

Background

Recovery of endangered or threatened animals and plants to the point where they are again secure, self-sustaining members of their ecosystems is a primary goal of our endangered species program and the Endangered Species Act of 1973, as amended (Act; 16 U.S.C. 1531 *et seq.*). Recovery means improvement of the status of listed species to the point at which listing is no longer appropriate under the criteria specified in section 4(a)(1) of the Act. The Act requires the development of recovery plans for listed species, unless such a plan would not promote the conservation of a particular species.

We listed Santa Ana sucker (*Catostomus santaanae*) throughout its entire range on April 12, 2000 (71 FR 19686). The species is endemic to the Los Angeles, San Gabriel, and Santa Ana River Basins in southern California. Santa Ana sucker is a small, short-lived member of the sucker family of fishes (Catostomidae), named so primarily because of the downward orientation and anatomy of its mouth parts, which allow it to consume algae, small invertebrates, and other organic matter with its fleshy, protrusible (extendable) lips.

The primary threat to Santa Ana sucker is ongoing, rangewide hydrological modifications, which lead to degradation and loss of habitat. Additionally, isolation by impassable barriers or unsuitable habitat limits gene flow within the watersheds, thus increasing the vulnerability of small occurrences to a range of stochastic (random) factors.

Recovery Plan Goals

The purpose of a recovery plan is to provide a framework for the recovery of species so that protection under the Act is no longer necessary. A recovery plan includes scientific information about the species and provides criteria that enable us to gauge whether downlisting or delisting the species is warranted. Furthermore, recovery plans help guide our recovery efforts by describing actions we consider necessary for each species' conservation and by estimating time and costs for implementing needed recovery measures.

The ultimate goal of this recovery plan is to recover Santa Ana sucker so that it can be delisted. To meet the recovery goal, the following objectives have been identified:

(1) Develop and implement a rangewide monitoring protocol to accurately and consistently document populations, occupied habitat, and threats.

(2) Conduct research projects specifically designed to inform management actions and recovery.

(3) Increase the abundance and develop a more even distribution of Santa Ana sucker within its current range by reducing threats to the species and its habitat.

(4) Expand the range of the Santa Ana sucker by restoring habitat (if needed), and reestablishing occurrences within its historical range.

As the Santa Ana sucker meets reclassification and recovery criteria, we will review its status and consider it for removal from the Federal List of Endangered and Threatened Wildlife.
