**History and Description of the Remains**

Sometime during the 1920s and 1930s, human remains representing, at minimum, one individual, were removed from private property on CA-SAC-157 (also known as Wamser Mound), located on the south bank of the American River near River Bend Park of Rancho Cordova in north-central Sacramento County, CA. The human remains were in the possession of Anthony Zallio, a private collector, who posthumously donated his collection in 1951 to the Department of Anthropology at Sacramento State College, CA (now California State University, Sacramento). No known individuals were identified. No associated funerary objects are present.

Archeological data from the site indicates occupation occurred during the Middle and Late Horizons. Additional archeological data suggests

occupation may have lasted into an unknown time during the Historic period.

Sometime during the 1920s and 1930s, human remains representing, at minimum, six individuals, were removed from CA-YOL-013 (also known as the Mustang site), located on the south bank of the Sacramento River at the confluence of the Sacramento River, Feather River, and Sacramento Slough in west-central Yolo County, CA. The human remains were in the possession of Anthony Zallio, a private collector, who posthumously donated his collection in 1951 to the Department of Anthropology at Sacramento State College, CA (now California State University, Sacramento). No known individuals were identified. No associated funerary objects are present.

Archeological data indicates occupation of the site occurring as early as Phase 1 of the Late Horizon, lasting until an unknown time during the historic period. Ethnographic evidence suggest that CA-YOL-013 may be the site of a large historic Nisenan Village known as *Hol'-lo-wi* or a close association thereof.

Archeological evidence indicates that the lower Sacramento Valley and Delta regions were continuously occupied since at least the Early Horizon (5550-550 B.C.). Cultural changes indicated by artifact typologies and burial patterns, historical linguistic evidence, and biological evidence reveal that the populations in the region were not static, with both *in situ* cultural changes and migrations of outside populations into the area. Linguistic evidence suggests that ancestral-Penutian speaking groups related to modern day Miwok, Nisenan, and Patwin groups occupied the region during the Middle (550 B.C.-A.D. 1100) and Late (A.D. 1100-Historic) Horizons, with some admixing between these groups and Hokan-speaking groups that occupied the region at an earlier date. The genetic data suggests that the Penutians may have arrived later than suggested by the linguistics.

Geographical data from ethnohistoric and ethnographic sources indicate that the site was most likely occupied by Nisenan-speaking groups at the beginning of the historic period, while Patwin-speakers occupied the valley west of the Sacramento River and Miwok-speakers resided south of the American River. Ethnographic data and expert testimony from Tribes support the high level of interaction between groups in the lower Sacramento Valley and Delta regions that crosscut linguistic boundaries. Historic population movements resulted in an

increased level of shifting among populations, especially among populations who were impacted by disease, violence, and Euro-American activities relating to Sutter's Fort and later gold-rush activities.

In summary, the ethnographic, historical, and geographical evidence available indicate that the burials listed above are most closely affiliated with contemporary descendants of the Nisenan with more distant ties to neighboring groups, such as Miwok, Patwin, and Yokut. The earlier remains from the Middle and Late Horizons share cultural relations with the Plains Miwok, Nisenan, and Yokut based on archeological, biological, and historical linguistic evidence.
