FOR FURTHER INFORMATION CONTACT: Ron Dean or Lisa Manning, (301) 427-8403.

SUPPLEMENTARY INFORMATION: Section 9 of the ESA and Federal regulations prohibit the 'taking' of a species listed as endangered or threatened. The ESA defines "take" to mean harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct. NMFS may issue permits, under limited circumstances to take listed species incidental to, and not the purpose of, otherwise lawful activities. Section 10(a)(1)(B) of the ESA provides for authorizing incidental take of listed species. NMFS regulations governing permits for threatened and endangered species are promulgated at 50 CFR 222.307.

Background

Pursuant to the ESA, GSML has submitted an application to NMFS for the incidental take of ESA-listed adult and juvenile sea turtles associated with otherwise lawful trawling activities in Florida state waters of Bay, Gulf, Franklin, and Wakulla Counties to harvest marine organisms for the purpose of supplying entities conducting scientific research and

educational activities. The species identified in the application were: Loggerhead (*Caretta caretta* Northwest Atlantic Ocean Distinct Population Segment), green (*Chelonia mydas* North Atlantic Distinct Population Segment), and Kemp's ridley (*Lepidochelys kempii*) sea turtles.

NMFS received a draft permit application from GSML on February 4, 2016. Based on our review of the application, we requested further information and clarification. On July 22, 2016, GSML submitted supplemental information to its application. NMFS and GSML held further discussions on amount and extent of anticipated takes and clarifications of gear type to be used. During these discussions, NMFS determined that leatherback sea turtles (*Dermochelys coriacea*) and Gulf sturgeon (*Acipenser oxyrinchus desotoi*) also occur in the action area specified in the permit application. Thus, NMFS included these species in its analysis of the permit application. On March 16, 2017, NMFS notified GSML of this approach, and GSML confirmed the updated approach on March 21, 2017.

The duration of the proposed permit is 18 years. GSML uses small trawls (under 500 square feet) without Turtle Excluder Devices (TEDs) and trawl times are less than thirty minutes in duration. Turtle Excluder Devices often expel the desired stingrays, electric rays, horseshoe crabs and other benthic invertebrates and fish that are required for the laboratory's ongoing operations, and are not practical in the collection of these specimens.

A take of one turtle and one gulf sturgeon every three years is anticipated, given the nature of the activities and the location of the species in the area where the activities will occur. No mortalities or injury are expected should this take occur. As data are gathered through monitoring, NMFS will amend the permit to reflect any changes in the take estimate, if appropriate.

Conservation Plan

Section 10 of the ESA specifies that no permit may be issued unless an applicant submits an adequate conservation plan. The conservation plan prepared by GSML describes measures designed to minimize and mitigate the impacts of any incidental takes of ESA-listed sea turtles. It includes provisions to ensure that any captured sea turtles in need of resuscitation are provided such care, per NMFS guidelines. Additionally, any animals needing medical attention or
