

FEDERAL REGISTER

Vol. 86

Thursday

No. 248

December 30, 2021

Pages 74353–74532

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097-6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see www.federalregister.gov.

The seal of the National Archives and Records Administration authenticates the **Federal Register** as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at www.govinfo.gov, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, gpocusthelp.com.

The annual subscription price for the **Federal Register** paper edition is \$860 plus postage, or \$929, for a combined **Federal Register**, **Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is \$330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register**, including postage, is based on the number of pages: \$11 for an issue containing less than 200 pages; \$22 for an issue containing 200 to 400 pages; and \$33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for \$3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see bookstore.gpo.gov.

There are no restrictions on the republication of material appearing in the **Federal Register**.

How To Cite This Publication: Use the volume number and the page number. Example: 86 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Rules and Regulations

Federal Register

Vol. 86, No. 248

Thursday, December 30, 2021

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA-2021-1165; Project Identifier MCAI-2021-01414-R; Amendment 39-21893; AD 2022-01-05]

RIN 2120-AA64

Airworthiness Directives; Airbus Helicopters

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule; request for comments.

SUMMARY: The FAA is superseding airworthiness directive (AD) 2021-24-06, which applied to certain Airbus Helicopters Model EC130T2 helicopters. AD 2021-24-06 required repetitive visual inspections of the rivets on the rear transmission shaft bearing support and of the local structure for cracking and missing, loose, or sheared rivets and accomplishment of applicable corrective actions. This AD retains those requirements and adds repetitive visual inspections of the rivet heads on the left-hand and right-hand sides of the rear transmission shaft bearing support, revises a corrective action, and adds a reporting requirement, as specified in a European Union Aviation Safety Agency (EASA) AD, which is incorporated by reference. This AD also revises the special flight permit limitation from AD 2021-24-06. This AD was prompted by an additional report of loose rivet heads on the outside face of the tail boom corner support. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD becomes effective January 14, 2022.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of January 14, 2022.

The FAA must receive comments on this AD by February 14, 2022.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to <https://www.regulations.gov>. Follow the instructions for submitting comments.

- *Fax:* (202) 493-2251.

- *Mail:* U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE, Washington, DC 20590.

- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For EASA material incorporated by reference (IBR) in this final rule, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email ADs@easa.europa.eu; Internet www.easa.europa.eu. You may find this IBR material on the EASA website at <https://ad.easa.europa.eu>. For Airbus Helicopters service information identified in this final rule, contact Airbus Helicopters, 2701 North Forum Drive, Grand Prairie, TX 75052; telephone (972) 641-0000 or (800) 232-0323; fax (972) 641-3775; or at <https://www.airbus.com/helicopters/services/technical-support.html>. You may view this material at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy., Room 6N-321, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call (817) 222-5110. Service information that is IBRed is also available in the AD docket at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2021-1165.

Examining the AD Docket

You may examine the AD docket at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2021-1165; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the EASA AD, any comments received, and other information. The street address for Docket Operations is listed above.

FOR FURTHER INFORMATION CONTACT:

Andrea Jimenez, Aerospace Engineer, COS Program Management Section, Operational Safety Branch, Compliance & Airworthiness Division, FAA, 1600

Stewart Ave., Suite 410, Westbury, NY 11590; telephone (516) 228-7330; email andrea.jimenez@faa.gov.

SUPPLEMENTARY INFORMATION:

Background

The FAA issued AD 2021-24-06, Amendment 39-21827 (86 FR 66934, November 24, 2021) (AD 2021-24-06), for certain Airbus Helicopters Model EC130T2 helicopters. AD 2021-24-06 required repetitive visual inspections of the rivets on the rear transmission shaft bearing support and of the local structure for cracking and missing, loose, or sheared rivets and accomplishment of applicable corrective actions. AD 2021-24-06 was prompted by EASA Emergency AD 2021-0235-E, dated October 28, 2021 (EASA AD 2021-0235-E), issued by EASA, which is the Technical Agent for the Member States of the European Union, to correct an unsafe condition for Airbus Helicopters (formerly Eurocopter) Model EC 130 T2 helicopters, all serial numbers, on which Airbus Helicopters Modification 074581 had been embodied in production. EASA advised of a report of degradation of the rear transmission shaft bearing support on a Model EC 130 T2 helicopter and the determination that all of the attachment rivets of the transmission shaft bearing support were sheared. EASA also advised that the investigation was ongoing to identify the root cause of this degradation. This condition, if not addressed, could lead to failure of the tail rotor drive shaft and subsequent loss of yaw control of the helicopter.

Actions Since AD 2021-24-06 was Issued

Since the FAA issued AD 2021-24-06, EASA has issued EASA Emergency AD 2021-0283-E, dated December 17, 2021 (EASA AD 2021-0283-E), to supersede EASA AD 2021-0235-E. EASA advises of an additional report of loose rivet heads on the outside face of the tail boom corner support. Accordingly, EASA AD 2021-0283-E retains the requirements of EASA AD 2021-0235-E and also requires repetitive visual inspections of the rivet heads on the left-hand and right-hand sides of the rear transmission shaft bearing support, revises a corrective action, and adds a reporting requirement. EASA considers its AD an interim action and states that further AD

action may follow. See EASA AD 2021–0283–E for additional background information.

The FAA has also determined to revise the special flight permit limitation from AD 2021–24–06. This new AD limits special flight permits to the inspections required before the “each first flight of the day” compliance time with no passengers on board. Special flight permits are prohibited for any other actions required by this AD.

Related Service Information Under 1 CFR Part 51

EASA AD 2021–0283–E requires repetitive visual inspections of the rivets on the rear transmission upper and lower bearing support, the local structure, and the rivet heads on the left-hand and right-hand sides of the rear transmission shaft bearing support. Depending on the results, EASA AD 2021–0283–E requires contacting Airbus Helicopters to obtain approved repair instructions and accomplishing those instructions, or replacing each affected rivet. EASA AD 2021–0283–E also requires reporting inspection findings to Airbus Helicopters.

This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Other Related Service Information

The FAA also reviewed Airbus Helicopters Emergency Alert Service Bulletin (EASB) No. 05A039, Revision 0, dated October 27, 2021, and EASB No. 05A039, Revision 1, dated December 16, 2021 (EASB 05A039 Rev 1). This service information specifies procedures for repetitive visual inspections of the rear transmission bearing support areas, including the frame and skin in the area of the bearing supports. EASB 05A039 Rev 1 adds repetitive visual inspections of the rivets heads on the left-hand and right-hand sides of the rear transmission shaft bearing support located under the Teflon tape on the tail boom.

FAA’s Determination

These helicopters have been approved by EASA and are approved for operation in the United States. Pursuant to the FAA’s bilateral agreement with the European Union, EASA has notified the FAA of the unsafe condition described in its AD. The FAA is issuing this AD after evaluating all pertinent information and determining that the unsafe condition exists and is likely to exist or develop on other helicopters of the same type design.

Requirements of This AD

This AD requires accomplishing the actions specified in EASA AD 2021–0283–E, described previously, as IBRed, except for any differences identified as exceptions in the regulatory text of this AD and except as discussed under “Differences Between this AD and the EASA AD.”

Explanation of Required Compliance Information

In the FAA’s ongoing efforts to improve the efficiency of the AD process, the FAA developed a process to use some civil aviation authority (CAA) ADs as the primary source of information for compliance with requirements for corresponding FAA ADs. The FAA has been coordinating this process with manufacturers and CAAs. As a result, EASA AD 2021–0283–E will be IBRed in this FAA final rule. This AD would, therefore, require compliance with EASA AD 2021–0283–E in its entirety through that incorporation, except for any differences identified as exceptions in the regulatory text of this AD. Using common terms that are the same as the heading of a particular section in EASA AD 2021–0283–E does not mean that operators need comply only with that section. For example, where the AD requirement refers to “all required actions and compliance times,” compliance with this AD requirement is not limited to the section titled “Required Action(s) and Compliance Time(s)” in EASA AD 2021–0283–E. Service information referenced in EASA AD 2021–0283–E for compliance will be available at <https://www.regulations.gov> by searching for and locating Docket No. FAA–2021–1165.

Differences Between This AD and the EASA AD

EASA AD 2021–0283–E requires inspections after each last flight of the day (ALF), whereas this AD requires accomplishing those inspections before each first flight of the day. EASA AD 2021–0283–E specifies that certain inspections can be done by a mechanical technician, a pilot with correct training and accreditation, or a pilot-owner, whereas this AD requires those inspections be done by a qualified mechanic. Depending on certain inspection results, EASA AD 2021–0283–E specifies contacting Airbus Helicopters to obtain approved repair instructions and accomplishing those instructions, whereas this AD requires repair done in accordance with a method approved by the Manager, General Aviation & Rotorcraft Section,

International Validation Branch, FAA; or EASA; or Airbus Helicopters” EASA Design Organization Approval (DOA). EASA AD 2021–0283–E requires reporting certain information to Airbus Helicopters within 30 days after each rivet replacement, whereas this AD requires reporting that information within 10 days after each rivet replacement.

Interim Action

The FAA considers this AD interim action. If final action is later identified, the FAA might consider further rulemaking then.

Justification for Immediate Adoption and Determination of the Effective Date

Section 553(b)(3)(B) of the Administrative Procedure Act (APA) (5 U.S.C. 551 *et seq.*) authorizes agencies to dispense with notice and comment procedures for rules when the agency, for “good cause,” finds that those procedures are “impracticable, unnecessary, or contrary to the public interest.” Under this section, an agency, upon finding good cause, may issue a final rule without providing notice and seeking comment prior to issuance. Further, section 553(d) of the APA authorizes agencies to make rules effective in less than thirty days, upon a finding of good cause.

An unsafe condition exists that requires the immediate adoption of this AD without providing an opportunity for public comments prior to adoption. The FAA has found that the risk to the flying public justifies foregoing notice and comment prior to adoption of this rule because sheared attachment rivets of the transmission shaft bearing support could lead to failure of the tail rotor drive shaft and subsequent loss of yaw control of the helicopter. In addition, the compliance time for the required actions are shorter than the time necessary for the public to comment and for publication of the final rule. Inspections of the rivets on the rear transmission shaft bearing support and of the local structure must be continued from AD 2021–24–06 before each first flight of the day and the initial inspection of the rivet heads must be accomplished within 10 hours time-in-service or seven days after the effective date of this AD, whichever occurs first. Accordingly, notice and opportunity for prior public comment are impracticable and contrary to the public interest pursuant to 5 U.S.C. 553(b)(3)(B).

In addition, the FAA finds that good cause exists pursuant to 5 U.S.C. 553(d) for making this amendment effective in less than 30 days, for the same reasons

the FAA found good cause to forego notice and comment.

Comments Invited

The FAA invites you to send any written data, views, or arguments about this final rule. Send your comments to an address listed under **ADDRESSES**. Include “Docket No. FAA–2021–1165; Project Identifier MCAI–2021–01414–R” at the beginning of your comments. The most helpful comments reference a specific portion of the final rule, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this final rule because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to <https://www.regulations.gov>, including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this final rule.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this AD contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this AD, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as “PROPIN.” The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this AD. Submissions containing CBI should be sent to Andrea Jimenez, Aerospace Engineer, COS Program Management Section, Operational Safety Branch, Compliance & Airworthiness Division, FAA, 1600 Stewart Ave., Suite 410, Westbury, NY 11590; telephone (516) 228–7330; email andrea.jimenez@faa.gov. Any commentary that the FAA receives that is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Regulatory Flexibility Act

The requirements of the Regulatory Flexibility Act (RFA) do not apply when an agency finds good cause pursuant to 5 U.S.C. 553 to adopt a rule without

prior notice and comment. Because the FAA has determined that it has good cause to adopt this rule without prior notice and comment, RFA analysis is not required.

Costs of Compliance

The FAA estimates that this AD affects up to 64 helicopters of U.S. Registry. Labor rates are estimated at \$85 per work-hour. Based on these numbers, the FAA estimates the following costs to comply with this AD.

Inspecting the rivets and local structure takes about 0.5 work-hour for an estimated cost of about \$43 per helicopter and up to \$2,752 for the U.S. fleet, per inspection cycle. Removing the Teflon tape and inspecting the rivet heads takes about 0.5 work-hour for an estimated cost of about \$43 per helicopter and up to \$2,752 for the U.S. fleet, per inspection cycle.

Replacing a rivet takes about 0.5 work-hour and parts cost up to \$20 for an estimated cost of up to \$63 per rivet. The FAA has received no definitive data on which to base the cost estimates for other on-condition repairs specified in this AD. Reporting information takes about 1 work-hour for an estimated cost of \$85 per instance.

Paperwork Reduction Act

A federal agency may not conduct or sponsor, and a person is not required to respond to, nor shall a person be subject to penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a currently valid OMB Control Number. The OMB Control Number for this information collection is 2120–0056. Public reporting for this collection of information is estimated to be approximately 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. All responses to this collection of information are mandatory. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to: Information Collection Clearance Officer, Federal Aviation Administration, 10101 Hillwood Parkway, Fort Worth, TX 76177–1524.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of

the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency’s authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed, I certify that this AD:

- (1) Is not a “significant regulatory action” under Executive Order 12866, and
- (2) Will not affect intrastate aviation in Alaska.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

- 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

- 2. The FAA amends § 39.13 by:
 - a. Removing Airworthiness Directive 2021–24–06, Amendment 39–21827 (86 FR 66934, November 24, 2021); and
 - b. Adding the following new airworthiness directive:

2022–01–05 Airbus Helicopters: Amendment 39–21893; Docket No. FAA–2021–1165; Project Identifier MCAI–2021–01414–R.

(a) Effective Date

This airworthiness directive (AD) is effective January 14, 2022.

(b) Affected ADs

This AD replaces AD 2021–24–06, Amendment 39–21827 (86 FR 66934, November 24, 2021) (AD 2021–24–06).

(c) Applicability

This AD applies to Airbus Helicopters Model EC130T2 helicopters, certificated in any category, as identified in European Union Aviation Safety Agency (EASA) Emergency AD 2021–0283–E, dated December 17, 2021 (EASA AD 2021–0283–E).

(d) Subject

Joint Aircraft System Component (JASC) Code: 5300, Fuselage Structure.

(e) Unsafe Condition

This AD was prompted by a report of degradation of the rear transmission shaft bearing support and the determination that all of the attachment rivets of the transmission shaft bearing support were sheared. The FAA is issuing this AD to address sheared attachment rivets of the transmission shaft bearing support. This condition, if not addressed, could lead to failure of the tail rotor drive shaft and subsequent loss of yaw control of the helicopter.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraph (h) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, EASA AD 2021–0283–E.

(h) Exceptions to EASA AD 2021–0283–E

(1) Where EASA AD 2021–0283–E refers to November 1, 2021 (the effective date of EASA Emergency AD 2021–0235–E, dated October 28, 2021), this AD requires using December 9, 2021 (the effective date of AD 2021–24–06).

(2) Where EASA AD 2021–0283–E refers to its effective date, this AD requires using the effective date of this AD.

(3) Where EASA AD 2021–0283–E requires compliance in terms of flight hours, this AD requires using hours time-in-service.

(4) Where paragraphs (1) and (2) of EASA AD 2021–0283–E require accomplishing inspections after each last flight of the day or “ALF,” this AD requires accomplishing those inspections before each first flight of the day.

(5) Where the service information referenced in EASA AD 2021–0283–E specifies that certain inspections can be done by a mechanical technician, a pilot with correct training and accreditation, or a pilot-owner, this AD requires that those inspections be done by a qualified mechanic.

(6) Where paragraphs (3) and (4) of EASA AD 2021–0283–E specify contacting Airbus Helicopters to obtain approved repair instructions and accomplishing those instructions, this AD requires repair done in accordance with a method approved by the Manager, General Aviation & Rotorcraft Section, International Validation Branch, FAA; or EASA; or Airbus Helicopters’ EASA Design Organization Approval (DOA). If

approved by the DOA, the approval must include the DOA-authorized signature.

(7) Where paragraph (6) of EASA AD 2021–0283–E requires reporting inspection results to Airbus Helicopters within 30 days after each rivet replacement, this AD requires reporting inspection results at the applicable time in paragraph (h)(7)(i) or (ii) of this AD.

(i) If the inspection was done on or after the effective date of this AD: Submit the report within 10 days after each rivet replacement.

(ii) If the inspection was done before the effective date of this AD: Submit the report within 10 days after the effective date of this AD.

(8) This AD does not mandate compliance with the “Remarks” section of EASA AD 2021–0283–E.

(i) Special Flight Permit

Special flight permits may be permitted to accomplish the actions required by paragraphs (1) and (2) of EASA AD 2021–0283–E for the before each first flight of the day compliance time only, provided that there are no passengers on board. Special flight permits are prohibited for any other actions required by this AD.

(j) Alternative Methods of Compliance (AMOCs)

(1) The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the International Validation Branch, send it to the attention of the person identified in paragraph (k) of this AD. Information may be emailed to: 9-AVS-AIR-730-AMOC@faa.gov.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(k) Related Information

For more information about this AD, contact Andrea Jimenez, Aerospace Engineer, COS Program Management Section, Operational Safety Branch, Compliance & Airworthiness Division, FAA, 1600 Stewart Ave., Suite 410, Westbury, NY 11590; telephone (516) 228–7330; email andrea.jimenez@faa.gov.

(l) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(i) European Union Aviation Safety Agency (EASA) Emergency AD 2021–0283–E, dated December 17, 2021.

(ii) [Reserved]

(3) For EASA AD 2021–0283–E, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999

000; email ADs@easa.europa.eu; Internet www.easa.europa.eu. You may find the EASA material on the EASA website at <https://ad.easa.europa.eu>.

BILLING CODE 4910–13–P

DEPARTMENT OF LABOR**Office of Labor-Management Standards****29 CFR Parts 403 and 408**

RIN 1245–AA12

Rescission of Labor Organization Annual Financial Report for Trusts In Which A Labor Organization Is Interested, Form T–1

AGENCY: Office of Labor-Management Standards, Department of Labor.

ACTION: Final rule.

SUMMARY: This rule rescinds the final rule published in the **Federal Register** on March 6, 2020, (2020 Form T–1 rule), which established the Form T–1, Trust Annual Report, required to be filed by labor organizations about certain trusts in which they are interested pursuant to the Labor-Management Reporting and Disclosure Act (LMRDA). Upon further review of the 2020 Form T–1 rule, including the pertinent facts and legally relevant policy considerations surrounding that rulemaking, the Department of Labor (Department) withdraws the rule implementing the Form T–1, because it has determined that the 2020 rulemaking record, particularly its analysis of the burden and the benefit of the rule, was insufficient as a matter of policy to justify the trust reporting requirements set forth in the 2020 Form T–1 rule. Further, by requiring reporting on entities not controlled or dominated by

labor unions, the Department has determined that the trust reporting required under the rule is overly inclusive and is not necessary to prevent the circumvention and evasion of the Title II reporting requirements.

DATES: This rule is effective on January 31, 2022.

FOR FURTHER INFORMATION CONTACT:

Karen Torre, Chief of the Division of Interpretations and Regulations, Office of Labor-Management Standards, U.S. Department of Labor, 200 Constitution Avenue NW, Room N-5609, Washington, DC 20210, (202) 693-0123 (this is not a toll-free number), (800) 877-8339 (TTY/TDD), *OLMS-Public@dol.gov*.

SUPPLEMENTARY INFORMATION:

I. Statutory Authority

The Department's statutory authority is set forth in section 208 of the LMRDA, 29 U.S.C. 438. Section 208 of the LMRDA provides that "[t]he Secretary [of Labor] shall have authority to issue, amend, and rescind rules and regulations prescribing the form and publication of reports required to be filed under this title and such other reasonable rules and regulations (including rules prescribing reports concerning trusts in which a labor organization is interested) as he may find necessary to prevent the circumvention or evasion of such reporting requirements."

The Secretary has delegated his authority under the LMRDA to the Director of the Office of Labor-Management Standards (OLMS) and permitted re-delegation of such authority. See Secretary's Order 03-2012 (Oct. 19, 2012), published at 77 FR 69375 (Nov. 16, 2012).

II. Background

A. Introduction

In enacting the LMRDA in 1959, Congress sought to protect the rights and interests of employees, labor organizations and the public generally as they relate to the activities of labor organizations, employers and their labor relations consultants, and the officers, employees, and representatives of these entities. The LMRDA's various reporting provisions for labor organizations, their officers, and their employees are designed to empower labor organization members by providing them the means to maintain democratic control over their labor organizations and ensure a proper accounting of labor organization funds. Labor organization members are better able to monitor their labor organization's financial affairs and to make informed choices about the

leadership of their labor organization and its direction when labor organizations disclose financial information as required by the LMRDA.

By reviewing a labor organization's financial reports, a member may ascertain the labor organization's priorities and whether they are in accord with the member's own priorities and those of fellow members. At the same time, this transparency promotes both the labor organization's own interests as a democratic institution and the interests of the public and the government. Furthermore, the LMRDA's reporting and disclosure provisions, together with the fiduciary duty provision, 29 U.S.C. 501, which directly regulates the primary conduct of labor organization officials, operate to safeguard a labor organization's funds from depletion by improper or illegal means. While the vast majority of union officers and employees do their work diligently and without incident, unfortunately civil and criminal violations sometimes occur and, when they do, the union is the victim. Timely and complete reporting helps detect instances of labor organization officers, employees, or others embezzling or otherwise making improper use of such funds and obtain relief for the benefit of the labor organization and its members when such improper use occurs.

B. The LMRDA's Reporting and Other Requirements

The LMRDA was the direct outgrowth of a Congressional investigation conducted by the Select Committee on Improper Activities in the Labor or Management Field, commonly known as the McClellan Committee, chaired by Senator John McClellan of Arkansas. In 1957, the committee began a highly publicized investigation of labor organization racketeering and corruption; and its findings of financial abuse, mismanagement of labor organization funds, and unethical conduct provided much of the impetus for enactment of the LMRDA's remedial provisions. See generally Benjamin Aaron, *The Labor-Management Reporting and Disclosure Act of 1959*, 73 HARV. L. REV. 851, 851-55 (1960). During the investigation, the committee uncovered a host of improper financial arrangements between officials of several international and local labor organizations and employers (and labor consultants aligned with the employers) whose employees were represented by the labor organizations in question or might be organized by them. Similar arrangements were also found to exist between labor organization officials and the companies that handled matters

relating to the administration of labor organization benefit funds. See generally *Interim Report of the Select Committee on Improper Activities in the Labor or Management Field*, S. Report No. 85-1417 (1957); see also William J. Isaacson, *Employee Welfare and Benefit Plans: Regulation and Protection of Employee Rights*, 59 COLUM. L. REV. 96 (1959).

Financial reporting and disclosure from labor organizations were conceived as partial remedies for these improper practices. As noted in a key Senate Report on the legislation, disclosure would discourage questionable practices ("The searchlight of publicity is a strong deterrent."), aid labor organization governance (labor organizations will be able "to better regulate their own affairs" because "members may vote out of office any individual whose personal financial interests conflict with his duties to members"), facilitate legal action by members against "officers who violate their duty of loyalty to the members", and create a record ("the reports will furnish a sound factual basis for further action in the event that other legislation is required"). S. Rep. No. 187 (1959) 16 reprinted in 1 NLRB LEGISLATIVE HISTORY OF THE LABOR-MANAGEMENT REPORTING AND DISCLOSURE ACT OF 1959, 412.

The Department has developed several forms for implementing the LMRDA's financial reporting requirements. The annual reports required by section 201(b) of the Act, 29 U.S.C. 431(b) (Form LM-2, Form LM-3, and Form LM-4), contain information about a labor organization's assets; liabilities; receipts; disbursements; loans to officers, employees, and business enterprises; payments to each officer; and payments to each employee of the labor organization paid more than \$10,000 during the fiscal year. The reporting detail required of labor organizations, as the Secretary has established by rule, varies depending on the amount of the labor organization's annual receipts. 29 CFR 403.4.

The labor organization's president and treasurer (or its corresponding officers) are personally responsible for filing the reports and for any statement in the reports known by them to be false. 29 CFR 403.6. These officers are also responsible for maintaining records in sufficient detail to verify, explain, or clarify the accuracy and completeness of the reports for not less than five years after the filing of the forms. 29 CFR 403.7. A labor organization "shall make available to all its members the information required to be contained in such reports" and "shall . . . permit such member[s] for just cause to

examine any books, records, and accounts necessary to verify such report[s].” 29 CFR 403.8(a).

The reports are public information. 29 U.S.C. 435(a). The Secretary is charged with providing for the inspection and examination of the financial reports, 29 U.S.C. 435(b). For this purpose, OLMS maintains: (1) A public disclosure room where copies of such reports filed with OLMS may be reviewed and; (2) an online public disclosure site, where copies of such reports filed since the year 2000 are available for the public’s review.

In addition to prescribing the form and publication of the LMRDA reports, the Secretary is authorized to issue regulations that prevent labor unions and others from avoiding their reporting responsibilities. Section 208 authorizes the Secretary of Labor to issue, amend, and rescind rules and regulations to implement the LMRDA’s reporting provisions, including “prescribing reports concerning trusts in which a labor organization is interested” as the Secretary may “find necessary to prevent the circumvention or evasion of [the LMRDA’s] reporting requirements.” 29 U.S.C. 438. In other words, the Secretary may require separate trust reporting only if: (1) The union has an interest in a trust *and* (2) reporting is determined to be necessary to prevent the circumvention or evasion of LMRDA reporting requirements. 29 U.S.C. 438.

The phrase “trust in which a labor organization is interested” is defined the LMRDA. It “means a trust or other fund or organization (1) which was created or established by a labor organization, or one or more of the trustees or one or more members of the governing body of which is selected or appointed by a labor organization, and (2) a primary purpose of which is to provide benefits for the members of such labor organization or their beneficiaries.” 29 U.S.C. 402(l)

III. Rescission of the March 6, 2020 Final Rule Establishing the Form T–1

A. History of the Form T–1

The Form T–1 report was first proposed on December 27, 2002, as one part of a proposal to extensively change the Form LM–2. 67 FR 79280 (Dec. 27, 2002). The rule was proposed under the authority of Section 208, which permits the Secretary to issue such rules “prescribing reports concerning trusts in which a labor organization is interested” as he may “find necessary to prevent the circumvention or evasion of [the LMRDA’s] reporting requirements.” 29 U.S.C. 438. Following consideration of public comments, on October 9, 2003,

the Department published a final rule enacting extensive changes to the Form LM–2 and establishing a Form T–1. 68 FR 58374 (Oct. 9, 2003) (2003 Form T–1 rule). The 2003 Form T–1 rule eliminated the requirement that unions report on subsidiary organizations on the Form LM–2,¹ but it mandated that each labor organization filing a Form LM–2 report also file a separate report to “disclose assets, liabilities, receipts, and disbursements of a significant trust in which the labor organization is interested,” increasing labor organizations’ reporting requirements generally and expanding the types of trusts for which reporting would be required. 68 FR at 58477. The reporting labor organization would make this disclosure by filing a separate Form T–1 for each significant trust in which it was interested. *Id.* at 58524.

To address the statutory requirement that trust reporting be “necessary to prevent the circumvention or evasion of [the LMRDA’s] reporting requirements,” the 2003 Form T–1 rule developed the “significant trust in which the labor organization is interested” test. It used the section 3(l) statutory definition of “a trust in which a labor organization is interested” coupled with an administrative determination of when a trust is deemed “significant.” 68 FR at 58477–78. A labor organization would be required to report on an entity only if both sets of criteria were met.

The 2003 Form T–1 rule set forth an administrative determination that stated that a “trust will be considered significant” and therefore subject to the Form T–1 reporting requirement under the following conditions:

The labor organization had annual receipts of \$250,000 or more during its most recent fiscal year, and (2) the labor organization’s financial contribution to the trust or the contribution made on the labor organization’s behalf, or as a result of a negotiated agreement to which the labor organization is a party, is \$10,000 or more annually.

Id. at 58478.

The portions of the 2003 rule relating to the Form T–1 were vacated by the

¹ The Form LM–2 Instructions define a “subsidiary” of a labor organization: Within the meaning of these instructions, a subsidiary organization is defined as any separate organization of which the ownership is wholly vested in the reporting labor organization or its officers or its membership, which is governed or controlled by the officers, employees, or members of the reporting labor organization, and which is wholly financed by the reporting labor organization. A subsidiary organization is considered to be wholly financed if the initial financing was provided by the reporting labor organization even if the subsidiary organization is currently wholly or partially self-sustaining. https://www.dol.gov/sites/dolgov/files/olms/regs/compliance/GPEA_Forms/2020/efile/LM-2_instructionsRevised2020.pdf.

D.C. Circuit in *AFL–CIO v. Chao*, 409 F.3d 377, 389–391 (D.C. Cir. 2005). The court held that the form “reaches information unrelated to union reporting requirements and mandates reporting on trusts even where there is no appearance that the union’s contribution of funds to an independent organization could circumvent or evade union reporting requirements by, for example, permitting the union to maintain control of the funds.” *Id.* at 389. The court also vacated the Form T–1 portions of the 2003 rule because its significance test (the second set of criteria for trust status, set forth above) failed to establish reporting based on domination or managerial control of assets subject to LMRDA Title II jurisdiction.

The court reasoned that the Department failed to explain how the test—*i.e.*, selection of one member of a board and a \$10,000 contribution to a trust with \$250,000 in receipts—could give rise to circumvention or evasion of Title II reporting requirements. *Id.* at 390. In so holding, the court emphasized that Section 208 authority is the only basis for LMRDA trust reporting, that this authority is limited to preventing circumvention or evasion of Title II reporting, and that “the statute doesn’t provide general authority to require trusts to demonstrate that they operate in a manner beneficial to union members.” *Id.* at 390.

However, the court recognized that reports on trusts that reflect a labor organization’s financial condition and operations are within the Department’s rulemaking authority, including trusts “established by one or more unions or through collective bargaining agreements calling for employer contributions, [where] the union has retained a controlling management role in the organization,” and also those “established by one or more unions with union members” funds because such establishment is a reasonable indicium of union control of that trust.” *Id.* The court acknowledged that the Department’s findings in support of its rule were based on particular situations where reporting about trusts would be necessary to prevent evasion of the related labor organizations’ own reporting obligations. *Id.* at 387–88. One example included a situation where “trusts [are] funded by union members’ funds from one or more unions and employers, and although the unions retain a controlling management role, no individual union wholly owns or dominates the trust, and therefore the use of the funds is not reported by the related union.” *Id.* at 389 (emphasis added). In citing these examples, the

court explained that “absent circumstances involving dominant control over the trust’s use of union members’ funds or union members’ funds constituting the trust’s predominant revenues, a report on the trust’s financial condition and operations would not reflect on the related union’s financial condition and operations.” *Id.* at 390. For this reason, while acknowledging that there are circumstances under which the Secretary may require a report, the court disapproved of a broader application of the rule to require reports by any labor organization simply because the labor organization satisfied a reporting threshold (a labor organization with annual receipts of at least \$250,000 that contributes at least \$10,000 to a section 3(l) trust with annual receipts of at least \$250,000). *Id.*

In light of the decision by the D.C. Circuit, the Department issued a revised Form T–1 final rule on September 29, 2006. 71 FR 57716 (Sept. 29, 2006) (2006 Form T–1 rule). Following an ensuing lawsuit, the U.S. District Court for the District of Columbia vacated this rule due to a failure to provide a new notice and comment period. *AFL–CIO v. Chao*, 496 F. Supp. 2d 76 (D.D.C. 2007). The district court did not engage in a substantive review of the 2006 rule, but the court noted that the AFL–CIO demonstrated that “the absence of a fresh comment period . . . constituted prejudicial error” and that the AFL–CIO objected with “reasonable specificity” to warrant relief vacating the rule. *Id.* at 90–92.

The Department issued a proposed rule for a revised Form T–1 on March 4, 2008. 73 FR 11754 (Mar. 4, 2008). After notice and comment, the 2008 Form T–1 final rule was issued on October 2, 2008. 73 FR 57412. The 2008 Form T–1 rule took effect on January 1, 2009. Under that rule, Form T–1 reports would have been filed no earlier than March 31, 2010, for fiscal years that began no earlier than January 1, 2009.

Following dicta in *AFL–CIO v. Chao*, the 2008 Form T–1 rule stated that labor organizations with total annual receipts of \$250,000 or more must file a Form T–1 for those section 3(l) trusts in which the labor organization, either alone or in combination with other labor organizations, had management control or financial dominance. 73 FR at 57412. For purposes of the rule, a labor organization had management control if the labor organization alone, or in combination with other labor organizations, selected or appointed the majority of the members of the trust’s governing board. Further, for purposes of the rule, a labor organization had

financial dominance if the labor organization alone, or in combination with other labor organizations, contributed more than 50 percent of the trust’s receipts during the annual reporting period. Significantly, the rule treated contributions made to a trust by an employer pursuant to CBA as constituting contributions by the labor organization that was party to the agreement.

Additionally, the 2008 Form T–1 rule provided exemptions to the Form T–1 filing requirements. No Form T–1 was required for a trust: (1) Established as a political action committee (PAC) fund if publicly available reports on the PAC fund were filed with Federal or state agencies; (2) established as a political organization for which reports were filed with the IRS under section 527 of the IRS code; (3) required to file a Form 5500 under the Employee Retirement Income Security Act of 1974 (ERISA); or (4) constituting a federal employee health benefit plan that was subject to the provisions of the Federal Employees Health Benefits Act (FEHBA), 5 U.S.C. 8901 *et seq.* Similarly, the rule clarified that no Form T–1 was required for any trust that met the statutory definition of a labor organization, 29 U.S.C. 402(i), and filed a Form LM–2, Form LM–3, or Form LM–4, constituted a subsidiary organization (*i.e.*, a separate organization that is wholly owned, controlled, and financed by a single labor organization), or was an entity that the LMRDA exempts from reporting. *Id.*

In the Spring 2009 and Fall 2009 Regulatory Agendas, the Department notified the public of its intent to initiate rulemaking proposing to rescind the Form T–1 and to require reporting of wholly owned, wholly controlled, and wholly financed (“subsidiary”) organizations on their Form LM–2 or LM–3 reports. See <http://www.reginfo.gov/public/do/eAgendaViewRule?pubId=200904&RIN=1215-AB75> and <http://www.reginfo.gov/public/do/eAgendaViewRule?pubId=200904&RIN=1215-AB75>.

Due to the proposed rescission, on December 3, 2009, the Department issued a notice of proposed extension of filing due date to delay for one calendar year the filing due dates for Form T–1 reports required to be filed during calendar year 2010. 74 FR 63335. On December 30, 2009, following comment, the Department published a rule extending for one year the filing due date of all Form T–1 reports required to be filed during calendar year 2010. 74 FR 69023.

Subsequently, on February 2, 2010, the Department published a Notice of Proposed Rulemaking (NPRM)

proposing to rescind the Form T–1. 75 FR 5456. After notice and comment, the Department published the final rule on December 1, 2010. In its rescission, the Department stated that it considered the reporting required under the rule to be overly broad and not necessary to prevent circumvention or evasion of Title II reporting requirements. The Department concluded that the scope of the 2008 Form T–1 rule was overbroad because it covered many trusts, such as those funded by employer contributions, without an adequate showing that reporting for such trusts is necessary to prevent the circumvention or evasion of the Title II reporting requirements. See 75 FR 74936.

In the Spring and Fall Regulatory Agendas for 2017 and 2018, the Department notified the public of its intent to initiate rulemaking reinstating the Form T–1 Trust Annual Report. See <https://www.reginfo.gov/public/do/eAgendaViewRule?pubId=201704&RIN=1245-AA09>, <https://www.reginfo.gov/public/do/eAgendaViewRule?pubId=201710&RIN=1245-AA09>, <https://www.reginfo.gov/public/do/eAgendaViewRule?pubId=201804&RIN=1245-AA09>, and <https://www.reginfo.gov/public/do/eAgendaViewRule?pubId=201810&RIN=1245-AA09>. On May 30, 2019 the Department proposed to establish a Form T–1 Trust Annual Report to capture financial information pertinent to “trusts in which a labor organization is interested” (“section 3(l) trusts”). See 84 FR 25130. After notice and comment, the Department published the 2020 Form T–1 final rule on March 6, 2020. 85 FR 13414.

Under the 2020 rule, and similar to the 2008 rule, the Department requires a labor organization with total annual receipts of \$250,000 or more (and, which therefore is obligated to file a Form LM–2 Labor Organization Annual Report) to file a Form T–1, under certain circumstances, for each trust of the type defined by section 3(l) of the LMRDA, 29 U.S.C. 402(l) (defining “trust in which a labor organization is interested”). 85 FR 13417. Such labor organizations must file where the labor organization during the reporting period, either alone or in combination with other labor organizations, (1) selects or appoints the majority of the members of the trust’s governing board or (2) contributes more than 50 percent of the trust’s receipts. *Id.* When applying this financial or managerial dominance test, contributions made pursuant to a collective bargaining agreement (CBA) shall be considered the labor organization’s contributions. *Id.* In its final rule, the Department stated that

the rule helped bring the reporting requirements for labor organizations and section 3(l) trusts in line with contemporary expectations for the disclosure of financial information and prevent the circumvention or evasion of the LMRDA's reporting requirements through funds over which labor organizations exercise domination. 85 FR 13415.

Like the 2008 rule, exemptions are provided for a trust that is a political action committee ("PAC") or a political organization (the latter within the meaning of 26 U.S.C. 527). No T-1 form is required for federal employee health benefit plans subject to the provision of the Federal Employees Health Benefits Act (FEHBA), any for-profit commercial bank established or operating pursuant to the Bank Holding Act of 1956, 12 U.S.C. 1843, or credit unions. 85 FR 13418. Similar to the 2008 rule, but unlike the 2003 or 2006 rules, the 2020 Form T-1 rule includes an exemption for section 3(l) trusts that are part of employee benefit plans that file a Form 5500 Annual Return/Report under ERISA. *Id.* Additionally, a partial exemption is provided for a trust for which an audit was conducted in accordance with prescribed standards and the audit is made publicly available. A labor organization choosing to use this option must complete and file the first page of the Form T-1 and a copy of the audit. *Id.*

Unlike the 2008 rule, the 2020 rule exempts unions from reporting on the Form T-1 their subsidiary organizations, retaining the requirement that unions must report their subsidiaries on the union's Form LM-2 report. *Id.* Also unlike the 2008 rule, the 2020 rule permits the parent union (*i.e.*, the national/international or intermediate union) to file the Form T-1 report for covered trusts in which both the parent union and its affiliates meet the financial or managerial domination test. *Id.* The affiliates must continue to identify the trust in their Form LM-2 report, and also state in their Form LM-2 report that the parent union will file a Form T-1 report for the trust. *Id.* The 2020 rule also allows a single union to voluntarily file the Form T-1 on behalf of itself and the other unions that collectively contribute to a multiple-union trust, relieving the Form T-1 obligation on the other unions. *Id.*

On May 27, 2021, the Department published an NPRM to withdraw the March 6, 2020 final rule. 85 FR 13414. The Department stated its view that the trust reporting required under the rule is overly broad and is thus not necessary to prevent the circumvention and evasion of the Title II reporting

requirements. Moreover, upon further consideration, the Department expressed concern that the 2020 rulemaking record was insufficient to justify the separate trust reporting requirements as set forth in the 2020 Form T-1 rule.

B. Reasons for Rescission of the March 6, 2020 Form T-1 Final Rule

In its NPRM, the Department proposed to rescind the 2020 Form T-1 rule for two reasons. First, the Department stated its view that the trust reporting required under the rule is overly broad, as it includes trusts that are exclusively funded by employers. Accordingly, required reporting of such employer-funded trusts is not necessary to prevent the circumvention and evasion of a union's Title II reporting requirements. Second, the Department reviewed the 2020 rulemaking record and stated its concern that, as a matter of policy, the reporting requirements set forth in the 2020 Form T-1 rule are not justified in light of the burden they impose.

The Department received nine comments in response to the proposal, with six comments supporting the rescission. Out of the three opposition comments, only one was substantive in nature. As explained below, the Department adopts its proposal to rescind the Form T-1, based upon the rationales provided in the NPRM. First, the Department will explain why the reporting requirements set forth in the 2020 Form T-1 rule, as a matter of policy, are not justified in light of the heavy burden they impose and the negligible benefits they offer. Second, the Department will explain why, even if the benefits could be said to justify the burdens, the Form T-1 rule is fatally over-inclusive, in that it requires reporting on entities that could not be used to circumvent and evade the LMRDA reporting requirements and is therefore outside the rulemaking authority established by the LMRDA.

Stated Benefits of 2020 Rule Do Not Support Form T-1 Rule in Light of Burden Imposed

As a matter of policy, the Department finds that the 2020 Form T-1 final rule's stated benefits fail to justify the extensive costs imposed. More specifically, the Form T-1 requirements capture largely redundant information already captured by the Form 990 filed with the Internal Revenue Service (IRS)² and the existing Forms LM-2, LM-10, and LM-30 reporting regimes

² See <https://www.irs.gov/charities-non-profits/annual-filing-and-forms>.

under LMRDA sections 201, 202, and 203. Accordingly, even to the extent that the 2020 Rule may have provided some intangible benefits, as a matter of policy, the Department now views those benefits as outweighed by the tangible and concrete costs imposed by the 2020 Rule. Moreover, the information collected is not necessary for preventing circumvention and evasion of the LMRDA's reporting requirements. Finally, the burdens on the agency are substantial and will divert necessary resources from more core activities under the statute. The Department thus rescinds the Form T-1 with today's rule.

As discussed in the NPRM to rescind, the 2020 rule imposed significant, quantifiable burdens on Form LM-2 filing labor organizations. The Department estimated that there will be at least 810 Form LM-2 organizations filing a Form T-1 report. 85 FR 13437. In the first year of reporting, Form T-1 filers would spend approximately 121.38 hours per report, which results in a total of 251,257 burden hours. 85 FR 13433. In subsequent years, Form T-1 filers would spend approximately 84.12 hours per report, which would result in 174,128 additional burden hours. *Id.* The total expected first-year costs of the Form T-1 are \$15,009,801, and in subsequent years the total cost would be \$10,385,820.³ 85 FR 13437. Multiple commenters—in connection with both the current NPRM and the 2020 NPRM—agreed with the Department's current policy judgment, that the burden created by the 2020 Form T-1 is unacceptably high in relation to the rule's benefits. As one commenter indicated, over \$15 million in costs imposed upon plans (and then reimbursed by the unions) in the first year would be "depriving [union members and fund participants] of benefits that would otherwise be paid to or on their behalf, benefits needed especially during the "economic uncertainty due to the COVID-19 pandemic." One training fund commenter also disputed the estimates of annual burden hours. The commenter estimated that it would take twice as long as the Department determined to acquire and report the information, stating that the estimates fall short especially for unions facing the significant difficulties associated with determining whether they need to file and who will file in multiple union situations.

³ The 10-year annualized cost of the rule would be \$10,285,704 at a 3 percent discount rate and \$9,608,788 at a 7 percent discount rate. 85 FR 13438.

These burdens are in addition to existing Form LM–2 recordkeeping and reporting burdens, and union members ultimately bear these costs.

In the 2020 rule, the Department declared, “[t]he Department’s position in this Final Rule and in the NPRM is that there will be a burden on unions created by the rule but that it will be outweighed and thereby justified by the benefits of the rule.” 85 FR 13414, 13433. When attempting to articulate the benefits, the Department did not articulate with specificity the benefits that would justify the policy underlying the new Form T–1. The preamble discussed the need “to curb embezzlement” and “to safeguard democratic procedures” and “to promote labor organization self-government” and to “expand the benefits of labor organization financial transparency to the members of all Form LM–2 filing labor organizations that utilize trusts to expend funds for the members’ benefit.” Id. The narrative did not, however, adequately explain how these intangible benefits justified the burden imposed by the Form T–1’s reporting requirements, given that the Form T–1 would provide a largely redundant reporting regime to the existing Form 990, as well as the existing Form LM–2, LM–10, and LM–30 reporting regimes under LMRDA sections 201, 202, and 203.

For example, as stated in the NPRM to rescind, the 2020 rule failed to adequately demonstrate how the Form T–1 would actually provide benefits in terms of detecting and deterring fraud. To the extent that the 2020 rule cited examples that purportedly demonstrate how the Form T–1 would help detect and deter fraud or prevent the circumvention and evasion of Title II reporting obligations, the 2020 rule did not sufficiently demonstrate how the Form T–1 would further these goals.

A general criticism by commenters was that the 2020 Form T–1 rule suffered from a lack of supporting evidence and examples, a position with which the Department now agrees, even concerning its primary example, UAW-Fiat Chrysler of America (FCA). While the 2020 rule relied heavily on UAW-FCA convictions as grounds for adopting the Form T–1, after consideration, the Department now believes, as both a matter of policy and a factual consideration, that the cited cases do not provide support for the 2020 rule. That those convictions were secured without a Form T–1 reporting regime instead demonstrates that the ability to obtain necessary results to adequately protect against bribery and other violations of the labor-

management process already exists, undermining the need to impose the additional costs of compliance with the Form T–1. Thus, rather than reinforcing the rationale behind the 2020 rule, that argument substantially undercuts the purported need for the new reporting burden.

Indeed, in recent years and as discussed in the 2020 rule, the Department played a key role in investigating and in securing over a dozen indictments and convictions in the UAW-FCA National Training Center (NTC) bribery and embezzlement scheme, all without the Form T–1. See 85 FR 13421. Working jointly with the Department of Justice and others, the Department of Labor helped secure convictions of management and union officials associated with the NTC, pursuant to the Taft-Hartley Act, for unlawful employer payments to UAW officials. See 29 U.S.C. 186. The 2020 rule offered no explanation as to what additional benefit, if any, the Form T–1 would have provided in this context. Indeed, OLMS already has a well-established history of effectively enforcing the LMRDA by combatting labor-management fraud without a Form T–1. See the OLMS enforcement results for the period 2001–present: <https://www.dol.gov/agencies/olms/criminal-enforcement>. As discussed below more fully, having to invest in the collection and enforcement of an unnecessary Form T–1 report may actually be detrimental to detecting fraud, because it would require that the Department redirect limited resources away from proven, effective means of uncovering and prosecuting such instances of possible financial corruption.

While the 2020 rule acknowledged existing transparency safeguards, it stated that the Department needed to “add necessary safeguards intended to deter circumvention or evasion of the LMRDA’s reporting requirements.” See 85 FR 13420. However, upon review, existing OLMS reporting requirements already provide sufficient information that enables OLMS to detect financial misconduct and deter circumvention or evasion of the existing reporting requirements. The Form T–1 added substantial burdens but no readily discernible benefits to the agency’s responsibility to deter circumvention or evasion of the statute’s reporting requirements. Since the LMRDA Section 202 and 203 reporting requirements would require disclosure of the FCA and similar payments, and require the parties to file reports pursuant to the Department’s Form LM–30 Labor Organization Officer and Employee Report and Form LM–10 Employer

Report, the Department already had investigatory authority and access to necessary financial information to effectively investigate this FCA and will continue to have that authority to investigate similar matters, all without a Form T–1. See 29 U.S.C. 432–433 and 531.⁴ Further, even if the Form T–1 provided a marginal increase in transparency, the clear, quantified burdens would far outweigh such intangible and small benefits.

Moreover, in terms of the benefits of general transparency to union members and union self-governance, the Department now believes that the 2020 rule did not provide sufficient reason to establish that the information provided by the Form T–1 would be significantly greater than what members currently enjoy. Consequently, the Department now believes that the Form T–1 established a redundant reporting regime.

More precisely, the rule did not identify any significant, concrete benefits gained through general transparency that were not already largely available through existing, publicly-available sources. Even without the 2020 rule, union members will continue to definitively benefit from transparency via mechanisms outside of the Form T–1 reporting regime. Members will continue to receive detailed information about their union’s finances, including the identity and contact information of their union’s trusts, through the annual Form LM–2 report available on the OLMS website. In particular, members will see whether the trust already files a report with another agency, such as the Form 990 filed with the IRS, which provides reporting comparable to the Form T–1.⁵ The IRS Form 990 requires comprehensive reporting of financial information such as assets, liabilities,

⁴ Additionally, the general public, including members of labor organizations, already has access to reports containing similar, if not identical, information that would be included on the Form T–1. For example, the NTC filed a Form 990 with the Internal Revenue Service (IRS) that listed three of the six UAW officials who took unlawful payments from FCA under Part VII (Compensation of Officers, Directors, Trustees, Key Employees, Highest Compensated Individuals, and Independent Contractors), and the trust should have reported payments to two other UAW officials’ sham charities on Schedule I (Grants and Other Assistance to Organizations, Governments, and Individuals in the United States). See OLMS FY 18 Annual Report. While the Form 990s filed by the trust did not properly report these payments, the Department of Justice secured indictments covering conspiring to defraud the United States by preparing and filing false tax returns for the NTC that concealed millions of dollars in prohibited payments directed to UAW officials.

⁵ See <https://www.irs.gov/charities-non-profits/annual-filing-and-forms>.

officer and director payments, leases, and other financial transactions.⁶ This form provides the type of financial information that interested parties, such as union members, could use to monitor the use of trust funds in order to prevent circumvention or evasion of Title II reporting obligations and to detect and deter fraud.

Additionally, the examples provided in the 2020 rule illustrate the redundancies. In particular, the 2020 rule cited examples of fraud involving apprenticeship and training plans and other ERISA-covered entities, all of which EBSA uncovered with its existing enforcement authority pursuant to ERISA. *See* 85 FR 13419–20. The 2020 rule provided other examples and hypothetical situations as purportedly demonstrating the need for the Form T–1 to detect and deter fraudulent activity. However, upon additional review, these examples do not demonstrate a need for the Form T–1. For example, the 2020 rule offered a hypothetical example of a trust making a \$15,000 payment to a printing company owned by a union official. In such a situation, the ownership of the printing company would not actually appear on the Form T–1, but the 2020 rule postulated that members or the public would notice the connection. *See* 85 FR 13418–19. It is just as likely, however, that union members or the public would already recognize this financial connection more directly via the IRS Form 990, Schedule L (Transactions with Interested Persons).⁷ The Form 990 actually provides greater transparency in this regard than would the Form T–1, because Schedule L of the 990 directly relates to payments to interested parties, whereas the Form T–1 would rely on union members to make inferences and then conduct separate inquiries to establish union connections to the recipients of trust payments. This greater transparency on the Form 990 undercuts this rationale as a basis for supporting a Form T–1 reporting requirement.

The 2020 rule reviewed Form LM–2 reports from FY 17 and offered

examples purportedly justifying the rule, but after careful consideration, the Department believes that such examples do not adequately support the rulemaking. *See* 85 FR 13419. For example, the 2020 rule cited a local union that made expenditures to a credit union. However, the 2020 rule exempted credit unions from the Form T–1 reporting requirements because existing law already provides detailed transparency and oversight. The 2020 rule also mentioned a local union making payments to a trust that constitutes an information technology (IT) service corporation established by the local union to provide it with IT services. But after further review, the local union reported on its Form LM–2 that the trust already files the IRS Form 1065.⁸ Another example discussed payments from a union to a labor college; but the labor college files a Form 990, which provides the necessary transparency the Form T–1 sought. After the rescission of the Form T–1 provided for by this rule, the Department will continue to require unions to identify their trusts on the Form LM–2 report, along with information that would enable the public to locate the Form 990 or other reports covering such trusts.

In sum, the Department does not identify any significant benefits derived from the Form T–1, but, even if the 2020 rule provided some benefits that might be used by union members and the Department to prevent circumvention or evasion of Title II reporting obligations, the concrete, quantified burdens outweigh such marginal benefits. The following observations about the 2020 rule's burdens support that conclusion and, thus, support rescission.

First, the 2020 rule's failure to consistently apply exemptions increases the burdens associated with the rule without providing commensurate benefits. In particular, the 2020 rule did not adequately explain why the Form T–1 exempted unions from submitting Form T–1 reports covering trusts that already file the EBSA Form 5500⁹ and certain IRS filings, such as those filed by

political organizations under 26 U.S.C. 527, but not trusts that file the Form 990 with the IRS.

The 2020 rule focused on the unique nature of union financial reporting required under the LMRDA. The Department continues to hold that IRS Form 990 reporting by labor organizations does not provide a substitute for Form LM–2, LM–3, and LM–4 reporting by labor organizations, since the LM reports provide information tailored to the unique labor-management purposes of the LMRDA. *See* 68 FR 58375, 58395 (2003). However, the 2020 rule did not provide an adequate justification as to why such Form 990 reporting is not a sufficient substitute for Form T–1 reporting. *See* 85 FR 13425–26.

Commenters largely agreed with the Department's reasoning, set forth in the NPRM, that the inclusion of a Form 5500 exemption and a Form 990 non-exemption, was unexplained and unsupported. One commenter confirmed that “a majority (if not all) of the trusts that will be reported under the rule are tax exempt entities that are required to file an annual Form 990 with the Internal Revenue Service.” As the commenter explained, in the 2020 rule, the Department did not indicate what information was needed beyond what would be contained in the Form 990, and because there was no evidence of need beyond that information, “any burden imposed by the rule is unwarranted.”

The Department drew an arbitrary and unexplained line between Form 5500 and the Form 990. To be consistent, the Department should have also exempted Form 990 filers; however, such an exemption would encompass nearly the entire universe of Form T–1 filers. Thus, if it had included a Form 990 exemption, the resulting Form T–1 would then have failed to capture any reportable activity and the Form 990 would have captured that activity—as it does without the rule. Such an underlying failure supports the withdrawal of this fundamentally flawed form.

Even when the Department used an existing form to create an exemption from the 2020 rule, the exemption was inconsistent with other Department policies. As one union commenter noted, the Form 5500 exemption failed to protect trusts from undue burdens, particularly apprenticeship and training plans. ERISA gives the Department the ability to exempt filers from the long Form 5500 when it is “unnecessarily burdensome and costly,” which EBSA has done by allowing certain apprenticeship and training plans to file

⁶ *See id.* The Form 990 includes simplified filing options for smaller organizations that require less disclosure of financial information than their more detailed versions or the Form T–1. The Form 990–N is for organizations with annual gross receipts that are normally \$50,000 or less. However, the Form T–1 does not have an assets schedule and a very small entity or an entity with less than \$50,000 in gross receipts is unlikely to have transactions to itemize on the Form T–1. Therefore, the Department has concluded that the marginal potential benefit gained from additional information about these smaller entities on a Form T–1 does not justify the burden imposed by the Form T–1.

⁷ *See*: <https://www.irs.gov/forms-pubs/about-schedule-l-form-990>.

⁸ Like the Form 990 and Form 5500, the Form 1065 is an information return used to report the income, gains, losses, deductions, credits, and other information from the operation of a partnership. A partnership does not pay tax on its income, but passes through any profits or losses to its partners. Partners must include partnership items on their tax or information returns. <https://www.irs.gov/forms-pubs/about-form-1065>. The term “partnership” includes a limited partnership, syndicate, group, pool, joint venture, or other unincorporated organization, through or by which any business, financial operation, or venture is carried on.

⁹ *See* <https://www.dol.gov/agencies/ebsa/employers-and-advisers/plan-administration-and-compliance/reporting-and-filing/form-5500>.

a short notice instead. Thus, in recognizing the Form 5500 as a nearly identical form, OLMS has through the Form T-1, the commenter argued, indirectly required the sort of financial reporting that EBSA has already decided is not necessary due to the burden it creates.

Second, adding to the burden on the filing unions, the information necessary to complete the report is not in the control of the reporting union; it is in the control of the trust. Notwithstanding that many, if not most, of the trusts on which unions are required to report are operated jointly and equally with employers, the unions alone are forced to seek trust cooperation when such trusts are under no legal obligation to cooperate. The union has no ability to compel the trust to provide its records to the union for the sake of the union's reporting requirement. The 2020 rule offered no factual support suggesting that trusts, whose trustees have a fiduciary obligation to the trust participants and beneficiaries and not to the union, would agree to provide their records to the union. Compiling such records and providing them to the union could constitute a significant annual expense and a significant amount of lost time that should be devoted to the administration of the trust. It is unclear why trustees would approve complying with union requests, and it is equally unclear how a union could compel a trust that refuses to provide records to provide them.

In that regard, a number of union commenters indicated that the Department has underestimated the costly complications that arise from requiring labor organizations to acquire and accurately report information from trusts that are not required to comply with the LMRDA, making such a rule unjustified. One commenter indicated that the trust may simply choose not to comply. As the commenter explained, the trust is under no obligation to fulfill the union's request, and, therefore, the union may through no fault of its own be unable to comply with the Form T-1 reporting requirements despite a desire to do so. A trust could reasonably refuse to provide the union with the information requested based on its fiduciary obligation to beneficiaries if it were to "determine that it is not an appropriate use of resources to track the necessary information or to turn that information over to the union."¹⁰

¹⁰ While the 2020 rule argued that such concerns of fiduciary obligation would be resolved by the union fully compensating the trust for the resources and time it spent, a trust might nonetheless refuse to comply. Staff time and resources would nonetheless be delayed in real time, being kept from

Another commenter cited how the preamble for the 2020 Form T-1 justified the Form T-1 reporting using cases where the administrators of plans on which unions would be required to report were guilty of "preparing and filing false tax returns . . . and deliberately providing misleading and incomplete testimony." The very premise of the Form T-1, the commenter reasoned, is flawed because the information supplied by the "assertedly corrupt plans cannot be relied upon."

One commenter indicated how auditing the Form T-1 will be practically impossible because the officers will not possess knowledge of the accuracy and completeness of information provided by the trust (assuming it agrees to provide information) and the union will not possess the underlying financial records that support the information the union was given by the trust. In such situations, the commenter argues, it is likewise unclear how labor organization officers are thus reasonably held "responsible for maintaining records in sufficient detail to verify, explain, or clarify the accuracy and completeness of the reports," as the final rule required.

A union officer must sign the Form T-1 and do so under penalty of perjury; however, as another commenter stated, officers would be forced to certify, under oath, as to their knowledge of the accuracy and completeness of information provided by a trust, even though they lack a sufficient basis to vouch for its accuracy. Ignoring these concerns, as the commenter put it, "grossly discounts the costs of filing Form T-1 reports on apprenticeship plans."

Third, in the NPRM, the Department considered and still considers the Form T-1 reporting regime as imposing substantial and unjustified burdens from the perspective of multiple labor unions filing for a single shared trust. The Department rejects this outcome as a matter of policy in light of the substantial burdens labor unions will face to submit these redundant reports, which in turn will impose significant

their usual usage in furtherance of the trust's business of providing benefit to its members for the sake of another entity's legal obligation. A trustee with a fiduciary obligation could reasonably decline to comply merely so that staff and resources were not diverted from their duties. In other words, while the union might be able to compensate for lost time, and despite the longstanding adage to the contrary, money is not time. Work hours will be consumed, which could result in a trust being delayed in meeting its own financial filing obligations, such as completing the IRS 990 or the Form 5500. The trustee faced with the complicating factors could choose to avoid the complications and delays entirely.

costs on the Department in terms of time and agency resources necessary to review those redundant reports. And even if, instead of multiple unions filing redundant, and thus unnecessary, forms for a single trust, the Department determined a means by which just a single union would file for the others, the result would be an arbitrary choice. The Department would be forcing one union to take on all the legal obligations associated with the completion and signing of the form, even in situations where it would be especially arbitrary to do so, such as when the selected union has no more a share of authority over the trust than any of the other, non-filing unions. This outcome would also impose costs on the Department in terms of needing to review redundant reports, which the Department now finds that, as a matter of policy, are not justified in light of those resource costs.

The 2020 rule acknowledged this problematic dynamic. The rule includes a provision allowing one union to file the Form T-1 report for the other unions. However, the Department now considers that solution unworkable as a matter of policy. As one commentator explained, different unions will interpret the Form T-1 reporting requirements differently and may therefore "refuse to cede control of the reporting requirement to another for fear the report would be done incorrectly," resulting in the filing of duplicative reports despite the purported workaround. Furthermore, the due date for the Form T-1 for different unions may be different because the contributing unions are not on the same fiscal year and thus unions are unlikely to "risk noncompliance and substantial penalties by agreeing to let another union file on its behalf" on a date after the first date any union related to a particular trust would be obligated to file the Form T-1 were it solely responsible for filing. Another commenter indicated also how the burden on a minimally contributing union in such joint situations is patently unfair, their officers then being as "personally responsible for the filing of a report and to require them to maintain data necessary to verify the reported information for at least five years . . . [even] in situations where the labor organization's contribution is minimal."

Another concern is that, with many trusts that have multiple, non-affiliated unions contributing, the individual unions would likely be unable to determine if they together with the others effectively "dominate" the fund. As one commenter indicated, unions in such arrangements "will commonly not know the extent of another labor

organization's involvement or contribution to the entity."

The Department believes that this, and the other practical complications mentioned above, could result in a substantial number of delinquencies, many through no fault of the unions. Such a result would force the Department to direct substantial amounts of valuable, scarce resources to investigate these delinquencies, even where the Department reasonably predicts that the substantial of such cases would not involve efforts to circumvent or evade Title II reporting requirements, but rather, technical or procedural missteps resulting from unworkable policy decisions. Further, the Department would need to expend significant resources creating and maintaining an electronic Form T-1 and database; provide compliance assistance to unions and trusts on such filing and related recordkeeping requirements; and pursue delinquent Form T-1 reports, particularly for unions unable to obtain timely and complete necessary information from the trust. The resources would thus inevitably be pulled away from other, well-settled areas of enforcement, such as officer elections, alleged financial malfeasance, delinquent reporting on unions' annual financial reports, among many others. From the standpoint of promoting sound agency policy decision-making and resource allocation, the 2020 rule falls far short. Such unreasonable policy decisions and the ensuing unjustified costs to both the regulated community and Department justify rescission of the 2020 Form T-1 final rule.

Consequently, for all the reasons above, the Department rescinds the 2020 Form T-1 rule. The reporting requirements set forth in the 2020 Form T-1 rule are not justified in light of the heavy burden they impose and the negligible benefits they offer.

The 2020 Form T-1 Rule Is Overbroad Because It Requires Reporting on Certain Trusts That Cannot Be Used To Circumvent or Evade LMRDA Reporting

In addition to the foregoing policy reasons which alone justify rescission of the Form T-1, it is also appropriate to rescind the 2020 Form T-1 rule because it is overbroad and inconsistent with Title II's mandate. The only statutory basis for requiring reporting on the activities of entities that are not labor organizations as defined by the LMRDA is if the Department determines that such reporting is necessary to prevent circumvention or evasion of the statute's reporting requirements. See 29 U.S.C. 438. The 2020 rule is deficient because it requires reporting on certain entities,

such as Taft-Hartley funds, without the requisite showing that such reporting is necessary to prevent circumvention or evasion of the reporting requirements. This over-breadth requires the rule to be rescinded. It is not enough that the Form T-1 may capture some transactions that could prevent the circumvention or evasion of the LMRDA's reporting requirements. The rule is defective if it necessarily captures transactions as to which there is no statutory basis permitting the capture. *American Federation of Labor & Congress of Industrial Organizations v. Chao*, 409 F.3d 377, 389 (D.C. Cir. 2005) (finding that although "[t]here can be little doubt that some of the trust reporting the Secretary has required on Form T-1 is tied to a union's financial reporting requirements under LMRDA Title II," and therefore lawful, the rule also "reaches information unrelated to union reporting requirements and mandates reporting on trusts even where there is no appearance that the union's contribution of funds to an independent organization could circumvent or evade union reporting requirements," and thus must be vacated).

Under the Act, the Secretary's rulemaking authority is limited. The Secretary has the authority to "issue, amend, and rescind rules and regulations prescribing the form and publication of reports required to be filed under this title and such other reasonable rules and regulations (including rules concerning trusts in which a labor organization is interested) as he may find necessary to prevent the circumvention or evasion of such reporting requirements." 29 U.S.C. 438. The Secretary's regulatory authority thus includes the reporting *mandated* by the Act and *discretionary* authority to require reporting on trusts falling within the statutory definition of a trust "in which a labor organization is interested." 29 U.S.C. 402(l). The Secretary's discretion to require separate trust reporting applies to trusts if, and only if: (1) The union has an interest in a trust as defined by 29 U.S.C. 402(l) and (2) reporting is determined to be necessary to prevent the circumvention or evasion of Title II reporting requirements. 29 U.S.C. 438. As both the Department and the court recognized, this is a two-part requirement. See *AFL-CIO v. Chao*, 409 F.3d 377, 386-87 (D.C. Cir. 2005) (discussion of two-part test).

A key feature of the Secretary's discretionary authority to regulate trust reporting is the requirement that the Secretary conclude that such reporting is "necessary" to prevent circumvention or evasion of a labor organization's

requirement to report on its financial condition and operations under the LMRDA. The Department now believes that the 2020 Form T-1 rule was overly broad, requiring financial reporting by many types of trusts, including trusts funded by employers pursuant to collective bargaining agreements, without an adequate showing that such a change is necessary to prevent circumvention or evasion of the reporting requirements.

In particular, the rule provides that, for purposes of evaluating whether payments to a trust indicate that the union is financially dominant over the trust, payments made by employers to fund trusts under section 302(c) of the Labor Management Relations Act (LMRA), 29 U.S.C. 186(c) (Taft-Hartley funds) should be treated as funds of the union. Taft-Hartley funds are created and maintained through employer contributions paid to a trust fund, pursuant to a collective bargaining agreement, and must have equal numbers of union and management trustees, who owe a duty of loyalty to the trust. Taft-Hartley funds are established for the "sole and exclusive benefit of the employees" and are exempt from the statutory prohibition against an employer paying money to employees, representatives, or labor organizations. See 29 U.S.C. 186(a) and (c)(5).

The Department recognizes that the section 3(l) "trusts in which a union is interested" term is sufficiently broad to encompass Taft-Hartley plans. However, as explained above, this is only the first part of the section 208 analysis. The second part of the analysis requires that the Secretary determine that the reporting is *necessary* to prevent circumvention or evasion of the reporting of union money subject to Title II.

As explained in the 2020 Form T-1 rule, section 201 of the LMRDA requires that unions "file annual, public reports with the Department, detailing the union's cash flow during the reporting period, and identifying its assets and liabilities, receipts, salaries and other direct or indirect disbursements to each officer and all employees receiving \$10,000 or more in aggregate from the union, direct or indirect loans (in excess of \$250 aggregate) to any officer, employee, or member, any loans (of any amount) to any business enterprise, and other disbursements." 85 FR at 13414 (citing 29 U.S.C. 431(b)). Further, section 201 requires that such information shall be filed "in such detail as may be necessary to disclose [a labor organization's] financial condition and operations." 85 FR at 13414 (citing

Id.). Significantly, each financial transaction to be reported is one that reflects upon the *union's* financial condition and operations. 29 U.S.C. 201(b). Consequently, trust reporting is only permissible to prevent a labor union from using a trust to circumvent reporting of the *labor union's* finances.

However, money contributed to a Taft-Hartley plan does not bear on the labor union's finances and is not by law required to be reflected on a labor union's Title II reporting; accordingly, the T-1 Form cannot be deemed necessary to prevent circumvention or evasion of the reporting of union money subject to Title II. The 2020 Form T-1 rule presumes that employer contributions to Taft-Hartley plans establish labor union financial domination of a trust. After review, the Department has determined that money contributed by an employer to a Taft-Hartley fund is not property of the union. Thus, its disclosure does not "disclose [the union's] financial condition and operations." 29 U.S.C. 201(b). Conversely, a union's nondisclosure of such funds would not be an evasion of the union's reporting requirement as ordinary employer funds—even if placed into such a trust—are not within the control of the union, and would in no instance be reported by a union under the LMRDA reporting requirements.

One union commenter in particular agreed with the Department's position in the NPRM that the 2020 Form T-1 is overbroad because it is not targeted at preventing evasion or circumvention of the labor organization's reporting requirement. It argued that the rule attempts to "erase the distinction between benefit plan and labor organization reporting," in defiance of the will of Congress, which chose to address the McClellan Committee concerns regarding labor organization pension, health, and welfare fund reporting in the Welfare and Pension Fund Act of 1958 and later superseded by ERISA.

Another union commenter argued that the 2020 Form T-1 is not necessary to prevent circumvention or evasion of LMRDA reporting requirements because properly structured Taft-Hartley funds are by definition not controlled by unions. Because Taft-Hartley fund assets are not—and could not be—assets of the union, the Form T-1 cannot be said to be necessary to prevent circumvention of *union* reporting requirements.

Commenters also supported the Department's view that counting employer contributions towards union financial dominance is not justifiable. As one union commenter stated,

"[e]mployers are separate business entities that have their own assets, management, employees, and business operations." Further, the commenter pointed out, even in consideration of an employer's failure to contribute according to the terms of a CBA with a union, the union will file a grievance under the CBA's arbitration clause or will file a suit under LMRA section 301 for violating the contract, demonstrating that the union does not have control or authority over the disposition of the employer's assets. Rather, "the dispute is treated [under LMRA Section 301] as one involving the employer's breach of its contractual obligation to contribute to the fund, not as a dispute over the employer holding on to the union's money." The commenter went on to explain, as did other commenters, that the idea of employer contributions being union controlled funds is expressly contradicted by the logic of section 302 of the LMRA; the employer willfully giving funds to the union in such a manner would be illegal, but for the explicit exception made in part (c) of that section, which acknowledges such contributions as still being employer funds. However, even when employer funds reach the plan, as one commenter reminded, under EBSA regulation and advisory opinions the assets immediately become assets of the plan. Thus, at no point in the lifecycle of the employer's contribution do the funds become "union funds." See DOL ERISA Advisory Opinion 93-14A; Preamble to Prohibited Transaction Exemption 76-1, 41 FR 12740 at 12741 (Mar. 26, 1976).

In addition, by definition, Taft-Hartley funds may not have union managerial dominance because "employees and employers are equally represented in the administration of such fund[s], together with such neutral persons as the representatives of the employers and the representatives of employees may agree upon." See 29 U.S.C. 186(c)(5)(B). Disclosure of such funds is thus unnecessary to ensure that unions comply with their own financial reporting requirements under the LMRDA. One commenter argued specifically that this rationale also applied to Labor Management Cooperation Committee funds. Another union commenter made the observation that technically (and nonsensically) under the 2020 Form T-1, a fund in which 100% of the funds came from the employer and was wholly governed by an equal number of employers and union officials would nonetheless still be counted as proof of "union dominance," a result that simply does not comport with the facts. Finally, the

2020 Form T-1 rule's preamble failed to establish that the Form T-1 would be "necessary to prevent circumvention and evasion" of the LMRDA reporting requirements.

First, the 2020 rule states that the Form T-1 "will make it more difficult for a labor organization to avoid, simply by transferring money from the labor organization to a trust, the basic reporting obligation that applies if the funds had been retained by the labor organization." 85 FR 13418. However, the rule provided no evidence that labor organizations were transferring their own funds to Taft-Hartley trusts, an objection cited by a number of comments. And, of course, if a union transferred funds to a Taft-Hartley trust, the transaction itself would be reportable on the union's LM report.

In *AFL-CIO v. Chao*, the Court of Appeals for the D.C. Circuit held that the 2003 Form T-1 "reaches information unrelated to union reporting requirements and mandates reporting on trusts even where there is no appearance that the union's contribution of funds to an independent organization could circumvent or evade union reporting requirements." *AFL-CIO v. Chao*, 409 F.3d at 389. The 2020 Form T-1 rule is overly broad in the same manner, requiring many labor organizations to file the Form T-1 for independent Taft-Hartley trusts, even where there is no apparent means by which the union could use the trust as a means of circumventing or evading its Title II reporting requirements.

Second, the Department argued in the 2020 rule that "the money an employer contributes to such trusts pursuant to a CBA might otherwise have been paid directly to a labor organization's members in the form of increased wages and benefits, the members on whose behalf the financial transaction was negotiated have an interest in knowing what funds were contributed, how the money was managed, and how it was spent." 85 FR 13418. Assuming this is so, these underlying wages and benefits would not have been reported on a Form LM-2. Therefore, it is not apparent that payment of these potential wages and benefits to a trust involves the circumvention or evasion of Title II reporting. Thus, with respect to these funds, it is not clear from the 2020 Form T-1 final rule how the Form T-1 would have "close[d] a reporting gap where *labor organization finances* related to LMRDA section 3(I) trusts were not disclosed to members, the public, or the

Department.” (emphasis added) 84 FR 25416.¹¹

Further, the Department rescinded the Form T–1 in 2010 because it lacked statutory authority, but the 2020 rule did not adequately address this legal concern. See 75 FR 74938. Indeed, while acknowledging that employer contributions to a trust do not constitute the circumvention or evasion of *labor organization* funds, the 2020 rule argued that Form T–1 reporting for Taft-Hartley trusts could nonetheless prevent the circumvention of employer or labor organization officer or employee reporting under LMRDA Sections 202 and 203. See 85 FR 13422. However, as noted in the NPRM, 86 FR 28510, the 2020 rule provided no evidence that employer or labor organization officials circumvented or evaded their reporting requirements through a trust. Moreover, none of the comments opposing rescission addressed the issue of potential circumvention or evasion of employer or labor organization officer or employee reporting requirements.

Nor did the 2020 rule justify its imposition of the T–1 requirement solely on labor organizations. In that regard, one commenter in support of rescission agreed with the NPRM’s conclusion that if the Department were to require reporting on payments made from an employer to a trust pursuant to a CBA, then such reporting requirements should be placed on the employer, not the labor organization. Because such financial reporting should be required of an employer and not the union, any failure to report employer payments made to a trust pursuant to a CBA could not constitute a union’s circumvention or evasion of its LMRDA reporting requirements. The same commenter also observed how the 2020 Form T–1 rule relied in part on the LMRDA’s employer reporting requirements, and not the union reporting requirements, such as “when the employer diverted unlawfully funds intended for the trust to a union official,” again raising the question of why the filing of the Form T–1 reports, at least in the instance of apprenticeship

plans, fell solely on labor organizations and not employers.

Further, in addition to the Form T–1 reaching beyond the scope of Title II because of its application to Taft-Hartley plans, its overbreadth renders the rule unnecessary as a matter of policy, since the transparency benefits to the public and enforcement authority for the Department already exist concerning such plans. As stated above, the public already has access to disclosure for such plans through the IRS Form 990 and EBSA Form 5500. Further, the Forms LM–10 and LM–30 would capture unlawful payments from employers to unions or union officials through Taft-Hartley plans, thus ensuring that the Department has enforcement authority concerning such payments. In that regard, the Department has an extensive and successful enforcement history of over 60 years without the Form T–1, as evidenced by the FCA enforcement activities. See: <https://www.dol.gov/agencies/olms/criminal-enforcement>.

Moreover, the 2020 rule focused primarily on capturing non-exempt Taft-Hartley plans, and, indeed, the rulemaking record suggested that most Form T–1 reports filed would cover Taft-Hartley plans. However, even if the Form T–1 would capture some non-Taft-Hartley plans, as detailed above in the discussion of the Department’s policy justifications for rescinding the Form T–1, the burden to both the regulated community and the Department to comply with and enforce the Form T–1 reporting regime do not justify any marginal benefit.

Consequently, from a policy perspective, the Department will rescind the 2020 Form T–1 rule because its application to Taft-Hartley plans was overly broad and any marginal, unquantifiable benefit is eclipsed by the immense burden imposed. Separately, the Department will rescind the 2020 rule because its application to Taft-Hartley plans exceeds the Department’s scope of authority under Title II. In the Taft-Hartley context, a union’s reporting (or failure to report) on the Form T–1 could not prevent a union’s use of a trust to circumvent or evade its own reporting requirement because it is the employer’s, and not the union’s, finances that are being contributed to the Taft-Hartley plan at issue.

Other Comments Regarding the 2020 Form T–1 Final Rule

First, as one union commenter observed, the rule also set up the prospect of creating confusion by failing to provide a *de minimis* exemption for funds. A union’s contribution of a single dollar could potentially trigger the rule’s

stringent standards, if that contribution, in combination with contributions from other unions, establishes financial domination over the trust (as defined in the rule), thus requiring reporting on trusts that may be of minimal (or no) interest to members. Such minimal contributions may also lead to unions filing multiple reports, again for trusts that may not be of interest to members. Furthermore, if the contribution is less than \$10,000, there would be greater confusion than before, because members would know that some amount of money was contributed but would not know the exact figure, whether \$1 or \$9,999. The Department agrees that this possibility would support a *de minimis* exemption, and the lack of one further demonstrates that the burden of the Form T–1 outweighs its potential benefits.

Two anonymous comments offered general arguments against rescission. One argued for greater “governance” and “accountability” and in favor of “total transparency,” without any evidence justifying why existing reporting does not provide the necessary governance and accountability. Further, even if true, this reasoning does not provide legal support for the Form T–1, as it does not demonstrate how the form would prevent the “circumvention or evasion” of the reporting requirements required by the statute. The commenter did not address this point. Nor did the commenter balance transparency with burden. The other anonymous comment inquired into whether the Department would bring reporting requirements for “labor organizations and section 3(l) trusts in line with [c]ontemporary expectations for the disclosure of financial information.” As stated, after further review, the Department has determined that existing reporting requirements already provide the necessary disclosures, so the duplicative reporting offered by the Form T–1 does not justify the significant burdens on unions.

One commenter, a union member, commented against the rescission of the Form. The commenter argued that rescission would serve as “a disadvantage in combating corruption and a hindrance [sic] to self governance,” and the commenter supported this argument by providing three real examples in which the commenter asserted that the 2020 Form T–1 would have been helpful. However, as the commenter indicated, each entity discussed in the examples, which included two “betterment funds” and a market recovery fund, filed the Form 990, a form that, as the Department concluded, and many commenters

¹¹ To the extent the rule was premised simply on the proposition that workers ought to know what employer payments were made to Taft-Hartley funds and whether those payments could be characterized as diversions from wages, the Department notes that Section 104 of the Act requires that unions “forward a copy of each collective bargaining agreement made by such labor organization with any employer to any employee who requests such a copy and whose rights as such employee are directly affected by such agreement.” Those collective bargaining agreements set out the measure of contributions employers have agreed to bargaining to contribute to Taft-Hartley funds.

concurrent, provides the necessary transparency. Moreover, it appears that the union “betterment fund” constitutes a wholly-owned subsidiary of the member’s union, which the union already reports on its annual Form LM–2 report. As for the market recovery fund mentioned by the commenter, it appears from a review of the commenter’s union’s Form LM–2 report that the fund constitutes a union fund that the union already reports on the Form LM–2. Thus, the Form T–1 would not have covered those funds. Further, the Form LM–2 actually provides greater detail than the Form T–1 would have provided, and OLMS retains authority to pursue an amended Form LM–2 report if the union did not submit it accurately. OLMS also retains investigative authority, in the event union officials committed fraud in maintaining the fund. The Form T–1 would also have not covered the management-side “betterment fund,” since it would not appear to meet either the Form T–1’s union managerial control or financial domination test.

The commenter also indicated that he “attempts to keep track of the union’s financial affairs,” and the Form T–1 would “help rank-and-file members to put the pieces of [the] financial puzzle together.” The Department appreciates the commenter’s input but respectfully disagrees. A separate trust is not, *per se*, part of the union’s financial affairs, unless the trust is being used to circumvent or evade the union’s reporting. The commenter did not describe how the Form T–1 would serve such a purpose, nor how existing reporting requirements, such as the Form 990, are inadequate to provide general trust transparency (even assuming that the LMRDA authorizes such transparency, which it does not). As shown, the 2020 rule’s rulemaking record does not reflect the benefits of the Form T–1 that would justify the significant, additional burden on unions, particularly since union trusts typically already file the Form 990, generally providing similar if not greater detail than does the Form T–1. The Department reiterates that greater transparency alone is not sufficient to justify LMRDA section 208 rulemaking. Instead, there must be a showing that the report is necessary to prevent circumvention and evasion of the statutory reporting requirements.

Finally, the commenter, seemingly acknowledging the costs of the Form T–1, suggested that the union could offset those costs by forgoing purportedly wasteful expenses. Even assuming that unions could or should curtail certain expenses, an assumption not supported

by the rulemaking record, this fact would not independently justify the cost and burden of the Form T–1 in light of the limited benefits that the Form would provide.

Therefore, in light of the foregoing concerns, the Department rescinds the rule implementing the Form T–1 because, after reviewing the 2020 rulemaking record as well as the current rulemaking record, it no longer views the separate reporting requirements as set forth in the 2020 Form T–1 rule as justified in light of the burden they impose. Further, as it concerns Taft-Hartley plans, the trust reporting required under the rule is overly broad and thus not necessary to prevent the circumvention and evasion of the Title II reporting requirements.

IV. Specific Changes to the Form LM–2 Instructions and the LMRDA Regulations

A. Changes to the Form LM–2

The Department received no comments upon, and therefore implements, the following changes to the Form LM–2 Labor Organization Annual Report, which implement the rescission of the Form T–1:

1. Section IX—Labor Organizations In Trusteeship: The Department revises this section to remove any reference to the Form T–1.

2. Section XI—Completing Form LM–2: The Department changes the instructions to Item 10 (Trusts or Funds). The instructions for Item 10 are changed to remove any reference to the Form T–1, although basic information about the trust would still be required, as would a cite to any report filed for the trust with another government agency, such as the Department’s Employee Benefits Security Administration (EBSA) or the Internal Revenue Service (IRS).

The public can view the Form LM–2 changes in the accompanying Information Collection Request (ICR), pursuant to the PRA. See Part V (Regulatory Procedures), PRA section.

B. Changes to the LMRDA Regulations

As described in the below regulatory procedures section, and in order to implement the rescission of the 2020 Form T–1 rule, the Department also removes the references to the Form T–1 located in the Department’s LMRDA regulations at 29 CFR Part 403. Additionally, as described in the below regulatory procedures section, and as proposed, the Department will now require mandatory electronic filing for labor organizations that submit simplified annual reports pursuant to 29

CFR 403.4(b). The Department’s experience with Form LM–2, LM–3, and LM–4 reporting demonstrates that labor organizations can submit such reports electronically with little difficulty and with burden reductions for the labor organization filers and the Department. Further, the public benefits from more timely disclosure on the OLMS website. The Department anticipates such benefits for electronic simplified annual reports, as well. The Department did not receive any comments on mandatory electronic filing.

V. Regulatory Procedures

Executive Orders 12866 (Regulatory Planning and Review) and 13563 (Improving Regulation and Review)

Under Executive Order (E.O.) 12866, the Office of Management and Budget (OMB)’s Office of Information and Regulatory Affairs (OIRA) determines whether a regulatory action is significant and, therefore, subject to the requirements of E.O. 12866 and OMB review.¹² Section 3(f) of E.O. 12866 defines a “significant regulatory action” as an action that is likely to result in a rule that (1) has an annual effect on the economy of \$100 million or more, or adversely affects in a material way a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local or tribal governments or communities (also referred to as economically significant); (2) creates serious inconsistency or otherwise interferes with an action taken or planned by another agency; (3) materially alters the budgetary impacts of entitlement grants, user fees, or loan programs, or the rights and obligations of recipients thereof; or (4) raises novel legal or policy issues arising out of legal mandates, the President’s priorities, or the principles set forth in E.O. 12866. OMB has determined that this rule is significant under section 3(f) of E.O. 12866. Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), OIRA has designated this rule as not a ‘major rule’, as defined by 5 U.S.C. 804(2).

E.O. 13563 directs agencies to propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs; the regulation is tailored to impose the least burden on society, consistent with achieving the regulatory objectives; and in choosing among alternative regulatory approaches, the agency has selected those approaches that maximize net benefits. E.O. 13563 recognizes that some benefits are difficult to quantify and provides that, where appropriate and permitted by

¹² See 58 FR 51735 (September 30, 1993).

law, agencies may consider and discuss qualitatively values that are difficult or impossible to quantify, including equity, human dignity, fairness, and distributive impacts.

A. Costs of the Form T-1 for Labor Organizations

As described in the 2020 Form T-1 final rule, the Form T-1 is filed by Form LM-2 filing labor organizations with trusts that meet the dominance test, if those labor organizations are not otherwise exempted from filing. Cost savings discussed below concern the costs incurred by labor organizations to file the Form T-1 reports in subsequent years (assuming that filers have already incurred many of the first year costs discussed in the 2020 rule).¹³ As a result of the Department rescinding the Form T-1, the affected labor organizations would save these future costs. Using data from LM-2 filings, the Department estimated, in the 2020 Form T-1 final rule, that there are at least 810 total affected labor organizations (*i.e.*, LM-2 filers with trusts for which they must submit at least one Form T-1). The Department estimated in the 2020 rule that each affected labor organization would be responsible for an average of 2.56 Form T-1 filings. Additionally, each affected labor organization would spend approximately 84.12 hours in each subsequent year to fill out the Form T-1.¹⁴ The average hourly wage for Form T-1 filers, as with Form LM-2 filers, includes: \$37.89 for an accountant, \$20.25 for a bookkeeper or clerk, \$25.15 for a Form LM-2 filing union secretary-treasurer or treasurer, and \$29.21 for the Form LM-2 filing president, respectively.¹⁵ The weighted average hourly wage is \$36.53.¹⁶ To account for fringe benefits and overhead costs, as well as any other unknown costs or increases in the wage average, the average hourly wage has been multiplied by 1.63, so the fully loaded

¹³ To the extent they have not already incurred those costs, the savings set out in text would be greater.

¹⁴ For more details, see the Paperwork Reduction Act section below.

¹⁵ Wage rates are derived from 2018 data; more specifically, the president and treasurer wage rates are determined from FY 19 Form LM-2 report filings, while the accountant and bookkeeper wage rates come from 2018 Bureau of Labor Statistics (BLS) data available at: https://www.bls.gov/oes/2018/may/oes_nat.htm.

¹⁶ The weighted average calculates the wage rate per hour weighted according to the percentage of time that the Form T-1's completion will demand of each official/employee: 90 percent of the Form T-1 burden hours will be completed by an accountant, 5 percent by the bookkeeper, 4 percent by the union's treasurer/secretary-treasurer, and 1 percent by the union president.

hourly wage is \$59.54 ($\$36.53 \times 1.63 = \59.54).¹⁷

Therefore, the cost for each Form T-1 filer in subsequent years would be \$12,822 ($2.56 \times 84.12 \times \$59.54 = \$12,822$), which would be eliminated if the Department rescinds the Form T-1, as proposed.

B. Summary of Costs

This final rule would save 810 Form LM-2 filers a total of \$10,385,820 annually. The 10-year annualized cost is expected to be \$10,285,704 at a 3 percent discount rate and \$9,608,788 at a 7 percent discount rate.

C. Benefits

As explained more fully in the preamble to this final rule, the Department rescinds the Form T-1, as the 2020 Form T-1 final rule was duplicative of other existing reporting requirements, did not prevent the circumvention or evasion of the LMRDA reporting requirements, and provided no evidence that it detected or deterred labor-management fraud or corruption. Rather, the Department believes that existing reporting requirements adequately address these concerns. Further, rescission of the 2020 Form T-1 rule provides labor organizations with additional resources to devote to existing reporting requirements.

D. Alternatives and Comments Received

As mentioned in the NPRM concerning potential alternatives to rescinding the Form T-1, the Department could maintain the existing Form T-1 or propose a scaled back version. The retention of the Form T-1 would retain the burdens discussed in the 2020 Form T-1 rule, and the Department now considers that these burdens are not justified by the purported benefits. Rather, the Department now believes that existing reporting provides much if not all of the potential benefits of the Form T-1. Further, while a scaled back Form T-1 would reduce such burdens, the Department did not consider this approach, since the current Form T-1 already contains multiple exemptions and burden-reduction components.

¹⁷ The use of 1.63 accounts for 17 percent for overhead and 46 percent for fringe. In the case of the 46 percent for fringe, see the following link to BLS data showing that wages and salaries represent 68.6 percent (.686) of compensation (<https://www.bls.gov/news.release/ecec.t02.htm>). Dividing total compensation by the 68.6 percent represented by wages and salaries is equivalent to a 1.46 multiplier. Adding a 17 percent multiplier (.17) for overhead equals 1.63.

The Department did not receive any comments that specifically address the NPRM's regulatory impact analysis.¹⁸

Regulatory Flexibility Act

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601 *et seq.*, requires agencies to prepare regulatory flexibility analyses, and to develop alternatives wherever possible, in drafting regulations that will have a significant impact on a substantial number of small entities. The Department has determined that this final rule will not have a significant economic impact on a substantial number of small entities because the final rule contains no new collection of information. Rather, it only relieves the additional collection burden imposed upon labor organizations through the rescission of the regulations published on March 6, 2020.

The 2020 Form T-1 rule's Final Regulatory Flexibility Analysis (FRFA) considered whether it would place a significant impact on a substantial number of small business entities. That rulemaking analysis considered a labor organization a "small business entity" if they had average annual receipts of less than \$8 million.¹⁹ Based on previous standards utilized in other regulatory analyses, the threshold for significance was set at 3% of annual receipts, while a substantial number of small entities would be 20 percent. The 2020 Form T-1 final rule at the time would have impacted 2,009 labor organizations at least \$250,000 in size by annual receipts, with at least one trust, resulting in approximately 2,070 Form T-1 reports. Of these organizations, 1,667 had annual receipts less than \$8 million. There were only 315 LM-2 filers with at least one trust whose annual receipts were small enough that the Form T-1 costs would amount to more than a 3 percent impact. The largest of the 315 had annual receipts of \$614,813 for a 3.01 percent impact. The smallest of the filers had \$253,475 in annual receipts for a 7.30 percent impact.

Thus, the rule would have impacted 18.90 percent of small business entities in the first year. In all subsequent years, the percentage of small entities significantly impacted is 8.94 percent (149 out of 1,667 small entities). Both these figures would have been below the threshold to constitute a "substantial"

¹⁸ One comment in support of rescission contended that the Form T-1 rule's estimates of the burden hours for the form should have been doubled or more, and the commenter noted the logistical difficulty of getting information from the interested trust to the labor organization.

¹⁹ See <https://www.sba.gov/document/support-table-size-standards>.

number of small entities. See 85 FR 13439. Given that this rulemaking merely eliminates even those non-substantial costs, this rule cannot constitute a substantial cost.

Therefore, a regulatory flexibility analysis under the Regulatory Flexibility Act is not required. The Secretary has certified this conclusion to the Chief Counsel for Advocacy of the Small Business Administration.

Unfunded Mandates Reform

This final rule does not include any Federal mandate that may result in increased expenditures by State, local, and tribal governments, in the aggregate, of \$100 million or more, or in increased expenditures by the private sector of \$100 million or more.

Paperwork Reduction Act

A. Summary of the Final Rule

The following is a summary of the need for and objectives of the final rule. A more complete discussion of various aspects of the proposal is found in the preamble.

The final rule rescinds the Form T-1 Trust Annual Report established by final rule on March 6, 2020.

The LMRDA was enacted to protect the rights and interests of employees, labor organizations and the public generally as they relate to the activities of labor organizations, employers, labor relations consultants, and labor organization officers, employees, and representatives. Provisions of the LMRDA include financial reporting and disclosure requirements for labor organizations and others as set forth in Title II of the Act. See 29 U.S.C. 431-36, 441. Under Section 201(b) of the Act, 29 U.S.C. 431(b), labor organizations are required to file for public disclosure annual financial reports, which are to contain information about a labor organization's assets, liabilities, receipts, and disbursements.

The Department has developed several forms to implement the union annual reporting requirements of the LMRDA. The reporting detail required of labor organizations, as the Secretary has established by rule, varies depending on the amount of the labor organization's annual receipts. The Form LM-2 Annual Report is the most detailed of the annual labor organization reports, and is required to be filed by labor organizations with \$250,000 or more in annual receipts. The Form LM-2 requires certain receipts and disbursements to be reported by functional categories, such as representational activities; political

activities and lobbying; contributions, gifts, and grants; union administration; and benefits. Further, the form requires labor organizations to allocate the time their officers and employees spend according to functional categories, as well as the payments that each of these officers and employees receive, and it requires the itemization of certain transactions totaling \$5,000 or more. It must include reporting of loans to officers, employees and business enterprises; existence of any trusts; payments to each officer; and payments to each employee of the labor organization paid more than \$10,000, in addition to other information. The Secretary also has prescribed simplified annual reports for smaller labor organizations. Form LM-3 may be filed by unions with \$10,000 or more, but less than \$250,000 in annual receipts, and Form LM-4 may be filed by unions with less than \$10,000 in annual receipts. A local union that has no assets, liabilities, receipts, or disbursements, and which is not in trusteeship, is not required to file an annual report if its parent union files a simplified annual report on its behalf. In order to be eligible for this simplified annual reporting, the local must be governed solely by a uniform constitution and bylaws filed with OLMS by its parent union and its members must be subject to uniform fees and dues applicable to all members of the local unions for which the parent union files simplified reports. The parent union must submit annually to OLMS certain basic information about the local, including the names of all officers, together with a certification signed by the president and treasurer of the parent union.

On March 6, 2020, the Department issued a final rule establishing the Form T-1 Trust Annual Report, which prescribes the form and content of annual reporting by unions concerning entities defined in Section 3(I) of the LMRDA as "trusts in which a labor organization is interested." 85 FR 13414. The objective of this final rule is to rescind the Form T-1 Trust Annual Report, as the Department has determined that it is overbroad and not necessary to prevent the circumvention and evasion of the Title II requirements.

Further, the Department has reviewed the 2020 rulemaking record and no longer views the separate reporting requirements as set forth in the 2020 Form T-1 rule as justified in light of the burden they impose. The rescission of the Form T-1 constitutes a decrease in reporting burdens for those labor organizations associated with reportable trusts. As detailed in the 2020 Form T-

1 rule, the Form T-1 represented a total burden, for the estimated 810 Form LM-2 filers affected by the rule, of approximately 251,257 hours in the first year and 174,128 in the subsequent years. 85 FR at 13433. Additionally, the projected total cost on filers in the first year was approximately \$15 million in the first year and approximately \$10.4 million in subsequent years. 85 FR at 13437. This final rule eliminates these burdens and costs for future years. This final rule would also eliminate any first-year costs that unions have not yet incurred.

B. Overview of Trust Reporting on Form T-1

Every labor organization whose total annual receipts are \$250,000 or more and those organizations that are in trusteeship must currently file an annual financial report using the current Form LM-2, Labor Organization Annual Report, within 90 days after the end of the labor organization's fiscal year, to disclose their financial condition and operations for the preceding fiscal year. The current instructions state that receipts of an LMRDA section 3(I) trust in which the labor organization is interested (as described in Information Item 10) should not be included in the total annual receipts of the labor organization when determining which form to file, unless the 3(I) trust is a subsidiary organization of the union. See Form LM-2 Instructions, Part II: What Form to File.

The current Form LM-2 consists of 21 questions that identify the labor organization and provide basic information (in primarily a yes/no format); a statement of 11 financial items on different assets and liabilities (Statement A); a statement of receipts and disbursements (Statement B); and 20 supporting schedules (Schedules 1-10, Assets and Liabilities related schedules; Schedules 11-12 and 14-20, receipts and disbursements related schedules; and Schedule 13, which details general membership information).

The Form LM-2 requires such information as: Whether the labor organization has any trusts (Item 10); whether the labor organization has a political action committee (Item 11); whether the labor organization discovered any loss or shortage of funds (Item 13); the number of members (Item 20); rates of dues and fees (Item 21); the dollar amount for seven asset categories, such as accounts receivable, cash, and investments (Items 22-28); the dollar amount for four liability categories, such as accounts payable and mortgages payable (Items 30-33); the dollar

amount for 13 categories of receipts such as dues and interest (Items 36–49); and the dollar amount for 16 categories of disbursements such as payments to officers and repayment of loans obtained (Items 50–65).

Schedules 1–10 require detailed information and itemization on assets and liabilities, such as loans receivable and payable and the sale and purchase of investments and fixed assets. There are also nine supporting schedules (Schedules 11–12, 14–20) for receipts and disbursements that provide members of labor organizations with more detailed information by general groupings or bookkeeping categories to identify their purpose. Labor organizations are required to track their receipts and disbursements in order to correctly group them into the categories on the current form.

The Form T–1 provides similar but not identical reporting and disclosure for section 3(I) trusts, currently including subsidiaries, of Form LM–2 filing labor organizations. The Form T–1 requires information such as: Losses or shortages of funds or other property (Item 16); acquisition or disposal of any goods or property in any manner other than by purchase or sale (Item 17); whether or not the trusts liquidated, reduced, or wrote-off any liabilities without full payment of principal and interest (Item 18); whether the trust extended any loan or credit during the reporting period to any officer or employee of the reporting labor organization at terms below market rates (Item 19); whether the trust liquidated, reduced, or wrote-off any loans receivable due from officers or employees of the reporting labor organization without full receipt of principal and interest (Item 20); and the aggregate totals of assets, liabilities, receipts, and disbursements (Items 21–24). Additionally, the union must report detailed itemization and other information regarding receipts in Schedule 1, disbursements in Schedule 2, and disbursements to officers and employees of the trust in Schedule 3.

Although the Form T–1 has a higher reporting threshold for receipts and disbursements than does the Form LM–2, it provides nearly identical information regarding receipts and disbursements as does the Form LM–2. For example, unions must itemize receipts of trusts with virtually identical detail on Form T–1, Schedule 1, as on the Form LM–2, Schedule 14. Further, the information required on Form T–1 Schedules 2 and 3 correspond almost directly to the information required on Form LM–2 Schedules 15–20 and 11–12, respectively, although the format

does not directly correlate. However, as discussed earlier, Form T–1 does not provide as much detail regarding assets and liabilities of trusts as the Form LM–2 requires. For example, although Form T–1 Items 16 and 17 correspond directly to Form LM–2 Items 13 and 15, and the information required in Form T–1 Items 18–20 is required in a different format in Form LM–2, Schedules 2 and 8–10, there is also significant information required on the Form LM–2 and not on the Form T–1. Chief among the material excluded on the Form T–1 is the detailed information regarding assets and liabilities required by Form LM–2, Schedules 1–10. In sum, under the 2020 rule unions would need to report such information on the Form LM–2, while they would not need to do so under the existing Form T–1.

Additionally, the Department provided the public with separate burden analyses for the Form LM–2 and the Form T–1, in addition to the other forms required to be filed with the Department under the LMRDA. These analyses include the time for reviewing the respective set of instructions, searching existing data sources, gathering and maintaining data needed, creating needed accounting procedures, purchasing software, and completing and reviewing the collection of information. This rule eliminates the need for a Form T–1 burden analysis, as it proposes to eliminate that form and its separate reporting regime. Thus, many of the areas analyzed in other LMRDA reporting and disclosure burden analyses are not relevant to this discussion, as the existence and basic structure and procedures of the present Form LM–2 reporting regime is not amended by this final rule.

C. Methodology for the Burden Estimates

Initially, as stated above, this document proposes a reduction of burden hours for respondents included within ICR 1245–0003, as a result of the rescission of the Form T–1. The rescission of the Form T–1 results in a reduction of 174,128.4 hours in future years that an estimated 2,292 Form LM–2 filers would incur. 85 FR 13433. Additionally, the rule would eliminate the total cost to filers of \$10,385,820 in subsequent years. See 85 FR at 13437.

The accompanying ICR discusses changes to the other LMRDA forms and instructions included within ICR 1245–0003, which the Department will implement as proposed. These changes include mandatory electronic filing for the simplified annual reports and Forms LM–15, 15A, 16, 30, and Form S–1 as well clarification concerning the OLMS

use of email addresses for the signatories of each of the forms included within the ICR. As explained in the ICR, the Department does not believe that such revisions will result in a change to the burden estimates, since electronic filing does not result in greater burden than paper filing and filers already provide email addresses as part of the electronic filing process. The Department did not receive any comments on these proposed changes.

D. Conclusion

As this final rule requires a revision to an existing information collection, the Department is submitting, contemporaneous with the publication of this document, an ICR to remove the Form T–1 and its associated burden from OMB Control Number 1245–0003 and revise the PRA clearance to address the clearance term. A copy of this ICR, with applicable supporting documentation, including among other items a description of the likely respondents, proposed frequency of response, and estimated total burden may be obtained free of charge from the RegInfo.gov website at <https://www.reginfo.gov/public/do/PRAOMBHistory?ombControlNumber=1245-0003> (this link will be updated following publication of this rule) or from the Department by contacting Andrew Davis on 202–693–0123 (this is not a toll-free number)/email: OLMS-Public@dol.gov.

Agency: DOL—Office of Labor-Management Standards (OLMS).

Type of Review: Revision of a currently approved collection.

OMB Control Number: 1245–0003.

Title of Collection: Labor Organization and Auxiliary Reports.

Affected Public: Private Sector—businesses or other for-profits and not-for-profit institutions.

Estimated Number of Respondents: 33,021.

Estimated Number of Annual Responses: 35,297.

Frequency of Response: Varies.

Estimated Total Annual Burden

Hours: 4,644,849.

Estimated Total Annual Other Burden Cost: \$0.

Small Business Regulatory Enforcement Fairness Act of 1996

This rule would not constitute a major rule as defined by section 804 of the Small Business Regulatory Enforcement Fairness Act of 1996. This rule will not result in an annual effect on the economy of \$100,000,000 or more; a major increase in costs or prices; or significant adverse effects on competition, employment, investment,

productivity, innovation, or on the ability of the United States-based companies to compete with foreign-based companies in domestic and export markets.

List of Subjects

29 CFR Part 403

Labor unions, Reporting and recordkeeping requirements, Trusts.

29 CFR Part 408

Labor unions, Reporting and recordkeeping requirements, Trusts and trustees.

Accordingly, the Department amends 29 CFR parts 403 and 408 as set forth below:

PART 403—LABOR ORGANIZATION ANNUAL FINANCIAL REPORTS

■ 1. The authority citation for part 403 continues to read as follows:

Authority: Secs. 201, 207, 208, 301, 73 Stat. 524, 529, 530 (29 U.S.C. 431, 437, 438, 461); Secretary’s Order No. 03–2012, 77 FR 69376, November 16, 2012.

§ 403.2 [Amended]

■ 2. Amend § 403.2 by removing paragraph (d).

■ 3. Amend § 403.4 by revising paragraphs (b)(3) and (b)(6) introductory text to read as follows:

§ 403.4 Simplified annual reports for smaller labor organizations.

* * * * *

(b) * * *

(3) The national organization with which it is affiliated assumes responsibility for the accuracy of a statement filed electronically, through the electronic filing system made available on the Office of Labor-Management Standards website, covering each local labor organization covered by this paragraph (b) and containing the following information with respect to each local organization:

- (i) The name and designation number or other identifying information;
- (ii) The file number which the Office of Labor-Management Standards has assigned to it;
- (iii) The mailing address;
- (iv) The beginning and ending date of the reporting period which must be the same as that of the report for the national organization;
- (v) The names and titles of the president and treasurer or corresponding principal officers as of the end of the reporting period;

* * * * *

(6) The national organization with which it is affiliated assumes

responsibility for the accuracy of, and submits with its simplified annual reports filed electronically pursuant to § 403.4(b)(3) for the affiliated local labor organizations, the following certification properly completed and signed by the president and treasurer of the national organization:

* * * * *

§ 403.5 [Amended]

■ 4. Amend § 403.5 by removing paragraph (d).

§ 403.8 [Amended]

■ 5. Amend § 403.8 by removing paragraph (b)(3).

PART 408—LABOR ORGANIZATION TRUSTEESHIP REPORTS

■ 6. The authority citation for part 408 continues to read as follows:

Authority: Secs. 202, 207, 208, 73 Stat. 525, 529 (29 U.S.C. 432, 437, 438); Secretary’s Order No. 03–2012, 77 FR 69376, November 16, 2012.

■ 7. Revise § 408.5 to read as follows:

§ 408.5 Annual financial report.

During the continuance of a trusteeship, the labor organization which has assumed trusteeship over a subordinate labor organization, shall file with the Office of Labor-Management Standards on behalf of the subordinate labor organization the annual financial report required by part 403 of this chapter, signed by the president and treasurer or corresponding principal officers of the labor organization which has assumed such trusteeship, and the trustees of the subordinate labor organization on Form LM–2.

Signed in Washington, DC, this 22nd day of December, 2021.

Jeffrey R. Freund,
Director, OLMs.

BILLING CODE 4510–86–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 31

[EPA-HQ–2020–03508; FRL–8540–01–OECA]

On-Site Civil Inspection Procedures; Rescission

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule; rescission of regulations.

SUMMARY: In accordance with the Presidential directive of January 20,

2021, “Revocation of Certain Executive Orders Concerning Federal Regulation,” and in order to ensure appropriate flexibilities to site-specific inspection work, the Environmental Protection Agency (EPA) is rescinding its March 2, 2020 final rule describing certain Agency procedures for conducting on-site civil inspections. This rule applies to on-site civil inspections conducted by federally credentialed EPA civil inspectors, federally credentialed contractors and Senior Environmental Employment employees conducting inspections on behalf of EPA.

DATES: This rule is effective on December 30, 2021.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA-HQ–2020–03508. All documents in the docket are listed on the <https://www.regulations.gov> website. Although listed in the index, some information is not publicly available, e.g., CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available electronically through <https://www.regulations.gov>. For information on the EPA Docket Center services and the current status, please visit us online at <https://www.epa.gov/dockets>.

FOR FURTHER INFORMATION CONTACT: Chad Carbone, Monitoring, Assistance, and Media Programs Division, Office of Enforcement and Compliance Assurance (Mail Code 2221A), Environmental Protection Agency, 1200 Pennsylvania Avenue NW, Washington, DC 20460; telephone number: 202–564–2523; email address: carbone.chad@epa.gov.

SUPPLEMENTARY INFORMATION:

I. General Information

A. What action is the Agency taking?

In accordance with E.O. 13992, “Revocation of Certain Executive Orders Concerning Federal Regulation,” issued by President Biden on January 20, 2021 (86 FR 7049, January 25, 2021), and in order to ensure appropriate flexibilities to site-specific inspection work, the EPA is rescinding the final rule (85 FR 12224, March 2, 2020) that described certain Agency procedures for conducting on-site civil inspections. The prior final rule was promulgated to implement the now revoked E.O. 13892, “Promoting the Rule of Law Through Transparency and Fairness in Civil Administrative Enforcement and Adjudication” (84 FR 55239, October 9, 2019).

B. What is the Agency's authority for taking this action?

EPA's policies and requirements surrounding inspection procedures are matters of agency organization, procedure, or practice that lack the force and effect of law. Accordingly, the EPA is not required to engage in a notice and comment process to issue or revise internal procedures under the Administrative Procedure Act (APA). See 5 U.S.C. 553(b)(3)(A), which provides that an agency may issue interpretive rules, general statements of policy, or rules of agency organization, procedure, or practice without providing notice and an opportunity for public comment. The EPA is providing an immediate effective date for this rulemaking because it is procedural rather than substantive. The APA's requirement, 5 U.S.C. 553(d), that substantive rules not be effective until at least 30 days after publication in the **Federal Register** is inapplicable because this rulemaking is procedural.

II. Background

On October 9, 2019, President Trump issued E.O. 13892, "Promoting the Rule of Law Through Transparency and Fairness in Civil Administrative Enforcement and Adjudication." Section 7 of the now revoked E.O., entitled Ensuring Reasonable Administrative Inspections, provided that: "Within 120 days of the date of this order, each agency that conducts civil administrative inspections shall publish a rule of agency procedure governing such inspections, if such a rule does not already exist." Section 1, Policy, of E.O. 13892 implied that there was a need for a rule of Agency procedure, due to a perceived lack of transparency on how EPA conducts on-site civil administrative inspections. On March 2, 2020, the EPA published a final rule consistent with E.O. 13892. The final rule, codified at 40 CFR part 31, described certain EPA procedures for governing agency personnel on how to conduct EPA on-site civil inspections (85 FR 12224).

On January 20, 2021, President Biden issued E.O. 13992, "Revocation of Certain Executive Orders Concerning Federal Regulation," which revoked E.O. 13892. E.O. 13992 states that it is the policy of the Administration "to use available tools to confront the urgent challenges facing the Nation, including the coronavirus disease 2019 (COVID-19) pandemic, economic recovery, racial justice, and climate change. To tackle these challenges effectively, executive departments and agencies (agencies) must be equipped with the flexibility to

use robust regulatory action to address national priorities. This order revokes harmful policies and directives that threaten to frustrate the Federal Government's ability to confront these problems, and empowers agencies to use appropriate regulatory tools to achieve these goals." Section 3 of E.O. 13992 directs agencies to take steps to rescind any orders, rules, regulations, guidelines or policies, or portions thereof, implementing or enforcing the revoked Executive orders.

III. Discussion

The inspection rule being rescinded today converted a subset of what had been long-standing civil inspection practices, guided by applicable agency policies, into *rules of Agency procedure* by which "all" civil inspections "shall be conducted." 40 CFR Part 31.1(a). Although not altering the rights of parties outside of EPA, the change from an Agency practice to a *rule of procedure* reduces the flexibility that is inherent in implementing agency policies in a case-by-case manner. The procedures for inspections must be adaptable to the site-specific conditions that the Agency faces in conducting its investigations. By rescinding the 2020 inspection rule, EPA is restoring the flexibility needed when carrying out civil inspections under a myriad of circumstances.

Further, the EPA has concluded that the 2020 rule on civil inspections is unnecessary, since procedures described in this rule already exist in inspection guidances and manuals, which are accessible to the public through EPA's website.

Therefore, in accordance with E.O. 13992, the EPA is issuing this final rule to rescind the part 31 regulations.

Section 1, Policy, of E.O. 13892 implied that there was a need for a rule of Agency procedure, due to a perceived lack of transparency on how EPA conducts on-site civil administrative inspections. The EPA notes, however, that the Agency has historically employed methods for public transparency of Agency procedures for conducting on-site civil inspections and will continue these transparency practices under current policies. (These Agency guidances and manuals on the procedures for on-site civil inspections are available to the public on the Agency's website at <https://www.epa.gov>.) In addition, the EPA has met and will meet all statutory obligations pertaining to posting documents for public accessibility. To the extent that concerns arise regarding Agency guidance, a person may—consistent with the APA—petition the

EPA, including a request to issue, amend, or repeal EPA guidance, by contacting the EPA program office or regional office that is responsible for administering the area of stakeholder interest.

EPA believes that rescinding the part 31 regulations will restore the flexibilities needed to meet the Agency's statutory duties. Therefore, in accordance with E.O. 13992 and for the reasons stated above, the EPA is rescinding its internal agency procedures for conducting on-site civil inspections codified at 40 CFR part 31.

IV. Statutory and Executive Orders Reviews

Additional information about these statutes and Executive orders can be found at <https://www.epa.gov/laws-regulations/laws-and-executive-orders>.

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

This action is exempt from review by the Office of Management and Budget (OMB) because it is a rule of agency procedure and practice and is limited to agency management.

B. Paperwork Reduction Act (PRA)

This action does not contain any information collection activities and therefore does not impose an information collection burden under the PRA.

C. Regulatory Flexibility Act (RFA)

This action is not subject to the RFA. The RFA applies only to rules subject to notice and comment rulemaking requirements under the Administrative Procedure Act (APA), 5 U.S.C. 553, or any other statute. This rule pertains to agency management or personnel, which the APA expressly exempts from notice and comment rulemaking requirements under 5 U.S.C. 553(a)(2).

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain any unfunded mandate as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. The action imposes no enforceable duty on any state, local, or tribal governments or the private sector.

E. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the National Government and the states, or on the distribution of power and

responsibilities among the various levels of government.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have tribal implications as specified in Executive Order 13175. Thus, Executive Order 13175 does not apply to this action.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

The EPA interprets Executive Order 13045 as applying only to those regulatory actions that concern environmental health or safety risks that the EPA has reason to believe may disproportionately affect children. Per the definition of “covered regulatory action” in section 2–202 of Executive Order 13891 and because this action does not concern an environmental health risk or safety risk, it is not subject to Executive Order 13045.

H. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution or Use

This action is not a “significant energy action” because it is not likely to have a significant adverse effect on the supply, distribution or use of energy. This action is not subject to Executive Order 13211 because it is not a significant regulatory action under Executive Order 12866.

I. National Technology Transfer and Advancement Act (NTTAA)

This rulemaking does not involve technical standards.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

The EPA believes that this action is not subject to Executive Order 12898 (59 FR 7629, February 16, 1994) because it does not establish an environmental health or safety standard. This regulatory action is a procedural rule and does not have any impact on human health or the environment.

K. Congressional Review Act

This rule is exempt from the CRA because it is a rule of agency organization, procedure or practice that does not substantially affect the rights or obligations of non-agency parties.

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: In this document, the Federal Communications Commission (Commission) reconsiders and clarifies certain aspects of the transparency and redress requirements previously adopted to ensure that voice service providers continue to block unwanted and illegal calls, while also protecting the interests of legitimate callers and consumers, also, granting a waiver to allow voice service providers terminating a call on an internet protocol (IP) network to use Session Initiation Protocol (SIP).

DATES: This rule is effective January 31, 2022, except for the addition of § 64.1200(k)(10), which is delayed indefinitely. The Commission will publish a document in the **Federal Register** announcing the effective date of this amendment. Section 64.1200(k)(9)(i) is waived from January 1, 2022 until January 31, 2022.

FOR FURTHER INFORMATION CONTACT: For additional information on this proceeding, contact Jerusha Burnett, Jerusha.Burnett@fcc.gov or (202) 418–0526, of the Consumer and Governmental Affairs Bureau, Consumer Policy Division.

SUPPLEMENTARY INFORMATION: This is a summary of the Commission’s Order on Reconsideration and Waiver Order, FCC 21–126, CG Docket No. 17–59, adopted

on December 10, 2021, and released on December 14, 2021. The full text of this document is available online at <https://www.fcc.gov/document/fcc-adopts-robocall-blocking-reconsideration-order>. To request this document in accessible formats for people with disabilities (e.g., Braille, large print, electronic files, audio format) or to request reasonable accommodations (e.g., accessible format documents, sign language interpreters, CART), send an email to fcc504@fcc.gov or call the FCC’s Consumer and Governmental Affairs Bureau at (202) 418–0530 (voice).

Final Paperwork Reduction Act of 1995 Analysis

The Order on Reconsideration contains a non-substantive modification to an approved information collection subject to the Paperwork Reduction Act of 1995 (PRA), Public Law 104–13. This modification will be submitted to the Office of Management and Budget (OMB) for review pursuant to OMB’s process for non-substantive changes. The Order on Reconsideration, therefore, does not contain any new or modified information collection burden for small business concerns with fewer than 25 employees, pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107–198, *see* 44 U.S.C. 3506(c)(4). The Waiver Order does not contain any new or modified information collection requirements subject to the Paperwork Reduction Act of 1995, Public Law 104–13.

Congressional Review Act

The Commission sent a copy of document FCC 21–126 to Congress and the Government Accountability Office pursuant to the Congressional Review Act, 5 U.S.C. 801(a)(1)(A).

Synopsis

1. In the Order on Reconsideration, the Commission reconsiders and clarifies certain aspects of the transparency and redress requirements previously adopted in the *Call Blocking Fourth Report and Order* to ensure that voice service providers continue to block unwanted and illegal calls, while also protecting the interests of legitimate callers and consumers. In the Waiver Order, the Commission grants a waiver to allow voice service providers terminating a call on an IP network to use SIP Code 603 in addition to SIP Code 607 or 608 from January 1, 2022 until the effective date of the amendments to § 64.1200(k)(9) of the Commission’s rules.

2. The Commission previously permitted voice service providers to block certain categories of calls that are

highly likely to be illegal without consumer consent, *e.g.*, calls purporting to be from invalid, unallocated, or unused numbers, and calls likely to be unwanted based on reasonable analytics designed to identify unwanted calls. The Commission adopted a safe harbor from liability under the Communications Act and the Commission's rules for erroneous call blocking, in order to protect voice service providers from liability for unintended blocking of wanted calls where terminating voice service providers block calls thought to be illegal or unwanted based on reasonable analytics that include caller ID authentication information and where the consumer is given the opportunity to opt out, if this blocking is managed with human oversight and network monitoring sufficient to ensure that blocking is working as intended. In addition, voice service providers must take steps to stop illegal traffic on their networks and assist the Commission, law enforcement, and the Traceback Consortium in tracking down callers that make such calls.

3. As part of the call blocking and safe harbor rules, the Commission had required voice service providers blocking calls to provide immediate notification to callers of such blocking through the use of specified SIP Codes. SIP is the signaling protocol used in IP networks enabling calls to be made and received by end-users and includes a SIP request and a SIP response. The SIP response is a three-digit code that indicates the status of the SIP request. The Commission specified that terminating voice service providers that block calls on an IP network return SIP Code 607 or 608, as appropriate. SIP Code 607 is used when the called party indicates a call is unwanted. SIP Code 608 indicates a call was rejected by an intermediary, such as an analytics engine, as opposed to by the called party. Because SIP Codes are not available on non-IP networks, the Commission required use of ISUP code 21 for calls blocked on a TDM network.

4. The Commission further required all voice service providers in the call path to transmit the appropriate SIP Codes to the origination point of the call and set a deadline of January 1, 2022 for voice service providers to comply with the immediate notification requirements. The Commission required that any terminating voice service provider that blocks calls on an opt-in or opt-out basis provide, on the request of the subscriber to a particular number, a list of all calls intended for that number that the voice service provider or its designee has blocked.

5. In the Order on Reconsideration, the Commission granted, in part, the petition for reconsideration filed by USTelecom and stated that allowing terminating voice service providers to utilize SIP Code 603 during the finalization of and transition to SIP Codes 607 and 608 strikes a reasonable balance between ensuring that voice service providers have the technical ability to provide immediate notification to callers and ensuring that callers have a uniform means of receiving such notifications. The Commission amended the immediate notification requirements to allow terminating voice service providers operating IP networks to use SIP Codes 603, 607, or 608 to comply with the rule. The Commission granted USTelecom's request to allow use of SIP Code 603 as an alternative to SIP Codes 607 and 608 and denied USTelecom's broader request for general flexibility with regard to providing blocking notification.

6. The Commission also granted USTelecom's request to confirm that immediate notification to callers is necessary only for calls blocked pursuant to any analytics programs. The Commission stated that a voice service provider must comply with the immediate notification requirement whenever it blocks calls based on analytics, regardless of whether such blocking is done with consumer opt in or opt out, or at the network level without consumer consent.

7. The Commission denied USTelecom's request to exempt voice service providers from the immediate notification requirements if they are temporarily unable to for technical reasons and concluded that under such circumstances they may seek a waiver from the Commission and such waivers will be evaluated on a case-by-case basis.

8. The Commission also clarified that the requirement that any terminating voice service provider that blocks on an opt-in or opt-out basis must provide, on the request of the subscriber to a particular number, a list of calls intended for that number that the voice service provider or its designee has blocked applies only to blocking performed pursuant to opt-in or opt-out analytics programs, rather than to subscriber-initiated features such as white lists, black lists, Do Not Disturb, call rejection, and line-level blocking. The Commission explained that because the purpose of the blocked-calls-list requirement is to ensure effective redress to consumers, there is no reason to apply such a requirement to situations where providers are not

required to allow consumers to opt out and this redress requirement is, thus, inapplicable. As a result, the blocked-calls-list requirement does not apply to such blocking programs.

9. The Commission denied USTelecom's request to confirm that originating voice service providers can determine with their enterprise customers how those customers will be notified about blocking of their calls by downstream providers and that notifications to enterprise customers are not covered by the Commission's notification requirement. All voice service providers in the call path are required to transmit the appropriate response codes to the origination point of the call. The Commission clarified that an originating voice service provider must transmit the appropriate response code to the origination point of the call, which means that the code must be made available to callers that are able to receive it. The Commission stated that the focus of section 10(b) of the TRACED Act, codified at 47 U.S.C. 227(j), and the Commission's rules implementing this provision, is on transparency for the caller, not transparency for an originating provider. Thus, originating voice service providers must, at a minimum, transmit the appropriate response code to the caller.

10. In the Waiver Order, the Commission explained that, because the amendment to the immediate notification requirement in the Order on Reconsideration may not be published in the **Federal Register** before January 1, 2022, the Commission grants, pursuant to section 1.3 of the Commission's rules, a waiver of § 64.1200(k)(9)(i) to allow voice service providers terminating a call on an IP network to use SIP Code 603, 607, or 608 from January 1, 2022 until the effective date of the amendments to section 64.1200(k)(9) of the Commission's rules adopted in the Order on Reconsideration.

11. The Commission found that good cause exists to allow voice service providers to use SIP Code 603 beginning on January 1, 2022. Granting this waiver is necessary to avoid a situation where a terminating voice service provider on an IP network may be unable to return SIP Code 607 or 608 beginning on January 1, 2022 (for the reasons discussed in the Order on Reconsideration) and thus, absent a waiver, could choose not to block calls rather than to block calls in a manner that does not comply with § 64.1200(k)(9)(i) of the Commission's rules.

Final Regulatory Flexibility Analysis

12. As required by the Regulatory Flexibility Act of 1980 (RFA), as amended, an Initial Regulatory Flexibility Analysis (IRFA) was incorporated into the *Call Blocking Fourth Report and Order*. The Commission sought written public comment on the proposals in the NPRM, including comment on the IRFA. This Final Regulatory Flexibility Analysis (FRFA) conforms to the RFA.

13. *Need for, and Objectives of, the Order*. The Order on Reconsideration reconsiders and clarifies certain aspects of the transparency and redress requirements adopted in the *Call Blocking Fourth Report and Order* to ensure that voice service providers continue to block unwanted and illegal calls, while also protecting the interests of legitimate callers and consumers. The rules adopted in the Order on Reconsideration help clarify certain aspects of our rules while promoting greater flexibility for voice service providers in meeting the obligations set forth in the *Call Blocking Fourth Report and Order*.

14. *Summary of Significant Issues Raised by Public Comments in Response to the IRFA*. The Commission responded to all significant issues raised in response to the IRFA in the *Call Blocking Fourth Report and Order*.

15. *Response to Comments by the Chief Counsel for Advocacy of the Small Business Administration*. Pursuant to the Small Business Jobs Act of 2010, which amended the RFA, the Commission is required to respond to any comments filed by the Chief Counsel for Advocacy of the Small Business Administration (SBA), and to provide a detailed statement of any change made to the proposed rules as a result of those comments. The Chief Counsel did not file any comments in response to the proposed rules in this proceeding.

16. *Description of Projected Reporting, Recordkeeping, and Other Compliance Requirements*. This Order on Reconsideration does not adopt any new reporting, recordkeeping, or other compliance requirements for small entities.

17. *Steps Taken to Minimize Significant Economic Impact on Small Entities, and Significant Alternatives Considered*. The RFA requires an agency to describe any significant alternatives that it has considered in reaching its approach, which may include the following four alternatives (among others): (1) The establishment of differing compliance or reporting requirements or timetables that take into

account the resources available to small entities; (2) the clarification, consolidation, or simplification of compliance or reporting requirements under the rule for small entities; (3) the use of performance, rather than design, standards; and (4) an exemption from coverage of the rule, or any part thereof, for small entities. The Order on Reconsideration relieves a burden on small voice service providers by allowing such providers more flexibility in meeting the immediate notification requirements adopted in the *Call Blocking Fourth Report and Order*.

List of Subjects in 47 CFR Part 64

Communications common carriers, Reporting and recordkeeping requirements, Telecommunications, Telephone.

Federal Communications Commission.

Katura Jackson,

Federal Register Liaison Officer.

Final Rules

For the reasons discussed in the preamble, the Federal Communications Commission amends 47 part 64 as follows:

PART 64—MISCELLANEOUS RULES RELATING TO COMMON CARRIERS

- 1. The authority citation for part 64 continues to read as follows:

Authority: 47 U.S.C. 151, 152, 154, 201, 202, 217, 218, 220, 222, 225, 226, 227, 227b, 228, 251(a), 251(e), 254(k), 262, 276, 403(b)(2)(B), (c), 616, 620, 1401–1473, unless otherwise noted; Pub. L. 115–141, Div. P, sec. 503, 132 Stat. 348, 1091.

- 2. Effective January 31, 2022, amend § 64.1200 by revising paragraphs (k)(9) introductory text and (k)(9)(i) to read as follows:

§ 64.1200 Delivery restrictions.

* * * * *

(k) * * *

(9) Any terminating provider that blocks calls based on any analytics program, either itself or through a third-party blocking service, must immediately return, and all voice service providers in the call path must transmit, an appropriate response code to the origination point of the call. For purposes of this rule, an appropriate response code is:

(i) In the case of a call terminating on an IP network, the use of Session Initiation Protocol (SIP) code 603, 607, or 608;

* * * * *

- 3. Delayed indefinitely, further amend § 64.1200 by revising paragraph (k)(10) to read as follows:

§ 64.1200 Delivery restrictions.

* * * * *

(k) * * *

(10) Any terminating provider that blocks calls pursuant to an opt-out or opt-in analytics program, either itself or through a third-party blocking service, must provide, at the request of the subscriber to a number, at no additional charge and within 3 business days of such a request, a list of calls to that number, including the date and time of the call and the calling number, that the terminating provider or its designee blocked pursuant to such analytics program within the 28 days prior to the request.

BILLING CODE 6712–01–P

DEPARTMENT OF DEFENSE

Defense Acquisition Regulations System

48 CFR Parts 225 and 252

[Docket DARS–2021–0026]

RIN 0750–AL50

Defense Federal Acquisition Regulation Supplement: Trade Agreements Thresholds (DFARS Case 2022–D003)

AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD).

ACTION: Final rule.

SUMMARY: DoD is issuing a final rule amending the Defense Federal Acquisition Regulation Supplement (DFARS) to incorporate revised thresholds for application of the World Trade Organization Government Procurement Agreement and the Free Trade Agreements, as determined by the United States Trade Representative.

DATES: Effective January 1, 2022.

FOR FURTHER INFORMATION CONTACT: Ms. Kimberly Bass, 571–372–6174.

SUPPLEMENTARY INFORMATION:

I. Background

This rule adjusts thresholds for application of the World Trade Organization (WTO) Government Procurement Agreement (GPA) and Free Trade Agreements (FTA) as determined by the United States Trade Representative (USTR). The trade agreements thresholds are adjusted every two years according to predetermined formulae set forth in the agreements. The USTR has specified the

following new thresholds in the **Federal Register** (86 FR 67579, November 26, 2021), which are being implemented in this rule:

Trade agreement	Supply contract (equal to or exceeding)	Construction contract (equal to or exceeding)
WTO GPA	\$183,000	\$7,032,000
FTA:		
Australia	92,319	7,032,000
Bahrain	183,000	12,001,460
CAFTA–DR (Costa Rica, Dominican Republic, El Salvador, Guatemala, Honduras, and Nicaragua)	92,319	7,032,000
Chile	92,319	7,032,000
Colombia	92,319	7,032,000
Korea	100,000	7,032,000
Morocco	183,000	7,032,000
Panama	183,000	7,032,000
Peru	183,000	7,032,000
Singapore	92,319	7,032,000

Updates for the United States-Mexico-Canada Agreement (USMCA), which superseded the North American Free Trade Agreement (NAFTA), are not included in this revision to the trade agreements thresholds in the DFARS. On January 29, 2020, the President signed into law the United States-Mexico-Canada Agreement Implementation Act, through which Congress approved the USMCA. On July 1, 2020, the USMCA entered into effect. Although Canada is still a designated country under the WTO GPA, Canada is no longer a Free Trade Agreement country, because chapter 13 of the USMCA (Government procurement) applies only to the United States and Mexico. While updates to the DFARS to implement the revisions resulting from the USMCA are not implemented in this final rule, implementation is being accomplished via separate rulemaking under DFARS Case 2020–D032. Changes to the Federal Acquisition Regulation (FAR) to implement the USMCA are being accomplished under FAR Case 2020–014.

II. Publication of This Final Rule for Public Comment is not Required by Statute

The statute that applies to the publication of the FAR is 41 U.S.C. 1707. Subsection (a)(1) of the statute requires that a procurement policy, regulation, procedure, or form (including an amendment or modification thereof) must be published for public comment if it relates to the expenditure of appropriated funds and has either a significant effect beyond the internal operating procedures of the agency issuing the policy, regulation, procedure, or form, or has a significant cost or administrative impact on contractors or offerors. This final rule is

not required to be published for public comment, because it only adjusts the thresholds according to predetermined formulae to account for changes in economic conditions, thus maintaining the status quo, without significant effect beyond the internal operating procedures of the Government.

III. Applicability to Contracts at or Below the Simplified Acquisition Threshold and for Commercial Items, Including Commercially Available Off-the-Shelf Items

This rule amends the DFARS to revise thresholds for application of the WTO GPA and the FTA. The revisions do not add any new burdens or impact applicability of clauses and provisions at or below the simplified acquisition threshold or to commercial items.

IV. Executive Orders 12866 and 13563

Executive Orders (E.O.s) 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This is not a significant regulatory action and, therefore, was not subject to review under section 6(b) of E.O. 12866, Regulatory Planning and Review, dated September 30, 1993.

V. Congressional Review Act

As required by the Congressional Review Act (5 U.S.C. 801–808) before an interim or final rule takes effect, DoD will submit a copy of the final rule with the form, Submission of Federal Rules

under the Congressional Review Act, to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States. A major rule under the Congressional Review Act cannot take effect until 60 days after it is published in the **Federal Register**. The Office of Information and Regulatory Affairs has determined that this rule is not a major rule as defined by 5 U.S.C. 804.

VI. Regulatory Flexibility Act

The Regulatory Flexibility Act does not apply to this rule, because this final rule does not constitute a significant DFARS revision within the meaning of FAR 1.501–1, and 41 U.S.C. 1707 does not require publication for public comment.

VII. Paperwork Reduction Act

The Paperwork Reduction Act (44 U.S.C chapter 35) does apply, because the final rule affects the prescriptions for use of the certification and information collection requirements in the provision at DFARS 252.225–7035, Buy American-Free Trade Agreements—Balance of Payments Program Certificate, and the certification and information collection requirements in the provision at DFARS 252.225–7018, Photovoltaic Devices—Certificate. The changes to these DFARS provisions do not impose additional information collection requirements to the paperwork burden previously approved under OMB Control Number 0704–0229, entitled “DFARS Part 225, Foreign Acquisition and related clauses,” because the threshold changes are in line with inflation and maintain the status quo.

List of Subjects in 48 CFR Parts 225 and 252

Government procurement.

Jennifer D. Johnson,

Editor/Publisher, Defense Acquisition Regulations System.

Therefore, 48 CFR parts 225 and 252 are amended as follows:

■ 1. The authority citation for 48 CFR parts 225 and 252 continues to read as follows:

Authority: 41 U.S.C. 1303 and 48 CFR chapter 1.

PART 225—FOREIGN ACQUISITION**225.1101 [Amended]**

■ 2. Amend section 225.1101 by—

■ a. In paragraph (6) introductory text, removing “\$182,000” and adding “\$183,000” in its place;

■ b. In paragraph (10)(i) introductory text, removing “\$182,000” and adding “\$183,000” in its place;

■ c. In paragraph (10)(i)(A), removing “\$182,000” and adding “\$183,000” in its place;

■ d. In paragraph (10)(i)(B), removing “\$83,099” and adding “92,319” in its place;

■ e. In paragraph (10)(i)(C), removing “\$182,000” and adding “\$183,000” in its place; and

■ f. In paragraphs (10)(i)(D) through (F), removing “\$83,099” and adding “92,319” in its place.

225.7017–3 [Amended]

■ 3. Amend section 225.7017–3 by—

■ a. In paragraph (b), removing “\$182,000” and adding “\$183,000” in its place; and

■ b. In paragraph (c)(2), by removing “\$180,000” and adding “\$183,000” in its place.

225.7503 [Amended]

■ 4. Amend section 225.7503 by—

■ a. In paragraphs (a) introductory text and (b) introductory text, removing “\$7,008,000” and adding “\$7,032,000” in its place;

■ b. In paragraph (b)(1), removing “\$10,802,884” and adding “\$12,001,460” in its place;

■ c. In paragraph (b)(2), removing “\$7,008,000” and adding “\$7,032,000” in its place, and removing “\$10,802,884” and adding “\$12,001,460” in its place;

■ d. In paragraph (b)(3), removing “\$10,802,884” and adding “\$12,001,460” in its place; and

■ e. In paragraph (b)(4), removing “\$7,008,000” and adding “\$7,032,000” in its place, and removing “\$10,802,884” and adding “\$12,001,460” in its place.

PART 252—SOLICITATION PROVISIONS AND CONTRACT CLAUSES**252.225–7017 [Amended]**

■ 5. Amend section 252.225–7017 by—

■ a. Removing clause date “(JAN 2020)” and adding “(JAN 2022)” in its place;

■ b. In paragraphs (c)(2) and (3), removing “\$83,099” and adding “92,319” in its place; and

■ c. In paragraphs (c)(4) and (5), removing “\$182,000” and adding “\$183,000” in its place.

252.225–7018 [Amended]

■ 6. Amend section 252.225–7018 by—

■ a. Removing clause date “(JAN 2020)” and adding “(JAN 2022)” in its place;

■ b. In paragraphs (b)(1) and (2), removing “\$182,000” and adding “\$183,000” in its place;

■ c. In paragraphs (d)(3) introductory text and (d)(4) introductory text, removing “\$83,099” and adding “92,319” in its place; and

■ d. In paragraphs (d)(5) introductory text and (d)(6) introductory text, removing “\$182,000” and adding “\$183,000” in each place.

[FR Doc. 2021–28161 Filed 12–29–21; 8:45 am]

BILLING CODE 5001–06–P

NATIONAL TRANSPORTATION SAFETY BOARD**49 CFR Part 801**

[Docket No.: NTSB–2021–0006]

Internal Personnel Rules and Practices of the NTSB; Corrections

AGENCY: National Transportation Safety Board (NTSB).

ACTION: Correcting amendments.

SUMMARY: This document corrects the wording reflected in various sections in part 801 as a result of the amendatory language in the interim final rule (IFR) published in the **Federal Register** (FR) on October 4, 2021. The IFR amended part 801, in pertinent part, by revising all references to “public reading room” to read “electronic reading room”. Consequently, that revision resulted in needless repetition of “electronic reading room” in several part 801 regulations. This correction amends the affected regulations to reflect the agency’s original intent.

DATES: Effective on December 30, 2021.

FOR FURTHER INFORMATION CONTACT: Kathleen Silbaugh, General Counsel, (202) 314–6080, rulemaking@ntsb.gov.

SUPPLEMENTARY INFORMATION: This document corrects the wording of

certain regulations in part 801 affected by the amendatory language reflected in the IFR published in the FR on October 4, 2021. 86 FR 54641 (Oct. 4, 2021). Specifically, the IFR amended part 801, in part, by revising all references to “public reading room” to read “electronic reading room”. As seen below, that amendatory instruction resulted in the needless repetition of the word “electronic reading room” in 49 CFR 801.10(b)(2), 801.10(c), 801.30, 801.31, 801.32(b), 801.41.

For example, § 801.10(b)(2) originally read that the NTSB’s Chief, Records Management Division “[m]aintains a *public reference room* and an electronic reading room in accordance with 5 U.S.C. 552(a)(2). The NTSB’s *public reference room* is located at 490 L’Enfant Plaza SW, Washington, DC. The NTSB’s electronic reading room is located on the NTSB’s FOIA website, found at <http://www.nts.gov/>.” (Emphasis added.)

After the IFR, however, that regulation currently provides that the NTSB’s Chief, Records Management Division “[m]aintains an *electronic reading room* and an electronic reading room in accordance with 5 U.S.C. 552(a)(2). The NTSB’s *electronic reading room* is located at 490 L’Enfant Plaza SW, Washington, DC. The NTSB’s electronic reading room is located on the NTSB’s FOIA website, found at <http://www.nts.gov/>.” (Emphasis added.)

To eliminate the redundancy, this document will revise that section to read: “Maintains an electronic reading room in accordance with 5 U.S.C. 552(a)(2). The NTSB’s electronic reading room is accessible on the NTSB’s FOIA website at <https://www.nts.gov/>.”

This document will further revise the remaining affected regulations to reflect the agency’s original intent for part 801.

List of Subjects in 49 CFR Part 801

Archives and records, Freedom of information.

Accordingly, 49 CFR part 801 is corrected by making the following correcting amendments:

PART 801—PUBLIC AVAILABILITY OF INFORMATION

■ 1. The authority citation for part 801 continues to read as follows:

Authority: 49 U.S.C. 1113(f); 5 U.S.C. 552; 18 U.S.C. 641, 2071; 31 U.S.C. 3717, 9701; 44 U.S.C. Chapters 21, 29, 31, and 33.

■ 2. Amend § 801.10 by revising paragraphs (b)(2) and (c) introductory text to read as follows:

§ 801.10 General.

* * * * *

(b) * * *

(2) Maintains an electronic reading room in accordance with 5 U.S.C. 552(a)(2). The NTSB's electronic reading room is accessible on the NTSB's FOIA website at <https://www.nts.gov/>.

* * * * *

(c) The NTSB maintains in its electronic reading room, making the following available:

* * * * *

■ 3. Revise § 801.30 to read as follows:

§ 801.30 Records from accident investigations.

Upon completion of an accident investigation, the NTSB will compile a public docket containing investigators' factual reports, and documents and exhibits that the agency deemed pertinent to the investigation. The Chief, Records Management Division, will then make the docket available on the NTSB website.

■ 4. Revise § 801.31 to read as follows:

§ 801.31 Public hearings regarding investigations.

Within approximately four (4) weeks after a public investigative hearing conducted in accordance with part 845, subpart A, of this chapter, the Chief, Records Management Division, will make the hearing transcript available in the electronic reading room. On or before the date of the hearing, the Chief, Records Management Division, will make the exhibits introduced at the hearing available on the NTSB website.

■ 5. Amend § 801.32 by revising paragraph (b) to read as follows:

§ 801.32 Accident reports.

* * * * *

(b) These reports will be made available on the NTSB electronic reading room.

■ 6. Revise § 801.41 to read as follows:

§ 801.41 Reports to Congress.

The NTSB submits its annual report to Congress, in accordance with 49 U.S.C. 1117. The report will be available on the NTSB's website at <https://www.nts.gov/>. Interested parties may purchase the report from the U.S. Government Publishing Office or review it in the NTSB's electronic reading room. All other reports or comments to Congress will be available in the NTSB's electronic reading room.

DEPARTMENT OF COMMERCE**National Oceanic and Atmospheric Administration****50 CFR Part 224**

[Docket No. 211202-0250]

RTID 0648-XR115

Endangered and Threatened Species; Removal of *Siderastrea glynni* From the Federal List of Threatened and Endangered Species

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Final rule.

SUMMARY: We, NMFS, are issuing a final rule to remove a coral, *Siderastrea glynni*, from the Federal List of Threatened and Endangered Species. Recently obtained genetic and morphological information demonstrates that *S. glynni* does not meet the statutory definition of a species, and therefore does not qualify for listing under the Endangered Species Act (ESA). Following public comment and peer review of the proposed rule and supporting scientific information, this final rule implements the changes to the listing for *S. glynni*.

DATES: This final rule is effective on January 31, 2022.

FOR FURTHER INFORMATION CONTACT: Adrienne Lohe, NMFS Office of Protected Resources, Adrienne.Lohe@noaa.gov, (301) 427-8442.

SUPPLEMENTARY INFORMATION:**Background**

On July 15, 2013, WildEarth Guardians petitioned us to list 81 marine species, including *Siderastrea glynni*, as threatened or endangered under the ESA and to designate critical habitat. On October 25, 2013, we found that the petition presented substantial scientific information indicating that listing three species of foreign corals, including *S. glynni*, may be warranted, and initiated a Status Review (78 FR 63941).

The Status Review (Meadows 2014) used the best available scientific and commercial data to consider the status of and extinction risk to each of the three species. The Status Review noted genetic similarities between *S. glynni* (occurring in the eastern Pacific) and the Caribbean coral species *Siderastrea siderea* but ultimately concluded that *S. glynni* was a valid and unique species. Based on the lack of known populations

in the wild, existence of only a small captive population in a single location, low growth rate and genetic diversity, and potential increased threats from El Niño, climate change, disease, and habitat degradation should it be reintroduced to Panama, extinction risk for this species was assessed to be high. Informed by the Status Review and the best available scientific and commercial data, NMFS published a final rule to list the species as endangered under the ESA on October 7, 2015, and the listing became effective on November 6, 2015 (80 FR 60560).

On April 7, 2020, we announced a 5-year review (85 FR 19456) for 3 foreign coral species including *S. glynni*. The 5-year review was completed on September 16, 2020 (NMFS 2020) and is available at: <https://www.fisheries.noaa.gov/resource/document/3-foreign-corals-5-year-review>. To complete the review, we collected, evaluated, and incorporated all information on the species that had become available since October 2015, the date of the final listing rule, including newly obtained genetic and morphological information relating to the taxonomy of *S. glynni*. This newly obtained information and the 5-year review inform the conclusions in this final rule.

Proposed Rule

Under section 4(c)(2) of the ESA, the Secretary shall conduct, at least once every 5 years, a review of a listed species and consider, among other things, whether a species' listing status should be changed. Pursuant to implementing regulations at 50 CFR 424.11(e), a species shall be delisted if the Secretary of Commerce finds that, after conducting a status review based on the best scientific and commercial data available:

- (1) The species is extinct;
- (2) The species does not meet the definition of an endangered species or a threatened species; or
- (3) The listed entity does not meet the statutory definition of a species.

Informed by the conclusions of the 5-year review (NMFS 2020) and our interpretation of the best available scientific and commercial data, on May 4, 2021, we issued a proposed rule (86 FR 23657) to remove *S. glynni* from the Federal List of Threatened and Endangered Species because it does not meet the statutory definition of a species. The proposed rule included the following finding on the identity of the species.

The discovery of *S. glynni* occurred in 1992 at Urabá Island, Panama Gulf, where five live colonies of *Siderastrea*

sp. were found, one of which was collected and designated as the holotype for the new species (Budd and Guzmán 1994). The remaining four colonies of *S. glynni* were subsequently transplanted to aquaria at the Smithsonian Tropical Research Institute on Naos Island, Panama, and despite extensive search efforts, no other colonies have been found in the area (Glynn *et al.* 2016). The presence of the species in the eastern Pacific was noteworthy because the other extant *Siderastrea* species were only known to occur in the western Pacific and the tropical Atlantic (Glynn *et al.* 2016). Additionally, no fossil evidence exists for *Siderastrea* occurring in the eastern Pacific over the last 5 million years (LaJeunesse *et al.* 2016).

As reported in the Status Review, a study by Forsman *et al.* (2005) found *Siderastrea glynni* to be genetically very similar to the Caribbean coral species *Siderastrea siderea*. The study provided two possible explanations for these results: (1) That *S. siderea* and *S. glynni* are the same species and that *S. glynni* may have recently passed through or been carried across the Panama Canal to the Pacific Ocean side, or (2) that *S. glynni* evolved from *S. siderea*, likely about 2 to 2.3 million years ago during a period of high sea level when the Isthmus of Panama may have been breached, allowing inter-basin transfer of species' ancestors. The Status Review concluded that *S. glynni* was a valid and unique species.

The 5-year review (NMFS 2020) synthesizes significant new information regarding the taxonomic classification of *S. glynni* that has become available since the species was listed as endangered. LaJeunesse *et al.* (2016) found *S. glynni* to host endosymbionts *Symbiodinium trenchii* and *Symbiodinium goreau*, both of which occur in *S. siderea* in the Atlantic. (Based on recent taxonomic revisions to the family Symbiodiniaceae, these two endosymbionts are now identified as *Durusdinium trenchii* and *Cladocopium goreau*, respectively (LaJeunesse *et al.* 2017)). In fact, the study by LaJeunesse *et al.* (2016) provided the first record of both of these endosymbionts in the eastern Pacific. A comparison of the single multilocus genotype of *D. trenchii* found in all five *S. glynni* colonies to other *D. trenchii* genotypes from several regions around the world provide evidence that the *D. trenchii* genotype from the eastern Pacific originated from the Greater Caribbean. The *D. trenchii* genotype found in the *S. glynni* colonies was an exact match to the *D. trenchii* genotype of a *S. siderea* colony in Curaçao, indicating that the presence of

D. trenchii in the eastern Pacific is almost certainly a result of an introduction from the Atlantic (LaJeunesse *et al.* 2016). Furthermore, the genotype of *D. trenchii* recovered from *S. glynni* was found to be genetically distinct from other genotypes of closely related endosymbionts of family Symbiodiniaceae living in co-occurring eastern Pacific corals of the genus *Pocillopora* and is therefore atypical of the region (LaJeunesse *et al.* 2016). More recently, the closely related endosymbiont in the eastern Pacific was identified as a new species (*Durusdinium glynni*) distinct from *D. trenchii*, further supporting their differentiation (Wham *et al.* 2017). LaJeunesse *et al.* (2016) conclude that *S. glynni* is likely to be *S. siderea* introduced from the Atlantic.

Glynn *et al.* (2016) discuss several lines of evidence further supporting the synonymy of *S. glynni* and *S. siderea*. First, the authors discuss the location and timing of the introduction of *S. siderea* to the site where *S. glynni* was discovered. In the early 1980s, blocks of *S. siderea* skeletons were transplanted from the Caribbean side of Panama to a reef at Urabá Island in the eastern Pacific as part of a comparative study of bioerosion (Kleemann 1990). After a period of several months, regenerating patches of *S. siderea* on the blocks were apparent; several fragments from these blocks were redeposited on the Urabá patch reef (the same site where *S. glynni* was discovered) in 1982 and were not retrieved (Glynn *et al.* 2016). Using the initial size (approximately 1 cm diameter) and expected growth rate (5.2 mm per year over a 10-year period) of the introduced *S. siderea* fragments, a 10 cm spherical colony would be expected after 10 years (Glynn *et al.* 2016). The five colonies found in 1992 measured between 7 and 10 cm in diameter, supporting the timeline of introduction (Budd and Guzmán 1994).

Glynn *et al.* (2016) also provide morphological evidence for the proposed synonymy. Despite observed variability in micro-skeletal traits among *S. siderea*, *S. radians*, and the type specimen of *S. glynni*, a single-factor multivariate analysis of variance (MANOVA) showed no significant differences with respect to all of the examined traits across the three species ($F_{3,17} = 2.2937$, $p = 0.1146$) (Glynn *et al.* 2016). There are, however, morphological differences between the *S. glynni* specimens and *S. siderea* as initially described by Budd and Guzmán (1994), including growth form (*S. glynni* was found unattached while *S. siderea* is typically attached) as well as corallite

wall structure, which was not quantified in the analysis by Glynn *et al.* (2016). The authors suggest that as the oceanic conditions in the Gulf of Panama are quite different from those in the Caribbean, certain skeletal features of the Pacific colonies could have been environmentally influenced, leading Budd and Guzmán to declare the discovered colonies a new species of *Siderastrea* (Glynn *et al.* 2016).

Based on this substantial evidence, Glynn *et al.* (2016) conclude that the live fragments of *S. siderea* deposited by Kleeman in 1982 are the same that were found by Guzmán in 1992, and therefore, that *S. glynni* should be considered a junior synonym of *S. siderea*. After reviewing the best available information, we agree that *S. glynni* is a synonym of *S. siderea* and not a separate taxonomic species or subspecies. It cannot qualify as a distinct population segment (DPS) under the statutory definition of a species because DPSs can be identified only for vertebrate fish or wildlife. Therefore, *S. glynni* does not meet the statutory definition of a species under the ESA.

Public Comment

Beginning on May 4, 2021, we solicited comments during a 60-day public comment period from all interested parties (86 FR 23657). We received one comment requesting that, given the observed variability in morphology (including growth form and corallite wall structure) and micro-skeletal traits, we provide a more thorough rationale for our conclusion that the eastern Pacific population does not constitute a subspecies of *S. siderea*.

Response: Based on our review of the best available information, we conclude that *S. glynni* is a junior synonym of *S. siderea*, and we found no indication in the available literature that the eastern Pacific population is a subspecies of *S. siderea*. Glynn *et al.* (2016) explain that the morphological differences between the colonies of *S. glynni* and *S. siderea*, including the eastern Pacific population's thin septa, porous or absent columella, and other weakly formed skeletal features, may be the result of differing environmental conditions between the eastern Pacific and tropical Atlantic, including the following: Carbon dioxide concentrations, aragonite saturation state, nutrient levels, water depth, shading, and upwelling cycles (Glynn *et al.* 2016). Scleractinian corals are known to exhibit phenotypic plasticity (*i.e.*, environment-induced changes in morphology), and therefore phylogenetic relationships are often

clarified by the use of molecular tools (Todd 2008, Budd *et al.* 2010). There is strong evidence for the synonymy of *S. glynni* and *S. siderea* based on genetic analyses of the corals and their endosymbionts by Forsman *et al.* (2005) and LaJeunesse *et al.* (2016), respectively. Through comparison of ribosomal DNA sequences of the two corals, *S. glynni* was found to share identical sequence types with *S. siderea* (Forsman *et al.* 2005), and molecular analysis of endosymbionts hosted by *S. glynni* provides evidence that these colonies originated from the Atlantic (LaJeunesse *et al.* 2016), as discussed in the proposed rule and above. Therefore, despite morphological differences between *S. glynni* and *S. siderea*, there is no evidence that the former is a subspecies of the latter. The best available scientific information supports our conclusion that *S. glynni* is an introduced population of *S. siderea* from the tropical western Atlantic and is therefore not a distinct subspecies of *S. siderea*.

Summary of Changes From Proposed Rule

We evaluated whether any pertinent scientific or commercial information has become available since publication of the proposed rule. We reviewed the best available scientific and commercial information, including the information in the peer reviews of the proposed rule (86 FR 23657; May 4, 2021) and public comments. Based on this information, we have made no changes in this final rule from the proposed rule.

Final Determination and Effects of Determination

As proposed on May 4, 2021 (86 FR 23657), with this final rule we remove *S. glynni* from the Federal List of Threatened and Endangered Species because the best available data indicate that the listed entity is synonymous with *S. siderea* and does not meet the statutory definition of a species. As of the effective date, the protections of the ESA will no longer apply to *S. glynni*. In addition, because *S. siderea* is not listed as an endangered species or threatened species under the ESA, our delisting of *S. glynni* has no effect on *S. siderea*.

Under section 4(g) of the ESA and per the joint NMFS-U.S. Fish and Wildlife Service Post-Delisting Monitoring Plan Guidance (2008, updated in 2018), post-delisting monitoring is required for species delisted due to biological recovery, but not for species delisted for other reasons. Therefore, there is no

need for a post-delisting monitoring plan for *S. glynni*.

Information Quality Act and Peer Review

In December 2004, the Office of Management and Budget (OMB) issued a Final Information Quality Bulletin for Peer Review establishing minimum peer review standards, a transparent process for public disclosure of peer review planning, and opportunities for public participation. The OMB Peer Review Bulletin, implemented under the Information Quality Act (Pub. L. 106–554), is intended to enhance the quality and credibility of the Federal government’s scientific information, and applies to influential or highly influential scientific information disseminated on or after June 16, 2005.

To satisfy our requirements under the OMB Peer Review Bulletin, the proposed rule was subject to peer review in accordance with the Bulletin. A peer review plan was posted on the NOAA peer review agenda and can be found at the following website: <https://www.noaa.gov/organization/information-technology/information-quality-peer-review-id423>. The agency did not receive public comments on the plan. Our synthesis and assessment of scientific information supporting this proposed action was peer reviewed via individual letters soliciting the expert opinions of four qualified specialists selected from the academic and scientific community. The charge to the peer reviewers and the peer review report have been placed in the administrative record and posted on the agency’s peer review agenda. In meeting the OMB Peer Review Bulletin requirements, we have also satisfied the requirements of the 1994 joint U.S. Fish and Wildlife Service/NMFS peer review policy (59 FR 34270; July 1, 1994).

Classification

National Environmental Policy Act (NEPA)

The 1982 amendments to the ESA, in section 4(b)(1)(A), restrict the information that may be considered when assessing species for listing to the best scientific and commercial data available. Based on this limitation of criteria for a listing decision and the opinion in *Pacific Legal Foundation v. Andrus*, 657 F. 2d 829 (6th Cir. 1981),

NMFS has concluded that ESA listing actions are not subject to the environmental assessment requirements of the National Environmental Policy Act (NEPA).

Executive Order 12866, Regulatory Flexibility Act, and Paperwork Reduction Act

As noted in the Conference Report on the 1982 amendments to the ESA, economic impacts cannot be considered when assessing the status of a species. Therefore, the economic analysis requirements of the Regulatory Flexibility Act are not applicable to the listing process. In addition, this final rule is exempt from review under Executive Order 12866. This final rule does not contain a collection of information requirement for the purposes of the Paperwork Reduction Act.

Executive Order 13132, Federalism

E.O. 13132 requires agencies to take into account any federalism impacts of regulations under development. It includes specific consultation directives for situations where a regulation will preempt state law, or impose substantial direct compliance costs on state and local governments (unless required by statute). Neither of these circumstances is applicable to this final rule.

List of Subjects

50 CFR Part 224

Endangered and threatened species.

Dated: December 22, 2021.

Samuel D. Rauch III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For the reasons set out in the preamble, 50 CFR part 224 is amended as follows:

PART 224—ENDANGERED MARINE AND ANADROMOUS SPECIES

■ 1. The authority citation for part 224 continues to read as follows:

Authority: 16 U.S.C. 1531–1543 and 16 U.S.C. 1361 *et seq.*

■ 2. In § 224.101, in the table in paragraph (h), under the subheading “Corals”, remove the entry for “Coral, [no common name] (*Siderastrea glynni*)”.

[FR Doc. 2021–28335 Filed 12–29–21; 8:45 am]

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE**National Oceanic and Atmospheric Administration****50 CFR Part 648**

RTID 0648–XB686

Fisheries of the Northeastern United States; Summer Flounder Fishery; Quota Transfers from NC to CT and ME to RI

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notification of quota transfer.

SUMMARY: NMFS announces that the states of North Carolina and Maine are transferring a portion of their 2021 commercial summer flounder quota to the states of Connecticut and Rhode Island, respectively. This adjustment to the 2021 fishing year quota is necessary to comply with the Summer Flounder, Scup, and Black Sea Bass Fishery Management Plan quota transfer provisions. This announcement informs the public of the revised 2021 commercial quotas for North Carolina, Maine, Connecticut, and Rhode Island.

DATES: Effective December 27, 2021, through December 31, 2021.

FOR FURTHER INFORMATION CONTACT: Laura Hansen, Fishery Management Specialist, (978) 281–9225.

SUPPLEMENTARY INFORMATION:

Regulations governing the summer flounder fishery are found in 50 CFR 648.100 through 648.110. These regulations require annual specification of a commercial quota that is apportioned among the coastal states from Maine through North Carolina. The process to set the annual commercial quota and the percent allocated to each state is described in § 648.102 and final 2021 allocations were published on December 21, 2020 (85 FR 82946).

The final rule implementing Amendment 5 to the Summer Flounder Fishery Management Plan (FMP), as published in the *Federal Register* on December 17, 1993 (58 FR 65936), provided a mechanism for transferring summer flounder commercial quota from one state to another. Two or more states, under mutual agreement and with the concurrence of the NMFS Greater Atlantic Regional Administrator, can transfer or combine summer flounder commercial quota under § 648.102(c)(2). The Regional Administrator is required to consider three criteria in the evaluation of requests for quota transfers or

combinations: The transfer or combinations would not preclude the overall annual quota from being fully harvested; the transfer addresses an unforeseen variation or contingency in the fishery; and the transfer is consistent with the objectives of the FMP and the Magnuson-Stevens Fishery Conservation and Management Act. The Regional Administrator has determined these three criteria have been met for the transfers approved in this notification.

North Carolina is transferring 40,000 lb (18,144 kg) to Connecticut and Maine is transferring 14,000 lb (6,350 kg) to Rhode Island through mutual agreement of the states. These transfers were requested to ensure Connecticut and Rhode Island would not exceed their 2021 quota. The revised summer flounder quotas for 2021 are: North Carolina, 2,878,480 lb (1,305,657 kg); Connecticut, 669,376 lb (303,624 kg); Maine, 33 lb (15 kg); and, Rhode Island, 1,922,724 lb (872,133 kg).

Classification

NMFS issues this action pursuant to section 305(d) of the Magnuson-Stevens Act. This action is required by 50 CFR 648.162(e)(1)(i) through (iii), which was issued pursuant to section 304(b), and is exempted from review under Executive Order 12866.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: December 27, 2021.

Karen Abrams,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

[FR Doc. 2021–28370 Filed 12–27–21; 4:15 pm]

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE**National Oceanic and Atmospheric Administration****50 CFR Part 660**

[Docket No. 201204–0325]

RIN 0648–BL10

Magnuson-Stevens Act Provisions; Fisheries Off West Coast States; Pacific Coast Groundfish Fishery; 2021–2022 Biennial Specifications and Management Measures; Inseason Adjustments; Correction

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Final rule; correction.

SUMMARY: NMFS published a final rule on December 23, 2021, announcing

routine inseason adjustments to management measures in the commercial and recreational groundfish fisheries. In implementing these changes, NMFS inadvertently removed the trip limit for California black rockfish between 42° N latitude and 40°10' N latitude in Table 2 (North) and Table 3 (North). This correction is necessary so that the implementing regulations are accurate.

DATES: This correction is effective January 1, 2022.

FOR FURTHER INFORMATION CONTACT: Sean E. Matson, (206) 526–6140, email: sean.matson@noaa.gov.

ADDRESSES:**Electronic Access**

This rule is accessible via the internet at the Office of the Federal Register website at <https://www.federalregister.gov>. Background information and documents are available at the Pacific Fishery Management Council's website at <http://www.pcouncil.org/>.

SUPPLEMENTARY INFORMATION: NMFS published a final rule on December 23, 2021, announcing routine inseason adjustments to management measures in the commercial and recreational groundfish fisheries. This rule is effective January 1, 2022.

The December 23, 2021, final rule implemented changes to trip limits for sablefish north of 36° N latitude and for lingcod north of 42° N latitude. Additionally, the final rule announced new sub-bag limits and sub-trip limits, in recreational and non-trawl commercial fisheries respectively, for two nearshore species, quillback rockfish and copper rockfish, as well as the shelf species vermillion rockfish.

In implementing these changes, NMFS inadvertently removed the trip limit for California black rockfish between 42° N latitude and 40°10' N latitude in Table 2 (North) and Table 3 (North) of part 660, subpart E and F, respectively. This correction reinstates this trip limit as Line 22 of both tables. No other changes are made via this correction document. This correction is necessary so that the implementing regulations are accurate.

Correction

Effective January 1, 2022, in FR Doc. 2021–27901 at 86 FR 72863 in the issue of December 23, 2021, the following corrections are made:

Table 2 (North) to Part 660 [Corrected]

- 1. On page 72869, in amendatory instruction 2, Table 2 (North) to Part 660, Subpart E—Non-Trawl Rockfish

Conservation Areas and Trip Limits for Limited Entry Fixed Gear North of 40°10' N Lat. is corrected to read as follows:

BILLING CODE 3510-22-P

Table 2 (North) to Part 660, Subpart E -- Non-Trawl Rockfish Conservation Areas and Trip Limits for Limited Entry Fixed Gear North of 40°10' N. lat.

Other limits and requirements apply -- Read §§660.10 through 660.399 before using this table 12/1/2021

	JAN-FEB	MAR-APR	MAY-JUN	JUL-AUG	SEP-OCT	NOV-DEC

28	Other Fish^{7/} & Cabezon in California Unlimited					
29	Oregon Cabezon/Kelp Greenling Unlimited					
30	Big skate Unlimited					

TABLE 2 (North)

1/ The Rockfish Conservation Area is an area closed to fishing by particular gear types, bounded by lines specifically defined by latitude and longitude coordinates set out at §§ 660.71-660.74. This RCA is not defined by depth contours (with the exception of the 20-fm depth contour boundary south of 42° N. lat.), and the boundary lines that define the RCA may close areas that are deeper or shallower than the depth contour. Vessels that are subject to RCA restrictions may not fish in the RCA, or operate in the RCA for any purpose other than transiting.

2/ Between 46°16' N. lat. and 40°10' N. lat. and the 30 fm and 40 fm lines, fishing is only allowed with hook-and-line gear except bottom longline and dinglebar gear, as defined in §660.11

3/ Bocaccio, chilipepper and cowcod are included in the trip limits for Minor Shelf Rockfish and splitnose rockfish is included in the trip limits for Minor Slope Rockfish.

4/ "Other flatfish" are defined at § 660.11 and include butter sole, curffin sole, flathead sole, Pacific sanddab, rex sole, rock sole, and sand sole.

5/ For black rockfish north of Cape Alava (48°09.50' N. lat.), and between Destruction Is. (47°40' N. lat.) and Leadbetter Pnt. there is an additional limit of 100 lb or 30 percent by weight of all fish on board, whichever is greater, per vessel, per fishing trip. (46°38.17' N. lat.).

6/ The minimum size limit for lingcod is 22 inches (56 cm) total length North of 42° N. lat. and 24 inches (61 cm) total length South of 42° N. lat.

7/ "Other Fish" are defined at § 660.11 and include kelp greenling off California and leopard shark.

8/ LEFG vessels are allowed to fish inside groundfish conservation areas using hook and line only. See section 660.230 (d) of the regulations for more information.

To convert pounds to kilograms, divide by 2.20462, the number of pounds in one kilogram.

Table 3 (North) to Part 660, Subpart F [Corrected]

■ 2. On page 72871, in amendatory instruction 4, Table 3 (North) to Part

660, Subpart F—Non-Trawl Rockfish Conservation Areas and Trip Limits for Open Access Gears North of 40°10' N Lat. is corrected to read as follows:

Table 3 (North) to Part 660, Subpart F -- Non-Trawl Rockfish Conservation Areas and Trip Limits for Open Access Gears North of 40° 10' N. lat.

Other limits and requirements apply -- Read §§660.10 through 660.399 before using this table

12/1/2021

		JAN-FEB	MAR-APR	MAY-JUN	JUL-AUG	SEP-OCT	NOV-DEC

1	North of 46° 16' N. lat.	shoreline - 100 fm line ^{1/}					
2	46° 16' N. lat. - 40° 10' N. lat.	40 fm line ^{1/} - 100 fm line ^{1/}					
3		30 fm line ^{1/} - 40 fm line ^{1/2/}					
See §§660.60, 660.330 and 660.333 for additional gear, trip limit and conservation area requirements and restrictions. See §§660.70-660.74 and §§660.76-660.79 for conservation area descriptions and coordinates (including RCAs, YRCAs, CCAs, Farallon Islands, Cordell Bank, and EFHCAs).							
State trip limits and seasons may be more restrictive than Federal trip limits or seasons, particularly in waters off Oregon and California.							
4	Minor Slope Rockfish ^{3/} & Darkblotched rockfish	2,000 lb / months					
5	Pacific ocean perch	100 lb/ month					
6	Sablefish	600 lb/day, or 1 landing /week up to 2,000 lb, not to exceed 4,000 lb / 2 months					
7	Shortpine thornyheads	50 lb/month					
8	Longspine thornyheads	50 lb/month					
9	Dover sole, arrowtooth flounder, petrale sole, English sole, starry flounder, Other	5,000 lb/ month					
10	Flatfish ^{4/8/}	300 lb/ month					
11	Whiting	800 lb / month					
12	Minor Shelf Rockfish ^{3/}	2,000 lb/ 2 months					
13	Widow rockfish	200 lb / month					
14	Shortbelly Rockfish	1,500 lb/ month					
15	Yellowtail rockfish	1,000 lb/ 2 months					
16	Canary rockfish	CLOSED					
17	Yelloweye rockfish	CLOSED					
18	Minor Nearshore Rockfish, Oregon black/blue/deacon rockfish & CA black rockfish						
19	North of 42°00' N. lat.	5,000 lb/ 2 months, no more than 1,200 lb of which may be species other than black rockfish or blue/deacon rockfish ^{5/}					
20	42° 00' N. lat. - 40° 10' N. lat. Minor Nearshore Rockfish	2,000 lb / 2 months, of which no more than 75 lb may be quillback rockfish, and of which no more than 75 lb may be copper rockfish					
21	42°00' N. lat. - 40° 10' N. lat. California Black Rockfish	7,000 lb / 2 months					
22	Lingcod ^{6/}						
23	North of 42° 00' N. lat.	2,500 lb/ month					
24	42° 00' N. lat. - 40° 10' N. lat.	1,000 lb / month					
25	Pacific cod	1,000 lb/ 2 months					
26	Spiny dogfish	200,000 lb/ 2 months		150,000 lb/ 2 months		100,000 lb/ 2 months	
27	Longnose skate	Unlimited					
28	Big skate	Unlimited					
29	Other Fish ^{7/} & Cabezon in California	Unlimited					
30	Oregon Cabezon/Kelp Greenling	Unlimited					
31	SALMON TROLL (subject to RCAs when retaining all species of groundfish, except for yellowtail rockfish and lingcod, as described below)						
32	North	Salmon trollers may retain and land up to 500 lb of yellowtail rockfish per month as long as salmon is on board, both within and outside of the RCA. Salmon trollers may retain and land up to 1 lingcod per 2 Chinook per trip, plus 1 lingcod per trip, up to a trip limit of 10 lingcod, on a trip where any fishing occurs within the RCA. The lingcod limit only applies during times when lingcod retention is allowed, and is not "CLOSED." These limits are within the per month limits described in the table above, and not in addition to those limits. All groundfish species are subject to the open access limits, seasons, size limits and RCA restrictions listed in the table above, unless otherwise stated here.					
33	PINK SHRIMP NON-GROUNDFISH TRAWL (not subject to RCAs)						
34	North	Effective April 1 - October 31: Groundfish: 500 lb/day, multiplied by the number of days of the trip, not to exceed 1,500 lb/trip. The following sublimits also apply and are counted toward the overall 500 lb/day and 1,500 lb/trip groundfish limits: lingcod 300 lb/month (minimum 24 inch size limit); sablefish 2,000 lb/month; canary, thornyheads and yelloweye rockfish are PROHIBITED. All other groundfish species taken are managed under the overall 500 lb/day and 1,500 lb/trip groundfish limits. Landings of these species count toward the per day and per trip groundfish limits and do not have species-specific limits. The amount of groundfish landed may not exceed the amount of pink shrimp landed.					

TABLE 3 (North)

1/ The Rockfish Conservation Area is an area closed to fishing by particular gear types, bounded by lines specifically defined by latitude and longitude coordinates set out at §§ 660.71-660.74. This RCA is not defined by depth contours (with the exception of the 20-fm depth contour boundary south of 42° N. lat.), and the boundary lines that define the RCA may close areas that are deeper or shallower than the depth contour. Vessels that are subject to RCA restrictions may not fish in the RCA, or operate in the RCA for any purpose other than transiting.

2/ Between 46° 16' N. lat. and 40° 10' N. lat. and the 30 fm and 40 fm lines, fishing is only allowed with hook-and-line gear except bottom longline and dinglebar gear, as defined in §660.11

3/ Bocaccio, chilipepper and cowcod rockfishes are included in the trip limits for Minor Shelf Rockfish. Splitnose rockfish is included in the trip limits for Minor Slope Rockfish.

4/ "Other flatfish" are defined at § 660.11 and include butter sole, curfin sole, flathead sole, Pacific sanddab, rex sole, rock sole, and sand sole.

5/ For black rockfish north of Cape Alava (48°09.50' N. lat.), and between Destruction Is. (47°40' N. lat.) and Leadbetter Pnt. (46°38.17' N. lat.), there is an additional limit of 100 lbs or 30 percent by weight of all fish on board, whichever is greater, per vessel, per fishing trip.

6/ The minimum size limit for lingcod is 22 inches (56 cm) total length North of 42° N. lat. and 24 inches (61 cm) total length South of 42° N. lat.

7/ "Other fish" are defined at § 660.11 and include kelp greenling off California and leopard shark.

8/ Open access vessels are allowed to fish inside groundfish conservation areas using hook and line only. See section 660.330 (d) of the regulations for more information.

To convert pounds to kilograms, divide by 2.20462, the number of pounds in one kilogram.

Dated: December 27, 2021.

National Oceanic and Atmospheric Administration

50 CFR Part 679

[Docket No. 210210-0018]

RTID 0648-XB679

Fisheries of the Exclusive Economic Zone off Alaska; Inseason Adjustment to the 2022 Gulf of Alaska Pollock and Pacific Cod Total Allowable Catch Amounts

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; inseason adjustment; request for comments.

SUMMARY: NMFS is adjusting the 2022 total allowable catch (TAC) amounts for the Gulf of Alaska (GOA) pollock and Pacific cod fishery. This action is necessary because NMFS has determined these TACs are incorrectly specified, and will ensure the GOA pollock and Pacific cod TACs are the appropriate amount based on the best available scientific information for pollock and Pacific cod in the GOA. This action is consistent with the goals and objectives of the Fishery Management Plan for Groundfish of the Gulf of Alaska.

DATES: Effective 0001 hours, Alaska local time (A.l.t.), January 1, 2022, until the effective date of the final 2022 and 2023 harvest specifications for GOA groundfish, unless otherwise modified or superseded through publication of a notification in the **Federal Register**.

Comments must be received at the following address no later than 4:30 p.m., A.l.t., January 14, 2022.

ADDRESSES: Submit your comments, identified by NOAA-NMFS-2020-0140 by any of the following methods:

- **Federal e-Rulemaking Portal:** Go to www.regulations.gov and enter NOAA-NMFS-2020-0140. Click the “Comment” icon, complete the required fields, and enter or attach your comments.

- **Mail:** Submit written comments to Glenn Merrill, Assistant Regional Administrator, Sustainable Fisheries Division, Alaska Region NMFS, Attn: Records. Mail comments to P.O. Box 21668, Juneau, AK 99802-1668.

Instructions: NMFS may not consider comments if they are sent by any other method, to any other address or individual, or received after the comment period ends. All comments received are a part of the public record, and NMFS will post the comments for public viewing on www.regulations.gov without change. All personal identifying information (e.g., name, address), confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. NMFS will accept anonymous comments (enter “N/A” in the required fields if you wish to remain anonymous).

FOR FURTHER INFORMATION CONTACT: Krista Milani, 907-581-2062.

SUPPLEMENTARY INFORMATION: NMFS manages the groundfish fishery in the GOA exclusive economic zone according to the Fishery Management Plan for Groundfish of the Gulf of Alaska (FMP) prepared by the North Pacific Fishery Management Council (Council) under authority of the Magnuson-Stevens Fishery Conservation and Management Act. Regulations governing fishing by U.S. vessels in accordance with the FMP appear at subpart H of 50 CFR part 600 and 50 CFR part 679.

The final 2021 and 2022 harvest specifications for groundfish in the GOA (86 FR 10184, February 19, 2021) set the 2022 pollock TAC at 99,784 metric tons (mt) in the GOA. In December 2021, the Council recommended a 2022 pollock TAC of 141,117 mt for the GOA, which is greater than the 99,784 mt established by the final 2021 and 2022 harvest specifications for groundfish in the GOA. The Council’s recommended 2022 TAC, and the area and seasonal apportionments, is based on the Stock

Assessment and Fishery Evaluation report (SAFE), dated November 2021.

The final 2021 and 2022 harvest specifications for groundfish in the GOA (86 FR 10184, February 19, 2021) set the 2022 Pacific cod TAC at 27,961 mt in the GOA. In December 2021, the Council recommended a 2022 Pacific cod TAC of 24,111 mt for the GOA, which is less than the 27,961 mt established by the final 2021 and 2022 harvest specifications for groundfish in the GOA. The Council’s recommended 2022 TAC, and the area and seasonal apportionments, is based on the SAFE, dated November 2021.

Steller sea lions occur in the same location as the pollock and Pacific cod fisheries and are listed as endangered under the Endangered Species Act. Pollock and Pacific cod are principal prey species for Steller sea lions in the GOA. The seasonal apportionment of pollock and Pacific cod harvests are necessary to ensure the groundfish fisheries are not likely to cause jeopardy of extinction or adverse modification of critical habitat for Steller sea lions. The regulations at § 679.20(a)(5)(iv) specify how the pollock TAC will be apportioned and the regulations at § 679.20(a)(6)(ii) and (a)(12)(i) specify how the Pacific cod TAC will be apportioned.

In accordance with § 679.25(a)(1)(iii), (a)(2)(i)(B), and (a)(2)(iv) the Administrator, Alaska Region, NMFS (Regional Administrator), has determined that, based on the best available scientific information for this fishery, the current GOA pollock and Pacific cod TACs are incorrectly specified. Consequently, pursuant to § 679.25(a)(1)(iii), the Regional Administrator is adjusting the 2022 GOA pollock TAC to 141,117 mt and the 2022 Pacific cod TAC to 24,111 mt. Therefore, Tables 4 and 6 of the final 2021 and 2022 harvest specifications for groundfish in the GOA (86 FR 10184, February 19, 2021) are revised consistent with this adjustment.

Pursuant to § 679.20(a)(5)(iv), Table 4 of the final 2021 and 2022 harvest specifications for groundfish in the GOA (86 FR 10184, February 19, 2021) is revised for the 2022 TACs of pollock in the Central and Western Regulatory Area of the GOA.

TABLE 4—FINAL 2022 DISTRIBUTION OF POLLOCK IN THE WESTERN AND CENTRAL REGULATORY AREAS OF THE GULF OF ALASKA; AREA APPORTIONMENTS;¹ AND SEASONAL ALLOWANCES OF ANNUAL TAC

[Values are rounded to the nearest metric ton]

Season ²	Shumigan (area 610)	Chirikof (area 620)	Kodiak (area 630)	Total ³
A (January 20–May 31)	1,132	52,304	8,080	61,516

TABLE 4—FINAL 2022 DISTRIBUTION OF POLLOCK IN THE WESTERN AND CENTRAL REGULATORY AREAS OF THE GULF OF ALASKA; AREA APPORTIONMENTS;¹ AND SEASONAL ALLOWANCES OF ANNUAL TAC—Continued

[Values are rounded to the nearest metric ton]

Season ²	Shumigan (area 610)	Chirikof (area 620)	Kodiak (area 630)	Total ³
B (September 1–November 1)	22,582	16,946	21,988	61,516
Annual Total	23,714	69,250	30,068	123,032

¹ Area apportionments and seasonal allowances may not total precisely due to rounding.

² As established by § 679.23(d)(2)(i) through (ii), the A and B season allowances are available from January 20 through May 31 and September 1 through November 1, respectively. The amounts of pollock for processing by the inshore and offshore components are not shown in this table.

³ The West Yakutat and Southeast Outside District pollock TACs are not allocated by season and are not included in the total pollock TACs shown in this table.

Pursuant to § 679.20(a)(6)(ii) and 2022 harvest specifications for February 19, 2021) is revised for the (a)(12)(i), Table 6 of the final 2021 and groundfish in the GOA (86 FR 10184, 2022 TACs of Pacific cod in the GOA.

TABLE 6—FINAL 2022 SEASONAL APPORTIONMENTS AND ALLOCATION OF PACIFIC COD TOTAL ALLOWABLE CATCH (TAC) AMOUNTS IN THE GOA; ALLOCATIONS IN THE WESTERN GOA AND CENTRAL GOA SECTORS, AND THE EASTERN GOA INSHORE AND OFFSHORE PROCESSING COMPONENTS

[Values are rounded to the nearest metric ton]

Regulatory area and sector	Annual allocation (mt)	A Season		B Season	
		Sector percentage of annual non-jig TAC	Seasonal allowances (mt)	Sector percentage of annual non-jig TAC	Seasonal allowances (mt)
Western GOA:					
Jig (3.5% of TAC)	244	N/A	146	N/A	97
Hook-and-line CV	94	0.70	47	0.70	47
Hook-and-line CP	1,330	10.90	732	8.90	598
Trawl CV	2,579	31.54	2,118	10.70	461
Trawl CP	161	0.90	60	1.50	101
All Pot CV and Pot CP	2,552	19.80	1,330	18.20	1,222
Total	6,959	63.84	4,433	36.16	2,526
Central GOA:					
Jig (1.0% of TAC)	148	N/A	89	N/A	59
Hook-and-line < 50 CV	2,142	9.32	1,366	5.29	775
Hook-and-line ≥ 50 CV	984	5.61	823	1.10	161
Hook-and-line CP	749	4.11	602	1.00	146
Trawl CV ¹	6,099	21.14	3,710	20.45	2,389
Trawl CP	616	2.00	294	2.19	322
All Pot CV and Pot CP	4,078	17.83	2,615	9.97	1,463
Total	14,814	64.16	9,498	35.84	5,316
Eastern GOA:					
		Inshore (90% of Annual TAC)		Offshore (10% of Annual TAC)	
	2,338	2,104	234

¹ Trawl catcher vessels participating in Rockfish Program cooperatives receive 3.81 percent, or 564 mt, of the annual Central GOA TAC (see Table 28c to 50 CFR part 679), which is deducted from the Trawl CV B season allowance (see Table 13. Final 2022 Apportionments of Rockfish Secondary Species in the Central GOA and Table 28c to 50 CFR part 679).

Classification

NMFS issues this action pursuant to section 305(d) of the Magnuson-Stevens Act. This action is required by 50 CFR part 679, which was issued pursuant to section 304(b), and is exempt from review under Executive Order 12866.

Pursuant to 5 U.S.C. 553(b)(B), there is good cause to waive prior notice and an opportunity for public comment on this action, as notice and comment would be impracticable and contrary to

the public interest, as it would prevent NMFS from responding to the most recent fisheries data in a timely fashion and would allow for harvests that exceed the appropriate allocation for pollock and Pacific cod based on the best scientific information available. NMFS was unable to publish a notice providing time for public comment because the most recent, relevant data only became available as of December 23, 2021.

Without this inseason adjustment, NMFS could not allow the fishery for Pollock and Pacific cod in the GOA to be harvested in an expedient manner and in accordance with the regulatory schedule. Under § 679.25(c)(2), interested persons are invited to submit written comments on this action to the above address until January 14, 2022.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: December 27, 2021.

50 CFR Part 679

[Docket No. 211221-0266]

RIN 0648-BL04

Fisheries of the Exclusive Economic Zone off Alaska; Reclassifying Sculpin Species in the Groundfish Fisheries of the Bering Sea and Aleutian Islands and the Gulf of Alaska; Correcting Amendment

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Final rule; correcting amendment.

SUMMARY: The National Marine Fisheries Service is correcting regulations published in a final rule on July 10, 2020, which reclassified sculpins as Ecosystem Component (EC) category, non-target species in both the Bering Sea/Aleutian Islands (BSAI) (Amendment 121) and Gulf of Alaska (Amendment 110) Groundfish Fishery Management Plans (FMPs). In the implementing regulations, footnotes requiring the full retention of all rockfish species by catcher vessels (CVs) using hook-and-line, pot, or jig gear in the BSAI (Amendment 119) and Gulf of Alaska (Amendment 107) were unintentionally omitted from Tables 10 and 11 to 50 CFR part 679. This correcting amendment is therefore necessary to restore the footnotes as published in the final rule implementing Amendments 119 and 107 and to make other minor corrections.

DATES: Effective December 30, 2021.

FOR FURTHER INFORMATION CONTACT: Mason Smith, 907-586-7228.

SUPPLEMENTARY INFORMATION:

Need for Correction

The National Marine Fisheries Service (NMFS) published a rule reclassifying sculpins as EC category, non-target species in both the BSAI (Amendment 121) and Gulf of Alaska (Amendment 110) Groundfish FMPs in the **Federal Register** on July 10, 2020 (85 FR 41427).

This rule became effective on August 10, 2020. NMFS has identified footnote errors in that final rule within Table 10 to 50 CFR part 679 (Gulf of Alaska Retainable Percentages) and Table 11 to 50 CFR part 679 (BSAI Retainable Percentage). These tables, associated errors, and corrections to each table are discussed below.

Corrections to Table 10 to 50 CFR Part 679—Gulf of Alaska Retainable Percentages

Table 10 describes the maximum retainable amount (MRA) of groundfish in the Gulf of Alaska when NMFS prohibits directed fishing for those species. This table was modified in a rule published on July 10, 2020 (85 FR 41427), which reclassified sculpins in the Gulf of Alaska (Amendment 110) Groundfish FMP as EC category, non-target species. However, the implementing regulations unintentionally omitted footnotes from Table 10, which were added to Table 10 a few months prior in the final rule implementing Amendment 107 to the Gulf of Alaska Groundfish FMP.

The final rule implementing Amendment 107 was published on February 20, 2020 (85 FR 9687) and required the full retention of rockfish that are caught by CVs using hook-and-line, pot, or jig gear. Since the majority of rockfish do not survive capture, this amendment was intended to decrease waste in the fishery. In addition, Amendment 107 was intended to improve identification of rockfish species by vessels using electronic monitoring, reduce overall enforcement burden, and promote consistency between State and Federal fisheries. This correcting amendment is therefore necessary to restore the footnotes in Table 10, as published in the final rule implementing Amendment 107. This correcting amendment makes the following corrections to Table 10:

- In the Notes to Table 10 to 50 CFR part 679, the following statement is restored under note 1 (Shortraker/rougheye rockfish): “Catcher vessels using hook-and-line, pot, or jig gear are required to retain all rockfish. See § 679.20(j);” and

- In the Notes to Table 10 to 50 CFR part 679, the following statement is restored under note 7 (Aggregated rockfish): “Catcher vessels using hook-and-line, pot, or jig gear are required to retain all rockfish. See § 679.20(j).”

In addition, after reviewing Table 10, NMFS determined that there are two minor additional errors that need to be corrected in Table 10:

- In Table 10 to 50 CFR part 679, amend note in header to read as: “for

DSR caught on catcher vessels in the SEO, see § 679.20 (j);” and

- In Table 10 to 50 CFR part 679, the reference to note 9 is removed from the “n/a” in the cell at the intersection of the Pacific cod basis species row and the Pacific cod incidental catch species column.

Corrections to Table 11 to 50 CFR Part 679—BSAI Retainable Percentages

Table 11 describes the MRA of groundfish in the BSAI when NMFS prohibits directed fishing of those species. This table was modified in a rule published on July 10, 2020 (85 FR 41427), which reclassified sculpins in the BSAI (Amendment 121) Groundfish FMP as EC category, non-target species. However, the implementing regulations unintentionally omitted footnotes from Table 11, which were added to Table 11 a few months prior in the final rule implementing Amendment 119 to the BSAI Groundfish FMP.

Amendment 119 was implemented in a rule published on February 20, 2020 (85 FR 9687) and required the full retention of rockfish that are caught by CVs using hook-and-line, pot, or jig gear. Since the majority of rockfish do not survive capture, this amendment was intended to decrease waste in the fishery. In addition, Amendment 119 was intended to improve identification of rockfish species by vessels using electronic monitoring, reduce overall enforcement burden, and promote consistency between State and Federal fisheries. This correcting amendment is therefore necessary to restore the footnotes in Table 11, as published in the final rule implementing Amendment 119. This correcting amendment makes the following corrections in Table 11:

- In Table 11 to 50 CFR part 679, a reference to footnote 9 is restored to the Shortraker/rougheye column header;

- In Table 11 to 50 CFR part 679, the following statement is restored to footnote 6: “Catcher vessels using hook-and-line, pot, or jig gear are required to retain all rockfish. See § 679.20(j); and

- In Table 11 to 50 CFR part 679, the following statement is restored to footnote 9: “Catcher vessels using hook-and-line, pot, or jig gear are required to retain all rockfish. See § 679.20(j).”

Classification

The NOAA Assistant Administrator (AA) for Fisheries finds there is good cause to waive the requirement to provide prior notice and opportunity for public comment on this action pursuant to the authority set forth at 5 U.S.C. 553(b)(B), as such requirement is unnecessary and contrary to the public interest. This correcting amendment

corrects unintentional errors to Table 10 footnotes as well as the unintentional omission of footnotes to Tables 10 and 11, as described above. These revisions do not change operating practices in the fisheries, and is consistent with the Council's intent for Amendments 107/119 and Amendments 110/121. During the public comment period for the rule requiring full retention of rockfish in the Gulf of Alaska and BSAI (85 FR 9687, February 20, 2020), the public was provided with notice and opportunity to comment, so additional opportunity for public comment at this point would not be meaningful. Additionally, these revisions are necessary to avoid public confusion from the unintentional omissions and errors. Therefore, the AA finds good cause to waive the requirement to provide prior notice and opportunity for public comment.

For the same reasons stated above, the AA also finds good cause under 5 U.S.C. 553(d)(3) to waive the 30-day delay in effective date and make this rule effective immediately upon publication. Because prior notice and opportunity for public comment are not required for this rule by 5 U.S.C. 553, or any other law, the analytical requirements of the Regulatory Flexibility Act, 5 U.S.C. 601 *et seq.*, are inapplicable.

This final rule contains no information collection requirements under the Paperwork Reduction Act of 1995.

This final rule is not significant for the purposes of Executive Order 12866.

List of Subjects in 50 CFR Part 679

Alaska, Fisheries, Reporting and recordkeeping requirements.

Dated: December 21, 2021.

Samuel D. Rauch, III,
Deputy Assistant Administrator for
Regulatory Programs, National Marine
Fisheries Service.

For the reasons set out in the preamble, 50 CFR part 679 is amended as follows:

PART 679—FISHERIES OF THE EXCLUSIVE ECONOMIC ZONE OFF ALASKA

■ 1. The authority citation for part 679 continues to read as follows:

Authority: 16 U.S.C. 773 *et seq.*; 1801 *et seq.*; 3631 *et seq.*; Pub. L. 108–447; Pub. L. 111–281.

■ 2. Revise Table 10 to Part 679—Gulf of Alaska Retainable Percentage, to read as follows:

BILLING CODE 3510–22–P

Table 10 to Part 679—Gulf of Alaska Retainable Percentage

Notes to Table 10 to Part 679			
1	Shortraker/rougheye rockfish	SR/RE	<i>Sebastes borealis</i> (shortraker)(152)
		ERA	<i>S. aleutianus</i> (rougheye) (151) Shortraker/rougheye rockfish in the Eastern Regulatory Area (ERA).
Where an MRA is not indicated, use the MRA for SR/RE included under Aggregated Rockfish			
Catcher vessels using hook-and-line, pot, or jig gear are required to retain all rockfish. See § 679.20(j).			
2	Deep-water flatfish	Dover sole (124), Greenland turbot (134), Kamchatka flounder (117), and deep-sea sole	
3	Shallow-water flatfish	Flatfish not including deep-water flatfish, flathead sole (122), rex sole (125), or arrowtooth flounder (121)	
4	Other rockfish	Western Regulatory Area	means other rockfish and demersal shelf rockfish
		Central Regulatory Area	
		West Yakutat District	
		Southeast Outside District	means other rockfish
Other rockfish			
		<i>S. aurora</i> (aurora) (185)	<i>S. variegates</i> (harlequin)(176)
		<i>S. melanostomus</i> (blackgill)(177)	<i>S. wilsoni</i> (pygmy)(179)
		<i>S. paucispinis</i> (bocaccio)(137)	<i>S. babcocki</i> (redbanded)(153)
		<i>S. goodei</i> (chilipepper)(178)	<i>S. proriger</i> (redstripe)(158)
		<i>S. crameri</i> (darkblotch)(159)	<i>S. zacentrus</i> (sharpchin)(166)
		<i>S. elongatus</i> (greenstriped)(135)	<i>S. jordani</i> (shortbelly)(181)
		<i>S. entomelas</i> (widow)(156)	<i>S. flavidus</i> (yellowtail)(155)
In the Eastern Regulatory Area only, Other rockfish also includes <i>S. polyspinis</i> (northern)(136)			
5	Demersal shelf rockfish (DSR)	<i>S. pinniger</i> (canary)(146)	<i>S. maliger</i> (quillback)(147)
		<i>S. nebulosus</i> (china)(149)	<i>S. helvomaculatus</i> (rosethorn)(150)
		<i>S. caurinus</i> (copper)(138)	<i>S. nigrocinctus</i> (tiger)(148)
DSR-SEO = Demersal shelf rockfish in the Southeast Outside District (SEO). Catcher vessels in the SEO have full retention of DSR (see § 679.20(j)).			
6	Other species	Octopuses (870)	Sharks (689)
7	Aggregated rockfish	Aggregated rockfish (see § 679.2) means any species of the genera <i>Sebastes</i> or <i>Sebastolobus</i> except <i>Sebastes ciliatus</i> (dark rockfish), <i>Sebastes melanops</i> (black rockfish), and <i>Sebastes mystinus</i> (blue rockfish), except in:	
		Southeast Outside District	where DSR is a separate species group for those species marked with an MRA
		Eastern Regulatory Area	where SR/RE is a separate species group for those species marked with an MRA
Catcher vessels using hook-and-line, pot, or jig gear are required to retain all rockfish. See § 679.20(j).			
8	n/a	Not applicable	

Notes to Table 10 to Part 679			
9	Aggregated forage fish (all species of the following taxa)	Bristlemouths, lightfishes, and anglemouths (family <i>Gonostomatidae</i>)	209
		Capelin smelt (family <i>Osmeridae</i>)	516
		Deep-sea smelts (family <i>Bathylagidae</i>)	773
		Eulachon smelt (family <i>Osmeridae</i>)	511

		Gunnels (family <i>Pholidae</i>)	207
		Krill (order <i>Euphausiacea</i>)	800
		Laternfishes (family <i>Myctophidae</i>)	772
		Pacific Sand fish (family <i>Trichodontidae</i>)	206
		Pacific Sand lance (family <i>Ammodytidae</i>)	774
		Pricklebacks, war-bonnets, eelblennys, cockscombs and shannys (family <i>Stichaeidae</i>)	208
		Surf smelt (family <i>Osmeridae</i>)	515
10	Skates Species and Groups	Alaska (<i>Bathyraja. Parmifera</i>)	703
		Aleutian (<i>B. aleutica</i>)	704
		Whiteblotched (<i>Raja binoculata</i>)	705
		Big Skates (<i>Raja binoculata</i>)	702
		Longnose Skates (<i>R. rhina</i>)	701
		Other Skates (<i>Rathyraja</i> and <i>Raja spp.</i>)	700
11	Aggregated non-groundfish	All legally retained species of fish and shellfish, including IFQ halibut, that are not listed as FMP groundfish in Tables 2a and 2c to this part.	
12	Grenadiers	Giant grenadiers (<i>Albatrossia pectoralis</i>)	214
		Other grenadiers (all grenadiers that are not Giant grenadiers)	213

¹ **Sablefish:** for fixed gear restrictions, see § 679.7(f)(3)(ii) and (f)(11).

² **Other flatfish** includes all flatfish species, except for Pacific halibut (a prohibited species), flathead sole, Greenland turbot, rock sole, yellowfin sole, Alaska plaice, arrowtooth flounder and Kamchatka flounder.

³ **Other rockfish** includes all “rockfish” as defined at § 679.2, except for Pacific ocean perch; and northern, shortraker, and rougheye rockfish.

⁴ The **Other species** includes sharks, skates and octopuses.

⁵ **na** = not applicable

⁶ **Aggregated rockfish** includes all “rockfish” as defined at § 679.2, except shortraker and rougheye rockfish. Catcher vessels using hook-and-line, pot, or jig gear are required to retain all rockfish. See § 679.20(j).

⁷ **Forage fish, grenadiers, squids, and sculpins** are all defined at Table 2c to this part.

⁸ All legally retained species of fish and shellfish, including CDQ halibut and IFQ halibut that are not listed as FMP groundfish in Tables 2a and 2c to this part.

⁹ Catcher vessels using hook-and-line, pot, or jig gear are required to retain all rockfish. See § 679.20(j).

[FR Doc. 2021–28232 Filed 12–29–21; 8:45 am]

BILLING CODE 3510–22–C

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 679

[Docket No. 210217–0022]

RTID 0648–XB678

Fisheries of the Exclusive Economic Zone Off Alaska; Inseason Adjustment to the 2022 Bering Sea and Aleutian Islands Pollock, Atka Mackerel, and Pacific Cod Total Allowable Catch Amounts

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; inseason adjustment; request for comments.

SUMMARY: NMFS is adjusting the 2022 total allowable catch (TAC) amounts for the Bering Sea and Aleutian Islands

(BSAI) pollock, Atka mackerel, and Pacific cod fisheries. This action is necessary because NMFS has determined these TACs are incorrectly specified, and will ensure the BSAI pollock, Atka mackerel, and Pacific cod TACs are the appropriate amounts based on the best available scientific information. This action is consistent with the goals and objectives of the Fishery Management Plan for Groundfish of the Bering Sea and Aleutian Islands Management Area.

DATES: Effective 0001 hours, Alaska local time (A.l.t.), January 1, 2022, until the effective date of the final 2022 and 2023 harvest specifications for BSAI groundfish, unless otherwise modified or superseded through publication of a notification in the **Federal Register**.

Comments must be received at the following address no later than 4:30 p.m., A.l.t., January 14, 2022.

ADDRESSES: Submit comments on this document, identified by NOAA–NMFS–2020–0141, by either of the following methods:

- **Electronic Submission:** Submit all electronic public comments via the

Federal e-Rulemaking Portal. Go to www.regulations.gov and enter NOAA–NMFS–2020–0141. Click the “Comment” icon, complete the required fields, and enter or attach your comments.

- **Mail:** Submit written comments to Glenn Merrill, Assistant Regional Administrator, Sustainable Fisheries Division, Alaska Region NMFS, Attn: Records Office. Mail comments to P.O. Box 21668, Juneau, AK 99802–1668.

Instructions: NMFS may not consider comments if they are sent by any other method, to any other address or individual, or received after the comment period ends. All comments received are a part of the public record, and NMFS will post the comments for public viewing on www.regulations.gov without change. All personal identifying information (e.g., name, address), confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. NMFS will accept anonymous comments (enter “N/A” in the required fields if you wish to remain anonymous).

FOR FURTHER INFORMATION CONTACT:
Krista Milani, 907-581-2062.

SUPPLEMENTARY INFORMATION: NMFS manages the groundfish fishery in the BSAI exclusive economic zone according to the Fishery Management Plan for Groundfish of the Bering Sea and Aleutian Islands Management Area (FMP) prepared by the North Pacific Fishery Management Council (Council) under authority of the Magnuson-Stevens Fishery Conservation and Management Act. Regulations governing fishing by U.S. vessels in accordance with the FMP appear at subpart H of 50 CFR part 600 and 50 CFR part 679.

The final 2021 and 2022 harvest specifications for groundfish in the BSAI (86 FR 11449, February 25, 2021) set the 2022 Aleutian Islands (AI) pollock TAC at 19,000 metric tons (mt), the 2022 Bering Sea (BS) pollock TAC at 1,400,000 mt, the 2022 BSAI Atka mackerel TAC at 57,717 mt, the 2022 BS Pacific cod TAC at 95,053 mt, and the 2022 AI Pacific cod TAC at 13,796 mt. In December 2021, the Council recommended a 2022 BS pollock TAC of 1,111,000 mt, which is less than the 1,400,000 mt TAC established by the final 2021 and 2022 harvest specifications for groundfish in the BSAI. The Council also recommended a 2022 BSAI Atka mackerel TAC of 66,481 mt, which is more than the 57,717 mt TAC established by the final 2021 and

2022 harvest specifications for groundfish in the BSAI. Furthermore, the Council recommended a 2022 BS Pacific cod TAC of 136,466 mt, and an AI Pacific cod TAC of 13,796 mt, which is more than the BS Pacific cod TAC of 95,053 mt, and the same as the AI Pacific cod TAC of 13,796 mt established by the final 2021 and 2022 harvest specifications for groundfish in the BSAI. The Council's recommended 2022 TACs, and the area and seasonal apportionments, are based on the Stock Assessment and Fishery Evaluation report (SAFE), dated November 2021, which NMFS has determined is the best available scientific information for these fisheries.

Steller sea lions occur in the same location as the pollock, Atka mackerel, and Pacific cod fisheries and are listed as endangered under the Endangered Species Act (ESA). Pollock, Atka mackerel, and Pacific cod are a principal prey species for Steller sea lions in the BSAI. The seasonal apportionment of pollock, Atka mackerel, and Pacific cod harvest is necessary to ensure the groundfish fisheries are not likely to cause jeopardy of extinction or adverse modification of critical habitat for Steller sea lions. NMFS published regulations and the revised harvest limit amounts for pollock, Atka mackerel, and Pacific cod fisheries to implement Steller sea lion protection measures to insure that

groundfish fisheries of the BSAI are not likely to jeopardize the continued existence of the western distinct population segment of Steller sea lions or destroy or adversely modify their designated critical habitat (79 FR 70286, November 25, 2014).

In accordance with § 679.25(a)(1)(iii), (a)(2)(i)(B), and (a)(2)(iv), the Administrator, Alaska Region, NMFS (Regional Administrator), has determined that, based on the November 2021 SAFE report for this fishery, the current BSAI pollock, Atka mackerel, and Pacific cod TACs are incorrectly specified. Pursuant to § 679.25(a)(1)(iii), the Regional Administrator is adjusting the 2022 BS pollock TAC to 1,111,000 mt, the 2022 BSAI Atka mackerel TAC to 66,481 mt, and the 2022 BS Pacific cod TAC to 136,466 mt. Therefore, Table 2 of the final 2021 and 2022 harvest specifications for groundfish in the BSAI (86 FR 11449, February 25, 2021) is revised consistent with this adjustment.

Pursuant to § 679.20(a)(5)(i) and (iii), Table 5 of the final 2021 and 2022 harvest specifications for groundfish in the BSAI (86 FR 11449, February 25, 2021) is revised for the 2022 BS and AI allocations of pollock TAC to the directed pollock fisheries and to the Community Development Quota (CDQ) directed fishing allowances consistent with this adjustment.

TABLE 5—FINAL 2022 ALLOCATIONS OF POLLOCK TACS TO THE DIRECTED POLLOCK FISHERIES AND TO THE CDQ DIRECTED FISHING ALLOWANCES (DFA) ¹—Continued

[Amounts are in metric tons]

Area and sector	2022 allocations	2022 A season ¹		2022 B season ¹
		A season DFA	SCA harvest limit ²	B season DFA
Bogoslof District ICA ⁸	250	n/a	n/a	n/a

¹ Pursuant to § 679.20(a)(5)(i)(A), the Bering Sea subarea pollock TAC, after subtracting the CDQ DFA (10 percent) and the ICA (4 percent), is allocated as a DFA as follows: Inshore sector—50 percent, catcher/processor sector (CP)—40 percent, and mothership sector—10 percent. In the Bering Sea subarea, 45 percent of the DFA is allocated to the A season (January 20–June 10) and 55 percent of the DFA is allocated to the B season (June 10–November 1). Pursuant to § 679.20(a)(5)(iii)(B)(2)(i) through (iii), the annual Aleutian Islands subarea pollock TAC, after subtracting first for the CDQ DFA (10 percent) and second for the ICA (2,500 mt), is allocated to the Aleut Corporation for a pollock directed fishery. In the Aleutian Islands subarea, the A season is allocated up to 40 percent of the Aleutian Islands pollock ABC.

² In the Bering Sea subarea, pursuant to § 679.20(a)(5)(i)(C), no more than 28 percent of each sector's annual DFA may be taken from the SCA before noon, April 1.

³ Pursuant to § 679.20(a)(5)(i)(A)(4), 8.5 percent of the DFA allocated to listed CPs shall be available for harvest only by eligible catcher vessels with a CP endorsement delivering to listed CPs, unless there is a CP sector cooperative for the year.

⁴ Pursuant to § 679.20(a)(5)(i)(A)(4)(iii), the AFA unlisted catcher/processors are limited to harvesting not more than 0.5 percent of the catcher/processor sector's allocation of pollock.

⁵ Pursuant to § 679.20(a)(5)(i)(A)(6), NMFS establishes an excessive harvesting share limit equal to 17.5 percent of the sum of the non-CDQ pollock DFAs.

⁶ Pursuant to § 679.20(a)(5)(i)(A)(7), NMFS establishes an excessive processing share limit equal to 30.0 percent of the sum of the non-CDQ pollock DFAs.

⁷ Pursuant to § 679.20(a)(5)(iii)(B)(6), NMFS establishes harvest limits for pollock in the A season in Area 541 of no more than 30 percent, in Area 542 of no more than 15 percent, and in Area 543 of no more than 5 percent of the Aleutian Islands pollock ABC.

⁸ Pursuant to § 679.22(a)(7)(B), the Bogoslof District is closed to directed fishing for pollock. The amounts specified are for incidental catch only and are not apportioned by season or sector.

Note: Seasonal or sector apportionments may not total precisely due to rounding.

Pursuant to § 679.20(a)(8), Table 7 of the final 2021 and 2022 harvest specifications for groundfish in the BSAI (86 FR 11449, February 25, 2021)

is revised for the 2022 seasonal and spatial allowances, gear shares, CDQ reserve, incidental catch allowance, jig, BSAI trawl limited access, and

Amendment 80 allocations of the BSAI Atka mackerel TAC consistent with this adjustment.

TABLE 7—FINAL 2022 SEASONAL AND SPATIAL ALLOWANCES, GEAR SHARES, CDQ RESERVE, INCIDENTAL CATCH ALLOWANCE, AND AMENDMENT 80 ALLOCATIONS OF THE BSAI ATKA MACKEREL TAC

¹ Section 679.20(a)(8)(ii) allocates the Atka mackerel TACs, after subtracting the CDQ reserves, jig gear allocation, and ICAs, to the Amendment 80 and BSAI trawl limited access sectors. The allocation of the iTAC for Atka mackerel to the Amendment 80 and BSAI trawl limited access sectors is established in Table 33 to 50 CFR part 679 and § 679.91. The CDQ reserve is 10.7 percent of the TAC for use by CDQ participants (see §§ 679.20(b)(1)(ii)(C) and 679.31).

² Sections 679.20(a)(8)(ii)(A) and 679.22(a) establish temporal and spatial limitations for the Atka mackerel fishery.

³ The seasonal allowances of Atka mackerel are 50 percent in the A season and 50 percent in the B season.

⁴ Section 679.23(e)(3) authorizes directed fishing for Atka mackerel with trawl gear during the A season from January 20 to June 10 and the B season from June 10 to December 31.

⁵ Section 679.20(a)(8)(ii)(C)(1)(i) limits no more than 60 percent of the annual TACs in Areas 542 and 543 to be caught inside of Steller sea lion critical habitat; section 679.20(a)(8)(ii)(C)(1)(ii) equally divides the annual TACs between the A and B seasons as defined at § 679.23(e)(3); and section 679.20(a)(8)(ii)(C)(2) requires that the TAC in Area 543 shall be no more than 65 percent of ABC in Area 543.

⁶ Sections 679.2 and 679.20(a)(8)(i) require that up to 2 percent of the Eastern Aleutian District and the Bering Sea subarea TAC be allocated to jig gear after subtracting the CDQ reserve and the ICA. NMFS sets the amount of this allocation for 2022 at 0.5 percent. The jig gear allocation is not apportioned by season.

Note: Seasonal or sector apportionments may not total precisely due to rounding.

Pursuant to § 679.20(a)(7), Table 9 of the final 2021 and 2022 harvest specifications for groundfish in the BSAI (86 FR 11449, February 25, 2021) is revised for the 2022 gear shares and seasonal allowances of the BSAI Pacific cod TAC consistent with this adjustment.

¹ The sector allocations and seasonal allowances for BSAI Pacific cod TAC are based on the sum of the BS and AI Pacific cod TACs, after the subtraction of the reserves for the CDQ Program. If the TAC for Pacific cod in either the AI or BS is or will be reached, then directed fishing for Pacific cod in that subarea will be prohibited, even if a BSAI allowance remains (§ 679.20(d)(1)(iii)).

² The ICA for the hook-and-line and pot sectors will be deducted from the aggregate portion of Pacific cod TAC allocated to the hook-and-line and pot sectors. The Regional Administrator approves an ICA of 400 mt for 2022 based on anticipated incidental catch in these fisheries.

Note: Seasonal or sector apportionments may not total precisely due to rounding.

Classification

NMFS issues this action pursuant to section 305(d) of the Magnuson-Stevens Act. This action is required by 50 CFR part 679, which was issued pursuant to section 304(b), and is exempt from review under Executive Order 12866.

Pursuant to 5 U.S.C. 553(b)(B), there is good cause to waive prior notice and an opportunity for public comment on this action, as notice and comment would be impracticable and contrary to the public interest, as it would prevent NMFS from responding to the most recent fisheries data in a timely fashion and would allow for harvests that

exceed the appropriate allocations for pollock, Atka mackerel, and Pacific cod in the BSAI based on the best scientific information available. NMFS was unable to publish a notice providing time for public comment because the most recent, relevant data only became available as of December 23, 2021.

Without this inseason adjustment, NMFS could not allow the fishery for pollock, Atka mackerel, and Pacific cod in the BSAI to be harvested in an expedient manner and in accordance with the regulatory schedule. Under

§ 679.25(c)(2), interested persons are invited to submit written comments on this action to the above address until January 14, 2022.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: December 27, 2021.

Karen Abrams,
Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

Proposed Rules

Federal Register

Vol. 86, No. 248

Thursday, December 30, 2021

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

LIBRARY OF CONGRESS

Copyright Office

37 CFR Parts 201, 232, and 234

[Docket No. 2021–9]

Copyright Claims Board: Representation by Law Students and of Business Entities

AGENCY: U.S. Copyright Office, Library of Congress.

ACTION: Notice of proposed rulemaking.

SUMMARY: The U.S. Copyright Office is issuing a notice of proposed rulemaking to establish procedures governing the appearance of law student representatives and employees of business entities in proceedings before the Copyright Claims Board.

DATES: Initial written comments must be received no later than 11:59 p.m. EDT on February 3, 2022. Written reply comments must be received no later than 11:59 p.m. EDT on February 18, 2022.

ADDRESSES: For reasons of Government efficiency, the Copyright Office is using the *Regulations.gov* system for the submission and posting of public comments in this proceeding. All comments are therefore to be submitted electronically through *regulations.gov*. Specific instructions for submitting comments are available on the Copyright Office website at <http://copyright.gov/rulemaking/case-act-implementation/representation/>. If electronic submission of comments is not feasible due to lack of access to a computer or the internet, please contact the Office using the contact information below for special instructions.

FOR FURTHER INFORMATION CONTACT: Megan Efthimiadis, Assistant to the General Counsel, by email at mefth@copyright.gov, or by telephone at 202–707–8350.

SUPPLEMENTARY INFORMATION:

I. Background

On December 27, 2020, the President signed into law the Copyright Alternative in Small-Claims Enforcement (“CASE”) Act of 2020.¹ The CASE Act directs the Copyright Office to establish the Copyright Claims Board (“CCB”), an alternative forum to federal court in which parties may seek resolution of copyright disputes that are capped at a lower economic value.² The CCB has authority to hear copyright infringement claims, claims seeking a declaration of non-infringement, and misrepresentation claims under section 512(f) of title 17.³ Participation in the CCB is voluntary for all parties,⁴ and all determinations are non-precedential.⁵

The CASE Act directs the Register of Copyrights to establish the regulations by which the CCB will conduct its proceedings, subject to the provisions of chapter 15 and relevant principles of law under title 17.⁶ The Office has issued a notification of inquiry (“NOI”),⁷ three notices of proposed rulemaking (“NPRMs”),⁸ and one final rule⁹ related to CCB procedures. In this notice of proposed rulemaking, the Office proposes procedures governing qualified law students who represent parties in CCB proceedings and procedures governing representation of corporations, limited liability companies, partnerships, sole proprietorships, or other unincorporated associations (collectively, “business entities”).

II. Proposed Rule

Under the CASE Act, a party before the CCB may be represented by “a law student who is qualified under applicable law governing representation by law students of parties in legal proceedings and who provides such representation on a *pro bono* basis.”¹⁰ Consistent with Congress’s directive to develop a system that is accessible to “those with little prior formal exposure to copyright laws,”¹¹ the Office is committed to facilitating law student representation through law school clinics, which play an important role in providing expanded legal access to often underserved members of the public.¹²

In response to the NOI, one group of commenters suggested that the Office adopt regulations establishing standards for law student representation, such as enrollment in good standing at an American Bar Association (“ABA”)-certified law school, participation in a law school clinic focused on copyright, and supervision by an attorney who takes responsibility for the student’s work.¹³ The comments also suggested that the Office maintain a public database of participating law school clinics and include a summary of the law student representation program’s activities as part of the Register’s annual report to Congress.¹⁴ The Office has considered these suggestions as set forth below.

To assess the “applicable law” that would govern any law students appearing before the CCB, the Office surveyed regulations pertaining to law student representation in several

¹⁴ *Id.*

jurisdictions that handle a large volume of copyright claims or are geographically close to the Office. Common eligibility requirements for students include enrollment at an ABA-accredited law school,¹⁵ completion of a minimum period of legal studies,¹⁶ completion of relevant coursework,¹⁷ the party's written consent to the student's representation,¹⁸ and certification by the student's law school dean.¹⁹ These jurisdictions also require supervision by an attorney, who must be a member of the bar²⁰ and generally must assume professional responsibility for the student's activity,²¹ which includes assistance with and approval of the student's work.²² The Office believes that some of the provisions discussed above provide appropriate guidance and, as discussed in more detail below, has incorporated many of these requirements into the proposed rule. To make law clinic representation widely available to parties before the CCB, some of the requirements in the proposed rule are slightly more lenient than those imposed by some of the surveyed states.²³ However, under the

proposed rule, law students still must meet the requirements imposed by the state in which they are certified, if such requirements exceed those established by the proposed rule.

Accordingly, the Office proposes to create a structure for law student representation that encourages both participation by law school clinics and transparency. The proposed rule addresses the threshold eligibility requirements for law students to appear before the CCB; the expectations for practice by law students and their supervising attorneys while participating in CCB proceedings; and the creation of a public directory of clinics that are available to accept clients appearing before the CCB.

A. Law Student Representation Eligibility Requirements

The proposed rule permits representation by qualified law students affiliated with qualifying law school clinics. It incorporates the requirements for law student representation provided by the law of the jurisdiction that certifies the student to practice in connection with a law school clinic. The law student also must meet an appropriate standard of competence,²⁴ by completing the first year of law school study and receiving formal training in either CCB procedures or copyright law. Law student representation before the CCB must be on a *pro bono* basis.

The proposed rule also sets forth additional requirements for the law student representative and supervising attorneys during the course of

representation before the CCB. Many of these provisions are based on the findings of the state law survey, including that clients must consent in writing to the law student's representation and that law student representatives must be supervised by an attorney. Under the proposed rule, supervising attorneys are responsible for confirming law student representatives' eligibility under applicable law and CCB regulations. Supervising attorneys are also responsible for overall case management, including ensuring that there is continuity of representation in any active proceedings during law school term transitions.

The proposed rule requires that both the law student representative and the supervising attorney file notices of appearance in the case (and notices of withdrawal, including if the identity of either the law student representative or the supervising attorney changes during the course of a proceeding). Law student representatives may not file documents with the CCB without the supervising attorney's knowledge, and the supervising attorney must maintain an account in the CCB's electronic file management system to track the law student representative's filings. Any document signed by the law student representative must include the name of the supervising attorney, and the supervising attorney must accompany the law student representative to hearings on the merits, unless the CCB grants leave for the law student representative to appear without the supervising attorney. The proposed rule does not require the supervising attorney to accompany the law student representative to conferences.

Under the proposed rule, both supervising attorneys and law student representatives are bound by the CCB's standards of conduct governing parties and their representatives. The supervising attorney has responsibility for the law student representative's actions, and the CCB may hold the supervising attorney responsible for the law student representative's activity.

The Office invites comments on whether the proposed regulations strike a proper balance between ensuring that law student representatives are properly qualified and supervised and minimizing burdens on supervising attorneys or clinics, which could diminish the availability of clinical representation for parties in CCB proceedings. The Office is particularly interested in any comments concerning whether a law student should have a minimum amount of formal training in copyright law or in appearing before the CCB; whether supervising attorneys

²⁰ Cal. R. Ct., R. 9.42(a)(2); N.Y. Comp. Codes R. & Regs. tit. 22, sec. 805.5(e) (2017); Ill. Sup. Ct. R. 711(c); Tenn. Sup. Ct. R. 7, sec. 10.03(h)(3)(A); D.C. Ct. App. R. 48(e)(4); Md. R. 19-220(a)(4); Va. Sup. Ct. R. pt. 6, sec. IV, 15(d)(i).

²¹ Cal. Rules of State Bar R. 3.6(B)(3); N.Y. Comp. Codes R. & Regs. tit. 22, sec. 805.5(e) (2017); Tenn. Sup. Ct. R. 7, sec. 10.03(h)(3)(C); D.C. Ct. App. R. 48(e)(2); Md. R. 19-220(d); Va. Sup. Ct. R. pt. 6, sec. IV, 15(d)(ii).

²² Cal. Rules of State Bar R. 3.6(B)(5); N.Y. Comp. Codes R. & Regs. tit. 22, sec. 805.5(e) (2017); Tenn. Sup. Ct. R. 7, sec. 10.03(g)(2), (h)(3)(C); D.C. Ct. App. R. 48(e)(3); Md. R. 19-220(d); Va. Sup. Ct. R. pt. 6, sec. IV, 15(d)(iii).

²³ For example, the proposed rule requires that the name of the supervising attorney appear on all documents signed by the law student representative, while some jurisdictions require that the supervising attorney sign all documents. *See, e.g.,* Cal. Rules of State Bar R. 3.6(B)(5); Ill. Sup. Ct. R. 711(c)(2)(ii), (v); Tenn. Sup. Ct. R. 7, sec.

10.03(g)(2); D.C. Ct. App. R. 48(d)(2). The proposed rule also only requires the supervising attorney to accompany the law student representative to hearings on the merits, barring leave, and does not require the supervising attorney to accompany the law student representative to conferences, though some jurisdictions require the supervising attorney to accompany the law student representative to a broader range of appearances before a tribunal. *See, e.g.,* Cal. R. Ct., R. 9.42(d)(2), (3) (requiring supervising attorney's presence at depositions and hearings); N.Y. Comp. Codes R. & Regs. tit. 22, sec. 805.5(b)(2), (3), (5), (6) (2017) (requiring supervising attorney's presence at appearances pertaining to criminal matters and to family and other contested civil actions); Tenn. Sup. Ct. R. 7, sec. 10.03(h)(2) (requiring supervising attorney's presence at administrative and adjudicatory proceedings); D.C. Ct. App. R. 48(d)(1), (3) (requiring supervising attorney's presence at appearances before tribunals and at oral arguments, except that the eligible student may appear before the tribunal without the supervising attorney's presence if the matter is not contested and with the tribunal's consent); Va. Sup. Ct. R. pt. 6, sec. IV, 15(a)(i) (requiring supervising attorney's presence at appearance before courts or administrative tribunals).

²⁴ Model Rules of Prof'l Conduct R. 1.1 (Am. Bar Ass'n 1983) ("Competent representation requires the legal knowledge, skill, thoroughness and preparation reasonably necessary for the representation [of a client].").

should be required to appear at hearings on the merits; whether the supervising attorney's appearance should also be required at conferences; and whether documents submitted to the CCB must be signed by both the supervising attorney and the law student representative.

B. Law School Clinic Directory

The proposed rule provides for the creation of a public directory of law school clinics actively accepting clients for CCB representation. The Office anticipates that there will be a large number of *pro se* (i.e., self-represented) participants in CCB proceedings who are appearing before an adjudicatory body for the first time. While the goal of the CCB is to provide streamlined, easy-to-understand proceedings, such that parties may appear without an attorney,²⁵ the Office wants to ensure that participants have as much access to available resources and legal support as possible. To that end, the proposed rule provides the opportunity for law school clinics to self-identify when they are available to represent clients before the CCB. The directory will include contact information for, and the geographic availability of, the clinic; the nature of the clinic's experience with copyright and litigation matters; and a description of the clinic's interest in handling CCB matters. Requiring this information for directory inclusion is intended to provide participants the means of making an informed decision regarding possible law student representation. The Office will make this information publicly available on the condition that the clinic certifies that its students are eligible to practice before the CCB and provides the required information to assist a participant in evaluating whether representation is available and appropriate. Clinics will have a duty to keep their information up to date, and a listing may be removed at the CCB's discretion.

The CASE Act's legislative history suggests that the Office look to the U.S. Patent and Trademark Office's Law School Clinic Certification Program ("USPTO Program") when considering how to encourage law student representation before the CCB.²⁶ The USPTO Program consists of a complex multi-year process that requires an application by an interested law school clinic, review and acceptance into the program, USPTO monitoring over a

training year, and reporting and renewal requirements.²⁷ The USPTO Program has grown since it was established in 2008, and now over sixty clinics in approximately thirty states are certified to have law students appear before the USPTO.²⁸ The program is run by five designated legal staff members within the USPTO's Office of Enrollment and Discipline.²⁹ The majority of the clinics in the USPTO Program represent applicants seeking patent or trademark registrations, and not parties involved in proceedings before the Patent Trial and Appeal Board or Trademark Trial and Appeal Board. Given the fact that practice before the CCB does not require the same type of technical expertise, the Office has adopted those aspects of the USPTO Program that are appropriate for the CCB. In light of the CCB's overall obligations in commencing operations, the Office has proposed a program which is feasible in light of its currently available resources. In the interest of making *pro bono* resources widely known and easily accessible, the Office proposes gathering information similar to information acquired through the USPTO Program³⁰ and making it publicly available for participants to review and assess. The Office believes that the proposed requirements would allow new clinics located in areas where there are fewer legal resources to participate in the CCB's program, and would allow clinics to be available to represent clients soon after the start of CCB operations. The rule proposed by the Office requires law school clinic directors to certify that the clinic meets all legal obligations under applicable state law prior to inclusion in the public directory. The Office believes that the training in copyright law or practice before the CCB that is required in the regulations will be most valuable to the

participating law students. After the CCB has become further established, the Office will reconsider whether more robust requirements should be imposed for law clinic certification.

The Office seeks comments on whether the directory as proposed is sufficient to allow participants to make an informed decision regarding whether and where to seek clinic representation. The Office also seeks comments regarding appropriate outreach strategies for encouraging law school clinic participation.

C. Representation of Business Entities

Finally, the proposed rule addresses the issue of who will be authorized to represent business entities, which include corporations, limited liability companies, partnerships, and sole proprietorships, before the CCB, and what kind of representation is required. Longstanding practice in federal court requires that a business entity appear with representation of counsel.³¹ Other jurisdictions, however, provide greater flexibility, particularly in the small claims context. In the Small Claims and Conciliation Branch of the Civil Division of the Superior Court of the District of Columbia, for instance, a corporation may appear as a plaintiff only when represented by counsel, but as a defendant, it may be represented by an authorized officer, director, or employee.³² In Virginia small claims court, a corporation or partnership may be represented by an officer or an employee of that entity. In fact, it may be represented by an attorney only when the attorney is entering an appearance to remove a case to general district court.³³ In contrast, when appearing in a Virginia general district court, a corporation must be represented by an attorney, unless the amount in controversy is \$2500 or less, the party is a private corporation whose stock is held by no more than five persons, and all stockholders consent to an officer providing representation.³⁴ In Maryland, an officer, designated employee, partner, or member of a limited liability company may appear

³³ Va. Code Ann. 16.1–122.4 (2021). An attorney may represent a corporate or partnership plaintiff or defendant, but only if they are appearing *pro se* and not in a representative capacity. *Id.* at 16.1–122.4(A)(1).

³⁴ *Id.* at 16.1–81.1; see *id.* at 16.1–88.3 (generally prohibiting non-attorneys from litigating cases in Virginia courts).

on behalf of the entity in the District Court of Maryland, so long as the action is a small claims action and is not based on an assignment to the entity of the claim of another.³⁵

Given the small claims nature of the CCB and the interest in facilitating participation before it, the proposed rule resembles the practices in some state small claims courts rather than the federal system. A business entity may be represented by an attorney, fiduciary, or authorized employee in a CCB proceeding. Representatives must certify that they are authorized to represent and bind the entity; if the representative is an employee, the employee must also submit written proof of that authorization. The Office welcomes comments on this proposed framework.

37 CFR Part 201

Copyright, General provisions.

37 CFR Part 232 and 234

Claims, Copyright.

Proposed Regulations

For the reasons stated in the preamble, the U.S. Copyright Office proposes to amend Chapter II, Subchapters A and B, of title 37 Code of Federal Regulations, as proposed to be amended at 86 FR 69890 (December 8, 2021), as follows:

SUBCHAPTER A—COPYRIGHT OFFICE AND PROCEDURES

PART 201—GENERAL PROVISIONS

■ 1. The authority citation for part 201 continues to read as follows:

Authority: 17 U.S.C. 702.

Section 201.10 also issued under 17 U.S.C. 304.

■ 2. In § 201.2, revise paragraph (a)(2) to read as follows:

§ 201.2 Information given by the Copyright Office.

(a) * * *

(2) The Copyright Office does not furnish the names of copyright attorneys, publishers, agents, or other similar information to the public, except that it may provide a directory of *pro bono* representation available to participants in proceedings before the Copyright Claims Board.

* * * * *

SUBCHAPTER B—COPYRIGHT CLAIMS BOARD AND PROCEDURES

PART 232—CONDUCT OF PARTIES

■ 3. The authority citation for part 232 continues to read as follows:

Authority: 17 U.S.C. 702, 1510.

■ 4. Add § 232.6 to read as follows:

* * * * *

§ 232.6 Representation of business entities.

(a) *Definition.* For the purpose of this section, a *business entity* is a corporation, limited liability company, partnership, sole proprietorship, or unincorporated association.

(b) *Appearance of a business entity.* A *business entity* may appear before the Copyright Claims Board (“Board”) through: (1) A member in good standing of the bar of the highest court of a State, the District of Columbia, or any territory or commonwealth of the United States;

(2) A law student who meets the requirements set forth in 37 CFR 234.1;

(3) An owner, partner, officer, or member of the *business entity*; or

(4) An authorized employee.

(c) *Certification.* Someone appearing before the Board to represent a *business entity* pursuant to paragraphs (b)(3) or (4) of this section shall certify that they are an authorized agent of the *business entity* and may bind that entity in matters pending before the Board. If the representative qualifies only as an authorized employee under paragraph (b)(4) of this section, then within 30 days of the authorized employee’s initial appearance, the representative also must submit written authorization, signed by an owner, partner, officer, or member of the *business entity* under penalty of perjury, stating that the representative may bind that entity on matters pending before the Board.

(d) *Subject to standards of professional conduct.* Representatives of business entities who appear pursuant to paragraphs (b)(3) or (4) of this section are equally subject to the standards of conduct set forth in 37 CFR 232.1 as any other party representative.

■ 5. Part 234 is added to read as follows:

PART 234—LAW STUDENT REPRESENTATIVES

Sec.

234.1 Law student representatives.

234.2 Law school clinic directory.

Authority: 17 U.S.C. 702, 1510.

§ 234.1 Law student representatives.

(a) *Eligibility for appearance.* (1) *State law compliance.* Any law student who is affiliated with a law school clinic, is qualified under applicable laws

governing representation by law students of parties in legal proceedings, and meets the other requirements of this paragraph may appear before the Copyright Claims Board (“Board”). Applicable law is the law of the jurisdiction that certifies the student to practice law in conjunction with a law school clinic.

(2) *Pro bono representation.* Any law student who appears before the Board must provide representation on a *pro bono* basis.

(3) *Competency.* Law student representatives must meet a standard of competency. For the purpose of appearances before the Board, competency includes successful completion of:

(i) The first year of studies at an American Bar Association-accredited law school; and

(ii) A copyright law course, formal copyright law training, or formal training in Board procedures.

(b) *Client consent.* The law student representative shall have the written consent of the client for the law student to appear on that client’s behalf.

(c) *Attorney supervision.* A law student who represents a party in a proceeding before the Board shall be supervised by an attorney who is qualified under applicable law governing representation by law students, as specified in paragraph (a) of this section. In supervising the law student, the attorney shall adhere to the requirements of 37 CFR 232.5.

(d) *Confirmation of eligibility.* In accordance with the standards of professional conduct set forth in paragraph (j) of this section, the attorney supervising the work of the law student representative is responsible for confirming the law student’s eligibility to appear before the Board as set forth in paragraph (a) of this section.

(e) *Identification of supervising attorney in documents.* The name of the supervising attorney shall appear on all documents signed by the law student representative.

(f) *Notice of appearance.* In any proceeding in which a law student represents a party, a notice of appearance shall be filed pursuant to 37 CFR 232.5(a) identifying both the law student representative and the supervising attorney.

(g) *Filing documents.* All filings by a law student representative shall be made with the knowledge of the supervising attorney, who shall maintain an association with the law student representative in the electronic filing system. The supervising attorney shall maintain their own account, in addition to the law student’s account, in

³⁵ Md. Code Ann., Bus. Occ. & Prof. 10–206(b)(4) (2021).

the electronic filing system to track law student filings. A notice of withdrawal shall be filed whenever the identity of a law student representative or a supervising attorney has changed.

(h) *Appearance at hearings.* The supervising attorney shall accompany the law student representative to hearings held in accordance with 37 CFR 222.15, absent leave of the Board for the law student to appear without the presence of the supervising attorney.

(i) *Responsibility for continuity of case management.* The supervising attorney shall be responsible for all aspects of case management, including appearances and withdrawals, as well as continuity of representation during law school term transitions.

(j) *Applicability of rules of professional conduct.* Law student representatives are equally subject to the standards of conduct set forth in 37 CFR 232.5 as any other attorney representatives. The supervising attorney has professional responsibility for the actions of the law student representative. The Board may hold supervisory attorneys responsible for law student representative activity.

§ 234.2 Law school clinic directory.

(a) *Publicly available directory.* The Board shall make a directory available on its website of law school clinics that have advised the Board that they are available, on a *pro bono* basis, to represent clients in proceedings before the Board.

(b) *Form for inclusion.* To be included in the public directory, the law school clinic director shall submit a form providing the following information for public dissemination:

- (1) The name of the participating law school;
- (2) The name of the participating clinic;
- (3) The name of the director of the clinic;
- (4) A general contact email address and phone number;
- (5) The geographic area from which the clinic may accept clients;
- (6) Whether the clinic has handled copyright matters in the past two years;
- (7) The nature of any copyright matters handled by the clinic in the past two years;
- (8) Whether the clinic has experience in handling litigation matters;
- (9) If the clinic does not have litigation experience, whether the clinic has a partnership with a litigation clinic;
- (10) A brief statement describing the clinic's interest in handling matters before the Board; and
- (11) A certification that student representatives participating in the

clinic will meet all requirements of 37 CFR 234.1(a).

(c) *Standards for inclusion.* Subject to paragraph (d) of this section, the Board will accept for inclusion in the public directory any law school clinic that certifies that its law student representatives will meet all requirements of 37 CFR 234.1(a) and provides sufficient information pursuant to paragraph (b) of this section for participants in Board proceedings to evaluate whether representation is available and appropriate.

(d) *Removal from directory.* The Board may, in its discretion, remove a clinic from the directory if it determines that the clinic is not suitable for representing clients before the Board, including, without limitation, if it determines that the clinic has failed to properly update its information in the public directory.

(e) *Duty to update directory.* Participating clinics have a duty to maintain current information in the directory and shall confirm the currency of the information on an annual basis.

Dated: December 22, 2021.

Kimberley Isbell,

Acting General Counsel and Associate Register of Copyrights.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Parts 87, 1030, and 1031

[EPA-HQ-OAR-2019-0660; FRL-9354-01 OAR]

RIN 2060-AU69

Public Hearing for Control of Air Pollution From Aircraft Engines: Emission Standards and Test Procedures

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule; public hearing.

SUMMARY: The Environmental Protection Agency (EPA) is announcing a virtual public hearing to be held on January 20, 2022, on its proposed rulemaking for particulate matter (PM) emission standards for aircraft engines, which was signed on December 17, 2021.

DATES: EPA will hold a virtual public hearing on January 20, 2022. The hearing will begin at 10 a.m. Eastern Time (ET) and end when all parties who wish to speak have had an opportunity to do so. Please refer to the **SUPPLEMENTARY INFORMATION** section for

additional information on the public hearing.

ADDRESSES: The public hearing will be held virtually. Additional information regarding the hearing appears below under the **SUPPLEMENTARY INFORMATION**.

FOR FURTHER INFORMATION CONTACT:

Bryan Manning, Office of Transportation and Air Quality, Assessment and Standards Division, Environmental Protection Agency, 2000 Traverwood Drive, Ann Arbor, MI 48105; telephone number: 734-214-4832; email address: manning.bryan@epa.gov.

SUPPLEMENTARY INFORMATION: The Environmental Protection Agency (EPA) is proposing PM emission standards and test procedures applicable to certain classes of engines used by civil subsonic jet airplanes (those engines with rated output of greater than 26.7 kilonewtons (kN)). These proposed standards and test procedures are equivalent to the aircraft engine standards adopted by the United Nations' International Civil Aviation Organization (ICAO) in 2017 and 2020. The proposed rulemaking was signed on December 17, 2021, and it will be published separately in the **Federal Register**. The pre-publication version is available at <https://www.epa.gov/regulations-emissions-vehicles-and-engines/proposed-rule-control-air-pollution-aircraft-engines>.

Participation in virtual public hearing. Please note that EPA is deviating from its typical approach because the President has declared a national emergency. Because of current recommendations from the Centers for Disease Control and Prevention (CDC), as well as state and local orders for social distancing to limit the spread of COVID-19, EPA cannot hold in-person public meetings at this time.

EPA is also asking all hearing attendees to register for the hearing, even those who do not intend to provide testimony, by January 18, 2022. Information on how to register for the hearing can be found at <https://www.epa.gov/regulations-emissions-vehicles-and-engines/proposed-rule-control-air-pollution-aircraft-engines>. For those without internet access, contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to register.

The last day to pre-register to speak at the hearing will be January 18, 2022. The virtual public hearing will provide interested parties the opportunity to present data, views, or arguments concerning the proposal (the official version of which was signed on December 17, 2021 and a copy of which is available at <https://www.epa.gov/>

regulations-emissions-vehicles-and-engines/proposed-rule-control-air-pollution-aircraft-engines). EPA may ask clarifying questions during the oral presentations but will not respond to the presentations at that time. Written statements and supporting information submitted during the comment period will be considered with the same weight as any oral comments and supporting information presented at the public hearing. EPA recommends submitting the text of your oral comments as written comments to the rulemaking Docket ID No. EPA-HQ-OAR-2019-0660, which can be found at <https://www.regulations.gov>.

The hearing will begin at 10 a.m. Eastern Time (ET) and end when all parties who wish to speak have had an opportunity to do so. A five-minute time limit will be placed on all oral testimony.

Please note that any updates made to any aspect of the hearing will be posted online at <https://www.epa.gov/regulations-emissions-vehicles-and-engines/proposed-rule-control-air-pollution-aircraft-engines>. While EPA expects the hearing to go forward as set forth above, please monitor our website or contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to determine if there are any updates. EPA does not intend to publish a document in the **Federal Register** announcing updates.

If you require the services of a translator or special accommodations such as audio description, please pre-register for the hearing and describe your needs by January 18, 2022. EPA may not be able to arrange accommodations without advance notice.

How can I get copies of the proposed action and other related information? EPA has established a docket for this action under Docket ID No. EPA-HQ-OAR-2019-0660, which can be found at <https://www.regulations.gov>. EPA has also developed a website for this proposed rule at <https://www.epa.gov/regulations-emissions-vehicles-and-engines/proposed-rule-control-air-pollution-aircraft-engines>. Please refer to the notice of proposed rulemaking for detailed information on accessing information related to the proposal.

William Charmley,

*Director, Assessment and Standards Division,
Office of Transportation and Air Quality.*

[CG Docket No. 17-59; FCC 21-126; FRS 63918]

Advanced Methods To Target and Eliminate Unlawful Robocalls—Petition for Reconsideration and Request for Clarification of USTelecom—The Broadband Association

AGENCY: Federal Communications Commission.

ACTION: Proposed rule.

SUMMARY: In this document, the Federal Communications Commission (FCC or Commission) seeks comment on whether and how to transition away from the use of Session Initiation Protocol (SIP) Code 603 for purposes of the immediate notification of call blocking requirement and toward full implementation of SIP Codes 607 and 608. The Commission also seeks comment on any potential costs and benefits associated with phasing out SIP Code 603 for purposes of the immediate notification requirement, and the burden, if any, on small businesses.

DATES: Comments are due on or before January 31, 2022 and reply comments are due on or before February 14, 2022.

ADDRESSES: You may submit comments, identified by CG Docket No. 17-59, by the following method:

Federal Communications Commission: <https://www.fcc.gov/ecfs/filings>. Follow the instructions for submitting comments.

Effective March 19, 2020, and until further notice, the Commission no longer accepts any hand or messenger delivered filings. This is a temporary measure taken to help protect the health and safety of individuals, and to mitigate the transmission of COVID-19. See FCC Announces Closure of FCC Headquarters Open Window and Change in Hand-Delivery Policy, Public Notice, 35 FCC Rcd 2788 (OMD 2020). In the event that the Commission announces the lifting of COVID-19 restrictions, a filing window will be opened at the Commission's office located at 9050 Junction Drive, Annapolis, MD 20701. See Amendment of the Commission's Rules of Practice and Procedure, Order, 35 FCC Rcd 5450 (OMD 2020).

FOR FURTHER INFORMATION CONTACT:

Jerusha Burnett of the Consumer Policy Division, Consumer and Governmental Affairs Bureau, at jerusha.burnett@fcc.gov or (202) 418-0526.

SUPPLEMENTARY INFORMATION: This is a summary of the Commission's Further

Notice of Proposed Rulemaking, FCC 21-126, CG Docket No. 17-59, adopted on December 10, 2021, and released on December 14, 2021.

The full text of this document is available online at <https://docs.fcc.gov/public/attachments/FCC-21-126A1.pdf>.

To request this document in accessible formats for people with disabilities (e.g., Braille, large print, electronic files, audio format) or to request reasonable accommodations (e.g., accessible format documents, sign language interpreters, CART), send an email to fcc504@fcc.gov or call the FCC's Consumer and Governmental Affairs Bureau at (202) 418-0530 (voice).

This matter shall be treated as a "permit-but-disclose" proceeding in accordance with the Commission's ex parte rules. 47 CFR 1.1200 *et seq.* Persons making oral ex parte presentations are reminded that memoranda summarizing the presentations must contain summaries of the substance of the presentations and not merely a listing of the subjects discussed. See 47 CFR 1.1206(b). Other rules pertaining to oral and written ex parte presentations in permit-but-disclose proceedings are set forth in § 1.1206(b) of the Commission's rules, 47 CFR 1.1206(b).

Initial Paperwork Reduction Act of 1995 Analysis

If the Commission adopts any modified information collection requirements, the Commission will publish another notice in the **Federal Register** inviting the public to comment on the requirements, as required by the Paperwork Reduction Act. Public Law 104-13; 44 U.S.C. 3501-3520. In addition, pursuant to the Small Business Paperwork Relief Act of 2002, the Commission seeks comment on how it might further reduce the information collection burden for small business concerns with fewer than 25 employees. Public Law 107-198; 44 U.S.C. 3506(c)(4).

Synopsis

1. In this Sixth Further Notice of Proposed Rulemaking (FNPRM), the Commission seeks comment on any potential costs and benefits associated with phasing out SIP Code 603 for purposes of the immediate notification of call blocking requirement, and the burden, if any, on small businesses. The Commission adopted an Order on Reconsideration on December 10, 2021, released on December 14, 2021, [insert FR cite], that granted USTelecom's request to allow voice service providers operating IP networks the flexibility to

use SIP Code 603 to meet the immediate notification requirement beginning on January 1, 2022. At that time, the Commission also granted the request to clarify that the immediate notification requirements apply to all analytics-based blocking, and do not apply to non-analytics-based blocking programs and that the blocked calls list requirements applies only to opt-in or opt-out analytics-based blocking and not to other blocking programs.

2. In this FNPRM, the Commission seeks comment on whether and how to transition away from the use of SIP Code 603 for immediate notification and toward full implementation of SIP Codes 607 and 608. Should the Commission phase out use of SIP Code 603 for its immediate notification requirement or does SIP Code 603 provide adequate information to callers? Does SIP Code 603 require additional modifications to make it useful for callers? If so, would such modifications potentially eliminate any cost or time savings gained from allowing its use? Would use of SIP Code 603 for such purposes undermine its value for callers because its use is too varied for proper analysis by caller analytics programs?

3. The Commission also sought comment on whether setting a firm deadline for implementation of SIP Codes 607 and 608 is the best means of ensuring that voice service providers move expeditiously while allowing standards bodies to continue their important processes. If the Commission requires use of only SIP Codes 607 and 608, what is the appropriate deadline for implementation? What factors should the Commission consider in making this decision? How might the Commission encourage standards bodies to finalize their work in a timely manner? Should the Commission require voice service providers to submit status reports on their progress in implementing SIP Codes 607 and 608? If so, how often should the Commission require such status reports?

4. The Commission sought comment on any other matters raised by the SIP Code requirements addressed in the Order on Reconsideration. The Commission specifically requested comment on any potential costs and benefits associated with phasing out SIP Code 603 for purposes of the immediate notification requirement, and the burden, if any, on small businesses.

Initial Regulatory Flexibility Analysis

5. As required by the Regulatory Flexibility Act of 1980, as amended, (RFA), the Commission has prepared this Initial Regulatory Flexibility Analysis (IRFA) of the possible

significant economic impact on a substantial number of small entities by the policies and rules proposed in this Sixth FNPRM. Written public comments are requested on this IRFA. Comments must be identified as responses to the IRFA and must be filed by the deadlines for comments on the FNPRM provided on the first page of this document. The Commission will send a copy of the FNPRM, including this IRFA, to the Chief Counsel for Advocacy of the Small Business Administration.

6. *Need for, and Objectives of, the Proposed Rules.* The FNPRM seeks comment on whether to phase out the use of SIP Code 603 for purposes of voice service providers' immediate notification requirements. The Commission continues to believe that it should retain its requirement that terminating voice service providers ultimately use only SIP Codes 607 or 608 in IP networks, as these codes are designed to be used for call blocking. As many commenters note, the design specifications for SIP Codes 607 and 608 provide important information that enables callers to contact blocking entities and initiate the redress process. The Commission believes that these codes present the best long-term solution for immediate notification. While some commenters argue that certain design specifications may be difficult to implement, the Commission believes that it should encourage standards-setting bodies to finalize their work and provide time for voice service providers to implement, test, and refine internal systems needed to return codes 607 and 608. The FNPRM seeks comment on this belief and whether and how the Commission should phase out the use of SIP Code 603 for purposes of voice service providers' immediate notification requirements.

7. *Legal Basis.* The proposed and anticipated rules are authorized under sections 154(i), 201, 202, 227, 251(e), and 403 of the Communications Act of 1934, as amended, 47 U.S.C. 154(i), 201, 202, 227, 251(e), 403, and section 10 of the Telephone Robocall Abuse Criminal Enforcement and Deterrence Act, Public Law 116–105, 133 Stat. 3274.

8. *Description of Projected Reporting, Recordkeeping, and Other Compliance Requirements.* As indicated above, the FNPRM seeks comment on whether and how to phase out the use of SIP Code 603 for purposes of voice service providers' immediate notification requirements. The FNPRM does not contain any projected reporting, recordkeeping, or other compliance requirements.

9. *Steps Taken to Minimize Significant Economic Impact on Small*

Entities, and Significant Alternatives Considered. The RFA requires an agency to describe any significant alternatives that it has considered in reaching its proposed approach, which may include the following four alternatives (among others): (1) The establishment of differing compliance or reporting requirements or timetables that take into account the resources available to small entities; (2) the clarification, consolidation, or simplification of compliance or reporting requirements under the rule for small entities; (3) the use of performance, rather than design, standards; and (4) an exemption from coverage of the rule, or any part thereof, for small entities.

10. The FNPRM seeks comment on whether and how to phase out the use of SIP Code 603 for purposes of voice service providers' immediate notification requirements. The Commission expects to consider the economic impact on small entities, as identified in comments filed in response to the FNPRM and this IRFA, in reaching its final conclusions and taking action in this proceeding.

11. *Federal Rules that May Duplicate, Overlap, or Conflict with the Proposed Rules.* None.

Federal Communications Commission.

Media Bureau Extends Comment and Reply Comment Deadlines for FM Directional Antenna NPRM

AGENCY: Federal Communications Commission.

ACTION: Notice.

SUMMARY: In this document, the Commission grants a motion for extension of time in the Updating FM Broadcast Radio Service Directional Antenna Performance Verification proceeding, to extend the comment and reply comment deadlines.

DATES: Comments may be filed on or before January 20, 2022, and reply comments may be filed on or before February 4, 2022.

ADDRESSES: You may submit comments, identified by MB Docket No. 21-422, by any of the following methods:

- *Electronic Filers:* Federal Communications Commission's website: <https://apps.fcc.gov/ecfs/>. Follow the instructions for submitting comments.

- *Paper Filers:* Parties who choose to file by paper must file an original and one copy of each filing.

Filings can be sent by commercial overnight courier, or by first-class or overnight U.S. Postal Service mail (although the Commission continues to experience delays in receiving U.S. Postal Service mail). All filings must be addressed to the Commission's Secretary, Office of the Secretary, Federal Communications Commission.

- Commercial overnight mail (other than U.S. Postal Service Express Mail and Priority Mail) must be sent to 9050 Junction Drive, Annapolis Junction, MD 20701.

- U.S. Postal Service first-class, Express, and Priority mail must be addressed to 45 L Street NE, Washington, DC 20554.

- Effective March 19, 2020, and until further notice, the Commission no longer accepts any hand or messenger delivered filings. This is a temporary measure taken to help protect the health and safety of individuals, and to mitigate the transmission of COVID-19.

- During the time the Commission's building is closed to the general public and until further notice, if more than one docket or rulemaking number appears in the caption of a proceeding, paper filers need not submit two additional copies for each additional docket or rulemaking number; an original and one copy are sufficient.

People with Disabilities: Contact the FCC to request reasonable accommodations (accessible format documents, sign language interpreters, CART, etc.) by email: FCC504@fcc.gov or phone: 202-418-0530 or 202-418-0432 (TTY).

FOR FURTHER INFORMATION CONTACT:

Albert Shuldiner, Chief, Media Bureau, Audio Division, (202) 418-2700; Thomas Nessinger, Senior Counsel, Media Bureau, Audio Division, (202) 418-2700.

SUPPLEMENTARY INFORMATION: This is a summary of the Media Bureau's Public Notice in MB Docket No. 21-422; DA 21-1611, released on December 20, 2021. The full text of this document is available electronically for public inspection via ECFS at <https://apps.fcc.gov/ecfs/> and the FCC's website at <https://docs.fcc.gov/public/attachments/FCC-21-1611A1.pdf>.

Documents will be available electronically in ASCII, Microsoft Word, and/or Adobe Acrobat. Alternative formats are available for people with disabilities (Braille, large print, electronic files, audio format), by sending an email to fcc504@fcc.gov or calling the Commission's Consumer and Governmental Affairs Bureau at (202) 418-0530 (voice), (202) 418-0432 (TTY).

Synopsis

1. By this Public Notice, the Media Bureau extends the deadlines for filing comments and reply comments in the above-captioned proceeding to update the Commission's rules by allowing an FM or LPFM applicant proposing a directional antenna system to verify the system's performance through computer modeling.

2. On November 15, 2021, the Commission released a Notice of Proposed Rulemaking setting out its proposed rule changes allowing verification of FM and LPFM directional antennas by computer modeling. Updating FM Broadcast Radio Service Directional Antenna Performance Verification, MB Docket No. 21-422, Notice of Proposed Rulemaking, FCC 21-117 (Nov. 15, 2021). On November 30, 2021, the Media Bureau announced a comment filing deadline of December 30, 2021, and a reply comment filing deadline of January 14, 2022, in the above-captioned proceeding. Comment and Reply Comment Dates Set for FM Directional Antenna NPRM, MB Docket No. 21-422, Public Notice, DA 21-1485 (MB Nov. 30, 2021).

3. On December 17, 2021, the National Association of Broadcasters (NAB) requested an extension of the comment and reply comment filing deadlines until January 20 and February 4, 2022, respectively. Motion for Extension of Time of the National Association of Broadcasters (NAB), MB Docket No. 21-422 (filed Dec. 17, 2021) (Extension Motion). NAB states that, in the Joint Petition for Rulemaking on which the NPRM was based (Joint Petition for Rulemaking, filed by Dielectric, LLC; Educational Media Foundation; Jampro Antennas, Inc.; Radio Frequency Systems; and Shively Labs (filed June 15, 2021)), the Joint Petitioners included a technical exhibit comparing the results of computer modeling using one commercial software product with the physical measurements taken from an FM directional antenna mounted on one particular type of tower. Extension Motion at 2. NAB believes that the record would "significantly benefit from additional technical information involving common tower structures and other commercial software products." *Id.* However, while NAB states it has reached out to broadcasters, consulting engineers, and antenna manufacturers to provide such technical data for the record, it points out that the end-of-year holiday season and upcoming federal holidays means that many potential commenters will be on vacation, or their offices will be closed or dealing with

year-end business matters. *Id.* NAB thus requests a three-week extension of both the comment and reply comment deadlines.

4. As set forth in section 1.46(a) of the Commission's rules, 47 CFR 1.46(a), the Commission's policy is that extensions of time shall not be routinely granted. We find, however, that NAB has set forth a sufficient justification to warrant grant of their requested extension. As an extension should enable interested

parties to present more complete and technically constructive comments to the Commission, we agree with NAB that both the parties commenting in the proceeding and the Commission should benefit and that the extension should not disadvantage any party. Extension Motion at 2–3. Accordingly, we grant the NAB's request and extend the comment and reply comment deadlines by three weeks, until January 20, 2022, and February 4, 2022, respectively.

5. For additional information on this proceeding, contact Tom Nessinger, Thomas.Nessinger@fcc.gov, of the Media Bureau, Audio Division. Press inquiries should be directed to Janice Wise, Janice.Wise@fcc.gov, (202) 418–8165.

Federal Communications Commission.

Thomas Horan,

Chief of Staff, Media Bureau.

Notices

Federal Register

Vol. 86, No. 248

Thursday, December 30, 2021

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

CHEMICAL SAFETY AND HAZARD INVESTIGATION BOARD

Sunshine Act Meeting

TIME AND DATE: January 26, 2022, 2:00 p.m. EDT (1.5 hours)

PLACE: The meeting will be held virtually via ZOOM. The access information will be provided by email to registrants. Registration is required via the below link: <https://www.zoomgov.com/meeting/register/vJltdeitjr4uEiWH1mi6iK-GmGrWpDP2YWA>. After registering, you will receive a confirmation email containing information about joining the meeting.

STATUS: Open to the public.

MATTERS TO BE CONSIDERED: The Chemical Safety and Hazard Investigation Board (CSB) will convene a public meeting on Wednesday, January 26, 2022, at 2:00 p.m. EDT. This meeting serves to fulfill its quarterly January public meeting requirement. The Board will review the CSB's progress in meeting its mission and highlight safety products newly released through investigations and safety recommendations.

CONTACT PERSON FOR FURTHER INFORMATION: Hillary Cohen, Communications Manager, at public@csb.gov or (202) 446-8094. Further information about this public meeting can be found on the CSB website at: www.csb.gov.

ADDITIONAL INFORMATION:

Background

The CSB is an independent federal agency charged with investigating incidents and hazards that result, or may result, in the catastrophic release of extremely hazardous substances. The agency's Board Members are appointed by the President and confirmed by the Senate. CSB investigations look into all aspects of chemical accidents and hazards, including physical causes such

as equipment failure as well as inadequacies in regulations, industry standards, and safety management systems.

Public Participation

The meeting is free and open to the public. This meeting will only be available via ZOOM. Close captions (CC) will be provided.

To submit public comments for the record please email us at public@csb.gov. Public comments sent in advance may be addressed at the meeting.

Dated: December 28, 2021.

Tamara Qureshi,

Assistant General Counsel, Chemical Safety and Hazard Investigation Board.

BILLING CODE 6350-01-P

DEPARTMENT OF COMMERCE

Minority Business Development Agency

Rural Business Center Program

AGENCY: Minority Business Development Agency (MBDA), Commerce.

ACTION: Notice of request for public comments.

SUMMARY: On November 15, 2021, President Biden signed the Infrastructure Investment and Jobs Act, which included statutory authority within the Minority Business Development Act (the Act) for the Minority Business Development Agency (MBDA) to establish a Rural Business Center Program. MBDA is seeking public comment on various issues related to rural areas and rural minority business enterprises to inform the agency and provide fundamental information regarding this sector of the economy. This notice requests comments on or before January 25, 2022.

DATES: The deadline for filing comments is January 25, 2022.

ADDRESSES: All comments should be submitted in electronic form to mbdapublicaffairs@mbda.gov.

FOR FURTHER INFORMATION CONTACT: Danae Pauli, Senior Advisor to the National Director, MBDA, U.S.

Department of Commerce, by email at dpauli@mbda.gov, or at (202) 482-2332.

SUPPLEMENTARY INFORMATION:

The Minority Business Development Agency (MBDA), a bureau of the U.S. Department of Commerce, leads Federal Government efforts to promote the growth and global competitiveness of minority business enterprises (MBEs). The Minority Business Development Act (the Act) authorized MBDA to establish a rural business center program to serve rural minority business enterprises or minority business enterprises located more than 50 miles from an MBDA Business Center (other than an MBDA Rural Business Center) and provide education and training, legal, financial, and technical assistance to minority business enterprises. Infrastructure Investment and Jobs Act, Public Law 117-58, division K, title III, sections 100301 and 100302 (November 15, 2021). Rural area is defined in the MBDA Act pursuant to section 371(a) of the Consolidated Farm and Rural Development Act, 7 U.S.C. 1991(a). The Act designated minority-serving institutions (as defined in section 371(a)(1) through (7) of the Higher Education Act of 1965, 20 U.S.C. 1067q(a)) as the entities that are eligible to receive grants to operate a rural business center. MBDA has initiated the process of conducting research and collecting information to design the new program that meets the business development needs of MBEs located in rural areas across the United States. Comments may be used to help MBDA decide policy related to the areas of focus, geographical location and distribution, and additional areas of service for the rural business center program. As part of this process, MBDA is seeking comments from members of the public, including but not limited to operators of rural businesses and persons with expertise and information, to provide the following information related to minority businesses in rural areas:

1. Describe the types of business operations in rural areas.
2. What are the financial, operational, and logistical needs of rural business enterprises?
3. Are there unique challenges faced by MBEs located in rural and remote areas of the U.S.? If so, describe.
4. What are the best methods to provide education, training, legal,

financial, and technical assistance to MBEs in rural areas?

5. Are there examples or success stories from organizations that provide services to MBEs in rural areas?

6. How should MBDA measure success for rural business centers?

7. What specific performance metrics should MBDA consider for rural business centers that would measure service to rural businesses?

8. What factors should be measured to demonstrate elements of success from the perspective of organizations that support, or customers served by rural businesses?

9. What is the most effective role for Minority Serving Institutions (MSIs) to foster the establishment and growth of MBEs in rural America and how should that impact be measured?

10. How many MSIs have degree and/or academic programs focused on business-related topics (*e.g.*, entrepreneurship, supply chains, advanced manufacturing/manufacturing, innovation, etc.) or offer business accelerator programs and/or business incubators? Provide names and locations of MSIs that have these programs.

11. What is the most effective way for MSIs to collaborate with community-based organizations? Please provide examples.

In addition, MBDA is seeking public comment regarding the focal points for the rural business centers as directed by the section 100302(c) of the MBDA Act: (i) The adoption of broadband internet access service (as defined in section 8.1(b) of title 47, Code of Federal Regulations, or any successor regulation), digital literacy skills, and e-commerce by rural minority business enterprises; (ii) advanced manufacturing; (iii) the promotion of manufacturing in the United States; (iv) ways in which rural minority business enterprises can meet gaps in the supply chain of critical supplies and essential goods and services for the United States; (v) improving the connectivity of rural minority business enterprises through transportation and logistics; (vi) promoting trade and export opportunities by rural minority business enterprises; (vii) securing financial capital; (viii) facilitating entrepreneurship in rural areas; and (ix) creating jobs in rural areas.

All comments must be submitted in electronic form (Word or other consistent software program) to the comment mailbox listed in the ADDRESSES section above. Comments should include the name or organization represented, contact information for the commenter, and the specific issue or

subject addressed in accordance with this notice and the provisions of the MBDA Act, Rural Business Center Program section.

Josephine Arnold,

Chief Counsel, Minority Business Development Agency.

[FR Doc. 2021-28331 Filed 12-29-21; 8:45 am]

BILLING CODE 3510-21-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[RTID 0648-XB590]

Fisheries of the Caribbean, Gulf of Mexico, and South Atlantic; Exempted Fishing Permit

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of receipt of an application for an exempted fishing permit; request for comments.

SUMMARY: NMFS announces the receipt of an application for an exempted fishing permit (EFP) from the REEF Environmental Education Foundation (REEF). If granted, the EFP would authorize the deployment of non-containment and spiny lobster traps in the Federal waters of the South Atlantic by research and contracted commercial vessels to target lionfish. The project would seek to determine the effectiveness of these traps for attracting and collecting invasive lionfish while avoiding impacts to non-target species and habitats.

DATES: Written comments must be received on or before January 14, 2022.

ADDRESSES: You may submit comments on the application, identified by “NOAA-NMFS-2021-0119” by any of the following methods:

- *Electronic Submission:* Submit all electronic public comments via the Federal e-Rulemaking Portal. Go to <https://www.regulations.gov> and enter “NOAA-NMFS-2021-0119” in the Search box. Click the “Comment” icon, complete the required fields, and enter or attach your comments.

- *Mail:* Kelli O’Donnell, Southeast Regional Office, NMFS, 263 13th Avenue South, St. Petersburg, FL 33701.

- *Instructions:* Comments sent by any other method, to any other address or individual, or received after the end of the comment period, may not be considered by NMFS. All comments received are a part of the public record and will generally be posted for public

viewing on www.regulations.gov without change. All personal identifying information (*e.g.*, name, address), confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. NMFS will accept anonymous comments (enter “N/A” in the required fields if you wish to remain anonymous).

Electronic copies of the application and programmatic environmental assessment (PEA) may be obtained from the Southeast Regional Office website at <https://www.fisheries.noaa.gov/action/lionfish-traps-exempted-fishing-permit-applications>.

FOR FURTHER INFORMATION CONTACT:

Kelli O’Donnell, 727-824-5305; email: kelli.odonnell@noaa.gov.

SUPPLEMENTARY INFORMATION: The EFP is requested under the authority of the Magnuson-Stevens Fishery Conservation and Management Act (16 U.S.C 1801 *et seq.*), and regulations at 50 CFR 600.745(b) concerning exempted fishing.

Lionfish is an invasive marine species that occurs in both the Gulf of Mexico (Gulf) and South Atlantic. The harvest of lionfish in the Federal waters of the Gulf and South Atlantic is not currently managed by NMFS. The EFP application submitted to NMFS involves the use of prohibited gear in Federal waters. Federal regulations prohibit the use or possession of a fish trap in Federal waters in the Gulf and South Atlantic (50 CFR 622.9(c)). In South Atlantic Federal waters, the term “fish trap” refers to a trap capable of taking fish, except for a seabass pot, a golden crab trap, or a crustacean trap, which are a type of trap historically used in the directed fishery for blue crab, stone crab, red crab, jonah crab, or spiny lobster and that contains at any time not more than 25 percent, by number, of fish other than blue crab, stone crab, red crab, jonah crab, and spiny lobster (50 CFR 622.2). The EFP would exempt these activities from the regulations prohibiting the use or possession of a fish trap in Federal waters of the South Atlantic at 50 CFR 622.9(c) and exempt the activities from the spiny lobster seasonal closures at 50 CFR 622.403(b) and (c). This allows the applicant to use non-containment traps and spiny lobster traps to target lionfish throughout the calendar year, including during the spiny lobster closed season off Florida. This exemption does not apply to fishing in areas where spiny lobster trap fishing is currently prohibited in Federal waters to protect corals (50 CFR 622.406). As described in more detail later in this notice, the EFP will allow

lionfish to be retained year-round from both the non-containment and the spiny lobster traps. The lionfish could be retained for personal use, which includes further scientific studies, and commercial use. Other incidentally caught species may be retained from the spiny lobster traps during the spiny lobster open season for personal and commercial use. Commercial use is limited to the contracted commercial fishers and must comply with all applicable laws and regulations. Additionally, to allow for retention of lionfish and incidental species from the traps as outlined, the EFP would exempt the applicant from commercial and recreational trap gear restrictions at 50 CFR 600.725(v) for the South Atlantic Snapper-Grouper Commercial and Recreational Fisheries (FMP) and from recreational trap gear restrictions for the Recreational Fishery (non-FMP).

The applicant seeks an EFP to test the effectiveness of non-containment traps in capturing lionfish in the South Atlantic while avoiding impacts to non-target species, protected species, and habitats. NMFS analyzed the effects of testing traps that target lionfish on the environment, including effects on Endangered Species Act (ESA)-listed species and designated critical habitat, and other non-target species and habitat, in the Gulf and South Atlantic regions through a PEA. Before issuing the permit, NMFS will analyze whether the proposed effort concerning non-containment traps and use of spiny lobster traps outside of the spiny lobster fishing season fits within the scope of the PEA and the ESA analysis on the expected effort under the PEA. If the proposed activities fit within the PEA and the ESA consultation, NMFS will document that determination for the record. Otherwise, NMFS will complete the required analyses.

The specific EFP request noticed here is further described and summarized below.

REEF is requesting authorization to test non-containment traps in the South Atlantic to harvest lionfish aboard federally permitted commercial spiny lobster fishing vessels and state of Florida research vessels. The proposed activities would examine the effectiveness and performance of non-containment traps for capturing lionfish, with the goal of identifying the best non-containment trap modification to maximize lionfish catch and reduce bycatch of other species. Both the non-containment and the spiny lobster traps would be fished singularly or in a trawl configuration with a maximum of 32 traps and 2 surface lines with buoys per trawl. Some traps would be outfitted

with cameras and/or hydrophones. Non-containment traps would be compared to standard spiny lobster trap controls. The standard spiny lobster traps to be used in the EFP would have a current endorsement, stamp, or certification. Sampling with the traps in the South Atlantic would occur in Federal waters in water depths from 100–300 ft (30–100 m) between Alligator Reef and Looe Key Reef in the Florida Keys. Commercial vessels would complete 20 trips per year while state research vessels would complete 30 trips per year for a maximum of 50 trips per year among all participating project vessels. Only areas open to commercial lobster fishing would be included in the study area and the complete calendar year would be available for sampling as a result of the lobster season exemptions in the EFP. No more than 100 non-containment traps would be deployed in the water at any given time, regardless of number of vessel deploying traps. During the spiny lobster closed season, no more than 100 non-containment and 100 spiny lobster traps would be deployed in the water at any given time. Trap soak times would vary, but they would not exceed 21 days per deployment. No bait would be used in the non-containment traps. Spiny lobster traps would be fished normally, with or without bait, at the discretion of the commercial fishermen. The project would deploy both non-containment traps and spiny lobster traps in various configurations. The spiny lobster traps would serve as control traps for the project and act as a way to examine the performance of the non-containment traps as a gear type for harvesting lionfish. As practicable, video and still photographs of trap deployment and animal behavior in and near traps would be recorded using remotely operated vehicles.

REEF would contract up to three federally permitted commercial lobster trap vessels crewed by fishermen with experience fishing within the study area. Additionally, the commercial vessel contractors must have demonstrable experience in the catching and handling of lionfish. The other project vessels would be two state of Florida research vessels. Researchers would be onboard the commercial vessels if scheduling allows. Data to be collected per trip would include: Non-containment trap design, gear configuration, and fishing effort data (e.g., date and time of deployment and retrieval, latitude, longitude, and water depth of each deployed trawl, soak time); trap loss and movement from original set position; protected species interactions; bycatch species (amount,

length, and disposition); and lionfish catch data for each trap type. All non-commercially viable bycatch species would be returned to the water as soon as possible. Commercial fishermen would be allowed to retain lionfish caught in the non-containment trap and spiny lobster traps for commercial catch year-round. During the spiny lobster open season, commercial fishermen would be able to retain for commercial purposes species caught from spiny lobster traps, including lionfish, subject to current regulations. In particular, depending on REEF's commercial vessels selected, species that are legally allowed to be commercially harvested in Federal waters by the contracted commercial fishermen may be retained as commercial catch as long as the harvest and retention complies with applicable laws and regulations (e.g., permitted commercial fishermen may retain species of the legal size taken during the applicable season from appropriate areas using legal gears and vessels, consistent with applicable laws and regulations). The researchers and contracted commercial fishers also can retain lionfish from the non-containment and spiny lobster traps year-round for personal use, including further scientific study. Other incidentally caught species can be retained from the spiny lobster traps during the spiny lobster open season for personal use, subject to applicable law (e.g., bag and possession limits). The EFP, if issued, will provide appropriate exemptions from the list of authorized gear types at 50 CFR 600.725(v) to allow the species to be retained for commercial and recreational purposes from trap gear. This would include an exemption from the recreational trap gear restrictions for the Recreational Fishery (Non-FMP) in the South Atlantic at 50 CFR 600.725(v) to allow the use of traps to retain lionfish for recreational purposes year-round, and an exemption from the commercial and recreational trap gear restrictions for the South Atlantic Snapper-Grouper Commercial and Recreational Fisheries (FMP) to allow the use of traps to retain managed snapper-grouper species for recreational purposes during the spiny lobster open season. "Recreational purposes" covers harvest for further scientific studies of lionfish as well as for personal consumption of lionfish and managed species caught in the traps. Previous lionfish studies from 100 deployments showed non-containment trap bycatch to consist only of striped burrfish, jackknife fish, and tattler bass, so lionfish is anticipated to be the primary species harvested out of the

non-containment traps and bycatch of non-target species is expected to be minimal. Bycatch from the spiny lobster traps are expected to be similar to that from the spiny lobster trap fishery in the South Atlantic.

The applicant has requested the EFP be effective for a 2-year period from the date the EFP is issued.

NMFS finds the application warrants further consideration based on a preliminary review. Possible conditions the agency may impose on the permit, if granted, include but are not limited to, a prohibition on conducting activities within marine protected areas, marine sanctuaries, or special management zones. Additionally, NMFS may require special protections for ESA-listed species and designated critical habitat, and may require particular gear markings. A final decision on issuance of the EFP will depend on NMFS' review of public comments received on the application, consultations with the appropriate fishery management agency of the affected state, the South Atlantic Fishery Management Council, the U.S. Coast Guard, and a determination that the activities to be taken under the EFP are consistent with all applicable laws and regulations.

Authority: 16 U.S.C 1801 *et seq.*

Dated: December 27, 2021.

Karen Abrams,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

[FR Doc. 2021-28352 Filed 12-29-21; 8:45 am]

BILLING CODE 3510-22-P

DEPARTMENT OF COMMERCE

Patent and Trademark Office

[Docket No.: PTO-P-2021-0037]

Extension of the Modified COVID-19 Prioritized Examination Pilot Program

AGENCY: United States Patent and Trademark Office, Department of Commerce.

ACTION: Notice.

SUMMARY: The United States Patent and Trademark Office (USPTO or Office) is extending the modified COVID-19 Prioritized Examination Pilot Program. Requests that are compliant with the pilot program's requirements and are filed on or before March 31, 2022, will be accepted. The USPTO will evaluate whether to terminate or further extend the program during this extension period.

DATES: The COVID-19 Prioritized Examination Pilot Program is extended

as of December 30, 2021, to run until March 31, 2022.

FOR FURTHER INFORMATION CONTACT: Robert A. Clarke, Editor of the Manual of Patent Examining Procedure (MPEP) (571-272-7735; robert.clarke@uspto.gov).

SUPPLEMENTARY INFORMATION: On May 14, 2020, the USPTO published a notice on the implementation of the COVID-19 Prioritized Examination Pilot Program. See COVID-19 Prioritized Examination Pilot Program, 85 FR 28932 (May 14, 2020) (COVID-19 Track One Notice). On September 3, 2021, the USPTO published a notice extending the program to December 31, 2021, and modifying it by removing the limit on the number of applications that could receive prioritized examination. See Modification of COVID-19 Prioritized Examination Pilot Program, 86 FR 49522 (September 3, 2021) (Modifying Notice).

The COVID-19 Track One Notice indicated that an applicant may request prioritized examination without payment of the prioritized examination fee and associated processing fee if: (1) The application's claim(s) covered a product or process related to COVID-19, (2) the product or process was subject to an applicable Food and Drug Administration (FDA) approval for COVID-19 use, and (3) the applicant met other requirements noted in the COVID-19 Track One Notice. As of November 29, 2021, 180 patents had issued from applications granted prioritized status under the pilot program. The average total pendency, including time consumed by continued examination, from filing date to issue date for those applications was 276 days. The shortest pendency from filing date to issue date for those applications was 75 days.

The Modifying Notice indicated that the pilot program would expire on December 31, 2021. In this notice, the Office is extending the pilot program by setting the expiration date as March 31, 2022. The Office will evaluate whether to terminate or further extend the program during this extension period. If the USPTO determines that a further extension of the pilot program is appropriate, the agency will publish a subsequent notice to the public further extending the program.

Unless the pilot program is further extended by a subsequent notice, following the expiration of this extension, the pilot program will be terminated, and applicants may instead seek to use the Prioritized Examination (Track One) Program. Applications accorded prioritized examination under the pilot program will not lose that

status merely because the application is still pending after the date the pilot program is terminated. In other words, applications accepted into the pilot program will continue to be examined under prioritized examination status until that status is terminated for one or more reasons, as described in the COVID-19 Track One Notice.

The Track One Program permits an applicant to have an application advanced out of turn (accorded special status) for examination under 37 CFR 1.102(e) if the applicant timely files a request for prioritized (Track One) examination accompanied by the appropriate fees and meets the other conditions of 37 CFR 1.102(e). See MPEP 708.02(b)(2). The current fee schedule is available at www.uspto.gov/learning-and-resources/fees-and-payment/uspto-fee-schedule.

The Track One Program does not have the restrictions of the COVID-19 Prioritized Examination Pilot Program on the types of inventions for which special status may be sought, as the Track One Program does not require a connection to any particular technology. Moreover, delays associated with the determination of whether an application presents a claim that covers a product or process related to COVID-19 and whether the product or process was subject to an applicable FDA approval for COVID-19 use may be avoided under the Track One Program.

Andrew Hirshfeld,

Commissioner for Patents, Performing the Functions and Duties of the Under Secretary of Commerce for Intellectual Property and Director of the United States Patent and Trademark Office.

BILLING CODE 3510-16-P

DEPARTMENT OF DEFENSE

Department of the Army

[Docket ID: USA-2021-HQ-0013]

Submission for OMB Review; Comment Request

AGENCY: Department of the Army, Department of Defense (DoD).

ACTION: 30-Day information collection notice.

SUMMARY: The Department of Defense has submitted to OMB for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act.

DATES: Consideration will be given to all comments received by January 31, 2022.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

FOR FURTHER INFORMATION CONTACT: Angela Duncan, 571–372–7574, whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Exchange Official Personnel Folder—Privilege Card; Exchange Form 1100–016; OMB Control Number 0702–0129.

Type of Request: Revision.
Number of Respondents: 207.
Responses per Respondent: 1.
Annual Responses: 207.
Average Burden per Response: 15 minutes.

Annual Burden Hours: 51.75.

Needs and Uses: The information collection requirement is necessary to obtain authorization or continued authorization for patronage to exchange associate dependents for shopping privileges.

Affected Public: Individuals or households.

Frequency: On occasion.

Respondent's Obligation: Voluntary.

OMB Desk Officer: Ms. Jasmeet Seehra.

You may also submit comments and recommendations, identified by Docket ID number and title, by the following method:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.

Instructions: All submissions received must include the agency name, Docket ID number, and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at <http://www.regulations.gov> as they are received without change, including any personal identifiers or contact information.

DOD Clearance Officer: Ms. Angela Duncan.

Requests for copies of the information collection proposal should be sent to Ms. Duncan at whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil.

Dated: December 27, 2021.

BILLING CODE 5001–06–P

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DoD–2021–OS–0092]

Submission for OMB Review; Comment Request

AGENCY: Defense Counterintelligence and Security Agency, Department of Defense (DoD).

ACTION: 30-Day information collection notice.

SUMMARY: The Department of Defense has submitted to OMB for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act.

DATES: Consideration will be given to all comments received by January 31, 2022.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

FOR FURTHER INFORMATION CONTACT: Angela Duncan, 571–372–7574, whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Personnel Security System Access Request Form; DD Form 2962, Volume 2; OMB Control Number 0704–0542.

Type of Request: Revision.
Number of Respondents: 22,225.
Responses per Respondent: 1.
Annual Responses: 22,225.
Average Burden per Response: 10 minutes.

Annual Burden Hours: 3,704.17.
Needs and Uses: The DD 2962, Volume 2, Personnel Security System Access Request (PSSAR) Form is used to collect the necessary information to vet and establish accounts for persons wishing to become users and gain access to personnel systems across the DoD, including National Background Investigation Services, the Defense Information System for Security, the

Defense Central Index of Investigations, and the Secure Web Fingerprint Transmission. These systems facilitate the initiation, investigation, and adjudication of information relevant to DoD security clearances and employment suitability determinations for active duty military, civilian employees and contractors seeking such credentials. These personnel security systems are the authoritative source for clearance information resulting in accesses determinations to sensitive/classified information and facilities. The PSSAR Form is solely used for the purpose of requesting an account for these systems, and this information collection request is not intended to cover any information collected within those systems. Each respondent is required to have a completed form on file at all times to remain compliant with the account request procedures for all systems.

Affected Public: Individuals or households.

Frequency: On occasion.

Respondent's Obligation: Required to Obtain or Retain Benefits.

OMB Desk Officer: Ms. Jasmeet Seehra.

You may also submit comments and recommendations, identified by Docket ID number and title, by the following method:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.

Instructions: All submissions received must include the agency name, Docket ID number, and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at <http://www.regulations.gov> as they are received without change, including any personal identifiers or contact information.

DOD Clearance Officer: Ms. Angela Duncan.

Requests for copies of the information collection proposal should be sent to Ms. Duncan at whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil.

Dated: December 27, 2021.

DEPARTMENT OF DEFENSE**Office of the Secretary**

[Docket ID: DoD–2021–OS–0130]

Proposed Collection; Comment Request

AGENCY: The Office of the Under Secretary of Defense for Personnel and Readiness (USD(P&R)), Department of Defense (DoD).

ACTION: Information collection notice.

SUMMARY: In compliance with the *Paperwork Reduction Act of 1995*, the Office of the Under Secretary of Defense for Personnel and Readiness announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by February 28, 2022.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

Federal eRulemaking Portal: <http://www.regulations.gov>. Follow the instructions for submitting comments.

Mail: DoD cannot receive written comments at this time due to the COVID–19 pandemic. Comments should be sent electronically to the docket listed above.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at <http://www.regulations.gov> as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to Defense Human

Resources Activity, 4800 Mark Center Drive, Suite 08F05 Alexandria, VA 22350, LaTarsha Yeargins, 571–372–2089.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Workplace and Gender Relations Survey of Military Members; OMB Control Number 0704–0615.

Needs and Uses: The legal requirements for the Workplace and Gender Relations (WGR) surveys of military members can be found in the following:

- 10 U.S.C. Section 481.
- Ronald W. Reagan National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2005.
- Public Law 111–383, Section 1631.
- NDAA for FY 2013, Section 570.
- 10 U.S.C. Section 2358.

Sexual assault, sexual harassment, and gender discrimination remain a major concern across the DoD and for members of Congress. In February 2004, the Under Secretary of Defense for Personnel and Readiness testified before the Senate Armed Services Committee on the prevalence of sexual assault in the DoD and the programs and policies planned to address the issues. In accordance with legislative requirements, the USD(P&R) issued memoranda to the Services that provides DoD policy guidance on sexual assault that included a new standard definition, response capability, training requirements, response actions, and reporting guidance throughout the DoD. The Sexual Assault and Prevention Response Office supported the implementation of the new policy and requires data to assess the prevalence of sexual assault in the DoD and the effectiveness of the programs they have implemented.

The WGR surveys will assess the attitudes and opinions of military members on issues relating to sexual harassment, gender discrimination, and sexual assault, as well as the culture and climate of the units/organizations in which individuals serve. It will provide the policy offices of the USD(P&R) with current data on (1) the positive and negative trends for professional and personal relationships between Service members; (2) the specific types of assault that have occurred and the number of times in the preceding year; (3) the effectiveness of DoD policies designed to improve professional relationships between male and female Service members; (4) the effectiveness of current processes for complaints, reports, and investigations; and, (5) specific issues related to sexual harassment, sexual assault, and gender

discrimination that may inform the DoD's prevention and response efforts.

Affected Public: Individuals or households.

Annual Burden Hours: 102,150 hours.

Number of Respondents: 204,300.

Responses per Respondent: 1.

Annual Responses: 204,300.

Average Burden per Response: 30 minutes.

Frequency: On occasion.

Dated: December 27, 2021.

Kayyonne T. Marston,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

BILLING CODE 5001–06–P

DEPARTMENT OF DEFENSE**Office of the Secretary**

[Docket ID: DoD–2021–OS–0129]

Submission for OMB Review; Comment Request

AGENCY: Office of the Under Secretary of Defense for Personnel and Readiness (USD(P&R)), Department of Defense (DoD).

ACTION: Emergency information collection notice.

SUMMARY: Consistent with the *Paperwork Reduction Act of 1995* and its implementing regulations, this document provides notice DoD is submitting an Information Collection Request to the Office of Management and Budget (OMB) to collect information on barriers and facilitators to minority participation in special operations and other identified units, as congressionally directed in the Fiscal Year (FY) 2021 National Defense Authorization Act (NDAA). DoD requests emergency processing and OMB authorization to collect the information after publication of this Notice for a period of six months.

DATES: Comments must be received by January 31, 2022.

ADDRESSES: The Department has requested emergency processing from OMB for this information collection request by 30 days after publication of this notice. Interested parties can access the supporting materials and collection instrument as well as submit comments and recommendations to OMB at www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function. Comments submitted in response to this notice will be

summarized and included in the request for OMB approval of this information collection. They will also become a matter of public record.

FOR FURTHER INFORMATION CONTACT: Angela Duncan, 571–372–7574, whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil.

SUPPLEMENTARY INFORMATION: Section 557 of the Fiscal Year 2021 National Defense Authorization Act requires USD(P&R) to sponsor a federally funded research and development center to assess existing barriers to minority participation in elite units, including Special Operations Forces (SOF) and pilot and navigator military occupational specialties. A RAND study, published in 1999, found that ethnic/racial minorities are underrepresented in SOF, compared to their representation in other military specialties, and recommended a range of actions DoD could take to address the barriers minorities face in securing equal participation in these units. Section 557 calls for a reexamination of minority representation in SOF and an expansion of past research to assess additional elite units (pilot/navigator specialties) and gender representation now that combat restrictions for women have been eliminated.

For this effort, focus groups will be conducted on topics that include recruitment, accession and training, culture and climate, and career progression; a small set of closed-ended and open-ended survey questions completed individually at the end of the session will also be included. Some focus groups will be conducted on military bases where members of the identified units serve and some focus groups will be conducted using an online platform that meets government compliance and security standards (Microsoft Teams or Zoom for Government, and Qualtrics, which has met the security standards required for government use (*i.e.*, Federal Risk and Authorization Management Program)). This study will inform DoD on how to enhance operational capabilities of these units by promoting diversity and inclusion.

Title; Associated Form; and OMB Number: Study on Reducing Barriers to Minority Participation in Elite Units in the Armed Services; 0704–RBMP.

Type of Request: New.

Number of Respondents: 500.

Responses per Respondent: 1.

Annual Responses: 500.

Average Burden per Response: 1 hour.

Annual Burden Hours: 500 hours.

Affected Public: Individuals or households.

Frequency: Once.

Respondent's Obligation: Voluntary.

Request for Comments: Comments are invited on: (1) Whether the proposed collection of information is necessary for the proper performance of the functions of DoD, including whether the information collected has practical utility; (2) the accuracy of DoD's estimate of the burden (including hours and cost) of the proposed collection of information; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including automated collection techniques or the use of other forms of information technology.

Dated: December 27, 2021.

Kayyonne T. Marston,

Alternate OSD Federal Register Liaison

Officer, Department of Defense.

BILLING CODE 5001–06–P

DEPARTMENT OF DEFENSE

Department of the Navy

[Docket ID: USN–2021–HQ–0009]

Submission for OMB Review; Comment Request

AGENCY: Department of the Navy, Department of Defense (DoD).

ACTION: 30-Day information collection notice.

SUMMARY: The Department of Defense has submitted to OMB for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act.

DATES: Consideration will be given to all comments received by January 31, 2022.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. FOR FURTHER INFORMATION CONTACT: Angela Duncan, 571–372–7574, whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Navy Health of the Force

Survey, OMB Control Number 0703–0079.

Type of Request: Extension.

Number of Respondents: 13,000.

Responses per Respondent: 1.

Annual Responses: 13,000.

Average Burden per Response: 25 minutes.

Annual Burden Hours: 5,417.

Needs and Uses: The Navy Health of the Force Survey is a strategic level engagement survey of the Navy Active Duty population that addresses core measures relating to the health of the force and addresses emergent issues of interest to Navy leadership. The survey will provide answers to important questions for Navy leadership including: Sailor job satisfaction, retention plans, and influences to stay or leave; value of different incentives for extended sea duty; sailor well-being including quality and amount of sleep, prevalence of burnout, stress and sources of stress; sailors' commitment to the organization and sense of unit cohesion.

Affected Public: Individuals or households.

Frequency: Once.

Respondent's Obligation: Voluntary.

OMB Desk Officer: Ms. Jasmeet Seehra.

You may also submit comments and recommendations, identified by Docket ID number and title, by the following method:

DEPARTMENT OF DEFENSE**Department of the Navy****[Docket ID: USN–2021–HQ–0011]****Proposed Collection; Comment Request****AGENCY:** Department of the Navy, Department of Defense (DoD).**ACTION:** Information collection notice.

SUMMARY: In compliance with the *Paperwork Reduction Act of 1995*, the United States Naval Academy (USNA) announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by February 28, 2022.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

Federal eRulemaking Portal: <http://www.regulations.gov>. Follow the instructions for submitting comments.

Mail: DoD cannot receive written comments at this time due to the COVID–19 pandemic. Comments should be sent electronically to the docket listed above.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at <http://www.regulations.gov> as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to the United States Naval Academy, 121 Blake Road, Rm. 311, Annapolis, MD 21401–1300, Shannon Campbell, 410–293–1550.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Naval Academy Information Program Blue and Gold Officer Program; USNA Form 1531/1; OMB Control Number 0703–BGOA.

Needs and Uses: This information requirement is needed to determine the eligibility and leadership potential of respondents applying to represent the United States Naval Academy as volunteer Blue and Gold Officers. Prior military service, current and past military performance, and prior affiliation with the USNA has been found to be an excellent predictor of success as a Blue and Gold Officer. Without this information, the ability for the USNA to recruit qualified Blue and Gold Officers would be impacted and would negatively affect the Naval Academy's ability to recruit qualified candidates.

Affected Public: Individuals or households.

Annual Burden Hours: 83.

Number of Respondents: 250.

Responses per Respondent: 1.

Annual Responses: 250.

Average Burden per Response: 20 minutes.

Frequency: On occasion.

Dated: December 27, 2021.

Kayyonne T. Marston,

DEPARTMENT OF EDUCATION**[Docket No.: ED–2021–SCC–0129]**

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; Implementation of Title I/II–A Program Initiatives

AGENCY: Institute of Education Sciences (IES), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, ED is proposing a new collection.

DATES: Interested persons are invited to submit comments on or before January 31, 2022.

ADDRESSES: Written comments and recommendations for proposed information collection requests should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this information collection request by selecting “Department of Education” under

“Currently Under Review,” then check “Only Show ICR for Public Comment” checkbox. Comments may also be sent to ICDocketmgr@ed.gov.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Erica Johnson, (202) 245–7676.

SUPPLEMENTARY INFORMATION: The Department of Education (ED), in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand the Department's information collection requirements and provide the requested data in the desired format. ED is soliciting comments on the proposed information collection request (ICR) that is described below. The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: Implementation of Title I/II–A Program Initiatives.

OMB Control Number: 1850–NEW.

Type of Review: New collection.

Respondents/Affected Public: State, Local, and Tribal Governments.

Total Estimated Number of Annual Responses: 881.

Total Estimated Number of Annual Burden Hours: 667.

Abstract: When the primary federal law governing K–12 schooling was updated in 2015 as the Every Student Succeeds Act (ESSA), it shifted many decisions to states and districts. However, through two of its core programs (Title I and Title I–A), ESSA retained federal requirements for states to set challenging content standards, assess student performance, identify and support low-performing schools, and promote the development of the educator workforce. How states and districts respond to the combination of

flexibility and requirements and how policies are enacted in schools and classrooms will determine whether ESSA stimulates educational improvement as intended, which is particularly important in the wake of educational disruptions wrought by the coronavirus pandemic.

This package requests clearance for state, district, and principal survey instruments and the collection of these data.

Dated: December 27, 2021.

Stephanie Valentine,

PRA Coordinator, Strategic Collections and Clearance, Governance and Strategy Division, Office of Chief Data Officer, Office of Planning, Evaluation and Policy Development.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. RP22–435–000]

Range Resources—Appalachia, LLC v. Texas Eastern Transmission, LP; Notice of Complaint

Take notice that on December 21, 2021, pursuant to Rule 206 of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure, 18 CFR 385.206 (2021), Range Resources—Appalachia, LLC (Complainant) filed a formal complaint against Texas Eastern

Transmission, LP (Respondent), alleging that Respondent failed to meet its firm service obligations for volumes flowing through the Adair Interconnect, in violation of, inter alia, the Natural Gas Act, the firm transportation service agreement between the parties, and Respondent's tariff, all as more fully explained in its complaint.

The Complainant certifies that copies of the complaint were served on the contacts listed for Respondent in the Commission's list of Corporate Officials.

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. The Respondent's answer and all interventions, or protests must be filed on or before the comment date. The Respondent's answer, motions to intervene, and protests must be served on the Complainant.

The Commission strongly encourages electronic filings of comments, protests and interventions in lieu of paper using the "eFiling" link at <http://www.ferc.gov>. Persons unable to file electronically may mail similar pleadings to the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426. Hand delivered submissions in docketed proceedings should be delivered to Health and Human Services, 12225 Wilkins Avenue, Rockville, Maryland 20852.

In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (<http://ferc.gov>) using the "eLibrary" link. Enter the docket number excluding the last three digits in the docket number field to access the document. At this time, the Commission has suspended access to the Commission's Public Reference Room, due to the proclamation declaring a National Emergency concerning the Novel Coronavirus Disease (COVID–19), issued by the President on March 13, 2020. For assistance, contact the Federal Energy Regulatory Commission at FERCOnlineSupport@ferc.gov, or call toll-free, (866) 208–3676 or TTY, (202) 502–8659.

Comment Date: 5:00 p.m. Eastern Time on January 10, 2022.

Dated: December 23, 2021.

Kimberly D. Bose,

Secretary.

FEDERAL RESERVE SYSTEM

Change in Bank Control Notices; Acquisitions of Shares of a Bank or Bank Holding Company

The notificants listed below have applied under the Change in Bank Control Act (Act) (12 U.S.C. 1817(j)) and § 225.41 of the Board's Regulation Y (12 CFR 225.41) to acquire shares of a bank or bank holding company. The factors that are considered in acting on the applications are set forth in paragraph 7 of the Act (12 U.S.C. 1817(j)(7)).

The public portions of the applications listed below, as well as

other related filings required by the Board, if any, are available for immediate inspection at the Federal Reserve Bank(s) indicated below and at the offices of the Board of Governors. This information may also be obtained on an expedited basis, upon request, by contacting the appropriate Federal Reserve Bank and from the Board's Freedom of Information Office at <https://www.federalreserve.gov/foia/request.htm>. Interested persons may express their views in writing on the standards enumerated in paragraph 7 of the Act.

Comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors, Ann E. Misback, Secretary of the Board, 20th Street and Constitution Avenue NW, Washington, DC 20551-0001, not later than January 18, 2022.

A. Federal Reserve Bank of New York (Ivan Hurwitz, Senior Vice President) 33 Liberty Street, New York, New York 10045-0001. Comments can also be sent electronically to

Comments.applications@ny.frb.org:

1. *Felix Scherzer, Scherzer Capital, LLC, and the Scherzer Family Trust, Thomas Nakashian, as trustee, all of New York, New York*; a group acting in concert, to acquire voting shares of Patriot National Bancorp, Inc., and thereby indirectly acquire voting shares of Patriot National Bank, both of Stamford, Connecticut.

B. Federal Reserve Bank of Atlanta (Erien O. Terry, Assistant Vice President) 1000 Peachtree Street NE, Atlanta, Georgia 30309. Comments can also be sent electronically to Applications.Comments@atl.frb.org:

1. *Stilwell Activist Investments, L.P., Stilwell Activist Fund, L.P., and Stilwell Value Partners VII, L.P., collectively known as "The Stilwell Group," with Stilwell Value LLC, the general partner of each of the limited partnerships, all of New York, New York; and Joseph D. Stilwell, San Juan, Puerto Rico*, each individually and as a group acting in concert, to acquire voting shares of Peoples Financial Corporation, and thereby indirectly acquire voting shares of The Peoples Bank, both of Biloxi, Mississippi.

C. Federal Reserve Bank of Chicago (Colette A. Fried, Assistant Vice President) 230 South LaSalle Street, Chicago, Illinois 60690-1414:

1. *JST 2020 Trust, Stephanie C. Thomson and CUSB Bank as co-trustees, all of Cresco, Iowa*; to join the Thomson Family Control Group, a group acting in concert, to retain voting shares of How-Win Development Co., and thereby indirectly retain voting

shares of CUSB Bank, both of Cresco, Iowa.

BILLING CODE P

FEDERAL TRADE COMMISSION

[File No. 211 0050]

Global Partners LP and Richard Wiehl; Analysis of Agreement Containing Consent Order To Aid Public Comment

AGENCY: Federal Trade Commission.

ACTION: Proposed consent agreement; request for comment.

SUMMARY: The consent agreement in this matter settles alleged violations of Federal law prohibiting unfair methods of competition. The attached Analysis of Proposed Consent Orders to Aid Public Comment describes both the allegations in the complaint and the terms of the consent orders—embodied in the consent agreement—that would settle these allegations.

DATES: Comments must be received on or before January 31, 2022.

ADDRESSES: Interested parties may file comments online or on paper, by following the instructions in the Request for Comment part of the **SUPPLEMENTARY INFORMATION** section below. Please write: "Global Partners LP; File No. 211 0050" on your

comment and file your comment online at <https://www.regulations.gov> by following the instructions on the web-based form. If you prefer to file your comment on paper, please mail your comment to the following address: Federal Trade Commission, Office of the Secretary, 600 Pennsylvania Avenue NW, Suite CC-5610 (Annex D), Washington, DC 20580; or deliver your comment to the following address: Federal Trade Commission, Office of the Secretary, Constitution Center, 400 7th Street SW, 5th Floor, Suite 5610 (Annex D), Washington, DC 20024.

FOR FURTHER INFORMATION CONTACT: Kurt Herrera-Heintz (202-326-3542), Bureau of Competition, Federal Trade Commission, 400 7th Street SW, Washington, DC 20024.

SUPPLEMENTARY INFORMATION: Pursuant to Section 6(f) of the Federal Trade Commission Act, 15 U.S.C. 46(f), and FTC Rule 2.34, 16 CFR 2.34, notice is hereby given that the above-captioned consent agreement containing a consent order to cease and desist, having been filed with and accepted, subject to final approval, by the Commission, has been placed on the public record for a period of thirty (30) days. The following Analysis of Agreement Containing Consent Orders to Aid Public Comment describes the terms of the consent agreement and the allegations in the complaint. An electronic copy of the full text of the consent agreement package can be obtained from the FTC website at this web address: <https://www.ftc.gov/news-events/commission-actions>.

You can file a comment online or on paper. For the Commission to consider your comment, we must receive it on or before January 31, 2022. Write "Global Partners LP; File No. 211 0050" on your comment. Your comment—including your name and your state—will be placed on the public record of this proceeding, including, to the extent practicable, on the <https://www.regulations.gov> website.

Due to protective actions in response to the COVID-19 pandemic and the agency's heightened security screening, postal mail addressed to the Commission will be delayed. We strongly encourage you to submit your comments online through the <https://www.regulations.gov> website.

If you prefer to file your comment on paper, write "Global Partners LP; File No. 211 0050" on your comment and on the envelope, and mail your comment to the following address: Federal Trade Commission, Office of the Secretary, 600 Pennsylvania Avenue NW, Suite CC-5610 (Annex D), Washington, DC

20580; or deliver your comment to the following address: Federal Trade Commission, Office of the Secretary, Constitution Center, 400 7th Street SW, 5th Floor, Suite 5610 (Annex D), Washington, DC 20024. If possible, submit your paper comment to the Commission by courier or overnight service.

Because your comment will be placed on the publicly accessible website at <https://www.regulations.gov>, you are solely responsible for making sure your comment does not include any sensitive or confidential information. In particular, your comment should not include sensitive personal information, such as your or anyone else's Social Security number; date of birth; driver's license number or other state identification number, or foreign country equivalent; passport number; financial account number; or credit or debit card number. You are also solely responsible for making sure your comment does not include sensitive health information, such as medical records or other individually identifiable health information. In addition, your comment should not include any "trade secret or any commercial or financial information which . . . is privileged or confidential"—as provided by Section 6(f) of the FTC Act, 15 U.S.C. 46(f), and FTC Rule 4.10(a)(2), 16 CFR 4.10(a)(2)—including in particular competitively sensitive information such as costs, sales statistics, inventories, formulas, patterns, devices, manufacturing processes, or customer names.

Comments containing material for which confidential treatment is requested must be filed in paper form, must be clearly labeled "Confidential," and must comply with FTC Rule 4.9(c). In particular, the written request for confidential treatment that accompanies the comment must include the factual and legal basis for the request, and must identify the specific portions of the comment to be withheld from the public record. See FTC Rule 4.9(c). Your comment will be kept confidential only if the General Counsel grants your request in accordance with the law and the public interest. Once your comment has been posted on <https://www.regulations.gov>—as legally required by FTC Rule 4.9(b)—we cannot redact or remove your comment from that website, unless you submit a confidentiality request that meets the requirements for such treatment under FTC Rule 4.9(c), and the General Counsel grants that request.

Visit the FTC website at <https://www.ftc.gov> to read this Notice and the news release describing this matter. The

FTC Act and other laws the Commission administers permit the collection of public comments to consider and use in this proceeding, as appropriate. The Commission will consider all timely and responsive public comments it receives on or before January 31, 2022. For information on the Commission's privacy policy, including routine uses permitted by the Privacy Act, see <https://www.ftc.gov/site-information/privacy-policy>.

Analysis of Agreement Containing Consent Orders To Aid Public Comment

I. Introduction

The Federal Trade Commission ("Commission") has accepted for public comment, subject to final approval, an Agreement Containing Consent Orders ("Consent Agreement") from Global Partners LP ("Global") and Richard Wiehl ("Wheels") (collectively, the "Respondents"). The Consent Agreement is designed to remedy the anticompetitive effects that likely would result from Global's proposed acquisition of retail fuel assets from Wheels.

Under the terms of the proposed Decision and Order ("Order") contained in the Consent Agreement, Respondents must divest certain retail fuel assets in five local markets in Connecticut to a Commission-approved buyer. Respondents must complete the divestiture within 20 days after the closing of the acquisition. The Commission has issued, and Respondents have agreed to comply with, an Order to Maintain Assets that requires Respondents to operate and maintain each divestiture outlet in the normal course of business through the date the approved buyer acquires the divested assets.

The Commission has placed the Consent Agreement on the public record for 30 days to solicit comments from interested persons. Comments received during this period will become part of the public record. After 30 days, the Commission will review the comments received and decide whether it should withdraw, modify, or make the proposed Order final.

II. The Respondents

Respondent Global, a publicly traded independent owner, supplier, and operator of gasoline stations and convenience stores, is headquartered in Waltham, Massachusetts. Global operates approximately 1,550 retail fuel outlets, primarily in the Northeastern United States. Global also operates petroleum products terminals, through which it distributes gasoline, distillates,

residual oil, and renewable fuels to wholesalers, retailers, and commercial customers.

Respondent Wheels is a family-owned chain of retail service stations and convenience stores headquartered in Milford, Connecticut. It has approximately 27 retail locations in its network, all in Connecticut, which operate under the Wheels convenience store brand. All of Wheels' retail outlets offer either Sunoco or Citgo branded fuel. Wheels also operates a small wholesale fuel distribution business serving 24 locations in Connecticut and New York under the Consumers Petroleum brand.

III. The Proposed Acquisition

On December 9, 2020, Global entered into an agreement to acquire the retail and wholesale fuel assets of Wheels and related entities (the "Acquisition"). The Commission's Complaint alleges that the Acquisition, if consummated, would violate Section 7 of the Clayton Act, as amended, 15 U.S.C. 18, and that the Acquisition agreement constitutes a violation of Section 5 of the Federal Trade Commission Act, as amended, 15 U.S.C. 45, by substantially lessening competition for the retail sale of gasoline in five local markets in Connecticut, and additionally by substantially lessening competition for the retail sale of diesel fuel in four of those same local markets.

IV. The Retail Sale of Gasoline

The Commission's Complaint alleges that the relevant product markets in which to analyze the Acquisition are the retail sale of gasoline and the retail sale of diesel fuel. Consumers require gasoline for their gasoline-powered vehicles and can purchase gasoline only at retail fuel outlets. Likewise, consumers require diesel fuel for their diesel-powered vehicles and can purchase diesel fuel only at retail fuel outlets. The retail sale of gasoline and the retail sale of diesel fuel constitute separate relevant markets because the two are not interchangeable. Vehicles that run on gasoline cannot run on diesel fuel, and vehicles that run on diesel fuel cannot run on gasoline.

The Commission's Complaint alleges that the relevant geographic markets in which to assess the competitive effects of the Acquisition with respect to the retail sale of gasoline are five local markets in and around the following cities: Fairfield, Connecticut; Bethel, Connecticut; Milford, Connecticut; Wilton, Connecticut; and Shelton, Connecticut. The relevant geographic markets in which to assess the competitive effects of the Acquisition

with respect to the retail sale of diesel fuel are the local markets in and around Fairfield, Bethel, Milford, and Shelton.

The geographic markets for retail gasoline and retail diesel fuel are highly localized, depending on the unique circumstances of each area. Each relevant market is distinct and fact-dependent, reflecting many considerations, including commuting patterns, traffic flows, and outlet characteristics. Consumers typically choose between nearby retail fuel outlets with similar characteristics along their planned routes. The geographic markets for the retail sale of diesel fuel are similar to the corresponding geographic markets for retail gasoline, as many diesel fuel consumers exhibit preferences and behaviors similar to those of gasoline consumers.

The Acquisition would substantially lessen competition in each of these local markets, resulting in five highly concentrated markets for the retail sale of gasoline and four highly concentrated markets for the retail sale of diesel fuel. Retail fuel outlets compete on price, store format, product offerings, and location, and pay close attention to competitors in close proximity, on similar traffic flows, and with similar store characteristics.

In each of the local gasoline and diesel fuel retail markets where the Commission alleges harm, the Acquisition would reduce the number of competitively constraining independent market participants to three or fewer. Absent the Acquisition, Global and Wheels would continue to compete head-to-head in these local markets. Post-Acquisition, the combined entity would be able to raise prices unilaterally in markets where Global and Wheels are close competitors.

Moreover, the Acquisition would enhance the incentives for interdependent behavior in local markets where only two or three competitively constraining independent market participants would remain. Two aspects of the retail fuel industry make it vulnerable to such coordination. First, retail fuel outlets post their fuel prices on price signs that are visible from the street, allowing competitors to easily observe each other's fuel prices. Second, retail fuel outlets regularly track their competitors' fuel prices and change their own prices in response. These repeated interactions give retail fuel outlets familiarity with how their competitors price and how changing prices affect fuel sales.

Entry into each relevant market would not be timely, likely, or sufficient to deter or counteract the anticompetitive effects arising from the Acquisition.

Significant entry barriers include the availability of attractive real estate, the time and cost associated with constructing a new retail fuel outlet, and the time and uncertainty associated with obtaining necessary permits and approvals.

V. The Consent Agreement

The proposed Order would remedy the Acquisition's likely anticompetitive effects by requiring Global to divest certain Global and Wheels retail fuel assets to Petroleum Marketing Investment Group, LLC ("PMG") in each local market. PMG is an experienced operator of retail fuel sites and will be a new entrant into the local markets.

The proposed Order requires that the divestiture be completed no later than 20 days after Global consummates the Acquisition. The proposed Order further requires Global and Wheels to maintain the economic viability, marketability, and competitiveness of each divestiture asset until the divestiture to PMG is complete.

In addition to requiring outlet divestitures, the proposed Order requires Respondents to obtain prior approval from the Commission before acquiring retail fuel assets within a two-mile driving distance of any divested outlet for ten years. The prior approval provision is necessary because an acquisition in close proximity to the divested assets likely would raise the same competitive concerns as the Acquisition. The proposed Order further requires PMG to obtain prior approval from the Commission for a period of three years before transferring any of the divested stations to any buyer, and for a period of seven years to any buyer with an interest in a retail fuel outlet within two miles of a divested station.

The Consent Agreement contains additional provisions designed to ensure the effectiveness of the relief. For example, Respondents have agreed to an Order to Maintain Assets that will issue at the time the proposed Consent Agreement is accepted for public comment. The Order to Maintain Assets requires Respondents to operate and maintain each divestiture outlet in the normal course of business through the date the Respondents complete the divestiture. The proposed Order also includes a provision that allows the Commission to appoint an independent third party as a Monitor if necessary to oversee the Respondents' compliance with the requirements of the Order.

The purpose of this analysis is to facilitate public comment on the Consent Agreement and proposed Order to aid the Commission in determining whether it should make the proposed

Order final. This analysis is not an official interpretation of the proposed Order and does not modify its terms in any way.

By direction of the Commission.

Joel Christie,

Acting Secretary.

BILLING CODE 6750-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[Document Identifier: CMS-8550]

Agency Information Collection Activities: Submission for OMB Review; Comment Request

AGENCY: Centers for Medicare & Medicaid Services, Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: The Centers for Medicare & Medicaid Services (CMS) is announcing an opportunity for the public to comment on CMS' intention to collect information from the public. Under the Paperwork Reduction Act of 1995 (PRA), federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, and to allow a second opportunity for public comment on the notice. Interested persons are invited to send comments regarding the burden estimate or any other aspect of this collection of information, including the necessity and utility of the proposed information collection for the proper performance of the agency's functions, the accuracy of the estimated burden, ways to enhance the quality, utility, and clarity of the information to be collected, and the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

DATES: Comments on the collection(s) of information must be received by the OMB desk officer by January 31, 2022.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting "Currently under 30-day Review—Open for Public Comments" or by using the search function.

To obtain copies of a supporting statement and any related forms for the proposed collection(s) summarized in this notice, you may make your request using one of following:

1. Access CMS' Website address at: <https://www.cms.gov/Regulations-and-Guidance/Legislation/PaperworkReductionActof1995/PRA-Listing.html>.

FOR FURTHER INFORMATION CONTACT: William Parham at (410) 786-4669.

SUPPLEMENTARY INFORMATION: Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501-3520), federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. The term "collection of information" is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires federal agencies to publish a 30-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, CMS is publishing this notice that summarizes the following proposed collection(s) of information for public comment:

1. *Type of Information Collection Request:* Revision of a currently approved information collection; *Title of Information Collection:* Medicare Registration Application; *Use:* Physicians and practitioners complete the Form CMS-855O (Medicare Enrollment Application—Enrollment for Eligible Ordering, Certifying Physicians and Other Eligible Professionals) if they are enrolling in Medicare not to obtain Medicare billing privileges but strictly to order, refer, or certify certain Medicare items and services. It is used by Medicare contractors to collect data that helps ensure the applicant has the necessary credentials to order and certify certain Medicare items and services.

The MAC establishes Medicare Identification Numbers. The MACs store these numbers and information in CMS' Provider Enrollment, Chain and Ownership System (PECOS). The application is used by the CMS' contractors to collect data ensures that the applicant has the necessary information for unique identification. The license numbers are validated against state licensing websites. All the

license numbers are captured and stored in the MAC database. Social Security Numbers (SSNs) are validated against the Social Security Administration database (SSA) and only the valid entries are allowed to proceed in the process of getting a Medicare billing number. Correspondence address and contact information is captured to contact the provider/supplier.

The collection and verification of this information defends and protects our beneficiaries from illegitimate providers/suppliers. These procedures also protect the Medicare Trust Fund against fraud. It gathers information that allow Medicare contractors to ensure that the physician or eligible professional is not sanctioned from the Medicare and/or Medicaid program(s), or debarred, or excluded from any other Federal agency or program. The data collected also ensures that the applicant has the necessary credentials to order and certify health care services. This is sole instrument implemented for this purpose. *Form Number:* CMS-855O (OMB Control Number: 0938-1135); *Frequency:* Occasionally; *Affected Public:* Private Sector (Business or other for-profits), State, Local, or Tribal Governments; *Number of Respondents:* 448,000; *Number of Responses:* 24,000; *Total Annual Hours:* 243,600. For questions regarding this collection contact Alisha Sanders (410) 786-0671.

Dated: December 27, 2021.

William N. Parham, III,

Director, Paperwork Reduction Staff, Office of Strategic Operations and Regulatory Affairs.

BILLING CODE 4120-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

Notice of Meeting; National Advisory Committee on the Sex Trafficking of Children and Youth in the United States

AGENCY: Office on Trafficking in Persons, Administration for Children and Families, HHS.

ACTION: Announcement of meeting and call for public comment on states' efforts to improve the nation's response to the sex trafficking of children and youth.

SUMMARY: Notice is hereby given, pursuant to the provisions of the Federal Advisory Committee Act (FACA) and the Preventing Sex

Trafficking and Strengthening Families Act, that a meeting of the National Advisory Committee on the Sex Trafficking of Children and Youth in the United States (Committee) will be held on January 6, 2022. The purpose of the meeting is for the Committee to finalize the distribution plan for the Committee's January 2022 report. The members of the Committee request comment from the public to inform their ongoing work. Please submit your comments to NAC@nhttac.org with the subject "NAC Comments," as soon as possible and before January 3, 2022.

DATES: The meeting will be held on January 6, 2022.

ADDRESSES: The meeting will be held virtually. Please register for this event online at <https://www.acf.hhs.gov/otip/partnerships/national-advisory-committee>.

FOR FURTHER INFORMATION CONTACT: Katherine Chon (Designated Federal Officer) at EndTrafficking@acf.hhs.gov or (202) 205-5778, or 330 C Street SW, Washington, DC 20201. Additional information is available at <https://www.acf.hhs.gov/otip/partnerships/the-national-advisory-committee>.

SUPPLEMENTARY INFORMATION: The formation and operation on behalf of the Committee are governed by the provisions of Public Law 92-463, as amended (5 U.S.C. app. 2), which sets forth standards for the formation and use of federal advisory committees.

Purpose of the Committee: The purpose of the Committee is to advise the Secretary and the Attorney General on practical and general policies concerning improvements to the nation's response to the sex trafficking of children and youth in the United States. HHS established the Committee pursuant to section 121 of the Preventing Sex Trafficking and Strengthening Families Act of 2014 (Pub. L. 113-183).

Tentative Agenda: The agenda can be found at <https://www.acf.hhs.gov/otip/partnerships/the-national-advisory-committee>. To submit written statements, email NAC@nhttac.org by January 3, 2022. Please include your name, organization, and phone number. More details on these options are below.

Public Accessibility to the Meeting: Pursuant to 5 U.S.C. 552b and 41 CFR 102-3.140 through 102-3.165, and subject to the availability of space, this meeting is open to the public virtually.

Written Statements: Pursuant to 41 CFR 102-3.105(j) and 102-3.140 and section 10(a)(3) of the Federal Advisory Committee Act, the public may submit written statements in response to the stated agenda of the meeting or to the

Committee’s mission in general. Organizations with recommendations on strategies to engage states and stakeholders are encouraged to submit their comments or resources (hyperlinks preferred). Written comments or statements received after January 3, 2022, may not be provided to the Committee until its next meeting.

Verbal Statements: Pursuant to 41 CFR 102–3.140d, the Committee is not obligated to allow a member of the public to speak or otherwise address the Committee during the meeting. Members of the public are invited to provide verbal statements during the Committee meeting only at the time and manner described in the agenda. The request to speak should include a brief statement of the subject matter to be addressed and should be relevant to the stated agenda of the meeting or the Committee’s mission in general.

Minutes: The minutes of this meeting will be available for public review and copying within 90 days at <https://www.acf.hhs.gov/otip/partnerships/the-national-advisory-committee>.

Dated: December 27, 2021.
Megan E. Steel,
Deputy Director, Executive Secretariat.

Agency Information Collection Activities; Announcement of Office of Management and Budget Approvals

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is publishing a list of information collections that have been approved by the Office of

Management and Budget (OMB) under the Paperwork Reduction Act of 1995.

FOR FURTHER INFORMATION CONTACT: Ila S. Mizrachi, Office of Operations, Food and Drug Administration, Three White Flint North, 10A–12M, 11601 Landsdown St, North Bethesda, MD 20852, 301–796–7726, PRASStaff@fda.hhs.gov.

SUPPLEMENTARY INFORMATION: The following is a list of FDA information collections recently approved by OMB under section 3507 of the Paperwork Reduction Act of 1995 (44 U.S.C. 3507). The OMB control number and expiration date of OMB approval for each information collection are shown in table 1. Copies of the supporting statements for the information collections are available on the internet at <https://www.reginfo.gov/public/do/PRAMain>. An Agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

TABLE 1—LIST OF INFORMATION COLLECTIONS APPROVED BY OMB

Title of collection	OMB control No.	Date approval expires
Medical Device User Fee Cover Sheet and Device Facility User Fee Cover Sheet	0910–0511	10/31/2024
Examination of Secondary Claim Disclosures and Biosimilar Disclosures in Prescription Drug Promotional Materials	0910–0902	10/31/2024
Medical Device Labeling Regulations	0910–0485	11/30/2024
Establishment and Operation of Clinical Trial Data Monitoring Committees	0910–0581	11/30/2024
Reports Intended to Demonstrate the Substantial Equivalence of a New Tobacco Product	0910–0673	11/30/2024
Current Good Manufacturing Practice and Hazard Analysis and Risk-Based Preventive Controls for Human Food and Food for Animals	0910–0751	11/30/2024
Federal-State Regulatory Program Standards	0910–0760	11/30/2024
Electronic User Fee Payment Form	0910–0805	11/30/2024

Dated: December 27, 2021.
Lauren K. Roth,
Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Committee on Vital and Health Statistics

AGENCY: Centers for Disease Control and Prevention, HHS.

ACTION: Notice of meeting.

SUMMARY: Pursuant to the Federal Advisory Committee Act, the Department of Health and Human Services (HHS) announces the following advisory committee meeting. This meeting is open to the public. The public is welcome to obtain the link to

attend this meeting by following the instructions that will be posted on the website prior to the meeting at: <https://ncvhs.hhs.gov/>.

Name: National Committee on Vital and Health Statistics (NCVHS), Meeting of the full Committee.

DATES: The meeting will be held Monday, January 24, 2022: 10:30 a.m.–5:30 p.m. EST and Tuesday, January 25, 2021: 10:00 a.m.–4:30 p.m. EST.

ADDRESSES: Virtual open meeting.

FOR FURTHER INFORMATION CONTACT: Substantive program information may be obtained from Rebecca Hines, MHS, Executive Secretary, NCVHS, National Center for Health Statistics, Centers for Disease Control and Prevention, 3311 Toledo Road, Hyattsville, Maryland 20782, or via electronic mail to vgh4@cdc.gov; or by telephone (301) 458–4715. Summaries of meetings and a roster of Committee members are

available on the NCVHS website, <https://ncvhs.hhs.gov/>, where further information including an agenda and instructions to access the broadcast of the meeting will be posted.

Should you require reasonable accommodation, please contact the CDC Office of Equal Employment Opportunity on (770) 488–3210 as soon as possible.

SUPPLEMENTARY INFORMATION:

Purpose: As outlined in its Charter, the National Committee on Vital and Health Statistics assists and advises the Secretary of HHS on health data, data standards, statistics, privacy, national health information policy, and the Department’s strategy to best address those issues. This includes the adoption and implementation of transaction standards, unique identifiers, operating rules and code sets adopted under the Health Insurance and Portability Act of

1996 (HIPAA).¹ At this meeting, the Committee will receive updates from HHS officials, hold discussions on current health data policy topics, and discuss its work plan for the upcoming period.

The Subcommittee on Standards will provide an update on its project focused on standardization of information for burden reduction and post-pandemic America. This will include discussion of the 2022 workplan and plans to ensure alignment of Subcommittee activities with ongoing work within HHS. The Subcommittee on Privacy, Confidentiality & Security will bring forward potential recommendations regarding data collection and use during public health emergencies for Committee discussion and consideration. The Subcommittee also plans to discuss and consider recommendations from the July 14 hearing on Security in Healthcare. The Committee will conduct follow up on its April 1, 2021, expert panel session, “Covid-19: Capacity, Gaps & Quality in Collection of Race/Ethnicity Data,” to explore the need for recommendations to HHS. A new Work Group of the Committee will discuss standards and practices for collection, use, measurement, and reporting of social determinants of health (SDOH) and sexual orientation and gender identity (SOGI).

The Committee will reserve time for public comment toward the end of the schedule on both days. Meeting times and topics are subject to change. Please refer to the agenda posted on the NCVHS website for any updates to this information: <https://ncvhs.hhs.gov/>.

Sharon Arnold,

Associate Deputy Assistant Secretary for Planning and Evaluation, Science and Data Policy, Office of the Assistant Secretary for Planning and Evaluation.

[FR Doc. 2021-28341 Filed 12-29-21; 8:45 am]

BILLING CODE 4150-05-P

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Docket ID: FEMA-2021-0025; OMB No. 1660-0138]

Agency Information Collection Activities: Proposed Collection; Comment Request; Direct Housing Assistance Forms

AGENCY: Federal Emergency Management Agency, Department of Homeland Security.

ACTION: 30-Day notice of revision and request for comments.

SUMMARY: The Federal Emergency Management Agency (FEMA) will submit the information collection abstracted below to the Office of Management and Budget for review and clearance in accordance with the requirements of the Paperwork Reduction Act of 1995. The submission will describe the nature of the information collection, the categories of respondents, the estimated burden (*i.e.*, the time, effort and resources used by respondents to respond) cost, and the actual data collection instruments FEMA will use.

DATES: Comments must be submitted on or before January 31, 2022.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection should be made to the Director, Information Management Division, 500 C St. SW, Washington, DC 20472, FEMA-Information-Collections-Management@fema.dhs.gov or Brian Thompson, Supervisory Program Specialist, FEMA, Recovery Directorate, 540-686-3602, Brian.Thompson6@fema.dhs.gov.

SUPPLEMENTARY INFORMATION: The Robert T. Stafford Disaster Relief and Emergency Assistance Act, 42 U.S.C. 5174, as amended by the Disaster Mitigation Act of 2000 (Pub. L. 106-390), authorizes the President to provide temporary housing units, including manufactured housing units, recreational vehicles or other readily fabricated dwellings and leased multi-

family housing units and residential properties to eligible applicants who, as a direct result of a major disaster or emergency, are unable to occupy their primary residence or obtain adequate alternate housing, and therefore require temporary housing. Requirements for disaster-related housing needs of individuals and households who are eligible for temporary housing assistance may be found in title 44 CFR 206.117—Housing Assistance. The information collected is used to determine the feasibility of a potential site for placement of temporary housing units (THUs) to ensure the THUs are ready for applicant occupancy, and to confirm applicant understanding of the requirements of occupancy of the THUs. The information will also provide FEMA with access to place the THUs, to document the installation and maintenance of the THUs, and to retrieve the THUs at the end of their use.

This proposed information collection was previously published in the **Federal Register** on October 13, 2021, at 86 FR 56979 with a 60-day public comment period. No comments were received. The purpose of this notice is to notify the public that FEMA will submit the information collection abstracted below to the Office of Management and Budget for review and clearance.

Collection of Information

Title: Direct Housing Assistance Forms.

Type of Information Collection: Revision of a currently approved information collection.

OMB Number: 1660-0138.

FEMA Forms: FEMA Form FF-104-FY-21-191 (English) (formerly 009-0-129), Transportable Temporary Housing Unit Ready for Occupancy Status; FF-104-FY-21-192 (English) (formerly 009-0-131), Sales Calculation Worksheet; FF-104-FY-21-193 (English) (formerly 009-0-134), Direct Temporary Housing Assistance Recertification Worksheet; FF-104-FY-21-194 (English) (formerly 009-0-135), Direct Temporary Housing Assistance Temporary Housing Agreement; FF-104-FY-21-195 (English) (formerly 009-0-137), Commercial Park Unit Pad Requirements—Information Checklist; FEMA Form FF-104-FY-21-109 (English) (formerly 010-0-9), Transportable Temporary Housing Unit Request for the Site Inspection; FEMA Form FF-104-FY-21-110 (formerly 010-0-10), Transportable Temporary Housing Unit Landowner’s Authorization Ingress-Egress Agreement; FEMA Form FF-104-FY-21-110-A (English/Spanish) (formerly

¹ Public Law 104-191, 110 Stat. 1936 (Aug 21, 1996), available at <https://www.congress.gov/104/plaws/publ191/PLAW-104publ191.pdf>.

010-0-10S), Autorización del Propietario/Acuuerdo de Entrada y Salida; FF-104-FY-21-111 (English) (formerly 009-0-138), Transportable Temporary Housing Unit Inspection Report; FF-104-FY-21-112 (English) (formerly 009-0-136), Transportable Temporary Housing Unit Installation Work Order; FF-104-FY-21-113 (English) (formerly 009-0-130), Transportable Temporary Housing Unit Maintenance Work Order.

Abstract: The information collected is used to determine the feasibility of a potential site for placement of temporary housing units (THUs) to ensure the THUs are ready for applicant occupancy, and to confirm applicant understanding of the requirements of occupancy of the THUs. The information will also provide FEMA with access to place the THUs, to document the installation and maintenance of the THUs, and to retrieve the THUs at the end of their use.

Affected Public: Individuals or households, business or other for-profit.

Estimated Number of Respondents: 50,000.

Estimated Number of Responses: 50,000.

Estimated Total Annual Burden Hours: 12,088.

Estimated Total Annual Respondent Cost: \$559,509.

Estimated Respondents' Operation and Maintenance Costs: \$0.

Estimated Respondents' Capital and Start-Up Costs: \$0.

Estimated Total Annual Cost to the Federal Government: \$10,578,900.

Comments

Comments may be submitted as indicated in the **ADDRESSES** caption above. Comments are solicited to (a) evaluate whether the proposed data collection is necessary for the proper performance of the agency, including whether the information shall have practical utility; (b) evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) enhance the quality, utility, and clarity of the information to be collected; and (d) minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology,

e.g., permitting electronic submission of responses.

Millicent L. Brown,

Acting Branch Chief, Records Management Branch, Office of the Chief Administrative Officer, Mission Support, Federal Emergency Management Agency, Department of Homeland Security.

[FR Doc. 2021-28346 Filed 12-29-21; 8:45 am]

BILLING CODE 9111-23-P

DEPARTMENT OF THE INTERIOR

Bureau of Indian Affairs

[222A2100DD/AAKC001030/AOA501010.999900253G; OMB Control Number 1076-0143]

Agency Information Collection Activities; Tribal Self-Governance Program

AGENCY: Bureau of Indian Affairs, Interior.

ACTION: Notice of information collection; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, we, the Bureau of Indian Affairs (BIA), are proposing to renew an information collection.

DATES: Interested persons are invited to submit comments on or before February 28, 2022.

ADDRESSES: Send your comments on this information collection request (ICR) by mail to Steven Mullen, Information Collection Clearance Officer, Office of Regulatory Affairs and Collaborative Action—Indian Affairs, U.S. Department of the Interior, 1001 Indian School Road NW, Suite 229, Albuquerque, New Mexico 87104; or by email to comments@bia.gov. Please reference Office of Management and Budget (OMB) Control Number 1076-0143 in the subject line of your comments.

FOR FURTHER INFORMATION CONTACT: To request additional information about this ICR, contact Ms. Sharee M. Freeman, Director, Office of Self-Governance, Department of the Interior, by email at Sharee.Freeman@bia.gov, or by telephone at (202) 219-0240. Individuals who are hearing or speech impaired may call the Federal Relay Service at 1-800-877-8339 for TTY assistance. You may also view the ICR at <http://www.reginfo.gov/public/do/PRAMain>.

SUPPLEMENTARY INFORMATION: In accordance with the Paperwork Reduction Act of 1995 (PRA, 44 U.S.C. 3501 *et seq.*) and 5 CFR 1320.8(d)(1), all information collections require approval

under the PRA. We may not conduct or sponsor and you are not required to respond to a collection of information unless it displays a currently valid OMB control number.

As part of our continuing effort to reduce paperwork and respondent burdens, we invite the public and other Federal agencies to comment on new, proposed, revised, and continuing collections of information. This helps us assess the impact of our information collection requirements and minimize the public's reporting burden. It also helps the public understand our information collection requirements and provide the requested data in the desired format.

We are especially interested in public comment addressing the following:

(1) Whether or not the collection of information is necessary for the proper performance of the functions of the agency, including whether or not the information will have practical utility;

(2) The accuracy of our estimate of the burden for this collection of information, including the validity of the methodology and assumptions used;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) How might the agency minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of response.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this ICR. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Abstract: The Self-Governance program is authorized by the Tribal Self-Governance Act of 1994, Public Law 103-413 (the Act), as amended. Indian Tribes interested in entering into Self-Governance must submit certain information as required by the Act. In addition, those Tribes and Tribal consortia that have entered into Self-Governance funding agreements will be requested to submit certain information

as described in 25 CFR 1000. This information will be used to justify a budget request submission on their behalf and to comport with section 405 of the Act that calls for the Secretary to submit an annual report to the Congress.

Title of Collection: Tribal Self-Governance Program.

OMB Control Number: 1076-0143.

Form Number: Annual Self-Governance Report Form.

Type of Review: Extension of a currently approved collection.

Respondents/Affected Public:

Federally recognized Indian Tribes and Tribal consortia participating in or wishing to enter into Tribal Self-Governance.

Total Estimated Number of Annual Respondents: 75.

Total Estimated Number of Annual Responses: 84.

Estimated Completion Time per Response: Completion times vary from 15 minutes to 400 hours, with an average of approximately 43 hours.

Total Estimated Number of Annual Burden Hours: 4,443 hours.

Respondent's Obligation: Required to obtain a benefit.

Frequency of Collection: On occasion or annually.

Total Estimated Annual Nonhour Burden Cost: \$10,500.

An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

Steven Mullen,

*Information Collection Clearance Officer,
Office of Regulatory Affairs and Collaborative
Action—Indian Affairs.*

BILLING CODE 4337-15-P

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[LLORN03000.L63100000.DB0000.
17XL1116AF.252Z. HAG 21-0300]

Notice of Intent To Prepare the Hult Reservoir and Dam Safety Environmental Impact Statement in Lane County, OR

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of intent.

SUMMARY: In accordance with the National Environmental Policy Act of 1969 (NEPA) and the Federal Land Policy and Management Act of 1976, the

Bureau of Land Management (BLM) Siuslaw Field Office, Northwest Oregon District, Oregon, intends to prepare the Hult Reservoir and Dam Safety Environmental Impact Statement (EIS). Through this notice, the BLM is announcing the beginning of the scoping process to solicit public comments and identify potential issues for analysis.

DATES: This notice initiates the public scoping process for the EIS. Comments may be submitted in writing until January 31, 2022.

The date(s) and location(s) of scoping meetings will be announced at least 15 days in advance on the BLM National NEPA Register at: <https://eplanning.blm.gov/eplanning-ui/project/99598/510>. Interested parties can also register for email notifications of the scoping meetings by submitting an email request to: BLM_OR_NO_SIU_Hult_Dam_EIS@blm.gov.

To be included in the Draft EIS, all comments must be received prior to the close of the 30-day scoping period or 15 days after the last public meeting, whichever is later. The BLM will provide additional opportunities for public participation upon publication of the Draft EIS.

ADDRESSES: You may submit comments related to the EIS by either of the following methods:

- *Email:* BLM_OR_NO_SIU_Hult_Dam_EIS@blm.gov;
- *Mail:* Siuslaw Field Office ATTN: Cheryl Adcock/Hult Reservoir and Dam Safety EIS, 3106 Pierce Parkway, Suite E, Springfield OR 97477-7909.

Documents pertinent to this proposal may be examined at the Northwest Oregon District's Springfield Interagency Office located at 3106 Pierce Parkway in Springfield, Oregon.

FOR FURTHER INFORMATION CONTACT: Cheryl Adcock, at (541) 683-6145 or by email at BLM_OR_NO_SIU_Hult_Dam_EIS@blm.gov. Contact Ms. Adcock if you wish to add your name to our mailing list. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Relay Service at 1-800-877-8339 to contact Ms. Adcock during normal business hours. The service is available 24 hours a day, 7 days a week, to leave a message or question. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: The Hult Reservoir is located within the Lake Creek watershed, near the community of Horton, Oregon, within the BLM Siuslaw Field Office of the Northwest Oregon District.

Hult Reservoir is a 41-acre pond, approximately a half-mile long and less

than a quarter-mile wide. Hult Dam is an earthen dam consisting of loose rock placed on the downstream face and is one of nine high-hazard-rated dams managed by the BLM due to the proximity of downstream residents and the potential for loss of life.

The dam and spillway at Hult Reservoir were originally constructed in 1949 or 1950 by the Hult Timber Company to create a holding pond for logs. These lands were transferred to the BLM in 1994. The site is now primarily used for recreation.

During severe winter weather, the amount of rainfall in the catchment area contributes substantially to the water levels in the reservoir. The dam requires constant monitoring and adjustment of the outflow valve by BLM engineers to avoid overwhelming the current water level controls in place. Since the transfer of ownership, costly renovations (e.g., grouting, reinforcement structures, and monitoring devices) to the dam have been ongoing to address existing and imminent structural and safety concerns.

In 2017, the U.S. Army Corps of Engineers (USACE) conducted an inspection of the dam, which identified several potential failure modes that would cause an uncontrolled release of impounded water downstream, and the projected inundation area would impact 70 to 130 people in the community of Horton, as well as Oregon State Highway 36. An uncontrolled release could result in loss of life and damage to infrastructure critical for access to the area by emergency services. The primary potential failure mode identified during this inspection was overtopping and breach during a large flood event. A secondary potential failure mode was instability of the spillway dike near the spillway. This area is marginally stable and is built on a foundation of ancient landslide material. Prolonged rainfall and elevated flows may cause an increase in groundwater, leading to the failure of the structure.

As a result of this 2017 inspection and its associated 2018 report, the BLM requested that USACE provide the BLM with various options that would reduce the risks found in the inspection. In response, USACE did preliminary feasibility analysis on four options: (1) Raise the dam crest height to decrease the probability of overtopping during a storm event; (2) Remove the failing spillway dike and use the excavated material to widen the dam; (3) Remove the dam; and (4) Lower the dam crest height to reduce pond storage and lower the potential for loss of human life and

infrastructure. Removal of the dam (option 3) is the only option that fully eliminates the risk of loss of life and damage to downstream infrastructure.

A Notice of Intent for this project was originally published in the **Federal Register** on May 1, 2018, (83 FR 19095). Scoping was originally initiated in 2018 for an EIS to repair or remove the dam, but the project was put on hold while USACE completed its dam inspection and associated reports. The BLM received comments from five individuals, one environmental organization, and the Environmental Protection Agency. These comments were similar to those received during pre-scoping, highlighting concerns about fish passage, recreation (fishing, boating, camping), water rights, water quality, rare plants, and public safety.

The average lifespan for this type of structure is 50 years, which the Hult Dam has exceeded by over 2 decades. The BLM believes that the dam is at the end of its lifecycle. The dam and spillway require costly monthly and annual inspections and maintenance, and the need for repairs is expected to increase with time.

The revised purpose of this project is to decommission and remove Hult Dam to eliminate the potential for a reasonably foreseeable failure of the aging structure and the associated loss of life and critical services.

The EIS will include a No Action alternative that would analyze the continued management and standard maintenance of Hult Dam under the current conditions. Action alternatives to be considered would remove the dam, drain the reservoir, and reconnect the Lake Creek channel. Action alternatives could include the following elements:

- An engineered stream channel (the stream channel would be excavated and follow a designed path) or a natural stream channel (the stream would follow a course determined by the natural characteristics of the stream basin).
- Possible recreational opportunities, including the development of a campground, hiking trails, equestrian trails, and ponds for swimming and wading.
- Restoration with native and culturally significant plants and wetlands preservation.
- Interpretive signage and kiosks to observe the area's historical and cultural value.
- Wildlife habitat restoration such as ponds for turtles and beavers.

In the EIS, the BLM will analyze how implementation of the alternatives

would affect the following potential issues:

- Safety risks to visitors and local communities from dam failure;
- Federally listed, native, or invasive fish passage and habitat;
- Downstream water quantity available for consumptive water rights;
- The Lake Creek form and function;
- The Lake Creek seasonal flood regime and floodplain connectivity;
- Archaeological or historic resources (including downstream of the dam), including whether excavation of the current pond sediments would reveal buried archaeological deposits;
- Visitor recreation access and opportunities;
- BLM-managed recreation sites;
- Existing populations of Bureau-sensitive plants;
- The introduction and spread of invasive plants;
- Existing wetlands associated with the Hult Reservoir;
- The use of the Hult Reservoir as a water source when fighting wildfires;
- The local economy; and
- The quality of life for local residents.

Hult Dam has a fish ladder that does not function for passing Oregon coastal Coho salmon, blocking passage to several miles of designated Oregon coastal Coho salmon critical habitat. Oregon coastal Coho salmon are listed as threatened under the Endangered Species Act.

Two BLM-sensitive plant species are present at the northern end of Hult Reservoir in a marsh: Bog clubmoss (*Lycopodiella inundata*) and humped bladderwort (*Utricularia gibba*). The noxious weed parrotfeather (*Myriophyllum aquaticum*) occurs in the reservoir, as does the non-native invasive weed reed canarygrass (*Phalaris arundinacea*).

The reservoir upstream of the dam is managed as the Hult Reservoir Recreation Site Special Recreation Management Area, which offers opportunities for camping, day use, swimming, fishing, and scenic driving. There are no developed campsites; however, two vault toilets are available to the public.

In anticipation of an action in the area, the BLM brought in a neutral third-party contractor to conduct stakeholder assessments and assist with facilitation of public involvement. In March 2017, the contractor conducted in-person interviews with 16 stakeholders, primarily in the town of Horton, Oregon, and in the Triangle Lake community. Stakeholders represented property owners near the Hult Reservoir, local business owners,

Triangle Lake School staff members, Siuslaw Watershed Council members, and fishing interest groups. The BLM may continue to use this neutral third-party contractor throughout the EIS process to assist with public outreach and engagement.

Federal, State, and local agencies, Tribes, and other stakeholders that may be interested in or affected by the proposed project that the BLM is evaluating are invited to participate in the scoping process and, if eligible, may request or be requested by the BLM to participate in the development of the EIS as a cooperating agency. The BLM will consult with the Confederated Tribes of the Coos, Lower Umpqua, and Siuslaw Indians; Confederated Tribes of the Grand Ronde; and Confederated Tribes of the Siletz during this analysis process.

Instructions for submitting public comments are provided under **ADDRESSES** listed earlier and located on the BLM's National NEPA Register (ePlanning) for this EIS. Before including your address, phone number, email address, or other personal identifiable information in your comment, you should be aware that your entire comment, including your personal identifiable information, may be made publicly available at any time, and we cannot guarantee that we will be able to withhold this information from public view.

(Authority: 40 CFR 1501.7)

Elizabeth Burghard,

Acting District Manager, Northwest Oregon District, Oregon/Washington.

BILLING CODE 4310-33-P

INTERNATIONAL TRADE COMMISSION

Notice of Receipt of Complaint; Solicitation of Comments Relating to the Public Interest

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission has received a complaint entitled *Certain High-Performance Gravity-Fed Water Filters and Products Containing the Same, DN 3588*; the Commission is soliciting comments on any public interest issues raised by the complaint or complainant's filing pursuant to the Commission's Rules of Practice and Procedure.

FOR FURTHER INFORMATION CONTACT: Lisa R. Barton, Secretary to the Commission, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436, telephone (202) 205-2000. The public version of the complaint can be accessed on the Commission's Electronic Document Information System (EDIS) at <https://edis.usitc.gov>. For help accessing EDIS, please email EDIS3Help@usitc.gov.

General information concerning the Commission may also be obtained by accessing its internet server at United States International Trade Commission (USITC) at <https://www.usitc.gov>. The public record for this investigation may be viewed on the Commission's Electronic Document Information System (EDIS) at <https://edis.usitc.gov>. Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205-1810.

SUPPLEMENTARY INFORMATION: The Commission has received a complaint and a submission pursuant to § 210.8(b) of the Commission's Rules of Practice and Procedure filed on behalf of Brita LP on December 27, 2021. The complaint alleges violations of section 337 of the Tariff Act of 1930 (19 U.S.C. 1337) in the importation into the United States, the sale for importation, and the sale within the United States after importation of certain high-performance gravity-fed water filters and products containing the same. The complainant names as respondents: Ecolife Technologies, Inc. of City of Industry, CA; Qingdao Ecopure Filter Co., Ltd. of China; Kaz USA, Inc. of El Paso, TX; Helen of Troy Limited of El Paso, TX; Zero Technologies, LLC of Trevoise, PA; Culligan International Co. of Rosemont, IL; Vestergaard Frandsen Inc. of Baltimore, MD; Mavea LLC of West Linn, OR; and Brita GmbH of Germany. The complainant requests that the Commission issue a limited exclusion order, cease and desist orders and impose a bond upon respondents alleged infringing articles during the 60-day Presidential review period pursuant to 19 U.S.C. 1337(j).

Proposed respondents, other interested parties, and members of the public are invited to file comments on any public interest issues raised by the complaint or § 210.8(b) filing. Comments should address whether issuance of the relief specifically requested by the complainant in this investigation would affect the public

health and welfare in the United States, competitive conditions in the United States economy, the production of like or directly competitive articles in the United States, or United States consumers.

In particular, the Commission is interested in comments that:

- (i) Explain how the articles potentially subject to the requested remedial orders are used in the United States;
- (ii) identify any public health, safety, or welfare concerns in the United States relating to the requested remedial orders;
- (iii) identify like or directly competitive articles that complainant, its licensees, or third parties make in the United States which could replace the subject articles if they were to be excluded;
- (iv) indicate whether complainant, complainant's licensees, and/or third party suppliers have the capacity to replace the volume of articles potentially subject to the requested exclusion order and/or a cease and desist order within a commercially reasonable time; and
- (v) explain how the requested remedial orders would impact United States consumers.

Written submissions on the public interest must be filed no later than by close of business, eight calendar days after the date of publication of this notice in the **Federal Register**. There will be further opportunities for comment on the public interest after the issuance of any final initial determination in this investigation. Any written submissions on other issues must also be filed by no later than the close of business, eight calendar days after publication of this notice in the **Federal Register**. Complainant may file replies to any written submissions no later than three calendar days after the date on which any initial submissions were due. No other submissions will be accepted, unless requested by the Commission. Any submissions and replies filed in response to this Notice are limited to five (5) pages in length, inclusive of attachments.

Persons filing written submissions must file the original document electronically on or before the deadlines stated above. Submissions should refer to the docket number ("Docket No. 3588") in a prominent place on the cover page and/or the first page. (See Handbook for Electronic Filing Procedures, Electronic Filing

Procedures).¹ Please note the Secretary's Office will accept only electronic filings during this time. Filings must be made through the Commission's Electronic Document Information System (EDIS, <https://edis.usitc.gov>.) No in-person paper-based filings or paper copies of any electronic filings will be accepted until further notice. Persons with questions regarding filing should contact the Secretary at EDIS3Help@usitc.gov.

Any person desiring to submit a document to the Commission in confidence must request confidential treatment. All such requests should be directed to the Secretary to the Commission and must include a full statement of the reasons why the Commission should grant such treatment. See 19 CFR 201.6. Documents for which confidential treatment by the Commission is properly sought will be treated accordingly. All information, including confidential business information and documents for which confidential treatment is properly sought, submitted to the Commission for purposes of this Investigation may be disclosed to and used: (i) By the Commission, its employees and Offices, and contract personnel (a) for developing or maintaining the records of this or a related proceeding, or (b) in internal investigations, audits, reviews, and evaluations relating to the programs, personnel, and operations of the Commission including under 5 U.S.C. Appendix 3; or (ii) by U.S. government employees and contract personnel,² solely for cybersecurity purposes. All nonconfidential written submissions will be available for public inspection at the Office of the Secretary and on EDIS.³

This action is taken under the authority of section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and of §§ 201.10 and 210.8(c) of the Commission's Rules of Practice and Procedure (19 CFR 201.10, 210.8(c)).

Issued: December 27, 2021.

William Bishop,
Supervisory Hearings and Information
Officer.

DEPARTMENT OF JUSTICE**Bureau of Alcohol, Tobacco, Firearms and Explosives**

[OMB 1140–NEW]

Agency Information Collection Activities; Proposed eCollection of eComments Requested; New Information Collection; Visitor Access Request—ATF Form 8620.71

AGENCY: Bureau of Alcohol, Tobacco, Firearms and Explosives, Department of Justice.

ACTION: 60-Day notice.

SUMMARY: The Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF), Department of Justice (DOJ), will submit the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The proposed information collection (IC) is also being published to obtain comments from the public and affected agencies.

DATES: Comments are encouraged and will be accepted for 60 days until February 28, 2022.

FOR FURTHER INFORMATION CONTACT: If you have additional comments regarding the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions, or additional information, contact: Lakisha Gregory, Chief, Personnel Security Division, by mail at 99 New York Avenue NE, Mail Stop 1.E–300, Washington, DC 20226, email at Lakisha.Gregory@atf.gov, or telephone at 202–648–9260.

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency’s estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Evaluate whether and, if so, how the quality, utility, and clarity of the information to be collected can be enhanced; and

—Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of responses.

Overview of This Information Collection

1. *Type of Information Collection (check justification or form 83):* New Information Collection.

2. *The Title of the Form/Collection:* Visitor Access Request.

3. *The agency form number, if any, and the applicable component of the Department sponsoring the collection:* Form number (if applicable): ATF Form 8620.71.

Component: Bureau of Alcohol, Tobacco, Firearms and Explosives, U.S. Department of Justice.

4. *Affected public who will be asked or required to respond, as well as a brief abstract:*

Primary: State, Local or Tribal Government.

Other (if applicable): Federal Government.

Abstract: The Visitor Access Request—ATF Form 8620.71 will be used to determine if representatives from other Federal, State, and local agencies can be granted access to ATF facilities to conduct official business.

5. *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* An estimated 2,000 respondents will respond to this collection once annually, and it will take each respondent approximately 5 minutes to complete their responses.

6. *An estimate of the total public burden (in hours) associated with the collection:* The estimated annual public burden associated with this collection is 167 hours, which is equal to 2,000 (total respondents) * 1 (# of response per respondent) * .833333 (5 minutes or the time taken to prepare each response).

If additional information is required contact: Melody Braswell, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE, Mail Stop 3.E–405A, Washington, DC 20530.

Dated: December 27, 2021.

Melody Braswell,

Department Clearance Officer for PRA U.S. Department of Justice.

BILLING CODE 4410–FY–P

DEPARTMENT OF LABOR**Agency Information Collection Activities; Submission for OMB Review; Comment Request; Occupation Exposure to COVID–19; Emergency Temporary Standard**

ACTION: Notice of availability; request for comments.

SUMMARY: The Department of Labor (DOL) is submitting this request for continued authorization of portions of the Occupational Safety and Health Administration (OSHA)-sponsored information collection request (ICR) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995 (PRA). Public comments on the ICR are invited.

DATES: The OMB will consider all written comments that the agency receives on or before January 31, 2022.

ADDRESSES: Written comments and recommendations for the proposed continuation of the information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

Comments are invited on: (1) Whether the collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; (2) if the information will be processed and used in a timely manner; (3) the accuracy of the agency’s estimates of the burden and cost of the collection of information, including the validity of the methodology and assumptions used; (4) ways to enhance the quality, utility and clarity of the information collection; and (5) ways to minimize the burden of the collection of information on those who are to respond, including the use of automated collection techniques or other forms of information technology.

FOR FURTHER INFORMATION CONTACT: Nora Hernandez by telephone at 202–693–8633 or by email at DOL_PRA_PUBLIC@dol.gov.

SUPPLEMENTARY INFORMATION: The COVID–19 Emergency Temporary Standard applicable to healthcare contains collection of information requirements that will assist both employers and employees in addressing the risk of occupational exposure to COVID–19 in healthcare. For additional substantive information about this ICR,

see the related notice published in the **Federal Register** on June 21, 2021 (86 FR 32376). OSHA seeks to extend the collections of information in the following provisions:

- 29 CFR 1910.502(q)(2)(ii) and (3) (ii)–(iv) Recordkeeping. Requiring employers with more than 10 employees to establish and maintain COVID-19 logs recording each instance in which an employee is COVID-19 positive, and to make such records available upon request to employees or their representatives (in redacted form where necessary), and OSHA.

- 29 CFR 1910.502(r) Reporting COVID-19 fatalities and hospitalizations to OSHA. Requiring the employer to report each work-related COVID-19 fatality within 8 hours of the employer learning about the fatality and each work-related COVID-19 in-patient hospitalization within 24 hours of the employer learning about the in-patient hospitalization.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless the OMB approves it and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid OMB Control Number. See 5 CFR 1320.5(a) and 1320.6.

DOL seeks PRA authorization for this information collection for three (3) years. OMB authorization for an ICR cannot be for more than three (3) years without renewal. The DOL notes that information collection requirements submitted to the OMB for existing ICRs receive a month-to-month extension while they undergo review.

Agency: DOL–OSHA.

Title of Collection: Occupation Exposure to COVID-19; Emergency Temporary Standard.

OMB Control Number: 1218–0277.

Affected Public: Private Sector: Businesses or other for-profit institutions.

Total Estimated Number of Respondents: 748,814.

Total Estimated Number of Responses: 207,859.

Total Estimated Annual Time Burden: 23,715 hours.

Total Estimated Annual Other Costs Burden: \$0.

Authority: 44 U.S.C. 3507(a)(1)(D)

Nora Hernandez,

Department Clearance Officer.

BILLING CODE 4510–26–P

DEPARTMENT OF LABOR

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Beryllium Standards for General Industry

ACTION: Notice of availability; request for comments.

SUMMARY: The Department of Labor (DOL) is submitting this Occupational and Safety Health Administration (OSHA)-sponsored information collection request (ICR) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995 (PRA). Public comments on the ICR are invited.

DATES: The OMB will consider all written comments that agency receives on or before January 31, 2022.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

Comments are invited on: (1) Whether the collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; (2) if the information will be processed and used in a timely manner; (3) the accuracy of the agency’s estimates of the burden and cost of the collection of information, including the validity of the methodology and assumptions used; (4) ways to enhance the quality, utility and clarity of the information collection; and (5) ways to minimize the burden of the collection of information on those who are to respond, including the use of automated collection techniques or other forms of information technology.

FOR FURTHER INFORMATION CONTACT:

Nora Hernandez by telephone at 202–693–8633, or by email at DOL_PRA_PUBLIC@dol.gov.

SUPPLEMENTARY INFORMATION: The Standard requires employers to monitor employee exposure to beryllium and beryllium compounds, to establish and implement a written control plan, to conduct medical surveillance, to provide personal protective equipment, to train workers about the hazards faced working in and around beryllium, and to establish and maintain accurate records of worker exposure to beryllium and beryllium compounds. These

records are used by employers, workers, physicians, and the Government to ensure that workers are not harmed by exposure to beryllium. For additional substantive information about this ICR, see the related notice published in the **Federal Register** on July 26, 2021 (86 FR 40083).

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless the OMB approves it and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid OMB Control Number. See 5 CFR 1320.5(a) and 1320.6.

DOL seeks PRA authorization for this information collection for three (3) years. OMB authorization for an ICR cannot be for more than three (3) years without renewal. The DOL notes that information collection requirements submitted to the OMB for existing ICRs receive a month-to-month extension while they undergo review.

BILLING CODE 4510–26–P

NATIONAL FOUNDATION FOR THE ARTS AND THE HUMANITIES

Institute of Museum and Library Services

Notice of Proposed Information Collection Requests: Museums for Digital Learning Project Evaluation

AGENCY: Institute of Museum and Library Services, National Foundation for the Arts and the Humanities.

ACTION: Notice, request for comments, collection of information.

SUMMARY: The Institute of Museum and Library Services (IMLS), as part of its continuing effort to reduce paperwork and respondent burden, conducts a pre-clearance consultation program to provide the general public and Federal agencies with an opportunity to comment on proposed and/or continuing collections of information in accordance with the Paperwork Reduction Act. This pre-clearance consultation program helps to ensure that requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements on respondents can be properly assessed. The purpose of this Notice is to announce the intent to solicit feedback on ease of use, usefulness, and recommended changes from both museum users and educators to continue to support the project in growth and utility for *Museums for Digital Learning Project Evaluation*. A copy of the proposed information collection request can be obtained by contacting the individual listed below in the **ADDRESSES** section of this Notice.

DATES: Written comments must be submitted to the office listed in the addressee section below on or before February 28, 2022.

ADDRESSES: Send comments to Connie Bodner, Ph.D., Director of Grants Policy and Management, Office of Grants Policy and Management, Institute of Museum and Library Services, 955 L'Enfant Plaza North SW, Suite 4000, Washington, DC 20024-2135. Dr. Bodner can be reached by telephone: 202-653-4636, or by email at cbodner@imls.gov. Office hours are from 8:30 a.m. to 5 p.m., E.T., Monday through Friday, except Federal holidays.

Persons who are deaf or hard of hearing (TTY users) can contact IMLS at 202-207-7858 via 711 for TTY-Based Telecommunications Relay Service.

FOR FURTHER INFORMATION CONTACT:

Christopher J. Reich, Chief Administrator, Office of Museum Services, Institute of Museum and Library Services, 955 L'Enfant Plaza North SW, Suite 4000, Washington, DC 20024-2135. Mr. Reich can be reached by telephone at 202-653-4685, or by email at CReich@imls.gov.

SUPPLEMENTARY INFORMATION: IMLS is particularly interested in public comment that help the agency to:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility.

- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information including the validity of the methodology and assumptions used.
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including using appropriate automated electronic, mechanical, or other technological collection techniques, or other forms of information technology, e.g., permitting electronic submissions of responses.

I. Background

The Institute of Museum and Library Services is the primary source of federal support for the Nation's libraries and museums. We advance, support, and empower America's museums, libraries, and related organizations through grant making, research, and policy development. To learn more, visit www.imls.gov.

II. Current Actions

The Museums for Digital Learning Project (<https://museumsfordigitalllearning.org/>) has created an online resource providing K-12 educators with access to authentic collections-based museum resources for use in and outside the classroom. The project is supported through a cooperative agreement between IMLS and History Colorado, and partners include the Field Museum of Natural History and the Indianapolis Museum of Art at Newfields. The project's content is searchable by curriculum standards, grade level, and subject matter. Its Resource Kits include activities such as narratives, hotspots, slideshows, annotations, and timelines.

In this data collection, independent external evaluators will solicit feedback on the ease of use, usefulness, and recommended changes and impact of the Resource Kits from participating museum educators and staff, K-12 teachers, homeschooling parents, and grade 4-12 students. In addition, project team members will be queried to assess how well their team is collaborating and making suggestions for the project's continued improvement. This information collection is exempt from the federal regulations governing research with human subjects [45 CFR 46.201(l)] through Exemption Categories 1 and 5 and is being confirmed as such through a separate Institutional Review Board process conducted during the 60-day review.

Agency: Institute of Museum and Library Services.

Title: Museums for Digital Learning Project Evaluation.

OMB Control Number: 3137-NEW.

Agency Number: 3,137.

Respondents/Affected Public:

Museum staff; teachers; homeschooling parents; grade 4-12 students; and project team members.

Total Estimated Number of Annual Respondents: TBD.

Frequency of Response: Once per request.

Average Minutes per Response: 15 minutes.

Total Estimated Number of Annual Burden Hours: TBD.

Cost Burden (dollars): TBD.

Public Comments Invited: Comments submitted in response to this Notice will be summarized and/or included in the request for OMB's clearance of this information collection.

Suzanne Mbollo,

Grants Management Specialist, Institute of Museum and Library Services.

BILLING CODE 7036-01-P

DEPARTMENT OF STATE

[Public Notice: 11612]

Advisory Committee on Historical Diplomatic Documentation—Notice of Closed and Open Meetings for 2021

SUMMARY: The Advisory Committee on Historical Diplomatic Documentation will meet on March 7-8, June 6-7, September 12-13, and December 5-6, 2022, in open session to discuss unclassified matters concerning declassification and transfer of Department of State records to the National Archives and Records Administration and the status of the *Foreign Relations* series. It is assumed that the public portions of these meetings will not need to be held virtually because of concerns surrounding the coronavirus pandemic. However, should that change based on guidance from public health authorities, the Department will notify those who have RSVP'd.

DATES: The Committee will meet in open session from 11:00 a.m. until noon in SA-4D Conference Room 109, Department of State, 2300 E Street NW, Washington, DC 20372 (Potomac Navy Hill Annex), on all four dates. RSVP and requests for reasonable accommodation for each meeting should be sent as directed below:

- March 7, not later than February 28, 2022.
- June 6, not later than May 30, 2022.

- September 12, not later than September 5, 2022.
- December 5, not later than November 28, 2022.

FOR FURTHER INFORMATION CONTACT:

Questions concerning the meeting should be directed to Adam M. Howard, Executive Secretary, Advisory Committee on Historical Diplomatic Documentation, Department of State, Office of the Historian, Washington, DC 20372, telephone (202) 955-0214, (email history@state.gov).

SUPPLEMENTARY INFORMATION:

Closed Sessions. The Committee's sessions in the afternoon of Monday, March 7, 2022; in the morning of Tuesday, March 8; in the afternoon of Monday, June 6, 2022; in the morning of Tuesday, June 7, 2022; in the afternoon of Monday, September 12, 2022; in the morning of Tuesday, September 13, 2022; in the afternoon of Monday, December 5, 2022; and in the morning of Tuesday, December 6, 2022, will be closed in accordance with Section 10(d) of the Federal Advisory Committee Act (Pub. L. 92-463). The agenda calls for discussions of agency declassification decisions concerning the *Foreign Relations* series and other declassification issues. These are matters properly classified and not subject to public disclosure under 5 U.S.C. 552b(c)(1) and the public interest requires that such activities be withheld from disclosure.

RSVP Instructions. Prior notification and a valid government-issued photo ID (such as driver's license, passport, U.S. Government or military ID) are required for entrance into the Department of State building. Members of the public planning to attend the open meetings should RSVP, by the dates indicated above, to Julie Fort, Office of the Historian (202-955-0214). When responding, please provide date of birth, valid government-issued photo identification number and type (such as driver's license number/state, passport number/country, or U.S. Government ID number/agency or military ID number/branch), and relevant telephone numbers. If you cannot provide one of the specified forms of ID, please consult with Julie Fort for acceptable alternative forms of picture identification.

Personal data is requested pursuant to Public Law 99-399 (Omnibus Diplomatic Security and Antiterrorism Act of 1986), as amended; Public Law 107-56 (USA PATRIOT Act); and E.O. 13356. The purpose of the collection is to validate the identity of individuals who enter Department facilities. The data will be entered into the Visitor Access Control System (VACS-D)

database. Please see the Security Records System of Records Notice (State-36) at <https://www.state.gov/wp-content/uploads/2019/05/Security-Records-STATE-36.pdf>, for additional information.

Note that requests for reasonable accommodation received after the dates indicated in this notice will be considered but might not be possible to fulfill.

Kevin E. Bryant,

Deputy Director, Office of Directives Management, Department of State.

BILLING CODE 4710-34-P

DEPARTMENT OF TRANSPORTATION**Federal Aviation Administration**

[Docket No. FAA-2018-0857; Summary Notice No.-2021-0020]

Petition for Exemption; Summary of Petition Received; Overwatch Aero, LLC

AGENCY: Federal Aviation Administration (FAA), Department of Transportation (DOT).

ACTION: Notice.

SUMMARY: This notice contains a summary of a petition seeking relief from specified requirements of Federal Aviation Regulations. The purpose of this notice is to improve the public's awareness of, and participation in, the FAA's exemption process. Neither publication of this notice nor the inclusion nor omission of information in the summary is intended to affect the legal status of the petition or its final disposition.

DATES: Comments on this petition must identify the petition docket number and must be received on or before January 19, 2022.

ADDRESSES: Send comments identified by docket number FAA-2018-0857 using any of the following methods:

- *Federal eRulemaking Portal:* Go to <http://www.regulations.gov> and follow the online instructions for sending your comments electronically.
- *Mail:* Send comments to Docket Operations, M-30; U.S. Department of Transportation, 1200 New Jersey Avenue SE, Room W12-140, West Building Ground Floor, Washington, DC 20590-0001.
- *Hand Delivery or Courier:* Take comments to Docket Operations in Room W12-140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC 20590-0001, between 9 a.m. and 5 p.m.,

Monday through Friday, except Federal holidays.

- *Fax:* Fax comments to Docket Operations at (202) 493-2251.

Privacy: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to <http://www.regulations.gov>, as described in the system of records notice (DOT/ALL-14 FDMS), which can be reviewed at <http://www.dot.gov/privacy>.

Docket: Background documents or comments received may be read at <http://www.regulations.gov> at any time. Follow the online instructions for accessing the docket or go to the Docket Operations in Room W12-140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC 20590-0001, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Jake Troutman, (202) 683-7788, Office of Rulemaking, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591.

This notice is published pursuant to 14 CFR 11.85.

Angela O. Anderson,

Acting Executive Director, Office of Rulemaking.

Petition for Exemption

Docket No.: FAA-2018-0857.

Petitioner: Overwatch Aero, LLC.

Section(s) of 14 CFR Affected:

§§ 61.113(a) and (b); 91.7(a); 91.103(b)(2); 91.109; 91.151(a); 91.403(b); 91.405(a); 91.407(a)(1); 91.409(a)(1) and (2); and 91.417(a) and (b).

Description of Relief Sought:

Overwatch Aero, LLC (Overwatch) seeks relief to operate the L3Harris Latitude HQ-90C, weighing over 55 pounds (lbs.) with an increased weight from 121 lbs. to no more than 130 lbs.; with approval to operate up to 1,200 feet (ft.) above ground level (AGL) in Class G Airspace, an increase from the currently-approved 400 ft. AGL and below; a provision to allow night visual flight rules (VFR) operations outside of areas designated as temporary flight restrictions, which are currently limited to day VFR operations; and, a provision to expand approved flight categories beyond active emergency response flights.

BILLING CODE 4910-13-P

DEPARTMENT OF TRANSPORTATION**National Highway Traffic Safety Administration**

[Docket No. NHTSA–2021–0085]

Agency Information Collection Activities; Notice and Request for Comment; Driver Alcohol Detection System for Safety Field Operational Test**AGENCY:** National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).**ACTION:** Notice and request for public comment on an extension of a currently approved information collection.

SUMMARY: The National Highway Traffic Safety Administration (NHTSA) invites public comments about our intention to request approval from the Office of Management and Budget (OMB) for an extension of a currently approved information collection. Before a Federal agency may collect certain information from the public, it must receive approval from OMB. Under procedures established by the Paperwork Reduction Act of 1995, before seeking OMB approval, Federal agencies must solicit public comment on proposed collections of information, including extensions and reinstatements of previously approved collections. This document describes a collection of information for which NHTSA intends to seek OMB approval to allow NHTSA to continue to conduct research on the development of a driver alcohol detection system. NHTSA is seeking an extension of the information collection, titled “Driver Alcohol Detection System for Safety Field Operational Test” (OMB Control Number 2127–0734), which is currently approved through March 31, 2022. The extension is necessary to complete data collection that was delayed due to COVID–19 restrictions. The burden hour and cost calculations have been adjusted to reflect only the remaining data collection, adjustments for recruitment based on current experience, and adjustments in participation based on current experience.

DATES: Comments must be submitted on or before February 28, 2022.**ADDRESSES:** You may submit comments identified by the Docket No. NHTSA–2021–0085 through any of the following methods:

- *Electronic Submissions:* Go to the Federal eRulemaking Portal at <http://www.regulations.gov>. Follow the online instructions for submitting comments.

- *Fax:* (202) 493–2251.

- *Mail or Hand Delivery:* Docket Management, U.S. Department of Transportation, 1200 New Jersey Avenue SE, West Building, Room W12–140, Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except on Federal holidays. To be sure someone is there to help you, please call (202) 366–9322 before coming.

Instructions: All submissions must include the agency name and docket number for this notice. Note that all comments received will be posted without change to <http://www.regulations.gov>, including any personal information provided. Please see the Privacy Act heading below.

Privacy Act: Anyone is able to search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review DOT’s complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (65 FR 19477–78) or you may visit <https://www.transportation.gov/privacy>.

Docket: For access to the docket to read background documents or comments received, go to <http://www.regulations.gov> or the street address listed above. Follow the online instructions for accessing the dockets via internet.

FOR FURTHER INFORMATION CONTACT: For additional information or access to background documents, contact Eric Traube, Vehicle Safety Research, Human Factors/Engineering Integration Division (NSR–310), (202) 366–5673, National Highway Traffic Safety Administration, W46–424, U.S. Department of Transportation, 1200 New Jersey Avenue SE, Washington, DC 20590. Please identify the relevant collection of information by referring to its OMB Control Number.

SUPPLEMENTARY INFORMATION: Under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), before an agency submits a proposed collection of information to OMB for approval, it must first publish a document in the **Federal Register** providing a 60-day comment period and otherwise consult with members of the public and affected agencies concerning each proposed collection of information. The OMB has promulgated regulations describing what must be included in such a document. Under OMB’s regulation (at 5 CFR 1320.8(d)), an agency must ask for public comment on the following: (a) Whether the proposed collection of information is necessary for the proper

performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency’s estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) how to enhance the quality, utility, and clarity of the information to be collected; and (d) how to minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of responses. In compliance with these requirements, NHTSA asks for public comments on the following proposed collection of information for which the agency is seeking approval from OMB.

Title: Driver Alcohol Detection System for Safety Field Operational Test.

OMB Control Number: 2127–0734.

Form Number(s): None.

Type of Request: Extension of a currently approved information collection.

Type of Review Requested: Regular.

Requested Expiration Date of Approval: 3 years from date of approval.

Summary of the Collection of Information

NHTSA and the Automotive Coalition for Traffic Safety (ACTS) began research in February 2008 to try to find potential in-vehicle approaches to the problem of alcohol-impaired driving. Members of ACTS comprise motor vehicle manufacturers representing approximately 99 percent of light vehicle sales in the U.S. This cooperative research partnership, known as the Driver Alcohol Detection System for Safety (DADSS) Program, is exploring the feasibility, the potential benefits of, and the public policy challenges associated with a more widespread use of non-invasive technology to prevent alcohol-impaired driving. The 2008 cooperative agreement between NHTSA and ACTS for Phases I and II outlined a program of research to assess the state of detection technologies that are capable of measuring blood alcohol concentration (BAC) or Breath Alcohol Concentration (BrAC). The 2008 cooperative agreement and a subsequent 2013 cooperative agreement support the creation and testing of prototypes and subsequent hardware that could be installed in vehicles. As part of this research program, and pursuant to the 2013 cooperative agreement, NHTSA and ACTS developed both breath- and

touch-based sensors to evaluate the potential implementation and integration of both breath- and touch-based sensor technologies. The sensors are to be integrated into a vehicle in a manner that does not significantly alter the appearance of the vehicle interior. Further research is needed to evaluate the potential implementation and integration of both breath- and touch-based sensor technologies.

The purpose of this information collection is to collect data needed to evaluate the functionality of the touch- and breath-based sensors in varying operating conditions by having study participants provide breath and touch samples in DADSS research vehicles equipped with the sensors. Although the sensors will undergo significant laboratory testing, it is necessary to evaluate their function in extreme real-world environmental conditions to ensure that they will be operational for the harshest conditions that the sensors will encounter.

The sensor-equipped research vehicles are used to gather data regarding sensor validity and reliability, as well as assess the real-world use of the sensors with human participants in varying environmental conditions, such as weather conditions, road conditions, temperatures, altitudes, air conditioner or heater status, window up or down, etc. These are the first vehicles ever to be equipped with systems designed to be unobtrusive that can measure driver alcohol levels. As such, it represents the first opportunity for researchers to gain an understanding of the use of the sensors in the operational context for which they were designed. Data collected from the study's Field Operational Test (FOT or DADSS FOT) will be used to further refine the DADSS Performance Specifications and evaluate subsystem/sensor performance. The collection of information consists of: (1) An eligibility interview with COVID screening questions and COVID test, (2) a multi-day FOT of DADSS sensors, and (3) a post-test-day questionnaire. NHTSA is currently collecting information for the study and the data collection is ongoing. Extension of the study is necessary due to COVID-related delays which paused data collection for a period of time and during development of new COVID precautions.

Description of the Need for the Information and Proposed Use of the Information

A key to the establishment of effective in-vehicle alcohol detection systems is an understanding of real-world use of the technology. The DADSS FOT will

provide a greater understanding of the performance of both breath- and touch-based sensors with actual drivers using the technology under varying environmental conditions.

The objectives of the DADSS FOT are to:

- Determine the effectiveness, as compared to the standardized breathalyzer, of the DADSS sensors in a real-world driving environment.
- Analyze DADSS touch- and breath-based sensors in real-world driving scenarios.
- Obtain technical data to further refine the DADSS Performance Specifications for the DADSS System that will ultimately be used for vehicle design and development.

The data collected during the DADSS FOT is for the purpose of validating the DADSS prototype sensors under varying environmental conditions. The use of human participants in the DADSS FOT is for the operation of the vehicle and to have participants testing the sensors with and without alcohol in their systems so that the sensors' performance may be evaluated.

Affected Public: General public.

Estimated Number of Respondents: 2,787.

When NHTSA sought approval for the currently approved information collection, it described its plan for collecting data from 480 unique respondents. In order to recruit 480 participants who would complete the field operational test, NHTSA estimated that 600 respondents would need to complete the initial eligibility screening (a 75% recruitment rate). Based on experience, NHTSA has found that the actual recruitment rate is much lower than anticipated. As of August 31, 2021, 62 participants had been successfully recruited and participated in the FOT. Successful recruitment involved a screening of 420 individuals, for a recruitment rate of 15 percent. Since NHTSA needs to recruit 418 more participants, NHTSA estimates that the research team would need to screen 2,787 individuals.

Frequency: Varies.

There are four different components to this information collection and the frequency for response varies across the components: The initial eligibility screening is conducted one-time; the full orientation is conducted one-time; the health screening is conducted each time that an individual participates in the FOT; and the FOT is conducted as many times as the individual wishes, up to 60 times.

Estimated Total Annual Burden Hours: 3,249.

When NHTSA originally obtained clearance for this ICR, the agency did not expect to need to renew the collection. Instead, it was expected that the data collection would have been completed within the three-year clearance period. However, COVID-19 delayed the research effort, necessitating this request for extension. Accordingly, NHTSA is requesting an extension of this currently approved information collection for the portion of the planned data collection that still needs to be completed. As of August 31, 2021, collection is complete for 62 participants of the necessary 480 participants. Therefore, NHTSA is requesting approval for the collection of information from 418 remaining participants and individuals screened in order to recruit the 418 participants. In estimating the burden of this collection, NHTSA has made adjustments, based on its experience with recruitment and data collection under the current collection, to its estimates for numbers of screenings, duration associated with information collection, and frequency of data collection of various phases of the study. NHTSA has also added new COVID-19 screening questions and a COVID-19 test requirement for the safety of both researchers and study participants. These new COVID-19 safety measures will be carried out in accordance with CDC guidelines and the data from the screening questions and tests will not be retained nor used for analytic purposes.

When NHTSA originally sought approval for this research study, it estimated that each initial eligibility/demographic interview would take approximately 15 minutes. With experience, NHTSA is now revising the estimate to be 30 minutes. NHTSA is also revising its burden estimates to include time for health screenings each time a respondent participates in the FOT after their first day. On the first day, participants will go through a full orientation, which is expected to last 1 hour and includes both a health screening and in-vehicle instruction. NHTSA estimates that the health screening portion takes approximately 30 minutes.

NHTSA originally estimated burdens associated with this collection assuming that each participant would complete the FOT 60 times. This was based on the maximum amount of participation. However, based on the experience of the data collection through August 31, 2021, participants are, on average, completing the FOT 2.13 times. Of the 62 participants who have completed the FOT thus far, 27 participated only once. The remaining 35 participated an

average of 3 times each. Using this average, NHTSA estimates that the remaining 418 participants will complete a total of 890 operational tests.

Based on experience, NHTSA has also revised the estimated burden hours for the FOT. NHTSA now estimates the average duration of the pre-drive, drive, and post-drive recovery to be five hours (this estimate does not include orientation time, which is estimated separately).

NHTSA has also revised estimates to include the time for test-day questions

in the burden estimate for FOT. These questions were counted separately in the initial ICR. However, the question responses are collected during the post-drive recovery time and included in the average time for participants in the FOT portion of the study.

NHTSA estimates the total burden for the remaining data collection to be 6,498 hours. The research team expects the data collection to take place over 24 months, for an average of 3,249 hours per year. This is longer than initially

estimated due to observed difficulty in recruitment.

NHTSA estimates the opportunity cost associated with this information collection using the median hourly wage for the Southwest Virginia nonmetropolitan area of \$15.34 per hour for all occupations,¹ resulting in a total opportunity cost of \$99,679.32 and an annual opportunity cost of \$49,839.66.

Table 1 provides a summary of the remaining burden hours for this information collection.

TABLE 1—ESTIMATED BURDEN HOURS AND ASSOCIATED OPPORTUNITY COSTS

Instrument	Number of responses	Number of respondents	Duration	Estimated burden hours	Cost per hour	Estimated burden hour cost
Eligibility/Demographic Interview	2,787	2,787	30 min (0.5 hrs).	1,393.5	\$15.34	\$21,376.29
Full Orientation	418	418	1 hour	418	15.34	8,151.00
Health Screening Only	468	234	30 min (0.5 hrs).	234	15.34	4,563.00
Field Operational Test	890	418	5 hours ..	4,452	15.34	86,814.00
Total (covering a 24-month period)				6,497.5 (6,498)		99,679.32
Estimated Annual Burden				3,249		49,839.66

Estimated Total Annual Burden Cost: \$0.

NHTSA estimates that there are no additional costs to respondents beyond those associated with opportunity cost. To offset these costs, NHTSA is paying respondents who participate in the FOT \$19.50 per hour.

Public Comments Invited: You are asked to comment on any aspects of this information collection, including (a) whether the proposed collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; (b) the accuracy of the Department's estimate of the burden of the proposed information collection; (c) ways to enhance the quality, utility and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including the use of automated collection techniques or other forms of information technology.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. chapter 35, as

amended; 49 CFR 1.49; and DOT Order 1351.29.

Cem Hatipoglu,
Associate Administrator, Vehicle Safety Research.

BILLING CODE 4910-59-P

DEPARTMENT OF TRANSPORTATION

[Docket No.: DOT-OST-2021-0160]

Transportation Research and Development Strategic Plan; Request for Information

AGENCY: Office of the Assistant Secretary for Research and Technology (OST-R), U.S. Department of Transportation (DOT).

ACTION: Request for Information (RFI).

SUMMARY: The Office of the Assistant Secretary for Research and Technology (OST-R) invites the public to provide comments to inform the development of DOT's Research, Development, and Technology (RD&T) Strategic Plan for fiscal years (FY) 2022-2026. We welcome the views of the transportation research community on USDOT's research vision, strategic goals, and

priorities, and how our research programs can advance the transportation system of the present and future. Please help us shape our research plans at this pivotal moment in the transformation of the nation's transportation system.

DATES: Comments are due by January 31, 2022. DOT will consider comments filed after this date to the extent practicable.

ADDRESSES: Written comments may be submitted by email or U.S. mail. Respondents are encouraged to submit comments electronically to ensure timely receipt. Please include your name, title, organization, postal address, telephone number, and email address.

- *Electronic Submission:* Go to <http://www.regulations.gov>. Search by using the docket number (provided above). Follow the instructions for sending comments.

- *Email:* rdtplan@dot.gov. Include the docket number in the subject line of the message. Please include the full body of your comments in the text of the electronic message and as an attachment.

- *Mail:* Docket Management Facility; U.S. Department of Transportation, 1200

¹ Occupational Employment and Wage Statistics, May 2020 Metropolitan and Nonmetropolitan Area Occupational Employment and Wage Estimates—

Southwest Virginia nonmetropolitan area. U.S. Bureau of Labor Statistics. <https://www.bls.gov/oes/>

2020/may/oes_5100001.htm. Last Accessed 12/27/21.

New Jersey Avenue SE, Room PL-401, Washington, DC 20590-0001.

• *Instructions:* All submissions must include the agency name and docket numbers.

FOR FURTHER INFORMATION CONTACT:

Jordan Katz, Community Planner, U.S. DOT Volpe Center, Telephone (617) 494-3783 or email rdtplan@dot.gov.

SUPPLEMENTARY INFORMATION: 49 U.S.C. Section 6503 requires that the Secretary of Transportation develop a 5-year transportation research and development strategic plan to guide future Federal transportation research and development activities. The statute states that the strategic plan shall describe how the plan furthers the primary purpose of the transportation research and development program.

49 U.S.C. Chapter 65 outlines the following primary purposes of transportation research:

- Promoting safety
- Improving mobility of people and goods
- Reducing congestion
- Improving the durability and extending the life of transportation infrastructure
- Preserving the existing transportation system
- Preserving the environment
- Reducing transportation cybersecurity risks

DOT is in the process of updating its strategic plan for FY 2022–2026 and released a Draft Strategic Framework in December 2021, which outlined the following six draft DOT Strategic Goals:

- Safety
- Economic strength and global competitiveness
- Equity
- Climate and sustainability
- Transformation
- Organizational excellence

The Draft Strategic Framework can be accessed at <https://www.transportation.gov/dot-strategic-plan>.

In order to align its research strategy and programs with the Department's goals, DOT is developing a new Research, Development, and Technology (RD&T) Strategic Plan for FY2022–2026.

OST-R invites the public to provide comments to inform the development of the 5-year strategic plan for transportation RD&T. Comments should regard appropriate RD&T activities to meet the purposes and considerations listed above and/or emerging RD&T challenges, opportunities, and priorities that DOT RD&T should address over the next five years. In particular, comments may respond to any or all of the following questions:

1. How should DOT prioritize and invest in research activities over the next five years? Over the next 30 years?

2. What types of research activities should DOT undertake to meet its strategic goals?

3. What key social, demographic, economic, technological, and/or other trends influence transportation today and into the future?

4. What emerging challenges or opportunities or knowledge gaps in transportation warrant additional Federal RD&T activities or investments?

5. How can DOT best lead and coordinate its RD&T activities with Federal, State, local, tribal, private sector, non-profit institutions, and international partners?

6. What activities should DOT adopt to facilitate deployment of DOT research results into the U.S. transportation system?

7. Is there anything else you want to share or say regarding DOT's research portfolio and activities?

Issued on December 23, 2021.

Jordan Wainer Katz,
Community Planner.

BILLING CODE 4910-9X-P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Collection; Requesting Comments on Notice 2021-57

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Internal Revenue Service, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995. The IRS is soliciting comments concerning Notice 2021-57, Funding relief for multiemployer defined benefit pension plans under the American Rescue Plan Act of 2021.

DATES: Written comments should be received on or before February 28, 2022 to be assured of consideration.

ADDRESSES: Direct all written comments to Andres Garcia, Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224. You must reference the information collection's title, form number, reporting or record-keeping requirement

number, and OMB number in your comment.

FOR FURTHER INFORMATION CONTACT:

Requests for additional information or copies of the notice should be directed to Jon Callahan, (737) 800-7639, at Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224, or through the internet at jon.r.callahan@irs.gov.

SUPPLEMENTARY INFORMATION:

The IRS is currently seeking comments concerning the following information collection tools, reporting, and record-keeping requirements:

Title: Funding relief for multiemployer defined benefit pension plans under the American Rescue Plan Act of 2021.

OMB Number: 1545-2300.

Notice Number: 2021-57.

Abstract: The American Rescue Plan Act of 2021 (ARP), P.L. 117-2, sections 9701, 9702, and 9703 provide elective funding relief for multiemployer defined benefit pension plans to address the continued impact of COVID-19. This notice provides guidance for sponsors of multiemployer defined benefit pension plans on the elections under sections 9701 and 9702 of the ARP Act, and the relief provided under section 9703 of the ARP Act, relating to Internal Revenue Code (IRC) sections 431 and 432.

Current Actions: There is no change to the existing collection.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations, and not-for-profit institutions.

Estimated Number of Responses: 937.

Estimated Time per Respondent: 58 minutes.

Estimated Total Annual Burden Hours: 896.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request for comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on:

(a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: December 27, 2021.

Jon R. Callahan,

Tax Analyst.

BILLING CODE 4830-01-P

DEPARTMENT OF VETERANS AFFAIRS

Tiered Pharmacy Copayments for Medications; Calendar Year 2022 Update

AGENCY: Department of Veterans Affairs.
ACTION: Notice.

SUMMARY: This Department of Veterans Affairs (VA) notice updates the information on Tier 1 medications.

FOR FURTHER INFORMATION CONTACT: Mr. Joseph Duran, Director of Policy and Planning, Office of Community Care (13BOA1), Veterans Health Administration, 3773 Cherry Creek North Drive, Denver, CO 80209, 303-370-1637. This is not a toll-free telephone number.

SUPPLEMENTARY INFORMATION: Section 17.110 of title 38, CFR, governs copayments for medications that VA provides to Veterans. Section 17.110 provides the methodologies for establishing the copayment amount for each 30-day or fewer supply of medication provided by VA on an outpatient basis (other than medication administered during treatment).

Tier 1 medication means a multi-source medication that has been identified using the process described in paragraph (b)(2) of this section. Not less than once per year, VA will identify a subset of multi-source medications as Tier 1 medications. Only medications that meet all of the criteria in 38 CFR 17.110(b)(2)(i), (ii) and (iii) will be eligible to be considered Tier 1 medications, and only those medications that meet all of the criteria in paragraph (b)(2)(i) of this section will be assessed using the criteria in paragraphs (b)(2)(ii) and (iii).

Based on the methodologies set forth in § 17.110, this notice updates the list of Tier 1 medications for Calendar Year 2022. The Tier 1 medication list is posted on VA's Community Care website at the following link: https://www.va.gov/COMMUNITYCARE/revenue_ops/copays.asp under the heading "Tier 1 Copay Medication List."

The following table is the Tier 1 Copay Medication List that is effective January 1, 2022, and will remain in effect until December 31, 2022.

Condition	VA product name
Arthritis and Pain	Aspirin Buffered Tablet. Aspirin Chewable Tablet. Aspirin Enteric-Coated (EC) Tablet. Allopurinol Tablet. Celecoxib Capsule. Diclofenac Tablet. Ibuprofen Tablet. Meloxicam Tablet. Naproxen Tablet.

BILLING CODE 8320-01-P366

FEDERAL REGISTER

Vol. 86

Thursday,

No. 248

December 30, 2021

Part II

Environmental Protection Agency

40 CFR Parts 86 and 600

Revised 2023 and Later Model Year Light-Duty Vehicle Greenhouse Gas Emissions Standards; Final Rule

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Parts 86 and 600

[EPA-HQ-OAR-2021-0208; FRL 8469-01-OAR]

RIN 2060-AV13

Revised 2023 and Later Model Year Light-Duty Vehicle Greenhouse Gas Emissions Standards

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is revising the greenhouse gas (GHG) emissions standards under the Clean Air Act section 202(a) for light-duty vehicles for 2023 and later model years to make the standards more stringent. On January 20, 2021, President Biden issued Executive Order 13990 “Protecting Public Health and the Environment and Restoring Science To Tackle the Climate Crisis” directing EPA to consider whether to propose suspending, revising, or rescinding the

standards previously revised under the “The Safer Affordable Fuel-Efficient (SAFE) Vehicles Rule for Model Years 2021–2026 Passenger Cars and Light Trucks,” promulgated in April 2020. EPA is revising the GHG standards to be more stringent than the SAFE rule standards in each model year from 2023 through 2026. EPA is also including temporary targeted flexibilities to address the lead time of the final standards and to incentivize the production of vehicles with zero and near-zero emissions technology. In addition, EPA is making technical amendments to clarify and streamline our regulations.

DATES: This final rule is effective on February 28, 2022. The incorporation by reference of certain publications listed in this regulation is approved by the Director of the Federal Register as of February 28, 2022.

ADDRESSES: EPA has established a docket for this action under Docket ID No. EPA-HQ-OAR-2021-0208. All documents in the docket are listed on the <http://www.regulations.gov> website. Although listed in the index, some

information is not publicly available, e.g., CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available electronically through <http://www.regulations.gov>.

FOR FURTHER INFORMATION CONTACT: Elizabeth Miller, Office of Transportation and Air Quality, Assessment and Standards Division (ASD), Environmental Protection Agency, 2000 Traverwood Drive, Ann Arbor, MI 48105; telephone number: (734) 214-4703; email address: miller.elizabeth@epa.gov.

SUPPLEMENTARY INFORMATION:

Does this action apply to me?

This action affects companies that manufacture or sell passenger automobiles (passenger cars) and non-passenger automobiles (light trucks) as defined in 49 CFR part 523. Regulated categories and entities include:

Category	NAICS codes ^A	Examples of potentially regulated entities
Industry	336111, 336112	Motor Vehicle Manufacturers.

I. Executive Summary

A. Purpose of This Final Rule and Legal Authority

1. Final Light-Duty GHG Standards for Model Years 2023–2026

In this final action, the Environmental Protection Agency (EPA) is establishing revised, more stringent national greenhouse gas (GHG) emissions standards for passenger cars and light trucks under section 202(a) of the Clean Air Act (CAA), 42 U.S.C. 7521(a). Section 202(a) requires EPA to establish standards for emissions of air pollutants from new motor vehicles which, in the Administrator’s judgment, cause or contribute to air pollution which may reasonably be anticipated to endanger public health or welfare.

This action finalizes the standards that EPA proposed in August 2021.¹

In response to Executive Order 13990 “Protecting Public Health and the Environment and Restoring Science To Tackle the Climate Crisis,”² EPA conducted an extensive review of the existing regulations, which resulted in EPA proposing revised, more stringent standards. In the proposed rule, EPA sought public comment on a range of alternative standards, including alternatives that were less stringent (Alternative 1) and more stringent (Alternative 2) than the proposed standards as well as standards that were even more stringent (in the range of 5–10 grams CO₂ per mile (g/mile)) for model year (MY) 2026. As discussed in Section I.A.2 of this preamble, based on public comments and EPA’s final analyses, EPA is finalizing standards consistent with the standards we proposed for MYs 2023 and 2024, and more stringent than those we proposed for MYs 2025 and 2026. EPA’s final standards for MYs 2025 and 2026 are the most stringent standards considered in the proposed rule and establish the most stringent GHG standards ever set for the light-duty vehicle sector. EPA is revising the light-duty vehicle GHG standards for MYs 2023 through 2026, which had been previously revised by the SAFE rule, in part by building on earlier EPA actions and supporting analyses that established or maintained stringent standards. For example, in 2012, EPA issued a final rule establishing light-duty vehicle GHG standards for MYs 2017–2025,³ which were supported by analyses of compliance costs, lead time and other relevant factors.⁴ That rule and its analyses also accounted for the development and availability of advanced GHG emission-reducing vehicle technologies, which demonstrated that the standards were

¹ 86 FR 43726.

² 86 FR 7037, January 25, 2021. “[T]he head of the relevant agency, as appropriate and consistent with applicable law, shall consider publishing for notice and comment a proposed rule suspending, revising, or rescinding the agency action[s] set forth below] within the time frame specified.” “Establishing Ambitious, Job-Creating Fuel Economy Standards: . . . ‘The Safer Affordable Fuel-Efficient (SAFE) Vehicles Rule for Model Years 2021–2026 Passenger Cars and Light Trucks,’ 85 FR 24174 (April 30, 2020), by July 2021. In considering whether to propose suspending, revising, or rescinding the latter rule, the agency should consider the views of representatives from labor unions, States, and industry.”

³ EPA’s model year emission standards also apply in subsequent model years, unless revised, e.g., MY 2025 standards issued in the 2012 rule also applied to MY 2026 and beyond.

⁴ 77 FR 62624, October 15, 2012.

appropriate under section 202(a) of the CAA.

This final rule is also supported by updated analyses that consider the most recent technical and scientific data and continuing developments in the automotive industry, as well as public comments on the proposed rule. As noted in the proposed rule, auto manufacturers continue to implement a broad array of advanced gasoline vehicle GHG emission-reducing technologies at a rapid pace throughout their vehicle fleets. Even more notably, vehicle electrification technologies are advancing at a historic pace as battery costs continue to decline and automakers continue to announce plans for an increasing diversity and production volume of zero- and near-zero emission vehicle models. These trends continue to support EPA’s decision to revise the existing GHG standards, particularly in light of factors indicating that more stringent near-term standards are feasible at reasonable cost and would achieve significantly greater GHG emissions reductions and public health and welfare benefits than the existing program.

In developing this final rule, EPA considered comments received during the public comment period, including during the public hearing. EPA held a two-day virtual public hearing on August 25 and 26, 2021 and heard from approximately 175 speakers. During the public comment period that ended on September 27, 2021, EPA received more than 188,000 written comments. This preamble, together with the accompanying Response to Comments (RTC) document, responds to all significant comments we received on the proposed rule.

Comments from automakers that historically have produced primarily internal combustion engine (ICE) vehicles, such as comments by the Alliance for Automotive Innovation (hereafter referred to as “the Alliance”) as well as comments by several individual automakers, generally supported the proposed standards and did not support the more stringent alternatives on which we requested comment. A common theme from these commenters is that EPA should not overly rely on high penetrations of electric vehicles (EVs) during the period through MY 2026 as a means of compliance for the industry, because of uncertainty about the degree of availability of EV charging infrastructure and market uptake of EVs in this time frame. The United Auto Workers (UAW) commented similarly, generally supporting the proposed standards and flexibilities but not

supporting more stringent standards or reduced flexibilities. In contrast, automakers producing (or planning to produce) only EVs (Tesla, Rivian, and Lucid) supported standards more stringent than the proposed standards, and they generally did not support the proposed flexibilities.

Comments from organizations representing environmental, public health, and consumer groups as well as comments from many states and local governments generally state that in this rulemaking EPA should address public health, climate change, and social equity in a robust manner. These commenters expressed nearly universal support for the more stringent Alternative 2; many also support an additional 10 g/mile more stringent standards in MY 2026, on which we requested comment. In addition, during the public hearing, many of these commenters, as well as speakers who identified themselves as representing frontline communities, urged the strongest possible emissions standards to address environmental impacts on overburdened communities. There was also broad opposition among these commenters to the proposed flexibilities and incentives, based on concerns that the flexibilities were unnecessary and would compromise the stringency of the program. In addition, tens of thousands of individual public commenters echoed these themes, urging EPA to establish the strongest possible GHG emissions standards.

As discussed in Section I.B of this preamble, the final rule revises GHG emissions standards for MYs 2023–2026, incorporating several changes from the proposed standards and flexibilities, based on our consideration of the public comments and updated information and analysis. As discussed in Section I.A.2 of this preamble, it is EPA's assessment that the final standards are reasonable and appropriate, after considering lead time, cost, and other relevant factors under the CAA.

As noted in the proposed rule, EPA set previous light-duty vehicle GHG emission standards in joint rulemakings where NHTSA also established CAFE standards. EPA concluded that it was not necessary for this rulemaking to be jointly issued with the National Highway Traffic Safety Administration (NHTSA). EPA has, however, coordinated with NHTSA, both on a bilateral level as well as through the interagency review process for EPA's proposed rule and this final rule facilitated by the Office of Management and Budget (OMB) under E.O. 12866.

2. Why does EPA believe the final standards are appropriate under the CAA?

EPA is revising GHG emissions standards for passenger cars and light trucks under the authority provided by section 202(a) of the CAA. Section 202(a) requires EPA to establish standards for emissions of pollutants from new motor vehicles which, in the Administrator's judgment, cause or contribute to air pollution which may reasonably be anticipated to endanger public health or welfare. Standards under section 202(a) take effect "after such period as the Administrator finds necessary to permit the development and application of the requisite technology, giving appropriate consideration to the cost of compliance within such period." Thus, in establishing or revising section 202(a) standards designed to reduce air pollution that endangers public health and welfare, EPA also must consider technological feasibility, compliance cost, and lead time. EPA also may consider other factors and in previous light-duty vehicle GHG standards rulemakings has considered the impacts of potential GHG standards on the auto industry, cost impacts for consumers, oil conservation, energy security and other energy impacts, as well as other relevant considerations such as safety.

When considering these factors for the SAFE rule, EPA identified several factors, primarily costs to manufacturers and upfront costs to vehicle purchasers, as disfavoring maintaining or increasing the stringency of the then-existing standards, and other factors, such as reduced emissions that endanger public health and welfare and reduced operating costs for consumers, as favoring increased stringency (or a lesser degree of reduced stringency from the then-existing standards). In balancing these factors in the SAFE rule, EPA placed greater weight on the former factors (reducing the costs for the manufacturers and reducing upfront costs for vehicle buyers), and thereby decided to make EPA's GHG standards significantly less stringent. However, the purpose of adopting standards under CAA section 202 is to address air pollution that may reasonably be anticipated to endanger public health and welfare. Indeed, reducing air pollution has traditionally been the focus of such standards.

EPA has reconsidered how costs, lead time and other factors were weighed in the SAFE rule against the potential for achieving emissions reductions and is reaching a different conclusion as to the appropriate stringency of the standards.

In light of the statutory purpose of CAA section 202, the Administrator is placing greater weight on the emission reductions and resulting public health and welfare benefits and, taking into consideration EPA's updated technical analysis, accordingly is establishing significantly more stringent standards for MYs 2023–2026 compared to the standards established by the SAFE rule.

We are revising decisions made in the SAFE final rule in accordance with our updated technical analyses for the proposed and final rule. EPA's approach is consistent with Supreme Court decisions affirming that agencies are free to reconsider and revise their prior decisions where they provide a reasonable explanation for their revised decisions.⁵ In this rule, the agency is changing its 2020 position and restoring its previous approach by finding, in light of its updated technical analyses and of the statutory purposes of the CAA and in particular of section 202(a), that it is more appropriate to place greater weight on the magnitude and benefits of reducing emissions that endanger public health and welfare, while continuing to consider compliance costs, lead time and other relevant factors. In addition to the greater emphasis on emissions reductions, the agency's decision to adopt more stringent standards for MYs 2023–2026 is significantly informed by consideration of new information that was not available during the SAFE rule development. Specifically, the agency's decision has been informed by the further technological advancements and successful implementations of electric vehicles since the SAFE rule, by the recent manufacturer announcements signaling an accelerated transition to electrified vehicles, and by additional evidence of sustained and active credit trading as manufacturers take advantage of this additional flexibility for adopting emissions-reducing technologies across the new vehicle fleet.

When considering these factors for the SAFE rule, EPA identified several factors, primarily costs to manufacturers and upfront costs to vehicle purchasers, as disfavoring maintaining or increasing the stringency of the then-existing standards, and other factors, such as reduced emissions that endanger public health and welfare and reduced operating costs for consumers, as favoring increased stringency (or a lesser degree of reduced stringency from the then-existing standards). In balancing these factors in the SAFE rule,

⁵ See, e.g., *Encino Motorcars, LLC v. Navarro*, 136 S. Ct. 2117, 2125 (2016); *FCC v. Fox Television Stations, Inc.*, 556 U.S. 502, 515 (2009).

EPA placed disproportionate weight on the former factors (reducing the costs for the manufacturers and reducing upfront costs for vehicle buyers), and thereby significantly diminished the relative weight given to the latter factors (increased operating costs and increased harmful emissions). The SAFE rule relied on this re-weighting to justify making EPA's GHG standards significantly less stringent in a way that (under the SAFE rule's own analysis) would have resulted in increases in CO₂ emissions of 867 MMT (over the vehicles' lifetimes), increases in criteria pollutants, and resulting increases in adverse health effects (as well as net costs to public welfare).⁶

The purpose of adopting standards under CAA section 202, however, is to address air pollution that may reasonably be anticipated to endanger public health and welfare. Indeed, reducing air pollution has traditionally been the focus of such standards. EPA has therefore updated its technical analysis of potential emissions control technologies, costs and lead time and reconsidered how those and other factors were weighed in the SAFE rule against the potential for achieving emissions reductions. In light of the statutory purpose of CAA section 202, the Administrator is restoring the appropriate, central consideration given to the emission reductions from motor vehicles and resulting public health and welfare benefits, while still giving appropriate consideration to compliance costs and other factors (including savings in vehicle operating costs). Accordingly, EPA is establishing significantly more stringent standards for MYs 2023–2026 compared to the standards established by the SAFE rule.

As discussed in Section III.A of this preamble, the standards take into consideration both the updated analyses for the proposed and final rule and past EPA analyses conducted for previous GHG standards. We are revising decisions made in the SAFE final rule in accordance with Supreme Court decisions affirming that agencies are free to reconsider and revise their prior decisions where they provide a reasonable explanation for their revised decisions. In this rulemaking, the agency is changing its 2020 position and restoring its previous approach by finding, in light of the statutory purposes of the CAA and in particular of section 202(a), that it is more appropriate to place considerable weight on the magnitude and benefits of reducing emissions that endanger public health and welfare, while continuing to

consider compliance costs, lead time and other relevant factors.

EPA has carefully considered the technological feasibility and cost of the full range of alternatives on which we sought public comment in the proposed rule and the available lead time for manufacturers to comply with them, including the role of flexibilities designed to facilitate compliance. In our technical assessment, discussed in further detail in section VI.A of this preamble, we conclude that there has been ongoing advancement in emissions reducing technologies since the beginning of the EPA's program in 2012, and that there is potential for greater penetration of these technologies across all new vehicles. In addition to improvements in ICE vehicles, recent advancements in electric vehicle technologies have greatly increased the available options for manufacturers to meet more stringent standards. Based on our updated technical analyses and consideration of the public comments, EPA has determined that standards that are more stringent in the later model years (*i.e.*, after MY 2024) than the proposed standards are more appropriate under Section 202(a).

In recognition of lead time considerations, for MYs 2023 and 2024, EPA is finalizing the proposed standards for those model years. For MYs 2025 and 2026, EPA has determined that it is appropriate to finalize standards more stringent than those proposed, and, as described in more detail in section I.B of this preamble, we are finalizing standards that are the most stringent of the alternatives considered in the proposed rule for those model years.

This approach best meets EPA's responsibility under the CAA to protect human health and the environment, as well as its statutory obligation to consider lead time, feasibility, and cost. The final standards will result in significantly greater reductions of GHG emissions over time compared to the proposed standards. EPA projects that the final standards will result in a reduction of 3.1 billion tons of GHG emissions by 2050—50 percent greater emission reductions than our proposed standards. In addition, the final standards will reduce emissions of some criteria pollutants and air toxics, resulting in important public health benefits, as described in Section V of this preamble. The final standards will result in reduced vehicle operating costs for consumers. The fuel consumption reduced by the final standards will save consumers \$210 to \$420 billion in retail fuel costs through 2050. Although the up-front technology cost for a MY 2026

vehicle meeting the final standards is estimated to be \$1,000 on average, drivers will recover that up-front cost over time through savings in fuel costs. For an individual consumer on average, EPA estimates that, over the lifetime of a MY 2026 vehicle, the reduction in fuel costs will exceed the increase in vehicle costs by \$1,080 (see Section VII.J of this preamble). Further, the overall benefits of the program will far outweigh the costs, as EPA estimates net benefits of \$120 billion to \$190 billion through 2050.⁷ Section I.B of this preamble describes the final standards in more detail.

In developing this final rulemaking, EPA updated the analyses based, in part, on our assessment of the public comments. We agree with commenters who stated that it is appropriate to update certain key inputs—for example, the vehicle baseline fleet and certain technology costs—to reflect newer data. For example, a key update was to the estimates of battery costs for electrified vehicles, which have decreased significantly in recent years. EPA's approach to updating these costs and other inputs to the analyses is described in Section III.A of this preamble.

The more stringent standards for MY 2025 and 2026 also provide a more appropriate transition to new standards for MY 2027 and beyond. As stated in the proposal, EPA is planning to initiate a rulemaking to establish multi-pollutant emission standards for MY 2027 and later (see the preamble to the proposed rule at section I.A.3). Consistent with the direction of Executive Order 14037, "Strengthening American Leadership in Clean Cars and Trucks,"⁸ this subsequent rulemaking will extend to at least MY 2030 and will apply to light-duty vehicles as well as medium-duty vehicles (*e.g.*, commercial pickups and vans, also referred to as heavy-duty class 2b and 3 vehicles) and is likely to significantly build upon the standards established in this final rule. EPA looks forward to engaging with all stakeholders, including states and our federal partners, to inform the development of these future standards.

B. Summary of Final Light-Duty Vehicle GHG Program

EPA is finalizing revised GHG standards that begin in MY 2023 and increase in stringency year over year through MY 2026.

After consideration of public comments, EPA is adopting the

⁷ See Section VII.I of this preamble for more detail.

⁸ 86 FR 43583, August 10, 2021.

⁶ See 85 FR 25111, April 30, 2020.

following approach for setting the final standards:

- For MYs 2023 and 2024, EPA is finalizing the proposed standards.
- For MY 2025, EPA is finalizing the Alternative 2 standards (the most stringent standards considered in the proposed rule for this MY).
- For MY 2026, EPA is finalizing the most stringent alternative upon which we sought comment—the Alternative 2 standards with an additional 10 g/mile increased stringency.

EPA is finalizing optional flexibility provisions for manufacturers that are more targeted than proposed, primarily to focus most of the flexibilities on MYs 2023–2024 in consideration of lead time for manufacturers and to help them manage the transition to more stringent standards by providing some additional flexibility. We summarize the final flexibility program elements, including an analysis of key public comments, in Sections II.A.4 and II.B of this preamble.

This final rule accelerates the rate of stringency increases of the MY 2023–2026 SAFE standards from a roughly 1.5 percent year-over-year rate of stringency increase to a nearly 10 percent stringency increase from MY 2022 to MY 2023, followed by a 5 percent stringency increase in MY 2024, as proposed. In MY 2025, the stringency of the final standards increases by 6.6 percent, culminating with a 10 percent stringency increase in MY 2026, as provided in the Alternative 2 standards with an additional 10 g/mile increased stringency in MY 2026, on which we sought comment.

EPA believes the 10 percent increase in stringency in MY 2023 is appropriate given the technological investments industry was on track to make under the 2012 standards and has continued to make beyond what would be required to meet the SAFE rule standards, as well as the compliance flexibilities available within the program. This is illustrated in part by several manufacturers, representing nearly 30 percent of the nationwide auto market, having chosen to participate in the California Framework Agreements. Our decision to finalize the more stringent Alternative 2 standards for MY 2025, and the Alternative 2 standards with a further increase of stringency of 10 g/mile in MY 2026 takes into account the additional lead time available for MYs 2025–2026 compared to MYs 2023–2024. Given this additional lead time, EPA has determined that it is appropriate, particularly in light of the accelerating transition to electrified vehicles that has already begun, to require additional emissions reductions in this time frame. The resulting

trajectory of increasing stringency from MYs 2023 to 2026 also takes into account the credit-based emissions averaging, banking and trading flexibilities of the current program, including flexibility provisions that have been retained, and the targeted additional flexibilities that are being extended in this final rule, especially in the early years of the program. EPA has also taken into account manufacturers' ability to generate credits against the existing standards that were relaxed in the SAFE rule for MYs 2021 and 2022, which we are not revising. The final standards for MYs 2023–2026 will achieve significant GHG and other emission reductions and related public health and welfare benefits, while providing consumers with lower operating costs resulting from significant fuel savings. Our analyses described in this final rule support the conclusion that the final standards are appropriate under section 202(a) of the CAA, considering costs, technological feasibility, available lead time, and other factors.

In our design and analyses of the final program, and our overall updated assessment of feasibility, EPA took into account the decade-long light-duty vehicle GHG emission reduction program in which the auto industry has introduced a wide lineup of ever more fuel-efficient, GHG-reducing technologies that are already present in much of the fleet and will enable the industry to achieve the standards established in this rule. As explained in the preamble to the proposed rule, in light of the design cycle timing for manufacturers of light-duty vehicles, EPA reasonably expects that the vehicles that automakers will be selling during the first years of the MY 2023–2026 program were already designed before the less stringent SAFE standards were adopted.

Most automakers have launched ambitious plans to develop and produce increasing numbers of zero- and near-zero-emission vehicles. EPA recognizes that during the near-term timeframe of the standards, the new vehicle fleet likely will continue to consist predominantly of gasoline-fueled vehicles, although the volumes of electrified vehicles will continue to increase, particularly in MYs 2025 and 2026. In this preamble and the Regulatory Impact Analysis (RIA), we provide analyses supporting our assessment that the final standards for MYs 2023 through 2026 are achievable primarily through the application of advanced gasoline vehicle technologies but with a growing percentage of electrified vehicles. We project that

during the four-year ramp up of the stringency of the GHG standards, the standards can be met with gradually increasing sales of plug-in electric vehicles in the U.S., from about 7 percent market share in MY 2023 (including both fully electric vehicles (EVs) and plug-in hybrid vehicles (PHEVs)) up to about 17 percent in MY 2026. In MY 2020, EVs and PHEVs represented about 2.2 percent of U.S. new vehicle production.⁹ From January through September 2021, EVs and PHEVs represented 3.6 percent of total U.S. light-duty vehicle sales,¹⁰ and are projected to be 4.1 percent of production by the end of MY 2021.¹¹ This rule is expected to result in an increase in penetration of EV and PHEV vehicles from today's levels, and we believe the projected penetrations are reasonable when considering the results of our analysis as well as these trends in the growth of EV market share, as well as the proliferation of recent automaker announcements on plans to transition toward an electrified fleet (which we discuss in Section III.C of this preamble). Projections of future EV market share also increasingly show rates of EV penetration commensurate with what we project under the final standards.^{12 13 14} Numerous automaker announcements of a rapidly increasing focus on EV and PHEV production (see Section III.C of this preamble), which were reiterated in their public comments, show that automakers are already preparing for rapid growth in EV penetration. EPA finds that, given

the rate and breadth of these announcements across the industry, the levels of EV penetration we project to occur are appropriate. As described elsewhere in this preamble, based on our analysis of the final standards, we believe that the targeted incentives and flexibilities that we are finalizing for the early years of the program will further address lead time considerations as well as support the acceleration of automakers' introduction and sales of advanced technologies, including zero and near-zero-emission technologies.

We describe additional details of the final standards below and in later sections of the preamble as well as in the RIA.

1. Final Revised GHG Emissions Standards

As with EPA's previous light-duty GHG programs, as proposed, EPA is finalizing footprint-based standards curves for both passenger cars and light trucks (throughout this action, "trucks" or "light trucks" refers to light-duty trucks). Each manufacturer has a unique standard for the passenger cars category and another for the truck category¹⁵ for each MY based on the sales-weighted

¹⁵ Passenger cars include cars and smaller cross-overs and SUVs, while the truck category includes larger cross-overs and SUVs, minivans, and pickup trucks.

footprint-based CO₂ targets¹⁶ of the vehicles produced in that MY.

EPA is finalizing the proposed standards for MYs 2023 and 2024, the Alternative 2 standards for MY 2025, and the Alternative 2 standards minus 10 g/mile for MY 2026. In the proposed rule, EPA requested comment on standards for MY 2026 that would result in fleet average target levels that are in the range of 5–10 g/mile lower (*i.e.*, more stringent) than the levels proposed in each of the three alternatives, and is finalizing a level 10 g/mile lower than the proposed rule's Alternative 2 for MY 2026.

Figure 1 shows EPA's final standards, expressed as average projected fleetwide GHG emissions targets (cars and trucks combined), through MY 2026. For comparison, the figure also shows the corresponding targets for the proposed standards (Proposal), the Alternative 2 standards reduced by 10 g/mile in MY 2026 (Alternative 2 minus 10), as described further in Section II.C of this preamble, the SAFE standards, and the 2012 FRM standards.¹⁷ The projected

¹⁶ Because compliance is based on the full range of vehicles in a manufacturer's car and truck fleets, with lower-emitting vehicles compensating for higher-emitting vehicles, the emission levels of specific vehicles within the fleet are referred to as targets, rather than standards.

¹⁷ The Proposal and Alternative 2 minus 10 standards are the less and more stringent alternatives EPA analyzed in addition to the final rule. See Sections II.C and III.D of this preamble for more information these alternatives.

fleet targets for the final standards increase in stringency in MY 2023 by almost 10 percent (compared to the SAFE rule standards in MY 2022), followed by stringency increases of 5 percent in MY 2024, 6.6 percent in MY 2025 and 10 percent in MY 2026. As with all EPA vehicle emissions standards, the MY 2026 standards will remain in place for all subsequent MYs, unless and until the standards for future MYs are revised in a subsequent rulemaking. As noted previously, EPA is planning a future rulemaking to establish new emissions standards for MY 2027 and beyond.

Table 1 presents the projected overall industry fleetwide CO₂-equivalent emission compliance target levels, based on EPA's final standards presented in Figure 1. The industry fleet-wide estimates in Table 1 are projections based on EPA's modeling, taking into consideration projected fleet mix and footprints for each manufacturer's fleet in each model year. Table 2 presents projected industry fleet average year-over-year percent reductions (and cumulative reductions from 2022 through 2026) comparing the standards under the SAFE rule and the revised final standards. See Section II.A of this preamble for a full discussion of the final standards and presentations of the footprint standards curves.

BILLING CODE 6560-50-P

Figure 1 EPA Final Industry Fleet-Wide CO₂ Compliance Targets, Compared to 2012 and SAFE Rules, the Proposal and Alternative 2 minus 10, g/mile, MYs 2020-2026 and later

BILLING CODE 6560-50-C

TABLE 1—PROJECTED INDUSTRY FLEET-WIDE CO₂ COMPLIANCE TARGETS FOR MYs 2023–2026 [g/mile]*

Model year	Cars CO ₂ (g/mile)	Light trucks CO ₂ (g/mile)	Fleet CO ₂ (g/mile)
2022 (SAFE reference)	181	261	224
2023	166	234	202
2024	158	222	192
2025	149	207	179
2026 and later	132	187	161
Total change 2022–2026	–49	–74	–63

* The combined car/truck CO₂ targets are a function of projected car/light truck shares, which have been updated for this final rule (MY 2020 is 44 percent car and 56 percent light trucks while the projected mix changes to 47 percent cars and 53 percent light trucks by MY 2026).

TABLE 2—PROJECTED INDUSTRY FLEET AVERAGE TARGET YEAR-OVER-YEAR PERCENT REDUCTIONS

	SAFE rule standards*			Proposed standards**			Final standards**		
	Cars (%)	Trucks (%)	Combined (%)	Cars (%)	Trucks (%)	Combined (%)	Cars (%)	Trucks (%)	Combined (%)
2023	1.7	1.7	2.1	8.4	10.4	9.8	8.4	10.4	9.8
2024	0.6	1.5	1.4	4.7	5.0	5.1	4.8	4.9	5.1
2025	2.3	1.7	2.2	4.8	5.0	5.0	5.7	7.0	6.6
2026	1.8	1.6	1.9	4.8	5.0	5.0	11.4	9.5	10.3

TABLE 2—PROJECTED INDUSTRY FLEET AVERAGE TARGET YEAR-OVER-YEAR PERCENT REDUCTIONS—Continued

	SAFE rule standards*			Proposed standards**			Final standards**		
	Cars (%)	Trucks (%)	Combined (%)	Cars (%)	Trucks (%)	Combined (%)	Cars (%)	Trucks (%)	Combined (%)
Cumulative	6.3	6.3	7.4	20.9	23.1	22.8	27.1	28.3	28.3

* Note the percentages shown for the SAFE rule targets have changed slightly from the proposed rule, due to the updates in our base year fleet from MY 2017 to MY 2020 manufacturer fleet data.

** These are modeled results based on projected fleet characteristics and represent percent reductions in projected targets, not the standards (which are the footprint car/truck curves), associated with that projected fleet (see Section III of this preamble for more detail on our modeling results).

2. Final Compliance Flexibilities and Advanced Technology Incentives

EPA received many comments on the proposed flexibility provisions. After considering the comments along with our updated analyses, we are finalizing flexibility provisions that are narrower than proposed in several aspects, primarily to focus the additional flexibilities in MYs 2023–2024 to help manufacturers manage the transition to more stringent standards by providing some additional flexibility in the near-term. We summarize the final flexibility program elements, including a summary and analysis of key comments, in Section II.B of this preamble.

EPA proposed a set of extended or additional temporary compliance flexibilities and incentives that we believed would be appropriate given the stringency and lead time of the proposed standards. We proposed four types of flexibilities/incentives, in addition to those already available under EPA’s previously established regulations: (1) A limited extension of carry-forward credits generated in MYs 2016 through 2020 beyond the normal five years otherwise specified in the

regulations; (2) an extension of the advanced technology vehicle multiplier credits for MYs 2022 through 2025 with a cumulative credit cap; (3) full-size pickup truck incentives for strong hybrids or similar performance-based credit for MYs 2022 through 2025 (provisions which were removed in the SAFE rule); and (4) an increase of the off-cycle credits menu cap from 10 g/mile to 15 g/mile. EPA also proposed to remove the multiplier incentives for natural gas fueled vehicles for MYs 2023–2026.

The GHG program includes existing provisions initially established in the 2010 rule, which set the MYs 2012–2016 GHG standards, for how credits may be used within the program. These averaging, banking, and trading (ABT) provisions include credit carry-forward, credit carry-back (also called deficit carry-forward), credit transfers (within a manufacturer), and credit trading (across manufacturers). These ABT provisions define how credits may be used and are integral to the program, essentially enabling manufacturers to plan compliance over a multi-year time period. The current program allows credits to be carried forward for 5 years

(i.e., a 5-year credit life). EPA proposed a two-year extension of MYs 2016 credit life and a one-year extension of MYs 2017–2020 credit life.

EPA is finalizing a more limited approach to credit life extension, adopting only a one-year extension for MY 2017–2018 credits, as shown in Table 3 below. EPA was persuaded by public comments from non-governmental organizations (NGOs), some states including California, and EV manufacturers that the proposed credit life extension overall was unnecessary and could diminish the stringency of the final standards. While several auto industry commenters suggested even additional credit life extensions, EPA’s assessment is that the standards are feasible with the more narrowed credit extensions of one-year for the MYs 2017 and 2018 credits, which make more credits available in the early years of the program, MYs 2023 and 2024, to help manufacturers manage the transition to more stringent standards by providing some additional flexibility. For all other credits generated in MY 2016 and later, credit carry-forward remains unchanged at five years.

TABLE 3—FINAL EXTENSION OF CREDIT CARRY-FORWARD FOR MY 2016–2020 CREDITS

MY credits are banked	MYs credits are valid under extension										
	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026
2016		x	x	x	x	x					
2017		x		x	x	x	x	+			
2018			x	x		x	x	x	+		
2019				x	x		x	x	x		
2020					x		x	x	x	x	
2021							x	x	x	x	x

x = Previous program. + = Additional years included in Final Rule.

The previous GHG program also includes temporary incentives through MY 2021 that encourage the use of advanced technologies such as electric, hybrid, and fuel cell vehicles, as well as incentives for full-size pickups using strong hybridization or technologies providing similar emissions reductions to hybrid technology. The full-size

pickup incentives originally (in the 2012 rule) were available through MY 2025, but the SAFE rule removed these incentives for MYs 2022 through 2025. When EPA established these incentives in the 2012 rule, EPA recognized that they would reduce the effective stringency of the standards, but believed that it was worthwhile to have a limited

near-term loss of emissions reduction benefits to increase the potential for far greater emissions reduction and technology diffusion benefits in the longer term.¹⁸ EPA believed that the temporary regulatory incentives would

¹⁸ See Tables III–2 and III–3, 77 FR 62772, October 15, 2012.

help bring low emission technologies to market more quickly than an effective market would in the absence of incentives.^{19 20} With these same goals in mind for this program, EPA proposed multiplier incentives from MYs 2022 through MY 2025 with a cap on multiplier credits and to reinstate the full-size pickup incentives also for MYs 2022 through 2025. The proposed incentives were intended as a temporary measure supporting the transition to zero-emission vehicles and to provide additional flexibility in meeting the MY 2023–2026 proposed standards.

However, EPA is finalizing a narrower timeframe for the temporary multiplier and full-size pickup incentives, focusing the incentives only in MYs 2023–2024, to help manufacturers manage the transition to more stringent standards by providing some additional flexibility. After considering comments and further analyzing the potential impact of multipliers on costs and emissions reductions, EPA is adopting temporary multipliers for MYs 2023–2024 at a level lower than proposed while finalizing the proposed credit cap of 10 g/mile cumulatively, as further discussed in Section II.B.1 of this preamble. EPA is not finalizing multiplier incentives for MY 2022 or MY 2025 and is instead sunsetting them at the end of MY 2024. Under this approach, manufacturers utilizing this optional incentive program would need to produce more advanced technology vehicles (EVs, PHEVs or fuel cells) in order to fully utilize multiplier credits before reaching the cap, thus incentivizing greater volumes of these zero and near-zero emission vehicles. Similarly, EPA is finalizing temporary full-size pickup incentives only for MYs 2023–2024 and sunsetting them at the end of MY 2024. These provisions are further discussed in Section II.B.2 of this preamble.

EPA is finalizing our proposed removal of the extended multiplier incentives for natural gas vehicles (NGVs) after MY 2022, which was added by the SAFE rule, because NGVs are not a near-zero emissions technology and EPA believes multipliers are no longer necessary or appropriate for these vehicles. NGV multiplier incentives are discussed in Section II.B.1.iii of this preamble.

For the off-cycle credits program, EPA is finalizing our proposed incentive to increase the menu cap from 10 to 15 g/

mile, but for a more limited time frame. EPA is finalizing this cap increase beginning in MY 2023 through MY 2026, instead of beginning the cap increase in MY 2020 as in the proposed rule. Off-cycle credits are intended to reflect real-world emissions reductions for technologies not captured on the CO₂ compliance test cycles. EPA agrees with public comments from many NGOs and states that increasing the off-cycle credit menu cap starting in MY 2020 would unnecessarily provide additional credit opportunities during the years of the weakened SAFE standards in MYs 2021 and 2022. EPA also is finalizing revised definitions for three off-cycle technologies to begin in MY 2023, to ensure real-world emission reductions consistent with the menu credit values. See Section II.B.3 of this preamble for further information.

C. Analytical Support for the Final Revised Standards

EPA updated several key inputs to our analysis for this final rule based on public comments and newer available data, as detailed in Section III.A of this preamble, including updates to the baseline vehicle fleet and battery costs, issues on which we received a substantial number of public comments.

We have updated the baseline vehicle fleet to reflect the MY 2020 fleet rather than the MY 2017 fleet used in the analysis for the proposed rule.²¹ As a result, there is slightly more GHG-reducing technology contained in the baseline fleet and the fleet mix has changed to reflect more light trucks in the fleet (56 percent trucks/44 percent cars, compared to the 50/50 car/truck split in the analysis for the proposed rule).

In the proposed rule, we noted that the electrified vehicle battery costs used in the SAFE FRM, which were carried over to the proposed rule analysis, could be lower based on EPA's latest assessment and that updating those costs for the proposed rule would not have had a notable impact on overall cost estimates. This conclusion was based in part on our expectation that electrification would continue to play a relatively modest role in our projections of compliance paths for the proposed standards, as it had in all previous analyses of standards with a similar level of stringency. We also noted in the proposal that we could update battery costs for the final rule and requested comment on whether our choice of

modeling inputs such as these should be modified for the final rule analysis. In response to the public comments regarding EPA's battery cost estimates used in the proposed rule, EPA has updated the battery costs for the final rule analysis based on the most recent available data, resulting in lower projected battery costs compared to our proposed rule. EPA agrees with commenters that battery costs used in the proposed rule were higher than recent evidence supports. Consideration of the current costs of batteries for electrified vehicles, as widely reported in the trade and academic literature and further supported by our battery cost modeling tools, led EPA to adjust the battery costs to more accurately account for these trends. Based on an updated assessment, described further in Section III.A of this preamble and Chapter 2 of the RIA, we determined that battery costs should be reduced by about 25 percent. More information on the public comments we received and the revised inputs leading to this change is available in Section III.A of this preamble and Chapter 2 of the RIA.

Other key changes to our analysis since the proposed rule include:

- Updated projections from EIA (AEO 2021), including Gross Domestic Product, number of households, vehicle miles traveled (VMT) growth rates and historic fleet data
- Updated energy security cost per gallon factors
- Updated tailpipe and upstream emission factors
- High compression ratio level 2 (HCR2) technology was removed as a separate compliance option within the model although HCR0 and HCR1 remain as options^{22 23}
- Increased utilization of BEVs with a 300 mile range and lower utilization of BEVs with a 200 mile range
- Updated credit banks reflecting more recent information from EPA's manufacturer certification and compliance data
- Updated valuation of off-cycle credits (lower costs) and updated assumptions for off-cycle credit usage across manufacturers
- Updated vehicle sales elasticity (changed from –1 percent to –0.4 percent) based on a recent EPA study²⁴

More information on these and other analysis updates is in Section III.A of this preamble.

¹⁹ 77 FR 62812, October 15, 2012.

²⁰ Manufacturers use of the incentives is provided in "The 2021 EPA Automotive Trends Report, Greenhouse Gas Emissions, Fuel Economy, and Technology since 1975," EPA-420R-211023, November 2021.

²¹ EPA's updated MY 2020 baseline fleet is generally consistent with that used by NHTSA in their recent CAFE NPRM (86 FR 49602, September 3, 2021).

²² For further details on HCR definitions, see Chapter 2.3.2 of the RIA. For HCR implementation in CCEMS, see Chapter 4.1.1.3 of the RIA.

²³ See Section III.A of this preamble.

²⁴ See Section VII.B of this preamble.

As with our earlier analyses, including SAFE and the August 2021 EPA proposed rule, for this final rule EPA used a model to simulate the decision process of auto manufacturers in choosing among the emission reduction technologies available to incorporate in vehicles across their fleets. The model takes into account both the projected costs of technologies and the relative ability of each of these technologies to reduce GHG emissions. This process identifies potential pathways for manufacturers to comply with a given set of GHG standards. EPA then estimates projected average and total costs for manufacturers to produce these vehicles to meet the standards under evaluation during the model years covered by the analysis.

In addition to projecting the technological capabilities of the industry and estimating compliance costs for each of the four affected model years (MYs 2023–2026), EPA has considered the role of the averaging, banking, and trading system that has been available and extensively used by the industry since the beginning of the light-duty vehicle GHG program in model year 2012. Our analysis of the current and anticipated near-future usage of the GHG credit mechanisms reinforces the trends we identified in our other analyses showing widespread technological advancement in the industry at reasonable per-vehicle costs. Together, these analyses support EPA’s conclusion under section 202(a) of the CAA that technologically feasible pathways are available at reasonable costs for automakers to comply with EPA’s standards during each of the four model years. We discuss these analyses and their results further in Section III of this preamble.

We also estimate the GHG and non-GHG emission impacts (tailpipe and

upstream) of the standards. EPA then builds on the estimated changes in emissions and fuel consumption to calculate projected net economic impacts from these changes. Key economic inputs include: Measures of health impacts from changes in criteria pollutant emissions; a value for the vehicle miles traveled “rebound effect;” estimates of energy security impacts of changes in fuel consumption; the social costs of GHGs; and costs associated with crashes, noise, and congestion from additional rebound driving.

Our overall analytical approach generates key results for the following metrics: Incremental costs per vehicle (industry-wide averages and by manufacturer); total vehicle technology costs for the auto industry; GHG emissions reductions and criteria pollutant emissions reductions; penetration of key GHG-reducing technologies across the fleet; consumer fuel savings; oil reductions; and net societal costs and benefits. We discuss these analyses in Sections III, IV, V, and VII of this preamble as well as in the RIA.

D. Summary of Costs, Benefits and GHG Emission Reductions of the Final Program

EPA estimates that the total benefits of this final rule far exceed the total costs—the net present value of benefits is between \$120 billion to \$190 billion (annualized net benefits between \$6.2 billion to \$9.5 billion). Table 4 below summarizes EPA’s estimates of total discounted costs, fuel savings, and benefits. The results presented here project the monetized environmental and economic impacts associated with the final program during each calendar year through 2050.

The benefits include climate-related economic benefits from reducing

emissions of GHGs that contribute to climate change, reductions in energy security externalities caused by U.S. petroleum consumption and imports, the value of certain particulate matter-related health benefits, the value of additional driving attributed to the rebound effect, and the value of reduced refueling time needed to fill a more fuel-efficient vehicle. Between \$8 and \$19 billion of the total benefits through 2050 are attributable to reduced emissions of non-GHG pollutants, primarily those that contribute to ambient concentrations of smaller particulate matter (PM_{2.5}). PM_{2.5} is associated with premature death and serious health effects such as hospital admissions due to respiratory and cardiovascular illnesses, nonfatal heart attacks, aggravated asthma, and decreased lung function. The program will also have other significant social benefits including \$130 billion in climate benefits (with the average SC–GHGs at a 3 percent discount rate) and fuel savings of \$150 billion to \$320 billion exclusive of fuel taxes. For American drivers, who purchase fuel inclusive of fuel taxes, the fuel savings will total \$210 billion to \$420 billion through 2050 (see Table 44). With these fuel savings, consumers will benefit from reduced operating costs over the vehicle lifetime. Over the lifetime of a MY 2026 vehicle, EPA estimates that the reduction in fuel costs will exceed the increase in vehicle costs by \$1,080 for consumers on average.

The analysis also includes estimates of economic impacts stemming from additional vehicle use from increased rebound driving, such as the economic damages caused by crashes, congestion, and noise. See Chapter 3 of the RIA for more information regarding these estimates.

TABLE 4—MONETIZED DISCOUNTED COSTS, BENEFITS, AND NET BENEFITS OF THE FINAL PROGRAM FOR CALENDAR YEARS THROUGH 2050

[billions of 2018 dollars] ^{a b c d e}

	Present value		Annualized value	
	3% discount rate	7% discount rate	3% discount rate	7% discount rate
Costs	\$300	\$180	\$15	\$14
Fuel Savings	320	150	16	12
Benefits	170	150	8.6	8.1
Net Benefits	190	120	9.5	6.2

Notes:

^a Values rounded to two significant figures; totals may not sum due to rounding. Present and annualized values are based on the stream of annual calendar year costs and benefits included in the analysis (2021–2050) and discounted back to year 2021.

^b Climate benefits are based on reductions in CO₂, CH₄ and N₂O emissions and are calculated using four different estimates of the social cost of each GHG (SC-GHG model average at 2.5%, 3%, and 5% discount rates; 95th percentile at 3% discount rate), which each increase over time. In this table, we show the benefits associated with the average SC-GHGs at a 3% discount rate but the Agency does not have a single central SC-GHG point estimate. We emphasize the importance and value of considering the benefits calculated using all four SC-GHG estimates and present them later in this preamble. As discussed in Chapter 3.3 of the RIA, a consideration of climate benefits calculated using discount rates below 3 percent, including 2 percent and lower, is also warranted when discounting intergenerational impacts. For further discussion of how EPA accounted for these estimates, please refer to section VI of this preamble and the separate Response to Comments.

^c The same discount rate used to discount the value of damages from future GHG emissions (SC-GHGs at 5, 3, and 2.5 percent) is used to calculate the present and annualized values of climate benefits for internal consistency, while all other costs and benefits are discounted at either 3% or 7%.

^d Net benefits reflect the fuel savings plus benefits minus costs.

^e Non-GHG impacts associated with the standards presented here do not include the full complement of health and environmental effects that, if quantified and monetized, would increase the total monetized benefits. Instead, the non-GHG benefits are based on benefit-per-ton values that reflect only human health impacts associated with reductions in PM_{2.5} exposure.

EPA estimates the average per-vehicle cost to meet the standards to be \$1,000 in MY 2026, as shown in Table 5 below. Note that compared to the proposal, the total costs through 2050, shown in Table 4, are somewhat higher, while the per-vehicle costs shown in Table 5 are slightly lower. We discuss this in more detail in Section III.B.2 of this preamble and RIA Chapter 4.1.3.

TABLE 5—CAR, LIGHT TRUCK AND FLEET AVERAGE COST PER VEHICLE RELATIVE TO THE NO ACTION SCENARIO [2018 dollars]

	2023	2024	2025	2026
Car	\$150	\$288	\$586	\$596
Light Truck	485	732	909	1,356
Fleet Average	330	524	759	1,000

The final standards will achieve significant reductions in GHG emissions. As seen in Table 6 below, through 2050 the program will achieve more than 3.1 billion tons of GHG emission reductions, which is 50 percent greater emissions reductions than EPA’s proposed standards.

TABLE 6—GHG REDUCTIONS THROUGH 2050

Emission impacts relative to no action			Percent change from no action		
CO ₂ (million metric tons)	CH ₄ (metric tons)	N ₂ O (metric tons)	CO ₂	CH ₄	N ₂ O
- 3,125	- 3,272,234	- 96,735	- 9%	- 8%	- 8%

E. How has EPA considered environmental justice in this final rule?

Executive Order 12898 (59 FR 7629, February 16, 1994) establishes federal executive policy on environmental justice. It directs federal agencies, to the greatest extent practicable and permitted by law, to make achieving environmental justice part of their mission by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects of their programs, policies, and activities on minority populations and low-income populations in the United States (U.S.). EPA defines environmental justice as the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies.²⁵

Executive Order 14008 (86 FR 7619, February 1, 2021) also calls on federal agencies to make achieving environmental justice part of their respective missions “by developing

environmental harms and risks, including those resulting from the negative environmental consequences of industrial, governmental and commercial operations or programs and policies.” Meaningful involvement occurs when “(1) potentially affected populations have an appropriate opportunity to participate in decisions about a proposed activity [e.g., rulemaking] that will affect their environment and/or health; (2) the public’s contribution can influence [the EPA’s rulemaking] decision; (3) the concerns of all participants involved will be considered in the decision-making process; and (4) [the EPA will] seek out and facilitate the involvement of those potentially affected” A potential EJ concern is defined as “the actual or potential lack of fair treatment or meaningful involvement of minority populations, low-income populations, tribes, and indigenous peoples in the development, implementation and enforcement of environmental laws, regulations and policies.” See “Guidance on Considering Environmental Justice During the Development of an Action.” Environmental Protection Agency, <https://www.epa.gov/environmentaljustice/guidance-considering-environmental-justice-during-development-action>. See also <https://www.epa.gov/environmentaljustice>.

programs, policies, and activities to address the disproportionately high and adverse human health, environmental, climate-related and other cumulative impacts on disadvantaged communities, as well as the accompanying economic challenges of such impacts.” It declares a policy “to secure environmental justice and spur economic opportunity for disadvantaged communities that have been historically marginalized and overburdened by pollution and underinvestment in housing, transportation, water and wastewater infrastructure and health care.”

Under E.O. 13563, federal agencies may consider equity, human dignity, fairness, and distributional considerations in their regulatory analyses, where appropriate and permitted by law.

EPA’s 2016 “Technical Guidance for Assessing Environmental Justice in Regulatory Analysis” provides recommendations on conducting the highest quality analysis feasible, recognizing that data limitations, time

²⁵ Fair treatment means that “no group of people should bear a disproportionate burden of

and resource constraints, and analytic challenges will vary by media and regulatory context.²⁶

EPA's mobile source regulatory program has historically reduced significant amounts of both GHG and non-GHG pollutants to the benefit of all U.S. residents, including populations that live near roads and in communities with environmental justice (EJ) concerns. EJ concerns may arise in the context of this rulemaking in two key areas.

First, people of color and low-income populations may be especially vulnerable to the impacts of climate change. As discussed in Section IV.C of this preamble, this rulemaking will mitigate the impacts of climate change by achieving significant GHG emission reductions, which will benefit populations that may be especially vulnerable to various forms of damages associated with climate change.

Second, in addition to significant climate-change benefits, the standards will also impact non-GHG emissions. As discussed in Section VII.L.2 of this preamble, numerous studies have found that environmental hazards such as air pollution are more prevalent in areas where people of color and low-income populations represent a higher fraction of the population compared with the general population. There is substantial evidence, for example, that people who live or attend school near major roadways are more likely to be of a non-White race, Hispanic ethnicity, and/or low socioeconomic status (see Section VII.L.2 of this preamble).

We project that this rule will, over time, result in reductions of non-GHG tailpipe emissions and emissions from upstream refinery sources. We also project that the rule will result in small increases of non-GHG emissions from upstream Electric Generating Unit (EGU) sources. Overall, there are substantial PM_{2.5}-related health benefits associated with the non-GHG emissions reductions that this rule will achieve. The benefits from these emissions reductions, as well as the adverse impacts associated with the emissions increases, could potentially impact communities with EJ concerns, though not necessarily immediately and not equally in all locations. The air quality information needed to perform a quantified analysis of the distribution of such impacts was not available for this rulemaking. We therefore recommend

caution when interpreting these broad, qualitative observations.

As noted previously, EPA intends to develop a subsequent rule to control emissions of GHGs as well as criteria and air toxic pollutants from light- and medium-duty vehicles for MYs 2027 and beyond. We are considering how to project air quality impacts from the changes in non-GHG emissions for that future rulemaking (see Section V.C of this preamble).

F. Affordability and Equity

In addition to considering environmental justice impacts, we have examined the effects of the standards on affordability of vehicles and transportation services for low-income households in Section VII.L of this preamble and Chapter 8.4 of the RIA. As with the effects of the standards on vehicle sales discussed in Section VII.B of this preamble, the effects of the standards on affordability and equity depend in part on two countervailing effects: The increase in the up-front costs of new vehicles subject to more stringent standards, and the decrease in operating costs from reduced fuel consumption over time. The increase in up-front new vehicle costs has the potential to increase the prices of used vehicles, to make credit more difficult to obtain, and to make the least expensive new vehicles less desirable compared to used vehicles. The reduction in operating costs over time has the potential to mitigate or reverse all these effects. Lower operating costs on their own increase mobility (see RIA Chapter 3.1 for a discussion of rebound driving).

While social equity involves issues beyond income and affordability, including race, ethnicity, gender, gender identification, and residential location, the potential effects of the standards on lower-income households are of great importance for social equity and reflect these contrasting forces. The overall effects on vehicle ownership, including for lower-income households, depend heavily on the role of fuel consumption in vehicle sales decisions, as discussed in Section VII.M of this preamble. At the same time, lower-income households own fewer vehicles per household and are more likely to buy used vehicles than new. In addition, for lower-income households, fuel expenditures are a larger portion of household income, so the fuel savings that will result from this rule may be more impactful to these consumers. Thus, the benefits of this rule may be stronger for lower-income households even (or especially) if they buy used vehicles: As vehicles meeting the standards enter the used vehicle market, they will retain the fuel

economy/GHG-reduction benefits, and associated fuel savings, while facing a smaller portion of the upfront vehicle costs; see Section VII.J of this preamble. The reduction in operating costs may also increase access to transportation services, such as ride-hailing and ride-sharing, where the lower per-mile costs may play a larger role than up-front costs in pricing. As a result, lower-income consumers may be affected more from the reduction in operating costs than the increase in up-front costs.

The analysis for this final rule projects that EVs and PHEVs will gradually increase to about 17 percent market share by MY 2026, although the majority of vehicles produced in the time frame of the final standards will continue to be gasoline-fueled vehicles (see Section III.B.3 of this preamble). EPA has heard from some environmental justice groups and Tribes that limited access to electric vehicles and charging infrastructure for electric vehicles can be a barrier for purchasing EVs. A recent report from the National Renewable Energy Laboratory estimates that public and workplace charging is keeping up with projected needs, based on Level 2 and fast charging ports per plug-in EV.²⁷ Comments received on the proposed rule point out both the higher up-front costs of EVs as challenges for adoption and their lower operating and maintenance costs as incentives for adoption. As noted previously, the higher penetration of EVs in the current analysis as compared to that of the proposed rule is in part an outgrowth of updated estimates of battery costs, which reduce the projected costs of EVs as a compliance path and is consistent with expectations that cost parity with conventional vehicles is in the process of being attained in an increasing number of market segments. A number of auto manufacturers commented on the importance of consumer education, purchase incentives, and charging infrastructure development for promoting adoption of electric vehicles. Some NGOs commented that EV purchase incentives should focus on lower-income households, because they are more responsive to price incentives than higher-income households. EPA will continue to monitor and study affordability issues related to electric

vehicles as their prevalence in the vehicle fleet increases.

II. EPA Standards for MY 2023–2026 Light-Duty Vehicle GHGs

A. Model Year 2023–2026 GHG Standards for Light-Duty Vehicles, Light-Duty Trucks, and Medium-Duty Passenger Vehicles

As noted, the transportation sector is the largest U.S. source of GHG emissions, making up 29 percent of all emissions.²⁸ Within the transportation sector, light-duty vehicles are the largest contributor, 58 percent, to transportation GHG emissions in the U.S.²⁹ EPA has concluded that more stringent standards are appropriate in light of our assessment of the need to reduce GHG emissions, technological feasibility, costs, lead time, and other factors. The MY 2023 through MY 2026 program that EPA is finalizing in this action is based on our assessment of the near-term potential of technologies already available and present in much of the fleet. This program also will serve as an important transition to a longer-term program beyond MY 2026. The following section provides details on EPA's revised standards and related provisions.

EPA is finalizing revised, more stringent standards to control the emissions of GHGs from MY 2023 and later light-duty vehicles.³⁰ Carbon dioxide (CO₂) is the primary GHG resulting from the combustion of vehicular fuels.³¹ The standards regulate CO₂ on a grams per mile (g/mile) basis, which EPA defines by separate footprint curves that apply to vehicles in a manufacturer's car and truck fleets.³² The final standards apply to passenger cars, light-duty trucks, and medium-duty passenger vehicles (MDPVs).³³ As an overall group, they are referred to in this preamble as light-duty vehicles or simply as vehicles. In this preamble, passenger cars may be referred to as "cars," and light-duty

trucks and MDPVs as "light trucks" or "trucks." Based on compliance with the final revised standards, the industry-wide average emissions target for new light-duty vehicles is projected to be 161 g/mile of CO₂ in MY 2026.³⁴ Except for a limited extension of credit carry-forward provisions for certain model years discussed in Section II.A.4 of this preamble, EPA is not changing existing averaging, banking, and trading program elements.

EPA has determined that the revised final standards reflect an appropriate balance of factors considered under section 202(a) of the CAA, as discussed in Section VI of this preamble. In selecting the final standards, EPA carefully considered the concerns raised in public comments submitted by a wide range of stakeholders. EPA appreciates that the auto industry and the UAW generally support the proposed standards, and we also recognize the shorter lead time for the standards beginning in MY 2023. At the same time, we recognize the multitude of stakeholders who voiced the critical need for greater GHG emissions reductions from the light-duty vehicle sector through MY 2026 given the significant need to address air pollution and climate change, as well as the many stakeholders who provided comments and analyses indicating that more stringent standards are achievable in this time frame. EPA has considered all public comments and our updated technical analysis in determining appropriate standards under the CAA. EPA is finalizing standards that maintain the stringency level of the proposed standards in the first two years (MYs 2023 and 2024) in consideration of the shorter lead time, and that are more stringent than the proposed standards in the latter two years (MYs 2025 and 2026). EPA notes that the revised final standards in each model year are significantly more stringent than the SAFE standards.

After considering the public comments received, EPA is finalizing a more limited set of optional manufacturer flexibilities than proposed. Generally, we are narrowing the availability of these flexibilities to MY 2023 and 2024 in consideration of lead time, with the exception of the off-cycle menu credit cap which is available for MY 2023 through 2026 given that these credits achieve real-world emission reductions. The set of four flexibilities includes: (1) A one-year

extension of credit life for MYs 2017 and 2018 credits such that they are available for use in MY 2023 and 2024, respectively; (2) an increase in the off-cycle credit menu cap from 10 g/mile to 15 g/mile from MYs 2023 through 2026. EPA also is finalizing revised definitions for three technologies to ensure real-world emission reductions commensurate with the menu credit values; (3) multiplier incentives for EVs, PHEVs, and FCVs, for 2023 and 2024, with a cumulative credit cap of 10 g/mile, and with multiplier levels lower than those proposed to incentivize more production of advanced technologies. EPA is eliminating multiplier incentives for natural gas vehicles adopted in the SAFE rule after MY 2022; (4) full size pick-up truck incentives for MYs 2023 and 2024 for vehicles that meet efficiency performance criteria or include strong hybrid technology at a minimum level of production volumes. The details of EPA's final provisions for these flexibilities are discussed in Section II.A.4 (credit life extension) and Section II.B (off-cycle, advanced technology multipliers, and full-size pickup credits) of this preamble.

The current light-duty vehicle program includes several program elements that will remain in place, without change. EPA is not changing the fundamental structure of the GHG standards, which are based on the footprint attribute with separate footprint curves for cars and trucks. EPA is also not changing the existing CH₄ and N₂O emissions standards or the program structure in terms of vehicle certification, compliance, and enforcement. EPA is continuing to use tailpipe-only values to determine vehicle GHG emissions, without accounting for upstream emissions (*i.e.*, EVs and PHEVs will continue to apply 0 g/mile through MY 2026). EPA is also not changing existing program opportunities to earn compliance credits toward the fleet-wide average CO₂ standards for improvements to air conditioning systems. The current A/C credits program provides credits for improvements to address both hydrofluorocarbon (HFC) refrigerant direct losses (*i.e.*, system "leakage") and indirect CO₂ emissions related to the increased load on the engine (also referred to as "A/C efficiency" related emissions). We did not propose to change any of these aspects of the existing program, they continue to function as intended and we do not presently believe changes are needed in the context of standards for MY 2023–2026.

²⁸ *Inventory of U.S. Greenhouse Gas Emissions and Sinks: 1990–2019* (EPA-430-R-21-005, published April 2021).

²⁹ *Ibid.*

³⁰ See Sections III and VI of this preamble for discussion of our technical assessment and basis of the final standards.

³¹ EPA's existing vehicle GHG program also includes emissions standards for methane (CH₄) and nitrous oxide (N₂O), and credits for hydrofluorocarbons (HFCs) reductions from air conditioning refrigerants.

³² Footprint curves are graphical representations of the algebraic formulae defining the emission standards in the regulatory text.

³³ As with previous GHG emissions standards, EPA will continue to use the same vehicle category definitions as in the CAFE program. MDPVs are grouped with light trucks for fleet average compliance determinations.

³⁴ The reference to CO₂ here refers to CO₂ equivalent reductions, as this level includes some reductions in emissions of greenhouse gases other than CO₂, from refrigerant leakage, as one part of the A/C related reductions.

1. What fleet-wide emissions levels correspond to the CO₂ standards?

EPA is finalizing revised standards for MYs 2023–2026 that are projected to result in an industry-wide average target for the light-duty fleet of 161 g/mile of CO₂ in MY 2026. The final standards are consistent with the proposed standards in MYs 2023 and 2024 and are more stringent than the proposed standards in MYs 2025 and 2026. In MY 2023, the final standards represent a nearly 10 percent increase in stringency from the SAFE rule standards. The final standards continue to increase in stringency by 5 percent in MY 2024, 6.6 percent in MY 2025, and more than 10 percent in 2026. For MYs 2025 and 2026, the final standards are more stringent than the 2012 rule level of stringency, making the MY 2025 and 2026 standards the most stringent vehicle GHG standards that EPA has

finalized to date. Based on auto manufacturers’ continued technological advancements and progress towards electrification, EPA believes that it is feasible and appropriate to make additional progress in reducing GHG emissions from light-duty vehicles by surpassing the level of stringency of the original MY 2025 and later standards established nine years ago in the 2012 rule, as further described in Sections III and VI of this preamble. EPA is finalizing standards that will take a reasonable approach towards achieving the need for ambitious GHG emission reductions to address climate change. These final standards will play an important role in the transition from the current fleet to even greater GHG emissions reductions in the light-duty fleet, which EPA will pursue in a subsequent rulemaking for MYs 2027 and later.

The industry fleet average and car/light truck year-over-year percent reductions for the final standards compared to the proposed standards and the SAFE rule standards are provided in Table 7 below. For passenger cars, the footprint curves are projected to result in reducing industry fleet average CO₂ emissions targets by 8.4 percent in MY 2023 followed by year over year reductions of 4.8 to 11.4 percent in MY 2024 through MY 2026. For light-duty trucks, the footprint standards curves are projected to result in reducing industry fleet average CO₂ emissions targets by 10.4 percent in MY 2023 followed by year over year reductions of 4.9 to 9.5 percent in MY 2024 through MY 2026. Cumulative reductions in the projected fleet average CO₂ targets over the four model year period are projected to total 27.1 for cars and 28.3 for light-duty trucks.

TABLE 7—PROJECTED INDUSTRY FLEET AVERAGE CO₂ TARGET YEAR-OVER-YEAR PERCENT REDUCTIONS

	SAFE rule standards *			Proposed standards **			Final standards **		
	Cars (%)	Trucks (%)	Combined (%)	Cars (%)	Trucks (%)	Combined (%)	Cars (%)	Trucks (%)	Combined (%)
2023	1.7	1.7	2.1	8.4	10.4	9.8	8.4	10.4	9.8
2024	0.6	1.5	1.4	4.7	5.0	5.1	4.8	4.9	5.1
2025	2.3	1.7	2.2	4.8	5.0	5.0	5.7	7.0	6.6
2026	1.8	1.6	1.9	4.8	5.0	5.0	11.4	9.5	10.3
Cumulative	6.3	6.3	7.4	20.9	23.1	22.8	27.1	28.3	28.3

* Note the percentages shown for the SAFE rule targets have changed slightly from the proposed rule, due to the updates in our base year fleet from MY 2017 to MY 2020 manufacturer fleet data.

** These are modeled results based on projected fleet characteristics and represent percent reductions in projected targets, not the standards (which are the footprint car/truck curves), associated with that projected fleet (see Section III of this preamble for more detail on our modeling results).

For light-trucks, EPA is finalizing, as proposed, a change to the upper right cutpoints of the CO₂-footprint curves (*i.e.*, the footprint sizes in sq. ft. at which the CO₂ standards level off as flat CO₂ target values for larger vehicle footprints. See Figure 4). The SAFE rule altered these cutpoints and EPA is now restoring them to the original upper right cutpoints initially established in the 2012 rule, for MYs 2023–2026, essentially requiring increasingly more stringent CO₂ targets at the higher footprint range up to the revised cutpoint levels. The shapes of the curves and the cutpoints are discussed in Section II.A.2 of this preamble.

The 161 g/mile estimated industry-wide target for MY 2026 noted above is based on EPA’s projected fleet mix projections for MY 2026 (approximately 47 percent cars and 53 percent trucks, with only slight variations from MYs

2023–2026). As discussed below, the final fleet average standards for each manufacturer ultimately will depend on each manufacturer’s actual rather than projected production in each MY from MY 2023 to MY 2026 under the sales-weighted footprint-based standard curves for the car and truck regulatory classes. In the 2012 rule, EPA estimated that the fleet average target would be 163 g/mile in MY 2025 based on the projected fleet mix for MY 2025 (67 percent car and 33 percent trucks) based on information available at the time of the 2012 rulemaking. Primarily due to the historical and ongoing shift in fleet mix that has included more crossover and small and mid-size SUVs and fewer passenger cars, EPA’s projection in the Midterm Evaluation (MTE) January 2017 Final Determination for the original MY 2025 fleet average target level increased

to 173 g/mile.³⁵ EPA has again updated its fleet mix projections for this final rule and projects that the original 2012 rule MY 2025 footprint standards curves would result in an industry-wide fleet average target level of 180 g/mile. The projected fleet average targets under the 2012 rule, using the updated fleet mix projections and the projected fleet average targets for the final rule are provided in Table 8 below. Figure 2 below, based on the values in Table 8, shows the final standards target levels along with estimated targets for the proposed standards, SAFE rule, and the 2012 rule for comparison.³⁶

³⁵ “Final Determination on the Appropriateness of the Model Year 2022–2025 Light-Duty Vehicle Greenhouse Gas Emissions Standards under the Midterm Evaluation,” EPA–420–R–17–001, January 2017.

TABLE 8—FLEET AVERAGE TARGET PROJECTIONS FOR THE FINAL STANDARDS COMPARED TO UPDATED FLEET AVERAGE TARGET PROJECTIONS * FOR THE PROPOSED STANDARDS, SAFE RULE 2012 RULE

[CO₂ g/mile]

MY	Final standards projected targets	Proposed standards projected targets	SAFE rule standards projected targets	2012 rule projected targets
2021	** 229	** 229	229	219
2022	** 224	** 224	224	208
2023	202	202	220	199
2024	192	192	216	189
2025	179	182	212	180
2026	161	173	208	179
Total change 2022–2026	– 63	– 51	– 16	– 29

* All projections have been updated to reflect the updated base year fleet, which results in slight changes compared to the values shown in the proposed rule.

** SAFE Rule targets shown for reference.

BILLING CODE 6560–50–P

Figure 2 Final CO₂ Standard Target Levels Compared to Other Programs

BILLING CODE 6560–50–C

EPA’s standards are based in part on EPA’s projection of average industry wide CO₂-equivalent emission

reductions from A/C improvements; specifically the footprint standards curves are made numerically more stringent by an amount equivalent to

this projection of industry-wide A/C

refrigerant leakage credits.³⁷ Including this projection of A/C credits for purposes of setting GHG standards levels is consistent with the 2012 rule and the SAFE rule.

Table 9 below shows overall fleet average target levels for both cars and light trucks that are projected over the implementation period of the final standards. A more detailed manufacturer by manufacturer break down of the projected target and achieved levels is provided in Section III.B.1 of this preamble. The actual fleet-wide average g/mile level that would be achieved in any year for cars and trucks will depend on the actual production of vehicles for that year, as well as the use of the various credit and averaging, banking, and trading provisions. For example, in any year, manufacturers would be able to generate credits from cars and use the credits for compliance with the truck standard, or vice versa. In Section V of this preamble, EPA

discusses the year-by-year estimate of emissions reductions that are projected to be achieved by the standards.

In general, the level and implementation schedule of the final standards provides for an incremental phase-in to the MY 2026 stringency level and reflects consideration of the appropriate lead time for manufacturers to take actions necessary to meet the final standards.³⁸ The technical feasibility of the standards is discussed in Section III of this preamble and in the RIA. Note that MY 2026 is the final MY in which the standards become more stringent. The MY 2026 CO₂ standards will remain in place for later MYs, unless and until they are revised by EPA in a future rulemaking. As mentioned in Section I.A.2 of this preamble, EPA is planning a subsequent rulemaking to set more stringent standards for the light-duty vehicle sector in MYs 2027 and beyond.

EPA has estimated the overall fleet-wide CO₂ emission target levels that correspond with the attribute-based footprint standards, based on projections of the composition of each manufacturer's fleet in each year of the program. As noted above, EPA estimates that, on a combined fleet-wide national basis, the 2026 MY standards will result in a target level of 161 g/mile CO₂. The derivation of the 161 g/mile estimate is described in Section III.A of this preamble. EPA aggregated the estimates for individual manufacturers based on projected production volumes into the fleet-wide averages for cars, trucks, and the entire fleet, shown in Table 9.³⁹ As discussed above, the combined fleet estimates are based on projected fleet mix of cars and trucks that varies over the MY 2023–2026 timeframe. This fleet mix distribution can also be found in Section III.A of this preamble.

TABLE 9—ESTIMATED FLEET-WIDE CO₂ TARGET LEVELS CORRESPONDING TO THE FINAL STANDARDS

Model year	Cars CO ₂ (g/mile)	Trucks CO ₂ (g/mile)	Fleet CO ₂ (g/mile)
2023	166	234	202
2024	158	222	192
2025	149	207	179
2026 and later	132	187	161

As shown in Table 9, fleet-wide CO₂ emission target levels for cars under the final standards are projected to decrease from 166 to 132 g/mile between MY 2023 and MY 2026. Similarly, fleet-wide CO₂ target levels for trucks are projected to decrease from 233 to 187 g/mile during the same period. These target levels reflect both the final standards and the flexibilities and credits available in the program.⁴⁰ The estimated fleetwide achieved values can be found in Section III.B.1 of this preamble.

As noted above, EPA is finalizing CO₂ standards that are increasingly more stringent each year from MY 2023 though MY 2026. Applying the CO₂ footprint standard curves applicable in each MY to the vehicles (and their footprint distributions) projected to be sold in each MY produces projections of progressively lower fleet-wide CO₂ emission target levels. EPA believes

manufacturers can achieve the final standards and their important CO₂ emissions reductions through the application of available control technology at reasonable cost, as well as the use of optional program flexibilities available in certain model years.

The existing program includes several provisions that we are not changing and so would continue during the implementation timeframe of this final rule. Consistent with CAA section 202(a)(1) that standards be applicable to vehicles “for their useful life,” the MY 2023–2026 vehicle standards will apply for the useful life of the vehicle.⁴¹ Also, in this action EPA is not changing the test procedures over which emissions are measured and weighted to determine compliance with the GHG standards. These procedures are the Federal Test Procedure (FTP or “city” test) and the Highway Fuel Economy Test (HFET or “highway” test). While

EPA may consider requiring the use of test procedures other than the 2-cycle test procedures in a future rulemaking, EPA did not propose and is not adopting any test procedure changes in this final rule.

EPA has analyzed the feasibility of achieving the car and truck CO₂ footprint based standards through the application of available technologies, based on projections of technology penetration rates that are in turn based on our estimates of the effectiveness and cost of the technology. The results of the analysis are discussed in detail in Section III of this preamble and in the RIA. EPA also presents the overall estimated costs and benefits of the final car and truck CO₂ standards in Section VII.I of this preamble.

³⁷ The total A/C adjustment is 18.8 g/mile for cars and 24.4 g/mile for trucks.

³⁸ As discussed in Section III of this preamble, EPA has used the Corporate Average Fuel Economy (CAFE) Compliance and Effects Modeling System (CEEMS) to support the technical assessment. Among the ways EPA has considered lead time is by using the constraints built into the CEEMS model which are designed to represent lead-time

constraints, including the use of redesign and refresh cycles. See CEEMS Model Documentation on web page <https://www.nhtsa.gov/corporate-average-fuel-economy/compliance-and-effects-modeling-system> and contained in the docket for this rule.

³⁹ Due to rounding during calculations, the estimated fleet-wide CO₂ target levels may vary by plus or minus 1 gram.

⁴⁰ The target levels do not reflect credit trading across manufacturers under the ABT program.

⁴¹ The GHG emission standards apply for a useful life of 10 years or 120,000 miles for light duty vehicles (LDVs) and light-light-duty trucks (LLDTs) and 11 years or 120,000 miles for heavy-light-duty trucks (HLDTs) and medium-duty passenger vehicles (MDPVs). See 40 CFR 86.1805–17.

2. What are the final CO₂ attribute-based standards?

As with the existing GHG standards, EPA is finalizing separate car and truck standards—that is, vehicles defined as cars have one set of footprint-based curves, and vehicles defined as trucks would have a different set.⁴² In general, for a given footprint, the CO₂ g/mile target⁴³ for trucks is higher than the

target for a car with the same footprint. The curves are defined mathematically in EPA’s regulations by a family of piecewise linear functions (with respect to vehicle footprint) that gradually and continually ramp down from the MY 2022 curves established in the SAFE rule. EPA’s minimum and maximum footprint targets and the corresponding cutpoints are provided below in Table 10 for MYs 2023–2026 along with the

slope and intercept defining the linear function for footprints falling between the minimum and maximum footprint values. For footprints falling between the minimum and maximum, the targets are calculated as follows: Slope × Footprint + Intercept = Target. Figure 3 and Figure 4 provide the existing MY 2021–2022 and final MY 2023–2026 footprint curves graphically for both car and light trucks, respectively.

TABLE 10—FINAL FOOTPRINT-BASED CO₂ STANDARD CURVE COEFFICIENTS

	Car				Truck			
	2023	2024	2025	2026	2023	2024	2025	2026
MIN CO ₂ (g/mile)	145.6	138.6	130.5	114.3	181.1	172.1	159.3	141.8
MAX CO ₂ (g/mile)	199.1	189.5	179.4	160.9	312.1	296.5	277.4	254.4
Slope (g/mile/ft ²)	3.56	3.39	3.26	3.11	3.97	3.77	3.58	3.41
Intercept (g/mile)	-0.4	-0.4	-3.2	-13.1	18.4	17.4	12.5	1.9
MIN footprint (ft ²)	41	41	41	41	41	41	41	41
MAX footprint (ft ²)	56	56	56	56	74	74	74	74

BILLING CODE 6560-50-P

Figure 3 Car Curves

⁴² See 49 CFR part 523. Generally, passenger cars include cars and smaller cross-overs and SUVs, while the truck category includes larger cross-overs and SUVs, minivans, and pickup trucks.

⁴³ Because compliance is based on a sales-weighting of the full range of vehicles in a manufacturer’s car and truck fleets, the footprint based CO₂ emission levels of specific vehicles

within the fleet are referred to as targets, rather than standards.

Figure 4 Truck Curves

BILLING CODE 6560-50-C

The shapes of the MY 2023–2026 car curves are similar to the MY 2022 car curve. By contrast, the MY 2023–2026 truck curves return to the cutpoint of 74.0 sq ft that was originally established in the 2012 rule but was changed in the SAFE rule.⁴⁴ The gap between the 2022 curves and the 2023 curves is indicative of the design of the final standards as described earlier, where the gap between the MY 2022 and MY 2023 curves is roughly double the gap between the curves for MYs 2024–2026.

3. EPA's Statutory Authority Under the CAA

i. Standards-Setting Authority Under CAA Section 202(a)

Title II of the CAA provides for comprehensive regulation of mobile sources, authorizing EPA to regulate emissions of air pollutants from all mobile source categories. Pursuant to these sweeping grants of authority, when setting GHG standards for light-duty vehicles, EPA considers such issues as technology effectiveness, technology cost (per vehicle, per manufacturer, and per consumer), the lead time necessary to implement the technology, and—based on these considerations—the feasibility and practicability of potential standards; as well as the impacts of potential

standards on emissions reductions of both GHGs and non-GHGs; the impacts of standards on oil conservation and energy security; the impacts of standards on fuel savings by consumers; the impacts of standards on the auto industry; other energy impacts; and other relevant factors such as impacts on safety.

Title II emission standards have stimulated the development of a broad set of advanced automotive technologies, such as on-board computers and fuel injection systems, which have been the building blocks of automotive designs and have yielded not only lower pollutant emissions, but improved vehicle performance, reliability, and durability. In response to EPA's adoption of Title II emission standards for GHGs from light-duty vehicles in 2010 and later, manufacturers have continued to significantly ramp up their development and application of a wide range of new and improved technologies, including more fuel-efficient engine designs, transmissions, aerodynamics, and tires, air conditioning systems that contribute to lower GHG emissions, and various levels of electrified vehicle technologies.

This rule implements a specific provision in Title II, section 202(a) of the CAA. Section 202(a)(1), 42 U.S.C. 7521(a)(1), states that “the Administrator shall by regulation

prescribe (and from time to time revise) . . . standards applicable to the emission of any air pollutant from any class or classes of new motor vehicles . . . which in his judgment cause, or contribute to, air pollution which may reasonably be anticipated to endanger public health or welfare.” Once EPA makes the appropriate endangerment and cause or contribute findings,⁴⁵ CAA section 202(a) authorizes EPA to issue standards applicable to emissions of those pollutants. Indeed, EPA's obligation to do so is mandatory. *See Coalition for Responsible Regulation v. EPA*, 684 F.3d 102, 126–27 (D.C. Cir. 2012); *Massachusetts v. EPA*, 549 U.S. 497, 533 (2007). Moreover, EPA's mandatory legal duty to promulgate these emission standards derives from “a statutory obligation wholly independent of DOT's mandate to promote energy efficiency.” *Massachusetts*, 549 U.S. at 532. Consequently, EPA has no discretion to decline to issue GHG standards under

⁴⁵ EPA did so in 2009 for the group of six well-mixed greenhouse gases—carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride—which taken in combination endanger both the public health and the public welfare of current and future generations. EPA further found that the combined emissions of these greenhouse gases from new motor vehicles and new motor vehicle engines contribute to greenhouse gas air pollution that endangers public health and welfare. 74 FR 66496 (Dec. 15, 2009).

⁴⁴ 77 FR 62781.

section 202(a), or to defer issuing such standards due to NHTSA's regulatory authority to establish fuel economy standards. Rather, "[j]ust as EPA lacks authority to refuse to regulate on the grounds of NHTSA's regulatory authority, EPA cannot defer regulation on that basis." *Coalition for Responsible Regulation*, 684 F.3d at 127.

Any standards under CAA section 202(a)(1) "shall be applicable to such vehicles . . . for their useful life." Emission standards set by EPA under CAA section 202(a)(1) are technology-based, as the levels chosen must be premised on a finding of technological feasibility. Thus, standards promulgated under CAA section 202(a) are to take effect only "after such period as the Administrator finds necessary to permit the development and application of the requisite technology, giving appropriate consideration to the cost of compliance within such period." CAA section 202(a)(2); see also *NRDC v. EPA*, 655 F. 2d 318, 322 (D.C. Cir. 1981). EPA must consider costs to those entities which are directly subject to the standards. *Motor & Equipment Mfrs. Ass'n Inc. v. EPA*, 627 F. 2d 1095, 1118 (D.C. Cir. 1979). Thus, "the [s]ection 202(a)(2) reference to compliance costs encompasses only the cost to the motor-vehicle industry to come into compliance with the new emission standards, and does not mandate consideration of costs to other entities not directly subject to the proposed standards." See *Coalition for Responsible Regulation*, 684 F.3d at 128.

EPA is afforded considerable discretion under CAA section 202(a) when assessing issues of technical feasibility and availability of lead time to implement new technology. Such determinations are "subject to the restraints of reasonableness," which "does not open the door to 'crystal ball' inquiry." *NRDC*, 655 F. 2d at 328, quoting *International Harvester Co. v. Ruckelshaus*, 478 F. 2d 615, 629 (D.C. Cir. 1973). However, "EPA is not obliged to provide detailed solutions to every engineering problem posed in the perfection of [a particular device]. In the absence of theoretical objections to the technology, the agency need only identify the major steps necessary for development of the device, and give plausible reasons for its belief that the industry will be able to solve those problems in the time remaining. The EPA is not required to rebut all speculation that unspecified factors may hinder 'real world' emission control." *NRDC*, 655 F. 2d at 333–34. In developing such technology-based standards, EPA has the discretion to consider different standards for

appropriate groupings of vehicles ("class or classes of new motor vehicles"), or a single standard for a larger grouping of motor vehicles. *NRDC*, 655 F.2d at 338. Finally, with respect to regulation of vehicular GHG emissions, EPA is not "required to treat NHTSA's . . . regulations as establishing the baseline for the [section 202(a) standards]." *Coalition for Responsible Regulation*, 684 F.3d at 127 (noting that the section 202(a) standards provide "benefits above and beyond those resulting from NHTSA's fuel-economy standards.")

Although standards under CAA section 202(a)(1) are technology-based, they are not based exclusively on technological capability. EPA has the discretion to consider and weigh various factors along with technological feasibility, such as the cost of compliance (section 202(a)(2)), lead time necessary for compliance (section 202(a)(2)), safety (see *NRDC*, 655 F. 2d at 336 n. 31),⁴⁶ other impacts on consumers, and energy impacts associated with use of the technology. See *George E. Warren Corp. v. EPA*, 159 F.3d 616, 623–624 (D.C. Cir. 1998) (ordinarily permissible for EPA to consider factors not specifically enumerated in the Act).

In addition, EPA has clear authority to set standards under CAA section 202(a) that are technology-forcing when EPA considers that to be appropriate, but EPA is not required to do so (as distinguished from standards under provisions such as section 202(a)(3) and section 213(a)(3)). Section 202(a) of the CAA does not specify the degree of weight to apply to each factor, and EPA accordingly has discretion in choosing an appropriate balance among factors. See *Sierra Club v. EPA*, 325 F.3d 374, 378 (D.C. Cir. 2003) (even where a provision is technology-forcing, the provision "does not resolve how the Administrator should weigh all [the statutory] factors in the process of finding the 'greatest emission reduction achievable'"); *NPRA v. EPA*, 287 F.3d 1130, 1135 (D.C. Cir. 2002) (EPA decisions, under CAA provision authorizing technology-forcing standards, based on complex scientific or technical analysis are accorded particularly great deference); see also *Husqvarna AB v. EPA*, 254 F. 3d 195,

⁴⁶ Since its earliest Title II regulations, EPA has considered the safety of pollution control technologies. See 45 FR 14496, 14503 (1980) ("EPA would not require a particulate control technology that was known to involve serious safety problems. If during the development of the trap-oxidizer safety problems are discovered, EPA would reconsider the control requirements implemented by this rulemaking").

200 (D.C. Cir. 2001) (great discretion to balance statutory factors in considering level of technology-based standard, and statutory requirement "to [give appropriate] consideration to the cost of applying . . . technology" does not mandate a specific method of cost analysis); *Hercules Inc. v. EPA*, 598 F. 2d 91, 106 (D.C. Cir. 1978) ("In reviewing a numerical standard we must ask whether the agency's numbers are within a zone of reasonableness, not whether its numbers are precisely right"); *Permian Basin Area Rate Cases*, 390 U.S. 747, 797 (1968) (same); *Federal Power Commission v. Conway Corp.*, 426 U.S. 271, 278 (1976) (same); *Exxon Mobil Gas Marketing Co. v. FERC*, 297 F. 3d 1071, 1084 (D.C. Cir. 2002) (same).

ii. Testing Authority

Under section 203 of the CAA, sales of vehicles are prohibited unless the vehicle is covered by a certificate of conformity. EPA issues certificates of conformity pursuant to section 206 of the CAA, based on (necessarily) pre-sale testing conducted either by EPA or by the manufacturer. The Federal Test Procedure (FTP or "city" test) and the Highway Fuel Economy Test (HFET or "highway" test) are used for this purpose. Compliance with standards is required not only at certification but throughout a vehicle's useful life, so that testing requirements may continue post-certification. Useful life standards may apply an adjustment factor to account for vehicle emission control deterioration or variability in use (section 206(a)).

EPA establishes the test procedures under which compliance with the CAA GHG standards is measured. EPA's testing authority under the CAA is broad and flexible. EPA has also developed tests with additional cycles (the so-called 5-cycle tests) which are used for purposes of fuel economy labeling and are used in EPA's program for extending off-cycle credits under the light-duty vehicle GHG program.

iii. Compliance and Enforcement Authority

EPA oversees testing, collects and processes test data, and performs calculations to determine compliance with CAA standards. CAA standards apply not only at certification but also throughout the vehicle's useful life. The CAA provides for penalties should manufacturers fail to comply with their fleet average standards, and there is no option for manufacturers to pay fines in lieu of compliance with the standards. Under the CAA, penalties for violation of a fleet average standard are typically determined on a vehicle-specific basis

by determining the number of a manufacturer's highest emitting vehicles that cause the fleet average standard violation. Penalties for reporting requirements under Title II of the CAA apply per day of violation, and other violations apply on a per vehicle, or a per part or component basis. See CAA sections 203(a) and 205(a) and 40 CFR 19.4.

Section 207 of the CAA grants EPA broad authority to require manufacturers to remedy vehicles if EPA determines there are a substantial number of noncomplying vehicles. In addition, section 205 of the CAA authorizes EPA to assess penalties of up to \$48,762 per vehicle for violations of various prohibited acts specified in the CAA. In determining the appropriate penalty, EPA must consider a variety of factors such as the gravity of the violation, the economic impact of the violation, the violator's history of compliance, and "such other matters as justice may require."

4. Averaging, Banking, and Trading Provisions for CO₂ Standards

EPA is finalizing provisions to extend credit life that are more targeted than those proposed. EPA proposed to extend credit carry-forward for MY 2016–2020 credits, including a two-year extension of MY 2016 credits and a one-year extension of MY 2017–2020 credits. After considering the comments received on this topic and further analyzing manufacturers' need for extended credit life, EPA is adopting a narrower approach in the final rule of adopting the one-year credit life extension only for MY 2017 and 2018 credits so they may be used in MYs 2023 and 2024, respectively. This section provides background on the ABT program as well as a summary of the proposed rule, public comments, and final rule provisions.

i. Background on Averaging, Banking, and Trading Program Under Previous Programs

Averaging, banking, and trading (ABT) is an important compliance flexibility that has been built into various highway engine and vehicle programs (and nonroad engine and equipment programs) to support emissions standards that, through the introduction and application of new technologies, result in reductions in air pollution. The light-duty ABT program for GHG standards includes existing provisions initially established in the 2010 rule for how credits may be generated and used within the

program.⁴⁷ These provisions include credit carry-forward, credit carry-back (also called deficit carry-forward), credit transfers (within a manufacturer), and credit trading (across manufacturers).

Credit carry-forward refers to banking (saving) credits for future use, after satisfying any needs to offset prior MY debits within a vehicle category (car fleet or truck fleet). Credit carry-back refers to using credits to offset any deficit in meeting the fleet average standards that had accrued in a prior MY. A manufacturer may have a deficit at the end of a MY (after averaging across its fleet using credit transfers between cars and trucks)—that is, a manufacturer's fleet average level may fail to meet the manufacturer's required fleet average standard for the MY, for a limited number of model years, as provided in the regulations. The CAA does not specify or limit the duration of such credit provisions, and in the MY 2012–2016 and 2017–2025 light-duty GHG programs, EPA chose to adopt 5-year credit carry-forward (generally, with an exception noted below) and 3-year credit carry-back provisions as a reasonable approach that maintained consistency between EPA's GHG and NHTSA CAFE regulatory provisions.⁴⁸ While some stakeholders had suggested that light-duty GHG credits should have an unlimited credit life, EPA did not adopt that suggestion for the light-duty GHG program because it would pose enforcement challenges and could lead to some manufacturers accumulating large banks of credits that could interfere with the program's goal to develop and transition to progressively more advanced emissions control technologies in the future.

Although the existing credit carry-forward and carry-back provisions generally remained in place for MY 2017 and later standards, EPA finalized provisions in the 2012 rule allowing all unused (banked) credits generated in MYs 2010–2015 (but not MY 2009 early credits) to be carried forward through MY 2021. See 40 CFR 86.1865–12(k)(6)(ii); 77 FR 62788 (October 15, 2012). This credit life extension provided additional carry-forward years for credits generated in MYs 2010–2015, thereby providing greater flexibility for manufacturers in using these credits. This provision was intended to facilitate the transition to increasingly stringent standards through MY 2021 by helping manufacturers resolve lead time issues they might face in the early MYs of the

⁴⁷ 40 CFR 86.1865–12.

⁴⁸ The EPCA/EISA statutory framework for the CAFE program limits credit carry-forward to 5 years and credit carry-back to 3 years.

program. This extension of credit carry-forward also provided an additional incentive for manufacturers to generate credits earlier, for example in MYs 2014 and 2015, thereby encouraging the earlier use of additional CO₂ reducing technologies. In addition, the existing 5-year carry-forward provisions applied to MY 2016 and later credits, making MY 2016 credits also eligible to be carried forward through MY 2021.

Transferring credits in the GHG program refers to exchanging credits between the two averaging sets—passenger cars and light trucks—within a manufacturer. For example, credits accrued by overcompliance with a manufacturer's car fleet average standard can be used to offset debits accrued due to that manufacturer not meeting the truck fleet average standard in a given model year. In other words, a manufacturer's car and truck fleets together are, in essence, a single averaging set in the GHG program. Finally, accumulated credits may be traded to another manufacturer. Credit trading has occurred on a regular basis in EPA's vehicle program.⁴⁹ Manufacturers acquiring credits may offset credit shortfalls and bank credits for use toward future compliance within the carry-forward constraints of the program.

The ABT provisions are an integral part of the vehicle GHG program and the agency expects that manufacturers will continue to utilize these provisions into the future. EPA's annual Automotive Trends Report provides details on the use of these provisions in the GHG program.⁵⁰ ABT allows EPA to consider standards more stringent than we would otherwise consider by giving manufacturers an important tool to resolve lead time and feasibility issues. EPA believes the targeted one-year extension of credit carry-forward for MY 2017 and 2018 credits that we are finalizing, discussed below, is appropriate considering the stringency and implementation timeframe of the revised standards.

ii. Extended Credit Carry-Forward

As in the transition to more stringent standards under the 2012 rule, EPA recognizes that auto manufacturers will again be facing a transition to more stringent standards for MYs 2023–2026.

⁴⁹ EPA provides general information on credit trades annually as part of its annual Automotive Trends and GHG Compliance Report. The latest report is available at: <https://www.epa.gov/automotive-trends> and the docket for this rulemaking.

⁵⁰ "The 2021 EPA Automotive Trends Report, Greenhouse Gas Emissions, Fuel Economy, and Technology since 1975," EPA-420-R-21-023, November 2021.

We also recognize that the stringency increase from MY 2022 to MY 2023 is a relatively steep step in our program with shorter lead time for MYs 2023 and 2024. Therefore, we believe it is again appropriate in the context of the revised standards to provide a targeted, limited amount of additional flexibility to carry-forward credits into MYs 2023–2024, as manufacturers manage the transition to these more stringent standards.

EPA proposed to temporarily increase the number of years that MY 2016–2020 credits could be carried-forward to provide additional flexibility for manufacturers in the transition to more stringent standards. EPA proposed to increase credit carry-forward for MY 2016 credits by two years such that they would not expire until after MY 2023. For MY 2017–2020 credits, EPA proposed to extend the credit life by one year, so that those banked credits can be used through MYs 2023–2026, depending on the MY in which the credits are banked. For MY 2021 and later credits, EPA did not propose any modification to existing credit carry-forward provisions, which allow credit carry-forward for 5 model years. EPA noted that the proposed extended credit carry-forward would help some manufacturers to have lower overall costs and address any potential lead time issues they may face during these MYs, especially in the first year of the proposed standards (MY 2023). EPA proposed to extend credit life only for credits generated against applicable standards established in the 2012 rule for MYs 2016–2020. EPA viewed these credits as a reflection of manufacturers' having achieved reductions beyond and earlier than those required by the 2012 rule standards.

As noted in the proposed rule and discussed above, there is precedent for extending credit carry-forward temporarily beyond five years to help manufacturers transition to more stringent standards. In the 2012 rule, EPA extended carry-forward for MY 2010–2015 credits to MY 2021 for similar reasons, to provide more flexibility for a limited time during a transition to more stringent standards.⁵¹ ABT is an important compliance flexibility and has been built into various highway engine and vehicle programs to support emissions standards programs that through the introduction of new technologies result in reductions in air pollution. While the existing five-year credit life provisions in the light-duty GHG program are generally sufficient to provide for manufacturer flexibility while balancing

the practical challenges of properly tracking credits over an extended period of time for compliance and enforcement purposes, there are occasions—such as when the industry is transitioning to significantly more stringent standards—where more flexibility may be appropriate.

EPA received a mix of comments regarding EPA's proposed provision for limited extended credit carry-forward. The Alliance and several individual manufacturers commented in support of the proposed credit life extensions. The Alliance commented that "limited expansion of credit carry-forward provisions may provide some additional flexibility for a limited number of manufacturers, and in theory could provide some additional credit market liquidity during the rapidly tightening standards in MYs 2023–2026." It also commented that carry-forward credits do not reduce the environmental benefits of the standards as these credits represent tons of emissions avoided in advance of requirements. Honda provided similar comments and commented further that the automobile industry is facing severe global supply chain issues that continue to disrupt vehicle production volumes, launch dates and compliance strategies. Honda stated that slight modifications to the proposed credit carry forward provisions (e.g., Honda suggested a two-year extension for MY 2016–2020 credits) could provide much needed compliance flexibility during an exceedingly challenging compliance planning time. Honda also commented that companies that signed up to the California Framework agreement can reasonably be expected to meet MY 2023 stringencies, but MY 2026 is likely to prove difficult for most, if not all, manufacturers. In addition, Honda commented in support of extending the credit carry forward provisions beyond those specified in the proposed rule. Nissan commented that EPA should extend the life of all model year 2015 and later GHG credits through at least model year 2026 to provide manufacturers with necessary compliance flexibility. Nissan believed that their recommended approach would enable manufacturers to invest appropriate resources at the appropriate time without eroding overall industry GHG benefits.

EV manufacturers did not support the proposed extended credit carry-forward, commenting that it is unnecessary and could lead to loss of emissions reductions. Tesla commented that it estimates the extension of the MY 2016 and 2017 credit bank will result in a reduction in stringency of 4.3 g/mile in

MY 2023. Tesla commented that the one-year extension of the credit lifetime for model years beyond MY 2017 will further reduce stringency by another ~5 g/mile. Additionally, Tesla commented that "the credit lifetime extension will also lessen the immediate value of earned credits in the trading market as underperforming manufacturers now may have greater opportunity on when to deploy credits. Operating under a consistent set of credit lifetime regulations, manufacturers over complying have been able to enter a robust credit marketing, basing credit value and need, in part, on a five-year lifetime. Under the proposal, the immediacy of the market will diminish, meaning less revenue and opportunity for an overperforming manufacturer that seeks to utilize credit revenue sales to invest in increased manufacturing of advanced technology vehicles. Like the other proposed flexibilities, this proposed change in credit lifetime reduces the standard's stringency, diminishes the level of investment going back into advanced manufacturing, and only serves to reward those manufacturers that delay deploying advanced technologies."

The California Air Resources Board (CARB) also did not support the credit life extensions in the proposed rule, commenting "when manufacturers planned their products to generate the credits, they were aware of the constraints on their use and available terms. Because these credits were earned before the Final SAFE Rules went into effect, they reflect manufacturer planning to meet the more stringent standards then in effect with improved technology after those credits had expired. Furthermore, extending the credit life is not necessary to facilitate compliance. In the time available, manufacturers can incentivize sales of vehicles with more of the necessary technologies if they are needed to meet the proposed standards, including additional zero-emission technologies." The California Attorney General commented that extending credit life for standards weaker than Alternative 2 could further delay the emissions reductions that are urgently needed.

Several environmental and health NGOs opposed the proposed extension as unnecessary and were concerned that it could lead to a loss of emissions reductions. A coalition of NGOs recommended that EPA not extend the lifetime of MY 2016–2020 credits as proposed, particularly not beyond MY 2024. They commented that extending credit life does not spur the development or application of more advanced technologies or vehicle

⁵¹ 77 FR 62788.

electrification and represents a windfall since manufacturers have not taken the extension into account in the product plans. Union of Concerned Scientists (UCS) commented that the proposed extension is not necessary, presenting modeling of the proposed standards and Alternative 2 in the proposed rule and found that the proposed standards could be met without the extended credit life with the same technology penetration rates as estimated by EPA for the proposed rule. American Council for an Energy- Efficient Economy (ACEEE) also commented that the extension was unnecessary because manufacturers could use their MY 2018 and 2019 credits in MYs 2023 and 2024 and those credits would likely still be available because it is unlikely manufacturers would need to use them prior to those years due to the previous credit banks and the less stringent standards adopted in the SAFE rule for MYs 2021–2022.

After analyzing the public comments and further analyzing the need for and impacts of extending credit carry-forward, EPA is finalizing a one-year credit life extension only for MYs 2017–2018 credits, as shown in Table 11. This approach focuses the credit carry-forward extension on MYs 2023–2024 where lead-time is limited and manufacturers’ ability to make adjustments to meet the more stringent standards is most constrained. EPA is not including the proposed one-year extension for MYs 2019 and 2020 credits out to MYs 2025 and 2026, respectively, because EPA believes there is sufficient lead time for manufacturers

to make adjustments in their product and technology mix to meet the standards without the extension (see EPA’s technical assessment of the standards in section III, of this preamble). MYs 2019 and 2020 credits will continue to be allowed to be carried forward through MYs 2024 and 2025, respectively, under the existing five year credit life provisions. EPA is not finalizing the two-year extension of the MY 2016 credits because we agree with the public comments that this additional year of credit life extension is unnecessary and could have the effect of weakening the MY 2022 SAFE standards.

If EPA were to extend MY 2016 credits, given the significant volume of currently banked credits that expire in MY2021 (as do the MY2016 credits), EPA expects that most of the MY 2016 credits would remain banked for use in MY 2023. However, if the MY2016 credits were extended, it is also possible due to the high number of credits held by some manufacturers, that some credits could be used or traded toward compliance with the weakened SAFE standards in MY 2022, for which EPA believes clearly no additional flexibility is warranted. This was not EPA’s intent in proposing the extension. After considering the feasibility of the standards without the extension for MY 2016 credits, EPA determined that the MY 2023 standards could be met without the extension. Also, without an extension, MY 2016 credits will expire in MY 2021, a MY where several manufacturers will already have

relatively large banks of MY 2010–2015 credits that also expire in MY 2021 (as noted, the 2012 rule provided a “one-time” extended credit life for these credits, and thus several manufacturers in the industry have built up extensive banks of credits all due to expire after MY 2021). The result of declining to extend MY 2016 credits, is that there will be an unusually high amount of credits that must be used or expire in MY 2021. In turn, the availability of these expiring credits will likely leave MY 2017–2021 credit balances unused by many manufacturers in MY 2021 and therefore available for use in MYs 2022 and beyond, depending on each manufacturer’s MY 2021 and later compliance plans.⁵² By extending MY 2017 credits but not MY 2016 credits, manufacturers’ need for near-term flexibility are balanced with concerns that excess credit banks could delay the introduction or further penetration of technology. EPA believes that the extension of MY 2017 and 2018 credits by one year provides a reasonable and sufficient level of additional flexibility in meeting the final MYs 2023 and 2024 standards, focusing the additional flexibility on MYs with relatively shorter lead time. Several manufacturers have MY 2017–2018 vintage credits banked for future use, which could be used either internally within the manufacturer or traded to another manufacturer, so this provision provides additional flexibility for MYs 2023–2024 compliance.⁵³

TABLE 11—FINAL EXTENSION OF CREDIT CARRY-FORWARD FOR MY 2016–2020 CREDITS

MY credits are banked	MYs credits are valid under extension										
	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026
2016		x	x	x	x	x					
2017			x	x	x	x	x	+			
2018				x	x	x	x	x	+		
2019					x	x	x	x	x		
2020						x	x	x	x	x	
2021							x	x	x	x	x

x = Existing program. + = Additional years included in Final Rule.

In response to the comments received, EPA believes the approach it is finalizing provides manufacturers with the flexibility asked for given the stated concerns about lead time, while also responding to other concerns raised that the proposed extension is unnecessary

and could lead to a delay in application of emissions reducing technology. By adopting a one-year extension only for MYs 2017–2018 credits, EPA more narrowly focuses the extension on MYs 2023–2024 to help manufacturers manage the transition to more stringent

standards by providing some additional flexibility. There is greater need for flexibility in these early years because manufacturers will be somewhat limited in making product plan changes in response to the final standards. By not adopting the proposed extension for MY

⁵² “The 2021 EPA Automotive Trends Report, Greenhouse Gas Emissions, Fuel Economy, and Technology since 1975,” EPA–420–R–21–023, November 2021.

⁵³ “The 2021 EPA Automotive Trends Report, Greenhouse Gas Emissions, Fuel Economy, and Technology since 1975,” EPA–420–R–21–023, November 2021. See Table 5.19. Credits noted as

expiring in MYs 2022–2023 represent MY 2017–2018 vintage credits, respectively. These credits will now expire one year later, respectively, in MYs 2023–2024.

2019 and MY 2020 credits, EPA's approach also responds to other commenters' concerns that the proposed extension may slow the adoption of emissions reducing technology. Concerning compliance with MYs 2025–2026 standards, EPA agrees with comments that manufacturers will be able to meet the standards through the application of technology and changes to product mix that includes increasing sales of lower emitting, credit generating vehicles, as shown in our technical analysis for the final rule.

In response to Tesla's comments that the extension may lessen the value of credits in the trading market, EPA believes this could be true if EPA were not adopting more stringent standards at the same time. However, any loss of credit value is likely more than offset by the stringent final standards which could make available credits even more sought after by some manufacturers, and thus potentially increasing credit value. EPA also notes that the GHG program regulations clearly state, "There are no property rights associated with CO₂ credits generated under this subpart. Credits are a limited authorization to emit the designated amount of emissions. Nothing in this part or any other provision of law should be construed to limit EPA's authority to terminate or limit this authorization through a rulemaking."⁵⁴ EPA retains the ability to revise credits provisions as it believes prudent through rulemaking.

5. Certification, Compliance, and Enforcement

EPA established comprehensive vehicle certification, compliance, and enforcement provisions for the GHG standards as part of the rulemaking establishing the initial GHG standards for MY 2012–2016 vehicles.⁵⁵ Manufacturers have been using these provisions since MY 2012 and EPA neither proposed nor is adopting any changes in the areas of certification, compliance, or enforcement.

6. On-Board Diagnostics Program Updates

EPA regulations state that onboard diagnostics (OBD) systems must generally detect malfunctions in the emission control system, store trouble codes corresponding to detected

malfunctions, and alert operators appropriately. EPA adopted (as a requirement for an EPA certificate) the 2013 CARB OBD regulation, with certain additional provisions, clarifications and exceptions, in the Tier 3 Motor Vehicle Emission and Fuel Standards final rulemaking (40 CFR 86.1806–17; 79 FR 23414, April 28, 2014). Since that time, CARB has made several updates to their OBD regulations and continues to consider changes periodically.⁵⁶ Manufacturers may find it difficult to meet both the 2013 OBD regulation adopted in EPA regulations and the currently applicable CARB OBD regulation on the same vehicles. This may result in different calibrations being required for vehicles sold in states subject to Federal OBD (2013 CARB OBD) and vehicles sold in states subject to current CARB OBD.

To provide clarity and regulatory certainty to manufacturers, EPA is finalizing as proposed a limited regulatory change to streamline OBD requirements. Under this change, EPA can find that a manufacturer met OBD requirements for purposes of EPA's certification process if the manufacturer can show that the vehicles meet newer CARB OBD regulations than the 2013 CARB regulation which currently establishes the core OBD requirements for EPA certification and that the OBD system meets the intent of EPA's regulation, including provisions that are in addition to or different from the applicable CARB regulation. The intent of this provision is to allow manufacturers to produce vehicles with one OBD system (software, calibration, and hardware) for all 50 states. We received only supportive comments on this change, from the auto industry, as summarized in the Response to Comments (RTC) document for this rulemaking.

7. Stakeholder Engagement

In developing this rule, EPA conducted outreach with a wide range of stakeholders, including auto manufacturers, automotive suppliers, labor groups, state/local governments, environmental and public interest groups, public health professionals, consumer groups, and other organizations. We also coordinated with the California Air Resources Board. Consistent with Executive Order 13990, in developing this rule EPA has considered the views from labor unions, states, and industry, as well as other stakeholders.

EPA has considered all public comments received during the two-day public hearing on August 25 and 26, 2021, and written comments submitted to the docket during the public comment period, which closed September 27, 2021. Responses to comments can be found in this preamble and the Response to Comments document. We look forward to continuing to engage with interested stakeholders as we embark on a future rulemaking to set standards beyond 2026, so diverse views can continue to be considered in our development of a longer-term program.

8. How do EPA's final standards relate to NHTSA's CAFE proposal and to California's GHG program?

i. EPA and NHTSA Rulemaking Coordination

In E.O. 13990, President Biden directed NHTSA and EPA to consider whether to propose suspending, revising, or rescinding the SAFE rule standards for MYs 2021–2026.⁵⁷ Both agencies determined that it was appropriate to propose revisions to their respective standards; EPA proposed and is finalizing revisions to its GHG standards and, in a separate rulemaking action, NHTSA proposed to revise its CAFE standards.⁵⁸ Since 2010, EPA and NHTSA have adopted fuel economy and GHG standards in joint rulemakings. In the 2010 joint rule, EPA and NHTSA explained the purpose of the joint rulemaking effort was to develop a coordinated and harmonized approach to implementing the two agencies' statutes. The joint rule approach was one appropriate mechanism for the agencies to coordinate closely, given the common technical issues both agencies needed to consider and the importance of avoiding inconsistency between the programs. A few environmental NGOs commented that the CAA does not require EPA to engage in joint rulemaking for its LD GHG program.

In light of additional experience as the GHG and CAFE standards have co-existed since the 2010 rule and the agencies have engaged in several joint rulemakings, EPA has concluded that while it remains committed to ensuring that GHG emissions standards for light duty vehicles are coordinated with fuel economy standards for those vehicles, it is unnecessary for EPA to do so specifically through a joint rulemaking.

In reaching this conclusion, EPA notes that the agencies have different statutory mandates and their respective programs have always reflected those

⁵⁴ 30 CFR 86.1865–12(k)(2). EPA adopted this regulatory provision when it established the first GHG standards in the 2010 rule.

⁵⁵ See 75 FR 25468–25488 and 77 FR 62884–62887 for a description of these provisions. See also "The 2020 EPA Automotive Trends Report, Greenhouse Gas Emissions, Fuel Economy, and Technology since 1975," EPA-420-R-21-003 January 2021 for additional information regarding EPA compliance determinations.

⁵⁶ See <https://ww2.arb.ca.gov/our-work/programs/obd-board-diagnostic-program/obd-workshops>.

⁵⁷ 86 FR 7037, January 25, 2021.

⁵⁸ 86 FR 49602, September 3, 2021.

differences. As the Supreme Court has noted “EPA has been charged with protecting the public’s ‘health’ and ‘welfare,’ a statutory obligation wholly independent of DOT’s mandate to promote energy efficiency.”⁵⁹ The agencies have recognized these different mandates, and the fact that they have produced different analytical approaches and standards. For example, since EPA’s responsibility is to address air pollution, it sets standards not only for carbon dioxide (measured as grams per mile), but also for methane and nitrous oxide. Even more significantly, EPA regulates leakage of fluorocarbons from air conditioning units by providing a credit against the tailpipe CO₂ standard for leakage reduction and adjusting those standards numerically downwards to reflect the anticipated availability of those credits. NHTSA, given its responsibility for fuel economy (measured as miles per gallon), does not have these elements in the CAFE program but has limits on transfers between car and truck fleets. There have always been other differences between the programs as well, which generally can be traced back to differences in statutory mandates. As the agencies reconsider the SAFE 2 standards, the difference in statutory lead time requirements has similarly led to a difference in the model years for which standards are being revised.

We note that EPA coordinates with NHTSA regardless of whether it is in the formal context of a joint rulemaking, and indeed we have done so during the development of this rulemaking. Although there is no statutory requirement for EPA to consult with NHTSA, EPA has consulted significantly with NHTSA in the development of this rule. For example, staff of the two agencies met to discuss various technical issues including modeling inputs and assumptions, shared technical information, and shared views related to the modeling used for each rule. Under other areas of the CAA, consultation is the usual approach Congress has specified when it recognizes that in addition to EPA, another agency shares expertise and equities in an area. The CAA does not require joint rulemaking, even for its many provisions that require EPA consultation with other agencies on topics such as the impacts of ozone-depleting substances on the atmosphere (CAA section 603(f) requires consultation with Administrators of NASA and NOAA), renewable fuels (CAA section 211(o)(2)(B)(ii) requires coordination with the Secretaries of

Energy and Agriculture, and section 211(o)(7) requires consultation with those Secretaries), the importance of visibility on public lands (CAA section 169A(d) requires consultation with Federal Land Manager), regulation of aerospace coatings (CAA section 183(b)(3) requires consultation with Secretaries of Defense and Transportation and NASA Administrator), and federal procurement (CAA section 613 requires consultation with GSA Administrator and Secretary of Defense). For example, for aircraft emissions standards, where CAA section 231(a)(2)(B)(i) requires EPA to set the standards in consultation with the Federal Aviation Administration (FAA), and FAA implements the standards, the two agencies may undertake, and have undertaken, separate rulemakings. Likewise, when EPA revises test procedures for NHTSA’s fuel economy standards under EPA’s authority in 42 U.S.C. 32904(c), those rules are not done as joint rulemaking (unless they were included as part of a larger joint rulemaking on GHG and fuel economy standards). Thus, EPA concludes that joint rulemaking is unnecessary, particularly to the extent it was originally intended to ensure that the agencies work together and coordinate their rules, which the agencies are indeed doing through separate rulemaking processes.

We note that many commenters, including automakers, suppliers, dealers and the UAW noted benefits of coordination between EPA and NHTSA in establishing their respective programs, and urged EPA to maintain a close alignment with NHTSA, to ensure that automakers can continue to design and build vehicles to meet both sets of standards. As explained above, and at proposal, EPA has coordinated and will continue to coordinate with NHTSA in the development of EPA’s and NHTSA’s standards even in the absence of joint rulemaking. While the statutory differences between the programs remain, and thus some differences in compliance strategies might result, EPA agrees with commenters that it is an important goal for coordination that automakers be able to produce a fleet of vehicles which achieves compliance with both sets of standards simultaneously, and we believe these standards are consistent with that longstanding practice and goal. For example, EPA believes that the revised MY 2023 GHG standards will not interfere with automakers’ ability to comply with MY 2023 CAFE standards

even though NHTSA has not proposed revising CAFE standards for that year.

ii. California GHG Program

California has long been a partner in reducing light-duty vehicle emissions, often leading the nation by setting more stringent standards before similar standards are adopted by EPA. This historically has been the case with GHG emissions standards in past federal rulemakings, where California provided technical support to EPA’s nationwide programs. Prior to EPA’s 2010 rule establishing the first nationwide GHG standards for MYs 2012–2016 vehicles, California had adopted GHG standards for MYs 2009–2016.⁶⁰ California subsequently adopted its MYs 2017–2025 GHG standards as part of its Advanced Clean Car (ACC) program. After EPA adopted its standards in the 2012 rule for MYs 2017–2025, California adopted a deemed-to-comply regulation whereby manufacturers could demonstrate compliance with California’s standards by complying with EPA’s standards.⁶¹ California also assisted and worked with EPA in the development of the 2016 Draft Technical Assessment Report for the Mid-term Evaluation,⁶² issued jointly by EPA, CARB and NHTSA, that served as an important technical basis for EPA’s original January 2017 Final Determination that the standards adopted in the 2012 rule for MYs 2022–2025 remained appropriate. California also conducted its own Midterm Review that arrived at a similar conclusion.⁶³

In August 2018, EPA and NHTSA jointly issued the SAFE rule proposal, which included an EPA proposal to withdraw CARB’s Advanced Clean Car (ACC) waiver as it related to California GHG emission standards and ZEV sales requirements (that would preclude California from enforcing its own program) as well as a proposal to

⁶⁰ EPA issued a waiver for CARB’s 2009–2016 model year vehicles in 2009 (74 FR 32744). EPA subsequently issued a within-the-scope waiver determination for CARB’s subsequent deemed-to-comply regulation (CARB adopted this regulation after EPA finalized its 2012–2016 model year GHG standards in 2010 on June 14, 2011 (76 FR 34693).

⁶¹ The California Air Resources Board (CARB) received a waiver of Clean Air Act preemption on January 9, 2013 (78 FR 2211) for its Advanced Clean Car (ACC) program. CARB’s ACC program includes the MYs 2017–2025 greenhouse gas (GHG) standards as well as regulations for zero-emission vehicle (ZEV) sales requirements and California’s low emission vehicle (LEV) III requirements.

⁵⁹ *Massachusetts v. EPA*, 549 U.S. at 532.

sharply reduce the stringency of the national standards.⁶⁴ In September 2019, EPA and NHTSA then jointly issued a final SAFE “Part One” rule, which included a final EPA action withdrawing CARB’s ACC waiver as it related to California GHG emission standards and ZEV sales requirements.⁶⁵ In response to the SAFE rule proposal, California and five auto manufacturers entered into identical agreements commonly referred to as the California Framework Agreements. The Framework Agreements included national GHG emission reduction targets for MYs 2021–2026 that, in terms of stringency, are about halfway between the original 2012 rule standards and those adopted in the final SAFE rule. The Framework Agreements also included additional flexibilities such as additional incentive multipliers for advanced technologies, off-cycle credits, and full-size pickup strong hybrid incentives.

EPA has considered California standards in past vehicle standards rules as we considered the factors of feasibility, costs of compliance and lead time. The California Framework Agreement provisions, and the fact that five automakers representing nearly 30 percent of national U.S. vehicle sales voluntarily committed to them, at a minimum provide a clear indication of manufacturers’ capabilities to produce cleaner vehicles than required by the SAFE rule standards in the implementation timeframe of EPA’s revised standards.⁶⁶ EPA further discusses how we considered the California Framework Agreements in the context of feasibility and lead time for our standards in Section III.C of this preamble. Some commenters supported continued coordination between EPA and California on our respective light-duty GHG programs. EPA expects to continue our long-standing practice of working closely with CARB and all other interested stakeholders in development of future emissions standards.

In a separate but related action, on April 28, 2021, EPA issued a Notice of Reconsideration for the previous withdrawal of the California’s ACC waiver as it relates to the ZEV sales mandate and GHG emission standards (SAFE 1), requesting comments on whether the withdrawal should be

rescinded, which would reinstate the waiver.⁶⁷ EPA conducted a virtual public hearing on June 2, 2021 and the comment period closed on July 6, 2021. EPA will announce the results of its reconsideration once it is complete.

B. Manufacturer Compliance Flexibilities

EPA is finalizing a targeted set of additional temporary compliance flexibilities intended to provide additional flexibility for manufacturers in meeting the 2023 and 2024 standards. EPA proposed temporary changes to certain flexibility provisions to provide limited additional flexibility for manufacturers in transition to more stringent standards. After considering comments and further analysis, EPA is adopting a narrower set of flexibilities than proposed, focusing them particularly on MYs 2023–2024 to help manufacturers manage the transition to more stringent standards by providing some additional flexibility in the near-term. One of the four flexibilities, extended credit carry-forward, is discussed above in section II.A.4 of this preamble. This section provides a detailed discussion of the remaining three flexibilities, listed below, including a summary of the final flexibility provisions compared to those proposed and public comment highlights.

(1) *Credit carry-forward extension*: As discussed previously in Section II.A.4 of this preamble, EPA is finalizing provisions for credit carry-forward extension that are more targeted than those proposed. EPA proposed to extend credit carry-forward for MY 2016–2020 credits to allow more flexibility for manufacturers in using banked credits in MYs 2023–2026. Specifically, EPA proposed a two-year extension of MY 2016 credits and a one-year extension of MY 2017–2020 credits. After considering comments and further analyzing the need for extended credit life, EPA is adopting a narrower approach for the final rule of only adopting the one-year credit life extension for MY 2017–2018 credits so they may be used in MYs 2023–2024.

(2) *Advanced technology multiplier incentives*: EPA proposed increased and extended advanced technology multiplier incentives for MYs 2021–2025 but is finalizing the multipliers at their MY 2021 levels as established in the 2012 rule (e.g., 1.5 for EVs rather than the proposed 2.0) and including them only for MYs 2023–2024. Also, EPA proposed to remove the multiplier incentives for natural gas vehicles for

MYs 2023–2026 established by the SAFE rule and is finalizing this program change as proposed.

(3) *Full-size pickup truck incentives*: EPA proposed to extend the full-size pickup incentives for MYs 2022–2025, reinstating the provisions of the 2012 rule after EPA had eliminated them for these years as part of the SAFE rule. As with multipliers, EPA is finalizing the full-size pickup credits only for MYs 2023–2024.

(4) *Off-cycle credits*: EPA proposed additional opportunities for menu-based off-cycle credits starting in MY 2020, along with updated technology definitions for some of the menu technologies. EPA is finalizing those additional credit opportunities only for MYs 2023–2026 and is not including them as an option for MYs 2020–2022. EPA is adopting new definitions for certain menu technologies as proposed with minor edits after considering comments.

The use of the optional credit and incentive provisions has varied, and EPA continues to expect it to vary, from manufacturer to manufacturer. However, most manufacturers are currently using at least some of the flexibilities.⁶⁸ Although a manufacturer’s use of the credit and incentive provisions is optional.

1. Multiplier Incentives for Advanced Technology Vehicles

i. Background on Multipliers Under Previous Programs

In the 2012 rule, EPA included incentives for advanced technologies to promote the commercialization of technologies that have the potential to transform the light-duty vehicle sector by achieving zero or near-zero GHG emissions in the longer term, but which faced major near-term market barriers. EPA recognized that providing temporary regulatory incentives for certain advanced technologies would decrease the overall GHG emissions reductions associated with the program in the near term, by reducing the effective stringency of the standards in years in which the incentives were available, to the extent the incentives were used. However, in setting the 2017–2025 standards, EPA believed it was worthwhile to forego modest additional emissions reductions in the near term in order to lay the foundation for much larger GHG emissions reductions in the longer term. EPA also

⁶⁴ EPA’s waiver for CARB’s Advanced Clean Car regulations is at 78 FR 2211 (January 9, 2013). The SAFE NPRM is at 83 FR 42986 (August 24, 2018).

⁶⁵ 84 FR 51310 (Sept. 27, 2019).

⁶⁶ The five California Framework Agreements may be found in the docket for this rulemaking and at: <https://ww2.arb.ca.gov/news/framework-agreements-clean-cars>.

⁶⁷ 80 FR 22421 (April 28, 2021).

⁶⁸ See “The 2020 EPA Automotive Trends Report, Greenhouse Gas Emissions, Fuel Economy, and Technology since 1975,” EPA–420–R–21–003 January 2021 for additional information regarding manufacturer use of program flexibilities.

believed that the temporary regulatory incentives may help bring some technologies to market more quickly than in the absence of incentives.⁶⁹

EPA established multiplier incentives for MYs 2017–2021 electric vehicles (EVs), plug-in hybrid electric vehicles (PHEVs), fuel cell vehicles (FCVs), and natural gas vehicles (NGVs).⁷⁰ The multiplier allows a vehicle to “count” as more than one vehicle in the manufacturer’s compliance calculation. Table 12 provides the multipliers for the various vehicle technologies included in the 2012 final rule for MY 2017–2021 vehicles.⁷¹ Since the GHG performance for these vehicle types is significantly better than that of conventional vehicles, the multiplier provides a significant benefit to the manufacturer. EPA chose the magnitude of the multiplier levels to be large enough to provide a meaningful incentive, but not be so large as to provide a windfall for vehicles that still would have been produced even at lower multiplier levels. The multipliers for EVs and FCVs were larger because these technologies faced greater market barriers at the time.

TABLE 12—INCENTIVE MULTIPLIERS FOR EV, FCV, PHEVs, AND NGVs ESTABLISHED IN 2012 RULE

Model years	EVs and FCVs	PHEVs and NGVs
2017–2019	2.0	1.6
2020	1.75	1.45
2021	1.5	1.3

In the SAFE rule, EPA adopted a multiplier of 2.0 for MYs 2022–2026 natural gas vehicles (NGVs), noting that no NGVs were being sold by auto manufacturers at that time. EPA did not extend multipliers for other vehicle types in the SAFE rule, as the SAFE standards did not contemplate the extensive use of these technologies in the future so there was no need to continue the incentives.

ii. Proposed and Final Multiplier Extension and Cap

EPA is adopting a narrower set of temporary advanced technology multipliers in the final rule, limiting the multipliers to MYs 2023–2024 and at multiplier values consistent with the MY 2021 multiplier levels shown in Table 12, which are lower than the levels in the proposed rule. EPA is also finalizing the proposed 10 g/mile multiplier credit cap as proposed. This

section first discusses the final multiplier levels and model year availability followed by a discussion of the multiplier cap.

a. Multiplier Levels and Model Year Applicability

EPA proposed to extend multipliers for EVs, PHEVs, and FCVs for MYs 2022–2025, but with a cap to limit the magnitude of resulting emissions reduction losses and to provide a means to more definitively project the impact of the multipliers on the overall stringency of the program. EPA noted in the proposed rule that with the revised more stringent standards being proposed, the Agency believed limited additional multiplier incentives would be appropriate for the purposes of encouraging manufacturers to accelerate the introduction of zero and near-zero emissions vehicles and maintaining momentum for that market transition. EPA requested comment on all aspects of the proposed extension of multipliers, including the proposed multiplier levels, model years when multipliers are available, and the size and structure of the multiplier credit cap.

Given that the multipliers previously established in the 2012 rule and modified in the SAFE rule only run through MY 2021, EPA proposed to start the new multipliers in MY 2022 to provide continuity for the incentives over MYs 2021–2025. As proposed the multipliers would function in the same way as they have in the past, allowing manufacturers to count eligible vehicles as more than one vehicle in their fleet average calculations. The levels of the proposed multipliers, shown in Table 13 below, are the same as those contained in the California Framework Agreements for MY 2022–2025. EPA proposed to sunset the multipliers after MY 2025, rather than extending them to MY 2026, because EPA intended them to be a temporary part of the program to incentivize technology in the near-term, consistent with previous multipliers. EPA noted in the proposed rule that sunsetting the multipliers at the end of MY 2025 would help signal that EPA does not intend to include multipliers in its future proposal for standards for MY 2027 and later MYs, where these technologies are likely to be integral to the feasibility of the standards. The goal of a long-term program would be to quickly transition the light-duty fleet to zero-emission technology, in which case “incentives” would no longer be appropriate, noting further that as zero-emissions technologies become more mainstream, EPA believes it is

appropriate to transition away from multiplier incentives.

TABLE 13—PROPOSED MULTIPLIER INCENTIVES FOR MYs 2022–2025

Model years	EVs and FCVs	PHEVs
2022–2024 ...	2.0	1.6
2025	1.75	1.45
2026+	1.0 (no multiplier credits).	1.0 (no multiplier credits).

EPA also noted in the proposed rule that it believes sunsetting multipliers would simplify programmatically a transition to a more stringent program for MY 2027. The proposed MY 2025 sunset date combined with the cap, discussed below, was intended to begin the process of transitioning away from auto manufacturers’ ability to make use of the incentive multipliers. While EPA proposed to end multipliers after MY 2025 for these reasons, EPA requested comments on whether it would be more appropriate to allow multiplier credits to be generated in MY 2026 without an increase in the cap, potentially providing an additional incentive for manufacturers who had not yet produced advanced technology vehicles by MY 2026. EPA noted, however, that extending the multipliers through MY 2026 could also potentially complicate transitioning to MY 2027 standards for some manufacturers.

EPA received a range of comments on its proposed multipliers for MYs 2021–2025, including both support for and opposition to including multipliers in the program. The Alliance and several member auto companies commented in support of including multipliers in the program. The Alliance commented that multipliers have proven effective in incentivizing increased production and sales of EVs and that it is aligned with EPA in recognizing that multipliers have provided, and can continue to provide, a meaningful incentive for manufacturers to help drive additional EVs into the marketplace and to help overcome ongoing market headwinds. The Alliance commented that “for the duration of this rule, it can be broadly summarized that while improving, there is projected to remain a lingering price disparity between EVs and conventional models. This disparity continues to support the basis of the EV multiplier to deliver “substantial induced innovation. Separate from the issue of cost, there are several points of friction that EVs have and may continue to struggle to overcome including availability of public charging infrastructure.” The

⁶⁹ See 77 FR 62811 *et seq.*

⁷⁰ 77 FR 62810, October 15, 2012.

⁷¹ 77 FR 62813–62816, October 15, 2012.

Alliance commented it believes the inclusion of EV multipliers for MY 2026 and a higher cap would better recognize the current state of EV technology and markets and incentivize additional EV production. The Alliance also commented that extending the multipliers out to MY 2026 would also recognize that some manufacturers are still developing EVs and would be influenced by later incentives. The Alliance suggested that EPA include an EV multiplier in MY 2026, and reconsider the need for such incentives beyond MY 2026 based on technology and market development in a subsequent rulemaking.

Honda commented that policy levers such as advanced technology multipliers can play an important role in driving continued investment in the face of market uncertainty, multipliers have the potential to bring the cost-effectiveness of long-term technologies more in line with those of shorter-term technologies, and can help facilitate a virtuous cycle in which reduced technology costs, passed along to consumers, can further assist market uptake. Jaguar Land Rover commented in support of lowering the multiplier levels to those in place for MY 2021. Toyota commented that the multiplier should be increased for PHEVs, to a level closer to that provided to EVs, as they claim that PHEVs are often driven as EVs. Lucid, an EV-only manufacturer, supported the multipliers.

CARB commented that EPA's proposed multiplier levels are too high because the proposed cap would be reached at around two percent of sales, a level already met by some auto manufacturers. CARB commented that, as such, the proposed cap would not provide much incentive for increased EV sales. CARB commented that EPA should finalize multipliers only for MYs 2023–2025 at a multiplier levels lower than the proposed levels as they believed that this approach would require manufacturers to sell more EVs in order to maximize multiplier incentive credits and reach the cap, thus providing a greater incentive for manufacturers to increase EV sales in this time frame. Similar comments were received from other state government stakeholders including New York, Minnesota, New Mexico, as well as NACAA. South Coast Air Quality Management District (SCAQMD) supported multipliers and suggested extending them out to MY 2026 but at a lower level as part of a phase-out.

Other commenters supporting multipliers include Motor and Equipment Manufacturers Association (MEMA), Manufacturers of Emission

Controls Association (MECA), ITB Group, and several individual suppliers. MEMA and MECA commented that their support was conditioned on the incentives sunseting in 2025 and the program including a stringent cap, discussed below. MEMA commented “while MEMA can support these advanced technology multiplier incentives, these multiplier incentives should not be extended indefinitely, credits should not be set higher than the proposed levels, and the proposed cap should not be increased.” The Electric Drive Transportation Association also supported multipliers, commenting that EVs are still an emerging market and industry and that multipliers promote investment in innovation and noting that there is still significant uncertainty in multi-year EV market predictions. The Edison Electric Institute also supported the proposed multipliers as reasonable and well supported.

Rivian and Tesla, both EV-only manufacturers, did not support including multipliers. Rivian commented that “artificially enhancing the compliance value of EVs, the multiplier can enable manufacturers to sell additional conventional vehicles if those units deliver a greater financial return. It is also debatable whether the multiplier is even necessary at this stage to help commercialize EV technology. With a rapidly proliferating lineup of EVs in all body styles and vehicle segments, the auto industry has amply demonstrated its ability to bring compelling and competitive advanced technology vehicles to market.” Tesla commented that the renewal of multipliers and increased value are unnecessary and, rather than serve as an incentive, will further delay manufacturers from deploying large amounts of electric vehicles in the U.S. Tesla also commented that the proposed enhanced multiplier unnecessarily rewards late-acting manufacturers with excessive credits and richer credits after over a decade of notice from the EPA that such incentives were temporary and destined to decline in reward.

Environmental and health NGOs also did not support the proposed multipliers, commenting that the incentives were not needed and would result in a loss of emissions reductions. A coalition of NGOs commented that the proposed multipliers would reduce the stringency of proposed rule through MY 2021–MY 2026 by about 6 percent—an amount exceeding one full year of emissions reductions and that the multipliers are no longer serving their original purpose of incentivizing the production of more EVs. NGOs commented that the multiplier credits

represent a windfall for manufacturers already planning to sell EVs. They commented further that EPA, at a minimum, should end the lifetimes of any multiplier credit in the final year for which they are granted such that the multiplier credits are not banked to be used in MY 2027 and later. UCS urged EPA to eliminate multipliers as the current program already provides substantial incentives by excluding upstream emissions; UCS submitted a modeling analysis which they believe indicates that multipliers are ineffective in encouraging greater EV sales.

The Southern Environmental Law Center commented that, at a minimum, EPA should revise the proposed rule so the MYs 2022 through 2024 multiplier incentives values start at 1.5 for EVs and FCVs, and 1.3 for PHEVs—the values provided for the last year of advanced technology credits (MY 2021) in the 2012 Rule—and then decrease to a value of 1.0 (no multiplier credits) by MY 2026.

Securing America's Future Energy (SAFE) commented in support of the proposed multipliers. SAFE further commented:

[I]f EPA remains concerned that the multiplier will result in fewer EV sales because the availability of the multiplier relaxes the stringency of the standard, EPA could modify the operation of the multiplier to mitigate those concerns while still incentivizing the sale of electric vehicles. First, EPA could take into account the possibility that the multiplier might relax the stringency of the standards, and then further tighten the standards to maintain its initial level of stringency. In the alternative, EPA could modify the multiplier so that it would only apply to the incremental percentage of EVs that an automaker sold over the percentage in the previous year. By limiting the availability of the multiplier to the incremental sales of EVs year over year, EPA could reduce the extent to which it decreases the overall stringency of the standard. Yet, by maintaining the multiplier for electric vehicles that represent growth of the EV segment of an automakers' sales, the multiplier would provide an ongoing and robust incentive for automakers to continually increase their EV sales.

The Institute for Policy Integrity commented that EPA should consider whether scaling back some of the multiplier credits, or limiting their application to MY 2023, would increase net social benefits while still preserving more than enough compliance flexibility to satisfy the requirement for lead time.

The Alliance for Vehicle Efficiency (AVE) commented in support of EPA's goal of offering advanced multiplier credits up until 2026 and recommended EPA offer additional performance-based

credits to automotive manufacturers (OEMs) for any vehicle that exceeds the standards ahead of EPA’s compliance timeline, including ICE vehicles. AVE commented that “by steering OEMs towards specific technologies that may only affect about 8 percent of the fleet by 2026 with extensive credits, EPA risks losing immediate and more extensive environmental improvements in exchange for estimated environmental gains years from now. EPA instead has an opportunity to accelerate the adoption of advanced vehicle technologies and reduce emissions from the vast majority of vehicles that will be sold between MYs 2023 to 2026 with performance-based credits.”

After careful weighing the diverse and thoughtful comments received regarding multipliers, EPA is finalizing temporary multipliers at lower levels than those proposed and for fewer model years. Table 14 provides the final multipliers.

TABLE 14—FINAL MULTIPLIER INCENTIVES FOR MYs 2023–2024

Model years	EVs and FCVs	PHEVs
2022	None	None.
2023–2024 ...	1.5	1.3.
2025+	None	None.

EPA believes the approach being finalized strikes an appropriate balance between providing additional near-term flexibility (with the goal that multipliers can act as an incentive for manufacturers to ramp up EV sales more quickly in this time period) and the overall emissions reduction goals of the program. To the extent that manufacturers utilize the optional multiplier flexibility to the maximum extent, it provides additional flexibility of up to 10 g/mile (compared to a projected total decrease in the fleet average targets over MYs 2023–2024 of 32 g/mile, as shown in Table 8 of section II.A.1 of this preamble.) for a manufacturer’s overall fleet, consistent with the cap level of the proposal. EPA’s final approach is also directionally responsive to many of the concerns raised about multipliers and incorporates several of the suggestions made by commenters to narrow the model years and reduce the magnitude of the multipliers. By reducing the multiplier numeric levels by 50 percent compared to the proposed rule (*i.e.*, reducing the EV multiplier from 2.0 to 1.5), manufacturers will need to sell twice as many advanced technology vehicles if they wish to fully utilize the multiplier incentive and reach the cap.

In addition, by retaining the proposed cumulative cap of 10 g/mile, but focusing the multiplier incentives on MYs 2023–2024, the result is an effective or average per year cap of 5.0 g/mile as opposed to the 2.5 g/mile nominal per year cap proposed, under which the 10 g/mile cumulative would spread over four rather than 2 years. EPA believes this approach is responsive to comments that the proposed multipliers would not represent an incentive but simply windfall credits manufacturers would generate by selling the same number of EVs as had been planned previously. In response to comments that the proposed multipliers could have the effect of delaying or reducing EV sales, EPA modeled the final program with and without the final multipliers and found that the final multipliers are not expected to reduce EV sales (see RIA Chapter 4.1.4).

In response to comments provided by SAFE, EPA believes the concept SAFE presented regarding incentivizing only incremental sales beyond those sold by manufacturers in the previous model year to focus the incentive more directly on increased sale has some merit, but EPA is not adopting such an approach. EPA proposed that the multipliers would be applied in the same way as those provided previously in the 2012 rule for MYs 2017–2021, with the exception of the credit cap. EPA would want to seek input from all stakeholders on the merits and implementation details of this type of approach prior to adopting such a fundamental change to the program. Also, the approach offered by SAFE would add complexity to the program which EPA does not believe to be necessary for the few model years, MYs 2023–2024, for which EPA is adopting new multipliers.

Some auto manufacturers commented in support of extending multipliers through MYs 2026 and even beyond, while other commenters were concerned that providing multipliers in later model years would reward manufacturers that introduce advanced technology vehicles such as EVs later than other manufacturers. EPA does not intend for multipliers to be an ongoing incentive but only a narrow flexibility to help address lead time concerns in early model years. EPA proposed to end the multipliers in MY 2025 and is finalizing ending them a year earlier in MY 2024, which is consistent with EPA’s intention that the incentives be short lived and narrowly targeted. As discussed further in Section III of this preamble, EPA believes that there is enough lead time for manufacturers to prepare to meet the final standards

starting in MY 2025 without such incentives. Regarding comments that EPA should not allow the multiplier credits to be used in MYs 2027 and later because the credits could unduly delay the application of technology and delay emissions reductions, EPA understands this concern. When considering the feasibility of standards for MYs 2027 and later, EPA intends to take credit banks and credit availability into consideration.

EPA received many comments on multiplier incentives and responds fully to comments in the RTC for the rule.

b. Multiplier Incentive Credit Cap

To limit the potential effect of the multipliers on reducing the effective stringency of the standards, EPA proposed to cap the credits generated by a manufacturer’s use of the multipliers to the Megagram (Mg) equivalent of 2.5 g/mile for their car and light truck fleets per MY for MYs 2022–2025 or 10.0 g/mile on a cumulative basis.⁷² Above the cap, the multiplier would effectively have a value of 1.0—in other words, after a manufacturer reaches the cap, the multiplier would no longer be available and would have no further effect on credit calculations. A manufacturer would sum the Mg values calculated for each of its car and light truck fleets at the end of a MY into a single cap value that would serve as the overall multiplier cap for the combined car and light truck fleets for that MY. This approach would limit the effect on stringency of the standards for manufacturers that use the multipliers to no greater than 2.5 g/mile less stringent each year on average over MYs 2022–2025. EPA proposed that manufacturers would be able to choose how to apply the cap within the four-year span of MYs 2022–2025 to best fit their product plans. Under the proposed approach, manufacturers could opt to use values other than 2.5 g/mile in the cap calculation as long as the sum of those values over MYs 2022–2025 did not exceed 10.0 g/mile (*e.g.*, 0.0, 2.5, 2.5, 5.0 g/mile in MYs 2022–2025).

EPA received a range of comments regarding the proposed cap. The

⁷² Proposed Multiplier Credit Cap [Mg] = (2.5 g/mile CO₂ × VMT × Actual Annual Production) / 1,000,000 calculated annually for each fleet and summed. The proposed approach would allow manufacturers to use values higher than 2.5 g/mile in the calculation as long as the sum of the cumulative values over MYs 2022–2025 did not exceed 10.0 g/mile. The vehicle miles traveled (VMT) used in credit calculations in the GHG program, as specified in the regulations, are 195,264 miles for cars and 225,865 for trucks. See 40 CFR 86.1866–12. See also 40 CFR 86.1866–12(c) for the calculation of multiplier credits to be compared to the cap.

Alliance and some individual auto manufacturers commented that EPA should provide a cap more in line with that included in the California Framework, equivalent to 23 g/mile (about 5.8 g/mile/year) through MY 2025 and 32 g/mile (about 6.4 g/mile/year) through MY 2026, in order to further incentivize EVs. The Alliance commented that the proposed 10 g/mile cap provides little incentive to increase EV production unless it is taken in a single, or limited, years. The Alliance also commented that the increased cap would better recognize the current state of EV technology and markets. Auto Innovators believes additional EV production can be incentivized by a higher credit cap while still balancing with the policy goal of maximizing near-term GHG benefits. Several individual manufacturers including Honda, Hyundai, JLR, Mercedes, Nissan, Stellantis, and Toyota also commented in support of a cap in line with or closer to the California Framework levels.

Ford commented that a larger multiplier should be provided for trucks compared to cars to alleviate proportionally lower benefits provided to OEMs with a higher truck mix. Lucid commented that EV-only manufacturers should not be subject to a cap because they are not off-setting higher emitting ICE vehicles in their own fleets. Lucid commented that the cap was intended to target manufacturers that produce vehicles with internal combustion engines to prevent them from counterbalancing high-emitting vehicles with ZEV sales.

CARB and New York State Department of Environmental Quality (DEQ) supported the proposed cap, but with lower multipliers such that more EVs are needed to reach the cap, thus providing an incentive for greater EV sales. UCS commented it supports EPA's cap and smaller window of time for those multipliers if multipliers are to remain in the final rule. It commented further that "should EPA continue to move forward with a new phase of EV multipliers, we are strongly supportive of the agency's proposed approach with the cap. The current cap is appropriately low—with a typical fleet compliance of 200–250 g/mile in this timeframe, even using all of the cap in a single year would affect no more than a few percent of a manufacturer's fleet in that year. Because the total impact is relatively low, allowing manufacturers to distribute the total cap utilization according to their own optimal usage does not pose a drastic risk—however, generally such flexibility is maximized by manufacturers at a cost to the goals of the program, and any increase in the

total g/mile value of the cap or additional years in which the multipliers are made available significantly enhances such risk."

MEMA supported including a cap, as noted above, commenting that "without a cap and sunset, the advanced technology multiplier credits could drive technologies down too narrow of a regulatory path, too quickly. MEMA commented further that the cap should not be increased beyond the level proposed. MECA submitted similar comments.

The Southern Environmental Law Center commented that EPA should cap the amount of credits generated by PHEVs that may be used to satisfy the overall multiplier incentive credit cap—similar to the cap established by California in the ZEV program for transitional zero emissions vehicles.

On the topic of allowing multiplier credits to be generated in MY 2026 and the credit cap, SCAQMD commented that it generally supported sunsetting the multipliers in MY 2025 but if the rule design could recognize narrower eligibility for generating credits in 2026, *e.g.*, extending the incentive only to those manufacturers that have used less than some fraction of the cap, it could promote this beneficial result without further ossifying multipliers. SCAQMD commented "[m]oreover, if MY 2026 had its own year-specific, lesser cap, such that a manufacturer would not rely too heavily on any new-gained multiplier incentive, that may partly address EPA's stated concern that any MY 2026 credits could 'potentially complicate transitioning to MY 2027 standards for some manufacturers.'"

After considering comments, EPA is finalizing the proposed credit cap of 10.0 g/mile on a cumulative basis. The nominal credit cap on a per year basis is five g/mile because the cap is spread over two MYs, 2023–2024, rather than the four MYs of 2022–2025 proposed.

Commenters were generally supportive of including a multiplier cap and while comments differed on the appropriate magnitude of the cap, EPA believes its approach for the final cap addresses many of the concerns expressed by commenters. Even though EPA reduced the number of years over which multiplier incentives would be available from four to two years, EPA is retaining the proposed cumulative cap of 10 g/mile. This is equivalent to a nominal per year cap of 5.0 g/mile compared to the 2.5 g/mile per year nominal cap proposed. This preserves the magnitude of the additional flexibility proposed overall but focuses it more narrowly on MYs 2023–2024. Based on current use of multipliers and

manufacturers' announced plans for the introduction of more advanced technology vehicles in this time frame, EPA believes this provision will provide additional flexibility in meeting the near-term standards and help them manage the transition to more stringent standards.⁷³

EPA considered whether reducing the magnitude of the cap by half would be appropriate, retaining the proposed nominal cap of 2.5 g/mile per year. EPA decided that rather than reduce the magnitude of the cap, it would be more appropriate to retain the 10 g/mile cap so that the available total incentive credits, and the flexibility they represent in the earliest years of the program, is retained. The approach EPA is finalizing is also consistent with the Alliance comments that, as proposed, the multipliers would provide little incentive and did not recognize the current state of technology or the market. We believe, as noted above, that concentrating the multipliers over two years with the same cumulative cap, rather than the proposed four years, provides additional incentive for increasing sales of advanced technology vehicles. EPA recognizes, also, that while the effect on emissions reductions would remain the same as under the proposed rule if manufacturers are able to maximize the use of the multipliers in MYs 2023–24, given that the cap remains at 10 g/mi, we expect it to be less likely for manufacturers to reach that level given the more limited timeline and reduced multiplier levels compared to the proposal. EPA believes the final approach better provides the intended incentive to manufacturers to more quickly ramp up sales of these vehicles, which are key in transitioning the light-duty fleet toward zero-emissions vehicles.

In response to comments that EPA should adopt a more generous multiplier cap, in line with that included in the California Framework, EPA did not take this approach because EPA believed the California Framework cumulative cap to be too generous for the EPA program. Conversely, other commenters believe that no multiplier should be allowed because, even under the proposed cap, multipliers may act to lessen the real world emission reductions from the standards. EPA notes that the California Framework Agreements take effect in MY 2021 compared to EPA's final standards that

⁷³ "The 2021 EPA Automotive Trends Report, Greenhouse Gas Emissions, Fuel Economy, and Technology since 1975," EPA-420-R-21-023, November 2021. Manufacturers generated overall fleet average multiplier credits equivalent to just under 3 g/mile (See Figure 5.5).

begin in MY 2023 and thus there is a significant difference in the program time frames. Although EPA is adopting a nominal per year cap that is more similar to that of the California Framework, EPA is not increasing the cumulative cap from the proposed 10 g/mile cap. The multipliers in EPA's final program are only available for MYs 2023–2024 compared to the longer duration of multipliers in the California Framework, which provides additional multipliers in MYs 2020–2026. EPA is providing more limited flexibilities in its final program in order to preserve the most emissions reductions feasible while still providing near-term flexibility in consideration of lead time.

iii. Natural Gas Vehicle Multipliers

As noted above, the SAFE rule did not extend multipliers for advanced technology vehicles but did extend and increase multiplier incentives for dual-fuel and dedicated natural gas vehicles (NGVs). The current regulations include a multiplier of 2.0, uncapped, for MYs 2022–2026 NGVs. In the SAFE rule, EPA said it was extending the multipliers for NGVs because “NGVs could be an important part of the overall light-duty vehicle fleet mix, and such offerings would enhance the diversity of potentially cleaner alternative fueled vehicles available to consumers.”⁷⁴ After further considering the issue, as proposed, EPA is removing the extended multiplier incentives added by the SAFE rule from the GHG program after MY 2022. EPA is ending multipliers for NGVs in this manner because NGVs are not a near-zero emissions technology and EPA no longer believes it is appropriate to incentivize these vehicles to encourage manufacturers to introduce them in the light-duty vehicle market. EPA does not view NGVs as a pathway for significant vehicle GHG emissions reductions in the future. Any NGV multiplier credits generated in MY 2022 would be included under the proposed multiplier cap. There are no NGVs currently offered by manufacturers in the light-duty market and EPA is unaware of any plans to introduce NGVs, so EPA does not expect the removal of multipliers for NGVs to have an impact on manufacturers' ability to meet standards.⁷⁵

⁷⁴ 85 FR 25211.

⁷⁵ The last vehicle to be offered, a CNG Honda Civic, was discontinued after MY 2015. It had approximately 20 percent lower CO₂ than the gasoline Civic. For more recent advanced internal

EPA requested comment on its proposed treatment of multipliers for NGVs including whether they should be eliminated altogether for MYs 2023–2026 as proposed or retained partially or at a lower level for MYs 2023–2025. Comments on this topic are summarized and discussed in the RTC document for the rule.

2. Full-Size Pickup Truck Incentives

EPA is finalizing temporary full-size pickup incentives for a more limited time frame than proposed, just for MYs 2023–2024 rather than the proposed MYs 2022–2025. This section provides an overview of the incentives, comments received, and the provisions EPA is finalizing in the final rule.

i. Background on Full Size Pickup Incentives in Past Programs

In the 2012 rule, EPA included a per-vehicle credit provision for manufacturers that hybridize a significant number of their full-size pickup trucks or use other technologies that comparably reduce CO₂ emissions. EPA's goal was to incentivize the penetration into the marketplace of low-emissions technologies for these pickups. The incentives were intended to provide an opportunity in the program's early years to begin penetration of advanced technologies into this category of vehicles, which face unique challenges in the costs of applying advanced technologies due to the need to maintain vehicle utility and meet consumer expectations. In turn, the introduction of low-emissions technologies in this market segment creates more opportunities for achieving the more stringent later year standards. Under the existing program, full-size pickup trucks using mild hybrid technology are eligible for a per-truck 10 g/mile CO₂ credit during MYs 2017–2021.⁷⁶ Full-size pickup trucks using strong hybrid technology are eligible for a per-truck 20 g/mile CO₂ credit during

combustion engines, the difference may be less than 20 percent due to lower emissions of the gasoline-fueled vehicles.

⁷⁶ As with multiplier credits, full-size pickup credits are in Megagrams (Mg). Full-size pickup credits are derived by multiplying the number of full-size pickups produced with the eligible technology by the incentive credit (either 10 or 20 g/mile) and a vehicle miles traveled (VMT) value for trucks of 225,865, as specified in the regulations. The resulting value is divided by 1,000,000 to convert it from grams to Mg. EPA is not adopting a cap for these credits and they are only available for full-size pickups, rather than the entire fleet, so the calculation is simpler than that for multiplier credits.

MYs 2017–2021, if certain minimum production thresholds are met.⁷⁷ EPA established definitions in the 2012 rule for full-size pickup and mild and strong hybrid for the program.⁷⁸

Alternatively, manufacturers may generate performance-based credits for full-size pickups. This performance-based credit is 10 g/mile CO₂ or 20 g/mile CO₂ for full-size pickups achieving 15 percent or 20 percent, respectively, better CO₂ performance than their footprint-based targets in a given MY through MY 2021.⁷⁹ This second option incentivizes other, non-hybrid, advanced technologies that can reduce pickup truck GHG emissions and fuel consumption at rates comparable to strong and mild hybrid technology. These performance-based credits have no specific technology or design requirements; automakers can use any technology or set of technologies as long as the vehicle's CO₂ performance is at least 15 or 20 percent below the vehicle's footprint-based target. However, a vehicle cannot receive both hybrid and performance-based credits since that would be double-counting.

Access to any of these large pickup credits requires that the technology be used on a minimum percentage of a manufacturer's full-size pickups. These minimum percentages, established in the 2012 final rule, are set to encourage significant penetration of these technologies, leading to long-term market acceptance. Meeting the penetration threshold in one MY does not ensure credits in subsequent years; if the production level in a MY drops below the required threshold, the credit is not earned for that MY. The required penetration levels are shown in Table 15 below.⁸⁰

⁷⁷ 77 FR 62825, October 15, 2012.

⁷⁸ 77 FR 62825, October 15, 2012. Mild and strong hybrid definitions as based on energy flow to the high-voltage battery during testing. Both types of vehicles must have start/stop and regenerative braking capability. Mild hybrid is a vehicle where the recovered energy over the Federal Test Procedure is at least 15 percent but less than 65 percent of the total braking energy. Strong hybrid means a hybrid vehicle where the recovered energy over the Federal Test Procedure is at least 65 percent of the total braking energy.

⁷⁹ 77 FR 62826, October 15, 2012. For additional discussion of the performance requirements, see Section 5.3.4 of the “Joint Technical Support Document: Final Rulemaking for 2017–2025 Light-duty Vehicle Greenhouse Gas Emission Standards and Corporate Average Fuel Economy Standards” for the Final Rule,” EPA–420–R–12–901, August 2012.

⁸⁰ 40 CFR 86.1870–12.

TABLE 15—PENETRATION RATE REQUIREMENTS BY MODEL YEAR FOR FULL-SIZE PICKUP CREDITS
[% of production]

	2017	2018	2019	2020	2021
Strong hybrid	10	10	10	10	10
Mild Hybrid	20	30	55	70	80
20% better performance	10	10	10	10	10
15% better performance	15	20	28	35	40

Under the 2012 rule, the strong hybrid/20 percent better performance incentives initially extended out through MY 2025, the same as the 10 percent production threshold. However, the SAFE rule removed these incentives after MY 2021, given the reduced stringency of the SAFE standards. The mild hybrid/15 percent better performance incentive was not affected by the SAFE rule, as those provisions end after MY 2021.⁸¹

ii. Proposed and Final Full Size Pickup Truck Incentives

EPA proposed to reinstate the full-size pickup credits as they existed before the SAFE rule, for MYs 2022 through 2025. As discussed in the proposal, while no manufacturer has yet claimed these credits, the rationale for establishing them in the 2012 rule remains valid. In the context of the proposed rule that included more stringent standards for MY 2023–2026, EPA believed these full-size pickup truck credits were appropriate to further incentivize advanced technologies penetrating this particularly challenging segment of the market. As with the original program, EPA proposed to limit this incentive to full-size pickups rather than broadening it to other vehicle types. Introducing advanced technologies with very low CO₂ emissions in the full-size pickup market segment remains a challenge due to the need to preserve the towing and hauling capabilities of the vehicles. The full-size pickup credits incentivize advanced technologies into the full-size pickup truck segment to help address cost, utility, and consumer acceptance challenges.

EPA requested comments on whether or not to reinstate the previously existing full-size pickup strong hybrid/20 percent better performance incentives and on the proposed approach for doing so. EPA also requested comment on the potential impacts of the full-size pickup incentive credit, and whether, and how, EPA should take the projected effects into account in the final rulemaking.

EPA received a range of comments both supporting and opposing the

proposed full-size pickup incentives. The Alliance supported the proposed full-size pickup hybrid and over-performance incentive credits and suggested that they should be extended through MY 2026. The Alliance commented that although many full-size pickup trucks are quite efficient for their size, weight, and utility, they remain among the highest emitting non-niche vehicles in the fleet. Incentivizing strong hybridization or other technology solutions that yield GHG emission rates 20 percent or better than their regulatory targets, the Alliance believes, can help encourage manufacturer production and marketing to foster greater long-term consumer market adoption in the transition to EVs.

Ford commented that it believes that the full-size pickup incentives are essential in enabling continued adoption of advanced technology in the full-size pickup segment and supports EPA’s proposed reinstatement. Ford commented further that one concern with this credit mechanism is the requirement that 10 percent volume penetration of the relevant technologies must be reached within a given model before any credit is granted. Ford commented “this ‘all-or-nothing’ approach poses risks and uncertainty to OEM compliance planning since it is difficult to predict future volumes with precision, particularly for new or advanced technologies such as hybridization. Ford believes that the threshold is also unnecessary since an OEM is already motivated to maximize volumes to the greatest extent possible—within market and material constraints—in order to recoup the sizeable investments needed to implement such technologies. For these reasons, Ford believes it is appropriate to lower or remove the volume threshold requirement. In the alternative, Ford asks that EPA clarify that an OEM may include multiple technologies toward the 10 percent threshold, for example, by combining BEV and HEV volumes to satisfy a given model’s 10 percent threshold requirement for the performance-based credit pathway.” The Alliance also supported this approach.

CARB supported restoring the full-size pickup credits in conjunction with revised standards but disagreed that the credits should be restored for MY 2022, commenting that vehicles produced for MY 2022 will remain subject to the substantially less stringent SAFE standards and no action should be taken to effectively further weaken the 2021 or 2022 standards.

Environmental and health NGOs opposed the pickup incentives. Center for Biological Diversity, Earthjustice, and Sierra Club (hereinafter “CBD et al.”) jointly commented that the incentives were unnecessary, noting automakers are making new electric trucks, and consumers are buying them. CBD et al. elaborated “For example, as of early June 2021, Ford had reached 100,000 reservations for its 2022 Ford F–150 electrified full-size truck. Rivian’s electric R1T will be released this year, and General Motors is planning an electric version of its popular Chevrolet Silverado for 2023.” CBD et al. commented that, as these developments are happening on their own, there is no evidence that EPA’s incentives would further spur production.

ACEEE commented, “this is another instance of awarding credits in excess of actual emission reductions, which reduces the stringency of the standards. This specific incentive is also problematic because it could encourage production of full-sized pickup trucks at the expense of smaller vehicles. It also provides a loophole to the 2.5 g/mile EV multiplier credit limit, by creating an alternative pathway for EV pickup trucks to earn unwarranted credits after the fleetwide EV multiplier limit has been reached. ACEEE estimates that this provision alone could reduce stringency by up to 2 g/mile by MY 2025 and reduce emissions savings by up to 1 percent for the entire period of the proposed rule.” UCS provided similar comments, stating that “even in the absence of the full-size pick-up strong hybrid/performance credit, manufacturers have moved forward with plans for full-size pick-ups that meet the criteria. The simple reason is that these vehicles are sold by only a

⁸¹ See 85 FR 25229.

small number of manufacturers, and as such represent a critical piece of the portfolio of those manufacturers—a company like Ford cannot afford for its best-selling vehicle to be a deficit-generator under the standards. Since these vehicles are already planned, the agency’s reinstatement of the credit cannot be considered an incentive—instead, it is a windfall credit.”

SAFE also opposed the pickup incentives, commenting that hybridization of pick-up trucks is no longer an innovative technology, as it has been replaced by full electric pickup trucks, with towing and hauling capacity similar to conventional pickups, that are entering the market shortly. SAFE further commented that EPA acknowledged that the proposed pickup incentives would allow additional GHG emissions and did not to adequately support its proposed rule. SAFE commented that “given the current state of pickup truck technology, EPA should focus on incentivizing transformative electric pickup trucks and decline to extend incentives to hybrids.”

Tesla commented that EPA should not renew the full-size pick-ups incentives, commenting that EPA’s analysis underestimates the deployment of newly manufactured full EV pick-up trucks. Tesla notes, for example, EPA projects no delivery of the Tesla Cybertruck as is scheduled in MY 2022, ignores any deployment of pickups by Rivian, and appears to underestimate Toyota’s deployment despite pronouncement of seven models by MY 2025. Tesla commented that their modeling anticipates that starting in MY 2023 this annual credit would further erode the proposed standard’s stringency starting at 0.3 g/mile and grow in usage in MYs 2024 and 2025. Tesla also asserted this incentive is not needed to incentivize deployment of actual EV pickups and should be removed to increase the revised standards’ stringency.

Consumer Reports recommended that EPA simplify the credit by eliminating the strong hybrid credit, and only provide the credit to vehicles that meet the 20 percent improvement above the standard threshold, regardless of technology used. Consumer Reports commented that this would avoid potentially giving credits to strong hybrids designed to deliver increased performance, but minimal efficiency improvements. UCS provided similar comments regarding strong hybrid pickups, commenting that strong hybrid pickups are not being designed for efficiency, and given that, it makes sense to eliminate the strong hybrid

credit entirely. UCS further commented that if EPA wishes to implement a full-size pick-up credit, it should only be for the 20 percent performance credit to ensure that at least the credit windfall will be limited to efficient vehicles, not just a high-performance trim level.

After considering the wide range of comments, EPA is finalizing a more limited time period for full-size pickup incentives—only for MYs 2023–2024. EPA is not finalizing the proposed incentives for MYs 2022 or 2025. These incentives will sunset at the end of MY 2024. EPA believes this approach balances the need for flexibility in these near-term model years given lead time considerations, with the overall emissions reduction goals of the program. EPA believes that this more targeted approach to full-size pickup truck credits is appropriate to further incentivize advanced technologies in this segment, which continues to be particularly challenging given the need to preserve the towing and hauling capabilities while addressing cost and consumer acceptance challenges. EPA is also retaining the production thresholds to ensure that manufacturers taking advantage of the flexibility must sell a significant number of qualifying vehicles to do so. While this flexibility is more narrowly focused, since not all manufacturers produce full-size pickups, it represents another avenue for credits that may help manufacturers meet the near-term standards, in addition to the other flexibilities included in the program.

Regarding comments from Consumer Reports and UCS that EPA should not include an incentive for strong hybrid technology, EPA understands the concerns raised by the commenters and believes the comments have some merit. However, EPA has decided to constrain the overall program instead in terms of timeframe by only finalizing the incentive for two model years, which directionally responds to the commenters more general concerns about the potential impact of the proposal. The approach EPA is finalizing is more in line with EPA’s proposal and request for comments regarding the scope full-size pickup incentives, since EPA did not seek comments or otherwise consider not including the strong hybrid portion of the full-size pickup incentive.

EPA also is finalizing the proposed provision to prevent double counting of the full-size pickup credits and the advanced technology multipliers. In the 2012 rule, EPA included a provision that prevents a manufacturer from using both the full-size pickup performance-based credit pathway and the multiplier

credits for the same vehicles. This would prevent, for example, an EV full-size pickup from generating both credits. EPA proposed the same restriction for vehicles qualifying for the full-size pickup hybrid credit pathway. With the extended multiplier credits and the full-size pickup credit, EPA believes allowing both credits would be double-counting and inappropriate. EPA did not receive adverse comments on this provision. Therefore, EPA is modifying the regulations as proposed such that manufacturers may choose between the two credits in instances where full-size pickups qualify for both but may not use both credits for the same vehicles. A manufacturer may choose to use the full-size pickup strong hybrid credit, for example, if the manufacturer either has reached the multiplier credit cap or intends to do so with other qualifying vehicles.

3. Off-Cycle Technology Credits

EPA is finalizing a temporary increase in the off-cycle menu credit cap from 10 to 15 g/mile, but over a more limited time frame than proposed, from MY 2023 through 2026. Coinciding with the increased menu cap, EPA is also adopting revised definitions for certain off-cycle menu technologies as proposed, with minor edits in response to comments, starting in MY 2023. EPA proposed to allow manufacturers the option to take advantage of the higher cap, using the updated definitions, in MYs 2020–2022. After considering comments, EPA is not finalizing the provisions applicable to MYs 2020–2022, due to concerns that they would provide unnecessary additional flexibility for the MY 2020–2022 standards established in the SAFE rule. The off-cycle credits program and the revisions EPA is finalizing are discussed in the section below.

i. Background on Off-Cycle Credits in Prior Programs

Starting with MY 2008, EPA started employing a “five-cycle” test methodology to measure fuel economy for purposes of new car window stickers (labels) to give consumers better information on the fuel economy they could more reasonably expect under real-world driving conditions.⁸² However, for GHG compliance, EPA continues to use the established “two-cycle” (city and highway test cycles, also known as the FTP and HFET) test

⁸² <https://www.epa.gov/vehicle-and-fuel-emissions-testing/dynamometer-drive-schedules>. See also 75 FR 25439 for a discussion of 5-cycle testing.

methodology.⁸³ As learned through development of the “five-cycle” methodology and prior rulemakings, there are technologies that provide real-world GHG emissions improvements, but whose improvements are not fully reflected on the “two-cycle” test. EPA established the off-cycle credit program to provide an appropriate level of CO₂ credit for technologies that achieve CO₂ reductions, but may not otherwise be chosen as a GHG control strategy, as their GHG benefits are not measured on the specified 2-cycle test. For example: High efficiency lighting is not measured on EPA’s 2-cycle tests because lighting is not turned on as part of the test procedure but reduces CO₂ emissions by decreasing the electrical load on the alternator and engine. The key difference between the credits discussed below and the incentives discussed in the previous two sections is that off-cycle credits—as well as A/C credits, discussed in the next section—represent real-world emissions reductions if appropriately sized and therefore their use should not result in deterioration of program benefits, and should not be viewed as cutting into the effective stringency of the program.

Under EPA’s existing regulations, there are three pathways by which a manufacturer may accrue off-cycle technology credits.⁸⁴ The first pathway is a predetermined list or “menu” of credit values for specific off-cycle technologies that was effective starting in MY 2014.⁸⁵ This pathway allows manufacturers to use credit values established by EPA for a wide range of off-cycle technologies, with minimal or no data submittal or testing requirements. The menu includes a fleetwide cap on credits of 10 g/mile to address the uncertainty of a one-size-fits-all credit level for all vehicles and the limitations of the data and analysis used as the basis of the menu credits. A second pathway allows manufacturers to use 5-cycle testing to demonstrate and justify off-cycle CO₂ credits.⁸⁶ The additional emissions tests allow emission benefits to be demonstrated over some elements of real-world driving not captured by the GHG compliance tests, including high speeds,

rapid accelerations, and cold temperatures. Under this pathway, manufacturers submit test data to EPA, and EPA determines whether there is sufficient technical basis to approve the off-cycle credits. The third pathway allows manufacturers to seek EPA approval, through a notice and comment process, to use an alternative methodology other than the menu or 5-cycle methodology for determining the off-cycle technology CO₂ credits.⁸⁷ This option is only available if the benefit of the technology cannot be adequately demonstrated using the 5-cycle methodology.

Prior to this rulemaking, EPA received comments from manufacturers on multiple occasions requesting that EPA increase the menu credit cap. Previously, EPA has opted not to increase the cap for several reasons.⁸⁸ First, the cap is necessary given the uncertainty in the menu values for any given vehicle. Menu credits are values EPA established to be used across the fleet rather than vehicle-specific values. When EPA established the menu credits in the 2012 rule, EPA included a cap because of the uncertainty inherent in using limited data and modeling as the basis of a single credit value for either cars or trucks. While off-cycle technologies should directionally provide an off-cycle emissions reduction, quantifying the reductions and setting appropriate credit values based on limited data was difficult. Manufacturers wanting to generate credits beyond the cap may do so by bringing in their own test data as the basis for the credits. Credits established under the second and third pathways do not count against the menu cap. Also, until recently most manufacturers still had significant headroom under the cap allowing them to continue to introduce additional menu technologies.⁸⁹ Finally, during the implementation of the program, EPA has expended significantly more effort than anticipated on scrutinizing menu credits to determine if a manufacturer’s technology approach was eligible under the technology definitions contained in the regulations. This further added to concerns about whether the technology could reasonably be expected to provide the real-world benefits that credits are meant to represent. For these reasons,

EPA has been reluctant to consider increasing the cap.

EPA may make changes to the test procedures for the GHG program in the future that could change the need for an off-cycle credits program, but there were no such test procedure changes proposed in this rule. EPA recognizes that off-cycle credits, therefore, will likely remain an important source of emissions reductions under the program, at least through MY 2026. Off-cycle technologies are often more cost effective than other available technologies that reduce vehicle GHG emissions over the 2-cycle tests and manufacturer use of the program continues to grow. Off-cycle credits reduce program costs and provide additional flexibility in terms of technology choices to manufacturers which has resulted in many manufacturers using the program. Multiple manufacturers were at or approaching the 10 g/mile credit cap in MY 2019.⁹⁰ Also, in the SAFE rule, EPA added menu credits for high efficiency alternators but did not increase the credit cap for the reasons noted above.⁹¹ While adding the technology to the menu has the potential to reduce the burden associated with the credits for both manufacturers and EPA, it further exacerbates the credit cap issue for some manufacturers.

ii. Proposed and Final Off-Cycle Credit Menu Cap Increase

EPA is finalizing its proposed provision to increase the off-cycle menu cap, but over a more limited time period (MY 2023 through 2026) than proposed. EPA proposed increasing the cap on menu-based credits from the current 10 g/mile to 15 g/mile beginning as early as MY 2020. As a companion to increasing the credit cap, EPA also proposed modifications to some of the off-cycle technology definitions to improve program implementation and to better accomplish the goal of the off-cycle credits program: To ensure emissions reductions occur in the real-world from the use of the off-cycle technologies. EPA proposed that manufacturers could optionally access the 15 g/mile menu cap in MYs 2020–2022 if the manufacturers met all of the revised definitions. EPA is finalizing the increased credit cap of 15 g/mile along with the proposed definition changes

⁸³ The city and highway test cycles, commonly referred to together as the “2-cycle tests” are laboratory compliance tests are effectively required by law for CAFE, and also used for determining compliance with the GHG standards. 49 U.S.C. 32904(c).

⁸⁹ See “The 2020 EPA Automotive Trends Report, Greenhouse Gas Emissions, Fuel Economy, and Technology since 1975,” EPA-420-R-21-003 January 2021 for information on the use of menu credits.

⁹⁰ In MY 2019, Ford, FCA, and Jaguar Land Rover reached the 10 g/mile cap and three other manufacturers were within 3 g/mile of the cap. See “The 2020 EPA Automotive Trends Report, Greenhouse Gas Emissions, Fuel Economy, and Technology since 1975,” EPA-420-R-21-003 January 2021.

⁹¹ 85 FR 25236.

starting in MY 2023. For reasons discussed below, EPA is not finalizing the proposed MY 2020–2022 opt-in provisions.

EPA believes this is a reasonable approach to provide more opportunity for menu-based credits in the off-cycle program, while still keeping a limit in place. For MY 2020, manufacturers claimed an average of 7.8 g/mile of menu credits with three manufacturers claiming the maximum 10 g/mile of credits.⁹² Increasing the cap provides an additional optional flexibility and also an opportunity for manufacturers to earn more menu credits by applying additional menu technologies, recognizing that some manufacturers may need to make changes to some of their current designs if they choose to continue to earn menu credits under the revised definitions.

In the proposal, EPA requested comment on whether the menu credit cap should be increased to 15 g/mile, EPA's proposed approach for implementing the increased credit cap, including the start date of MY 2020, as well as the proposed application of revised technology definitions. EPA specifically requested comment on whether an increased credit cap, if finalized, should begin in MY 2020 as proposed or a later MY such as MY 2021, 2022, or 2023. EPA encouraged commenters supporting off-cycle provisions that differ from EPA's proposed rule to address how such differences could be implemented to improve real-world emissions benefits and how such provisions could be effectively implemented.

EPA received both supportive and adverse comments regarding the proposed off-cycle menu cap increase. The Alliance supported raising the credit cap for the off-cycle technology menu, effective in MY 2020, commenting that the 10 g/mile cap was originally promulgated in the 2012 Rule and has become constraining to technology additions, particularly with the addition of new menu technologies added in the SAFE rule. The Alliance did not support tying the increased menu cap to the revised definitions, commenting that the issues should be considered separately. The Alliance commented that “the cap should be raised regardless of the decision whether to modify technology definitions or not and, if modified technology definitions are adopted,

regardless of when a manufacturer applies the modified definitions.”

The Alliance recommended that EPA not adopt the revised definitions in this rulemaking but wait until the subsequent rule for MYs 2027 and later. The Alliance commented that “model year 2023 vehicles can be built as soon as January 2022, leaving manufacturers only three to at most nine months to design, validate, and certify vehicles with systems that meet the new definitions. This lead-time is simply insufficient to make the necessary level of changes. In MY 2019, the fleetwide average use of active engine warmup, active transmission warmup, and passive cabin ventilation technologies resulted in a credit of approximately 3.6 g/mile. Modifying definitions without sufficient lead-time would likely result in an immediate loss of most, if not all of this credit, further escalating the challenge of managing the large increase in standard stringency proposed for MY 2023. The new definitions will require innovative solutions and significant changes to vehicle design to meet them.” The Alliance commented further, “if EPA adopts new definitions for passive cabin ventilation, active engine warm-up, and/or active transmission warm-up technologies, EPA should also continue to recognize existing designs. EPA justifies its proposed provision to modify technology definitions on the basis that current system designs are not meeting EPA's original expectations. However, current system designs are providing off-cycle emissions benefits. Given the benefits of such systems, EPA should continue to provide credit for systems that meet existing definitions through the menu, in addition to newly defined systems.”

Several individual manufacturers also raised lead time concerns regarding the implementation of revised definitions. Stellantis commented that if EPA wants to implement new technology definitions, EPA should do so starting in MY 2027, allowing manufacturers to plan and implement fleetwide changes. Stellantis argued that previous systems were approved by EPA and that the benefits they provide are threatened by the revised definitions. Toyota requested that the revised definitions be effective starting with the 2025 model year at the earliest to provide adequate lead time for appropriate countermeasures and compliance plan adjustments. Hyundai requested that the revised definitions not be implemented until 2027 MY for similar reasons, adding that “use of the higher 15 g/mile cap should be permitted without prejudice in order to encourage the

inclusion of more fuel saving technologies.” Ford commented that the “Notice and Comment process is the appropriate mechanism for making major policy or technology definition clarifications to the off-cycle program. However, such clarifications should not be retroactively applied, or be required in order to qualify for the 15 g/mile cap for previous model years. It should also be noted that Ford has relied on these credits to comply with current and past regulatory structures, such as ‘One National Program’ and the California Framework Agreement.”

JLR commented that it understands EPA's proposed provision to change the technology definitions but requested that the menu be expanded to include technologies that do not meet the new definition, but do meet the old definition, with appropriate credit values assigned. JLR also commented that there should be an option for manufacturers to remain at the 10 g/mile cap with the original technology definitions up to and including MY 2025. JLR commented that this is required as, for technologies that involve significant changes to the vehicle to meet the new definition such as active transmission warm up, there must be a longer lead time for manufacturers to adapt to this change in the regulation.

MEMA commented that it strongly supports EPA expanding the off-cycle technology credit program by increasing the credit cap on credits received through the off-cycle menu from 10 g/mile to 15 g/mile. Similarly, MECA commented that it supports EPA's continuation and improvement of the off-cycle credit program with the higher credit cap. BorgWarner commented that the credit cap “should be removed to allow and promote the true potential of these technologies to achieve the new standards. We do not see the value of a cap that excludes technologies that are shown to provide additional real-world fuel economy benefits. Credit programs should be continued and expanded to provide important flexibilities and broader pathways for greater innovation and lower compliance costs.”

Environmental Defense Fund (EDF) commented that the proposed off-cycle program changes would help manufacturers meet the MY 2023–2024 standards and, in modeling performed to support their comments that the standards are feasible, included a portion of the proposed increased off-cycle credits. EDF commented that “it is also eminently reasonable to assume automakers could (and would) apply relatively inexpensive, widely deployed off-cycle technologies that can be added

⁹² “The 2021 EPA Automotive Trends Report, Greenhouse Gas Emissions, Fuel Economy, and Technology since 1975,” EPA-420-R-21-023, November 2021.

at the tail end of the product-development process.”

ACEEE supported EPA’s proposed provision to revise the definitions, commenting that EPA should continue to scrutinize menu credits to ensure that definitions only allow for technologies that have been researched and tested and not others that may be superficially similar. ACEEE, however, opposed beginning the 15 g/mile credit cap increase in MY 2020, commenting that those vehicles have already been designed and no new menu technologies will be added to the vehicles. Therefore, the change would not lead to any additional emissions reductions but instead, would effectively reduce the stringency of the proposed rule by giving automakers credits for decisions that they have already made and implemented. ACEEE estimated that if automakers were to take advantage of the entire 5 g/mile retroactive cap increase, emission savings from the proposed standards would be reduced by 19 percent.

ACEEE also commented that the credit cap increase is concerning as applied to future model years, as it believes the off-cycle credit system already over awards credits and further weakens the rule stringency. ACEEE commented that research has shown that some technologies are awarded up to 100 percent more credits than appropriate, equaling up to 3 g/mile of credits per technology (Gonder et al. 2016; Kreutzer et al., 2017). Another concern raised by ACEEE is that technologies that qualify for menu credits have not been evaluated for redundancies or overlaps in benefits (Lutsey and Isenstadt 2018). ACEEE commented that a vehicle that has more than one of the technologies addressing the same inefficiencies may not achieve the sum of the benefits of the individual technologies due to synergistic effects.

UCS also did not support raising the menu credit cap, commenting that there is a lack of evidence demonstrating real-world reductions associated with some off-cycle technologies and in some cases, there is evidence that some credit levels are too high, supporting a reduction rather than expansion of the program. UCS also commented in support of implementing the revised definitions and suggest the definitions be implemented immediately to avoid further unwarranted credits for these inferior technologies. UCS also agrees with EPA that any manufacturers seeking credit for technologies that do not meet the revised definitions must do so through the off-cycle credit public comment process pathway.

CBD et al. commented that EPA should end, reduce, or significantly reform the off-cycle credits program. CBD et al. commented that uncertainties arise due to “the lack of data submission; the lack of testing; and the practice of ‘one-size-fits-all installation’ by which automakers who install the same technology not just on the specific vehicle type and model they tested, but also on many or all of the other cars and trucks in their fleets, without submitting any test data on the level of emissions reductions, if any, they generate on these different and diverse vehicles. CBD et al. commented that if EPA proceeds with its current proposed rule, off-cycle credits should, at a minimum, be limited and reformed so real-world results are assured and verified, as stated in the Joint Comments. If the agency adopts Alternative 2 plus, off-cycle credits should still not be expanded, and their cap maintained.”

Tesla also commented that EPA should end the off-cycle credits program. Tesla argued that “extending and expanding these credit rewards old technology and, to the extent new technologies are deployed to generate off-cycle credits, focuses critical R&D budgets on tweaking legacy ICE platforms rather than directing these budgets to electrification and greater emissions reductions. As such, EPA’s proposed rule, rather than confronting this built-in bias toward ICE legacy technology, enhances the pre-existing bias by increasing the off-cycle cap to 15 g/mile. Again, such perverse incentives should not be extended, much less increased.”

After carefully considering the comments, EPA is finalizing the 15 g/mile cap and revised definitions, beginning in MYs 2023 through 2026. Given the level of concern expressed regarding optionally allowing the cap to increase retroactively starting in MY 2020 and comments from manufacturers that it would not be particularly useful to the extent they may need to make technology changes in order to meet the new definitions, EPA is not finalizing the optional provisions for MYs 2020–2022. EPA views the definition updates as important refinements to the ongoing off-cycle program to improve its implementation and help ensure that the program produces real-world benefits as intended and continues believes that it is reasonable and appropriate to make these updates in parallel with the cap increase for MYs 2023–2026.

EPA acknowledges that off-cycle credits are meant to represent real-world reductions and theoretically there would not be a loss of emissions

reductions associated with allowing manufacturers to use the revised definitions and increased cap in MY 2021–2022 as proposed. However, many commenters were concerned with EPA making any changes in MYs 2021–2022 that could make it easier for manufacturers to meet the revised less stringent standards established in the SAFE rule for those years. EPA understands this concern, and also is concerned that additional off-cycle credits in those years may represent a windfall for manufacturers since there is no lead time for manufacturer to change their product line in MYs 2021–2022 and therefore manufacturers would likely only generate additional credits to the extent they had already deployed qualifying technologies. For these reasons, also, EPA is finalizing the start of both the revised definitions and increased cap prospectively only, rather than retroactively in MYs 2021–2022. The new definitions will go into effect in MY 2023 and EPA believes it’s appropriate that the cap be increased only once the revised definitions go into effect to ensure the real-world reductions for these technologies.

EPA disagrees with comments that EPA should continue to allow the use of the unrevised definitions and menu credits for several model years into the future. When EPA established the menu, EPA intended it to be a streamlined process not requiring manufacturers to produce data on which to base credits. There are not data requirements associated with menu credits. Also, EPA notes that claiming menu credits from the off-cycle menu does not require EPA pre-approval. EPA made clear its intended approach in the 2012 rule preamble establishing the menu where EPA stated that “both technologies and credit values based on the list are established by rule. That is, there is no approval process associated with obtaining the credit.”⁹³ As discussed in the proposed rule, the original regulatory definitions for a few technologies have allowed manufacturers to use technological approaches that were not consistent with those envisioned in the 2012 rule that established them. These approaches are unlikely to produce emissions reductions matching the menu credits. For example, when establishing the passive cabin ventilation credit, EPA envisioned air flow consistent with windows and/or sunroof being open for a period of time to allow hot air to escape the cabin through convective air flow. Under the original definitions, manufacturers are generating a sizeable

⁹³ 77 FR 62833.

credit for simply opening the interior vents when the vehicle is keyed off. EPA recognized that this approach would not produce benefits consistent with the credits but was not able to disallow the credit.

Although EPA may have detailed discussions with manufacturers regarding their claims, in the end, under 40 CFR 86.1869–12(b) EPA’s only recourse in situations where the technology may not provide the emissions reductions envisioned is to scrutinize the technologies to determine if the approach does in fact meet the definition. EPA may also request data, engineering analyses, or other information to support a manufacturer’s claim that a technology meets the regulatory definition. In cases where EPA finds that it does not meet the definition, it may disallow the claimed credit. However, if EPA finds that the approach does meet the definition, EPA may not disallow the credit even if the technology is not likely to provide a benefit in line with the menu credit level. In those situations, EPA must revise the definitions section of the regulations in order to strengthen the program, a step EPA is now taking in this final rule. To help preserve the integrity of the off-cycle program, EPA believes that updating the program by revising the definitions as needed to correct known deficiencies discovered during implementation is essential to maintaining program integrity and emissions benefits. Also, EPA’s requests for information regarding the technologies and follow-up with manufacturers has been flagged by manufacturers as causing delays in the manufacturer ability to claim credits and that further streamlining is needed, so revising the definitions will help with program implementation.

EPA notes that the off-cycle program is optional, and there is no requirement for any manufacturer to produce any

menu technology. If a manufacturer does use the off-cycle menu for any given technology, it is important for EPA and the public to have confidence that technology used by manufacturers achieves the emission reductions reflected by the credit value. Thus, we are not persuaded that the issue of lead time is relevant in the context of optional off-cycle credit technologies or outweighs the need to maintain off-cycle program integrity by revising it when necessary to ensure that the program delivers intended emissions reductions. These are optional, additional, potential avenues to manufacturers to achieve the standards, but only to the extent that the technologies indeed provide the expected real-world emission benefits. EPA has had discussions with manufacturers regarding each of the technologies where EPA is now revising the definitions, during which EPA raised questions and concerns regarding certain technological approaches being taken by manufacturers, so these issues have been generally known amongst manufacturers claiming credits. Also, the manufacturers that use technological approaches consistent with the known intent of the regulations, will continue to generate credits without interruption due to the definition changes.

Regarding manufacturer comments that EPA allow some lesser credit for technologies that meet the unrevised definitions but not the updated definitions (definitions are discussed below), EPA does not have sufficient data on which to base an appropriate credit value. Manufacturers may use the other program pathways to demonstrate a credit value for such approaches by presenting data to support an appropriate credit level.

EPA is only finalizing the 15 g/mile menu credit cap through MY 2026. EPA received several critical comments regarding the off-cycle program, its

value moving forward, and its implementation which has been challenging both for manufacturers and the agency. EPA intends to thoroughly review all aspects of the off-cycle program for the future rulemaking covering MYs 2027 and later.

EPA received numerous additional comments regarding the structure and implementation of the off-cycle credits program that were not specific to the proposed off-cycle program revisions. See the RTC for a full summary and response to off-cycle credits program comments.

iii. EPA Proposed and Final Modifications to Menu Technology Definitions

Some stakeholders have previously raised concerns about whether the off-cycle credit program produces the real-world emissions reductions as intended, or results in a loss of emissions benefits.⁹⁴ EPA believes these are important considerations, as noted above, and believes it is important to address to the extent possible the issues that the agency has experienced in implementing the menu credits, alongside raising the menu cap. EPA believes that raising the menu cap is appropriate so long as the agency can improve the program and reasonably expect the use of menu technologies to provide real-world emissions reductions, consistent with the intent of the program. Providing additional opportunities for menu credits may allow for more emissions reductions sooner and at a lower cost than would otherwise be possible under a program without off-cycle credits. With that in mind, EPA is finalizing modifications to the menu definitions discussed below to coincide with increasing the menu cap in MY 2023.

The existing menu technologies and associated credits are provided below in Table 16 and Table 17 for reference.⁹⁵

TABLE 16—EXISTING OFF-CYCLE TECHNOLOGIES AND CREDITS FOR CARS AND LIGHT TRUCKS

Technology	Credit for cars (g/mile)	Credit for light trucks (g/mile)
High Efficiency Alternator (at 73%; scalable)	1.0	1.0
High Efficiency Exterior Lighting (at 100W)	1.0	1.0
Waste Heat Recovery (at 100W; scalable)	0.7	0.7
Solar Roof Panels (for 75W, battery charging only)	3.3	3.3
Solar Roof Panels (for 75W, active cabin ventilation plus battery charging)	2.5	2.5
Active Aerodynamic Improvements (scalable)	0.6	1.0
Engine Idle Start-Stop with heater circulation system	2.5	4.4
Engine Idle Start-Stop without heater circulation system	1.5	2.9
Active Transmission Warm-Up	1.5	3.2

⁹⁴ 85 FR 25237.

⁹⁵ See 40 CFR 86.1869–12(b). See also “Joint Technical Support Document: Final Rulemaking for

2017–2025 Light-duty Vehicle Greenhouse Gas Emission Standards and Corporate Average Fuel Economy Standards for the Final Rule,” EPA–420–

R–12–901, August 2012, for further information on the definitions and derivation of the credit values.

TABLE 16—EXISTING OFF-CYCLE TECHNOLOGIES AND CREDITS FOR CARS AND LIGHT TRUCKS—Continued

Technology	Credit for cars (g/mile)	Credit for light trucks (g/mile)
Active Engine Warm-Up	1.5	3.2
Solar/Thermal Control	Up to 3.0	Up to 4.3

TABLE 17—OFF-CYCLE TECHNOLOGIES AND CREDITS FOR SOLAR/THERMAL CONTROL TECHNOLOGIES FOR CARS AND LIGHT TRUCKS

Thermal control technology	Car credit (g/mile)	Truck credit (g/mile)
Glass or Glazing	Up to 2.9	Up to 3.9
Active Seat Ventilation	1.0	1.3
Solar Reflective Paint	0.4	0.5
Passive Cabin Ventilation	1.7	2.3
Active Cabin Ventilation	2.1	2.8

a. Passive Cabin Ventilation

Some manufacturers have claimed the passive cabin ventilation credits based on the addition of software logic to their HVAC system that sets the interior climate control outside air/recirculation vent to the open position when the power to vehicle is turned off at higher ambient temperatures. The manufacturers have claimed that the opening of the vent allows for the flow of ambient temperature air into the cabin. While opening the vent may ensure that the interior of the vehicle is open for flow into the cabin, no other action is taken to improve the flow of heated air out of the vehicle. This technology relies on the pressure in the cabin to reach a sufficient level for the heated air in the interior to flow out through body leaks or the body exhausters to open and vent heated air out of the cabin.

The credits for passive cabin ventilation were determined based on an NREL study that strategically opened a sunroof to allow for the unrestricted flow of heated air to exit the interior of the vehicle while combined with additional floor openings to provide a minimally restricted entry for cooler ambient air to enter the cabin. The modifications that NREL performed on the vehicle reduced the flow restrictions for both heated cabin air to exit the vehicle and cooler ambient air to enter the vehicle, creating a convective airflow path through the vehicle cabin.

Analytical studies performed by manufacturers to evaluate the performance of the open dash vent demonstrate that while the dash vent may allow for additional airflow of ambient temperature air entering the cabin, it does not reduce the existing restrictions on heated cabin air exiting the vehicle, particularly in the target

areas of the occupant’s upper torso. That hotter air generally must escape through restrictive (by design to prevent water and exhaust fumes from entering the cabin) body leaks and occasional venting of the heated cabin air through the body exhausters. While this may provide some minimal reduction in cabin temperatures, this open dash vent technology is not as effective as the combination of vents used by the NREL researchers to allow additional ambient temperature air to enter the cabin and also to reduce the restriction of heated air exiting the cabin.

As noted in the Joint Technical Support Document: Final Rulemaking for 2017–2025 Light-Duty Vehicle Greenhouse Gas Emission Standards and Corporate Average Fuel Economy Standards, pg. 584, “For passive ventilation technologies, such as opening of windows and/or sunroofs and use of floor vents to supply fresh air to the cabin (which enhances convective airflow), (1.7 g/mile for light-duty vehicles and 2.3 g/mile for light-duty trucks) a cabin air temperature reduction of 5.7 °C can be realized.” The passive cabin ventilation credit values were based on achieving the 5.7 °C cabin temperature reduction.

The Agency is finalizing revisions to the passive cabin ventilation definition with clarifying edits to make it consistent with the technology used to generate the credit value. The Agency continues to allow for innovation as the definition includes demonstrating equivalence to the methods described in the Joint TSD. As proposed, EPA is revising the definition of passive cabin ventilation to include only methods that create and maintain convective airflow through the body’s cabin by opening windows or a sunroof, or equivalent means of creating and maintaining

convective airflow, when the vehicle is parked outside in direct sunlight. Current systems claiming the passive ventilation credit by opening the dash vent would not meet the updated definition. Manufacturers seeking to claim credits for the open dash vent system will be eligible to petition the Agency for credits for this technology using the alternative EPA approved method outlined in 40 CFR 86.1869–12(d). EPA’s response to comments and discussion of the clarifying edits are provided in section 8 of the RTC.

b. Active Engine and Transmission Warm-Up

In the NPRM for the 2012 rule (76 FR 74854) EPA proposed capturing waste heat from the exhaust and using that heat to actively warm-up targeted parts of the engine and the transmission fluid. The exhaust waste heat from an internal combustion engine is heat that is not being used as it is exhausted to the atmosphere.

In the 2012 Final Rule (77 FR 62624), the Agency revised the definitions for active engine and transmission warm-up by replacing exhaust waste heat with the waste heat from the vehicle. As noted in the Joint TSD, pages 5–98 and 5–99, the Alliance of Automobile Manufacturers and Volkswagen recommended the definition be broadened to account for other methods of warm-up besides exhaust heat such as a secondary coolant loop.

EPA concluded that other methods, in addition to waste heat from the exhaust, that could provide similar performance—such as coolant loops or direct heating elements—may prove to be a more effective alternative to direct exhaust heat. Therefore, the Agency expanded the definition in the 2012 Final Rule.

In the 2012 Final Rule the Agency also required two unique heat exchanger loops—one for the engine and one for the transmission—for a manufacturer to claim both the Active Engine Warm-up and Active Transmission Warm-up credits. EPA stated in the Joint TSD that manufacturers utilizing a single heat exchanging loop would need to demonstrate that the performance of the single loop would be equivalent to two dedicated loops in order for the manufacturer to claim both credits, and that this test program would need to be performed using the alternative method off-cycle GHG credit application described in 40 CFR 86.1869–12(d).

All Agency analysis regarding active engine and transmission warm-up through the 2012 Final Rule (77 FR 62624) was performed assuming the waste heat utilized for these technologies would be obtained directly from the exhaust prior to being released into the atmosphere and not from any engine-coolant-related loops. At this time, many of the systems in use are engine-coolant-loop-based and are taking heat from the coolant to warm-up the engine oil and transmission fluid.

EPA provided additional clarification on the use of waste heat from the engine coolant in preamble to SAFE rule (85 FR 24174). EPA focused on systems using heat from the exhaust as a primary source of waste heat because that heat would be available quickly and also would be exhausted by the vehicle and otherwise unused (85 FR 25240). Heat from the engine coolant already may be used by design to warm up the internal engine oil and components. That heat is traditionally not considered “waste heat” until the engine reaches normal operating temperature and subsequently requires it to be cooled in the radiator or other heat exchanger.

EPA allowed for the possible use of other sources of heat such as engine coolant circuits, as the basis for the credits as long as those methods would “provide similar performance” as extracting the heat directly from the exhaust system and would not compromise how the engine systems would heat up normally absent the added heat source. However, the SAFE rule also allowed EPA to require manufacturers to demonstrate that the system is based on “waste heat” or heat that is not being preferentially used by the engine or other systems to warm up other areas like engine oil or the interior cabin. Systems using waste heat from the coolant do not qualify for credits if their operation depends on, and is delayed by, engine oil temperature or interior cabin temperature. As the engine and transmission components

are warming up, the engine coolant and transmission oil typically do not have any “waste” heat available for warming up anything else on the vehicle since they are both absorbing any heat from combustion cylinder walls or from friction between moving parts in order to achieve normal operating temperatures. During engine and transmission warm-up, the only waste heat source in a vehicle with an internal combustion engine is the engine exhaust, as the transmission and coolant have not reached warmed-up operating temperature and therefore do not have any heat to share (85 FR 25240).

As proposed, EPA is finalizing revisions to the menu definitions of active engine and transmission warm-up to no longer allow systems that capture heat from the coolant circulating in the engine block to qualify for the Active Engine and Active Transmission warm-up menu credits. EPA would allow credit for coolant systems that capture heat from a liquid-cooled exhaust manifold if the system is segregated from the coolant loop in the engine block until the engine has reached fully warmed-up operation. The Agency would also allow system design that captures and routes waste heat from the exhaust to the engine or transmission, as this was the basis for these two credits as originally proposed in the proposal for the 2012 rule. The approach EPA is finalizing will help ensure that the level of menu credit is consistent with the technology design envisioned by EPA when it established the credit in the 2012 rule.

Manufacturers seeking to utilize their existing systems that capture coolant heat before the engine is fully warmed-up and transfer this heat to the engine oil and transmission fluid would remain eligible to seek credits through the alternative method application process outlined in 40 CFR 86.1869–12(d). EPA expects that these technologies may provide some benefit, though not the level of credits included in the menu. But, as noted above, since these system designs remove heat that is needed to warm-up the engine the Agency expects that these technologies will be less effective than those that capture and utilize exhaust waste heat.

Ford suggested clarifying edits to the proposed revised definitions for active engine and transmission definitions. In response, EPA has accepted some of their edits where the meaning of the definition is clarified but not altered, and has made some additional clarifying edits as well after reviewing Ford’s comments. A full discussion of these comments and the definition revisions

finalized by EPA is provided in section 8 of the RTC.

iv. Clarification Regarding Use of Menu Credits

While EPA received extensive comments on implementing the revised definitions, EPA did not receive many comments on the proposed revised definitions themselves. Comments on the revised definitions are summarized and discussed in the RTC.

Finally, as proposed, EPA is finalizing clarifications that manufacturers claiming credits for a menu technology must use the menu pathway rather than claim credits through the public process or 5-cycle testing pathways. EPA views this as addressing a potential loophole around the menu cap. As is currently the case, a new technology that represents an advancement compared to the technology represented by the menu credit—that is, by providing significantly more emissions reductions than the menu credit technology—would be eligible for the other two pathways. Comments received on this provision are summarized and discussed in the RTC.

4. Air Conditioning System Credits

There are two mechanisms by which A/C systems contribute to the emissions of GHGs: through leakage of hydrofluorocarbon refrigerants into the atmosphere (sometimes called “direct emissions”) and through the consumption of fuel to provide mechanical power to the A/C system (sometimes called “indirect emissions”).⁹⁶ The high global warming potential of the previously most common automotive refrigerant, HFC–134a, means that leakage of a small amount of refrigerant will have a far greater impact on global warming than emissions of a similar amount of CO₂. The impacts of refrigerant leakage can be reduced significantly by systems that incorporate leak-tight components, or, ultimately, by using a refrigerant with a lower global warming potential. The A/C system also contributes to increased tailpipe CO₂ emissions through the additional work required to operate the compressor, fans, and blowers. This additional power demand is ultimately met by using additional fuel, which is converted into CO₂ by the engine during combustion and exhausted through the tailpipe. These emissions can be reduced by increasing the overall efficiency of an A/C system, thus reducing the additional load on the engine from A/C operation, which in turn means a reduction in fuel

⁹⁶ 40 CFR 1867–12 and 40 CFR 86.1868–12.

consumption and a commensurate reduction in GHG emissions.

Manufacturers have been able to generate credits for improved A/C systems to help them comply with the CO₂ fleet average standards since the 2012 and later MYs. Because A/C credits represent a low-cost and effective technology pathway, EPA expected manufacturers to generate both A/C refrigerant and efficiency credits, and EPA accounted for those credits in developing the final CO₂ standards for the 2012 and SAFE rules, by adjusting the standards to make them more stringent. EPA believes it is important to encourage manufacturers to continue to implement low GWP refrigerants or low leak systems. Thus, EPA did not propose and is not finalizing any changes for its A/C credit provisions and is taking the same approach in adjusting the level of the standards to reflect the use of the A/C credits.

Comments received regarding A/C credits are summarized in the RTC.

5. Natural Gas Vehicles Technical Correction

EPA is finalizing as proposed a narrow technical amendment to its regulations to correct a clerical error related to natural gas vehicles. In the SAFE rule, EPA established incentive multipliers for MYs 2022–2026 natural gas vehicles.⁹⁷ EPA also received comments during the SAFE rulemaking recommending that EPA adopt an additional incentive for natural gas vehicles in the form of a 0.15 multiplicative factor that would be applied to the CO₂ emissions measured from the vehicle when tested on natural

gas. Commenters recommended the 0.15 factor as an appropriate way to account for the potential use of renewable natural gas (RNG) in the vehicles.⁹⁸

EPA decided not to adopt the additional 0.15 factor incentive, as discussed in the preamble to the SAFE Rule.⁹⁹ EPA provided a detailed rationale for its decision not to implement a 0.15 factor recommended by commenters in the SAFE Rule.¹⁰⁰ EPA is not revisiting or reopening its decision regarding the 0.15 factor. However, the regulatory text adopted in the SAFE rule contains an inadvertent clerical error that conflicts with EPA’s decision and rationale in the final SAFE rule preamble and provides an option for manufacturers to use this additional incentive in MYs 2022–2026 by multiplying the measured CO₂ emissions measured during natural gas operation by the 0.15 factor.¹⁰¹ EPA proposed and is finalizing narrow technical amendments to its regulations to correct this clerical error by removing the option to use the 0.15 factor in MY 2022 (as discussed in Section II.B.1.iii of this preamble EPA is eliminating multipliers for NGVs after MY 2022). This will ensure the regulations are consistent with the decision and rationale in the SAFE final rule. EPA likely would not have granted credits under the erroneous regulatory text if such credits were sought by a manufacturer because the intent of the agency was clear in the preamble text. In addition, natural gas vehicles are not currently offered by any auto manufacturer and EPA is not aware of any plans to do so. Therefore, there are

no significant impacts associated with the correction of this clerical error. The comments on this provision as well as EPA’s analysis and response are provided in the RTC for the final rule.

C. What alternatives did EPA analyze?

In addition to analyzing the standards we are finalizing, EPA analyzed two alternatives, one less stringent and one more stringent than the final standards. For the less stringent alternative, EPA assessed the proposed standards, *i.e.*, the coefficients of the standards proposed in the NPRM, including the advanced technology multipliers consistent with those proposed. This alternative, referred to as the “Proposal” in Table 18 below, is less stringent than the final standards in MYs 2025 and 2026.

For the more stringent alternative, EPA assessed Alternative 2 from our proposed rule with an additional 10 g/mile increased stringency in MY 2026 per our request for public comments on this option. This alternative is more stringent than the final standards, in particular for MYs 2023 and 2024. For this alternative, EPA used the coefficients from Alternative 2 in the proposed rule for MYs 2023 through 2025, with the standards increasing in stringency in MY 2026 by an additional 10 g/mile compared to the Alternative 2. The Alternative 2 minus 10 standards are the same as the final standards in MYs 2025 and 2026 and differ from the final standards in MYs 2023 and 2024.

We provide the fleet average target levels for the two alternatives compared to the final standards in Table 18 below.

TABLE 18—PROJECTED FLEET AVERAGE TARGET LEVELS FOR FINAL STANDARDS AND ALTERNATIVES [CO₂ g/mile] *

Model year	Final standards projected targets	Proposal projected targets	Alternative 2 minus 10 projected targets
2021 **	229	229	229
2022 **	224	224	224
2023	202	202	198
2024	192	192	189
2025	179	182	180
2026	161	173	161

* Targets shown are modeled results and, therefore, reflect fleet projections impacted by the underlying standards. For that reason, slight differences in targets may occur despite equality of standards in a given year.

** SAFE rule targets shown for reference.

Figure 5 Final Standards Fleet Average Targets Compared to Alternatives

BILLING CODE 6560-50-C

As shown in Figure 5, the range of alternatives that EPA analyzed is fairly narrow, with the final standard target levels differing from the alternatives in MYs 2023–2025 by 3 to 4 g/mile, and in MY 2026 by 12 g/mile. EPA believes the analysis of these alternatives is reasonable and appropriate considering the shorter lead time for the revised standards, our assessment of feasibility, the existing automaker commitments to meet the California Framework (representing nearly 30 percent of the nationwide auto market), the standards adopted in the 2012 rule, public comments on the proposed rule, and the need to reduce GHG emissions. See Chapters 4, 6, and 10 of the RIA for the analysis of costs and benefits of the alternatives.

III. Technical Assessment of the Final CO₂ Standards

In Section II of this preamble, we describe EPA's final standards and related program elements and present industry-wide estimates of projected

GHG emissions targets. Section III of this preamble provides an overview of EPA's technical assessment of the final standards including the analytical approach, projected target levels by manufacturer, projected per vehicle cost for each manufacturer, projections of EV and PHEV technology penetration rates, and a discussion of why the final standards are technologically feasible, drawing from these analyses. Finally, this section discusses the alternative standards EPA analyzed in selecting the final standards. The RIA presents further details of the analysis including a full assessment of feasibility, technology penetration rates and cost projections. In Section VI of this preamble, EPA discusses the basis for our final standards under CAA section 202(a) and in Section VII of this preamble presents aggregate cost and benefit projections as well as other program impacts.

A. What approach did EPA use in analyzing the standards?

The final standards are based on the extensive light-duty GHG technical analytical record developed over the past dozen years, as represented by EPA's supporting analyses for the 2010 and 2012 final rules, the Mid-Term Evaluation (including the Draft TAR, Proposed Determination and Final Determinations), as well as the updated analysis for this final rule, informed by public comments and the best available data. The updated analysis for the proposal and this final rule is not intended to be the sole technical basis of the final standards. EPA's extensive record is consistent and supports EPA's conclusion that year-over-year stringency increases in the time frame of this final rule are feasible at reasonable costs and can result in significant GHG emission reductions and public health and welfare benefits. The updated analysis shows that, consistent with past analyses, when modeling standards of similar stringency to those set forth

in the 2012 rule, the results are similar to the results presented previously. Chapter 1 of the RIA further discusses and synthesizes EPA’s record supporting stringent GHG standards through the MY 2025–2026 time frame.

To confirm that these past analyses continue to provide valid results for consideration by the Administrator in selecting the most appropriate level of stringency and other aspects of the final standards, we have conducted an updated analysis since the proposed rule issued in August 2021. Prior to the analysis used for the SAFE FRM, EPA has used its OMEGA (Optimization Model for reducing Emissions of Greenhouse gases from Automobiles) model as the basis for setting light-duty GHG emissions standards. EPA’s OMEGA model was not used in the technical analysis of the GHG standards established in the SAFE FRM; instead, NHTSA’s Corporate Average Fuel Economy (CAFE) Compliance and Effects Modeling System (CCEMS) model was used.

For this final rule, consistent with the proposed rule, EPA has chosen to use the peer reviewed CCEMS model, and to use the same version of that model that was used in support of the SAFE FRM (though, as discussed below, EPA has updated several inputs to the model since the proposed rule based on public comments and newer available data). As

explained in the proposed rule, given that the SAFE FRM was published a little over a year ago, direct comparisons between the analysis presented in this rulemaking and the analysis presented in support of the SAFE FRM are more direct if the same modeling tool is used. For example, CCEMS has categorizations of technologies and model output formats that are distinct to the model, so continuing use of CCEMS for this rule has facilitated comparisons to the SAFE FRM. Also, by using the same modeling tool as used in the SAFE rule, we can more clearly illustrate the influence of some of the key updates to the inputs used in the SAFE FRM. EPA considers the SAFE FRM version of the CCEMS model to be an effective modeling tool for purposes of assessing standards through the MY 2026 timeframe, along with changes to some of the key inputs as discussed below (see Table 20).

For use in future vehicle standards analyses, EPA is developing an updated version of its OMEGA model. This updated model, OMEGA2, is being developed to better account for the significant evolution over the past decade in vehicle markets, technologies, and mobility services. In particular, the recent advancements in battery electric vehicles (BEVs), and their introduction into the full range of market segments provides strong evidence that vehicle

electrification can play a central role in achieving greater levels of emissions reductions in the future. In developing OMEGA2, EPA is exploring the interaction between consumer and producer decisions when modeling compliance pathways and the associated technology penetration into the vehicle fleet. OMEGA2 also is being designed to have expanded capability to model a wider range of GHG program options than are possible using existing tools, which will be especially important for the assessment of policies that are designed to address future GHG reduction goals. While the OMEGA2 model is not available for use in this rule, peer review of the draft model is underway.

Our updated analysis is based on the same version of the CCEMS model that was used for the proposed rule and for the SAFE FRM. The CCEMS model was extensively documented by NHTSA for the SAFE FRM and the documentation also applies to the updated analysis for this final rule.¹⁰² While the CCEMS model itself remains unchanged from the version used in the final SAFE rule, EPA made the following changes (shown in Table 19) to the inputs for the analysis supporting the proposed rule. Further updates to the inputs based on our assessment of the public comments and newer data are summarized in Table 20.

TABLE 19—CHANGES MADE TO CCEMS MODEL INPUTS FOR THE PROPOSED RULE, RELATIVE TO THE SAFE FRM ANALYSIS

Input file	Changes
Parameters file	Global social cost of carbon \$/ton values in place of domestic values (see RIA Chapter 3.3). Inclusion of global social cost of methane (CH ₄) and nitrous oxide (N ₂ O) \$/ton values (see Section IV of this preamble). Updated PM _{2.5} cost factors (benefit per ton values, see Section VII.E of this preamble). Rebound effect of –0.10 rather than –0.20 (see RIA Chapter 3.1). AEO2021 fuel prices (expressed in 2018 dollars) rather than AEO2019. Updated energy security cost per gallon factors (see Section VII.F of this preamble). Congestion cost factors of 6.34/6.34/5.66 (car/van-SUV/truck) cents/mile rather than 15.4/15/4/13.75 (see RIA Chapter 5). Discounting values to calendar year 2021 rather than calendar year 2019. The following fuel import and refining inputs have been changed based on AEO2021 (see RIA Chapter 3.2): Share of fuel savings leading to lower fuel imports: Gasoline 7%; E85 19%; Diesel 7% rather than 50%; 7.5%; 50% Share of fuel savings leading to reduced domestic fuel refining: Gasoline 93%; E85 25.1%; Diesel 93% rather than 50%; 7.5%; 50% Share of reduced domestic refining from domestic crude: Gasoline 9%; E85 2.4%; Diesel 9% rather than 10%; 1.5%; 10% Share of reduced domestic refining from imported crude: Gasoline 91%; E85 24.6%; Diesel 91% rather than 90%; 13.5%; 90%
Technology file	High compression ratio level 2 (HCR2) technology allowance set to TRUE for all engines beginning in 2018 (see RIA Chapter 2).
Market file	On the Engines sheet, we allow high compression ratio level 1 (HCR1) and HCR2 technology on all 6-cylinder and smaller engines rather than allowing it on no engines (see RIA Chapter 2). Change the off-cycle credit values on the Credits and Adjustments sheet to 15 g/mile for 2020 through 2026 (for the CA Framework) or to 15 g/mile for 2023 through 2026 (for the proposed option) depending on the model run.

¹⁰² See CCEMS Model Documentation on web page <https://www.nhtsa.gov/corporate-average-fuel-economy/compliance-and-effects-modeling-system>.

EPA invited public comment on the input changes noted in Table 19, as well as any other input choices that EPA should consider making for the final rule. EPA encouraged stakeholders to provide technical support for any suggestions on changes to modeling inputs.

We received comments on our analysis. Specifically, the Alliance suggested that we use the updated version of CCEMS used in the recent NHTSA NPRM. The Alliance also suggested that we update our analysis fleet, model HCR2 technology with a more appropriate level of effectiveness relative to the HCR0 and HCR1

technologies, and limit the penetration of BEV200 technology. The Alliance took exception to the share of BEV200 versus BEV300 technology arguing that BEV300 is more in line with where industry is headed due to consumer desire for greater range.

Regarding the first of these comments, that we use an updated version of CCEMS, we have chosen not to do so since it is possible that between the recent CAFE proposal and upcoming CAFE final rule NHTSA may make changes to that version of the model either of their own accord or in response to public comment. Therefore, we believe it is premature to use the

NHTSA CAFE NPRM version of the CCEMS model for EPA’s final rulemaking. Regarding each of the other Alliance comments on the use of the CCEMS model: As discussed further below, we removed HCR2 technology as a compliance option; we strictly limited BEV200 technology such that it represents a very small portion of the projected BEV technology penetration; and we have updated our analysis fleet to reflect the MY 2020 fleet.

As a result, the analysis supporting this final rule includes several changes to the inputs as shown in Table 20.

TABLE 20—CHANGES MADE TO CCEMS MODEL INPUTS FOR THE FINAL RULE, RELATIVE TO THE PROPOSED ANALYSIS

Input file	Changes *
Parameters file	Updated Gross Domestic Product, Number of Households, VMT growth rates and Historic Fleet data consistent with updated projections from EIA (AEO 2021). Updated energy security cost per gallon factors (see Section VII.F of this preamble). Distinct benefit per ton values for refinery and electricity generating unit benefits instead of treating all upstream emissions as refinery emission (see Section V of this preamble). Updated tailpipe and upstream emission factors from MOVES3 and GREET2020 and consistent with NHTSA’s 20201 CAFE NPRM (86 FR 49602, September 3, 2021).
Technology file	High compression ratio level 2 (HCR2, sometimes referred to as Atkinson cycle) technology allowance set to FALSE thereby making this technology unavailable. BEV200 phase-in start year set to the same year as the new market file fleet (see below) which, given the low year-over-year phase-in cap allows for low penetration of BEV200 technology in favor of BEV300 technology. Battery cost was reduced by about 25 percent (see preamble Section III.A of this preamble and RIA 2.3.4); battery cost learning is also held constant (<i>i.e.</i> , no further learning) beyond the 2029 model year.
Market file	The market file has been completely updated to reflect the MY 2020 fleet rather than the MY 2017 fleet used in EPA’s proposed rule (and the SAFE FRM) using the market file developed by NHTSA in support of their recent CAFE NPRM. ¹⁰³ Because the market files are slightly different between the version of CCEMS we are using and the version used by NHTSA, the files are not identical. However, the data are the same with the following exceptions: —We conducted all model runs using EPA Multiplier Mode 2 rather than Mode 1 as used in our proposed rule (and the SAFE FRM). —We have used projected off-cycle credits as developed by NHTSA in support of their recent CAFE NPRM rather than modeling all manufacturers as making use of the maximum allowable off-cycle credits (see RIA Chapter 4.1.1.1). —We have updated the credit banks to incorporate more up-to-date information from manufacturer certification and compliance data.
Scenarios file	The off-cycle credit cap has been set to 10 g/mile even in scenarios and years for which 15 g/mile are available. In addition, the off-cycle credit cost is set to \$0 and then post-processed back into the costs calculated within CCEMS itself. See RIA Chapter 4.1.1.1 for more detail.
Runtime settings	At runtime (in the CCEMS graphical user interface), the “Price Elasticity Multiplier” is now set to –0.40 rather than the value of –1.0 used in the proposed rule analysis.
*	We are using a MY 2020 baseline fleet rather than a MY 2017 baseline fleet. However, since some date-based data used by the model is hardcoded in the model code, and because we did not want to change the model code for analytical consistency with the proposed rule, we adjusted any date-related input data accordingly. Therefore, the input files we are using have headings and date-related identifiers reflecting a MY 2017-based analysis but the data in the files have been adjusted by 3 years to reflect that anything noted as 2017 is actually 2020. For example, in the Scenarios input file which specifies the standards in a year-by-year format, the standards for MY 2023 through MY 2026 are actually entered in the columns noted as 2020 through 2023 due to this need to “shift years”. Importantly, in post-processing of model results, the “year-shift” is corrected back to reflect the actual years.

As noted in Table 20, we have updated the baseline fleet to reflect the MY 2020 fleet rather than the MY 2017 fleet used in the proposed rule. As a result, there is slightly more technology contained in the MY 2020 baseline fleet and the fleet mix has changed to reflect

a more truck-heavy fleet (56 percent truck vs. 44 percent cars, while the proposed rule fleet had a 50/50 split). There are also roughly 3.5 million fewer sales in the MY 2020 base fleet than were in the MY 2017 based fleet. As in the proposed rule, the future fleet is based on the CCEMS model’s sales, scrappage, and fleet mix responses to

the standards being analyzed, whether from the No Action scenario or one of the Action scenarios. The MY 2020 baseline fleet was developed by NHTSA for their recent CAFE NPRM.¹⁰⁴ As in our proposed rule, we split the market file into separate California Framework

¹⁰³ 86 FR 49602, September 3, 2021.

¹⁰⁴ 86 FR 49602.

OEM (FW-OEM) and non-Framework OEM (NonFW-OEM) fleets for model runs. Note that the scrappage model received many negative comments in response to the SAFE NPRM, but changes made for the FRM version of the CCEMS model were responsive to the identified issues involving sales and VMT results of the SAFE NPRM version of the CCEMS model.¹⁰⁵ That said, the Institute for Policy Integrity at New York University (NYU IPI) expressed concerns on the EPA proposal about the sales and scrappage modeling and commented that, while EPA has already begun to revise the modeling, we should continue to make adjustments in the future. Michalek and Whitefoot in their comments on the EPA proposal provide some preliminary research suggesting that non-rebound total fleet VMT might increase due to policy-induced scrappage delay. They do not rule out an effect of zero and note that their results are preliminary and not yet peer-reviewed. EPA is maintaining the assumption of constant non-rebound total fleet VMT for this FRM and will continue to review these and other modeling approaches for future analyses.

As mentioned, for some model runs we have split the fleet in two, one fleet consisting of California Framework OEMs and the other consisting of the non-Framework OEMs. This was done because the Framework OEMs would be meeting more stringent emission reduction targets (as set in the scenarios file) and would have access to more advanced technology incentive multipliers as contained in the California Framework Agreements, while the non-Framework OEMs would be meeting less stringent standards and would not have access to any advanced technology multipliers. For such model runs, a post-processing step was necessary to properly sales-weight the two sets of model outputs into a single fleet of results. This post-processing tool is in the docket for this rule.¹⁰⁶

In the proposed rule, we modeled all manufacturers as making use of the maximum number of off-cycle credits available under any given set of standards being analyzed. For example, under the California Framework and our proposed standards, manufacturers were projected to make use of 15 grams CO₂ per mile of off-cycle credit and to incur a cost for each of those credits at a rate of over \$70 per credit (this would be the cost of the technology added to achieve the credits). Since their off-cycle credit

allowance was identical in both action and no action scenarios, this resulted in no marginal cost for off-cycle credits for the Framework OEMs. However, for the non-Framework OEMs, modeled as making use of 10 grams per mile of credit under the SAFE FRM standards and 15 grams of credit under the proposed standards, the result was roughly \$350 in marginal per vehicle costs (roughly \$70 times 5 grams/mile of credits) even though more cost-effective technology, compared to off-cycle credits, may be available to facilitate a manufacturer's efforts toward complying with the standards. Commenters expressed concerns with our proposed rule over this approach as resulting in unreasonably high costs for use of the optional off-cycle credits. In response to the comments, in this final rule we have made two important changes to our modeling. First, we have projected use of off-cycle credits consistent with projections developed by NHTSA for their recent CAFE NPRM except that we have not exceeded 10 g/mile in any case. In this way, we avoid having a case where more off-cycle credits are used in an action scenario relative to a no action scenario. Second, we have set the cost of the off-cycle credits to \$0 in the scenarios input file and are post-processing their costs back into the costs per vehicle results. CCEMS does not provide for technology application choices to be made between off-cycle credits and other technologies; instead the off-cycle credits are applied within the model regardless of their cost-effectiveness. Therefore, setting the off-cycle credit cost to \$0 in the scenarios input file has no effect on technology application decisions within the model. Further, it allows off-cycle credit costs to be applied in a post-process rather than re-running the model. Last, we have updated the cost of each off-cycle credit to be less than the costs used in our proposed rule. As a result, each off-cycle credit is now roughly \$30 less costly on a gram per mile basis than in our NRPM. We outline our methodology for this revised cost in RIA Chapter 4.1.1.1.

Importantly, our primary model runs consist of a "No Action" scenario and an "Action" scenario. The results, or impact of our final standards (or alternatives being analyzed), are measured relative to the no action scenario. Our No Action scenario consists of the Framework OEMs (roughly 28 percent of fleet sales) meeting the Framework emission reduction targets and the Non-Framework OEMs (roughly 72 percent of fleet sales) meeting the SAFE FRM

standards. Our action scenario consists of the whole fleet meeting our final standards (or alternatives) for MYs 2023 and later. Throughout this preamble, our "No Action scenario" refers to this Framework-OEM/NonFramework-OEM compliance split.

In our analysis for the proposed rule, as indicated in Table 19, we used a VMT rebound effect of 10 percent. The 10 percent value had been used in EPA supporting analyses for the 2010 and 2012 final rules as well as for the 2017 MTE Final Determination. The SAFE rule used a VMT rebound effect of 20 percent. Our assessment for the proposed rule indicated that a rebound effect of 10 percent was appropriate and supported by the body of research on the rebound effect for light-duty vehicle driving. We requested comment on the use of the 10 percent VMT rebound value, or an alternative value such as 5 or 15 percent, for our analysis of the MY 2023 through 2026 standards.

Several commenters (Center for Biological Diversity et al., CARB/Gillingham, New York University-Institute for Policy Integrity) are supportive of the approach that EPA has utilized to determine the value of the VMT rebound effect for this rule. Several commenters (Center for Biological Diversity et al., CARB/Gillingham, Consumer Federation of America, Consumer Reports, New York University-Institute for Policy Integrity) widely support the use of a 10 percent rebound effect, with a few commenters suggesting that a lower rebound estimate than 10 percent should be used. One commenter (Center for Biological Diversity et al.) suggests that while EPA's proposed rule reported a range of VMT rebound estimates from the Hymel and Small (2015) study of 4 to 18 percent, that only the lower value of the range, 4 percent, should be used in developing an overall estimate of the VMT rebound effect for use in this rule. We agree with this comment and discuss this issue in more detail in both the RIA and the RTC. One commenter (Consumer Reports) requests that EPA consider doing more research prior to future rulemakings on the potential applicability of rebound effects based on studies for conventional vehicles being applied to battery electric vehicles (BEVs). We address this comment in the RTC. After considering the comments received, EPA is continuing to use a 10 percent rebound effect for the analysis of the final rule. Our discussion of the basis for the 10 percent rebound value is in the RIA Chapter 3.1, and our assessment of the public comments is contained in the RTC.

¹⁰⁵ See 85 FR 24647.

¹⁰⁶ See EPA_CCEMS_PostProcessingTool, Release 0.3.1 July 21, 2021.

For the proposed rule, EPA chose to change a select number of the SAFE FRM model inputs, as listed in Table 19, largely because we concluded that other potential updates, regardless of their potential merit, such as the continued use of the MY 2017 base year fleet, would not have a significant impact on the assessment of the proposed standards. In addition, while the technology effectiveness estimates used in the CCEMS model to support the SAFE FRM could have been updated with more recent engine maps, the incremental effectiveness values are of primary importance within the CCEMS model and, while the maps were somewhat dated, the incremental effectiveness values derived from them were in rough agreement with incremental values derived from more up-to-date engine maps (see RIA Chapter 2).

As noted in Table 20, for this final rule we have chosen to conduct model runs with high compression ratio level 2 (HCR2) set to FALSE (*i.e.*, it is not an available technology for the model to choose to apply in simulating compliance with the standards). We have done this due to our concerns over the effectiveness of the technology relative to the HCR0 and HCR1 technologies modeled in the SAFE FRM which were subsequently used in the analysis for our proposed rule. The HCR2 technology in CCEMS would require a level of cylinder deactivation technology (dynamic cylinder deactivation) that has not yet been added to Atkinson Cycle Engines either with or without cooled EGR. HCR1 technologies reflect the effectiveness of Atkinson Cycle engines with either cooled EGR or cylinder deactivation (however, not both technologies in combination) and thus also represent a number of high-volume ICE applications from Mazda, Toyota and Hyundai. The additional step to HCR2 reflected a level of ICE effectiveness that is not yet within the light-duty vehicle fleet, and that we do not anticipate seeing until the later years of this final rule (*e.g.*, MYs 2025–2026).¹⁰⁷

In the proposed rule, we noted that the electrified vehicle battery costs used in the SAFE FRM, which were carried over to the proposed rule analysis, could have been lower based on EPA's latest assessment and that we had ultimately believed at the time of the proposed rule that updating those costs for the proposed rule would not have a

notable impact on overall cost estimates. This conclusion was based in part on our expectation that electrification would continue to play a relatively modest role in our projections of compliance paths for the proposed standards, as it had in all previous analyses of standards having a similar level of stringency. We also noted that we could update battery costs for the final rule and requested comment on whether our choice of modeling inputs such as these should be modified for the final rule analysis.

Commenters on the proposed rule made several observations and recommendations about battery costs, with most saying that the costs in the proposed rule analysis were too high. Tesla commented on [EPA's] "refusal to revisit admittedly over-estimated battery costs in the agency's analysis," further stating that EPA "failed to complete a review of battery cost for EVs, asserting it was unnecessary given the agency does not rely on significant EV penetration for MY 2023–26." Tesla stated that it "agree[s] battery costs in the SAFE rule were too high," further citing various projections for future battery costs: "UBS reports that leading manufacturers are estimated to reach battery pack costs as low as \$67/kWh between 2022 and 2024. Recently, others have also projected costs significantly lower than EPA's past projections. BNEF's recent estimate is that pack prices go below \$100/kWh on a volume-weighted average basis by 2024, hit \$58/kWh in 2030, and could achieve a volume-weighted average price of \$45/kWh in 2035. The National Academies of Sciences found high-volume battery pack production would be at costs of \$65–80/kWh by 2030 and DNV–GL has predicted costs declining to \$80/kWh in 2025. In short, had the agency rightfully determined that EVs offer the best compliance technology near term and revisited battery pack costs, it would have found dramatically decreasing battery costs that further support that EV deployment will accelerate rapidly near term and represent the best possible emissions reduction technology."

ACEEE commented: "Battery cost assumptions in the NRPM are too high and do not consider the manufacturing and technological advancements of the past few years. EPA uses the same cost figures used in the SAFE rule, which are based on 2017 data, effectively inflating the costs of vehicle electrification (EPA 2021b, p. 145)."

Consumer Reports commented that it: "recommends that EPA update their battery costs to be more in line with the current state of the electric vehicle

market. This has the potential to have a significant impact on the cost-benefit analysis of the rule, especially with regards to the ability for EPA to push further, and set a stronger standard than the preferred alternative that is more in line with the administration's climate commitments."

ICCT commented that: "EPA used an updated ANL BatPaC model (BatPaC Version 3.1, 9 October 2017) as the basis for BEV, PHEV, HEV and mild HEV battery costs in its 2018 MTE, but these updated costs were not used in the proposed rule." "Unlike for the other technologies in the agencies' analysis, the vast majority of costs related to the RPE markup are already included in the base costs that the agencies used from ANL lookup tables. In other words, those lookup tables do not provide "direct manufacturing costs," they provide total costs, including indirect costs. Thus, EPA erroneously inflated battery costs by applying the retail price equivalent (RPE) markup to base costs that already include indirect costs." On this point, ICCT referred to the Joint NGO 2020 Reconsideration Petition, pages 88–90, which was filed in response to the final SAFE rule.

NCAT commented: "As explained in the Proposed Rule, EPA chose to continue to use certain model inputs from the modeling conducted several years ago for the 2020 Rule, including the continued use of MY 2017 as the base year fleet and use of the electric vehicle battery cost data from the 2020 Rule modeling effort. However, electric vehicle penetration has grown significantly since that time, see Section IV.A of this preamble, and battery costs have continued to decline dramatically [. . .] EPA even acknowledged that the agency may consider updating the battery costs for the final rule, noting that EPA's latest assessment suggests they could have been lower. There was a 13 percent drop in electric vehicle battery cost in just 2020 alone. EPA's approach was very conservative in light of these older model inputs relating to electric vehicles."

World Resources Institute commented: "Despite the very dynamic nature of the ZEV market, EPA chose not to update the battery cost assumptions used in its compliance modeling even though EPA considers the assumed battery costs to be too high." "This is a fundamental error. While EPA is correct in observing that "significant levels of vehicle electrification will not be necessary in order to comply with the proposed standard," this in no way obviates the need for EPA to properly evaluate likely ZEV penetration in order to determine

¹⁰⁷ For further information on HCR definitions, see RIA Chapter 2.3.2. For more information on HCR implementation in CCEMS, see RIA Chapter 4.1.1.4.

whether a more stringent standard is appropriate.” “EPA should update its projections of ZEV market shares to reflect current trends in battery prices, automaker investment plans and EV market development. EPA should also consider higher penetration scenarios that would occur if Congress enacts additional incentives and infrastructure investments and should update the final rule to reflect any enacted legislation.” “EPA’s flawed battery price assumptions and resulting underestimate of ZEV market penetration rates have a dramatic impact on the emissions rates that would be required of ICEVs under the proposal as well as the alternatives considered.” “In order to have a rational basis for setting emissions standards that allow averaging across ICEVs and ZEVs EPA needs to update its battery cost assumptions and likely additional assumptions related to ZEV adoption rates.” “EPA should update its projections of ZEV market shares to reflect current trends in battery prices, automaker investment plans and EV market development.”

The Alliance noted the inherent uncertainty in predicting future battery costs, stating: “Given high levels of investment in research and development, and production processes, and the considerable uncertainty of what approaches will succeed or fail, it is possible that NHTSA’s estimates of battery pack direct manufacturing costs (after learning factor) will be meaningfully low, or high in the MY 2027 timeframe and beyond.” “EPA appears to use previous generation assumptions and battery costs from the SAFE Final Rule record, despite updated battery pack assumptions, and direct manufacturing cost assumptions being available for use in the DOT analysis.” This is a reference to the NHTSA CAFE NPRM, which uses an updated version of the SAFE rule analysis, in which NHTSA uses costs from a more recent release of BatPaC and implements some changes in their input assumptions, which the Alliance states “better account for high voltage isolation costs, and battery cell specifications.”

The Alliance also encouraged EPA to “consider costs and specifications that are reasonable for the industry as a whole to inform policy analysis, and not to assume that intellectual property and proprietary production processes that have been the result of billions of dollars of research and development paid by one manufacturer will be readily available to all manufacturers.” The Alliance went on to state: “Total industry volumes of battery electric

vehicles are not an appropriate volume assumption for BatPaC. Auto Innovators recommends that EPA update their approach to that used in the DOT analysis to estimate battery costs for strong hybrids, plug-in hybrids, and battery electric vehicles, considering vehicle type and synergies with other fuel saving technologies.”

Additional comments from the Alliance that were submitted to NHTSA as comment on the 2021 NHTSA NPRM were also placed in the EPA docket and can be found in Response to Comments Section 12.1. Among other topics, the Alliance commented on the potential for mineral costs to act as a constraint on the downward trajectory of battery costs in the future, citing in part a 2019 MIT report on the subject that suggested that battery costs for chemistries of the type relied on today may not have the potential to reach as low a cost as suggested by forecasts cited by other commenters. In response, EPA agrees that mineral and other material costs are a large component of the cost of the currently prevailing family of lithium-ion chemistries, that these costs might decline more slowly or increase if supply fails to meet demand in a timely manner, and that this is a relevant consideration when forecasting the potential for future reductions in battery costs. EPA also notes that manufacturers are working to reduce the content of some critical minerals in the battery chemistries used today, and that chemistries that have less critical mineral content may have less potential exposure to this effect. We have incorporated the uncertainties surrounding the future effect of mineral costs on battery cost reductions by limiting projected reductions in future battery costs to a level that we can reasonably technically validate at this time, as described below. EPA responds further to these comments in Section 12.1 of the Response to Comments document.

Prompted by the totality of comments received on battery costs, EPA chose to update the battery costs for the FRM analysis. EPA believes that some of the more optimistic scenarios for reductions in battery costs that were cited in the public comments are difficult to validate at this time, given the importance of material costs to the cost of batteries, and the uncertainties surrounding mineral and other material costs as demand for batteries increases in the coming years. With regard to the ICCT comments that BatPaC output costs already include indirect costs that are represented by the RPE markup and hence RPE was double counted, EPA disagrees, and we note that the indirect

costs represented in BatPaC output are those that apply to the battery supplier, and do not represent the indirect costs experienced by the OEM who purchases the battery and integrates it into the vehicle. EPA has always considered RPE markup to be applicable to purchased items, with the exception that BatPaC by default includes a warranty cost, which we have traditionally subtracted from BatPaC output because it is already covered in the RPE.

However, EPA agrees with the commenters that battery costs used in the SAFE rulemaking, and hence the proposed rule, were higher than would be supported by information available today. Cited reports that are based on empirical data of what manufacturers are currently paying, and near-term forecasts that can reasonably be corroborated with our battery modeling tools, suggest lower battery costs than were assumed in the proposal. Consideration of the current and expected near-term costs of batteries for electrified vehicles, as widely reported in the trade and academic literature and further supported by our battery cost modeling tools, led to an adjustment of battery costs to more accurately account for these trends. Based on an assessment of the effect of using updated inputs to the BatPaC model in place of those used in the SAFE rulemaking, we determined that battery costs should be reduced by about 25 percent.

We also considered the effect of this reduction on the projected battery costs for future years beyond MY2026, which due to this adjustment were now declining to levels below \$80 per kWh (for an example 60 kWh battery) in the mid-2030s, and which our current battery cost modeling tools cannot technically validate at this time.

Due to the widely acknowledged uncertainty of quantitatively projecting declines in battery costs far into the future, and to reflect current uncertainty about future mineral costs as battery demand increases (which is consistent with the points raised by the Alliance), we chose to place a limit on continued battery cost reductions past MY 2029 so as to prevent future costs from declining below \$90 per kWh for a 60 kWh battery, a level that we can currently technically validate. More discussion of the rationale for these changes can be found in Chapters 2.3.4 and 4.1.1.2 of the RIA.

We expect that pending updates to the ANL BatPaC model, as well as collection of emerging data on forecasts for future mineral prices and production capacity, will make it possible to more confidently characterize the declines in battery costs that we continue to believe

will occur in the 2030s and beyond, and we will incorporate this information in the subsequent rulemaking for MYs 2027 and beyond.

In response to the Alliance comments on appropriate production volumes for developing battery costs, EPA understands how BatPaC considers production volume in developing pack costs and agrees that use of total industry volume to estimate the cost of a specific pack design would be inappropriate and would likely underestimate the true manufacturing cost. However, EPA also recognizes that using a production volume specific to the actual production of a specific pack design would tend to overestimate overhead costs by constructing a plant that is much smaller than the plants currently in operation and being planned today. For example, a 5 Gigawatt-hour (gWh) plant such as the LG Chem plant in Holland, Michigan is large enough to manufacture more than 80,000 60 kWh packs, while other leading plants in operation and under construction are designed for much higher volumes. For example, a 30 to 35 gWh plant such as the Tesla factory in Reno, Nevada, even when manufacturing an assortment of pack and cell designs would be able to amortize its construction, overhead and maintenance costs across 500,000 or more packs per year. Also, manufacturers are increasingly adopting design approaches that reuse cells and parts across multiple pack designs, meaning that the economies of scale that are relevant for those cells and parts are likely to be greater than the volume of a single pack design alone would represent. For these and similar reasons, EPA continues to believe that using a

production volume specific to a given pack would create overly conservative estimates of battery manufacturing cost.

With regard to the Alliance comments on the applicability of technology assumptions to all manufacturers, EPA recognizes that different manufacturers may experience different costs resulting from differences in their past research and investments and differences in their approach to sourcing components. Manufacturers have largely approached the sourcing of batteries through joint ventures or contractual relationships with established cell manufacturers rather than true vertical integration. For example, while Tesla has developed intellectual property relating to pack and cell design and production, their production occurs via a joint venture with Panasonic, and also includes sourcing from other suppliers that are not part of this venture. Other manufacturers are increasingly adopting a similar approach in which new manufacturing plants are to be constructed as part of a joint venture, by which the OEM may secure a supply of batteries for its products.^{108 109 110 111 112} As with other technologies, the existence of intellectual property belonging to one manufacturer seldom prevents other manufacturers from developing and benefiting from similarly effective technologies. The battery costs that EPA develops are not taken from the example of any specific manufacturer but are developed based on our assessment of the industry as a whole.

In regard to updating the BEV driving ranges that were considered in the analysis, the Alliance stated that the “analysis could be improved by using the BatPaC results for BEV400’s and BEV500’s, instead of scaling up BEV300

costs.” “Auto Innovators encourages EPA to include BEV400 and BEV500 in their analysis tool, and to adopt DOT phase-in caps from the CAFE NPRM in place of the phase-in caps used in the EPA proposal, as the EPA proposal likely overestimates the number of consumers who would accept BEV200’s, especially given today’s charging infrastructure.”

In the updated analysis, we set the BEV200 phase-in start year to the same year as the new market file fleet, which, given the low year-over-year phase-in cap, allows for low penetration of BEV200 technology in favor of BEV300 technology. Thus, the great majority of BEV penetration projected by the model represents BEV300 vehicles. We did not choose to extend the analysis to BEV400 and BEV500 vehicles. While BEV400 and BEV500 vehicles are entering the market and are anticipated to be some part of the future market, the known examples are concentrated in the luxury, high-end market, limiting their likely penetration into the fleet during the time frame of the rule.

B. Projected Compliance Costs and Technology Penetrations

1. GHG Targets and Compliance Levels

The final curve coefficients were presented in Table 10. Here we present the projected fleet targets for each manufacturer. These targets are projected based on each manufacturer’s car/truck fleets and their sales weighted footprints. As such, each manufacturer has a set of targets unique to them. The projected targets are shown by manufacturer for MYs 2023 through 2026 in Table 21 for cars, Table 22 for light trucks, and Table 23 for the combined fleets.¹¹³

The modeled achieved CO₂-equivalent (CO₂e) levels for the final standards are shown in Table 24 for

cars, Table 25 for light trucks, and Table 26 for the combined fleets. These values were produced by the modeling analysis

and represent the projected certification emissions values for possible compliance approaches with the final

standards for each manufacturer. These achieved values, shown as averages over the respective car, truck and combined fleets, include the 2-cycle tailpipe emissions based on the modeled application of emissions-reduction technologies minus the modeled application of off-cycle credit technologies and the full A/C efficiency credits. The values also reflect any application of the final advanced technology multipliers, up to the cap. Hybrid pickup truck incentive credits were not modeled (the CCEMS version used does not have this capability) and are therefore not included in the achieved values.

Comparing the target and achieved values, it can be seen that some manufacturers are projected to have achieved values that are over target (higher emissions) on trucks, and under target (lower emissions) on cars, and vice versa for other manufacturers. This is a feature of the unlimited credit transfer (across a manufacturer's car and truck fleets) provision, which results in a compliance determination that is based on the combined car and truck fleet credits rather than a separate determination of each fleet's compliance. The application of technologies is influenced by the relative cost-effectiveness of technologies among each manufacturer's

vehicles, which explains why different manufacturers exhibit different compliance approaches in the modeling results. For the combined fleet, the achieved values are typically close to, or slightly under the target values, which would represent the banking of credits that can be carried over into other model years. Note that an achieved value for a manufacturer's combined fleet that is above the target in a given model year does not indicate a likely failure to comply with the standards, since the model includes the GHG program credit banking provisions that allow credits from one year to be carried into another year.

2. Projected Compliance Costs per Vehicle

EPA has performed an updated assessment of the estimated per vehicle

costs for manufacturers to meet the final MYs 2023–2026 standards. The total car, truck and combined fleet costs per

vehicle for MY 2023–2026 are shown in Table 27.

TABLE 27—CAR, LIGHT TRUCK AND FLEET AVERAGE COST PER VEHICLE RELATIVE TO THE NO ACTION SCENARIO
[2018 Dollars]

	2023	2024	2025	2026
Car	\$150	\$288	\$586	\$596
Light Truck	485	732	909	1,356
Fleet Average	330	524	759	1,000

The car costs per vehicle by manufacturer from this analysis are shown in Table 28, followed by light truck costs by manufacturer in Table 29 and combined fleet costs by manufacturer in Table 30. As shown in these tables, the combined cost for car and truck fleets, averaged over all manufacturers, increases from MY 2023 to MY 2026 as the final standards become more stringent. The costs for

trucks tend to be somewhat higher than for cars—many technology costs scale with engine and vehicle size—but it is important to note that the absolute emissions, and therefore emissions reductions, also tend to be higher for trucks. Projected costs for individual manufacturers vary based on the composition of vehicles produced. The estimated costs for California Framework Agreement manufacturers in

MY 2026 range from approximately \$600-\$750 dollars per vehicle—because the final standards are more stringent than the Framework emission reduction targets—and fall within the wider cost range of non-Framework manufacturers. The estimated costs for Framework manufacturers are somewhat lower than the overall industry average costs of approximately \$1000 per vehicle in MY 2026.

* Framework Manufacturer.

Overall, EPA estimates the average costs of the final standards at \$1,000 per vehicle in MY 2026 relative to meeting the No Action scenario in MY 2026. As discussed in Section VII of this

preamble, there are benefits resulting from these costs including savings to consumers in the form of lower fuel costs.

In RIA 4.1.3, we present the costs per vehicle extending out through MY 2050. The data presented there show that projected costs per vehicle rise somewhat beyond MY 2026 prior to

falling again due to the projected learning effects on technology costs. This helps to explain the higher present value and annualized costs in this final rule analysis (see Section VII.I of this preamble) compared to the proposed rule despite the MY 2026 cost per vehicle results being slightly lower in this final rule. The similarity of the cost per vehicle projections presented in the tables above and those projected in the proposal despite the more stringent final standards is due in large part to the lower battery costs projected in the final rule. Those lower costs result in higher penetrations of BEV and PHEV technology because, although more costly than non-plug-in technologies, they have such a significant effect on reducing fleet average emissions. In the modeling, the effect of higher penetrations of BEVs and PHEVs in turn results in other vehicles adding less technology toward meeting the fleet average emissions standards, thereby reducing per-vehicle costs on those vehicles as well.

3. Technology Penetration Rates

In this section we discuss the projected new sales technology penetration rates from EPA’s updated analysis for the final standards. Additional detail on this topic can be found in the RIA. EPA’s assessment, consistent with past EPA assessments, shows that the final standards can largely be met with increased sales of advanced gasoline vehicle technologies, and projects modest (17 percent) penetration rates of electrified vehicle technology.

Table 31, Table 32, and Table 33 show the projected penetration rates of BEVs and PHEVs combined (BEV+PHEV) technology under the final standards, with the remaining share being traditional or advanced ICE technology. Values shown reflect absolute values of fleet penetration and are not increments from the No Action scenario or other standards. It is important to note that this is a projection and represents one out of many possible compliance

pathways for the industry. The standards are performance-based and do not mandate any specific technology for any manufacturer or any vehicles. As the standards become more stringent over MYs 2023 to 2026, the projected penetration of plug-in electrified vehicles (BEV and PHEV combined) increases by approximately 10 percentage points over this 4-year period, from about 7 percent in MY 2023 to about 17 percent in MY 2026. This is a greater penetration of BEVs and PHEVs than projected in the proposed rule, and is driven by several factors, including the increased stringency of our final standards, the updated baseline fleet that includes more EVs in the baseline, and the updated battery costs (based on which the model is selecting more BEV+PHEV technology as the optimal least-cost pathway to meet the standards). Conversely, in MY 2026 about 83 percent of new light-duty vehicle sales will continue to utilize ICE technology.

C. Are the final standards feasible?

The final standards are based on the extensive light-duty GHG technical analytical record developed over the past dozen years, as represented by EPA’s supporting analyses for the 2010 and 2012 final rules, the Mid-Term Evaluation (including the Draft TAR, Proposed Determination and Final Determinations), as well as the updated analyses for this rule and the supporting analyses for the SAFE rule.¹¹⁴ Our conclusion that the program is feasible is based in part on a projection that the standards primarily will be met using the same advances in light-duty vehicle engine technologies, transmission technologies, electric drive systems, aerodynamics, tires, and vehicle mass reduction that have gradually entered the light-duty vehicle fleet over the past decade and that are already in use in today’s vehicles. Further support that the technologies needed to meet the standards do not need to be developed but are already widely available and in use on vehicles can be found in the fact

¹¹⁴ Although the MTE 2018 Revised Final Determination “withdrew” the 2017 Final Determination, the D.C. Circuit Court has noted that EPA did “not erase” the Draft Technical Assessment Report, Technical Support Document, or any of the other prior evidence [EPA] collected.” California v. EPA, 940 F.3d 1342, 1351 (D.C. Cir. 2019).

that five vehicle manufacturers, representing nearly 30 percent of U.S. auto sales, agreed in 2019 with the State of California that their nationwide fleets would meet GHG emission reduction targets more stringent than the applicable EPA standards for MYs 2021 and 2022, and similar to the final EPA standards for MYs 2022 and 2023.

Our updated analysis projects that the final standards can be met with a fleet that achieves a gradually increasing market share of EVs and PHEVs, approximately 7 percent in MY 2023 up to about 17 percent in MY 2026 (see Section III.B.3 of this preamble and the following paragraph). While this represents an increasing penetration of zero-emission and near-zero emission vehicles into the fleet during the 2023–2026 model years, we believe that the growth in the projected rate of penetration is consistent with current trends and market forces, as discussed below.

The proliferation of GHG-reducing technologies has been steadily increasing within the light-duty vehicle fleet. As of MY 2020, more than half of light-duty gasoline spark ignition engines use direct injection (GDI) engines and more than a third are turbocharged. Nearly half of all light-duty vehicles have planetary automatic transmissions with 8 or more gear ratios,

and one-quarter are using continuously variable transmissions (CVT). The sales of vehicles with 12V start/stop systems has increased from approximately 7 percent to approximately 42 percent between MY 2015 and MY 2020. Significant levels of powertrain electrification of all types (HEV, PHEV, and EV) have increased more than 3-fold from MY 2015 to MY 2020. In MY 2015, hybrid electric vehicles accounted for approximately 2.4 percent of vehicle sales, which increased to approximately 6.5 percent of vehicle sales in MY 2020. Production of plug-in hybrid electric vehicles (PHEVs) and battery electric vehicles (EVs) together comprised 0.7 percent of vehicle production in MY 2015 and increased to about 2.2 percent for MY 2020 (projected to be 4.1 percent for MY 2021),¹¹⁵ and from January through September 2021 they represented 3.6 percent of total U.S. light-duty vehicle sales.¹¹⁶ The pace of introduction of new EV and PHEV models is rapidly increasing. For

¹¹⁵ The 2021 EPA Automotive Trends Report, Greenhouse Gas Emissions, Fuel Economy, and Technology since 1975,” EPA–420R–21023, November 2021.

¹¹⁶ Argonne National Laboratory, “Light Duty Electric Drive Vehicles Monthly Sales Updates,” September 2021, accessed on October 20, 2021 at: <https://www.anl.gov/es/light-duty-electric-drive-vehicles-monthly-sales-updates>.

example, the number of EV and PHEV models available for sale in the U.S. has more than doubled from about 24 in MY 2015 to about 60 in MY 2021.¹¹⁷ Even under the less stringent SAFE standards, manufacturers have indicated that the number of EV and PHEV models will increase to more than 80 by MY 2023, with many more expected to reach production before the end of the decade.¹¹⁸

Despite the increased penetration of electrified vehicles that we are projecting for the final standards, the large majority (more than 80 percent) of vehicles projected to be produced by manufacturers in complying with the final standards would draw from the various advanced gasoline vehicle technologies already present in many vehicles within today's new vehicle fleet. This projection is consistent with EPA's previous conclusions that a wide variety of emission reducing technologies are already available at reasonable costs for manufacturers to incorporate into their vehicles within the timeframe of the final standards.

Although the projected penetrations of BEVs and PHEVs are higher than in the proposal, we find they more accurately reflect the current momentum and direction of technological innovation in the automotive industry. By all accounts, a shift to zero-emission vehicle technologies is well underway, and it presents a strong potential for dramatic reductions in GHG and criteria pollutant emissions. Major automakers as well as many global jurisdictions and U.S. states have announced plans to shift the light-duty fleet toward zero-emissions technology.

As noted in the proposed rule, a proliferation of recent announcements from automakers signals a rapidly growing shift in investment away from internal-combustion technologies and toward high levels of electrification. These automaker announcements are supported by continued advances in automotive electrification technologies and are further driven by the need to compete in a global market as other countries implement aggressive zero-emission transportation policies. For example, in January 2021, General Motors announced plans to become carbon neutral by 2040, including an effort to shift its light-duty vehicles

entirely to zero-emissions by 2035.¹¹⁹ In March 2021, Volvo announced plans to make only electric cars by 2030,¹²⁰ and Volkswagen announced that it expects half of its U.S. sales will be all-electric by 2030.¹²¹ In April 2021, Honda announced a full electrification plan to take effect by 2040, with 40 percent of North American sales expected to be fully electric or fuel cell vehicles by 2030, 80 percent by 2035 and 100 percent by 2040.¹²² In May 2021, Ford announced that they expect 40 percent of their global sales will be all-electric by 2030.¹²³ In June 2021, Fiat announced a move to all electric vehicles by 2030, and in July 2021 its parent corporation Stellantis announced an intensified focus on electrification across all of its brands.¹²⁴ Also in July 2021, Mercedes-Benz announced that all of its new architectures would be electric-only from 2025, with plans to become ready to go all-electric by 2030 where possible.¹²⁵ In September 2021, Toyota announced large new investments in battery production and development to support an increasing focus on electrification,¹²⁷ and in December 2021, announced plans to increase this investment as well as introduce 30 BEV models by 2030.¹²⁸ On August 5, 2021, in conjunction with

the announcement of Executive Order 14037, many of these automakers, as well as the United Auto Workers and the Alliance for Automotive Innovation, expressed continued commitment to these announcements and support for the goal of achieving 40 to 50 percent sales of zero emissions vehicles by 2030.¹²⁹

These announcements, and others like them, continue a pattern over the past several years in which many manufacturers have taken steps to aggressively pursue zero-emission technologies, introduce a wide range of zero-emission vehicle models, and reduce their reliance on the internal-combustion engine in various markets around the globe.¹³⁰ These goals and investments have been coupled with a continuing increase in the market penetration of new zero-emission vehicles (3.6 percent of new U.S. light-duty vehicle sales so far in calendar year 2021,¹³² projected to be 4.1 percent of production in MY 2021, up from 2.2 percent of production in MY 2020),¹³³ as well as a rapidly increasing diversity of electrified vehicle models.¹³⁴ For example, the number of EV and PHEV models available for sale in the U.S. has more than doubled from about 24 in MY 2015 to about 60 in MY 2021, with offerings in a growing range of vehicle segments.¹³⁵ Recent model announcements indicate that this number will increase to more than 80 models by MY 2023, with many more expected to reach production before the

end of the decade.¹³⁶ Many of the zero-emission vehicles already on the market today cost less to drive than conventional vehicles,¹³⁷ offer improved performance and handling,¹³⁹ and can be charged at a growing network of public chargers¹⁴⁰ as well as at home.

At the same time, an increasing number of global jurisdictions and U.S. states plan to take actions to shift the light-duty fleet toward zero-emissions technology. In 2020, California announced an intention to require increasing numbers of zero-emission vehicles to meet the goal that, by 2035, all new light-duty vehicles sold in the state be zero-emission vehicles.¹⁴¹ New York¹⁴² has adopted similar targets and requirements to take effect by 2035, with Massachusetts¹⁴⁴ poised to follow. Several other states may adopt similar provisions by 2050 as members of the International Zero-Emission Vehicle Alliance.¹⁴⁵ Globally, at least 12 countries, as well as numerous local jurisdictions, have announced similar

goals to shift all new passenger car sales to zero-emission vehicles in the coming years, including Norway (2025); the Netherlands, Denmark, Iceland, Ireland, Sweden, and Slovenia (2030); Canada and the United Kingdom (2035); France and Spain (2040); and Costa Rica (2050).¹⁴⁶ Together, these countries represent approximately 13 percent of the global market for passenger cars,¹⁴⁸ in addition to that represented by the aforementioned U.S. states and other global jurisdictions. Already, all-electric and plug-in vehicles together comprise about 18 percent of the new vehicle market in Western Europe,¹⁴⁹ led by Norway which reached 77 percent all-electric and 91 percent plug-in sales in September 2021.¹⁵⁰

In addition to substantially reducing GHG emissions, a subsequent rulemaking for MY 2027 and beyond will address criteria pollutant and air toxics emissions from the new light-duty vehicle fleet—especially important considerations as the fleet transitions toward zero-emission vehicles. EPA expects that this subsequent rulemaking will take critical steps to continue the trajectory of transportation emission reductions needed to protect public health and welfare. Achieving this trajectory with increased fleet penetration of zero-emission vehicles would bring with it other advantages as well, such as potentially large reductions in roadway pollution and noise in overburdened communities, and potentially support for the future development of vehicle-to-grid services that could become a key enabler for increased utilization of renewable

energy sources, such as wind and solar, across the grid.¹⁵²

D. How did EPA consider alternatives in selecting the final program?

In Section II.C of this preamble, we described alternatives that we considered in addition to the final standards. See Figure 5 and Table 18 in Section II.C of this preamble. The analyses of the costs, GHG emission reductions, and technology penetrations for each alternative are presented in the RIA Chapters 4 and 5. The alternatives analyzed for the final rule, in addition to the standards we are finalizing, are the “Proposal”, which are the proposed standards, and “Alternative 2 minus 10” which is the Alternative 2 standards reduced by 10 g/mile in MY 2026, on which EPA sought public comment.

In comparing the per-vehicle costs of the final standards and the two alternatives, we first note that, in the updated analysis for this final rule, the estimated costs of both the proposed standards and final standards are lower than the estimated cost of the proposed standards as originally presented in the proposed rule, largely due to the updated battery costs used in our final rule analysis. For example, in the proposed rule the proposed standards were projected to cost about \$1,044 per vehicle in MY 2026 whereas in the final rule analysis the costs for the proposed standards are estimated at \$644 per vehicle, about \$400 lower than in the proposed rule. Further, the cost of our final standards (\$1,000 per vehicle) remains less than the costs for the proposed standards presented in the proposed rule, as well as being slightly less than the costs for Alternative 2 minus 10 standards (\$1,070 per vehicle). In addition, while the final standards and Alternative 2 minus 10 standards have similar per-vehicle costs in MY 2026, it is important to consider the per-vehicle costs in MY 2023 and 2024—when available lead time is shorter. In these model years, the final standards are slightly more costly than the proposed standards (by about \$55 per vehicle in 2023 and \$140 per vehicle in 2024) and less costly than the Alternative 2 minus 10 standards (by more than \$200 per vehicle in MYs 2023 and 2024). EPA believes that given lead time considerations for the early years of the program (MY 2023 and 2024), the lower per-vehicle cost to manufacturers of the final standards compared to the Alternative 2 minus 10 standards are an

¹⁵² Department of Energy Electricity Advisory Committee, “Enhancing Grid Resilience with Integrated Storage from Electric Vehicles: Recommendations for the U.S. Department of Energy,” June 25, 2018.

important consideration. See Section VI of this preamble and RIA Chapter 6.

In comparing the cumulative CO₂ emissions reductions of the final standards and the two alternatives, the final standards and the Alternative 2 minus 10 standards achieve essentially identical cumulative CO₂ reductions through 2050, about 1.1 billion tons (about 50 percent) more than the proposed standards. See RIA Chapter 5.1.1.2.

Finally, when comparing the combined BEV+PHEV technology penetrations across the alternatives, the final standards and the Alternative 2 minus 10 standards provide the same level of BEV+PHEV market penetration (17 percent) in MY 2026 and thus the same strong launching point for a more ambitious program for 2027 and later, which EPA will establish in a subsequent rulemaking. The proposed standards would achieve less penetration of BEV+PHEV (13 percent) in MY 2026. See RIA Table 4–26, and Table 4–31. EPA believes that the higher projected penetration of BEVs and PHEVs that would be achieved through the final standards or the Alternative 2

minus 10 standards represents a reasonable level of technology commensurate with industry projections for this time period and is feasible in this time frame as further discussed in Section III.B.3 and III.C of this preamble.

EPA’s updated analysis shows that the final standards and the Alternative 2 minus 10 standards achieve nearly the same cumulative CO₂ reductions and the same level of electric vehicle penetration in 2026—and thus provide the same strong launch point for the next phase of standards for MY 2027 and later. The important difference between the final standards and the Alternative 2 minus 10 standards is in the per-vehicle costs during the earlier years (MYs 2023 and 2024), where we believe the lower costs of the final standards are important considering the shorter lead time for manufacturers. EPA discusses further in Section VI of this preamble the reasons we believe the final standards represent the appropriate standards under the CAA.

IV. How does this final rule reduce GHG emissions and their associated effects?

A. Impact on GHG Emissions

EPA used the CCEMS to estimate GHG emissions inventories including tailpipe emissions from light-duty cars and trucks and the upstream emissions associated with the fuels used to power those vehicles (both at the refinery and the electricity generating unit). The upstream emission factors used in this final rule modeling have been updated since EPA’s proposed rule. The updated upstream emission factors are identical to those used in the recent NHTSA CAFE proposal and were generated using the DOE/Argonne GREET model.^{153 154}

The resultant annual GHG inventory estimates are shown in Table 34 for the calendar years 2023 through 2050. The table shows that the final program would result in significant net GHG reductions compared to the No Action scenario. The cumulative CO₂, CH₄ and N₂O emissions reductions from the final program total 3,100 MMT, 3.3 MMT and 0.097 MMT, respectively, through 2050.

B. Climate Change Impacts From GHG Emissions

Elevated concentrations of GHGs have been warming the planet, leading to changes in the Earth’s climate including changes in the frequency and intensity of heat waves, precipitation, and extreme weather events, rising seas, and retreating snow and ice. The changes taking place in the atmosphere as a result of the well-documented buildup of GHGs due to human activities are changing the climate at a pace and in a way that threatens human health, society, and the natural environment. While EPA is not making any new scientific or factual findings with regard to the well-documented impact of GHG emissions on public health and welfare in support of this rule, EPA is providing some scientific background on climate change to offer additional context for this rulemaking and to increase the public’s understanding of the environmental impacts of GHGs.

Extensive additional information on climate change is available in the scientific assessments and the EPA documents that are briefly described in this section, as well as in the technical and scientific information supporting them. One of those documents is EPA’s 2009 Endangerment and Cause or Contribute Findings for Greenhouse Gases Under section 202(a) of the CAA (74 FR 66496, December 15, 2009). In the 2009 Endangerment Finding, the Administrator found under section 202(a) of the CAA that elevated atmospheric concentrations of six key well-mixed GHGs—CO₂, methane (CH₄), nitrous oxide (N₂O), HFCs, perfluorocarbons (PFCs), and sulfur hexafluoride (SF₆)—“may reasonably be anticipated to endanger the public health and welfare of current and future generations” (74 FR 66523). The 2009 Endangerment Finding, together with the extensive scientific and technical evidence in the supporting record, documented that climate change caused by human emissions of GHGs (including HFCs) threatens the public health of the U.S. population. It explained that by raising average temperatures, climate change increases the likelihood of heat waves, which are associated with increased deaths and illnesses (74 FR

66497). While climate change also increases the likelihood of reductions in cold-related mortality, evidence indicates that the increases in heat mortality will be larger than the decreases in cold mortality in the U.S. (74 FR 66525). The 2009 Endangerment Finding further explained that compared with a future without climate change, climate change is expected to increase tropospheric ozone pollution over broad areas of the U.S., including in the largest metropolitan areas with the worst tropospheric ozone problems, and thereby increase the risk of adverse effects on public health (74 FR 66525). Climate change is also expected to cause more intense hurricanes and more frequent and intense storms of other types and heavy precipitation, with impacts on other areas of public health, such as the potential for increased deaths, injuries, infectious and waterborne diseases, and stress-related disorders (74 FR 66525). Children, the elderly, and the poor are among the most vulnerable to these climate-related health effects (74 FR 66498).

The 2009 Endangerment Finding also documented, together with the extensive scientific and technical evidence in the supporting record, that climate change touches nearly every aspect of public welfare¹⁵⁵ in the U.S. with resulting economic costs, including: Changes in water supply and quality due to changes in drought and extreme rainfall events; increased risk of storm surge and flooding in coastal areas and land loss due to inundation; increases in peak electricity demand and risks to electricity infrastructure; and the potential for significant agricultural disruptions and crop failures (though offset to some extent by carbon fertilization). These impacts are also global and may exacerbate problems outside the U.S. that raise

¹⁵⁵ The CAA states in section 302(h) that “[a]ll language referring to effects on welfare includes, but is not limited to, effects on soils, water, crops, vegetation, manmade materials, animals, wildlife, weather, visibility, and climate, damage to and deterioration of property, and hazards to transportation, as well as effects on economic values and on personal comfort and well-being, whether caused by transformation, conversion, or combination with other air pollutants.” 42 U.S.C. 7602(h).

humanitarian, trade, and national security issues for the U.S. (74 FR 66530).

In 2016, the Administrator issued a similar finding for GHG emissions from aircraft under section 231(a)(2)(A) of the CAA.¹⁵⁶ In the 2016 Endangerment Finding, the Administrator found that the body of scientific evidence amassed in the record for the 2009 Endangerment Finding compellingly supported a similar endangerment finding under CAA section 231(a)(2)(A), and also found that the science assessments released between the 2009 and the 2016 Findings “strengthen and further support the judgment that GHGs in the atmosphere may reasonably be anticipated to endanger the public health and welfare of current and future generations” (81 FR 54424).

Since the 2016 Endangerment Finding, the climate has continued to change, with new observational records being set for several climate indicators such as global average surface temperatures, GHG concentrations, and sea level rise. Additionally, major scientific assessments continue to be released that further advance our understanding of the climate system and the impacts that GHGs have on public health and welfare both for current and future generations. These updated observations and projections document the rapid rate of current and future climate change both globally and in the U.S.^{157 158 159 160}

Continued

C. Global Climate Impacts and Benefits Associated With the Final Rule's Estimated GHG Emissions Reductions

Transportation is the largest source of GHG emissions in the U.S., making up 29 percent of all emissions. Within the transportation sector, light-duty vehicles are the largest contributor, 58 percent, to transportation GHG emissions in the U.S., and 17 percent of all emissions.¹⁶¹ Reducing GHG emissions, including the four GHGs affected by this program, will contribute toward the goal of holding the increase in the global average temperature to well below 2 °C above pre-industrial levels, and subsequently reducing the probability of severe climate change related impacts including heat waves, drought, sea level rise, extreme climate and weather events, coastal flooding, and wildfires. While EPA did not conduct modeling to specifically quantify changes in climate impacts resulting from this rule in terms of avoided temperature change or sea-level rise, we did quantify the climate benefits by monetizing the emission reductions through the application of the social cost of greenhouse gases (SC-GHGs), as described in Section VII.D of this preamble.

V. How would the final rule impact non-GHG emissions and their associated effects?

A. Impact on Non-GHG Emissions

The model runs that EPA conducted estimated the inventories of non-GHG

air pollutants resulting from tailpipe emissions from light-duty cars and trucks, and the upstream emissions associated with the fuels used to power those vehicles (both at the refinery and the electricity generating unit). The tailpipe emissions of PM_{2.5}, NO_x, VOCs, CO and SO₂ are estimated using emission factors from EPA's MOVES model. The tailpipe emission factors used have been updated since EPA's proposed rule to be identical to those used in NHTSA's recent CAFE NPRM.¹⁶² The upstream emissions are calculated using emission factors applied to the gallons of liquid fuels projected to be consumed and the kilowatt hours of electricity projected to be consumed. The upstream emission factors used in this final rule modeling have also been updated since EPA's proposed rule. The updated upstream emission factors are identical to those used in the recent NHTSA CAFE proposal and were generated using the DOE/Argonne GREET model.^{163 164} Table 35 presents the annual refinery and electricity generating unit upstream emission impacts for years 2023 through 2050. See RIA Chapter 5.1 for more information on emission impacts. We estimate that the final standards will lead to reductions in non-GHG pollutants from the refinery sector and increases in non-GHG pollutants from the EGU sector. The projected net upstream NO_x and PM_{2.5} reductions are smaller in the final rule compared to the

proposal, and the projected net increase in upstream SO₂ emissions is larger in the final rule compared to the proposal.

On the whole, the final standards reduce non-GHG emissions and Section VII.A of this preamble details the substantial PM_{2.5}-related health benefits associated with the non-GHG emissions reductions that this rule will achieve. Table 36 presents the annual tailpipe and total upstream inventory impacts for years 2023 through 2050 and Table 37 presents the net annual inventory impacts for those same years. Specifically, we project net reductions in emissions of non-GHG pollutants from upstream sources, except for SO₂. For tailpipe emissions we project initial increases from most non-GHG pollutants, except SO₂, followed by decreases in all non-GHG pollutants over time. The initial increases in non-GHG tailpipe emissions in the years after the rule's implementation are due to projections about the gasoline-fueled LD vehicle population in the final rule scenario, including decreased scrappage of older vehicles, see Section III of this preamble. Increases in total upstream SO₂ are due to increased EGU emissions associated with fleet penetration of electric vehicles.

B. Health and Environmental Effects Associated With Exposure to Non-GHG Pollutants Impacted by the Final Standards

Along with reducing GHG emissions, these standards will also have an impact on non-GHG (criteria and air toxic pollutant) emissions from vehicles and non-GHG emissions that occur during the extraction, transport, distribution and refining of fuel and from power plants. The non-GHG emissions that will be impacted by the standards contribute, directly or via secondary formation, to concentrations of pollutants in the air which affect human and environmental health. These pollutants include particulate matter, ozone, nitrogen oxides, sulfur oxides, carbon monoxide and air toxics. Chapter 7 of the RIA includes more detailed information about the health and environmental effects associated with exposure to these non-GHG pollutants. This includes pollutant-specific health effect information, discussion of exposure to the mixture of traffic-related pollutants in the near road environment, and effects of particulate matter and gases on visibility, effects of ozone on ecosystems, and the effect of deposition of pollutants from the atmosphere to the surface.

C. Air Quality Impacts of Non-GHG Pollutants

Photochemical air quality modeling is necessary to accurately project levels of most criteria and air toxic pollutants, including ozone and PM. Air quality models use mathematical and numerical techniques to simulate the physical and chemical processes that affect air pollutants as they disperse and react in the atmosphere. Based on inputs of meteorological data and source information, these models are designed to characterize primary pollutants that are emitted directly into the atmosphere and secondary pollutants that are formed through complex chemical reactions within the atmosphere. Photochemical air quality models have

become widely recognized and routinely utilized tools in regulatory analysis for assessing the impacts of control strategies.

Section V.A of this preamble presents projections of the changes in non-GHG emissions due to the standards. Section VII.E of this preamble describes the monetized non-GHG health impacts of this final rule which are estimated using a reduced-form benefit-per-ton approach. The atmospheric chemistry related to ambient concentrations of PM_{2.5}, ozone and air toxics is very complex, and making predictions based solely on emissions changes is extremely difficult. However, based on the magnitude of the emissions changes predicted to result from the standards, we expect that there will be very small changes in ambient air quality in most places. The changes in tailpipe and upstream non-GHG emissions that were inputs to the air quality modeling analysis for the 2012 rule were larger than the changes in non-GHG emissions projected for this final rule. The air quality modeling for the 2012 rule projected very small impacts across most of the country, with the direction of the small impact (increase or decrease) dependent on location.¹⁶⁵ The next phase of LD standards will be considered in a separate, future multi-pollutant rulemaking for model years 2027 and beyond. We are considering how best to project air quality impacts from changes in non-GHG emissions in that future rulemaking analysis.

VI. Basis for the Final GHG Standards Under CAA Section 202(a)

In this section, EPA discusses the basis for our final standards under our authority in CAA section 202(a), how we are balancing the factors considered in our assessment that the final standards are appropriate, how this balancing of factors differs from that

used in the SAFE rule, and how further technical analysis and consideration of the comments we received has informed our decision on the final standards. This section draws from information presented elsewhere in this preamble, including EPA’s statutory authority in Section II.A.3 of this preamble, our technical analysis in Section III of this preamble, GHG emissions impacts in Section IV of this preamble, non-GHG emissions impacts in Section V, and the total costs and benefits of the rule in Section VII of this preamble.

EPA is finalizing standards for MYs 2023 and 2024 as proposed and more stringent standards than proposed for MYs 2025 and 2026. Supported by analytical updates that respond to public comments on battery costs and other model inputs, our analysis shows that ICE vehicles are projected to remain the large majority of new vehicles in this timeframe, and that together with moderate levels of electrification, the continued adoption of advanced gasoline vehicle GHG-reducing technologies already existing in the market will be sufficient to meet the final standards. Our technical analysis includes projections of increased BEV+PHEV penetration that are reasonable and commensurate with other industry projections for this same time period. Taking into consideration the full technical record, public comments on the proposal, and the available compliance flexibilities, we believe the final standards represent an appropriate level of stringency, considering relevant factors as discussed below.

EPA has considered the technological feasibility and cost of the final standards, available lead time for manufacturers, and other relevant factors under section 202(a) of the CAA. Based on our analysis, discussed in greater detail in other sections of this preamble and Chapter 2 of the RIA, we believe that the final standards are reasonable and appropriate. Greater reductions in GHG emissions from light duty vehicles over these model years are

¹⁶⁵ U.S. EPA, 2012. Regulatory Impact Analysis: Final Rulemaking for 2017–2025 Light-Duty Vehicle Greenhouse Gas Emission Standards and Corporate Average Fuel Economy Standards. EPA-420-R-12-016.

both feasible and warranted as a step to reduce the impacts of climate change on public health and welfare. In addition, the rule will achieve reductions in emissions of some criteria pollutants and air toxics that will achieve benefits for public health and welfare. Our analysis for this rule supports the conclusion that standards for MYs 2023–2026 are technologically feasible and the costs of compliance for manufacturers are reasonable. In addition, we project that there will be net savings to consumers over the lifetime of vehicles meeting the standards, which we think is a more significant consideration than the anticipated increase in the initial cost for new vehicles. We also note the benefits of the program are projected to significantly exceed the costs.

In selecting the final standards, we considered a range of more- and less-stringent alternatives. Compared to the most stringent alternative that EPA considered (see Section III.D of this preamble), the final standards achieve nearly the same cumulative GHG, criteria pollutant, and air toxics emissions reductions, and a similar level of BEV+PHEV penetration in MY 2026. However, the final standards have lower costs during MYs 2023 and 2024, which EPA considered when determining the appropriate balance between emissions reductions and cost, in the limited lead time available in these earlier years. Compared to the less stringent proposed standards, the final standards achieve greater emissions reductions at similar costs to those we had estimated for the proposed standards in the proposed rule, given the updates to our cost estimates based on public comments and updated data.

A. Consideration of Technological Feasibility and Lead Time

The technological readiness of the auto industry to meet the final standards for MYs 2023–2026 is best understood in the context of the decade-long light-duty vehicle GHG emission reduction program in which the auto industry has developed and introduced on an ongoing basis ever more effective GHG-reducing technologies. The result is that now manufacturers have access to a wide range of GHG-reducing technologies, many of which were in the early stages of development at the beginning of EPA's program in 2012, and which still have potential to reach greater penetration across all new vehicles. (See Sections III.B and III.C of this preamble and Chapter 2 of the RIA for a discussion of technological progression, status of technology penetration, and our assessment of

continuing technology penetration across the fleet.)

In addition to the technologies that were anticipated by EPA in the 2012 rule to make significant contributions toward compliance with standards for this timeframe, the recent technological advancements and successful implementations of electrification have been particularly significant and have greatly increased the available options for manufacturers to meet more stringent standards. Because BEVs and PHEVs have GHG emissions well below their vehicle footprint targets, even a relatively small number of these vehicles can have a large influence on a manufacturer's compliance credits in a given year.

As part of EPA's evaluation of the technological feasibility of the final standards, we have modeled manufacturers' decisions in choosing among available emission reduction technologies to incorporate in their vehicles, taking into account both the projected costs and effectiveness of the technologies. This analytic approach is consistent with EPA's past analyses. See Section III.C of this preamble and Chapter 2 of the RIA. The analysis demonstrates that a wide variety of emission reducing technologies are already available for manufacturers to incorporate into their vehicles within the time frame of the final standards.

Our updated analysis projects that about 17 percent of vehicles meeting the MY 2026 final standards will be BEVs or PHEVs (See Section III.B.3 of this preamble). In making this projection, we are considering both the influence of the standards in that year and the availability and cost of the various available technologies. Among the updates for this final rule analysis, our updated battery costs are one significant factor. For the final rule assessment, EPA is projecting lower battery costs over this timeframe compared to our projections in the proposed rule. We believe that together with other analysis updates (described further in Section III of this preamble and Chapter 2 of the RIA), the cost for manufacturers to implement BEV and PHEV technologies is more accurately represented.

In addition to considering the contribution of BEV and PHEV technologies in the overall feasibility of the standards, EPA also considered the continued advancements and further fleet penetration of internal combustion engine (ICE) powertrain emissions-reducing technology. As was the case for each of the prior EPA assessments for this timeframe, the large majority of vehicles are projected to remain ICE (non-BEV+PHEVs) under the final

standards (e.g., ICE levels are projected to be 83 percent in MY 2026). As shown in more detail in Chapter 4 of the RIA, together with moderate levels of electrification, the final standards can be met by continued adoption of advanced ICE technologies already existing in the market. We believe the penetrations of existing emissions-reducing ICE technologies projected by our analysis support our conclusion that the final standards are appropriate.

EPA believes the technological achievements already developed and applied to vehicles within the current new vehicle fleet will enable the industry to achieve the final standards even without the development of new technologies beyond those already widely available. Rather, in response to the increased stringency of the final standards, automakers would be expected to adopt such technologies at an increasing pace across more of their vehicle fleets. As we discuss further below, our assessment shows that a large portion of the current fleet (MY 2021 vehicles), across a wide range of vehicle segments, already meets the MY 2023 footprint-based GHG targets being finalized here. Compliance with the final standards will necessitate greater implementation and pace of technology penetration through MY 2026 using existing GHG reduction technologies, including further deployment of BEV and PHEV technologies.

Another factor in considering the feasibility of the final standards is the fact that five automakers voluntarily entered into the California Framework Agreements with the California Air Resources Board, first announced in July 2019, to meet more stringent GHG emission reduction targets nationwide than the relaxed standards in the SAFE rule.¹⁶⁶ These voluntary actions by automakers that collectively represent nearly 30 percent of the U.S. vehicle market speak directly to the feasibility of meeting standards at least as stringent as the emission reduction targets under the California Framework Agreements. As discussed in Section II.A.8 of this preamble, the California Framework Agreements were a consideration in our assessment of the revised EPA standards.

In the SAFE rulemaking EPA concluded that the projected level of advanced technologies was “too high from a consumer-choice perspective” and ultimately could lead to automakers

¹⁶⁶ <https://ww2.arb.ca.gov/resources/documents/framework-agreements-clean-cars> (last updated on May 22, 2021).

changing the vehicle types they offer.¹⁶⁷ EPA currently does not believe these conclusions are accurate, even with the higher technology penetration rates for BEVs and PHEVs that we project in this rulemaking compared to rates that we projected in the SAFE rulemaking. Rather, EPA's judgment is that the history of significant developments in automotive offerings over the last ten years supports the conclusion that automakers are capable of deploying a wide range of advanced technologies across the entire vehicle fleet, and that consumers remain interested and willing to purchase vehicles with advanced technologies. Reinforcing this updated judgment are the recent automaker announcements (reviewed in Section III.C of this preamble) signaling an accelerating transition to electrified vehicles across a wide range of vehicle segments, including not only passenger cars and SUVs but also including examples of light-duty pickup trucks and minivans. EPA sees no reason why the standards revised by this final rule would fundamentally alter such trends in technology deployment.

We believe that the continuation of trends already underway, as exemplified in part by the aforementioned public announcements about manufacturers' plans to transition to electrified vehicles, as well as continuing advancements in EV technology, support the feasibility of this level of BEV+PHEV penetration during the time period of the rule. EPA also believes that current levels and trends, which include significant ongoing and near-term growth, of public and private charging infrastructure are consistent with the projected levels of BEV+PHEV penetration.¹⁶⁸ Moreover, EPA is committed to encouraging the rapid development and deployment of zero-emission vehicles, and we are finalizing compliance flexibilities and incentives to support this transition (see Section II.B.1 of this preamble).

As noted above, we are projecting that BEVs and PHEVs can play a significant role in complying with the final standards. While not all manufacturers will introduce these technologies into their lineups at the same rate, a robust market exists for credit trading between manufacturers, as discussed further below, which has enabled more

manufacturers to access the credits generated by the implementation of BEVs and PHEVs by other manufacturers.

In our modeling of manufacturer decisions and technology applications, the current and previous assessments of potential standards for this timeframe have relied primarily on projections that do not account for credit trading between manufacturers. When credits are available for less than the marginal cost of compliance, EPA anticipates that an automaker might choose to adopt a compliance strategy relying on credits.¹⁶⁹ As noted in the proposal, EPA recognizes that it previously considered that some manufacturers may be unwilling to design a compliance strategy based on purchase of credits from another manufacturer. However, based in part on our review of the evidence of active credit trading cataloged in the annual EPA Automotive Trends Report^{170 171} and consideration of public comments, we conclude there is increased acceptance of credit trading among manufacturers and that it is appropriate to recognize that manufacturers consider credit trading as a compliance strategy. For both of these reasons, we believe it is appropriate to consider the effect of credit trading between firms in our assessment of the feasibility of the final standards.

The potential contribution of traded credits towards a manufacturer's compliance strategy is magnified as more BEVs and PHEVs are introduced into the fleet. Because the standards are largely set assuming the overall fleet will be largely ICE vehicles, a manufacturer who produces more than a moderate number of BEVs and PHEVs may end up with GHG credits that could

expire if not used internally or sold to another manufacturer. EPA believes that credit trading will continue to be an important compliance flexibility that manufacturers will take advantage of, especially when differences and timing of product strategies are likely to persist across manufacturers.

As an additional way to evaluate the potential effect of credit trading on the auto industry's compliance costs, EPA conducted a sensitivity analysis to evaluate the potential contribution of credit trading between manufacturers towards compliance in MYs 2023 and 2024 (as well as the later MYs), and the more realistic treatment of banked credits which are otherwise modeled as unused in our primary analysis which assumes no trading. Under this scenario, credits that are generated by one manufacturer can be used by another manufacturer if it results in an overall reduction in compliance costs.¹⁷² The results of this sensitivity analysis, presented in RIA 4.1.5.1 under the 'perfect trading' case, show that by accounting for credit trading between manufacturers the projected vehicle costs are reduced dramatically from \$330 without trading to \$147 with trading in MY 2023, and from \$534 to \$360 in MY 2024. Considering lead-time for these earlier model years, these results illustrate how credit trading allows manufacturers to meet the standards in a more cost-effective manner from an overall industry perspective, which can involve some manufacturers applying additional technology and selling credits while other manufacturers might rely on purchasing credits in lieu of adding technology. We would consider any analysis which assumes all manufacturers participate in a frictionless and transparent market to be a bounding representation of how credits might actually be traded between manufacturers. It is likely that the actual market behavior will lie somewhere between our no-trading (central case) and a frictionless market with all manufacturers. We believe our modeling of the 'perfect trading' sensitivity case, with two groups of manufacturers participating in independent markets, will be closer to actual credit trading behavior than the no-trading case. Note that the results of our central case

¹⁶⁹ "FCA historically pursued compliance with fuel economy and greenhouse gas regulations in the markets where it operated through the most cost effective combination of developing, manufacturing and selling vehicles with better fuel economy and lower GHG emissions, purchasing compliance credits, and, as allowed by the U.S. federal Corporate Average Fuel Economy ("CAFE") program, paying regulatory penalties. The cost of each of these components of FCA's strategy has increased and is expected to continue to increase in the future. The compliance strategy for the combined company is currently being assessed by Stellantis management." Stellantis N.V. (2020). "Annual Report and Form 20-F for the year ended December 31, 2020."

¹⁷⁰ More than 10 vehicle firms collectively have participated in 70 credit trading transactions since the inception of EPA's program through MY 2019, including many of the largest automotive firms. (See EPA Report 420-R-21-003 page 110 and Figure 5.15, January 2021).

¹⁷¹ Credit trading between firms has occurred throughout the nearly ten year history of the EPA light-duty vehicle GHG program, including during MY 2012, the first year (See EPA Report 420-R-14-011, April 2014).

¹⁷² Note that the fleet was divided between non-Framework and Framework manufacturers, and trading was assumed to occur for manufacturers within those groups, but not between. This is a relatively more restrictive assumption than true "perfect" trading, that will tend to increase the likelihood of credits going unused or applied inefficiently, and thus potentially higher costs than in a true perfect trading scenario.

¹⁶⁷ 85 FR 25116.

¹⁶⁸ Brown, A., A. Schayowitz, and E. Klotz (2021). "Electric Vehicle Infrastructure Trends from the Alternative Fueling Station Locator: First Quarter 2021." National Renewable Energy Laboratory Technical Report NREL/TP-5400-80684, https://afdc.energy.gov/files/u/publication/electric_vehicle_charging_infrastructure_trends_first_quarter_2021.pdf, accessed 11/3/2021.

analysis, even without accounting for trading between manufacturers, projects feasible compliance pathways for MYs 2023 and 2024.

EPA also received comments which cited independent analyses of how the industry's existing bank of credits can contribute towards meeting the proposed standards for MYs 2023 and 2024. UCS provided in their comments modeling results generated using a version of the CCEMS model which had been modified to include manufacturer credit trading. UCS also included the modeling restriction that non-Framework manufacturers would continue with technology adoption in MY2023 as projected under the less stringent SAFE standards. UCS concluded that with the use of existing banked credits and maintaining product plans projected under a no-action case, there is "sufficient credit availability for manufacturers to comply with the proposed MY2023 and 2024 standards, even without resorting to additional technology deployment or credit carryback from improvements made post-MY2024." Similarly, EDF cited recent modeling results generated using the OMEGA model, concluding that "the analysis demonstrates that automakers will be able to comply with the proposed MY 2023 standard largely through the application of existing credits." The commenter's analysis supported this conclusion even under the most conservative assumption where non-Framework manufacturers did not have access to credits held through MY2020 by Framework manufacturers, had limited use of off-cycle credits, and only reduced tailpipe GHG emissions along the trajectory of the SAFE rule's MY2021–2023 requirements. In other words, these commenters concluded that automakers could comply with the model year 2023 and 2024 standards without adjusting their existing product plans at all, simply by acquiring a portion of the large bank of available credits (and this analysis did not even consider the flexibilities available to manufacturers of carrying back credits earned in future years). EPA agrees with the commenters' central conclusion that the standards can be met in MYs 2023 and 2024 only with the technology deployment that would have been expected under the SAFE rule standards, the voluntary actions taken by some manufacturers beyond the SAFE standards (*e.g.*, the California Framework agreements), and the effective utilization of existing credits. This further reinforces that the lead time for the MYs 2023 and 2024 standards is sufficient.

In any given model year, some vehicles will be "credit generators," over-performing compared to the footprint-based CO₂ target in that model year, while other vehicles will be "debit generators" and under-performing against their footprint-based targets. Together, an automaker's mix of credit-generator and debit-generator vehicles contribute to its sales-weighted fleet average CO₂ performance, compared to its standard, for that year. If a manufacturer's sales-weighted fleet CO₂ performance is better than its fleet average standard at the end of the model year, those credits can be banked for the automaker's future use in certain years (under the credit carry-forward provisions) or sold to other manufacturers (under the credit trading provisions). Likewise, if a manufacturer's sales-weighted fleet CO₂ performance falls short of its fleet average standard at the end of a model year, the automaker can use banked credits or purchased credits to meet the standard. These provisions of the GHG credit program were designed to recognize that automakers typically have a multi-year redesign cycle and not every vehicle will be redesigned every year to add GHG-reducing technology. Moreover, when GHG-reducing technology is added, it will generally not achieve emissions reductions corresponding exactly to a single year-over-year change in stringency of the standards. Furthermore, in recognition of the possibility that a manufacturer might comply with a standard for a given model year with credits earned in a future model year (under the allowance for "credit carryback"), a manufacturer may also choose to carry a deficit forward up to three years before showing compliance with that model year.

EPA examined manufacturer certification data to assess the extent to which MY 2021 vehicles already being produced and sold today would be credit generators compared to the model year 2023 targets (accounting for projected off-cycle and air conditioning credits). As detailed in Chapter 2.4 of the RIA, automakers are selling approximately 216 vehicle models (60 percent of which are advanced gasoline technology vehicles) that would be credit generators compared to the proposed model year 2023 targets, and they appear in nearly all light-duty vehicle market segments. This information supports our conclusion about the feasibility of vehicles with existing technologies meeting the MY 2023 standards. We also considered the ability of MY 2021 vehicles to generate

credits based on the MY 2021 and MY 2022 standards relaxed in the SAFE rule. Of the 1370 distinct MY 2021 vehicle models, EPA's analysis (RIA, Chapter 2.4) indicates that 336 of these models (25 percent of today's new vehicle fleet offerings) are credit generators for the MY 2022 SAFE standards: It can be assumed that those models are also generating credits for the MY 2021 standards.

This represents an opportunity for manufacturers to build their credit banks for both MY 2021 and MY 2022 and carry those credits forward to help meet the MY 2023–2026 standards. These data demonstrate that the technology to meet these standards is available today, as well as opportunities for manufacturers to sell more of the credit-generator vehicles as another available strategy to generate credits that will help them comply with the model year 2023 and later standards. Our analysis clearly shows this could be done within vehicle segments to maintain consumer choice (we would not expect that overall car/truck fleet mix would shift), as credit-generating vehicles exist across vehicle segments, representing 95 percent of vehicle sales. Under the fleet-average based standards, manufacturers have multiple feasible paths to compliance, including varying sales volumes of credit generating vehicles, adopting GHG-reducing technologies, and implementing other credit strategies and incentive provisions including those finalized in this rule. Pricing strategy is a well-documented approach¹⁷³ to shifting a manufacturer's sales mix to achieve compliance. As UCS mentioned in their comments, General Motors published

¹⁷³ *E.g.*, When fuel economy standards were not footprint-based, less efficient vehicles were priced higher than more efficient vehicles to encourage sales of the latter. Austin, D., and T. Dinan (2004). "Clearing the air: The costs and consequences of higher CAFE standards and increased gasoline taxes." *Journal of Environmental Economics and Management* 50: 562–582. Greene, D., P. Patterson, M. Singh, and J. Li (2005). "Feebates, rebates, and gas-guzzler taxes: A study of incentives for increased fuel economy." *Energy Policy* 33: 757–775 found that automakers were more likely to add technology than use pricing mechanisms to achieve standards. Whitefoot, K., M. Fowlie, and S. Skerlos (2017). "Compliance by Design: Influence of Acceleration Trade-offs on CO₂ Emissions and Costs of Fuel Economy and Greenhouse Gas Regulations." *Environmental Science and Technology* 51: 10307–10315 found evidence consistent with automakers using trade-offs with acceleration as yet another path to comply with fuel economy standards. However, EPA's Trends Report (420-R-21-003 Figure 3.11 and Figure 3.15) shows that manufacturers have proven capable of increasing both fuel economy and acceleration performance simultaneously.

literature¹⁷⁴ on its own pricing strategy model it uses to make decisions on how best to motivate consumers into purchasing alternate vehicles that help achieve fleetwide CAFE compliance.

The availability of current models across a range of vehicle segments meeting the final standards is notable. EPA recognizes that auto design and development is a multi-year process, which imposes some constraints on the ability of manufacturers to immediately redesign vehicles with new technologies. However, EPA also understands that this multi-year process means that the industry's product plans developed in response to EPA's 2012 GHG standards rulemaking for MYs 2017–2025 have largely continued, notwithstanding the SAFE rule that was published on April 30, 2020 and that did not relax standards until MY 2021. In their past comments on EPA's light-duty GHG programs, some automakers broadly stated that they generally require about five years to design, develop, and produce a new vehicle model.¹⁷⁵ Under that schedule, it would follow that in most cases the vehicles that automakers will be selling during the first years of this MY 2023–26 program were already designed under the original, more stringent GHG standards finalized in 2012 for those model years. At the time of the proposal of these final standards, the relaxed GHG standards under the SAFE rule had been in place for little more than one year. During this time, the ability of the industry to commit to a change of plans to take advantage of the SAFE rule's relaxed standards, especially for MYs 2023 and later, was highly uncertain in light of pending litigation,¹⁷⁶ and concern was regularly expressed across the auto industry over the uncertain future of the SAFE standards.

In its comments, the Alliance emphasized “the importance and significance of design cycles on real world response to changes proposed in today's policy. DOT and EPA jointly proposed the SAFE Vehicles Rule on August 24, 2018, signaling some probability of changes in federal

regulations on GHG and CAFE. It is reasonable to expect that some manufacturers updated production plans for new vehicles accordingly, and consistent with the corporate strategies, for some of the affected model years in the SAFE proposal (MYs 2021–2024, for instance).” If it were indeed the case that auto manufacturers updated product plans based on the SAFE proposed rule as a signal of policy changes, then it also seems reasonable that automakers might have similarly initiated production planning to prepare for potentially more stringent standards in response to the President's January 21, 2021 Executive Order 13990 directing EPA to review the SAFE rule standards, or if not then when EPA's proposed rule issued later in 2021. In any case, EPA's modeling reflects the significance of design cycles, and is not dependent on manufacturers having retained their pre-SAFE product strategies without change. While EPA anticipates that different manufacturers will adopt different compliance strategies for the standards established by this rule, EPA believes, based on the availability of technologies, the results of its modeling, and the flexibilities of the program, that these standards can be achieved by manufacturers at a reasonable cost.

In fact, due in part to this uncertainty, five automakers voluntarily agreed to more stringent national emission reduction targets under the California Framework Agreements. Therefore, the automakers' own past comments regarding product plan development and the regulatory and litigation history of the GHG standards since 2012 support EPA's expectation that automakers remain largely on track in terms of technological readiness within their product plans to meet the approximate trajectory of increasingly stringent standards initially promulgated in 2012. Although we do not believe that automakers have significantly changed their product plans in response to the SAFE final rule issued in 2020, any that did would have done so relatively recently and there is reason to expect that, for any automakers that changed their plans after the SAFE rule, the automakers' earlier plans could be reinstated or adapted with little change. We also note that some automakers may have adopted product plans to over comply with the more stringent, pre-SAFE standards, with the intention of selling credits to other automakers. For these automakers, the final standards of this rule reduce or eliminate the sudden disruption to product plans caused by the SAFE rule.

Despite the relaxed SAFE standards in the U.S., manufacturers have continued to advance technology deployment in response to steadily more stringent standards in other global markets. In comments referenced by CARB, Roush provided further justification that adequate lead time and available technology already exist, in part, due to global regulatory pressures. Roush indicates that, globally, manufacturers have been developing and implementing technology to meet international standards more stringent than in the U.S., and regularly incorporate these technologies into U.S. products.

EPA considers this an additional aspect of its analysis that mitigates concerns about lead time for manufacturers to meet the final standards beginning with the 2023 model year. We see no reason to expect that the major GHG-reducing technologies that automakers have already developed and introduced, or have already been planning for near-term implementation, will not be available for model year 2023–2026 vehicles. Thus, in contrast to the situation that existed prior to EPA's adoption of the initial light-duty GHG standards in the 2012 rule, automakers now have had the benefit of at least 8 to 9 years of planning and development for increasing levels of GHG-reducing technologies in preparation for meeting the final standards.

EPA sought and received comment on generating credits against the MY 2021 and MY 2022 SAFE standards in the context of lead time for the standards in this rulemaking. The California Attorney General commented that for MY 2023, automakers can comply with standards at least as stringent as EPA's proposed preferred alternative without the use of the credit banks they will likely hold coming into that year. Those banks, including the windfall credits available under the SAFE standards, support EPA's consideration of its Alternative 2 standards for MY 2023 and underscore that EPA should not finalize standards less stringent than its preferred alternative for that model year. The California Attorney General commented further that if EPA were to adopt MY 2023 standards weaker than its preferred alternative (*i.e.*, the Alternative 1 standards), they would support some form of discounting of the credits generated during MYs 2021–2022. In their comments, CARB argued that EPA should protect against what it views as windfall credits from manufacturers over-complying with the SAFE standards in MYs 2021 and 2022. CARB believes that auto manufacturers

¹⁷⁴ Biller, S., and Swann, J. (2006). “Pricing for Environmental Compliance in the Auto Industry.” *Interfaces* 36(2): 118–125. <https://pubsonline.informs.org/doi/abs/10.1287/inte.1050.0174>.

¹⁷⁵ For example, in its comments on the 2012 rule, Ford stated that manufacturers typically begin to firm up their product plans roughly five years in advance of actual production. (Docket OAR–2009–0472–7082.1, p. 10.)

¹⁷⁶ See *Competitive Enterprise Institute v. NHTSA*, D.C. Cir. No. 20–1145 (and consolidated cases brought by several states, localities, environmental and public organizations, and others), filed on May 1, 2020 and later dates.

were on a path to compliance with the original 2012 standards, those plans should not have been changed by the 2020 SAFE rule, and thus credits generated off the relaxed SAFE standards should be considered windfall and not be made available to offset future compliance.

EPA has considered the comments but is not finalizing any changes to the existing credit generating or credit carry-forward provisions for the MY 2021 and 2022 standards. While we appreciate the view of commenters that manufacturers could have feasibly met more stringent standards in MYs 2021 and 2022, we believe the credit system is an integral part of the design of the GHG standards, which allow for multi-year compliance strategies. We think it would be inappropriate to deny any credits for manufacturers who outperformed their applicable footprint standards in those years, and choosing a more stringent compliance baseline now for credit generation would be difficult in light of the significant increase in stringency for MY 2023. In addition to CARB's comments, EPA also considered the recent performance of the auto industry in meeting the GHG standards; in MY 2020 the industry-wide average performance was 6 g/mile above the industry-wide average standard and compliance was achieved by many manufacturers through applying banked credits.¹⁷⁷ Rather than denying or discounting credits, we have considered the relative stringency of the MY 2021 and MY 2022 standards as part of our consideration of the appropriate MY 2023–2026 standards. In light of the implementation timeframe of the final standards beginning in model year 2023, we are continuing to allow manufacturers to generate credits against the SAFE standards in model years 2021 and 2022. We are not changing the existing 5-year credit carry-forward provision for credits generated in model years 2021 and 2022, so those credits can be carried forward under the existing regulations to facilitate the transition from the SAFE standards to the final standards. We believe our approach in this rulemaking on revising credit provisions appropriately balances the benefits of credits, especially for compliance in earlier model years, with the benefits of achieving greater emissions reductions. EPA will consider future program provisions for credits in the context of future standards and timing.

In summary, manufacturers have access to a wide range of GHG-reducing technologies and have made significant

technological advances in recent years, which together provide ample evidence of the technological feasibility of the final standards particularly in light of the wide range of credit and flexibility strategies, as well as fleet mix strategies, that manufacturers can marshal to comply with the standards.

In considering feasibility of the final standards EPA also considered the impact of available compliance flexibilities on automakers' compliance options, including the additional four compliance flexibility options we are finalizing primarily to address lead time considerations in MYs 2023 and 2024 (See Section II of this preamble). EPA is adopting a one-year credit life extension for credits earned in MYs 2017 and 2018 so they can be used in MYs 2023 and 2024, respectively. EPA is finalizing the extension of advanced technology vehicle multiplier incentives for MYs 2023 and 2024, which offer the potential for an additional cumulative 10 g/mi of emission credits. EPA is finalizing a 20 g/mi incentive for full-size pickup trucks equipped with strong hybrid technology or achieving 20 percent better GHG performance compared to their footprint targets for MYs 2023 and 2024. And finally, EPA is providing 5 g/mi of additional credit generation opportunity for off-cycle credits from the menu.

As we discuss above, the advanced technologies that automakers are continuing to incorporate in vehicle models today directly contribute to each company's compliance plan (*i.e.*, these vehicle models have lower GHG emissions). In addition, automakers widely utilize the program's established ABT provisions which provide a variety of flexible paths to plan compliance (See more detail in Section II.A.4 of this preamble). EPA's annual Automotive Trends Report illustrates how different automakers have chosen to make use of the GHG program's various credit features.¹⁷⁸ It is clear that manufacturers are widely utilizing the various credit programs available, and we have every expectation that manufacturers will continue to take advantage of the compliance flexibilities and crediting programs to their fullest extent, thereby providing them with additional powerful tools in finding the lowest cost compliance solutions in light of the final standards.

¹⁷⁸ "The 2020 EPA Automotive Trends Report, Greenhouse Gas Emissions, Fuel Economy, and Technology since 1975," EPA-420-R-21-003 January 2021.

B. Consideration of Vehicle Costs of Compliance

In addition to technological feasibility and lead time, EPA considered the cost for the auto industry to comply with the final standards. See Section III.B of this preamble and Chapter 2 of the RIA for our analysis of compliance costs. As shown in Section III.B.2 of this preamble and Chapter 4.1.3 of the RIA, our updated estimate of the average per-vehicle cost increase for a MY 2026 vehicle is \$1,000 compared to the No Action scenario. Average per-vehicle costs are projected to rise from \$330 in MY 2023 to \$1,000 in MY 2026. EPA has also evaluated costs by manufacturer (see Section III.B.2 of this preamble) and finds the range of costs to be similarly reasonable. EPA has also projected the cost impacts for MYs beyond 2026 due to the revised final standards, and those per-vehicle cost increases are in the range of \$1,000 to \$1,200, which EPA also believes is a reasonable cost increase. EPA also considered the cost impacts across a number of sensitivity cases using a range of input assumptions (see RIA Chapter 4.1.5). We conclude that per-vehicle costs are also reasonable for these cases, including those with higher cost impacts. For example, in the higher battery cost sensitivity case, per-vehicle costs are \$1,396 in MY 2026, and in the MYs beyond, up to as \$1,590 in MY 2028.

As part of these cost estimates, we continue to project significant increases in the use of advanced gasoline technologies (including mild and strong hybrids), comprising 83 percent of the fleet (see Section III.B.3 of this preamble). EPA has considered the feasibility of the standards under several different assumptions about future fuel prices, technology application or credit trading (see RIA Chapters 4 and 10), which shows very small variations in average per-vehicle cost or technology penetration mix. Our conclusion that there are multiple ways the MY 2023–2026 standards can be met given the wide range of technologies at reasonable cost, and predominantly with advanced gasoline engine and vehicle technologies, holds true across all these alternative assumptions and scenarios.

EPA concludes that the costs of the standards are reasonable.

C. Consideration of Impacts on Consumers

Another important consideration for EPA is the impact of the standards on consumers. EPA concludes that the standards will be beneficial for consumers because the lower operating

¹⁷⁷ Trends Report, Figure ES-8.

costs from significant fuel savings will offset the vehicle costs. Total fuel savings for consumers through 2050 are estimated at \$210 billion to \$420 billion (7 percent and 3 percent discount rates, see Section VII.I of this preamble, Table 44, “Retail Fuel Savings”). For an individual consumer on average, we project that over the lifetime of a MY 2026 vehicle, the reduction in fuel costs will exceed the increase in vehicle costs by \$1,083. Thus, the standards will result in significant savings for consumers, as further described in Section VII.J of this preamble.

The Administrator also carefully considered the affordability impacts of these standards, especially considering E.O. 14008 and EPA’s increasing focus on environmental justice and equity. EPA examined the impacts of the standards on the affordability of new and used cars and trucks in Section VII.M of this preamble and Chapter 8.4 of the RIA. Because lower-income households spend a larger share of their household income on gasoline than do higher-income households, the effects of reduced operating costs may be especially important for these households.

EPA recognizes that in the SAFE rulemaking we placed greater weight on the upfront costs of vehicles, and little weight on total cost of ownership. In part, that rulemaking explained that “[n]ew vehicle purchasers are not likely to place as much weight on fuel savings that will be realized by subsequent owners.”¹⁷⁹ However EPA now believes that in assessing the benefits of these standards it is more appropriate to consider the fuel savings of the vehicle, over its lifetime, including those fuel savings that may accrue to later owners, consistent with the approach EPA took in both the 2010 and 2012 light-duty vehicle GHG standard final rules. Disregarding those savings for consumers, which often accrue to lower income households, who more often purchase used cars, would provide a less accurate picture of total benefits to society.

Likewise, EPA has reconsidered the weight placed in the SAFE rulemaking on promoting fleet turnover as a standalone factor and is now considering the influence of turnover in the context of the full range effects of the proposed standards. As discussed in Section VII.B of this preamble and RIA Chapter 8.1, EPA estimates a reduction in new vehicle sales associated with these standards of one percent or less, though we also describe why sales

impacts may be even less negative, or potentially positive. For comparison, the SAFE standards were estimated to increase sales by up to 1.7 percent.¹⁸⁰ Thus, while recognizing that standards can influence purchasing decisions, EPA finds that the emissions reductions from these final standards far outweigh any temporary effect from delayed purchases.

D. Consideration of Emissions of GHGs and Other Air Pollutants

An essential factor that EPA considered in determining the appropriate level of the standards is the reductions in emissions that would result from the program. This primarily includes reductions in vehicle GHG emissions, given the increased urgency of the climate crisis. We also considered the effects of the standards on criteria pollutant and air toxics emissions and associated public health and welfare impacts.

The GHG emissions reductions from our standards are projected to be 3,100 MMT of CO₂, 3.3 MMT of CH₄ and 97,000 metric tons of N₂O, as the fleet turns over year-by-year to new vehicles that meet the standards, in an analysis through 2050.¹⁸¹ See Section IV.A of this preamble, Table 34. EPA recognizes there are a number of limitations and uncertainties with respect to quantifying the benefits of GHG reductions. EPA estimates the monetized benefit of these GHG reductions through 2050 at \$31 billion to \$390 billion across a range of discount rates and values for the social cost of greenhouse gases (SC-GHG) carbon (see Section VII.I of this preamble, Table 47). Under Section 202 of the CAA, EPA is required to establish standards to reduce air pollution that endangers public health and welfare, taking into consideration the cost of compliance and lead time. EPA is not required to conduct formal cost benefit analysis to determine the appropriate standard under Section 202. EPA weighed the relevant statutory factors to determine the appropriate standard and the analysis of monetized GHG benefits was not material to the choice of that standard. E.O. 12866 requires EPA to perform a cost-benefit analysis, including monetizing costs and benefits where practicable, and the EPA has

¹⁸⁰ U.S. Department of Transportation and U.S. Environmental Protection Agency (2020). Final Regulatory Impact Analysis: The Safer Affordable Fuel-Efficient (SAFE) Vehicles Rule for Model Year 2021–2026 Passenger Cars and Light Trucks. Table VI–189, p. 875. https://www.nhtsa.gov/sites/nhtsa.gov/files/documents/final_safe_fria_web_version_200330.pdf, accessed 11/9/21.

¹⁸¹ These emission reductions have increased compared to the proposed rule due to the increased stringency of the final standards.

conducted such an analysis. The monetized GHG benefits are included in the cost-benefit analysis. That cost-benefit analysis provides additional support for the EPA’s final standards.

These GHG reductions projected to result from the standards are important to continued progress in addressing climate change. In fact, EPA believes that we will need to achieve far deeper GHG reductions from the light-duty sector in future years beyond the compliance timeframe for the standards, which is why we are initiating a rulemaking in the near future to consider establishing more stringent standards after MY 2026.

The criteria pollutant emissions reductions expected to result from the standards are also a factor considered by the Administrator. The standards would result in emissions reductions of some criteria pollutants and air toxics and associated benefits for public health and welfare. Public health benefits through 2050 from reducing these pollutants are estimated to total \$8.1 billion to \$19 billion (7 percent and 3 percent discount rates, see Section VII.I of this preamble, Table 46).¹⁸² EPA concludes that this rule is important in reducing the public health and welfare impacts of air pollution, including GHG, criteria, and air toxics emissions.

E. Consideration of Energy, Safety and Other Factors

EPA also evaluated the impacts of the final standards on energy, in terms of fuel consumption and energy security. This final rule is projected to reduce U.S. gasoline consumption by more than 440 million barrels through 2050, a roughly 15 percent reduction in U.S. gasoline consumption (see Section VII.C of this preamble). EPA considered the impacts of this projected reduction in fuel consumption on energy security, specifically the avoided costs of macroeconomic disruption (See Section VII.F of this preamble). We estimate the energy security benefits of the final rule at \$7 billion to \$14 billion (7 percent and 3 percent discount rate, see Section VII.I of this preamble, Table 45). EPA considers this final rule to be beneficial from an energy security perspective.

Section 202(a)(4)(A) of the CAA specifically prohibits the use of an emission control device, system or element of design that will cause or contribute to an unreasonable risk to public health, welfare, or safety. We have concluded that no device, system,

¹⁸² Similar to the GHG emission reductions, public health and welfare benefits have increased compared to the proposed rule due to the increased stringency of the final standards.

or element of design adopted for the purposes of complying with these standards will impact vehicle operation or function in such a way as to increase risk. However, we have also more broadly considered effects beyond vehicle operation and function. For example, we considered the estimated societal costs of fatal and non-fatal injuries due to projected changes in overall VMT and changes in the relative usage of vehicles due to rebound, and scrappage effects on fleet mix. EPA has a long history of considering the safety implications of its emission standards,¹⁸³ up to and including the more recent light-duty GHG regulations: The 2010 rule which established the MY 2012–2016 light-duty vehicle GHG standards, the 2012 rule which first established MY 2017–2025 light-duty vehicle GHG standards, the MTE 2016 Proposed Determination and the 2020 SAFE rule. The relationship between GHG emissions standards and safety is multi-faceted, and can be influenced not only by control technologies, but also by consumer decisions about vehicle ownership and use. EPA has estimated safety implications of this rule by accounting for changes in new vehicle purchase, changes in vehicle scrappage, fleet turnover, and VMT, and changes in vehicle weight as an emissions control strategy. EPA finds that under this rule, the estimated risk of fatal and non-fatal injuries per distance traveled will remain virtually unchanged (see Section VII.H of this preamble).

This rule also projects that as the costs of driving declines due to the improvement in fuel economy, consumers overall will choose to drive more miles (this is the “VMT rebound” effect). As a result of this personal decision by consumers to drive more due to the reduced cost of driving, EPA also projects this will result in an increase in accidents, injuries, and fatalities. EPA recognizes that in the SAFE rulemaking EPA placed emphasis on the estimated total number of fatal and non-fatal injuries. However, EPA currently believes it is more appropriate to consider the risk of injuries per mile traveled. The risk of injuries per mile traveled is a measure of how safe driving as an activity is (and whether this rule is projected to impact that safety). Assessing whether the risk of injury per mile traveled has changed is a better means of attributing any projected changes in fatal and nonfatal injuries between the effects of this rule

and other contributing factors such as voluntary decisions to drive more. In addition, by focusing on whether the technologies applied by manufacturers to meet the standards established by this rule will make use of a car more dangerous (rather than whether people will use their cars more), we believe that considering risk of injury per vehicle mile traveled is more consistent with the statutory direction in section 202(a)(4)(A) prohibiting “an emission control device, system or element of design that will cause or contribute to an unreasonable risk.” Two commenters (CARB, Center for Biological Diversity) expressed support for the use of this metric. Even in the SAFE rule EPA recognized that “EPA’s intention is not to restrict mobility, or to discourage driving, based on the level of the standards.”¹⁸⁴ For these reasons, EPA finds that the most important safety considerations are EPA’s conclusions that the rule will not increase risk, as calculated on an injury per mile traveled basis.

F. Balancing of Factors Under CAA 202(a)

Under CAA section 202(a) EPA has statutory authority providing considerable discretion in setting or revising vehicle emission standards with adequate lead time for the development and application of technology to meet the standards. EPA’s final standards properly implement this statutory provision, as discussed above. As discussed throughout this preamble, and consistent with the proposed rule, the emission reduction technologies needed to meet the standards are already available at reasonable cost, and a significant fraction of new vehicles today already meets these standards. Moreover, the flexibilities already available under EPA’s existing regulations, including fleet average standards and the ABT program—in effect enabling manufacturers to spread the compliance requirement for any particular model year across multiple model years—and the additional flexibilities finalized in this rule further support EPA’s conclusion that the standards provide sufficient time for the development and application of technology, giving appropriate consideration to cost.

The Administrator in this rule is balancing the factors differently than in the SAFE rule in reaching the

conclusion about what standards to finalize. In the SAFE rulemaking, EPA promulgated relaxed GHG standards that were projected to result in increases in GHG and criteria pollutant emissions and adverse public health impacts (e.g., increases in premature mortality and illnesses due to increased air pollution). The SAFE rulemaking was the most significant weakening of mobile source emissions standards in EPA’s history. It is particularly notable that the rationale for the revision was not that the standards prior to the SAFE rulemaking had turned out to be technologically infeasible or that they would impose unexpectedly high costs on society. As we have noted, the estimated per-vehicle costs in the SAFE rulemaking for more stringent standards were not significantly different from the costs estimated in the 2012 rule or for this rulemaking. Rather, in considering the factors for the SAFE rulemaking, EPA placed greatest weight on reducing the per-vehicle cost of compliance on the regulated industry and the upfront (but not total) cost to consumers and placed little weight on reductions in GHGs and other pollutants, contrary to EPA’s traditional approach to adopting standards under CAA section 202(a).

Although EPA continues to believe that the Administrator has significant discretion to weigh various factors under CAA section 202(a), the Administrator notes, consistent with the proposal, that the purpose of adopting standards under that provision is to address air pollution that may reasonably be anticipated to endanger public health and welfare and that reducing air pollution has traditionally been the focus of such standards. In this action, the Administrator is setting more stringent standards based on a weighing of factors under consideration different from that in the SAFE rulemaking, which the Administrator believes is more consistent with the purpose of the CAA.¹⁸⁵ The Administrator finds it is appropriate to place greater weight on the importance of reducing GHG emissions and the primary purpose of CAA section 202, to reduce the threat posed to human health and the environment by air pollution, and to adopt standards that, when implemented, would result in

¹⁸³ See, e.g., 45 FR 14496, 14503 (1980) (“EPA would not require a particulate control technology that was known to involve serious safety problems.”).

¹⁸⁴ 85 FR 25119. See also 85 FR 24826 (“For the proposal, the agencies assumed that, in deciding to drive more, drivers internalize the full cost to themselves and others, including the cost of accidents, associated with their additional driving.”).

¹⁸⁵ See, e.g., CAA sections 101(a)(2) (finding that “the increasing use of motor vehicles[] has resulted in mounting dangers to the public health and welfare”); 101(b)(1) (declaring one purpose of the CAA is “to protect and enhance the quality of the Nation’s air resources, so as to promote the public health and welfare”); 101(c) (“a primary goal of this chapter is to encourage or otherwise promote reasonable Federal . . . actions . . . for pollution prevention”).

significant reductions of light duty vehicle emissions both in the near term and over the longer term, while giving appropriate consideration to costs of compliance and lead time.

In addition to the greater consideration of emissions reductions, several technological developments since the SAFE rule was promulgated have informed the Administrator's decision on what level of standards are appropriate. These developments include technological advancements (including reductions in battery costs) and successful introductions of electric vehicles, recent manufacturer announcements signaling an accelerated transition to electrified vehicles, and further evidence of credit trading which has now been demonstrated as an important compliance strategy. The Administrator's consideration of these technological developments support his conclusion that greater emissions reductions can be achieved in the near term at reasonable costs and within the lead time provided by each model year of the revised standards.

EPA estimates net benefits of this rule at \$120 billion to \$190 billion (7 percent and 3 percent discount rates, with 3 percent SC-GHG) (see Section VII.I of this preamble, Table 48).¹⁸⁶ Our projection that the estimated benefits exceed the estimated costs of the program reinforces our view that the final standards represent an appropriate weighing of the statutory factors and other relevant considerations. EPA is presenting a range of net benefits which reflect our best estimates for SC-GHG and health benefits. EPA acknowledges that the best available estimates do not eliminate uncertainties. We consider potential variation in costs in part through sensitivity analyses, as we recognize that the cost estimates also contain uncertainties. For example, as noted above, we did a sensitivity analysis considering costs of the program if battery costs are higher than we project.¹⁸⁷ EPA notes that even with these uncertainties in quantified estimates of costs and benefits taken into account, the Administrator finds that the final standards are appropriate when considering the full range of potential costs and other impacts assessed in this rulemaking.

In summary, the Administrator has selected standards which achieve appropriate emissions reductions in light of the need to reduce emissions

¹⁸⁶ Net benefits of this final rule are higher than those estimated for the proposed rule, as well as those estimated for the SAFE rule.

¹⁸⁷ See section VI.B of this preamble and RIA Chapter 4.1.5 for further discussion of the sensitivity analyses.

and taking into account the potential for, and cost of, the application of emissions reducing technologies for the model years at issue and other relevant factors. In the Administrator's judgment, the final standards are appropriate under EPA's CAA section 202(a) authority.

VII. What are the estimated cost, economic, and other impacts of the rule?

This section discusses EPA's assessment of a variety of impacts related to the standards, including impacts on vehicle sales, fuel consumption, energy security, additional driving, and safety. It presents an overview of EPA's estimates of GHG reduction benefits and non-GHG health impacts and a summary of aggregate costs through 2050, drawing from the per-vehicle cost estimates presented in Section III of this preamble, and estimated program benefits. Finally, it discusses EPA's assessment of the potential impacts on consumers and employment. The RIA presents further details of the analyses presented in this section.

A. Conceptual Framework for Evaluating Consumer Impacts

A significant question in analyzing consumer impacts from vehicle GHG standards has been why there have appeared to be existing technologies that, if adopted, would reduce fuel consumption enough to pay for themselves in short periods, but which were not widely adopted. If the benefits to vehicle buyers outweigh the costs to those buyers of the new technologies, conventional economic principles suggest that automakers would provide them, and people would buy them. Yet engineering analyses have identified a number of technologies whose costs are quickly covered by their fuel savings, such as downsized-turbocharged engines, gasoline direct injection, and improved aerodynamics, that were not widely adopted before the issuance of standards, but which were adopted rapidly afterwards.¹⁸⁸ Why did markets fail, on their own, to adopt these technologies? This question, termed the "energy paradox" or "energy efficiency gap,"¹⁸⁹ has been discussed in detail in

¹⁸⁸ U.S. Environmental Protection Agency (2021). 2020 EPA Automotive Trends Report: Greenhouse Gas Emissions, Fuel Economy, and Technology since 1975, Chapter 4. EPA-420-R-21-003, <https://www.epa.gov/automotive-trends/download-automotive-trends-report#Full%20Report>, accessed 4/15/2021.

previous rulemakings.¹⁹⁰ As discussed in what follows, and in more detail in RIA Chapter 8.1.1, EPA has evaluated whether the efficiency gap exists, as well as potential explanations for why the gap might exist.

Whether the efficiency gap exists depends on the assessment of fuel savings relative to technology costs and "hidden costs," *i.e.*, any adverse effects on other vehicle attributes. In the Midterm Evaluation,¹⁹¹ EPA evaluated both the costs and the effectiveness for reducing fuel consumption (and GHG emissions) of technologies used to meet the emissions standards to date; the agency found that the estimates used in the original rulemakings were generally correct.

EPA also examined the relationship between the presence of fuel-saving technologies and negative evaluations of vehicle operating characteristics, such as performance and noise, in auto reviews and found that the presence of the technologies was more often correlated with positive evaluations than negative ones.¹⁹² Preliminary work with data from recent purchasers of new vehicles found similar results.¹⁹³ While these studies cannot prove that the technologies pose no problems to other vehicle attributes, they suggest that it is possible to implement the technologies without imposing hidden costs.

A few public comments addressed perspectives on the issue of potential tradeoffs among vehicle attributes. The National Automobile Dealers Association (NADA) raises concerns that vehicle buyers must give up vehicle attributes, especially performance, to get improved fuel economy. NYU IPI, on the other hand, finds no evidence of tradeoffs and notes that some fuel-saving technologies improve other vehicle attributes, including

¹⁹⁰ 75 FR 25510-25513; 77 FR 62913-62917; U.S. Environmental Protection Agency (2016). Proposed Determination on the Appropriateness of the Model Year 2022-2025 Light-Duty Vehicle Greenhouse Gas Emissions Standards under the Midterm Evaluation, EPA-420-R-16-020, Appendix B.1.2; 85 FR 24603-24613.

performance. In response to these comments, EPA notes that we have evaluated the relationship between performance and fuel economy, in light of research arguing that fuel consumption must come at the expense of other vehicle attributes.¹⁹⁴ Research in progress from Watten et al. (2021)¹⁹⁵ distinguishes between technologies that improve, or do not adversely affect, both performance and fuel economy and technologies that reduce engine displacement, which does trade off improved fuel economy for performance. Thus, EPA does not agree with NADA that vehicle buyers must give up performance to get better fuel economy; it is possible to get more of both. Following Moskalik et al. (2018),¹⁹⁶ Watten et al. observe that the “marginal rate of attribute substitution” between power and fuel economy has changed substantially over time. In particular, it has become relatively more costly to improve efficiency by reducing power, and relatively less costly to add technologies that improve efficiency. These technology improvements do not reduce power and in some cases may enhance it. This research supports the concept that automakers take consumer preferences into account in identifying where to add technology.

EPA does not reject the observation that the energy efficiency gap has existed for light-duty vehicles—that is, it appears that markets on their own have not led to incorporation by manufacturers, and purchase by new vehicle buyers, of a number of technologies whose fuel savings quickly outweigh the costs in the absence of standards. As discussed in RIA Chapter 8.1.1.2, EPA has previously identified a number of hypotheses to explain this apparent market failure.¹⁹⁷ Some relate

to consumer behavior, such as putting little emphasis on future fuel savings compared to up-front costs (a form of “myopic loss aversion”), not having a full understanding of potential cost savings, or not prioritizing fuel consumption in the complex process of selecting a vehicle. Explanations of these kinds tend to draw on the conceptual and empirical literature in behavioral economics, which emphasizes the importance of limited attention, the relevance of salience, “present bias” or myopia, and loss aversion. (Some of these are described as contributing to “behavioral market failures.”) Other potential explanations relate to automaker behaviors that grow out of the large fixed costs of investments involved with switching to new technologies, as well as the complex and uncertain processes involved in technological innovation and adoption.

We note that it is challenging to identify which of these hypotheses for the efficiency gap explain its apparent existence. On the consumer side, EPA has explored the evidence on how consumers evaluate fuel economy in their vehicle purchase decisions.¹⁹⁸ As noted, there does not appear to be consensus in that literature on that behavior; the variation in estimates is very large. Even less research has been conducted on producer-side behavior. The reason there continues to be limited adoption of cost-effective fuel-saving technologies before the implementation of more stringent standards remains an open question. Yet, more stringent standards have been adopted without apparent disruption to the vehicle market after they become effective.¹⁹⁹ NYU IPI commented that EPA should include additional potential market failures in its assessment, as well as additional evidence related to the market failures already mentioned. The American Enterprise Institute, in contrast, asserts based on economic

theory, but without evidence, that failures in the market for fuel savings do not exist. EPA agrees with NYU IPI that evidence on technology costs, fuel savings, and the absence of hidden costs suggest that there are market failures in the provision of fuel-saving technologies, though we cannot demonstrate at this time which specific failures operate in this market. Adding additional possible market failures to the list of hypotheses is useful for suggesting future research activities, but does not change the finding that market failures appear to exist in the provision of fuel economy.

B. Vehicle Sales Impacts

As discussed in Section III.A of this preamble, EPA utilized the CCEMS model for this analysis. For this final rule as with the proposed rule, we have continued to estimate vehicle sales impacts through this model.²⁰⁰ First, the model projects future new vehicle sales in the reference case based on projections of macroeconomic variables. Second, it applies a demand elasticity (that is, the percent change in quantity associated with a one percent increase in price) to the change in net price, where net price is the difference in technology costs less an estimate of the change in fuel costs over 2.5 years. This approach assumes that both automakers and vehicle buyers take into consideration the fuel savings that buyers might expect to accrue over the first 2.5 years of vehicle ownership.

As discussed in Section VII.A of this preamble, and in more detail in RIA Chapter 8.1.2, there does not yet appear to be consensus around the role of fuel consumption in vehicle purchase decisions, and the assumption that 2.5 years of fuel consumption is the right number for both automakers and vehicle buyers deserves further evaluation. As noted there, Greene et al. (2018) provides a reference value of \$1,150 for the value of reducing fuel costs by \$0.01/mile over the lifetime of an average vehicle; for comparison, 2.5 years of fuel savings is only about 30 percent of that value, or about \$334.²⁰¹

²⁰⁰ U.S. Department of Transportation and U.S. Environmental Protection Agency (2020). Final Regulatory Impact Analysis: The Safer Affordable Fuel-Efficient (SAFE) Vehicles Rule for Model Year 2021–2026 Passenger Cars and Light Trucks.” https://www.nhtsa.gov/sites/nhtsa.gov/files/documents/final_safe_fria_web_version_200701.pdf, accessed 11/1/2021, p. 871.

²⁰¹ See Greene et al. (2018), Footnote 198. Greene et al. (2018) cite a ballpark value of reducing driving costs by \$0.01/mile as \$1150, but does not provide enough detail to replicate their analysis perfectly. The 30% estimate is calculated by assuming, following assumptions in Greene et al. (2018), that a vehicle is driven 15,000 miles per

Hossain, J. Hofmann, G. Helfand, and R. Beach (2018). “Consumer Willingness to Pay for Vehicle Attributes: What Do We Know?” *Transportation Research Part A* 118: 258–279.

¹⁹⁹ “The 2020 EPA Automotive Trends Report, Greenhouse Gas Emissions, Fuel Economy, and Technology since 1975,” EPA–420–R–21–003 January 2021. See Table 2–1 for total vehicle production by model year.

This \$334 is within the large standard deviation in Greene et al. (2018) for the willingness to pay to reduce fuel costs, but it is far lower than both the mean of \$1,880 (160 percent of that value) and the median of \$990 (85 percent of that value) per one cent per mile in the paper. On the other hand, the 2021 NAS report, citing the 2015 NAS report, observed that automakers “perceive that typical consumers would pay upfront for only one to four years of fuel savings” (pp. 9–10),²⁰² a range of values within that identified in Greene et al. (2018) for consumer response, but well below the median or mean. Thus, it appears possible that automakers operate under a different perception of consumer willingness to pay for additional fuel economy than how consumers actually behave. Both NYU IPI and Consumer Reports comment that new vehicle buyers care more about fuel consumption than the use of 2.5 years suggests. Consumer Reports comments that EPA should model automaker adoption of fuel-saving technologies based on historical actions. While EPA considers these concerns as deserving additional consideration for future actions, the CCEMS model used for this rulemaking uses 2.5 years for both automaker perception and consumer perception of the value of additional fuel economy in its sales modeling. The decision to use the CCEMS model is further discussed in Section III.A of this preamble.

In addition, setting the elasticity of demand at -1 in the SAFE FRIA was based on literature more than 25 years old. In the proposed rule, EPA mentioned that it was sponsoring a review of more recent estimates of the elasticity of demand for new vehicles and requested comment on using an elasticity value of -1 . As discussed further in RIA Chapter 8.1.2, EPA recently completed the report reviewing this literature.²⁰³ The report also describes a method based in economic principles to examine the effects of

year for 13.5 years, 10% discount rate. Those figures produce a “present value of miles” of 108,600; thus, a \$0.01/mile change in the cost of driving would be worth \$1086. In contrast, saving \$0.01/mile for 2.5 years using these assumptions is worth about \$318, or 29% of the value over 13.5 years. Multiplying Greene et al.’s 29 percent to \$1150 = \$334.

²⁰² National Research Council (2015). Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles. Washington, DC: The National Academies Press. <https://doi.org/10.17226/21744>, p. 9–10.

²⁰³ U.S. Environmental Protection Agency (2021). “The Effects of New-Vehicle Price Changes on New and Used-Vehicle Markets and Scrapage.” EPA-420-R-21-019, https://cfpub.epa.gov/si/public_record_Report.cfm?dirEntryId=352754&Lab=OTAQ (accessed 10/06/2021).

changes in new vehicle prices, taking into account changes in the used vehicle market and scrappage of used vehicles. Several commenters (CARB, NYU IPI, and a coalition of environmental NGOs) provide assessments of the literature. These commenters all observe that the value of -1 is based on older studies that focus on short-term changes in the new vehicle market and suggest using an elasticity no larger (in absolute value) than -0.4 . EPA agrees that more recent evidence incorporating longer-term effects, such as interactions with the used vehicle market, suggests that -0.4 may be an upper limit (in absolute value) for this elasticity, and values as low as -0.15 are plausible. A smaller elasticity does not change the direction of sales effects, but it does reduce the magnitude of the effects.

The CCEMS model also makes use of a dynamic fleet share model (SAFE FRIA p. 877) that estimates, separately, the shares of passenger cars and light trucks based on vehicle characteristics, and then adjusts them so that the market shares sum to one. The model also includes the effects of the standards on vehicle scrappage based on a statistical analysis (FRIA starting p. 926). The model looks for associations between vehicle age, change in new vehicle prices, fuel prices, cost per mile of driving, and macroeconomic measures and the scrappage rate, with different equations for cars, SUVs/vans, and pickups. EPA’s report to review new vehicle demand elasticities also includes a review of the literature on the relationship between new and used vehicle markets and scrappage.

For this final rule, EPA is maintaining the previous assumptions for its modeling, with the exception of updating the new-vehicle demand elasticity to -0.4 based on more recent evidence. As EPA’s recently issued literature review and public commenters have noted, -0.4 appears to be the largest estimate (in absolute value) for a long-run new vehicle demand elasticity in recent studies. Further, EPA’s report examining the relationship between new and used vehicle markets shows that, for plausible values reflecting that interaction, the new vehicle demand elasticity varies from -0.15 to -0.4 . The proposed rule presented results with -0.4 , and for the final rule we are using this value in our central case, with sensitivities of -0.15 (a lower value from the report) and -1 (for continuity with the proposed rule). See Section III.A of this preamble and the Response to Comments document for further discussion of our updated approach.

With the modeling assumptions that both automakers and vehicle buyers consider 2.5 years of future fuel consumption in the purchase decision and that the demand elasticity is -0.4 , vehicle sales are projected to decrease by roughly one-half to one percent compared to sales under the SAFE standards, as discussed in more detail in RIA Chapter 8.1.3. In contrast, when modeled using a demand elasticity of -0.15 , sales decrease by no more than 0.3 percent; and, using a demand elasticity of -1 , sales decrease by about 2 percent. These results show how the value of the elasticity affects sales impacts. If, however, automakers underestimate consumers’ valuation of fuel economy, then sales may increase relative to the baseline under the standards. NADA commented that EPA underestimated adverse sales impacts but does not provide analytical support for that statement. For reasons noted above, including the limited consideration of fuel consumption in consumer vehicle purchase decisions, EPA disagrees that adverse sales impacts are underestimated.

How easily new vehicle buyers will be willing to substitute EVs for internal combustion engine (ICE) vehicles is a matter of some uncertainty. With upfront costs dropping, the total cost of ownership for EVs is also dropping and becoming more competitive with ICE vehicles. Some commenters, including the California Attorney General Office, Consumer Reports, the National Coalition for Advanced Technology, Southern Environmental Law Center, Tesla, and some EV owners, expect EVs to be attractive to many new vehicle buyers as their costs drop, ranges improve, and more charging infrastructure is developed. Other commenters, including many automakers, Alliance for Automotive Innovation, Center for Climate and Energy Solutions, Environmental Protection Network, and Motor & Equipment Manufacturers Association, raise the role of complementary policies outside of this rule, such as purchase subsidies and more development of charging infrastructure, to facilitate consumer acceptance of EVs. As discussed in Section III.B.3 of this preamble, our analysis suggests that EV penetration under these standards is projected to increase from about 7 percent in MY 2023 to about 17 percent in MY 2026. Consistent with the objectives of E.O. 14037, EPA believes that the transition to zero emission vehicles is an important pathway in addressing the climate crisis; in addition, as discussed in Section VII.K

of this preamble, increasing domestic production of EVs will be important for future leadership and competitiveness of the U.S. auto industry as other markets also make this transition.

C. Changes in Fuel Consumption

The final standards will reduce not only GHG emissions but also fuel consumption. Reducing fuel consumption is a significant means of reducing GHG emissions from the transportation fleet. EPA received comments on fuel consumption and

savings in the sales and net benefits analysis as summarized in Sections 13, 17, and 17.1 of the RTC document for this rulemaking. Table 38 shows the estimated fuel consumption changes under the final standards relative to the No Action scenario and include rebound effects, credit usage and advanced technology multiplier use.

The largest changes in fuel consumption come from gasoline, which follows from our projection that improvements to gasoline vehicles will

be the primary way that manufacturers meet the final standards. Through 2050, our rule will reduce gasoline consumption by more than 360,000 million gallons—reaching a 15 percent reduction in annual U.S. gasoline consumption in 2050. Roughly 17 percent of the fleet is projected to be either EV or PHEV by MY 2026 to meet the final standards for which we project smaller percentage changes in the U.S. electricity consumption to fuel these vehicles.

TABLE 38—CHANGE IN FUEL CONSUMPTION FROM THE LIGHT-DUTY FLEET

	Gasoline equivalents (million gallons)	Percent of 2020 U.S. consumption	Electricity (gigawatt hours)	Percent of 2020 U.S. consumption
2023	582	0	3,631	0
2026	3,245	-3	23,196	1
2030	8,680	-7	59,241	2
2035	14,203	-11	95,798	3
2040	17,424	-14	118,225	3
2050	18,860	-15	128,625	3
Sum	-361,438	2,457,336

Notes: The CCEMS reports all liquid fuels as gasoline equivalents; according to the Energy Information Administration (EIA), U.S. gasoline consumption in 2020 was 123.73 billion gallons, roughly 16 percent less (due to the coronavirus pandemic) than the highest consumption on record (2018). According to the Department of Energy, there are 33.7 kWh of electricity per gallon gasoline equivalent, the metric reported by CCEMS for electricity consumption and used here to convert to kWh. According to EIA, the U.S. consumed 3,800,000 gigawatt hours of electricity in 2020.

With changes in fuel consumption come associated changes in the amount of time spent refueling vehicles. Consistent with the assumptions used in the proposed rule (and presented in

Table 39 and Table 40), the costs of time spent refueling are calculated as the total amount of time the driver of a typical vehicle would spend refueling multiplied by the value of their time. If

less time is spent refueling vehicles under the final standards, then a refueling time savings would be incurred.

TABLE 39—CCEMS INPUTS USED TO ESTIMATE LIQUID REFUELING TIME COSTS

	Cars	Vans/SUVs	Pickups
Fixed Component of Average Refueling Time in Minutes (by Fuel Type)			
Gasoline	3.5	3.5	3.5
Ethanol-85	3.5	3.5	3.5
Diesel	3.5	3.5	3.5
Electricity	3.5	3.5	3.5
Hydrogen	0	0	0
Compressed Natural Gas	0	0	0
Average Tank Volume Refueled	65%	65%	65%
Value of Travel Time per Vehicle (2018 \$/hour)	20.46	20.79	20.79

TABLE 40—CCEMS INPUTS USED TO ESTIMATE ELECTRIC REFUELING TIME COSTS

	Cars	Vans/SUVs	Pickups
Electric Vehicle Recharge Thresholds (BEV200)			
Miles until mid-trip charging event	2,000	1,500	1,600
Share of miles charged mid-trip	6.00%	9.00%	8.00%
Charge rate (miles/hour)	67	67	67
Electric Vehicle Recharge Thresholds (BEV300)			
Miles until mid-trip charging event	5,200	3,500	3,800
Share of miles charged mid-trip	3.00%	4.00%	4.00%

TABLE 40—CCEMS INPUTS USED TO ESTIMATE ELECTRIC REFUELING TIME COSTS—Continued

	Cars	Vans/SUVs	Pickups
Charge rate (miles/hour)	100	100	100

Note that the values presented in this table were also used in the August 2021 EPA proposed rule, but this table was inadvertently not presented then.

D. Greenhouse Gas Emission Reduction Benefits

EPA estimated the climate benefits for the final standards using measures of the social cost of three GHGs: Carbon, methane, and nitrous oxide. While the program also accounts for reduction in HFCs through the AC credits program, EPA has not quantified the associated emission reductions. The social cost of each gas (*i.e.*, the social cost of carbon (SC-CO₂), methane (SC-CH₄), and nitrous oxide (SC-N₂O)) is the monetary value of the net harm to society associated with a marginal increase in emissions in a given year, or the benefit of avoiding that increase. Collectively, these values are referenced as the “social cost of greenhouse gases” (SC-GHG). In principle, SC-GHG includes the value of all climate change impacts, including (but not limited to) changes in net agricultural productivity, human health effects, property damage from increased flood risk and natural disasters, disruption of energy systems, risk of conflict, environmental migration, and the value of ecosystem services. The SC-GHG therefore, reflects the societal value of reducing emissions of the gas in question by one metric ton.

We estimate the global social benefits of CO₂, CH₄, and N₂O emission reductions expected from the final rule using the SC-GHG estimates presented in the February 2021 Technical Support Document (TSD): Social Cost of Carbon, Methane, and Nitrous Oxide Interim Estimates under E.O. 13990 (IWG 2021). These SC-GHG estimates are interim values developed under E.O. 13990 for use in benefit-cost analyses until an improved estimate of the impacts of climate change can be developed based on the best available climate science and economics. We have evaluated the SC-GHG estimates in the TSD and have determined that these estimates are appropriate for use in estimating the global social benefits of CO₂, CH₄, and N₂O emission reductions expected from this final rule. After considering the TSD, and the issues and studies discussed therein, EPA finds that these estimates, while likely an underestimate, are the best currently available SC-GHG estimates. As discussed in Chapter 3.3 of the RIA, these interim SC-GHG estimates have a

number of limitations, including that the models used to produce them do not include all of the important physical, ecological, and economic impacts of climate change recognized in the climate-change literature and that several modeling input assumptions are outdated. As discussed in the February 2021 TSD, the Interagency Working Group on the Social Cost of Greenhouse Gases (IWG) finds that, taken together, the limitations suggest that these SC-GHG estimates likely underestimate the damages from GHG emissions. We received comments on the use and application of the interim SC-GHG estimates as summarized in the RTC document for this rulemaking. The IWG is currently working on a comprehensive update of the SC-GHG estimates (to be released by January 2022 under E.O. 13990) taking into consideration recommendations from the National Academies of Sciences, Engineering and Medicine, recent scientific literature, public comments received on the February 2021 TSD and other input from experts and diverse stakeholder groups. See Section VII.I of this preamble for a summary of the monetized GHG benefits and Chapter 3.3 of the RIA for more on the application of SC-GHG estimates.

E. Non-Greenhouse Gas Health Impacts

It is important to quantify the non-GHG health and environmental impacts associated with the final program because a failure to adequately consider ancillary impacts could lead to an incorrect assessment of a program’s costs and benefits. Moreover, the health and other impacts of exposure to criteria air pollutants and airborne toxics tend to occur in the near term, while most effects from reduced climate change are likely to occur over a time frame of several decades or longer. Ideally, human health benefits would be estimated based on changes in ambient PM_{2.5} and ozone as determined by full-scale air quality modeling. However, the projected non-GHG emissions impacts associated with the final program are expected to contribute to very small changes in ambient air quality (see Preamble Section V.C of this preamble for more detail). EPA intends to develop a future rule to control emissions of GHGs, criteria pollutants, and air toxic

pollutants from light-duty vehicles for model years beyond 2026. We are considering how to project air quality impacts, and associated health benefits, from the changes in non-GHG emissions for that future rulemaking.

In lieu of air quality modeling, we use a reduced-form benefit-per-ton (BPT) approach to inform our assessment of PM_{2.5}-related health impacts, which is conceptually consistent with EPA’s use of BPT estimates in several previous RIAs.^{204 205} In this approach, the PM_{2.5}-related BPT values are the total monetized human health benefits (the sum of the economic value of the reduced risk of premature death and illness) that are expected from reducing one ton of directly-emitted PM_{2.5} or PM_{2.5} precursor such as NO_x or SO₂. We note, however, that the complex, non-linear photochemical processes that govern ozone formation prevent us from developing reduced-form ozone BPT values for mobile sources. This is an important limitation to recognize when using the BPT approach.

EPA received comment about the use of BPT values to estimate the PM-related health benefits of the program. EPA agrees with commenters that the use of BPT values to estimate the PM-related health benefits of the program “is a well-established approach” that nonetheless omits a number of other health and environmental benefits, such as ozone-related benefits. Commenters expressed concern that because the BPT approach leaves these benefits unquantified, the analysis undercounts air quality benefits. EPA believes that using the reduced-form BPT approach to benefits estimation was reasonable for the analysis conducted for this

²⁰⁴ U.S. Environmental Protection Agency (U.S. EPA). 2015. Regulatory Impact Analysis for the Final Revisions to the National Ambient Air Quality Standards for Ground-Level Ozone. EPA452/R-15-007. Office of Air Quality Planning and Standards, Health and Environmental Impacts Division, Research Triangle Park, NC. December. Available at: <http://www.epa.gov/ttnecas1/regdata/RIAs/finalria.pdf>.

²⁰⁵ U.S. Environmental Protection Agency (U.S. EPA). (2012). Regulatory Impact Analysis: Final Rulemaking for 2017–2025 Light-Duty Vehicle Greenhouse Gas Emission Standards and Corporate Average Fuel Economy Standards, Assessment and Standards Division, Office of Transportation and Air Quality, EPA-420-R-12-016, August 2012. Available on the internet at: <http://www3.epa.gov/otaq/climate/documents/420r12016.pdf>.

rulemaking though less robust than an analysis based on photochemical air quality modeling. EPA continues to refine our reduced form methods. We note that criteria pollutant-related health benefits are typically driven by reductions in PM-related mortality risk, which are reflected in the BPT-based analysis of benefits associated with the final rule. We would expect that monetizing the full suite of health and environmental benefits associated with the final rule would increase total benefits, and benefits would increase in proportion to the criteria pollutant emissions reductions achieved, for both the final program and the alternatives that were considered. However, as explained earlier in this section, we are limited to the use of PM_{2.5}-related BPT values for this analysis. We do not expect that the omission of unquantified benefits would meaningfully change how the impacts of the final program compare to the alternatives, though the rule would be even more beneficial on net (compared to costs) if all benefits were quantified and monetized.

For tailpipe emissions, we apply national PM_{2.5}-related BPT values that were recently derived for the “Onroad Light Duty Vehicle” sector.²⁰⁶ The onroad light-duty vehicle BPT values were derived using detailed mobile sector source-apportionment air quality modeling, and apply EPA’s existing method for using reduced-form tools to estimate PM_{2.5}-related benefits.^{207 208}

To monetize the PM_{2.5}-related impacts of upstream emissions, we apply BPT values that were developed for the refinery and electric generating unit (EGU) sectors.²⁰⁹ While upstream emissions also include petroleum extraction, storage and transport sources, as well as sources upstream from the refinery, the modeling tool used to support this analysis only provides estimates of upstream

emissions impacts aggregated across refinery and EGU sources. We believe that for purposes of this rule the separate accounting of refinery and EGU impacts adequately monetizes upstream PM-related health impacts.

EPA received comment about the use of refinery-related BPT values as a surrogate for the monetization of all upstream emissions impacts. EPA agrees with the commenters that sector-specific BPT values are preferable to monetize sector-specific emissions. For the final rule, upstream emissions have been apportioned to the refinery and EGU sectors and we apply corresponding BPT values to monetize those emissions impacts. More information on non-GHG emissions impacts of the final rule can be found in Preamble Section V.

EPA bases its benefits analyses on peer-reviewed studies of air quality and health effects and peer-reviewed studies of the monetary values of public health and welfare improvements. Recently, EPA updated its approach to estimating the benefits of changes in PM_{2.5} and ozone.^{210 211} These updates were based on information drawn from the recent 2019 PM_{2.5} and 2020 Ozone Integrated Science Assessments (ISAs), which were reviewed by the Clean Air Science Advisory Committee (CASAC) and the public.^{212 213} As part of the update, EPA identified PM_{2.5}-related long-term premature mortality risk estimates from two studies deemed most appropriate to inform a benefits analysis: A retrospective analysis of Medicare beneficiaries (Medicare) and the American Cancer Society Cancer Prevention II study (ACS CPS–II).^{214 215 216}

²⁰⁹ U.S. Environmental Protection Agency (U.S. EPA). 2018. Technical Support Document: Estimating the Benefit per Ton of Reducing PM_{2.5} Precursors from 17 Sectors. 2018. Office of Air Quality Planning and Standards. Research Triangle Park, NC.

the same ACS CPS-II cohort.²²³ The Agency is currently working to update its mobile source BPT estimates to reflect these recent updates for use in future rulemaking analyses. More information on the BPT approach to valuing PM-related benefits can be found in RIA Chapter 7.2.

EPA received comments asserting that quantifying and monetizing the health benefits of reduced emissions of particulate matter is not consistent with the available scientific evidence and that EPA did not consider the advice made by some members of CASAC that reviewed the 2019 PM ISA. We disagree that our estimates are not consistent with the available scientific evidence and the advice of the Clean Air Science Advisory Committee. In determining which health outcomes to quantify and monetize, EPA relies on the weight-of-evidence evaluation of relationships between PM_{2.5} exposure and health effects conducted within the ISAs, which are the scientific basis of the NAAQS review process. ISAs represent thorough evaluations and syntheses of the most policy-relevant science. EPA uses a structured and transparent process for evaluating scientific information and determining the causal nature of relationships between air pollution exposures and health effects. The ISA development process is detailed in the *Preamble of the Integrated Science Assessments*,²²⁴ which describes approaches for literature searches, criteria for selecting and evaluating relevant studies, and a framework for evaluating the weight of evidence and forming causality determinations. EPA quantifies and monetizes health effects that the ISA determines are “causal” or “likely to be causal.” The focus on categories identified as having a “causal” or “likely to be causal” relationship with the pollutant of interest allows for the estimation of pollutant-attributable human health benefits in which the Agency is most confident.

As part of the process of developing an ISA, the Clean Air Scientific Advisory Committee (CASAC) is statutorily required to review the science underlying decisions about the NAAQS. CASAC provides independent review of draft ISA documents for scientific quality and sound implementation of the causal framework

that informs the ISA before it is finalized. The 2020 PM NAAQS review was completed without the benefit of a PM-specific panel supporting the CASAC, as had been done in prior reviews. However, CASAC did have access to a pool of consultants who were available to respond in writing to questions from CASAC members. With limited access to relevant expertise, CASAC did not reach consensus on the determination that there is a causal relationship for PM_{2.5} exposure (*i.e.*, both short- and long-term) and mortality presented within the draft PM ISA. After the disbandment of the 20-member CASAC PM panel, CASAC noted that “Additional expertise is needed for [CASAC] to provide a thorough review of the [PM NAAQS] documents” and recommended the Administrator reappoint “the previous CASAC PM panel or panel with similar expertise.”²²⁵ In his final decision to retain the PM standards, after considering CASAC’s advice, the EPA Administrator, “placing the greatest weight on evidence of effects for which the ISA determined there is a causal or likely causal relationship with long- and short-term PM_{2.5} exposures,”²²⁶ concluded that the current PM NAAQS are necessary to protect public health. Thus, the Administrator fully considered CASAC’s recommendations with respect to assessing the health risks of PM in the review of the PM NAAQS and EPA is being consistent with the conclusions of the PM NAAQS review in this action.

Commenters also asserted that health benefits from reductions in human exposure to ambient concentrations of PM_{2.5} only occur above the level of the primary health-based NAAQS, and that accounting for the health benefits of PM_{2.5} at all represents double counting given other regulatory measures promulgated under the Clean Air Act to reduce ambient concentrations of PM_{2.5}. The EPA disagrees with this assertion. First, it is important to recognize that the NAAQS “shall be ambient air quality standards . . . which in the judgment of the Administrator” are

²²⁵ In the time since the previously chartered CASAC, EPA has recognized the significant accumulation of new scientific studies since the cutoff date of the 2019 PM ISA (January 2018) and published a draft supplement to the 2019 PM ISA. The Supplement found that recent studies further support, and in some instances extend, the evidence that formed the basis of the causality determinations presented within the 2019 PM ISA that characterizes relationships between PM exposure and health, including mortality.

²²⁶ 85 FR 82715. The effects for which the 2019 ISA determined there is a causal or likely causal relationship with long- and short-term PM_{2.5} exposures include respiratory effects, cardiovascular effects, and mortality.

“requisite” to protect public health with an “adequate margin of safety” (CAA Section 109). “Requisite” means sufficient but not more than necessary while an “adequate margin of safety” is intended to address uncertainties associated with inconclusive evidence and to provide a reasonable degree of protection against hazards that research has not yet identified. The CAA does not require eliminating all risk, and therefore, the NAAQS does not represent a zero-risk standard. Additionally, EPA is reconsidering the 2020 decision to retain the PM standards because available scientific evidence and technical information suggests that the current standards may not be adequate to protect public health and welfare, as required by the Clean Air Act.

As detailed in the 2019 PM ISA and previous assessments in support of the PM NAAQS, EPA’s review of the science has consistently found no evidence of a threshold below which exposure to PM_{2.5} yields no health response. Specifically, the 2019 p.m. ISA found that “extensive analyses across health effects continues to support a linear, no-threshold concentration-response (C–R) relationship.” This conclusion in the 2019 PM ISA is supported by the more recent evaluation of the health effects evidence detailed in the recently released Draft Supplement to the PM ISA which found “continued evidence of a linear, no-threshold concentration-response (C–R) relationship.”

Regarding double-counting, the emissions attributed to this final rulemaking are incremental to all other currently promulgated air pollution regulations and can therefore be monetized without double-counting previously achieved benefits from mobile source emissions reductions.

The PM-related BPT estimates used in this analysis are provided in Table 41. We multiply these BPT values by projected national changes in NO_x, SO₂ and directly-emitted PM_{2.5}, in tons, to estimate the total PM_{2.5}-related monetized human health benefits associated with the final program. As the table indicates, these values differ among pollutants and depend on their original source, because emissions from different sources can result in different degrees of population exposure and resulting health impacts. The BPT values for emissions of non-GHG pollutants from both onroad light-duty vehicle use and upstream sources such as fuel refineries will increase over time. These projected increases reflect rising income levels, which increase affected individuals’ willingness to pay for

²²³ Turner, MC, Jerrett, M, Pope, A, III, Krewski, D, Gapstur, SM, Diver, WR, Beckerman, BS, Marshall, JD, Su, J, Crouse, DL and Burnett, RT (2016). Long-term ozone exposure and mortality in a large prospective study. *Am J Respir Crit Care Med* 193(10): 1134–1142.

²²⁴ See <https://cfpub.epa.gov/ncea/isa/recordisplay.cfm?deid=310244>.

reduced exposure to health threats from air pollution. The BPT values also reflect future population growth and increased life expectancy, which expands the size of the population exposed to air pollution in both urban and rural areas, especially among older age groups with the highest mortality risk.²²⁷

TABLE 41—PM_{2.5}-RELATED BENEFIT-PER-TON VALUES [2018\$]^a

Year	Onroad light duty vehicles ^b			Upstream sources—refineries ^c			Upstream sources—EGUs ^c		
	Direct PM _{2.5}	SO ₂	NO _x	Direct PM _{2.5}	SO ₂	NO _x	Direct PM _{2.5}	SO ₂	NO _x
Estimated Using a 3 Percent Discount Rate									
2020	\$600,000	\$150,000	\$6,400	\$380,000	\$81,000	\$8,100	\$160,000	\$44,000	\$6,600
2025	660,000	170,000	6,900	420,000	90,000	8,800	180,000	49,000	7,100
2030	740,000	190,000	7,600	450,000	98,000	9,600	190,000	52,000	7,600
2035	830,000	210,000	8,400
2040	920,000	230,000	9,000
2045	1,000,000	250,000	9,600
Estimated Using a 7 Percent Discount Rate									
2020	540,000	140,000	5,800	350,000	74,000	7,300	150,000	40,000	5,900
2025	600,000	150,000	6,200	380,000	80,000	7,900	160,000	43,000	6,400
2030	660,000	170,000	6,800	410,000	88,000	8,600	170,000	48,000	6,900
2035	750,000	190,000	7,500
2040	830,000	210,000	8,200
2045	900,000	230,000	8,600

Notes:
^a The benefit-per-ton estimates presented in this table are based on estimates derived from the American Cancer Society cohort study (Krewski et al., 2009). They also assume either a 3 percent or 7 percent discount rate in the valuation of premature mortality to account for a twenty-year segmented premature mortality cessation lag.
^b Benefit-per-ton values for onroad light duty vehicles were estimated for the years 2020, 2025, 2030, 2035, 2040, and 2045. We hold values constant for intervening years (e.g., the 2020 values are assumed to apply to years 2021–2024; 2025 values for years 2026–2029; and 2045 values for years 2046 and beyond).
^c Benefit-per-ton values for upstream sources were estimated only for the years 2020, 2025 and 2030. We hold values constant for intervening years and 2030 values are applied to years 2031 and beyond.

The monetized PM_{2.5} health impacts of the final standards are presented in Table 46. Using PM_{2.5}-related BPT values to monetize the non-GHG impacts of the final standards omits ozone-related impacts, unquantified PM-related health impacts, as well as other impacts associated with reductions in exposure to air toxics, ecosystem benefits, and visibility improvement. Section V of this preamble provides a qualitative description of both the health and environmental effects of the non-GHG pollutants impacted by the final program.

F. Energy Security Impacts

This final rule will require reductions in the GHG emissions from light-duty vehicles and, thereby, reduce fuel consumption. In turn, this final rule will help to reduce U.S. petroleum imports. A reduction of U.S. petroleum imports reduces both financial and strategic risks caused by potential sudden disruptions in the supply of imported petroleum to the U.S., thus increasing U.S. energy security. In other words, reduced U.S. oil imports act as a “shock absorber” when there is a supply disruption in world oil markets.

Given that the U.S. is projected to be a net exporter of crude oil and product over the time frame of the analysis of

this final rule (2023–2050), one could surmise that the U.S. no longer has a significant energy security problem. However, U.S. refineries still rely on significant imports of heavy crude oil from potentially unstable regions of the world. Also, oil exporters with a large share of global production have the ability to raise or lower the price of oil by exerting market power through the Organization of Petroleum Exporting Countries (OPEC) to alter oil supply relative to demand. These factors contribute to the vulnerability of the U.S. economy to episodic oil supply shocks and price spikes, even when the U.S. is projected to be an overall net exporter of crude oil and product.

In order to understand the energy security implications of reducing U.S. oil imports, EPA has worked with Oak Ridge National Laboratory (ORNL), which has developed approaches for evaluating the social costs and energy security implications of oil use. When conducting this analysis, ORNL considers the full cost of importing petroleum into the U.S. The full economic cost (i.e., oil security premiums, as labeled below) is defined to include two components in addition to the purchase price of petroleum itself. These are: (1) The higher costs/benefits for oil imports resulting from the effect

of changes in U.S. demand on the world oil price (i.e., the “demand” or “monopsony” costs/benefits); and (2) the risk of reductions in U.S. economic output and disruption to the U.S. economy caused by sudden disruptions in the supply of imported oil to the U.S. (i.e., the avoided macroeconomic disruption/adjustment costs). One commenter (American Enterprise Institute) suggests that there are no energy security benefits associated with this rule, since there is only one price in the international petroleum market, confronted equally by economies importing all or none of their oil. We disagree and believe that there are energy security benefits to the U.S. from decreased exposure to volatile world oil prices. We respond to this comment in more detail in the RTC.

For this final rule, EPA is using oil security premiums estimated using ORNL’s methodology, which incorporates oil price projections and energy market and economic trends from the EIA’s Annual Energy Outlook (AEO). Specifically, we are using oil security premiums based on AEO 2021, updating the oil security premiums from the AEO 2018 used in the proposed rule. In addition, for this final rule, EPA and ORNL have worked together to revise the oil security premiums based

²²⁷ For more information about income growth adjustment factors and EPA’s population

projections, please refer to the following: <https://www.epa.gov/sites/production/files/2015-04/>

[documents/benmap-ce_user_manual_march_2015.pdf](https://www.epa.gov/sites/production/files/2015-04/documents/benmap-ce_user_manual_march_2015.pdf).

upon recent energy security literature (see Chapter 3.2.5 of the RIA accompanying this rule for how the macroeconomic oil security premiums have been updated based upon a review of recent energy security literature on this topic). These revisions have lowered the estimated oil security premiums since the proposal of this rule. However, this modest decrease in oil security premiums is offset by an increase in fuel savings since the proposal, resulting in an overall increase in energy security benefits for this final rule compared to the proposal.

In our analysis, we only consider the avoided macroeconomic disruption/adjustment costs in the oil security premiums (*i.e.*, labeled macroeconomic oil security premiums below), since the monopsony impacts are considered transfer payments. Two commenters (Center for Biological Diversity et al., CARB) suggest that EPA is underestimating the energy security benefits of the final rule by not accounting for the monopsony oil security impacts. EPA continues to believe that the monopsony impacts of this rule are transfer payments. Therefore, EPA disagrees that the energy security benefits of this final rule are underestimated for this reason. See more discussion of the monopsony oil security premiums in the RIA and RTC.

Three commenters (Center for Biological Diversity et al., CARB, SAFE) suggest that EPA understates the energy security benefits of the final rule by not considering military cost impacts. One commenter (American Enterprise Institute) suggests that reductions in military costs from the rule would be imperceptible. While EPA believes that military costs are important considerations, we continue to believe that there are methodological limitations in our ability to quantify these impacts (*e.g.*, how a reduction of U.S. oil imports would incrementally reduce oil supply protection forces). As a result, we do not quantify military cost impacts for this final rule. (See Chapter 3.2.3 of the RIA for a review of the literature on the military costs impacts of U.S. oil import reductions). In addition, some commenters (Attorney General of Missouri, et al., SAFE, Alliance for Automotive Innovation, an energy company, private citizens) express concern that these standards would reduce U.S. security by increasing the U.S.'s reliance on foreign countries (*i.e.*, China) for electric vehicle components such as electric batteries. We respond to both sets of comments, military cost impacts and U.S. security implications of this final rule, in more detail in the RTC.

To calculate the energy security benefits of this final rule, EPA is using the ORNL oil security premium methodology with: (1) Estimated oil savings calculated by EPA and (2) an oil import reduction factor of 91 percent, which represents how much U.S. oil imports are reduced resulting from changes in U.S. oil consumption. One commenter (Center for Biological Diversity et al.) requests more explanation of how EPA estimates the oil import reduction factor. The Alliance for Automotive Innovation believes that U.S. refiners and oil producers may see a greater reduction in fuel demand than EPA is estimating as a result of this final rule. We continue to believe that EPA's use of the most recent AEO 2021 provides a reasonable estimate of the oil import reduction factor being used in this rule and also the impacts of this rule on U.S. oil producers and refineries. We respond to both of these comments in more detail in the RTC. Each of the assumptions used to calculate the energy security benefits of this final rule, oil savings and the oil import reduction factor, are discussed in more detail in Chapter 3.2 of the RIA. EPA presents the macroeconomic oil security premiums used for the final standards for selected years from 2023–2050 in Table 42.

TABLE 42—MACROECONOMIC OIL SECURITY PREMIUMS FOR SELECTED YEARS FROM 2023–2050 [2018\$/Barrel]*

Year (range)	Macroeconomic oil security premiums (range)
2023	\$3.15 (\$0.92–\$5.71).
2026	\$3.23 (\$0.74–\$6.00).
2030	\$3.41 (\$0.62–\$6.41).
2035	\$3.76 (\$0.70–\$7.05).
2040	\$4.21 (\$1.04–\$7.77).
2050	\$4.94 (\$1.46–\$8.91).

*Top values in each cell are the midpoints, the values in parentheses are the 90 percent confidence intervals.

G. Impacts of Additional Driving

As discussed in Chapter 3.1 of the RIA, the assumed rebound effect might occur when an increase in vehicle fuel efficiency encourages people to drive more as a result of the lower cost per mile of driving. Along with the safety considerations associated with increased vehicle miles traveled (described in Section VII.H of this preamble), additional driving can lead to other costs and benefits that can be monetized. For a discussion of these impacts—Drive Value, Congestion, Noise—all of which are calculated in

the same way as done in the proposed rule, see RIA Chapter 3.4. EPA did not receive any comments on these elements of our proposal.

H. Safety Considerations in Establishing GHG Standards

Consistent with previous light-duty GHG analyses, EPA has assessed the potential of the final MY 2023–2026 standards to affect vehicle safety. EPA applied the same historical relationships between mass, size, and fatality risk that were established and documented in the SAFE rulemaking. These relationships are based on the statistical analysis of historical crash data, which included an analysis performed by using the most recently available crash studies based on data for model years 2007 to 2011. EPA used the findings of this analysis to estimate safety impacts of the modeled mass reductions over the lifetimes of new vehicles in response to MY 2023–2026 standards. As in the initial promulgation of the GHG standards and the MTE Proposed Determination, EPA's assessment in this rulemaking is that manufacturers can achieve the MY 2023–2026 standards while using modest levels of mass reduction as one technology option among many. On the whole, EPA considers safety impacts in the context of all projected health impacts from the rule including public health benefits from the projected reductions in air pollution. Based on the findings of our safety analysis, we concluded there are no changes to the vehicles themselves, nor the combined effects of fleet composition and vehicle design, that will have a statistically significant impact on safety. All fatalities that are statistically significant are due to changes in use (VMT) rather than changes to the vehicles themselves.

The projected change in risk of fatal and non-fatal injuries is influenced by changes in fleet mix (car/truck share), vehicle scrappage rates, distribution of VMT among vehicles in the fleet and vehicle mass. Because the empirical analysis described previously did not produce any mass-safety coefficients with a statistically significant difference from zero, we analyzed safety results over the range of coefficient values. We project that the effect of the final standards on annual fatalities per billion miles driven ranges from a decrease of 0.25 percent to an increase of 0.36 percent, with a central estimate of a 0.06 percent increase.²²⁸

²²⁸ These fatality risk values are the average of changes in annual risk through 2050. The range of values is based on the 5% to 95% confidence interval of mass-safety coefficients presented in the SAFE FRM.

In addition to changes in risk, EPA also considered the projected impact of the standards on the absolute number of fatal and non-fatal injuries. The majority of the fatalities projected would result from the projected increased driving—*i.e.*, people choosing to drive more due to the lower operating costs of more efficient vehicles. Our cost-benefit analysis accounts for both the value of this additional driving and its associated risk, which we assume are considerations in the decision to drive. The risk valuation associated with this increase in driving partially offsets the associated increase in societal costs due to increased fatalities and non-fatal injuries.

This analysis projects that there will be an increase in VMT under the standards of 304 billion miles compared to the No Action scenario through 2050 (an increase of about 0.3 percent). EPA estimates that vehicle safety, in terms of risk measured as the total fatalities per the total distance traveled over this period, will remain almost unchanged at 5.012 fatalities per billion miles under

the final rule, compared to 5.010 fatalities per billion miles for the no-action scenario. EPA has also estimated, over the same 30 year period, that total fatalities will increase by 1,780, with 1,348 deaths attributed to increased driving and 432 deaths attributed to the increase in fatality risk. In other words, approximately 75 percent of the change in fatalities under these standards is due to projected increases in VMT and mobility (*i.e.*, people driving more). Our analysis also considered the increase in non-fatal injuries. Consistent with the SAFE FRM, EPA assumed that non-fatal injuries scale with fatal injuries.

EPA also estimated the societal costs of these safety impacts using assumptions consistent with the SAFE FRM (see Table 43.) Specifically, we are continuing to use the cost associated with each fatality of \$10.4 million (2018 dollars). We have also continued to use a scalar of approximately 1.6 applied to fatality costs to estimate non-fatal injury costs. In addition, we have accounted for the driver's inherent valuation of risk when making the decision to drive

more due to rebound. This risk valuation partially offsets the fatal and non-fatal injury costs described previously, and, consistent with the SAFE FRM, is calculated as 90 percent of the fatal and non-fatal injury costs due to rebound to reflect the fact that consumers do not fully evaluate the risks associated with this additional driving.

I. Summary of Costs and Benefits

This section presents a summary of costs, benefits, and net benefits of the program. Table 43 shows the estimated annual monetized costs of the program for the indicated calendar years. The table also shows the present-values (PV) of those costs and the annualized costs for the calendar years 2021–2050 using both 3 percent and 7 percent discount rates.²²⁹ The table includes an estimate of foregone consumer sales surplus, which measures the loss in benefits attributed to consumers who would have purchased a new vehicle in the absence of the final standards.

TABLE 43—COSTS ASSOCIATED WITH THE FINAL PROGRAM
[Billions of 2018 dollars]

Calendar year	Foregone consumer sales surplus ^a	Technology costs	Congestion	Noise	Fatality costs	Non-fatal crash costs	Total costs
2023	\$0.029	\$5.6	\$0.03	\$0.00045	\$0.13	\$0.23	\$6.1
2026	0.11	16	0.12	0.002	0.42	0.7	17
2030	0.093	17	0.4	0.0067	0.44	0.73	19
2035	0.078	17	0.68	0.011	0.27	0.44	19
2040	0.063	16	0.84	0.014	0.15	0.25	17
2050	0.052	15	0.9	0.015	0.16	0.25	16
PV, 3%	1.3	280	9.6	0.16	4.9	8.1	300
PV, 7%	0.84	160	4.8	0.08	3.2	5.3	180
Annualized, 3%	0.069	14	0.49	0.0082	0.25	0.42	15
Annualized, 7%	0.068	13	0.39	0.0065	0.26	0.43	14

^a "Foregone Consumer Sales Surplus" refers to the difference between a vehicle's price and the buyer's willingness to pay for the new vehicle; the impact reflects the reduction in new vehicle sales described in Section VII.B of this preamble. See Section 8 of *CAFE_Model_Documentation_FR_2020.pdf* in the docket for more information.

Table 44 shows the undiscounted annual monetized fuel savings of the program. The table also shows the present- and annualized-values of those fuel savings for the same calendar years using both 3 percent and 7 percent discount rates. The net benefits

calculations use the aggregate value of fuel savings (calculated using pre-tax fuel prices) since savings in fuel taxes do not represent a reduction in the value of economic resources utilized in producing and consuming fuel. Note that the fuel savings shown in Table 44

result from reductions in fleet-wide fuel use (including rebound effects, credit usage and advanced technology multiplier use). Thus, fuel savings grow over time as an increasing fraction of the fleet is projected to meet the standards.

TABLE 44—FUEL SAVINGS ASSOCIATED WITH THE FINAL PROGRAM
[Billions of 2018 dollars]

Calendar year	Retail fuel savings	Fuel tax savings	Pre-tax fuel savings
2023	\$0.94	\$0.31	\$0.62
2026	5.1	1.7	3.3
2030	16	4.5	12

²²⁹ For the estimation of the stream of costs and benefits, we assume that after implementation of

the MY 2023–2026 standards, the 2026 standards apply to each year thereafter.

TABLE 44—FUEL SAVINGS ASSOCIATED WITH THE FINAL PROGRAM—Continued
[Billions of 2018 dollars]

Calendar year	Retail fuel savings	Fuel tax savings	Pre-tax fuel savings
2035	28	7.1	21
2040	37	8.5	29
2050	42	8.6	33
PV, 3%	420	100	320
PV, 7%	210	51	150
Annualized, 3%	21	5.1	16
Annualized, 7%	17	4.1	12

Note: Electricity expenditure increases are included.

Table 45 presents estimated annual monetized benefits from non-emission sources for the indicated calendar years. The table also shows the present- and annualized-value of those benefits for the calendar years 2021–2050 using both 3 percent and 7 percent discount rates.

TABLE 45—BENEFITS FROM NON-EMISSION SOURCES
[Billions of 2018 dollars]

Calendar year	Drive value	Refueling time savings	Energy security benefits	Total non-emission benefits
2023	\$0.035	–\$0.0052	\$0.031	\$0.061
2026	0.14	–0.12	0.18	0.2
2030	0.55	–0.27	0.51	0.79
2035	1	–0.47	0.92	1.5
2040	1.3	–0.67	1.3	1.9
2050	1.5	–0.83	1.6	2.3
PV, 3%	15	–7.4	14	21
PV, 7%	7.2	–3.6	7	11
Annualized, 3%	0.75	–0.38	0.73	1.1
Annualized, 7%	0.58	–0.29	0.56	0.85

* See Section VII.G, Section VII.C and Section VII.F of this preamble for more on drive value, refueling time and energy security, respectively.

Table 46 presents estimated annual monetized benefits from non-GHG emission sources for the indicated calendar years. The table also shows the present- and annualized-values of those benefits for the calendar years 2021–2050 using both 3 percent and 7 percent discount rates.

TABLE 46—PM_{2.5}-RELATED EMISSION REDUCTION BENEFITS
[Billions of 2018 dollars]^{a b}

Calendar year	Tailpipe benefits		Upstream benefits		Total PM _{2.5} -related benefits	
	3% DR	7% DR	3% DR	7% DR	3% DR	7% DR

Annualized	0.34	0.22	0.61	0.43	0.96	0.65

Notes:

^a Note that the non-GHG impacts associated with the standards presented here do not include the full complement of health and environmental effects that, if quantified and monetized, would increase the total monetized benefits. Instead, the non-GHG benefits are based on benefit-per-ton values that reflect only human health impacts associated with reductions in PM_{2.5} exposure.

^b Calendar year non-GHG benefits presented in this table assume either a 3 percent or 7 percent discount rate in the valuation of PM-related premature mortality to account for a twenty-year segmented cessation lag. Note that annual benefits estimated using a 3 percent discount rate were used to calculate the present and annualized values using a 3 percent discount rate and the annual benefits estimated using a 7 percent discount rate were used to calculate the present and annualized values using a 7 percent discount rate.

Table 47 shows the benefits of reduced GHG emissions, and consequently the annual quantified benefits (i.e., total GHG benefits), for each of the four interim social cost of GHG (SC–GHG) values estimated by the interagency working group. As discussed in the RIA Chapter 3.3, there are some limitations to the SC–GHG analysis, including the incomplete way in which the integrated assessment models capture catastrophic and non-

catastrophic impacts, their incomplete treatment of adaptation and technological change, uncertainty in the extrapolation of damages to high temperatures, and assumptions regarding risk aversion.

TABLE 47—CLIMATE BENEFITS FROM REDUCTIONS IN GHG EMISSIONS
[Billions of 2018 dollars]

Calendar year	Discount rate and statistic			
	5% average	3% average	2.5% average	3% 95th percentile
2023	\$0.081	\$0.27	\$0.4	\$0.8
2026	0.48	1.6	2.3	4.7
2030	1.5	4.6	6.7	14
2035	2.8	8.4	12	25
2040	3.9	11	16	34
2050	5.5	14	20	44
PV	31	130	200	390
Annualized	2	6.6	9.5	20

Notes: The present value of reduced GHG emissions is calculated differently than other benefits. The same discount rate used to discount the value of damages from future emissions (SC–GHGs at 5, 3, 2.5 percent) is used to calculate the present value of SC–GHGs for internal consistency. Annual benefits shown are undiscounted values.

Table 48 presents estimated annual net benefits for the indicated calendar years. The table also shows the present and annualized value of those net benefits for the calendar years 2021–2050 using both 3 percent and 7 percent discount rates. The table includes the benefits of reduced GHG emissions (and consequently the annual net benefits) for each of the four SC–GHG values considered by EPA. We estimate that the total benefits of the program far exceed the costs and would result in a net present value of benefits that ranges between \$27–\$450 billion, depending on which SC–GHG and discount rate is assumed.

TABLE 48—NET BENEFITS (EMISSION BENEFITS + NON-EMISSION BENEFITS + FUEL SAVINGS – COSTS) ASSOCIATED WITH THE FINAL PROGRAM
[Billions of 2018 dollars]^{a b}

Calendar year	Net benefits, with climate benefits based on 5% discount rate	Net benefits, with climate benefits based on 3% discount rate	Net benefits, with climate benefits based on 2.5% discount rate	Net benefits, with climate benefits based on 3% discount rate, 95th percentile SC–GHG
2023	–\$5.3	–\$5.1	–\$5	–\$4.6
2026	–13	–12	–11	–9.1
2030	–4.6	–1.4	0.63	7.9
2035	7.8	13	17	30
2040	19	26	31	49
2050	27	36	41	66
PV, 3%	88	190	260	450
PV, 7%	27	120	190	390
Annualized, 3%	4.9	9.5	12	23
Annualized, 7%	1.7	6.2	9.2	20

Notes:
^a The present value of reduced GHG emissions is calculated differently than other benefits. The same discount rate used to discount the value of damages from future emissions (SC–GHG at 5, 3, 2.5 percent) is used to calculate present value of SC–GHGs for internal consistency, while all other costs and benefits are discounted at either 3% or 7%. Annual costs and benefits shown are undiscounted values.
^b Note that the non-GHG impacts associated with the standards presented here do not include the full complement of health and environmental effects that, if quantified and monetized, would increase the total monetized benefits. Instead, the non-GHG benefits are based on benefit-per-ton values that reflect only human health impacts associated with reductions in PM_{2.5} exposure.

J. Impacts on Consumers of Vehicle Costs and Fuel Savings

Although the primary purpose of this regulatory action is to reduce GHG emissions, the impact of EPA’s standards on consumers is an important consideration for EPA. This section discusses the impact of the standards on consumer net costs for purchasing and fueling vehicles. For further discussion of impacts on vehicle sales, see Section

VII.B of this preamble and for impacts on affordability, see Section VII.M of this preamble.

EPA estimates that the average cost of a new MY 2026 vehicle will increase by \$1,000 due to the final standards, while we estimate that the average per-mile fuel cost in the first year will decrease

by 0.73 cents.²³⁰ Over time, reductions

²³⁰ See U.S. Environmental Protection Agency, “Fuel Savings Offset to Vehicle Costs_20211031.xlsx,” in the docket for this and the other calculations in this section. Fuel prices are based on AEO2021 and change over time; for the Reference Case, the average retail fuel price for years 2026–2036 ranged from \$2.53 to \$2.98/gallon (2020\$) for gasoline and \$0.118 to \$0.119/kWh of electricity (2020\$). U.S. Energy Information Administration (EIA), U.S. Department of Energy

in fuel consumption will offset the increase in upfront costs. For instance, EPA estimates that, over the lifetime of a MY 2026 vehicle,²³¹ the reduction in fuel costs will exceed the increase in vehicle costs by \$1,083, using a 3 percent discount rate.²³²

Another way to look at the effects on vehicle buyers is to examine how the costs are distributed among new and used vehicle owners. Because depreciation occurs over the lifetime of the vehicle, the net purchase cost to an owner will depend on the vehicle age when it was bought, and, if sold, the length of time that the vehicle was owned. A study from Argonne National

Laboratory provides estimates for the depreciation of light-duty vehicles by age, as summarized in Table 49.²³³ If the additional cost of fuel-saving technology depreciates at the same rates, then a person who buys a new vehicle and sells it after 5 years would incur 60 percent of the upfront costs (100 percent of the original value, less 40 percent paid back). Analogously, the person who buys the vehicle at age 5 would incur 20 percent of those costs (40 percent, less 20 percent paid back), and the purchaser of the 10-year-old vehicle would face a net 10 percent of the cost of the technology after it is sold five years later at vehicle age 15. A person

purchasing a new vehicle, driving the average fleetwide VMT for the given age and facing the fuel prices used in this analysis, would face an estimated net cost of \$60, shown in Table 50, which reflects fuel savings that offset 91 percent of the depreciation cost. The buyer of that 5-year-old used vehicle would see an estimated reduction in net cost—that is, a net saving—of \$357, while the buyer of that same 10-year-old used vehicle would see an estimated reduction of net cost of \$430. In general, the purchasers of older vehicles will see a greater portion of their depreciation costs offset by fuel savings.

TABLE 49—DEPRECIATION ESTIMATES FOR LIGHT DUTY VEHICLES

Vehicle age	1	2	3	4	5	10	15
Fraction of original value retained	0.70	0.61	0.53	0.475	0.40	0.20	0.10

Estimated by Argonne National Laboratory using Edmunds data for MYs 2013–2019 vehicles (see figure ES–2).²³³

TABLE 50—IMPACT OF STANDARDS ON DEPRECIATION AND FUEL COSTS FOR MY 2026 VEHICLE OVER 5 YEARS OF OWNERSHIP

	Vehicle depreciation plus fuel costs	Portion of depreciation costs offset by fuel savings (%)
Vehicle Purchased New	\$60	91
Vehicle Purchased at Age 5	(\$357)	257
Vehicle Purchased at Age 10	(\$430)	478

Calculated using analysis VMT assumptions for standards, using a 3% discount rate from year of purchase.

Because the use of vehicles varies widely across vehicle owners, another way to estimate the effects of the standards is to examine the “break even” number of miles—that is, the number of miles driven that would result in fuel savings matching the increase in up-front costs. For example, if operating costs of a MY 2026 vehicle decrease by 0.73 cents per mile due to reduced fuel consumption, the upfront costs (when purchased new) would be recovered after 137,000 miles of driving, excluding discounting.²³⁴ As this

measure makes clear, the financial effect on a new vehicle owner depends on the amount that the vehicle is driven. Mobility service providers, such as taxis or ride-sharing services, are likely to accumulate miles more quickly than most people who use their vehicles for personal use. As discussed in Section VII.M of this preamble, the lower per-mile cost for these vehicles may reduce the importance of up-front costs in the charge for mobility as a service, and thus further enable use of that service.

Table 51 shows, for purchasers of different-age MY 2026 vehicles, how the degree to which fuel savings offset depreciation costs will depend on vehicle use levels.²³⁵ Cost recovery is again higher for older vehicles, and faster for vehicles that accumulate VMT more quickly. For example, a consumer who purchases a 5-year old used MY 2026 vehicle would recover their vehicle costs through fuel savings after only 23,000 miles of driving.

(DOE), Annual Energy Outlook, 2021. For the analysis involving 5-year ownership periods, we use the fuel costs associated with the initial year of purchase for each owner, *i.e.*, 2026, 2031, 2036. The analysis includes the program flexibilities of credit banking, fleet averaging, advanced technology multipliers, and air conditioning and off-cycle credits.

²³¹ The CCEMS models vehicles over a 30 year lifetime; however, it includes scrappage rates such that fewer and fewer vehicles of any vintage remain on the road year after year, and those vehicles that remain are driven fewer and fewer miles year after year.

²³² EPA Guidelines for Preparing Economic Analysis, Chapter 6.4, suggests that a 3 percent discount rate is appropriate for calculations involving consumption, instead of the opportunity cost of capital. Here, the discount rate is applied, beginning in 2026 when the vehicle is purchased new, to the stream of fuel costs over the vehicle lifetime. U.S. Environmental Protection Agency (2010). “Guidelines for Preparing Economic Analysis,” Chapter 6. <https://www.epa.gov/sites/production/files/2017-09/documents/ee-0568-06.pdf>, accessed 6/14/2021.

²³³ Argonne National Laboratory (2021). “Comprehensive Total Cost of Ownership Quantification for Vehicles with Different Size Classes and Powertrains.” ANL/ESD–21/4, Figure

ES–2. <https://publications.anl.gov/anlpubs/2021/05/167399.pdf>, accessed 6/8/2021.

²³⁴ This estimate is calculated as the increase in cost, \$1,000, divided by the reduced per-mile cost, \$0.0073, to get miles until cost is recovered.

²³⁵ The up-front costs for each purchaser are based on the cost to the owner based on the depreciated price for the vehicle’s age, with recovery of some further depreciated cost after 5 years of ownership. Cost recovery per mile is \$0.0073, and is multiplied by the number of miles in the second column. The remaining columns are cost recovery divided by the relevant cost. Discounting is not used to abstract from the VMT occurring during a specified timeframe.

TABLE 51—PROPORTION OF DEPRECIATION COSTS OFFSET BY FUEL SAVINGS, FOR NEW AND USED VEHICLE PURCHASERS, FOR A MY 2026 VEHICLE

		When vehicle purchased new	When vehicle purchased at 5 years old	When vehicle purchased at 10 years old
Portion of vehicle depreciation cost offset by fuel savings (own vehicle for 5 years).	At 10,000 miles	12%	43%	93%
	At 50,000 miles	61%	214%	467%
	At 100,000 miles	122%	428%	933%
Miles where fuel savings fully offset the vehicle owner's depreciation cost.	Owned vehicle for 5 years	82,000	23,000	11,000
	Owned vehicle for full remaining lifetime	137,000	47,000	21,000

Thus, the financial effects on a vehicle buyer depend on how much that person drives, as well as whether the vehicle is bought new or used. Importantly, all people receive the benefits of reduced GHG emissions, the primary focus of this rule.

K. Employment Impacts

Several commenters, including the Alliance, Blue-Green Alliance, International Union, United Automobile, Aerospace & Agricultural Implement Workers of America (UAW), SAFE (Securing America’s Future Energy), and a coalition of 25 Great Lakes and Midwest environmental organizations, indicated that domestic employment effects, especially in the auto industry, are an important impact of the standards. The Blue-Green Alliance, Ceres, Environmental Entrepreneurs, EDF, Environmental Law and Policy Center, EOS at Federated Hermes, New Mexico Environment Department, New York State Department of Environmental Conservation, and the coalition of organizations argue that strong standards contribute to job-supporting domestic manufacturing. CBD et al. considers EPA’s employment estimates to be too low, by not considering impacts in the broader economy. National Coalition for Advanced Transportation, SAFE and Alliance discuss the role of domestic supply chains for electric vehicles in promoting domestic employment. The UAW notes their involvement in building these “vehicles of the future.” Volkswagen describes its partnership with Chattanooga State Community College to train workers in next-generation auto manufacturing skills. EPA acknowledges these comments and recognizes employment impacts as an important impact to be assessed, and thus we present an assessment of impacts of these standards on employment.

If the U.S. economy is at full employment, even a large-scale

environmental regulation is unlikely to have a noticeable impact on aggregate net employment.²³⁶ Instead, labor would primarily be reallocated from one productive use to another, and net national employment effects from environmental regulation would be small and transitory (e.g., as workers move from one job to another).²³⁷ Affected sectors may nevertheless experience transitory effects as workers change jobs. Some workers may retrain or relocate in anticipation of new requirements or require time to search for new jobs, while shortages in some sectors or regions could bid up wages to attract workers. These adjustment costs can lead to local labor disruptions. Even if the net change in the national workforce is small, localized reductions in employment may adversely impact individuals and communities just as localized increases may have positive impacts.

If the economy is operating at less than full employment, economic theory does not clearly indicate the direction or magnitude of the net impact of environmental regulation on employment; it could cause either a short-run net increase or short-run net decrease.²³⁸ At the level of individual companies, employers affected by environmental regulation may increase their demand for some types of labor, decrease demand for other types of labor, or for still other types, not change it at all. The uncertain direction of labor impacts is due to the different channels

²³⁶ Full employment is a conceptual target for the economy where everyone who wants to work and is available to do so at prevailing wages is actively employed. The unemployment rate at full employment is not zero.

²³⁷ Arrow et al. (1996). “Benefit-Cost Analysis in Environmental, Health, and Safety Regulation: A Statement of Principles.” American Enterprise Institute, The Annapolis Center, and Resources for the Future. See discussion on bottom of p. 6. In practice, distributional impacts on individual workers can be important, as discussed later in this section.

²³⁸ Schmalensee, Richard, and Stavins, Robert N. “A Guide to Economic and Policy Analysis of EPA’s Transport Rule.” White paper commissioned by Excelon Corporation, March 2011.

by which regulations affect labor demand.

Morgenstern et al. (2002)²³⁹ decompose the labor consequences in a regulated industry facing increased abatement costs into three separate components. First, there is a demand effect caused by higher production costs raising market prices. Higher prices reduce consumption (and production), reducing demand for labor within the regulated industry. Second, there is a cost effect where, as production costs increase, plants use more of all inputs, including labor, to produce the same level of output. Third, there is a factor-shift effect where post-regulation production technologies may have different labor intensities. Other researchers use different frameworks along a similar vein.²⁴⁰

RIA Chapter 8.2 discusses the calculation of employment impacts in the model used for this analysis. The estimates include effects on three sectors: Automotive dealers, final assembly labor and parts production, and fuel economy technology labor. The first two of these are examples of Morgenstern et al.’s (2002) demand-effect employment, while the third reflects cost-effect employment. For automotive dealers, the model estimates the hours involved in each new vehicle sale. To estimate the labor involved in final assembly, the model used average labor hours per vehicle at a sample of U.S. assembly plants, adjusted by the ratio of vehicle assembly manufacturing employment to employment for total

(2018). “Balancing the Benefits of Environmental Regulations for Everyone and the Costs to Workers and Firms.” *IZA World of Labor* 22v2. <https://wol.iza.org/uploads/articles/458/pdfs/environmental-regulations-and-labor-markets.pdf>, accessed 4/19/2021.

vehicle and equipment manufacturing for new vehicles. Finally, for fuel economy technology labor, DOT calculated the average revenue per job-year for automakers.

The new-vehicle demand elasticity, among other factors, affects employment impacts because it affects the estimated changes in new vehicle sales due to the standards. In the proposed rule, EPA's central analysis used a new-vehicle demand elasticity of -1 , with a sensitivity analysis using -0.4 as the demand elasticity. As discussed in Section VII.B of this preamble, in this FRM, EPA's central case uses a new-vehicle demand elasticity of -0.4 , with sensitivities of -0.15 and -1 , due to evidence that the value of -1 used in the proposed rule, from older studies, is no longer supported by recent studies. EPA's assessment of employment impacts, in RIA Chapter 8.2.3, using the sales assumptions of both automakers and consumers using 2.5 years of fuel consumption in vehicle decisions and a demand elasticity of -0.4 , shows an increase in employment of between about 1 and 2.4 percent due to the labor involved in producing the technologies needed to meet the standards. If, instead, we use the sensitivity analysis with a demand elasticity of -0.15 , employment is higher for both the no-action alternative and the standards, but the percent change is almost the same. In contrast, in our sensitivity analysis using the -1 demand elasticity, which EPA now believes is outdated, employment increases by between 0 and 0.7 percent. If automakers underestimate consumers' valuation of fuel economy, as noted in Section VII.B of this preamble, then demand-effect employment is likely to be higher, and employment impacts are likely to be more positive.

Note that these are employment impacts in the directly regulated sector, plus the impacts for automotive dealers. These do not include economy-wide labor impacts. As discussed earlier, economy-wide impacts on employment are generally driven by broad macroeconomic effects. It also does not reflect employment effects due to reduced spending on fuel consumption. Those changes may lead to some reductions in employment in gas stations, and some increases in other sectors to which people reallocate those expenditures.

Electrification of the vehicle fleet is likely to affect both the number and the nature of employment in the auto and parts sectors and related sectors, such as providers of charging infrastructure. The kinds of jobs in auto manufacturing are expected to change: For instance, there

will be no need for engine and exhaust system assembly for EVs, while many assembly tasks will involve electrical rather than mechanical fitting. Batteries represent a significant portion of the manufacturing content of an electrified vehicle, and some automakers are likely to purchase the cells, if not pre-assembled modules or packs, from suppliers. The effect on total employment for auto manufacturing is uncertain: Some suggest that fewer workers will be needed because BEVs have fewer moving parts,²⁴¹ while others estimate that the labor-hours involved in BEVs are almost identical to that for ICE vehicles.²⁴² Effects in the supply chain, as Securing America's Energy Future (SAFE) and Alliance noted, depend on where goods in the supply chain are developed. Blue-Green Alliance, BICEP, Ceres, Environmental Entrepreneurs, Elders Climate Action, SAFE, and the UAW all argue that developing EVs in the U.S. is critical for domestic employment and for the global competitiveness of the U.S. in the future auto industry. EPA agrees that these concerns are important and will continue to assess changes in employment associated with electrification of the auto industry.

L. Environmental Justice

Executive Order 12898 (59 FR 7629, February 16, 1994) establishes federal executive policy on environmental justice. It directs federal agencies, to the greatest extent practicable and permitted by law, to make achieving environmental justice part of their mission by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects of their programs, policies, and activities on minority populations and low-income populations in the U.S. EPA defines environmental justice as the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies.²⁴³

²⁴¹ Krisher, T., and Sewer, J. (2021). "Autoworkers face uncertain future in an era of electric cars." <https://abcnews.go.com/US/wireStory/autoworkers-face-dimmer-future-era-electric-cars-75828610>, accessed 10/20/2021.

²⁴² Kupper, D., K. Kuhlmann, K. Tominaga, A. Arora, and J. Schlageter (2020). "Shifting Gears in Auto Manufacturing." <https://www.bcg.com/publications/2020/transformational-impact-of-electric-vehicles-on-auto-manufacturing>, accessed 10/20/2021.

²⁴³ Fair treatment means that "no group of people should bear a disproportionate burden of environmental harms and risks, including those resulting from the negative environmental

Executive Order 14008 (86 FR 7619, February 1, 2021) also calls on federal agencies to make achieving environmental justice part of their respective missions "by developing programs, policies, and activities to address the disproportionately high and adverse human health, environmental, climate-related and other cumulative impacts on disadvantaged communities, as well as the accompanying economic challenges of such impacts." It also declares a policy "to secure environmental justice and spur economic opportunity for disadvantaged communities that have been historically marginalized and overburdened by pollution and under-investment in housing, transportation, water and wastewater infrastructure and health care."

Under Executive Order 13563 (76 FR 3821, January 21, 2011), federal agencies may consider equity, human dignity, fairness, and distributional considerations in their regulatory analyses, where appropriate and permitted by law.

EPA's 2016 "Technical Guidance for Assessing Environmental Justice in Regulatory Analysis" provides recommendations on conducting the highest quality analysis feasible, recognizing that data limitations, time and resource constraints, and analytic challenges will vary by media and regulatory context.²⁴⁴

When assessing the potential for disproportionately high and adverse health or environmental impacts of regulatory actions on populations of color, low-income populations, tribes, and/or indigenous peoples, EPA strives

consequences of industrial, governmental and commercial operations or programs and policies." Meaningful involvement occurs when "(1) potentially affected populations have an appropriate opportunity to participate in decisions about a proposed activity [e.g., rulemaking] that will affect their environment and/or health; (2) the public's contribution can influence [EPA's rulemaking] decision; (3) the concerns of all participants involved will be considered in the decision-making process; and (4) [EPA will] seek out and facilitate the involvement of those potentially affected" A potential EJ concern is defined as "the actual or potential lack of fair treatment or meaningful involvement of minority populations, low-income populations, tribes, and indigenous peoples in the development, implementation and enforcement of environmental laws, regulations and policies." See "Guidance on Considering Environmental Justice During the Development of an Action." Environmental Protection Agency, www.epa.gov/environmentaljustice/guidanceconsidering-environmental-justice-duringdevelopment-action. See also <https://www.epa.gov/environmentaljustice>.

²⁴⁴ "Technical Guidance for Assessing Environmental Justice in Regulatory Analysis." EPA.gov, Environmental Protection Agency, https://www.epa.gov/sites/production/files/2016-06/documents/ejtg_5_6_16_v5.1.pdf.

to answer three broad questions: (1) Is there evidence of potential EJ concerns in the baseline (the state of the world absent the regulatory action)? Assessing the baseline will allow EPA to determine whether pre-existing disparities are associated with the pollutant(s) under consideration (e.g., if the effects of the pollutant(s) are more concentrated in some population groups). (2) Is there evidence of potential EJ concerns for the regulatory option(s) under consideration? Specifically, how are the pollutant(s) and its effects distributed for the regulatory options under consideration? (3) Do the regulatory option(s) under consideration exacerbate or mitigate EJ concerns relative to the baseline? It is not always possible to quantitatively assess these questions.

EPA's 2016 Technical Guidance does not prescribe or recommend a specific approach or methodology for conducting an environmental justice analysis, though a key consideration is consistency with the assumptions underlying other parts of the regulatory analysis when evaluating the baseline and regulatory options. Where applicable and practicable, the Agency endeavors to conduct such an analysis. Going forward, EPA is committed to conducting environmental justice analysis for rulemakings based on a framework similar to what is outlined in EPA's Technical Guidance, in addition to investigating ways to further weave environmental justice into the fabric of the rulemaking process. EPA greatly values input from EJ stakeholders and communities and looks forward to engagement as we consider the impacts of light-duty vehicle emissions.

1. GHG Impacts

In 2009, under the *Endangerment and Cause or Contribute Findings for Greenhouse Gases Under Section 202(a) of the Clean Air Act* ("Endangerment Finding"), the Administrator considered how climate change threatens the health and welfare of the U.S. population. As part of that consideration, she also considered risks to minority and low-income individuals and communities, finding that certain parts of the U.S. population may be especially vulnerable based on their characteristics or circumstances. These groups include economically and socially disadvantaged communities; individuals at vulnerable lifestages, such as the elderly, the very young, and pregnant or nursing women; those already in poor health or with comorbidities; the disabled; those experiencing homelessness, mental illness, or substance abuse; and/or

Indigenous or minority populations dependent on one or limited resources for subsistence due to factors including but not limited to geography, access, and mobility.

Academies of Science, Engineering, and Medicine^{251 252} add more evidence that the impacts of climate change raise potential environmental justice concerns. These reports conclude that poorer or predominantly non-White communities can be especially vulnerable to climate change impacts because they tend to have limited adaptive capacities and are more dependent on climate-sensitive resources such as local water and food supplies, or have less access to social and information resources. Some communities of color, specifically populations defined jointly by ethnic/racial characteristics and geographic location, may be uniquely vulnerable to climate change health impacts in the U.S. In particular, the 2016 scientific assessment on the *Impacts of Climate Change on Human Health*²⁵³ found with high confidence that vulnerabilities are place- and time-specific, lifestages and ages are linked to immediate and future health impacts, and social determinants of health are linked to greater extent and severity of climate change-related health impacts.

i. Effects on Specific Populations of Concern

Individuals living in socially and economically disadvantaged communities, such as those living at or below the poverty line or who are experiencing homelessness or social isolation, are at greater risk of health effects from climate change. This is also true with respect to people at vulnerable lifestages, specifically women who are pre- and perinatal, or are nursing; *in utero* fetuses; children at all stages of development; and the elderly. Per the Fourth National Climate Assessment, "Climate change affects human health by altering exposures to heat waves, floods, droughts, and other extreme events; vector-, food- and waterborne infectious diseases; changes in the quality and safety of air, food, and water; and stresses to mental health and well-being."²⁵⁴ Many health conditions

such as cardiopulmonary or respiratory illness and other health impacts are associated with and exacerbated by an increase in GHGs and climate change outcomes, which is problematic as these diseases occur at higher rates within vulnerable communities. Importantly, negative public health outcomes include those that are physical in nature, as well as mental, emotional, social, and economic.

To this end, the scientific assessment literature, including the aforementioned reports, demonstrates that there are myriad ways in which these populations may be affected at the individual and community levels. Individuals face differential exposure to criteria pollutants, in part due to the proximities of highways, trains, factories, and other major sources of pollutant-emitting sources to less-affluent residential areas. Outdoor workers, such as construction or utility crews and agricultural laborers, who frequently are comprised of already at-risk groups, are exposed to poor air quality and extreme temperatures without relief. Furthermore, individuals within EJ populations of concern face greater housing, clean water, and food insecurity and bear disproportionate economic impacts and health burdens associated with climate change effects. They have less or limited access to healthcare and affordable, adequate health or homeowner insurance. Finally, resiliency and adaptation are more difficult for economically disadvantaged communities: They have less liquidity, individually and collectively, to move or to make the types of infrastructure or policy changes to limit or reduce the hazards they face. They frequently are less able to self-advocate for resources that would otherwise aid in building resilience and hazard reduction and mitigation.

The assessment literature cited in EPA's 2009 and 2016 Endangerment Findings, as well as *Impacts of Climate Change on Human Health*, also concluded that certain populations and life stages, including children, are most vulnerable to climate-related health effects. The assessment literature produced from 2016 to the present strengthens these conclusions by providing more detailed findings regarding related vulnerabilities and the projected impacts youth may experience. These assessments—

Health. In *Impacts, Risks, and Adaptation in the United States: Fourth National Climate Assessment, Volume II* [Reidmiller, D.R., C.W. Avery, D.R. Easterling, K.E. Kunkel, K.L.M. Lewis, T.K. Maycock, and B.C. Stewart (eds.)]. U.S. Global Change Research Program, Washington, DC, USA, pp. 539–571. doi: 10.7930/NCA4.2018.CH14.

including the Fourth National Climate Assessment (2018) and *The Impacts of Climate Change on Human Health in the United States* (2016)—describe how children's unique physiological and developmental factors contribute to making them particularly vulnerable to climate change. Impacts to children are expected from heat waves, air pollution, infectious and waterborne illnesses, and mental health effects resulting from extreme weather events. In addition, children are among those especially susceptible to allergens, as well as health effects associated with heat waves, storms, and floods. Additional health concerns may arise in low-income households, especially those with children, if climate change reduces food availability and increases prices, leading to food insecurity within households.

*The Impacts of Climate Change on Human Health*²⁵³ also found that some communities of color, low-income groups, people with limited English proficiency, and certain immigrant groups (especially those who are undocumented) live with many of the factors that contribute to their vulnerability to the health impacts of climate change. While difficult to isolate from related socioeconomic factors, race appears to be an important factor in vulnerability to climate-related stress, with elevated risks for mortality from high temperatures reported for Black or African American individuals compared to White individuals after controlling for factors such as air conditioning use. Moreover, people of color are disproportionately exposed to air pollution based on where they live, and disproportionately vulnerable due to higher baseline prevalence of underlying diseases such as asthma, so climate exacerbations of air pollution are expected to have disproportionate effects on these communities.

Native American Tribal communities possess unique vulnerabilities to climate change, particularly those impacted by degradation of natural and cultural resources within established reservation boundaries and threats to traditional subsistence lifestyles. Tribal communities whose health, economic well-being, and cultural traditions depend upon the natural environment will likely be affected by the degradation of ecosystem goods and services associated with climate change. The IPCC indicates that losses of customs and historical knowledge may cause communities to be less resilient or adaptable.²⁵⁵ The Fourth National

²⁵³ Porter et al., 2014: Food security and food production systems.

Climate Assessment (2018) noted that while Indigenous peoples are diverse and will be impacted by the climate changes universal to all Americans, there are several ways in which climate change uniquely threatens Indigenous peoples' livelihoods and economies.²⁵⁶ In addition, there can institutional barriers to their management of water, land, and other natural resources that could impede adaptive measures.

For example, Indigenous agriculture in the Southwest is already being adversely affected by changing patterns of flooding, drought, dust storms, and rising temperatures leading to increased soil erosion, irrigation water demand, and decreased crop quality and herd sizes. The Confederated Tribes of the Umatilla Indian Reservation in the Northwest have identified climate risks to salmon, elk, deer, roots, and huckleberry habitat. Housing and sanitary water supply infrastructure are vulnerable to disruption from extreme precipitation events.

NCA4 noted that Indigenous peoples often have disproportionately higher rates of asthma, cardiovascular disease, Alzheimer's, diabetes, and obesity, which can all contribute to increased vulnerability to climate-driven extreme heat and air pollution events. These factors also may be exacerbated by stressful situations, such as extreme weather events, wildfires, and other circumstances.

NCA4 and IPCC AR5²⁵⁷ also highlighted several impacts specific to Alaskan Indigenous Peoples. Coastal erosion and permafrost thaw will lead to more coastal erosion, exacerbated risks of winter travel, and damage to buildings, roads, and other infrastructure—these impacts on archaeological sites, structures, and objects that will lead to a loss of cultural heritage for Alaska's Indigenous people. In terms of food security, the NCA discussed reductions in suitable ice conditions for hunting, warmer temperatures impairing the use of traditional ice cellars for food storage, and declining shellfish populations due to warming and acidification. While the NCA also noted that climate change provided more opportunity to hunt from

²⁵⁶ Jantarasami, L.C., R. Novak, R. Delgado, E. Marino, S. McNeeley, C. Narducci, J. Raymond-Yakoubian, L. Singletary, and K. Powys Whyte, 2018: Tribes and Indigenous Peoples. ²⁵⁷ Porter et al., 2014: Food security and food production systems.

boats later in the fall season or earlier in the spring, the assessment found that the net impact was an overall decrease in food security.

In addition, the U.S. Pacific Islands and the indigenous communities that live there are also uniquely vulnerable to the effects of climate change due to their remote location and geographic isolation. They rely on the land, ocean, and natural resources for their livelihoods, but face challenges in obtaining energy and food supplies that need to be shipped in at high costs. As a result, they face higher energy costs than the rest of the nation and depend on imported fossil fuels for electricity generation and diesel. These challenges exacerbate the climate impacts that the Pacific Islands are experiencing. NCA4 notes that Indigenous peoples of the Pacific are threatened by rising sea levels, diminishing freshwater availability, and negative effects to ecosystem services that threaten these individuals' health and well-being.

2. Non-GHG Impacts

In addition to significant climate change benefits, the final rule will also affect non-GHG emissions. In general, we expect small non-GHG emissions reductions from upstream sources related to refining petroleum fuels. We also expect small increases in emissions from upstream electricity generating units (EGUs). An increase in emissions from coal- and NG-fired electricity generation to meet increased EV electricity demand could result in adverse EJ impacts. For on-road light duty vehicles, the final rule will reduce total non-GHG tailpipe emissions, though we expect small increases in some non-GHG emissions in the years immediately following implementation of the standards, followed by growing decreases in emissions in later years. This is due to our projections about the gasoline-fueled LD vehicle population in the final rule scenario, including decreased scrappage of older vehicles. See Table 35, Table 36, and Table 37 for more detail on the estimated non-GHG emissions impacts of the rule.²⁵⁸ As discussed in Section III.C of this preamble, future EPA regulatory actions that would result in increased zero-emission vehicles and cleaner energy generation may have greater non-GHG impacts for transportation and electricity generation, and those impacts will be analyzed in more detail in those future actions.

There is evidence that communities with EJ concerns are disproportionately impacted by the non-GHG emissions

associated with this rule.²⁵⁹ Numerous studies have found that environmental hazards such as air pollution are more prevalent in areas where populations of color and low-income populations represent a higher fraction of the population compared with the general population.^{260 261 262} Consistent with this evidence, a recent study found that most anthropogenic sources of PM_{2.5}, including industrial sources, and light- and heavy-duty vehicle sources, disproportionately affect people of color.²⁶³

Analyses of communities in close proximity to upstream sources, such as EGUs, have found that a higher percentage of communities of color and low-income communities live near these sources when compared to national averages.²⁶⁴ Vulnerable populations near upstream refineries may experience potential disparities in pollution-related health risk from that source.²⁶⁵ We expect that small increases in non-GHG emissions from EGUs and small reductions in petroleum-sector emissions would lead to small changes in exposure to these non-GHG pollutants for people living in the communities near these facilities.

There is also substantial evidence that people who live or attend school near major roadways are more likely to be of a non-White race, Hispanic ethnicity, and/or low socioeconomic status.^{266 267}

²⁶⁷ Boehmer, T.K.; Foster, S.L.; Henry, J.R.; Woghiren-Akinnifesi, E.L.; Yip, F.Y. (2013)

We would expect that communities near roads will benefit from reductions of non-GHG pollutants as fuel efficiency improves and the use of zero-emission vehicles (such as full battery electric vehicles) increases, though projections about the gasoline-fueled LD vehicle population in the final rule scenario, including decreased scrappage of older vehicles, may offset some of these emission reductions, especially in the years immediately after finalization of the standards.

Although proximity to an emissions source is a useful indicator of potential exposure, it is important to note that the impacts of emissions from both upstream and tailpipe sources are not limited to communities in close proximity to these sources. The effects of potential increases and decreases in emissions from the sources affected by this final rule might also be felt many miles away, including in communities with EJ concerns. The spatial extent of these impacts from upstream and tailpipe sources depend on a range of interacting and complex factors including the amount of pollutant emitted, atmospheric chemistry and meteorology.

In summary, we expect this rule will, over time, result in reductions of non-GHG tailpipe emissions and emissions from upstream refinery sources. We also project that the rule will result in small increases of non-GHG emissions from upstream EGU sources. Overall, there are substantial PM_{2.5}-related health benefits associated with the non-GHG emissions reductions that this rule will achieve. The benefits from these emissions reductions, as well as the adverse impacts associated with the emissions increases, could potentially impact communities with EJ concerns, though not necessarily immediately and not equally in all locations. For this rulemaking, the air quality information needed to perform a quantified analysis of the distribution of such impacts was not available. We therefore recommend caution when interpreting these broad, qualitative observations. We note in Section I.A.2 of this preamble that EPA intends to develop a future rule to control emissions of GHGs as well as criteria and air toxic pollutants from light-duty vehicles for model years beyond 2026. We are considering how to project air quality impacts from the changes in non-GHG emissions for that future rulemaking (see Section V.C of this preamble).

Residential proximity to major highways—United States, 2010. *Morbidity and Mortality Weekly Report* 62(3): 46–50.

M. Affordability and Equity Impacts

The impacts of the standards on social equity depend in part on their effects on the affordability of vehicles and transportation services, especially for lower-income households. Access to transportation improves the ability of people, including those with low income, to pursue jobs, education, health care, and necessities of daily life such as food and housing. This section discusses how these standards might affect affordability of vehicles. We acknowledge that vehicles, especially household ownership of vehicles, are only a portion of the larger issues concerning access to transportation and mobility services, which also take into consideration public transportation and land use design. Though these issues are inextricably linked, the following discussion focuses on effects related to private vehicle ownership and use. We also acknowledge that the emissions of vehicles, both local pollutants and GHGs, can have disproportionate impacts on lower-income and minority communities; see Preamble Sections I.E and VII.L for further discussion of these topics. Finally, we note that social equity involves issues beyond income and affordability, including race, ethnicity, gender, gender identification, and residential location; EPA will continue to examine such impacts.

Affordability is not a well-defined concept in academic literature. As discussed in Cassidy et al. (2016),²⁶⁸ researchers have generally applied the term to necessities such as food, housing, or energy, and have identified some themes related to:

Instead of focusing on the traditional economic concept of willingness to pay, any consideration of affordability must also consider the ability to pay for a socially defined minimum level of a good, especially of a necessity.

Although the ability to pay is often based on the proportion of income devoted to expenditures on a particular good, this ratio approach is widely criticized for not considering expenditures on other possibly necessary goods, quality differences in the good, and heterogeneity of consumer preferences for the good.

Assessing affordability should take into account both the short-term costs and long-term costs associated with consumption of a particular good.

As noted in Cassidy et al., (2016), there is very little literature applying the concept of affordability to transportation, much less to vehicle ownership. It is not clear how to

identify a socially acceptable minimum level of transportation service. However, it seems reasonable that some minimum level of transportation services is necessary to enable households' access to employment, education, and basic services such as buying food. It also seems reasonable to assume that transportation requirements vary substantially across populations and geographic locations, and it is not clear when consumption of transportation moves from being a necessity to optional. Normatively defining the minimum adequate level of transportation consumption is difficult given the heterogeneity of consumer preferences and living situations. As a result, it is challenging to define how much residual income should remain with each household after transportation expenditures. It is therefore not surprising that academic and policy literature have largely avoided attempting to define transportation affordability.

As with the proposed rule, we are following the approach in the 2016 EPA Proposed Determination for the Midterm Evaluation²⁶⁹ of considering four questions that relate to the effects of the final standards on new vehicle affordability: How the standards affect lower-income households; how the standards affect the used vehicle market; how the standards affect access to credit; and how the standards affect the low-priced vehicle segment. See RIA Chapter 8.3 for further detail.

Americans for Prosperity, Attorneys General of Missouri and Ohio, Competitive Enterprise Institute, some individual commenters, NADA, Taxpayers Protection Alliance, and Valero Energy Corporation express concern that increases in new vehicle prices will hurt low- and middle-income households by making new vehicles more expensive. EPA notes that the effects of the standards on lower-income households depend on the responses not just to up-front costs but also to the reduction in fuel and operating costs associated with the standards. These responses will affect not only the sales of new vehicles, as discussed in Section VII.B of this preamble, but also the prices of used vehicles as well as the costs associated with ride-hailing and ride-sharing services. Consumer Reports, Dream

Corps Green for All, and Center for Biological Diversity et al. say that, although up-front costs are higher, the total cost of ownership is lower. In addition, they say that lower-income households may disproportionately benefit, as they observe that low-income households typically buy used vehicles, whose up-front cost increases are more modest compared to the fuel savings; because fuel costs are a larger proportion of household income for lower-income people, these savings are especially important. Hutchens et al. (2021)²⁷⁰ find that lower-income households spend more on used vehicles than new ones. A recent study notes that lower-income households spend more on gasoline as a proportion of their income than higher-income households,²⁷¹ suggesting the importance of operating costs for these households. If the per-mile costs of services such as ride hailing and ride sharing decrease to reflect lower operating costs, those who do not own vehicles may benefit. The National Coalition for Advanced Technology comments that Uber and Lyft have a target in 2030 of going all-electric; if those lower operating and maintenance costs are passed along to users, these services may become more affordable.

Most people who buy vehicles purchase used vehicles, instead of new.²⁷² If sales of new vehicles decrease, then prices of used vehicles, which are disproportionately purchased by lower-income households, would be expected to increase; the reverse would happen if new vehicle sales increase. These effects in the used vehicle market also affect how long people hold onto their used vehicles. This effect, sometimes termed the "Gruenspecht effect" after Gruenspecht (1982),²⁷³ would lead to both slower adoption of vehicles subject to the new standards, and more use of older vehicles not subject to the new standards, with

²⁶⁹ U.S. Environmental Protection Agency (2016). Proposed Determination on the Appropriateness of the Model Year 2022-2025 Light-Duty Vehicle Greenhouse Gas Emissions Standards under the Midterm Evaluation, Chapter 4.3.3. EPA-420-R-16-020. <https://nepis.epa.gov/Exe/ZyPDF.cgi?Dockey=P100Q3DO.pdf>, accessed 4/26/2021.

associated higher emissions, if new vehicle sales decrease. The Gruenspecht effect, therefore, may have the additional consequence of increased concentrations of older vehicles in some communities in the short term, and may delay benefits associated with advanced vehicle technologies for those communities. As discussed in Section VII.B of this preamble, new vehicle sales are projected to show a roughly one-half to one percent decrease from sales under the SAFE rule; that value depends on the uncertain assumption that vehicle buyers consider just a small share of future fuel consumption in the purchase decision. Changes in the new vehicle market are expected not only to have immediate effects on the prices of used vehicles, but also to affect the market over time, as the supply of used vehicles in the future depends on how many new vehicles are sold.²⁷⁴ As discussed in Section VII.J of this preamble, because the prices of used vehicles depreciate more rapidly than fuel savings, buyers of used vehicles will recover any increase in up-front costs more rapidly than buyers of new vehicles.

Access to credit is a potential barrier to purchase of vehicles whose up-front costs have increased; access may also be affected by race, ethnicity, gender, gender identity, residential location, religion, or other factors. If lenders are not willing to provide financing for buyers who face higher prices, perhaps because the potential buyers are hitting a maximum on the debt-to-income ratio (DTI) that lenders are willing to accept, then those buyers may not be able to purchase new vehicles. NADA in its comments provided results of two surveys of financial institutions, which were asked whether they would increase credit for a more expensive vehicle with lower cost of ownership. With about half of those surveyed responding, over 80 percent of respondents replied that they would not; the remainder said they would. These survey results do not contradict EPA's observation, discussed in the proposed rule, that some lenders are willing to give discounts on loans to purchase more fuel-efficient vehicles.²⁷⁵ Subsidies exist from the federal government, and some state

²⁷⁴ U.S. Environmental Protection Agency (2021). "The Effects of New-Vehicle Price Changes on New and Used-Vehicle Markets and Scrappage." EPA-420-R-21-019, https://cfpub.epa.gov/si/si_public_record_Report.cfm?dirEntryId=352754&Lab=OTAQ (accessed 10/06/2021).

²⁷⁵ Helfand, Gloria (2021). "Memorandum: Lending Institutions that Provide Discounts for more Fuel Efficient Vehicles." U.S. EPA Office of Transportation and Air Quality, Memorandum to the Docket.

governments, for plug-in electric vehicles.²⁷⁶ In addition, the DTI does not appear to be a fixed obstacle for access to finance; from 2007 to 2019, 40 percent of lower-income households and 8 percent of higher-income households who both had a DTI of over 36 percent and purchased at least one new vehicle financed their vehicle purchases.²⁷⁷

Low-priced vehicles may be considered an entry point for people into buying new vehicles instead of used ones; automakers may seek to entice people to buy new vehicles through a low price point. It is possible that higher costs associated with standards could affect the ability of automakers to maintain vehicles in this value segment. At the same time, this segment historically tended to include more fuel-efficient vehicles that assisted automakers in achieving CAFE standards.²⁷⁸ The footprint-based standards, by encouraging improvements in GHG emissions and fuel economy across the vehicle fleet, reduce the need for low-priced vehicles to be a primary means of compliance with the standards. This change in incentives for the marketing of this segment may contribute to the increases in the prices of vehicles previously in this category. Low-priced vehicles still exist; the Chevrolet Spark, for example, is listed as starting at \$13,400.²⁷⁹ At the same time, this segment is gaining more content, such as improved entertainment systems and electric windows; they may be developing an identity as a desirable market segment without regard to their previous purpose in enabling the sales of less efficient vehicles and compliance with CAFE standards.²⁸⁰ Whether this segment continues to exist, and in what form, may depend on the marketing plans of manufacturers: whether benefits are greater from offering basic new vehicles to first-time new-vehicle buyers, or from

²⁸⁰ See Note 268.

making small vehicles more attractive by adding more desirable features to them.

The updated analysis for the final rule projects that, although the vast majority of vehicles produced in the time frame of the standards will be gasoline-fueled vehicles, EVs and PHEVs increase with each MY up to about 17 percent total market share by MY 2026, compared to about 7 percent MY 2023; see Table 33. New EVs and PHEVs have lower operating costs than gasoline vehicles, but currently have higher up-front costs and require access to a means of charging. EPA has heard from some environmental justice groups and Tribes that limited access to electric vehicles and charging infrastructure can be a barrier for purchasing EVs. Comments received on the proposed rule cited both the higher up-front costs of EVs as challenges for adoption, and their lower operating and maintenance costs as incentives for adoption. A number of auto manufacturers commented on the importance of consumer education, purchase incentives, and charging infrastructure development for promoting adoption of electric vehicles. Some NGOs commented that EVs have lower total cost of ownership than ICE vehicles, and that EV purchase incentives should focus on lower-income households, because they are more responsive to price incentives than higher-income households. Access to charging infrastructure may be especially challenging for those who do not have easy access to home charging, such as people living in multi-unit dwellings, unless public charging infrastructure or charging at workplaces becomes more widespread. On the other hand, a recent report from the National Renewable Energy Laboratory estimated that public and workplace charging is keeping up with projected needs, based on Level 2 and fast charging ports per plug-in vehicle.²⁸¹ EPA acknowledges the comments received. As the up-front costs of EVs drops, as discussed in Section III.A of this preamble, EPA expects consumer acceptance of EVs to increase; as more EVs enter the new vehicle market, those EVs will gradually move into the used vehicle fleet and become more accessible to lower-income households. In addition, as adoption of EVs increases, EPA expects greater development of charging

National Renewable Energy Laboratory Technical Report NREL/TP-5400-80684, https://afdc.energy.gov/files/u/publication/electric_vehicle_charging_infrastructure_trends_first_quarter_2021.pdf, accessed 11/3/2021.

infrastructure. EPA will continue to monitor and further study affordability issues related to electric vehicles as their prevalence in the vehicle fleet increases. We respond to these comments in more detail in the RTC.

In sum, as with the effects of the standards on vehicle sales discussed in Section VII.B of this preamble, the effects of the standards on affordability depend on two countervailing effects: the increase in the up-front costs of the vehicles, and the decrease in operating costs. As discussed here, different commenters emphasize one or the other aspect of this tradeoff. The increase in up-front costs has the potential to increase the prices of used vehicles, to make credit more difficult to obtain, and to make the least expensive new vehicles less desirable compared to used vehicles. The reduction in operating costs has the potential to mitigate or reverse all these effects. Lower operating costs on their own increase mobility (see RIA Chapter 3.1 for a discussion of rebound driving). It is possible that lower-income households may benefit more from the reduction in operating costs than the increase in up-front costs, because they own fewer vehicles per household, spend more on fuel than on vehicles on an annual basis, and those fuel expenditures represent a higher fraction of their household income.

See RIA Chapter 8.4 for more detailed discussion of these issues.

VIII. Statutory and Executive Order Reviews

A. Executive Order 12866: “Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review”

This action is an economically significant regulatory action that was submitted to OMB for review. Any changes made in response to OMB recommendations have been documented in the docket. EPA prepared an analysis of the potential costs and benefits associated with this action.

This analysis is in the Regulatory Impact Analysis, which can be found in the docket for this rule and is briefly summarized in Section VII of this preamble.

B. Paperwork Reduction Act

This action does not impose any new information collection burden under the PRA. OMB has previously approved the information collection activities contained in the existing regulations and has assigned OMB control number 2127–0019. This final rule changes the level of the existing emission standards

and revises several existing credit provisions, but imposes no new information collection requirements.

C. Regulatory Flexibility Act

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA. This action will not impose any requirements on small entities. EPA’s existing regulations exempt from the GHG standards any manufacturer, domestic or foreign, meeting Small Business Administration’s size definitions of small business in 13 CFR 121.201. EPA is not finalizing any changes to the provisions for small businesses under this rule, and thus they would remain exempt. For additional discussion see Chapter 9 of the RIA.

D. Unfunded Mandates Reform Act

This final rule contains no federal mandates under UMRA, 2 U.S.C. 1531–1538, for State, local, or tribal governments. The final rule imposes no enforceable duty on any State, local or tribal government. This final rule contains a federal mandate under UMRA that may result in expenditures of \$100 million or more for the private sector in any one year. Accordingly, the costs and benefits associated with the final rule are discussed in Section VII of this preamble and in the RIA, which are in the docket for this rule.

This action is not subject to the requirements of section 203 of UMRA because it contains no regulatory requirements that might significantly or uniquely affect small governments.

E. Executive Order 13132: “Federalism”

This action does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government.

F. Executive Order 13175: “Consultation and Coordination With Indian Tribal Governments”

This action does not have tribal implications as specified in Executive Order 13175. Thus, Executive Order 13175 does not apply to this action. However, EPA has engaged with our tribal stakeholders in the development of this rulemaking by offering a tribal workshop and offering government-to-government consultation upon request.

G. Executive Order 13045: “Protection of Children From Environmental Health Risks and Safety Risks”

With respect to GHG emissions, EPA has determined that this rule will not have disproportionate impacts on children (62 FR 19885, April 23, 1997). This rule will reduce emissions of potent GHGs, which as noted earlier in Section IV of this preamble, will reduce the effects of climate change, including the public health and welfare effects on children.

GHGs contribute to climate change and the GHG emissions reductions resulting from implementation of this final rule would further improve children’s health. The assessment literature cited in EPA’s 2009 and 2016 Endangerment Findings concluded that certain populations and life stages, including children, the elderly, and the poor, are most vulnerable to climate-related health effects. The assessment literature since 2016 strengthens these conclusions by providing more detailed findings regarding these groups’ vulnerabilities and the projected impacts they may experience. These assessments describe how children’s unique physiological and developmental factors contribute to making them particularly vulnerable to climate change. Impacts to children are expected from heat waves, air pollution, infectious and waterborne illnesses, and mental health effects resulting from extreme weather events. In addition, children are among those especially susceptible to most allergic diseases, as well as health effects associated with heat waves, storms, and floods. Additional health concerns may arise in low-income households, especially those with children, if climate change reduces food availability and increases prices, leading to food insecurity within households. More detailed information on the impacts of climate change to human health and welfare is provided in Section IV.B of this preamble.

We expect this rule would, on net, result in both small reductions and small increases in non-GHG emissions that could impact children, though not necessarily immediately and not equally in all locations. However, with respect to non-GHG emissions, EPA has concluded that it is not practicable to determine whether there would be disproportionate impacts on children. As mentioned in Section I.A.2 of this preamble, EPA intends to initiate another rulemaking to further reduce emissions of GHGs from light-duty vehicles for model years beyond 2026. We are considering how to project air quality and health impacts from the

changes in non-GHG emissions for that future rulemaking (see Section V.C of this preamble).

H. Executive Order 13211: “Energy Effects”

This action is not a “significant energy action” because it is not likely to have a significant adverse effect on the supply, distribution, or use of energy. EPA has outlined the energy effects in Table 5–7 of the Regulatory Impact Analysis (RIA), which is available in the docket for this action and is briefly summarized here.

This action reduces CO₂ for passenger cars and light trucks under revised GHG standards, which will result in significant reductions of the consumption of petroleum, will achieve energy security benefits, and have no adverse energy effects. Because the GHG emission standards result in significant fuel savings, this rule encourages more efficient use of fuels. Table 5–10 in the RIA shows over 360 billion gallons of retail gasoline reduced through 2050 or nearly seven billion barrels of oil reduced through 2050.

I. National Technology Transfer and Advancement Act and 1 CFR Part 51

This rulemaking involves technical standards. The Agency conducted a search to identify potentially applicable voluntary consensus standards. For CO₂ emissions, we identified no such standards and none were identified in comments; EPA is therefore collecting data over the same tests that are used for the current CO₂ standards and for the CAFE program. This will minimize the amount of testing done by manufacturers, since manufacturers are already required to run these tests. For A/C credits, EPA is using the test specified in 40 CFR 1066.845. EPA knows of no voluntary consensus standard for the A/C test and none were identified in comments.

In accordance with the requirements of 1 CFR 51.5, we are incorporating by reference the use of a test method from SAE International, specifically SAE J1711, “Recommended Practice for Measuring the Exhaust Emissions and Fuel Economy of Hybrid-Electric Vehicles, Including Plug-in Hybrid Vehicles”, Revised June 2010. The Recommended Practice establishes uniform chassis dynamometer test procedures for hybrid electric vehicles to allow for measuring and calculating exhaust emissions and fuel economy when vehicles drive over specified duty cycles. We adopted regulatory requirements in an earlier rulemaking, but did not complete all the steps necessary to formally incorporate this

test method by reference into the EPA regulation. The referenced test method may be obtained through the SAE International website (www.sae.org) or by calling SAE at (877) 606–7323 (U.S. and Canada) or (724) 776–4970 (outside the U.S. and Canada).

J. Executive Order 12898: “Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations”

For this final action, EPA is only able to qualitatively evaluate the extent to which this action may result in disproportionately high and adverse human health or environmental effects on minority populations, low income populations, and/or indigenous peoples, as specified in Executive Order 12898 (59 FR 7629, February 16, 1994). With respect to GHG emissions, EPA has determined that this rule will benefit all U.S. populations, including communities of color, low-income populations and/or indigenous peoples. While this final rule will substantially reduce GHG emissions, future impacts of climate change are still expected in the baseline and will likely be unevenly distributed in ways that uniquely impact these communities. EPA has not quantitatively assessed these effects.

For non-GHG pollutants, EPA has concluded that it is not practicable given the timing of this final action to determine the extent to which effects on communities of color, low-income populations and/or indigenous peoples are differentially distributed. We expect this final rule will result in both small reductions and small increases of non-GHG emissions that could impact communities with EJ concerns in the near term, though not necessarily immediately and not equally in all locations. It was not practicable to develop the air quality information needed to perform a quantified analysis of the distribution of such non-GHG impacts. EPA intends to initiate a future rule to further reduce emissions of GHGs and criteria and toxic pollutants from light-duty vehicles for model years beyond 2026. We are considering how to project air quality impacts from the changes in non-GHG emissions for that future rulemaking (see Section V.C of this preamble). Section VII.L of this preamble describes how we considered environmental justice in this action.

K. Congressional Review Act (CRA)

This action is subject to the CRA, and the EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action is a “major rule” as defined by 5 U.S.C. 804(2).

L. Judicial Review

This final action is “nationally applicable” within the meaning of CAA section 307(b)(1) because it is expressly listed in the section (*i.e.*, “any standard under section [202] of this title”). Under section 307(b)(1) of the CAA, petitions for judicial review of this action must be filed in the United States Court of Appeals for the District of Columbia Circuit within 60 days from the date this final action is published in the **Federal Register**. Filing a petition for reconsideration by the Administrator of this final action does not affect the finality of the action for the purposes of judicial review, nor does it extend the time within which a petition for judicial review must be filed and shall not postpone the effectiveness of such rule or action.

IX. Statutory Provisions and Legal Authority

Statutory authority for this final rule is found in section 202(a) (which authorizes standards for emissions of pollutants from new motor vehicles which emissions cause or contribute to air pollution which may reasonably be anticipated to endanger public health or welfare), 202(d), 203–209, 216, and 301 of the Clean Air Act, 42 U.S.C. 7521(a), 7521(d), 7522–7525, 7541–7543, 7550, and 7601.

List of Subjects

40 CFR Part 86

Environmental protection, Administrative practice and procedure, Confidential business information, Incorporation by reference, Labeling, Motor vehicle pollution, Reporting and recordkeeping requirements.

40 CFR Part 600

Environmental protection, Administrative practice and procedure, Electric power, Fuel economy, Labeling, Reporting and recordkeeping requirements.

Michael S. Regan, Administrator.

For the reasons set out in the preamble, we are amending title 40, chapter I of the Code of Federal Regulations as set forth below.

PART 86—CONTROL OF EMISSIONS FROM NEW AND IN-USE HIGHWAY VEHICLES AND ENGINES

- 1. The authority citation for part 86 continues to read as follows:

Authority: 42 U.S.C. 7401–7671q.

- 2. Amend § 86.1 by redesignating paragraphs (g)(3) through (27) as (g)(4)

through (28) and adding a new paragraph (g)(3) to read as follows:

§ 86.1 Incorporation by reference.

* * * * *

(g) * * *

(3) SAE J1711, Recommended Practice for Measuring the Exhaust Emissions and Fuel Economy of Hybrid-Electric Vehicles, Including Plug-in Hybrid Vehicles, Revised June 2010, IBR approved for § 86.1866–12(b).

* * * * *

■ 3. Amend § 86.1806–17 by revising paragraph (a) introductory text to read as follows:

§ 86.1806–17 Onboard diagnostics.

* * * * *

(a) Vehicles must comply with the 2013 OBD requirements adopted for California as described in this paragraph (a). California’s 2013 OBD–II requirements are part of Title 13, § 1968.2 of the California Code of Regulations, approved on July 31, 2013 (incorporated by reference in § 86.1). We may approve your request to certify an OBD system meeting a later version of California’s OBD requirements if you demonstrate that it complies with the intent of this section. The following clarifications and exceptions apply for vehicles certified under this subpart:

* * * * *

■ 4. Amend § 86.1818–12 by revising paragraph (c)(2)(i), (c)(3)(i), and (e)(3)(ii)(A) to read as follows:

§ 86.1818–12 Greenhouse gas emission standards for light-duty vehicles, light-duty trucks, and medium-duty passenger vehicles.

* * * * *

(c) * * *

(2) * * *

(i) *Calculation of CO₂ target values for passenger automobiles.* A CO₂ target value shall be determined for each passenger automobile as follows:

(A) For passenger automobiles with a footprint of less than or equal to 41 square feet, the gram/mile CO₂ target value shall be selected for the appropriate model year from the following table:

TABLE 1 TO § 86.1818–12(C)(2)(i)(A)

Model year	CO ₂ target value (grams/mile)
2012	244.0
2013	237.0
2014	228.0

TABLE 1 TO § 86.1818–12(C)(2)(i)(A)—Continued

Model year	CO ₂ target value (grams/mile)
2015	217.0
2016	206.0
2017	195.0
2018	185.0
2019	175.0
2020	166.0
2021	161.8
2022	159.0
2023	145.6
2024	138.6
2025	130.5
2026 and later	114.3

(B) For passenger automobiles with a footprint of greater than 56 square feet, the gram/mile CO₂ target value shall be selected for the appropriate model year from the following table:

TABLE 2 TO § 86.1818–12(C)(2)(i)(B)

Model year	CO ₂ target value (grams/mile)
2012	315.0
2013	307.0
2014	299.0
2015	288.0
2016	277.0
2017	263.0
2018	250.0
2019	238.0
2020	226.0
2021	220.9
2022	217.3
2023	199.1
2024	189.5
2025	179.4
2026 and later	160.9

(C) For passenger automobiles with a footprint that is greater than 41 square feet and less than or equal to 56 square feet, the gram/mile CO₂ target value shall be calculated using the following equation and rounded to the nearest 0.1 gram/mile:

$$\text{Target CO}_2 = [a \times f] + b$$

Where:

f is the vehicle footprint, as defined in § 86.1803; and *a* and *b* are selected from the following table for the appropriate model year:

TABLE 3 TO § 86.1818–12(C)(2)(i)(C)

Model year	A	B
2012	4.72	50.5
2013	4.72	43.3
2014	4.72	34.8

TABLE 3 TO § 86.1818–12(C)(2)(i)(C)—Continued

Model year	A	B
2015	4.72	23.4
2016	4.72	12.7
2017	4.53	8.9
2018	4.35	6.5
2019	4.17	4.2
2020	4.01	1.9
2021	3.94	0.2
2022	3.88	–0.1
2023	3.56	–0.4
2024	3.39	–0.4
2025	3.26	–3.2
2026 and later	3.11	–13.1

* * * * *

(3) * * *

(i) *Calculation of CO₂ target values for light trucks.* A CO₂ target value shall be determined for each light truck as follows:

(A) For light trucks with a footprint of less than or equal to 41 square feet, the gram/mile CO₂ target value shall be selected for the appropriate model year from the following table:

TABLE 4 TO § 86.1818–12(c)(3)(i)(A)

Model year	CO ₂ target value (grams/mile)
2012	294.0
2013	284.0
2014	275.0
2015	261.0
2016	247.0
2017	238.0
2018	227.0
2019	220.0
2020	212.0
2021	206.5
2022	203.0
2023	181.1
2024	172.1
2025	159.3
2026 and later	141.8

(B) For light trucks with a footprint that is greater than 41 square feet and less than or equal to the maximum footprint value specified in the table below for each model year, the gram/mile CO₂ target value shall be calculated using the following equation and rounded to the nearest 0.1 gram/mile, except as specified in paragraph (c)(3)(i)(D) of this section:

$$\text{Target CO}_2 = (a \times f) + b$$

Where:

f is the footprint, as defined in § 86.1803; and *a* and *b* are selected from the following table for the appropriate model year:

TABLE 5 TO § 86.1818–12(c)(3)(i)(B)

Model year	Maximum footprint	A	B
2012	66.0	4.04	128.6
2013	66.0	4.04	118.7
2014	66.0	4.04	109.4
2015	66.0	4.04	95.1
2016	66.0	4.04	81.1
2017	50.7	4.87	38.3
2018	60.2	4.76	31.6
2019	66.4	4.68	27.7
2020	68.3	4.57	24.6
2021	68.3	4.51	21.5
2022	68.3	4.44	20.6
2023	74.0	3.97	18.4
2024	74.0	3.77	17.4
2025	74.0	3.58	12.5
2026 and later	74.0	3.41	1.9

(C) For light trucks with a footprint that is greater than the minimum footprint value specified in the table below and less than or equal to the maximum footprint value specified in the table below for each model year, the

gram/mile CO₂ target value shall be calculated using the following equation and rounded to the nearest 0.1 gram/mile, except as specified in paragraph (c)(3)(i)(D) of this section:

$$\text{Target CO}_2 = (a \times f) + b$$

Where:

f is the footprint, as defined in § 86.1803; and *a* and *b* are selected from the following table for the appropriate model year:

TABLE 6 TO § 86.1818–12(c)(3)(i)(C)

Model year	Minimum footprint	Maximum footprint	A	b
2017	50.7	66.0	4.04	80.5
2018	60.2	66.0	4.04	75.0

(D) For light trucks with a footprint greater than the minimum value specified in the table below for each

model year, the gram/mile CO₂ target value shall be selected for the

appropriate model year from the following table:

TABLE 7 TO § 86.1818–12(c)(3)(i)(D)

Model year	Minimum footprint	CO ₂ target value (grams/mile)
2012	66.0	395.0
2013	66.0	385.0
2014	66.0	376.0
2015	66.0	362.0
2016	66.0	348.0
2017	66.0	347.0
2018	66.0	342.0
2019	66.4	339.0
2020	68.3	337.0
2021	68.3	329.4
2022	68.3	324.1
2023	74.0	312.1
2024	74.0	296.5
2025	74.0	277.4
2026 and later	74.0	254.4

- * * * * *
- (e) * * *
- (3) * * *
- (ii) * * *

(A) The alternative compliance schedule is as described in this paragraph (e)(3)(ii)(A). In lieu of the

standards in paragraph (c) of this section that would otherwise be applicable to the model year shown in the first column of table 8 to § 86.1818–12(e)(3)(ii)(A), a qualifying manufacturer may comply with the standards in paragraph (c) of this

section determined for the model year shown in the second column of the table. In the 2021 and later model years the manufacturer must meet the standards designated for each model year in paragraph (c) of this section.

Table 8 to § 86.1818–12(e)(3)(ii)(A) follows:

TABLE 8 TO § 86.1818–12(e)(3)(ii)(A)

Model year	Applicable standards
2017	2016
2018	2016
2019	2018
2020	2019

* * * * *

■ 5. Amend § 86.1865–12 by revising paragraphs (k)(2), (3), and (6) to read as follows:

§ 86.1865–12 How to comply with the fleet average CO₂ standards.

* * * * *

(k) * * *

(2) There are no property rights associated with CO₂ credits generated under this subpart. Credits are a limited authorization to emit the designated amount of emissions. Nothing in this part or any other provision of law shall be construed to limit EPA’s authority to terminate or limit this authorization through a rulemaking.

(3) Each manufacturer must comply with the reporting and recordkeeping requirements of paragraph (l) of this section for CO₂ credits, including early credits. The averaging, banking and trading program is enforceable as provided in paragraphs (k)(7)(ii), (k)(9)(iii), and (l)(1)(vi) of this section through the certificate of conformity that allows the manufacturer to introduce any regulated vehicles into U.S. commerce.

* * * * *

(6) Unused CO₂ credits generally retain their full value through five model years after the model year in which they were generated; credits remaining at the end of the fifth model year after the model year in which they were generated may not be used to demonstrate compliance for later model years. However, in the case of model year 2017 and 2018 passenger cars and light trucks, unused CO₂ credits retain their full value through six model years after the year in which they were generated.

* * * * *

■ 6. Amend § 86.1866–12 by revising the section heading and paragraph (b) and adding paragraph (c)(3) to read as follows:

§ 86.1866–12 CO₂ credits for advanced technology vehicles.

* * * * *

(b) For electric vehicles, plug-in hybrid electric vehicles, fuel cell vehicles, dedicated natural gas vehicles, and dual-fuel natural gas vehicles as those terms are defined in § 86.1803–01, that are certified and produced for U.S. sale in the specified model years and that meet the additional specifications in this section, the manufacturer may use the production multipliers in this paragraph (b) when determining additional credits for advanced technology vehicles. Full size pickup trucks eligible for and using a production multiplier are not eligible for the strong hybrid-based credits described in § 86.1870–12(a)(2) or the performance-based credits described in § 86.1870–12(b).

(1) The following production multipliers apply for model year 2017 through 2025 vehicles:

TABLE 1 TO PARAGRAPH (b)(1)

Model year	Electric vehicles and fuel cell vehicles	Plug-in hybrid electric vehicles	Dedicated and dual-fuel natural gas vehicles
2017	2.0	1.6	1.6
2018	2.0	1.6	1.6
2019	2.0	1.6	1.6
2020	1.75	1.45	1.45
2021	1.5	1.3	1.3
2022	2.0
2023–2024	1.5	1.3

(2) The minimum all-electric driving range that a plug-in hybrid electric vehicle must have in order to qualify for use of a production multiplier is 10.2 miles on its nominal storage capacity of electricity when operated on the highway fuel economy test cycle. Alternatively, a plug-in hybrid electric vehicle may qualify for use of a production multiplier by having an equivalent all-electric driving range greater than or equal to 10.2 miles during its actual charge-depleting range as measured on the highway fuel economy test cycle and tested according to the requirements of SAE J1711 (incorporated by reference in § 86.1). The equivalent all-electric range of a

PHEV is determined from the following formula:

$$EAER = R_{CDA} \times (CO_{2CS} - CO_{2CD}/CO_{2CS})$$

Where:

EAER = the equivalent all-electric range attributed to charge-depleting operation of a plug-in hybrid electric vehicle on the highway fuel economy test cycle.

R_{CDA} = The actual charge-depleting range determined according to SAE J1711 (incorporated by reference in § 86.1).

CO_{2CS} = The charge-sustaining CO₂ emissions in grams per mile on the highway fuel economy test determined according to SAE J1711 (incorporated by reference in § 86.1).

CO_{2CD} = The charge-depleting CO₂ emissions in grams per mile on the highway fuel economy test determined according to

SAE J1711 (incorporated by reference in § 86.1).

(3) The actual production of qualifying vehicles may be multiplied by the applicable value according to the model year, and the result, rounded to the nearest whole number, may be used to represent the production of qualifying vehicles when calculating average carbon-related exhaust emissions under § 600.512 of this chapter.

(c) * * *

(3) Multiplier-based credits for model years 2022 through 2025 may not exceed credit caps, as follows:

(i) Calculate a nominal annual credit cap in Mg using the following equation, rounded to the nearest whole number:

$$CAP_{annual} = 2.5 \frac{g}{mile} \cdot [195,264 \text{ miles} \cdot P_{auto} + 225,865 \cdot P_{truck}] \cdot 10^{-6} \frac{tonne}{g}$$

Where:

P_{auto} = total number of certified passenger automobiles the manufacturer produced in a given model year for sale in any state or territory of the United States.

P_{truck} = total number of certified light trucks (including MDPV) the manufacturer produced in a given model year for sale in any state or territory of the United States.

(ii) Calculate an annual g/mile equivalent value for the multiplier-based credits using the following equation, rounded to the nearest 0.1 g/mile:

$$\text{annual g per mile equivalent value} = 2.5 \cdot \frac{\text{annual credits}}{CAP_{\text{annual}}}$$

Where:

annual credits = a manufacturer's total multiplier-based credits in a given model year from all passenger automobiles and light trucks as calculated under this paragraph (c).

(iii) Calculate a cumulative g/mile equivalent value for the multiplier-based credits in 2022 through 2025 by adding the annual g/mile equivalent values calculated under paragraph (c)(3)(ii) of this section.

(iv) The cumulative g/mile equivalent value may not exceed 10.0 in any year.

(v) The annual credit report must include for every model year from 2022 through 2025, as applicable, the calculated values for the nominal annual credit cap in Mg and the cumulative g/mile equivalent value.

■ 7. Revise the section heading for § 86.1867–12 to read as follows:

§ 86.1867–12 CO₂ credits for reducing leakage of air conditioning refrigerant.

* * * * *

■ 8. Amend § 86.1869–12 by revising paragraphs (b)(2) and (b)(4)(v), (vi), and (x) and (d)(2)(ii)(A) to read as follows:

§ 86.1869–12 CO₂ credits for off-cycle CO₂ reducing technologies.

* * * * *

(b) * * *

(2) The maximum allowable decrease in the manufacturer's combined passenger automobile and light truck fleet average CO₂ emissions attributable to use of the default credit values in paragraph (b)(1) of this section is 15 g/mi for model years 2023 through 2026 and 10 g/mi in all other model years. If the total of the CO₂ g/mi credit values from paragraph (b)(1) of this section does not exceed 10 or 15 g/mi (as

applicable) for any passenger automobile or light truck in a manufacturer's fleet, then the total off-cycle credits may be calculated according to paragraph (f) of this section. If the total of the CO₂ g/mi credit values from paragraph (b)(1) of this section exceeds 10 or 15 g/mi (as applicable) for any passenger automobile or light truck in a manufacturer's fleet, then the gram per mile decrease for the combined passenger automobile and light truck fleet must be determined according to paragraph (b)(2)(ii) of this section to determine whether the applicable limitation has been exceeded.

(i) Determine the gram per mile decrease for the combined passenger automobile and light truck fleet using the following formula:

$$\text{Decrease} = \frac{\text{Credits} \times 1,000,000}{[(\text{Prod}_C \times 195,264) + (\text{Prod}_T \times 225,865)]}$$

Where:

Credits = The total of passenger automobile and light truck credits, in Megagrams, determined according to paragraph (f) of this section and limited to those credits accrued by using the default gram per mile values in paragraph (b)(1) of this section.

Prod_C = The number of passenger automobiles produced by the manufacturer and delivered for sale in the U.S.

Prod_T = The number of light trucks produced by the manufacturer and delivered for sale in the U.S.

(ii) If the value determined in paragraph (b)(2)(i) of this section is

greater than 10 or 15 grams per mile (as applicable), the total credits, in Megagrams, that may be accrued by a manufacturer using the default gram per mile values in paragraph (b)(1) of this section shall be determined using the following formula:

$$\text{Credit (Megagrams)} = \frac{[10 \times ((\text{Prod}_C \times 195,264) + (\text{Prod}_T \times 225,865))]}{1,000,000}$$

Where:

Prod_C = The number of passenger automobiles produced by the manufacturer and delivered for sale in the U.S.

Prod_T = The number of light trucks produced by the manufacturer and delivered for sale in the U.S.

(iii) If the value determined in paragraph (b)(2)(i) of this section is not greater than 10 or 15 grams per mile (as applicable), then the credits that may be accrued by a manufacturer using the default gram per mile values in paragraph (b)(1) of this section do not

exceed the allowable limit, and total credits may be determined for each category of vehicles according to paragraph (f) of this section.

(iv) If the value determined in paragraph (b)(2)(i) of this section is greater than 10 or 15 grams per mile (as applicable), then the combined passenger automobile and light truck credits, in Megagrams, that may be accrued using the calculations in paragraph (f) of this section must not exceed the value determined in paragraph (b)(2)(ii) of this section. This

limitation should generally be done by reducing the amount of credits attributable to the vehicle category that caused the limit to be exceeded such that the total value does not exceed the value determined in paragraph (b)(2)(ii) of this section.

* * * * *

(4) * * *

(v) *Active transmission warm-up* means one of the following:

(A) Through model year 2022, *active transmission warm-up* means a system that uses waste heat from the vehicle to

quickly warm the transmission fluid to an operating temperature range using a heat exchanger, increasing the overall transmission efficiency by reducing parasitic losses associated with the transmission fluid, such as losses related to friction and fluid viscosity.

(B) Starting in model year 2023, *active transmission warm-up* means a system that uses waste heat from the vehicle's exhaust to warm the transmission fluid to an operating temperature range using a dedicated heat exchanger. *Active transmission warm-up* may also include coolant systems that capture heat from a liquid-cooled exhaust manifold if the coolant loop to the transmission heat exchanger is not shared with other heat-extracting systems and it starts heat transfer to the transmission fluid immediately after engine starting, consistent with designs that exchange heat directly from exhaust gases to the transmission fluid.

(vi) *Active engine warm-up* means one of the following:

(A) Through model year 2022, *active engine warm-up* means a system that uses waste heat from the vehicle to warm up targeted parts of the engine so it reduces engine friction losses and enables closed-loop fuel control to start sooner.

(B) Starting in model year 2023, *active engine warm-up* means a system that uses waste heat from the vehicle's exhaust to warm up targeted parts of the engine so it reduces engine friction losses and enables closed-loop fuel control to start sooner. *Active engine warm-up* may also include coolant systems that capture heat from a liquid-cooled exhaust manifold.

* * * * *

(x) *Passive cabin ventilation* means one of the following:

(A) Through model year 2022, *passive cabin ventilation* means ducts, devices, or methods that utilize convective airflow to move heated air from the cabin interior to the exterior of the vehicle.

(B) Starting in model year 2023, *passive cabin ventilation* means methods that create and maintain convective airflow through the body's cabin by keeping windows or sunroof open to prevent excessive interior temperatures when the vehicle is parked outside in direct sunlight.

* * * * *

- (d) * * *
- (2) * * *
- (ii) * * *

(A) A citation to the appropriate previously approved methodology, including the appropriate **Federal Register** Notice and any subsequent EPA documentation of the Administrator's decision;

* * * * *

■ 9. Amend § 86.1870–12 by revising the section heading and paragraphs (a)(2) and (b)(2) to read as follows:

§ 86.1870–12 CO₂ credits for qualifying full-size pickup trucks.

* * * * *

- (a) * * *

(2) Full-size electric trucks that are strong hybrid electric vehicles and that are produced in 2017 through 2021 model years are eligible for a credit of 20 grams/mile. This same credit is available again for those vehicles produced in 2023 and 2024 model years. To receive this credit in a model year, the manufacturer must produce a quantity of strong hybrid electric full-size pickup trucks such that the proportion of production of such vehicles, when compared to the manufacturer's total production of full-size pickup trucks, is not less than 10 percent in that model year. Full-size pickup trucks earning credits under this paragraph (a)(2) may not earn credits based on the production multipliers described in § 86.1866–12(b).

* * * * *

- (b) * * *

(2) Full-size pickup trucks that are produced in 2017 through 2021 model years and that achieve carbon-related exhaust emissions less than or equal to the applicable target value determined in § 86.1818–12(c)(3) multiplied by 0.80 (rounded to the nearest gram/mile) in a model year are eligible for a credit of 20 grams/mile. This same credit is available again for qualifying vehicles produced in 2023 and 2024 model years. A pickup truck that qualifies for this credit in a model year may claim this credit for a maximum of four subsequent model years (a total of five consecutive model years) if the carbon-related exhaust emissions of that pickup truck do not increase relative to the emissions in the model year in which the pickup truck first qualified for the credit. This credit may not be claimed

in model year 2022 or in any model year after 2024. To qualify for this credit in a model year, the manufacturer must produce a quantity of full-size pickup trucks that meet the emission requirements of this paragraph (b)(2) such that the proportion of production of such vehicles, when compared to the manufacturer's total production of full-size pickup trucks, is not less than 10 percent in that model year. A pickup truck that qualifies for this credit in a model year and is subject to a major redesign in a subsequent model year such that it qualifies for the credit in the model year of the redesign may be allowed to qualify for an additional five years with EPA approval (not to go beyond the 2024 model year). Use good engineering judgment to determine whether a pickup truck has been subject to a major redesign.

* * * * *

PART 600—FUEL ECONOMY AND GREENHOUSE GAS EXHAUST EMISSIONS OF MOTOR VEHICLES

■ 10. The authority citation for part 600 continues to read as follows:

Authority: 49 U.S.C. 32901–23919q, Pub. L. 109–58.

■ 11. Amend § 600.510–12 by revising paragraphs (j)(2)(v) introductory text and (j)(2)(vii)(A) introductory text to read as follows:

§ 600.510–12 Calculation of average fuel economy and average carbon-related exhaust emissions.

* * * * *

- (j) * * *

- (2) * * *

(v) For natural gas dual fuel model types, for model years 2012 through 2015, the arithmetic average of the following two terms; the result rounded to the nearest gram per mile:

* * * * *

(vii)(A) This paragraph (j)(2)(vii) applies to model year 2016 and later natural gas dual fuel model types. Model year 2021 and later natural gas dual fuel model types may use a utility factor of 0.5 or the utility factor prescribed in this paragraph (j)(2)(vii).

[Docket No. FAR-2021-0051, Sequence No. 7]

Federal Acquisition Regulation; Federal Acquisition Circular 2022-03; Introduction

AGENCY: Department of Defense (DoD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

ACTION: Summary presentation of a final rule.

SUMMARY: This document summarizes the Federal Acquisition Regulation (FAR) rule agreed to by the Civilian Agency Acquisition Council and the Defense Acquisition Regulations Council (Councils) in this Federal Acquisition Circular (FAC) 2022-03. A companion document, the *Small Entity Compliance Guide* (SECG), follows this FAC.

DATES: For effective date see the separate documents, which follow.

FOR FURTHER INFORMATION CONTACT: Mr. Curtis E. Glover, Sr., Procurement Analyst, at 202-501-1448 or by email at curtis.glover@gsa.gov for clarification of content. For information pertaining to status or publication schedules, contact the Regulatory Secretariat Division at 202-501-4755 or GSARegSec@gsa.gov. Please cite FAC 2022-03, FAR Case 2022-001.

Rule Listed in FAC 2022-03

Subject: Trade Agreements Thresholds.

FAR Case: 2022-001.

ADDRESSES: The FAC, including the SECG, is available via the internet at <https://www.regulations.gov>.

SUPPLEMENTARY INFORMATION: A summary for the FAR rule follows. For the actual revisions and/or amendments made by this FAR rule, refer to the specific subject set forth in the document following this summary. FAC 2022-03 amends the FAR as follows:

Trade Agreements Thresholds (FAR Case 2022-001)

This final rule amends the Federal Acquisition Regulation to adjust the thresholds for application of the World Trade Organization Government Procurement Agreement and the Free Trade Agreements as determined by the United States Trade Representative, according to predetermined formulae under the agreements.

William F. Clark,

Director, Office of Government-wide Acquisition Policy, Office of Acquisition Policy, Office of Government-wide Policy.

Federal Acquisition Circular (FAC) 2022-03 is issued under the authority of the Secretary of Defense, the Administrator of General Services, and the Administrator of National Aeronautics and Space Administration.

Unless otherwise specified, all Federal Acquisition Regulation (FAR) and other directive material contained in FAC 2022-03 is effective December 30, 2022 except for FAR Case 2022-001, which is effective January 1, 2022.

Linda W. Neilson,

Director, Defense Acquisition Regulations System, Department of Defense.

William F. Clark,

Director, Office of Government-wide Acquisition Policy, Office of Acquisition Policy, Office of Government-wide Policy.

Karla Smith Jackson,

Assistant Administrator for Procurement, National Aeronautics and Space Administration.

RIN 9000-A038

Federal Acquisition Regulation: Trade Agreements Thresholds

AGENCY: Department of Defense (DoD), General Services Administration (GSA),

and National Aeronautics and Space Administration (NASA).

ACTION: Final rule.

SUMMARY: DoD, GSA, and NASA are issuing a final rule amending the Federal Acquisition Regulation (FAR) to incorporate revised thresholds for application of the World Trade Organization Government Procurement Agreement and the Free Trade Agreements, as determined by the United States Trade Representative.

DATES: Effective January 1, 2022.

FOR FURTHER INFORMATION CONTACT: Mr. Curtis E. Glover, Sr., Procurement Analyst, at 202-501-1448 or by email at curtis.glover@gsa.gov for clarification of content. For information pertaining to status or publication schedules, contact the Regulatory Secretariat Division at 202-501-4755 or GSARegSec@gsa.gov. Please cite FAC 2022-03, FAR Case 2022-001.

SUPPLEMENTARY INFORMATION:

I. Background

Approximately every two years, the trade agreements thresholds for the World Trade Organization Government Procurement Agreement (WTO GPA) and the free trade agreements (FTAs) are adjusted according to predetermined formulae under the agreements. These thresholds become effective on January 1, 2022. On November 26, 2021 (86 FR 67579), the United States Trade Representative (USTR) published new procurement thresholds. DoD, GSA, and NASA are not changing the Canada thresholds because of the United States-Mexico-Canada Agreement Implementation Act, which is being implemented in FAR Case 2020-014, United States-Mexico-Canada Agreement. FAR Case 2020-014 was published as a proposed rule on December 13, 2021.

The United States Trade Representative has specified the following new thresholds:

	Supply contract (equal to or exceeding)	Service contract (equal to or exceeding)	Construction contract (equal to or exceeding)
Trade agreement			
WTO GPA	\$183,000	\$183,000	\$7,032,000
FTAs:			

Trade agreement	Supply contract (equal to or exceeding)	Service contract (equal to or exceeding)	Construction contract (equal to or exceeding)
Australia FTA	2,319	92,319	7,032,000
Bahrain FTA	183,000	183,000	12,001,460
CAFTA-DR (Costa Rica, Dominican Republic, El Salvador, Guatemala, Honduras, and Nicaragua)	92,319	92,319	7,032,000
Chile FTA	92,319	92,319	7,032,000
Colombia FTA	92,319	92,319	7,032,000
Korea FTA	100,000	100,000	7,032,000
Morocco FTA	183,000	183,000	7,032,000
NAFTA:			
Canada	25,000	83,099	10,802,884
Mexico	92,319	92,319	12,001,460
Oman FTA	183,000	183,000	12,001,460
Panama FTA	183,000	183,000	7,032,000
Peru FTA	183,000	183,000	7,032,000
Singapore FTA	92,319	92,319	7,032,000
Israeli Trade Act	50,000		

II. Discussion and Analysis

This final rule implements the new thresholds in FAR subpart 25.4, Trade Agreements, and other sections in the FAR that include trade agreements thresholds (i.e., 22.1503, 25.202, 25.603, 25.1101, and 25.1102).

In addition, changes are required to the provision at 52.204–8, Annual Representations and Certifications, and the clause at 52.222–19, Child Labor-Cooperation with Authorities and Remedies, with conforming changes to the clause dates in 52.212–5, Contract Terms and Conditions Required to Implement Statutes or Executive Orders-Commercial Products and Commercial Services, and 52.213–4, Terms and Conditions-Simplified Acquisitions (Other Than Commercial Products and Commercial Services).

III. Publication of This Final Rule for Public Comment Is Not Required by Statute

The statute that applies to the publication of the FAR is 41 U.S.C. 1707. Subsection (a)(1) of 41 U.S.C. 1707 requires that a procurement policy, regulation, procedure, or form (including an amendment or modification thereof) must be published for public comment if it relates to the expenditure of appropriated funds and has either a significant effect beyond the internal operating procedures of the agency issuing the policy, regulation, procedure, or form, or has a significant cost or administrative impact on contractors or offerors. This final rule is not required to be published for public comment, because it only adjusts the thresholds according to predetermined formulae to adjust for changes in economic conditions, thus maintaining the status quo, without significant effect

beyond the internal operating procedures of the Government.

IV. Expected Impact of the Rule

This final rule will adjust the thresholds for application of the WTO GPA and FTAs, as determined by the USTR. For acquisitions covered by the WTO GPA or FTAs, the USTR has waived the Buy American statute and other discriminatory provisions for eligible products. As a result, eligible products and services will receive equal consideration with domestic offers if the estimated value of the contract meets or exceeds the new thresholds set by the USTR. This rule is not expected to significantly impact domestic offerors or offerors covered by the WTO GPA or a FTA, because the threshold adjustments made under this rule simply accommodate changes in economic conditions while maintaining the status quo.

V. Applicability to Contracts at or Below the Simplified Acquisition Threshold and for Commercial Products, Including Commercially Available Off-the-Shelf Items, or for Commercial Services

This rule amends the FAR to make minor revisions in the thresholds for application of the WTO GPA and the FTAs. The revisions do not add any new burdens or, except for the thresholds changes themselves, impact applicability of clauses and provisions at or below the simplified acquisition threshold, to acquisitions of commercial products (including commercially available off-the-shelf items), or to acquisition of commercial services.

VI. Executive Orders 12866 and 13563

Executive Orders (E.O.s) 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory

alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This is not a significant regulatory action and, therefore, was not subject to review under Section 6(b) of E.O. 12866, Regulatory Planning and Review, dated September 30, 1993.

VII. Congressional Review Act

As required by the Congressional Review Act (5 U.S.C. 801–808) before an interim or final rule takes effect, DoD, GSA, and NASA will send the rule and the “Submission of Federal Rules Under the Congressional Review Act” form to each House of the Congress and to the Comptroller General of the United States. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. The Office of Information and Regulatory Affairs (OIRA) in the Office of Management and Budget has determined that this is not a major rule under 5 U.S.C. 804.

VIII. Regulatory Flexibility Act

Because a notice of proposed rulemaking and an opportunity for public comment are not required to be given for this rule under 41 U.S.C. 1707(a)(1) (see section III of this preamble), the analytical requirements of the Regulatory Flexibility Act (5 U.S.C. 601–612) are not applicable. Accordingly, no regulatory flexibility analysis is required, and none has been prepared.

IX. Paperwork Reduction Act

This rule affects the information collection requirements in the provisions at 52.225–2, 52.225–4, 52.225–6 and 52.225–10, and the clauses at FAR 52.225–9, 52.225–11, 52.225–21, and 52.225–23, currently approved under OMB Control Number 9000–0024, entitled “Buy American Act, Trade Agreements, and Duty-Free Entry, in accordance with the Paperwork Reduction Act (44 U.S.C. 3501–3521). The impact, however, is negligible, because the threshold changes are in line with inflation and maintain the status quo. As a result, there is no change to the estimated burden.

List of Subjects in 48 CFR Parts 22, 25, and 52

Government procurement.

William F. Clark,

Director, Office of Government-wide Acquisition Policy, Office of Acquisition Policy, Office of Government-wide Policy.

Therefore, DoD, GSA, and NASA amend 48 CFR parts 22, 25, and 52 as set forth below:

■ 1. The authority citation for 48 CFR parts 22, 25, and 52 continues to read as follows:

Authority: 40 U.S.C. 121(c); 10 U.S.C. chapter 137; and 51 U.S.C. 20113.

PART 22—APPLICATION OF LABOR LAWS TO GOVERNMENT ACQUISITIONS

22.1503 [Amended]

■ 2. Amend section 22.1503 by—

■ a. Removing from paragraph (b)(3) “\$83,099” and adding “\$92,319” in its place; and

■ b. Removing from paragraph (b)(4) “\$182,000” and adding “\$183,000” in its place.

PART 25—FOREIGN ACQUISITION

25.202 [Amended]

■ 3. Amend section 25.202 by removing from paragraph (c) “\$7,008,000” and adding “\$7,032,000” in its place.

■ 4. Amend section 25.402 by revising table 1 to paragraph (b) to read as follows:

25.402 General.

* * * * *

(b) * * *

TABLE 1 TO PARAGRAPH (b)

Trade agreement	Supply contract (equal to or exceeding)	Service contract (equal to or exceeding)	Construction contract (equal to or exceeding)
WTO GPA	\$183,000	\$183,000	\$7,032,000
FTAs:			
Australia FTA	92,319	92,319	7,032,000
Bahrain FTA	183,000	183,000	12,001,460
CAFTA-DR (Costa Rica, Dominican Republic, El-Salvador, Guatemala, Honduras, and Nicaragua)	92,319	92,319	7,032,000
Chile FTA	92,319	92,319	7,032,000
Colombia FTA	92,319	92,319	7,032,000
Korea FTA	100,000	100,000	7,032,000
Morocco FTA	183,000	183,000	7,032,000
NAFTA:			
—Canada	25,000	83,099	10,802,884
—Mexico	92,319	92,319	12,001,460
Oman FTA	183,000	183,000	12,001,460
Panama FTA	183,000	183,000	7,032,000
Peru FTA	183,000	183,000	7,032,000
Singapore FTA	92,319	92,319	7,032,000
Israeli Trade Act	50,000

25.603 [Amended]

■ 5. Amend section 25.603 by removing from paragraph (c)(1) “\$7,008,000” and adding “\$7,032,000” in its place.

25.1101 [Amended]

■ 6. Amend section 25.1101 by—

■ a. Removing from paragraph (b)(1)(i)(A) “\$182,000” and adding “\$183,000” in its place;

■ b. Removing from paragraphs (b)(1)(iii) and (iv) “\$83,099” and adding “\$92,319” in its place;

■ c. Removing from paragraphs (b)(2)(iii) and (iv) “\$83,099” and adding “\$92,319” in its place;

■ d. Removing from paragraph (c)(1) “\$182,000” and “WTO GPA applies” and adding “\$183,000” and “WTO GPA” in their places, respectively; and

■ e. Removing from paragraph (d) “\$182,000” and adding “\$183,000” in its place.

25.1102 [Amended]

■ 7. Amend section 25.1102 by—

■ a. Removing from the paragraph (a) introductory text paragraph (c) introductory text “\$7,008,000” and adding “\$7,032,000” in its place; and

■ b. Removing from paragraphs (c)(3) and (d)(3) “\$7,008,000” and “\$10,802,884” adding “\$7,032,000” and “\$12,001,460” in their places, respectively.

PART 52—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

■ 8. Amend section 52.204–8 by—

■ a. Revising the date of the provision; and

■ b. Removing from paragraphs (c)(1)(xxi)(C) and (D) “\$83,099” and adding “\$92,319” in its place.

The revision reads as follows:

52.204–8 Annual Representations and Certifications.

* * * * *

Annual Representations and Certifications (Jan 2022)

* * * * *

■ 9. Amend section 52.212–5 by—

■ a. Revising the date of the clause; and

■ b. Removing from paragraph (b)(28) “(JAN 2020)” and adding “(JAN 2022)” in its place.

The revisions read as follows:

52.212–5 Contract Terms and Conditions Required to Implement Statutes or Executive Orders—Commercial Products and Commercial Services.

* * * * *

Contract Terms and Conditions Required To Implement Statutes or Executive Orders—Commercial Products and Commercial Services (Jan 2022)

* * * * *

- 10. Amend section 52.213–4 by—
- a. Revising the date of the clause; and
- b. Removing from paragraph (b)(1)(ii) “(JAN 2020)” and adding “(JAN 2022)” in its place.

The revision reads as follows:

52.213–4 Terms and Conditions—Simplified Acquisitions (Other Than Commercial Products and Commercial Services).

* * * * *

Terms and Conditions—Simplified Acquisitions (Other Than Commercial Products and Commercial Services) (Jan 2022)

* * * * *

- 11. Amend section 52.222–19 by—
- a. Revising the date of the clause; and
- b. Removing from paragraph (a)(3) “\$83,099” and adding “\$92,319” in its place; and
- c. Removing from paragraph (a)(4) “\$182,000” and adding “\$183,000” in its place.

The revision reads as follows:

52.222–19 Child Labor—Cooperation with Authorities and Remedies.

* * * * *

Child Labor—Cooperation With Authorities and Remedies (Jan 2022)

* * * * *

[Docket No. FAR–2021–0051, Sequence No. 7]

Federal Acquisition Regulation; Federal Acquisition Circular 2022–03; Small Entity Compliance Guide

AGENCY: Department of Defense (DoD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

ACTION: Small Entity Compliance Guide (SECG).

SUMMARY: This document is issued under the joint authority of DoD, GSA, and NASA. This *Small Entity Compliance Guide* has been prepared in accordance with section 212 of the Small Business Regulatory Enforcement Fairness Act of 1996. It consists of a summary of the rule appearing in Federal Acquisition Circular (FAC) 2022–03, which amends the Federal Acquisition Regulation (FAR). Interested parties may obtain further information regarding this rule by referring to FAC 2022–03, which precedes this document.

DATES: December 30, 2021.

ADDRESSES: The FAC, including the SECG, is available via the internet at <https://www.regulations.gov>.

FOR FURTHER INFORMATION CONTACT: Mr. Curtis E. Glover, Sr., Procurement Analyst, at 202–501–1448 or by email at curtis.glover@gsa.gov for clarification of content. For information pertaining to status or publication schedules, contact the Regulatory Secretariat Division at 202–501–4755 or GSARegSec@gsa.gov. Please cite FAC 2022–03, FAR Case 2022–001.

Rule Listed in FAC 2022–03

Subject: Trade Agreements Thresholds.

FAR Case: 2022–001.

SUPPLEMENTARY INFORMATION: A summary for the FAR rule follows. For the actual revisions and/or amendments made by this FAR rule, refer to the specific subject set forth in the document following this summary. FAC 2022–03 amends the FAR as follows:

Trade Agreements Thresholds (FAR Case 2022–001)

This final rule amends the Federal Acquisition Regulation to adjust the thresholds for application of the World Trade Organization Government Procurement Agreement and the Free Trade Agreements as determined by the United States Trade Representative, according to predetermined formulae under the agreements.

William F. Clark,

Director, Office of Government-wide Acquisition Policy, Office of Acquisition Policy, Office of Government-wide Policy.

ELECTRONIC RESEARCH

World Wide Web

Full text of the daily Federal Register, CFR and other publications is located at: www.govinfo.gov.

Federal Register information and research tools, including Public Inspection List and electronic text are located at: www.federalregister.gov.

E-mail

FEDREGTOC (Daily Federal Register Table of Contents Electronic Mailing List) is an open e-mail service that provides subscribers with a digital form of the Federal Register Table of Contents. The digital form of the Federal Register Table of Contents includes HTML and PDF links to the full text of each document.

To join or leave, go to <https://public.govdelivery.com/accounts/USGPOOFR/subscriber/new>, enter your email address, then follow the instructions to join, leave, or manage your subscription.

PENS (Public Law Electronic Notification Service) is an e-mail service that notifies subscribers of recently enacted laws.

To subscribe, go to <http://listserv.gsa.gov/archives/publaws-l.html> and select *Join or leave the list (or change settings)*; then follow the instructions.

FEDREGTOC and **PENS** are mailing lists only. We cannot respond to specific inquiries.

Reference questions. Send questions and comments about the Federal Register system to: fedreg.info@nara.gov

The Federal Register staff cannot interpret specific documents or regulations.

LIST OF PUBLIC LAWS

This is a continuing list of public bills from the current session of Congress which have become Federal laws. This list is also available online at <https://www.archives.gov/federal-register/laws>.

The text of laws is not published in the **Federal Register** but may be ordered in "slip law" (individual

pamphlet) form from the Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402 (phone, 202-512-1808). The text will also be made available at <https://www.govinfo.gov>. Some laws may not yet be available.

H.R. 1664/P.L. 117-80
To authorize the National Medal of Honor Museum Foundation to establish a commemorative work in the District of Columbia and its environs, and for other

purposes. (Dec. 27, 2021; 135 Stat. 1539)

S. 1605/P.L. 117-81
National Defense Authorization Act for Fiscal Year 2022 (Dec. 27, 2021; 135 Stat. 1541)

Last List December 28, 2021

Public Laws Electronic Notification Service (PENS)

PENS is a free email notification service of newly

enacted public laws. To subscribe, go to <https://listserv.gsa.gov/cgi-bin/wa.exe?SUBED1=PUBLAWS-L&A=1>

Note: This service is strictly for email notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
