Overview of this information collection:

(1) *Type of Information Collection:* New collection under activities related to the National Crime Victimization Survey Redesign Research (NCVS-RR) program: NCVS Subnational Companion Study—American Crime Survey Field Test.

(2) *The Title of the Form/Collection:* American Crime Survey (ACS).

(3) *The agency form number, if any, and the applicable component of the Department sponsoring the collection:* The form number for the questionnaire is ASC1 and ASC2. The applicable component within the Department of Justice is the Bureau of Justice Statistics, in the Office of Justice Programs.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:* Adults ages 18 or older in 40 largest Core Based Statistical Areas (CBSAs) in the United States, as measured by the number of households. Since 2008, BJS has initiated numerous research projects to assess and improve upon the core NCVS methodology. The purpose the Companion Survey Field Test will be to test a low-cost alternative self-administered survey for collecting information about violence and property crime to generate subnational, local level estimates of victimization. The goal of this test is to generate a survey that could parallel National Crime Victimization Survey (NCVS) and Uniform Crime Report (UCR) estimates over time, rather than replicate either of them, and could be used to assess whether local initiatives are correlated with changes in crime rates. A secondary goal is to assess change over time, as the Field Test will be administered over two years, with a cross-sectional address-based sample survey in 2015 and a second address-based sample survey 2016. The rationale for collecting data in two years is that we are able to assess the ability of the instruments to detect change over time.

An additional feature of the surveys being tested is the inclusion of a set of questions on perceptions of neighborhood safety, fear of crime, and police effectiveness, which would allow the survey to be used to assess changes in these perceptions as well. This information is not currently available from the NCVS.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* Over the two year period approximately 200,400 households are expected to complete the survey. The sample is divided into two groups by instrument version: ASC1 person-level survey and ASC2 incident-level survey. Over the two waves, for both versions, approximately 25% of households interviewed in year 1 will be re-interviewed in year 2.

- The first group of 100,200 households will receive the ASC1, a person-level survey to measure prevalence or the number of adult household members victimized by one or more types of violent crime and the number of households victimized by types of property crime. The expected burden placed on these respondents is 12 minutes per respondent for a total of 20,040 burden hours for both years.

- The second group of 100,200 households will receive the ASC2, an incident-level survey to measure the number of victimization incidents experienced by all adult household members. The expected burden placed on these respondents is 12.5 minutes for a total of 17,535 burden hours.

(6) *An estimate of the total public burden (in hours) associated with the collection:* The total respondent burden is approximately 37,575 hours.
