information maintained by the entity. According to industry and government sources, many states already have laws requiring business entities to utilize data security programs, and moreover, it is the current practice of many businesses to use security measures to protect sensitive data. However, because of uncertainty about the number of entities that are already in compliance with the data security mandates, CBO cannot estimate the incremental cost of complying with those mandates.

#### *Security breach notification*

Subtitle B of title III would require certain business entities engaged in interstate commerce that use, access, transmit, store, dispose of, or collect sensitive personally identifiable information to notify individuals in the event of a security breach if the individuals' sensitive, personally identifiable information is compromised. Entities would be able to notify individuals using written letters, the telephone, or email under certain circumstances. The bill also would require those entities to notify the owner or licensee of any such information that the entity does not own or license. The bill, however, would exempt business entities from the notification requirements under certain circumstances.

Business entities would be required to notify other entities and agencies in the event of a large security breach. The additional notification requirements are:

- If more than 5,000 individuals are affected by a security breach, the entities would be required to notify appropriate consumer reporting agencies that compile and maintain files on consumers on a nationwide basis.
- If more than 5,000 individuals are affected by a security breach in a state, the entity would be required to notify major media outlets serving that state or jurisdiction.
- Entities would be required to notify the Secret Service if:
  - More than 10,000 individuals are affected by a security breach.
  - A security breach involves a database that contains sensitive, personally identifiable information on more than one million people.
  - A security breach involves databases owned by the federal government.
  - A security breach involves sensitive, personally identifiable information of employees or contractors of the fed-

eral government involved in national security or law enforcement.

According to industry and government sources, millions of individuals' sensitive personally identifiable information is illegally accessed every year. However, according to those sources, 38 states already have laws requiring notification in the event of a security breach. In addition, it is the current practice of many business entities to notify individuals in the event of a security breach. Because of uncertainty about the number of entities that are already in compliance with the notification mandates, CBO cannot estimate the incremental cost of complying with the notification requirement under the bill.

#### *Requirements for data brokers*

Section 201 would require certain data brokers to disclose all personal electronic records relating to an individual that are kept primarily for third parties if requested by the individual. The bill defines a data broker as a business entity which for monetary fees or dues regularly engages in the practice of collecting, transmitting, or providing access to sensitive, personally identifiable information on more than 5,000 individuals who are not the customers or employees of that business entity or affiliate primarily for the purposes of providing such information to nonaffiliated third parties on an interstate basis.

Additionally, if an individual disputes the accuracy of the information that is contained in the data brokers' records, the data brokers would be required to change the information or provide the individual with contact information for the source from which they obtained the individual's information. Data brokers could determine that some requests to change an individual's information are frivolous. However, the data brokers would be required to notify any individual requesting a change of information of the action taken.

The cost of providing records upon request depends on the costs of gathering and distributing the information to individuals and the number of individuals requesting their information. Under the bill, data brokers would be allowed to charge a reasonable fee for this service. Data brokers would likely be able to cover their costs of providing individuals with their personal information with the fee they could charge. The cost to data brokers of having to change individuals' information and notifying the individuals could be large. According to information from industry sources, however, some data brokers already correct information based on the individual requests. Because of uncertainty about the number of individuals who would request information under the bill and as a result of those requests, the amount of information that would need to be changed, CBO cannot estimate the cost of this mandate.

#### *Adverse actions using information from data brokers*

The section also would require any entity taking an adverse action with respect to an individual based on information contained in a personal electronic record maintained, updated, owned, or possessed by a data broker to notify the individual of the adverse action. The notification can be written or electronic and must include certain information about the data broker. While the per-individual

cost of notification would be small, the cost of complying with the mandate would depend on the number of adverse actions that would be taken against individuals by entities. CBO does not have enough information about the incidence of such actions to determine the direct cost of complying with the mandate.

Estimate prepared by: Federal costs: Federal Agencies—Matthew Pickford; Federal Trade Commission—Susan Willie; U.S. Secret Service—Mark Grabowicz. Impact on state, local, and tribal governments: Elizabeth Cove. Impact on the private sector: Paige Piper/Bach.

Estimate approved by: Peter H. Fontaine, Deputy Assistant Director for Budget Analysis.

#### V. REGULATORY IMPACT EVALUATION

In compliance with rule XXVI of the Standing Rules of the Senate, the Committee finds that no significant regulatory impact will result from the enactment of S. 495.

#### VI. CONCLUSION

The Personal Data Privacy and Security Act of 2007, S. 495, provides greatly-needed privacy protections to American consumers, to ensure that all Americans have the tools necessary to protect themselves from identity theft and other data security risks. This legislation will also ensure that the most effective mechanisms and technologies for dealing with the underlying problem of lax data security are implemented by the Nation's businesses to help prevent data breaches from occurring in the first place. The passage and enactment of this important privacy legislation is long overdue.

## VII. ADDITIONAL VIEWS

### ADDITIONAL VIEWS OF SENATOR SESSIONS

This legislation deals with two issues that are very important to me and to the citizens of Alabama: data security and identity theft. I commend my colleague, Senator Shelby, for his efforts to address this issue through the Senate Banking Committee. In fact, as discussed in greater detail below, some of the items that S. 495 addresses fall within the jurisdiction of the Senate Banking Committee, and are inappropriate topics for Senate Judiciary Committee legislation.

I fully support many of the purported goals of this legislation: the protection of sensitive personal information by entities that have custody of it; and providing consumers with the ability to protect themselves in the event that a data breach could lead to a significant risk of identity theft. I believe this risk-based standard is essential if we are to avoid defeating the purpose for which the legislation has been designed to address. Unfortunately, I cannot support S. 495 and fear that it not only strays too far from these core objectives, but the manner in which it is crafted will likely have significant negative impacts on the consumer, and eventually the economy at large.

While I commend the Chairman's efforts in this area, I feel that S. 495 is not the most effective, well drafted effort from the Judiciary Committee on this issue. This legislation not only contains a number of potentially harmful policy decisions, but it also has some significant drafting flaws as well. These problems will reduce protections for consumers, increasing their chances of becoming victims of identity theft by undermining fraud detection and authentication tools, making them less reliable. Additionally, they will lead to over-notification of consumers when data breaches occur, thereby diluting the effectiveness of consumer notice. Finally, I believe S. 495 creates internally inconsistent and confusing burdens on companies, with no quantifiable benefit to the consumer.

### BACKGROUND

Identity theft is a very important issue facing America today, and both business and government has spent a tremendous amount of time and effort to understand and combat this crime. For instance, law enforcement at the federal, state and local levels have started to cooperate more with each other, and with international law enforcement, to pursue the perpetrators of these crimes. Similarly, as noted in detail by the President's Identity Theft Task Force Report, released after 10 months of study on April 11, 2007, the business community, which ultimately bears the major finan-

cial cost of credit fraud associated with identity theft,<sup>16</sup> has spent literally billions of dollars enhancing data security, building better ways to detect and stop fraud and identity theft before it occurs, and working with victims. These efforts are starting to pay off. Consider the following:

- Identity theft complaints were down 3.7% in 2006, and credit card complaints have been declining, as well, down 18.75% between 2003 and 2005. Fraudulent new account openings for credit cards have decreased most significantly since the first year that the FTC gathered statistics, down 19.17% between 2003 and 2005.
- FTC survey data shows a downward trend in total victims from 10.1 million in 2002 to 8.9 million in 2005, an 11.9% reduction; and
- FTC data show that complaints in a variety of key categories have held steady or dropped between 2003 and 2005.

While the problems of identity theft are still too big, and need to be addressed, progress is being made. The goal of legislation to address these issues, therefore, should be to build upon the success that consumers, law enforcement and business have already started to achieve, not to undermine that progress.

Therefore, the first step in addressing this issue is to ensure that consumers have the tools to protect themselves in the event of a data breach. Americans need to know that when information pertaining to them is compromised in a way that may jeopardize their identities, they will be notified. Without such a risk-based notice, they will be aware that they need to take steps to protect their identities after a data breach occurs. This straddle between the occurrences of a breach and when consumers should be notified is a critical issue that needed to be effectively addressed through legislation, and yet it did not happen. We know from the experience of the Gramm-Leach-Bliley Act (GLBA) that over-notification leads to consumer apathy, with the results that consumers are exposed to increasing risks. This problem, however, was not adequately addressed by S. 495.

In addition, Congress should build upon the statutes already in place to ensure that companies who hold sensitive personal data take reasonable steps to protect that data. In this respect, I commend the Chairman for extending the GLBA Safeguards Rule to non-financial entities. Consumers deserve to have data that pertains to them protected, no matter whether the custodian is a financial institution, a retailer, or a non-profit. Adoption of a targeted bill aimed at data security and consumer notification is the proper solution. S. 495 goes far beyond that and lessens the likelihood that legislation will pass and that consumers will be better protected.

---

<sup>16</sup> President's ID Theft Task Force Report: Combating Identity Theft, A Strategic Plan, p. 11a.

**S. 1326, THE NOTIFICATION OF RISK TO PERSONAL DATA ACT (109TH CONGRESS)**

REINTRODUCED AS

**S. 1202, THE PERSONAL DATA PROTECTION ACT (110TH CONGRESS)**

I first introduced legislation to address this issue in 2005 in response to massive data security breaches at major companies, and the potential injury those breaches generated. That bill, the Notification of Risk to Personal Data Act (S. 1326), was reported by the Senate Judiciary Committee by unanimous consent on October 20, 2005. Once reported by the Committee, however, no floor action was taken in the 109th Congress on that or any other bill which addressed data security. Part of the reason was the presence of several bills that sought to go well beyond the problem of data security and notification. With the reporting of S. 495 and the defeat of S. 1202 because, according to the Chairman, it did not hold industry “accountable enough,” we are running the risk of a repeat of that political gridlock, and consumers will doubtless suffer from our inaction. The need for legislation in this area has not abated. Indeed, with the publicity of recent breaches, it has only increased.

On April 24, 2007, I introduced the Personal Data Protection Act (S. 1202), which would effectively combat the problems of security breaches in three ways. First, the bill requires all companies, regardless of industry, to install security procedures and practices, so that sensitive personal information is protected—if a company is going to hold sensitive personal information, it has the duty to protect it. Second, it provides consumers with a uniform, risk-based notice and standard in the event of a security breach, balancing the need to notify consumers when a breach has occurred with the very real possibility that over-notification may desensitize consumers from real threats. National standards for security procedures and notification procedures are imperative both for consumers and the businesses that have to comply with those standards. Third, it contains reasonable compliance standards. An entity that discovers a security breach must send individuals a clear and conspicuous description of the information disclosed and provide a toll-free number for customers to call to obtain further information. The notification would have to have been in writing, or via phone or email, with a few exceptions exist (if sufficient contact information does not exist; if notice would cost more than \$250,000; or if more than 500,000 customers must be contacted).

We want people to take it seriously when they receive notice of a breach. We know from experience that sending too many notices will lead to public immunization. People will stop heeding the warnings they receive and fail to take proper steps if they are told too many times that they are the victims of a security breach. This result can be avoided by imposing a risk-based notification requirement only when there is a “significant risk of identity theft.” Under S. 1202, entities must disclose a security breach when there is a “significant risk of identity theft to an individual” caused by the unauthorized disclosure of computerized data.

Unlike bills introduced by my colleagues, such as S. 495, my bill does not require notification if the data that is jeopardized could not lead to a significant risk of identity theft. For example, if the data that is stolen cannot be accessed, there is no risk to any individual, and thus no need to require notification. Or, if information stolen is information that is otherwise publicly available, no notice is required. I believe an essential part of preventing harm from these breaches is making consumers aware of the problem. Consumers who find that data pertaining to them has been jeopardized should be alerted so that they can monitor their financial accounts for the risk of identity theft. No one will monitor the situation as thoroughly as the person who would be most affected by having their financial information compromised—the victim themselves.

S. 495, THE PERSONAL DATA PRIVACY AND SECURITY ACT

Though I support many of the stated goals of this legislation, I have concerns that S. 495 may create a convoluted framework for companies which may result in more harm to consumers than good.

*1. The Notice provisions will result in over-notification*

As a result of the way in which the bill is drafted, I believe over-notification to individuals of non-harmful data breaches is inevitable. Furthermore although the bill attempts to establish a “safe harbor” for encrypted or unusable data, the confusing parallel tracks of Sections 311 and 312 will not provide companies with much confidence that the safe harbor will be available to them.

Specifically, Section 311(a) requires notification upon the “discovery” of a breach, and does not provide a company with the opportunity to determine if the data in any way causes “harm” to consumers. The term “harm” is potentially very broad, and the bill does not define it. In fact, when Senator Feinstein was asked during markup what it meant, she was unable to say. Does it mean economic loss? Increased anxiety? Mere inconvenience? We do not know, and neither will the entities who will be obligated to comply with the statute if it should become law. But the potential liability will be substantial. When enacting the law, I believe it is our duty and our responsibility to be precise, and this amorphous term invites abuse and over-application.

Further, it is by definition unreasonable to impose a “risk assessment” as a precondition to taking advantage of the “Safe Harbor,” because the result will be illusory protection. This will result in a flood of notices for data breaches where there is virtually no risk. This will be detrimental to consumers who will inevitably become desensitized to notice and ignore them altogether.

*2. The legislation should specifically and completely exempt entities regulated by other federal laws from the provisions of this Act*

Consumer reporting agencies (CRAs) are already fully regulated under requirements under the Fair Credit Reporting Act (FCRA), and financial institutions are regulated under the Gramm-Leach-Bliley Act. Companies that are already regulated under the FCRA and Gramm-Leach-Bliley (GLB) should be specifically exempt from this Act, and from the definition of “data broker” because they are

already subject to rigorous data safeguard requirements under these statutes.

The Fair Credit Reporting Act (15 U.S.C. § 1681 et seq.) is a time-tested statute that has received frequent and thoughtful review by Congress, and was most recently updated in 2003, with extensive changes implemented by the FACT Act (Pub. L. 108–159).<sup>17</sup>

The requirements laid out in this legislation would create a host of conflicting, inconsistent, unworkable and potentially negative impacts on FCRA-regulated entities, and could have significant negative effects on consumers.

**Compliance with parallel provisions under the FCRA and the GLBA should constitute compliance with the bill. The bill's requirements for information security already closely track the provisions of the Safeguards Rule.**

Further, assuming that it was the Committee's intent to exempt FCRA and GLB covered entities from the scope of some provisions of this Act, the exemption crafted by the Judiciary Committee is far from perfect, and would in many cases subject FCRA regulated entities to duplicative and conflicting standards. Rather than having the Judiciary Committee attempt to craft those exemptions, we should defer to the Banking Committee, which has the expertise to determine that the exemptions are as complete as intended.

### *3. The legislation should fully preempt all state and local laws regarding these issues*

As a general matter, I believe that there is no reason for the Congress to act in this area if it does not effectively preempt the growing number of state laws now in effect and give protection to consumers in states not now covered by any state law. In this instance, the preemption provisions contained in S. 495 are too narrow. The U.S. has a national economy, and more than half the states have enacted various data security, breach notification and other requirements. Adding a confusing federal standard that is inconsistent not only with state and federal laws, would make compliance very difficult. Accordingly, the preemption standards in this legislation should explicitly preempt all state laws relating to any activity covered under this Act: I would urge replacing this approach with one that preempts “. . . the subject matter regulated by this Act” to obtain as broad a preemptive standard as possible.

### *4. Other issues*

Before concluding, I would like to comment on a couple of the other provisions in S. 495 that I believe to be inappropriate for a data security and notification bill, and which add, as I mentioned earlier, unnecessary baggage that might be politically attractive to their advocates but which do not ultimately serve the interests of the consumers we are pledged to protect.

The first such language appears in the form of the data broker language in Title II of S. 495. Notwithstanding the exemptions incorporated into this title, the Committee makes the definition of who is, or is not, a data broker far too broad, and in so doing risks

<sup>17</sup>That Act contained a number of significant provisions designed to protect consumers and combat identity theft, and I again compliment Senator Shelby for his work on that legislation as the then-Chairman of the Senate Banking Committee.

covering a range of entities not contemplated by the bill. And the result of this inclusion will inevitably be that its sponsors will contribute to increased fraud.

It's a fact that fraud detection tools are used by much of the business community, from financial institutions (who understandably use them most frequently) to journalists who use them to locate sources, attorneys to locate witnesses, and parents who use them to conduct background checks on childcare providers. If databases are opened up, as S. 495 envisions, it will be just a matter of time before those databases are accessed by criminals, and the absence, over time, of "negative" information, these tools will become less reliable.

A second additional element of the bill is Sen. Ben Cardin's amendment, offered for the first time at mark-up and never fully vetted, which requires that any adverse action resulting from information provided by a data broker must require a notification of that adverse action followed by the opportunity to "access and correct" that information. This amendment will cause tumult in the business community and has no place in this bill.

Last, Sen. Whitehouse used S. 495 as an opportunity to amend the Bankruptcy Abuse Prevention and Consumer Protection Act (Bankruptcy Act), so carefully crafted by this Committee sometime ago. His amendment would adjust the "means test" in that statute to exempt debtors who are the victims of identity theft. It is not only non-germane to data security and notification, thus even more baggage the bill will have to carry, but it is also structurally unnecessary. As the lead sponsor of the Bankruptcy Act, Sen. Charles Grassley, so eloquently noted during the markup, the "special circumstances" language already contained in the Bankruptcy Act contemplates just this kind of situation, obviating the need for this language but inviting further amendments to adjust the Bankruptcy Act on the Senate Floor.

#### CONCLUSION

For these reasons, I dissent from the views and policy represented by S. 495, and I would urge my colleagues to revisit many of the policy and drafting problems created by this bill.

JEFF SESSIONS.

VIII. CHANGES IN EXISTING LAW MADE BY THE BILL AS REPORTED

In compliance with paragraph 12 of rule XXVI of the Standing Rules of the Senate, the Committee finds that it is necessary to dispense with the requirement of paragraph 12 to expedite the business of the Senate.

## APPENDIX

### PRIVACY RIGHTS CLEARINGHOUSE CHRONOLOGY OF DATA BREACHES AS OF MAY 21, 2007

#### CHRONOLOGY OF DATA BREACHES

[Go to Breaches for 2005, 2006, or 2007]

Date made public	Name (Location)	Type of breach	Number of records
<b>2005</b>			
Jan. 10, 2005 .....	George Mason University (Fairfax, VA).	Names, photos, and Social Security numbers of 32,000 students and staff were compromised because of a hacker attack on the university's main ID server.	32,000
Jan. 18, 2005 .....	Univ. of CA, San Diego (San Diego, CA).	A hacker breached the security of two University computers that stored the Social Security numbers and names of students and alumni of UCSD Extension.	3,500
Jan. 22, 2005 .....	University of Northern Colorado (Greeley, CO).	A hard drive was apparently stolen. It contained information on current and former University employees and their beneficiaries—name, date of birth, SSN, address, bank account and routing number.	30,000
Feb. 12, 2005 .....	Science Applications International Corp. (SAIC) (San Diego, CA).	On Jan. 25 thieves broke into a SAIC facility and stole computers containing names, SSNs, and other personal information of past and current employees. Stolen information included names, NNS, addresses, phone numbers and records of financial transactions.	45,000 employees.

## CHRONOLOGY OF DATA BREACHES—Continued

[Go to Breaches for 2005, 2006, or 2007]

Date made public	Name (Location)	Type of breach	Number of records
Feb. 15, 2005 .....	ChoicePoint (Alpharetta, GA).	Bogus accounts established by ID thieves. The initial number of affected records was estimated at 145,000 but was later revised to 163,000. UPDATE (1/26/06): .. ChoicePoint settled with the <i>Federal Trade Commission</i> for \$10 million in civil penalties and \$5 million for consumer redress. UPDATE (12/06/06): The <i>FTC announced</i> that victims of identity theft as a result of the data breach who had out-of-pocket expenses can now be reimbursed. The claims deadline is Feb. 4, 2007.	163,000
Feb. 18, 2005 .....	Univ. of Chicago Hospital (Chicago, IL).	Dishonest insider .....	85
Feb. 25, 2005 .....	Bank of America (Charlotte, NC).	Lost backup tape .....	1,200,000
Feb. 25, 2005 .....	PayMaxx (Miramar, FL) .....	Exposed online .....	25,000
March 8, 2005 .....	DSW/Retail Ventures (Columbus, OH).	Hacking .....	100,000
March 10, 2005 .....	LexisNexis (Dayton, OH) .....	Passwords compromised. UPDATE (06/30/06): Last week, five men were arrested in connection with this breach.	32,000
March 11, 2005 .....	Univ. of CA, Berkeley (Berkeley, CA).	Stolen laptop .....	98,400

## CHRONOLOGY OF DATA BREACHES—Continued

[Go to Breaches for 2005, 2006, or 2007]

Date made public	Name (Location)	Type of breach	Number of records
March 11, 2005 .....	Kaiser Permanente (Oakland, CA).	A disgruntled employee posted information on her blog noting that Kaiser Permanente included private patient information on systems diagrams posted on the Web. UPDATE (6/21/2005): The California Department of Managed Health Care fined Kaiser \$200,000 for exposing the confidential health information.	140
March 11, 2005 .....	Boston College (Boston, MA)	Hacking .....	120,000
March 12, 2005 .....	NV Dept. of Motor Vehicle ..	Stolen computer .....	[8,900] Not included in total below.
		UPDATE: The computer was later recovered.	
March 20, 2005 .....	Northwestern Univ. (Evanston, IL).	Hacking .....	21,000
March 20, 2005 .....	Univ. of NV, Las Vegas (Las Vegas, NV).	Hacking .....	5,000
March 22, 2005 .....	Calif. State Univ. (Chico, CA).	Hacking .....	59,000
March 23, 2005 .....	Univ. of CA. (San Francisco, CA).	Hacking .....	7,000
March 25, 2005 .....	Purdue University (West Lafayette, IN).	Computers in the College of Liberal Arts' Theater Dept. were hacked, exposing personal information of employees, students, graduates, and business affiliates.	1,200 (not included in total because news stories are not clear if SSNs or financial information were exposed).
April ?, 2005 .....	Georgia DMV .....	Dishonest insider .....	465,000
April 5, 2005 .....	MCI (Ashburn, VA) .....	Stolen laptop .....	16,500
April 5, 2005 .....	Univ. of CA, Davis (Davis, CA).	The names and Social Security numbers of students, faculty, visiting speakers and staff may have been compromised when a hacker accessed a main computer.	1,100

## CHRONOLOGY OF DATA BREACHES—Continued

[Go to Breaches for 2005, 2006, or 2007]

Date made public	Name (Location)	Type of breach	Number of records
April 6, 2005 .....	University of California, San Francisco.	A server in the accounting and personnel departments was hacked. It contained information on 7,000 students, faculty, and staff members. The affected individuals were notified March 23.	7,000
April 8, 2005 .....	Eastern National .....	Hacker .....	15,000
April 8, 2005 .....	San Jose Med. Group (San Jose, CA).	Stolen computer .....	185,000
April 11, 2005 .....	Tufts University (Boston, MA).	Hacking .....	106,000
April 12, 2005 .....	LexisNexis (Dayton, OH) .....	Passwords compromised. UPDATE (06/30/06): Last week, five men were arrested in connection with this breach.	Additional 280,000.
April 14, 2005 .....	Polo Ralph Lauren/HSBC (New York, NY).	Hacking .....	180,000
April 14, 2005 .....	Calif. Fastrack .....	Dishonest Insider .....	4,500
April 15, 2005 .....	CA Dept. of Health Services	Stolen laptop .....	21,600
April 18, 2005 .....	DSW/ Retail Ventures (Columbus, OH).	Hacking .....	Additional 1,300,000.
April 20, 2005 .....	Ameritrade (Bellevue, NE) ..	Lost backup tape .....	200,000
April 21, 2005 .....	Carnegie Mellon Univ. (Pittsburg, PA).	Hacking .....	19,000
April 26, 2005 .....	Mich. State Univ's Wharton Center.	Hacking .....	40,000
April 26, 2005 .....	Christus St. Joseph's Hospital (Houston, TX).	Stolen computer .....	19,000
April 28, 2005 .....	Georgia Southern Univ. ....	Hacking .....	"tens of thousands".
April 28, 2005 .....	Wachovia, Bank of America, PNC Financial Services Group and Commerce Bancorp.	Dishonest insiders ....	676,000
April 29, 2005 .....	Oklahoma State Univ. ....	Missing laptop .....	37,000
May 2, 2005 .....	Time Warner (New York, NY)	Lost backup tapes ....	600,000
May 4, 2005 .....	CO. Health Dept. ....	Stolen laptop .....	1,600 (families).
May 5, 2005 .....	Purdue Univ. (West Lafayette, IN).	Hacking .....	11,360
May 7, 2005 .....	Dept. of Justice (Washington, D.C.).	Stolen laptop .....	80,000
May 11, 2005 .....	Stanford Univ. (Stanford, CA).	Hacking .....	9,900
May 12, 2005 .....	Hinsdale Central High School (Hinsdale, IL).	Hacking .....	2,400
May 16, 2005 .....	Westborough Bank (Westborough, MA).	Dishonest insider .....	750
May 18, 2005 .....	Jackson Comm. College (MI)	Hacking .....	8,000
May 18, 2005 .....	Univ. of Iowa .....	Hacking .....	30,000
May 19, 2005 .....	Valdosta State Univ. (GA) ...	Hacking .....	40,000

## CHRONOLOGY OF DATA BREACHES—Continued

[Go to Breaches for 2005, 2006, or 2007]

Date made public	Name (Location)	Type of breach	Number of records
May 25, 2005 .....	North Carolina Div. of Motor Vehicles (Greensboro, NC).	On Feb. 10, an employee downloaded addresses of 3.8 million people but was detected and stopped before being able to retrieve more sensitive information such as driver's license numbers.	None.
May 26, 2005 .....	Duke Univ. (Durham, NC) ...	Hacking .....	5,500
May 27, 2005 .....	Cleveland State Univ. (Cleveland, OH).	Stolen laptop .....	[44,420] Not included in total below.
		UPDATE (12/24): CSU found the stolen laptop.	
May 28, 2005 .....	Merlin Data Services (Kali-spell, MT).	Bogus acct. set up ...	9,000
May 30, 2005 .....	Motorola .....	Computers stolen .....	Unknown.
June 6, 2005 .....	CitiFinancial .....	Lost backup tapes .....	3,900,000
June 10, 2005 .....	Fed. Deposit Insurance Corp. (FDIC).	Not disclosed .....	6,000
June 16, 2005 .....	CardSystems .....	Hacking .....	40,000,000
June 17, 2005 .....	Kent State Univ. ....	Stolen laptop .....	1,400
June 18, 2005 .....	Univ. of Hawaii .....	Dishonest Insider .....	150,000
June 22, 2005 .....	Eastman Kodak .....	Stolen laptop .....	5,800
June 22, 2005 .....	East Carolina Univ. ....	Hacking .....	250
June 25, 2005 .....	Univ. of CT (UCONN) .....	Hacking .....	72,000
June 28, 2005 .....	Lucas Cty. Children Services (OH).	Exposed by email .....	900
June 29, 2005 .....	Bank of America .....	Stolen laptop .....	18,000
June 30, 2005 .....	Ohio State Univ. Med. Ctr.	Stolen laptop .....	15,000
July 1, 2005 .....	Univ. of CA, San Diego .....	Hacking .....	3,300
July 6, 2005 .....	City National Bank .....	Lost backup tapes .....	Unknown.
July 7, 2005 .....	Mich. State Univ. ....	Hacking .....	27,000
July 19, 2005 .....	Univ. of Southern Calif (USC).	Hacking .....	270,000 possibly accessed; "dozens" exposed.
July 21, 2005 .....	Univ. of Colorado—Boulder	Hacking .....	49,000
		UPDATE (08/20/2005): The number of students affected was increased from an estimate of 42,000 to 49,000.	
July 30, 2005 .....	San Diego Co. Employees Retirement Assoc..	Hacking .....	33,000
July 30, 2005 .....	Calif. State Univ., Dominguez Hills.	Hacking .....	9,613
July 31, 2005 .....	Cal Poly-Pomona .....	Hacking .....	31,077
Aug. 2, 2005 .....	Univ. of Colorado .....	Hacking .....	36,000
Aug. 9, 2005 .....	Sonoma State Univ. ....	Hacking .....	61,709
Aug. 9, 2005 .....	Univ. of Utah .....	Hacking .....	100,000
Aug. 10, 2005 .....	Univ. of North Texas .....	Hacking .....	39,000
Aug. 17, 2005 .....	Calif. State University, Stanislaus.	Hacking .....	900
Aug. 19, 2005 .....	Univ. of Colorado .....	Hacking .....	49,000
Aug. 22, 2005 .....	Air Force .....	Hacking .....	33,300
Aug. 27, 2005 .....	Univ. of Florida, Health Sciences Center/ChartOne.	Stolen Laptop .....	3,851

## CHRONOLOGY OF DATA BREACHES—Continued

[Go to Breaches for 2005, 2006, or 2007]

Date made public	Name (Location)	Type of breach	Number of records
Aug. 30, 2005 .....	J.P. Morgan Chase & Co. (Dallas, TX).	Stolen laptop (Aug. 8) containing personal and financial account information of customers of its private bank.	Unknown.
Aug. 30, 2005 .....	Calif. State University, Chancellor's Office.	Hacking .....	154
Sept. 2, 2006 .....	Iowa Student Loan (W. Des Moines).	Compact disk containing personal information, including SSNs, was lost when shipped by private courier.	165,000
Sept. 10, 2005 .....	Kent State Univ. ....	Stolen computers .....	100,000
Sept. 15, 2005 .....	Miami Univ. ....	Exposed online .....	21,762
Sept. 16, 2005 .....	ChoicePoint (2nd notice, see 2/15/05) (Alpharetta, GA).	ID thieves accessed; also misuse of IDs & passwords.	[Total later revised to 163,000—see 2/15/05 above]
Sept. 17, 2005 .....	North Fork Bank, NY .....	Stolen laptop (7/24/05) with mortgage data.	9,000
Sept. 19, 2005 .....	Children's Health Council, San Jose CA.	Stolen backup tape ..	5,000–6,000
Sept. 22, 2005 .....	City University of New York	Exposed online .....	350
Sept. 23, 2005 .....	Bank of America .....	Stolen laptop with info of Visa Buxx users (debit cards).	Not disclosed
Sept. 28, 2005 .....	RBC Dain Rauscher .....	Illegitimate access to customer data by former employee.	100+ customers' records compromised out of 300,000
Sept. 29, 2005 .....	Univ. of Georgia .....	Hacking .....	At least 1,600
Oct. 12, 2005 .....	Ohio State Univ. Medical Center.	Exposed online. Appointment information including SSN, DOB, address, phone no., medical no., appointment reason, physician.	2,800
Oct. 15, 2005 .....	Montclair State Univ. ....	Exposed online .....	9,100
Oct. 21, 2005 .....	Wilcox Memorial Hospital, Hawaii.	Lost backup tape .....	130,000
Nov. 1, 2005 .....	Univ. of Tenn. Medical Center.	Stolen laptop .....	3,800
Nov. 4, 2005 .....	Keck School of Medicine, USC.	Stolen computer .....	50,000
Nov. 5, 2005 .....	Safeway, Hawaii .....	Stolen laptop .....	1,400 in Hawaii, perhaps more elsewhere
Nov. 8, 2005 .....	ChoicePoint (Alpharetta, GA).	Bogus accounts established by ID thieves. Total affected now reaches 163,000 (See Feb. 15 & Sept. 16).	[Total later revised to 163,000—see 2/15/05 above]
Nov. 9, 2005 .....	TransUnion .....	Stolen computer .....	3,623
Nov. 11, 2005 .....	Georgia Tech Ofc. of Enrollment Services.	Stolen computer, Theft 10/16/05.	13,000
Nov. 11, 2005 .....	Scotttrade Troy Group .....	Hacking .....	Unknown.

## CHRONOLOGY OF DATA BREACHES—Continued

(Go to Breaches for 2005, 2006, or 2007)

Date made public	Name (Location)	Type of breach	Number of records
Nov. 19, 2005 .....	Boeing .....	Stolen laptop with HR data incl. SSNs and bank account info.	161,000
Dec. 1, 2005 .....	Firststrust Bank .....	Stolen laptop .....	100,000
Dec. 1, 2005 .....	Univ. of San Diego (San Diego, CA).	Hacking. Faculty, students and employee tax forms containing SSNs.	7,800
Dec. 2, 2005 .....	Cornell Univ. ....	Hacking. Names, addresses, SSNs, bank names and acct. numbers.	900
Dec. 6, 2005 .....	WA Employment Security Dept.	Stolen laptop. Names, SSNs and earnings of former employees.	530
Dec. 7, 2005 .....	Idaho State University, Office of Institutional Research (Pocatello, ID). Contact <i>Information Technology Services</i> , (208) 282-2872.	ISU discovered a security breach in a server containing archival information about students, faculty, and staff, including names, SSNs, birthdates, and grades.	Unknown.

June 2, 2006 .....	Ahold USA (Landover, MD) Parent company of Stop & Shop, Giant stores and Tops stores via subcontractor Electronic Data Systems (Plano, TX).	An EDS employee lost a laptop computer during a commercial flight that contained pension data of former employees of Ahold's supermarket chains including Social Security numbers, birth dates and benefit amounts.	Unknown.

## CHRONOLOGY OF DATA BREACHES—Continued

[Go to Breaches for 2005, 2006, or 2007]

Date made public	Name (Location)	Type of breach	Number of records
June 2, 2006 .....	YMCA (Providence, RI) .....	Laptop computer containing personal information of members was stolen. The information included credit card and debit card numbers, checking account information, Social Security numbers, the names and addresses of children in daycare programs and medical information about the children, such as allergies and the medicine they take, though the type of stolen information about each person varies.	65,000
June 2, 2006 .....	Humana (Louisville, KY) .....	Personal information of Humana customers enrolled in the company's Medicare prescription drug plans could have been compromised when an insurance company employee called up the data through a hotel computer and then failed to delete the file.	17,000 current and former Medicare enrollees
June 5, 2006 .....	Internal Revenue Service (Washington, DC).	A laptop computer containing personal information of employees and job applicants, including fingerprints, names, Social Security numbers, and dates of birth, was lost during transit on an airline flight.	291
June 6, 2006 .....	Univ. of Texas (El Paso, TX)	Students demonstrated that student body and faculty elections could be rigged by hacking into student information including Social Security numbers.	4,719

## CHRONOLOGY OF DATA BREACHES—Continued

[Go to Breaches for 2005, 2006, or 2007]

Date made public	Name (Location)	Type of breach	Number of records
June 8, 2006 .....	Univ. of Michigan Credit Union (Ann Arbor, MI).	Paper documents containing personal information of credit union members were stolen from a storage room. The documents were supposed to have been digitally imaged and then shredded. Instead, they were stolen and used to perpetrate identity theft.	5,000
June 11, 2006 .....	Denver Election Commission (Denver, CO).	Records containing personal information on more than 150,000 voters are missing at city election offices. The microfilmed voter registration files from 1989 to 1998 were in a 500-pound cabinet that disappeared when the commission moved to new offices in February. The files contain voters' Social Security numbers, addresses and other personal information.	150,000
June 12, 2006 .....	U.S. Dept. of Energy (Washington, D.C.).	Names, Social Security numbers, security clearance levels and place of employment for mostly contract employees who worked for National Nuclear Security Administration may have been compromised when a hacker gained entry to a computer system at a service center in Albuquerque, N.M. eight months ago.	1,502

## CHRONOLOGY OF DATA BREACHES—Continued

[Go to Breaches for 2005, 2006, or 2007]

Date made public	Name (Location)	Type of breach	Number of records
June 13, 2006 .....	Minn. State Auditor (St. Paul, MN).	Three laptops possibly containing Social Security numbers of employees and recipients of housing and welfare benefits along with other personal information of local governments the auditor oversees have gone missing.	493
June 13, 2006 .....	Oregon Dept. of Revenue (Salem, OR).	Electronic files containing personal data of Oregon taxpayers may have been compromised by an ex-employee's downloaded a contaminated file from a porn site. The "trojan" attached to the file may have sent taxpayer information back to the source when the computer was turned on.	2,200
June 13, 2006 .....	U.S. Dept of Energy, Hanford Nuclear Reservation (Richland, WA).	Current and former workers at the Hanford Nuclear Reservation that their personal information may have been compromised, after police found a 1996 list with workers' names and other information in a home during an unrelated investigation.	4,000
June 14, 2006 .....	American Insurance Group (AIG), Indiana Office of Medical Excess, LLC (New York, NY).	The computer server was stolen on March 31 containing personal information including names, Social Security numbers, birth dates, and some medical and disability information.	930,000

## CHRONOLOGY OF DATA BREACHES—Continued

[Go to Breaches for 2005, 2006, or 2007]

Date made public	Name (Location)	Type of breach	Number of records
June 14, 2006 .....	<i>Western Illinois Univ.</i> (Macomb, IL).	On June 5th, a hacker compromised a University server that contained names, addresses, credit card numbers and Social Security numbers of people connected to the University. UPDATE (7/5/06): Number affected reduced from 240,000.	180,000
June 16, 2006 .....	Union Pacific (Omaha, NE)	On April 29th, an employee's laptop was stolen that contained data for current and former Union Pacific employees, including names, birth dates and Social Security numbers.	30,000
June 16, 2006 .....	NY State Controller's Office (Albany, NY).	State controller data cartridge containing payroll data of employees who work for a variety of state agencies was lost during shipment. The data contained names, salaries, Social Security numbers and home addresses.	1,300
June 16, 2006 .....	ING (Miami, FL) .....	Two ING laptops that carried sensitive data affecting Jackson Health System hospital workers were stolen in December 2005. The computers, belonging to financial services provider ING, contained information gathered during a voluntary life insurance enrollment drive in December and included names, birth dates and Social Security numbers.	8,500

## CHRONOLOGY OF DATA BREACHES—Continued

[Go to Breaches for 2005, 2006, or 2007]

Date made public	Name (Location)	Type of breach	Number of records
June 16, 2006 .....	Univ. of Kentucky (Lexington, KY).	The personal data of current and former students including classroom rosters names, grades and Social Security numbers was reported stolen on May 26 following the theft of a professor's flash drive.	6,500
June 17, 2006 .....	ING (Washington, D.C.) .....	Laptop stolen from employee's home containing retirement plan information including Social Security numbers of D.C. city employees.	13,000
June 17, 2006 .....	Automatic Data Processing (ADP) (Roseland, NJ).	Personal and payroll information of workers were intended to be faxed between ADP offices and were mistakenly sent to a third party.	80
June 17, 2006 .....	CA Dept. of Health Services (CDHS) (Sacramento, CA).	CDHS documents were inappropriately emptied from an employee's cubicle on June 5 and 9 rather than shredded.  The documents contained state employees and other individuals applying for employment with the state including names, addresses, Social Security numbers and home and work telephone numbers. They were mostly expired state employment certification lists, but also included requests for personnel action, copies of e-mail messages and handwritten notes.	1,550

## CHRONOLOGY OF DATA BREACHES—Continued

[Go to Breaches for 2005, 2006, or 2007]

Date made public	Name (Location)	Type of breach	Number of records
June 20, 2006 .....	Equifax (Atlanta, GA) .....	On May 29, a company laptop containing employee names and partial and full Social Security numbers was stolen from an employee.	2,500
June 20, 2006 .....	Univ. of Alabama (Birmingham, AL).	In February a computer was stolen from a locked office of the kidney transplant program at the University of Alabama at Birmingham that contained confidential information of donors, organ recipients and potential recipients including names, Social Security numbers and medical information.	9,800
June 21, 2006 .....	<i>U.S. Dept. of Agriculture</i> (USDA) (Washington, D.C.).	During the first week in June, a hacker broke into the Department's computer system and may have obtained names, Social Security numbers and photos of current and former employees and contractors.	26,000
June 21, 2006 .....	Cape Fear Valley Health System (Fayetteville, NC).	Portable computer containing personal information of more than 24,000 people was stolen from ambulance of Cumberland Co. Emergency Medical Services on June 8th. It contained information on people treated by the EMS, including names, addresses, and birthdates, plus SSNs of 84% of those listed.	24,350

## CHRONOLOGY OF DATA BREACHES—Continued

[Go to Breaches for 2005, 2006, or 2007]

Date made public	Name (Location)	Type of breach	Number of records
June 21, 2006 (Date of letter sent to doctors. Date of news story is July 28, 2006).	Lancaster General Hospital (Lancaster, PA).	A desktop computer with personal information of hundreds of doctors was stolen from a locked office June 10. The unencrypted data included names, practice addresses, and SSNs of physicians on medical and dental staff.	“Hundreds of local physicians” (not included in total below)
June 22, 2006 .....	Federal Trade Commission (FTC) (Washington, D.C.).	Two laptop computers containing personal and financial data were stolen from an employee's vehicle. The data included names, addresses, Social Security numbers, dates of birth, and in some instances, financial account numbers gathered in law enforcement investigations.	110
June 23, 2006 .....	<i>San Francisco State Univ.</i> (San Francisco, CA).	A faculty member's laptop was stolen from a car on June 1 that contained personal information of former and current students including Social Security numbers, and names and in some instance, phone numbers and grade point averages.	3,000
June 23, 2006 .....	U.S. Navy (Washington, D.C.).	Navy personnel were notified on June 22 that a civilian web site contained files with personal information of Navy members and dependents including names, birth dates and Social Security numbers.	30,000

## CHRONOLOGY OF DATA BREACHES—Continued

[Go to Breaches for 2005, 2006, or 2007]

Date made public	Name (Location)	Type of breach	Number of records
June 23, 2006 .....	<i>CA Dept. of Health Services</i> (CDHS) (Sacramento, CA).	On June 12, a box of Medi-Cal forms from December 2005 were found in the cubicle of a CDHS employee. The claim forms contained the names, addresses, Social Security numbers and prescriptions for beneficiaries or their family members.	323
June 23, 2006 .....	Catawba County Schools (Newton, NC).	On June 22, it was discovered that a web site posted names, Social Security numbers, and test scores of students who had taken a keyboarding and computer applications placement test during the 2001–02 school year. UPDATE: The web site containing the data has been removed.	619
June 23, 2006 .....	<i>King County Records, Elections, and Licensing Services Division</i> (Seattle, WA).	Social Security numbers for potentially thousands of current and former county residents may be exposed on the agency's web site. <i>Residents can request</i> that the image of any document that contains a Social Security number, Mother's Maiden Name or Drivers License be removed. Officials state that they are unable to alter original public documents and cannot choose to not record documents presented for recording.	Unknown.

## CHRONOLOGY OF DATA BREACHES—Continued

[Go to Breaches for 2005, 2006, or 2007]

Date made public	Name (Location)	Type of breach	Number of records
June 27, 2006 .....	Gov't Accountability Office (GAO) (Washington, D.C.).	Data from audit reports on Defense Department travel vouchers from the 1970s were inadvertently posted online and included some service members' names, Social Security numbers and addresses. The agency has subsequently removed the information.	"Fewer than 1,000" [1,000 used in total]
June 28, 2006 .....	AAAAA Rent-A-Space (Colma, CA).	Customer's account information including name, address, credit card, and Social Security number was easily accessible due to a security gap in its online payment system.	13,000
June 29, 2006 .....	AllState Insurance Huntsville branch (Huntsville, AL).	Over Memorial Day weekend, a computer containing personal data including images of insurance policies, correspondence and Social Security numbers was stolen.	2,700
June 29, 2006 .....	<i>Nebraska Treasurer's Office</i> (Lincoln, NE).	A hacker broke into a child-support computer system and may have obtained names, Social Security numbers and other information such as tax identification numbers for 9,000 businesses.	309,000

## CHRONOLOGY OF DATA BREACHES—Continued

[Go to Breaches for 2005, 2006, or 2007]

Date made public	Name (Location)	Type of breach	Number of records
June 29, 2006 .....	<i>Minnesota Dept. of Revenue</i> (St. Paul, MN).	On May 16, a package containing a data tape used to back up the regional office's computers went missing during delivery. The tape contained personal information including individuals' names, addresses, and Social Security numbers. UPDATE (7/20/06): The package was reported delivered 2 months later, but apparently had been temporarily lost by the U.S. Postal Service.	50,400
June 30, 2006 .....	<i>Nat'l Institutes of Health Federal Credit Union</i> (Rockville, MD).	NIHFCU is investigating with law enforcement the identity theft of some of its 41,000 members. No details given on type of information stolen, or how it was stolen.	"Very few" of 41,000 members affected [not included in total]
July 1, 2006 .....	American Red Cross, Farmers Branch (Dallas, TX).	Sometime in May, 3 laptops were stolen, one of them containing encrypted personal information including names, SSNs, dates of birth, and medical information of all regional donors. They also report losing a laptop with encrypted donor information in June 2005.	Unknown.
July 5, 2006 .....	Bisys Group Inc. (Roseland, NJ).	Personal details about 61,000 hedge fund investors were lost when an employee's truck carrying backup tapes was stolen. The data included SSNs of 35,000 individuals. The tapes were being moved from one Bisys facility to another on June 8 when the theft occurred.	61,000

## CHRONOLOGY OF DATA BREACHES—Continued

[Go to Breaches for 2005, 2006, or 2007]

Date made public	Name (Location)	Type of breach	Number of records
July 6, 2006 .....	Automated Data Processing (ADP) (Roseland, NJ).	Payroll service company ADP gave scam-artist names, addresses, and number of shares held of investors, although apparently not SSNs or account numbers. The leak occurred from Nov. '05 to Feb. '06 and involved individual investors with 60 companies including Fidelity, UBS, Morgan Stanley, Bear Stearns, Citigroup, Merrill Lynch.	“Hundreds of thousands” [not included in total]
July 7, 2006 .....	<i>University of Tennessee</i> (866) 748-1680.	Hacker broke into UT computer containing names, addresses and SSNs of about 36,000 past and current employees. Intruder apparently used computer from Aug. '05 to May '06 to store and transmit movies.	36,000
July 7, 2006 .....	Nat'l Association of Securities Dealers (NASD) (Boca Raton, FL).	Ten laptops were stolen on Feb. 25 '06 from NASD investigators. They included SSNs of securities dealers who were the subject of investigations involving possible misconduct. Inactive account numbers of about 1,000 consumers were also contained on laptops.	73
July 7, 2006 .....	Naval Safety Center .....	SSNs and other personal information of naval and Marine Corps aviators and air crew, both active and reserve, were exposed on Center web site and on 1,100 computer discs mailed to naval commands.	“more than 100,000”

## CHRONOLOGY OF DATA BREACHES—Continued

[Go to Breaches for 2005, 2006, or 2007]

Date made public	Name (Location)	Type of breach	Number of records
July 7, 2006 .....	Montana Public Health and Human Services Dept. (Helena, MT).	A state government computer was stolen from the office of a drug dependency program during a 4th of July break-in. It was not known if sensitive information such as SSNs was compromised.	Unknown.
July 7, 2006 .....	City of Hattiesburg (Hattiesburg, MS).	Video surveillance cameras caught 2 intruders stealing hard drives from 18 computers June 23. Data files contained names, addresses, and SSNs of current and former city employees and registered voters as well as bank account information for employees paid through direct deposit and water system customers who paid bills electronically.	“thousands of city workers and contractors”
July 13, 2006 .....	Moraine Park Technical College (Beaver Dam, Fond du Lac, & West Bend, WI).	Computer disk (CD) with personal information of 1,500 students was reported missing. Information includes names, addresses, phone numbers & SSNs of apprenticeship students back to 1993.	1,500
July 14, 2006 .....	<i>Northwestern Univ.</i> (Evanston, IL) (888-209-0097).	Files containing names and some personal information including SSNs were on 9 desktop computers that had been accessed by unauthorized persons outside the University. The computers were in the Office of Admissions and Financial Aid Office.	“As many as 17,000 individuals’ records” exposed.

## CHRONOLOGY OF DATA BREACHES—Continued

[Go to Breaches for 2005, 2006, or 2007]

Date made public	Name (Location)	Type of breach	Number of records
July 14, 2006 .....	University of Iowa (Davenport, IA).	Laptop computer containing personal information of current and former MBA students was stolen. Data files included SSNs and some contact info.	280
July 14, 2006 (Date of letter sent to students. Date of news story is 8/1/06).	California Polytechnic State University (Cal Poly) (San Luis Obispo, CA) (Call (805) 756-2226 or (805) 756-2171).	Laptop computer was stolen from the home of a physics department professor July 3. It included names and SSNs of physics and astronomy students from 1994-2004.	3,020 students
July 14, 2006 .....	Treasurer's computer in Circuit Court Clerk's office (Hampton, VA).	Public computer in city government building containing taxpayer information was found to display SSNs of many residents—those who paid personal property and real estate taxes. It was shut down and confiscated by the police on July 12th. UPDATE (7/27/2006): Investigation concluded that the data was exposed due to software problem.	“Over 100,000 records” (The number containing SSNs is not known yet and not included in total below.)
July 16, 2006 .....	Mississippi Secretary of State (Jackson, MS).	The state agency's web site listed 2 million+ Uniform Commercial Code (UCC) filings in which thousands of individuals' SSNs were exposed.	Among the 2 million postings are “thousands” containing SSNs (not included in total)
July 17, 2006 .....	Vassar Brothers Medical Center (Poughkeepsie, NY) (845) 483-6990.	Laptop was stolen from the emergency department between June 23-26. It contained information on patients dating back to 2000, including SSNs and dates of birth. UPDATE (10/5/06): Private investigators determined the laptop did not contain personally identifiable patient information.	[257,800 patients were initially notified, but an analysis by Kroll later determined that the laptop contained no personal information. This number is not included in the total below.]

## CHRONOLOGY OF DATA BREACHES—Continued

[Go to Breaches for 2005, 2006, or 2007]

Date made public	Name (Location)	Type of breach	Number of records
July 18, 2006 .....	Nelnet Inc. (Lincoln, NE) (800) 552-7925.	Computer tape containing personal information of student loan customers and parents, mostly from Colorado, was lost when shipped via UPS. The loans were previously serviced by College Access Network.	188,000
July 18, 2006 .....	CS Stars, subsidiary of insurance company Marsh Inc. (Chicago, IL).	On May 9, CS Stars lost track of a personal computer containing records of more than a half million New Yorkers who made claims to a special workers' comp fund. The lost data includes SSNs and date of birth but apparently no medical information. UPDATE (7/26/06): Computer was recovered. UPDATE (04/26/07): The <i>New York Attorney General's office</i> found that CS Stars violated the state's security breach law. CS Stars must pay the Attorney General's office \$60,000 for investigation costs. It was determined that the computer had been stolen by an employee of a cleaning contractor, the missing computer was located and recovered, and that the data on the missing computer had not been improperly accessed.	540,000
July 18, 2006 .....	U.S. Dept. of Agriculture (Wellington, KS).	Laptop computer and printout containing names, addresses and SSNs of 350 employees was stolen from an employee's car and later recovered.	350

## CHRONOLOGY OF DATA BREACHES—Continued

[Go to Breaches for 2005, 2006, or 2007]

Date made public	Name (Location)	Type of breach	Number of records
July 24, 2006 .....	New York City Dept. of Homeless Services.	The personal information of 8,400 homeless persons, including SSNs, was leaked in an e-mail attachment July 21, when accidentally sent to homeless advocates and city officials.	8,400
July 25, 2006 .....	Armstrong World Industries (Lancaster Co., PA).	A laptop containing personal information of current and former employers was stolen. The computer was in the possession of the company's auditor, Deloitte & Touche. Data included names, home addresses, phone numbers, SSNs, employee ID numbers, salary data, and bank account numbers of employees who have their checks directly deposited.	12,000
July 25, 2006 .....	Belhaven College (Jackson, MS).	An employee carrying laptop was robbed at gunpoint on July 19 while walking to his car. Computer contained names and SSNs of college employees.	300 employees
July 25, 2006 .....	Georgetown University Hospital (Washington, DC).	Patient data was exposed online via the computers of an e-prescription provider, InstantDx. Data included names, addresses, SSNs, and dates of birth, but not medical or prescription data. GUH suspended the trial program with InstantDX.	"between 5,600 and 23,000 patients were affected" (23,000 added to total below)
July 25, 2006 .....	Old Mutual Capital Inc., subsidiary of United Kingdom-based financial services firm Old Mutual PLC.	Laptop was stolen sometime in May containing personal information of U.S. clients, including names, addresses, account numbers and some SSNs.	6,500 fund shareholders

## CHRONOLOGY OF DATA BREACHES—Continued

[Go to Breaches for 2005, 2006, or 2007]

Date made public	Name (Location)	Type of breach	Number of records
July 25, 2006 .....	Cablevision Systems Corp. (lost when shipped to Dallas-based ACS).	A tape en route to the company's 401(k) plan record-keeper ACS was lost when shipped by FedEx to Dallas, TX. No customer data was on the tape.	13,700 current and former employees
July 26, 2006 .....	U.S. Navy recruitment offices (Trenton, NJ, and Jersey City, NJ).	Two laptop computers with information on Navy recruiters and applicants were stolen in June and July. Also included was information from selective service and school lists. About 4,000 records contained SSNs. Files were password protected.	31,000 records were stolen, with about 4,000 containing SSNs. The latter number is included in the total below
July 26, 2006 .....	West Virginia Div. of Rehabilitation Services (Beckley, WV).	A laptop was stolen July 24 containing clients' names, addresses, SSNs, and bphone numbers. Data was password protected.	Unknown.
July 27, 2006 .....	Kaiser Permanente Northern Calif. Office (Oakland, CA) (866) 453-3934.	A laptop was stolen containing names, phone numbers, and the Kaiser number for each HMO member. The data file did not include SSNs. The data was being used to market Hearing Aid Services to Health Plan members.	160,000 records. Because the data file did not include SSNs, this number is not added to the total below
July 27, 2006 .....	Los Angeles County (Los Angeles, CA).	In May, a laptop was stolen from the home of a community and senior services employee. It contained information on LA County employees.	Unknown.
July 27, 2006 .....	Los Angeles Co., Community Development Commission (CDC) (Monterey Park, CA).	Earlier in July, a computer hacker located in Germany gained access to the CDC's computer system, containing personal information on 4,800 public housing residents.	4,800 records. Because it is not clear if SSNs were included, this number is not added to the total below

[Go to Breaches for 2005, 2006, or 2007]

Date made public	Name (Location)	Type of breach	Number of records
Dec. 14, 2006 .....	Electronic Registry Systems affecting Emory University (Emory Hospital, Emory Crawford Long Hospital, Grady Memorial Hospital), Geisinger Health System (Pennsylvania), Williamson Medical Center (Nashville, TN).	On Nov. 23, 2006, two computers (one desktop, one laptop) were stolen from Electronic Registry Systems, a business contractor in suburban Springdale, OH, that provides cancer patient registry data processing services. It contained the personal information (name, date of birth, Social Security number, address, medical record number, medical data and treatment information) of cancer patients from hospitals in Pennsylvania, Tennessee, Ohio and Georgia, dating back to 1977 at some hospitals.	More than 63,000 patients.
Dec. 14, 2006 .....	Riverside High School (Durham, NC).	UPDATE (1/14/07): The number of affected patients was increased from 25,000 to 63,000. Two students discovered a breach in the security of a Durham Public Schools computer as part of a class assignment. They reported to school officials that they were able to access a database containing SSNs and other personal information of thousands of school employees. The home of one student was searched by Sheriff's deputies and the family computer was seized.	"thousands of school employees".

Date made public	Name (Location)	Type of breach	Number of records
Dec. 20, 2006 .....	Lake County residents, plus Major League Baseball players (Northbrook, IL).	A Chicago man apparently removed documents from a trash bin outside SFX Baseball Inc., a sports agency that deals with Major League Baseball. He used information found on those documents to commit identity theft on at least 27 Lake County residents. Information found during a search of the thief's home included SSNs, birthdates, canceled paychecks, obituaries, and infant death records.	27 residents of Lake County plus about 90 current and retired Major League Baseball players for a total of 117 individuals.
Dec. 20, 2006 .....	Deb Shops, Inc. (Philadelphia, PA) (800) 460-9704.	A hacker illegally accessed company Web pages and a related data base used for Internet-based purchases. The intruder may have accessed customers' credit card information including names on cards and credit card numbers.	Unknown.
Dec. 21, 2006 .....	Santa Clara County employment agency (Santa Clara County, CA).	A computer stolen from the agency holds the SSNs of approximately 2,500 individuals.	2,500
Dec. 22, 2006 .....	Texas Woman's University (Dallas, Denton, and Houston, TX).	A document containing names, addresses and SSNs of 15,000 TWU students was transmitted over a non-secure connection.	15,000 students.
Dec. 27, 2006 .....	Montana State University (Bozeman, MT).	A student working in the loan office mistakenly sent packets containing lists of student names, Social Security numbers, and loan information to other students.	259 students.

[Go to Breaches for 2005, 2006, or 2007]

Date made public	Name (Location)	Type of breach	Number of records
Jan. 16, 2007 .....	University of New Mexico (Albuquerque, NM).	At least 3 computers and 4 monitors were stolen from the associate provost's office overnight between Jan. 2 and 3. They may have included faculty members' names and SSNs.	Unknown.
Jan. 17, 2007 .....	TJ stores (TJX), including TJMaxx, Marshalls, Winners, HomeSense, AJWright, TKMaxx, and possibly Bob's Stores in U.S. & Puerto Rico—Winners and HomeGoods stores in Canada—and possibly TKMaxx stores in UK and Ireland (Framingham, Mass.) U.S.: Call (866) 484-6978 Canada: (866) 903-1408 U.K. & Ireland: 0800 77 90 15 <a href="http://www.tjx.com">www.tjx.com</a> .	The TJX Companies Inc. experienced an "unauthorized intrusion" into its computer systems that process and store customer transactions including credit card, debit card, check, and merchandise return transactions. It discovered the intrusion mid-December 2006. Transaction data from 2003 as well as mid-May through December 2006 may have been accessed. According to its Web site, TJX is "the leading off-price retailer of apparel and home fashions in the U.S. and worldwide."  UPDATE (2/22/07): TJX said that while it first thought the intrusion took place from May 2006 to January 2007, it now thinks its computer system was also hacked in July 2005 and on "various subsequent dates" that year.	45,700,000 credit and debit card account numbers. 455,000 merchandise return records containing customer names and driver's license numbers.

## CHRONOLOGY OF DATA BREACHES—Continued

[Go to Breaches for 2005, 2006, or 2007]

Date made public	Name (Location)	Type of breach	Number of records
		<p>UPDATE (3/21/07): Information stolen from TJX's systems was being used fraudulently in November 2006 in an \$8 million gift card scheme, one month before TJX officials said they learned of the breach, according to Florida law enforcement officials.</p>	
		<p>UPDATE (3/29/07): The company reported in its SEC filing that 45.7 million credit and debit card numbers were hacked, along with 455,000 merchandise return records containing customers' driver's license numbers, Military ID numbers or Social Security numbers.</p>	
		<p>UPDATE (4/22/07): Initially, TJX said the break-in started seven months before it was discovered. Then, on Feb. 18, the company noted the perpetrators had access to data for 17 months, and apparently began in July 2005.</p>	
		<p>UPDATE (04/26/07): Three states' banking associations (MA, CT, and ME) filed a class action lawsuit against TJX to recover the costs of damages totaling "tens of millions of dollars" incurred for replacing customers' debit and credit cards.</p>	

## CHRONOLOGY OF DATA BREACHES—Continued
