

authority of the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 *et seq.*) and the regulations governing the taking, importing, and exporting of endangered and threatened species (50 CFR 222–226).

The applicant requests a five-year permit to study green, hawksbill, and loggerhead sea turtles at Buck Island Reef National Monument, U.S. Virgin Islands. The purposes of the research are to determine species-specific habitat-use patterns over time, increase understanding of genetic stock structure, and estimate vital rates and local population abundance. The applicant would capture 160 green turtles each year. All would be subject to counts, epibiota removal, lavage, temporary carapace marking, flipper and passive integrated transponder tagging, measure, photograph, (potential) recapture, blood sampling, fecal sampling, tissue biopsy, and weighing. Of the 160, 20 also would be tagged with satellite tags and data loggers (epoxy attachments) and acoustic transmitters (epoxy or drill carapace and attach with wire). All 20 would not necessarily be subject to all three tag types, but no more than 20 would have any type of tag attached. Hawksbill takes would be for the same activities, but a total of 180 would be captured annually, with 30 of those subject to a combination of tags. Fifteen loggerheads would be captured per year, and all would be subject to all of the activities.
