

DEPARTMENT OF COMMERCE**National Oceanic and Atmospheric Administration****50 CFR Part 648**

[Docket No. 151211999–6343–02]

RIN 0648–XF467

Fisheries of the Northeastern United States; Northeast Multispecies Fishery; American Plaice Trimester Total Allowable Catch Area Closure for the Common Pool Fishery

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; area closure.

SUMMARY: This action closes the American Plaice Trimester Total Allowable Catch Area to Northeast multispecies common pool vessels fishing with trawl gear for the remainder of Trimester 1, through August 31, 2017. The closure is required by regulation because the common pool fishery has caught 90 percent of its Trimester 1 quota for American plaice. This closure is intended to prevent an overage of the common pool's quota for this stock.

DATES: This action is effective May 24, 2017, through August 31, 2017.

FOR FURTHER INFORMATION CONTACT: Reid Lichwell, Fishery Management Specialist, (978) 281–9112.

SUPPLEMENTARY INFORMATION: Federal regulations at § 648.82(n)(2)(ii) require the Regional Administrator to close a common pool Trimester Total Allowable Catch (TAC) Area for a stock when 90 percent of the Trimester TAC is projected to be caught. The closure applies to all common pool vessels fishing with gear capable of catching that stock for the remainder of the trimester.

As of May 21, 2017, the common pool fishery caught approximately 90 percent of the Trimester 1 TAC (5.2 mt) for American plaice. Effective May 24, 2017, the American plaice Trimester TAC Area is closed for the remainder of Trimester 1, through August 31, 2017, to all common pool vessels on a Northeast multispecies day-at-sea fishing with trawl gear. The American Plaice Trimester TAC Area consists of statistical areas 512, 513, 514, 515, 521, 522, and 525. The area reopens at the beginning of Trimester 2 on September 1, 2017.

If a vessel declared its trip through the Vessel Monitoring System (VMS) or the interactive voice response system, and crossed the VMS demarcation line prior to May 24, 2017, it may complete its trip within the Trimester TAC Area.

Any overage of the Trimester 1 or 2 TACs must be deducted from the Trimester 3 TAC. If the common pool fishery exceeds its total quota for a stock in the 2017 fishing year, the overage must be deducted from the common pool's quota for that stock for fishing year 2018. Any uncaught portion of the Trimester 1 and Trimester 2 TACs is carried over into the next trimester. However, any uncaught portion of the common pool's total annual quota may not be carried over into the following fishing year.

Weekly quota monitoring reports for the common pool fishery are on our Web site at: <http://www.greateratlantic.fisheries.noaa.gov/ro/fso/MultiMonReports.htm>. We will continue to monitor common pool catch through vessel trip reports, dealer-reported landings, VMS catch reports, and other available information and, if necessary, we will make additional adjustments to common pool management measures.

Classification

This action is required by 50 CFR part 648 and is exempt from review under Executive Order 12866.

The Assistant Administrator for Fisheries, NOAA, finds good cause pursuant to 5 U.S.C. 553(b)(B) and 5 U.S.C. 553(d)(3) to waive prior notice and the opportunity for public comment and the 30-day delayed effectiveness period because it would be impracticable and contrary to the public interest.

The regulations require the Regional Administrator to close a trimester TAC area to the common pool fishery when 90 percent of the Trimester TAC for a stock has been caught. Updated catch information only recently became available indicating that the common pool fishery has caught 90 percent of its Trimester 1 TAC for American plaice as of May 21, 2017, and 100 percent of the TAC will likely be caught by May 23. The time necessary to provide for prior notice and comment, and a 30-day delay in effectiveness, would prevent the immediate closure of the American Plaice Trimester 1 TAC Area. This increases the likelihood that the common pool fishery will exceed its annual quota of American plaice to the detriment of this stock, which could undermine management objectives of the Northeast Multispecies Fishery Management Plan. Additionally, an overage of the trimester or annual common pool quotas could cause negative economic impacts to the common pool fishery as a result of overage paybacks deducted from a future trimester or fishing year.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: May 24, 2017.

Margo B. Schulze-Haugen,

Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.
