FEDERAL REGISTER

Vol. 87 Tuesday

No. 35 February 22, 2022

Pages 9425–10056

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.federalregister.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.govinfo.gov*, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpocusthelp.com.*

The annual subscription price for the **Federal Register** paper edition is $860 plus postage, or $929, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 87 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2021–0662; Project Identifier MCAI–2021–00031–E; Amendment 39–21943; AD 2022–04–02]

RIN 2120–AA64

Airworthiness Directives; Rolls-Royce Deutschland Ltd & Co KG (Type Certificate Previously Held by Rolls-Royce plc) Turbofan Engines

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for certain Rolls-Royce Deutschland Ltd & Co KG (RRD) Trent 1000 model turbofan engines. This AD was prompted by reports of high levels of wear on the seal fins on a small number of certain high-pressure turbine triple seals. This AD requires manual deactivation of the modulated air system (MAS) control valves. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective March 29, 2022.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of March 29, 2022.

ADDRESSES: For service information identified in this final rule, contact Rolls-Royce plc, Corporate Communications, P.O. Box 31, Derby, DE24 8BJ, United Kingdom; phone: +44 (0)1332 242424; fax: +44 (0)1332 249936; website: *https://www.rolls-royce.com/contact-us.aspx.* You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 1200 District Avenue, Burlington, MA 01803. For information on the availability of this material at the FAA, call (817) 222–5110. It is also available at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2021–0662.

Examining the AD Docket

You may examine the AD docket at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2021–0662; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT: Kevin Clark, Aviation Safety Engineer, ECO Branch, FAA, 1200 District Avenue, Burlington, MA 01803; phone: (781) 238–7088; fax: (781) 238–7199; email: *kevin.m.clark@faa.gov*.

SUPPLEMENTARY INFORMATION:

Background

The FAA issued a supplemental notice of proposed rulemaking (SNPRM) to amend 14 CFR part 39 by adding an AD that would apply to certain RRD (Type Certificate previously held by Rolls-Royce plc) Trent 1000–AE3, Trent 1000–CE3, Trent 1000–D3, Trent 1000–G3, Trent 1000–H3, Trent 1000–J3, Trent 1000–K3, Trent 1000–L3, Trent 1000–M3, Trent 1000–N3, Trent 1000–P3, Trent 1000–Q3, and Trent 1000–R3 model turbofan engines. The SNPRM published in the **Federal Register** on November 05, 2021 (86 FR 61083). The SNPRM was prompted by the notice of proposed rulemaking (NPRM) being placed in incorrect Docket No. FAA–2021–0637 instead of Docket No. FAA–2021–0662, which caused some commenters to experience difficulty commenting on the NPRM. In the SNPRM, the FAA proposed to require manual deactivation of the MAS control valves. The FAA is issuing this AD to address the unsafe condition on these products.

The European Union Aviation Safety Agency (EASA), which is the Technical Agent for the Member States of the European Union, has issued EASA AD 2021–0009, dated January 8, 2021 (referred to after this as ''the MCAI''), to address the unsafe condition on these products. The MCAI states:

> The Modulated Air System (MAS) optimises cooling air, extracted from the compressor, where full flow is not required at cruise conditions. It is only active during cruise. Recently, occurrences have been reported of finding high levels of wear on the seal fins on a small number of high pressure turbine triple seals, Part Number FW34485. The effect on the secondary air system was conservatively assessed due to the resultant increased turbine cooling air leakage, which changes the cooling flow around the intermediate pressure (IP) turbine disc.
>
> This condition, if not corrected, could lead to temperature increase at the IP turbine disc rim when the MAS is active, possibly resulting in IP turbine disc failure and high energy debris release, with consequent damage to, and reduced control of, the aeroplane. To address this potential unsafe condition, Rolls-Royce has issued the NMSB, providing instructions to manually 'lock-out' (deactivate) the MAS control valves.
>
> For the reason described above, this [EASA] AD requires to deactivate the MAS control valves. This [EASA] AD also specifies that the Master Minimum Equipment List (MMEL) item for 'MAS inoperative', which has a limit of 120 days, does not apply when the system is manually deactivated.

You may obtain further information by examining the MCAI in the AD docket at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2021–0662.

Discussion of Final Airworthiness Directive

Comments

The FAA received a comment from one commenter, Roll-Royce plc (RR). The following presents the comment received on the SNPRM and the FAA's response to the comment.

Request To Consider Improved Solution as a Terminating Action

RR stated that it has no objections to the SNPRM as written but requested that the FAA consider an improved solution that is being developed by RR as a terminating action for this AD. RR noted that the improved solution would permanently deactivate the MAS system without initiating engine indicating and crew alerting system (EICAS) messages. RR reasoned that deactivation of the MAS was introduced as an immediate containment action; however, this solution produces spurious EICAS messages, indicating a malfunction in

the MAS system. As a result, operators are instructed not to follow the minimum equipment list instructions and limitations.

The FAA will consider the improved solution as a possible terminating action and may consider future rulemaking once the improved solution becomes available. The FAA did not change this AD as a result of this comment.

Conclusion

The FAA reviewed the relevant data, considered the comment received, and determined that air safety and the public interest require adopting this AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on these products. This AD is adopted as proposed in the SNPRM.

Related Service Information Under 1 CFR Part 51

The FAA reviewed Rolls-Royce Alert Non-Modification Service Bulletin Trent 1000 75–AK642, Initial Issue, dated November 30, 2020. The service information specifies procedures for deactivating the MAS control valves. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in **ADDRESSES**.

Costs of Compliance

The FAA estimates that this AD affects 4 engines installed on airplanes of U.S. registry.

The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Deactivate the MAS control valves	2 work-hours × $85 per hour = $170	$0	$170	$680

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

2022–04–02 Rolls-Royce Deutschland Ltd & Co KG (Type Certificate previously held by Rolls-Royce plc): Amendment 39–21943; Docket No. FAA–2021–0662; Project Identifier MCAI–2021–00031–E.

(a) Effective Date

This airworthiness directive (AD) is effective March 29, 2022.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Rolls-Royce Deutschland Ltd & Co KG (RRD) (Type Certificate previously held by Rolls-Royce plc) Trent 1000–AE3, Trent 1000–CE3, Trent 1000–D3, Trent 1000–G3, Trent 1000–H3, Trent 1000–J3, Trent 1000–K3, Trent 1000–L3, Trent 1000–M3, Trent 1000–N3, Trent 1000–P3, Trent 1000–Q3, and Trent 1000–R3 model turbofan engines.

(d) Subject

Joint Aircraft System Component (JASC) Code 7250, Turbine Section.

(e) Unsafe Condition

This AD was prompted by reports of high levels of wear on the seal fins on a small number of certain high-pressure turbine triple seals. The FAA is issuing this AD to ensure cooling airflow restoration to the intermediate-pressure turbine (IPT) disk rim during cruise by deactivating the modulated air system (MAS). The unsafe condition, if not addressed, could result in a temperature increase at the IPT disk rim when the MAS is active during cruise, resulting in failure of the IPT disk, loss of engine thrust control, and loss of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

Within the compliance time specified in figure 1 to paragraph (g) of this AD, deactivate the MAS control valves using the Accomplishment Instructions, paragraphs 3.A.(6) and 3.A.(7), of Rolls-Royce Alert Non-Modification Service Bulletin Trent 1000 75–AK642, Initial Issue, dated November 30, 2020.

Note 1 to paragraph (g): Deactivation of the MAS control valves on an engine required by paragraph (g) of this AD changes the engine to an approved configuration that will produce engine indicating and crew alerting system (EICAS) status messages ''ENG MAS VALVE L/R'' and ''ENG MAS SYS TEST L/R.'' Since MAS is purposely disabled after compliance with paragraph (g) of this AD, these status messages do not indicate inoperative (failed) equipment and, consequently, the operator's existing FAA-approved minimum equipment list (MEL) instructions and limitations, including the 120-day operation limitation, do not apply.

Note 2 to paragraph (g): Deactivation of the MAS control valves on an engine as required by paragraph (g) of this AD does not produce the EICAS status message ''ENG MAS VALVE SENSOR L/R.'' Consequently, when this EICAS message displays, it remains indicative of inoperative equipment, even if

the MAS has been disabled as required by paragraph (g) of this AD. As a result, the corresponding MEL instructions and limitations apply whenever the EICAS status message ''ENG MAS VALVE SENSOR L/R'' is displayed.

Figure 1 to paragraph (g) – Compliance time

MAS deactivation option	Compliance time, whichever occurs later after the effective date of this AD, A or B
A	Within 50 engine flight cycles (FCs) since new
B	Within 30 days or 100 FCs, whichever occurs first

(h) Alternative Methods of Compliance (AMOCs)

(1) The Manager, ECO Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the ECO Branch, send it to the attention of the person identified in paragraph (i)(1) of this AD and email to: *ANE-AD-AMOC@faa.gov.*

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(i) Related Information

(1) For more information about this AD, contact Kevin Clark, Aviation Safety Engineer, ECO Branch, FAA, 1200 District Avenue, Burlington, MA 01803; phone: (781) 238–7088; fax: (781) 238–7199; email: *kevin.m.clark@faa.gov.*

(2) Refer to European Union Aviation Safety Agency (EASA) AD 2021–0009, dated January 8, 2021, for more information. You may examine the EASA AD in the AD docket at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2021–0662.

(j) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) Rolls-Royce Alert Non-Modification Service Bulletin Trent 1000 75–AK642, Initial Issue, dated November 30, 2020.

(ii) [Reserved]

(3) For Rolls-Royce service information identified in this AD, contact Rolls-Royce plc, Corporate Communications, P.O. Box 31, Derby, DE24 8BJ, United Kingdom; phone: +44 (0)1332 242424; fax: +44 (0)1332 249936; website: *https://www.rolls-royce.com/contact-us.aspx.*

(4) You may view this service information at FAA, Airworthiness Products Section, Operational Safety Branch, 1200 District Avenue, Burlington, MA 01803. For information on the availability of this material at the FAA, call (817) 222–5110.

(5) You may view this service information that is incorporated by reference at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, email: *fr.inspection@nara.gov,* or go to: *https://www.archives.gov/federal-register/cfr/ibr-locations.html.*

Issued on February 3, 2022.

Lance T. Gant,

Director, Compliance & Airworthiness Division, Aircraft Certification Service.

RIN 2120–AA64

Airworthiness Directives; Learjet, Inc., Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule; request for comments.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for certain Learjet, Inc., Model 35, 35A (C–21A), 36, 36A, 55, 55B, 55C, and 60 airplanes. This AD was prompted by a report indicating that a repair station approved Learjet spoiler assemblies for return to service after extending their life limit. This AD requires removing certain spoiler assemblies from service and prohibits their installation. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective March 9, 2022.

The FAA must receive comments on this AD by April 8, 2022.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *https://www.regulations.gov.* Follow the instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Examining the AD Docket

You may examine the AD docket at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2022–0144; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, any comments received, and other information. The street address for Docket Operations is listed above.

FOR FURTHER INFORMATION CONTACT: Tara Shawn, Aerospace Engineer, Airframe and Services Section, FAA, Wichita ACO Branch, 1801 Airport Road, Room 100, Wichita, KS 67209; phone: 316–946–4141; email: *Tara.Shawn@faa.gov.*

SUPPLEMENTARY INFORMATION:

Background

On September 14, 2021, the FAA Kansas City Flight Standards District Office (FSDO) received a report that a repair station, Restored Aircraft Sales and Service, LLC, had approved several Learjet spoiler assemblies for return to service after completing a life limit extension. The Kansas City FSDO notified the Wichita ACO Branch of this issue on September 22, 2021.

Investigation by the Kansas City FSDO and Wichita ACO Branch revealed that after overhauling or repairing spoiler assemblies for Learjet airplanes, the repair station extended the FAA-approved life limit of the spoiler assemblies, in some cases by

doubling, the life limit established by Learjet in the airworthiness limitations section of the instructions for continued airworthiness. This maintenance on the spoiler assemblies performed by the repair station constituted a major change in type design. Since the repair station does not hold the type certificate for the affected airplanes, this major change in type design required application for a supplemental type certificate and FAA approval to ensure the structural durability of the spoiler assemblies beyond the established life limit. Instead, the approval for return to service by the repair station lacked references to acceptable data and FAA approval. Documentation received during the investigation suggests that these spoiler assemblies are being used in service beyond the FAA-approved life limit. Furthermore, the investigation specifically identified eight spoiler assemblies that had their life limit extended and were approved for return to service, although there could be more spoiler assemblies subject to the unsafe condition.

Operation of an airplane with a spoiler assembly beyond its FAA-approved life limit, if not addressed, could lead to undetected cracking and consequent failure or separation of the spoiler assembly, resulting in a reduction or complete loss of control of the airplane. The FAA is issuing this AD to address the unsafe condition on these products.

FAA's Determination

The FAA is issuing this AD because the agency has determined that the unsafe condition described previously is likely to exist or develop in other products of the same type design.

AD Requirements

This AD requires removing affected spoiler assemblies (those that have had their life limit extended by Restored Aircraft Sales and Service, LLC, or the maintenance records related to the life limit for the spoiler assembly are missing or incomplete) before further flight. This AD also prohibits the installation of affected spoiler assemblies on the identified Learjet airplane models.

Justification for Immediate Adoption and Determination of the Effective Date

Section 553(b)(3)(B) of the Administrative Procedure Act (APA) (5 U.S.C. 551 *et seq.*) authorizes agencies to dispense with notice and comment procedures for rules when the agency, for ''good cause,'' finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' Under this section, an agency, upon finding good cause, may issue a final rule without providing notice and seeking comment prior to issuance. Further, section 553(d) of the APA authorizes agencies to make rules effective in less than thirty days, upon a finding of good cause.

An unsafe condition exists that requires the immediate adoption of this AD without providing an opportunity for public comments prior to adoption. The FAA has found that the risk to the flying public justifies forgoing notice and comment prior to adoption of this rule because use of a spoiler assembly beyond its FAA-approved life limit could lead to undetected cracking and consequent failure or separation of the spoiler assembly, resulting in a reduction or complete loss of control of the airplane. Based on the lack of available data that would ensure the strength or durability characteristics of these assemblies beyond their life limit, the FAA has determined that affected spoiler assemblies must be removed before further flight. Accordingly, notice and opportunity for prior public comment are impracticable and contrary to the public interest pursuant to 5 U.S.C. 553(b)(3)(B).

In addition, the FAA finds that good cause exists pursuant to 5 U.S.C. 553(d) for making this amendment effective in less than 30 days, for the same reasons the FAA found good cause to forgo notice and comment.

Comments Invited

The FAA invites you to send any written data, views, or arguments about this final rule. Send your comments to an address listed under **ADDRESSES**. Include Docket No. FAA–2022–0144 and Project Identifier AD–2022–00042–T at the beginning of your comments. The most helpful comments reference a specific portion of the final rule, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this final rule because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to *https://www.regulations.gov,* including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this final rule.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this AD contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this AD, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as ''PROPIN.'' The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this AD. Submissions containing CBI should be sent to Tara Shawn, Aerospace Engineer, Airframe and Services Section, FAA, Wichita ACO Branch, 1801 Airport Road, Room 100, Wichita, KS 67209; phone: 316–946–4141; email: *Tara.Shawn@faa.gov.* Any commentary that the FAA receives that is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Regulatory Flexibility Act

The requirements of the Regulatory Flexibility Act (RFA) do not apply when an agency finds good cause pursuant to 5 U.S.C. 553 to adopt a rule without prior notice and comment. Because the FAA has determined that it has good cause to adopt this rule without notice and comment, RFA analysis is not required.

Costs of Compliance

The FAA estimates that this AD affects at least 8 spoiler assemblies. The FAA estimates the following costs to comply with this AD, based on the assumption that all affected spoiler assemblies are installed on airplanes of U.S. registry:

ESTIMATED COSTS *

Action	Labor cost	Parts cost	Cost per spoiler assembly	Cost on U.S. operators
Spoiler assembly replacement.	70 work-hours × $85 per hour = $5,950.	$44,039	$49,989	$399,912

* Each airplane contains two spoiler assemblies.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866, and

(2) Will not affect intrastate aviation in Alaska.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

2022–05–01 Learjet, Inc.: Amendment 39–21952; Docket No. FAA–2022–0144; Project Identifier AD–2022–00042–T.

(a) Effective Date

This airworthiness directive (AD) is effective March 9, 2022.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Learjet, Inc., Model 35, 35A (C–21A), 36, 36A, 55, 55B, 55C, and 60 airplanes, certificated in any category, with any spoiler assembly that meets any of the criteria identified in paragraph (c)(1) or (2) of this AD.

(1) The spoiler assembly's life limit was extended by Restored Aircraft Sales and Service, LLC.

(2) The maintenance records related to the life limit for the spoiler assembly are missing or incomplete.

(d) Subject

Air Transport Association (ATA) of America Code 5755, Spoilers.

(e) Unsafe Condition

This AD was prompted by a report indicating that a repair station performed a life extension program on spoiler assemblies that had reached or were close to reaching their life limit. The FAA is issuing this AD to prevent use of a spoiler assembly beyond its FAA-approved life limit, which could lead to undetected cracking and consequent failure or separation of the spoiler assembly, resulting in a reduction or complete loss of control of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Spoiler Assembly Removal

For each spoiler assembly identified in paragraph (c) of this AD: Remove the spoiler assembly from service before further flight.

(h) Parts Installation Prohibition

As of the effective date of this AD, no person may install, on any airplane, a spoiler assembly identified in paragraph (c) of this AD.

(i) Special Flight Permit

Special flight permits, as described in 14 CFR 21.197 and 21.199, may be issued to operate the airplane to a location where the requirements of this AD can be accomplished, but concurrence by the Manager, Wichita ACO Branch, FAA, is required before issuance of the special flight permit.

(j) Alternative Methods of Compliance (AMOCs)

(1) The Manager, Wichita ACO Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager of the certification office, send it to the attention of the person identified in paragraph (k) of this AD.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(k) Related Information

For more information about this AD, contact Tara Shawn, Aerospace Engineer, Airframe and Services Section, FAA, Wichita ACO Branch, 1801 Airport Road, Room 100, Wichita, KS 67209; phone: 316–946–4141; email: *Tara.Shawn@faa.gov.*

(l) Material Incorporated by Reference

None.

Issued on February 16, 2022.

Lance T. Gant,

Director, Compliance & Airworthiness Division, Aircraft Certification Service.

RIN 2120–AA64

Airworthiness Directives; Airbus SAS Airplanes

AGENCY: Federal Aviation Administration (FAA), Department of Transportation (DOT).

ACTION: Final rule.

SUMMARY: The FAA is superseding Airworthiness Directive (AD) 2019–26–01, which applied to certain Airbus SAS Model A350–941 and –1041 airplanes. AD 2019–26–01 required repetitive detailed inspections, and applicable corrective actions, and provided an optional modification that terminated the inspections. Since the FAA issued AD 2019–26–01, a determination was made that a related production modification was not properly installed on certain airplanes. This AD retains the requirements of AD 2019–26–01, and, for certain airplanes, adds a one-time detailed inspection of the modification for proper installation, and applicable corrective actions if necessary, as specified in a European Union Aviation Safety Agency (EASA) AD, which is incorporated by reference. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective March 29, 2022.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of March 29, 2022.

ADDRESSES: For the material incorporated by reference (IBR) in this AD, contact the EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu*; internet *www.easa.europa.eu*. You may view this IBR material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195. It is also available in the AD docket on the internet at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2021–1006.

Examining the AD Docket

You may examine the AD docket at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2021–1006; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT: Dan Rodina, Aerospace Engineer, International Section, Transport Standards Branch, FAA, 2200 South 216th St., Des Moines, WA 98198; telephone and fax 206–231–3225; email *dan.rodina@faa.gov.*

SUPPLEMENTARY INFORMATION:

Background

EASA, which is the Technical Agent for the Member States of the European Union, has issued EASA AD 2021–0141, dated June 15, 2021 (EASA AD 2021–0141) (also referred to as the MCAI), to correct an unsafe condition for certain Airbus SAS Model A350–941 and –1041 airplanes.

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 to supersede AD 2019–26–01, Amendment 39–21023 (85 FR 4199, January 24, 2020) (AD 2019–26–01). AD 2019–26–01 applied to certain Airbus SAS Model A350–941 and –1041 airplanes. The NPRM published in the **Federal Register** on November 18, 2021 (86 FR 64416). The NPRM was prompted by reports of sealant bead damage caused by rotation of the attachment fitting bearing assembly of a trimmable horizontal stabilizer (THS) and a determination that a related production modification was not properly installed on certain airplanes. The NPRM proposed to retain the requirements of AD 2019–26–01, and, for certain airplanes, proposed to add a one-time detailed inspection of the modification for proper installation, and applicable corrective actions if necessary, as specified in EASA AD 2021–0141.

The FAA is issuing this AD to address possible water ingress due to sealant bead damage, which could result in corrosion damage in the aluminum corner fitting. This condition, if not addressed, could lead to detachment and loss of the THS, possibly resulting in loss of control of the airplane and injury to persons on the ground. See the MCAI for additional background information.

Discussion of Final Airworthiness Directive

Comments

The FAA received a comment from the Air Line Pilots Association, International (ALPA), who supported the NPRM without change.

Conclusion

The FAA reviewed the relevant data, considered the comment received, and determined that air safety requires adopting this AD as proposed. Except for minor editorial changes, this AD is adopted as proposed in the NPRM. None of the changes will increase the economic burden on any operator. Accordingly, the FAA is issuing this AD to address the unsafe condition on these products.

Related Service Information Under 1 CFR Part 51

EASA AD 2021–0141 describes procedures for repetitive detailed inspections for damage of the fillet sealant and corrosion on aluminum in the lower and upper corner fittings and bearing assembly attachment interface at frame (FR) 102, left-hand and right-hand sides, and an optional modification (application of new corrosion protection in the THS upper and lower attachment fitting bearing assembly) that would eliminate the need for the repetitive inspections. EASA AD 2021–0141 also describes procedures for a one-time detailed inspection of the modification of the lower and upper corner fittings and bearing assembly attachment interface at FR 102, left-hand and right-hand sides (Airbus production modification 113102) for discrepancies (including missing sealant bead, cracks in the sealant bead, and corrosion on the affected bearing zone) and corrective actions (including, but not limited to, a check for grease, a check for cracks in the sealant bead, applying sealant, torqueing the bearing nut, inspecting for corrosion on the affected bearing zone, applying corrosion preventative compound and actions to address missing grease and corrosion). This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Costs of Compliance

The FAA estimates that this AD affects 15 airplanes of U.S. registry. The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS FOR REQUIRED ACTIONS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Retained actions from AD 2019-26-01	30 work-hours × $85 per hour = $2,550	$0	$2,550	$38,250
New actions	32 work-hours × $85 per hour = $2,720	0	2,720	40,800

The FAA has received no definitive data that enables the agency to provide cost estimates for the corrective actions (including repair) specified in this AD.

ESTIMATED COSTS OF OPTIONAL ACTIONS

Labor cost	Parts cost	Cost per product
34 work-hours × $85 per hour = $2,890	$0	$2,890

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by:

■ a. Removing Airworthiness Directive (AD) 2019–26–01, Amendment 39–21023 (85 FR 4199, January 24, 2020); and

■ b. Adding the following new AD:

2022–03–22 Airbus SAS: Amendment 39–21940; Docket No. FAA–2021–1006; Project Identifier MCAI–2021–00700–T.

(a) Effective Date

This airworthiness directive (AD) is effective March 29, 2022.

(b) Affected ADs

This AD replaces AD 2019–26–01, Amendment 39–21023 (85 FR 4199, January 24, 2020) (AD 2019–26–01).

(c) Applicability

This AD applies to Airbus SAS Model A350–941 and –1041 airplanes, certificated in any category, as identified in European Union Aviation Safety Agency (EASA) AD 2021–0141, dated June 15, 2021 (EASA AD 2021–0141).

(d) Subject

Air Transport Association (ATA) of America Code 53, Fuselage.

(e) Reason

This AD was prompted by reports of sealant bead damage caused by rotation of the attachment fitting bearing assembly of a trimmable horizontal stabilizer (THS) and a determination that a related production modification was not properly installed on certain airplanes. The FAA is issuing this AD to address possible water ingress due to sealant bead damage, which could result in corrosion damage in the aluminum corner fitting. This condition, if not addressed, could lead to detachment and loss of the THS, possibly resulting in loss of control of the airplane and injury to persons on the ground.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraph (h) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, EASA AD 2021–0141.

(h) Exceptions to EASA AD 2021–0141

(1) Where EASA AD 2021–0141 refers to February 21, 2018 (the effective date of EASA AD 2018–0037), this AD requires using February 28, 2020 (the effective date of FAA AD 2019–26–01).

(2) Where EASA AD 2021–0141 refers to its effective date, this AD requires using the effective date of this AD.

(3) The ''Remarks'' section of EASA AD 2021–0141 does not apply to this AD.

(i) Other FAA AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, Large Aircraft Section, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the Large Aircraft Section, International Validation Branch, send it to the attention of the person

identified in paragraph (j) of this AD. Information may be emailed to: *9-AVS-AIR-730-AMOC@faa.gov.*

(i) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(ii) AMOCs approved previously for AD 2019–26–01 are approved as AMOCs for the corresponding provisions of EASA AD 2021–0141 that are required by paragraph (g) of this AD.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, Large Aircraft Section, International Validation Branch, FAA; or EASA; or Airbus SAS's EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(3) *Required for Compliance (RC):* For any service information referenced in EASA AD 2021–0141 that contains RC procedures and tests: Except as required by paragraph (i)(2) of this AD, RC procedures and tests must be done to comply with this AD; any procedures or tests that are not identified as RC are recommended. Those procedures and tests that are not identified as RC may be deviated from using accepted methods in accordance with the operator's maintenance or inspection program without obtaining approval of an AMOC, provided the procedures and tests identified as RC can be done and the airplane can be put back in an airworthy condition. Any substitutions or changes to procedures or tests identified as RC require approval of an AMOC.

(j) Related Information

For more information about this AD, contact Dan Rodina, Aerospace Engineer, International Section, Transport Standards Branch, FAA, 2200 South 216th St., Des Moines, WA 98198; telephone and fax 206–231–3225; email *dan.rodina@faa.gov.*

(k) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(i) European Union Aviation Safety Agency (EASA) AD 2021–0141, dated June 15, 2021.

(ii) [Reserved]

(3) For EASA AD 2021–0141, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu*; internet *www.easa.europa.eu.* You may find this EASA AD on the EASA website at *https://ad.easa.europa.eu.*

(4) You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(5) You may view this material that is incorporated by reference at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, email *fr.inspection@nara.gov,* or go to: *https://www.archives.gov/federal-register/cfr/ibr-locations.html.*

Issued on January 28, 2022.

Lance T. Gant,

Director, Compliance & Airworthiness Division, Aircraft Certification Service.

RIN 2120–AA64

Airworthiness Directives; General Electric Company Turbofan Engines

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule; request for comments.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for certain General Electric Company (GE) GEnx–1B64, –1B64/P1, –1B64/P2, –1B67, –1B67/P1, –1B67/P2, –1B70, –1B70/75/P1, –1B70/75/P2, –1B70/P1, –1B70/P2, –1B70C/P1, –1B70C/P2, –1B74/75/P1, –1B74/75/P2, –1B76/P2, –1B76A/P2, GEnx–2B67, –2B67B, and –2B67/P model turbofan engines. This AD was prompted by an in-flight shutdown (IFSD) of an engine and subsequent investigation by the manufacturer that revealed an improperly torqued fuel metering unit (FMU) bypass valve (BPV) plug. This AD requires a shim check inspection of the FMU BPV plug and, depending on the results of the inspection, replacement of the FMU. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective March 9, 2022.

The Director of the Federal Register approved the incorporation by reference of certain publications listed in this AD as of March 9, 2022.

The FAA must receive comments on this AD by April 8, 2022.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *https://www.regulations.gov.* Follow the instructions for submitting comments.
- *Fax:* (202) 493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this final rule, contact General Electric Company, 1 Neumann Way, Cincinnati, OH 45215; phone: (513) 552–3272; email: *aviation.fleetsupport@ae.ge.com;* website: *https://www.ge.com.* You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 1200 District Avenue, Burlington, MA 01803. For information on the availability of this material at the FAA, call (817) 222–5110. It is also available at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2022–0101.

Examining the AD Docket

You may examine the AD docket at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2022–0101; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, any comments received, and other information. The street address for the Docket Operations is listed above.

FOR FURTHER INFORMATION CONTACT: Alexei Marqueen, Aviation Safety Engineer, ECO Branch, FAA, 1200 District Avenue, Burlington, MA 01803; phone: (781) 238–7178; email: *Alexei.T.Marqueen@faa.gov.*

SUPPLEMENTARY INFORMATION:

Background

On July 20, 2021, a Boeing model 747–8F airplane, powered by GEnx–2B67/P model turbofan engines, flying from Hong Kong to Dubai, experienced N1 overspeed and fire warnings that resulted in an IFSD and air turnback (ATB) to Hong Kong. After landing, the engine reignited and emergency crews extinguished the fire. The investigation led by the National Transportation Safety Board found several fuel system leaks including at the FMU supply pressure (P1) BPV pressure port with a loose FMU BPV plug safety cabled in place. Because a safety cable was in place, the investigation concluded that the FMU BPV plug might not have been torqued properly during production or during an engine shop visit. During the investigation, GE discovered that another operator, operating a Boeing

model 787–10 airplane, powered by GEnx–1B74/75/P2 model turbofan engines, found a fuel system leak related to a loose FMU BPV plug in August 2020 during a walk-around after a flight. As a result of the investigation, the manufacturer published GE GEnx–1B Service Bulletin (SB) 73–0100 R00, dated December 3, 2021, and GE GEnx–2B SB 73–0092 R00, dated December 3, 2021, specifying procedures to inspect the FMU BPV plug and, depending on the results of the inspection, replacement of the FMU. This condition, if not addressed, could result in loss of engine thrust control, IFSD, and reduced control of the aircraft. The FAA is issuing this AD to address the unsafe condition on these products.

FAA's Determination

The FAA is issuing this AD because the agency has determined the unsafe condition described previously is likely to exist or develop in other products of the same type design.

Related Service Information Under 1 CFR Part 51

The FAA reviewed GE GEnx–1B SB 73–0100 R00, dated December 3, 2021, and GE GEnx–2B SB 73–0092 R00, dated December 3, 2021. These SBs specify procedures for inspecting the FMU BPV plug and replacing the FMU on GE GEnx–1B and GEnx–2B model turbofan engines. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in **ADDRESSES**.

AD Requirements

This AD requires a shim check inspection of the FMU BPV plug and, depending on the results of the inspection, replacement of the FMU.

Justification for Immediate Adoption and Determination of the Effective Date

Section 553(b)(3)(B) of the Administrative Procedure Act (APA) (5 U.S.C. 551 *et seq.*) authorizes agencies to dispense with notice and comment procedures for rules when the agency, for ''good cause,'' finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' Under this section, an agency, upon finding good cause, may issue a final rule without providing notice and seeking comment prior to issuance. Further, section 553(d) of the APA authorizes agencies to make rules effective in less than thirty days, upon a finding of good cause.

An unsafe condition exists that requires the immediate adoption of this AD without providing an opportunity for public comments prior to adoption. The FAA has found that the risk to the flying public justifies foregoing notice and comment prior to adoption of this rule. On July 20, 2021, a Boeing model 747–8F airplane, powered by GEnx–2B67/P model turbofan engines, experienced an IFSD and ATB due to a fuel system leak. This unsafe condition, caused by improper torquing of the FMU BPV plug, may result in the loss of engine thrust control, IFSD, and reduced control of the aircraft.

The FAA considers inspection of the FMU BPV plug to be an urgent safety issue. Inspection of the FMU BPV plug must be accomplished within 150 flight cycles after the effective date of this AD. The FAA estimates that engines affected by this AD will accumulate 150 flight cycles within approximately 90 days of the effective date of this AD. These conditions still exist, therefore, notice and opportunity for prior public comment are impracticable and contrary to the public interest pursuant to 5 U.S.C. 553(b)(3)(B).

In addition, the FAA finds that good cause exists pursuant to 5 U.S.C. 553(d) for making this amendment effective in less than 30 days, for the same reasons the FAA found good cause to forego notice and comment.

Comments Invited

The FAA invites you to send any written data, views, or arguments about this final rule. Send your comments to an address listed under **ADDRESSES**. Include ''Docket No. FAA–2022–0101 and Project Identifier AD–2021–01456–E'' at the beginning of your comments. The most helpful comments reference a specific portion of the final rule, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this final rule because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to *https://www.regulations.gov,* including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this final rule.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this AD contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this AD, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as ''PROPIN.'' The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this AD. Submissions containing CBI should be sent to Alexei Marqueen, Aviation Safety Engineer, ECO Branch, FAA, 1200 District Avenue, Burlington, MA 01803. Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Regulatory Flexibility Act

The requirements of the Regulatory Flexibility Act (RFA) do not apply when an agency finds good cause pursuant to 5 U.S.C. 553 to adopt a rule without prior notice and comment. Because FAA has determined that it has good cause to adopt this rule without prior notice and comment, RFA analysis is not required.

Costs of Compliance

The FAA estimates that this AD affects 114 engines installed on airplanes of U.S. registry.

The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Shim check inspection of FMU BPV plug	0.50 work-hours × $85 per hour = $42.50	$0	$42.50	$4,845

The FAA estimates the following costs to do any necessary replacement that would be required based on the results of the inspection. The agency has no way of determining the number of aircraft that might need this replacement:

ON-CONDITION COSTS

Action	Labor cost	Parts cost	Cost per product
Replace the FMU with a FMU that has undergone packing replacement.	8 work-hours × $85 per hour = $680	$200	$880
Replace the FMU	7 work-hours × $85 per hour = $595	727,317	727,912

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866, and

(2) Will not affect intrastate aviation in Alaska.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

2022–04–07 General Electric Company: Amendment 39–21949; Docket No. FAA–2022–0101; Project Identifier AD–2021–01456–E.

(a) Effective Date

This airworthiness directive (AD) is effective March 9, 2022.

(b) Affected ADs

None.

(c) Applicability

This AD applies to all General Electric Company (GE) GEnx–1B64, GEnx–1B64/P1, GEnx–1B64/P2, GEnx–1B67, GEnx–1B67/P1, GEnx–1B67/P2, GEnx–1B70, GEnx–1B70/75/P1, GEnx–1B70/75/P2, GEnx–1B70/P1, GEnx–1B70/P2, GEnx–1B70C/P1, GEnx–1B70C/P2, GEnx–1B74/75/P1, GEnx–1B74/75/P2, GEnx–1B76/P2, GEnx–1B76A/P2, GEnx–2B67, GEnx–2B67B, and GEnx–2B67/P model turbofan engines with:

(1) A fuel metering unit (FMU) VIN 8062–1094 part number (P/N) 2122M20P07, VIN 8062–1176 P/N 2122M20P08, VIN 8062–1106 P/N 2459M17P01, or VIN 8062–1177 P/N 2459M17P02, installed; and

(2) An FMU having a serial number (S/N) identified in Paragraph 4, Appendix A, Table 1, of either GE GEnx–1B Service Bulletin (SB) 73–0100 R00, dated December 3, 2021 (GEnx–1B SB 73–0100), or GE GEnx–2B SB 73–0092 R00, dated December 3, 2021 (GEnx–2B SB 73–0092).

(d) Subject

Joint Aircraft System Component (JASC) Code 7320, Fuel Controlling System.

(e) Unsafe Condition

This AD was prompted by an in-flight shutdown (IFSD) of an engine and subsequent investigation by the manufacturer that revealed an improperly torqued FMU bypass valve (BPV) plug. The FAA is issuing this AD to prevent fuel system leakage from the FMU. The unsafe condition, if not addressed, could result in the loss of engine thrust control, IFSD, and reduced control of the aircraft.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

(1) Within 150 flight cycles after the effective date of this AD, perform either an on-wing or off-wing shim check inspection using a 0.005 inch feeler gauge of the FMU BPV plug to verify the FMU BPV plug is properly installed using the Accomplishment Instructions, paragraph 3.A.(4) or paragraph 3.B.(3), of GEnx–1B SB 73–0100 (for GEnx–1B models) or the Accomplishment Instructions, paragraph 3.A.(4) or paragraph 3.B.(3), of GEnx–2B SB 73–0092 (for GEnx–2B models), as applicable. Perform the shim check inspection on any flat side of the FMU BPV plug.

(2) If, during the inspection required by paragraph (g)(1) of this AD, the 0.005 inch feeler gauge can fit between the FMU BPV plug and the FMU housing on the flat side, before further flight, remove the FMU and replace with an FMU eligible for installation.

(h) Definitions

For the purpose of this AD, an ''FMU eligible for installation'' is:

(1) An FMU having a S/N that is not identified in Paragraph 4, Appendix A, Table 1, of GEnx–1B SB 73–0100 or GEnx–2B SB 73–0092;

(2) An FMU having a S/N identified in Paragraph 4, Appendix A, Table 1, of GEnx–1B SB 73–0100 or GEnx–2B SB 73–0092 that passes the shim check inspection required by paragraph (g)(1) of this AD; or

(3) An FMU having a S/N identified in Paragraph 4, Appendix A, Table 1, of GEnx–1B SB 73–0100 or GEnx–2B SB 73–0092 that fails the shim check inspection required by paragraph (g)(1) of this AD but has had the packing of the FMU BPV plug replaced per the Accomplishment Instructions, paragraph 3.C. of GEnx–1B 73–0100 or GEnx–2B 73–0092.

(i) Alternative Methods of Compliance (AMOCs)

(1) The Manager, ECO Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as

appropriate. If sending information directly to the manager of the certification office, send it to the attention of the person identified in paragraph (j) of this AD and email to: *ANE-AD-AMOC@faa.gov.*

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(j) Related Information

For more information about this AD, contact Alexei Marqueen, Aviation Safety Engineer, ECO Branch, FAA, 1200 District Avenue, Burlington, MA 01803; phone: (781) 238–7178; email: *Alexei.T.Marqueen@faa.gov.*

(k) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) General Electric Company (GE) GEnx–1B Service Bulletin (SB) 73–0100 R00, dated December 3, 2021.

(ii) GE GEnx–2B SB 73–0092 R00, dated December 3, 2021.

(3) For service information identified in this AD, contact General Electric Company, 1 Neumann Way, Cincinnati, OH 45215; phone: (513) 552–3272; email: *aviation.fleetsupport@ae.ge.com;* website: *https://www.ge.com.*

(4) You may view this service information at FAA, Airworthiness Products Section, Operational Safety Branch, 1200 District Avenue, Burlington, MA 01803. For information on the availability of this material at the FAA, call (817) 222–5110.

(5) You may view this service information that is incorporated by reference at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, email: *fr.inspection@nara.gov,* or go to: *https://www.archives.gov/federal-register/cfr/ibr-locations.html.*

Issued on February 15, 2022.

Ross Landes,

Deputy Director for Regulatory Operations, Compliance & Airworthiness Division, Aircraft Certification Service.

RIN 2120–AA64

Airworthiness Directives; Continental Aerospace Technologies, Inc. and Continental Motors Reciprocating Engines

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for certain Continental Aerospace Technologies, Inc. C–125, C145, IO–360, IO–470, IO–550, O–300, O–470, TSIO–360, TSIO–520 series model reciprocating engines and certain Continental Motors IO–520 series model reciprocating engines with a certain oil filter adapter installed. This AD was prompted by reports of two accidents that were the result of power loss due to oil starvation. This AD requires replacing the oil filter adapter fiber gasket (fiber gasket) with an oil filter adapter copper gasket (copper gasket). The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective March 29, 2022.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of March 29, 2022.

ADDRESSES: For service information identified in this final rule, contact Stratus Tool Technologies, LLC, 2208 Air Park Drive, Burlington, NC 27215; phone: (800) 822–3200; website: *https://www.tempestplus.com.* You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 1200 District Avenue, Burlington, MA 01803. For information on the availability of this material at the FAA, call (817) 222–5110. It is also available at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2021–0875.

Examining the AD Docket

You may examine the AD docket at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2021–0875; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT: George Hanlin, Aviation Safety Engineer, Atlanta ACO, FAA, 1701 Columbia Avenue, College Park, GA 30337; phone: (404) 474–5584; fax: (404) 474–5605; email: *george.hanlin@faa.gov.*

SUPPLEMENTARY INFORMATION:

Background

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to certain Continental Aerospace Technologies, Inc. (Type Certificate previously held by Continental Motors, Inc., and Teledyne Continental Motors) C–125–1, C–125–2, C145–2, C145–2H, IO–360–C, IO–360–D, IO–360–DB, IO–360–H, IO–360–HB, IO–360–K, IO–360–KB, IO–470–E, IO–470–S, IO–550–B, IO–550–G, O–300–B, O–300–C, O–300–D, O–300–E, O–470–A, O–470–B, O–470–G, O–470–J, O–470–K, O–470–L, O–470–M, O–470–N, O–470–R, O–470–S, O–470–U, O–470–11, O–470–15, TSIO–360–E, TSIO–360–EB, TSIO–360–F, TSIO–360–FB, TSIO–360–GB, TSIO–360–LB, TSIO–360–MB, TSIO–360–SB, TSIO–520–C, TSIO–520–CE, TSIO–520–E, TSIO–520–UB model reciprocating engines; and Continental Motors (Type Certificate previously held by Teledyne Continental Motors) IO–520–A, IO–520–B, IO–520–BA, IO–520–BB, IO–520–C, IO–520–D, IO–520–J, and IO–520–L model reciprocating engines. The NPRM published in the **Federal Register** on October 12, 2021 (86 FR 56658). The NPRM was prompted by reports of two accidents that were the result of power loss due to oil starvation. The first was a fatal accident on May 1, 2019, in Mill Creek California, involving a Cessna 182P airplane with an installed Continental Motors O–470–S engine. The National Transportation Safety Board's preliminary accident investigation report, docket number WPR19FA126, identified evidence of improperly maintained or installed oil filter adapters. An improperly maintained or installed oil filter adapter may lead to failure of the fiber gasket, which may result in oil loss or oil starvation. Based on the investigation, the manufacturer determined the need to replace the fiber gasket with a copper gasket. In the NPRM, the FAA proposed to require removal of the fiber gasket and replacement with a copper gasket.

The FAA is issuing this AD to address the unsafe condition on these products.

Discussion of Final Airworthiness Directive

Comments

The FAA received comments from two individual commenters. The following presents the comments received on the NPRM and the FAA's response to each comment.

Request To Broaden the Scope

One commenter compared the NPRM to a previous AD that the FAA issued in 1996, AD 96–12–22 (61 FR 30501, June 17, 1996), to address loose or separated oil filter adapters. The commenter requested that the FAA consider issuing an AD with a broader scope, such as a remote-mounted oil filter secured to the firewall, as a more permanent solution. The commenter reasoned that a remote-mounted filter would reduce the potential for accidents caused by oil starvation and power loss.

The FAA issued AD 96–12–22 to address an unsafe condition caused by adapter-to-oil pump threads fragmenting, resulting in loose or separated oil filter adapters. Like AD 96–12–22, a remote-mounted oil filter secured to the firewall is not needed to correct the unsafe condition prompting this AD, which is power loss due to oil starvation. The unsafe condition that prompted this AD was caused by failure of the fiber gasket due to improperly maintained or installed oil filter adapters. Therefore, this AD requires replacing the fiber gasket with a copper gasket.

Suggestion To Design a Better Gasket

One commenter requested that the FAA make the manufacturer design a better gasket, installed with a torque commensurate with the torqued material, such as fiber gasket material similar to the gaskets used in propeller governors. The commenter stated that the gaskets used in propeller governors are manufactured with an oil-resistant outer layer, a stainless steel mesh center layer, and an oil-resistant inner layer. The commenter reasoned that these gaskets would cover the entire sealing faces of the oil filter adapter and the oil pump, unlike the copper gasket, which uses only a portion of the sealing area.

The FAA does not agree that using fiber gasket material similar to the gaskets used in propeller governors is necessary to address the unsafe condition, which is power loss due to oil starvation. The unsafe condition that prompted this AD was caused by failure of the fiber gasket due to improperly maintained or installed oil filter adapters, not the amount of torque applied to a specific gasket material. Additionally, as part of the certification process, the manufacturer has analyzed and tested the copper gasket and found it meets the design intent.

Conclusion

The FAA reviewed the relevant data, considered any comments received, and determined that air safety requires adopting this AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on these products. This AD is adopted as proposed in the NPRM.

Related Service Information Under 1 CFR Part 51

The FAA reviewed Stratus Tool Technologies Mandatory Service Bulletin (MSB) SB–001 Rev B, dated June 17, 2021. This MSB specifies procedures for removing a fiber gasket and replacing it with a copper gasket. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in **ADDRESSES**.

Costs of Compliance

The FAA estimates that this AD affects 6,300 engines installed on airplanes of U.S. registry.

The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Replace fiber gasket with copper gasket	2.5 work-hours × $85 per hour = $212.50	$34	$246.50	$1,552,950

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

2022–04–04 Continental Aerospace Technologies, Inc. and Continental

Motors: Amendment 39–21945; Docket No. FAA–2021–0875; Project Identifier AD–2021–00675–E.

(a) Effective Date

This airworthiness directive (AD) is effective March 29, 2022.

(b) Affected ADs

None.

(c) Applicability

This AD applies to the reciprocating engine models identified in paragraphs (c)(1) and (2) of this AD with an F&M Enterprises, Inc. (F&M) or Stratus Tool Technologies, LLC (Stratus) oil filter adapter installed per Supplemental Type Certificate SE8409SW, SE09356SC, or SE10348SC.

(1) Continental Aerospace Technologies, Inc. (Type Certificate previously held by Continental Motors, Inc., and Teledyne Continental Motors) C–125–1, C–125–2, C145–2, C145–2H, IO–360–C, IO–360–D, IO–360–DB, IO–360–H, IO–360–HB, IO–360–K, IO–360–KB, IO–470–E, IO–470–S, IO–550–B, IO–550–G, O–300–B, O–300–C, O–300–D, O–300–E, O–470–A, O–470–B, O–470–G, O–470–J, O–470–K, O–470–L, O–470–M, O–470–N, O–470–R, O–470–S, O–470–U, O–470–11, O–470–15, TSIO–360–E, TSIO–360–EB, TSIO–360–F, TSIO–360–FB, TSIO–360–GB, TSIO–360–LB, TSIO–360–MB, TSIO–360–SB, TSIO–520–C, TSIO–520–CE, TSIO–520–E, and TSIO–520–UB model reciprocating engines; and

(2) Continental Motors (Type Certificate previously held by Teledyne Continental Motors) IO–520–A, IO–520–B, IO–520–BA, IO–520–BB, IO–520–C, IO–520–D, IO–520–J, and IO–520–L model reciprocating engines.

(d) Subject

Joint Aircraft System Component (JASC) Code 8550, Reciprocating Engine Oil System.

(e) Unsafe Condition

This AD was prompted by reports of two accidents that were the result of power loss due to oil starvation. The FAA is issuing this AD to prevent loss of engine power. The unsafe condition, if not addressed, could result in failure of the engine, in-flight shutdown, and loss of control of the aircraft.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

Before accumulating 50 flight hours after the effective date of this AD or at the next scheduled oil change after the effective date of this AD, whichever occurs first, remove any F&M or Stratus oil filter adapter fiber gasket from service and replace it with a Stratus AN900–28 or AN900–29 oil filter adapter copper gasket in accordance with the Compliance Instructions, paragraph 6., pages 7 through 10 (including all detailed instructions for Figure 5 through Figure 16), of Stratus Tool Technologies Mandatory Service Bulletin SB–001 Rev B, dated June 17, 2021.

(h) Installation Prohibition

After the effective date of this AD, do not install or reuse an F&M or Stratus oil filter adapter fiber gasket in any F&M or Stratus Tool Technologies oil filter adapter.

(i) Special Flight Permit

A special flight permit may be issued in accordance with 14 CFR 21.197 and 21.199 to permit a one-time non-revenue ferry flight to operate the airplane to a location where the maintenance action can be performed.

(j) Alternative Methods of Compliance (AMOCs)

(1) The Manager, Atlanta ACO Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the certification office, send it to the attention of the person identified in paragraph (k) of this AD.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(k) Related Information

For more information about this AD, contact George Hanlin, Aviation Safety Engineer, Atlanta ACO, FAA, 1701 Columbia Avenue, College Park, GA 30337; phone: (404) 474–5584; fax: (404) 474–5605; email: *george.hanlin@faa.gov*.

(l) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) Stratus Tool Technologies Mandatory Service Bulletin SB–001 Rev B, dated June 17, 2021.

(ii) [Reserved]

(3) For Stratus Tool Technologies, LLC service information identified in this AD, contact Stratus Tool Technologies, LLC, 2208 Air Park Drive, Burlington, NC 27215; phone: (800) 822–3200; website: *https://www.tempestplus.com.*

(4) You may view this service information at FAA, Airworthiness Products Section, Operational Safety Branch, 1200 District Avenue, Burlington, MA 01803. For information on the availability of this material at the FAA, call (817) 222–5110.

(5) You may view this service information that is incorporated by reference at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, email: *fr.inspection@nara.gov,* or go to: *https://www.archives.gov/federal-register/cfr/ibr-locations.html.*

Issued on February 4, 2022.

Lance T. Gant,

Director, Compliance & Airworthiness Division, Aircraft Certification Service.

RIN 2120–AA64

Airworthiness Directives; DG Flugzeugbau GmbH and Schempp-Hirth Flugzeugbau GmbH Gliders

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for DG Flugzeugbau GmbH Model DG–1000T gliders and Schempp-Hirth Flugzeugbau GmbH Model Duo Discus T gliders with a Solo Kleinmotoren GmbH Solo Model 2350C or 2350D engine installed. This AD was prompted by mandatory continuing airworthiness information (MCAI) issued by the aviation authority of another country to identify and correct an unsafe condition on an aviation product. The MCAI describes the unsafe condition as failure of the bearing of the upper pulley of the belt driven reduction gear resulting in separation of the propeller from the engine. This AD requires replacing a certain hex-nut and establishing a life limit for the ball bearing assembly. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective March 29, 2022.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of March 29, 2022.

ADDRESSES: For service information identified in this final rule, contact Solo Kleinmotoren GmbH, Postfach 600152, D71050 Sindelfingen, Germany; phone: +49 703 1301–0; fax: +49 703 1301–136; email: *aircraft@solo-germany.com*; website: *http://aircraft.solo-online.com.* You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 901 Locust, Kansas City, MO 64106. For information on the availability of this material at the FAA, call (817) 222–5110. It is also available at *https://*

Examining the AD Docket

You may examine the AD docket at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2021–1015; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the MCAI, any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT: Jim Rutherford, Aviation Safety Engineer, General Aviation & Rotorcraft Section, International Validation Branch, FAA, 901 Locust, Room 301, Kansas City, MO 64106; phone: (816) 329–4165; email: *jim.rutherford@faa.gov*.

SUPPLEMENTARY INFORMATION:

Background

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to DG Flugzeugbau GmbH Model DG–1000T gliders and Schempp-Hirth Flugzeugbau GmbH Model Duo Discus T gliders with a Solo Kleinmotoren GmbH Solo Model 2350C or 2350D engine, all serial numbers, installed. The NPRM published in the **Federal Register** on December 1, 2021 (86 FR 68168). The NPRM was prompted by MCAI originated by the European Aviation Safety Agency (EASA), which is the Technical Agent for the Member States of the European Union. EASA issued EASA AD 2019–0029, dated February 8, 2019 (referred to after this as ''the MCAI''), to address an unsafe condition on Solo Kleinmotoren GmbH Solo Model 2350B, 2350BS, 2350C, and 2350D engines. The MCAI states:

> An occurrence was reported of failure of the bearing of the upper pulley of the belt driven reduction gear, resulting in separation of the propeller from the engine.
>
> This condition, if not corrected, could lead to similar occurrences, with possible reduced control of, and damage to, the aircraft.
>
> To address this potential unsafe condition, Solo redesigned the nut securing the pulley bearing on the axle and introduced a life time limit of 15 years for the reduction gear bearings.
>
> For the reason stated above, this [EASA] AD requires replacement of affected parts with serviceable parts, and introduces a life limit for the affected ball bearings.

You may examine the MCAI in the AD docket at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2021–1015.

Comments

The FAA received no comments on the NPRM or on the determination of the costs.

Conclusion

This product has been approved by the aviation authority of another country and is approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA reviewed the relevant data and determined that air safety requires adopting this AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on these products. This AD is adopted as proposed in the NPRM.

Related Service Information Under 1 CFR Part 51

The FAA reviewed Solo Kleinmotoren GmbH Service Bulletin 4603–18, dated January 22, 2019. The service information specifies procedures for replacing the hex-nut at the excentric axle and the ball bearing assemblies at the bearing block of the reduction gear. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in **ADDRESSES**.

Differences Between This AD and the MCAI or Service Information

The MCAI applies to Solo Kleinmotoren GmbH Solo Model 2350B, 2350BS, 2350C, and 2350D engines. None of these model engines have an FAA engine type certificate. However, Model 2350C and Model 2350D engines are certificated by the FAA with the type certificate for certain gliders. This AD does not apply to Solo Kleinmotoren GmbH Solo Model 2350B and 2350BS engines because they are not part of an FAA glider type design.

The MCAI requires replacing an affected ball bearing assembly before it accumulates 15 years since first installation on an engine. This AD requires replacing both ball bearing assemblies simultaneously before either accumulates 15 years since first installation on an engine.

Costs of Compliance

The FAA estimates that this AD affects 10 gliders of U.S. registry. The FAA estimates that for gliders with an affected hex-nut, replacement would take about 0.5 work-hour and require a part costing $95. The average labor rate is $85 per work-hour. Based on these figures, the FAA estimates the cost to replace the hex-nut on U.S. operators to be $1,380 (assuming all 10 gliders have this configuration) or $138 per glider.

In addition, the FAA estimates that for gliders with the affected ball bearing assemblies, replacement would take about 4 work-hours for both ball bearing assemblies and require ball bearing assemblies costing $118 (2 units). The average labor rate is $85 per work-hour. Based on these figures, the FAA estimates the cost of the ball bearing assembly replacement on U.S. operators to be $4,580 (assuming all 10 gliders have this configuration) or $458 per glider.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

2022–04–01 DG Flugzeugbau GmbH and Schempp-Hirth Flugzeugbau GmbH Gliders: Amendment 39–21942; Docket No. FAA–2021–1015; Project Identifier 2019–CE–014–AD.

(a) Effective Date

This airworthiness directive (AD) is effective March 29, 2022.

(b) Affected ADs

None.

(c) Applicability

This AD applies to DG Flugzeugbau GmbH Model DG–1000T gliders and Schempp-Hirth Flugzeugbau GmbH Model Duo Discus T gliders, certificated in any category, with a Solo Kleinmotoren GmbH Solo Model 2350C or 2350D engine, all serial numbers, installed.

(d) Subject

Joint Aircraft System Component (JASC) Code 7200, Engine (Turbine/Turboprop).

(e) Unsafe Condition

This AD was prompted by mandatory continuing airworthiness information (MCAI) issued by the aviation authority of another country to identify and correct an unsafe condition on an aviation product. The MCAI describes the unsafe condition as failure of the bearing of the upper pulley of the belt driven reduction gear. The FAA is issuing this AD to prevent separation of the propeller from the engine. The unsafe condition, if not addressed, could result in loss of control of the glider.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Actions and Compliance

(1) Within 12 months after the effective date of this AD, remove the nut installed at the excentric axle from service and replace it with a nut in accordance with the Condition section, paragraph a), of Solo Kleinmotoren GmbH Service Bulletin 4603–18, dated January 22, 2019.

(2) Before either ball bearing assembly at the bearing block of the reduction gear accumulates 15 years since first installation on an engine or within 12 months after the effective date of this AD, whichever occurs later, and thereafter at intervals not to exceed 15 years, remove both ball bearing assemblies from service and replace with new (zero hours time-in-service) ball bearing assemblies in accordance with the Condition section, paragraph b), of Solo Kleinmotoren GmbH Service Bulletin 4603–18, dated January 22, 2019.

(3) After replacing the ball bearing assemblies required by paragraph (g)(2) of this AD, record compliance in the aircraft log book. The entry must include: (1) Reduction gear part number (P/N) and serial number; and (2) date ball bearing assemblies were replaced.

(4) As of the effective date of this AD, do not install a hex-nut P/N 0028143 on any engine.

(5) As of the effective date of this AD, do not install ball bearing assembly P/N 0050110 on any engine unless it is new (zero hours time-in-service).

(h) Alternative Methods of Compliance (AMOCs)

(1) The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the certification office, send it to the attention of the person identified in paragraph (i)(1) of this AD and email to: *9-AVS-AIR-730-AMOC@faa.gov.*

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(i) Related Information

(1) For more information about this AD, contact Jim Rutherford, Aviation Safety Engineer, General Aviation & Rotorcraft Section, International Validation Branch, FAA, 901 Locust, Room 301, Kansas City, MO 64106; phone: (816) 329–4165; email: *jim.rutherford@faa.gov.*

(2) Refer to European Aviation Safety Agency (EASA) AD 2019–0029, dated February 8, 2019, for more information. You may examine the EASA AD in the AD docket at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2021–1015.

(j) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) Solo Kleinmotoren GmbH Service Bulletin 4603–18, dated January 22, 2019.

Note 1 to paragraph (j)(2)(i): This service information contains German to English translation. EASA used the English translation in referencing the document from Solo Kleinmotoren GmbH. For enforceability purposes, the FAA will cite the service information in English as it appears on the document.

(ii) [Reserved]

(3) For service information identified in this AD, contact Solo Kleinmotoren GmbH, Postfach 600152, D71050 Sindelfingen, Germany; phone: +49 703 1301–0; fax: +49 703 1301–136; email: *aircraft@solo-germany.com*; website: *http://aircraft.solo-online.com.*

(4) You may view this service information at FAA, Airworthiness Products Section, Operational Safety Branch, 901 Locust, Kansas City, MO 64106. For information on the availability of this material at the FAA, call (817) 222–5110.

(5) You may view this service information that is incorporated by reference at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, email: *fr.inspection@nara.gov,* or go to: *https://www.archives.gov/federal-register/cfr/ibr-locations.html.*

Issued on February 1, 2022.

Lance T. Gant,

Director, Compliance & Airworthiness Division, Aircraft Certification Service.

RIN 1515–AE72

Emergency Import Restrictions Imposed on Archaeological and Ethnological Material of Afghanistan

AGENCY: U.S. Customs and Border Protection, Department of Homeland Security; Department of the Treasury.

ACTION: Final rule.

SUMMARY: This document amends the U.S. Customs and Border Protection (CBP) regulations to reflect the imposition of emergency import restrictions on certain archaeological and ethnological material from Afghanistan. The Acting Assistant Secretary for Educational and Cultural Affairs, United States Department of State, determined that conditions warrant the imposition of emergency restrictions on categories of archaeological material and ethnological material of the cultural heritage of Afghanistan. This document contains

the Designated List of Archaeological and Ethnological Material of Afghanistan that describes the types of objects or categories of archaeological and ethnological material to which the import restrictions apply. The emergency import restrictions imposed on certain archaeological and ethnological material of Afghanistan will be in effect until April 28, 2026, unless extended. These restrictions are being imposed pursuant to determinations of the United States Department of State made under the terms of the Convention on Cultural Property Implementation Act.

DATES: Effective on February 18, 2022.

FOR FURTHER INFORMATION CONTACT: For legal aspects, W. Richmond Beevers, Chief, Cargo Security, Carriers and Restricted Merchandise Branch, Regulations and Rulings, Office of Trade, (202) 325–0084, *otrculturalproperty@cbp.dhs.gov.* For operational aspects, Julie L. Stoeber, Chief, 1USG Branch, Trade Policy and Programs, Office of Trade, (202) 945–7064, *1USGBranch@cbp.dhs.gov.*

SUPPLEMENTARY INFORMATION:

Background

The Convention on Cultural Property Implementation Act, Public Law 97–446, 19 U.S.C. 2601 *et seq.* (hereinafter, ''the Cultural Property Implementation Act'' or ''Act''), implements the 1970 United Nations Educational, Scientific and Cultural Organization (UNESCO) Convention on the Means of Prohibiting and Preventing the Illicit Import, Export and Transfer of Ownership of Cultural Property (hereinafter, ''the Convention'' (823 U.N.T.S. 231 (1972)). Pursuant to the Cultural Property Implementation Act, the United States may enter into international agreements with another State Party to the Convention to impose import restrictions on eligible archaeological and ethnological material under procedures and requirements prescribed by the Act. Under certain limited circumstances, the Cultural Property Implementation Act authorizes the imposition of import restrictions on an emergency basis (19 U.S.C. 2603).

Pursuant to 19 U.S.C. 2602(a), on April 28, 2021, Afghanistan, a State Party to the Convention, requested that import restrictions be imposed on certain archaeological and ethnological material, the pillage of which jeopardizes the cultural heritage of Afghanistan. The Cultural Property Implementation Act authorizes the President (or designee) to apply import restrictions on an emergency basis if the President determines that an emergency condition applies with respect to any archaeological or ethnological material of any requesting State Party (19 U.S.C. 2603). The emergency restrictions are effective for no more than five years from the date of the State Party's request and may be extended for three years where it is determined that the emergency condition continues to apply with respect to the covered material (19 U.S.C. 2603(c)(3)). These restrictions may also be continued pursuant to an agreement concluded within the meaning of the Act (19 U.S.C. 2603(c)(4)).

On November 16, 2021, the Acting Assistant Secretary for Educational and Cultural Affairs, United States Department of State, after consultation with and recommendation by the Cultural Property Advisory Committee, made the determinations necessary under the Act for the emergency imposition of import restrictions on certain archaeological material and ethnological material of the cultural heritage of Afghanistan. The Designated List below sets forth the categories of material to which the import restrictions apply. Thus, U.S. Customs and Border Protection (CBP) is amending § 12.104g(b) of title 19 of the Code of Federal Regulations (19 CFR 12.104g(b)) accordingly.

Importation of covered material from Afghanistan will be restricted until April 28, 2026, unless the conditions set forth in 19 U.S.C. 2606 and 19 CFR 12.104c are met.

Designated List of Archaeological and Ethnological Material of Afghanistan

The Designated List includes archaeological and ethnological material sourced from Afghanistan. Archaeological material ranges in date from the Paleolithic (50,000 B.C.) through the beginning of the Durrani Dynasty (A.D. 1747). Ethnological material includes architectural objects and wooden objects associated with Afghanistan's diverse history, from the 9th century A.D. through A.D. 1920. The Designated List set forth is representative only. Any dates and dimensions are approximate. The list is inclusive of yet-to-be-discovered styles and types.

Categories of Archaeological and Ethnological Material

I. Archaeological Material
- A. Stone
- B. Ceramics, Faience, and Fired Clay
- C. Metal
- D. Plaster, Stucco, and Unfired Clay
- E. Painting
- F. Ivory and Bone
- G. Glass
- H. Leather, Birch Bark, Vellum, Parchment, and Paper
- I. Textiles
- J. Wood, Shell, and other Organic Material
- K. Human Remains

II. Ethnological Material
- A. Stone, Brick, Plaster, and Stucco
- B. Tiles
- C. Stained Glass
- D. Wood

Approximate simplified chronology of well-known periods:
- (a) Paleolithic to Chalcolithic (c. 50,000–3000 B.C.)
- (b) Bronze Age (3000–1000 B.C.)
- (c) Achaemenid Period (c. 6th century–330 B.C.)
- (d) Mauryan Empire (c. 304–232 B.C.)
- (e) Hellenistic Empire and Greco-Bactrian Kingdom (330 B.C.–c. A.D. 10)
- (f) Kushan Empire (c. 2nd century B.C.–3rd century A.D.)
- (g) Persian Sassanid Empire and Hepthalite Conquest (A.D. 224–651)
- (h) Gandharan Period (c. 300 B.C.–A.D. 1200)
- (i) Ghaznavid Empire (A.D. 962–1186)
- (j) Ghurid Empire (A.D. 1148–1202)
- (k) Timurid and Mughal Empire (A.D. 1370–A.D. early 18th century)
- (l) Durrani Dynasty (A.D. 1747 [1]–1826)
- (m) Dost Mohammed and Anglo-Afghan Wars (A.D. 1826–1880)
- (n) Modern Afghanistan (A.D. 1880–Present) [2]

I. Archaeological Material

A. Stone

1. Architectural Elements—Primarily in alabaster, limestone, marble, steatite schist and other types of stone. Category includes, but is not limited to, bricks and blocks from walls, ceilings, and floors; columns; door frames; false gables; friezes; lintels; mihrabs; minarets; niches; pillars; plinths; qiblas; and so on. These architectural elements may be plain, molded, carved, or inscribed in various languages and scripts. Decorative elements on architectural elements may be in high or low relief. Architectural elements may include relief and inlay sculptures that were part of a building (*e.g.,* mausoleums, mosques, minarets, palaces, religious structures, public buildings, stupas, and others) such as friezes, panels, or stone figures. Architectural elements may have religious imagery or have been part of religious structures. For example, Gandharan and Kushan Period styles may include images of the Buddha, scenes from the life of the Buddha, Bodhisattvas, and other human figures, as well as animals, columns, and floral, geometric, and/or vegetal motifs. Other examples may include architectural

[1] *Note:* Import restrictions concerning archaeological material apply only to those objects dating to A.D. 1747 and earlier.

[2] *Note:* Import restrictions concerning ethnological material apply only to those objects that are 100 years old or older.

elements with images of Hindu deities and figures, or Zoroastrian images. Architectural elements carved in stone from Islamic periods may include inscriptions in multiple languages and scripts. Stone architectural elements were common across many periods in Afghanistan's history. Approximate date: 330 B.C.–A.D. 1747.

2. Non-Architectural Relief Sculpture—Primarily in alabaster, limestone, marble, steatite schist, and other types of stone. Types include, but are not limited to, carved bases, ceiling decoration, funerary headstones and monuments, fountains, monoliths niches, plaques, roundels, slabs, sundials, and stelae bases. Decorative elements may be in high- or low-relief and may include animal and/or human forms as well as floral, geometric, and/or vegetal motifs. Includes edicts and rock pillars with inscriptions in low relief. Inscriptions may be in multiple languages and scripts. Approximate date: 330 B.C.–A.D. 1747.

3. Large Statuary—Primarily in grey schist, gypsum, and marble. Statuary includes human figures, which are often seated or standing. Heads and other figurative elements may be used in high- or low-relief statues. Large statuary of human figures is primarily associated with the Hellenistic Empire and Greco-Bactrian Kingdom through the Gandharan Periods. Also includes statuary of Hindu deities, figures, and images, often dated from the 7th century A.D. onward. Approximate date: 330 B.C.–A.D. 1200.

4. Small Statuary—Primarily in alabaster, calcite, chlorite, dolomite, jasper, limestone, marble, and steatite; primarily free standing; may have been shaped by carving, incision, grinding, polishing, or other techniques. Animal and human forms tend to be stylized. Includes game pieces. Small statuary is found throughout many archaeological periods from the Bronze Age onward, but representative styles are from the Bactrian and Sassanian periods. Approximate date: 2100 B.C.–A.D. 1200.

a. Bactrian figurative statuary is often made of more than one type of stone, often chlorite or steatite, with limestone. Bactrian statues are in anthropomorphic forms, primarily female, and are elaborately carved and/or incised. Forms tend to be abstract and stylized, with armless bodies and legs, and a small protruding head. Heads tend to be small and carved in white limestone. Often in a seated or squatting position. Zoomorphic forms are also included and are often in a squatting or coiled position. Sizes vary, but are typically 14 cm tall. Approximate date: 3rd–2nd millennium B.C.

b. Non-figurative Bactrian statuary includes types such as columns, pillars, or column idols, and discs or disc idols. Column and disc statues have a smooth finish. Columns may have an elongated and/or tapered form with a wider base than at top. Column sizes vary, but typically range from 28–40 cm high and 10–20 cm wide. Discs may have an incision or groove through the center. Disc sizes vary, but typically range from 20–30 cm wide. Approximate date: 3rd–2nd millennium B.C.

c. Sassanian statuary includes animal and human figures shaped by carving, grinding, and/or polishing. Figures tend to be stylized. May have been used for a variety of purposes including, small statuary possibly used as gaming pieces. Approximate date: A.D. 200–700.

5. Vessels and Containers—Primarily in alabaster, chlorite, porphyry, rock crystal, and steatite schist. Vessel types may be conventional shapes such as amphora, bowls, cups, cylindrical vessels, flacons, jars, jugs, lamps, platters, pyxides, flasks, and trays, and may also include cosmetic containers, reliquaries (and their contents), and incense burners. Some drinking vessels (rhytons) may be in the shape of an animal or mythical creature carved into the ventral end. Surfaces may have incised geometric or vegetal decoration, incised script in multiple languages, and/or be polished. Some stone vessels and containers have no surface decoration. Includes vessel lids.

6. Tools, Instruments, and Weights—Includes groundstone and flaked stone tools.

a. Groundstone tools, instruments, and weights are mainly made from diorite, granite, marble, limestone, or quartz, but other types of stone are included. Types of groundstone tools include balls, batons, maces, palates, pestles, scrapers, scepters, and others. Includes spindle whorls and weights. Ends of batons and scepters may be carved or shaped and are approximately 50 cm to 2 m in length. Stone weights can be shaped or ground into various forms including balls, cubes, handbags, pyramids, rings, or teardrop shapes; may be polished; and may be decorated with incisions or inscriptions in multiple languages. Stone weights typically vary from 20 to 30 cm. Stone tools used to polish, shape, or sharpen other tools are included.

b. Flaked stone tools are primarily made of chert or other cryptocrystalline silicates, flint, limestone, obsidian, quartzite, schist, and others. Flaked stone tool types include axes, bifaces, blades, choppers, cores, hammers, microliths, projectiles, scrapers, sickles, unifaces, and others. Also includes tools like hammerstones and anvils used to create flaked stone tools.

7. Beads and Jewelry—Primarily in agate, amber, carnelian, cryptocrystalline silicates, garnet, lapis lazuli, onyx, turquoise, quartz, or other semi-precious materials. Beads may be carved, cut, drilled, ground, and/or polished. Beads include animal, conical, cylindrical, disc, faceted, tear drop, spherical, and other shapes. May be inscriptions in multiple types of languages and scripts. Jewelry includes amulet, amulet cases, bracelets, necklaces, rings, and other types.

8. Stamps and Seals—Primarily in agate, amethyst, chalcedony, hematite, jasper, rock crystal, steatite, or other types of stone. Stamps and seals may have engravings that include animals, human figures, geometric designs, inscriptions in various languages and scripts, and/or floral/vegetal motifs. Approximate date: 4th century B.C.–A.D. 1500.

9. Furniture— Primarily in agate, steatite, turquoise, or other semi-precious stones. Includes furniture and furniture hardware such as inlay, fragments of inlay, fasteners, handles, knobs, and roundels.

B. *Ceramics, Faience, and Fired Clay*

1. Statuary—Includes small and large-scale ceramic and terracotta statuary. May be in animal, human, hybrid animal/human, and mythological forms. Imagery may be religious. Objects may be associated with religious activity, games, or toys. May have traces of paint or pigment. Forms may be stylized or naturalized statuary depending on the time period. Stylized forms are associated with the Neolithic and Sassanian periods, while naturalized forms are associated with the Greco-Bactrian and Gandharan period onward. Approximate date: 9000 B.C.—A.D. 1747.

2. Architectural Elements—Includes terracotta antefixes, niches, panels, tiles, and other elements used as functional or decorative elements in buildings and mosaics. Terracotta panels may be painted or have traces of paint. Terracotta tiles may be painted or unpainted. Mosaic designs often include animals, humans, floral, geometric, and/or vegetal motifs. Tiles may be carved or have impressed or molded images of animals, humans, floral, geometric, and/or vegetal motifs for decorative relief. Imagery may be religious. Includes bricks, pipes, and other architectural elements from archaeological contexts. Approximate date: 330 B.C.–A.D. 1747.

3. Vessels—Includes utilitarian types, fine tableware, incense burners, cosmetic containers, funerary urns,

lamps, and other ceramic objects of everyday use.

a. Neolithic—Includes earthenware vessels. Vessel types include bowls, cups, goblets, jars, vases, and other forms. Often painted with animal design; floral, geometric, and/or vegetal motifs (*e.g.,* pipal leaves). Approximate date: 9000–2400 B.C.

b. Bronze Age through pre-Islamic Periods—Includes earthenware vessels that may have a pink, peach, orange, or grey core. Vessel types include conventional shapes such as basins, beakers, bottles, bowls, jars, pitchers, storage vessels, vases, as well other forms such as cosmetic jars, lamps, stands, and table amphorae. Vessel forms may have pedestalled bases and/or handles. Surface treatments may include slip, painting, and/or burnishing/polishing. Decorative techniques include incised and impressed decorations, including grooving, roulette, stamping, and other techniques. Stamps used for decoration range from simple geometric patterns to rosettes to elaborate scenes combining animal, floral, geometric, and/or vegetal designs. Some vessels may have elaborate shapes created using molds. High-relief surface decorative techniques may include affixing molded animal heads or rosettes to the exterior surface of a vessel. Examples include Greco-Bactrian vessels that range from plain to having multiple types of surface treatment and decorative techniques. Begram vessels may have intricate human/animal hybrid shapes molded into the vessel exterior. Some Sassanian vessel forms may have uniformly glazed ceramics in green, blue-green, or yellow glazes, while utilitarian forms may be unglazed. Includes lids of ceramic vessels. Approximate date: 3000 B.C.–A.D. 1000.

c. Islamic Periods—Includes earthenware vessels (often red and buff) and porcelain. Vessel types may form conventional shapes such as bowls, cups, ewers, flasks, jars, jugs, platters, trays, and other types such as fire blowers (aeolipipes), incense burners, footed vessels, and zoomorphic shapes. May be hand-built, molded, or wheel thrown. Surface treatments may include slip, polishing, burnishing, and others. Vessels may have slip and paint. Other decorative techniques include incisions (sgraffito), often in floral, geometric, and/or vegetal designs; and inscriptions in multiple languages and scripts. Animal and human forms may be stylized. Vessels may have colorless lead, monochrome, or polychrome glazing. Vessels may be colorful. Common colors include green, yellow, blue, tomato red, purplish black, turquoise, and white. Imported types include celadons and blue-and-white porcelain from China; fritware, earthenware, and copies of Chinese ceramics from Iran; and glazed ceramics from Uzbekistan. Includes lids of ceramic vessels. Approximate date: A.D. 1000–1747.

4. Islamic Period Tiles—Includes glazed tiles and bricks used to decorate civic and religious architecture. Tiles are mostly square, but some are polygonal. Types may be molded and glazed in monochrome or polychrome. Turquoise and manganese are commonly used for glazing. Some tiles can be molded with decoration, with low- and high-relief techniques. Decorative molding may be in floral, geometric, or vegetal motifs; may have animal imagery. May have inscriptions in multiple languages and scripts. Includes glazed bricks. Approximate date: A.D. 1000–1747

C. *Metal*—Includes copper, gold, silver, iron, electrum, and alloys of copper, tin, lead, and zinc. Metal objects may have been created using different techniques such as casting, chasing, gilding or repoussé. Approximate date: 3000 B.C.–A.D. 1750.

1. Containers and Vessels—Vessel types may form conventional shapes such as basins, bowls, cauldrons, cups, dishes, ewers, flacons, jars, jugs, lamps, platters, stands, table ornaments, and utensils, and also may be cosmetic containers, incense burners, medicine droppers, reliquaries (and their contents), spouted vessels, and tripod stands. Some drinking vessels (rhytons) may be in the shape of an animal or mythical creature carved into the ventral end. Some styles may have lids and/or handles. Metal containers may be cast and turned, chased, engraved, gilt, and/or punched. Decorative styles include, but are not limited to, animals, arabesque motifs, inscriptions in different languages, floral motifs, geometric motifs, vegetal motifs. Some types of containers and vessels, like reliquaries, may be inlaid with garnet, lapis lazuli, pearl, turquoise, and/or other types of semi-precious stone as well as other types of precious metals, including gold and silver. Includes lids and handles of vessels.

2. Jewelry and Personal Adornment—Types include, but are not limited to, amulets, amulet holders, bracelets, bracteates, belts, brooches, buckles, buttons, charms, crowns, hair ornaments, hairpins, mirrors, mirror handles, necklaces, ornaments, pectoral ornaments, pendants, rings, rosettes, scale weights, staffs, and others. May be highly decorative and include inlays of other types of ivory, bone, animal teeth, metals, precious stones, or semi-precious stones. Includes metal ornaments once attached to other types of textiles or leather objects.

3. Tools and Instruments—Types include, but are not limited to, axes, bells, blades, hooks, keys, knives, pins, projectiles, rakes, sickles, spoons, staffs, trowels, weights, and tools of craftpersons such as carpenters, masons, and metal smiths. Approximate date: 3000 B.C.–A.D. 1747.

4. Weapons and Armor—Includes body armor, such as helmets, shin guards, shields, horse armor and horse bits. Launching weapons (spears and javelins); hand-to-hand combat weapons (swords, daggers); and sheaths. Some weapons may be highly decorative and include inlays of other types of metals, precious stones, or semi-precious stones in the sheaths and hilts. Approximate date: 330 B.C.–A.D. 1747.

5. Coins— Ancient coins include gold, silver, copper, and bronze coins; may be hand stamped with units ranging from tetradrachms to dinars; includes gold bun ingots and silver ingots, which may be plain and/or inscribed. Some of the most well-known types are described below:

a. The earliest coins in Afghanistan are Greek silver coins, including tetradrachms and drachmae. Approximate date: 530–333 B.C.

b. During the reign of Darius I, gold staters and silver sigloi were produced in Bactria and Gandhara. Approximate date: 586–550 B.C.

c. Achaemenid coins include round punch-marked coins with one or two punched holes and bent bar coins (*shatamana*). Approximate date: 5th century B.C.

d. Gandhara coins include *janapadas,* bent bar coins based on the silver sigloi weight. Approximate date: 4th century B.C.

e. Mauryan coins include silver *karshapanas* with five punches, six arm designs, and/or sun symbols. Weights ranged from 5.5 to 7.2 gm. Approximate date: 322–185 B.C.

f. Gold staters and silver tetradrachms were produced locally after Alexander the Great conquered the region. Approximate date: 327–323 B.C.

g. Greco-Bactrian coins include gold staters, silver tetradrachms, silver and bronze drachms, and a small number of punch-marked coins. The bust of the king with his name written in Greek and Prakit were on the obverse, and Greek deities and images of Buddha were on the reverse. Approximate date: 250–125 B.C.

h. Common Roman Imperial coins found in archaeological contexts in Afghanistan were struck in silver and

bronze. Approximate date: 1st century B.C.–4th century A.D.

i. Kushan Dynasty coins include silver tetradrachms, copper coin (Augustus type), bronze diadrachms and gold dinars. Imagery includes portrait busts of each king with his emblem (*tamgha)* on both sides. Classical Greek and Zoroastrian deities and images of the Buddha are depicted on the reverse. Approximate date: A.D. 19–230.

j. Sassanian coins include silver drachms, silver half drachms, obols (*dang),* copper drahms and gold dinars, and gold coins of Shapur II (A.D. 309–379). Starting with Peroz I, mint indication was included on the coins. Sassanian coins may include imagery of Zoroastrian Fire Temples. Approximate date: A.D. 224–651.

k. Hephthalite coins include silver drachms, silver dinars, and small copper and bronze coins. The designs were the same as Sassanian, but they did not put the rulers' names on the coins. Hephthalite coins may include imagery of Zoroastrian Fire Temples. Approximate date: 5th–8th centuries A.D.

l. Turk Shahis coins include silver and copper drachma with portraits of the rulers wearing a distinctive triple crescent crown. The emblems of these Buddhist Turks were also included on the coin. Inscriptions were in Bactrian. Approximate date: A.D. 665–850.

m. Shahiya or Shahis of Kabul coins include silver, bronze, and copper drachma with inscriptions of military and chief commanders. Hindu imagery is included on the coin design. The two main types of images are the bull and horseman and the elephant and lion. Approximate date: A.D. 565–879.

n. Chinese coins belonging primarily to the Tang Dynasty are found in archaeological contexts in Afghanistan. Approximate date: A.D. 618–907.

o. Ghaznavid coins include gold dinars with bilingual inscriptions, Islamic titles in Arabic and Sharda and images of Shiva, Nandi, and Samta Deva. Approximate date: A.D. 977–1186.

p. Ghurid coins include silver and gold tangas with inscriptions and abstract goddess iconography. Approximate date: A.D. 879–1215.

q. Timurid coins include silver and copper tangas and copper dinars, both coin types are decorated with Arabic inscriptions. Approximate date: A.D. 1370 –1507.

r. Mughal coins include shahrukhi, gold mithqal, gold mohur, silver rupee, copper dams, and copper falus. The iconography varies, depending on the ruler, but popular designs include images of the Hindu deities Sita and Ram, portrait busts of the rulers, and the twelve zodiac signs. Approximate date: A.D. 1526–1857.

6. Ceremonial Objects—Includes highly decorative axes, staffs, swords, and other types of implements. While the forms may be similar to utilitarian objects, ceremonial objects are too decorative to have been used as everyday tools. Approximate date: 3000 B.C.–A.D. 1747.

7. Statuary, Ornaments, and other Relief Sculpture—Primarily in copper, gold, silver, bronze, or alloys of copper, tin lead, and zinc. Includes free-standing or supported statuary; relief plaques or tablets; votive ornaments; and other ornaments. Decoration may include humans, animals, mythological figures (*e.g.,* griffins or horned lions), and/or scenes of activity. Plaques or tablets may have been cast, chased, and/or embossed. Plaques and tablets may have inlay of other types of material. Statuary includes objects fashioned as humans, animals, or mythological figures; miniature chariots; wheeled carts; and other types of objects. Decorative elements may include floral, geometric, or vegetal motifs; inscriptions in multiple languages or scripts. Statuary includes naturalized and stylized forms.

8. Stamps and Seals—Primarily in cast bronze, and alloys of copper, tin, lead, and zinc; includes stamps and seals in gold or silver. Types include amulets, rings, small devices with engraving on one side, and others. Stamps and seals may have engravings that include animals, human figures, geometric designs, inscriptions in various languages and scripts, and/or floral/vegetal motifs. May have inlay of other types of material. Approximate date: 4th century B.C.–A.D. 1500.

D. *Plaster, Stucco, and Unfired Clay*—Includes animal figures, columns, human figures, reliefs, medallions, ornaments, panels, plaques, roundels, window screens, and other architectural and non-architectural decoration or sculpture. There may be traces of paint, gilding, and/or inscriptions in multiple languages and scripts. Stucco panels may have elaborate scenes of animals and human activity (such as hunting or elite activity) and/or floral, geometric, and vegetal patterns. Stucco panels may have been made with molds. Stucco figures and objects may have strong resemblance to Hellenistic styles. Painted clay objects are often represented as single individuals, such as a Buddha, Bodhisattva, or a male or female patron of a religious complex. Unfired clay roundels with stamped impressions used as sealing material are included.

E. *Painting*—Includes wall painting and fragments, often having a white base coat on ground clay mixed with small stones and vegetal matter; color is often applied in thin pigments in primary colors; figures are often outlined in black. Subjects vary, but images of Buddha figures and mandalas are common.

F. *Ivory and Bone*

1. Non-Architectural Relief Panels and Plaques—Highly and elaborately decorated and engraved panels and plaques with low- and high-relief carvings. May include imagery of humans, animals, and human activity; floral, geometric, and/or vegetal designs. Begram ivory panels are a typical example. Approximate date: 1st century A.D.

2. Statuary—Includes carved animal and human figures. Floral, geometric, and/or vegetal decorative elements may be part of the carved design. May be in low- or high-relief. Begram Ivory figurines are an example.

3. Containers, Handles, and other Non-Architectural Objects—Includes buckles, buttons, combs, game die, handles on daggers, mirrors, pins, and other personal objects.

4. Furniture—Includes arms, brackets, handles, finials, footstools, and legs in chairs, chests, trunks, and other types of furniture.

G. *Glass*

1. Architectural Elements—Mosaics and stained glass with various designs and colors. May be part of large designs with floral, geometric, and/or vegetal motifs; often with religious imagery. Includes glass inlay used in architectural elements. Approximate date: 1st century A.D.–A.D. 1747.

2. Beads/Jewelry—Includes beads that may be cylindrical, spherical, conical, disc, and others. Decorations may include bevels, incisions, and/or raised decoration. Includes glass inlay used in other types of beads and/or jewelry. Approximate date: 1st century A.D.–A.D. 1747.

3. Vessels—Vessel types may form conventional shapes such as beakers, bowls, cups, dishes, flasks, goblets, jars, mugs, perfume bottles, and vases, and other shapes such as cosmetic containers, lamps, medicine droppers, and others. Flasks and drinking vessels may be shaped as animals or fish. Some vessel types may have been blown into molds. May have decorative elements of high-relief including honeycomb patterns and waves. May be monochrome or polychrome. Some polychrome glass vessels are elaborately colored and decorated with animals, humans, human activity; floral, geometric, and vegetal designs. Some

polychrome glass vessels may have been elaborately painted with scenes of humans, animals, and/or scenes of human activity or have traces of paint. Vessels created and molded using mosaic techniques are included. Approximate date: 1st century A.D.–A.D. 1747.

4. Ornaments—Includes glass medallions. May have molded decorations including, but not limited to, animals, humans, floral, geometric, and vegetal motifs. Typically associated with the Ghaznavid and Ghurid periods. Approximate date: A.D. 1000–1200.

H. *Leather, Birch Bark, Velum, Parchment, and Paper*

1. Books and Manuscripts—Includes scrolls, sheets, or bound volumes. Includes secular and religious texts. Text may be written on birch bark, velum, parchment, or paper, and may be gathered into leather bindings or folios. Calligraphy is written in ink. Books and manuscripts are written in multiple languages and scripts, but Arabic and Persian are most common. Books and manuscripts may be further embellished or decorated with colorful floral, geometric, or vegetal motifs; images of animals; images of humans and human activity. Decoration, embellishment, illumination, and/or painting may have been added after the text was written. Occasionally, there are portraits or illustrations of single figures. May be in miniature form. Timurid period manuscript types are typically highly colorful with polychrome decoration, embellishment, illumination, and/or painting. Approximate date: 1st century A.D.–A.D. 1750.

2. Items of Personal Adornment—Primarily in leather, including bracelets, belts, necklaces, sandals, shoes, and other types of jewelry. May be embroidered or embellished with other types of materials. Leather goods may have also been used in conjunction with other types of textiles.

I. *Textiles*—Includes silk, linen, cotton, hemp, wool, damasee, samit, other woven materials used in basketry and other household goods; clothing, shoes, jewelry, and items of personal adornment; burial shrouds; tent coverings and domestic textiles; carpets; and others. Decorative techniques may include embroidery with various motifs, including, but not limited to, animals, floral, geometric, and vegetal motifs or textiles may be undecorated. May have patterns woven into the body of the textile. Gold or silver threads may be woven into other fabrics, for example in samit textiles. May have traces of paint. Approximate date: 1st century A.D.–A.D. 1747.

J. *Wood, Shell, and other Organic Material*—Includes architectural pieces made from wood; statuary and figurines; furniture; jewelry and other items of personal adornment; musical instruments; vessels and containers; and engraved stamps and seals from archaeological contexts.

K. *Human Remains*—Human remains and fragments of human remains, including skeletal remains, soft tissue, and ash from the human body that may be preserved in burial, reliquaries, and other contexts.

II. Ethnological Material

A. Stone, brick, plaster, and stucco—Primarily in brick, plaster, stone (*e.g.,* alabaster, limestone, marble, steatite schist), and stucco. Includes structural elements such as bricks and blocks from walls, ceilings, and floors; columns; door frames; false gables; friezes; jalis; lintels; mihrabs; minarets; niches; pillars; plinths; qiblas; and others. Also includes decorative elements such as carved bases, ceiling decoration, funerary headstones and monuments, fountains, monoliths, niches, plaques, roundels, slabs, and stelae bases. May be plain, molded, carved, or inscribed in various languages and scripts. Decorative elements may be in high- or low-relief. Architectural elements may include relief and inlay sculptures that were part of a building (*e.g.,* mausoleums, mosques, minarets, palaces, religious structures, public buildings, royal buildings, shrines, stupas, and others), such as friezes, panels, or stone figures. Architectural elements may have religious imagery or may have been part of religious structures.

B. Tiles—Includes glazed tiles and glazed bricks used to decorate civic and religious architecture. Tiles are mostly square, but some are polygonal. Types may be molded and glazed in monochrome or polychrome. Turquoise and manganese are commonly used for glazing. Some tiles can be molded with decoration, with low- and high-relief techniques. Decorative molding may be in floral, geometric, or vegetal motifs; may have animal imagery. May have inscriptions in multiple languages and scripts.

C. Stained Glass—Stained glass is glass that is colored and arranged in various patterns, often with floral, geometric, and/or vegetal designs. Wooden dividers may separate the panels of glass. Often in the windows of religious buildings, including mosques.

D. Wood

1. Architectural elements—This type encompasses both structural and decorative elements including walls, doors, door frames, posts, lintels, jambs, finials, figural capitals, panels, veranda shutters, window fittings, window frames, balconies, minbars, mihrabs, or pieces of any of these objects. Architectural elements may be repurposed into newer and different items, such as a wood panel into a table or a door jamb into a bench. Well known examples are from the Nuristan region or date to the Timurid and Mughal period.

2. Nuristani Figures—Includes life-sized and hand-held stylized wooden figures of ancestors and deities. A small number are horse and rider types. Many have sustained damage including small holes and cracks, others may be partially defaced, and others may be cut in half for ease of transport. Approximate date: A.D. 1400 –1920.

3. Musical Instruments—Type includes stringed and percussion instruments associated with the Nuristani culture. Typically made in a variety of materials including animal hair, animal hides, cloth, nylon, and wood. Stringed instruments may have bows often crafted with horsehair or silk; may have ivory inlay; may have tuning pegs. Approximate date: A.D. 1400—1920.

Inapplicability of Notice and Delayed Effective Date

This amendment involves a foreign affairs function of the United States and is, therefore, being made without notice or public procedure (5 U.S.C. 553(a)(1)). For the same reason, a delayed effective

date is not required under 5 U.S.C. 553(d)(3).

Regulatory Flexibility Act

Because no notice of proposed rulemaking is required, the provisions of the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) do not apply.

Executive Order 12866

CBP has determined that this document is not a regulation or rule subject to the provisions of Executive Order 12866 because it pertains to a foreign affairs function of the United States, as described above, and therefore is specifically exempted by section 3(d)(2) of Executive Order 12866.

Signing Authority

This regulation is being issued in accordance with 19 CFR 0.1(a)(1) pertaining to the Secretary of the Treasury's authority (or that of his/her delegate) to approve regulations related to customs revenue functions.

Chris Magnus, the Commissioner of CBP, having reviewed and approved this document, is delegating the authority to electronically sign this document to Robert F. Altneu, who is the Director of the Regulations and Disclosure Law Division for CBP, for purposes of publication in the **Federal Register**.

List of Subjects in 19 CFR Part 12

Cultural property, Customs duties and inspection, Imports, Prohibited merchandise, Reporting and recordkeeping requirements.

Amendment to CBP Regulations

For the reasons set forth above, part 12 of title 19 of the Code of Federal Regulations (19 CFR part 12), is amended as set forth below:

PART 12—SPECIAL CLASSES OF MERCHANDISE

■ 1. The general authority citation for part 12 and the specific authority for § 12.104g continue to read as follows:

Authority: 5 U.S.C. 301; 19 U.S.C. 66, 1202 (General Note 3(i), Harmonized Tariff Schedule of the United States (HTSUS)), 1624.

* * * * *

Sections 12.104 through 12.104i also issued under 19 U.S.C. 2612;

* * * * *

■ 2. In § 12.104g, the table in paragraph (b) is amended by adding Afghanistan to the list in alphabetical order to read as follows:

§ 12.104g Specific items or categories designated by agreements or emergency actions.

* * * * *

(b) * * *

State party	Cultural property	Decision No.
Afghanistan	Archaeological and ethnological material from Afghanistan	CBP Dec. 22–04.

Guidance on Passive Foreign Investment Companies; Correction

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Correcting amendment.

SUMMARY: This document contains corrections to the final regulations Treasury Decision 9960 published in the **Federal Register** on Tuesday, January 25, 2022. The final regulations regarding the treatment of domestic partnerships for purposes of determining amounts included in the gross income of their partners with respect to foreign corporations.

DATES: These corrections are effective on *February 22, 2022,* and applicable on or after January 25, 2022.

FOR FURTHER INFORMATION CONTACT: Edward J. Tracy at (202) 317–6934 (not a toll-free number).

SUPPLEMENTARY INFORMATION:

Background

The final regulations (TD 9960) subject to this correction are issued under section 951 of the Internal Revenue Code.

Need for Correction

As published on January 25, 2022 (87 FR 3648), the final regulations (TD 9960) contain errors that need to be corrected.

List of Subjects in 26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

Correction of Publication

Accordingly, 26 CFR part 1 is corrected by making the following correcting amendments:

PART 1—INCOME TAXES

■ **Paragraph 1.** The authority citation for part 1 continues to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

§ 1.958–1 [Corrected]

■ **Par. 2.** Section 1.958–1(d)(3)(iii)(B)(*3*) is corrected by removing the word ''note'' and adding the word ''account'' in its place.

Oluwafunmilayo A. Taylor,

Chief, Publications and Regulations Branch, Legal Processing Division, Associate Chief Counsel, (Procedure and Administration).

RIN 0703–AB27

Policies and Procedures for the Protection of Proprietary Rights in Technical Information Proposed for Release to Foreign Governments

AGENCY: Department of the Navy, Department of Defense (DoD).

ACTION: Final rule.

SUMMARY: This final rule removes the Navy regulation on the Policies and Procedures for the Protection of Proprietary Rights in Technical Information Proposed for Release to

Foreign Governments because its content is duplicative of a DoD-level regulation. The rule is redundant and unnecessary. Therefore, this rule can be removed from the Code of Federal Regulations (CFR).

DATES: This rule is effective on February 22, 2022.

FOR FURTHER INFORMATION CONTACT: Captain Bruce Gragert, United States Navy, 2000 Navy Pentagon, Room 4B654, Washington, DC 20350–2000, telephone: 703–692–5310.

SUPPLEMENTARY INFORMATION: It has been determined that publication of this CFR part removal for public comment is impracticable, unnecessary, and contrary to public interest since it is removing a duplicative rule memorialized elsewhere in the CFR. The rule provides guidance to Department of the Navy entities on the same delegation of authority captured in 32 CFR 264.4(d)(3). It does not add or subtract requirements beyond those already established.

This rule is not significant under Executive Order 12866, ''Regulatory Planning and Review.''

List of Subjects in 32 CFR Part 744

Military personnel.

PART 744—[REMOVED]

Accordingly, by the authority of 5 U.S.C. 301, 32 CFR part 744 is removed.

J.M. Pike,

Commander, Judge Advocate General's Corps, U.S. Navy, Federal Register Liaison Officer.

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 117

[Docket No. USCG–2021–0181]

RIN 1625–AA09

Drawbridge Operation Regulation; Old River, Between Victoria Island and Byron Tract, CA

AGENCY: Coast Guard, DHS.

ACTION: Final rule.

SUMMARY: The Coast Guard is changing the operating schedule that governs the California Department of Transportation (Route 4) highway bridge, across Old River, mile 14.8, between Victoria Island and Byron Tract, California. This action is due to the infrequent amount of vessels requiring drawbridge openings on the waterway. It will reduce unnecessary staffing of the drawbridge during periods of navigational inactivity while continuing to meet the reasonable needs of navigation. The schedule change would require vessels to provide a four-hour advance notification for drawspan opening.

DATES: This rule is effective March 24, 2022.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to *https://www.regulations.gov.* Type USCG–2021–0181 in the ''SEARCH'' box and click ''SEARCH.'' In the Document Type column, select ''Supporting & Related Material.''

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email Carl T. Hausner, Chief, Bridge Section, Eleventh Coast Guard District; telephone 510–437–3516, email *Carl.T.Hausner@uscg.mil.*

I. Table of Abbreviations

CADFW California Department of Fish and Wildlife
Caltrans California Department of Transportation
CFR Code of Federal Regulations
DHS Department of Homeland Security
FR Federal Register
OMB Office of Management and Budget
NPRM Notice of Proposed Rulemaking (Advance, Supplemental)
§ Section
U.S.C. United States Code

II. Background Information and Regulatory History

On October 25, 2021, the Coast Guard published a Notice of Proposed Rulemaking (NPRM) entitled ''Drawbridge Operation Regulation; Old River, Between Victoria Island and Byron Tract, CA'' in the **Federal Register** (86 FR 58827). Further, the Commander (dpw), Eleventh Coast Guard District, mailed/emailed notification of the NPRM to 104 interested parties that may navigate Old River and published a notification of the NPRM in the Local Notice to Mariners, No. 43/21. The Coast Guard received no comments on this proposed rule.

On May 3, 2021, the Coast Guard published a temporary deviation from the operating schedule, entitled ''Drawbridge Operation Regulation; Old River, Between Victoria Island and Byron Tract, CA'' in the **Federal Register** (86 FR 23278). The May 3, 2021 proposed temporary deviation to the bridge operating schedule was employed to determine whether a permanent change was warranted to allow the draw to operate as follows:

The draw of the California Department of Transportation (Route 4) highway bridge, mile 14.8 between Victoria Island and Byron Tract, shall open on signal if at least four hours notice is given to the drawtender at the Rio Vista bridge across the Sacramento River, mile 12.8.

One comment from the Contra Costa County Office of the Sheriff was received during the temporary deviation period and was addressed in the NPRM.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority 33 U.S.C. 499.

The Caltrans (Route 4) highway bridge, across Old River, mile 14.8, between Victoria Island and Byron Tract, California is a swing span drawbridge. It provides a horizontal clearance of 98 feet and a vertical clearance of 12.7 feet above mean high water in the closed-to-navigation position with unlimited vertical clearance when fully opened. The Caltrans (Route 4) highway bridge is currently governed by 33 CFR 117.183, which requires the draw to open on signal from May 1 through October 31 from 6 a.m. to 10 p.m., and from November 1 through April 30 from 9 a.m. to 5 p.m. At all other times, the draw opens on signal if at least four hours notice is given to the drawtender at the Rio Vista bridge across the Sacramento River, mile 12.8.

Due to infrequent calls for drawbridge openings, Caltrans has requested a four-hour notification year-round for drawbridge openings at this location. A four-hour notification will allow Caltrans to use personnel more efficiently and reduce unnecessary staffing of the drawbridge during periods of navigational inactivity while continuing to meet the reasonable needs of navigation on the waterway.

There are approximately 10 marinas on Old River and nearby waterways, with two marinas upriver from the bridge. From 2011 through June 2020, the swing span opened for vessels 474 times, an average of 4.27 openings per month. Most openings have been for vessels operated by the CADFW (58%), followed by recreational vessels (22%), towboat-vessel assistance (9%), and tug and barge units (6%). Law enforcement and search and rescue vessels also used the waterway.

IV. Discussion of Comments, Changes and the Final Rule

The preceding NPRM the Coast Guard issued provided a comment period of 60 days and no comments were received.

The Final Rule would require the drawspan to open on signal if at least four hours notice is given to the drawtender at the Rio Vista bridge across the Sacramento River, mile 12.8. This Final Rule would meet the reasonable needs of navigation of vessels that currently use the waterway.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive Orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive Orders, and we discuss First Amendment rights of protesters.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This rule has not been designated a ''significant regulatory action,'' under Executive Order 12866. Accordingly, it has not been reviewed by the Office of Management and Budget (OMB).

This regulatory action determination is based on the ability that vessels can still transit the bridge given advanced notice.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980 (RFA), 5 U.S.C. 601–612, as amended, requires federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard received no comments from the Small Business Administration on this rule. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the bridge may be small entities, for the reasons stated in section V. A above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule calls for no new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Government

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Management Directive 023–01, Rev.1, associated implementing instructions, and Environmental Planning Policy COMDTINST 5090.1 (series) which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (NEPA)(42 U.S.C. 4321–4370f). The Coast Guard has determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule promulgates the operating regulations or procedures for drawbridges and is categorically excluded from further review, under paragraph L49, of Chapter 3, Table 3–1 of the U.S. Coast Guard Environmental Planning Implementation Procedures.

Neither a Record of Environmental Consideration nor a Memorandum for the Record are required for this rule.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.

List of Subjects in 33 CFR Part 117

Bridges.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 117 as follows:

PART 117—DRAWBRIDGE OPERATION REGULATIONS

■ 1. The authority citation for part 117 continues to read as follows:

Authority: 33 U.S.C. 499; 33 CFR 1.05–1; and Department of Homeland Security Delegation No. 0170.1.

■ 2. Revise § 117.183 to read as follows:

§ 117.183 Old River.

The draw of the California Department of Transportation (Route 4) highway bridge, mile 14.8 between Victoria Island and Byron Tract, shall open on signal if at least four hours notice is given to the drawtender at the Rio Vista bridge across the Sacramento River, mile 12.8.

Dated: February 14, 2022.

Brian K. Penoyer,

Rear Admiral, U.S. Coast Guard, Commander, Eleventh Coast Guard District.

Coast Guard

33 CFR Part 165

[Docket Number USCG–2022–0075]

RIN 1625–AA00

Safety Zone; Firestone Grand Prix of St. Petersburg, St. Petersburg, Florida

AGENCY: Coast Guard, Department of Homeland Security (DHS).

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone for the navigable waters of Tampa Bay, in the vicinity of the St. Petersburg Municipal Yacht Basin, St. Petersburg, Florida, during the Firestone Grand Prix of St. Petersburg. The temporary safety zone is needed to protect the safety of race participants, spectators, and vessels on the surrounding waterway during the race. Persons and vessels are prohibited from entering, transiting through, anchoring in, or remaining within the regulated area unless authorized by the Captain of the Port St. Petersburg or a designated representative.

DATES: This rule is effective from 6:00 a.m. on Feburary 25, 2022, through 10:00 p.m. on February 27, 2022.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to *https://www.regulations.gov,* type USCG–2022–0075 in the ''SEARCH'' box and click ''SEARCH.'' Click on Open Docket Folder on the line associated with this rule.

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email Marine Science Technician Second Class Regina Cuevas, Sector St. Petersburg Prevention Department, Coast Guard; telephone (813) 228–2191, email *Regina.L.Cuevas@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background, Purpose, and Regulatory History

The Coast Guard is issuing this temporary rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' Under 5 U.S.C. 553(b)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because it is impracticable. The Coast Guard received information regarding the need for a safety zone on February 2, 2022. Insufficient time remains to publish a NPRM and to receive public comments, as the event will occur before the rulemaking process would be completed. Because of the potential safety hazards associated with the race, the regulations is necessary to provide for the safety of race participants, spectators, and other vessels navigating the surrounding waterways. For those reasons, it would be impracticable to publish an NPRM.

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register**. For the reasons discussed above, the Coast Guard finds that good cause exists.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 46 U.S.C. 70034. The Captain of the Port St. Petersburg has determined that potential hazards associated with the Firestone Grand Prix of St. Petersburg race, will be a safety concern for race participants, spectators, and vessels. This rule is needed to ensure the safety of vessels and persons within the navigable waters of the safety zone, during the race event.

IV. Discussion of the Rule

This rule establishes a safety zone from 6 a.m. until 10 p.m., daily on February 25, 2022, through February 27, 2022. The safety zone will cover all navigable waters within a specified area of Tampa Bay, in the vicinity of St. Petersburg, Florida. The duration of the zone is intended to ensure the safety of the public and these navigable waters during the race event. No vessel or person will be permitted to enter, transit through, anchor in, or remain within the safety zone without obtaining permission from the Captain of the Port St. Petersburg or a designated representative.

Persons and vessels may request authorization to enter, transit through, anchor in, or remain within the regulated area by contacting the Captain of the Port St. Petersburg by telephone at (727) 824–7506, or a designated representative via VHF radio on channel 16. If authorization to enter, transit through, anchor in, or remain within the regulated area is granted by the Captain of the Port St. Petersburg or a designated representative, all persons and vessels receiving such authorization must comply with the instructions of the Captain of the Port St. Petersburg or a designated representative. The Coast Guard will provide notice of the safety zone by Local Notice to Mariners, Broadcast Notice to Mariners, and/or on-scene designated representatives.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. Executive Order 13771 directs agencies to control regulatory costs through a budgeting process. This rule has not been designated a ''significant regulatory action,'' under Executive Order 12866. Accordingly, this rule has not been reviewed by the Office of Management and Budget (OMB), and pursuant to OMB guidance it is exempt from the requirements of Executive Order 13771.

This regulatory action determination is based on the size, location, duration, and scope of the safety zone. The safety zone will only be enforced for a limited period of time. This time period extends over the course of three days, during the Firestone Grand Prix of St. Petersburg race events. Although persons and vessels are prohibited to enter, transit through, anchor in, or remain within the regulated area, without authorization from the Captain of the Port St. Petersburg or a designated representative, they may operate in the surrounding area during the enforcement period. The Coast Guard will provide advance notification of the safety zone to the local maritime community by Local Notice to Mariners and/or Broadcast Notice to Mariners.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The

term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule would not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section V.A above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. If you believe this rule has implications for federalism or Indian tribes, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section above.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule would not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guides the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves a safety zone that will prohibit persons and vessels from entering, transiting through, anchoring in, or remaining within the regulated area during a three day high speed grand prix race event. It is categorically excluded from further review under paragraph L60(a) Table 3–1 of U.S. Coast Guard Environmental Planning Implementing Procedures. A Record of Environmental Consideration supporting this determination is available in the docket where indicated under **ADDRESSES**.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places, or vessels.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 00170.1, Revision No. 01.2.

■ 2. Add § 165.T07–0075 to read as follows:

§ 165.T07–0075 Safety Zone; Firestone Grand Prix of St. Petersburg, St. Petersburg, FL.

(a) *Regulated area.* The following area is established as a safety zone. All waters of the Gulf of Mexico encompassed within the following points: 27°46′18″ N, 082°37′55.2″ W, thence to position 27°46′18″ N, 082°37′54.6″ W, thence to position 27°46′9.6″ N, 082°37′54.6″ W, thence to position 27°46′9.6″ N, 082°37′33″ W, thence to position 27°46′4.2″ N, 082°37′33″ W, thence to position 27°45′59.4″ N, 082°37′50.4″ W, thence to position 27°46′6.6″ N, 082°37′56.4″ W, thence to position 27°46′13.8″ N, 082°37′55.8″ W, thence back to the original position 27°46′18″ N, 082°37′55.2″ W. All coordinates are North American Datum 1983.

(b) *Definition.* The term ''designated representative'' means Coast Guard Patrol Commanders, including Coast Guard coxswains, petty officers, and other officers operating Coast Guard vessels, and Federal, state, and local officers designated by or assisting the Captain of the Port St. Petersburg in the enforcement of the regulated areas.

(c) *Regulations.* (1) All persons and vessels are prohibited from entering, transiting through, anchoring in, or remaining within the regulated area unless authorized by the Captain of the Port St. Petersburg or a designated representative.

(2) Designated representatives may control vessel traffic throughout the enforcement area as determined by the prevailing conditions.

(3) Persons and vessels may request authorization to enter, transit through, anchor in, or remain within the regulated areas by contacting the

Captain of the Port St. Petersburg by telephone at (727) 824–7506, or a designated representative via VHF radio on channel 16. If authorization is granted by the Captain of the Port St. Petersburg or a designated representative, all persons and vessels receiving such authorization must comply with the instructions of the Captain of the Port St. Petersburg or a designated representative.

(d) *Enforcement period.* This section will be enforced daily from 6 a.m. until 10 p.m., on February 25, 2022, through February 27, 2022.

Dated: February 15, 2022.

Matthew A. Thompson,

Captain, U.S. Coast Guard, Captain of the Port Saint Petersburg.

[FR Doc. 2022–03707 Filed 2–18–22; 8:45 am]

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket Number USCG–2022–0094]

RIN 1625–AA00

Safety Zone; Atlantic Ocean, Cape Lookout, NC

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone on the navigable waters of the Atlantic Ocean near Cape Lookout, North Carolina. This temporary safety zone restricts vessel traffic in a portion of the Atlantic Ocean while crews continue to search a plane crash area. This action restricts vessel traffic to protect mariners, vessels, and dive crews from the hazards associated with the work or surveying a plane crash site. Entry of vessels or persons into this safety zone is prohibited unless specifically authorized by the Captain of the Port (COTP) North Carolina or a designated representative.

DATES: This rule is effective without actual notice from February 22, 2022, until March 1, 2022. For the purposes of enforcement, actual notice will be used from February 15, 2022, until February 22, 2022.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to *https://www.regulations.gov,* type USCG–2022–0094 in the search box and click ''Search.'' Next, in the Document Type column, select ''Supporting & Related Material.''

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email Petty Officer Ken Farah, Waterways Management Division, U.S. Coast Guard; telephone 910–772–2221, email *ncmarineevents@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background Information and Regulatory History

The Coast Guard is issuing this temporary rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' Under 5 U.S.C. 553(b)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because it would be impracticable and contrary to the public interest. The Coast Guard was unable to publish an NPRM and hold a reasonable comment period for this rulemaking due to the emergent nature of the recovery operations and required publication of this rule. Immediate action is needed to protect persons and vessels from the hazards associated with carrying out operations to recover the downed aircraft and survey the area for debris. It is impracticable and contrary to the public interest to publish an NPRM because a final rule needs to be in place by February 15, 2022.

We are issuing this rule, and under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making it effective less than 30 days after publication in the **Federal Register**. Delaying the effective date of this rule would be impracticable and contrary to the public interest for the reasons discussed above, immediate action is needed to protect persons, property, vessels, and the marine environment on the navigable waters of the Atlantic Ocean near Cape Lookout in North Carolina.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 33 U.S.C. 1231. The Captain of the Port North Carolina (COTP) has determined potential hazards associated with operations during recovery work on the site of a plane crash. Work on this site is starting February 15, 2022, and ongoing. This work is a safety concern for anyone transiting the designated recovery area of the Atlantic Ocean and Cape Lookout, NC, because the site work will involve persons in the water. This rule is necessary to protect persons, vessels, and participants from the hazards associated with the recovery efforts.

IV. Discussion of the Rule

This rule establishes a safety zone from on February 15, 2022, through March 1, 2022. The safety zone will be enforced from 7 a.m. through 7 p.m. each day the rule is in effect. The safety zone will include all navigable waters of the Atlantic Ocean within a 1,000 yard radius of position 34–48.81 N by 076–17.23 W. The duration of this zone is intended to protect persons, property, vessels, and the marine environment on the navigable waters of the Atlantic Ocean during the recovery efforts of at downed aircraft. No vessel or person will be permitted to enter the safety zone unless specifically authorized by the Captain of the Port North Carolina or a designated representative.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This rule has not been designated a ''significant regulatory action,'' under Executive Order 12866. Accordingly, this rule has not been reviewed by the Office of Management and Budget (OMB).

This regulatory action determination is based on the emergent nature of this event and limited impact to the public. The safety zone is in an area where there is ample space to pass around this area. Moreover, the Coast Guard will issue a Broadcast Notice to Mariners via VHF–FM marine channel 16 about the zone, and the rule will allow vessels to seek permission to pass through the zone if necessary.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section V.A above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves a safety zone that will prohibit entry within 1,000 yards of vessels and machinery being used by personnel to survey and recover an aircraft crash site at position 34–48.81 N by 076–17.23 W. It is categorically excluded from further review under paragraph L[60d] of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 00170.1, Revision No. 01.2.

■ 2. Add § 165.T05–0094

§ 165.T05–0094 Safety Zone; Atlantic Ocean, Cape Lookout, NC.

(a) *Location.* The following area is a safety zone on all navigable waters within a 1,000 yard radius of position 34–48.81 N by 076–17.23 W on the Atlantic Ocean near Cape Lookout, North Carolina.

(b) *Definitions.* As used in this section—

Designated representative means a Coast Guard Patrol Commander, including a Coast Guard commissioned, warrant, or petty officer designated by the Captain of the Port North Carolina (COTP) for the enforcement of the safety zone.

(c) *Regulations.* (1) The general regulations governing safety zones in § 165.23 apply to the area described in paragraph (a) of this section.

(2) Entry into or remaining in this safety zone is prohibited unless authorized by the COTP or the COTP's designated representative. Unless permission to remain in the zone has been granted by the COTP or the COTP's designated representative, a vessel within this safety zone must immediately depart the zone when this section becomes effective.

(3) The Captain of the Port, North Carolina can be reached through the Coast Guard Sector North Carolina Command Duty Officer, Wilmington, North Carolina, at telephone number 910–343–3882.

(4) The Coast Guard and designated security vessels enforcing the safety zone can be contacted on VHF–FM marine band radio channel 13 (165.65 MHz) and channel 16 (156.8 MHz).

(d) *Enforcement.* The U.S. Coast Guard may be assisted in the patrol and enforcement of the safety zone by Federal, State, and local agencies.

(e) *Enforcement period.* This section will be enforced from 7 a.m. through 7 p.m. each day from February 15, 2022, through March 1, 2022.

Dated: February 15, 2022.

Matthew J. Baer,

Captain, U.S. Coast Guard, Captain of the Port North Carolina.

40 CFR Part 52

[EPA–R04–OAR–2022–0002; FRL–9413–01–R4]

Approval and Promulgation of Implementation Plans; Georgia: Approval of Revisions to State Implementation Plan; Correction

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule; correction and clarification.

SUMMARY: The Environmental Protection Agency (EPA) is correcting statements contained in a July 11, 2002, **Federal Register** notice of direct final rulemaking approving changes to the Georgia State Implementation Plan (SIP). Specifically, EPA stated that it was approving a change to the public notice requirements in Georgia's SIP for federally-enforceable operating permits. However, this change was never effective at the state level and, therefore, was never incorporated into the SIP. EPA is publishing this correction notice to eliminate any potential confusion regarding the public notice requirements in Georgia's SIP for these permits.

DATES: Effective February 22, 2022.

ADDRESSES: EPA has established a docket for this notice of correction under Docket Identification No. EPA–R04–OAR–2022–0002 to provide electronic access to the July 11, 2002, submittal. All documents in the docket are listed on the *www.regulations.gov* website. Although listed in the index, some information may not be publicly available, *i.e.,* Confidential Business Information or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available either electronically through *www.regulations.gov* or in hard copy at the Air Regulatory Management Section, Air Planning and Implementation Branch, Air and Radiation Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street SW, Atlanta, Georgia 30303–8960. EPA requests that if at all possible, you contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to schedule your inspection. The Regional Office's official hours of business are Monday through Friday 8:30 a.m. to 4:30 p.m., excluding Federal holidays.

FOR FURTHER INFORMATION CONTACT: D. Brad Akers, Air Regulatory Management Section, Air Planning and Implementation Branch, Air and Radiation Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street SW, Atlanta, Georgia 30303–8960. Mr. Akers can be reached via telephone at 404–562–9089 or via electronic mail at *akers.brad@epa.gov.*

SUPPLEMENTARY INFORMATION: Section 110 of the Clean Air Act (CAA) requires states to develop and submit to EPA a SIP to ensure that state air quality meets the National Ambient Air Quality Standards (NAAQS). These NAAQS currently address six criteria pollutants: Carbon monoxide, nitrogen dioxide, ozone, lead, particulate matter, and sulfur dioxide. Each state has a SIP containing the control measures and strategies used to attain and maintain the NAAQS. The SIP is extensive, containing such elements as air pollution control and permitting regulations, emission inventories, attainment demonstrations, and enforcement mechanisms. Each state must formally adopt the elements it proposes to include in its SIP after the public has had an opportunity to comment on them and must then submit the proposed SIP revisions to EPA. If the revisions meet all relevant CAA requirements, EPA must approve them through notice and comment rulemaking and incorporate the elements into the SIP at 40 Code of Federal Regulations part 52—''Approval and Promulgation of Implementation Plans.'' [1]

EPA incorporated Georgia's ''Operating (SIP) Permits'' rule—Ga. Comp. R. & Regs. 391–3–1–.03, *Permits,* at Section (2) (hereinafter Rule 391–3–1–.03(2))—into the Georgia SIP on August 30, 1995. *See* 60 FR 45048. Paragraph (i) of this rule requires the State to notify EPA and the public prior to issuing any federally-enforceable operating permit and provide the opportunity to comment on the draft permit. Georgia has not revised this public notice provision since its initial incorporation into the SIP.[2]

On July 11, 2002 (67 FR 45909), EPA approved numerous changes to the Georgia SIP through a direct final rule. This rule addressed regulatory changes transmitted to EPA on December 6, 1999, March 21, 2000, January 4, 2001, August 21, 2001, and December 28, 2001, by the State of Georgia, through the Georgia Department of Natural Resources' Environmental Protection Division (also known as GA EPD).

GA EPD's March 21, 2000, submittal contained several revisions to Rule 391–3–1–.03 and information indicating that it included changes to Rule 391–3–1–.03(2) for EPA approval. Specifically, the submittal contained a strikeout/underline draft version of Rule 391–3–1–.03(2)(i), that purported to eliminate the phrase ''on the draft permit.'' In the preamble of the July 11, 2002, notice of direct final rulemaking, EPA indicated it was removing this phrase, stating that ''*Rule 391–3–1–.03(2)(i)* is being amended to allow the public and EPA notification and review of a permit application to begin upon receipt of a permit application rather than upon completion of a draft permit.'' [3] [4] *See* 67 FR 45909 at 45910. However, the submittal also included a final version of the rule that retained the phrase ''on the draft permit'' and a hearing record showing that the draft version of Rule 391–3–1–.03(2)(i) (eliminating the phrase ''on the draft permit''), was never adopted by the Georgia Board of Natural Resources, and, therefore, was never state effective.

The direct final rule incorporated the final version of Rule 391–3–1–.03 into the SIP at 40 CFR 52.570(c). Because the draft change to the public notice requirement in Rule 391–3–1–.03(2)(i) (eliminating the phrase ''on the draft permit''), was never state effective, EPA could not have incorporated it into the SIP. Therefore, EPA did not approve any change to 391–3–1–.03(2) in the July 11,

[1] Georgia's SIP is set forth at 40 CFR 52.570.

[2] The SIP-approved version of Rule 391–3–1–.03(2) states ''Prior to the issuance of any federally enforceable operating permit, EPA and the public will be notified and given a chance for comment on the draft permit.''

[3] EPA erroneously made the draft change to Rule 391–3–1–.03(2)(i) in its online Georgia SIP compilation at *https://www.epa.gov/sips-ga.* EPA will correct this error in the SIP compilation at the time of publication or shortly thereafter.

[4] The SIP table at 40 CFR 52.570(c) contains an error in the entry for Rule 391–3–1–.03(2) indicating a December 26, 2001, state effective date. EPA intends to correct this table entry to reflect a state effective date of August 17, 1994, in the next routine update to the materials incorporated by reference into the Georgia SIP.

2002, direct final rule, and the preamble description of EPA's action was erroneous.

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Carbon monoxide, Incorporation by reference, Intergovernmental relations, Lead, Nitrogen dioxide, Ozone, Particulate matter, Reporting and recordkeeping requirements, Sulfur oxides, Volatile organic compounds.

Authority: 42 U.S.C. 7401 *et seq.*

Dated: February 4, 2022.

Daniel Blackman,

Regional Administrator, Region 4.

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 54

[WC Docket No. 10–90; FCC 19–95, FCC 20–5; FR ID 72341]

Connect America Fund

AGENCY: Federal Communications Commission.

ACTION: Final rule; announcement of effective date.

SUMMARY: In this document, the Federal Communications Commission (Commission) announces that the Office of Management and Budget (OMB) has approved, for a period of three years, an information collection associated with the rules for the Connect America Fund contained in the Commission's *Uniendo a Puerto Rico Fund and the Connect USVI Fund,* FCC 19–95 and the *2020 Rural Digital Opportunity Fund Order,* FCC 20–5. This document is consistent with the *Uniendo a Puerto Rico Fund and the Connect USVI Fund Order* and the *2020 Rural Digital Opportunity Fund Order,* which stated that the Commission would publish a document in the **Federal Register** announcing the effective date of the revised information collection requirements.

DATES: The amendments to §§ 54.316(a)(7) and (b)(7), 54.1503, 54.1513, and 54.1514, published at 84 FR 59937, November 7, 2019, and § 54.316(a)(8), (b)(5), and (c)(1) published at 85 FR 13773, March 10, 2020, are effective February 22, 2022.

FOR FURTHER INFORMATION CONTACT: Jesse Jachman, Wireline Competition Bureau at (202) 418–7400. For additional information concerning the Paperwork Reduction Act information collection requirements contact Nicole Ongele at (202) 418–2991 or via email at *Nicole.Ongele@fcc.gov.*

SUPPLEMENTARY INFORMATION: The Commission submitted revised information collection requirements for review and approval by OMB, as required by the Paperwork Reduction Act (PRA) of 1995, on October 19, 2021. OMB approved the revised information collection requirements on January 5, 2022. The information collection requirements are contained in the Commission's *Uniendo a Puerto Rico Fund and the Connect USVI Fund Order,* FCC 19–95, published at 84 FR 59937, November 7, 2019 and the *2020 Rural Digital Opportunity Fund Order,* FCC 20–5, published at 85 FR 13773, March 10, 2020. The OMB Control Number is 3060–1228. The Commission publishes this document as an announcement of the effective date of the rules published on November 7, 2019 and March 10, 2020. If you have any comments on the burden estimates listed in the following, or how the Commission can improve the collections and reduce any burdens caused thereby, please contact Nicole Ongele, Federal Communications Commission, 45 L Street NE, Washington, DC 20554. Please include the OMB Control Number, 3060–1228, in your correspondence. The Commission will also accept your comments via email at *PRA@fcc.gov.* To request materials in accessible formats for people with disabilities (Braille, large print, electronic files, audio format), send an email to *fcc504@fcc.gov* or call the Consumer and Governmental Affairs Bureau at (202) 418–0530.

Synopsis

As required by the Paperwork Reduction Act of 1995 (44 U.S.C. 3507), the Commission is notifying the public that it received OMB approval on January 5, 2022, for the amendments to 47 CFR 54.316(a)(7) and (b)(7), 54.1503, 54.1513 and 54.1514 published at 84 FR 59937, November 7, 2019 and 47 CFR 54.316(a)(8), (b)(5) and (c)(1) published at 85 FR 13773, March 10, 2020. Under 5 CFR part 1320, an agency may not conduct or sponsor a collection of information unless it displays a current, valid OMB Control Number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the Paperwork Reduction Act that does not display a current, valid OMB Control Number. The OMB Control Number is 3060–1228. The foregoing notice is required by the Paperwork Reduction Act of 1995, Public Law 104–13, October 1, 1995, and 44 U.S.C. 3507.

The total annual reporting burdens and costs for the respondents are as follows:

OMB Control Number: 3060–1228.

OMB Approval Date: January 5, 2022.

OMB Expiration Date: January 31, 2025.

OMB Control Number: 3060–1228.

Title: Connect America Fund—High Cost Portal Filing.

Form Number: N/A.

Type of Review: Revision of a currently approved collection.

Respondents: Business or other for-profit, not-for-profit institutions.

Number of Respondents and Responses: 2,024 unique respondents; 4,644 responses.

Estimated Time per Response: 8 hours–60 hours.

Frequency of Response: On occasion, quarterly reporting requirements, annual reporting requirements, and recordkeeping requirement.

Obligation to Respond: Required to obtain or retain benefits. Statutory authority for this information collection is contained in 47 U.S.C. 151–154, 155, 201–206, 214, 218–220, 251, 252, 254, 256, 303(r), 332, 403, 405, 410, and 1302.

Total Annual Burden: 86,727 hours.

Total Annual Cost: No Cost.

Privacy Act Impact Assessment: No impact(s).

Nature and Extent of Confidentiality: Except for the middle-mile maps for Alaska Plan carriers, and the coverage maps and information for Uniendo a Puerto Rico Fund and Connect USVI Fund Stage 2 mobile support recipients, the Commission is not requesting respondents to submit confidential information to the Commission. The Commission notes that the Universal Service Administrative Company (USAC) must preserve the confidentiality of all data obtained from respondents and contributors to the universal service support program mechanism; must not use the data except for purposes of administering the universal service support program; and must not disclose data in company-specific form unless directed to do so by the Commission. Also, respondents may request materials or information submitted to the Commission or to the Administrator believed confidential to be withheld from public inspection under 47 CFR 0.459 of the FCC's rules.

Needs and Uses: Through several orders, the Commission has recently changed or modified reporting obligations for high-cost support. Pursuant to the following orders, this collection includes location reporting and related certification requirements of high-cost support recipients: *Connect*

America Fund et al., Report and Order, Order and Order on Reconsideration, and Further Notice of Proposed Rulemaking, 31 FCC Rcd 3087 (2016) (*2016 Rate-of-Return Order*); *Connect America Fund et al.,* Report and Order and Further Notice of Proposed Rulemaking, 31 FCC Rcd 5949 (2016) (*Phase II Auction Order*); *Connect America Fund et al.,* Order, 31 FCC Rcd 12086 (2016) (*ACS Phase II Order*); Connect America Fund et al., Report and Order and Notice of Proposed Rulemaking, 29 FCC Rcd 876 (2014) (*Rural Broadband Experiments Order*); *Connect America Fund et al.,* Report and Order, 29 FCC Rcd 15644 (2014) (*Price Cap Order*); *Technology Transitions et al.,* Order *et al.,* 29 FCC Rcd 1433 (2014) (*Tech Transitions Order*); *Connect America Fund et al.,* Report and Order and Further Notice of Proposed Rulemaking, 31 FCC Rcd 10139 (2016) (*Alaska Plan Order*); *Connect America Fund et al.,* Order, 32 FCC Rcd 968 (2017) (*New York Auction Order*); *Connect America Fund et al.,* Report and Order, Further Notice of Proposed Rulemaking, and Order on Reconsideration, 33 FCC Rcd 11–893 (2018) (*2018 Rate-of-Return Order*); *Uniendo a Puerto Rico and Connect USVI Fund et al.,* Report and Order and Order on Reconsideration, 34 FCC Rcd 9109 (2019) (*PR–USVI Stage 2 Order*); *Rural Digital Opportunity Fund et al.,* Report and Order, 35 FCC Rcd 686 (2020) (*2020 Rural Digital Opportunity Fund Order*).

This information collection addresses the requirement that certain carriers with high-cost reporting obligations must file information about the locations to which they have deployed broadband service meeting applicable public interest requirements (location information). A web-based portal, the High-Cost Universal Broadband Portal (HUBB or portal), is used to accept this information. The Commission and USAC will use this information to monitor the deployment progress of reporting carriers and to verify the reporting carriers' claims of service at the reported locations. Such activities help the Commission ensure that support is being used as intended. In addition, because data filed in the HUBB is publicly accessible, the reporting helps ensure public accountability and transparency.

In the *2019 PR–USVI Stage 2 Order,* the Commission created a competitive process to determine support recipients for the Commonwealth of Puerto Rico and the U.S. Virgin Islands. As a result, carriers receiving support in these areas are subject to specific public interest obligations related to speed, usage, latency, and price as well as certain deployment milestones. Specifically, the Commission imposed defined deployment obligations and associated HUBB reporting requirements (annual location reporting and build-out certifications) for all Uniendo a Puerto Rico Fund and Connect USVI Fund Stage 2 fixed support recipients as well as annual reporting and certification requirements for all Uniendo a Puerto Rico Fund and Connect USVI Fund Stage 2 mobile support recipients.

Uniendo a Puerto Rico Fund and Connect USVI Fund Stage 2 mobile support recipients will also file network coverage and other data as required by the Commission's orders. The Commission and USAC will use this information to monitor the deployment progress of mobile carriers and to verify that carriers meet the public interest obligations for 4G LTE and 5G mobile broadband and voice services in the Commonwealth of Puerto Rico and the U.S. Virgin Islands. Instead of filing in the HUBB portal, mobile support recipients will submit their reports electronically as part of a web form accessed via the Commission's Form 477 portal (477 Portal) and the Electronic Comment Filing System. This collection mechanism is being used to reduce the technological burden on the public and the Commission, as carriers and the public are familiar with both of these systems. The Commission's Wireline Competition Bureau will specify the filing process by which Stage 2 mobile support recipients must file their reports in the 477 Portal prior to the filing deadlines.

In the *2020 Rural Digital Opportunity Fund Order,* the Commission adopted a support mechanism to provide funding through a competitive auction to connect rural homes and businesses to high-speed broadband networks. The Commission established specific public interest obligations and deployment milestones for all carriers receiving this support. Specifically, the Commission imposed defined deployment obligations and associated HUBB reporting requirements (annual location reporting and build-out certifications) for all support recipients.

The Commission therefore revises this information collection to increase the burdens associated with existing and new reporting requirements to account for additional carriers that will be subject to these requirements.

Federal Communications Commission.

Marlene Dortch,

Secretary.

BILLING CODE 6712–01–P

Proposed Rules

Federal Register
Vol. 87, No. 35
Tuesday, February 22, 2022

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 981

[Doc. No. AMS–SC–21–0076; SC21–981–1 PR]

Marketing Order Regulations for Almonds Grown in California

AGENCY: Agricultural Marketing Service, Department of Agriculture (USDA).

ACTION: Proposed rule.

SUMMARY: This proposed rule would implement a recommendation from the Almond Board of California (Board) to make changes to multiple provisions in the administrative requirements prescribed under the Federal marketing order regulating the handling of almonds grown in California. This action would revise several provisions in the Order's requirements to facilitate the efficient administration of the Order.

DATES: Comments must be received by April 25, 2022. Comments on the forms and information collection must also be received by April 25, 2022.

ADDRESSES: Interested persons are invited to submit written comments concerning this proposed rule. Comments must be sent to the Docket Clerk, Market Development Division, Specialty Crops Program, AMS, USDA, 1400 Independence Avenue SW, STOP 0237, Washington, DC 20250–0237; Fax: (202) 720–8938; or via internet at: *https://www.regulations.gov.* Comments should reference the document number and the date and page number of this issue of the **Federal Register**. All comments will be made available for public inspection in the Office of the Docket Clerk during regular business hours, or can be viewed at: *https://www.regulations.gov.* All comments submitted in response to this proposed rule will be included in the record and will be made available to the public on the internet at the address provided above. Please be advised that the identity of individuals or entities submitting comments will be made public.

FOR FURTHER INFORMATION CONTACT: Peter Sommers, Marketing Specialist, or Gary Olson, Regional Director, West Region Field Office, Market Development Division, Specialty Crops Program, AMS, USDA; Telephone: (559) 487–5901, Fax: (559) 487–5906, or Email: *PeterR.Sommers@usda.gov* or *GaryD.Olson@usda.gov.*

Small businesses may request information on complying with this regulation by contacting Richard Lower, Market Development Division, Specialty Crops Program, AMS, USDA, 1400 Independence Avenue SW, STOP 0237, Washington, DC 20250–0237; Telephone: (202) 720–2491, Fax: (202) 720–8938, or Email: *Richard.Lower@usda.gov.*

SUPPLEMENTARY INFORMATION: This action, pursuant to 5 U.S.C. 553, proposes to amend regulations issued to carry out a marketing order as defined in 7 CFR 900.2(j). This proposed rule is issued under Marketing Order No. 981, as amended (7 CFR part 981), regulating the handling of almonds grown in California. Part 981 (referred to as the ''Order'') is effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674), hereinafter referred to as the ''Act.'' The Board locally administers the Order and comprises growers and handlers of almonds operating within the production area.

The Department of Agriculture (USDA) is issuing this proposed rule in conformance with Executive Orders 12866 and 13563. Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility. This action falls within a category of regulatory actions that the Office of Management and Budget (OMB) exempted from Executive Order 12866 review.

This proposed rule has been reviewed under Executive Order 13175—Consultation and Coordination with Indian Tribal Governments, which requires agencies to consider whether their rulemaking actions would have tribal implications. The Agricultural Marketing Service (AMS) has determined this proposed rule is unlikely to have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

This proposed rule has been reviewed under Executive Order 12988, Civil Justice Reform. This proposed rule is not intended to have retroactive effect.

The Act provides that administrative proceedings must be exhausted before parties may file suit in court. Under section 608c(15)(A) of the Act, any handler subject to an order may file with USDA a petition stating that the order, any provision of the order, or any obligation imposed in connection with the order is not in accordance with law and request a modification of the order or to be exempted therefrom. A handler is afforded the opportunity for a hearing on the petition. After the hearing, USDA would rule on the petition. The Act provides that the district court of the United States in any district in which the handler is an inhabitant, or has his or her principal place of business, has jurisdiction to review USDA's ruling on the petition, provided an action is filed not later than 20 days after the date of the entry of the ruling.

This proposed rule would amend administrative requirements in the Order regulating the roadside stand exemption, credit for market promotion activities, quality control, exempt dispositions, and interest and late charges provisions. In addition, the proposed rule would stay two sections of the administrative requirements that define almond butter and stipulate disposition in reserve outlets by handlers. These proposed changes modify the requirements to reflect updates in industry practices and are expected to help facilitate the orderly administration of the Order. The Board unanimously recommended these changes at meetings held on December 7, 2020, and June 17, 2021.

Multiple sections in the Order provide the authority for this proposed action. The authorities are cited with

the descriptions of each of the proposed changes in the following narrative.

Section 981.13 of the Order defines the term ''handler.'' The definition includes an exemption for roadside stand sales. Section 981.413 of the Order's administrative requirements further expounds roadside stand sales by setting certain conditions that must be met for sales to be exempted from regulation under the Order. This proposed rule would add language to the requirements to clarify that sales of almonds through E-commerce (electronic commerce) are not exempt from regulation under the roadside stand exemption.

Section 981.41(c) of the Order provides the authority to establish provisions for crediting a handler's direct expenditures for marketing promotion against that handler's assessment obligation. Section 981.441 of the Order's administrative requirements delineates the provisions that handlers must meet to have a portion of their marketing promotion expenditures, including paid advertising, credited against their pro rata assessment obligation. This provision is otherwise known as Credit-Back. This proposed rule would allow the Board, with the approval of the Secretary, to annually establish a limit on the Credit-Back amount allowed for a handler's expenditures on E-commerce. Further, this rule would modify the receipt submission and reimbursement requirements for the Credit-Back program and update the provisions for appealing the Board's Credit-Back decisions.

Section 981.42 of the Order provides the authority to establish quality control regulations for both incoming and outgoing product. Section 981.442 of the Order's administrative requirements establishes quality control regulations under that authority. Section 981.442(a) establishes the quality requirements for incoming product received by handlers. Section 981.442(b) establishes the quality requirements for outgoing product prior to being shipped by handlers.

This proposal would modify provisions in § 981.442(a) to clarify ambiguous language, remove irrelevant dates, and more clearly define ''accepted user'' as it is referenced in the regulations. The proposed rule would also relax the requirements for handlers in meeting their disposition obligation under the regulations. The incoming quality requirements would be amended to allow inedible kernels, foreign material, and other defects sorted from off-site cleaning facilities to be credited to a handler's disposition obligation. In addition, almond meal would be allowed to meet the non-inedible portion of the disposition obligation, with the meal content to be determined in a manner acceptable to the Board.

In § 981.442(b), the proposed rule would amend the regulations to facilitate handlers utilizing off-site cleaning and treatment facilities in fulfillment of their quality control requirements. The proposal would allow the transfer of product for off-site cleaning without being considered a shipment, would designate off-site treatment facilities as ''custom processors,'' and would establish application and approval procedures for Board authorization of such custom processors. This action would also clarify the roles of the Technical Expert Review Panel (TERP) and the Board in administering the program as detailed in several provisions in § 981.442(b). Lastly, the proposed rule would refine the duties of a Direct Verifiable (DV) program auditor to disallow individuals who conduct process validations from being named as the DV auditor for that same equipment used in the treatment process.

Section 981.50 of the Order establishes handler reserve obligation requirements. Under those Order provisions, certain products are exempted from the reserve obligation, subject to the accountability of the Board. Section 981.450 establishes the provisions for exempt dispositions under the reserve obligation. This proposed rule would enhance the procedures currently in place for the Board to account for exempt dispositions. Under the proposed rule, outlets for exempted product would need to be pre-approved by the Board in accordance with the requirements contained in § 981.442(a)(7).

Section 981.66(b) of the Order establishes the conditions governing the disposition of reserve product. Within that paragraph, diversion of reserve almonds to be manufactured into almond butter is listed as an allowable outlet for such product. Section 981.466 further defines ''almond butter'' as used in § 981.66. The expanded definition of almond butter is no longer relevant in the administration of the program. The proposed rule would stay § 981.466 indefinitely.

Section 981.467 establishes the requirements regarding the disposition in reserve outlets by handlers. The section details the establishment of agents of the Board, delineates reserve credit in satisfaction of a reserve obligation, sets minimum prices, and establishes certain dates pertaining to the reserve disposition obligations. As the Order is not currently regulating volume, and a significant portion of the requirements is outdated, the provisions in § 981.467 are not currently relevant to the administration of the Order. As such, this proposed rule would stay the entire section indefinitely.

Lastly, § 981.481 stipulates the requirements for submission of handler assessment payments, which includes documentary requirements for proof of timely submission of assessment payments. Other than actual receipt of payment in the Board's office within 30 days of the invoice date on the handler's statement, the current provisions only identify the U.S. Postal Service postmark as proof of timely submission. This proposed rule would add ''or by some other verifiable delivery tracking system'' to allow handlers alternative delivery methods.

The Board believes that the changes recommended herein are necessary to update the Order's administrative requirements to adapt to changes in the industry and to reflect current industry practices. Many of the revisions may be considered conforming changes, but the proposed rule also makes changes to the Credit-Back provisions and quality control regulations that the Board views as essential to the continued efficient administration of the Order. The proposed changes contained herein are expected to facilitate the orderly marketing of California almonds and benefit growers and handlers in the industry.

Initial Regulatory Flexibility Analysis

Pursuant to requirements set forth in the Regulatory Flexibility Act (RFA) (5 U.S.C. 601–612), the Agricultural Marketing Service (AMS) has considered the economic impact of this action on small entities. Accordingly, AMS has prepared this initial regulatory flexibility analysis.

The purpose of the RFA is to fit regulatory actions to the scale of businesses subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Act, are unique in that they are brought about through group action of essentially small entities acting on their own behalf.

There are approximately 7,600 almond growers in the production area and approximately 100 handlers subject to regulation under the Order. Small agricultural producers are defined by the Small Business Administration (SBA) as those having annual receipts of less than $1,000,000, and small agricultural service firms are defined as

those having annual receipts of less than $30,000,000 (13 CFR 121.201).

The National Agricultural Statistics Service (NASS) reported in its 2017 Census of Agriculture (Census) that there were 7,611 almond farms in the production area, of which 6,683 had bearing acres. Additionally, the Census indicates that out of the 6,683 California farms with bearing acres of almonds, 4,425 (66 percent) have fewer than 100 bearing acres.

In another publication, NASS reported a 2019 crop year average yield of 2,160 pounds per acre and a season average grower price of $2.43 per pound. Therefore, a 100-acre farm with an average yield of 2,160 pounds per acre would produce about 216,000 pounds of almonds (2,160 pounds times 100 acres equals 216,000 pounds). At $2.43 per pound, that farm's production would be valued at $524,880 (216,000 pounds times $2.43 per pound equals $524,880). Since the Census indicated that 66 percent of California's almond farms are less than 100 acres, it could be concluded that the majority of California almond growers had annual receipts from the sale of almonds of less than $524,880 for the 2019–20 crop year, which is below the SBA threshold of $1,000,000 for small producers. Therefore, the majority of growers may be classified as small businesses.

To estimate the proportion of almond handlers that would be considered small businesses, it was assumed that the unit value per pound of almonds exported in a particular year could serve as a representative almond price at the handler level. A unit value for a commodity is the value of exports divided by the quantity exported. Data from the Global Agricultural Trade System (GATS) database of USDA's Foreign Agricultural Service showed that the value of almond exports from August 2019 to July 2020 (combining shelled and inshell) was $4.691 billion. The quantity of almond exports over that time-period was 1.78 billion pounds. Dividing the export value by the quantity yields a unit value of $2.64 per pound ($4.691 billion divided by 1.78 billion pounds equals $2.64).

NASS estimated that the California almond industry produced 2.55 billion pounds of almonds in 2019. Applying the $2.64 derived representative handler price per pound to total industry production results in an estimated total revenue at the handler level of $6.73 billion (2.55 billion pounds × $2.64 per pound). With an estimated 100 handlers in the California almond industry, average revenue per handler would be approximately $67.3 million ($6.73 billion divided by 100). Assuming a normal distribution of revenues, most almond handlers shipped almonds valued at more than $30,000,000 during the 2019–20 crop year. Therefore, the majority of handlers may be classified as large businesses.

This proposed rule would revise multiple provisions in the Order's administrative requirements. This proposal would amend regulations covering the Order's roadside stand exemption, credit for market promotion activities, quality control, exempt dispositions, and interest and late charges provisions. In addition, it would stay regulations contained in §§ 981.466 and 981.467. One of the sections defines almond butter and the other regulates almond disposition in reserve outlets by handlers. Both sections would be stayed indefinitely.

More specifically, the proposed rule would add language in § 981.413 to clarify that sales of almonds through E-commerce are not exempt from regulation under the roadside stand exemption.

In addition, the action would modify § 981.441 to allow the Board, with the approval of the Secretary, to annually establish a limit on the Credit-Back amount allowed for a handler's expenditures on E-commerce. Further, this rule would modify the receipt submission and reimbursement requirements for the Credit-Back program, as well as update the provisions for appealing the Board's Credit-Back decisions.

In § 981.442(a), the proposed rule would clarify ambiguous language, remove irrelevant dates, and more clearly define the term ''accepted user'' as it is referenced in the regulations. It would also relax the requirements for handlers in meeting their disposition obligation under the Order.

In § 981.442(b), the proposed rule would allow the transfer of product for off-site cleaning without being considered a shipment, designate off-site treatment facilities as ''custom processors,'' and establish the application and approval procedures for Board authorization of custom processors. This proposal would also clarify the roles of the TERP and the Board in administering the program in several subparagraphs in the section. Further, the proposed rule would refine the definition of a DV program auditor to disallow individuals who conduct process validations from being named as the DV auditor for that same equipment used in the treatment process.

Additionally, this proposed rule would amend § 981.450 to require outlets for exempted product be Board-approved, in accordance with § 981.442(a)(7).

Further, under the proposed action, § 981.466, which defines ''almond butter'' as it is used in § 981.66(b), is no longer relevant in the administration of the program and would be stayed indefinitely. In addition, as the Order is not currently regulating volume, § 981.467 is not necessary for the administration of the Order and would also be stayed indefinitely.

Lastly, this action would revise § 981.481 by adding ''or by some other verifiable delivery tracking system'' to the requirements to allow handlers alternative trackable delivery methods for demonstration of timely submission of assessment payments.

The authorities for the proposed changes above are contained in §§ 981.13, 981.41, 981.42, 981.50, 981.66, 981.67, and 981.81 of the Order.

The Board believes that the administrative requirement revisions recommended herein are necessary to reflect changes in the industry and to update the regulations to reflect current practices. Many of the modifications may be considered conforming changes, but this proposal also makes substantive changes to the Credit-Back provisions and quality control requirements that the Board views as essential to the efficient administration of the Order. The proposed changes contained herein are expected to facilitate the orderly marketing of California almonds and benefit growers and handlers in the industry. The Board unanimously recommended these changes at meetings held on December 7, 2020, and June 17, 2021.

AMS anticipates that this proposed rule would impose minimal, if any, additional costs on handlers or growers, regardless of size. The proposed changes to the administrative requirements are intended to clarify certain provisions, remove ambiguous and obsolete language, and adapt the requirements to facilitate the orderly marketing of almonds. The benefits derived from this proposed rule are not expected to be disproportionately more or less for small handlers or growers than for larger entities.

The Board considered alternatives to this action, including making no changes to the current requirements, only making changes to some of the requirements, and recommending the changes be considered as two separate rulemaking actions. Prior to the recommendation of the Board, the Board's Almond Quality, Food Safety and Services Committee reviewed the program, surveyed handlers, and unanimously recommended this action

to the Board. After consideration of all the alternatives, and in consultation with USDA, the Board determined that making all the recommended changes, collectively in one rule, would be the best option to facilitate the Order's administration, contribute to the orderly marketing of almonds, and provide the greatest benefit to growers and handlers while maintaining the integrity of the Order.

Further, the Board's meetings were widely publicized throughout the California almond industry, and all interested persons were invited to attend the meetings and participate in Board deliberations. Like all Board and subcommittee meetings, the December 7, 2020, and June 17, 2021, meetings were public meetings, and all entities, both large and small, were able to express their views on this issue. Finally, interested persons are invited to submit comments on this proposed rule, including the regulatory and information collection impacts of this proposed action on small businesses.

In accordance with the Paperwork Reduction Act of 1995, (44 U.S.C. Chapter 35), the Order's information collection requirements have been previously approved by the Office of Management and Budget (OMB) and assigned OMB Nos. 0581–0178 (Vegetable and Specialty Crops) and 0581–0242 (Almond Salmonella). This proposed rule announces AMS's intent to request approval from OMB for amendments made to existing information collections under OMB Nos. 0581–0178 and 0581–0242, and for a new information collection under OMB No. 0581–NEW.

Upon finalization of the proposed rule, AMS will submit a Justification for Change to OMB for the Statement of Intent form contained in the ABC Credit-Back Guide (OMB No. 0581–0178). The form is necessary to administer the Credit-Back provisions as established in § 981.441 of the Order's requirements. This proposed rule would change the number of days that the applicant is afforded to submit all necessary paperwork for proper evaluation of their Credit-Back claim from 76 days to 60 days. The Credit-Back Statement of Intent form included in the Credit-Back Guide would be changed accordingly.

In addition, also upon finalization of the proposed rule, AMS will submit a Justification for Change to OMB for the ABC Form 52—Direct Verifiable (DV) Program for Further Processing of Untreated Almonds Application Form (OMB No. 0581–0242). The form is necessary to administer the DV Program established by § 981.442(b)(6)(i) in the Order's quality control requirements. The proposed rule would change the body that approves DV Program applications from the TERP to the Board. The instructions that accompany ABC Form 52 would need to be revised accordingly.

Lastly, this proposed rule would create a new form for California almond handlers, titled ABC Form 55—Custom Processor Application.

Title: Custom Processor Application (7 CFR part 981).

OMB Number: 0581–NEW.

Type of Request: New Collection.

Abstract: The information requirements in this request are essential to carry out the intent of the Act and to administer the Order. The Order is effective under the Act, and USDA is responsible for the oversight of the Order's administration.

The Order's quality control requirements for outgoing product require handlers to subject their almonds to a treatment process or processes prior to shipment to reduce potential *Salmonella* bacteria contamination. The Order's quality control requirements allow handlers to utilize off-site treatment facilities to fulfill that requirement. The Committee unanimously recommended that the Order's quality control requirements be amended to define off-site treatment facilities located within the production area as ''custom processors'' and to require such custom processors to annually apply to the Board for approval.

An individual desiring approval as a custom processor must demonstrate that their facility meets the Order's treatment process requirements and must submit an application to the Board. This form, numbered ABC Form 55 and titled ''Custom Processor Application,'' would be submitted directly to the Board once each year no later than July 31. The application would provide the Board with the name of the applicant, the location of each treatment facility covered by the application, applicant contact information, and certification that the applicant's technology and equipment provide a treatment process that has been validated by a Board-approved process authority.

The Order authorizes the Board to collect certain information necessary for the administration of the Order. The information collected would only be used by authorized representatives of the USDA, including the AMS Specialty Crops Program regional and headquarters staff, and authorized employees of the Board. All proprietary information would be kept confidential in accordance with the Act and the Order.

The proposed request for new information collection under the Order is as follows:

Custom Processor Application

Estimate of Burden: Public reporting burden for this collection of information is estimated to be an average of 0.5 hours per response.

Respondents: Nut processors located within the Order's area of production.

Estimated Number of Respondents: 25.

Estimated Number of Responses per Respondent: 1.

Estimated Total Annual Responses: 25.

Estimated Total Annual Burden on Respondents: 12.5 hours.

Comments are invited on: (1) Whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility; (2) the accuracy of the Agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Comments should reference OMB No. 0581–NEW and the marketing order for almonds grown in California. Comments should be sent to the USDA in care of the Docket Clerk at the previously mentioned address or at *https://www.regulations.gov.*

All responses to this notice will be summarized and included in the request for OMB approval. All comments received will become a matter of public record and will be available for public inspection during regular business hours at the address of the Docket Clerk or at *https://www.regulations.gov.*

If this proposed rule is finalized, this information collection will be merged with the forms currently approved under OMB No. 0581–0242 (Almond Salmonella).

As with all Federal marketing order programs, reports and forms are periodically reviewed to reduce information requirements and duplication by industry and public sector agencies. USDA has not identified any relevant Federal rules that duplicate, overlap, or conflict with this proposed rule.

AMS is committed to complying with the E-Government Act, to promote the use of the internet and other information technologies to provide increased opportunities for citizen access to Government information and services, and for other purposes.

Further, the Board's meetings are widely publicized throughout the California almond industry, and all interested persons are invited to attend the meetings and participate in Board deliberations on all issues. Like all Board meetings, the December 7, 2020, and June 17, 2021, meetings were open to the public, and all entities, both large and small, were able to express their views on this issue. Also, the Board has several appointed committees to review certain issues and make recommendations to the Board. The Board's Almond Quality, Food Safety, and Services Committee met several times in 2019 and discussed this issue in detail. Those meetings were also public meetings, and both large and small entities were able to participate and express their views. Finally, interested persons are invited to submit comments on this proposed rule, including the regulatory and information collection impacts of this action on small businesses.

A small business guide on complying with fruit, vegetable, and specialty crop marketing agreements and orders may be viewed at: *https://www.ams.usda.gov/rules-regulations/moa/small-businesses.* Any questions about the compliance guide should be sent to Richard Lower at the previously mentioned address in the **FOR FURTHER INFORMATION CONTACT** section.

A 60-day comment period is provided to allow interested persons to respond to this proposal. All written comments timely received will be considered before a final determination is made on this matter.

List of Subjects in 7 CFR Part 981

Marketing agreements, Nuts, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Agricultural Marketing Service proposes to amend 7 CFR part 981 as follows:

PART 981—ALMONDS GROWN IN CALIFORNIA

■ 1. The authority citation for 7 CFR part 981 continues to read as follows:

Authority: 7 U.S.C. 601–674.

■ 2. Amend § 981.413 by adding a sentence at the end of the paragraph to read as follows:

§ 981.413 Roadside stand exemption.

* * * Sales of almonds through E-commerce are not eligible for this exemption.

■ 3. Amend § 981.441 by revising paragraphs (e)(4)(ii)(K), (e)(5), (e)(6)(ii) through (iv), and (f) to read as follows:

§ 981.441 Credit for market promotion activities, including paid advertising.

* * * * *

(e) * * *

(4) * * *

(ii) * * *

(K) Development and use of website on the internet for advertising and public relations purposes, including E-commerce (mail ordering through the internet): *Provided,* That Credit-Back for such activities shall be limited to a specific amount per crop year, to be established in conjunction with the approval of the Board's annual budget by the Secretary. No credit shall be given for costs for E-commerce administration, Extranet (restricted websites within the internet), Intranet (inter-office communication network), or portions of a website that target the farming or grower trade.

* * * * *

(5) If the handler is promoting pursuant to a contract with the Foreign Agricultural Service (FAS) of the U.S. Department of Agriculture (USDA) and/or the California Department of Food and Agriculture (CDFA), such activities must also meet the requirements of paragraphs (e)(1), (2), (3), (4), and (6) of this section. Unless the Board is administering the foreign marketing program, such activities shall not be eligible for Credit-Back unless the handler certifies that it was not and will not be reimbursed by either FAS or the CDFA for the amount claimed for Credit-Back, and has on record with the Board all claims for reimbursement made to FAS and/or the CDFA. Foreign market expenses paid by third parties as part of a handler's contract with FAS or CDFA will not be eligible for Credit-Back.

(6) * * *

(ii) Handlers may receive credit against their assessment obligation up to the year-to-date advertising amount of the assessment, less the year-to-date reimbursed claims: *Provided,* That handlers submit the required documentation for a qualified activity at least 2 weeks prior to the mailing of each of the Board's first and second assessment notices, and at least 3 weeks prior to the mailing of each of the Board's third and fourth assessment notices in a crop year. In all other instances, handlers must remit the advertising assessment to the Board when billed, and a refund will be issued to the extent of proven, qualified activities.

(iii) In addition to the credit against an assessment obligation as provided in paragraph (e)(6)(ii) of this section, the Board will issue Credit-Back reimbursements, by check or other means, on June 30 for any claim submission received by May 31 of the same crop year.

(iv) The final opportunity to submit a claim for any given crop year requires submission of notice to the Board by August 15 of the following crop year. Notice must be given using the Statement of Intent form that is included in the Credit-Back Guide. Final claim submissions for activities outlined in the Statement of Intent must be submitted with all required elements no more than 60 days after the close of the crop year.

(f) If a determination is made by the Board staff that a particular promotional activity is not eligible for Credit-Back because it does not meet the criteria specified in this section, or for any other reason, the affected handler may request a Board-designated committee to review the Board staff's decision. If the affected handler disagrees with the decision, the handler may request that the Board review the designated committee's decision. If the handler disagrees with the decision of the Board, the handler, through the Board, may request that the Secretary review the Board's decision. Handlers have the right to request anonymity in the review of their appeal. The Secretary maintains the right to review any decisions made by the aforementioned bodies at his/her discretion.

■ 4. Amend § 981.442 by:

■ a. Revising paragraphs (a)(1), (a)(4)(i), and (a)(5);

■ b. Revising the introductory text of paragraph (b);

■ c. Revising paragraphs (b)(2), (b)(3)(i) and (v), and (b)(4)(i) and (v);

■ d. Revising the introductory text of paragraph (b)(6)(i); and

■ e. Revising paragraphs (b)(6)(i)(A), (C), and (D).

The revisions read as follows:

§ 981.442 Quality control.

(a) * * *

(1) *Sampling.* Each handler shall cause a representative sample of almonds to be drawn from each lot of any variety received from any incoming source. The sample shall be drawn before inedible kernels are removed from the lot after hulling/shelling, or before the lot is processed or stored by the handler. For receipts at premises with mechanical sampling equipment

and under contracts providing for payment by the handler to the grower for sound meat content, samples shall be drawn by the handler in a manner acceptable to the Board and the inspection agency. The inspection agency shall make periodic checks of the mechanical sampling procedures. For all other receipts, including but not limited to field examination and purchase receipts, accumulations purchased for cash at the handler's door or from an accumulator, or almonds of the handler's own production, sampling shall be conducted or monitored by the inspection agency in a manner acceptable to the Board. All samples shall be bagged and identified in a manner acceptable to the Board and the inspection agency.

* * * * *

(4) * * *

(i) The weight of inedible kernels in excess of 2 percent of kernel weight reported to the Board of any variety received by a handler shall constitute that handler's disposition obligation. For any almonds sold inshell, the weight may be reported to the Board and that disposition obligation for that variety reduced proportionately.

* * * * *

(5) *Meeting the disposition obligation.* Each handler shall meet its disposition obligation by delivering packer pickouts, kernels rejected in blanching, pieces of kernels, meal accumulated in manufacturing, or other material, to Board-approved accepted users, which can include, but is not limited to, crushers, feed manufacturers, feeders, or dealers in nut wastes, located withing the production area. Inedible kernels, foreign material, and other defects sorted from edible kernels by off-site cleaning facilities may be used towards that handler's disposition obligation or destroyed. Handlers shall notify the Board at least 72 hours prior to delivery of product to an off-site cleaning facility or accepted user location: *Provided,* That the Board or its employees may lessen this notification time whenever it determines that the 72 hour requirement is impracticable. The Board may supervise deliveries at its option. In the case of a handler having an annual total obligation of less than 1,000 pounds, delivery may be to the Board in lieu of an accepted user, in which case the Board would certify the disposition lot and report the results to the USDA. For dispositions by handlers with mechanical sampling equipment, samples may be drawn by the handler in a manner acceptable to the Board and the inspection agency. For all other dispositions, samples shall be drawn by or under supervision of the inspection agency. Upon approval by the Board and the inspection agency, sampling may be accomplished at the accepted user's destination. The edible and inedible almond meat content of each delivery shall be determined by the inspection agency and reported by the inspection agency to the Board and the handler. The handler's disposition obligation will be credited upon satisfactory completion of ABC Form 8. ABC Form 8, Part A, is filled out by the handler, and Part B by the accepted user. At least 50 percent of a handler's total crop year inedible disposition obligation shall be satisfied with dispositions consisting of inedible kernels as defined in § 981.408: *Provided,* That this 50 percent requirement shall not apply to handlers with total annual obligations of less than 1,000 pounds. Each handler's disposition obligation shall be satisfied when the almond meat content of the material delivered to accepted users equals the disposition obligation, but no later than September 30 succeeding the crop year in which the obligation was incurred. Almond meal can be used for meeting the non-inedible portion of the obligation. Meal content shall be determined in a manner acceptable to the Board.

* * * * *

(b) *Outgoing.* Pursuant to § 981.42(b), and except as provided in § 981.13 and in paragraph (b)(6) of this section, handlers shall subject their almonds to a treatment process or processes prior to shipment to reduce potential *Salmonella* bacteria contamination in accordance with the provisions of this section. Temporary transfer by a handler to an off-site cleaning facility is not considered a shipment under this section. Handlers may utilize off-site cleaning facilities within the production area, on record with the Board, to provide sorting services to separate inedible kernels, foreign material, and other defects from edible kernels. Product sent by a handler to an off-site cleaning facility is considered a temporary transfer, with ownership maintained by the handler, and accountability required for all product fractions and handler obligations pursuant to § 981.42.

* * * * *

(2) *On-site versus off-site treatment.* Handlers shall subject almonds to a treatment process or processes prior to shipment either at their handling facility (on-site) or a custom processor (defined as a Board-approved off-site treatment facility located within the production area subject to the provisions of paragraph (b)(4)(v) of this section). Transportation of almonds by a handler to a custom processor shall not be deemed a shipment. A handler with an on-site treatment process or processes may use such facility to act as a custom processor for other handlers.

(3) * * *

(i) Validation means that the treatment technology and equipment have been demonstrated to achieve in total a minimum 4-log reduction of *Salmonella* bacteria in almonds. Validation data prepared by a Board-approved process authority must be submitted to the Board, and accepted by the TERP, for each piece of equipment used to treat almonds prior to its use under the program.

* * * * *

(v) The TERP, in coordination with the Board, may revoke any approval for cause. The Board shall notify the process authority in writing of the reasons for revoking the approval. Should the process authority disagree with the decision, they may appeal the decision in writing to the Board, and ultimately to USDA. A process authority whose approval has been revoked must submit a new application to the TERP and await approval.

(4) * * *

(i) By May 31, each handler shall submit to the Board a Handler Treatment Plan (Treatment Plan) for the upcoming crop year. A Treatment Plan shall describe how a handler plans to treat his or her almonds and must address specific parameters as outlined by the Board for the handler to ship almonds. Such plan shall be reviewed by the Board, in conjunction with the inspection agency, to ensure it is complete and can be verified, and be approved by the Board. Almonds sent by a handler for treatment at a custom processing facility affiliated with another handler shall be subject to the approved Treatment Plan utilized at that facility. Handlers shall follow their own approved Treatment Plans for almonds sent to custom processors that are not affiliated with another handler.

* * * * *

(v) Custom processors shall provide access to the inspection agency and Board staff for verification of treatment and review of treatment records. Custom processors shall utilize technologies that have been determined to achieve, in total, a minimum 4-log reduction of Salmonella bacteria in almonds, pursuant to a letter of recommendation issued by FDA or accepted by TERP. Custom processors must submit a Custom Processor Application, ABC Form XX, to the Board annually by July

31. A custom processor who submits a timely application, and utilizes a treatment process or processes that has been validated by a Board-approved process authority and approved by the Board in conjunction with the TERP, shall be approved by the Board for handler use. The Board may revoke any such approval for cause. The Board shall notify the custom processor of the reasons for revoking the approval. Should the custom processor disagree with the Board's decision, it may appeal the decision in writing to USDA. Handlers may treat their almonds only at custom processor treatment facilities that have been approved by the Board.

* * * * *

(6) * * *

(i) Handlers may ship untreated almonds for further processing directly to manufacturers located within the U.S., Canada, or Mexico. This program shall be termed the Direct Verifiable (DV) program. Handlers may only ship untreated almonds to manufacturers who have submitted ABC Form No. 52, ''Application for Direct Verifiable (DV) Program for Further Processing of Untreated Almonds,'' and have been approved by the Board. Such almonds must be shipped directly to approved manufacturing locations, as specified on Form No. 52. Such manufacturers (DV Users) must submit an initial Form No. 52 to the Board for review and approval in conjunction with the TERP. Should the applicant disagree with the Board's decision concerning approval, it may appeal the decision in writing to the Board, and ultimately to USDA. For subsequent crop years, approved DV Users with no changes to their initial application must send the Board a letter, signed and dated, indicating that there are no changes to the application the Board has on file. Approved DV Users desiring to make changes to their approved application must resubmit Form No. 52 to the Board for approval. The TERP, in coordination with the Board, may revoke any approval for cause. The Board shall notify the DV User in writing of the reasons for revoking the approval. Should the DV User disagree with the decision, it may appeal the decision in writing to the Board, and ultimately to USDA. A DV User whose approval has been revoked must submit a new application to the Board and await approval. The Board shall issue a DV User code to an approved DV User. Handlers must reference such code in all documentation accompanying the lot and identify each container of such almonds with the term ''unpasteurized.'' Such lettering shall be on one outside principal display panel, at least ½ inch in height, clear and legible. If a third party is involved in the transaction, the handler must provide sufficient documentation to the Board to track the shipment from the handler's facility to the approved DV user. While a third party may be involved in such transactions, shipments to a third party and then to a manufacturing location are not permitted under the DV program. Approved DV Users shall:

(A) Subject such almonds to a treatment process or processes using technologies that achieve in total a minimum 4-log reduction of *Salmonella* bacteria as determined by the FDA or established by a process authority accepted by the TERP, in accordance with and subject to the provisions and procedures of paragraph (b)(3) of this section. Establish means that the treatment process and protocol have been evaluated to ensure the technology's ability to deliver a lethal treatment for *Salmonella* bacteria in almonds to achieve a minimum 4-log reduction;

* * * * *

(C) Have their treatment technology and equipment validated by a Board-approved process authority, and accepted by the TERP. Documentation must be provided with their DV application to verify that their treatment technology and equipment have been validated by a Board-approved process authority. Such documentation shall be sufficient to demonstrate that the treatment processes and equipment achieve a 4-log reduction in *Salmonella* bacteria. Treatment technology and equipment that have been modified to a point where operating parameters such as time, temperature, or volume change, shall be revalidated;

(D) Have their technology and procedures verified by a Board-approved DV auditor to ensure they are being applied appropriately. A DV auditor may not be an employee of the manufacturer that they are auditing. A DV auditor may not be the same individual who conducted the process validation accepted by the TERP for the equipment being audited. DV auditors must submit a report to the Board after conducting each audit. DV auditors must submit an initial application to the Board on ABC Form No. 53, ''Application for Direct Verifiable (DV) Program Auditors,'' and be approved by the Board in coordination with the TERP. Should the applicant disagree with the decision concerning approval, they may appeal the decision in writing to the Board, and ultimately to USDA. For subsequent crop years, approved DV auditors with no changes to their initial application must send the Board a letter, signed and dated, indicating that there are no changes to the application the Board has on file. Approved DV auditors whose status has changed must submit a new application. The Board, in coordination with the TERP, may revoke any approval for cause. The Board shall notify the DV auditor in writing of the reasons for revoking the approval. Should the DV auditor disagree with the decision to revoke, it may appeal the decision in writing to the Board, and ultimately to USDA. A DV auditor whose approval has been revoked must submit a new application to the Board and await approval;

* * * * *

■ 5. Revise § 981.450 to read as follows:

§ 981.450 Exempt dispositions.

As provided in § 981.50, any handler disposing of almonds for crushing into oil, or for animal feed, may have the kernel weight of these almonds excluded from their program obligations, so long as:

(a) The handler qualifies as, or delivers such almonds to, a Board-approved accepted user;

(b) Each delivery is made directly to the accepted user by June 30 of each crop year; and

(c) Each delivery is certified to the Board by the handler on ABC Form 8.

§§ 981.466 and 981.467 [Stayed]

■ 6. Sections 981.466 and 981.467 are stayed indefinitely.

■ 7. Revise § 981.481 to read as follows:

§ 981.481 Interest and late payment charges.

(a) Pursuant to § 981.81(e), the Board shall impose an interest charge on any handler whose assessment payment has not been received in the Board's office within 30 days of the invoice date shown on the handler's statement, or the envelope containing the payment has not been legibly postmarked by the U.S. Postal Service or some other verifiable delivery tracking system, as having been remitted within 30 days of the invoice date. The interest charge shall be a rate of one- and one-half percent per month and shall be applied to the unpaid assessment balance for the number of days all or any part of the unpaid balance is delinquent beyond the 30-day payment period.

(b) In addition to the interest charge specified in paragraph (a) of this section, the Board shall impose a late payment charge on any handler whose payment has not been received in the Board's office, or the envelope containing the payment legibly

postmarked by the U.S. Postal Service or some other verifiable delivery tracking system, within 60 days of the invoice date. The late payment charge shall be 10 percent of the unpaid balance.

Erin Morris,

Associate Administrator, Agricultural Marketing Service.

AGENCY: Coast Guard, DHS.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Coast Guard is proposing to disestablish the presedential security zone that encompasses certain waters of the Lake Worth Lagoon, Intracoastal Waterway (ICW), and Atlantic Ocean near the Mar-A-Lago Club, and the Southern Boulevard Bridge in Palm Beach, Florida (FL). The security zone is no longer needed to protect official parties, public, or surrounding waterways from terrorist acts, sabotage or other subversive acts, accidents, or other events of a similar nature. This proposed action would remove existing regulations that restrict vessel movement through the area. We invite your comments on this proposed rulemaking.

DATES: Comments and related material must be received by the Coast Guard on or before March 24, 2022.

ADDRESSES: You may submit comments identified by docket number USCG–2022–0054 using the Federal Decision Making Portal at *https://www.regulations.gov.* See the ''Public Participation and Request for Comments'' portion of the **SUPPLEMENTARY INFORMATION** section for further instructions on submitting comments.

FOR FURTHER INFORMATION CONTACT: If you have questions about this proposed rulemaking, call or email LTJG Ben Adrien, Waterways Management Division Chief, U.S. Coast Guard; telephone (305) 535–4307, email *Benjamin.D.Adrien@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background, Purpose, and Legal Basis

On May 21, 2018, the United States Coast Guard established a security zone to protect the President of the United States, members of the First Family, and/or other persons under the protection of the Secret Service when staying at the Mar-A-Lago Club in Palm Beach, FL. The security zone is described 33 CFR 165.785. With the inauguration of a new President of the United States on January 20, 2021, the Mar-A-Lago Club security zone is no longer needed.

The purpose of this rulemaking is to disestablish a security zone in certain waters of the Lake Worth Lagoon, Intercoastal Waterway (ICW), and Atlantic Ocean that are no longer need to protect official parties staying at the Mar-A-Lago Club. The Coast Guard is proposing this rulemaking under authority in 46 U.S.C. 70034 (previously 33 U.S.C. 1231).

III. Discussion of Proposed Rule

The Coast Guard is proposing to disestablish the existing security zone published in 33 CFR 165.785. The regulation places unnecessary restrictions on vessel movement through the Lake Worth Lagoon, ICW, and Atlantic Ocean near the Mar-A-Lago Club and the Southern Boulevard Bridge in Palm Beach. The regulatory text we are proposing appears at the end of this document.

IV. Regulatory Analyses

We developed this proposed rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This NPRM has not been designated a ''significant regulatory action,'' under Executive Order 12866. Accordingly, the NPRM has not been reviewed by the Office of Management and Budget (OMB).

This regulatory action determination is based on the removal of regulatory requirements for vessel navigation in the Lake Worth Lagoon, ICW, and Atlantic Ocean near the Mar-A-Lago Club and the Southern Boulevard Bridge in Palm Beach.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this proposed rule would not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the Lake Worth Lagoon, ICW, and Atlantic Ocean, near the Mar-A-Lago Club and the Southern Boulevard Bridge in Palm Beach, may be small entities, for the reasons stated in section IV.A above, this proposed rule would not have a significant economic impact on any vessel owner or operator.

If you think that your business, organization, or governmental jurisdiction qualifies as a small entity and that this proposed rule would have a significant economic impact on it, please submit a comment (see **ADDRESSES**) explaining why you think it qualifies and how and to what degree this rule would economically affect it.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this proposed rule. If the proposed rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section. The Coast Guard will not retaliate against small entities that question or complain about this proposed rule or any policy or action of the Coast Guard.

C. Collection of Information

This proposed rule would not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132 (Federalism), if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this proposed rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this proposed rule does not have tribal implications under Executive Order 13175 (Consultation and Coordination with Indian Tribal Governments) because it would not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. If you believe this proposed rule has implications for federalism or Indian tribes, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this proposed rule would not result in such an expenditure, we do discuss the potential effects of this proposed rule elsewhere in this preamble.

F. Environment

We have analyzed this proposed rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have made a preliminary determination that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This proposed rule involves disestablishing a security zone. Such actions are categorically excluded from further review under paragraph L60(b) of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. We seek any comments or information that may lead to the discovery of a significant environmental impact from this proposed rule.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places, or vessels.

V. Public Participation and Request for Comments

We view public participation as essential to effective rulemaking, and will consider all comments and material received during the comment period. Your comment can help shape the outcome of this rulemaking. If you submit a comment, please include the docket number for this rulemaking, indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation.

Submitting comments. We encourage you to submit comments through the Federal Decision Making Portal at *https://www.regulations.gov.* To do so, go to *https://www.regulations.gov,* type USCG–2022–0054 in the search box and click ''Search.'' Next, look for this document in the Search Results column, and click on it. Then click on the Comment option. If you cannot submit your material by using *https://www.regulations.gov,* call or email the person in the **FOR FURTHER INFORMATION CONTACT** section of this proposed rule for alternate instructions.

Viewing material in docket. To view documents mentioned in this proposed rule as being available in the docket, find the docket as described in the previous paragraph, and then select ''Supporting & Related Material'' in the Document Type column. Public comments will also be placed in our online docket and can be viewed by following instructions on the *https://www.regulations.gov* Frequently Asked Questions web page. We review all comments received, but we will only post comments that address the topic of the proposed rule. We may choose not to post off-topic, inappropriate, or duplicate comments that we receive.

Personal information. We accept anonymous comments. Comments we post to *https://www.regulations.gov* will include any personal information you have provided. For more about privacy and submissions to the docket in response to this document, see DHS's eRulemaking System of Records notice (85 FR 14226, March 11, 2020).

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and record keeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard is proposing to amend 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 00170.1, Revision No. 01.2.

§ 165.785 [Removed]

■ 2. Remove § 165.785.

Dated: February 15, 2022.

J.F. Burdian,

Captain, U.S. Coast Guard, Captain of the Port Miami.

[FR Doc. 2022–03600 Filed 2–18–22; 8:45 am]

BILLING CODE 9110–04–P

ENVIRONMENTAL PROTECTION AGENCY

Air Plan Disapproval; Maryland; Interstate Transport of Air Pollution for the 2015 8-Hour Ozone National Ambient Air Quality Standard

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: Pursuant to the Federal Clean Air Act (CAA or the Act), the Environmental Protection Agency (EPA) is proposing to disapprove a State Implementation Plan (SIP) submittal from Maryland intended to address interstate transport for the 2015 8-hour ozone national ambient air quality standard (2015 8-hour ozone NAAQS). The ''good neighbor'' or ''interstate transport'' provision requires that each state's SIP contain adequate provisions to prohibit emissions from within the state from significantly contributing to nonattainment or interfering with maintenance of the NAAQS in other states. This requirement is part of the broader set of ''infrastructure'' requirements, which are designed to ensure that the structural components of

each state's air quality management program are adequate to meet the state's responsibilities under the CAA. This disapproval, if finalized, will establish a 2-year deadline for the EPA to promulgate a Federal Implementation Plan (FIP) to address the relevant interstate transport requirements, unless the EPA approves a subsequent SIP submittal that meets these requirements. Disapproval does not start a mandatory sanctions clock.

DATES: Written comments must be received on or before April 25, 2022.

ADDRESSES: You may send comments, identified as Docket No. EPA–R03–OAR–2021–0872, by any of the following methods: Federal eRulemaking Portal at *https://www.regulations.gov* following the online instructions for submitting comments or via email to *gordon.mike@epa.gov.* Include Docket ID No. EPA–R03–OAR–2021–0872 in the subject line of the message. For further submission methods contact the person in the **FOR FURTHER INFORMATION CONTACT** section. Include Docket ID No. EPA–R03–OAR–2021–0872 in the subject line of the message.

Instructions: All submissions received must include the Docket ID No. for this rulemaking. Comments received may be posted without change to *https://www.regulations.gov/,* including any personal information provided. For detailed instructions on sending comments and additional information on the rulemaking process, see the ''Public Participation'' heading of the **SUPPLEMENTARY INFORMATION** section of this document. Out of an abundance of caution for members of the public and our staff, the EPA Docket Center and Reading Room are open to the public by appointment only to reduce the risk of transmitting COVID–19. Our Docket Center staff also continues to provide remote customer service via email, phone, and webform. For further information on EPA Docket Center services and the current status, please visit us online at *https://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: Michael Gordon, Planning & Implementation Branch (3AD30), Air & Radiation Division, U.S. Environmental Protection Agency, Region III, 1650 Arch Street, Philadelphia, Pennsylvania 19103. The telephone number is (215) 814–2039. Mr. Gordon can also be reached via electronic mail at *gordon.mike@epa.gov.*

SUPPLEMENTARY INFORMATION:

Public Participation: Submit your comments, identified by Docket ID No. EPA–R03–OAR–2021–0872, at *https://www.regulations.gov* (our preferred method), or the other method identified in the **ADDRESSES** section. Once submitted, comments cannot be edited or removed from the docket. The EPA may publish any comment received to its public docket. Do not submit to EPA's docket at *https://www.regulations.gov* any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system).

There are two dockets supporting this action, EPA–R03–OAR–2021–0872 and EPA–HQ–OAR–2021–0663. Docket No. EPA–R03–OAR–2021–0872 contains information specific to Maryland, including the notice of proposed rulemaking. Docket No. EPA–HQ–OAR–2021–0663 contains additional modeling files, emissions inventory files, technical support documents, and other relevant supporting documentation regarding interstate transport of emissions for the 2015 8-hour ozone NAAQS which are being used to support this action. All comments regarding information in either of these dockets are to be made in Docket No. EPA–R03–OAR–2021–0872 only. For additional submission methods, please contact Mike Gordon, 215–814–2039, *gordon.mike@epa.gov.* For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov/dockets/commenting-epa-dockets.* Due to public health concerns related to COVID–19, the EPA Docket Center and Reading Room are open to the public by appointment only. Our Docket Center staff also continues to provide remote customer service via email, phone, and webform. For further information and updates on EPA Docket Center services, please visit us online at *https://www.epa.gov/dockets.*

The EPA continues to carefully and continuously monitor information from the Centers for Disease Control and Prevention (CDC), local area health departments, and our Federal partners so that we can respond rapidly as conditions change regarding COVID–19.

The index to the docket for this action, Docket No. EPA–R03–OAR–2021–0872, is available electronically at *www.regulations.gov.* While all documents in the docket are listed in the index, some information may not be publicly available via the online docket due to docket file size restrictions, such as certain modeling files, or content (*e.g.,* CBI). Please contact the EPA Docket Center Services for further information.

Throughout this document, ''we,'' ''us,'' and ''our'' means the EPA.

I. Background

A. Description of Statutory Background

On October 1, 2015, the EPA promulgated a revision to the ozone NAAQS (2015 8-hour ozone NAAQS), lowering the level of both the primary and secondary standards to 0.070 parts per million (ppm).[1] Section 110(a)(1) of the CAA requires states to submit, within 3 years after promulgation of a new or revised NAAQS, SIP submissions meeting the applicable requirements of section 110(a)(2).[2] One of these applicable requirements is found in CAA section 110(a)(2)(D)(i)(I), otherwise known as the ''interstate transport'' or ''good neighbor'' provision, which generally requires SIPs to contain adequate provisions to prohibit in-state emissions activities from having certain adverse air quality effects on other states due to interstate transport of pollution. There are two so-called ''prongs'' within CAA section 110(a)(2)(D)(i)(I). A SIP for a new or revised NAAQS must contain adequate provisions prohibiting any source or other type of emissions activity within the state from emitting air pollutants in amounts that will significantly contribute to nonattainment of the NAAQS in another state (prong 1) or interfere with maintenance of the NAAQS in another state (prong 2). The EPA and states must give independent significance to prong 1 and prong 2 when evaluating downwind air quality problems under CAA section 110(a)(2)(D)(i)(I).[3]

[1] National Ambient Air Quality Standards for Ozone, Final Rule, 80 FR 65292 (October 26, 2015). Although the level of the standard is specified in the units of ppm, ozone concentrations are also described in parts per billion (ppb). For example, 0.070 ppm is equivalent to 70 ppb.

[2] SIP revisions that are intended to meet the applicable requirements of section 110(a)(1) and (2) of the CAA are often referred to as infrastructure SIPs and the applicable elements under section 110(a)(2) are referred to as infrastructure requirements.

[3] *See North Carolina* v. *EPA,* 531 F.3d 896, 909–11 (D.C. Cir. 2008).

B. Description of the EPA's Four-Step Interstate Transport Regulatory Process

The EPA is using the 4-step interstate transport framework (or 4-step framework) to evaluate all of the states' SIP submittals addressing the interstate transport provision for the 2015 8-hour ozone NAAQS. The EPA has addressed the interstate transport requirements of CAA section 110(a)(2)(D)(i)(I) with respect to prior ozone NAAQS in several regional regulatory actions, including the Cross-State Air Pollution Rule (CSAPR), which addressed interstate transport with respect to the 1997 ozone NAAQS, as well as the 1997 and 2006 fine particulate matter standards,[4] and the Cross-State Air Pollution Rule Update (CSAPR Update) [5] and the Revised CSAPR Update, both of which addressed the 2008 ozone NAAQS.[6]

Through the development and implementation of the CSAPR rulemakings and prior regional rulemakings pursuant to the interstate transport provision,[7] the EPA, working in partnership with states, developed the following 4-step interstate transport framework to evaluate a state's obligations to eliminate interstate transport emissions under the interstate transport provision for the ozone NAAQS: (1) Identify monitoring sites that are projected to have problems attaining and/or maintaining the NAAQS (*i.e.,* nonattainment and/or maintenance receptors); (2) identify states that impact those air quality problems in other (*i.e.,* downwind) states sufficiently such that the states are considered ''linked'' and therefore warrant further review and analysis; (3) identify the emissions reductions necessary (if any), applying a multifactor analysis, to eliminate each linked upwind state's significant contribution to nonattainment or interference with maintenance of the NAAQS at the locations identified in Step 1; and (4) adopt permanent and enforceable measures needed to achieve those emissions reductions.

C. Background on the EPA's Ozone Transport Modeling Information

In general, the EPA has performed nationwide air quality modeling to project ozone design values which are used in combination with measured data to identify nonattainment and maintenance receptors. To quantify the contribution of emissions from specific upwind states on 2023 ozone design values for the identified downwind nonattainment and maintenance receptors, the EPA performed nationwide, state-level ozone source apportionment modeling for 2023. The source apportionment modeling provided contributions to ozone at receptors from precursor emissions of anthropogenic nitrogen oxides (NO_X) and volatile organic compounds (VOCs) in individual upwind states.

The EPA has released several documents containing projected ozone design values, contributions, and information relevant to evaluating interstate transport with respect to the 2015 8-hour ozone NAAQS. First, on January 6, 2017, the EPA published a notice of data availability (NODA) in which the EPA requested comment on preliminary interstate ozone transport data, including projected ozone design values and interstate contributions for 2023 using a 2011 emissions platform.[8] In the NODA, the EPA used the year 2023 as the analytic year for this preliminary modeling because that year aligns with the expected attainment year for Moderate ozone nonattainment areas for the 2015 8-hour ozone NAAQS.[9] On October 27, 2017, the EPA released a memorandum (October 2017 memorandum) containing updated modeling data for 2023, which incorporated changes made in response to comments on the NODA and noted that the modeling may be useful for states developing SIPs to address interstate transport obligations for the 2008 ozone NAAQS.[10] On March 27, 2018, the EPA issued a memorandum (March 2018 memorandum) noting that the same 2023 modeling data released in the October 2017 memorandum could also be useful for identifying potential downwind air quality problems with respect to the 2015 8-hour ozone NAAQS at Step 1 of the 4-step interstate transport framework.[11] The March 2018 memorandum also included the then newly available contribution modeling data for 2023 to assist states in evaluating their impact on potential downwind air quality problems for the 2015 8-hour ozone NAAQS under Step 2 of the 4-step interstate transport framework.[12] The EPA subsequently issued two more memoranda in August and October 2018, providing additional information to states developing interstate transport SIP submissions for the 2015 8-hour ozone NAAQS concerning, respectively, potential contribution thresholds that may be appropriate to apply in Step 2 of the 4-step interstate transport framework, and considerations for identifying downwind areas that may have problems maintaining the standard at Step 1 of the 4-step interstate transport framework.[13]

Since the release of the modeling data shared in the March 2018 memorandum, the EPA performed updated modeling using a 2016 emissions platform (*i.e.,* 2016v1). This emissions platform was developed under the EPA/Multi-Jurisdictional Organization (MJO)/state collaborative project.[14] This collaborative project was a multi-year joint effort by the EPA, MJOs, and states to develop a new, more

[4] *See* Federal Implementation Plans: Interstate Transport of Fine Particulate Matter and Ozone and Correction of SIP Approvals, 76 FR 48208 (August 8, 2011).

[5] Cross-State Air Pollution Rule Update for the 2008 Ozone NAAQS, 81 FR 74504 (October 26, 2016).

[6] In 2019, the D.C. Circuit Court of Appeals remanded the CSAPR Update to the extent it failed to require upwind states to eliminate their significant contribution by the next applicable attainment date by which downwind states must come into compliance with the NAAQS, as established under CAA section 181(a). *Wisconsin* v. *EPA,* 938 F.3d 303, 313 (D.C. Cir. 2019). The Revised CSAPR Update for the 2008 Ozone NAAQS, 86 FR 23054 (April 30, 2021), responded to the remand of the CSAPR Update in *Wisconsin* and the vacatur of a separate rule, the ''CSAPR Close-Out,'' 83 FR 65878 (December 21, 2018), in *New York* v. *EPA,* 781 F. App'x. 4 (D.C. Cir. 2019).

[7] In addition to the CSAPR rulemakings, other regional rulemakings addressing ozone transport include the ''NO_X SIP Call,'' 63 FR 57356 (October 27, 1998), and the ''Clean Air Interstate Rule'' (CAIR), 70 FR 25162 (May 12, 2005).

[8] *See* Notice of Availability of the Environmental Protection Agency's Preliminary Interstate Ozone Transport Modeling Data for the 2015 8-hour Ozone National Ambient Air Quality Standard (NAAQS), 82 FR 1733 (January 6, 2017).

[9] *See* 82 FR 1733, 1735 (January 6, 2017).

[10] *See* Information on the Interstate Transport State Implementation Plan Submissions for the 2008 Ozone National Ambient Air Quality Standards under Clean Air Act Section 110(a)(2)(D)(i)(I), October 27, 2017, available in docket ID No. EPA–HQ–OAR–2021–0663.

[11] *See* Information on the Interstate Transport State Implementation Plan Submissions for the 2015 Ozone National Ambient Air Quality Standards under Clean Air Act Section 110(a)(2)(D)(i)(I), March 27, 2018 (March 2018 memorandum), available in docket ID No. EPA–HQ–OAR–2021–0663.

[12] The March 2018 memorandum, however, provided, ''While the information in this memorandum and the associated air quality analysis data could be used to inform the development of these SIPs, the information is not a final determination regarding states' obligations under the good neighbor provision. Any such determination would be made through notice-and-comment rulemaking.''

[13] *See* Analysis of Contribution Thresholds for Use in Clean Air Act Section 110(a)(2)(D)(i)(I) Interstate Transport State Implementation Plan Submissions for the 2015 Ozone National Ambient Air Quality Standards, August 31, 2018 (August 2018 memorandum), and Considerations for Identifying Maintenance Receptors for Use in Clean Air Act Section 110(a)(2)(D)(i)(I) Interstate Transport State Implementation Plan Submissions for the 2015 Ozone National Ambient Air Quality Standards, October 19, 2018, available in docket ID No. EPA–HQ–OAR–2021–0663.

[14] The results of this modeling, as well as the underlying modeling files, are included in docket ID No. EPA–HQ–OAR–2021–0663.

recent emissions platform for use by the EPA and states in regulatory modeling as an improvement over the dated 2011 emissions platform to project ozone design values and contributions for 2023. On October 30, 2020, in the Notice of Proposed Rulemaking for the Revised CSAPR Update, the EPA released and accepted public comment on 2023 modeling that used the 2016v1 emissions platform.[15] Although the Revised CSPAR Update addressed transport for the 2008 ozone NAAQS, the projected design values and contributions from the 2016v1 emissions platform are also useful for identifying downwind ozone problems and linkages with respect to the 2015 8-hour ozone NAAQS.[16]

Following the final Revised CSAPR Update, the EPA made further updates to the 2016v1 emissions platform to include mobile emissions from the EPA's Motor Vehicle Emission Simulator MOVES3 model [17] and updated emissions projections for electric generating units (EGUs) that reflect the emissions reductions from the Revised CSAPR Update, recent information on plant closures, and other sector trends. The construct of the updated emissions platform, 2016v2 (2016v2 emissions platform), is described in the Emissions Modeling technical support document (TSD) for this proposed rulemaking.[18] The EPA performed air quality modeling of the 2016v2 emissions platform using the most recent public release version of the Comprehensive Air-quality Model with extensions (CAMx) photochemical modeling, version 7.10 [19] in evaluating these submissions with respect to Steps 1 and 2 of the 4-step interstate transport framework and generally referenced within this action as 2016v2 modeling for 2023. By using the updated modeling results, the EPA is using the most recent available and technically appropriate information for this proposed rulemaking. Section III of this document and the Air Quality Modeling TSD for the 2015 8-hour Ozone NAAQS Transport SIP Proposed Actions, included in Docket ID No. EPA–HQ–OAR–2021–0663 for this proposal, contain additional detail on the EPA's 2016v2 modeling. In this document, the EPA is accepting public comment on this updated 2023 modeling, which uses the 2016v2 emissions platform. Comments on the EPA's air quality modeling should only be submitted in the Regional docket for this action, docket ID No. EPA–R03–OAR–2021–0872. No comments on any topic are being accepted in docket ID No. EPA–HQ–OAR–2021–0663.

States may have chosen to rely on the results of the EPA modeling and/or alternative modeling performed by states or MJOs to evaluate downwind air quality problems and contributions as part of their submissions. In Section III of this document, the EPA evaluates how Maryland used air quality modeling information in their submission.

D. The EPA's Approach To Evaluating Interstate Transport SIPs for the 2015 8-Hour Ozone NAAQS

The EPA proposes to apply a consistent set of policy judgments across all states for purposes of evaluating interstate transport obligations and the approvability of interstate transport SIP submittals for the 2015 8-hour ozone NAAQS. These policy judgments reflect consistency with relevant case law and past agency practice as reflected in the CSAPR and related rulemakings. Nationwide consistency in approach is particularly important in the context of interstate ozone transport, which is a regional-scale pollution problem involving many smaller contributors. Effective policy solutions to the problem of interstate ozone transport going back to the NO_X SIP Call have necessitated the application of a uniform framework of policy judgments in order to ensure an ''efficient and equitable'' approach. *See EME Homer City Generation, LP* v. *EPA,* 572 U.S. 489, 519 (2014).

In the March, August, and October 2018 memoranda, the EPA recognized that states may be able to establish alternative approaches to addressing their interstate transport obligations for the 2015 8-hour ozone NAAQS that vary from a nationally uniform framework. The EPA emphasized in these memoranda, however, that such alternative approaches must be technically justified and appropriate in light of the facts and circumstances of each particular state's submittal. In general, the EPA continues to believe that deviation from a nationally consistent approach to ozone transport must be substantially justified and have a well-documented technical basis that is consistent with relevant case law. Where states submitted SIPs that rely on any such potential ''flexibilities'' as may have been identified or suggested in the past, the EPA will evaluate whether the state adequately justified the technical and legal basis for doing so. The EPA's proposed framework with respect to analytic year, definition of nonattainment and maintenance receptors, selection of contribution threshold, and multifactor control strategy assessment is described in this section.

The EPA notes that certain concepts included in an attachment to the March 2018 memorandum require unique consideration, and these ideas do not constitute agency guidance with respect to transport obligations for the 2015 8-hour ozone NAAQS. Attachment A to the March 2018 memorandum identified a ''Preliminary List of Potential Flexibilities'' that could potentially inform SIP development.[20] However, the EPA made clear in Attachment A that the list of ideas were not suggestions endorsed by the Agency but rather ''comments provided in various forums'' on which the EPA sought ''feedback from interested stakeholders.'' [21] Further, Attachment A stated, ''EPA is not at this time making any determination that the ideas discussed below are consistent with the requirements of the CAA, nor is the EPA specifically recommending that states use these approaches.'' [22] Attachment A to the March 2018 memorandum, therefore, does not constitute agency guidance, but was intended to generate further discussion around potential approaches to addressing ozone transport among interested stakeholders. To the extent states sought to develop or rely on these ideas in support of their SIP submittals, the EPA will thoroughly review the technical and legal justifications for doing so.

The remainder of this section describes the EPA's proposed framework with respect to analytic year, definition of nonattainment and maintenance receptors, selection of contribution threshold, and multifactor control strategy assessment.

1. Selection of Analytic Year

In general, the states and the EPA must implement the interstate transport provision in a manner ''consistent with the provisions of [title I of the CAA.]'' CAA section 110(a)(2)(D)(i). This requires, among other things, that these

[20] March 2018 memorandum, Attachment A.

[21] *Id.* at A–1.

[22] *Id.*

obligations are addressed consistently with the timeframes for downwind areas to meet their CAA obligations. With respect to ozone NAAQS, under CAA section 181(a), this means obligations must be addressed ''as expeditiously as practicable'' and no later than the schedule of attainment dates provided in CAA section 181(a)(1).[23] Several D.C. Circuit court decisions address the issue of the relevant analytic year for the purposes of evaluating ozone transport air-quality problems. On September 13, 2019, the D.C. Circuit issued a decision in *Wisconsin* v. *EPA,* remanding the CSAPR Update to the extent that it failed to require upwind states to eliminate their significant contribution by the next applicable attainment date by which downwind states must come into compliance with the NAAQS, as established under CAA section 181(a). 938 F.3d 303 at 313.

On May 19, 2020, the D.C. Circuit issued a decision in *Maryland* v. *EPA* that cited the *Wisconsin* decision in holding that the EPA must assess the impact of interstate transport on air quality at the next downwind attainment date, including Marginal area attainment dates, in evaluating the basis for the EPA's denial of a petition under CAA section 126(b). *Maryland* v. *EPA,* 958 F.3d 1185, 1203–04 (D.C. Cir. 2020). The court noted that ''section 126(b) incorporates the Good Neighbor Provision,'' and, therefore, ''EPA must find a violation [of section 126] if an upwind source will significantly contribute to downwind nonattainment at the *next downwind attainment deadline.* Therefore, the agency must evaluate downwind air quality at that deadline, not at some later date.'' *Id.* at 1204 (emphasis added). The EPA interprets the court's holding in *Maryland* as requiring the states and the Agency, under the good neighbor provision, to assess downwind air quality as expeditiously as practicable and no later than the next applicable attainment date,[24] which is now the Moderate area attainment date under CAA section 181 for ozone nonattainment. The Moderate area attainment date for the 2015 8-hour ozone NAAQS is August 3, 2024.[25] The EPA believes that 2023 is now the appropriate year for analysis of interstate transport obligations for the 2015 8-hour ozone NAAQS, because the 2023 ozone season is the last relevant ozone season during which achieved emissions reductions in linked upwind states could assist downwind states with meeting the August 3, 2024 Moderate area attainment date for the 2015 8-hour ozone NAAQS.

The EPA recognizes that the attainment date for nonattainment areas classified as Marginal for the 2015 8-hour ozone NAAQS was August 3, 2021. Under the *Maryland* holding, any necessary emissions reductions to satisfy interstate transport obligations should have been implemented by no later than this date. At the time of the statutory deadline to submit interstate transport SIPs (October 1, 2018), many states relied upon the EPA modeling of the year 2023, and no state provided an alternative analysis using a 2021 analytic year (or the prior 2020 ozone season). However, the EPA must act on SIP submittals using the information available at the time it takes such action. In this circumstance, the EPA does not believe it would be appropriate to evaluate states' obligations under CAA section 110(a)(2)(D)(i)(I) as of an attainment date that is wholly in the past, because the Agency interprets the interstate transport provision as forward looking. *See* 86 FR at 23074; *see also Wisconsin,* 938 F.3d at 322. Consequently, in this proposal the EPA will use the analytical year of 2023 to evaluate each state's CAA section 110(a)(2)(D)(i)(I) SIP submission with respect to the 2015 8-hour ozone NAAQS.

2. Step 1 of the 4-Step Interstate Transport Framework

In Step 1, the EPA identifies monitoring sites that are projected to have problems attaining and/or maintaining the NAAQS in the 2023 analytic year. Where the EPA's analysis shows that a site does not fall under the definition of a nonattainment or maintenance receptor, that site is excluded from further analysis under the EPA's 4-step interstate transport framework. For sites that are identified as a nonattainment or maintenance receptor in 2023, the EPA proceeds to the next step of our 4-step interstate transport framework by identifying the upwind state's contribution to those receptors.

The EPA's approach to identifying ozone nonattainment and maintenance receptors in this action is consistent with the approach used in previous transport rulemakings. The EPA's approach gives independent consideration to both the ''contribute significantly to nonattainment'' and the ''interfere with maintenance'' prongs of CAA section 110(a)(2)(D)(i)(I), consistent with the D.C. Circuit's direction in *North Carolina* v. *EPA.*[26]

For the purpose of this proposal, the EPA identifies nonattainment receptors as those monitoring sites that are projected to have average design values that exceed the NAAQS and that are also measuring nonattainment based on the most recent monitored design values. This approach is consistent with prior transport rulemakings, such as the CSAPR Update, where the EPA defined nonattainment receptors as those areas that both currently measure nonattainment and that the EPA projects will be in nonattainment in the future analytic year (*i.e.,* 2023).[27]

In addition, in this proposal, the EPA identifies a receptor to be a ''maintenance'' receptor for purposes of defining interference with maintenance, consistent with the method used in the CSAPR and upheld by the D.C. Circuit in *EME Homer City Generation, L.P.* v. *EPA,* 795 F.3d 118, 136 (D.C. Cir. 2015).[28] Specifically, the EPA identified maintenance receptors as those receptors that would have difficulty maintaining the relevant NAAQS in a scenario that takes into account historical variability in air quality at that receptor. The variability in air quality was determined by evaluating the ''maximum'' future design value at each receptor based on a projection of the maximum measured design value over the relevant period. The EPA interprets the projected maximum future design value to be a potential future air quality outcome consistent

[23] For attainment dates for the 2015 8-hour ozone NAAQS, refer to CAA section 181(a), 40 CFR 51.1303, and Additional Air Quality Designations for the 2015 Ozone National Ambient Air Quality Standards, 83 FR 25776 (June 4, 2018, effective August 3, 2018).

[24] The EPA notes that the court in *Maryland* did not have occasion to evaluate circumstances in which the EPA may determine that an upwind linkage to a downwind air quality problem exists at Steps 1 and 2 of the interstate transport framework by a particular attainment date, but for reasons of impossibility or profound uncertainty the Agency is unable to mandate upwind pollution controls by that date. *See Wisconsin,* 938 F.3d at 320. The D.C. Circuit noted in *Wisconsin* that upon a sufficient showing, these circumstances may warrant flexibility in effectuating the purpose of the interstate transport provision.

[25] *See* CAA section 181(a); 40 CFR 51.1303; Additional Air Quality Designations for the 2015 Ozone National Ambient Air Quality Standards, 83 FR 25776 (June 4, 2018, effective August 3, 2018).

[26] *See North Carolina* v. *EPA,* 531 F.3d at 910–11 (holding that the EPA must give ''independent significance'' to each prong of CAA section 110(a)(2)(D)(i)(I)).

[27] *See* 81 FR 74504 (October 26, 2016). This same concept, relying on both current monitoring data and modeling to define nonattainment receptor, was also applied in CAIR. *See* 70 FR at 25241, 25249 (January 14, 2005); *see also North Carolina,* 531 F.3d at 913–14 (affirming as reasonable the EPA's approach to defining nonattainment in CAIR).

[28] *See* 76 FR 48208 (August 8, 2011). CSAPR Update and Revised CSAPR Update also used this approach. *See* 81 FR 74504 (October 26, 2016) and 86 FR 23054 (April 30, 2021).

with the meteorology that yielded maximum measured concentrations in the ambient data set analyzed for that receptor (*i.e.,* ozone conducive meteorology). The EPA also recognizes that previously experienced meteorological conditions (*e.g.,* dominant wind direction, temperatures, air mass patterns) promoting ozone formation that led to maximum concentrations in the measured data may reoccur in the future. The maximum design value gives a reasonable projection of future air quality at the receptor under a scenario in which such conditions do, in fact, reoccur. The projected maximum design value is used to identify upwind emissions that, under those circumstances, could interfere with the downwind area's ability to maintain the NAAQS.

Recognizing that nonattainment receptors are also, by definition, maintenance receptors, the EPA often uses the term ''maintenance-only'' to refer to those receptors that are not nonattainment receptors. Consistent with the concepts for maintenance receptors, as described above, the EPA identifies ''maintenance-only'' receptors as those monitoring sites that have projected average design values above the level of the applicable NAAQS, but that are not currently measuring nonattainment based on the most recent official design values. In addition, those monitoring sites with projected average design values below the NAAQS, but with projected maximum design values above the NAAQS are also identified as ''maintenance only'' receptors, even if they are currently measuring nonattainment based on the most recent official design values.

3. Step 2 of the 4-Step Interstate Transport Framework

In Step 2, the EPA quantifies the contribution of each upwind state to each receptor in the 2023 analytic year. The contribution metric used in Step 2 is defined as the average impact from each state to each receptor on the days with the highest ozone concentrations at the receptor based on the 2023 modeling. If a state's contribution value does not equal or exceed the threshold of 1 percent of the NAAQS (*i.e.,* 0.70 parts per billion (ppb) for the 2015 8-hour ozone NAAQS), the upwind state is not ''linked'' to a downwind air quality problem, and the EPA, therefore, concludes that the state does not significantly contribute to nonattainment or interfere with maintenance of the NAAQS in the downwind states. However, if a state's contribution equals or exceeds the 1 percent threshold, the state's emissions are further evaluated in Step 3, considering both air quality and cost as part of a multi-factor analysis, to determine what, if any, emissions might be deemed ''significant'' and, thus, must be eliminated under CAA section 110(a)(2)(D)(i)(I). The EPA is proposing to rely in the first instance on the 1 percent threshold for the purpose of evaluating a state's contribution to nonattainment or maintenance of the 2015 8-hour ozone NAAQS (*i.e.,* 0.70 ppb) at downwind receptors. This is consistent with the Step 2 approach that the EPA applied in CSAPR for the 1997 ozone NAAQS, which has subsequently been applied in the CSAPR Update when evaluating interstate transport obligations for the 2008 ozone NAAQS. The EPA continues to find 1 percent to be an appropriate threshold. For ozone, as the EPA found in the Clean Air Interstate Rule (CAIR), CSAPR, and CSAPR Update, a portion of the nonattainment problems from anthropogenic sources in the U.S. result from the combined impact of contributions from many upwind states, along with contributions from in-state sources and, in some cases, substantially larger contributions from a subset of particular upwind states. The EPA's analysis shows that much of the ozone transport problem being analyzed in this proposed rulemaking is still the result of the collective impacts of contributions from many upwind states. Therefore, application of a consistent contribution threshold is necessary to identify those upwind states that should have responsibility for addressing their contribution to the downwind nonattainment and maintenance problems to which they collectively contribute. Continuing to use 1 percent of the NAAQS as the screening metric to evaluate collective contribution from many upwind states also allows the EPA (and states) to apply a consistent framework to evaluate interstate emissions transport under the interstate transport provision from one NAAQS to the next. *See* 81 FR at 74518. *See also* 86 FR at 23085 (reviewing and explaining rationale from CSAPR, 76 FR at 48237–38, for selection of 1 percent threshold).

The EPA's August 2018 memorandum recognized that in certain circumstances, a state may be able to establish that an alternative contribution threshold of 1 ppb is justifiable. Where a state relies on this alternative threshold, and where that state determined that it was not linked at Step 2 using the alternative threshold, the EPA will evaluate whether the state provided a technically sound assessment of the appropriateness of using this alternative threshold based on the facts and circumstances underlying its application in the particular SIP submission.

4. Step 3 of the 4-Step Interstate Transport Framework

Consistent with the EPA's longstanding approach to eliminating significant contribution or interference with maintenance, at Step 3, states linked at Steps 1 and 2 are generally expected to prepare a multifactor assessment of potential emissions controls. The EPA's analysis at Step 3 in prior Federal actions addressing interstate transport requirements has primarily focused on an evaluation of cost-effectiveness of potential emissions controls (on a marginal cost-per-ton basis), the total emissions reductions that may be achieved by requiring such controls (if applied across all linked upwind states), and an evaluation of the air quality impacts such emissions reductions would have on the downwind receptors to which a state is linked; other factors may potentially be relevant if adequately supported. In general, where the EPA's or alternative air quality and contribution modeling establishes that a state is linked at Steps 1 and 2, it will be insufficient at Step 3 for a state merely to point to its existing rules requiring control measures as a basis for approval. In general, the emissions-reducing effects of all existing emissions control requirements are already reflected in the air quality results of the modeling for Steps 1 and 2. If the state is shown to still be linked to one or more downwind receptor(s), states must provide a well-documented evaluation determining whether their emissions constitute significant contribution or interference with maintenance by evaluating additional available control opportunities by preparing a multifactor assessment. While the EPA has not prescribed a particular method for this assessment, the EPA expects states at a minimum to present a sufficient technical evaluation. This would typically include information on emissions sources, applicable control technologies, emissions reductions, costs, cost effectiveness, and downwind air quality impacts of the estimated reductions, before concluding that no additional emissions controls should be required.[29]

[29] As examples of general approaches for how such an analysis could be conducted for their sources, states could look to the CSAPR Update, 81 FR 74504, 74539–51 (October 26, 2016); CSAPR, 76

5. Step 4 of the 4-Step Interstate Transport Framework

At Step 4, states (or the EPA) develop permanent and federally enforceable control strategies to achieve the emissions reductions determined to be necessary at Step 3 to eliminate significant contribution to nonattainment or interference with maintenance of the NAAQS. For a state linked at Steps 1 and 2 to rely on an emissions control measure at Step 3 to address its interstate transport obligations, that measure must be included in the state's SIP so that it is permanent and federally enforceable. *See* CAA section 110(a)(2)(D) (''Each such [SIP] shall . . . contain adequate provisions . . .''). *See also* CAA 110(a)(2)(A); *Committee for a Better Arvin* v. *U.S. E.P.A.,* 786 F.3d 1169, 1175–76 (9th Cir. 2015) (holding that measures relied on by state to meet CAA requirements must be included in the SIP).

II. Maryland's SIP Submission Addressing Interstate Transport of Air Pollution for the 2015 8-Hour Ozone NAAQS

On October 11, 2018, the Maryland Department of the Environment (MDE), on behalf of the State of Maryland, made a SIP submission to address most of the 2015 8-hour ozone NAAQS i-SIP requirements under CAA section 110(a)(2), except for the CAA section 110(a)(2)(D)(i)(I) (the ''Good Neighbor'' or ''interstate transport'') requirements, which Maryland proposed to address in a separate SIP submittal. The EPA published a final approval of this SIP submission on September 18, 2019, 84 FR 49062. On October 16, 2019, MDE then submitted a separate, supplemental SIP revision addressing only the CAA section 110(a)(2)(D)(i)(I) interstate transport requirements for the 2015 8-hour ozone NAAQS (the 2019 SIP).[30] Maryland's 2019 SIP submittal provided an analysis of ozone monitoring data and emission trends, as well as a list of already-enacted Federal and State air pollution control measures, before concluding that Maryland satisfied its section 110(a)(2)(D)(i)(I) Good Neighbor obligations for purposes of the 2015 8-hour ozone NAAQS.

Maryland's SIP submittal roughly followed the 4-step interstate transport framework recommended by the EPA. For Steps 1 and 2, Maryland relied on the EPA's modeling in the March 2018 memorandum to demonstrate that it complies with the requirements of CAA section 110(a)(2)(D)(i)(I) for the 2015 8-hour ozone NAAQS. As part of Step 1, Maryland's SIP submittal identified the downwind nonattainment and maintenance receptors for which the EPA's modeling projected impacts from Maryland emissions, and thus linkage in 2023. The State examined historical ozone design values based on past monitoring data from 2015 to 2018 at key linked monitors to evaluate the likelihood of future compliance with the NAAQS at those locations. As part of Step 2, Maryland's SIP submission specified that even though the EPA's August 31, 2018 [31] memorandum concluded that it may be reasonable and appropriate for states to use a 1 ppb contribution threshold, as an alternative to a 1-percent threshold, Maryland chose to use the one-percent threshold as it captured a greater contribution from upwind states.

In the 2019 SIP submittal, Maryland also asserted that it does not agree with the results of the EPA's 2023 projection modeling outlined in the March 2018 memorandum, because in their opinion the air quality modeling accompanying the March 2018 memorandum was ''based on flawed, unenforceable inventory assumptions and modeling methodology'' that resulted in lower projected 2023 design values and state contributions that differ from the expected reality.[32] Maryland further explained that even though that was the most current modeling available at the time, states should not solely rely on it to fulfill their interstate transport obligations, and for that reason, the State identified four items that, in its opinion, need to be included in a SIP submission to address section 110(a)(2)(D)(i)(I) for the EPA to approve it. These four items include the following: (i) Completion of the entire 4-step interstate transport framework; (ii) requiring optimization of post-combustion controls at EGUs as a cost-effective strategy for NOx reduction; (iii) requiring that reductions included in the modeling for interstate transport SIP submittals be permanent, enforceable and implemented as expeditiously as possible; and (iv) requiring that the optimization of post-combustion controls at EGUs happen on a daily basis, consistent with the way peak days are used to demonstrate attainment with the standards using measured ozone data. Even though Maryland did not agree with the results of the EPA's March 2018 memorandum modeling on the basis that it contains unenforceable control measures, the State did use that modeling analysis to fulfill Step 2 of the 4-step interstate transport framework.

For Step 3 of the 4-step interstate transport framework, Maryland's SIP submittal highlighted the EPA's CSAPR Update rule. In particular, the State focused on the determination of the necessary level of NO_X emission control and the state budgets for NO_X emissions for EGUs, corresponding to emission levels after accounting for operation of existing pollution controls, emission reductions available at a certain cost threshold, and any additional reductions required to address interstate ozone transport. Maryland acknowledged that the CSAPR Update rule aids in the reduction of interstate transport through the implementation of NO_X emissions limits for EGUs in 22 eastern states, including Maryland, during the ozone season.

Lastly, with regard to Step 4 of the 4-step interstate transport framework, the State's SIP submittal described why it believed that Maryland's NO_X Rule met and exceeded the CSAPR Update requirements. Maryland claims that Maryland's NO_X Rule controls EGU NO_X emissions at levels more stringent than required by the CSAPR Update rule. The submittal notes that Maryland has implemented its NO_X Rule in two phases, with Phase 1 satisfying the CSAPR Update requirements, while Phase 2, which took effect in 2020, could be considered as additional emission reductions eliminating Maryland's significant contributions to downwind states. As part of Step 4, Maryland's submittal also provided a list of state regulations and voluntary control measures for a variety of other source categories for both NO_X and VOC emissions that the State has adopted to demonstrate how Maryland complies and will continue to comply with the good neighbor provisions of the 2015 8-hour ozone NAAQS.

III. EPA Evaluation

The EPA is proposing to find that Maryland's October 16, 2019 SIP submission does not meet the state's obligations with respect to prohibiting

FR 48208, 48246–63 (August 8, 2011); CAIR, 70 FR 25162, 25195–229 (May 12, 2005); or the NO_X SIP Call, 63 FR 57356, 57399–405 (October 27, 1998). *See also* Revised CSAPR Update, 86 FR 23054, 23086–23116 (April 30, 2021). Consistently across these rulemakings, the EPA has developed emissions inventories, analyzed different levels of control stringency at different cost thresholds, and assessed resulting downwind air quality improvements.

[30] *See* the October 16, 2019 SIP submittal included in docket ID No. EPA–R03–OAR–2021–0872.

[31] Analysis of Contribution Thresholds Memo, August 2018, *https://www.epa.gov/sites/production/files/2018-09/documents/contrib_thresholds_transport_sip_subm_2015_ozone_memo_08_31_18.pdf.*

emissions that contribute significantly to nonattainment or interfere with maintenance of the 2015 8-hour ozone NAAQS in any other state, and the EPA is therefore proposing to disapprove Maryland's SIP submission. This proposed disapproval is based on newer, updated modeling performed by the EPA which was not available when Maryland submitted its supplemental SIP, and the EPA's evaluation of the SIP submission using the 4-step interstate transport framework.

A. Maryland

1. Evaluation of Information Provided by Maryland Regarding Steps 1 and 2

As noted in Section II of this document, at Steps 1 and 2 of the 4-step interstate transport framework, Maryland used the EPA modeling released in the March 2018 memorandum [33] to identify nonattainment and maintenance receptors in 2023 and to determine whether the State was linked to any of these receptors in 2023. The March 2018 memorandum modeling was the latest modeling available when Maryland submitted its SIP revision in October 2019. As described previously in this document, the EPA has since released air quality modeling using the most recent available and technically appropriate emissions data (*i.e.,* 2016v2 emissions platform). Therefore, the EPA proposes to primarily rely on the EPA's most recent modeling to identify nonattainment and maintenance receptors and identify upwind state linkages to these receptors 2023.

In Maryland's 2019 SIP submission, the State used the modeling in the EPA's March 2018 memorandum to identify six downwind monitors to which Maryland sources contributed to nonattainment or interfered with maintenance. The EPA's air quality modeling for 2023 using the 2016v2 emissions platform shows nonattainment or interference at five of the same six monitors, as shown in Table 1 of this document in the following subsection, although in slightly differing amounts. As noted in Section II of this document, Maryland objected to the modeling attached to the March 2018 memorandum by claiming that it relied on outdated information and flawed inventory assumptions that would tend to lessen downwind contributions from upwind sources. The EPA's air quality modeling using the 2016v2 emissions platform would presumably address some of Maryland's concerns regarding the March 2018 memorandum modeling. As stated in Section I of this document, the EPA is accepting comment on this more recent modeling data used to support this action. Regardless, both sets of modeling show that Maryland is linked to nonattainment or interfering with maintenance at downwind out-of-state monitors, and the State did not provide any alternative modeling analysis that showed an alternative set of nonattainment or maintenance receptors in 2023, nor did Maryland provide an alternative analysis to demonstrate that they were not linked to nonattainment or interfering with maintenance at downwind monitors. Therefore, both the EPA and Maryland agree that Maryland's sources are contributing to nonattainment or interfering with maintenance at downwind monitors.

2. Results of the EPA's Step 1 and Step 2 Modeling and Findings for Maryland

As described in Section I of this document, the EPA performed air quality modeling using the 2016v2 emissions platform to project design values and contributions for 2023. The EPA examined these data to determine if emissions from Maryland sources contribute at or above the threshold of 1 percent of the 2015 8-hour ozone NAAQS (0.70 ppb) to any downwind nonattainment or maintenance receptor. As shown in Table 1 of this document, the data [34] indicate that in 2023, emissions from Maryland contribute greater than 1 percent of the NAAQS to nonattainment or maintenance-only receptors in Fairfield County and New Haven County, Connecticut; and in Queens County and Suffolk County, New York.[35]

Therefore, based on the EPA's evaluation of the information submitted by Maryland, and based on the EPA's most recent modeling results for 2023, the EPA proposes to find that Maryland is linked at Steps 1 and 2 and has an obligation to assess potential emissions reductions from sources or other emissions activity at Step 3 of the 4-step framework.

TABLE 1—MARYLAND LINKAGE RESULTS BASED ON EPA'S UPDATED 2016V2-BASED MODELING

Receptor ID	Location	Nonattainment/maintenance	2023 average design value (ppb)	2023 maximum design value (ppb)	Maryland contribution (ppb)
090013007	Fairfield County—Stratford, CT	Nonattainment	74.3	75.2	1.18
090019003	Fairfield County—Westfield, CT	Nonattainment	76.9	77.2	1.18
090010017	Fairfield County—Greenwich, CT	Maintenance	73.4	74.0	0.67
090099002	New Haven—Madison, CT	Maintenance	71.7	73.8	1.51
360810124	Queens County, NY	Maintenance	66.2	67.8	1.10
361030002	Suffolk County—Babylon, NY	Nonattainment	67.0	68.8	1.12

3. Evaluation of Information Provided Regarding Step 3

At Step 3 of the 4-step interstate transport framework, a state's emissions are further evaluated, in light of multiple factors, including air quality and cost considerations, to determine what, if any, emissions significantly contribute to nonattainment or interfere with maintenance and, thus, must be eliminated under CAA section 110(a)(2)(D)(i)(I).

[33] Page 2 of Maryland's 2019 SIP submission notes that Maryland does not agree with the 2023 modeling assessment included with the March 2018 memorandum because it is ''based on flawed, unenforceable inventory assumptions and modeling assumptions'' that result in lower projected 2023 design values and state contributions that differ from reality. However, Maryland does not elaborate further on these ''flaws,'' nor does Maryland explain how or why these flaws, if corrected, would either change the status of any receptor or show that Maryland is not linked to any downwind nonattainment or maintenance receptors.

[34] Design values and contributions at individual monitoring sites nationwide are provide in the file: 2016v2_DVs_state_contributions.xlsx which is included in docket ID No. EPA–HQ–OAR–2021–0663.

[35] These modeling results are consistent with the results of a prior round of 2023 modeling using the 2016v1 emissions platform which became available to the public in the fall of 2020 in the Revised CSAPR Update, as noted in Section I of this document. That modeling showed that Maryland had a maximum contribution greater than 0.70 ppb to at least one nonattainment or maintenance-only receptor in 2023. These modeling results are included in the file ''Ozone Design Values and Contributions Revised CSAPR Update.xlsx'' in docket ID No. EPA–HQ–OAR–2021–0663.

To evaluate effectively which emissions in the state should be deemed ''significant'' and therefore prohibited, states generally should prepare an accounting of sources and other emissions activity for relevant pollutants and assess potential, additional emissions reduction opportunities and resulting downwind air quality improvements. The EPA has consistently applied this general approach (*i.e.,* Step 3 of the 4-step interstate transport framework) when identifying emissions contributions that the Agency has determined to be ''significant'' (or interfere with maintenance) in each of its prior Federal, regional ozone transport rulemakings, and this interpretation of the statute has been upheld by the Supreme Court. *See EME Homer City,* 572 U.S. 489, 519 (2014). While the EPA has not directed states that they must conduct a Step 3 analysis in precisely the manner the EPA has done in its prior regional transport rulemakings, state implementation plans addressing the obligations in CAA section 110(a)(2)(D)(i)(I) must prohibit ''any source or other type of emissions activity within the State'' from emitting air pollutants which will contribute significantly to downwind air quality problems. Thus, states must complete something similar to the EPA's analysis (or an alternative approach to defining ''significance'' that comports with the statute's objectives) to determine whether and to what degree emissions from a state should be ''prohibited'' to eliminate emissions that will ''contribute significantly to nonattainment in, or interfere with maintenance of,'' the NAAQS in any other state. At Step 3 of the 4-step interstate transport framework, Maryland did not include an accounting of all of the NO_X emitting facilities in the state along with an analysis of potential NO_X emissions control technologies, their associated costs, estimated emissions reductions, and downwind air quality improvements.

Maryland's analysis instead focused on the CSAPR Update rule and described how, as of May 2017, that rule has reduced ozone season NO_X emissions from power plants in 22 eastern states, including Maryland. Maryland referenced the EPA's finding in the CSAPR Update that for the updated NO_X ozone season budgets for EGUs, an increased cost threshold of $1,400 per ton of NO_X reduced was appropriate, because it represented the level of maximum marginal NO_X reduction with respect to cost, while not over-controlling upwind states' emissions. Maryland's SIP submittal included a table with the 22 states' updated ozone season NO_X budgets. That table shows that for Maryland, the CSAPR Update NO_X ozone season budget, at the $1,400 per ton threshold, was 3,238 tons.[36]

Maryland's focus on the CSAPR Update (which reflected a stringency at the nominal marginal cost threshold of $1400/ton (2011$) for the 2008 ozone NAAQS) rule to satisfy their obligations for the 2015 8-hour ozone NAAQS is unpersuasive. First, the CSAPR Update did not regulate non-electric generating units (non-EGU), so Maryland's reliance on only the CSAPR Update analysis is incomplete because Maryland did not analyze non-EGU sources. *See Wisconsin,* 938 F.3d at 318–20. Second, relying on the CSAPR Update's (or any other CAA program's) determination of cost-effectiveness without further Step 3 analysis by Maryland is not approvable. Cost-effectiveness must be assessed in the context of the specific CAA program; assessing cost-effectiveness in the context of ozone transport should reflect a more comprehensive evaluation of the nature of the interstate transport problem, the total emissions reductions available at several cost thresholds, and the air quality impacts of the reductions at downwind receptors. While the EPA has not established a benchmark cost-effectiveness value for the 2015 8-hour ozone NAAQS interstate transport obligations, because the 2015 8-hour ozone NAAQS is a more stringent and more protective air quality standard, it is reasonable to expect control measures or strategies to address interstate transport under this NAAQS to reflect higher marginal control costs. As such, the marginal cost threshold of $1,400/ton for the CSAPR Update (which addresses the 2008 ozone NAAQS and is in 2011$) is not an appropriate cost threshold and cannot be approved as a benchmark to use for interstate transport SIP submissions for the 2015 8-hour ozone NAAQS. Furthermore, Maryland did not explain how the ozone season NO_X emission budget for Maryland's EGUs set by the CSAPR Update, which was intended to address ozone transport nonattainment and maintenance issues for the less-stringent 2008 ozone NAAQS, eliminates Maryland's significant contribution to the downwind nonattainment and maintenance receptors to which Maryland is linked for purposes of the more stringent 2015 8-hour ozone NAAQS.

In addition, the updated 2023 EPA modeling using the 2016v2 emissions platform captures all existing CSAPR trading programs in the baseline, and that modeling confirms that these control programs were not sufficient to eliminate Maryland's linkage at Steps 1 and 2 under the 2015 8-hour ozone NAAQS. The State was therefore obligated at Step 3 to assess *additional* control measures using a multifactor analysis.

Finally, relying on a FIP at Step 3 is per se not approvable if the state has not adopted that program into its SIP and instead continues to rely on the FIP. States may not rely on non-SIP measures to meet SIP requirements. *See* CAA section 110(a)(2)(D) (''Each such [SIP] shall . . . contain adequate provisions . . .''). *See also* CAA section 110(a)(2)(A); *Committee for a Better Arvin* v. *U.S. E.P.A.,* 786 F.3d 1169, 1175–76 (9th Cir. 2015) (holding that measures relied on by state to meet CAA requirements must be included in the SIP).

Notwithstanding the above deficiencies, Maryland asserts at Step 3 of its analysis that ''Maryland's NO_X Rule controls EGU NO_X emissions at levels more stringent than what is required by the CSAPR Update and it will achieve the necessary reductions to meet the State's good neighbor obligations under the 2015 8-hour ozone NAAQS.'' [37] Maryland's submittal provided, among other things, a description of the Maryland NO_X Rule to control NO_X emissions from Coal-Fired EGUs, and the following description of the NO_X Rule is taken largely from Maryland's submittal.[38] Maryland's NO_X Rule took effect in May 2015 and contains two phases. Phase I, found at COMAR 26.11.38.3, became effective on May 1, 2015 and required owners and operators of affected EGUs (coal-fired EGUs in Maryland) to comply with several measures meant to optimize their emission controls. These measures included: (i) The submission of a plan for approval by MDE and the EPA demonstrating how the EGU will operate installed pollution control technology and combustion controls during the ozone season to minimize emissions (COMAR 26.11.38.03A(1)); (ii) beginning May 1, 2015, and during the entire ozone season, requiring the owners and operators to operate and optimize the use of all installed pollution and combustion controls

[36] *See* Maryland's October 16, 2019 SIP submittal included in docket ID No. EPA–R03–OAR–2021–0872.

[37] *See* Maryland's October 16, 2019 SIP submittal at 7 included in docket ID No. EPA–R03–OAR–2021–0872.

[38] The Maryland NO_X rule is codified at COMAR 26.11.38 (Control of NO_X Emissions from Coal-Fired Electric Generating Units).

consistent with the technological limitations, manufacturers' specifications, good engineering, maintenance practices, and air pollution control practices to minimize emissions (COMAR 26.11.38.03A(2)); (iii) setting an ozone season system-wide NO_X emission rate of 0.15 pounds per million British units (lbs/MMBtu) as a 30-day rolling average for affected EGUs (COMAR 26.11.38.03B(1)); (iv) exempting EGUs that are the only facility in Maryland directly or indirectly owned, operated, or controlled by the owner, operator, or controller of the facility from the 0.15 lbs/MMBtu system-wide emission rate specified in COMAR 26.11.38.03B(1) (COMAR 26.11.38.03B(3)); and (v) setting a NO_X emission rate for EGUs using fluidized bed combustors of 0.10 lbs/MMBtu as a 24-hour block average on an annual basis while exempting these units from meeting COMAR 26.11.38.03A, B(1) and (2), and (C) (COMAR 26.11.38.03D).[39] Sources subject to Phase I must also continue meeting annual NO_X reductions in COMAR 26.11.27, Maryland's Healthy Air Act. Maryland claims that for owners and operators to meet the limits set by Maryland's NO_X Rule, the sources are required to run their controls ''continuously.''[40]

In addition, Maryland's 2019 SIP Submission contains a table (Table 5)[41] which the State describes as listing ''NO_X indicator rates'' which demonstrate compliance with the optimization requirement in COMAR 26.11.38.03A(1). These rates, found in COMAR 26.11.38.05, are described as ''Required 24-Hour Block Average Unit Level NO_X Emission Rates.'' The rates can vary from unit to unit at each affected source (and at the unit level based on heat input at Brandon Shores Unit 2) and between affected sources. These limits range from 0.07 lbs/MMBtu to 0.34 lbs/MMBtu. The effect of meeting these indicator rates is that ''(2) An affected electric generating unit shall not be required to submit a unit-specific report consistent with § A(3) of this regulation when the unit emits at levels that are at or below the . . .'' rates in the table. COMAR 26.11.38.05A(2). If the affected EGU does not meet its prescribed emission rate, it must submit a report to MDE for that day explaining the circumstances of the exceedance. COMAR 26.11.38.05A(3). As specified in COMAR 26.11.38.05A(4), such exceedance shall not be a violation if it was caused by certain events and was in accordance with the plan submitted under COMAR 26.11.38.03A(1).

Regarding Phase I of Maryland's NO_X Rule, the EPA notes that the Phase I NO_X Rule emission reductions took effect in 2017 and are captured in the EPA's updated 2023 modeling using the 2016v2 emissions platform, but that emissions modeling still shows that Maryland is contributing to nonattainment or interfering with maintenance at downwind receptors in other states. The EPA's latest projections of the baseline EGU emissions uses the version 6—Summer 2021 Reference Case of the Integrated Planning Model (IPM). IPM is a multi-regional, dynamic, and deterministic linear programming model of the U.S. electric power sector. The model provides forecasts of least cost capacity expansion, electricity dispatch, and emission control strategies, while meeting energy demand, environmental, transmission, dispatch, and reliability constraints.

The IPM version 6—Summer 2021 Reference Case incorporated recent updates through the Summer of 2021 to account for updated Federal and State environmental regulations for EGUs. This projected base case accounts for the effects of the finalized Mercury and Air Toxics Standards rule, CSAPR, the CSAPR Update, the Revised CSAPR Update, New Source Review settlements, the final effluent limitation guidelines (ELG) Rule, the coal combustion residual (CCR) Rule, and other on-the-books Federal and State rules (including renewable energy tax credit extensions from the Consolidated Appropriations Act of 2021) through early 2021 impacting SO_2, NO_X, directly emitted particulate matter, CO_2, and power plant operations. It also includes final actions the EPA has taken to implement the Regional Haze Rule and the best available retrofit technology (BART) requirements. Further, the IPM Platform version 6 uses demand projections from the Energy Information Agency's (EIA) annual energy outlook (AEO) 2020.[42]

The IPM version 6—Summer 2021 Reference Case uses the national electric energy data system (NEEDS) v6 database as its source for data on all existing and planned-committed units. Units are removed from the NEEDS inventory only if a high degree of certainty could be assigned to future implementation of the announced future closure or retirement.[43] The available retirement-related information was reviewed for each unit, and the following rules are applied to remove:

(i) Units that are listed as retired in the December 2020 EIA Form 860M;

(ii) Units that have a planned retirement year prior to June 30, 2023 in the December 2020 EIA Form 860M;

(iii) Units that have been cleared by a regional transmission operator (RTO) or independent system operator (ISO) to retire before 2023, or whose RTO/ISO clearance to retire is contingent on actions that can be completed before 2023;

(iv) Units that have committed specifically to retire before 2023 under Federal or state enforcement actions or regulatory requirements; and

(v) Finally, units for which a retirement announcement can be corroborated by other available information. Units required to retire pursuant to enforcement actions or state rules on July 1, 2023 or later are retained in NEEDS v6.

Retirements or closures taking place on or after July 1, 2023 are captured as constraints on those units in the IPM modeling, and the units are retired in future year projections per the terms of the related requirements.

As highlighted in previous rulemakings, the IPM documentation and the EPA's Power Sector Modeling website, the EPA's goal is to explain and document the use of IPM in a transparent and publicly accessible manner, while also providing for concurrent channels for improving the model's assumptions and representation by soliciting constructive feedback to improve the model. This includes making all inputs and assumptions to the model, output files from the model, and IPM feedback form publicly available on the EPA's website.

Phase II[44] of Maryland's NO_X Rule took effect on June 1, 2020 and applies only to owners or operators of EGUs without SCR controls, which consists of seven units at four facilities. These EGUs were required to choose between four options by June 1, 2020. The

[39] COMAR 28.11.38(D) does not specify that CFBs must meet the 0.10 lb/MMBtu 24-hour block average rate on an ''annual basis,'' so EPA has not been able to verify that this rate applies outside of ozone season.

[40] *See* Maryland's October 16, 2019 SIP submittal at 7 included in docket ID No. EPA–R03–OAR–2021–0872.

[41] *Id.* at 8.

[42] Detailed information and documentation of EPA's Base Case, including all the underlying assumptions, data sources, architecture parameters, and IPM comments form can be found on EPA's website at: *https://www.epa.gov/airmarkets/epas-power-sector-modeling-platform-v6-using-ipm-summer-2021-reference-case.*

[43] The ''Capacity Dropped'' and the ''Retired Through 2023'' worksheets in NEEDS lists all units that are removed from the NEEDS v6 inventory—NEEDS v6 Summer 2021 Reference Case. This data can be found on EPA's website at: *https://www.epa.gov/airmarkets/national-electric-energy-data-system-needs-v6.*

[44] Phase II is codified at COMAR 26.11.38.04 (*Additional NO_X Emission Control Requirements*).

options include: (i) Installation and operation of an SCR control system by June 1, 2020 that can meet a NO_X emission rate of 0.09 lbs/MMBtu during the ozone season based on a 30-day rolling average; (ii) permanently retiring the unit; (iii) switching fuel permanently from coal to natural gas and operating the unit on natural gas; or (iv) meeting a system-wide, daily NO_X tonnage cap of 21 tons per day for every day of the ozone season or meeting a system-wide NO_X emission rate of 0.13 lbs/MMBtu as a 24-hour block average. Option 4, if selected by the source, included additional measures requiring a series of greater emission reductions beginning in May 2016, 2018, and 2020.[45] If the owner or operator did not select option 4, then the allowable 30-day system-wide rolling average NO_X emission rate was set at 0.15 lbs/MMBtu during the ozone season. In addition, option 4 included provisions to ensure that the reliability of the electrical system is maintained. There are additional provisions in the NO_X Rule which addressed the options and limits applicable if a unit or units included in a ''system'' as of May 1, 2015 were no longer owned, operated or controlled by the ''system.''

For Phase II, the 2019 SIP Submission notes that Chalk Point, Dickerson and Morgantown generating stations selected option 4, that Brandon Shores and Herbert A. Wagner generating stations chose the optimization requirement in COMAR 26.11.38.03A, and that pursuant to a May 23, 2018 settlement agreement, C.P. Crane agreed to cease, and has ceased, the burning of coal in Units 1 and 2 by no later than June 15, 2018, and that the coal-fired boilers have been disabled. Maryland predicted that the implementation of both the Phase I and II requirements would result in ozone season NO_X emission reductions of 2,507 to 2,627 tons from the base year 2011 emissions. The SIP submission did not specify the amount of reduction that would occur on any specific date, or the amount of reduction attributable to any specific element of the NO_X Rule. As noted earlier, these reductions are likely included in the 2016v2 emission platform, and that modeling continues to show that Maryland is contributing to downwind nonattainment and maintenance receptors for the 2015 8-hour ozone NAAQS.

The SIP submission also listed several control measures, including regulation of emissions from the mobile sector, pursuing significant regulation of industrial sources, and implementing VOC rules that regulate emissions from other source categories that Maryland has implemented to address the control of VOC and NO_X emissions from various point, mobile, and area sources. Maryland's submission also described additional voluntary or innovative control measures that the State has implemented in attainment plan SIP provisions and stated that even though they do not rely on any emission reductions projected as a result of the implementation of these voluntary programs to demonstrate attainment, these strategies assist in the overall clean air goals across the State.

Unfortunately, Maryland failed to provide any analysis as to how these many provisions cited in its 2019 SIP Submittal would eliminate the significant contribution of Maryland's emission sources to downwind nonattainment or maintenance receptors to which Maryland's emissions are linked by the EPA's 2016v2 emissions platform. As noted in Section D–4 of this proposal, ''[i]n general, where the EPA's or alternative air quality and contribution modeling establishes that a state is linked at Steps 1 and 2, it will be insufficient at Step 3 for a state merely to point to its existing rules requiring control measures as a basis for approval. In general, the emissions-reducing effects of all existing emissions control requirements are already reflected in the air quality results of the modeling for Steps 1 and 2. If the state is shown to still be linked to one or more downwind receptor(s), states must provide a well-documented evaluation determining whether their emissions constitute significant contribution or interference with maintenance by evaluating additional available control opportunities by preparing a multifactor assessment.'' Maryland provided no such multifactor assessment, and instead claims, without any modeling to support this claim, that its existing, already adopted control measures for EGUs and other sources will keep Maryland from contributing significantly to nonattainment or interfere with maintenance at downwind receptors to which it is linked. As such, it does not rise to the level of a ''well-documented evaluation.''

Maryland's SIP submittal also included a weight of evidence analysis which analyzed various scenarios. These scenarios evaluated various iterations of controls, including SCR controls and emission limits comparable to those under the 2015 Maryland NO_X Rule, and applied these SCR controls and limits to emissions sources in other states (IL, IN, KY, MI, NC, OH, WV, VA, NY and PA). This is the same weight of evidence analysis that Maryland included with its transport SIP submittal for the 2008 ozone NAAQS. This modeling analysis only addressed the impact that installation of these controls and imposition of these limits in other states would have on Maryland's monitors. There is no analysis in this weight of evidence portion addressing Maryland's contribution to downwind receptors. It therefore does not change the EPA's evaluation of Maryland's obligations to address its own contributions.

The EPA acknowledges that Maryland's efforts to reduce NO_X emissions from EGUs, and other requirements to reduce NO_X and VOC emissions from other source categories, have helped reduce the interstate transport impacts of emissions from Maryland's sources on other states' receptors. In addition to addressing ambient ozone levels in nonattainment areas in Maryland, these state specific requirements should also help reduce the level of NO_X emissions reductions that Maryland needs to obtain in order to meet the section 110(a)(2)(D)(i)(I) requirements for the 2015 8-hour ozone NAAQS.

Based on the EPA's evaluation of Maryland's SIP submittal at Step 3, however, the EPA proposes that Maryland was required to analyze emissions from the sources and other emissions activity from within the state to determine whether its contributions were significant, and therefore the EPA proposes to base part of its disapproval on Maryland's failure to do so.

4. Evaluation of Information Provided Regarding Step 4

Step 4 of the 4-step interstate transport framework calls for development of permanent and federally enforceable control strategies to achieve the emissions reductions determined to be necessary at Step 3 to eliminate significant contribution to nonattainment or interference with maintenance of the NAAQS. Maryland identified a number of measures that were either in development or anticipated to occur in the future.[46] As

[45] Deeper reductions include meeting a 30-day system-wide rolling average NO_X emission rate of 0.13 lbs/MMBtu in May 2016, 0.11 lbs/MMBtu in May 2018, and 0.09 lbs/MMBtu in May 2020 during the ozone season.

[46] Pointing to anticipated upcoming emission reductions, even if they were not included in the analysis at Steps 1 and 2, is not sufficient as a Step 3 analysis, for the reasons discussed in Section III.A.3 of this document. In this section, the EPA explains that to the extent such anticipated reductions are not included in the SIP and rendered permanent and enforceable, reliance on such anticipated reductions is also insufficient at Step 4.

discussed in detail in the Step 3 analysis above, Phase II of Maryland's NO_X Rule (COMAR 26.11.38.04) requires coal-fired EGUs that have not installed SCR to choose from one of four options by June 1, 2020 that should result in NO_X emission reductions.[47] Another measure is the Regional Greenhouse Gas Initiative (RGGI), which Maryland projects will result in Maryland's and other participating states' regional CO_2 emission budgets declining by 30% by 2030.[48] However, the State has not revised its SIP to include these emission reductions to ensure the reductions are permanent and enforceable. As a result, the EPA also proposes as an additional ground for disapproval of Maryland's SIP submission the fact that the State has not developed permanent and enforceable emissions reductions necessary to meet the obligations of CAA section 110(a)(2)(d)(i)(I).

5. Conclusion

Based on the EPA's evaluation of Maryland's SIP submission, the EPA is proposing to find that Maryland's October 16, 2019 SIP submission does not meet the State's interstate transport obligations, because it fails to show that the provisions adopted by Maryland to reduce NO_X and VOC emissions from sources within Maryland will reduce emissions to levels that will not contribute significantly to nonattainment or interfere with maintenance of the 2015 8-hour ozone NAAQS at downwind monitors in other states to which it is linked. Maryland's 2019 SIP submission lacks an analysis of the effect that Maryland's adopted emission reductions would have on the specific downwind monitors which the EPA's March 2018 memorandum modeling analysis and 2016v2 emissions platform analysis determined that Maryland sources contribute more than 1 percent to nonattainment or interference with maintenance. Maryland's SIP submission disputes neither the significant contribution from Maryland nor the ''linkages'' between Maryland emissions and these downwind nonattainment or maintenance monitors. Further, although Maryland objects to the modeling assessment included with the EPA's March 2018 Memorandum, it does not offer an alternative modeling assessment showing that projected reductions in Maryland's emissions, as outlined in its 2019 SIP submittal, would eliminate the contribution Maryland's emissions make to non-attaining or maintenance monitors identified by the EPA's 2018 memorandum modeling assessment, or to those in the more recent 2016v2 emissions platform assessment. Maryland's modeling assessment in its 2019 SIP submittal merely explores the varying effects that various emission reduction strategies in eastern states would have on ozone nonattainment in general, rather than the effect Maryland's reductions would have on non-attaining or maintenance monitors to which it is linked.

[47] *See* Maryland's October 16, 2019 SIP submittal at pages 8–9, included in docket ID No. EPA–R03–OAR–2021–0872.

[48] *Id.* at 16.

IV. Proposed Action

The EPA is proposing to disapprove Maryland's October 16, 2019 SIP submission pertaining to interstate transport of air pollution which will significantly contribute to nonattainment or interfere with maintenance of the 2015 8-hour ozone NAAQS in other states. Under CAA section 110(c)(1), disapproval would establish a 2-year deadline for the EPA to promulgate a FIP for Maryland to address the CAA section 110(a)(2)(D)(i)(I) interstate transport requirements pertaining to significant contribution to nonattainment and interference with maintenance of the 2015 8-hour ozone NAAQS in other states, unless the EPA approves a new Maryland SIP submission that meets these requirements. Disapproval does not start a mandatory sanctions clock for Maryland.

V. Statutory and Executive Order Reviews

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

This action is not a ''significant regulatory action'' as defined by Executive Order 12866 and was therefore not submitted to the Office of Management and Budget for review.

B. Paperwork Reduction Act (PRA)

This proposed action does not impose an information collection burden under the PRA because it does not contain any information collection activities

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA. This action merely proposes to disapprove a SIP submission as not meeting the CAA.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain any unfunded mandate as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. The action imposes no enforceable duty on any state, local or tribal governments or the private sector.

E. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have tribal implications as specified in Executive Order 13175. This action does not apply on any Indian reservation land, any other area where the EPA or an Indian tribe has demonstrated that a tribe has jurisdiction, or non-reservation areas of Indian country. Thus, Executive Order 13175 does not apply to this action.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

The EPA interprets Executive Order 13045 as applying only to those regulatory actions that concern environmental health or safety risks that the EPA has reason to believe may disproportionately affect children, per the definition of ''covered regulatory action'' in section 2–202 of the Executive Order. This action is not subject to Executive Order 13045 because it merely proposes to disapprove a SIP submission as not meeting the CAA.

H. Executive Order 13211, Actions That Significantly Affect Energy Supply, Distribution or Use

This action is not subject to Executive Order 13211, because it is not a significant regulatory action under Executive Order 12866.

I. National Technology Transfer and Advancement Act

This rulemaking does not involve technical standards.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

The EPA believes the human health or environmental risk addressed by this

action will not have potential disproportionately high and adverse human health or environmental effects on minority, low-income or indigenous populations. This action merely proposes to disapprove a SIP submission as not meeting the CAA.

K. CAA Section 307(b)(1)

Section 307(b)(1) of the CAA governs judicial review of final actions by the EPA. This section provides, in part, that petitions for review must be filed in the D.C. Circuit: (i) When the agency action consists of ''nationally applicable regulations promulgated, or final actions taken, by the Administrator,'' or (ii) when such action is locally or regionally applicable, if ''such action is based on a determination of nationwide scope or effect and if in taking such action the Administrator finds and publishes that such action is based on such a determination.'' For locally or regionally applicable final actions, the CAA reserves to the EPA complete discretion whether to invoke the exception in (ii).[49]

If the EPA takes final action on this proposed rulemaking the Administrator intends to exercise the complete discretion afforded to him under the CAA to make and publish a finding that the final action (to the extent a court finds the action to be locally or regionally applicable) is based on a determination of ''nationwide scope or effect'' within the meaning of CAA section 307(b)(1). Through this rulemaking action (in conjunction with a series of related actions on other SIP submissions for the same CAA obligations), the EPA interprets and applies section 110(a)(2)(d)(i)(I) of the CAA for the 2015 8-hour ozone NAAQS based on a common core of nationwide policy judgments and technical analysis concerning the interstate transport of pollutants throughout the continental U.S. In particular, the EPA is applying here (and in other proposed actions related to the same obligations) the same, nationally consistent 4-step framework for assessing good neighbor obligations for the 2015 8-hour ozone NAAQS. The EPA relies on a single set of updated, 2016-base year photochemical grid modeling results of the year 2023 as the primary basis for its assessment of air quality conditions and contributions at Steps 1 and 2 of that framework. Further, the EPA proposes to determine and apply a set of nationally consistent policy judgments to apply the 4-step framework. The EPA has selected a nationally uniform analytic year (2023) for this analysis and is applying a nationally uniform definition of nonattainment and maintenance receptors at Step 1, and a nationally uniform contribution threshold analysis at Step 2.[50] For these reasons, the Administrator intends, if this proposed action is finalized, to exercise the complete discretion afforded to him under the CAA to make and publish a finding that this action is based on one or more determinations of nationwide scope or effect for purposes of CAA section 307(b)(1).[51]

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Ozone.

Authority: 42 U.S.C. 7401 *et seq.*

Dated: February 7, 2022.

Diana Esher,

Acting Regional Administrator, Region III.

[FR Doc. 2022–02951 Filed 2–18–22; 8:45 am]

BILLING CODE 6560–50–P

[49] In deciding whether to invoke the exception by making and publishing a finding that an action is based on a determination of nationwide scope or effect, the Administrator takes into account a number of policy considerations, including his judgment balancing the benefit of obtaining the D.C. Circuit's authoritative centralized review versus allowing development of the issue in other contexts and the best use of agency resources.

[50] A finding of nationwide scope or effect is also appropriate for actions that cover states in multiple judicial circuits. In the report on the 1977 Amendments that revised section 307(b)(1) of the CAA, Congress noted that the Administrator's determination that the ''nationwide scope or effect'' exception applies would be appropriate for any action that has a scope or effect beyond a single judicial circuit. See H.R. Rep. No. 95–294 at 323, 324, reprinted in 1977 U.S.C.C.A.N. 1402–03.

[51] The EPA may take a consolidated, single final action on all of the proposed SIP disapproval actions with respect to obligations under CAA section 110(a)(2)(D)(i)(I) for the 2015 ozone NAAQS. Should EPA take a single final action on all such disapprovals, this action would be nationally applicable, and the EPA would also anticipate, in the alternative, making and publishing a finding that such final action is based on a determination of nationwide scope or effect.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R09–OAR–2022–0106; FRL–9527–01–R9]

Air Plan Approval; Nevada; Clark County Department of Environment and Sustainability

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve revisions to the Clark County Department of Environment and Sustainability (DES) portion of the Nevada State Implementation Plan (SIP). These revisions concern the title change of the Clark County Department of Air Quality to the Department of Environment and Sustainability. We are proposing to approve this title change. The ''department of air quality'' was deleted in the air quality regulations and replaced with ''department.'' We are taking comments on this proposal and plan to follow with a final action.

DATES: Any comments must arrive by March 24, 2022.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R09–OAR–2022–0106 at *https://www.regulations.gov*. For comments submitted at *Regulations.gov,* follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from *Regulations.gov*. The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system). For additional submission methods, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section. For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov/dockets/commenting-epa-dockets*. If you need assistance in a language other than English or if you are a person with disabilities who needs a reasonable accommodation at no cost to you, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section.

FOR FURTHER INFORMATION CONTACT: Christine Vineyard, EPA Region IX, 75 Hawthorne St., San Francisco, CA 94105. By phone: (415) 947–4125 or by email at *vineyard.christine@epa.gov*.

SUPPLEMENTARY INFORMATION: Throughout this document, ''we,'' ''us'' and ''our'' refer to the EPA.

Table of Contents

I. The State's Submittal

A. What rules did the State submit?

Table 1 lists the rules addressed by this proposal with the dates that they were adopted by Clark County DES and submitted by the Nevada Division of Environmental Protection (NDEP).

TABLE 1—SUBMITTED RULES

Local agency	Rule No.	Rule title	Amended	Submitted
DES	Rule 2	Procedures for Adoption and Revision of Regulations and for Inclusion of those Regulations in the State Implementation Plan.	1/21/20	3/13/20
DES	Rule 33	Chlorine in Chemical Processes	1/21/20	3/13/20
DES	Rule 41	Fugitive Dust	1/21/20	3/13/20
DES	Rule 53	Oxygenated Gasoline Program	1/21/20	3/13/20
DES	Rule 90	Fugitive Dust from Open Areas and Vacant Lots	1/21/20	3/13/20
DES	Rule 93	Fugitive Dust from Paved Roads and Street Sweeping Equipment	1/21/20	3/13/20
DES	Rule 94	Permitting and Dust Control for Construction Activities	1/21/20	3/13/20

On September 13, 2020, the submitted rules in Table 1 were deemed to be complete by operation of law to meet the completeness criteria in 40 CFR part 51 Appendix V, which must be met before formal EPA review.

B. Are there other versions of these rules?

We approved an earlier version of Rule 2 into the SIP on August 27, 1981 (46 FR 43141). The Clark County DES adopted revisions to the SIP-approved version on January 21, 2020, and NDEP submitted it to us on March 13, 2020.

We approved an earlier version of Rule 33 into the SIP on September 7, 2004 (69 FR 54006). The Clark County DES adopted a revision to the SIP-approved version on January 21, 2020, and NDEP submitted it to us on March 13, 2020.

We approved an earlier version of Rule 41 into the SIP on October 6, 2014 (79 FR 60078). The Clark County DES adopted a revision to the SIP-approved version on January 21, 2020, and NDEP submitted it to us on March 13, 2020.

We approved an earlier version of Rule 53 into the SIP on September 21, 2004 (69 FR 56351). The Clark County DES adopted a revision to the SIP-approved version on January 21, 2020, and NDEP submitted it to us on March 13, 2020.

We approved an earlier version of Rule 90 into the SIP on October 6, 2014 (79 FR 60078). The Clark County DES adodpted a revision to the SIP-approved version on January 21, 2020, and NDEP submitted it to us on March 13, 2020.

We approved an earlier version of Rule 93 into the SIP on October 6, 2014 (79 FR 60078). The Clark County DES adopted a revision to the SIP-approved version on January 21, 2020, and NDEP submitted it to us on March 13, 2020.

We approved an earlier version of Rule 94 into the SIP on October 30, 2006 (71 FR 63250). The Clark County DES adopted a revision to the SIP-approved vesion on January 21, 2020, and NDEP submitted it to us on March 13, 2020.

While we can act on only the most recently submitted version, we have reviewed materials provided with previous submittals.

C. What is the purpose of the submitted rule revisions?

The purpose of these submitted rule revisions is to delete ''the department of air quality'' everywhere it appears in the submitted rules and replacing it with ''department'' and to update formatting.

The EPA's technical support document (TSD) and submitted staff report have more information about these rules.

II. The EPA's Evaluation and Action

A. How is the EPA evaluating the rules?

Rules in the SIP must be enforceable (see CAA section 110(a)(2)), must not interfere with applicable requirements concerning attainment and reasonable further progress or other CAA requirements (see CAA section 110(l)), and must not modify certain SIP control requirements in nonattainment areas without ensuring equivalent or greater emissions reductions (see CAA section 193).

Guidance and policy documents that we used to evaluate enforceability, revision/relaxation and rule stringency requirements for the applicable criteria pollutants include the following:

1. ''State Implementation Plans; General Preamble for the Implementation of Title I of the Clean Air Act Amendments of 1990,'' 57 FR 13498 (April 16, 1992); 57 FR 18070 (April 28, 1992).
2. ''Issues Relating to VOC Regulation Cutpoints, Deficiencies, and Deviations,'' EPA, May 25, 1988 (the Bluebook, revised January 11, 1990).
3. ''Guidance Document for Correcting Common VOC & Other Rule Deficiencies,'' EPA Region 9, August 21, 2001 (the Little Bluebook).

B. Do the rules meet the evaluation criteria?

These rules are consistent with CAA requirements and relevant guidance regarding enforceability. The TSD has more information on our evaluation.

C. Public Comment and Proposed Action

As authorized in section 110(k)(3) of the Act, the EPA proposes to fully approve the submitted rules because they fulfill all relevant requirements. We will accept comments from the public on this proposal until March 24, 2022. If we take final action to approve the submitted rules, our final action will incorporate these rules into the federally enforceable SIP.

III. Incorporation by Reference

In this proposed rule, the EPA is proposing to include in a final EPA rule regulatory text that includes incorporation by reference. In accordance with requirements of 1 CFR 51.5, the EPA is proposing to incorporate by reference the Clark County DES rules described in Table 1 of this preamble. The EPA has made, and will continue to make, these materials available through *https://www.regulations.gov* and at the EPA Region IX Office (please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section of this preamble for more information).

IV. Statutory and Executive Order Reviews

Under the Clean Air Act, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, the EPA's role is to approve state choices, provided that they meet the criteria of the Clean Air Act. Accordingly, this proposed action merely proposes to approve state law as meeting federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this proposed action:

- Is not a ''significant regulatory action'' subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act; and
- Does not provide the EPA with the discretionary authority to address disproportionate human health or environmental effects with practical, appropriate, and legally permissible methods under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where the EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the proposed rule does not have tribal implications and will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Carbon monoxide, Incorporation by reference, Intergovernmental relations, Nitrogen dioxide, Ozone, Particulate matter, Reporting and recordkeeping requirements, Volatile organic compounds.

Authority: 42 U.S.C. 7401 *et seq.*

Dated: February 15, 2022.

Air Plan Approval; Iowa; Interstate Transport of Air Pollution for the 2015 8-Hour Ozone National Ambient Air Quality Standards

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule and withdrawal of proposed rule.

SUMMARY: The Clean Air Act (CAA) requires each State Implementation Plan (SIP) to contain adequate provisions prohibiting emissions that will significantly contribute to nonattainment or interfere with maintenance of air quality in other states. The State of Iowa made a submission to the Environmental Protection Agency (EPA or Agency) to address these requirements for the 2015 ozone National Ambient Air Quality Standards (NAAQS). EPA is proposing to approve the submission for Iowa as meeting the requirement that the SIP contains adequate provisions to prohibit emissions that will significantly contribute to nonattainment or interfere with maintenance of the 2015 ozone NAAQS in any other state. The EPA is also withdrawing its previous proposed rule to approve Iowa's SIP submission, as published in the **Federal Register** on March 2, 2020.

DATES:

Comments: Written comments on this proposed rule must be received on or before March 24, 2022.

Withdrawal: As of February 22, 2022, the proposed rule published March 2, 2020, at 85 FR 12232, is withdrawn.

ADDRESSES: You may send comments, identified as Docket No. EPA–R07–OAR–2021–0870, by any of the following methods: Federal eRulemaking Portal at *https://www.regulations.gov* following the online instructions for submitting comments or via email to *stone.william@epa.gov.* Include Docket ID No. EPA–R07–OAR–2021–0870 in the subject line of the message.

Instructions: All submissions received must include the Docket ID No. for this rulemaking. Comments received may be posted without change to *https://www.regulations.gov/,* including any personal information provided. For detailed instructions on sending comments and additional information on the rulemaking process, see the ''Public Participation'' heading of the **SUPPLEMENTARY INFORMATION** section of this document. Out of an abundance of caution for members of the public and our staff, the EPA Docket Center and Reading Room are open to the public by appointment only to reduce the risk of transmitting COVID–19. Our Docket Center staff also continues to provide remote customer service via email, phone, and webform. For further information on EPA Docket Center services and the current status, please visit us online at *https://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: William Stone, Environmental Protection Agency, Region 7 Office, Air Quality Planning Branch, 11201 Renner Boulevard, Lenexa, Kansas 66219; telephone number: (913) 551–7714; email address: *stone.william@epa.gov.*

SUPPLEMENTARY INFORMATION: *Public participation:* Submit your comments, identified by Docket ID No. EPA–R07–OAR–2021–0870, at *https://www.regulations.gov* (our preferred method), or the other methods identified in the **ADDRESSES** section. Once submitted, comments cannot be edited or removed from the docket. The EPA may publish any comment received to its public docket. Do not submit to EPA's docket at *https://www.regulations.gov* any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to

make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system).

There are two dockets supporting this action, EPA–R07–OAR–2021–0870 and EPA–HQ–OAR–2021–0663. Docket No. EPA–R07–OAR–2021–0870 contains information specific to Iowa, including the notice of proposed rulemaking. Docket No. EPA–HQ–OAR–2021–0663 contains additional modeling files, emissions inventory files, technical support documents, and other relevant supporting documentation regarding interstate transport of emissions for the 2015 8-hour ozone NAAQS which are being used to support this action. All comments regarding information in either of these dockets are to be made in Docket No. EPA–R07–OAR–2021–0870. For additional submission methods, please contact William Stone, (913) 551–7714, *stone.william@epa.gov.* For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov/dockets/commenting-epa-dockets.* Due to public health concerns related to COVID–19, the EPA Docket Center and Reading Room are open to the public by appointment only. Our Docket Center staff also continues to provide remote customer service via email, phone, and webform. For further information and updates on EPA Docket Center services, please visit us online at *https://www.epa.gov/dockets.*

The EPA continues to carefully and continuously monitor information from the Centers for Disease Control and Prevention (CDC), local area health departments, and our Federal partners so that we can respond rapidly as conditions change regarding COVID–19. The index to the docket for this action, Docket No. EPA–R07–OAR–2021–0870, is available electronically at *www.regulations.gov.* While all documents in the docket are listed in the index, some information may not be publicly available due to docket file size restrictions or content (*e.g.,* CBI).

Throughout this document, ''we,'' ''us,'' and ''our'' means the EPA.

Table of Contents

I. Background

A. Description of Statutory Background

On October 1, 2015, the EPA promulgated a revision to the ozone NAAQS (2015 8-hour ozone NAAQS), lowering the level of both the primary and secondary standards to 0.070 parts per million (ppm).[1] Section 110(a)(1) of the CAA requires states to submit, within 3 years after promulgation of a new or revised standard, SIP submissions meeting the applicable requirements of section 110(a)(2).[2] One of these applicable requirements is found in CAA section 110(a)(2)(D)(i)(I), otherwise known as the ''interstate transport'' or ''good neighbor'' provision, which generally requires SIPs to contain adequate provisions to prohibit in-state emissions activities from having certain adverse air quality effects on other states due to interstate transport of pollution. There are two so-called ''prongs'' within CAA section 110(a)(2)(D)(i)(I). A SIP for a new or revised NAAQS must contain adequate provisions prohibiting any source or other type of emissions activity within the state from emitting air pollutants in amounts that will significantly contribute to nonattainment of the NAAQS in another state (prong 1) or interfere with maintenance of the NAAQS in another state (prong 2). The EPA and states must give independent significance to prong 1 and prong 2 when evaluating downwind air quality problems under CAA section 110(a)(2)(D)(i)(I).[3]

B. Description of the EPA's Four Step Interstate Transport Regulatory Process

The EPA is using the 4-step interstate transport framework (or 4-step framework) to evaluate the state's SIP submittals addressing the interstate transport provision for the 2015 8-hour ozone NAAQS. The EPA has addressed the interstate transport requirements of CAA section 110(a)(2)(D)(i)(I) with respect to prior ozone NAAQS in several regional regulatory actions, including the Cross-State Air Pollution Rule (CSAPR), which addressed interstate transport with respect to the 1997 ozone NAAQS as well as the 1997 and 2006 fine particulate matter standards,[4] and the Cross-State Air Pollution Rule Update (CSAPR Update) [5] and the Revised CSAPR Update, both of which addressed the 2008 ozone NAAQS.[6]

Through the development and implementation of the CSAPR rulemakings and prior regional rulemakings pursuant to the interstate transport provision,[7] the EPA, working in partnership with states, developed the following 4-step interstate transport framework to evaluate a State's obligations to eliminate interstate transport emissions under the interstate transport provision for the ozone NAAQS: (1) Identify monitoring sites that are projected to have problems attaining and/or maintaining the NAAQS (*i.e.,* nonattainment and/or maintenance receptors); (2) identify states that impact those air quality problems in other (*i.e.,* downwind) states sufficiently such that the states are considered ''linked'' and therefore warrant further review and analysis; (3) identify the emissions reductions necessary (if any), applying a multifactor analysis, to eliminate each linked upwind state's significant contribution to nonattainment or interference with maintenance of the NAAQS at the locations identified in step 1; and (4) adopt permanent and enforceable measures needed to achieve those emissions reductions.

C. Background on the EPA's Ozone Transport Modeling Information

In general, the EPA has performed nationwide air quality modeling to project ozone design values which are used in combination with measured data to identify nonattainment and maintenance receptors. To quantify the

[1] National Ambient Air Quality Standards for Ozone, Final Rule, 80 FR 65292 (October 26, 2015). Although the level of the standard is specified in the units of ppm, ozone concentrations are also described in parts per billion (ppb). For example, 0.070 ppm is equivalent to 70 ppb.

[2] SIP revisions that are intended to meet the applicable requirements of section 110(a)(1) and (2) of the CAA are often referred to as infrastructure SIPs and the applicable elements under section 110(a)(2) are referred to as infrastructure requirements.

[3] *See North Carolina* v. *EPA,* 531 F.3d 896, 909–11 (D.C. Cir. 2008).

[4] *See* Federal Implementation Plans: Interstate Transport of Fine Particulate Matter and Ozone and Correction of SIP Approvals, 76 FR 48208 (Aug. 8, 2011).

[5] Cross-State Air Pollution Rule Update for the 2008 Ozone NAAQS, 81 FR 74504 (Oct. 26, 2016).

[6] In 2019, the D.C. Circuit Court of Appeals remanded the CSAPR Update to the extent it failed to require upwind states to eliminate their significant contribution by the next applicable attainment date by which downwind states must come into compliance with the NAAQS, as established under CAA section 181(a). *Wisconsin* v. *EPA,* 938 F.3d 303, 313 (D.C. Cir. 2019). The Revised CSAPR Update for the 2008 Ozone NAAQS, 86 FR 23054 (April 30, 2021), responded to the remand of the CSAPR Update in *Wisconsin* and the vacatur of a separate rule, the ''CSAPR Close-Out,'' 83 FR 65878 (December 21, 2018), in *New York* v. *EPA,* 781 F. App'x. 4 (D.C. Cir. 2019).

[7] In addition to the CSAPR rulemakings, other regional rulemakings addressing ozone transport include the ''NO_X SIP Call,'' 63 FR 57356 (October 27, 1998), and the ''Clean Air Interstate Rule'' (CAIR), 70 FR 25162 (May 12, 2005).

contribution of emissions from specific upwind states on 2023 ozone design values for the identified downwind nonattainment and maintenance receptors, the EPA performed nationwide, state-level ozone source apportionment modeling for 2023. The source apportionment modeling provided contributions to ozone at receptors from precursor emissions of anthropogenic nitrogen oxides (NO_X) and volatile organic compounds (VOCs) in individual upwind states.

The EPA has released several documents containing projected ozone design values, contributions, and information relevant to evaluating interstate transport with respect to the 2015 8-hour ozone NAAQS. First, on January 6, 2017, the EPA published a notice of data availability (NODA) in which we requested comment on preliminary interstate ozone transport data including projected ozone design values and interstate contributions for 2023 using a 2011 base year platform.[8] In the NODA, the EPA used the year 2023 as the analytic year for this preliminary modeling because that year aligns with the expected attainment year for Moderate ozone nonattainment areas for the 2015 8-hour ozone NAAQS.[9] On October 27, 2017, we released a memorandum (October 2017 memorandum) containing updated modeling data for 2023, which incorporated changes made in response to comments on the NODA, and noted that the modeling may be useful for states developing SIPs to address interstate transport obligations for the 2008 ozone NAAQS.[10] On March 27, 2018, we issued a memorandum (March 2018 memorandum) noting that the same 2023 modeling data released in the October 2017 memorandum could also be useful for identifying potential downwind air quality problems with respect to the 2015 8-hour ozone NAAQS at Step 1 of the 4-step interstate transport framework.[11] The March 2018 memorandum also included the then newly available contribution modeling data to assist states in evaluating their impact on potential downwind air quality problems for the 2015 8-hour ozone NAAQS under Step 2 of the 4-step interstate transport framework.[12] The EPA subsequently issued two more memoranda in August and October 2018, providing additional information to states developing interstate transport SIP submissions for the 2015 8-hour ozone NAAQS concerning, respectively, potential contribution thresholds that may be appropriate to apply in Step 2 of the 4-step interstate transport framework, and considerations for identifying downwind areas that may have problems maintaining the standard at Step 1 of the 4-step interstate transport framework.[13]

Since the release of the modeling data shared in the March 2018 memorandum, the EPA performed updated modeling using a 2016-based emissions modeling platform (*i.e.,* 2016v1). This emissions platform was developed under the EPA/Multi-Jurisdictional Organization (MJO)/state collaborative project.[14] This collaborative project was a multi-year joint effort by the EPA, MJOs, and states to develop a new, more recent emissions platform for use by the EPA and states in regulatory modeling as an improvement over the dated 2011-based platform that the EPA had used to project ozone design values and contribution data provided in the 2017 and 2018 memoranda. The EPA used the 2016v1 emissions to project ozone design values and contributions for 2023. On October 30, 2020, in the Notice of Proposed Rulemaking for the Revised CSAPR Update, the EPA released and accepted public comment on 2023 modeling that used the 2016v1 emissions platform.[15] Although the Revised CSAPR Update addressed transport for the 2008 ozone NAAQS, the projected design values and contributions from the 2016v1 platform are also useful for identifying downwind ozone problems and linkages with respect to the 2015 ozone NAAQS.[16]

Following the final Revised CSAPR Update, the EPA made further updates to the 2016 emissions platform to include mobile emissions from the EPA's Motor Vehicle Emission Simulator MOVES3 model[17] and updated emissions projections for electric generating units (EGUs) that reflect the emissions reductions from the Revised CSAPR Update, recent information on plant closures, and other sector trends. The construct of the updated emissions platform, 2016v2, is described in the emissions modeling technical support document (TSD) for this proposed rule.[18] The EPA performed air quality modeling of the 2016v2 emissions using the most recent public release version of the Comprehensive Air-quality Model with extensions (CAMx) photochemical modeling, version 7.10.[19] The EPA now proposes to primarily rely on modeling based on the updated and newly available 2016v2 emissions platform in evaluating these submissions with respect to Steps 1 and 2 of the 4-step interstate transport framework and generally referenced within this action as 2016v2 modeling for 2023. By using the updated modeling results, the EPA is using the most current and technically appropriate information for this proposed rulemaking. Section III of this document and the Air Quality Modeling TSD for 2015 Ozone NAAQS Transport SIP Proposed Actions, included in Docket ID No. EPA–HQ–OAR–2021–0663 for this proposal, contain additional detail on the EPA's 2016v2 modeling. In this document, the

EPA is accepting public comment on this updated 2023 modeling, which uses a 2016v2 emissions platform. Comments on the EPA's air quality modeling should be submitted in the Regional docket for this action, docket ID No. EPA–R07–OAR–2021–0870. Comments are not being accepted in docket ID No. EPA–HQ–OAR–2021–0663.

D. The EPA's Approach To Evaluating Interstate Transport SIPs for the 2015 8-Hour Ozone NAAQS

The EPA proposes to apply a consistent set of policy judgments across all states for purposes of evaluating interstate transport obligations and the approvability of interstate transport SIP submittals for the 2015 8-hour ozone NAAQS. These policy judgments reflect consistency with relevant case law and past agency practice as reflected in the CSAPR and related rulemakings. Nationwide consistency in approach is particularly important in the context of interstate ozone transport, which is a regional-scale pollution problem involving many smaller contributors. Effective policy solutions to the problem of interstate ozone transport going back to the NO_X SIP Call have necessitated the application of a uniform framework of policy judgments in order to ensure an ''efficient and equitable'' approach. *See EME Homer City Generation, LP* v. *EPA,* 572 U.S. 489, 519 (2014).

In the March, August, and October 2018 memoranda, the EPA recognized that states may be able to establish alternative approaches to addressing their interstate transport obligations for the 2015 8-hour ozone NAAQS that vary from a nationally uniform framework. The EPA emphasized in these memoranda, however, that such alternative approaches must be technically justified and appropriate in light of the facts and circumstances of each particular state's submittal. In general, the EPA continues to believe that deviation from a nationally consistent approach to ozone transport must be substantially justified and have a well-documented technical basis that is consistent with relevant case law. Where states submitted SIPs that rely on any such potential ''flexibilities'' as may have been identified or suggested in the past, the EPA will evaluate whether the state adequately justified the technical and legal basis for doing so.

The EPA notes that certain concepts included in an attachment to the March 2018 memorandum require unique consideration, and these ideas do not constitute agency guidance with respect to transport obligations for the 2015 ozone NAAQS. Attachment A to the March 2018 memorandum identified a ''Preliminary List of Potential Flexibilities'' that could potentially inform SIP development.[20] However, EPA made clear in that Attachment that the list of ideas were not suggestions endorsed by the Agency but rather ''comments provided in various forums'' on which EPA sought ''feedback from interested stakeholders.'' [21] Further, Attachment A stated, ''EPA is not at this time making any determination that the ideas discussed below are consistent with the requirements of the CAA, nor are we specifically recommending that states use these approaches.'' [22] Attachment A to the March 2018 memorandum, therefore, does not constitute agency guidance, but was intended to generate further discussion around potential approaches to addressing ozone transport among interested stakeholders. To the extent states sought to develop or rely on these ideas in support of their SIP submittals, EPA will thoroughly review the technical and legal justifications for doing so.

The remainder of this section describes the EPA's proposed framework with respect to analytic year, definition of nonattainment and maintenance receptors, selection of contribution threshold, and multifactor control strategy assessment.

1. Selection of Analytic Year

In general, the states and the EPA must implement the interstate transport provision in a manner ''consistent with the provisions of [title I of the CAA.]'' CAA section 110(a)(2)(D)(i). This requires, among other things, that these obligations are addressed consistently with the timeframes for downwind areas to meet their CAA obligations. With respect to ozone NAAQS, under CAA section 181(a), this means obligations must be addressed ''as expeditiously as practicable'' and no later than the schedule of attainment dates provided in CAA section 181(a)(1).[23] Several D.C. Circuit court decisions address the issue of the relevant analytic year for the purposes of evaluating ozone transport air-quality problems. On September 13, 2019, the D.C. Circuit issued a decision in *Wisconsin* v. *EPA,* remanding the CSAPR Update to the extent that it failed to require upwind states to eliminate their significant contribution by the next applicable attainment date by which downwind states must come into compliance with the NAAQS, as established under CAA section 181(a). 938 F.3d at 313.

On May 19, 2020, the D.C. Circuit issued a decision in *Maryland* v. *EPA* that cited the *Wisconsin* decision in holding that the EPA must assess the impact of interstate transport on air quality at the next downwind attainment date, including Marginal area attainment dates, in evaluating the basis for the EPA's denial of a petition under CAA section 126(b). *Maryland* v. *EPA,* 958 F.3d 1185, 1203–04 (D.C. Cir. 2020). The court noted that ''section 126(b) incorporates the Good Neighbor Provision,'' and, therefore, ''EPA must find a violation [of section 126] if an upwind source will significantly contribute to downwind nonattainment at the *next downwind attainment deadline.* Therefore, the agency must evaluate downwind air quality at that deadline, not at some later date.'' *Id.* at 1204 (emphasis added). The EPA interprets the court's holding in *Maryland* as requiring the states and the Agency, under the good neighbor provision, to assess downwind air quality as expeditiously as practicable and no later than the next applicable attainment date,[24] which is now the Moderate area attainment date under CAA section 181 for ozone nonattainment. The Moderate area attainment date for the 2015 8-hour ozone NAAQS is August 3, 2024.[25] The EPA believes that 2023 is now the appropriate year for analysis of interstate transport obligations for the 2015 8-hour ozone NAAQS, because the 2023 ozone season is the last relevant ozone season during which achieved emissions reductions in linked upwind states could assist downwind states with meeting the August 3, 2024, Moderate area attainment date for the 2015 8-hour ozone NAAQS.

The EPA recognizes that the attainment date for nonattainment areas classified as Marginal for the 2015 8-

[20] March 2018 memorandum, Attachment A.

[21] *Id.* at A–1.

[22] *Id.*

[23] For attainment dates for the 2015 8-hour ozone NAAQS, refer to CAA section 181(a), 40 CFR 51.1303, and Additional Air Quality Designations for the 2015 Ozone National Ambient Air Quality Standards, 83 FR 25776 (June 4, 2018, effective Aug. 3, 2018).

[24] We note that the court in *Maryland* did not have occasion to evaluate circumstances in which the EPA may determine that an upwind linkage to a downwind air quality problem exists at steps 1 and 2 of the interstate transport framework by a particular attainment date, but for reasons of impossibility or profound uncertainty the Agency is unable to mandate upwind pollution controls by that date. *See Wisconsin,* 938 F.3d at 320. The D.C. Circuit noted in *Wisconsin* that upon a sufficient showing, these circumstances may warrant flexibility in effectuating the purpose of the interstate transport provision.

[25] *See* CAA section 181(a); 40 CFR 51.1303; Additional Air Quality Designations for the 2015 Ozone National Ambient Air Quality Standards, 83 FR 25776 (June 4, 2018, effective Aug. 3, 2018).

hour ozone NAAQS was August 3, 2021. Under the *Maryland* holding, any necessary emissions reductions to satisfy interstate transport obligations should have been implemented by no later than this date. At the time of the statutory deadline to submit interstate transport SIPs (October 1, 2018), many states relied upon the EPA modeling of the year 2023, and no state provided an alternative analysis using a 2021 analytic year (or the prior 2020 ozone season). However, the EPA must act on SIP submittals using the information available at the time it takes such action. In this circumstance, the EPA does not believe it would be appropriate to evaluate states' obligations under CAA section 110(a)(2)(D)(i)(I) as of an attainment date that is wholly in the past, because the Agency interprets the interstate transport provision as forward looking. *See* 86 FR at 23074; *see also Wisconsin,* 938 F.3d at 322. Consequently, in this proposal the EPA will use the analytical year of 2023 to evaluate each state's CAA section 110(a)(2)(D)(i)(I) SIP submission with respect to the 2015 8-hour ozone NAAQS.

2. Step 1 of the 4-Step Interstate Transport Framework

In Step 1, the EPA identifies monitoring sites that are projected to have problems attaining and/or maintaining the NAAQS in the 2023 analytic year. Where the EPA's analysis shows that a site does not fall under the definition of a nonattainment or maintenance receptor, that site is excluded from further analysis under the EPA's 4-step interstate transport framework. For sites that are identified as a nonattainment or maintenance receptor in 2023, we proceed to the next step of our 4-step interstate transport framework by identifying the upwind state's contribution to those receptors.

The EPA's approach to identifying ozone nonattainment and maintenance receptors in this action is consistent with the approach used in previous transport rulemakings. The EPA's approach gives independent consideration to both the ''contribute significantly to nonattainment'' and the ''interfere with maintenance'' prongs of CAA section 110(a)(2)(D)(i)(I), consistent with the D.C. Circuit's direction in *North Carolina* v. *EPA*.[26]

For the purpose of this proposal, the EPA identifies nonattainment receptors as those monitoring sites that are projected to have average design values that exceed the NAAQS and that are also measuring nonattainment based on the most recent monitored design values. This approach is consistent with prior transport rulemakings, such as the CSAPR Update, where the EPA defined nonattainment receptors as those areas that both currently measure nonattainment and that the EPA projects will be in nonattainment in the future analytic year (*i.e.,* 2023).[27]

In addition, in this proposal, the EPA identifies a receptor to be a ''maintenance'' receptor for purposes of defining interference with maintenance, consistent with the method used in the CSAPR and upheld by the D.C. Circuit in *EME Homer City Generation, L.P.* v. *EPA,* 795 F.3d 118, 136 (D.C. Cir. 2015).[28] Specifically, the EPA identified maintenance receptors as those receptors that would have difficulty maintaining the relevant NAAQS in a scenario that takes into account historical variability in air quality at that receptor. The variability in air quality was determined by evaluating the ''maximum'' future design value at each receptor based on a projection of the maximum measured design value over the relevant period. EPA interprets the projected maximum future design value to be a potential future air quality outcome consistent with the meteorology that yielded maximum measured concentrations in the ambient data set analyzed for that receptor (*i.e.,* ozone conducive meteorology). EPA also recognizes that previously experienced meteorological conditions (*e.g.,* dominant wind direction, temperatures, air mass patterns) promoting ozone formation that led to maximum concentrations in the measured data may reoccur in the future. The maximum design value gives a reasonable projection of future air quality at the receptor under a scenario in which such conditions do, in fact, reoccur. The projected maximum design value is used to identify upwind emissions that, under those circumstances, could interfere with the downwind area's ability to maintain the NAAQS.

Recognizing that nonattainment receptors are also, by definition, maintenance receptors, the EPA often uses the term ''maintenance-only'' to refer to those receptors that are not nonattainment receptors. Consistent with the concepts for maintenance receptors, as described above, the EPA identifies ''maintenance-only'' receptors as those monitoring sites that have projected average design values above the level of the applicable NAAQS, but that are not currently measuring nonattainment based on the most recent official design values. In addition, those monitoring sites with projected average design values below the NAAQS, but with projected maximum design values above the NAAQS are also identified as ''maintenance only'' receptors, even if they are currently measuring nonattainment based on the most recent official design values.

3. Step 2 of the 4-Step Interstate Transport Framework

In Step 2 the EPA quantifies the contribution of each upwind state to each receptor in the 2023 analytic year. The contribution metric used in Step 2 is defined as the average impact from each state to each receptor on the days with the highest ozone concentrations at the receptor based on the 2023 modeling. If a state's contribution value does not equal or exceed the threshold of 1 percent of the NAAQS (*i.e.,* 0.70 ppb for the 2015 8-hour ozone NAAQS), the upwind state is not ''linked'' to a downwind air quality problem, and the EPA, therefore, concludes that the state does not significantly contribute to nonattainment or interfere with maintenance of the NAAQS in the downwind states. However, if a state's contribution equals or exceeds the 1 percent threshold, the state's emissions are further evaluated in Step 3, considering both air quality and cost as part of a multi-factor analysis, to determine what, if any, emissions might be deemed ''significant'' and, thus, must be eliminated under CAA section 110(a)(2)(D)(i)(I). The EPA is proposing to rely in the first instance on the 1 percent threshold for the purpose of evaluating a state's contribution to nonattainment or maintenance of the 2015 8-hour ozone NAAQS (*i.e.,* 0.70 ppb) at downwind receptors. This is consistent with the Step 2 approach that the EPA applied in CSAPR for the 1997 ozone NAAQS, which has subsequently been applied in the CSAPR Update when evaluating interstate transport obligations for the 2008 ozone NAAQS. The EPA continues to find 1 percent to be an appropriate threshold. For ozone, as the EPA found in the Clean Air Interstate Rule (CAIR), CSAPR, and CSAPR Update, a portion of the nonattainment problems from

[26] *See North Carolina* v. *EPA, 531 F.3d at 910–11 (holding that the EPA must give ''independent significance'' to each prong of CAA section 110(a)(2)(D)(i)(I)).*

[27] *See* 81 FR 74504 (October 26, 2016). This same concept, relying on both current monitoring data and modeling to define nonattainment receptor, was also applied in CAIR. *See* 70 FR at 25241, 25249 (January 14, 2005); *see also North Carolina,* 531 F.3d at 913–14 (affirming as reasonable EPA's approach to defining nonattainment in CAIR).

[28] *See* 76 FR 48208 (August 8, 2011). CSAPR Update and Revised CSAPR Update also used this approach. See 81 FR 74504 (October 26, 2016) and 86 FR 23054 (April 30, 2021).

anthropogenic sources in the U.S. results from the combined impact of relatively small contributions from many upwind states, along with contributions from in-state sources and, in some cases, substantially larger contributions from a subset of particular upwind states. The EPA's analysis shows that much of the ozone transport problem being analyzed in this proposed rule is still the result of the collective impacts of contributions from many upwind states. Therefore, application of a consistent contribution threshold is necessary to identify those upwind states that should have responsibility for addressing their contribution to the downwind nonattainment and maintenance problems to which they collectively contribute. Continuing to use 1 percent of the NAAQS as the screening metric to evaluate collective contribution from many upwind states also allows the EPA (and states) to apply a consistent framework to evaluate interstate emissions transport under the interstate transport provision from one NAAQS to the next. *See* 81 FR at 74518. *See also* 86 FR at 23085 (reviewing and explaining rationale from CSAPR, 76 FR at 48237–38, for selection of 1 percent threshold).

The EPA's August 2018 memorandum recognized that in certain circumstances, a state may be able to establish that an alternative contribution threshold of 1 ppb is justifiable. Where a state relies on this alternative threshold, and where that state determined that it was not linked at Step 2 using the alternative threshold, the EPA will evaluate whether the state provided a technically sound assessment of the appropriateness of using this alternative threshold based on the facts and circumstances underlying its application in the particular SIP submission.

4. Step 3 of the 4-Step Interstate Transport Framework

Consistent with the EPA's longstanding approach to eliminating significant contribution or interference with maintenance, at Step 3, states linked at Steps 1 and 2 are generally expected to prepare a multifactor assessment of potential emissions controls. The EPA's analysis at Step 3 in prior Federal actions addressing interstate transport requirements has primarily focused on an evaluation of cost-effectiveness of potential emissions controls (on a marginal cost-per-ton basis), the total emissions reductions that may be achieved by requiring such controls (if applied across all linked upwind states), and an evaluation of the air quality impacts such emissions reductions would have on the downwind receptors to which a state is linked; other factors may potentially be relevant if adequately supported. In general, where the EPA's or alternative air quality and contribution modeling establishes that a state is linked at Steps 1 and 2, it will be insufficient at Step 3 for a state merely to point to its existing rules requiring control measures as a basis for approval. In general, the emissions-reducing effects of all existing emissions control requirements are already reflected in the air quality results of the modeling for steps 1 and 2. If the state is shown to still be linked to one or more downwind receptor(s), states must provide a well-documented evaluation determining whether their emissions constitute significant contribution or interference with maintenance by evaluating additional available control opportunities by preparing a multifactor assessment. While the EPA has not prescribed a particular method for this assessment, the EPA expects states at a minimum to present a sufficient technical evaluation. This would typically include information on emissions sources, applicable control technologies, emissions reductions, costs, cost effectiveness, and downwind air quality impacts of the estimated reductions, before concluding that no additional emissions controls should be required.[29]

5. Step 4 of the 4-Step Interstate Transport Framework

At Step 4, states (or the EPA) develop permanent and federally enforceable control strategies to achieve the emissions reductions determined to be necessary at Step 3 to eliminate significant contribution to nonattainment or interference with maintenance of the NAAQS. For a state linked at Steps 1 and 2 to rely on an emissions control measure at Step 3 to address its interstate transport obligations, that measure must be included in the state's SIP so that it is permanent and federally enforceable. *See* CAA section 110(a)(2)(D) (''Each such [SIP] shall . . . contain adequate provisions . . . .''). *See also* CAA 110(a)(2)(A); *Committee for a Better Arvin* v. *U.S. E.P.A.,* 786 F.3d 1169, 1175–76 (9th Cir. 2015) (holding that measures relied on by state to meet CAA requirements must be included in the SIP).

[29] As examples of general approaches for how such an analysis could be conducted for their sources, states could look to the CSAPR Update, 81 FR 74504, 74539–51; CSAPR, 76 FR 48208, 48246–63; CAIR, 70 FR 25162, 25195–229; or the NO_X SIP Call, 63 FR 57356, 57399–405. *See also* Revised CSAPR Update, 86 FR 23054, 23086–23116. Consistently across these rulemakings, the EPA has developed emissions inventories, analyzed different levels of control stringency at different cost thresholds, and assessed resulting downwind air quality improvements.

II. Iowa's SIP Submission Addressing Interstate Transport of Air Pollution for the 2015 8-Hour Ozone NAAQS

On November 30, 2018, Iowa submitted a SIP revision addressing the CAA section 110(a)(2)(D)(i)(I) interstate transport requirements for the 2015 ozone NAAQS. Iowa chose to rely on the results of EPA's 2023 modeling, as presented in the March 2018 memorandum, to identify downwind nonattainment and maintenance receptors that may be impacted by emissions from sources in Iowa. Based on Iowa's review of the EPA's modeling assumptions and model performance evaluation, Iowa determined that EPA's future year projections were appropriate for purposes of evaluating Iowa's impact on attainment and maintenance of the 2015 ozone NAAQS in other states.

Iowa relied on EPA's 2023 modeling to conclude that the state does not contribute significantly to nonattainment or interfere with maintenance of the 2015 ozone NAAQS in any other state. Iowa referred to the analytic information in EPA's August 2018 memorandum as a basis to use a 1 ppb contribution threshold when evaluating the state's contribution to downwind receptors at Step 2 of EPA's four-step interstate transport framework. Using EPA's modeling, Iowa identified that it is projected to contribute below 1 percent of the 2015 ozone NAAQS (*i.e.,* less than 0.70 ppb) to all but two downwind receptors: The nonattainment receptor in Milwaukee County, Wisconsin (Milwaukee receptor), and the maintenance-only receptor in Allegan County, Michigan (Allegan receptor). Iowa's contribution to these two receptors was projected to be between 1 percent and 1 ppb. Iowa concluded that 1 ppb is an appropriate contribution threshold to apply with respect to the 2015 ozone NAAQS and that Iowa's emissions therefore do not contribute to nonattainment or maintenance problems at either receptor.

Iowa noted that its 2023 modeled contribution to the Milwaukee receptor is 0.79 ppb, and its 2023 modeled contribution to the Allegan receptor is 0.77 ppb. Iowa further noted that application of the 1 ppb threshold captures 83 percent of the upwind contribution captured at the 1 percent threshold at the Milwaukee receptor and 94 percent of the upwind contribution

captured at the 1 percent threshold at the Allegan receptor. Based on these data, Iowa concluded that the 1 ppb threshold is therefore appropriate because it captures a ''substantial portion'' of the transported contribution from upwind states when compared to the 1 percent threshold at both receptors. Because the state's impact on both receptors was projected to be below the 1 ppb threshold, the state concluded that its emissions will not contribute significantly to nonattainment or interfere with maintenance of the 2015 ozone NAAQS in downwind states.

III. Withdrawal of Prior Proposed Approval

On March 2, 2020, EPA proposed to approve portions of the infrastructure SIP submission received from the State of Iowa on November 30, 2018, in accordance with section 110(a)(1) of the CAA. In the document, the EPA proposed to approve the portion of the SIP addressing section 110(a)(2)(D)(i)(I)—significant contribution to nonattainment (prong 1), and interference with maintenance of the NAAQS (prong 2). This proposal relied on results of EPA's 2023 modeling, as presented in the March 2018 memorandum explained above, as well as the State's argument for using the 1 ppb threshold in Step 2 rather than the 1 percent threshold. The action received two adverse comments. In this document, we are withdrawing our March 2, 2020, proposed approval. We are now reproposing approval based on new modeling and a new rationale for approval based on that new modeling, as discussed in section IV.

IV. EPA Evaluation of Iowa's Submission

Iowa's SIP submission relies on analysis of the year 2023 (using a 2011 base year platform) to conclude that the State does not significantly contribute to nonattainment or interfere with maintenance of the 2015 ozone NAAQS in any other state. As explained in section I of this proposal, the EPA has conducted an updated analysis for the 2023 analytical year (using a 2016 base year platform) and proposes to rely primarily on this updated modeling to evaluate Iowa's transport SIP submission.

As described in section I, the EPA performed air quality modeling to project design values and contributions for 2023 using the 2016v2 emissions platform. The design values and contributions were examined to determine if Iowa contributes at or above the threshold of 1 percent of the 2015 ozone NAAQS (0.70 ppb) to any downwind nonattainment or maintenance receptor. The data [30] indicate that the highest contribution in 2023 from Iowa to a downwind nonattainment and maintenance receptors is 0.64 ppb and 0.58 ppb, respectively.[31]

Based on the EPA's updated modeling, it is no longer necessary to evaluate Iowa's use of 1 ppb as a contribution threshold at Step 2. The state is projected to contribute less than a 1 percent threshold. While the EPA does not, in this action, approve of the state's application of the 1 ppb threshold, based on the state's contributions of less than 1 percent to projected downwind nonattainment or maintenance receptors, the state's use of this alternative threshold is inconsequential to our action on this SIP submittal. The EPA is proposing to approve Iowa's SIP submission on the basis of the use of a 1 percent contribution threshold at Step 2.

The EPA's evaluation of measured and monitored data and contribution values in 2023, as discussed in this section, is consistent with conclusions made by Iowa that emissions from sources in the State will not contribute to nonattainment or interfere with maintenance of the 2015 ozone NAAQS in any other state.

V. Proposed Action

The EPA is proposing to approve a portion of Iowa's November 30, 2018, SIP submittal as meeting the interstate transport requirements of CAA section 110(a)(2)(D)(i)(I) for the 2015 ozone NAAQS. The EPA has addressed the remaining infrastructure elements included in Iowa's submittal in a separate action. Additionally, this proposal withdraws and replaces EPA's March 2, 2020, proposed rule as discussed in section III.

The Agency is soliciting public comments on its proposed approval of the CAA section 110(a)(2)(D)(i)(I) element of Iowa's infrastructure SIP submittal for the 2015 ozone NAAQS. Significant comments will be considered before taking final action. Interested parties may participate in the Federal rulemaking procedure by submitting written comments to this proposed rule by following the instructions listed in the **ADDRESSES** section of this **Federal Register**.

VI. Statutory and Executive Order Reviews

Under the Clean Air Act, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this proposed action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this proposed action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- Is not subject to requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act; and
- Does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible

[30] Design values and contributions at individual monitoring sites nationwide are provide in the file: *2016v2_DVs_state_contributions.xlsx* which is included in docket ID No. EPA–HQ–OAR–2021–0663.

[31] The EPA's analysis indicates that Iowa will have a 0.64 ppb impact at the projected nonattainment receptor in Kenosha County, Wisconsin (Site ID 550590019), which has a 2023 projected average design value of 72.8 ppb and a 2023 projected maximum design value of 73.7 ppb. The EPA's analysis further indicates that Iowa will have a 0.58 ppb impact at a projected maintenance receptor in Cook County, Illinois (Site ID 170310032), which has which has a projected 2023 average design value of 69.8 ppb and a 2023 projected maximum design value of 72.4 ppb.

methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications and will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: Pursuant to the Federal Clean Air Act (CAA or the Act), the Environmental Protection Agency (EPA) is proposing to disapprove State Implementation Plan (SIP) submittals from New York and New Jersey regarding interstate transport for the 2015 8-hour ozone national ambient air quality standards (NAAQS). This provision requires that each state's SIP contain adequate provisions to prohibit emissions from within the state from significantly contributing to nonattainment or interfering with maintenance of the NAAQS in other states. The ''good neighbor'' or ''interstate transport'' requirement is part of the broader set of ''infrastructure'' requirements, which are designed to ensure that the structural components of each state's air quality management program are adequate to meet the state's responsibilities under the CAA. This disapproval, if finalized, will establish a 2-year deadline for the EPA to promulgate a Federal Implementation Plan (FIP) to address the relevant interstate transport requirements, unless the EPA approves a subsequent SIP submittal that meets these requirements. Disapproval does not start a mandatory sanctions clock.

DATES: *Comments:* Written comments must be received on or before April 25, 2022.

ADDRESSES: You may send comments, identified as Docket No. EPA–R02–OAR–2021–0673 to the Federal eRulemaking Portal at *https://www.regulations.gov* following the online instructions for submitting comments.

Instructions: All submissions received must include the Docket ID No. for this rulemaking. Comments received may be posted without change to *https://www.regulations.gov,* including any personal information provided. For detailed instructions on sending comments and additional information on the rulemaking process, see the ''Public Participation'' heading of the **SUPPLEMENTARY INFORMATION** section of this document. Out of an abundance of caution for members of the public and our staff, the EPA Docket Center and Reading Room are open to the public by appointment only to reduce the risk of transmitting COVID–19. Our Docket Center staff also continues to provide remote customer service via email, phone, and webform. For further information on the EPA Docket Center services and the current status, please visit us online at *https://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: Kenneth Fradkin, Environmental Protection Agency, Region 2, 290 Broadway, 25th Floor, New York, NY 10007–1866, (212) 637–3702, or by email at *Fradkin.Kenneth@epa.gov.*

SUPPLEMENTARY INFORMATION: *Public Participation:* Submit your comments,

identified by Docket ID No. EPA–R02–OAR–2021–0673 at *https://www.regulations.gov.* Once submitted, comments cannot be edited or removed from the docket. The EPA may publish any comment received to its public docket. Do not submit to the EPA's docket at *https://www.regulations.gov* any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system).

There are two dockets supporting this action, EPA–R02–OAR–2021–0673 and EPA–HQ–OAR–2021–0663. Docket No. EPA–R02–OAR–2021–0673 contains information specific to New York and New Jersey, including the notice of proposed rulemaking. Docket No. EPA–HQ–OAR–2021–0663 contains additional modeling files, emissions inventory files, technical support documents, and other relevant supporting documentation regarding interstate transport of emissions for the 2015 8-hour ozone NAAQS which are being used to support this action. All comments regarding information in either of these dockets are to be made in Docket No. EPA–R02–OAR–2021–0673. For additional submission methods, please contact Kenneth Fradkin, Environmental Protection Agency, 290 Broadway, 25th Floor, New York, 10007–1866, (212) 637–3702, or by email at *Fradkin.Kenneth@epa.gov.* For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov/dockets/commenting-epa-dockets.* Due to public health concerns related to COVID–19, the EPA Docket Center and Reading Room are open to the public by appointment only. Our Docket Center staff also continues to provide remote customer service via email, phone, and webform. For further information and updates on the EPA Docket Center services, please visit us online at *https://www.epa.gov/dockets.*

The EPA continues to carefully and continuously monitor information from the Centers for Disease Control and Prevention (CDC), local area health departments, and our Federal partners so that we can respond rapidly as conditions change regarding COVID–19.

The index to the docket for this action, Docket No. EPA–R02–OAR–2021–0673, is available electronically at *www.regulations.gov.* While all documents in the docket are listed in the index, some information may not be publicly available due to docket file size restrictions or content (*e.g.,* CBI).

Throughout this document, ''we,'' ''us,'' and ''our'' means the EPA.

I. Background

A. Description of Statutory Background

On October 1, 2015, the EPA promulgated a revision to the ozone NAAQS (2015 8-hour ozone NAAQS), lowering the level of both the primary and secondary standards to 0.070 parts per million (ppm).[1] Section 110(a)(1) of the CAA requires states to submit, within 3 years after promulgation of a new or revised standard, SIP submissions meeting the applicable requirements of section 110(a)(2).[2] One of these applicable requirements is found in CAA section 110(a)(2)(D)(i)(I), otherwise known as the ''interstate transport'' or ''good neighbor'' provision, which generally requires SIPs to contain adequate provisions to prohibit in-state emissions activities from having certain adverse air quality effects on other states due to interstate transport of pollution. There are two so-called ''prongs'' within CAA section 110(a)(2)(D)(i)(I). A SIP for a new or revised NAAQS must contain adequate provisions prohibiting any source or other type of emissions activity within the state from emitting air pollutants in amounts that will significantly contribute to nonattainment of the NAAQS in another state (prong 1) or interfere with maintenance of the NAAQS in another state (prong 2). The EPA and states must give independent significance to prong 1 and prong 2 when evaluating downwind air quality problems under CAA section 110(a)(2)(D)(i)(I).[3]

B. Description of the EPA's Four Step Interstate Transport Regulatory Process

The EPA is using the 4-step interstate transport framework (or 4-step framework) to evaluate the states' SIP submittals addressing the interstate transport provision for the 2015 8-hour ozone NAAQS. The EPA has addressed the interstate transport requirements of CAA section 110(a)(2)(D)(i)(I) with respect to prior ozone NAAQS in several regional regulatory actions, including the Cross-State Air Pollution Rule (CSAPR), which addressed interstate transport with respect to the 1997 ozone NAAQS as well as the 1997 and 2006 fine particulate matter standards,[4] and the Cross-State Air Pollution Rule Update (CSAPR Update) [5] and the Revised CSAPR Update, both of which addressed the 2008 ozone NAAQS.[6]

Through the development and implementation of the CSAPR rulemakings and prior regional rulemakings pursuant to the interstate transport provision,[7] the EPA, working in partnership with states, developed the following 4-step interstate transport framework to evaluate a State's obligations to eliminate interstate transport emissions under the interstate transport provision for the ozone NAAQS: (1) Identify monitoring sites that are projected to have problems attaining and/or maintaining the NAAQS (*i.e.,* nonattainment and/or maintenance receptors); (2) identify states that impact those air quality problems in other (*i.e.,* downwind) states sufficiently such that the states are considered ''linked'' and therefore warrant further review and analysis; (3) identify the emissions reductions necessary (if any), applying a multifactor analysis, to eliminate each linked upwind state's significant contribution to nonattainment or interference with maintenance of the NAAQS at the locations identified in Step 1; and (4) adopt permanent and

[1] National Ambient Air Quality Standards for Ozone, Final Rule, 80 FR 65292 (October 26, 2015). Although the level of the standard is specified in the units of ppm, ozone concentrations are also described in parts per billion (ppb). For example, 0.070 ppm is equivalent to 70 ppb.

[2] SIP revisions that are intended to meet the applicable requirements of section 110(a)(1) and (2) of the CAA are often referred to as infrastructure SIPs and the applicable elements under section 110(a)(2) are referred to as infrastructure requirements.

[3] *See North Carolina* v. *EPA,* 531 F.3d 896, 909–11 (D.C. Cir. 2008).

[4] *See* Federal Implementation Plans: Interstate Transport of Fine Particulate Matter and Ozone and Correction of SIP Approvals, 76 FR 48208 (Aug. 8, 2011).

[5] Cross-State Air Pollution Rule Update for the 2008 Ozone NAAQS, 81 FR 74504 (Oct. 26, 2016).

[6] In 2019, the D.C. Circuit Court of Appeals remanded the CSAPR Update to the extent it failed to require upwind states to eliminate their significant contribution by the next applicable attainment date by which downwind states must come into compliance with the NAAQS, as established under CAA section 181(a). *Wisconsin* v. *EPA,* 938 F.3d 303, 313 (D.C. Cir. 2019). The Revised CSAPR Update for the 2008 Ozone NAAQS, 86 FR 23054 (April 30, 2021), responded to the remand of the CSAPR Update in *Wisconsin* and the vacatur of a separate rule, the ''CSAPR Close-Out,'' 83 FR 65878 (December 21, 2018), in *New York* v. *EPA,* 781 F. App'x. 4 (D.C. Cir. 2019).

[7] In addition to the CSAPR rulemakings, other regional rulemakings addressing ozone transport include the ''NO_X SIP Call,'' 63 FR 57356 (October 27, 1998), and the ''Clean Air Interstate Rule'' (CAIR), 70 FR 25162 (May 12, 2005).

enforceable measures needed to achieve those emissions reductions.

C. Background on the EPA's Ozone Transport Modeling Information

In general, the EPA has performed nationwide air quality modeling to project ozone design values which are used in combination with measured data to identify nonattainment and maintenance receptors. To quantify the contribution of emissions from specific upwind states on 2023 ozone design values for the identified downwind nonattainment and maintenance receptors, the EPA performed nationwide, state-level ozone source apportionment modeling for 2023. The source apportionment modeling provided contributions to ozone at receptors from precursor emissions of anthropogenic nitrogen oxides (NO_X) and volatile organic compounds (VOCs) in individual upwind states.

The EPA has released several documents containing projected ozone design values, contributions, and information relevant to evaluating interstate transport with respect to the 2015 8-hour ozone NAAQS. First, on January 6, 2017, the EPA published a notice of data availability (NODA) in which we requested comment on preliminary interstate ozone transport data including projected ozone design values and interstate contributions for 2023 using a 2011 base year platform.[8] In the NODA, the EPA used the year 2023 as the analytic year for this preliminary modeling because that year aligns with the expected attainment year for Moderate ozone nonattainment areas for the 2015 8-hour ozone NAAQS.[9] On October 27, 2017, we released a memorandum (October 2017 memorandum) containing updated modeling data for 2023, which incorporated changes made in response to comments on the NODA, and noted that the modeling may be useful for states developing SIPs to address interstate transport obligations for the 2008 ozone NAAQS.[10] On March 27, 2018, we issued a memorandum (March 2018 memorandum) noting that the same 2023 modeling data released in the October 2017 memorandum could also be useful for identifying potential downwind air quality problems with respect to the 2015 8-hour ozone NAAQS at Step 1 of the 4-step interstate transport framework.[11] The March 2018 memorandum also included the then newly available contribution modeling data for 2023 to assist states in evaluating their impact on potential downwind air quality problems for the 2015 8-hour ozone NAAQS under Step 2 of the 4-step interstate transport framework.[12] The EPA subsequently issued two more memoranda in August and October 2018, providing additional information to states developing interstate transport SIP submissions for the 2015 8-hour ozone NAAQS concerning, respectively, potential contribution thresholds that may be appropriate to apply in Step 2 of the 4-step interstate transport framework, and considerations for identifying downwind areas that may have problems maintaining the standard at Step 1 of the 4-step interstate transport framework.[13]

Since the release of the modeling data shared in the March 2018 memorandum, the EPA performed updated modeling using a 2016-based emissions modeling platform (*i.e.,* 2016v1). This emissions platform was developed under the EPA/Multi-Jurisdictional Organization (MJO)/state collaborative project.[14] This collaborative project was a multi-year joint effort by the EPA, MJOs, and states to develop a new, more recent emissions platform for use by the EPA and states in regulatory modeling as an improvement over the dated 2011-based platform that the EPA had used to project ozone design values and contribution data provided in the 2017 and 2018 memoranda. The EPA used the 2016v1 emissions to project ozone Design values and contributions for 2023. On October 30, 2020, in the Notice of Proposed Rulemaking for the Revised CSAPR Update, the EPA released and accepted public comment on 2023 modeling that used the 2016v1 emissions platform.[15] Although the Revised CSPAR Update addressed transport for the 2008 ozone NAAQS, the projected design values and contributions from the 2016v1 platform are also useful for identifying downwind ozone problems and linkages with respect to the 2015 ozone NAAQS.[16]

Following the final Revised CSAPR Update, the EPA made further updates to the 2016 emissions platform to include mobile emissions from the EPA's Motor Vehicle Emission Simulator MOVES3 model[17] and updated emissions projections for electric generating units (EGUs) that reflect the emissions reductions from the Revised CSAPR Update, recent information on plant closures, and other sector trends. The construct of the updated emissions platform, 2016v2, is described in the Emissions Modeling technical support document (TSD) for this proposed rule. The EPA performed air quality modeling of the 2016v2 emissions using the most recent public release version of the Comprehensive Air Quality Model with Extensions (CAMx) photochemical modeling, version 7.10.[18] The EPA now proposes to primarily rely on modeling based on the updated and newly available 2016v2 emissions platform in evaluating these submissions with respect to Steps 1 and 2 of the 4-step interstate transport framework. By using the updated modeling results, the EPA is using the most current and technically appropriate information for this proposed rulemaking. Section III of this notice and the Air Quality Modeling TSD for 2015 Ozone NAAQS Transport SIP Proposed Actions included in Docket ID No. EPA–HQ–OAR–2021–0663 for this proposal contains additional detail on the EPA's 2016v2 modeling. In this notice, the EPA is

accepting public comment on this updated 2023 modeling, which uses a 2016v2 emissions platform. Comments on the EPA's air quality modeling should be submitted in the Regional docket for this action, Docket No. EPA–R02–OAR–2021–0673. Comments are not being accepted in Docket EPA–HQ–OAR–2021–0663.

In some cases, states may rely on the results of EPA modeling and/or alternative modeling performed by states or Multi-Jurisdictional Organizations (MJOs) to evaluate downwind air quality problems and contributions as part of their submissions. New York and New Jersey have done so, and so we have evaluated the use of that alternative modeling in Section III.

D. The EPA's Approach to Evaluating Interstate Transport SIPs for the 2015 8-Hour Ozone NAAQS

The EPA proposes to apply a consistent set of policy judgments across all states for purposes of evaluating interstate transport obligations and the approvability of interstate transport SIP submittals for the 2015 8-hour ozone NAAQS. These policy judgments reflect consistency with relevant case law and past agency practice as reflected in the CSAPR and related rulemakings. Nationwide consistency in approach is particularly important in the context of interstate ozone transport, which is a regional-scale pollution problem involving many smaller contributors. Effective policy solutions to the problem of interstate ozone transport going back to the NO_X SIP Call have necessitated the application of a uniform framework of policy judgments in order to ensure an ''efficient and equitable'' approach. *See EME Homer City Generation, LP* v. *EPA,* 572 U.S. 489, 519 (2014).

In the March, August, and October 2018 memoranda, the EPA recognized that states may be able to establish alternative approaches to addressing their interstate transport obligations for the 2015 8-hour ozone NAAQS that vary from a nationally uniform framework. The EPA emphasized in these memoranda, however, that such alternative approaches must be technically justified and appropriate in light of the facts and circumstances of each particular state's submittal. In general, the EPA continues to believe that deviation from a nationally consistent approach to ozone transport must be substantially justified and have a well-documented technical basis that is consistent with relevant case law. Where states submitted SIPs that rely on any such potential ''flexibilities'' as may have been identified or suggested in the past, the EPA will evaluate whether the state adequately justified the technical and legal basis for doing so.

The EPA notes that certain concepts included in an attachment to the March 2018 memorandum require unique consideration, and these ideas do not constitute agency guidance with respect to transport obligations for the 2015 ozone NAAQS. Attachment A to the March 2018 memorandum identified a ''Preliminary List of Potential Flexibilities'' that could potentially inform SIP development.[19] However, the EPA made clear in that Attachment that the list of ideas were not suggestions endorsed by the Agency but rather ''comments provided in various forums'' on which the EPA sought ''feedback from interested stakeholders.'' [20] Further, Attachment A stated, ''EPA is not at this time making any determination that the ideas discussed below are consistent with the requirements of the CAA, nor are we specifically recommending that states use these approaches.'' [21] Attachment A to the March 2018 memorandum, therefore, does not constitute agency guidance, but was intended to generate further discussion around potential approaches to addressing ozone transport among interested stakeholders. To the extent states sought to develop or rely on these ideas in support of their SIP submittals, the EPA will thoroughly review the technical and legal justifications for doing so.

The remainder of this section describes the EPA's proposed framework with respect to analytic year, definition of nonattainment and maintenance receptors, selection of contribution threshold, and multifactor control strategy assessment.

1. Selection of Analytic Year

In general, the states and the EPA must implement the interstate transport provision in a manner ''consistent with the provisions of [title I of the CAA.]'' CAA section 110(a)(2)(D)(i). This requires, among other things, that these obligations are addressed consistently with the timeframes for downwind areas to meet their CAA obligations. With respect to ozone NAAQS, under CAA section 181(a), this means obligations must be addressed ''as expeditiously as practicable'' and no later than the schedule of attainment dates provided in CAA section 181(a)(1).[22] Several D.C. Circuit court decisions address the issue of the relevant analytic year for the purposes of evaluating ozone transport air-quality problems. On September 13, 2019, the D.C. Circuit issued a decision in *Wisconsin* v. *EPA,* remanding the CSAPR Update to the extent that it failed to require upwind states to eliminate their significant contribution by the next applicable attainment date by which downwind states must come into compliance with the NAAQS, as established under CAA section 181(a). 938 F.3d at 313.

On May 19, 2020, the D.C. Circuit issued a decision in *Maryland* v. *EPA* that cited the *Wisconsin* decision in holding that the EPA must assess the impact of interstate transport on air quality at the next downwind attainment date, including Marginal area attainment dates, in evaluating the basis for the EPA's denial of a petition under CAA section 126(b). *Maryland* v. *EPA,* 958 F.3d 1185, 1203–04 (D.C. Cir. 2020). The court noted that ''section 126(b) incorporates the Good Neighbor Provision,'' and, therefore, ''EPA must find a violation [of section 126] if an upwind source will significantly contribute to downwind nonattainment at the *next downwind attainment deadline.* Therefore, the agency must evaluate downwind air quality at that deadline, not at some later date.'' *Id.* at 1204 (emphasis added). The EPA interprets the court's holding in *Maryland* as requiring the states and the Agency, under the good neighbor provision, to assess downwind air quality as expeditiously as practicable and no later than the next applicable attainment date,[23] which is now the Moderate area attainment date under CAA section 181 for ozone nonattainment. The Moderate area attainment date for the 2015 8-hour ozone NAAQS is August 3, 2024.[24] The EPA believes that 2023 is now the appropriate year for analysis of interstate transport obligations for the

[19] March 2018 memorandum, Attachment A.

[20] *Id.* at A–1.

[21] *Id.*

[22] For attainment dates for the 2015 8-hour ozone NAAQS, refer to CAA section 181(a), 40 CFR 51.1303, and Additional Air Quality Designations for the 2015 Ozone National Ambient Air Quality Standards, 83 FR 25776 (June 4, 2018, effective Aug. 3, 2018).

[23] We note that the court in *Maryland* did not have occasion to evaluate circumstances in which the EPA may determine that an upwind linkage to a downwind air quality problem exists at Steps 1 and 2 of the interstate transport framework by a particular attainment date, but for reasons of impossibility or profound uncertainty the Agency is unable to mandate upwind pollution controls by that date. *See Wisconsin,* 938 F.3d at 320. The D.C. Circuit noted in *Wisconsin* that upon a sufficient showing, these circumstances may warrant flexibility in effectuating the purpose of the interstate transport provision.

[24] *See* CAA section 181(a); 40 CFR 51.1303; Additional Air Quality Designations for the 2015 Ozone National Ambient Air Quality Standards, 83 FR 25776 (June 4, 2018, effective Aug. 3, 2018).

2015 8-hour ozone NAAQS because the 2023 ozone season is the last relevant ozone season during which achieved emissions reductions in linked upwind states could assist downwind states with meeting the August 3, 2024 Moderate area attainment date for the 2015 8-hour ozone NAAQS.

The EPA recognizes that the attainment date for nonattainment areas classified as Marginal for the 2015 8-hour ozone NAAQS was August 3, 2021. Under the *Maryland* holding, any necessary emissions reductions to satisfy interstate transport obligations should have been implemented by no later than this date. At the time of the statutory deadline to submit interstate transport SIPs (October 1, 2018), many states relied upon the EPA modeling of the year 2023, and no state provided an alternative analysis using a 2021 analytic year (or the prior 2020 ozone season). However, the EPA must act on SIP submittals using the information available at the time it takes such action. In this circumstance, the EPA does not believe it would be appropriate to evaluate states' obligations under CAA section 110(a)(2)(D)(i)(I) as of an attainment date that is wholly in the past, because the Agency interprets the interstate transport provision as forward looking. *See* 86 FR at 23074; *see also Wisconsin,* 938 F.3d at 322. Consequently, in this proposal the EPA will use the analytical year of 2023 to evaluate each state's CAA section 110(a)(2)(D)(i)(I) SIP submission with respect to the 2015 8-hour ozone NAAQS.

2. Step 1 of the 4-Step Interstate Transport Framework

In Step 1, the EPA identifies monitoring sites that are projected to have problems attaining and/or maintaining the NAAQS in the 2023 analytic year. Where the EPA's analysis shows that a site does not fall under the definition of a nonattainment or maintenance receptor, that site is excluded from further analysis under the EPA's 4-step interstate transport framework. For sites that are identified as a nonattainment or maintenance receptor in 2023, we proceed to the next Step of our 4-step interstate transport framework by identifying the upwind state's contribution to those receptors.

The EPA's approach to identifying ozone nonattainment and maintenance receptors in this action is consistent with the approach used in previous transport rulemakings. The EPA's approach gives independent consideration to both the ''contribute significantly to nonattainment'' and the ''interfere with maintenance'' prongs of CAA section 110(a)(2)(D)(i)(I), consistent with the D.C. Circuit's direction in *North Carolina* v. *EPA.*[25]

For the purpose of this proposal, the EPA identifies nonattainment receptors as those monitoring sites that are projected to have average design values that exceed the NAAQS and that are also measuring nonattainment based on the most recent monitored design values. This approach is consistent with prior transport rulemakings, such as the CSAPR Update, where the EPA defined nonattainment receptors as those areas that both currently measure nonattainment and that the EPA projects will be in nonattainment in the future analytic year (*i.e.,* 2023).[26]

In addition, in this proposal, the EPA identifies a receptor to be a ''maintenance'' receptor for purposes of defining interference with maintenance, consistent with the method used in the CSAPR and upheld by the D.C. Circuit in *EME Homer City Generation, L.P.* v. *EPA,* 795 F.3d 118, 136 (D.C. Cir. 2015).[27] Specifically, the EPA identified maintenance receptors as those receptors that would have difficulty maintaining the relevant NAAQS in a scenario that takes into account historical variability in air quality at that receptor. The variability in air quality was determined by evaluating the ''maximum'' future design value at each receptor based on a projection of the maximum measured design value over the relevant period. The EPA interprets the projected maximum future design value to be a potential future air quality outcome consistent with the meteorology that yielded maximum measured concentrations in the ambient data set analyzed for that receptor (*i.e.,* ozone conducive meteorology). The EPA also recognizes that previously experienced meteorological conditions (*e.g.,* dominant wind direction, temperatures, air mass patterns) promoting ozone formation that led to maximum concentrations in the measured data may reoccur in the future. The maximum design value gives a reasonable projection of future air quality at the receptor under a scenario in which such conditions do, in fact, reoccur. The projected maximum design value is used to identify upwind emissions that, under those circumstances, could interfere with the downwind area's ability to maintain the NAAQS.

Recognizing that nonattainment receptors are also, by definition, maintenance receptors, the EPA often uses the term ''maintenance-only'' to refer to those receptors that are not nonattainment receptors. Consistent with the concepts for maintenance receptors, as described above, the EPA identifies ''maintenance-only'' receptors as those monitoring sites that have projected average design values above the level of the applicable NAAQS, but that are not currently measuring nonattainment based on the most recent official design values. In addition, those monitoring sites with projected average design values below the NAAQS, but with projected maximum design values above the NAAQS are also identified as ''maintenance only'' receptors, even if they are currently measuring nonattainment based on the most recent official design values.

3. Step 2 of the 4-Step Interstate Transport Framework

In Step 2 the EPA quantifies the contribution of each upwind state to each receptor in the 2023 analytic year. The contribution metric used in Step 2 is defined as the average impact from each state to each receptor on the days with the highest ozone concentrations at the receptor based on the 2023 modeling. If a state's contribution value does not equal or exceed the threshold of 1 percent of the NAAQS (*i.e.,* 0.70 ppb for the 2015 8-hour ozone NAAQS), the upwind state is not ''linked'' to a downwind air quality problem, and the EPA, therefore, concludes that the state does not significantly contribute to nonattainment or interfere with maintenance of the NAAQS in the downwind states. However, if a state's contribution equals or exceeds the 1 percent threshold, the state's emissions are further evaluated in Step 3, considering both air quality and cost as part of a multi-factor analysis, to determine what, if any, emissions might be deemed ''significant'' and, thus, must be eliminated under CAA section 110(a)(2)(D)(i)(I). The EPA is proposing to rely in the first instance on the 1 percent threshold for the purpose of evaluating a state's contribution to nonattainment or maintenance of the 2015 8-hour ozone NAAQS (*i.e.,* 0.70 ppb) at downwind receptors. This is consistent with the Step 2 approach that

[25] *See North Carolina* v. *EPA,* 531 F.3d 896, 910–11 (D.C. Cir. 2008) (holding that the EPA must give ''independent significance'' to each prong of CAA section 110(a)(2)(D)(i)(I)).

[26] *See* 81 FR 74504 (October 26, 2016). This same concept, relying on both current monitoring data and modeling to define nonattainment receptor, was also applied in CAIR. *See* 70 FR at 25241, 25249 (January 14, 2005); *see also North Carolina,* 531 F.3d at 913–14 (affirming as reasonable EPA's approach to defining nonattainment in CAIR).

[27] *See* 76 FR 48208 (August 8, 2011). CSAPR Update and Revised CSAPR Update also used this approach. See 81 FR 74504 (October 26, 2016) and 86 FR 23054 (April 30, 2021).

the EPA applied in CSAPR for the 1997 ozone NAAQS, which has subsequently been applied in the CSAPR Update when evaluating interstate transport obligations for the 2008 ozone NAAQS. The EPA continues to find 1 percent to be an appropriate threshold. For ozone, as the EPA found in the Clean Air Interstate Rule (CAIR), CSAPR, and CSAPR Update, a portion of the nonattainment problems from anthropogenic sources in the U.S. results from the combined impact of relatively small contributions from many upwind states, along with contributions from in-state sources and, in some cases, substantially larger contributions from a subset of particular upwind states. The EPA's analysis shows that much of the ozone transport problem being analyzed in this proposed rule is still the result of the collective impacts of contributions from many upwind states. Therefore, application of a consistent contribution threshold is necessary to identify those upwind states that should have responsibility for addressing their contribution to the downwind nonattainment and maintenance problems to which they collectively contribute. Continuing to use 1 percent of the NAAQS as the screening metric to evaluate collective contribution from many upwind states also allows the EPA (and states) to apply a consistent framework to evaluate interstate emissions transport under the interstate transport provision from one NAAQS to the next. *See* 81 FR at 74518. *See also* 86 FR at 23085 (reviewing and explaining rationale from CSAPR, 76 FR at 48237–38, for selection of the 1 percent threshold).

The EPA's August 2018 memorandum recognized that in certain circumstances, a state may be able to establish that an alternative contribution threshold of 1 ppb is justifiable. Where a state relies on this alternative threshold, and where that state determined that it was not linked at Step 2 using the alternative threshold, the EPA will evaluate whether the state provided a technically sound assessment of the appropriateness of using this alternative threshold based on the facts and circumstances underlying its application in the particular SIP submission.

4. Step 3 of the 4-Step Interstate Transport Framework

Consistent with the EPA's longstanding approach to eliminating significant contribution or interference with maintenance, at Step 3, states linked at Steps 1 and 2 are generally expected to prepare a multifactor assessment of potential emissions controls. The EPA's analysis at Step 3 in prior Federal actions addressing interstate transport requirements has primarily focused on an evaluation of cost-effectiveness of potential emissions controls (on a marginal cost-per-ton basis), the total emissions reductions that may be achieved by requiring such controls (if applied across all linked upwind states), and an evaluation of the air quality impacts such emissions reductions would have on the downwind receptors to which a state is linked; other factors may potentially be relevant if adequately supported. In general, where the EPA's or alternative air quality and contribution modeling establishes that a state is linked at Steps 1 and 2, it will be insufficient at Step 3 for a state merely to point to its existing rules requiring control measures as a basis for approval. In general, the emissions-reducing effects of all existing emissions control requirements are already reflected in the air quality results of the modeling for Steps 1 and 2. If the state is shown to still be linked to one or more downwind receptor(s), states must provide a well-documented evaluation determining whether their emissions constitute significant contribution or interference with maintenance by evaluating additional available control opportunities by preparing a multifactor assessment. While the EPA has not prescribed a particular method for this assessment, the EPA expects states at a minimum to present a sufficient technical evaluation. This would typically include information on emissions sources, applicable control technologies, emissions reductions, costs, cost effectiveness, and downwind air quality impacts of the estimated reductions, before concluding that no additional emissions controls should be required.[28]

5. Step 4 of the 4-Step Interstate Transport Framework

At Step 4, states (or the EPA) develop permanent and federally enforceable control strategies to achieve the emissions reductions determined to be necessary at Step 3 to eliminate significant contribution to nonattainment or interference with maintenance of the NAAQS. For a state linked at Steps 1 and 2 to rely on an emissions control measure at Step 3 to address its interstate transport obligations, that measure must be included in the state's SIP so that it is permanent and federally enforceable. *See* CAA section 110(a)(2)(D) (''Each such [SIP] shall . . . contain adequate provisions. . . .''). *See also* CAA 110(a)(2)(A); *Committee for a Better Arvin* v. *U.S. E.P.A.,* 786 F.3d 1169, 1175–76 (9th Cir. 2015) (holding that measures relied on by state to meet CAA requirements must be included in the SIP).

II. SIP Submissions Addressing Interstate Transport of Air Pollution for the 2015 8-Hour Ozone NAAQS

A. New York

On September 25, 2018, the New York State Department of Environmental Conservation (NYSDEC) submitted a revision to its SIP addressing the infrastructure SIP requirements for the 2015 ozone NAAQS, including the interstate transport obligations pursuant to the good neighbor provision. The EPA finalized approval of elements of New York's submittal, except for the portion of the SIP submittal addressing the good neighbor provision, on June 23, 2021.[29]

In New York's SIP submittal, the State followed the 4-step framework for determining its good neighbor obligations. New York provided air quality modeling (Steps 1 and 2) and a list of already-enacted and ''on-the-way'' state air pollution control measures to conclude that New York satisfied its good neighbor obligations for the 2015 ozone NAAQS (under Step 3). The State did not reach Step 4 of the framework as it concluded that the State did not need additional emissions reductions at Step 3 to eliminate significant contribution.

At Step 1, New York identified nonattainment and maintenance receptors based on the EPA's 2023 projection modeling shared in the EPA March 2018 memorandum. New York identified nonattainment receptors at the Stratford (receptor ID 90013007) and Westport (receptor ID 90019003) monitoring sites in Fairfield County, in Connecticut, in 2023 and identified maintenance receptors at the Greenwich (receptor ID 900190017) and New Haven (receptor ID 90099002) monitoring sites in Fairfield and New Haven Counties, in Connecticut, respectively, in 2023.

[28] As examples of general approaches for how such an analysis could be conducted for their sources, states could look to the CSAPR Update, 81 FR 74504, 74539–51; CSAPR, 76 FR 48208, 48246–63; CAIR, 70 FR 25162, 25195–229; or the NO_X SIP Call, 63 FR 57356, 57399–405. *See also* Revised CSAPR Update, 86 FR 23054, 23086–23116. Consistently across these rulemakings, the EPA has developed emissions inventories, analyzed different levels of control stringency at different cost thresholds, and assessed resulting downwind air quality improvements.

[29] 86 FR 35034 (July 1, 2021).

New York submitted state-by-state contribution modeling for 2023 based on CAMx modeling performed by the Maryland Department of the Environment (MDE). New York coupled 2023 Community Multiscale Air Quality (CMAQ) projection modeling with MDE's CAMx contribution modeling to show that New York was linked to the Stratford, Westport, Greenwich, and New Haven monitoring sites in Connecticut using a 1 percent of the NAAQS threshold (0.70 ppb for the 2015 8-hour ozone NAAQS). Based on this information, New York conceded that it was linked to four Connecticut receptors at Step 2.

New York asserted that, despite its contributions, the State had met its good neighbor obligations through the implementation and enforcement of stringent NO_X and VOC control measures that the State asserted go well beyond the EPA presumptive cost threshold in the CSAPR Update for highly cost-effective emissions reductions, and through the ongoing adoption and revision of additional control measures to further ensure the reduction of ozone in both New York State and downwind areas.

New York cited its Reasonably Available Control Technology (RACT) rules, which have been required on major sources of NO_X throughout the State since 1995, and have been periodically updated (in 1999, 2004, and 2010) to keep up with advances in control technology. New York indicated that the State's RACT presumptive emissions limits and facility-specific emissions limits are based on inflation-adjusted control cost valued at $5,500 per ton of NO_X reduced, which New York indicated was consistent with typical costs to install selective catalytic reduction (SCR) units, and above the EPA's $1,400 per ton control cost threshold used for the CSAPR Update that reflected the cost of turning on already-existing SCR controls at EGUs. New York also noted that the State's EGU NO_X emissions rates are among the lowest in the country, as reflected in its CSAPR Update ozone season emissions budget, which is lower than all other states with the exception of New Jersey and Maryland. New York indicated that its $5,500 RACT control cost also applied to non-EGUs.

New York also stated in the September 2018 submittal that it was in various stages of the rulemaking process for additional measures to further control NO_X and VOC emissions from EGU, non-EGU, area, and mobile sources.

Additional NO_X reductions would be obtained, according to the State, through the following regulatory updates that were, at the time of the submittal, under development by the State: Establishing new NO_X limits for simple cycle combustion turbines (or ''peaking'' [30] units), which New York noted would benefit the New York Metropolitan Area on hot summer days that are most conducive to ozone formation (*i.e.,* high electric demand days) (6 NYCRR Part 227); establishing NO_X limits for distributed generation sources (6 NYCRR Part 222); applying NO_X RACT requirements to municipal waste combustors (6 NYCRR Part 219); requiring new installation, recordkeeping and reporting requirements for aftermarket catalytic converters (Part 218); and the adoption of the CSAPR Update trading program (6 NYCRR Part 243).

New York's submittal also indicates that it will further control area-source VOC emissions through updates to State VOC RACT regulations for Oil and Gas (6 NYCRR Part 203); Architectural and Industrial Maintenance Coatings (6 NYCRR Part 205); Solvent Metal Cleaning Processes (Part 226); Motor Vehicle and Mobile Equipment Refinishing and Recoating Operations (6 NYCRR Part 228, Subpart 228–1); Gasoline Dispensing Sites and Transport Vehicles (6 NYCRR Part 230); and Consumer Products (6 NYCRR Part 235).

In its submittal to the EPA, New York commented that the State's mobile on-road sector alone (without considering other state emissions) ''significantly impacted downwind monitors, with 2023 contributions as high as 4.64 ppb at the Greenwich, Connecticut monitor'' (receptor ID 90010017), based on CAMx modeling conducted by the University of Maryland.[31]

New York stated that the on-road sector is controlled through the inspection/maintenance and anti-idling standards in 6 NYCRR Part 217, ''Motor Vehicle Emissions,'' and the implementation of the California Low-Emission Vehicle Standards under 6 NYCRR Part 218, ''Emission Standards for Motor Vehicles and Motor Vehicle Engines.''

B. New Jersey

On May 13, 2019, New Jersey submitted a SIP revision that addressed infrastructure SIP requirements for the 2015 ozone NAAQS,[32] including its interstate transport obligations pursuant to the good neighbor provision. Except for the portion of the SIP submittal addressing the good neighbor provision for the 2015 8-hour ozone NAAQS, the EPA will act on the portion of the submittal addressing the remaining infrastructure SIP elements for the 2015 8-hour ozone NAAQS in a separate action at a later date.

In New Jersey's SIP submittal, the State followed the 4-step framework based on a 2023 analytic year for evaluating its significant contribution. New Jersey provided air quality modeling (Steps 1 and 2), and a list of its adopted and implemented air pollution control measures, to demonstrate that it satisfied its transport obligations for the 2015 8-hour ozone NAAQS (under Step 3). The State did not reach Step 4 of the framework as it concluded that the State did not need additional emissions reductions to eliminate significant contribution at Step 3.

At Step 1, New Jersey identified areas that the State potentially significantly contributed to in other states based on 2023 regional modeling [33] conducted under the coordination of the Ozone Transport Commission (OTC) modeling Committee. The OTC modeling used CAMx modeling, version 6.3, to project emissions to 2023 (using a 2011 base year). OTC used the Eastern Regional Technical Advisory Committee (ERTAC) EGU Projection Tool to estimate emissions from the EGU sector.

New Jersey identified four nonattainment and four maintenance receptors in the OTC/MANE–VU 12 kilometer (km) modeling domain utilized in the OTC modeling.[34] The nonattainment receptors were located at the Westport [35] (receptor ID 90019003) monitoring site in Fairfield County, in Connecticut; the Susan Wagner (receptor ID 360850067) and Babylon (receptor ID 36103002) monitoring sites in Richmond and Suffolk Counties,

[30] Simple cycle combustion turbines, also known as peaking units (peakers), run to meet electric load during periods of peak electricity demand. These peakers typically operate during periods of elevated temperature when electric demand increases. Older simple cycle combustion turbines sometimes have no or only low-level NO_X emission controls.

[31] See Appendix C of New York's submittal.

[32] The SIP submittal also addressed the good neighbor provision for the 2008 ozone NAAQS, which EPA acted on in a separate action. The EPA proposed disapproval on October 26, 2021, at 86 FR 60602 (November 3, 2021).

[33] OTC modeling included in Appendix I of NJ submittal.

[34] OTC modeling generally followed the EPA approach for identifying nonattainment and maintenance receptors. Monitors in the Eastern U.S. were projected as nonattainment (an average design value greater than or equal to 71 ppb) or maintenance only (a maximum design value greater than or equal to 71 ppb) of the 2015 Ozone NAAQS in 2023. The EPA's approach for identifying ozone nonattainment and maintenance receptors is defined in section I.D.2.

[35] Referenced as the Sherwood Island site in the New Jersey submittal.

respectively, in New York; and the Edgewood (receptor ID 240251001) monitoring site in Harford County, Maryland. The maintenance receptors were located at the Greenwich (receptor ID 90010017), New Haven (receptor ID 90099002) and Stratford (receptor ID 90013007) monitoring sites in Fairfield, New Haven, and Fairfield Counties, in Connecticut, respectively; and the Queens College (receptor ID 360810124) in Queens County, in New York.

New Jersey relied on the OTC 2023 regional modeling using CAMx to determine the nonattainment and maintenance sites that it was linked to as a potential significant contributor based on its contribution above 1 percent of the NAAQS (0.70 ppb for the 2015 8-hour ozone NAAQS). The OTC modeling showed that New Jersey was linked above the 1 percent threshold to four receptors, including two nonattainment receptors at the Westport monitoring site in Connecticut and at the Susan Wagner and Babylon monitoring sites in New York. Additionally, the modeling demonstrated that New Jersey was linked to maintenance receptors located at the Greenwich, New Haven, and Stratford monitoring sites in Connecticut and the Babylon monitoring site in New York.

New Jersey asserted that considering air quality, emissions reductions from the State's adopted measures, and the cost effectiveness of those measures, no additional emissions reductions from New Jersey are necessary to address its good neighbor obligations to downwind nonattainment and maintenance areas.

New Jersey noted that from 1990 to 2017, annual NO_X and VOC emissions in New Jersey have each decreased approximately 77 percent. From 2011 to 2017, annual NO_X and VOC emissions decreased 31 percent and 17 percent, respectively. From 2002 to 2017, for point sources in the State, NO_X was reduced by 81 percent and VOC emissions were reduced by 63 percent. New Jersey also noted that its point source emissions represent only about 8 percent of New Jersey's total NO_X emissions, while mobile sources were approximately 43 percent.

New Jersey stated that there has been a significant decreasing trend in 8-hour ozone design values in New Jersey, approximately 40 percent from 1988 to 2017 and 13 percent from 2011 to 2017. According to the State, the significant decrease demonstrates the impact of New Jersey control measures.

New Jersey provided a list [36] of its post-2002 adopted NO_X and VOC control measures, including estimated cost-effectiveness (dollar ($) per ton of NO_X reduced or VOC reduced), and the EPA's approval date [37] for many of the measures. New Jersey notes that the State has met Reasonably Available Control Measures (RACM) and RACT requirements and has gone beyond RACM/RACT by adopting control measures more stringent than Federal rules and rules adopted by other states. Furthermore, New Jersey states that its rules are implemented statewide and not limited to the Northern New Jersey-New York-Connecticut ozone nonattainment area. New Jersey highlighted several of its control measures:

—Power generation rules, including requirements for high electric demand days (HEDD) when ozone concentrations are highest. New Jersey estimates NO_X emissions reduction during HEDD to be over 60 tons from a baseline without the rules;
—municipal waste combustor controls;
—stationary reciprocating internal combustion engines (RICE) controls (as low as 37 kW) used for distributed generation or demand response (DG/DR), which the State noted are often operated on hot summer days that often coincide with high ozone days;
—mobile source controls including New Jersey's Low Emission Vehicle Program (NJ LEV) (based on California's program), which requires a certain percentage of Zero Emission Vehicles in the State, as well as its rules for vehicle idling and heavy-duty vehicle inspection and maintenance using on-board diagnostics technology; and
—various NO_X and VOC measures to address the EPA Control Techniques Guideline (CTG), NO_X Alternative Control Technique (ACT) categories, and updated controls at gasoline dispensing facilities including California Air Resources Board (CARB) enhanced vapor recovery certified Phase I vapor recovery systems, dripless nozzles, and low permeation hoses.

New Jersey also asserts that it has implemented its control measures before the attainment deadlines for downwind nonattainment areas. New Jersey provides the example of the New Jersey power generation and HEDD rules being effective in 2015 or earlier. New Jersey further asserts that, when determining New Jersey's significant contribution to interstate transport, the State should not be penalized for its early adoption of appropriate and effective rules in advance of and more stringent than other states.

In the State's evaluation of cost effectiveness, New Jersey claims that it has gone beyond the measures of other nearby and upwind states and previously established the EPA cost effectiveness thresholds. The State notes that the cost-effectiveness values associated with many of its adopted rules are several times greater than the threshold of $1,400 per ton NO_X reduced set for upwind states in the CSAPR Update. For example, according to the State's list of existing NO_X and VOC control measures [38] included in its SIP submittal, the control measures for turbines operating during HEDD had a cost effectiveness of $44,000 per ton NO_X reduced; the control measures for oil-fired boilers operating during HEDD had a cost effectiveness up to $18,000 per ton NO_X reduced; and, for natural gas compressor engines and turbines rules adopted in 2017, the rules have a cost effectiveness up to $26,020 per ton NO_X reduced, with SCR costs up to $18,983 per ton NO_X reduced.

III. EPA Evaluation

The EPA is proposing to find that the New York SIP revision submitted on September 25, 2018, and the New Jersey SIP revision submitted on May 13, 2019, do not meet the States' obligations with respect to prohibiting emissions that contribute significantly to nonattainment or interfere with maintenance of the 2015 8-hour ozone NAAQS in any other state based on the EPA's evaluation of the SIP submissions using the 4-step interstate transport framework. Both States conceded that they are linked to nonattainment and maintenance receptors in another state at Steps 1 and 2 of the 4-step interstate transport framework-which is confirmed by the EPA's most recent modeling. However, neither state conducted an adequate Step 3 analysis to conclude that either state's SIP contains adequate measures to prohibit significant contribution or interference with maintenance. Both states conclude that their existing (or certain ''on-the-way'') control measures are already sufficient to meet good neighbor obligations. However, for this argument to provide

[36] Table 5 of the SIP submittal.

[37] Control measures that the State identified as ''USEPA Approval Pending'' have been approved by the EPA as follows: The EPA finalized approval of the CTGs for Fiberglass Boat Manufacturing Materials; Industrial Cleaning Solvents; Miscellaneous Metal and Plastic Parts Coatings; Paper, Film, and Foil Coatings; and Natural Gas Engines and Turbines. 83 FR 50506 (October 9, 2018). The EPA approved revisions to New Jersey's I/M rules. 83 FR 21174 (May 9, 2018). The EPA finalized approval of New Jersey's Vapor Recovery 2017 Stage I and Refueling. 85 FR 36748 (June 18, 2020).

[38] Table 5 of the New Jersey SIP submittal.

support for their conclusions, an analysis as to why no additional control measures are justified is needed. Neither state provided such an analysis in their respective SIP submittals. Therefore, as discussed below, the EPA proposes to disapprove both New York's and New Jersey's good neighbor SIP submittals for the 2015 8-hour ozone NAAQS.

A. New York

1. Results of the EPA's Step 1 and Step 2 Modeling and Findings for New York

As described in section I, the EPA performed air quality modeling using the 2016v2 emissions platform to project design values and contributions for 2023. These data were examined to determine if New York contributes at or above the threshold of 1 percent of the 2015 8-hour ozone NAAQS (0.70 ppb) to any downwind nonattainment or maintenance receptor. As shown in Table 1, the data [39] indicate that in 2023, emissions from New York contribute greater than 1 percent of the standard to nonattainment or maintenance-only receptors in Stratford, Connecticut (receptor ID 90013007), Westport, Connecticut (receptor ID 90019003), Greenwich, Connecticut (receptor ID 90010017), New Haven, Connecticut (receptor ID 90099002), and Bucks County, Pennsylvania (receptor ID 480170012).[40]

TABLE 1—NEW YORK LINKAGE RESULTS BASED ON EPA UPDATED 2023 MODELING

Receptor ID	Location	Nonattainment/maintenance	2023 Average design value (ppb)	2023 Maximum design value (ppb)	New York contribution (ppb)
90013007	Stratford, CT	Nonattainment	74.2	75.1	13.56
90019003	Westport, CT	Nonattainment	76.1	76.4	14.36
90010017	Greenwich, CT	Nonattainment	73.0	73.7	16.81
90099002	New Haven, CT	Nonattainment	71.8	73.9	11.54
420170012	Bucks County, PA	Maintenance	70.7	72.2	1.80

2. Evaluation of Information Provided by New York Regarding Step 1

At Step 1 of the 4-step interstate transport framework, New York relied on EPA modeling released in the March 2018 memorandum to identify nonattainment and maintenance receptors in 2023. As described previously in this notice, the EPA has recently updated this modeling using the most current and technically appropriate information. The EPA proposes to primarily rely on the EPA's most recent modeling to identify nonattainment and maintenance receptors in 2023.

3. Evaluation of Information Provided by New York Regarding Step 2

As described previously in this notice, the EPA has recently updated modeling to identify upwind state contributions to nonattainment and/or maintenance receptors in 2023. In this proposal, the EPA relies on the Agency's most recently available modeling to identify upwind contributions and ''linkages'' to downwind air quality problems in 2023 using a threshold of 1 percent of the NAAQS. As shown in Table 1, updated EPA modeling identifies New York's maximum contribution to a downwind nonattainment or maintenance receptor is greater than 1 percent of the standard (*i.e.,* 0.70 ppb).

Although New York relied on alternative modeling to the EPA's modeling at Step 2, New York acknowledged in its SIP submission that it is linked above 1 percent of the NAAQS to one or more downwind receptors in 2023. Because the alternative modeling relied on by the State also demonstrates that a linkage exists between the State and downwind receptors at Step 2, the EPA need not conduct a comparative assessment of the alternative modeling; the State concedes that it is linked. New York's analysis corroborates the conclusion in the EPA's most recent modeling. The EPA therefore will proceed to Step 3 of the 4-step interstate transport framework to assess arguments the State presented as to why, despite this linkage, the State should not be considered to significantly contribute to nonattainment or interfere with maintenance of the NAAQS in any other state such that additional emissions reductions are required.

4. Evaluation of Information Provided Regarding Step 3

At Step 3 of the 4-step interstate transport framework, a state's emissions are further evaluated, in light of multiple factors, including air quality and cost considerations, to determine what, if any, emissions significantly contribute to nonattainment or interfere with maintenance and, thus, must be eliminated under CAA section 110(a)(2)(D)(i)(I). To effectively evaluate which emissions in the state should be deemed ''significant'' and therefore prohibited, states generally should prepare an accounting of sources and other emissions activity and assess potential, additional emissions reduction opportunities and resulting downwind air quality improvements. The EPA has consistently applied this general approach (*i.e.,* Step 3 of the 4-step interstate transport framework) when identifying emissions contributions that the Agency has determined to be ''significant'' (or interfere with maintenance) in each of its prior Federal, regional ozone transport rulemakings, and this interpretation of the statute has been upheld by the Supreme Court. *See EME Homer City,* 572 U.S. 489, 519 (2014). While the EPA has not directed states that they must conduct a Step 3 analysis in precisely the manner the EPA has done in its prior regional transport rulemakings, state implementation plans addressing the obligations in CAA section 110(a)(2)(D)(i)(I) must prohibit ''any source or other type of emissions activity within the State'' from emitting air pollutants which will contribute significantly to downwind air quality problems. Thus, states must complete something similar to the EPA's analysis (or an alternative approach to defining ''significance'' that comports with the

[39] Design values and contributions at individual monitoring sites nationwide are provide in the file: 2023_DVs_Contributions_2016v2_Platform which is included in docket ID No. EPA–HQ–OAR–2021–0663.

[40] These modeling results are consistent with the results of a prior round of 2023 modeling using the 2016v1 emissions platform which became available to the public in the fall of 2020 in the Revised CSAPR Update, as noted in Section I.

statute's objectives) to determine whether and to what degree emissions from a state should be ''prohibited'' to eliminate emissions that will ''contribute significantly to nonattainment in, or interfere with maintenance of,'' the NAAQS in any other state. New York did not conduct such an analysis in its SIP submission. Although in this action we are relying on the results of the EPA's most recent air quality modeling results for receptor identification and contributions, we will continue to evaluate the analysis provided by New York at Step 3 to assess whether the analysis provided adequately supports New York's conclusion, and whether the analysis could apply to the linkages identified by the EPA at Step 2.

As previously indicated in section II.A, New York asserted in its September 2018 submittal that, despite its contributions, the State had met its good neighbor obligations through the implementation and enforcement of stringent NO_X and VOC control measures that go beyond the EPA's presumptive cost threshold in the CSAPR Update for highly cost-effective emissions reductions, and through the ongoing adoption and revision of additional control measures to further ensure the reduction of ozone in both New York and downwind areas.

The State's submittal, however, did not contain a demonstration at Step 3 that the State was adequately controlling its emissions for the purposes of the good neighbor provision, particularly because New York conceded in its submission that its emissions were linked to Connecticut receptors at Steps 1 and 2. The SIP submittal pointed to the State's existing NO_X RACT measures with presumptive and facility-specific emission limits based on $5,500 per ton of NO_X reduced, as well as ongoing state and local emission control efforts to conclude New York is already meeting its good neighbor obligations for the 2015 8-hour ozone NAAQS. However, the State's submittal does not include a sufficient examination or a technical justification that could support the conclusion that the State has no further good neighbor obligations for the 2015 8-hour ozone NAAQS. In particular, the State did not conduct in its submittal an analysis of potential additional emissions-reduction measures to further reduce its impact on the identified downwind receptors. For example, New York did not include in its submission an accounting of sources and other emissions activity in the State along with an analysis of potential NO_X emissions control technologies, their associated costs, estimated emissions reductions, and downwind air quality improvements. Nor does the submittal include an analysis of whether such potential additional control technologies or measures could reduce the impact of New York's emissions on out of state receptors. Though there is not a prescribed method for a Step 3 analysis, EPA has consistently applied Step 3 of the good neighbor framework through a more rigorous evaluation of potential additional control technologies or measures than what was provided in the SIP submission. Identifying a range of various emissions control measures that have been or may be enacted at the state or local level, without analysis of the impact of those measures on the out of state receptors, is not analytically sufficient. In general, the air quality modeling that the EPA has conducted (as well the modeling relied on by New York in its submittal) already accounts for ''on-the-books'' emissions control measures. Both sets of modeling clearly establish continued linkage from New York to downwind receptors in 2023 at Steps 1 and 2, despite those emissions control efforts.

New York's September 2018 submittal referenced regulatory updates that New York asserted were in development and would provide for additional NO_X and VOC reductions. The EPA notes that New York has since adopted many of these regulatory updates.[41] New York adopted 6 NYCRR Part 227, Subpart 227–3, ''Ozone Season Oxides of Nitrogen (NO_X) Emission Limits for Simple Cycle and Regenerative Combustion Turbines,'' with a State effective date of January 16, 2020, that lowered allowable NO_X emissions from peaking units during the ozone season on high electric demand days, with compliance dates of May 1, 2023 (100 ppmvd[42] limit), and May 1, 2025 (25 ppmvd limit for gas and 42 ppmvd limit for oil).[43] New York adopted a regulation, 6 NYCRR Part 222, ''Distributed Generation Sources,'' with a State effective date of March 25, 2020, that established NO_X emissions control requirements for distributed generation and price responsive generation sources[44] with compliance dates of May 1, 2021 and May 1, 2025.[45] New York adopted revisions, with a State effective date of March 13, 2020, to NYCRR Part 219, including adoption of a new Subpart 219–10, ''Reasonably Available Control Technology (RACT) For Oxides of Nitrogen (NO_X) At Municipal and Private Solid Waste Incineration Units,'' which established NO_X limits for municipal waste combustors with a compliance date of March 14, 2021.[46] New York adopted revisions to NYCRR Part 218, subpart 218–7, ''Aftermarket Parts,'' with a State effective date of March 14, 2020, which required cleaner California certified aftermarket catalytic converters offered for sale or installed in New York State beginning January 1, 2023.[47] New York adopted revisions, with a State effective date of January 11, 2020, to 6 NYCRR Part 205, ''Architectural and Industrial Maintenance Coatings,'' with compliance effective January 1, 2021,[48] requiring more stringent VOC limits for coatings.[49] New York adopted revisions, with a State effective date of November 1, 2019, to 6 NYCRR Part 226, ''Solvent Metal Cleaning Processes,'' establishing VOC content limits for cleaning solvents used in operations not covered by other regulations, beginning November 1, 2020.[50] New York adopted revisions to 6 NYCRR Part 230, with a State effective date of February 11, 2021, ''Gasoline Dispensing Sites and Transport Vehicles,'' and 6 NYCRR Part 235, ''Consumer Products.'' Updates to NYCRR Part 230 include additional VOC control requirements for facilities during gasoline transfer operations beginning February 5, 2021.[51] Updates to Part 235, which require compliance by January 1, 2022, include revising and

[41] New York regulations are available at *https://www.dec.ny.gov/regulations/regulations.html.*

[42] The NO_X emission limits are on a part per million dry volume basis (ppmvd), corrected to 15 percent oxygen.

[43] New York submitted the updated regulation for SIP approval to the EPA on May 18, 2020. The EPA finalized approval on August 3, 2021. 86 FR 43956 (August 11, 2021).

[44] Distributed generation (DG) sources are engines used by host sites to supply electricity outside that supplied by distribution utilities. This on-site generation of electricity by DG sources is used by a wide range of commercial, institutional, and industrial facilities. DG applications range from supplying electricity during blackouts to supplying all a facility's electricity demand year-round. NY's DG rule applies to sources enrolled in demand response programs sponsored by the New York Independent System Operator or transmission utilities as well as sources used during times when the cost of electricity supplied by utilities is high (*i.e.,* price-responsive generation sources).

[45] New York submitted the updated regulation for SIP approval to the EPA on October 15, 2020.

[46] New York submitted the updated regulation for SIP approval to the EPA on February 23, 2021.

[47] As of December 1, 2021, New York had not submitted a revised version of subpart 218–7 to the EPA for SIP approval.

[48] The compliance date for the sale of products is January 1, 2021. The sell-through provision allows for product manufactured before January 1, 2021, to be sold through May 1, 2023.

[49] New York submitted the updated regulation for SIP approval to the EPA on October 15, 2020.

[50] New York submitted the updated regulation for SIP approval to the EPA on November 5, 2019. The EPA finalized approval on April 19, 2020. 85 FR 28490 (May 13, 2020).

[51] New York submitted the updated regulation for SIP approval to the EPA on March 3, 2021.

establishing VOC contents for consumer products.[52]

Additionally, New York adopted a revised version of 6 NYCRR Part 243, ''CSAPR NO_X Ozone Season Group 2 Trading Program,'' with a State effective date of January 2, 2019, in order to allow New York to allocate CSAPR allowances to regulated entities in New York under an abbreviated SIP.[53] However, the EPA notes that although New York's revised Part 243 replaced the EPA's default allocation procedures for the control periods in 2021 and beyond under the CSAPR Update FIP, the revised state rules did not create any enforceable emission limitations and did not replace the enforceable emission limitations set forth in the additional trading program provisions established under the CSAPR Update FIP. Moreover, the allowance allocations provisions adopted in Part 243 (as well as the additional trading program provisions established under the CSAPR Update) are no longer in effect for New York's sources because those provisions have been replaced as to the State's sources by the new trading program provisions established under the Revised CSAPR Update.[54]

In any case, in both the CSAPR Update and the more recent Revised CSAPR Update, the EPA found, in spite of the nominal stringency of New York's control programs, additional emissions reductions were achievable from EGUs in the State. This was true even under the level of control stringency the EPA determined appropriate to eliminate significant contribution for the *2008* ozone NAAQS. Further, the EPA has not established a benchmark cost-effectiveness threshold for good neighbor obligations for the 2015 ozone NAAQS, and New York in its submittal has not conducted an analysis to establish one for EPA to evaluate. Additionally, while New York's existing control measures have undoubtedly reduced the amount of transported ozone pollution to other states and have contributed to the downward emissions trends and improving air quality in the State, in light of continuing contribution to out of state receptors from the State at Steps 1 and 2 despite these measures, New York's SIP submission failed to provide an adequate analysis at Step 3.

As of December 1, 2021, New York had not yet adopted revisions to 6 NYCRR Part 203, ''Oil and Gas Sector,'' [55] or NYCRR Part 228, Subpart 228–1, ''Motor Vehicle and Mobile Equipment Refinishing and Recoating Operation.''

The EPA also notes that New York's 6 NYCRR Part 227, Subpart 227–3, which was approved into the SIP after EPA's receipt of this September 2018 submittal, and which implements NO_X limits on combustion turbines that operate as peaking units, will not be fully phased in until 2025, which is past the August 3, 2024 Moderate area attainment date for the 2015 ozone NAAQS. Additionally, New York said that the State's mobile on-road sector alone significantly impacted downwind monitors and noted that it controls its mobile emissions through its inspection/maintenance (I/M) and anti-idling standards. However, New York did not explain the role its I/M and anti-idling standards play in eliminating its significant contribution.

The EPA acknowledges that New York's RACT presumptive emissions limits and facility-specific emissions limits are based on an inflation-adjusted control cost valued at $5,500 per ton of NO_X reduced.

In general, however, the listing of existing or ''on-the-way'' control measures, whether approved into the State's SIP or not, does not substitute for a complete Step 3 analysis under the EPA's 4-step framework to define ''significant contribution.'' New York's submittal does not include an assessment of the overall effects of these measures, when the reductions would be achieved, and what the overall resulting air quality effects would be observed at identified out-of-state receptors. The State's submittal does not include an evaluation of additional potential emissions control opportunities, or their costs or impacts, or attempt to analyze whether, if applied more broadly across linked states, the emissions reductions would constitute the elimination of significant contribution on a regional scale. The State's submittal did not contain an explanation as to whether any faster or more stringent emissions reductions that may be available were prohibitively costly or infeasible. Although the EPA acknowledges states are not necessarily bound to follow its own analytical framework at Step 3, we note that the State did not attempt to determine or justify an appropriate uniform cost-effectiveness threshold for the more stringent 2015 ozone NAAQS, nor did the State offer an alternative to this analytical framework for determining ''significant contribution'' in its submittal. This would have been similar to the approach to defining significant contribution that the EPA has applied in prior rulemakings such as CSAPR and the CSAPR Update.

Further, the EPA's modeling already accounts for ''on-the-books'' control measures, and the State has not explained which of its measures were not already included in the EPA's modeling and thus deserve to be further credited as reducing the impact of the State's emissions beyond what the EPA's air quality modeling has already accounted for. In light of continuing contribution to out of state receptors from the State (at Steps 1 and 2) despite these measures, New York's SIP submission failed to evaluate the availability of any additional controls to improve downwind air quality at nonattainment and maintenance receptors at Step 3.

Finally, under the *Wisconsin* decision, states and the EPA may not delay implementation of measures necessary to address good neighbor requirements beyond the next applicable attainment date without a showing of impossibility or necessity. See 938 F.3d at 320. In those cases where the measures identified by the State had implementation timeframes beyond the next relevant attainment dates the submission did not offer a demonstration of impossibility of earlier implementation of those control measures.[56] Similarly, the State's submittal is insufficient to the extent the implementation timeframes for identified control measures were left unidentified, unexplained, or too uncertain to permit the EPA to form a judgment as to whether the timing requirements for good neighbor obligations have been met.

5. Evaluation of Information Provided Regarding Step 4

Step 4 of the 4-step interstate transport framework calls for development of permanent and

[52] New York submitted the updated regulation for SIP approval to the EPA on March 3, 2021.

[53] CSAPR provided a process for the submission and approval of SIP revisions to replace certain provisions of the CSAPR FIPs while the remaining FIP provisions continue to apply. This type of CSAPR SIP is termed an abbreviated SIP.

[54] The regulations implementing the Revised CSAPR Update provide that, for states subject to the Revised CSAPR Update and with respect to control periods after 2020, the EPA will no longer administer state trading program provisions approved under SIP revisions addressing the CSAPR Update's trading program. See 40 CFR 52.38(b)(16)(ii).

[55] New York filed a notice of proposed rulemaking on April 20, 2021. See *https://www.dec.ny.gov/regulations/122829.html.*

[56] While *Wisconsin* was decided after the state made its submission, EPA must evaluate the SIP based on the information available at the time of its action, including any relevant changes in caselaw or other requirements. States are generally free to withdraw and resubmit their SIP submissions in light of intervening changes in the law. The State of New York has not done so in this case.

federally enforceable control strategies to achieve the emissions reductions determined to be necessary at Step 3 to eliminate significant contribution to nonattainment or interference with maintenance of the NAAQS. New York identified a number of measures that were either in development or anticipated to occur in the future (See section III.4).[57] However, the State had not revised its SIP to include these emission reductions to ensure the reductions were permanent and enforceable. Although New York has subsequently adopted many of the measures identified in section III.4, several measures have not been approved into the SIP, either because the State failed to submit (*e.g.,* 6 NYCRR Part 218, Subpart 218–7, ''Aftermarket Parts) or the EPA has not yet finalized approval into the SIP. Therefore, the emission reductions associated with those rules are not permanent and enforceable. As a result, EPA proposes to disapprove New York's submittal on the separate, additional basis that New York has not included permanent and enforceable emissions reductions in its SIP as necessary to meet the obligations of 110(a)(2)(d)(i)(I).

6. Conclusion

Based on the EPA's evaluation of New York's' SIP submission, the EPA is proposing to find that the portion of New York's September 25, 2018 SIP submission addressing CAA section 110(a)(2)(D)(i)(I) does not meet the State's interstate transport obligations for the 2015 8-hour ozone NAAQS, because it fails to contain the necessary provisions to eliminate emissions in amounts that will contribute significantly to nonattainment or interfere with maintenance of the NAAQS in any other state.

B. New Jersey

1. Results of the EPA's Step 1 and Step 2 Modeling and Findings for New Jersey

As described in section I, the EPA performed air quality modeling using the 2016v2 emissions platform to project design values and contributions for 2023. These data were examined to determine if New Jersey contributes at or above the threshold of 1 percent of the 2015 8-hour ozone NAAQS (0.70 ppb) to any downwind nonattainment or maintenance receptor. As shown in Table 2, the data[58] indicate that in 2023 emissions from New Jersey contribute greater than 1 percent of the standard to nonattainment or maintenance-only receptors in Stratford, Connecticut (receptor ID 90013007), Westport, Connecticut (receptor ID 90019003), Greenwich, Connecticut (receptor ID 90010017), Madison, Connecticut (receptor ID 90099002), and Bucks County, Pennsylvania (receptor ID 480170012).[59]

TABLE 2—NEW JERSEY LINKAGE RESULTS BASED ON EPA UPDATED 2023 MODELING

Receptor ID	Location	Nonattainment/maintenance	2023 Average design value (ppb)	2023 Maximum design value (ppb)	New Jersey contribution (ppb)
90013007	Stratford, CT	Nonattainment	74.2	75.1	7.43
90019003	Westport, CT	Nonattainment	76.1	76.4	8.85
90010017	Greenwich, CT	Nonattainment	73.0	73.7	6.90
90099002	Madison, CT	Nonattainment	71.8	73.9	5.67
420170012	Bucks County, PA	Maintenance	70.7	72.2	5.79

2. Evaluation of Information Provided by New Jersey Regarding Step 1

As noted in section II.B., New Jersey submitted OTC modeling that identified nonattainment and maintenance receptors in 2023. Although the State used a different modeling approach (utilizing 2011 based modeling and the ERTAC EGU Projection tool), than the EPA's modeling, which used a 2016-based emissions platform developed under an EPA/MJO/state collaborative project, New Jersey's alternative modeling also identified a number of nonattainment and maintenance receptor sites in 2023. See page 9 of the May 30, 2019 SIP submission. New Jersey determined that there were nonattainment or maintenance problems at eight locations in Connecticut, New York, and Maryland, which exceeded the 5 locations in Connecticut and Pennsylvania that the EPA determined to have nonattainment or maintenance problems. Based on both the New Jersey and the EPA modeling, nonattainment and maintenance receptors are projected in 2023 at Step 1. Thus, even under the alternative modeling of 2023, New Jersey acknowledges in its submittal the existence of several nonattainment and maintenance receptors.

3. Evaluation of Information Provided by the State Regarding Step 2

Although New Jersey relied on alternative modeling to the EPA's modeling at Step 2, New Jersey acknowledged in its SIP submission that it is linked above 1 percent of the NAAQS (0.70 ppb for the 2015 8-hour ozone NAAQS) to one or more downwind receptors in 2023. Because the alternative modeling relied on by the State also demonstrates that a linkage exists between the State and downwind receptors at Step 2, the EPA need not conduct a comparative assessment of the alternative modeling; the State concedes that it is linked. New Jersey's analysis corroborates the conclusion in the EPA's most recent modeling. The EPA therefore will proceed to Step 3 of the 4-step interstate transport framework to assess arguments the State presented as to why, despite this linkage, the State should not be considered to significantly contribute to nonattainment or interfere with maintenance of the NAAQS in any other

[57] Pointing to anticipated upcoming emission reductions, even if they were not included in the analysis at Steps 1 and 2, is not sufficient as a Step 3 analysis, for the reasons discussed in Section III.A.4. In this section, we explain that to the extent such anticipated reductions are not included in the SIP and rendered permanent and enforceable, reliance on such anticipated reductions is also insufficient at Step 4.

[58] Design values and contributions at individual monitoring sites nationwide are provide in the file: 2023_DVs_Contributions_2016v2_Platform which is included in docket ID No. EPA–HQ–OAR–2021–0663.

[59] These modeling results are consistent with the results of a prior round of 2023 modeling using the 2016v1 emissions platform which became available to the public in the fall of 2020 in the Revised CSAPR Update, as noted in Section I. That modeling showed that New Jersey had a maximum contribution greater than 0.70 ppb to at least one nonattainment or maintenance-only receptor in 2023. These modeling results are included in the file ''Ozone Design Values And Contributions Revised CSAPR Update.xlsx'' in docket EPA–HQ–OAR–2021–0663.

state such that additional emissions reductions are required.

4. Evaluation of Information Provided Regarding Step 3

At Step 3 of the 4-step interstate transport framework, a state's emissions are further evaluated, in light of multiple factors, including air quality and cost considerations, to determine what, if any, emissions significantly contribute to nonattainment or interfere with maintenance and, thus, must be eliminated under CAA section 110(a)(2)(D)(i)(I).

To effectively evaluate which emissions in the state should be deemed ''significant'' and therefore prohibited, states generally should prepare an accounting of sources and other emissions activity and assess potential, additional emissions reduction opportunities and resulting downwind air quality improvements. The EPA has consistently applied this general approach (*i.e.,* Step 3 of the 4-step interstate transport framework) when identifying emissions contributions that the Agency has determined to be ''significant'' (or interfere with maintenance) in each of its prior Federal, regional ozone transport rulemakings, and this interpretation of the statute has been upheld by the Supreme Court. *See EME Homer City,* 572 U.S. 489, 519 (2014). While the EPA has not directed states that they must conduct a Step 3 analysis in precisely the manner the EPA has done in its prior regional transport rulemakings, state implementation plans addressing the obligations in CAA section 110(a)(2)(D)(i)(I) must prohibit ''any source or other type of emissions activity within the State'' from emitting air pollutants which will contribute significantly to downwind air quality problems. Thus, states must complete something similar to the EPA's analysis (or an alternative approach to defining ''significance'' that comports with the statute's objectives) to determine whether and to what degree emissions from a state should be ''prohibited'' to eliminate emissions that will ''contribute significantly to nonattainment in, or interfere with maintenance of,'' the NAAQS in any other state. New Jersey did not conduct such an analysis in its SIP submission.

As previously noted, New Jersey asserted in its May 2019 submittal that considering air quality, the emissions reductions from New Jersey's adopted measures, and the cost effectiveness of those measures, no additional emissions reductions from New Jersey are necessary to address its good neighbor obligations to downwind nonattainment and maintenance areas. New Jersey stated that control measures were adopted and implemented before attainment deadlines and go beyond previously established the EPA cost effectiveness thresholds. New Jersey also provided information documenting the emissions reductions that have been made throughout the State beginning in 2002 with corresponding improvements in air quality in New Jersey to demonstrate the impact of New Jersey's control measures.

New Jersey's submittal, however, did not contain a demonstration at Step 3 that the State was adequately controlling its emissions for purposes of the good neighbor provision, particularly because the State conceded in its submission that it was potentially significantly contributing to eight receptors in 2023 at Steps 1 and 2. The SIP submittal pointed to the State's existing NO_X and VOC control measures that were adopted by the State to conclude New Jersey is already meeting its good neighbor obligations for the 2015 8-hour ozone NAAQS. However, the State's submittal does not include a sufficient examination or a technical justification that could support the conclusion that the State has no further good neighbor obligations for the 2015 8-hour ozone NAAQS. In particular, the State did not conduct in its submittal an analysis of potential additional emissions-reduction measures to further reduce its impact on the identified downwind receptors. For example, New Jersey did not include in its submission an accounting of individual emissions units at facilities in the State along with an analysis of potential NO_X emissions control technologies, their associated costs, estimated emissions reductions, and downwind air quality improvements. Nor does the submittal include an analysis of whether such potential, additional control technologies or measures could reduce the impact of New Jersey's emissions on out of state receptors. Though there is not a prescribed method for a Step 3 analysis, the EPA has consistently applied Step 3 of the good neighbor framework through a more rigorous evaluation of potential additional control technologies or measures than what New Jersey provided in its submission. Identifying a range of various emissions control measures that have been or may be enacted at the state level, without analysis of the impact of those measures on the out of state receptors, is not analytically sufficient. In general, the air quality modeling that EPA has conducted (as well the modeling relied on by New Jersey in its submittal) already accounts for ''on-the-books'' emissions control measures. Both sets of modeling clearly establish continued linkage from New Jersey to downwind receptors in 2023 at Steps 1 and 2, despite those emissions control efforts.

The EPA acknowledges that the State's control measures listed in the State's SIP submittal may be nominally more stringent than the EPA cost-thresholds used for the CSAPR Update or Revised CSAPR Update. But those cost-thresholds were for the 2008 ozone NAAQS (a less stringent NAAQS than the 2015 ozone NAAQS). Further, in the Revised CSAPR Update, the EPA found that despite the nominal stringency of New Jersey's control programs, additional emissions reductions were achievable from EGUs in the State, even under the level of control stringency the EPA determined appropriate to eliminate significant contribution for the *2008* ozone NAAQS. In any case, the EPA has not established a benchmark cost-effectiveness threshold for good neighbor obligations for the 2015 ozone NAAQS, and New Jersey in its submittal has not conducted an analysis to establish one for the EPA to evaluate. Additionally, while New Jersey's existing control measures have undoubtedly reduced the amount of transported ozone pollution to other states and have contributed to the downward emissions trends and improving air quality in the State as shown in the State's SIP submittal, in light of continuing contribution to out of state receptors from the State at Steps 1 and 2 despite these measures, New Jersey's SIP submission failed to provide an adequate analysis at Step 3.

We therefore propose that New Jersey was required to analyze emissions from the sources and other emissions activity from within the state to determine whether its contributions were significant, and we propose to disapprove its submission because New Jersey failed to do so.

5. Evaluation of Information Provided Regarding Step 4

Step 4 of the 4-step interstate transport framework calls for development of permanent and federally enforceable control strategies to achieve the emissions reductions determined to be necessary at Step 3 to eliminate significant contribution to nonattainment or interference with maintenance of the NAAQS. As mentioned previously, New Jersey's SIP submission did not contain an evaluation of additional emission control opportunities (or establish that no additional controls are required),

thus, no information was provided at Step 4. As a result, EPA proposes to disapprove New Jersey's submittal on the separate, additional basis that the State has not developed permanent and enforceable emissions reductions necessary to meet the obligations of CAA section 110(a)(2)(d)(i)(I).

6. Conclusion

Based on the EPA's evaluation of New Jersey's SIP submission, the EPA is proposing to find that the portion of New Jersey's May 13, 2019 SIP submission addressing CAA section 110(a)(2)(D)(i)(I) does not meet the State's interstate transport obligations for the 2015 8-hour ozone NAAQS, because it fails to contain the necessary provisions to eliminate emissions in amounts that will contribute significantly to nonattainment or interfere with maintenance of the NAAQS in any other state.

IV. Proposed Action

We are proposing to disapprove the portion of New York's and New Jersey's SIP submissions pertaining to interstate transport of air pollution which will significantly contribute to nonattainment or interfere with maintenance of the 2015 8-hour ozone NAAQS in other states. Under CAA section 110(c)(1), disapproval, if finalized, would establish a 2-year deadline for the EPA to promulgate a FIP for New York and New Jersey to address interstate transport requirements for the 2015 8-hour ozone NAAQS, unless the EPA approves a SIP that meets these requirements. Disapproval does not start a mandatory sanctions clock for New York and New Jersey. The remaining elements of New York's September 25, 2018 submission, and New Jersey's May 13, 2019 submission are not addressed in this action and either have been or will be acted on in separate rulemakings.

V. Statutory and Executive Order Reviews

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

This action is not a significant regulatory action and was therefore not submitted to the Office of Management and Budget for review.

B. Paperwork Reduction Act (PRA)

This proposed action does not impose an information collection burden under the PRA because it does not contain any information collection activities

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA. This action merely proposes to disapprove a SIP submission as not meeting the CAA.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain any unfunded mandate as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. The action imposes no enforceable duty on any state, local or tribal governments or the private sector.

E. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have tribal implications as specified in Executive Order 13175. This action does not apply on any Indian reservation land, any other area where the EPA or an Indian tribe has demonstrated that a tribe has jurisdiction, or non-reservation areas of Indian country. Thus, Executive Order 13175 does not apply to this action.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

The EPA interprets Executive Order 13045 as applying only to those regulatory actions that concern environmental health or safety risks that the EPA has reason to believe may disproportionately affect children, per the definition of ''covered regulatory action'' in section 2–202 of the Executive Order. This action is not subject to Executive Order 13045 because it merely proposes to disapprove a SIP submission as not meeting the CAA.

H. Executive Order 13211, Actions That Significantly Affect Energy Supply, Distribution or Use

This action is not subject to Executive Order 13211, because it is not a significant regulatory action under Executive Order 12866.

I. National Technology Transfer and Advancement Act

This rulemaking does not involve technical standards.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

The EPA believes the human health or environmental risk addressed by this action will not have potential disproportionately high and adverse human health or environmental effects on minority, low-income or indigenous populations. This action merely proposes to disapprove a SIP submission as not meeting the CAA.

K. CAA Section 307(b)(1)

Section 307(b)(1) of the CAA governs judicial review of final actions by the EPA. This section provides, in part, that petitions for review must be filed in the D.C. Circuit: (i) When the agency action consists of ''nationally applicable regulations promulgated, or final actions taken, by the Administrator,'' or (ii) when such action is locally or regionally applicable, if ''such action is based on a determination of nationwide scope or effect and if in taking such action the Administrator finds and publishes that such action is based on such a determination.'' For locally or regionally applicable final actions, the CAA reserves to the EPA complete discretion whether to invoke the exception in (ii).[60]

The EPA anticipates that this proposed rulemaking, if finalized, would be ''nationally applicable'' within the meaning of CAA section 307(b)(1) because it would take final action on SIP submittals for the 2015 ozone NAAQS for two states, which are located in two different Federal judicial circuits. It would apply uniform, nationwide analytical methods, policy judgments, and interpretation with respect to the same CAA obligations, *i.e.,* implementation of good neighbor requirements under CAA section 110(a)(2)(D)(i)(I) for the 2015 ozone NAAQS for states across the country, and final action would be based on this common core of determinations, described in further detail below.

If the EPA takes final action on this proposed rulemaking, in the alternative,

[60] In deciding whether to invoke the exception by making and publishing a finding that an action is based on a determination of nationwide scope or effect, the Administrator takes into account a number of policy considerations, including his judgment balancing the benefit of obtaining the D.C. Circuit's authoritative centralized review versus allowing development of the issue in other contexts and the best use of agency resources.

the Administrator intends to exercise the complete discretion afforded to him under the CAA to make and publish a finding that the final action (to the extent a court finds the action to be locally or regionally applicable) is based on a determination of ''nationwide scope or effect'' within the meaning of CAA section 307(b)(1). Through this rulemaking action (in conjunction with a series of related actions on other SIP submissions for the same CAA obligations), the EPA interprets and applies section 110(a)(2)(d)(i)(I) of the CAA for the 2015 ozone NAAQS based on a common core of nationwide policy judgments and technical analysis concerning the interstate transport of pollutants throughout the continental U.S. In particular, the EPA is applying here (and in other proposed actions related to the same obligations) the same, nationally consistent 4-step framework for assessing good neighbor obligations for the 2015 ozone NAAQS. The EPA relies on a single set of updated, 2016-base year photochemical grid modeling results of the year 2023 as the primary basis for its assessment of air quality conditions and contributions at Steps 1 and 2 of that framework. Further, the EPA proposes to determine and apply a set of nationally consistent policy judgments to apply the 4-step framework. The EPA has selected a nationally uniform analytic year (2023) for this analysis and is applying a nationally uniform approach to nonattainment and maintenance receptors and a nationally uniform approach to contribution threshold analysis.[61] For these reasons, the Administrator intends, if this proposed action is finalized, to exercise the complete discretion afforded to him under the CAA to make and publish a finding that this action is based on one or more determinations of nationwide scope or effect for purposes of CAA section 307(b)(1).[62]

[61] A finding of nationwide scope or effect is also appropriate for actions that cover states in multiple judicial circuits. In the report on the 1977 Amendments that revised section 307(b)(1) of the CAA, Congress noted that the Administrator's determination that the ''nationwide scope or effect'' exception applies would be appropriate for any action that has a scope or effect beyond a single judicial circuit. See H.R. Rep. No. 95–294 at 323, 324, reprinted in 1977 U.S.C.C.A.N. 1402–03.

[62] The EPA may take a consolidated, single final action on all the proposed SIP disapproval actions with respect to obligations under CAA section 110(a)(2)(D)(i)(I) for the 2015 ozone NAAQS. Should EPA take a single final action on all such disapprovals, this action would be nationally applicable, and the EPA would also anticipate, in the alternative, making and publishing a finding that such final action is based on a determination of nationwide scope or effect.

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Ozone.

Authority: 42 U.S.C. 7401 *et seq.*

Dated: January 31, 2022.

Air Plan Disapproval; Kentucky; Interstate Transport Requirements for the 2015 8-Hour Ozone National Ambient Air Quality Standards

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: Pursuant to the Federal Clean Air Act (CAA or the Act), the Environmental Protection Agency (EPA or Agency) is proposing to disapprove a State Implementation Plan (SIP) submittal from the Kentucky Energy and Environment Cabinet, Department of Environmental Quality (DAQ) (herein after referred to as Kentucky or the Commonwealth) regarding the interstate transport requirements for the 2015 8-hour ozone national ambient air quality standards (NAAQS or standard). The ''Good Neighbor'' or ''Interstate Transport'' provision requires that each state's implementation plan contain adequate provisions to prohibit emissions from within the state from significantly contributing to nonattainment or interfering with maintenance of the NAAQS in other states. This requirement is part of the broader set of ''infrastructure'' requirements, which are designed to ensure that the structural components of each state's air quality management program are adequate to meet the state's responsibilities under the CAA. This disapproval, if finalized, will establish a 2-year deadline for EPA to promulgate a Federal Implementation Plan (FIP) to address the relevant interstate transport requirements, unless EPA approves a subsequent SIP submittal that meets these requirements. Disapproval does not start a mandatory sanctions clock.

DATES: Comments must be received on or before April 25, 2022.

Withdrawals: As of February 22, 2022, the proposed rule published in December 30, 2019, at 84 FR 71854, is withdrawn.

ADDRESSES: You may submit comments, identified by Docket No. EPA–R04–OAR–2021–0841, through the Federal eRulemaking Portal at *https://www.regulations.gov* following the online instructions for submitting comments.

Instructions: All submissions received must include the Docket No. EPA–R04–OAR–2021–0841 for this rulemaking. Comments received may be posted without change to *https://www.regulations.gov/,* including any personal information provided. For detailed instructions on submitting comments and additional information on the rulemaking process, see the ''Public Participation'' heading of the **SUPPLEMENTARY INFORMATION** section of this document. Out of an abundance of caution for members of the public and staff, the EPA Docket Center and Reading Room are open to the public by appointment only to reduce the risk of transmitting COVID–19. The Docket Center staff also continues to provide remote customer service via email, phone, and webform. For further information on EPA Docket Center services and the current status, please visit EPA online at *https://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: Evan Adams of the Air Regulatory Management Section, Air Planning and Implementation Branch, Air and Radiation Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street SW, Atlanta, Georgia 30303–8960. Mr. Adams can be reached by telephone at (404) 562–9009, or via electronic mail at *adams.evan@epa.gov.*

SUPPLEMENTARY INFORMATION: *Public Participation:* Submit your comments, identified by Docket No. EPA–R04–OAR–2021–0841, at *https://www.regulations.gov.* Once submitted, comments cannot be edited or removed from the docket. EPA may publish any comment received to its public docket. Do not submit to EPA's docket at *https://www.regulations.gov* any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system).

There are two dockets supporting this action, EPA–R04–OAR–2021–0841 and EPA–HQ–OAR–2021–0663. Docket No. EPA–R04–OAR–2021–0841 contains information specific to Kentucky, including this notice of proposed rulemaking. Docket No. EPA–HQ–OAR–2021–0663 contains additional modeling files, emissions inventory files, technical support documents, and other relevant supporting documentation regarding interstate transport of emissions for the 2015 8-hour ozone NAAQS which are being used to support this action. All comments regarding information in either of these dockets are to be made in Docket No. EPA–R04–OAR–2021–0841. For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov/dockets/commenting-epa-dockets.* Due to public health concerns related to COVID–19, the EPA Docket Center and Reading Room are open to the public by appointment only. The Docket Center staff also continues to provide remote customer service via email, phone, and webform. For further information and updates on EPA Docket Center services, please visit EPA online at *https://www.epa.gov/dockets.*

EPA continues to carefully and continuously monitor information from the Centers for Disease Control and Prevention (CDC), local area health departments, and Federal partners so that EPA can respond rapidly as conditions change regarding COVID–19.

The indices to Docket No. EPA–R04–OAR–2021–0841 and Docket No. EPA–HQ–OAR–2021–0663 are available electronically at *www.regulations.gov.* While all documents in each docket are listed in their respective index, some information may not be publicly available due to docket file size restrictions or content (*e.g.,* CBI).

Table of Contents

I. Background

The following provides background for EPA's proposed action related to the interstate transport requirements for the 2015 8-hour ozone NAAQS for the Commonwealth of Kentucky.

A. Description of Statutory Background

On October 1, 2015, EPA promulgated a revision to the ozone NAAQS (2015 8-hour ozone NAAQS), lowering the level of both the primary and secondary standards to 0.070 parts per million (ppm).[1] Section 110(a)(1) of the CAA requires states to submit, within 3 years after promulgation of a new or revised standard, SIP submissions meeting the applicable requirements of section 110(a)(2).[2] One of these applicable requirements is found in CAA section 110(a)(2)(D)(i)(I), otherwise known as the ''good neighbor'' or ''interstate transport'' provision, which generally requires SIPs to contain adequate provisions to prohibit in-state emissions activities from having certain adverse air quality effects on other states due to interstate transport of pollution. There are two so-called ''prongs'' within CAA section 110(a)(2)(D)(i)(I). A SIP for a new or revised NAAQS must contain adequate provisions prohibiting any source or other type of emissions activity within the state from emitting air pollutants in amounts that will significantly contribute to nonattainment of the NAAQS in another state (prong 1) or interfere with maintenance of the NAAQS in another state (prong 2). EPA and states must give independent significance to prong 1 and prong 2 when evaluating downwind air quality problems under CAA section 110(a)(2)(D)(i)(I).[3]

B. Description of EPA's Four Step Interstate Transport Regulatory Process

EPA is using the 4-step interstate transport framework (or 4-step framework) to evaluate the states' implementation plan submittals addressing the interstate transport provision for the 2015 8-hour ozone NAAQS. EPA has addressed the interstate transport requirements of CAA section 110(a)(2)(D)(i)(I) with respect to prior ozone NAAQS in several regional regulatory actions, including the Cross-State Air Pollution Rule (CSAPR), which addressed interstate transport with respect to the 1997 ozone NAAQS as well as the 1997 and 2006 fine particulate matter standards,[4] the Cross-State Air Pollution Rule Update (CSAPR Update) [5] and the Revised CSAPR Update, both of which addressed the 2008 ozone NAAQS.[6]

Through the development and implementation of the CSAPR rulemakings and prior regional rulemakings pursuant to the interstate transport provision,[7] EPA, working in partnership with states, developed the following 4-step interstate transport framework to evaluate a state's obligations to eliminate interstate transport emissions under the interstate transport provision for the ozone NAAQS: (1) Identify monitoring sites that are projected to have problems attaining and/or maintaining the NAAQS (*i.e.,* nonattainment and/or maintenance receptors); (2) identify

[1] National Ambient Air Quality Standards for Ozone, Final Rule, 80 FR 65292 (October 26, 2015). Although the level of the standard is specified in the units of ppm, ozone concentrations are also described in parts per billion (ppb). For example, 0.070 ppm is equivalent to 70 ppb.

[2] SIP revisions that are intended to meet the applicable requirements of section 110(a)(1) and (2) of the CAA are often referred to as infrastructure SIPs and the applicable elements under section 110(a)(2) are referred to as infrastructure requirements.

[3] *See North Carolina* v. *EPA,* 531 F.3d 896, 909–11 (D.C. Cir. 2008).

[4] *See* Federal Implementation Plans: Interstate Transport of Fine Particulate Matter and Ozone and Correction of SIP Approvals, 76 FR 48208 (August 8, 2011).

[5] Cross-State Air Pollution Rule Update for the 2008 Ozone NAAQS, 81 FR 74504 (October 26, 2016).

[6] In 2019, the United States Court of Appeals for the District of Columbia Circuit (D.C. Circuit) remanded the CSAPR Update to the extent it failed to require upwind states to eliminate their significant contribution by the next applicable attainment date by which downwind states must come into compliance with the NAAQS, as established under CAA section 181(a). *Wisconsin* v. *EPA,* 938 F.3d 303, 313 (D.C. Cir. 2019). The Revised CSAPR Update for the 2008 Ozone NAAQS, 86 FR 23054 (April 30, 2021), responded to the remand of the CSAPR Update in *Wisconsin* and the vacatur of a separate rule, the ''CSAPR Close-Out,'' 83 FR 65878 (December 21, 2018), in *New York* v. *EPA,* 781 F. App'x. 4 (D.C. Cir. 2019).

[7] In addition to CSAPR rulemakings, other regional rulemakings addressing ozone transport include the ''NO_X SIP Call,'' 63 FR 57356 (October 27, 1998), and the ''Clean Air Interstate Rule'' (CAIR), 70 FR 25162 (May 12, 2005).

states that impact those air quality problems in other (*i.e.,* downwind) states sufficiently such that the states are considered ''linked'' and therefore warrant further review and analysis; (3) identify the emissions reductions necessary (if any), applying a multifactor analysis, to eliminate each linked upwind state's significant contribution to nonattainment or interference with maintenance of the NAAQS at the locations identified in Step 1; and (4) adopt permanent and enforceable measures needed to achieve those emissions reductions.

C. Background on EPA's Ozone Transport Modeling Information

In general, EPA has performed nationwide air quality modeling to project ozone design values which are used in combination with measured data to identify nonattainment and maintenance receptors. To quantify the contribution of emissions from specific upwind states on 2023 ozone design values for the identified downwind nonattainment and maintenance receptors, EPA performed nationwide, state-level ozone source apportionment modeling for 2023. The source apportionment modeling provided contributions to ozone at receptors from precursor emissions of anthropogenic nitrogen oxides (NO_X) and volatile organic compounds (VOCs) in individual upwind states.

EPA has released several documents containing projected design values, contributions, and information relevant to evaluating interstate transport with respect to the 2015 8-hour ozone NAAQS. First, on January 6, 2017, EPA published a notice of data availability (NODA) in which the Agency requested comment on preliminary interstate ozone transport data including projected ozone design values and interstate contributions for 2023 using a 2011 base year platform.[8] In the NODA, EPA used the year 2023 as the analytic year for this preliminary modeling because that year aligns with the expected attainment year for Moderate ozone nonattainment areas for the 2015 8-hour ozone NAAQS.[9] On October 27, 2017, EPA released a memorandum (October 2017 memorandum) containing updated modeling data for 2023, which incorporated changes made in response to comments on the NODA, and noted that the modeling may be useful for states developing SIPs to address interstate transport obligations for the 2008 ozone NAAQS.[10] On March 27, 2018, EPA issued a memorandum (March 2018 memorandum) noting that the same 2023 modeling data released in the October 2017 memorandum could also be useful for identifying potential downwind air quality problems with respect to the 2015 8-hour ozone NAAQS at Step 1 of the 4-step interstate transport framework.[11] The March 2018 memorandum also included the then newly available contribution modeling data for 2023 to assist states in evaluating their impact on potential downwind air quality problems for the 2015 8-hour ozone NAAQS under Step 2 of the 4-step interstate transport framework.[12] EPA subsequently issued two more memoranda in August and October 2018, providing additional information to states developing interstate transport SIP submissions for the 2015 8-hour ozone NAAQS concerning, respectively, potential contribution thresholds that may be appropriate to apply in Step 2 of the 4-step interstate transport framework, and considerations for identifying downwind areas that may have problems maintaining the standard at Step 1 of the 4-step interstate transport framework.[13]

Since the release of the modeling data shared in the March 2018 memorandum, EPA performed updated modeling using a 2016-based emissions modeling platform (*i.e.,* 2016v1). This emissions platform was developed under the EPA/Multi-Jurisdictional Organization (MJO)/state collaborative project.[14] This collaborative project was a multi-year joint effort by EPA, MJOs, and states to develop a new, more recent emissions platform for use by EPA and states in regulatory modeling as an improvement over the dated 2011-based platform that EPA had used to project ozone design values and contribution data provided in the 2017 and 2018 memoranda. EPA used the 2016v1 emissions to project ozone design values and contributions for 2023. On October 30, 2020, in the Notice of Proposed Rulemaking for the Revised CSAPR Update, EPA released and accepted public comment on 2023 modeling that used the 2016v1 emissions platform.[15] Although the Revised CSAPR Update addressed transport for the 2008 ozone NAAQS, the projected design values and contributions from the 2016v1 platform are also useful for identifying downwind ozone problems and linkages with respect to the 2015 8-hour ozone NAAQS.[16]

Following the Revised CSAPR Update final rule, EPA made further updates to the 2016 emissions platform to include mobile emissions from EPA's Motor Vehicle Emission Simulator (MOVES) model [17] and updated emissions projections for electric generating units (EGUs) that reflect the emissions reductions from the Revised CSAPR Update, recent information on plant closures, and other sector trends. The construct of the updated emissions platform, 2016v2, is described in the Preparation of Emissions Inventories for the 2016v2 North American Emissions Modeling Platform technical support document (TSD) for this proposed rule and is included in Docket No. EPA–HQ–OAR–2021–0663. EPA performed air quality modeling of the 2016v2 emissions using the most recent public release version of the Comprehensive Air Quality Modeling with Extensions (CAMx) photochemical modeling,

[11] *See* Information on the Interstate Transport State Implementation Plan Submissions for the 2015 Ozone National Ambient Air Quality Standards under Clean Air Act Section 110(a)(2)(D)(i)(I), March 27, 2018 (''March 2018 memorandum''), available in Docket No. EPA–HQ–OAR–2021–0663 or at *https://www.epa.gov/interstate-air-pollution-transport/interstate-air-pollution-transport-memos-and-notices.*

[12] The March 2018 memorandum, however, provided, ''While the information in this memorandum and the associated air quality analysis data could be used to inform the development of these SIPs, the information is not a final determination regarding states' obligations under the good neighbor provision. Any such determination would be made through notice-and-comment rulemaking.''

[13] *See* Analysis of Contribution Thresholds for Use in Clean Air Act Section 110(a)(2)(D)(i)(I) Interstate Transport State Implementation Plan Submissions for the 2015 Ozone National Ambient Air Quality Standards, August 31, 2018) (''August 2018 memorandum''), and Considerations for Identifying Maintenance Receptors for Use in Clean Air Act Section 110(a)(2)(D)(i)(I) Interstate Transport State Implementation Plan Submissions for the 2015 Ozone National Ambient Air Quality Standards, October 19, 2018 (''October 2018 memorandum''), available in Docket No. EPA–HQ–OAR–2021–0663 for this action or at *https://www.epa.gov/airmarkets/memo-and-supplemental-information-regarding-interstate-transport-sips-2015-ozone-naaqs.*

[14] The results of this modeling, as well as the underlying modeling files, are included in Docket No. EPA–HQ–OAR–2021–0663.

[15] *See* 85 FR 68964, 68981 (October 30, 2020).

[16] See the Air Quality Modeling Technical Support Document for the Final Revised Cross-State Air Pollution Rule Update, included in Docket No. EPA–HQ–OAR–2021–0663.

[17] Additional details and documentation related to the MOVES3 model can be found at *https://www.epa.gov/moves/latest-version-motor-vehicle-emission-simulator-moves.*

version 7.10.[18] EPA proposes to primarily rely on modeling based on the updated and newly available 2016v2 emissions platform in evaluating these submissions with respect to Steps 1 and 2 of the 4-step interstate transport framework. By using the updated modeling results, EPA is using the most current and technically appropriate information for this proposed rulemaking. Section III of this notice and the Air Quality Modeling TSD included in Docket No. EPA–HQ–OAR–2021–0663 for this proposal contain additional detail on the modeling performed using the 2016v2 emissions modeling.

In this notice, EPA is accepting public comment on this updated 2023 modeling, which uses the 2016v2 emissions platform. Details on the air quality modeling and the methods for projecting design values and determining contributions in 2023 are described in the Air Quality Modeling TSD for 2015 8-hour Ozone NAAQS Transport SIP Proposed Actions. Comments on EPA's air quality modeling should be submitted in Docket No. EPA–R04–OAR–2021–0841. Comments are not being accepted in Docket No. EPA–HQ–OAR–2021–0663.

States may have chosen to rely on the results of EPA modeling and/or alternative modeling performed by states or Multi-Jurisdictional Organizations (MJOs) to evaluate downwind air quality problems and contributions as part of their submissions. In section III, EPA evaluates how Kentucky used air quality modeling information in its submission.

D. EPA's Approach to Evaluating Interstate Transport SIPs for the 2015 8-Hour Ozone NAAQS

EPA proposes to apply a consistent set of policy judgments across all states for purposes of evaluating interstate transport obligations and the approvability of interstate transport SIP submittals for the 2015 8-hour ozone NAAQS. These policy judgments reflect consistency with relevant case law and past Agency practice as reflected in CSAPR and related rulemakings. Nationwide consistency in approach is particularly important in the context of interstate ozone transport, which is a regional-scale pollution problem involving many smaller contributors. Effective policy solutions to the problem of interstate ozone transport going back to the NO_X SIP Call have necessitated the application of a uniform framework of policy judgments in order to ensure an ''efficient and equitable'' approach. *See EME Homer City Generation, LP* v. *EPA,* 572 U.S. 489, 519 (2014).

In the March, August, and October 2018 memoranda, EPA recognized that states may be able to establish alternative approaches to addressing their interstate transport obligations for the 2015 8-hour ozone NAAQS that vary from a nationally uniform framework. EPA emphasized in these memoranda, however, that such alternative approaches must be technically justified and appropriate in light of the facts and circumstances of each particular state's submittal. In general, EPA continues to believe that deviation from a nationally consistent approach to ozone transport must be substantially justified and have a well-documented technical basis that is consistent with relevant case law. Where states submitted SIPs that rely on any such potential concepts as may have been identified or suggested in the past, EPA will evaluate whether the state adequately justified the technical and legal basis for doing so.

EPA notes that certain potential concepts included in an attachment to the March 2018 memorandum require unique consideration, and these ideas do not constitute Agency guidance with respect to transport obligations for the 2015 8-hour ozone NAAQS. Attachment A to the March 2018 memorandum identified a ''Preliminary List of Potential Flexibilities'' that could potentially inform SIP development.[19] However, EPA made clear in that attachment that the list of ideas were not suggestions endorsed by the Agency but rather ''comments provided in various forums'' on which EPA sought ''feedback from interested stakeholders.'' [20] Further, Attachment A stated, ''EPA is not at this time making any determination that the ideas discussed below are consistent with the requirements of the CAA, nor [is EPA] specifically recommending that states use these approaches.'' [21] Attachment A to the March 2018 memorandum, therefore, does not constitute agency guidance, but was intended to generate further discussion around potential approaches to addressing ozone transport among interested stakeholders. To the extent states sought to develop or rely on these ideas in support of their SIP submittals, EPA will thoroughly review the technical and legal justifications for doing so.

The remainder of this section describes EPA's proposed framework with respect to analytic year, definition of nonattainment and maintenance receptors, selection of contribution threshold, and multifactor control strategy assessment.

1. Selection of Analytic Year

In general, the states and EPA must implement the interstate transport provision in a manner ''consistent with the provisions of [title I of the CAA].'' *See* CAA section 110(a)(2)(D)(i). This requires, among other things, that these obligations are addressed consistently with the timeframes for downwind areas to meet their CAA obligations. With respect to ozone NAAQS, under CAA section 181(a), this means obligations must be addressed ''as expeditiously as practicable'' and no later than the schedule of attainment dates provided in CAA section 181(a)(1).[22] Several D.C. Circuit court decisions address the issue of the relevant analytic year for the purposes of evaluating ozone transport air-quality problems. On September 13, 2019, the D.C. Circuit issued a decision in *Wisconsin* v. *EPA,* remanding the CSAPR Update to the extent that it failed to require upwind states to eliminate their significant contribution by the next applicable attainment date by which downwind states must come into compliance with the NAAQS, as established under CAA section 181(a). *See* 938 F.3d 303, 313.

On May 19, 2020, the D.C. Circuit issued a decision in *Maryland* v. *EPA* that cited the *Wisconsin* decision in holding that EPA must assess the impact of interstate transport on air quality at the next downwind attainment date, including Marginal area attainment dates, in evaluating the basis for EPA's denial of a petition under CAA section 126(b). *Maryland* v. *EPA,* 958 F.3d 1185, 1203–04 (D.C. Cir. 2020). The court noted that ''section 126(b) incorporates the Good Neighbor Provision,'' and, therefore, ''EPA must find a violation [of section 126] if an upwind source will significantly contribute to downwind nonattainment at the *next downwind attainment deadline.* Therefore, the agency must evaluate downwind air quality at that deadline, not at some later date.'' *Id.* at 1204 (emphasis added). EPA interprets the court's holding in *Maryland* as requiring the states and the Agency, under the good neighbor provision, to assess downwind air quality as expeditiously as practicable and no later than the next

[18] Ramboll Environment and Health, January 2021, *www.camx.com.*

[19] March 2018 memorandum, Attachment A.

[20] *Id.* at A–1.

[21] *Id.*

[22] For attainment dates for the 2015 8-hour ozone NAAQS, refer to CAA section 181(a), 40 CFR 51.1303, and Additional Air Quality Designations for the 2015 Ozone National Ambient Air Quality Standards, 83 FR 25776 (June 4, 2018, effective August 3, 2018).

applicable attainment date,[23] which is now the Moderate area attainment date under CAA section 181 for ozone nonattainment. The Moderate area attainment date for the 2015 8-hour ozone NAAQS is August 3, 2024.[24] EPA believes that 2023 is now the appropriate year for analysis of interstate transport obligations for the 2015 8-hour ozone NAAQS, because the 2023 ozone season is the last relevant ozone season during which achieved emissions reductions in linked upwind states could assist downwind states with meeting the August 3, 2024, Moderate area attainment date for the 2015 8-hour ozone NAAQS.

EPA recognizes that the attainment date for nonattainment areas classified as Marginal for the 2015 8-hour ozone NAAQS was August 3, 2021. Under the *Maryland* holding, any necessary emissions reductions to satisfy interstate transport obligations should have been implemented by no later than this date. At the time of the statutory deadline to submit interstate transport SIPs (October 1, 2018), many states relied upon EPA modeling of the year 2023, and no state provided an alternative analysis using a 2021 analytic year (or the prior 2020 ozone season). However, EPA must act on SIP submittals using the information available at the time it takes such action. In this circumstance, EPA does not believe it would be appropriate to evaluate states' obligations under CAA section 110(a)(2)(D)(i)(I) as of an attainment date that is wholly in the past, because the Agency interprets the interstate transport provision as forward looking. *See* 86 FR 23054, 23074; *see also Wisconsin,* 938 F.3d at 322. Consequently, in this proposal EPA will use the analytical year of 2023 to evaluate each state's CAA section 110(a)(2)(D)(i)(I) SIP submission with respect to the 2015 8-hour ozone NAAQS.

2. Step 1 of the 4-Step Interstate Transport Framework

In Step 1, EPA identifies monitoring sites that are projected to have problems attaining and/or maintaining the NAAQS in the 2023 analytic year. Where EPA's analysis shows that a site does not fall under the definition of a nonattainment or maintenance receptor, that site is excluded from further analysis under EPA's 4-step interstate transport framework. For sites that are identified as a nonattainment or maintenance receptor in 2023, EPA proceeds to the next step of the 4-step interstate transport framework by identifying the upwind state's contribution to those receptors.

EPA's approach to identifying ozone nonattainment and maintenance receptors in this action is consistent with the approach used in previous transport rulemakings. EPA's approach gives independent consideration to both the ''contribute significantly to nonattainment'' and the ''interfere with maintenance'' prongs of CAA section 110(a)(2)(D)(i)(I), consistent with the D.C. Circuit's direction in *North Carolina* v. *EPA.*[25]

For the purpose of this proposal, EPA identifies nonattainment receptors as those monitoring sites that are projected to have average design values that exceed the NAAQS and that are also measuring nonattainment based on the most recent monitored design values. This approach is consistent with prior transport rulemakings, such as the CSAPR Update, where EPA defined nonattainment receptors as those areas that both currently measure nonattainment and that EPA projects will be in nonattainment in the future analytic year (*i.e.,* 2023).[26]

In addition, in this proposal, EPA identifies a receptor to be a ''maintenance'' receptor for purposes of defining interference with maintenance, consistent with the method used in CSAPR and upheld by the D.C. Circuit in *EME Homer City Generation, L.P.* v. *EPA,* 795 F.3d 118, 136 (D.C. Cir. 2015).[27] Specifically, EPA identified maintenance receptors as those receptors that would have difficulty maintaining the relevant NAAQS in a scenario that takes into account historical variability in air quality at that receptor. The variability in air quality was determined by evaluating the ''maximum'' future design value at each receptor based on a projection of the maximum measured design value over the relevant period. EPA interprets the projected maximum future design value to be a potential future air quality outcome consistent with the meteorology that yielded maximum measured concentrations in the ambient data set analyzed for that receptor (*i.e.,* ozone conducive meteorology). EPA also recognizes that previously experienced meteorological conditions (*e.g.,* dominant wind direction, temperatures, air mass patterns) promoting ozone formation that led to maximum concentrations in the measured data may reoccur in the future. The maximum design value gives a reasonable projection of future air quality at the receptor under a scenario in which such conditions do, in fact, reoccur. The projected maximum design value is used to identify upwind emissions that, under those circumstances, could interfere with the downwind area's ability to maintain the NAAQS.

Recognizing that nonattainment receptors are also, by definition, maintenance receptors, EPA often uses the term ''maintenance-only'' to refer to those receptors that are not nonattainment receptors. Consistent with the concepts for maintenance receptors, as described above, EPA identifies ''maintenance-only'' receptors as those monitoring sites that have projected average design values above the level of the applicable NAAQS, but that are not currently measuring nonattainment based on the most recent official design values. In addition, those monitoring sites with projected average design values below the NAAQS, but with projected maximum design values above the NAAQS are also identified as ''maintenance-only'' receptors, even if they are currently measuring nonattainment based on the most recent official design values.

3. Step 2 of the 4-Step Interstate Transport Framework

In Step 2, EPA quantifies the contribution of each upwind state to each receptor in the 2023 analytic year. The contribution metric used in Step 2 is defined as the average impact from each state to each receptor on the days with the highest ozone concentrations at the receptor based on the 2023 modeling. If a state's contribution value does not equal or exceed the threshold of 1 percent of the NAAQS (*i.e.,* 0.70 ppb for the 2015 8-hour ozone NAAQS), the upwind state is not ''linked'' to a

[23] EPA notes that the court in *Maryland* did not have occasion to evaluate circumstances in which EPA may determine that an upwind linkage to a downwind air quality problem exists at Steps 1 and 2 of the interstate transport framework by a particular attainment date, but for reasons of impossibility or profound uncertainty the Agency is unable to mandate upwind pollution controls by that date. *See Wisconsin,* 938 F.3d at 320. The D.C. Circuit noted in *Wisconsin* that upon a sufficient showing, these circumstances may warrant flexibility in effectuating the purpose of the interstate transport provision.

[24] *See* CAA section 181(a); 40 CFR 51.1303; Additional Air Quality Designations for the 2015 Ozone National Ambient Air Quality Standards, 83 FR 25776 (June 4, 2018, effective August 3, 2018).

[25] *See North Carolina* v. *EPA,* 531 F.3d 896, 910–11 (D.C. Cir. 2008) (holding that EPA must give ''independent significance'' to each prong of CAA section 110(a)(2)(D)(i)(I)).

[26] *See* 81 FR 74504 (October 26, 2016). This same concept, relying on both current monitoring data and modeling to define nonattainment receptor, was also applied in CAIR. *See* 70 FR at 25241, 25249 (January 14, 2005); *see also North Carolina,* 531 F.3d at 913–14 (affirming as reasonable EPA's approach to defining nonattainment in CAIR).

[27] *See* 76 FR 48208 (August 8, 2011). The CSAPR Update and Revised CSAPR Update also used this approach. *See* 81 FR 74504 (October 26, 2016) and 86 FR 23054 (April 30, 2021).

downwind air quality problem, and EPA, therefore, concludes that the state does not significantly contribute to nonattainment or interfere with maintenance of the NAAQS in the downwind states. However, if a state's contribution equals or exceeds the 1 percent threshold, the state's emissions are further evaluated in Step 3, considering both air quality and cost as part of a multi-factor analysis, to determine what, if any, emissions might be deemed ''significant'' and, thus, must be eliminated under CAA section 110(a)(2)(D)(i)(I).

EPA is proposing to rely in the first instance on the 1 percent threshold for the purpose of evaluating a state's contribution to nonattainment or maintenance of the 2015 8-hour ozone NAAQS (*i.e.,* 0.70 ppb) at downwind receptors. This is consistent with the Step 2 approach that EPA applied in CSAPR for the 1997 ozone NAAQS, which has subsequently been applied in the CSAPR Update when evaluating interstate transport obligations for the 2008 ozone NAAQS. EPA continues to find 1 percent to be an appropriate threshold. For ozone, as EPA found in the CAIR, CSAPR, and the CSAPR Update, a portion of the nonattainment problems from anthropogenic sources in the U.S. result from the combined impact of relatively small contributions from many upwind states, along with contributions from in-state sources and, in some cases, substantially larger contributions from a subset of particular upwind states. EPA's analysis shows that much of the ozone transport problem being analyzed in this proposed rule is still the result of the collective impacts of contributions from many upwind states. Therefore, application of a consistent contribution threshold is necessary to identify those upwind states that should have responsibility for addressing their contribution to the downwind nonattainment and maintenance problems to which they collectively contribute. Continuing to use 1 percent of the NAAQS as the screening metric to evaluate collective contribution from many upwind states also allows EPA (and states) to apply a consistent framework to evaluate interstate emissions transport under the interstate transport provision from one NAAQS to the next. *See* 81 FR at 74518 (August 8, 2011); *see also* 86 FR at 23085 (April 30, 2021) (reviewing and explaining rationale from CSAPR, 76 FR at 48237–38 (August 8, 2011), for selection of 1 percent threshold).

EPA's August 2018 memorandum recognized that in certain circumstances, a state may be able to establish that an alternative contribution threshold of 1 ppb is justifiable. Where a state relies on this alternative threshold, and where that state determined that it was not linked at Step 2 using the alternative threshold, EPA will evaluate whether the state provided a technically sound assessment of the appropriateness of using this alternative threshold based on the facts and circumstances underlying its application in the particular SIP submission.

4. Step 3 of the 4-Step Interstate Transport Framework

Consistent with EPA's longstanding approach to eliminating significant contribution or interference with maintenance, at Step 3, states linked at Steps 1 and 2 are generally expected to prepare a multifactor assessment of potential emissions controls. EPA's analysis at Step 3 in prior Federal actions addressing interstate transport requirements has primarily focused on an evaluation of cost-effectiveness of potential emissions controls (on a marginal cost-per-ton basis), the total emissions reductions that may be achieved by requiring such controls (if applied across all linked upwind states), and an evaluation of the air quality impacts such emissions reductions would have on the downwind receptors to which a state is linked; other factors may potentially be relevant if adequately supported. In general, where EPA's or alternative air quality and contribution modeling establishes that a state is linked at Steps 1 and 2, it will be insufficient at Step 3 for a state merely to point to its existing rules requiring control measures as a basis for approval. In general, the emissions-reducing effects of all existing emissions control requirements are already reflected in the air quality results of the modeling for Steps 1 and 2. If the state is shown to still be linked to one or more downwind receptor(s), states must provide a well-documented evaluation determining whether their emissions constitute significant contribution or interference with maintenance by evaluating additional available control opportunities by preparing a multifactor assessment. While EPA has not prescribed a particular method for this assessment, EPA expects states at a minimum to present a sufficient technical evaluation. This would typically include information on emissions sources, applicable control technologies, emissions reductions, costs, cost effectiveness, and downwind air quality impacts of the estimated reductions, before concluding that no additional emissions controls should be required.[28]

5. Step 4 of the 4-Step Interstate Transport Framework

At Step 4, states (or EPA) develop permanent and federally enforceable control strategies to achieve the emissions reductions determined to be necessary at Step 3 to eliminate significant contribution to nonattainment or interference with maintenance of the NAAQS. For a state linked at Steps 1 and 2 to rely on an emissions control measure at Step 3 to address its interstate transport obligations, that measure must be included in the state's implementation plan so that it is permanent and federally enforceable. *See* CAA section 110(a)(2)(D) (''Each such [SIP] shall . . . contain adequate provisions. . . .''). *See also* CAA section 110(a)(2)(A); *Committee for a Better Arvin* v. *EPA,* 786 F.3d 1169, 1175–76 (9th Cir. 2015) (holding that measures relied on by a state to meet CAA requirements must be included in the SIP).

II. Summary of Kentucky's 2015 8-Hour Ozone Interstate Transport SIP Submission

On January 11, 2019, Kentucky submitted a SIP revision, a portion of which addressed the CAA section 110(a)(2)(D)(i)(I) interstate transport requirements for the 2015 8-hour ozone NAAQS. The Commonwealth's SIP submission provided Kentucky's analysis of its impact to downwind states and concluded that the Commonwealth had met the requirements of CAA section l10(a)(2)(D)(i)(I) (*i.e.,* prongs 1 and 2) because Kentucky's SIP contains adequate provisions to prevent sources and other types of emissions activities within the Commonwealth from significantly contributing to nonattainment, or interfering with the maintenance, of downwind states with respect to the 2015 8-hour ozone NAAQS.

The Commonwealth's submission relied on the results of EPA's modeling of the year 2023, contained in the March 2018 memorandum, to identify downwind nonattainment and

[28] As examples of general approaches for how such an analysis could be conducted for their sources, states could look to the CSAPR Update, 81 FR 74504, 74539–51; CSAPR, 76 FR 48208, 48246–63; CAIR, 70 FR 25162, 25195–229; or the NO_X SIP Call, 63 FR 57356, 57399–405. *See also* Revised CSAPR Update, 86 FR 23054, 23086–23116. Consistently across these rulemakings, EPA has developed emissions inventories, analyzed different levels of control stringency at different cost thresholds, and assessed resulting downwind air quality improvements.

maintenance receptors that may be ''linked'' to emissions from sources in Kentucky (which correlates to Step 1 of the 4-step framework).[29] The March 2018 modeling indicates that the Commonwealth was linked to four nonattainment receptors and one maintenance monitor above 1% of the NAAQS. The largest impact from Kentucky sources on any downwind nonattainment receptor in the East was projected to be 0.89 ppb at the Fairfield County, Connecticut (ID: 90013007) site. The other nonattainment receptors to which Kentucky was linked are: a second site in Fairfield County (ID: 90019003); Milwaukee, Wisconsin (ID: 550790085); and Sheboygan, Wisconsin (ID: 551170006). The impact from Kentucky sources on the one downwind maintenance-only receptor to which it was linked in that modeling was 1.52 ppb at the Harford County, Maryland monitor (ID: 240251001).

The Commonwealth reviewed EPA's August 2018 memorandum as it related to the use of a potential alternative contribution threshold of 1 ppb and agreed that use of a 1 ppb contribution threshold is comparable to the amount of collective contribution captured using a threshold equivalent to 1 percent of the NAAQS. Based on the March 2018 modeling and application of a 1 ppb alternative contribution threshold, the Commonwealth found that it would not be linked as a significant contributor to the four nonattainment receptors in Connecticut and Wisconsin (which correlates to EPA's Step 2), and therefore concluded that no further controls were required to address its contribution to those four receptors. Thus, the Commonwealth concluded that Kentucky's SIP contains adequate provisions to prevent sources and other types of emissions activities within the Commonwealth from contributing significantly to nonattainment in any other state (*i.e.,* ''prong 1'' of CAA section l10(a)(2)(D)(i)(I)) for the 2015 8-hour ozone NAAQS.

After application of the 1 ppb contribution threshold, Kentucky remained linked to the downwind maintenance-only receptor at Harford County, Maryland (ID: 240251001) because the Commonwealth's contribution of 1.52 ppb to this receptor was greater than the 1 ppb alternative threshold. Kentucky's SIP submission asserted that the amount of NO_X emission reductions required for an upwind state should not be the same for a monitor that is already attaining the NAAQS as they are for a nonattainment monitor. The Commonwealth further asserted that local controls should be implemented before requiring upwind states to control their sources. Thus, Kentucky concluded that no further reductions other than on-the-books and on-the-way measures are required to address the Commonwealth's interstate transport obligation to eliminate its contribution to the Harford County, Maryland maintenance receptor.

In addition, Kentucky provided information intended to demonstrate that Kentucky's SIP contains adequate provisions to prevent sources and other types of emissions activities within the Commonwealth from significantly contributing to nonattainment, or interfering with the maintenance, of downwind states with respect to the 2015 8-hour ozone NAAQS, and thus, no additional emissions reductions from Kentucky are necessary. Specifically, Kentucky listed existing state, SIP-approved regulations and Federal programs for sources in the Commonwealth that it concluded address the requirements of CAA 110(a)(2)(D)(i)(I) for the 2015 8-hour ozone NAAQS.[30] Kentucky provided more detailed analyses related to several specific topics, which are summarized in sections below.

The Commonwealth also included documents attached as appendices to its submittal. The March 2018 memorandum and the August 2018 memorandum were attached at appendices A and B, respectively.[31] As Appendix C, the Commonwealth appended several documents developed and/or submitted by the Midwest Ozone Group (a consortium of upwind industries with emitting facilities).[32] This included a modeling analysis developed by Alpine Geophysics titled ''Good Neighbor Modeling Technical Support Document for the 8-hour Ozone State Implementation Plans,'' dated June 2018 (Alpine TSD). The Alpine TSD contains alternative modeling of 2023 performed by Alpine Geophysics sponsored by MOG, as well as additional policy suggestions that MOG suggested states could consider in developing good neighbor SIP submissions (see section 9 of the Alpine TSD).[33] The Alpine TSD also appended a separate set of MOG comments on EPA's March 2018 memorandum.[34] These comments and Alpine's modeling analysis were further summarized in a Microsoft PowerPoint Presentation titled ''MOG's Preview of 2015 Ozone NAAQS Good Neighbor SIPs.'' EPA also summarizes the materials developed by MOG that the Commonwealth included as Appendix C to its submittal, although it is unclear that Kentucky intended to rely on all aspects of these materials.

A. Information Related to Emission Trends From Kentucky Sources

With respect to ozone precursors emitted from Kentucky sources, Kentucky focused its analysis on NO_X emissions, as it found that ozone is far more sensitive to NO_X emissions than VOC emissions in the Southeastern United States and that controlling NO_X emissions is a more effective strategy in reducing ozone. Kentucky reviewed NO_X emissions trends in the Commonwealth, comparing annual NO_X emissions from 2008 to 2016, finding that NO_X emissions in Kentucky have significantly decreased since 2008. The Commonwealth asserted that it has significantly lowered NO_X emissions between 2008 and 2017 [35] and contended that planned shutdowns and

[29] EPA notes that Kentucky's SIP submission is not organized around EPA's 4-step framework for assessing good neighbor obligations, but EPA summarizes the submission using that framework for clarity here.

[30] See Kentucky's January 11, 2019, SIP submission, at pages 20 through 30 for the list of state, SIP-approved regulations and Federal programs identified by Kentucky.

[31] See the following Appendices to Kentucky's January 11, 2019, submission: Appendix A—Information on the Interstate Transport State Implementation Plan Submissions for the 2015 Ozone National Ambient Air Quality Standards under Clean Air Act Section 110(a)(2)(D)(i)(I), March 27, 2018 (''March 2018 memorandum''); Appendix B—Analysis of Contribution Thresholds for Use in Clean Air Act Section 110(a)(2)(D)(i)(I) Interstate Transport State Implementation Plan Submissions for the 2015 Ozone National Ambient Air Quality Standards, August 31, 2018; and Appendix D—Public Hearing & Statement of Consideration.

[32] See Appendix C to Kentucky's January 11, 2019, submission—Midwest Ozone Group Technical Support Document: ''Good Neighbor Modeling Technical Support Document for 8-Hour Ozone Implementation Plans.''

[33] It is unclear whether Kentucky intends to rely on all of the data and policy approaches in Appendix C as included in its submittal, or if these documents were appended solely to support specific policy and technical arguments relied on by Kentucky in its submittal.

[34] See the following Appendices to Appendix C—Midwest Ozone Group Technical Support Document: ''Good Neighbor Modeling Technical Support Document for 8-Hour Ozone Implementation Plans of Kentucky's January 11, 2019: Appendix A—4km Modeling Results for Mid-Atlantic and Lake Michigan Domains Compared to EPA 12 km ''No Water'' Design Value Calculations from March 2018 Memorandum; Appendix B—Midwest Ozone Group Comments on EPA's March 27, 2018 Memorandum Entitled ''Information on the Interstate Transport State Implementation Plan Submissions for the 2015 Ozone National Ambient Air Quality Standards under Clean Air Act Section 110(a)(2)(D)(i)(I); Appendix C—Presentation—Midwest Ozone Group Preview of 2015 Ozone NAAQS Good Neighbor SIPs.

[35] Table 2 in Kentucky's SIP provides historic annual NO_X emissions data for point sources in the state from 2008 through 2016, however, the associated graph at Chart 1 indicates annual NO_X emissions from 2008 through 2017.

conversion to natural gas, along with the implementation of Federal and State programs, ensure Kentucky's emissions will continue to decrease. Based on the 2014 national emission inventory (NEI), Kentucky indicated that the major contributor of NO_X emissions in the Commonwealth are point sources, mainly comprised of electric generating units (EGUs).

Kentucky asserted that NO_X emissions from EGUs in the Commonwealth have decreased and would continue to decrease based, in part, on the implementation of CAIR, CSAPR, and the CSAPR Update, as well as retirements of several EGUs in the Commonwealth. The Commonwealth compared Kentucky's NO_X ozone season allocations to actual EGU emissions in the Commonwealth, concluding that Kentucky's NO_X ozone season budgets have decreased since the implementation of CSAPR and the CSAPR Update and actual ozone season NO_X emissions are significantly lower than the trading program budgets.[36] The SIP submission summarized coal-fired unit retirements, shutdowns, and repowering from 2015 through 2017 as well as on-the-way reductions from natural gas conversions and retirements from 2017 through 2023.[37] Kentucky stated that it expected emissions will continue to decline in the future due to continued implementation of CSAPR, the CSAPR Update, and scheduled shutdowns, fuel switches, and retirements of facilities in the Commonwealth.

B. Information Related to Connecticut Monitors Provided by Kentucky

EPA's March 2018 modeling showed Kentucky linked to the two receptors located in Fairfield County, Connecticut, which is part of the New York-Northern New Jersey-Long Island, NY-NJ-CT (New York Metro Area) core based statistical area (CBSA).[38] Kentucky applied an alternative contribution threshold of 1 ppb, and thus determined that Kentucky was no longer linked to the Connecticut receptors. In addition, Kentucky provided information intended to demonstrate that emissions from local sources in the area surrounding the monitors contribute significantly to the continued nonattainment issues, and thus, that local controls should be implemented before requesting upwind states to control facilities.

In particular, Kentucky's SIP submission claims that the Westport Sherwood, Fairfield, Connecticut (ID: 90019003) and Stratford Point Lighthouse, Fairfield County (ID: 90013007) monitors are located less than three miles from the I–95 interstate highway corridor and over 500 miles from Kentucky. Kentucky asserted these monitors have a consistent pattern of violating the 2015 8-hour ozone NAAQS from 2007 to 2016. Kentucky also pointed out that it is not linked in the modeling to two other nonattainment receptors (the Greenwich Point Park and Criscuolo Park monitoring sites) that are in relatively close proximity to the Westport and Stratford monitors. Kentucky compared the distances between these sites with the distances of the sites to Kentucky's nearest border.

Kentucky's SIP submission also provided information related to the New York Metro Area, citing the 2014 NEI to state that the on-road source sector contributed the highest amount of NO_X emissions and that the nonpoint source sector contributed the highest amount of VOC emissions in that area. The Commonwealth further provided information about high vehicle miles traveled (VMT) and commuting patterns in the New York Metro Area, as well as information regarding violating monitors along the I–95 corridor and outlying monitors that show attainment.

Additionally, Kentucky's SIP submission includes Hybrid Single Particle Lagrangian Integrated Trajectory (HYSPLIT) model back trajectory analysis to the two Connecticut receptors,[39] asserting that the HYSPLIT analysis indicates that the monitors are downwind of nonattainment areas in New York, New Jersey, Pennsylvania, and Maryland. The Commonwealth also asserted there is a consistent pattern of violating monitors located along the I–95 corridor. In addition, Kentucky asserted that pollutants are trapped in the marine boundary layer and then transported inland to coastal Connecticut receptors due to conditions on Long Island Sound.

The Commonwealth's SIP submission also discussed point sources in the New York Metro Area, providing information regarding the largest point sources in that area. In addition, Kentucky provided NO_X and VOC emission information for 13 counties in the New York Metro Area that have NO_X and VOC emission totals above 10,000 tpy, finding that three counties that surround Fairfield County (Suffolk, Queens, and Nassau Counties) had the highest NO_X emissions.

Kentucky further evaluated high electric demand days in New York, discussing a New York Department of Environmental Conservation (NYDEC) determination that peaking units operating on peak electricity demand days are a major contributor of NO_X (particularly units installed before 1987), and that such units can contribute 4.8 ppb of ozone on high ozone days.[40] Kentucky concluded NO_X emission reductions from these EGUs point sources would have a significant impact on ozone levels in the New York Metro Area.

C. Information Related to the Harford, Maryland Monitor Provided by Kentucky

Kentucky acknowledged that EPA's March 27, 2018 modeling shows the potential for Kentucky emissions to significantly contribute to the Edgewood, Harford County, Maryland (ID: 240251001) maintenance-only monitor (Edgewood monitor) in 2023. However, Kentucky provided air quality data designed to demonstrate that emissions from local sources in the area surrounding the monitors contribute significantly to the continued air quality issues and concluded that there are local controls that should be implemented before requesting upwind states to control facilities.

Kentucky provided additional information with respect to the Edgewood Monitor, which is located 3 miles from the I–95 corridor and approximately 350 miles from Kentucky. Kentucky provided data to show that the Edgewood monitor consistently violated the 2015 8-hour ozone standard from 2007 to 2016. Kentucky also provided information related to other nonattainment monitors located in Baltimore County and Harford County.

The Commonwealth's SIP submission provided data related to the Baltimore-

[36] Kentucky's SIP acknowledged that the CSAPR trading program does not address interstate transport for the 2015 standard but nonetheless provides NO_X emission reductions.

[37] See Kentucky's January 11, 2019, submittal located in Docket No. EPA–R04–OAR–2021–0841, at pages 32–33 for discussion on implementation of CSAPR, the CSAPR Update, EGU retirements, and EGU fuel switches.

[38] EPA's designations for the 2015 8-hour ozone standard divided the state into two areas, Greater Connecticut, CT, with a marginal classification, and New York-Northern New Jersey-Long Island, NY-NJ-CT (New York Metro Area), with a moderate classification. *See https://www.epa.gov/ozone-designations/additional-designations-2015-ozone-standards.*

[39] According to Kentucky, the HYSPLIT analysis were generated using EPA's 2015 Ozone Designation Mapping Tool, available at *https://www.epa.gov/ozone-designations/ozone-designations-guidance-and-data#:~:text=The%20ozone%20designations%20mapping%20tool,for%20the%202015%20Ozone%20NAAQS.*

[40] Kentucky references NYDEC emission analysis entitled ''Background, High Electric Demand Day (HEDD) Initiative'', New York Department of Environmental Conservation.

Columbia-Towson, MD CBSA (Baltimore Area), citing to the 2014 NEI to state that the on-road source sector contributed the highest amount of NO_X emissions and that the nonpoint source sector contributed the highest amount of VOC emissions in that area. Kentucky further provided information about VMTs and commuting patterns in the Baltimore Area, as well as information regarding violating monitors along the I–95 corridor and outlying monitors that show attainment. The SIP submission asserted that local mobile emissions are a key contributor to the Edgewood monitor, which is also located in close proximity to the 1–95 corridor. Kentucky further cited to a presentation and remarks by Maryland officials, discussing programs to reduce emissions from local sources, specifically focusing on mobile source NO_X reduction programs.

Kentucky cited a 2010 case study in the Chesapeake Bay that suggests the transport of pollution from nearby urban areas accumulates over the Bay and becomes stagnant, creating a bay breeze which is pushed by southerly winds northward towards the Edgewood monitor. Additionally, Kentucky's SIP submission also provided HYSPLIT model back trajectory analysis to the Edgewood receptor,[41] asserting that the HYSPLIT indicates that the monitors are downwind of nonattainment areas in Baltimore County, Baltimore City, Arlington County, and the District of Columbia. Kentucky also asserted that higher altitude particles from the northwest of Baltimore combine with lower-level particles from the south and southeast.

Kentucky's submission used information on local mobile emissions along the I–95 corridor and coastal air pollution formation and accumulation along the Maryland coast to support its conclusion that local air quality problems are the source of ozone violations at these monitors.

Additionally, Kentucky asserted that the implementation of local programs to reduce emissions should be sufficient for monitors in the Maryland area to attain the 2015 8-hour ozone NAAQS. Kentucky cited claims by MOG (appended to the submittal in Appendix C) that the modeling in EPA's March 2018 memorandum does not account for additional retirements, conversions, and modifications or emission control programs expected to be implemented before 2023. Kentucky concluded that because the Edgewood monitor is a maintenance receptor, the Commonwealth believes that no further reductions from Kentucky sources other than on-the-books controls should be required because maintenance receptors should be treated differently than nonattainment receptors in terms of upwind requirements. The Commonwealth also asserted that states linked to maintenance receptors should be held to less stringent standards of emissions reductions as compared to states linked to a nonattainment receptor.

The Commonwealth also asserted that local emission controls should be implemented before upwind states are required to control their facilities, which is based on Kentucky's concurrence with statements from MOG. The Commonwealth cited MOG's comments on local controls stating: ''When an area is measuring nonattainment of a NAAQS, as is the case with the areas linked to Kentucky, the CAA requires that the effects and benefits of local controls on all source sectors be considered first, prior to pursuing controls of sources in upwind states.'' [42] The Commonwealth concluded that the emissions reductions resulting from on-the-books and on-the-way measures are adequate to prohibit emissions within Kentucky from interfering with the maintenance of downwind states with respect to the 2015 8-hour ozone NAAQS.

D. Summary of Conclusions From Kentucky

In summary, based on Kentucky's reliance on the modeling results in EPA's March 2018 memorandum, the Commonwealth found that emissions from Kentucky sources were potentially linked to four nonattainment monitors in Connecticut and Wisconsin and one maintenance receptor in Harford County, Maryland. However, after utilizing a 1 ppb alternative contribution threshold, the Commonwealth concluded that it was no longer linked to the four nonattainment monitors, and thus, that the Kentucky SIP contains adequate provisions to prevent sources and other types of emissions activities within the State from contributing significantly to nonattainment in any other state (*i.e.,* ''prong 1'' of CAA section 110(a)(2)(D)(i)(I)) for the 2015 8-hour ozone NAAQS. Although modeling results indicated that Kentucky remained linked to the maintenance-only receptor in Harford County, Maryland, even after the application of the 1 ppb alternative threshold, Kentucky asserted that states should not be required to apply the same degree of reductions for maintenance receptors as nonattainment areas, and determined that additional NO_X emission reductions other than those that are on-the-books or on-the-way are not required to address its downwind contribution to that receptor. Kentucky further provided an assessment of local sources in the vicinity of the Connecticut and Maryland monitors and concluded that local (particularly mobile) emissions, high VMTs and commuting patterns, and weather patterns are the primary cause of violating monitors in these areas. Therefore, Kentucky concluded that its SIP has adequate provisions to prohibit emissions from interfering with maintenance in another state (*i.e.,* ''prong 2'' of CAA section 110(a)(2)(D)(i)(I)) with respect to the 2015 8-hour ozone NAAQS.

E. Summary of Midwest Ozone Group TSD Appended to Kentucky's Submittal

Kentucky attached several materials developed by MOG to its submittal as Appendix C, which included a document titled '' 'Good Neighbor' Modeling Technical Support Document for 8-Hour Ozone State Implementation Plans'' prepared by Alpine Geophysics.[43] The Alpine Geophysics document also attached the following documents: 4 kilometer (km) modeling results for mid-Atlantic and Lake Michigan domains compared to EPA 12 km ''No Water'' Design Value Calculations from March 2018 memorandum (Appendix A); MOG comments on EPA's March 2018 memorandum (Appendix B); and a Microsoft PowerPoint presentation from MOG previewing 2015 8-hour ozone NAAQS good neighbor SIPs (Appendix C). EPA notes a number of modeling results and technical and policy arguments provided in the MOG attachments are not explicitly discussed in Kentucky's SIP submission narrative. Therefore, it is unclear whether Kentucky intended to rely on Alpine's modeling or MOG's policy argument to support the Commonwealth's overall transport SIP conclusions. To ensure review of all potentially relevant technical and policy issues identified in Kentucky's SIP package, this section summarizes key arguments presented in

[41] According to Kentucky, the HYSPLIT analysis were generated using EPA's 2015 Ozone Designation Mapping Tool, available at *https://www.epa.gov/ozone-designations/ozone-designations-guidance-and-data#:~:text=The%20ozone%20designations%20mapping%20tool,for%20the%202015%20Ozone%20NAAQS.*

[42] Kentucky's SIP references MOG's comments that cite CAA sections 107(a) and 110(a)(1).

[43] *See* Appendix C of Kentucky's January 11, 2019, transport SIP submission.

Appendix C. However, in EPA's evaluation of the SIP submittal in section III, EPA will differentiate between those positions clearly adopted by the Commonwealth and those where it is unclear and therefore a position espoused by MOG cannot be attributed to Kentucky.

Appendix C included modeling results performed by Alpine Geophysics as presented in the Alpine TSD. The Alpine modeling results identified the Harford, Maryland receptor as a nonattainment receptor, with Kentucky emissions contributing 2.07 ppb. In addition, the Alpine modeling results identified Kentucky linkages above 1 percent to the following maintenance-only receptors: Gloucester, New Jersey (ID: 340150002), with a Kentucky contribution of 1.69 ppb; Richmond, New York (ID: 360850067), with a Kentucky contribution of 0.93; and Philadelphia, Pennsylvania (ID: 421010024), with a Kentucky contribution of 1.53. (While MOG asserts in separate comments that emission reductions not accounted for in EPA's modeling suggests there will be no receptors by 2023, this is not consistent with Alpine's modeling.)

The Alpine TSD also evaluated additional approaches and flexibilities that states could apply in SIP revisions, based on the potential concepts provided in Appendix A of EPA's March 2018 memorandum.[44] These included reliance on alterative modeling data, evaluation of international contributions (both anthropogenic contribution and as an additional percentage of boundary conditions), alternate contribution thresholds, proportional control of upwind emissions by level of upwind state contribution, and addressing interference with maintenance obligations through use of 10-year projections.

MOG suggested states should be allowed to select multiple sources of modeling data rather than a single modeling simulation if such information is considered equally credible when making policy decisions related to the development of good neighbor SIPs.

With respect to international emissions, MOG cited to an attachment to EPA's 2018 memorandum and asserts that EPA's and Alpine's contribution modeling tracks and reports the relative impact contributions of anthropogenic emissions located within the 36 km modeling domain. Considering this information, MOG concluded that states seeking to avoid overcontrol may wish to consider removing that portion of the projected design value that is explicitly attributed to international anthropogenic contribution, which may be enough to demonstrate attainment with the 2008 or 2015 8-hour ozone NAAQS at multiple monitors in the U.S.

With respect to potential use of alternative contribution thresholds, MOG pointed to states raising concerns that the 1 percent threshold is more stringent than the 2016 EPA Significant Impact level (SIL) guidance of 1 ppb, which is designed as an individual source or group of sources' contribution limit (in the context of prevention of significant deterioration (PSD) permitting).[45] MOG suggested that states could submit SIP revisions citing the SIL of 1 ppb as an acceptable total state anthropogenic contribution threshold under Step 2 of the 4-step process, and request relief from the 1 percent threshold in lieu of using an alternate value.

MOG presented an alternative approach to how upwind-state emission reduction obligations could be allocated. Specifically, MOG proposed that upwind reductions could be allocated in proportion to the size of their contribution to downwind nonattainment. To illustrate this approach, MOG determined a proportional reduction requirement associated with the relative contribution from each upwind state to the Harford County, Maryland monitor. Under this analysis, MOG's approach indicated that Kentucky would be responsible for a 0.02 ppb reduction at the monitor and ''would then need to craft a [good neighbor SIP] revision to generate reductions associated with this proportional amount.''

With respect to ''interference with maintenance'' obligations, MOG suggested that an upwind state could choose to indicate that no additional controls would be needed to address a maintenance monitor if the upwind state can show that either the monitor is likely to remain in attainment for a period of 10 years or that the upwind state's emissions will not increase for 10 years after the attainment date.

III. EPA's Evaluation of Kentucky's 2015 8-Hour Ozone Interstate Transport SIP Submission

EPA is proposing to find that Kentucky's January 11, 2019, SIP submission does not meet the Commonwealth's obligations with respect to prohibiting emissions that contribute significantly to nonattainment or interfere with maintenance of the 2015 8-hour ozone NAAQS in any other state based on EPA's evaluation of the SIP submission using the 4-step interstate transport framework, and therefore EPA is proposing to disapprove Kentucky's SIP submission.

A. Results of EPA's Step 1 and Step 2 Modeling and Findings for Kentucky

As described in section I, EPA performed updated air quality modeling to project design values and contributions for 2023. These data were examined to determine if Kentucky contributes at or above the threshold of 1 percent of the 2015 8-hour ozone NAAQS (0.70 ppb) to any downwind nonattainment or maintenance receptor. As shown in Table 1, the data[46] indicate that in 2023, emissions from Kentucky contribute greater than 1 percent of the standard to nonattainment or maintenance-only receptors in Bucks County, Pennsylvania (ID: 420170012), New Haven County, Connecticut (ID: 90099002), and Fairfield County, Connecticut (ID: 90019003 and 90013007).[47]

[44] *See* Section 9.0—Selected SIP Revision Approaches in Appendix C—MOG's TSD of Kentucky's January 11, 2019 transport SIP submission.

[45] MOG cited to the Georgia Environmental Protection Division's comment on EPA's March 2018 Memorandum to support this claim. *See* Section 9.0—Selected SIP Revision Approaches in Appendix C—MOG's TSD of Kentucky's January 11, 2019 transport SIP submission, *citing* Boylan, J. W. (May 4, 2018). Georgia EPD Comments on EPA's March 27, 2018 Interstate Transport Memo [Memorandum].

[46] The ozone design values and contributions at individual monitoring sites nationwide are provided in the file ''2016v2_DVs_state_contributions.xlsx'' which is included in Docket No. EPA–HQ–OAR–2021–0663.

[47] These modeling results are consistent with the results of a prior round of 2023 modeling using the 2016v1 emissions platform which became available to the public in the fall of 2020 in the Revised CSAPR Update, as noted in section I. That modeling showed that Kentucky had a maximum contribution greater than 0.70 ppb to at least one nonattainment or maintenance-only receptor in 2023. These modeling results are included in the file ''Ozone Design Values And Contributions Revised CSAPR Update.xlsx'' in Docket No. EPA–HQ–OAR–2021–0663.

TABLE 1—KENTUCKY LINKAGE RESULTS BASED ON EPA UPDATED 2023 MODELING

Receptor ID	Location	County	Nonattainment/ maintenance	2023 average design value (ppb)	2023 maximum design value (ppb)	Kentucky contribution (ppb)
420170012	Pennsylvania	Bucks	Maintenance	70.7	72.2	0.88
90099002	Connecticut	New Haven	Nonattainment	71.8	73.9	0.83
90019003	Connecticut	Fairfield	Nonattainment	76.1	76.4	0.82
90013007	Connecticut	Fairfield	Nonattainment	74.2	75.1	0.77

B. Evaluation of Information Provided by Kentucky Regarding Step 1

At Step 1 of the 4-step interstate transport framework, Kentucky relied on EPA modeling released in the March 2018 memorandum to identify nonattainment and maintenance receptors in 2023 and also included results from modeling performed by Alpine. As described previously in this notice, EPA has recently updated its 2023 modeling using the most current and technically appropriate information. EPA proposes to rely on EPA's most recent modeling to identify nonattainment and maintenance receptors in 2023. However, even using EPA modeling available to Kentucky at the time of its SIP submittal, three nonattainment receptors and one maintenance-only receptor were projected in 2023 to which Kentucky was linked above 1 percent of the NAAQS. In addition, the Alpine modeling that Kentucky appended to its submittal also indicated that Kentucky was linked to several receptors in 2023.[48] Kentucky appended comments from MOG arguing that states should be allowed to select multiple sources of modeling data rather than a single modeling simulation if such information is considered equally credible when making policy decisions related to the development of good neighbor SIPs. Whether EPA's most recent 2023 modeling is relied on, or whether it is considered in conjunction with its older 2023 modeling and/or the Alpine modeling, the results consistently identify several nonattainment or maintenance receptors to which Kentucky is linked above 1 percent of the 2015 8-hour ozone NAAQS.

As discussed in section II.E, Kentucky attached documents from MOG that discussed international transport of emissions and their contribution to U.S. ozone monitors, and argued that states could remove that portion of the projected design value explicitly attributed to international anthropogenic contribution. MOG asserted that excluding the international anthropogenic contributions could result in attainment with the 2008 or 2015 8-hour ozone NAAQS at ozone monitors in the United States, thus potentially eliminating 2023 receptors. Kentucky did not explicitly discuss in its SIP submittal MOG's arguments regarding contributions from international emissions and therefore it is unclear if the Commonwealth intended to rely on this argument to support their conclusion, however, EPA is providing its analysis related to these arguments.

EPA disagrees that excluding international contribution (whether from North American international anthropogenic, boundary conditions, or other international sources) from the projected design value of receptors is acceptable under the CAA.[49] The good neighbor provision requires states and EPA to address interstate transport of air pollution that *contributes to* downwind states' ability to attain and maintain NAAQS. Whether emissions from other states or other countries also contribute to the same downwind air quality issue is irrelevant in assessing whether a downwind state has an air quality problem, or whether an upwind state is significantly contributing to that problem. States are not obligated under CAA section 110(a)(2)(D)(i)(I) to reduce emissions sufficient on their own to resolve downwind receptors' nonattainment or maintenance problems. Rather, states are obligated to eliminate their own ''significant contribution'' or ''interference'' with the ability of other states to attain or maintain the NAAQS.

Indeed, the D.C. Circuit in *Wisconsin* specifically rejected petitioner arguments suggesting that upwind states should be excused from good neighbor obligations on the basis that some other source of emissions (whether international or another upwind state) could be considered the ''but-for'' cause of downwind air quality problem. *See* 938 F.3d at 323–324. The court viewed petitioners' arguments as essentially an argument ''that an upwind State 'contributes significantly' to downwind nonattainment only when its emissions are the sole cause of downwind nonattainment.'' *See* 938 F.3d at 324. The court explained that ''an upwind State can 'contribute' to downwind nonattainment even if its emissions are not the but-for cause.'' *Id.* at 324–325. *See also Catawba County* v. *EPA,* 571 F.3d 20, 39 (D.C. Cir. 2009) (rejecting the argument ''that 'significantly contribute' unambiguously means 'strictly cause' '' because there is ''no reason why the statute precludes EPA from determining that [an] addition of [pollutant] into the atmosphere is significant even though a nearby county's nonattainment problem would still persist in its absence''); *Miss. Comm'n on Envtl. Quality* v. *EPA,* 790 F.3d 138, 163 n.12 (D.C. Cir. 2015) (observing that the argument that ''there likely would have been no violation at all . . . if it were not for the emissions resulting from [another source]'' is ''merely a rephrasing of the but-for causation rule that we rejected in *Catawba County*.''). Therefore, a state is not excused from eliminating its significant contribution on the basis that international emissions also contribute some amount of pollution to the same receptors to which the state is linked.

C. Evaluation of Information Provided by Kentucky Regarding Step 2

At Step 2 of the 4-step interstate transport framework, Kentucky relied on EPA modeling released in the March 2018 memorandum to identify upwind state linkages to nonattainment and maintenance receptors in 2023 and included results from modeling run by

[48] The Alpine modeling results identified the Harford, Maryland receptor as a nonattainment receptor, with Kentucky emissions contributing 2.07 ppb. In addition, the Alpine modeling results identified Kentucky linkages above 1 percent to the following maintenance-only receptors: Gloucester, New Jersey (ID: 340150002), with a Kentucky contribution of 1.69 ppb; Richmond, New York (ID: 360850067), with a Kentucky contribution of 0.93; and Philadelphia, Pennsylvania (ID: 421010024), with a Kentucky contribution of 1.53.

[49] To the extent that MOG cited Attachment A to EPA's March 2018 memorandum as suggesting support for this approach, this is incorrect. As discussed in section I.D, the attachment summarized ideas from outside stakeholders, and EPA did not endorse such approaches as technically or legally appropriate. Further, nothing in Attachment A suggested that international contribution could simply be subtracted from a downwind receptor's projected design value.

Alpine. Both EPA's modeling released in the March 2018 memorandum as well as Alpine's modeling indicate that Kentucky is linked to downwind monitors.[50] As Kentucky attached Alpine's modeling without discussing it in the narrative of the submittal, it is unclear whether Kentucky intended to rely on Alpine's modeling in its submittal.

As described in section I.C of this notice, EPA has recently updated modeling to identify upwind state contributions to nonattainment and/or maintenance receptors in 2023. In this notice, EPA proposes to rely on the Agency's most recently available modeling to identify upwind contributions and ''linkages'' to downwind air quality problems in 2023 using a threshold of 1 percent of the NAAQS. *See* section I.D for a general explanation of the use of 1 percent of the NAAQS.

As shown in Table 1, updated EPA modeling identifies Kentucky's maximum contribution to a downwind nonattainment or maintenance receptor is greater than 1 percent of the standard (i.e., 0.70 ppb).

Kentucky, however, argued in its SIP submittal for the use of an alternative 1 ppb contribution threshold at Step 2 to attempt to demonstrate that it was no longer ''linked'' to projected downwind nonattainment receptors. Specifically, Kentucky cited EPA's August 2018 memorandum as supporting the use of a 1 ppb alternative contribution threshold at Step 2 to assert that the Commonwealth was no longer ''linked'' to projected downwind nonattainment receptors, while conceding that even under this alternative threshold, it was linked above 1 ppb to the projected Harford, Maryland maintenance-only receptor. EPA's most recent modeling of 2023 no longer identifies the Harford, Maryland monitoring site as either a maintenance or nonattainment receptor. Nonetheless, Kentucky is linked above 1 percent of the NAAQS but less than 1 ppb to the four receptors in EPA's most recent modeling. Therefore, whether Kentucky's use of an alternative 1 ppb contribution threshold is approvable is potentially a dispositive question in EPA's evaluation.

EPA proposes to find that Kentucky's reliance on an alternative contribution threshold of 1 ppb at Step 2 is not approvable. EPA acknowledges that the August 2018 memorandum generally recognized that a 1 ppb threshold may be appropriate for states to use, but also made clear that this guidance would be applied under the facts and circumstances of each particular SIP submittal.[51] However, Kentucky did not provide a technical analysis to sufficiently justify use of an alternative 1 ppb threshold at the linked, downwind monitors. Kentucky's SIP submission simply stated that the Commonwealth agrees with EPA's rationale set out in the August 2018 memorandum that the amount of upwind collective contribution captured with the 1 percent and 1 ppb thresholds was generally comparable. But the guidance anticipated that states would evaluate whether the alternative threshold was appropriate under their specific facts and circumstances, not that the use of the alternative threshold would be automatically approvable.[52] With respect to the assertion that 1 ppb was generally comparable to 1 percent, Kentucky did not provide discussion or analysis containing information specific to Kentucky or a receptor analysis for the affected monitors, as anticipated in the 2018 memorandum, to evaluate whether the alternative threshold was appropriate to apply with respect to the monitors to which Kentucky was linked. Such state-specific information is necessary to thoroughly evaluate the state-specific circumstances that could support approval. Given the absence of technical analysis to support the use of a 1 ppb threshold under the facts and circumstances relevant to Kentucky and its linked receptors, EPA proposes that the use of 1 ppb as a contribution threshold is not approvable.[53] (As discussed in section III.C.1 below, EPA no longer intends to dedicate resources to supplement state submittals with insufficient analysis in this regard, and also has identified other policy and programmatic concerns with attempting to recognize alternative thresholds at Step 2 or otherwise deviating from its historical, consistent practice since CSAPR of applying a threshold of 1 percent of the NAAQS at Step 2.)

The MOG materials appended to Kentucky's submission argued that a 2016 EPA SIL guidance could be cited as acceptable to support a 1 ppb contribution threshold. As an initial matter, Kentucky appears not to have relied on this rationale. In EPA's comments on Kentucky's draft SIP submittal, EPA stated, ''EPA has not made a determination that the SIL, developed for source-specific (PSD) purposes, could be considered an appropriate threshold to use when assessing contribution from an entire state.'' [54] Kentucky stated in response that it ''concurs with the comment'' and had adjusted its SIP submittal accordingly.[55] Further, even if the State had attempted to rely on the SIL as support for a 1 ppb threshold, the basis supplied by MOG is inadequate. The SIL is an analytical metric used in the context of PSD permitting, a part of the CAA's ''prevention of significant deterioration'' program, which generally is applicable in areas that designated attainment [56] or unclassifiable for the NAAQS. Good neighbor analysis for the ozone NAAQS, by contrast, addresses the degree of significant contribution to nonattainment and interference with maintenance of the NAAQS resulting at downwind receptors from the collective contribution of many upwind sources. Further, it is not correct to conflate the

[50] Although the various modeling runs (EPA's March 2018 modeling, Alpine's modeling and EPA's updated modeling) indicate that Kentucky is linked to different receptors and with differing amounts of contribution, all three sets of modeling are consistent in that each indicates linkages between Kentucky and downwind receptors.

[51] *See* August 2018 memorandum at 1.

[52] As an example of the type of analysis that EPA anticipated states might conduct under the guidance, in one instance, EPA itself attempted to conduct a state- and receptor-specific analysis that could support approval of the use of a 1 ppb threshold. *See* Air Plan Approval; Iowa; Infrastructure State Implementation Plan Requirements for the 2015 Ozone National Ambient Air Quality Standard, 85 FR 12232 (March 2, 2020). The Agency received adverse comment on this proposed approval and has not taken final action with respect to this proposal.

[53] Kentucky applied the 1 ppb contribution threshold to the Connecticut, Wisconsin, and Maryland receptors, as the Commonwealth found that Kentucky was linked to these receptors based on the modeling released with the March 2018 memorandum. Under EPA's updated modeling, Kentucky is no longer linked to the Wisconsin and Maryland receptors and is linked to receptors in Pennsylvania and New Haven, Connecticut. *See* Table 1. However, as Kentucky did not provide any state-specific information, the rationale is also applicable to the Pennsylvania and New Haven, Connecticut linkages.

[54] *See* Kentucky's January 11, 2019, submission, Appendix D, Summary of Comments and Responses, at 6–7.

[55] *Id.* at 7. EPA directed Kentucky instead to the August 2018 memorandum if it wished to rely on a 1 ppb threshold; however, EPA's comments noted that this memorandum was only a ''part'' of the rationale the Commonwealth should develop. *Id.* at 6.

[56] Pursuant to section 107(d) of the CAA, EPA must designate areas as either ''nonattainment,'' ''attainment,'' or ''unclassifiable.'' Historically for ozone, the EPA has designated most areas that do not meet the definition of nonattainment as ''unclassifiable/attainment.'' This category includes areas that have air quality monitoring data meeting the NAAQS and areas that do not have monitors but for which the EPA has no evidence that the areas may be violating the NAAQS or contributing to a nearby violation. In the designations for the 2015 ozone NAAQS, the EPA reversed the order of the label to be ''attainment/unclassifiable'' to better convey the definition of the designation category and so that the category is more easily distinguished from the separate unclassifiable category. An ''attainment'' designation is reserved for a previous nonattainment area that has been redesignated to attainment as a result of the EPA's approval of a CAA section 175A maintenance plan submitted by the state air agency.

use of the term ''significance'' as used in the SIL guidance, with the term ''contribution,'' which is the appliable statutory term that EPA applies at Step 2 of the 4-step interstate transport framework. (''Significance'' within the 4-step framework is evaluated at Step 3 through a multifactor analysis, for those states that are determined to ''contribute'' to downwind receptors at Steps 1 and 2. See section I.D.4.) Given the fundamentally different statutory objectives and context, EPA disagrees with MOG's contention that the SIL guidance is applicable in the good neighbor context.

1. EPA's Experience With Alternative Step 2 Thresholds

EPA here shares further evaluation of its experience since the issuance of the August 2018 memorandum regarding use of alternative thresholds at Step 2. This experience leads the Agency to now believe it may not be appropriate to continue to attempt to recognize alternative contribution thresholds at Step 2. The August 2018 memorandum stated that ''it may be reasonable and appropriate'' for states to rely on an alternative threshold of 1 ppb threshold at Step 2.[57] (The memorandum also indicated that any higher alternative threshold, such as 2 ppb, would likely not be appropriate.) However, EPA also provided that ''air agencies should consider whether the recommendations in this guidance are appropriate for each situation.'' Following receipt and review of 49 good neighbor SIP submittals for the 2015 8-hour ozone NAAQS, EPA's experience has been that nearly every state that attempted to rely on a 1 ppb threshold did not provide sufficient information and analysis to support a determination that an alternative threshold was reasonable or appropriate for that state.

For instance, in nearly all submittals, the states did not provide EPA with analysis specific to their state or the receptors to which its emissions are potentially linked. In one case, the proposed approval of Iowa's SIP submittal, EPA expended its own resources to attempt to supplement the information submitted by the state, in order to more thoroughly evaluate the state-specific circumstances that could support approval.[58] It was at EPA's sole discretion to perform this analysis in support of the state's submittal, and the Agency is not obligated to conduct supplemental analysis to fill the gaps whenever it believes a state's analysis is insufficient. The Agency no longer intends to undertake supplemental analysis of SIP submittals with respect to alternative thresholds at Step 2 for purposes of the 2015 8-hour ozone NAAQS.

Furthermore, EPA's experience since 2018 is that allowing for alternative Step 2 thresholds may be impractical or otherwise inadvisable for a number of additional policy reasons. For a regional air pollutant such as ozone, consistency in requirements and expectations across all states is essential. Based on its review of submittals to-date and after further consideration of the policy implications of attempting to recognize an alternative Step 2 threshold for certain states, the Agency now believes the attempted use of different thresholds at Step 2 with respect to the 2015 8-hour ozone NAAQS raises substantial policy consistency and practical implementation concerns.[59] The availability of different thresholds at Step 2 has the potential to result in inconsistent application of good neighbor obligations based solely on the strength of a state's implementation plan submittal at Step 2 of the 4-step interstate transport framework. From the perspective of ensuring effective regional implementation of good neighbor obligations, the more important analysis is the evaluation of the emissions reductions needed, if any, to address a state's significant contribution after consideration of a multifactor analysis at Step 3, including a detailed evaluation that considers air quality factors and cost. Where alternative thresholds for purposes of Step 2 may be ''similar'' in terms of capturing the relative amount of upwind contribution (as described in the August 2018 memorandum), nonetheless, use of an alternative threshold would allow certain states to avoid further evaluation of potential emission controls while other states must proceed to a Step 3 analysis. This can create significant equity and consistency problems among states.

Further, it is not clear that national ozone transport policy is best served by allowing for less stringent thresholds at Step 2. EPA recognized in the August 2018 memorandum that there was some similarity in the amount of total upwind contribution captured (on a nationwide basis) between 1 percent and 1 ppb. However, EPA notes that while this may be true in some sense, that is hardly a compelling basis to move to a 1 ppb threshold. Indeed, the 1 ppb threshold has the disadvantage of losing a certain amount of total upwind contribution for further evaluation at Step 3 (*e.g.,* roughly 7 percent of total upwind state contribution was lost according to the modeling underlying the August 2018 memorandum;[60] in EPA's updated modeling, the amount lost is 5 percent). Considering the core statutory objective of ensuring elimination of all significant contribution to nonattainment or interference of the NAAQS in other states and the broad, regional nature of the collective contribution problem with respect to ozone, there does not appear to be a compelling policy imperative in allowing some states to use a 1 ppb threshold while others rely on a 1 percent of the NAAQS threshold.

Consistency with past interstate transport actions such as CSAPR, and the CSAPR Update and Revised CSAPR Update rulemakings (which used a Step 2 threshold of 1 percent of the NAAQS for two less stringent ozone NAAQS), is also important. Continuing to use a 1 percent of NAAQS approach ensures that as the NAAQS are revised and made more stringent, an appropriate increase in stringency at Step 2 occurs, so as to ensure an appropriately larger amount of total upwind-state contribution is captured for purposes of fully addressing interstate transport. *See* 76 FR 48208, 48237–38 (August 8, 2011).

Therefore, notwithstanding the August 2018 memorandum's recognition of the potential viability of alternative Step 2 thresholds, and in particular, a potentially applicable 1 ppb threshold, EPA's experience since the issuance of that memorandum has revealed substantial programmatic and policy difficulties in attempting to implement this approach. Nonetheless, EPA is not at this time rescinding the August 2018 memorandum. The basis for disapproval of Kentucky's SIP submission with respect to the Step 2 analysis is, in the Agency's view, warranted even under the terms of the August 2018 memorandum. EPA invites comment on this broader discussion of issues associated with alternative thresholds at Step 2. Depending on comment and further evaluation of this issue, EPA may determine to rescind the August 2018 memorandum in the future.

[57] *See* August 2018 memorandum at 4.

[58] *Air Plan Approval; Iowa; Infrastructure State Implementation Plan Requirements for the 2015 Ozone National Ambient Air Quality Standard,* 85 FR 12232 (March 2, 2020). The Agency received adverse comment on this proposed approval and has not taken final action with respect to this proposal.

[59] EPA notes that Congress has placed on EPA a general obligation to ensure the requirements of the CAA are implemented consistently across states and regions. *See* CAA section 301(a)(2). Where the management and regulation of interstate pollution levels spanning many states is at stake, consistency in application of CAA requirements is paramount.

[60] *See* August 2018 memorandum at 4.

In summary, EPA's updated modeling indicates that emissions from Kentucky sources are linked to downwind receptors identified in Table 1, and application of 1 ppb alternative threshold is not supported by Kentucky's SIP submission. Thus, EPA preliminarily finds that Kentucky is linked to downwind nonattainment and maintenance receptors, and proceeds to Step 3 of the 4-step framework.

D. Evaluation of Information Provided by Kentucky Regarding Step 3

At Step 3 of the 4-step interstate transport framework, a state's emissions are further evaluated, in light of multiple factors, including air quality and cost considerations, to determine what, if any, emissions significantly contribute to nonattainment or interfere with maintenance and, thus, must be eliminated under CAA section 110(a)(2)(D)(i)(I).

To effectively evaluate which emissions in the state should be deemed ''significant'' and therefore prohibited, states generally should prepare an accounting of sources and other emissions activity for relevant pollutants and assess potential, additional emissions reduction opportunities and resulting downwind air quality improvements. EPA has consistently applied this general approach (*i.e.,* Step 3 of the 4-step interstate transport framewor46k) when identifying emissions contributions that the Agency has determined to be ''significant'' (or interfere with maintenance) in each of its prior Federal, regional ozone transport rulemakings, and this interpretation of the statute has been upheld by the Supreme Court. *See EME Homer City,* 572 U.S. 489, 518–520 (2014). While EPA has not directed states that they must conduct a Step 3 analysis in precisely the manner EPA has done in its prior regional transport rulemakings, state implementation plans addressing the obligations in CAA section 110(a)(2)(D)(i)(I) must prohibit ''any source or other type of emissions activity within the State'' from emitting air pollutants which will contribute significantly to downwind air quality problems. Thus, states must complete something similar to EPA's analysis (or an alternative approach to defining ''significance'' that comports with the statute's objectives) to determine whether and to what degree emissions from a state should be ''prohibited'' to eliminate emissions that will ''contribute significantly to nonattainment in, or interfere with maintenance of'' the NAAQS in any other state. Kentucky did not conduct such an analysis in its SIP submission.

Kentucky did not include a comprehensive accounting of facilities in the Commonwealth and did not include a sufficient analysis of potential NO_X emissions control technologies, their associated costs, estimated emissions reductions, and downwind air quality improvements for the purpose of identifying what additional emission controls may be necessary to eliminate their significant contribution. Rather, Kentucky's SIP included air quality analysis related to downwind receptors and relied on existing NO_X emission measures in the Commonwealth without any rationale to show how or why existing measures would eliminate the Kentucky's downwind contribution. Further, the Commonwealth provided information related to programs that it asserted were responsible for a 10-year decline in ozone season NO_X emissions in Kentucky, such as regulations and Federal programs (including the CSAPR Update), EGU shutdowns, retirements, and fuel switches. However, Kentucky did not quantify the NOx emission reduction potential of on-the-books regulations or Federal programs or on-the-way measures for 2023, nor does the submission consider cost-effectiveness of potential emissions controls, the total emissions reductions that may be achieved by requiring these controls, or an evaluation of the air quality impacts such emissions reductions would have on the downwind receptors to which Kentucky is linked. Identifying a range of on-the-books emissions control measures that have been or may be enacted at the state or local level, without analysis of the impact of those measures on the downwind receptors, is not a sufficient analysis.

Furthermore, the emissions-reducing effects of on-the-books emissions control requirements are already reflected in the air quality results of EPA's modeling under Steps 1 and 2 of the 4-step framework. Kentucky, and MOG in the materials it submitted to Kentucky, maintain that there were additional emission reductions that have occurred that were not accounted for in EPA's 2023 modeling as presented in the March 2018 memorandum. Kentucky cites the 2019 retirement of units 1 and 2 at the E.W. Brown coal-fired power plant (see Appendix D, Response to Comments, at 5), and MOG claims a variety of unidentified changes not accounted for in EPA's emissions inventory at the time of the modeling in the March 2018 memorandum, as well as certain downwind state measures apparently under consideration but not adopted, and certain changes in the Wisconsin EGU fleet (*see* Alpine TSD, Appendix B, at pages B–5, B–6). In general, any changes in the emissions inventory and on-the-books controls relevant to emissions in 2023 have now been incorporated into EPA's most recent modeling of 2023. This includes changes in Kentucky EGU emissions.

As previously discussed, EPA's updated modeling indicates sources in Kentucky are linked to downwind air quality problems for the 2015 8-hour ozone standard. However, Kentucky's SIP submittal did not include a sufficient accounting of emissions sources or activity in the Commonwealth, along with an analysis of potential NO_X emissions control technologies, associated costs, estimated emissions reductions, and downwind air quality improvements to eliminate the Kentucky's downwind contribution.

EPA therefore propose to find that Kentucky was required to analyze emissions from the sources and other emissions activity from within the Commonwealth to determine whether its contributions were significant, and EPA proposes to disapprove its submission because Kentucky failed to do so.

The subsections below contain additional detail with respect to arguments made by the Commonwealth in its SIP submission.[61]

1. Evaluation of Kentucky's Reliance on Existing and Future NO_X Emission Reductions

The Commonwealth's SIP submission does not contain a Step 3 analysis regarding future emissions reduction opportunities beyond pointing to NO_X emission reductions from expected retirements, fuel switching, and shutdowns. While the Commonwealth claimed there would be an estimated 471 tons of NO_X emissions from potential shutdown of units at the E.W. Brown Generating Station facility in Harrodsburg, Kentucky, the Commonwealth did not clarify how these planned reductions would resolve the Commonwealth's downwind contribution to the Harford County, Maryland maintenance-only receptor by 2023. (Nor did the Commonwealth evaluate whether emissions may increase at other sources whose generation would replace that lost at E. W. Brown.) Further, the E.W. Brown facility retired coal-fired units 1 and 2

[61] These subsections provide brief summaries of the issues as presented in Kentucky's SIP as context; please see section II of this notice for additional detail on the contents of Kentucky's SIP.

in February 2019,[62] the units' retirement is included in the recently updated modeling for Steps 1 and 2, and yet emissions from Kentucky sources remain linked to one or more downwind receptors.

While the Commonwealth generally asserted that on-the-books or on-the-way regulations and programs may provide future emissions reductions, Kentucky did not quantify these reductions in a meaningful way or demonstrate that the downwind improvements from these regulations and programs would be sufficient to eliminate the Commonwealth's significant contribution or interference with maintenance. In addition, the SIP submission did not evaluate or even attempt to identify additional control measures for EGUs or non-EGUs, nor did it include a determination of emission reduction potential for these potential additional controls or consider their cost-effectiveness or downwind air quality effects. This is not a sufficient Step 3 analysis.

2. Evaluation of Kentucky's Reliance on Prior Transport FIPs

The 10-year emission reductions discussed by Kentucky relies in part on the implementation of CAIR, CSAPR, and the CSAPR Update. Kentucky's SIP relied on its EGUs being subject to the CSAPR Update (which reflected a stringency at the nominal marginal cost threshold of $1,400/ton (in 2011 dollars) for the 2008 8-hour ozone NAAQS) to argue that it has already implemented all cost-effective emissions reductions to support its conclusion that additional NO_X emission reductions are not necessary from sources in Kentucky. Kentucky did not conduct a comprehensive Step 3 analysis or provide any justification for reliance on the CSAPR Update beyond identifying the NO_X emission reductions that the Commonwealth believes are the source of the 10-year decline in NO_X emissions at EGUs in the Commonwealth and noting that the actual emissions from EGUs in the Commonwealth are well below the CSAPR Update NO_X ozone season trading budget.

EPA disagrees with the Commonwealth. Reliance on the CSAPR Update (or the subsequent Revised CSAPR Update, which fully resolved Kentucky's good neighbor obligations for the 2008 ozone NAAQS, 86 FR 23056–57), is insufficient because those policies addressed section 110(a)(2)(D)(i)(I) only for the *2008* ozone NAAQS. Additionally, reliance on an alleged cost-threshold stringency from the CSAPR Update is insufficient without additional Step 3 analysis and justification. First, the CSAPR Update did not regulate non-EGUs, and thus this analysis would have been incomplete, even with respect to obligations under the 2008 ozone NAAQS. *See Wisconsin,* 938 F.3d at 318–20. Second, relying on the CSAPR Update's (or any other CAA program's) determination of cost-effectiveness without further Step 3 analysis is not approvable. Cost-effectiveness must be assessed in the context of the specific CAA program; assessing cost-effectiveness in the context of ozone transport should reflect a more comprehensive evaluation of the nature of the interstate transport problem under the relevant NAAQS, the total emissions reductions available at alternative cost thresholds, and the air quality impacts of the reductions at downwind receptors. While EPA has not established a benchmark cost-effectiveness value for 2015 8-hour ozone NAAQS interstate transport obligations, because the 2015 8-hour ozone NAAQS is a more stringent and more protective air quality standard, it is reasonable to expect control measures or strategies to address interstate transport under this NAAQS to reflect higher marginal control costs. As such, the marginal cost threshold of $1,400/ton for the CSAPR Update (which addresses the 2008 ozone 8-hour NAAQS and is in 2011 dollars) is not an appropriate cost threshold and cannot be approved as a benchmark to use for interstate transport SIP submissions for the 2015 8-hour ozone NAAQS.

In addition, the updated EPA modeling captures all existing CSAPR trading programs in the baseline, and that modeling confirms that these control programs were not sufficient to eliminate the Kentucky's linkage at Steps 1 and 2 under the 2015 8-hour ozone NAAQS. Kentucky was therefore obligated at Step 3 to assess *additional* control measures using a multifactor analysis.

Finally, relying on a FIP at Step 3 is per se not approvable if the state has not adopted that program into its SIP and instead continues to rely on the FIP. States may not rely on non-SIP measures to meet SIP requirements. *See* CAA section 110(a)(2)(D) (''Each such [SIP] shall . . . contain adequate provisions. . . .''). *See also* CAA section 110(a)(2)(A); *Committee for a Better Arvin* v. *U.S. E.P.A.,* 786 F.3d 1169, 1175–76 (9th Cir. 2015) (holding that measures relied on by state to meet CAA requirements must be included in the SIP). Kentucky has not adopted the Group 3 NO_X Ozone Season Trading Program promulgated in the Revised CSAPR Update into its SIP.

3. Evaluation of Kentucky's Analysis of Air Quality and Emission Reductions Near the Linked Monitors

Kentucky's SIP also evaluated air quality in the vicinity of the Fairfield County, Connecticut (IDs: 090013007 and 090019003) and Harford County, Maryland (ID: 240251001) monitors for which the Commonwealth is linked based on EPA's modeling in the March 2018 memorandum. Kentucky's submission asserts that the primary cause of nonattainment problems at the Connecticut and Maryland monitors are due to local emissions of ozone precursors (particularly NO_X) and meteorological conditions.

Kentucky's SIP submittal argues against control requirements on Kentucky sources to address the two nonattainment receptors in Fairfield, Connecticut (IDs: 090013007, 090019003) and the maintenance-only monitor in Harford County, Maryland monitor, claiming that additional emission reductions from Kentucky EGUs (the only Kentucky source category discussed in the submittal) are not necessary. Kentucky concludes that local emissions reductions should be applied before requiring Kentucky to control its sources, and that the implementation of local programs to reduce emissions should be sufficient for monitors in the area to attain the 2015 8-hour ozone NAAQS.[63]

With respect to the information Kentucky provided that is related to local emissions and the impact on air quality at the Connecticut and Maryland receptors, this information is insufficient to approve Kentucky's SIP submission. Regardless of whether local emissions are the largest contributor to a specific nonattainment or maintenance receptor, the good neighbor provision requires that upwind states prohibit emissions that contribute significantly to nonattainment or interfere with maintenance of the NAAQS in downwind states. EPA evaluates a state's obligations to eliminate interstate transport emissions under the interstate transport provision according to EPA's 4-step process, and EPA's updating modeling at Steps 1 and

[62] *See* Retired Unit exemption forms for E.W. Brown Generating station in Docket No.: EPA–R04–OAR–2021–0841.

[63] The Commonwealth's submission cites to MOG's statements regarding controls on local sources ''When an area is measuring nonattainment of a NAAQS, as is the case with the areas linked to Kentucky, the CAA requires that the effects and benefits of local controls on all source sectors be considered first, prior to pursuing controls of sources in upwind states.''

2 has identified a linkage between emission from Kentucky sources and downwind nonattainment and maintenance receptors.

Further, EPA disagrees with Kentucky's claims that local emissions reductions from the jurisdiction where the downwind receptor is located must first be implemented and accounted for before imposing obligations on upwind states under the interstate transport provision. There is nothing in the CAA that supports that position, and it does not provide grounds on which to approve Kentucky SIP submission. The D.C. Circuit has held on five different occasions that the timing framework for addressing interstate transport obligations must be consistent with the downwind areas' attainment schedule. In particular, for the ozone NAAQS, the states and EPA are to address interstate transport obligations ''as expeditiously as practicable'' and no later than the attainment schedule set in accordance with CAA section 181(a). *See North Carolina,* 531 F.3d at 911–13; *Wisconsin,* 938 F.3d at 313–20; *Maryland,* 958 F.3d at 1204; *New York* v. *EPA,* 964 F.3d 1214, 1226 (D.C. Cir. 2020); *New York* v. *EPA,* 781 Fed. App'x 4, 6–7 (D.C. Cir. 2019). The court in *Wisconsin* explained its reasoning in part by noting that downwind jurisdictions often may need to heavily rely on emissions reductions from upwind states in order to achieve attainment of the NAAQS, 938 F.3d at 316–17; such states would face increased regulatory burdens including the risk of bumping up to a higher nonattainment classification if attainment is not reached by the relevant deadline. *Maryland,* 958 F.3d at 1204. The statutory framework of the CAA and these cases establish clearly that states and EPA must address interstate transport obligations in line with the attainment schedule provided in the Act in order to timely assist downwind states in attaining and maintain the NAAQS, and this schedule is ''central to the regulatory scheme.'' *Wisconsin,* 938 F.3d at 316 (quoting *Sierra Club* v. *EPA,* 294 F.3d 155, 161 (D.C. Cir. 2002)).

In addition, Kentucky's SIP does not provide a technical justification to support its conclusion that local emissions reductions at the receptors will achieve attainment without upwind reductions from sources within Kentucky. Specifically, Kentucky does not provide any information to support its claim that the implementation of local programs alone will address the air quality problems at the Connecticut and Maryland monitors. Even with the consideration of on-the-books control measures to reduce mobile source emissions, EPA's modeling projects that the total contribution from upwind states is a substantial part of the ozone problem at the nonattainment and maintenance receptors to which Kentucky is linked. To illustrate this, at the four receptors to which Kentucky is linked in EPA's latest 2023 modeling, the total percent of U.S. anthropogenic emissions from upwind states is 55 percent (Bucks Co., Pennsylvania), 90 percent (New Haven Co., Connecticut), 90 percent (Fairfield Co.—Stratford, Connecticut), and 94 percent (Fairfield Co.—Westport, Connecticut) of the total design values at these receptors. Clearly, emissions reductions from upwind states would have an impact on the design values at the identified receptors.[64]

Additionally, the SIP submission does not assess whether the Commonwealth's own emissions contributed to nonattainment or interfered with maintenance at the linked receptors, or rather substantiate that emissions from the Commonwealth's sources were not interacting with these monitors. Consequently, the application of local emission reduction measures does not absolve upwind states and sources from the responsibility of addressing their significant contribution. Moreover, Kentucky still has an obligation under the Act to address its downwind contribution to ozone nonattainment or interference with maintenance regardless of the emission reduction potential for local control measures. Furthermore, given that EPA's updated modeling indicates that Kentucky is linked to nonattainment and maintenance receptors at Step 2 including the same Fairfield County, Connecticut nonattainment receptors as were linked in the modeling released with the March 2018 memorandum, EPA disagrees with Kentucky's claims regarding the application of local emission reduction measures with respect to its downwind linkages in the most recent modeling.

[64] In contrast to the receptors to which Kentucky is linked, EPA has found that certain receptors are so heavily impacted by local emissions that they should not be considered ''transport'' receptors for purposes of the ozone NAAQS. Typically, in such cases, only one state is linked above 1 percent to that receptor and the total upwind state contribution is on the order of 2 percent to 4 percent of the receptor's DV. *See, e.g.,* 81 FR 15200 (March 22, 2016), 81 FR 31513 (May 19, 2016), and 81 FR 36179 (June 6, 2016) (approving Arizona's transport SIP on basis that certain California receptors should not be considered impacted by interstate ozone transport).

4. Evaluation of Kentucky's HYSPLIT Analysis

Kentucky's SIP submittal also included HYSPLIT model back trajectory analysis, which Kentucky used to emphasize the local nature of the ozone precursor emissions at the two Connecticut receptors, mobile sources along the I–95 Corridor, and the proximity of large point sources and ozone nonattainment areas in New York, New Jersey, Pennsylvania, and Maryland. Similarly, Kentucky also evaluated HYSPLIT back-trajectory for the Harford County, Maryland monitor and noted similar localized emissions impacts with respect to the Maryland monitor as discussed previously for the two Fairfield County, Connecticut monitors.

However, the limited information provided by Kentucky is not adequate to support approval of Kentucky's SIP on this basis and in the absence of a more complete Step 3 evaluation. Kentucky's SIP submittal did not address that the HYSPLIT back-trajectories indicate that ozone precursor emissions sources in Kentucky are upwind of the linked nonattainment receptors in Connecticut (regardless of the existence of other upwind nonattainment areas that may also be contributing to those receptors). Additionally, the HYSPLIT trajectory information provided by Kentucky was developed by EPA to inform the 2015 8-hour ozone NAAQS area designations and was not intended to evaluate long-distance interstate transport.[65]

Attachment 3 of the 2015 8-hour ozone Area Designations memorandum states that the line thickness displayed on trajectory plots ''does not imply coverage other than to represent the centerline of an air parcel's motion calculated to arrive at the starting location at the starting time. Uncertainties are clearly present in these results and these uncertainties change with trajectory time and distance traveled. One should avoid concluding a region is not along a trajectory's path if the center line of that trajectory missed the region by a relatively small distance.'' [66]

[65] *See* Area Designations for the 2015 Ozone National Ambient Air Quality Standards memorandum from Janet G. McCabe to EPA Regional Administrators, February 25, 2016 (2015 ozone Area Designations memorandum).

[66] *See id.* It is important to understand that HYSPLIT back trajectory analyses use archived meteorological modeling that includes actual observed data (surface, upper air, airplane data, etc.) and modeled meteorological fields to estimate the most likely route of an air parcel transported to a receptor at a specified time. The method essentially follows a parcel of air backward in hourly steps for a specified length of time. HYSPLIT

Continued

Further, the back trajectories used by Kentucky were limited to evaluating transport of air parcels over a relatively short 24-hour period, which limits their use for evaluating long-distance transport of emissions from Kentucky to the Fairfield, Connecticut receptors and the Harford, Maryland receptor. In contrast, EPA's analysis of transported emissions as discussed in section III.A uses updated, photochemical grid modeling designed to assess ozone transported to downwind monitors across the entire region and over extended timeframes that fully account for fate and transport of ozone-precursors over longer distances.

Kentucky's SIP submission states that the Fairfield County ozone monitors are located in the New York Metro Area, in close proximity to the I–95 transportation artery. The Commonwealth's analysis asserts a high VMT and number of commuters in the area indicating the presence of mobile emissions that could be the cause of violating monitors along the I–95 corridor. Kentucky's SIP also mentions two additional coastal monitor sites (Westport Sherwood and Stratford Point Lighthouse) located less than three miles from the I–95 corridor that also show a pattern of ozone violations. Kentucky raises similar points regarding the effect of mobile source emissions along the I–95 corridor in Maryland near the Edgewood receptor. Further, Kentucky asserts that both the Connecticut and Maryland receptor sites may be particularly impacted by unique coastal conditions associated with the Long Island Sound and the Chesapeake Bay. While it is true that both of these monitors are affected by coastal meteorological conditions such as complex land-water wind flows and mixing heights, a large portion of anthropogenic ozone at these locations is the result of transport from upwind states. In addition, as noted above, EPA's most recent modeling shows that Kentucky is linked to a receptor in Bucks County, Pennsylvania which is inland and not influenced by coastal meteorology.

The relevance of the points raised by Kentucky regarding the HYSPLIT back trajectories related to the evaluation of Kentucky's good neighbor obligations is not clear. As already discussed, the statute and the case law (particularly the holdings in *Wisconsin* and *Maryland*) make clear that good neighbor obligations are not merely supplementary to or deferable until after local emission reductions are achieved. Further, all of the receptors to which Kentucky is linked are heavily impacted by upwind state emissions in addition to local sources and conditions. The *Wisconsin* decision's holding regarding international contribution (discussed in section III.A) is equally applicable to an upwind state's claims that some other state's emissions, or local emissions, are ''more to blame'' than its own emissions. *See* 938 F.3d 303 at 323–25 (''an upwind State can 'contribute' to downwind nonattainment even if its emissions are not the but-for cause'').

5. Evaluation of Kentucky's Approach to Maintenance Receptors

Kentucky's SIP argues that states linked only to maintenance receptors should be held to less stringent standards of emissions reductions compared to states linked to a nonattainment receptor. Thus, as the Edgewood monitor was identified as a maintenance receptor in EPA's March 2018 memorandum modeling, the Commonwealth asserts that no further reductions from Kentucky sources other than on-the-books controls should be required. Although the Harford monitor is no longer linked to Kentucky based on EPA's updated modeling,[67] emissions from the Commonwealth are linked to the Bucks County, Pennsylvania (ID: 420170012) maintenance-only receptor. Additionally, MOG argues that states should be absolved from additional emissions controls to address a maintenance monitor if the upwind state can show that either the monitor is likely to remain in attainment for a period of 10 years or that the upwind state's emissions will not increase for 10 years after the attainment date.[68]

Under the D.C. Circuit's decision in *North Carolina,* states and EPA are required to give independent significance to the ''interference with maintenance'' prong of section 110(a)(2)(D)(i)(I). *See* 531 F.3d at 910. Since CSAPR, EPA's nationally consistent policy framework for addressing interstate ozone transport has given meaning to this prong through a separate definition of maintenance receptors at Step 1 of the 4-step interstate transport framework. For states linked only to those receptors, EPA has found it appropriate to apply an emissions control solution that is uniform with the strategy applied for states that are linked to nonattainment receptors. *See* 76 FR at 48271. EPA's approach to addressing interference with maintenance under prong 2 for ozone NAAQS has been upheld twice. *See EME Homer City Generation, L.P.,* 795 F.3d at 136; *Wisconsin,* 938 F.3d at 325–27. *See also* 86 FR at 23054 (April 30, 2021).[69]

Particularly given this context, Kentucky's SIP submission does not provide information sufficient to support less stringent standards of emissions reductions than would result from EPA's historical approach of addressing emissions activities from upwind states that are linked to maintenance-only receptors. The Commonwealth does not explain how the obligations of upwind states linked to maintenance-only receptors should be treated differently than the obligations of upwind states linked to nonattainment receptors.

Further, EPA believes it would be inconsistent with the CAA for EPA to identify receptors that are at risk of NAAQS violations given certain conditions due to transported upwind emissions and then not prohibit the emissions that place the receptor at risk. The Supreme Court held that it was a permissible interpretation of the statute to apportion responsibility for states

estimates the central path in both the vertical and horizontal planes. The HYSPLIT central path represents the centerline with the understanding that there are areas on each side horizontally and vertically that also contribute to the end point at the monitor. The horizontal and vertical areas from the centerline grow wider the further back in time the trajectory goes. Therefore, a HYSPLIT centerline does not have to pass directly over emissions sources or emission source areas but merely relatively near emission source areas.

[67] *See* Table 1, shown previously in this notice.

[68] Kentucky did not rely on MOG's proposed approach in its SIP submittal, therefore EPA does not comprehensively evaluate MOG's suggestion. However, EPA's definition of maintenance receptors already accounts for, and projects whether, receptors may have trouble attaining the NAAQS, through the use of projected maximum design values in the relevant analytic year. Further, EPA's modeling of the relevant analytic year also already accounts for projected emissions trends of the upwind state (among others) and may (and often does) identify a linkage to areas that may struggle to maintain the NAAQS despite an overall declining emissions trend. This is not surprising. First, most maintenance receptors in EPA's projections are currently measuring nonattainment, meaning that, despite projecting improved air quality in the future analytic year, the receptor location is currently, and may continue to be, near the level of the NAAQS. Second, ozone levels are influenced by meteorological variability and thus high ozone levels may persist despite declining emissions as a result of recurring or worsening ozone-conducive atmospheric conditions (*e.g.,* higher temperatures). It is unclear how MOG's approach would account for this variability or ensure that projected emissions reductions from linked states are rendered certain and enforceable.

[69] In the main text of its SIP submittal conclusion regarding interstate transport, Kentucky incorrectly attributes statements regarding the ''interfere with maintenance'' prong to the U.S. Supreme Court. *See* Submittal at 45–46. A footnote, however, correctly attributes this language to the D.C. Circuit's original opinion in *EME Homer City* v *EPA,* 696 F.3d 7 (D.C. Cir. 2012). This decision was reversed and remanded by the Supreme Court, and on remand, the D.C. Circuit affirmed EPA's approach to implementing prong 2, *see* 795 F.3d at 136.

linked to nonattainment receptors considering ''both the magnitude of upwind States' contributions and the cost associated with eliminating them.'' *EME Homer City,* 134 S. Ct. at 1606. It is equally reasonable and permissible to use these factors to apportion responsibility among upwind states linked to maintenance receptors because the goal in both instances is to prohibit the ''amounts'' of pollution that will either significantly contribute to nonattainment or interfere with maintenance of the NAAQS downwind. EPA's updated modeling indicates that the Commonwealth is still linked to downwind nonattainment and maintenance receptors for the 2015 8-hour ozone standard. Consequently, EPA believes Kentucky's assertion that upwind states linked to maintenance-only receptors should be held to less stringent standards of emissions reductions (as compared to states linked to a nonattainment receptor) is also inappropriate for new downwind linkages.

6. Evaluation of Weighted Step 3 Approach

Although Kentucky did not adopt this approach in its SIP submittal, the MOG materials Kentucky appended provided arguments suggesting a ''weighted'' approach to Step 3 similar to an approach that stakeholders had identified to EPA (as listed in Attachment A to EPA's March 2018 memorandum). Under this approach, upwind-state emission reduction obligations would be allocated in proportion to the size of their contribution to downwind nonattainment. MOG determined the proportional reduction requirement associated with the relative significant contribution from each upwind state to the Harford County, Maryland monitor including Kentucky, which resulted in an additional emission reduction obligation for Kentucky of 0.02 ppb, as MOG proposed would be the appropriate proportion of reductions necessary for attainment at the Harford receptor. This approach would have imposed additional emissions reductions for Kentucky sources. Kentucky's final SIP did not consider MOG's proposal, and did not provide an explanation for why it was rejecting this approach to allocating upwind emission reductions, even though it appended this recommendation to its SIP submittal.

In summary, EPA has newly available information that confirms sources in Kentucky are linked to downwind air quality problems for the 2015 8-hour ozone standard. Kentucky's SIP submittal did not include an accounting of emissions sources and activity in the Commonwealth along with an analysis of potential NO_X emissions control technologies, their associated costs, estimated emissions reductions, and downwind air quality improvements. Nor did Kentucky present an alternative approach to assess which of its emissions should be deemed ''significant.'' EPA proposes to find that Kentucky's analysis—including reliance on on-the-books state and Federal measures (including prior CSAPR programs) and claimed on-the-way emission reductions, as well as other air quality, emissions, and geographic factors—is insufficient to support the Commonwealth's claim that its SIP adequately prohibits emissions within Kentucky in a manner sufficient to address the State's interstate transport obligations for the 2015 8-hour ozone.

E. Evaluation of Information Provided by Kentucky Regarding Step 4

Step 4 of the 4-step interstate transport framework calls for development of permanent and federally enforceable control strategies to achieve the emissions reductions determined to be necessary at Step 3 to eliminate significant contribution to nonattainment or interference with maintenance of the NAAQS. Kentucky indicates that certain upcoming planned fuel switches or shutdowns at EGUs will occur before the end of 2023, for which Kentucky cites a press release and a closure plan developed by each plant's parent company.[70] As discussed in section III.D., Kentucky's analysis is insufficient to demonstrate that these reductions are sufficient to address the Commonwealth's interstate transport obligations; however, the Commonwealth also did not provide a separate SIP revision to ensure the reductions were permanent and enforceable. As a result, EPA proposes to disapprove Kentucky's January 11, 2019, submittal on the separate, additional basis that the Commonwealth has not developed permanent and enforceable emissions reductions necessary to meet the obligations of CAA section 110(a)(2)(d)(i)(I).

F. Conclusion

Based on EPA's evaluation of Kentucky's SIP submission, EPA is proposing to find that the interstate transport portion of Kentucky's January 11, 2019, SIP submission addressing CAA section 110(a)(2)(D)(i)(I) does not meet the Commonwealth's interstate transport obligations because it fails to contain the necessary provisions to eliminate emissions that will contribute significantly to nonattainment or interfere with maintenance of the 2015 8-hour ozone NAAQS in any other state.

[70] Pointing to anticipated upcoming emission reductions, even if they were not included in the analysis at Steps 1 and 2, is not sufficient as a Step 3 analysis, for the reasons discussed in section III.C. In this section, EPA explain that to the extent such anticipated reductions are not included in the SIP and rendered permanent and enforceable, reliance on such anticipated reductions is also insufficient at Step 4.

IV. Proposed Action

EPA is proposing to disapprove the 2015 8-hour ozone good neighbor interstate transport SIP revision from Kentucky, dated January 11, 2019. Under CAA section 110(c)(1), if finalized, this disapproval would establish a 2-year deadline for EPA to promulgate a FIP for Kentucky to address the CAA section 110(a)(2)(D)(i)(I) interstate transport requirements pertaining to significant contribution to nonattainment and interference with maintenance of the 2015 8-hour ozone NAAQS in other states, unless EPA approves a SIP that meets these requirements. However, under the CAA, a good neighbor SIP disapproval does not start a mandatory sanctions clock.

V. Statutory and Executive Order Reviews

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

This proposed action is not a significant regulatory action and was therefore not submitted to the Office of Management and Budget for review.

B. Paperwork Reduction Act (PRA)

This proposed action does not impose an information collection burden under the PRA because it does not contain any information collection activities.

C. Regulatory Flexibility Act (RFA)

This action merely proposes to disapprove a SIP submission as not meeting the CAA for Kentucky. EPA certifies that this proposed rule will not have a significant economic impact on a substantial number of small entities under the RFA (5 U.S.C. 601 *et seq.*).

D. Unfunded Mandates Reform Act (UMRA)

This proposed action does not contain any unfunded mandate as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. This proposed action imposes no enforceable duty on any state, local, or tribal governments or the private sector.

E. Executive Order 13132: Federalism

This proposed action does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This proposed action does not have tribal implications as specified in Executive Order 13175. This proposed action does not apply on any Indian reservation land, any other area where EPA or an Indian tribe has demonstrated that a tribe has jurisdiction, or non-reservation areas of Indian country. Thus, Executive Order 13175 does not apply to this action.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

EPA interprets Executive Order 13045 as applying only to those regulatory actions that concern environmental health or safety risks that EPA has reason to believe may disproportionately affect children, per the definition of ''covered regulatory action'' in section 2–202 of the Executive Order. This proposed action is not subject to Executive Order 13045 because it merely proposes to disapprove a SIP submission from Kentucky as not meeting the CAA.

H. Executive Order 13211, Actions That Significantly Affect Energy Supply, Distribution or Use

This proposed action is not subject to Executive Order 13211, because it is not a significant regulatory action under Executive Order 12866.

I. National Technology Transfer and Advancement Act

This proposed rulemaking does not involve technical standards.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

EPA believes the human health or environmental risk addressed by this action will not have potential disproportionately high and adverse human health or environmental effects on minority, low-income or indigenous populations. This action merely proposes to disapprove a SIP submission as not meeting the CAA.

K. CAA Section 307(b)(1)

Section 307(b)(1) of the CAA governs judicial review of final actions by EPA. This section provides, in part, that petitions for review must be filed in the D.C. Circuit: (i) When the agency action consists of ''nationally applicable regulations promulgated, or final actions taken, by the Administrator,'' or (ii) when such action is locally or regionally applicable, if ''such action is based on a determination of nationwide scope or effect and if in taking such action the Administrator finds and publishes that such action is based on such a determination.'' For locally or regionally applicable final actions, the CAA reserves to EPA complete discretion whether to invoke the exception in (ii).[71]

If EPA takes final action on this proposed rulemaking, the Administrator intends to exercise the complete discretion afforded to him under the CAA to make and publish a finding that the final action (to the extent a court finds the action to be locally or regionally applicable) is based on a determination of ''nationwide scope or effect'' within the meaning of CAA section 307(b)(1). Through this rulemaking action (in conjunction with a series of related actions on other SIP submissions for the same CAA obligations), EPA interprets and applies section 110(a)(2)(d)(i)(I) of the CAA for the 2015 8-hour ozone NAAQS based on a common core of nationwide policy judgments and technical analysis concerning the interstate transport of pollutants throughout the continental U.S. In particular, EPA is applying here (and in other proposed actions related to the same obligations) the same, nationally consistent 4-step framework for assessing good neighbor obligations for the 2015 8-hour ozone NAAQS. EPA relies on a single set of updated, 2016-base year photochemical grid modeling results of the year 2023 as the primary basis for its assessment of air quality conditions and contributions at Steps 1 and 2 of that framework. Further, EPA proposes to determine and apply a set of nationally consistent policy judgments to apply the 4-step framework. EPA has selected a nationally uniform analytic year (2023) for this analysis and is applying a nationally uniform approach to nonattainment and maintenance receptors and a nationally uniform approach to contribution threshold analysis.[72] For these reasons, the Administrator intends, if this proposed action is finalized, to exercise the complete discretion afforded to him under the CAA to make and publish a finding that this action is based on one or more determinations of nationwide scope or effect for purposes of CAA section 307(b)(1).[73]

[71] In deciding whether to invoke the exception by making and publishing a finding that an action is based on a determination of nationwide scope or effect, the Administrator takes into account a number of policy considerations, including his judgment balancing the benefit of obtaining the D.C. Circuit's authoritative centralized review versus allowing development of the issue in other contexts and the best use of agency resources.

[72] A finding of nationwide scope or effect is also appropriate for actions that cover states in multiple judicial circuits. In the report on the 1977 Amendments that revised section 307(b)(1) of the CAA, Congress noted that the Administrator's determination that the ''nationwide scope or effect'' exception applies would be appropriate for any action that has a scope or effect beyond a single judicial circuit. *See* H.R. Rep. No. 95–294 at 323, 324, reprinted in 1977 U.S.C.C.A.N. 1402–03.

[73] EPA may take a consolidated, single final action on all of the proposed SIP disapproval actions with respect to obligations under CAA section 110(a)(2)(D)(i)(I) for the 2015 8-hour ozone NAAQS. Should EPA take a single final action on all such disapprovals, this action would be nationally applicable, and EPA would also anticipate, in the alternative, making and publishing a finding that such final action is based on a determination of nationwide scope or effect.

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Ozone.

Authority: 42 U.S.C. 7401 *et seq.*

Dated: February 3, 2022.

Air Plan Disapproval; West Virginia; Interstate Transport of Air Pollution for the 2015 8-Hour Ozone National Ambient Air Quality Standard

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: Pursuant to the Federal Clean Air Act (CAA or the Act), the Environmental Protection Agency (EPA) is proposing to disapprove a State Implementation Plan (SIP) submittal from West Virginia intended to address interstate transport for the 2015 8-hour ozone national ambient air quality standards (2015 8-hour ozone NAAQS). The ''good neighbor'' or ''interstate

transport'' provisions require that each state's SIP contain adequate provisions to prohibit emissions from within the state from significantly contributing to nonattainment or interfering with maintenance of the NAAQS in other states. This requirement is part of the broader set of ''infrastructure'' requirements, which are designed to ensure that the structural components of each state's air quality management program are adequate to meet the state's responsibilities under the CAA. This disapproval, if finalized, will establish a 2-year deadline for the EPA to promulgate a Federal Implementation Plan (FIP) to address the relevant interstate transport requirements, unless the EPA approves a subsequent SIP submittal that meets these requirements. Disapproval does not start a mandatory sanctions clock.

DATES: Written comments must be received on or before April 25, 2022.

ADDRESSES: You may send comments, identified as Docket No. EPA–R03–OAR–2021–0873, by any of the following methods: Federal eRulemaking Portal at *https://www.regulations.gov* following the online instructions for submitting comments or via email to *gordon.mike@epa.gov.* For additional methods for submitting comments, contact the person in the **FOR FURTHER INFORMATION CONTACT** section. Include Docket ID No. EPA–R03–OAR–2021–0873 in the subject line of the message.

Instructions: All submissions received must include the Docket ID No. for this rulemaking. Comments received may be posted without change to *https://www.regulations.gov/,* including any personal information provided. For detailed instructions on sending comments and additional information on the rulemaking process, see the ''Public Participation'' heading of the **SUPPLEMENTARY INFORMATION** section of this document. Out of an abundance of caution for members of the public and our staff, the EPA Docket Center and Reading Room are open to the public by appointment only to reduce the risk of transmitting COVID–19. Our Docket Center staff also continues to provide remote customer service via email, phone, and webform. For further information on EPA Docket Center services and the current status, please visit us online at *https://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: Michael Gordon, Planning & Implementation Branch (3AD30), Air & Radiation Division, U.S. Environmental Protection Agency, Region III, 1650 Arch Street, Philadelphia, Pennsylvania 19103. The telephone number is (215) 814–2039. Mr. Gordon can also be reached via electronic mail at *gordon.mike@epa.gov.*

SUPPLEMENTARY INFORMATION: *Public Participation:* Submit your comments, identified by Docket ID No. EPA–R03–OAR–2021–0873, at *https://www.regulations.gov* (our preferred method), or the other methods identified in the **ADDRESSES** section. Once submitted, comments cannot be edited or removed from the docket. The EPA may publish any comment received to its public docket. Do not submit to EPA's docket at *https://www.regulations.gov* any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system).

There are two dockets supporting this action, EPA–R03–OAR–2021–0873 and EPA–HQ–OAR–2021–0663. Docket No. EPA–R03–OAR–2021–0873 contains information specific to West Virginia, including the notice of proposed rulemaking. Docket No. EPA–HQ–OAR–2021–0663 contains additional modeling files, emissions inventory files, technical support documents, and other relevant supporting documentation regarding interstate transport of emissions for the 2015 8-hour ozone NAAQS which are being used to support this action. All comments regarding information in either of these dockets are to be made in Docket No. EPA–R03–OAR–2021–0873. For additional submission methods, please contact Michael Gordon, 215–814–2039, *gordon.mike@epa.gov.* For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov/dockets/commenting-epa-dockets.* Due to public health concerns related to COVID–19, the EPA Docket Center and Reading Room are open to the public by appointment only. Our Docket Center staff also continues to provide remote customer service via email, phone, and webform. For further information and updates on EPA Docket Center services, please visit us online at *https://www.epa.gov/dockets.*

The EPA continues to carefully and continuously monitor information from the Centers for Disease Control and Prevention (CDC), local area health departments, and our Federal partners so that we can respond rapidly as conditions change regarding COVID–19. The index to the docket for this action, Docket No. EPA–R03–OAR–2021–0873, is available electronically at *www.regulations.gov.* While all documents in the docket are listed in the index, some information may not be publicly available via the online docket, such as modeling data files, due to docket file size restrictions or content (*e.g.,* CBI). Please contact the EPA Docket Center Services for further information on how to obtain these files.

Throughout this document, ''we,'' ''us,'' and ''our'' means the EPA.

I. Background

A. Description of Statutory Background

On October 1, 2015, the EPA promulgated a revision to the ozone NAAQS (2015 8-hour ozone NAAQS), lowering the level of both the primary and secondary standards to 0.070 parts per million (ppm).[1] Section 110(a)(1) of the CAA requires states to submit, within 3 years after promulgation of a new or revised standard, SIP submissions meeting the applicable requirements of section 110(a)(2).[2] One of these applicable requirements is found in CAA section 110(a)(2)(D)(i)(I), otherwise known as the ''interstate transport'' or ''good neighbor'' provision, which generally requires SIPs to contain adequate provisions to prohibit in-state emissions activities from having certain adverse air quality effects on other states due to interstate transport of pollution. There are two so-called ''prongs'' within CAA section 110(a)(2)(D)(i)(I). A SIP for a new or revised NAAQS must contain adequate provisions prohibiting any source or other type of emissions activity within the state from emitting air pollutants in amounts that will significantly contribute to nonattainment of the NAAQS in another state (prong 1) or interfere with maintenance of the NAAQS in another state (prong 2). The EPA and states must give independent

[1] National Ambient Air Quality Standards for Ozone, Final Rule, 80 FR 65292 (October 26, 2015). Although the level of the standard is specified in the units of ppm, ozone concentrations are also described in parts per billion (ppb). For example, 0.070 ppm is equivalent to 70 ppb.

[2] SIP revisions that are intended to meet the applicable requirements of section 110(a)(1) and (2) of the CAA are often referred to as infrastructure SIPs and the applicable elements under section 110(a)(2) are referred to as infrastructure requirements.

significance to prong 1 and prong 2 when evaluating downwind air quality problems under CAA section 110(a)(2)(D)(i)(I).[3]

B. Description of the EPA's Four-Step Interstate Transport Regulatory Process

The EPA is using the 4-step interstate transport framework (or 4-step framework) to evaluate the states' SIP submittals addressing the interstate transport provision for the 2015 8-hour ozone NAAQS. The EPA has addressed the interstate transport requirements of CAA section 110(a)(2)(D)(i)(I) with respect to prior ozone NAAQS in several regional regulatory actions, including the Cross-State Air Pollution Rule (CSAPR), which addressed interstate transport with respect to the 1997 ozone NAAQS as well as the 1997 and 2006 fine particulate matter standards,[4] and the Cross-State Air Pollution Rule Update (CSAPR Update) [5] and the Revised CSAPR Update, both of which addressed the 2008 ozone NAAQS.[6]

Through the development and implementation of the CSAPR rulemakings and prior regional rulemakings pursuant to the interstate transport provision,[7] the EPA, working in partnership with states, developed the following 4-step interstate transport framework to evaluate a State's obligations to eliminate interstate transport emissions under the interstate transport provision for the ozone NAAQS: (1) Identify monitoring sites that are projected to have problems attaining and/or maintaining the NAAQS (*i.e.,* nonattainment and/or maintenance receptors); (2) identify states that impact those air quality problems in other (*i.e.,* downwind) states sufficiently such that the states are considered ''linked'' and therefore warrant further review and analysis; (3) identify the emissions reductions necessary (if any), applying a multifactor analysis, to eliminate each linked upwind state's significant contribution to nonattainment or interference with maintenance of the NAAQS at the locations identified in Step 1; and (4) adopt permanent and enforceable measures needed to achieve those emissions reductions.

C. Background on the EPA's Ozone Transport Modeling Information

In general, the EPA has performed nationwide air quality modeling to project ozone design values which are used in combination with measured data to identify nonattainment and maintenance receptors. To quantify the contribution of emissions from specific upwind states on 2023 ozone design values for the identified downwind nonattainment and maintenance receptors, the EPA performed nationwide, state-level ozone source apportionment modeling for 2023. The source apportionment modeling provided contributions to ozone at receptors from precursor emissions of anthropogenic nitrogen oxides (NO_X) and volatile organic compounds (VOCs) in individual upwind states.

The EPA has released several documents containing projected ozone design values, contributions, and information relevant to evaluating interstate transport with respect to the 2015 8-hour ozone NAAQS. First, on January 6, 2017, the EPA published a notice of data availability (NODA) in which we requested comment on preliminary interstate ozone transport data including projected ozone design values (DVs) and interstate contributions for 2023 using a 2011 base year platform.[8] In the NODA, the EPA used the year 2023 as the analytic year for this preliminary modeling because that year aligns with the expected attainment year for Moderate ozone nonattainment areas for the 2015 8-hour ozone NAAQS.[9] On October 27, 2017, we released a memorandum (October 2017 memorandum) containing updated modeling data for 2023, which incorporated changes made in response to comments on the NODA, and noted that the modeling may be useful for states developing SIPs to address interstate transport obligations for the 2008 ozone NAAQS.[10] On March 27, 2018, we issued a memorandum (March 2018 memorandum) noting that the same 2023 modeling data released in the October 2017 memorandum could also be useful for identifying potential downwind air quality problems with respect to the 2015 8-hour ozone NAAQS at Step 1 of the 4-step interstate transport framework.[11] The March 2018 memorandum also included the then newly available contribution modeling data for 2023 to assist states in evaluating their impact on potential downwind air quality problems for the 2015 8-hour ozone NAAQS under Step 2 of the 4-step interstate transport framework.[12] The EPA subsequently issued two more memoranda in August and October 2018, providing additional information to states developing interstate transport SIP submissions for the 2015 8-hour ozone NAAQS concerning, respectively, potential contribution thresholds that may be appropriate to apply in Step 2 of the 4-step interstate transport framework, and considerations for identifying downwind areas that may have problems maintaining the standard at Step 1 of the 4-step interstate transport framework.[13]

Since the release of the modeling data shared in the March 2018

[5] Cross-State Air Pollution Rule Update for the 2008 Ozone NAAQS, 81 FR 74504 (October 26, 2016).

[6] In 2019, the D.C. Circuit Court of Appeals remanded the CSAPR Update to the extent it failed to require upwind states to eliminate their significant contribution by the next applicable attainment date by which downwind states must come into compliance with the NAAQS, as established under CAA section 181(a). *Wisconsin* v. *EPA,* 938 F.3d 303, 313 (D.C. Cir. 2019). The Revised CSAPR Update for the 2008 Ozone NAAQS, 86 FR 23054 (April 30, 2021), responded to the remand of the CSAPR Update in *Wisconsin* and the vacatur of a separate rule, the ''CSAPR Close-Out,'' 83 FR 65878 (December 21, 2018), in *New York* v. *EPA,* 781 F. App'x. 4 (D.C. Cir. 2019).

[7] In addition to the CSAPR rulemakings, other regional rulemakings addressing ozone transport include the ''NO_X SIP Call,'' 63 FR 57356 (October 27, 1998), and the ''Clean Air Interstate Rule'' (CAIR), 70 FR 25162 (May 12, 2005).

[8] *See* Notice of Availability of the Environmental Protection Agency's Preliminary Interstate Ozone Transport Modeling Data for the 2015 8-hour Ozone National Ambient Air Quality Standard (NAAQS), 82 FR 1733 (January 6, 2017).

[10] *See* Information on the Interstate Transport State Implementation Plan Submissions for the 2008 Ozone National Ambient Air Quality Standards under Clean Air Act Section 110(a)(2)(D)(i)(I), October 27, 2017, available in the docket for this action or at *https://www.epa.gov/interstate-air-pollution-transport/interstate-air-pollution-transport-memos-and-notices.*

[11] *See* Information on the Interstate Transport State Implementation Plan Submissions for the 2015 Ozone National Ambient Air Quality Standards under Clean Air Act Section 110(a)(2)(D)(i)(I), March 27, 2018 (''March 2018 memorandum''), available in the docket for this action or at *https://www.epa.gov/interstate-air-pollution-transport/interstate-air-pollution-transport-memos-and-notices.*

[12] The March 2018 memorandum, however, provided, ''While the information in this memorandum and the associated air quality analysis data could be used to inform the development of these SIPs, the information is not a final determination regarding states' obligations under the good neighbor provision. Any such determination would be made through notice-and-comment rulemaking.''

[13] *See* Analysis of Contribution Thresholds for Use in Clean Air Act Section 110(a)(2)(D)(i)(I) Interstate Transport State Implementation Plan Submissions for the 2015 Ozone National Ambient Air Quality Standards, August 31, 2018) (''August 2018 memorandum''), and Considerations for Identifying Maintenance Receptors for Use in Clean Air Act Section 110(a)(2)(D)(i)(I) Interstate Transport State Implementation Plan Submissions for the 2015 Ozone National Ambient Air Quality Standards, October 19, 2018, available in the docket for this action or at *https://www.epa.gov/airmarkets/memo-and-supplemental-information-regarding-interstate-transport-sips-2015-ozone-naaqs.*

memorandum, the EPA performed updated modeling using a 2016-based emissions modeling platform (*i.e.,* 2016v1). This emissions platform was developed under the EPA/Multi-Jurisdictional Organization (MJO)/state collaborative project.[14] This collaborative project was a multi-year joint effort by the EPA, MJOs, and states to develop a new, more recent emissions platform for use by the EPA and states in regulatory modeling as an improvement over the dated 2011-based platform that the EPA had used to project ozone design values and contribution data provided in the 2017 and 2018 memoranda. The EPA used the 2016v1 emissions to project ozone design values and contributions for 2023. On October 30, 2020, in the Notice of Proposed Rulemaking for the Revised CSAPR Update, the EPA released and accepted public comment on 2023 modeling that used the 2016v1 emissions platform.[15] Although the Revised CSPAR Update addressed transport for the 2008 ozone NAAQS, the projected design values and contributions from the 2016v1 platform are also useful for identifying downwind ozone problems and linkages with respect to the 2015 ozone NAAQS.[16]

Following the final Revised CSAPR Update, the EPA made further updates to the 2016 emissions platform to include mobile emissions from the EPA's Motor Vehicle Emission Simulator MOVES3 model [17] and updated emissions projections for electric generating units (EGUs) that reflect the emissions reductions from the Revised CSAPR Update, recent information on plant closures, and other sector trends. The construct of the updated emissions platform, 2016v2 (2016v2 emissions platform), is described in the emissions modeling technical support document (TSD) for this proposed rulemaking.[18] The EPA performed air quality modeling of the 2016v2 emissions using the most recent public release version of the Comprehensive Air-quality Model with extensions (CAMx) photochemical modeling, version 7.10.[19] The EPA now proposes to primarily rely on modeling based on the updated and newly available 2016v2 emissions platform in evaluating these submissions with respect to Steps 1 and 2 of the 4-step interstate transport framework and generally referenced within this action as 2016v2 modeling for 2023. By using the updated modeling results, the EPA is using the most current and technically appropriate information for this proposed rulemaking. Section III of this document and the Air Quality Modeling TSD for 2015 8-hour Ozone NAAQS Transport SIP Proposed Actions, included in Docket ID No. EPA–HQ–OAR–2021–0663 for this proposal, contain additional detail on the EPA's 2016v2 modeling. In this document, the EPA is accepting public comment on this updated 2023 modeling, which uses a 2016v2 emissions platform. Comments on the EPA's air quality modeling should be submitted in the Regional docket for this action, Docket ID No. EPA–R03–OAR–2021–0873. No comments on any topic are being accepted in docket ID No. EPA–HQ–OAR–2021–0663.

States may have chosen to rely on the results of EPA modeling and/or alternative modeling performed by states or MJOs to evaluate downwind air quality problems and contributions as part of their submissions. EPA's evaluation of how West Virginia used air quality modeling information in their submission is in Section III of this document.

D. The EPA's Approach to Evaluating Interstate Transport SIPs for the 2015 8-Hour Ozone NAAQS

The EPA proposes to apply a consistent set of policy judgments across all states for purposes of evaluating interstate transport obligations and the approvability of interstate transport SIP submittals for the 2015 8-hour ozone NAAQS. These policy judgments reflect consistency with relevant case law and past agency practice as reflected in the CSAPR and related rulemakings. Nationwide consistency in approach is particularly important in the context of interstate ozone transport, which is a regional-scale pollution problem involving many smaller contributors. Effective policy solutions to the problem of interstate ozone transport going back to the NO_X SIP Call have necessitated the application of a uniform framework of policy judgments in order to ensure an ''efficient and equitable'' approach. *See EME Homer City Generation, LP* v. *EPA,* 572 U.S. 489, 519 (2014).

In the March, August, and October 2018 memoranda, the EPA recognized that states may be able to establish alternative approaches to addressing their interstate transport obligations for the 2015 8-hour ozone NAAQS that vary from a nationally uniform framework. The EPA emphasized in these memoranda, however, that such alternative approaches must be technically justified and appropriate in light of the facts and circumstances of each particular state's submittal. In general, the EPA continues to believe that deviation from a nationally consistent approach to ozone transport must be substantially justified and have a well-documented technical basis that is consistent with relevant case law. Where states submitted SIPs that rely on any such potential ''flexibilities'' as may have been identified or suggested in the past, the EPA will evaluate whether the state adequately justified the technical and legal basis for doing so. The EPA's proposed framework with respect to analytic year, definition of nonattainment and maintenance receptors, selection of contribution threshold, and multifactor control strategy assessment is described in this section. The EPA notes that certain concepts included in an attachment to the March 2018 memorandum require unique consideration, and these ideas do not constitute agency guidance with respect to transport obligations for the 2015 ozone NAAQS. Attachment A to the March 2018 memorandum identified a ''Preliminary List of Potential Flexibilities'' that could potentially inform SIP development.[20] However, EPA made clear in that Attachment that the list of ideas were not suggestions endorsed by the Agency but rather ''comments provided in various forums'' on which EPA sought ''feedback from interested stakeholders.'' [21] Further, Attachment A stated, ''EPA is not at this time making any determination that the ideas discussed below are consistent with the requirements of the CAA, nor is the EPA specifically recommending that states use these approaches.'' [22] Attachment A to the March 2018 memorandum, therefore, does not constitute agency guidance, but was intended to generate further discussion around potential approaches to addressing ozone transport among interested stakeholders. To the extent

[14] The results of this modeling, as well as the underlying modeling files, are included in docket EPA–HQ–OAR–2021–0663.

[22] *Id.*

states sought to develop or rely on these ideas in support of their SIP submittals, the EPA will thoroughly review the technical and legal justifications for doing so.

The remainder of this section describes the EPA's proposed framework with respect to analytic year, definition of nonattainment and maintenance receptors, selection of contribution threshold, and multifactor control strategy assessment.

1. Selection of Analytic Year

In general, the states and the EPA must implement the interstate transport provision in a manner ''consistent with the provisions of [title I of the CAA.]'' CAA section 110(a)(2)(D)(i). This requires, among other things, that these obligations are addressed consistently with the timeframes for downwind areas to meet their CAA obligations. With respect to ozone NAAQS, under CAA section 181(a), this means obligations must be addressed ''as expeditiously as practicable'' and no later than the schedule of attainment dates provided in CAA section 181(a)(1).[23] Several D.C. Circuit court decisions address the issue of the relevant analytic year for the purposes of evaluating ozone transport air-quality problems. On September 13, 2019, the D.C. Circuit issued a decision in *Wisconsin* v. *EPA,* remanding the CSAPR Update to the extent that it failed to require upwind states to eliminate their significant contribution by the next applicable attainment date by which downwind states must come into compliance with the NAAQS, as established under CAA section 181(a). 938 F.3d 303 at 313.

On May 19, 2020, the D.C. Circuit issued a decision in *Maryland* v. *EPA* that cited the *Wisconsin* decision in holding that the EPA must assess the impact of interstate transport on air quality at the next downwind attainment date, including Marginal area attainment dates, in evaluating the basis for the EPA's denial of a petition under CAA section 126(b). *Maryland* v. *EPA,* 958 F.3d 1185, 1203–04 (D.C. Cir. 2020). The court noted that ''section 126(b) incorporates the Good Neighbor Provision,'' and, therefore, ''EPA must find a violation [of section 126] if an upwind source will significantly contribute to downwind nonattainment at the *next downwind attainment deadline.* Therefore, the agency must evaluate downwind air quality at that deadline, not at some later date.'' *Id.* at 1204 (emphasis added). The EPA interprets the court's holding in *Maryland* as requiring the Agency, under the good neighbor provision, to assess downwind air quality as expeditiously as practicable and no later than the next applicable attainment date,[24] which is now the Moderate area attainment date under CAA section 181 for ozone nonattainment. The Moderate area attainment date for the 2015 8-hour ozone NAAQS is August 3, 2024.[25] The EPA believes that 2023 is now the appropriate year for analysis of interstate transport obligations for the 2015 8-hour ozone NAAQS because the 2023 ozone season is the last relevant ozone season during which achieved emissions reductions in linked upwind states could assist downwind states with meeting the August 3, 2024 Moderate area attainment date for the 2015 8-hour ozone NAAQS.

The EPA recognizes that the attainment date for nonattainment areas classified as Marginal for the 2015 8-hour ozone NAAQS was August 3, 2021. Under the *Maryland* holding, any necessary emissions reductions to satisfy interstate transport obligations should have been implemented by no later than this date. At the time of the statutory deadline to submit interstate transport SIPs (October 1, 2018), many states relied upon the EPA modeling of the year 2023, and no state provided an alternative analysis using a 2021 analytic year (or the prior 2020 ozone season). However, the EPA must act on SIP submittals using the information available at the time it takes such action. In this circumstance, the EPA does not believe it would be appropriate to evaluate states' obligations under CAA section 110(a)(2)(D)(i)(I) as of an attainment date that is wholly in the past, because the Agency interprets the interstate transport provision as forward looking. *See* 86 FR at 23074(April 30, 2021); *see also Wisconsin,* 938 F.3d at 322. Consequently, in this proposal the EPA will use the analytical year of 2023 to evaluate each state's CAA section 110(a)(2)(D)(i)(I) SIP submission with respect to the 2015 8-hour ozone NAAQS.

2. Step 1 of the 4-Step Interstate Transport Framework

In Step 1, the EPA identifies monitoring sites that are projected to have problems attaining and/or maintaining the NAAQS in the 2023 analytic year. Where the EPA's analysis shows that a site does not fall under the definition of a nonattainment or maintenance receptor, that site is excluded from further analysis under the EPA's 4-step interstate transport framework. For sites that are identified as a nonattainment or maintenance receptor in 2023, we proceed to the next step of our 4-step interstate transport framework by identifying the upwind state's contribution to those receptors.

The EPA's approach to identifying ozone nonattainment and maintenance receptors in this action is consistent with the approach used in previous transport rulemakings. The EPA's approach gives independent consideration to both the ''contribute significantly to nonattainment'' and the ''interfere with maintenance'' prongs of CAA section 110(a)(2)(D)(i)(I), consistent with the D.C. Circuit's direction in *North Carolina* v. *EPA.*[26]

For the purpose of this proposal, the EPA identifies nonattainment receptors as those monitoring sites that are projected to have average design values that exceed the NAAQS and that are also measuring nonattainment based on the most recent monitored design values. This approach is consistent with prior transport rulemakings, such as the CSAPR Update, where the EPA defined nonattainment receptors as those areas that both currently measure nonattainment and that the EPA projects will be in nonattainment in the future analytic year (*i.e.,* 2023).[27]

In addition, in this proposal, the EPA identifies a receptor to be a ''maintenance'' receptor for purposes of defining interference with maintenance, consistent with the method used in the CSAPR and upheld by the D.C. Circuit in *EME Homer City Generation, L.P.* v. *EPA,* 795 F.3d 118, 136 (D.C. Cir.

[23] For attainment dates for the 2015 8-hour ozone NAAQS, refer to CAA section 181(a), 40 CFR 51.1303, and Additional Air Quality Designations for the 2015 Ozone National Ambient Air Quality Standards, 83 FR 25776 (June 4, 2018, effective August 3, 2018).

[24] We note that the court in *Maryland* did not have occasion to evaluate circumstances in which the EPA may determine that an upwind linkage to a downwind air quality problem exists at steps 1 and 2 of the interstate transport framework by a particular attainment date, but for reasons of impossibility or profound uncertainty the Agency is unable to mandate upwind pollution controls by that date. *See Wisconsin,* 938 F.3d at 320. The D.C. Circuit noted in *Wisconsin* that upon a sufficient showing, these circumstances may warrant flexibility in effectuating the purpose of the interstate transport provision.

[25] *See* CAA section 181(a); 40 CFR 51.1303; Additional Air Quality Designations for the 2015 Ozone National Ambient Air Quality Standards, 83 FR 25776 (June 4, 2018, effective August 3, 2018).

[26] *See North Carolina* v. *EPA,* 531 F.3d 896, 910–11 (D.C. Cir. 2008) (holding that the EPA must give ''independent significance'' to each prong of CAA section 110(a)(2)(D)(i)(I)).

[27] *See* 81 FR 74504 (October 26, 2016). This same concept, relying on both current monitoring data and modeling to define nonattainment receptor, was also applied in CAIR. *See* 70 FR 25241 (January 14, 2005); *see also North Carolina,* 531 F.3d at 913–14 (affirming as reasonable EPA's approach to defining nonattainment in CAIR).

2015).[28] Specifically, the EPA identified maintenance receptors as those receptors that would have difficulty maintaining the relevant NAAQS in a scenario that takes into account historical variability in air quality at that receptor. The variability in air quality was determined by evaluating the ''maximum'' future design value at each receptor based on a projection of the maximum measured design value over the relevant period. The EPA interprets the projected maximum future design value to be a potential future air quality outcome consistent with the meteorology that yielded maximum measured concentrations in the ambient data set analyzed for that receptor (*i.e.,* ozone conducive meteorology). The EPA also recognizes that previously experienced meteorological conditions (*e.g.,* dominant wind direction, temperatures, air mass patterns) promoting ozone formation that led to maximum concentrations in the measured data may reoccur in the future. The maximum design value gives a reasonable projection of future air quality at the receptor under a scenario in which such conditions do, in fact, reoccur. The projected maximum design value is used to identify upwind emissions that, under those circumstances, could interfere with the downwind area's ability to maintain the NAAQS.

Recognizing that nonattainment receptors are also, by definition, maintenance receptors, the EPA often uses the term ''maintenance-only'' to refer to those receptors that are not nonattainment receptors. Consistent with the concepts for maintenance receptors, as described above, the EPA identifies ''maintenance-only'' receptors as those monitoring sites that have projected average design values above the level of the applicable NAAQS, but that are not currently measuring nonattainment based on the most recent official design values. In addition, those monitoring sites with projected average design values below the NAAQS, but with projected maximum design values above the NAAQS are also identified as ''maintenance only'' receptors, even if they are currently measuring nonattainment based on the most recent official design values.

[28] *See* 76 FR 48208 (August 8, 2011). CSAPR Update and Revised CSAPR Update also used this approach. See 81 FR 74504 (October 26, 2016) and 86 FR 23054 (April 30, 2021).

3. Step 2 of the 4-Step Interstate Transport Framework

In Step 2, the EPA quantifies the contribution of each upwind state to each receptor in the 2023 analytic year. The contribution metric used in Step 2 is defined as the average impact from each state to each receptor on the days with the highest ozone concentrations at the receptor based on the 2023 modeling. If a state's contribution value does not equal or exceed the threshold of 1 percent of the NAAQS (*i.e.,* 0.70 parts per billion (ppb) for the 2015 8-hour ozone NAAQS), the upwind state is not ''linked'' to a downwind air quality problem, and the EPA, therefore, concludes that the state does not significantly contribute to nonattainment or interfere with maintenance of the NAAQS in the downwind states. However, if a state's contribution equals or exceeds the 1 percent threshold, the state's emissions are further evaluated in Step 3, considering both air quality and cost as part of a multi-factor analysis, to determine what, if any, emissions might be deemed ''significant'' and, thus, must be eliminated under CAA section 110(a)(2)(D)(i)(I). The EPA is proposing to rely in the first instance on the 1 percent threshold (*i.e.,* 0.70 ppb) for the purpose of evaluating a state's contribution to nonattainment or maintenance of the 2015 8-hour ozone NAAQS at downwind receptors. This is consistent with the Step 2 approach that EPA applied in CSAPR for the 1997 ozone NAAQS, which has subsequently been applied in the CSAPR Update when evaluating interstate transport obligations for the 2008 ozone NAAQS. The EPA continues to find 1 percent to be an appropriate threshold. For ozone, as the EPA found in the Clean Air Interstate Rule (CAIR), CSAPR, and CSAPR Update, a portion of the nonattainment problems from anthropogenic sources in the U.S. result from the combined impact of relatively small contributions from many upwind states, along with contributions from in-state sources and, in some cases, substantially larger contributions from a subset of particular upwind states. The EPA's analysis shows that much of the ozone transport problem being analyzed in this proposed rulemaking is still the result of the collective impacts of contributions from many upwind states. Therefore, application of a consistent contribution threshold is necessary to identify those upwind states that should have responsibility for addressing their contribution to the downwind nonattainment and maintenance problems to which they collectively contribute. Continuing to use 1 percent of the NAAQS as the screening metric to evaluate collective contribution from many upwind states also allows the EPA (and states) to apply a consistent framework to evaluate interstate emissions transport under the interstate transport provision from one NAAQS to the next. *See* 81 FR at 74518 (October 26, 2016). *See also* 86 FR at 23085 (April 30, 2021) (reviewing and explaining rationale from CSAPR, 76 FR at 48237–38 (August 8, 2011), for selection of 1 percent threshold).

The EPA's August 2018 memorandum recognized that in certain circumstances, a state may be able to establish that an alternative contribution threshold of 1 ppb is justifiable. Where a state relies on this alternative threshold, and where that state determined that it was not linked at Step 2 using the alternative threshold, the EPA will evaluate whether the state provided a technically sound assessment of the appropriateness of using this alternative threshold based on the facts and circumstances underlying its application in the particular SIP submission.

4. Step 3 of the 4-Step Interstate Transport Framework

Consistent with the EPA's longstanding approach to eliminating significant contribution or interference with maintenance, at Step 3, states linked at Steps 1 and 2 are generally expected to prepare a multifactor assessment of potential emissions controls. The EPA's analysis at Step 3 in prior Federal actions addressing interstate transport requirements has primarily focused on an evaluation of cost-effectiveness of potential emissions controls (on a marginal cost-per-ton basis), the total emissions reductions that may be achieved by requiring such controls (if applied across all linked upwind states), and an evaluation of the air quality impacts such emissions reductions would have on the downwind receptors to which a state is linked; other factors may potentially be relevant if adequately supported. In general, where the EPA's or alternative air quality and contribution modeling establishes that a state is linked at Steps 1 and 2, it will be insufficient at Step 3 for a state merely to point to its existing rules requiring control measures as a basis for approval. In general, the emissions-reducing effects of all existing emissions control requirements are already reflected in the air quality results of the modeling for Steps 1 and 2. If the state is shown to still be linked to one or more downwind receptor(s), states must provide a well-

documented evaluation determining whether their emissions constitute significant contribution or interference with maintenance by evaluating additional available control opportunities by preparing a multifactor assessment. While the EPA has not prescribed a particular method for this assessment, the EPA expects states at a minimum to present a sufficient technical evaluation. This would typically include information on emissions sources, applicable control technologies, emissions reductions and costs, cost effectiveness, and downwind air quality impacts of the estimated reductions, before concluding that no additional emissions controls should be required.[29]

5. Step 4 of the 4-Step Interstate Transport Framework

At Step 4, states (or the EPA) develop permanent and federally enforceable control strategies to achieve the emissions reductions determined to be necessary at Step 3 to eliminate significant contribution to nonattainment or interference with maintenance of the NAAQS. For a state linked at Steps 1 and 2 to rely on an emissions control measure at Step 3 to address its interstate transport obligations, that measure must be included in the state's SIP so that it is permanent and federally enforceable. *See* CAA section 110(a)(2)(D) (''Each such [SIP] shall . . . contain adequate provisions . . .''). *See also* CAA section 110(a)(2)(A); *Committee for a Better Arvin* v. *U.S. E.P.A.,* 786 F.3d 1169, 1175–76 (9th Cir. 2015) (holding that measures relied on by state to meet CAA requirements must be included in the SIP).

II. West Virginia's SIP Submission Addressing Interstate Transport of Air Pollution for the 2015 8-Hour Ozone NAAQS

On September 14, 2018, the West Virginia Department of Environmental Protection (WVDEP), on behalf of the State of West Virginia, made a SIP submission to address most of the 2015 8-hour ozone NAAQS i-SIP requirements under CAA section 110(a)(2), except for the CAA section 110(a)(2)(D)(i)(I) (the ''Good Neighbor'' or ''interstate transport'') requirements, which West Virginia proposed to address in a separate SIP submittal. The EPA published a final approval of this SIP submission on March 17, 2020. 85 FR 15071. On February 4, 2019, WVDEP submitted a separate, supplemental SIP revision addressing only the CAA Section 110(a)(2)(D)(i)(I) interstate transport requirements for the 2015 8-hour ozone NAAQS (the 2019 SIP).[30] West Virginia's 2019 SIP submittal evaluated different modeling options, provided an analysis of ozone monitoring data and emission trends, and argued that the State has already implemented adequate measures to address pollutant transport that may significantly contribute to downwind states' ozone maintenance and nonattainment problems, before concluding that West Virginia has satisfied its section 110(a)(2)(D)(i)(I) Good Neighbor obligations for the 2015 8-hour ozone NAAQS.

WVDEP requested that the EPA ''conditionally'' approve the 2019 SIP submittal, because at the time of submission, WVDEP had a proposed rulemaking pending before the West Virginia Legislature for approval during the 2019 legislative session. The proposed rulemaking, entitled ''45CSR43—Cross-State Air Pollution Rule to Control Annual Nitrogen Oxide Emissions, Annual Sulfur Dioxide Emissions and Ozone Season Nitrogen Oxide Emissions,'' would incorporate by reference into the West Virginia regulations the following emissions trading programs set forth in the CSAPR and CSAPR Update regulations: 40 CFR part 97, subpart AAAAA (CSAPR NO_X Annual Trading Program), subpart CCCCC (CSAPR SO_2 Group 1 Trading Program), and subpart EEEEE (CSAPR NO_X Ozone Season Group 2 Trading Program). Following the submission of this 2019 SIP revision, the West Virginia Legislature approved the state regulation incorporating by reference these subparts, and WVDEP submitted a SIP revision requesting that the EPA approve this regulation into the West Virginia SIP on June 5, 2019. The EPA proposed approval of this SIP revision on August 16, 2019. 84 FR 41944.[31] WVDEP claimed that following the EPA final approval of the SIP revision incorporating these programs, the West Virginia SIP would contain all the measures necessary to ensure that it met the good neighbor obligations of the CAA section 110(a)(2)(D)(i)(I) for the 2015 8-hour ozone NAAQS. The EPA has not taken final action on that SIP revision.[32]

WVDEP's submittal to address interstate transport for the 2015 8-hour ozone NAAQS roughly followed the 4-step interstate transport framework, as briefly described here. At Step 1, WVDEP discussed and compared the EPA's transport modeling provided in the March 2018 memorandum against transport modeling provided by Alpine and LADCO and decided that the Alpine modeling was the ''most appropriate, robust modeling available to identify the nonattainment and maintenance receptors to which West Virginia significantly contributes.'' Alpine released air quality modeling in June 2018, which used a 12-km grid (supplemented with two 4-km nested grids) based on the EPA's 2023en modeling platform and preliminary source contribution assessment. In addition to air quality modeling, the Alpine TSD[33] included a discussion of ''Selected SIP Revision Approaches'' based on information on the ''flexibilities'' listed in an appendix to the EPA's March 2018 Memorandum. Alpine's air quality modeling incorporated meteorological data from the WRF model along with emissions data developed using SMOKE, MOVES2014, and BEIS version 3.61. Alpine used CAMx, and the OSAT/APCA tool to project ozone concentrations at downwind receptors. The modeling used 2023 as the projection year based on the EPA's guidance in the 2017 Memorandum stating that 2023 was the appropriate year to use. As shown in Table 1 of this document, Alpine modeling projected that in the Mid-Atlantic region, one receptor would have nonattainment issues and nine receptors would have maintenance problems in 2023 with respect to the 2015 ozone NAAQS.

[29] As examples of general approaches for how such an analysis could be conducted for their sources, states could look to the CSAPR Update, 81 FR 74504, 74539–51; CSAPR, 76 FR 48208, 48246–63 (August 8, 2011); CAIR, 70 FR 25162, 25195–229 (May 12, 2005).; or the NO_X SIP Call, 63 FR 57356, 57399–405 (October 27, 1998). *See also* Revised CSAPR Update, 86 FR 23054, 23086–23116 (April 30, 2021). Consistently across these rulemakings, the EPA has developed emissions inventories, analyzed different levels of control stringency at different cost thresholds, and assessed downwind air quality improvements.

[30] *See* the 2019 SIP submittal included in docket EPA–R03–OAR–2021–0873.

[31] Docket No. EPA–R03–OAR–2019–0349.

[32] The D.C. Circuit court's decision in *Wisconsin* v. *EPA,* 938 F.3d 303 (September 13, 2019) remanding the CSAPR Update rule to EPA for further consideration prevented final approval of West Virginia's SIP submission.

TABLE 1—RECEPTORS IDENTIFIED BY WEST VIRGINIA USING ALPINE'S JUNE 2018 MODELING

Receptor ID	Location	Nonattainment/ maintenance	2023 Average design value (ppb)	2023 Maximum design value (ppb)	2014–2016 Actual design value (ppb)
240251001	Harford, MD	Nonattainment	71.1	73.5	73
551170006	Sheboygan, WI	Nonattainment	71.7	74.0	79
90010017	Fairfield, CT	Maintenance	69.2	71.5	80
90013007	Farifield, CT	Maintenance	69.7	73.6	81
90019003	Farifield, CT	Maintenance	69.9	72.7	83
90099002	New Haven, CT	Maintenance	70.3	73.0	76
90110124	New London, CT	Maintenance	68.2	71.3	72
260050003	Allegan, MI	Maintenance	70.3	73.1	75
340150002	Gloucester, NJ	Maintenance	68.8	71.0	74
360850067	Richmond, NY	Maintenance	69.6	71.0	76
361030002	Suffolk, NY	Maintenance	70.7	72.1	72
421010024	Philadelphia, PA	Maintenance	68.0	71.0	77

At Step 2 of the analysis, WVDEP noted that the Alpine modeling projected that West Virginia would be ''linked'' to the only downwind 2023 nonattainment receptor and three maintenance receptors in the Mid-Atlantic 4-km region. The contribution results of the Alpine modeling are shown in Table 2 of this document. WVDEP noted that the Alpine modeling projected that West Virginia's largest identified contribution to downwind 8-hour ozone nonattainment and maintenance receptors was 2.52 ppb and 1.63 ppb, respectively.

TABLE 2—WEST VIRGINIA'S CONTRIBUTION TO RECEPTORS BASED ON ALPINE'S JUNE 2018 MODELING

Receptor ID	Location	Nonattainment/maintenance	2023 Average design value (ppb)	2023 Maximum design value (ppb)	West Virginia contribution (ppb)
240251001	Harford County, MD	Nonattainment	71.1	73.5	2.52
340150002	Gloucester County, NJ	Maintenance	68.8	71.0	1.63
360850067	Richmond County, NY	Maintenance	69.6	71.0	0.71
421010024	Philadelphia County, PA	Maintenance	68.0	71.0	1.21

WVDEP identified specific receptors for further analysis, based upon the Alpine modeling that indicated that emissions from the State would be ''linked'' to the downwind ozone nonattainment receptor at Harford, Maryland, and to three maintenance receptors at Gloucester, New Jersey; Richmond, New York; and Philadelphia, Pennsylvania. Therefore, WVDEP stated that further review and analysis relevant to those areas was warranted. With respect to these specific monitors, WVDEP also presented further analysis of the air pollution problems at these four locations in Section 4 of the SIP submittal, entitled ''Flexibilities.''

At Step 3, WVDEP noted that it is necessary to identify the emissions reductions necessary (if any), considering cost and air quality factors, to prevent the identified upwind state from contributing significantly to downwind air quality problems. To do this, WVDEP reviewed NO_X emissions data from EPA's 2008, 2011, 2014 and 2017 NEI Air Pollution Emissions Trends Data website, to evaluate emissions' trends data for all Tier 1 Categories from 1990 through 2017.[34] This review determined that six categories of Tier 1 sources accounted for approximately 95% of the State's NO_X emissions in 2017, and thus WVDEP focused its evaluation of potential controls and the cost-effectiveness of those controls on these six categories of sources in West Virginia.

For two of these categories—highway vehicles and off-highway vehicles—WVDEP determined that these emission sources are regulated by the Federal government, and therefore declined to conduct any further analysis of emissions reduction opportunities. For the other four categories—fuel combustion electric utilities, fuel combustion industrial, fuel combustion other, and petroleum and related industries—WVDEP grouped these into two categories for analysis: EGUs and non-EGUs. For the EGU category, WVDEP identified the shutdown of six EGUs since 2011 and the amount of emissions that these sources emitted prior to shutdown. For those EGUs still operating, WVDEP relied upon the EPA's analysis in the proposed CSAPR Update for its finding that ''because all identified highly cost-effective emission reductions have already been implemented with respect to EGUs, WV finds that no additional highly cost-effective reductions are available for EGUs for the 2015 ozone NAAQS.''

For the non-EGU categories, WVDEP relied upon a technical support document (TSD) developed by the EPA analyzing available controls and the costs for non-EGU sources for the CSAPR Update. This TSD identified nine non-EGU sources in West Virginia emitting more than 100 tons per year of NO_X, and 21 West Virginia sources emitting between 25 and 100 tons per year of NO_X. WVDEP then listed those sources in these two groupings which have shut down, or will shut down in the near future, and the reduction in NO_X emissions from the 2011 base year attributable to these past and future shutdowns and various other information before determining that ''[t]he shutdown of the identified 10 sources; the required shutdown of the

[34] This website provides current emissions trends data for all Tier 1 Categories from 1990 through 2017. *See also https://www.epa.gov/air-emissions-inventories/what-sources-make-tier-1-categories-used-emissions-trends.*

additional five sources; and the current level of control on the remaining 20 sources, in conjunction with the implementation of the Control Measures programs listed in Section 6, represent the implementation of reasonable control measures in West Virginia.''

For the petroleum category, WVDEP separately opined that its approved permitting programs would prevent new or modified sources from causing or contributing to a violation of the NAAQS and included a discussion of these programs in section 6.1 of the SIP submittal.

At Step 4 of its analysis, WVDEP identified the control measures it has already implemented or is subject to that ''reasonably'' reduce emissions from relevant sources located in the State. Among the measures identified by WVDEP in its SIP submittal are permitting programs, stationary source control measures, and mobile source control measures. WVDEP also determined that the adoption of a regional trading program to replace the CSAPR Update FIP under 45CSR43 was sufficient to address the State's significant contribution to the downwind receptors. Upon approval of West Virginia's 45CSR43 into the SIP, WVDEP states that its SIP will contain the necessary measures to reduce the State's impact on the identified downwind receptors for purposes of the 2015 ozone NAAQS.

Under the permitting programs, WVDEP referenced the State's NSR permit program, which includes revision of applications, determination of permit applicability and issuance of permits for both minor [35] and major [36] sources. Under the minor source NSR program, the construction or modification of a source with the potential to emit six or more pounds per hour (lbs/hr), or greater than 144 pounds per calendar day, of a regulated pollutant, including ozone precursors, requires that the source obtain a permit under the state rule 45CSR13. WVDEP stated that ''45CSR13 is the mechanism under which NSPS are applied to a given minor source,'' and reductions from sources subject to NSPS are assumed to be equivalent to reasonably available control technology/reasonably available control measures (RACT/RACM).

For major stationary sources, WVDEP referenced two additional permitting programs: One that satisfies the prevention of significant deterioration (PSD) requirements under Part C of Title 1 of the CAA, and another that satisfies the nonattainment area NSR (NNSR) requirements under Part D of the CAA. These are codified at 45CSR14 [37] and 45CSR19,[38] respectively. WVDEP asserts that the PSD regulations at 45CSR14 regulate future growth and thus provide for continued maintenance of the 2015 8-hour ozone NAAQS. WVDEP also notes that, pursuant to CAA section 165(a)(3), WVDEP is authorized to implement the existing PSD permit program to ensure that construction and modification of a major source will not cause or contribute to violations of the NAAQS.[39] The State explained that the NNSR regulations at 45CSR19 cover new major sources and major modifications, not subject to PSD, in nonattainment areas. The State explained that this regulation contains a significance level for ozone of 40 tons per year of VOC or NO_X. WVDEP specified in its SIP submittal that there are no areas designated as nonattainment for the 2008 or 2015 ozone NAAQS in West Virginia.

For stationary sources, WVDEP's submittal also included a list of other federally established control measures including: (i) New source performance standards (40 CFR part 60); (ii) the Acid Rain Program; (iii) the NO_X SIP call; (iv) the CAIR; (v) CSAPR; (vi) the CSAPR Update; (vii) solid waste combustion rules (40 CFR part 60); and (viii) the maximum achievable control technology (MACT) program (*i.e.,* the NESHAPS at 40 CFR part 63).

In addition, WVDEP included a list of control measures for mobile sources that EPA has established. These control measures include: (i) The 2007 heavy-duty highway rule in 40 CFR part 86, subpart P; (ii) Tier 2 vehicle and gasoline sulfur program at 40 CFR part 80, subpart H, 40 CFR part 85 and 40 CFR part 86; (iii) Tier 3 motor vehicle emission and fuel standards codified under 40 CFR parts 79, 80, 85, 86, 600, 1036, 1037, 1039, 1042, 1048, 1054, 1065, and 1066; (iv) Tier 4 vehicle standards; and (v) the nonroad diesel emissions program at 40 CFR part 89.

In conclusion, following a review of the emission reductions created by shutdowns, and various existing emission control requirements, WVDEP states that ''upon incorporation of 45CSR43 into the SIP, no additional highly cost-effective reductions are available for the 2015 8-hour ozone NAAQS.''

III. EPA Evaluation

The EPA is proposing to find that WVDEP's February 4, 2019 SIP submission does not meet the State's obligations with respect to prohibiting emissions that contribute significantly to nonattainment or interfere with maintenance of the 2015 8-hour ozone NAAQS in any other state. The proposed disapproval is based on both newer, updated modeling performed by the EPA that was not available when WVDEP submitted its SIP submission to address the requirements of section 110(a)(2)(D)(i)(I) for the 2015 ozone NAAQS, and the EPA's evaluation of WVDEP's SIP submission using the 4-step interstate transport framework.

A. West Virginia

1. Evaluation of Information Provided by West Virginia Regarding Steps 1 and 2

As explained in Section II of this document, at Step 1 of the 4-Step interstate transport framework, WVDEP used the Alpine modeling released in June 2018 to identify any areas where that modeling would project nonattainment or maintenance problems in 2023. Although Alpine's June 2018 modeling TSD describes several potential concepts identified by outside parties and listed in an appendix to the EPA's March 2018 Memorandum, it does not appear that WVDEP relied on those so-called ''flexibilities.'' [40] The nonattainment and maintenance receptors identified in Alpine's modeling under Step 1 are listed in Table 1 in Section II of this document. Based on the results of the Alpine modeling alone, WVDEP acknowledged

[35] Permitting requirements for minor sources are codified at 45CSR13—*Permits for Construction, Modification, Relocation and Operation of Stationary Sources of Air Pollutants, Notification Requirements, Administrative Updates, Temporary Permits, General Permits, Permission to Commence Construction, and Procedures for Evaluation.*

[36] Permitting requirements for major sources are codified at 45CSR14—*Permits for the Construction and Major Modification of Major Stationary Sources of Air Pollution for the Prevention of Significant Deterioration,* and 45CSR19—*Permits for Construction and Major Modification of Major Stationary Sources Which Cause or Contribute to Nonattainment Areas* and 45CSR30—*Requirements for Operating Permits.*

[37] *Permits for the Construction and Major Modification of Major Stationary Sources of Air Pollution for the Prevention of Significant Deterioration.*

[38] *Permits for Construction and Major Modification of Major Stationary Sources Which Cause or Contribute to Nonattainment Areas.*

[39] *See* 45CSR 14–9.1 and 40 CFR 51.166(k).

[40] The ''flexibilities'' identified in the Alpine modeling TSD, but not used by West Virginia, include removing Canadian and Mexican contributions from modeling results, using an alternate significant contribution threshold in Step 2 of EPA's four-step transport interstate framework, using relative significant impact amongst those states similarly contributing to a downwind receptor under Step 3 of EPA's four-step transport interstate framework, and using alternative timeframes to address the ''interference with maintenance'' prong of the good neighbor provision.

in its SIP submission that it should proceed to Step 2 of the analysis.

At Step 2 of its analysis, WVDEP again relied on Alpine's June 2018 modeling results and highlighted any receptors to which emissions from the State contributed more than 1 percent of the NAAQS (*i.e.,* >0.70 ppb). Table 2 in Section II of this document identifies receptors from Alpine's June 2018 modeling that are projected to receive contribution levels from emissions in West Virginia above the 1 percent threshold. According to Alpine's June 2018 modeling projections, emissions from West Virginia would significantly contribute to the Harford, MD nonattainment receptor, with a 2.52 ppm contribution, and to the Gloucester, NJ, Richmond, NY, and Philadelphia, PA maintenance receptors with contributions of 1.63, 0.71, and 1.21 ppb, respectively.

WVDEP concluded in its own analysis that it was linked using the 1 percent of the NAAQS threshold and acknowledged that ''it is [then] necessary to identify the emissions reductions (if any), considering cost and air quality factors, to prevent West Virginia from contributing to downwind air quality problems,'' [41] which is Step 3 of the 4-step interstate transport framework.

Although WVDEP relied on alternative modeling instead of the EPA's modeling included in the March 2018 memorandum, WVDEP acknowledged in its SIP submission that it is linked to downwind receptors and is projected to contribute above the 1 percent threshold to certain nonattainment and/or maintenance receptors in 2023. Because the alternative modeling relied on by the state also demonstrates that a linkage exists between the state and downwind receptors at Step 2, the EPA need not conduct a comparative assessment of the alternative modeling. The State's analysis corroborates the conclusion in the EPA's most recent modeling.

2. Results of the EPA's Step 1 and Step 2 Modeling and Findings for West Virginia

As described in Section I of this document, the EPA performed air quality modeling using the 2016v2 emissions platform to project design values and contributions for 2023. These data were examined to determine if West Virginia contributes at or above the threshold of 1 percent of the 2015 8-hour ozone NAAQS (*i.e.,* 0.70 ppb) to any downwind nonattainment or maintenance receptor. As shown in Table 1 of this document, the data [42] indicate that in 2023, emissions from West Virginia contribute greater than 1 percent of the NAAQS to nonattainment or maintenance-only receptors in Fairfield County-Westport, Fairfield County-Stratford, and New Haven County in Connecticut, as well as Bucks County, Pennsylvania.[43]

TABLE 3—WEST VIRGINIA'S LINKAGE RESULTS BASED ON EPA 2016v2-BASED MODELING

Receptor ID	Location	Nonattainment/maintenance	2023 Average design value (ppb)	2023 Maximum design value (ppb)	West Virginia contribution (ppb)
90099002	New Haven, CT	Nonattainment	71.8	73.9	1.45
420170012	Bucks, PA	Maintenance	70.7	72.2	1.44
90019003	Fairfield-Westport, CT	Nonattainment	76.1	76.4	1.34
90013007	Fairfield-Stratford, CT	Nonattainment	74.2	75.1	1.30

We recognize that the results of EPA (2011 and 2016 base year) and Alpine (2011 base year) modeling indicated different receptors and linkages at Steps 1 and 2 of the framework. These differing results regarding receptors and linkages can be affected by the varying meteorology from year to year, but this does not indicate that the modeling or the EPA or the state's methodology for identifying receptors or linkages is inherently unreliable. Rather, these three separate modeling runs all indicated: (i) That there would be receptors in areas that would struggle with nonattainment or maintenance in the future, and (ii) that West Virginia was linked to some set of these receptors, even if the receptors and linkages differed from one another in their specifics (*e.g.,* a different set of receptors were identified to have nonattainment or maintenance problems, or West Virginia was linked to different receptors in one modeling run versus another). The EPA thinks this common result indicates that West Virginia's emissions have been substantial enough to generate linkages at Steps 1 and 2 to some set of downwind receptors, under varying assumptions and meteorological conditions, even if the precise set of linkages changed between modeling runs. Under these circumstances, we think it is appropriate to proceed to a Step 3 analysis to determine what portion of West Virginia's emissions should be deemed ''significant.'' In doing so, the EPA does not necessarily agree with the methods and assumptions contained in the Alpine modeling relied on by WVDEP in this action, nor that we consider our own earlier modeling to be of equal reliability relative to more recent modeling. However, where alternative or older modeling generated linkages, even if those linkages differ from linkages in the EPA's most recent set of modeling, that information provides further evidence, not less, in support of a conclusion that the state is required to proceed to Step 3 to further evaluate its emissions.

Therefore, based on the EPA's evaluation of the information submitted by West Virginia, and based on the EPA's most recent modeling results for 2023, the EPA proposes to find that West Virginia is linked at Steps 1 and 2 and has an obligation to assess potential emissions reductions from sources or other emissions activity at Step 3 of the 4-step framework.

[41] *See* the February 4, 2019 SIP submittal included in docket EPA–R03–OAR–2021–0873.

[42] Design values and contributions at individual monitoring sites nationwide are provide in the file: 2016v2_DVs_state_contributions.xlsx which is included in docket ID No. EPA–HQ–OAR–2021–0663.

[43] These modeling results are consistent with the results of a prior round of 2023 modeling using the 2016v1 emissions platform which became available to the public in the fall of 2020 in the Revised CSAPR Update, as noted in Section I of this document. That modeling showed that West Virginia had a maximum contribution greater than 0.70 ppb to at least one nonattainment or maintenance-only receptor in 2023. These modeling results are included in the file ''Ozone Design Values And Contributions Revised CSAPR Update.xlsx'' in docket EPA–HQ–OAR–2021–0663.

3. West Virginia's Analysis of ''Flexibilities''

Before proceeding to Step 3 of the analysis, WVDEP examined several so-called ''flexibilities'' identified in Attachment A to the EPA's March 2018 Memorandum in section 4 of its SIP submission,[44] ostensibly to show that West Virginia should not be seen as contributing significantly to certain 2023 nonattainment or maintenance receptors identified by the Alpine modeling. Although the Alpine modeling is now out of date, and the EPA is primarily relying upon the updated 2023 modeling using the 2016v2 emissions platform to inform its decision, the EPA has evaluated the ''flexibilities'' discussed by West Virginia to see if any of these ideas continue to have relevance to this proposed disapproval action.

a. HYSPLIT Back Trajectories

WVDEP evaluated the potential interstate impacts of emissions from West Virginia on other states, using HYPLIT modeling. To do so, WVDEP considered impacts at the one nonattainment receptor (Harford, MD) and three maintenance receptors (Philadelphia, PA; Gloucester, NJ; Richmond, NY) to which West Virginia was linked by the Alpine 4-km modeling. WVDEP identified the exceedance days for each of those receptors during the 2015–2017 time period. For the identified exceedance days, West Virginia then used the National Oceanic and Atmospheric Administration's (NOAA) Air Resources Laboratory's Hybrid Single-Particle Lagrangian Integrated Trajectory (HYSPLIT) model to develop a back trajectory analysis for each day to show the origin of air masses and establish emission source-receptor relationships. These back trajectory analyses are shown in Appendix H of the West Virginia 2019 SIP submittal. Using this approach, WVDEP concluded that the 291 back trajectory analyses ''demonstrate that on the majority of the days on which ozone exceedances occurred at the subject receptors, the origin of the air masses impacting the receptors did not originate within, or pass through, West Virginia's borders in the 48 hours preceding the exceedance.'' [45]

The EPA notes that WVDEP's own back trajectory analysis did not indicate that there were no cases when air masses associated with exceedance days at linked receptors passed over West Virginia. Rather, the state claimed that air masses did not move across West Virginia on a ''majority'' of the days the State examined ''in the 48 hours preceding'' the exceedance. WVDEP further argued that only some of the air masses moving across the state moved across ''an industrial area where air emissions are more predominate.'' Thus, WVDEP's evaluation of HYSPLIT back trajectories still show linkages between some downwind exceedances and air masses originating or passing through West Virginia.

In addition, the data in Appendix H of the WVDEP submittal indicate that one or more of the daily back trajectories from the Harford, Maryland receptor moved across West Virginia on 50 percent of the exceedance days between 2015 and 2017 at this receptor. Furthermore, the line thickness displayed on trajectory plots does not represent the geographic extent of the transported air mass, but rather they represent the centerline of an air parcel's motion, calculated to understand the trajectory line itself. Uncertainties are clearly present in these results and these uncertainties change with trajectory time and distance traveled. In this regard, one should avoid concluding a region is not along a trajectory's path if the center line of that trajectory missed the region by a relatively small distance.[46] In contrast, the EPA's analysis of transported emissions as discussed in Section I.C of this document, above, uses updated, photochemical grid modeling designed to assess ozone transported to downwind monitors across the entire region and over extended timeframes that fully account for fate and transport of ozone-precursors over longer distances. Thus, the EPA finds that WVDEP's back trajectory analysis does not show that West Virginia should not be linked to downwind nonattainment or maintenance receptors in 2023.

b. Downwind Air Quality Context

As the ''context'' surrounding certain downwind receptors, WVDEP presented information regarding other local sources of emissions also contributing to the nonattainment or maintenance problems at those locations. In Section 4.2 of the SIP submittal, WVDEP analyzed various types of information.[47] From this analysis, WVDEP concluded that all of the projected receptors in the Alpine modeling are located in 2015 8-hour ozone NAAQS nonattainment areas within the Interstate 95 highway corridor, that high population areas ''closely correspond'' to the nonattainment areas, and that high Vehicle Miles Traveled (VMT) also ''closely correlate'' with the nonattainment areas. WVDEP included a more detailed analysis of these factors in Appendix I of the West Virginia 2019 SIP Submittal.

While the EPA would generally agree that the high VMT along the Interstate 95 corridor, along with high population densities in the various existing and predicted 2023 nonattainment areas, have a large impact on the ozone nonattainment status of these areas, this does not prove that West Virginia's emissions do not also contribute to nonattainment and maintenance problems at those locations. The fact that local sources of emissions also contribute to high ozone levels is neither surprising nor outcome determinative. The EPA has developed the 4-step process to help evaluate whether or not a given state is linked to downwind nonattainment and maintenance problems, and that analysis starts at the question of whether the state's emissions have a projected impact above the 1 percent of the NAAQS threshold in 2023. That value at Step 2 is set relatively low in light of the ''collective contribution'' problem associated with regional ozone transport. The Alpine modeling that WVDEP relied upon shows such impacts above the Step 2 threshold from West Virginia at a number of receptors. The more recent modeling that the EPA has conducted indicates impacts above that threshold at other monitors. Thus, the EPA does not agree that WVDEP's analysis of the relative impacts of local sources compared to the projected impacts of emissions from the state establishes that West Virginia does not significantly contribute to these nonattainment and maintenance areas. Nor would the EPA agree that similar arguments about the ''context'' of local emissions would apply at the more recently identified receptors.

c. International Emissions

The last consideration noted by WVDEP is Section 179B of the CAA, entitled ''International border areas.'' The State focused not on section 179B(a), applicable to states that are required to submit nonattainment plan SIP submissions to address applicable requirements in nonattainment areas, but rather section 179B(b), which applies in the case of a state with a designated ozone nonattainment area that fails to meet the applicable attainment date and thus may trigger a reclassification to the next highest

[44] *See* West Virginia 2019 SIP submittal, p. 14.

[45] *Id.* at 17.

[47] *Id.*

classification of ozone nonattainment. Section 179B(b) states:
''Notwithstanding any other provision of law, any State that establishes to the satisfaction of the Administrator that, with respect to an ozone nonattainment area in such State, such State would have attained the national ambient air quality standard for ozone by the applicable attainment date, but for emissions emanating from outside of the United States, shall not be subject to the provisions of section 7511(a)(2) or (5) of this title or section 7511d of this title.'' [48]

West Virginia cites a statement in the TSD for the Alpine modeling which notes that if anthropogenic emissions from Canada and Mexico, tracked as a single tag, are taken into account, then both the EPA and Alpine's modeling demonstrate attainment at the Harford Maryland receptor with the 2015 ozone NAAQS.[49] In other words, simply subtracting the projected impact of international emissions from Canada and Mexico at that receptor would result in ''attainment'' at that location. WVDEP asserts that this fact would allow the State to ''stop at Step 1 of the four-factor process.'' EPA notes that WVDEP only raised this issue with respect to the nonattainment receptor it identified in Harford, Maryland, rather than the maintenance receptors, presumably in recognition of the fact that section 179B(b) pertains to nonattainment areas, rather than maintenance areas.

The EPA disagrees with the theory that section 179B applies in this way. First, the EPA notes that section 179B(b), relied upon and quoted by WVDEP, has no bearing on the issue of interstate transport as posited in the State's SIP submission. That specific statutory provision, by its explicit terms, only applies in the event a state with a designated ozone nonattainment area fails to attain the NAAQS by the applicable attainment date. If, in those circumstances, the state at issue would have attained the NAAQS but for the impacts of international transport, then that state may seek to avoid reclassification to the next level of ozone nonattainment that would otherwise occur upon the EPA making the requisite finding of failure to attain. WVDEP misapplies section 179B(b) when it suggests that it alters the State's obligations with respect to section 110(a)(D)(i)(I), using the example of the impacts at the Harford Maryland receptor identified in the Alpine modeling. However, even if Maryland could in the future seek to invoke section 179B(b), the only effect would be to excuse Maryland from certain additional nonattainment plan requirements of CAA sections 7511(a)(2) and (5) and 7511D. Further, if Maryland were to do so, the mere existence of international transport impacts would not be outcome determinative—even in that context where CAA section 179B(b) actually applies.[50] Section 179B does not supplant the separate obligation of upwind states such as West Virginia to address their interstate transport impacts on other downwind states. It is a separate provision of the CAA intended to address the impacts of international emissions on nonattainment areas.

Second, and more importantly, West Virginia's reasoning related to international emissions is inapplicable to the requirements of CAA section 110(a)(2)(D)(i)(I). The good neighbor provision requires states and the EPA to address interstate transport of air pollution that *contributes to* downwind states' ability to attain and maintain NAAQS. Whether emissions from other states or other countries also contribute to the same downwind air quality issue is irrelevant in assessing whether a downwind state has an air quality problem, or whether an upwind state is significantly contributing to that problem. States are not obligated under CAA section 110(a)(2)(D)(i)(I) to reduce emissions sufficient on their own to resolve downwind receptors' nonattainment or maintenance problems. Rather, states are obligated to eliminate their own ''significant contribution'' or ''interference'' with the ability of other states to attain or maintain the NAAQS.

Indeed, the D.C. Circuit in *Wisconsin* specifically rejected petitioner arguments suggesting that upwind states should be excused from good neighbor obligations on the basis that some other source of emissions (whether international or another upwind state) could be considered the ''but-for'' cause of downwind air quality problem. 938 F.3d 303 at 323–324. The court viewed petitioners' arguments as essentially an argument ''that an upwind State 'contributes significantly' to downwind nonattainment only when its emissions are the sole cause of downwind nonattainment.'' 938 F.3d 303 at 324. The court explained that ''an upwind State can 'contribute' to downwind nonattainment even if its emissions are not the but-for cause.'' *Id.* at 324–325. *See also Catawba County* v. *EPA,* 571 F.3d 20, 39 (D.C. Cir. 2009) (rejecting the argument ''that 'significantly contribute' unambiguously means 'strictly cause' '' because there is ''no reason why the statute precludes EPA from determining that [an] addition of [pollutant] into the atmosphere is significant even though a nearby county's nonattainment problem would still persist in its absence''); *Miss. Comm'n o Envtl. Quality* v. *EPA,* 790 F.3d 138, 163 n.12 (D.C. Cir. 2015) (observing that the argument that ''there likely would have been no violation at all . . . if it were not or the emissions resulting from [another source]'' is ''merely a rephrasing of the but-for causation rule that we rejected in *Catawba County.*''). Therefore, a state is not excused from eliminating its significant contribution on the basis that international emissions also contribute some amount of pollution to the same receptors to which the State is linked.

Therefore, the EPA proposes to find that Section 179B(b) of the CAA does not serve to alleviate West Virginia of any potential obligations under Section 110(a)(2)(D)(i)(I).

EPA will proceed to evaluate the information and analysis WVDEP provided at Step 3 of the 4-step interstate transport framework.

4. Evaluation of Information Provided Regarding Step 3

At Step 3 of the 4-step interstate transport framework, the state should further evaluate its sources of emissions that may impact the relevant downwind receptors, in light of multiple factors, including air quality and cost considerations, to determine what, if any, emissions significantly contribute to nonattainment or interfere with maintenance and, thus, must be eliminated under CAA section 110(a)(2)(D)(i)(I).

To evaluate effectively which emissions in the state should be deemed ''significant'' and therefore prohibited, states generally should prepare an accounting of sources and other emissions activity for relevant pollutants and assess potential, additional emissions reduction opportunities and resulting downwind air quality improvements. The EPA has consistently applied this general approach (*i.e.,* Step 3 of the 4-step

[48] Section 7511(a)(2) relates to the attainment date for severe ozone nonattainment areas, and (a)(5) describes the conditions necessary for a one-year extension of ozone attainment dates. Section 7511d pertains to enforcement for severe and extreme ozone nonattainment areas for failure to attain. Neither provision is germane to this action.

[49] *Id.* at p. 20.

[50] *See* Guidance on the Preparation of Clean Air Act Section 179B Demonstrations for Nonattainment Areas Affected by International Transport of Emissions (December 2020), pages 10–12, available at *https://www.epa.gov/sites/default/files/2020-01/documents/draft_179b_guidance-final_draft_for_posting.pdf.*

interstate transport framework) when identifying emissions contributions that the Agency has determined to be ''significant'' (or interfere with maintenance) in each of its prior Federal, regional ozone transport rulemakings, and this interpretation of the statute has been upheld by the Supreme Court. *See EME Homer City,* 572 U.S. 489, 519 (2014). While the EPA has not directed states that they must conduct a Step 3 analysis in precisely the manner the EPA has done in its prior regional transport rulemakings, state implementation plans addressing the obligations in CAA section 110(a)(2)(D)(i)(I) must prohibit ''any source or other type of emissions activity within the State'' from emitting air pollutants which will contribute significantly to downwind air quality problems. Thus, states must complete something similar to the EPA's analysis (or an alternative approach to defining ''significance'' that comports with the statute's objectives) to determine whether and to what degree emissions from a state should be ''prohibited'' to eliminate emissions that will ''contribute significantly to nonattainment in, or interfere with maintenance of,'' the NAAQS in any other state.

In Step 3, West Virginia evaluated statewide NO_X emissions data from the triennial National Emissions Inventory (NEI) for 2008, 2011, 2014 and 2017, as updated on August 2, 2018, on the EPA's NEI Air Pollution Emissions Trends Data website. This website provides current emissions trends data for all Tier 1 Categories of NO_X emissions from 1990 through 2020.[51] WVDEP's analysis found that of the Tier 1 Categories, six of those categories represented 95% of the total 2017 NO_X emissions from sources in the State. These categories are: (i) Fuel Combustion—Electric Utilities (29.5%); (ii) Fuel Combustion—Industrial (9.1%); (iii) Fuel Combustion—Other (4.8%); (iv) Petroleum and Related Industries (22.8%); (v) Highway Vehicles (21.5%); (vi) and Off-Highway (7.6%). West Virginia therefore focused its Step 3 control and cost analysis on these six categories of sources.

a. Highway Vehicles and Off-Highway

West Virginia's analysis of NEI data indicated that these two Tier 1 source categories combined produced 29.1% of the NO_X emissions in the State in 2017. For these categories of mobile sources, WVDEP noted that such sources are regulated at the Federal level and not the state level, so WVDEP concluded that no further analysis of the Highway Vehicles and Off-Highway categories for additional potential reductions is required. In Section 6.1 of the SIP submission, WVDEP noted and described a number of EPA programs designed to reduce NO_X emissions from mobile sources, including the 2007 Heavy-Duty Highway Rule (40 CFR part 86, subpart P); the Tier 2 Vehicle and Sulfur Program (40 CFR part 80, subpart H; 40 CFR part 85, 40 CFR part 86), Tier 3 Motor Vehicle Emission and Fuel Standards (40 CFR parts 79, 80, 85, 86, 600, 1036, 1037, 1042, 1048, 1054, 1065, and 1066); Tier 4 Vehicle Standards; and the Nonroad Diesel Emissions Program (40 CFR part 89).

Given the magnitude of NO_X emission reductions in West Virginia reflected in the NEI, the EPA agrees that it is appropriate for WVDEP to evaluate these source categories for potential additional controls to reduce interstate transport for the purposes of the 2015 8-hour ozone NAAQS. The EPA does not agree, however, with the State's attempt to categorize certain sectors of emissions as per se beyond its regulatory control. Clearly the State possesses regulatory authority over many categories of sources and other types of ''emissions activity within the state,'' *see* CAA section 110(a)(2)(D)(i). While the EPA generally regulates mobile sources at the Federal level under title II of the CAA, the state also has the authority to undertake any number of measures to reduce emissions from mobile sources through means and techniques that are not preempted by title II. *See, e.g.,* CAA sections 182(b)(3), 182(b)(4), 182(c)(3), 182(c)(4), 182(c)(5), 182(d)(1), 182(e)(3), and 182(e)(4) (identifying programs to control mobile source emissions that states are required to implement depending on the degree of ozone nonattainment). Pursuant to CAA section 116, states retain authority to regulate sources in SIPs, and to do so more stringently than the EPA, unless preempted. For example, many states, including states with receptors to which West Virginia is linked, have adopted California motor vehicle standards as permitted under CAA section 177.[52]

WVDEP's listing of existing Federal control measures for mobile sources does not in and of itself serve as an adequate substitute for a Step 3 analysis of additional potential emission reductions. First, these standards, to the extent they are ''on-the-books,'' are already reflected in the base case air quality modeling conducted at Steps 1 and 2. Further, the listing of existing or on-the-way control measures, whether approved into the State's SIP or not, does not substitute for a complete Step 3 analysis under the EPA's 4-step framework to define ''significant contribution.''

b. Petroleum and Related Industries

For the Petroleum and Related Industries Tier 1 category, WVDEP's analysis indicated that sources of this type produced 22.8% of the 2017 NO_X emissions in the State. West Virginia further acknowledged that this category has been a growing source of emissions in more recent years, but argued that West Virginia's New Source Review (NSR) permitting programs will adequately ensure that emissions from any new or modified sources in this category do not cause or contribute to nonattainment of the NAAQS.[53] West Virginia has a PSD program that requires new or modified major stationary sources located in designated attainment areas to obtain a permit and impose emission controls that meet the best available control technology (BACT) level of control. Similarly, West Virginia has a Nonattainment NSR program that requires new or modified major stationary sources located in designated nonattainment areas to obtain a permit and impose emission controls that meet the lowest achievable emission rate (LAER) level of control. WVDEP asserts that the BACT and LAER requirements are by definition more stringent than the RACT/RACM level of control required in nonattainment plans that states must impose in designated nonattainment areas. As a component of these permitting programs, the State noted that there is also a requirement to consider whether the emissions from the source ''will interfere with attainment or maintenance of an applicable ambient air quality standard.'' The State therefore did not perform an analysis of potential additional control measures or costs for this category of sources.

The EPA agrees with WVDEP's identification of the sources in the Petroleum and Related Industries category from the NEI as sufficiently significant to warrant evaluation for NO_X emission controls. As the State reflected in its SIP submission, the

[51] At the time West Virginia submitted its SIP in 2019, NEI data for 2020 was not available, so West Virginia limited its analysis to data available at that time.

[52] California Air Resources Board, States That Have Adopted California's Vehicle Standards Under Section 177 of the Federal Clean Air Act (Current as of December 6, 2021), *https://ww2.arb.ca.gov/resources/documents/states-have-adopted-californias-vehicle-standards-under-section-177-federal.*

[53] *Id.* at 25.

cumulative NO_X emissions from this category comprise 22.8% of West Virginia's emissions, and thus a proportion of emissions second only to the category that includes EGUs. Further, WVDEP acknowledged that unlike other source categories, the NO_X emissions from this category have been increasing in recent years. In Table 6 of the SIP submission, the State reflected the large increase in such emissions from 2008 through 2017.

Notwithstanding these increases in emissions, WVDEP relies primarily on the existing permitting programs (minor source, PSD, and NNSR) as the basis for concluding that no further controls would be necessary for these sources to address interstate transport problems for purposes of the 2015 8-hour ozone NAAQS. First, WVDEP seems to have done no more than describe the general framework for new source permitting that is mandated of all states under the CAA and has not identified how its state programs in particular go beyond those basic requirements in any manner relevant to ozone transport. Nonetheless, the State is correct that these permitting programs do impose control requirements (*e.g.,* BACT or LAER) and do require an analysis of potential impacts on attainment and maintenance of the NAAQS. But there are likewise important distinctions between the permitting program requirements and interstate transport requirements, including but not limited to: (i) The permitting programs generally apply only to new sources or major modification of existing sources; (ii) the evaluation of impacts on attainment and maintenance in other states in the context of a permit for a single source may not be as robust and have the same geographic scope as that undertaken by states and the EPA for purposes of section 110(a)(2)(D)(i)(I); and (iii) the timing of the permitting process evaluation may have no bearing on the NAAQS at issue (*i.e.,* a permit issued in 2005 would not have considered impacts vis a vis the 2015 8-hour ozone NAAQS). Further, existing sources may have been permitted under a new source permitting program years or even decades ago, before more effective or cheaper emissions control technologies became available.

Thus, even if the permitting programs address new sources of emissions for the intended purposes of those programs, it does not necessarily follow that they automatically meet all other CAA requirements as well. The EPA disagrees, therefore, with the conclusion that the existence of these permitting programs resolves the issue of whether there are additional control measures that the State should impose specifically for purposes of eliminating significant contribution to nonattainment or interference with maintenance at downwind receptors for the 2015 8-hour ozone NAAQS.[54]

In general, the listing of existing or on-the-way control measures, whether approved into the State's SIP or not, does not substitute for a complete Step 3 analysis under EPA's 4-step framework to define ''significant contribution.'' WVDEP did not provide an assessment of the overall effects of these measures, when the emissions reductions would be achieved, and what the overall resulting air quality effects would be at identified out of state receptors. WVDEP did not evaluate additional, potential emissions control opportunities, or their costs or impacts, or attempt to analyze whether, if applied more broadly across linked states, the emissions reductions would constitute the elimination of significant contribution. Although the EPA acknowledges states are not necessarily bound to follow its own analytical framework at Step 3, we note that WVDEP did not do a meaningful analysis of what other potential controls may be necessary to achieve NO_X emission reductions from these sources for the 2015 ozone NAAQS. This would have been similar to the approach to defining significant contribution that EPA has applied in prior rulemakings such as CSAPR and or the CSAPR Update, even if such an analysis is not technically mandatory.

c. Fuel Combustion—Electric Utilities

West Virginia's analysis of NEI data indicated that EGUs produced 30.2% of the NO_X emissions in the State in 2017.[55] The State noted that NO_X emissions from EGUs have already declined as a result of other CAA requirements, such as the Acid Rain Program, the NO_X Budget Trading Program, the CAIR, and the CSAPR programs. As a result of these programs and actions, WVDEP estimated a reduction in ozone season emissions of 75 percent, or almost 2 million tons, since 1997. The EPA acknowledges that these existing programs have already reduced NO_X emissions substantially from EGUs, but the question at issue at this time is whether more NO_X emissions reductions are necessary from such sources for purposes of CAA section 110(a)(2)(D)(i)(I) for the 2015 8-hour ozone NAAQS. Notwithstanding the past reductions of NO_X from EGUs, WVDEP correctly concluded that further analysis of potential controls is necessary.

As one part of this analysis, West Virginia relied on the shutdown of specific EGUs that would further reduce NO_X emissions from the state. West Virginia identified the retirements of six coal-fired power plants (consisting of 17 units total) that have occurred in recent years. Three power plants shut down in September 2012. Three additional power plants shut down in June 2015. WVDEP provided documentation for these units showing that the units were permanently retired, and the Title V permits were surrendered. The State further indicated that should operations resume at any of the shut-down units in the future, the source[56] would have to complete the permitting process as a new facility.

The EPA agrees that these shutdowns will eliminate NO_X emissions from these sources, and thus this may help to reduce the impacts of such emissions from West Virginia at the identified nonattainment and maintenance receptors. Evaluation of further control of these specific EGU sources is not required. However, EPA's most recent 2016v2 emissions platform-based modeling has already taken these shutdowns into account, and projects impacts at nonattainment or maintenance receptors in Connecticut, New York, and Maryland notwithstanding these reductions in emissions. Further, the mere fact that a particular EGU has shutdown does not mean that all associated emissions should be subtracted from the total inventory of a state's emissions. Typically, a shutdown is accompanied by a shift in generation to new sources or existing sources with available capacity, which in turn produces some incremental increase in emissions at those sources. WVDEP did not analyze the net emissions effects of the shutdowns it listed. By contrast, in its most recent modeling, the EPA has thoroughly and comprehensively evaluated emissions from EGUs in West Virginia and other states. The EPA's latest projections of the baseline EGU emissions uses the version 6—Summer 2021 Reference Case of the Integrated Planning Model (IPM). IPM is a multi-

[54] The EPA notes that WVDEP has not explained why new source permitting was a sufficient control measure for interstate ozone transport from the ''Petroleum and Related Industries'' category, but not other source categories, when the new source permitting requirements apply to all new sources.

[55] The narrative text of West Virginia's SIP submission at page 27 says that EGUs contribute 30.2%, while Table 6 of the SIP submission identifies the EGU contribution as 29.5%. This difference in attributed contribution does not change the outcome of EPA's analysis.

[56] The documentation is in Appendix M of West Virginia's 2019 SIP submittal.

regional, dynamic, and deterministic linear programming model of the U.S. electric power sector.[57] The model provides forecasts of least cost capacity expansion, electricity dispatch, and emission control strategies, while meeting energy demand, environmental, transmission, dispatch, and reliability constraints.

The IPM version 6—Summer 2021 Reference Case incorporated recent updates through the Summer of 2021 to account for updated Federal and State environmental regulations for EGUs. This projected base case accounts for the effects of the finalized Mercury and Air Toxics Standards rule, CSAPR, the CSAPR Update, the Revised CSAPR Update, New Source Review settlements, the final effluent limitation guidelines (ELG) Rule, the coal combustion residual (CCR) Rule, and other on-the-books Federal and State rules (including renewable energy tax credit extensions from the Consolidated Appropriations Act of 2021) through early 2021 impacting SO_2, NO_X, directly emitted particulate matter, CO_2, and power plant operations. It also includes final actions EPA has taken to implement the Regional Haze Rule and best available retrofit technology (BART) requirements. Further, the IPM Platform v6 uses demand projections from the Energy Information Agency's (EIA) Annual Energy Outlook (AEO) 2020.[58]

The IPM version 6—Summer 2021 Reference Case uses the National Electric Energy Data System (NEEDS) v6 database as its source for data on all existing and planned-committed units. Units are removed from the NEEDS inventory only if a high degree of certainty could be assigned to future implementation of the announced future closure or retirement.[59] The available retirement-related information was reviewed for each unit, and the following rules are applied to remove:

(i) Units that are listed as retired in the December 2020 EIA Form 860M;

(ii) Units that have a planned retirement year prior to June 30, 2023 in the December 2020 EIA Form 860M;

(iii) Units that have been cleared by a regional transmission operator (RTO) or independent system operator (ISO) to retire before 2023, or whose RTO/ISO clearance to retire is contingent on actions that can be completed before 2023;

(iv) Units that have committed specifically to retire before 2023 under Federal or state enforcement actions or regulatory requirements; and

(v) Finally, units for which a retirement announcement can be corroborated by other available information. Units required to retire pursuant to enforcement actions or state rules on July 1, 2023 or later are retained in NEEDS v6.

Retirement of EGU units that follow this process are excluded from the NEEDS inventory. This includes EGU units as highlighted in the West Virginia SIP submission (Appendix G and Appendix M).[60] Thus, the modeling already accounts for the NO_X emission reductions in West Virginia that resulted from the source shutdowns identified by WVDEP. Further, closures taking place on or after July 1, 2023 are captured as constraints on those units in the IPM modeling, and the units are retired in future year projections per the terms of the related requirements.

As a second part of its Step 3 evaluation of potential controls for EGUs, West Virginia also relied on the EPA's own analysis of potential NO_X emission reductions in connection with the CSAPR Update for the 2008 ozone NAAQS. WVDEP noted that the EPA itself considered the adequacy of NO_X controls for EGUs as part of the CSAPR Update rulemaking. The State pointed to the EPA's analytical process in the CSAPR Update rulemaking concerning factors such as cost, available emissions reductions, and downwind air impacts, and the resulting emission budgets that EPA derived using the ''knee in the curve'' evaluation of cost effectiveness as described in the proposed ''Determination Regarding Good Neighbor Obligations for the 2008 Ozone National Ambient Air Quality Standard.'' In particular, WVDEP emphasized the EPA statement in the proposal that it ''considers the turning on and optimizing of existing SCR controls and the installation of combustion controls to be NO_X control strategies that have already been appropriately evaluated and implemented in the final CSAPR Update.'' The State also pointed to the EPA's proposed CSAPR Close-Out Rule, in which the EPA similarly stated, ''the EPA considers the turning on and optimizing of existing SCR controls and the installation of combustion controls to be NO_X control strategies that have already been appropriately evaluated and implemented in the final CSAPR Update.''

In support of this argument, WVDEP also included a Table containing the ozone season NO_X emission rates in 2017 and 2018 for EGU sources located in West Virginia. Table 7 presents information about the size, fuel type, control type, and emission rates in pounds (lbs) per million British thermal unit (MMBtu) (lbs/MMBtu). This table provides key information about the existing control measures and emission rates for these individual sources, at the time of the SIP submission. However, WVDEP does not provide analysis of any potential additional or strengthened control measures at these sources, that may or may not be needed for purposes of the 2015 8-hour ozone NAAQS.

Finally, for EGUs, WVDEP asserted that because the EPA's CSAPR Update concluded that all identified highly cost-effective emission reductions have already been implemented with respect to EGUs for the 2008 ozone NAAQS, no additional highly cost-effective reductions are available for EGUs for the 2015 8-hour ozone NAAQS. WVDEP argues that because its EGUs are subject to the CSAPR Update (which reflected a stringency at the nominal marginal cost threshold of $1400/ton (2011$) for the 2008 ozone NAAQS), it has already implemented all cost-effective emissions reductions for its EGU fleet.

The EPA disagrees. First, the so-called CSAPR Close-Out has been vacated for unlawfully permitting significant contribution to continue beyond the next attainment date. *New York* v. *EPA,* 781 Fed. App'x 4 (D.C. Cir. 2019). *See also Wisconsin,* 938 F.3d at 318–20. Second, in the CSAPR Update, EPA had promulgated only a partial remedy as to EGUs even with respect to the less stringent *2008* ozone NAAQS, a conclusion affirmed by the D.C. Circuit in *New York* v. *EPA,* 964 F.3d 1214, 1225 (D.C. Cir. 2020). EPA has recently completed action on remand from the *Wisconsin* decision and has promulgated a full remedy as to West Virginia's obligations for the 2008 ozone NAAQS in the Revised CSAPR Update. EPA found that additional, cost-effective emissions reductions from West Virginia's EGUs were indeed necessary to resolve its obligations under the 2008

[57] Detailed information and documentation of EPA's Base Case, including all the underlying assumptions, data sources, and architecture parameters can be found on EPA's website at: *https://www.epa.gov/airmarkets/epas-power-sector-modeling-platform-v6-using-ipm-summer-2021-reference-case.*

[58] Detailed information and documentation of EPA's Base Case, including all the underlying assumptions, data sources, architecture parameters, and IPM comments form can be found on EPA's website at: *https://www.epa.gov/airmarkets/epas-power-sector-modeling-platform-v6-using-ipm-summer-2021-reference-case.*

[59] The ''Capacity Dropped'' and the ''Retired Through 2023'' worksheets in NEEDS lists all units that are removed from the NEEDS v6 inventory—NEEDS v6 Summer 2021 Reference Case. This data can be found on EPA's website at: *https://www.epa.gov/airmarkets/national-electric-energy-data-system-needs-v6.*

[60] The ''Capacity Dropped'' and the ''Retired Through 2023'' worksheets in NEEDS lists all units that are removed from the NEEDS v6 inventory—NEEDS v6 Summer 2021 Reference Case. This data can be found on EPA's website at: *https://www.epa.gov/airmarkets/national-electric-energy-data-system-needs-v6.*

ozone NAAQS, *see* 86 FR 23054, 23100, 23123–24 (April 30, 2021). Therefore, WVDEP's conclusions that no further cost-effective emission reductions are available from its EGUs cannot be sustained.

More fundamentally, relying on the CSAPR Update's (or any other CAA program's) determination of cost-effectiveness without further Step 3 analysis is insufficient. Cost-effectiveness must be assessed in the context of the specific CAA program; assessing cost-effectiveness in the context of ozone transport should reflect a more comprehensive evaluation of the nature of the interstate transport problem, the total emissions reductions available at several cost thresholds, and the air quality impacts of the reductions at downwind receptors. While the EPA has not established a benchmark cost-effectiveness value for the 2015 8-hour ozone NAAQS interstate transport obligations, because the 2015 8-hour ozone NAAQS is a more stringent and more protective air quality standard, it is reasonable to expect control measures or strategies to address interstate transport under this NAAQS to reflect higher marginal control costs. As such, the marginal cost threshold of $1,400/ton for the CSAPR Update (which addresses the 2008 ozone NAAQS and is in 2011$) is not an appropriate cost threshold and cannot be approved as a benchmark to use for interstate transport SIP submissions for the 2015 8-hour ozone NAAQS.

In addition, the updated 2016v2 emissions platform captures all existing CSAPR trading programs in the baseline, and that modeling confirms that these control programs were not sufficient to eliminate West Virginia's linkage at Steps 1 and 2 under the 2015 8-hour ozone NAAQS. Although the state provided an inventory of existing controls on its EGU fleet, based on updated modeling results, the State was therefore obligated at Step 3 to assess *additional* control measures using a multifactor analysis.

d. Fuel Combustion—Industrial and Fuel Combustion—Other

WVDEP's analysis indicated that NO_X emissions from non-EGU sources in two other NEI source categories, Fuel Combustion—Industrial and Fuel Combustion—Other, together comprised 13.9% of the NO_X emissions in West Virginia in 2017. For non-EGU sources of NO_X emissions, WVDEP similarly reviewed EPA documentation for the CSAPR Update, specifically a cost-effectiveness evaluation provided by SRA International (SRA), which was contracted by the EPA to perform this analysis. The analysis split the sources subject to the cost-effectiveness analysis into two groups: Sources with NO_X emissions greater than 100 tons per year (tpy) in 2017, and sources with NO_X emissions between 25 and 100 tpy in 2017. The analysis then reviewed these sources using a $10,000 per ton cost effectiveness threshold. In West Virginia, the analysis identified nine emissions units in the ''greater than 100 tpy'' group and 21 emission units in the ''25 to 100 tpy'' group for further evaluation based on potential for controls.

Of the nine ''greater than 100 tpy'' units, WVDEP noted that four had permanently shutdown, two were subject to a Consent Order to shutdown by December 31, 2021, and one was subject to a Consent Order which established a 0.20 lbs/MMBtu during the ozone season. For the remaining two sources, WVDEP claims that the EPA determined in the CSAPR Close-Out Rule that one source was well controlled and the other did not have any technically and economically available controls. However, EPA made no such determinations with respect to any non-EGUs in the CSAPR Close-Out. Of the 21 ''25 to 100 tpy'' units, WVDEP noted that six units have permanently shutdown and three are subject to a Consent Order to shutdown by December 31, 2021.[61] West Virginia's SIP submission concludes that ''[t]he shutdown of the identified 10 sources; the required shutdown of the additional five sources; and the current level of control on the remaining 20 sources, in conjunction with the implementation of the Control Measures programs listed in Section 6, represent the implementation of reasonable control measures in West Virginia.'' [62]

Given that the emissions from these source categories comprise 13.9% of the total NO_X emissions from West Virginia in the 2017 NEI, the EPA agrees that it is appropriate for WVDEP to evaluate them. The EPA does not, however, agree with this analysis for certain non-EGU sources. First, many of the source shutdowns identified by West Virginia have generally been captured in the data the EPA used to perform the 2016v2 emissions platform-based modeling. Even with the shutdowns, the results of that updated modeling continue to show that West Virginia's sources contribute to nonattainment and maintenance receptors. Moreover, because the 2015 8-hour ozone NAAQS is more stringent than the 2008 ozone NAAQS, the EPA's findings of an acceptable cost threshold for controls (which did not include non-EGUs) in the CSAPR Update, which only addresses transport for the 2008 ozone NAAQS, are not sufficient to evaluate whether West Virginia has adopted all reasonable control measures for these non-EGU sources for purposes of the 2015 8-hour ozone NAAQS. Additional reductions above and beyond those amounts may be needed for a more stringent 2015 8-hour ozone NAAQS, so WVDEP's analysis showing the NO_X reductions attributable to sources shutdown since 2011 did not address the quantity of additional reductions that may be needed from these types of sources for purposes of meeting section 110(a)(2)(D)(i)(I) requirements for the 2015 8-hour ozone NAAQS. Although the State provided an inventory of non-EGU sources based on previous CoST outputs, the State did not assess *additional* control measures using a multifactor analysis for sources that were not shut down, not under the obligations of a consent order, or were not considered well controlled based on the EPA's assessment. The inventory of non-EGU stationary sources included in EPA's most recent emissions inventory indicates that there are a number of such sources that continue to emit NO_X in excess of 100 tpy.[63] WVDEP conducted no analysis of additional emissions control opportunities at these sources.

Finally, relying on a FIP at Step 3 is per se not approvable if the state has not adopted that program into its SIP and instead continues to rely on the FIP. States may not rely on non-SIP measures to meet SIP requirements. *See* CAA section 110(a)(2)(D) (''Each such [SIP] shall . . . contain adequate provisions. . . .''). *See also* CAA section 110(a)(2)(A); *Committee for a Better Arvin* v. *U.S. E.P.A.,* 786 F.3d 1169, 1175–76 (9th Cir. 2015) (holding that measures relied on by state to meet CAA requirements must be included in the SIP). In this matter, West Virginia has adopted a state regulation, 45CSR43,[64] incorporating by reference 40 CFR part 97, subparts AAAAA, CCCCC, and EEEEE, which are the CSAPR NO_X Annual, SO_2 Group 1, and Ozone Season NO_X trading programs. The State designed the SIP submission to incorporate into the West Virginia SIP the requirements of the CSAPR Update

[61] See Appendix N of West Virginia's SIP submittal.

Group 2 trading program, in order to meet the State's obligations under the good neighbor provision for the 2008 ozone NAAQS. WVDEP submitted this as a SIP revision to the EPA on June 5, 2019, and the EPA proposed approval of the revision.[65] However, following EPA's proposed approval of this SIP submission, a court decision and EPA's subsequent rulemaking in the Revised CSAPR Update have rendered it inadequate. As explained in Section I of this document, the D.C. Circuit issued a decision in *Wisconsin* v. *EPA,* remanding the CSAPR Update because the EPA had failed to require upwind states to eliminate their significant contribution by the next applicable attainment date by which downwind states must come into compliance with the NAAQS, as established under CAA section 181(a). 938 F.3d at 313. The EPA has since issued the Revised CSAPR Update, which released updated budgets and requirements for states, including West Virginia, in order to fully resolve interstate transport obligations for the 2008 ozone NAAQS. As such, the ozone season NO_X budgets in the West Virginia SIP submission for which the EPA proposed approval no longer satisfy the State's interstate transport obligations under the 2008 ozone NAAQS. The EPA is not in this action addressing the pending June 5, 2019 SIP submission and will address it in a separate action. The EPA encourages West Virginia to withdraw the June 5, 2019 SIP submission.

5. Evaluation of Information Provided Regarding Step 4

Step 4 of the 4-step interstate transport framework calls for development of permanent and federally enforceable control strategies to achieve the emissions reductions determined to be necessary at Step 3 to eliminate significant contribution to nonattainment or interference with maintenance of the NAAQS. As mentioned previously, WVDEP's SIP submission did not contain an evaluation of additional emission control opportunities or establish that no additional controls are required beyond their existing controls and regulatory mechanisms to eliminate significant contribution to nonattainment or interference with maintenance of the 2015 8-hour ozone NAAQS. WVDEP additionally identified the incorporation by reference into its SIP certain emission budgets and trading programs created by CSAPR and the CSAPR Update and the EPA's pending final action on this proposed SIP revision to meet its requirements for the good neighbor provisions under the 2015 8-hour ozone NAAQS. However, as explained in our evaluation of Step 3 of WVDEP's 2019 SIP submittal, we do not agree that the requirements of the CSAPR Update satisfy West Virginia's good neighbor obligations under the 2015 8-hour ozone NAAQS (or the 2008 ozone NAAQS). Additionally, the budgets and trading programs created by CSAPR and the CSAPR Update is not a new measure with new requirements, as the FIP implementing these programs has been in effect for several years and the emissions reductions associated have been taken into account in the EPA's modeling of 2023 nonattainment and maintenance receptors using the 2016v2 emissions platform. As a result, EPA proposes to disapprove West Virginia's submittal on the separate, additional basis that the State has not developed the appropriate permanent and enforceable emissions reductions necessary to meet the obligations of CAA section 110(a)(2)(d)(i)(I).

6. Conclusion

Based on the EPA's evaluation of West Virginia's SIP submission, the EPA is proposing to find that West Virginia's February 4, 2019 SIP submission addressing CAA section 110(a)(2)(D)(i)(I) does not meet the State's interstate transport obligations, because it fails to contain the necessary provisions to eliminate emissions that will contribute significantly to nonattainment or interfere with maintenance of the 2015 8-hour ozone NAAQS in any other state.

IV. Proposed Action

We are proposing to disapprove West Virginia's February 4, 2019 SIP submission pertaining to interstate transport of air pollution which will significantly contribute to nonattainment or interfere with maintenance of the 2015 8-hour ozone NAAQS in other states. Under CAA section 110(c)(1), disapproval would establish a 2-year deadline for the EPA to promulgate a FIP for West Virginia to address the CAA section 110(a)(2)(D)(i)(I) interstate transport requirements pertaining to significant contribution to nonattainment and interference with maintenance of the 2015 8-hour ozone NAAQS in other states, unless the EPA approves a new West Virginia SIP submission that meets these requirements. Disapproval does not start a mandatory sanctions clock for West Virginia.

V. Statutory and Executive Order Reviews

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

This action is not a significant regulatory action as defined by E.O. 12866 and was therefore not submitted to the Office of Management and Budget for review.

B. Paperwork Reduction Act (PRA)

This proposed action does not impose an information collection burden under the PRA because it does not contain any information collection activities.

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA. This action merely proposes to disapprove a SIP submission as not meeting the CAA.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain any unfunded mandate as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. The action imposes no enforceable duty on any state, local or tribal governments or the private sector.

E. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have tribal implications as specified in Executive Order 13175. This action does not apply on any Indian reservation land, any other area where the EPA or an Indian tribe has demonstrated that a tribe has jurisdiction, or non-reservation areas of Indian country. Thus, Executive Order 13175 does not apply to this action.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

The EPA interprets Executive Order 13045 as applying only to those regulatory actions that concern environmental health or safety risks that the EPA has reason to believe may disproportionately affect children, per

[65] *See* 84 FR 41944 (August 16, 2019).

the definition of ''covered regulatory action'' in section 2–202 of the Executive Order. This action is not subject to Executive Order 13045 because it merely proposes to disapprove a SIP submission as not meeting the CAA.

H. Executive Order 13211, Actions That Significantly Affect Energy Supply, Distribution or Use

This action is not subject to Executive Order 13211, because it is not a significant regulatory action under Executive Order 12866.

I. National Technology Transfer and Advancement Act

This rulemaking does not involve technical standards.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

The EPA believes the human health or environmental risk addressed by this action will not have potential disproportionately high and adverse human health or environmental effects on minority, low-income or indigenous populations. This action merely proposes to disapprove a SIP submission as not meeting the CAA.

K. CAA Section 307(b)(1)

Section 307(b)(1) of the CAA governs judicial review of final actions by the EPA. This section provides, in part, that petitions for review must be filed in the D.C. Circuit: (i) When the agency action consists of ''nationally applicable regulations promulgated, or final actions taken, by the Administrator,'' or (ii) when such action is locally or regionally applicable, if ''such action is based on a determination of nationwide scope or effect and if in taking such action the Administrator finds and publishes that such action is based on such a determination.'' For locally or regionally applicable final actions, the CAA reserves to the EPA complete discretion whether to invoke the exception in (ii).[66]

If the EPA takes final action on this proposed rulemaking, the Administrator intends to exercise the complete discretion afforded to him under the CAA to make and publish a finding that the final action (to the extent a court finds the action to be locally or regionally applicable) is based on a determination of ''nationwide scope or effect'' within the meaning of CAA section 307(b)(1). Through this rulemaking action (in conjunction with a series of related actions on other SIP submissions for the same CAA obligations), the EPA interprets and applies section 110(a)(2)(d)(i)(I) of the CAA for the 2015 ozone NAAQS based on a common core of nationwide policy judgments and technical analysis concerning the interstate transport of pollutants throughout the continental U.S. In particular, the EPA is applying here (and in other proposed actions related to the same obligations) the same, nationally consistent 4-step framework for assessing good neighbor obligations for the 2015 8-hour ozone NAAQS. The EPA relies on a single set of updated, 2016-base year photochemical grid modeling results of the year 2023 as the primary basis for its assessment of air quality conditions and contributions at Steps 1 and 2 of that framework. Further, the EPA proposes to determine and apply a set of nationally consistent policy judgments to apply the 4-step framework. The EPA has selected a nationally uniform analytic year (2023) for this analysis and is applying a nationally uniform approach to nonattainment and maintenance receptors and a nationally uniform approach to contribution threshold analysis.[67]

For these reasons, the Administrator intends, if this proposed action is finalized, to exercise the complete discretion afforded to him under the CAA to make and publish a finding that this action is based on one or more determinations of nationwide scope or effect for purposes of CAA section 307(b)(1).[68]

[66] In deciding whether to invoke the exception by making and publishing a finding that an action is based on a determination of nationwide scope or effect, the Administrator takes into account a number of policy considerations, including his judgment balancing the benefit of obtaining the D.C. Circuit's authoritative centralized review versus allowing development of the issue in other contexts and the best use of agency resources.

[67] A finding of nationwide scope or effect is also appropriate for actions that cover states in multiple judicial circuits. In the report on the 1977 Amendments that revised section 307(b)(1) of the CAA, Congress noted that the Administrator's determination that the ''nationwide scope or effect'' exception applies would be appropriate for any action that has a scope or effect beyond a single judicial circuit. See H.R. Rep. No. 95–294 at 323, 324, reprinted in 1977 U.S.C.C.A.N. 1402–03.

[68] The EPA may take a consolidated, single final action on all of the proposed SIP disapproval actions with respect to obligations under CAA section 110(a)(2)(D)(i)(I) for the 2015 ozone NAAQS. Should EPA take a single final action on all such disapprovals, this action would be nationally applicable, and the EPA would also anticipate, in the alternative, making and publishing a finding that such final action is based on a determination of nationwide scope or effect.

Air Plan Disapproval; Missouri Interstate Transport of Air Pollution for the 2015 8-Hour Ozone National Ambient Air Quality Standards

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: Pursuant to the Federal Clean Air Act (CAA or the Act), the Environmental Protection Agency (EPA) is proposing to disapprove a State Implementation Plan (SIP) submittal from Missouri regarding interstate transport for the 2015 8-hour ozone national ambient air quality standards (NAAQS). The ''good neighbor'' or ''interstate transport'' provision requires that each state's SIP contain adequate provisions to prohibit emissions from within the state from significantly contributing to nonattainment or interfering with maintenance of the NAAQS in other states. This requirement is part of the broader set of ''infrastructure'' requirements, which are designed to ensure that the structural components of each state's air quality management program are adequate to meet the state's responsibilities under the CAA. This disapproval, if finalized, will establish a 2-year deadline for the EPA to promulgate a Federal Implementation Plan (FIP) to address the relevant interstate transport requirements, unless the EPA approves a subsequent SIP submittal that meets these requirements. Disapproval does not start a mandatory sanctions clock.

DATES: Written comments must be received on or before April 25, 2022.

ADDRESSES: You may send comments, identified as Docket No. EPA–R07–OAR–2021–0851, by any of the following methods: Federal eRulemaking Portal at *https://*

www.regulations.gov following the online nstructions for submitting comments or via email to *stone.william@epa.gov.* Include Docket ID No. EPA–R07–OAR–2021–0851 in the subject line of the message.

Instructions: All submissions received must include the Docket ID No. for this rulemaking. Comments received may be posted without change to *https://www.regulations.gov/,* including any personal information provided. For detailed instructions on sending comments and additional information on the rulemaking process, see the ''Public Participation'' heading of the **SUPPLEMENTARY INFORMATION** section of this document. Out of an abundance of caution for members of the public and our staff, the EPA Docket Center and Reading Room are open to the public by appointment only to reduce the risk of transmitting COVID–19. Our Docket Center staff also continues to provide remote customer service via email, phone, and webform. For further information on EPA Docket Center services and the current status, please visit us online at *https://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: William Stone, Environmental Protection Agency, Region 7 Office, Air Quality Planning Branch, 11201 Renner Boulevard, Lenexa, Kansas 66219; telephone number: (913) 551–7714; email address: *stone.william@epa.gov.*

SUPPLEMENTARY INFORMATION: *Public participation:* Submit your comments, identified by Docket ID No. EPA–R07–OAR–2021–0851, at *https://www.regulations.gov* (our preferred method), or the other methods identified in the **ADDRESSES** section. Once submitted, comments cannot be edited or removed from the docket. The EPA may publish any comment received to its public docket. Do not submit to EPA's docket at *https://www.regulations.gov* any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system).

There are two dockets supporting this action, EPA–R07–OAR–2021–0851 and EPA–HQ–OAR–2021–0663. Docket No. EPA–R07–OAR–2021–0851 contains information specific to Missouri, including the notice of proposed rulemaking. Docket No. EPA–HQ–OAR–2021–0663 contains additional modeling files, emissions inventory files, technical support documents, and other relevant supporting documentation regarding interstate transport of emissions for the 2015 8-hour ozone NAAQS which are being used to support this action. All comments regarding information in either of these dockets are to be made in Docket No. EPA–R07–OAR–2021–0851. For additional submission methods, please contact William Stone, (913) 551–7714, *stone.william@epa.gov.* For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov/dockets/commenting-epa-dockets.* Due to public health concerns related to COVID–19, the EPA Docket Center and Reading Room are open to the public by appointment only. Our Docket Center staff also continues to provide remote customer service via email, phone, and webform. For further information and updates on EPA Docket Center services, please visit us online at *https://www.epa.gov/dockets.*

The EPA continues to carefully and continuously monitor information from the Centers for Disease Control and Prevention (CDC), local area health departments, and our Federal partners so that we can respond rapidly as conditions change regarding COVID–19.

The index to the docket for this action, Docket No. EPA–R07–OAR–2021–0851, is available electronically at *www.regulations.gov.* While all documents in the docket are listed in the index, some information may not be publicly available due to docket file size restrictions or content (*e.g.,* CBI).

Throughout this document, ''we,'' ''us,'' and ''our'' means the EPA.

I. Background

A. Description of Statutory Background

On October 1, 2015, the EPA promulgated a revision to the ozone NAAQS (2015 8-hour ozone NAAQS), lowering the level of both the primary and secondary standards to 0.070 parts per million (ppm).[1] Section 110(a)(1) of the CAA requires states to submit, within 3 years after promulgation of a new or revised standard, SIP submissions meeting the applicable requirements of section 110(a)(2).[2] One of these applicable requirements is found in CAA section 110(a)(2)(D)(i)(I), otherwise known as the ''interstate transport'' or ''good neighbor'' provision, which generally requires SIPs to contain adequate provisions to prohibit in-state emissions activities from having certain adverse air quality effects on other states due to interstate transport of pollution. There are two so-called ''prongs'' within CAA section 110(a)(2)(D)(i)(I). A SIP for a new or revised NAAQS must contain adequate provisions prohibiting any source or other type of emissions activity within the state from emitting air pollutants in amounts that will significantly contribute to nonattainment of the NAAQS in another state (prong 1) or interfere with maintenance of the NAAQS in another state (prong 2). The EPA and states must give independent significance to prong 1 and prong 2 when evaluating downwind air quality problems under CAA section 110(a)(2)(D)(i)(I).[3]

B. Description of the EPA's Four Step Interstate Transport Regulatory Process

The EPA is using the 4-step interstate transport framework (or 4-step framework) to evaluate the state's SIP submittals addressing the interstate transport provision for the 2015 8-hour ozone NAAQS. The EPA has addressed the interstate transport requirements of CAA section 110(a)(2)(D)(i)(I) with respect to prior ozone NAAQS in several regional regulatory actions, including the Cross-State Air Pollution Rule (CSAPR), which addressed interstate transport with respect to the 1997 ozone NAAQS as well as the 1997 and 2006 fine particulate matter standards,[4] and the Cross-State Air Pollution Rule Update (CSAPR Update) [5] and the Revised CSAPR Update, both of which addressed the 2008 ozone NAAQS.[6]

[1] National Ambient Air Quality Standards for Ozone, Final Rule, 80 FR 65292 (October 26, 2015). Although the level of the standard is specified in the units of ppm, ozone concentrations are also described in parts per billion (ppb). For example, 0.070 ppm is equivalent to 70 ppb.

[2] SIP revisions that are intended to meet the applicable requirements of section 110(a)(1) and (2) of the CAA are often referred to as infrastructure SIPs and the applicable elements under section 110(a)(2) are referred to as infrastructure requirements.

[3] *See North Carolina* v. *EPA,* 531 F.3d 896, 909–11 (D.C. Cir. 2008).

[4] *See* Federal Implementation Plans: Interstate Transport of Fine Particulate Matter and Ozone and Correction of SIP Approvals, 76 FR 48208 (Aug. 8, 2011).

[5] Cross-State Air Pollution Rule Update for the 2008 Ozone NAAQS, 81 FR 74504 (Oct. 26, 2016).

[6] In 2019, the D.C. Circuit Court of Appeals remanded the CSAPR Update to the extent it failed to require upwind states to eliminate their significant contribution by the next applicable attainment date by which downwind states must come into compliance with the NAAQS, as

Through the development and implementation of the CSAPR rulemakings and prior regional rulemakings pursuant to the interstate transport provision,[7] the EPA, working in partnership with states, developed the following 4-step interstate transport framework to evaluate a state's obligations to eliminate interstate transport emissions under the interstate transport provision for the ozone NAAQS: (1) Identify monitoring sites that are projected to have problems attaining and/or maintaining the NAAQS (*i.e.,* nonattainment and/or maintenance receptors); (2) identify states that impact those air quality problems in other (*i.e.,* downwind) states sufficiently such that the states are considered ''linked'' and therefore warrant further review and analysis; (3) identify the emissions reductions necessary (if any), applying a multifactor analysis, to eliminate each linked upwind state's significant contribution to nonattainment or interference with maintenance of the NAAQS at the locations identified in Step 1; and (4) adopt permanent and enforceable measures needed to achieve those emissions reductions.

C. Background on the EPA's Ozone Transport Modeling Information

The EPA has released several documents containing information relevant to evaluating interstate transport with respect to the 2015 8-hour ozone NAAQS. First, on January 6, 2017, the EPA published a notice of data availability (NODA) in which we requested comment on preliminary interstate ozone transport data including projected ozone design values (DVs) and interstate contributions for 2023 using a 2011 base year platform.[8] In the NODA, the EPA used the year 2023 as the analytic year for this preliminary modeling because that year aligns with the expected attainment year for Moderate ozone nonattainment areas for the 2015 8-hour ozone NAAQS.[9] On October 27, 2017, we released a memorandum (October 2017 memorandum) containing updated modeling data for 2023, which incorporated changes made in response to comments on the NODA and noted that the modeling may be useful for states developing SIPs to address interstate transport obligations for the 2008 ozone NAAQS.[10] On March 27, 2018, we issued a memorandum (March 2018 memorandum) noting that the same 2023 modeling data released in the 2017 memorandum could also be useful for identifying potential downwind air quality problems with respect to the 2015 8-hour ozone NAAQS at Step 1 of the 4-step interstate transport framework.[11] The March 2018 memorandum also included the then newly available contribution modeling data for 2023 to assist states in evaluating their impact on potential downwind air quality problems for the 2015 8-hour ozone NAAQS under Step 2 of the 4-step interstate transport framework.[12] The EPA subsequently issued two more memoranda in August and October 2018, providing additional information to states developing interstate transport SIP submissions for the 2015 8-hour ozone NAAQS concerning, respectively, potential contribution thresholds that may be appropriate to apply in Step 2 of the 4-step interstate transport framework, and considerations for identifying downwind areas that may have problems maintaining the standard at Step 1 of the 4-step interstate transport framework.[13]

Since the release of the modeling data shared in the March 2018 memorandum, the EPA performed updated modeling using a 2016-based emissions modeling platform (*i.e.,* 2016v1). This emissions platform was developed under the EPA/Multi-Jurisdictional Organization (MJO)/state collaborative project.[14] This collaborative project was a multi-year joint effort by the EPA, MJOs, and states to develop a new, more recent emissions platform for use by the EPA and states in regulatory modeling as an improvement over the dated 2011-based platform that the EPA had used to project ozone design values and contribution data provided in the 2017 and 2018 memoranda. The EPA used the 2016v1 emissions to project ozone DVs and contributions for 2023. On October 30, 2020, in the Notice of Proposed Rulemaking for the Revised CSAPR Update, the EPA released and accepted public comment on 2023 modeling that used the 2016v1 emissions platform.[15] *See* 85 FR 68964, 68981. Although the Revised CSAPR Update addressed transport for the 2008 ozone NAAQS, the projected design values and contributions from the 2016v1 platform are also useful for identifying downwind ozone problems and linkages with respect to the 2015 ozone NAAQS.[16]

Following the Revised CSAPR Update final rule, the EPA made further updates to the 2016 emissions platform to include mobile emissions from the EPA's Motor Vehicle Emission Simulator MOVES3 model[17] and updated emissions projections for electric generating units (EGUs) that reflect the emissions reductions from the Revised CSAPR Update, recent information on plant closures, and other sector trends. The construct of the updated emissions platform, 2016v2, is described in the emissions modeling technical support document (TSD) for this proposed rule.[18] The EPA

established under CAA section 181(a). *Wisconsin* v. *EPA,* 938 F.3d 303, 313 (D.C. Cir. 2019). The Revised CSAPR Update for the 2008 Ozone NAAQS, 86 FR 23054 (April 30, 2021), responded to the remand of the CSAPR Update in *Wisconsin* and the vacatur of a separate rule, the ''CSAPR Close-Out,'' 83 FR 65878 (December 21, 2018), in *New York* v. *EPA,* 781 F. App'x. 4 (D.C. Cir. 2019).

[7] In addition to the CSAPR rulemakings, other regional rulemakings addressing ozone transport include the ''NO_X SIP Call,'' 63 FR 57356 (October 27, 1998), and the ''Clean Air Interstate Rule'' (CAIR), 70 FR 25162 (May 12, 2005).

[8] *See* Notice of Availability of the Environmental Protection Agency's Preliminary Interstate Ozone Transport Modeling Data for the 2015 8-Hour Ozone National Ambient Air Quality Standard (NAAQS), 82 FR 1733 (January 6, 2017).

performed air quality modeling of the 2016v2 emissions using the most recent public release version of the Comprehensive Air Quality Model with Extensions (CAMx) photochemical modeling, version 7.10. with the 2016 base year and 2023 future year emissions developed as part of the 2016v2 emissions platform.[19] The EPA now proposes to rely on modeling based on the updated and newly available 2016v2 air quality modeling in evaluating these submissions with respect to Steps 1 and 2 of the 4-step interstate transport framework. By using the updated modeling results, the EPA is using the most current and technically appropriate information for this proposed rulemaking. Section III of this document and the Air Quality Modeling TSD included in the docket for this proposal contain additional detail on the modeling performed using the 2016v2 emissions. In this document, the EPA is accepting public comment on this updated 2023 modeling, which uses a 2016 emissions platform. Details on the air quality modeling and the methods for projecting design values and determining contributions in 2023 are described in the Air Quality Modeling TSD for 2015 Ozone NAAQS Transport SIP Proposed Actions. Comments on the EPA's air quality modeling should be submitted in the Regional docket for this action, docket ID No. EPA–R07–OAR–2021–0851. Comments are not being accepted in docket EPA–HQ–OAR–2021–0663.

States may have chosen to rely on the results of the EPA modeling and/or alternative modeling performed by states or Multi-Jurisdictional Organizations (MJOs) to evaluate downwind air quality problems and contributions as part of their submissions. In section III we evaluate how Missouri used air quality modeling information in their submission.

D. The EPA's Approach to Evaluating Interstate Transport SIPs for the 2015 8-Hour Ozone NAAQS

The EPA proposes to apply a consistent set of policy judgments across all states for purposes of evaluating interstate transport obligations and the approvability of interstate transport SIP submittals for the 2015 8-hour ozone NAAQS. These policy judgments reflect consistency with relevant case law and past agency practice as reflected in the CSAPR and related rulemakings. Nationwide consistency in approach is particularly important in the context of interstate ozone transport, which is a regional-scale pollution problem involving many smaller contributors. Effective policy solutions to the problem of interstate ozone transport going back to the NO_X SIP Call have necessitated the application of a uniform framework of policy judgments in order to ensure an ''efficient and equitable'' approach. *See EME Homer City Generation, LP* v. *EPA,* 572 U.S. 489, 519 (2014).

In the March, August, and October 2018 memoranda, the EPA recognized that states may be able to establish alternative approaches to addressing their interstate transport obligations for the 2015 8-hour ozone NAAQS that vary from a nationally uniform framework. The EPA emphasized in these memoranda, however, that such alternative approaches must be technically justified and appropriate in light of the facts and circumstances of each particular state's submittal. In general, the EPA continues to believe that deviation from a nationally consistent approach to ozone transport must be substantially justified and have a well-documented technical basis that is consistent with relevant case law. Where states submitted SIPs that rely on any such potential ''flexibilities'' as may have been identified or suggested in the past, the EPA will evaluate whether the state adequately justified the technical and legal basis for doing so.

The EPA notes that certain concepts included in an attachment to the March 2018 memorandum require unique consideration, and these ideas do not constitute agency guidance with respect to transport obligations for the 2015 ozone NAAQS. Attachment A to the March 2018 memorandum identified a ''Preliminary List of Potential Flexibilities'' that could potentially inform SIP development.[20] However, the EPA made clear in that Attachment that the list of ideas were not suggestions endorsed by the Agency but rather ''comments provided in various forums'' on which the EPA sought ''feedback from interested stakeholders.'' [21] Further, Attachment A stated, ''EPA is not at this time making any determination that the ideas discussed below are consistent with the requirements of the CAA, nor are we specifically recommending that states use these approaches.'' [22] Attachment A to the March 2018 memorandum, therefore, does not constitute agency guidance, but was intended to generate further discussion around potential approaches to addressing ozone transport among interested stakeholders. To the extent states sought to develop or rely on these ideas in support of their SIP submittals, the EPA will thoroughly review the technical and legal justifications for doing so.

The remainder of this section describes the EPA's proposed framework with respect to analytic year, definition of nonattainment and maintenance receptors, selection of contribution threshold, and multifactor control strategy assessment.

1. Selection of Analytic Year

In general, the states and the EPA must implement the interstate transport provision in a manner ''consistent with the provisions of [title I of the CAA.]'' CAA section 110(a)(2)(D)(i). This requires, among other things, that these obligations are addressed consistently with the timeframes for downwind areas to meet their CAA obligations. With respect to ozone NAAQS, under CAA section 181(a), this means obligations must be addressed ''as expeditiously as practicable'' and no later than the schedule of attainment dates provided in CAA section 181(a)(1).[23] Several D.C. Circuit court decisions address the issue of the relevant analytic year for the purposes of evaluating ozone transport air-quality problems. On September 13, 2019, the D.C. Circuit issued a decision in *Wisconsin* v. *EPA,* remanding the CSAPR Update to the extent that it failed to require upwind states to eliminate their significant contribution by the next applicable attainment date by which downwind states must come into compliance with the NAAQS, as established under CAA section 181(a). 938 F.3d at 313.

On May 19, 2020, the D.C. Circuit issued a decision in *Maryland* v. *EPA* that cited the *Wisconsin* decision in holding that the EPA must assess the impact of interstate transport on air quality at the next downwind attainment date, including Marginal area attainment dates, in evaluating the basis for the EPA's denial of a petition under CAA section 126(b). *Maryland* v. *EPA,* 958 F.3d 1185, 1203–04 (D.C. Cir. 2020). The court noted that ''section 126(b) incorporates the Good Neighbor Provision,'' and, therefore, ''EPA must find a violation [of section 126] if an upwind source will significantly contribute to downwind nonattainment

included in the Headquarters docket ID No. EPA–HQ–OAR–2021–0663.

[20] March 2018 memorandum, Attachment A.

[21] *Id.* at A–1.

[22] *Id.*

[23] For attainment dates for the 2015 8-hour ozone NAAQS, refer to CAA section 181(a), 40 CFR 51.1303, and Additional Air Quality Designations for the 2015 Ozone National Ambient Air Quality Standards, 83 FR 25776 (June 4, 2018, effective Aug. 3, 2018).

at the *next downwind attainment deadline.* Therefore, the Agency must evaluate downwind air quality at that deadline, not at some later date.'' *Id.* at 1204 (emphasis added). The EPA interprets the court's holding in *Maryland* as requiring the states and the Agency, under the good neighbor provision, to assess downwind air quality as expeditiously as practicable and no later than the next applicable attainment date,[24] which is now the Moderate area attainment date under CAA section 181 for ozone nonattainment. The Moderate area attainment date for the 2015 8-hour ozone NAAQS is August 3, 2024.[25] The EPA believes that 2023 is now the appropriate year for analysis of interstate transport obligations for the 2015 8-hour ozone NAAQS, because the 2023 ozone season is the last relevant ozone season during which achieved emissions reductions in linked upwind states could assist downwind states with meeting the August 3, 2024, Moderate area attainment date for the 2015 8-hour ozone NAAQS.

The EPA recognizes that the attainment date for nonattainment areas classified as Marginal for the 2015 8-hour ozone NAAQS was August 3, 2021. Under the *Maryland* holding, any necessary emissions reductions to satisfy interstate transport obligations should have been implemented by no later than this date. At the time of the statutory deadline to submit interstate transport SIPs (October 1, 2018), many states relied upon the EPA modeling of the year 2023, and no state provided an alternative analysis using a 2021 analytic year (or the prior 2020 ozone season). However, the EPA must act on SIP submittals using the information available at the time it takes such action. In this circumstance, the EPA does not believe it would be appropriate to evaluate states' obligations under CAA section 110(a)(2)(D)(i)(I) as of an attainment date that is wholly in the past, because the Agency interprets the interstate transport provision as forward looking. *See* 86 FR 23074; *see also Wisconsin,* 938 F.3d at 322. Consequently, in this proposal the EPA will use the analytical year of 2023 to evaluate each state's CAA section 110(a)(2)(D)(i)(I) SIP submission with respect to the 2015 8-hour ozone NAAQS.

2. Step 1 of the 4-Step Interstate Transport Framework

In Step 1, the EPA identifies monitoring sites that are projected to have problems attaining and/or maintaining the NAAQS in the 2023 analytic year. Where the EPA's analysis shows that a site does not fall under the definition of a nonattainment or maintenance receptor, that site is excluded from further analysis under the EPA's 4-step interstate transport framework. For sites that are identified as a nonattainment or maintenance receptor in 2023, we proceed to the next step of our 4-step interstate transport framework by identifying the upwind state's contribution to those receptors.

The EPA's approach to identifying ozone nonattainment and maintenance receptors in this action is consistent with the approach used in previous transport rulemakings. The EPA's approach gives independent consideration to both the ''contribute significantly to nonattainment'' and the ''interfere with maintenance'' prongs of CAA section 110(a)(2)(D)(i)(I), consistent with the D.C. Circuit's direction in *North Carolina* v. *EPA.*[26]

For the purpose of this proposal, the EPA identifies nonattainment receptors as those monitoring sites that are projected to have average design values that exceed the NAAQS and that are also measuring nonattainment based on the most recent monitored design values. This approach is consistent with prior transport rulemakings, such as the CSAPR Update, where the EPA defined nonattainment receptors as those areas that both currently measure nonattainment and that the EPA projects will be in nonattainment in the future analytic year (*i.e.,* 2023).[27]

In addition, in this proposal, the EPA identifies a receptor to be a ''maintenance'' receptor for purposes of defining interference with maintenance, consistent with the method used in the CSAPR and upheld by the D.C. Circuit in *EME Homer City Generation, L.P.* v. *EPA,* 795 F.3d 118, 136 (D.C. Cir. 2015).[28] Specifically, the EPA identified maintenance receptors as those receptors that would have difficulty maintaining the relevant NAAQS in a scenario that takes into account historical variability in air quality at that receptor. The variability in air quality was determined by evaluating the ''maximum'' future design value at each receptor based on a projection of the maximum measured design value over the relevant period. The EPA interprets the projected maximum future design value to be a potential future air quality outcome consistent with the meteorology that yielded maximum measured concentrations in the ambient data set analyzed for that receptor (*i.e.,* ozone conducive meteorology). The EPA also recognizes that previously experienced meteorological conditions (*e.g.,* dominant wind direction, temperatures, air mass patterns) promoting ozone formation that led to maximum concentrations in the measured data may reoccur in the future. The maximum design value gives a reasonable projection of future air quality at the receptor under a scenario in which such conditions do, in fact, reoccur. The projected maximum design value is used to identify upwind emissions that, under those circumstances, could interfere with the downwind area's ability to maintain the NAAQS.

Recognizing that nonattainment receptors are also, by definition, maintenance receptors, the EPA often uses the term ''maintenance-only'' to refer to those receptors that are not nonattainment receptors. Consistent with the concepts for maintenance receptors, as described above, the EPA identifies ''maintenance-only'' receptors as those monitoring sites that have projected average design values above the level of the applicable NAAQS, but that are not currently measuring nonattainment based on the most recent official design values. In addition, those monitoring sites with projected average design values below the NAAQS, but with projected maximum design values above the NAAQS are also identified as ''maintenance only'' receptors, even if they are currently measuring nonattainment based on the most recent official design values. Consistent with the methodology described for nonattainment, those sites that are

[24] We note that the court in *Maryland* did not have occasion to evaluate circumstances in which the EPA may determine that an upwind linkage to a downwind air quality problem exists at steps 1 and 2 of the interstate transport framework by a particular attainment date, but for reasons of impossibility or profound uncertainty the Agency is unable to mandate upwind pollution controls by that date. *See Wisconsin,* 938 F.3d at 320. The D.C. Circuit noted in *Wisconsin* that upon a sufficient showing, these circumstances may warrant flexibility in effectuating the purpose of the interstate transport provision.

[25] *See* CAA section 181(a); 40 CFR 51.1303; Additional Air Quality Designations for the 2015 Ozone National Ambient Air Quality Standards, 83 FR 25776 (June 4, 2018, effective Aug. 3, 2018).

[26] *See North Carolina* v. *EPA,* 531 F.3d 896, 910–11 (D.C. Cir. 2008) (holding that the EPA must give ''independent significance'' to each prong of CAA section 110(a)(2)(D)(i)(I)).

[27] *See* 81 FR 74504 (October 26, 2016). This same concept, relying on both current monitoring data and modeling to define nonattainment receptor, was also applied in CAIR. *See* 70 FR at 25241, 25249 (January 14, 2005); *see also North Carolina,* 531 F.3d at 913–14 (affirming as reasonable EPA's approach to defining nonattainment in CAIR).

[28] *See* 76 FR 48208 (August 8, 2011). CSAPR Update and Revised CSAPR Update also used this approach. See 81 FR 74504 (October 26, 2016) and 86 FR 23054 (April 30, 2021).

currently measuring ozone concentrations below the level of the applicable NAAQS, but that are projected to be nonattainment based on the average or maximum design values, are identified as maintenance-only receptors.

3. Step 2 of the 4-Step Interstate Transport Framework

In Step 2, the EPA quantifies the contribution of each upwind state to each receptor in the 2023 analytic year. The contribution metric used in Step 2 is defined as the average impact from each state to each receptor on the days with the highest ozone concentrations at the receptor based on the 2023 modeling. If a state's contribution value does not equal or exceed the threshold of 1 percent of the NAAQS (*i.e.,* 0.70 ppb for the 2015 8-hour ozone NAAQS), the upwind state is not ''linked'' to a downwind air quality problem, and the EPA, therefore, concludes that the state does not significantly contribute to nonattainment or interfere with maintenance of the NAAQS in the downwind states. However, if a state's contribution equals or exceeds the 1 percent threshold, the state's emissions are further evaluated in Step 3, considering both air quality and cost as part of a multi-factor analysis, to determine what, if any, emissions might be deemed ''significant'' and, thus, must be eliminated under CAA section 110(a)(2)(D)(i)(I).

The EPA is proposing to rely in the first instance on the 1 percent threshold for the purpose of evaluating a state's contribution to nonattainment or maintenance of the 2015 8-hour ozone NAAQS (*i.e.,* 0.70 ppb) at downwind receptors. This is consistent with the Step 2 approach that the EPA applied in CSAPR for the 1997 ozone NAAQS, which has subsequently been applied in the CSAPR Update when evaluating interstate transport obligations for the 2008 ozone NAAQS. The EPA continues to find 1 percent to be an appropriate threshold. For ozone, as the EPA found in the Clean Air Interstate Rule (CAIR), CSAPR, and CSAPR Update, portion of the nonattainment problems from anthropogenic sources in the U.S. results from the combined impact of relatively small contributions from many upwind states, along with contributions from in-state sources and, in some cases, substantially larger contributions from a subset of particular upwind states. The EPA's analysis shows that much of the ozone transport problem being analyzed in this proposed rule is still the result of the collective impacts of contributions from many upwind states. Therefore, application of a consistent contribution threshold is necessary to identify those upwind states that should have responsibility for addressing their contribution to the downwind nonattainment and maintenance problems to which they collectively contribute. Continuing to use 1 percent of the NAAQS as the screening metric to evaluate collective contribution from many upwind states also allows the EPA (and states) to apply a consistent framework to evaluate interstate emissions transport under the interstate transport provision from one NAAQS to the next. *See* 81 FR at 74518. *See also* 86 FR at 23085 (reviewing and explaining rationale from CSAPR; 76 FR at 48237–38. (for selection of 1 percent threshold)).

The EPA's August 2018 memorandum recognized that in certain circumstances, a state may be able to establish that an alternative contribution threshold of 1 ppb is justifiable. Where a state relies on this alternative threshold, and where that state determined that it was not linked at Step 2 using the alternative threshold, the EPA will evaluate whether the state provided a technically sound assessment of the appropriateness of using this alternative threshold based on the facts and circumstances underlying its application in the particular SIP submission.

4. Step 3 of the 4-Step Interstate Transport Framework

Consistent with the EPA's longstanding approach to eliminating significant contribution or interference with maintenance, at Step 3, states linked at steps 1 and 2 are generally expected to prepare a multifactor assessment of potential emissions controls. The EPA's analysis at Step 3 in prior Federal actions addressing interstate transport requirements has primarily focused on an evaluation of cost-effectiveness of potential emissions controls (on a marginal cost-per-ton basis), the total emissions reductions that may be achieved by requiring such controls (if applied across all linked upwind states), and an evaluation of the air quality impacts such emissions reductions would have on the downwind receptors to which a state is linked; other factors may potentially be relevant if adequately supported. In general, where the EPA's or alternative air quality and contribution modeling establishes that a state is linked at steps 1 and 2, it will be insufficient at Step 3 for a state merely to point to its existing rules requiring control measures as a basis for approval. In general, the emissions-reducing effects of all existing emissions control requirements are already reflected in the air quality results of the modeling for steps 1 and 2. If the state is shown to still be linked to one or more downwind receptor(s), states must provide a well-documented evaluation determining whether their emissions constitute significant contribution or interference with maintenance by evaluating additional available control opportunities by preparing a multifactor assessment. While the EPA has not prescribed a particular method for this assessment, the EPA expects states at a minimum to present a sufficient technical evaluation. This would typically include information on emissions sources, applicable control technologies, emissions reductions, costs, cost effectiveness, and downwind air quality impacts of the estimated reductions, before concluding that no additional emissions controls should be required.[29]

5. Step 4 of the 4-Step Interstate Transport Framework

At Step 4, states (or the EPA) develop permanent and federally enforceable control strategies to achieve the emissions reductions determined to be necessary at Step 3 to eliminate significant contribution to nonattainment or interference with maintenance of the NAAQS. For a state linked at steps 1 and 2 to rely on an emissions control measure at Step 3 to address its interstate transport obligations, that measure must be included in the state's SIP so that it is permanent and federally enforceable. *See* CAA section 110(a)(2)(D) (''Each such [SIP] shall . . . contain adequate provisions . . . .''). *See also* CAA 110(a)(2)(A); *Committee for a Better Arvin* v. *U.S. E.P.A.,* 786 F.3d 1169, 1175–76 (9th Cir. 2015) (holding that measures relied on by state to meet CAA requirements must be included in the SIP).

II. SIP Submission Addressing Interstate Transport of Air Pollution for the 2015 8-Hour Ozone NAAQS

On June 10, 2019, the Missouri Department of Natural Resources' Air Pollution Control Program (MoDNR)

[29] As examples of general approaches for how such an analysis could be conducted for their sources, states could look to the CSAPR Update, 81 FR 74504, 74539–51; CSAPR, 76 FR 48208, 48246–63; CAIR, 70 FR 25162, 25195–229; or the NO_X SIP Call, 63 FR 57356, 57399–405. *See also* Revised CSAPR Update, 86 FR 23054, 23086–23116. Consistently across these rulemakings, the EPA has developed emissions inventories, analyzed different levels of control stringency at different cost thresholds, and assessed resulting downwind air quality improvements.

made a SIP submission to address interstate transport of air pollution for the 2015 8-hour ozone NAAQS. MoDNR's good neighbor SIP submission for the 2015 ozone NAAQS relied on the EPA's four-step approach and corresponding memoranda for determining obligations for upwind states to limit transported air pollution to downwind states. The State concluded that emissions from sources or emissions activity in Missouri will not contribute significantly to nonattainment or interfere with maintenance of the 2015 ozone NAAQS in any downwind states.

In its analysis, the state relied on the EPA's modeling released with the March 2018 memorandum to identify nonattainment and maintenance receptors in 2023 (Step 1). The State also relied on the EPA's modeling from the March 2018 memorandum to identify which monitors were then linked to emissions from Missouri. In its submission, the MoDNR identified all of the nonattainment and maintenance receptors to which Missouri was projected to contribute more than 0.70 ppb to the 2023 DV. Table 1 provides information on the six nonattainment and maintenance receptors identified by the MoDNR.

TABLE 1—2023 AVERAGE AND MAXIMUM DESIGN VALUES AT DOWNWIND RECEPTORS WITH MISSOURI CONTRIBUTIONS LARGER THAN 0.70 PPB

Site (monitor, county, state)	2023 Average DV (ppb)	2023 Maximum DV (ppb)	Missouri contribution (ppb)	Comments
260050003, Allegan, MI	69.0	71.7	2.61	Maintenance receptor.
261630019, Wayne, MI	69.0	71.0	0.92	Maintenance receptor.
484392003, Brazoria, TX	74.0	74.9	0.88	Nonattainment receptor.
482011039, Harris, TX	71.8	73.5	0.88	Nonattainment receptor.
550790085 Milwaukee, WI	71.2	73.0	0.93	Nonattainment receptor.
551170006, Sheboygan, WI	72.8	75.1	1.37	Nonattainment receptor.

The state analyzed each of the six receptors in Table 1 using information in the EPA's 2018 guidance memoranda described above. For the two receptors in Texas, the state observed that the total upwind state contribution is approximately 13 ppb to both of these Texas receptors and that Texas' in-state contribution to these two receptors is 26 ppb to the Brazoria County receptor and 22.6 ppb to the Harris County receptor. The MoDNR combined the contributions from initial/boundary conditions with the contribution from biogenic emissions to show that the contribution from these two categories is over 52 ppb, at these two receptors. Based on this information, the MoDNR claimed that the ozone problems at these two receptors are not caused by upwind U.S. anthropogenic emissions from other states, but rather that in-state contributions, natural ozone concentrations, and international emissions are the likely significant contributors to the problem at these two sites.

The MoDNR also noted that its contribution to the projected 2023 ozone DV at the two Texas receptors is 0.88 ppb. The MoDNR then referenced statements in the EPA's August 2018 memorandum on the use of alternative thresholds that a 1 ppb threshold would generally capture a substantial amount of transported contribution from upwind states to the downwind monitors. The MoDNR concluded that 1 ppb is, therefore, an appropriate alternative screening threshold for evaluating whether emissions in their state are linked to the ozone problems at these two receptors. Based on this alternative threshold, the State determined that it will not contribute significantly to these nonattainment receptors in 2023. The MoDNR then concluded that its SIP sufficiently addresses the good neighbor obligation for the 2015 ozone NAAQS with respect to these two Texas receptors based only on its Step 2 weight of evidence analysis.

For the Milwaukee, Wisconsin receptor, the MoDNR noted that its projected contribution to this receptor is 0.93 ppb, and thus less than 1 ppb. The State observed that the 1 ppb threshold would capture 79.4 percent of the total contribution from all upwind states and that the contribution captured by the 1 ppb threshold is 83 percent of the amount captured by the 0.70 ppb threshold at this receptor. The state asserted that the 1 ppb threshold would capture a substantial amount of total upwind states' contribution to ozone concentrations at this receptor, which will lead to meaningful emission reductions to ensure attainment of the NAAQS at this monitor in 2023. Therefore, the MoDNR relied on a 1 ppb threshold to conclude that its existing SIP sufficiently addresses the good neighbor obligation for the 2015 ozone NAAQS with respect to this receptor.

For the Wayne, Michigan site, the state observed that the 1 ppb threshold captures 61.8 percent of total upwind state contributions and the contribution captured by the 1 ppb threshold would constitute 92.2 percent of the total contribution that would be captured by the 0.70 ppb threshold. The state asserted that the 1 ppb threshold will capture a substantial amount of upwind states' contribution to the ozone concentrations at this site, which will lead to meaningful emission reductions that will help ensure attainment of the NAAQS at this receptor in 2023. The MoDNR noted that its projected contribution to the Wayne, Michigan receptor is 0.92 ppb, and thus less than 1 ppb. Therefore, the MoDNR concluded that its existing SIP sufficiently addresses the good neighbor obligation for the 2015 ozone NAAQS with respect to this receptor based only on this Step 2 weight of evidence analysis.

For the Sheboygan, Wisconsin site, the State observed that the 1 ppb threshold would capture 79.4 percent of the total upwind contributions and that a 2 ppb threshold would capture 68.2 percent of the total upwind state contributions. The State also observed that an alternative 2 ppb threshold would capture 85.9 percent of the upwind state contributions captured under a 1 ppb threshold. Using these data, the MoDNR asserted that a 2 ppb threshold is appropriate because it would capture nearly 70 percent of the total upwind state contributions and thus would result in meaningful emission reductions that will help to ensure attainment of the NAAQS at the site by 2023. The state also asserted that the primary contributors to the projected ozone concentrations at the monitor in Sheboygan include emissions from Illinois, Indiana, and Wisconsin. The MoDNR cited the EPA modeling projecting that emissions from these states would contribute a

combined 31.93 ppb in 2023 to the Sheboygan receptor.

For the Sheboygan receptor, the MoDNR also pointed to the Lake Michigan Air Director's Consortium's (LADCO's) interstate transport modeling results for the 2015 ozone NAAQS. The State noted that LADCO's analysis also indicates that the ozone levels at the Wisconsin shoreline of Lake Michigan are heavily affected by the emissions from Illinois, Indiana, and Wisconsin.[30]

The MoDNR further pointed out that the other monitoring site in Sheboygan County (551170009), which is a few miles further inland than the Sheboygan nonattainment receptor, has no projected problems with attaining and maintaining compliance with the 2015 ozone NAAQS. The MoDNR concluded that the nonattainment receptor in Sheboygan is heavily influenced by local transport emissions and lake breeze effects over Lake Michigan. The State asserted that use of a 2 ppb threshold would capture a substantial amount of upwind states' contribution to the ozone concentrations at this site, which will lead to meaningful emission reductions that will help ensure attainment of the NAAQS at this monitor in 2023. The MoDNR noted that its projected contribution to the Sheboygan, Wisconsin receptor is 1.37 ppb, which is less than 2 ppb. Therefore, the MoDNR concluded that its existing SIP sufficiently addresses the good neighbor obligation for the 2015 ozone NAAQS with respect to the Sheboygan receptor based only on this Step 2 weight of evidence analysis.

For the Allegan, Michigan receptor, the MoDNR used an analysis based on information in the EPA's October 2018 memorandum on alternative approaches for identifying maintenance receptors to claim that the Allegan monitoring site will not be a receptor in 2023. Specifically, rather than rely upon the EPA's projected 2023 maximum design value for identifying maintenance receptors, the state used an alternative approach that included projected 2023 ozone concentrations based on a 2-year base period (2010–2011), a 3-year base period (2009–2011) and a 4-year base period (2009–2012) to demonstrate that the Allegan monitoring site would attain the standard by 2023. To support the use of these alternative base periods, the State provided an analysis for the three consideration outlined in the August 2018 memorandum: (i) Meteorological conditions in the area of the monitoring site were conducive to ozone formation during the alternative base period design value used for projections; (ii) ozone concentrations have been trending downward at the site since 2011 (and ozone precursor emissions of NO_X and VOCs have also decreased); and (iii) emissions are expected to continue to decline in the upwind and downwind states out to the attainment date of the site. The MoDNR noted that ozone concentrations during the summer of 2009 were well below normal for the state of Michigan despite having a large number of days during the ozone season where they claim that meteorology was conducive to ozone formation. The MoDNR also noted that the summer of 2012 was among the most ozone conducive summers across the entire Midwestern portion of the country. MoDNR suggested that the variation in the degree of ozone conducive meteorology between 2009 and 2012 would counterbalance in the alternative baseline period.

The State provided an analysis showing ozone concentrations trending down since 2012 at the Allegan monitor. The State also provided the total statewide anthropogenic NO_X and VOC emissions (ozone precursors) in Michigan, Missouri, and two neighboring states that are upwind of the Allegan monitor during 2011 and 2017 (*i.e.,* Illinois and Indiana), which showed that emissions in all four of these states went down during this time period.

The MoDNR concluded that the Allegan receptor meets all the criteria listed in the EPA October memorandum relating to alternative methods for identifying maintenance receptors. Based on this analysis, the MoDNR asserted that the Allegan Michigan monitor should not be a maintenance receptor for purposes of the 2015 ozone NAAQS. Therefore, the State found that the Missouri' existing SIP fully addresses the CAA good neighbor obligation with respect to the Allegan, Michigan receptor.

Based on the analysis above, the MoDNR concluded that its current SIP adequately addresses the state's obligation under CAA section 110(a)(2)(D)(i)(I) (the good neighbor provision) with respect to the 2015 ozone NAAQS. The MoDNR stated that it has demonstrated that its SIP submittal ensures that emissions in Missouri will not significantly contribute to nonattainment or interfere with maintenance of the 2015 ozone NAAQS in any downwind state. Based on this conclusion, the MoDNR concluded its analysis at Step 2 of the 4-step interstate transport framework and provided no analysis for steps 3 or 4.

III. EPA Evaluation

The EPA is proposing to find that the June 10, 2019, SIP submission from the MoDNR does not meet the State's obligations with respect to prohibiting emissions that contribute significantly to nonattainment or interfere with maintenance of the 2015 8-hour ozone NAAQS in any other state based on the EPA's evaluation of the SIP submission using the 4-step interstate transport framework, and the EPA is therefore proposing to disapprove Missouri's submission.

A. Missouri

1. Evaluation of Information Provided by the MoDNR Regarding Step 1

At Step 1 of the 4-Step interstate transport framework, the MoDNR relied on the EPA modeling released in the March 2018 memorandum to identify nonattainment and maintenance receptors in 2023. As correctly noted in the MoDNR SIP submittal, the EPA's prior analysis indicated that the State was linked to six nonattainment and/or maintenance receptors in three downwind states in 2023 (identified in Table 1 of this action). In its October 2018 memorandum on alternative maintenance receptors, the EPA suggested that States could provide meteorological data, among other data, to support potential alternative methodologies or flexibilities to identify maintenance receptors. The MoDNR utilized this flexibility to eliminate the Allegan, Michigan maintenance receptor (monitor ID 260050003) based on the use of alternative base year periods. The State considered three alternative base periods as a basis for projecting design values in 2023. These based periods include (1) a 2-year base period using 4th high ozone concentrations in 2010 and 2011, (2) a 3-year base year period from 2009–2011, and (3) a 4-year base year period from 2009–2012. As an initial matter, design values, by definition are based on the average of the 4th highest maximum daily 8-hour ozone concentration in three consecutive years. The ''pseudo'' design values calculated by the State using 2 years of data, when data for the third year (*i.e.,* 2009) were clearly available, and using 4 years of data do not constitute alternative design values. In this regard, the approach by the State using these two alternatives runs counter to the approach identified in the October 2018 memorandum: ''. . . . EPA believes that a state may, in some

[30] Interstate Transport Modeling for the 2015 Ozone National Ambient Air Quality Standard, the technical support document (TSD), *https://www.ladco.org/wp-content/uploads/Documents/Reports/TSDs/O3/LADCO_2015O3iSIP_TSD_13Aug2018.pdf.*

cases, use a *design value* from the base period that is not the maximum design value.''

The State also provided information and analysis of meteorological data to attempt to establish that all years that constitute the 2011 design value (*i.e.,* the average of the 4th high values in 2009, 2010, and 2011) were conducive to ozone formation. The State's analysis noted that the summer of 2009 was well below normal for average temperatures, but highlighted that data from Western Michigan Regional Airport national weather service site showed that a number of days in summer of 2009 were conducive to ozone formation. Overall, the state identified 25 days between May and September of 2009 that it considered conducive to ozone formation based on the criteria that the temperature reached 80 degrees Fahrenheit or greater, no precipitation occurred, and the daily average wind speed was less than 5 miles per hour. In the EPA's review, we find the State did not sufficiently demonstrate that all years within the alternative base period were conducive to ozone formation. As the State noted, the summer of 2009 was abnormally cool in Michigan. While the State also analyzed local meteorological data (temperature, precipitation, wind speed) near the Allegan, Michigan monitor to identify 25 days that it considered conducive to ozone formation based on surface temperatures, wind speed and precipitation, the State did not provide any technical analysis to demonstrate a statistically significant relationship between high ozone concentrations at the Allegan receptor and the temperature, precipitation, and wind speed criteria used in the submittal to define ozone conducive conditions for this receptor. In addition, the State's evaluation did not discuss or consider how other meteorological factors identified in the October 2018 memorandum such as humidity, solar radiation, vertical mixing, and/or other meteorological indicators such as cooling-degree days confirm whether conditions affecting the monitor may have been conducive to ozone formation in 2009. The supplemental information provided in the October 2018 memorandum, which included temperature anomalies by state and region of the U.S. and annual state-wide average June–August temperature rankings, clearly highlight that the summer of 2009 was abnormally cool in Michigan and the Great Lakes Region. Therefore, the EPA finds that not all years within the alternative base period used by the State (*i.e.,* 2009–2011) were conducive to ozone formation, especially given the abnormally cold temperatures seen in the summer of 2009. Accordingly, in view of the guidance included in the October 2020 memorandum, it was not appropriate for the state to have eliminated the Allegan, Michigan receptor as a maintenance receptor at Step 1 of the 4-step interstate transport framework on this basis.

Further, the MoDNR's attempt to eliminate this receptor on the basis of this analysis did not provide any basis to eliminate the other receptors to which the EPA's modeling suggested the state was linked. The EPA's most recent modeling, discussed further in section III.A.3, confirms that the existence of several receptors to which the state is linked. The EPA therefore proposes to proceed to evaluate the submittal at Step 2.

2. Evaluation of Information Provided by the State Regarding Step 2

As an initial matter, the EPA disagrees with the arguments made by MoDNR based on the ostensible ''causation'' of the projected attainment and maintenance problems at the receptors in Brazoria County and Harris County in Texas. While it is correct that impacts from various sources, such as in-state contributions, background ozone concentrations, and international emissions, are often themselves significant contributors to attainment and maintenance problems at receptors for the 2015 ozone NAAQS, this does not address the question of whether there are also interstate transport impacts from emissions sources or activities in Missouri that significantly contribute to nonattainment, or interfere with maintenance, in any other state. This question is not one of causation, but rather of whether there is significant contribution as contemplated in CAA section 110(a)(2)(D)(i)(I). The EPA's 4-step interstate transport framework is intended to evaluate whether there are emissions that the State must address in its SIP to meet this requirement for purposes of the 2015 ozone NAAQS.

The State also utilized a 1 ppb threshold at Step 2 for the receptors in Wayne Michigan, Milwaukee, Wisconsin and both Texas receptors to evaluate whether the state was ''linked'' to a projected downwind nonattainment or maintenance receptor. As discussed in the EPA's August 2018 memorandum, with appropriate additional analysis it may be reasonable for states to use a 1 ppb contribution threshold, instead of the 1 percent of the NAAQS threshold for the purposes of identifying linkages to appropriate downwind receptors. In some cases, MoDNR argued for application of the alternative 1 ppb threshold, by presenting the different numerical percentages of downwind impacts that the respective thresholds would result in, and then asserting that the percentages of upwind contribution captured from the 1 ppb threshold would be sufficiently substantial to justify its use for Missouri.

For the Wayne, Michigan receptor, MoDNR observed that application of a 1 ppb threshold would capture 61.8 percent of total upwind state contributions, and that the contribution captured by the 1 ppb threshold would constitute 92.2 percent of the total contribution that would be captured by application of the 0.70 ppb threshold. The State thus argued that use of a 1 ppb threshold instead of a 1% of the NAAQS threshold will capture a substantial amount of upwind states' contribution to the ozone concentrations at this site. Using this alternative threshold, MoDNR stated that the projected Missouri contribution to the Wayne, Michigan receptor is 0.92 ppb, and thus less than 1 ppb. MoDNR made a comparable argument for the Milwaukee, Wisconsin receptor (79.4 percent of the total contribution from all upwind states and that the contribution captured by the 1 ppb threshold is 83 percent of the amount captured by the 0.70 ppb threshold). For the receptors in Brazoria County and Harris County, Texas, the MoDNR did not provide any additional analyses to determine the appropriateness of the application of the 1 ppb threshold at either of these receptors, and simply referred to the August 2018 memorandum as evidence to support the use of a 1 ppb threshold at these receptors. Rather than a quantitative comparison, MoDNR made qualitative statements to the effect that a 1 ppb threshold would be appropriate given other considerations, such as the impacts of local or international sources.

However, the EPA's memorandum did not indicate that this type of information alone was determinative of whether an alternative threshold was in fact appropriate to justify use of a threshold in lieu of the 0.70 ppb level. Rather, the EPA determined that by capturing a percentage of upwind state emissions comparable to the amount captured at 1 percent, the alternative threshold *may* be appropriate, indicating that a more determinative conclusion of appropriateness would require further analysis. The MoDNR did not provide any further technical justification to make that determination.

The EPA notes that in each case, the use of the alternative 1 ppb threshold

would have the result of reducing the amount of cumulative upwind state emissions that would be captured. While the EPA does not, in this action, approve of the state's application of the 1 ppb threshold, because the state has linkages greater than 1 ppb to projected downwind nonattainment or maintenance receptors, the state's use of this alternative threshold at Step 2 of the 4-step interstate framework would not alter our review and proposed disapproval of this SIP submittal.

The EPA here shares further evaluation of its experience since the issuance of the August 2018 memorandum regarding use of alternative thresholds at Step 2. This experience leads the Agency to now believe it may not be appropriate to continue to attempt to recognize alternative contribution thresholds at Step 2. The August 2018 memorandum stated that ''it may be reasonable and appropriate'' for states to rely on an alternative threshold of 1 ppb at Step 2.[31] However, the EPA also indicated that ''air agencies should consider whether the recommendations in this guidance are appropriate for each situation.'' Following receipt and review of 49 good neighbor SIP submittals for the 2015 8-hour ozone NAAQS, the EPA's experience has been that nearly every state that attempted to rely on a 1 ppb threshold did not provide sufficient information and analysis to support a determination that an alternative threshold was reasonable or appropriate for that state.

For instance, in nearly all submittals, the states did not provide the EPA with analysis specific to their state or the receptors to which its emissions are potentially linked. In one case, the proposed approval of Iowa's SIP submittal, the EPA expended its own resources to attempt to supplement the information submitted by the state, in order to more thoroughly evaluate the state-specific circumstances that could support approval.[32] It was at the EPA's sole discretion to perform this analysis in support of the state's submittal, and the Agency is not obligated to conduct supplemental analysis to fill the gaps whenever it believes a state's analysis is insufficient. The Agency no longer intends to undertake supplemental analysis of SIP submittals with respect to alternative thresholds at Step 2 for purposes of the 2015 ozone NAAQS.

Furthermore, the EPA's experience since 2018 is that allowing for alternative Step 2 thresholds may be impractical or otherwise inadvisable for a number of additional policy reasons. For a regional air pollutant such as ozone, consistency in requirements and expectations across all states is essential. Based on its review of submittals to-date and after further consideration of the policy implications of attempting to recognize an alternative Step 2 threshold for certain states, the Agency now believes the attempted use of different thresholds at Step 2 with respect to the 2015 ozone NAAQS raises substantial policy, consistency, and practical implementation concerns.[33] The availability of different thresholds at Step 2 has the potential to result in inconsistent application of good neighbor obligations based solely on the strength of a state's SIP submittal at Step 2 of the 4-step interstate transport framework. From the perspective of ensuring effective regional implementation of good neighbor obligations, the more important analysis is the evaluation of the emissions reductions needed, if any, to address a state's significant contribution after consideration of a multifactor analysis at Step 3, including a detailed evaluation that considers air quality factors and cost. Where alternative thresholds for purposes of Step 2 may be ''similar'' in terms of capturing the relative amount of upwind contribution (as described in the August 2018 memorandum), nonetheless, use of an alternative threshold could allow certain states to avoid further evaluation of potential emission controls while other states must proceed to a Step 3 analysis. This can create significant equity and consistency problems among states.

Further, it is not clear that national ozone transport policy is best served by allowing for less stringent thresholds at Step 2. The EPA recognized in the August 2018 memo that there was some similarity in the amount of total upwind contribution captured (on a nationwide basis) between 1percent and 1 ppb. However, the EPA notes that while this may be true in some sense, that is hardly a compelling basis to move to a 1 ppb threshold. Indeed, the 1 ppb threshold has the disadvantage of losing a certain amount of total upwind contribution for further evaluation at Step 3 (*e.g.,* roughly seven percent of total upwind state contribution was lost according to the modeling underlying the August 2018 memorandum;[34] in the EPA's updated modeling, the amount lost is five percent). Considering the core statutory objective of ensuring elimination of all significant contribution to nonattainment or interference of the NAAQS in other states and the broad, regional nature of the collective contribution problem with respect to ozone, there does not appear to be a compelling policy imperative in allowing some states to use a 1 ppb threshold while others rely on a 1 percent of NAAQS threshold.

Consistency with past interstate transport actions such as CSAPR, and the CSAPR Update and Revised CSAPR Update rulemakings (which used a Step 2 threshold of 1 percent of the NAAQS for two less stringent ozone NAAQS), is also important. Continuing to use a 1 percent of NAAQS approach ensures that as the NAAQS are revised and made more stringent, an appropriate increase in stringency at Step 2 occurs, so as to ensure an appropriately larger amount of total upwind-state contribution is captured for purposes of fully addressing interstate transport. *Accord* 76 FR 48237–38.

Therefore, notwithstanding the August 2018 memorandum's recognition of the potential viability of alternative Step 2 thresholds, and in particular, a potentially applicable 1 ppb threshold, the EPA's experience since the issuance of that memo has revealed substantial programmatic and policy difficulties in attempting to implement this approach. Nonetheless, the EPA is not, at this time, rescinding the August 2018 memorandum. The EPA invites comment on this broader discussion of issues associated with alternative thresholds at Step 2. Depending on comment and further evaluation of this issue, the EPA may determine to rescind the August 2018 memorandum in the future.

MoDNR used two arguments at Step 2 for excluding the nonattainment receptor in Sheboygan, Wisconsin, (Monitor ID: 551170006). First, the State utilized a 2 ppb threshold at Step 2 to identify whether the state was ''linked'' to this receptor. Second, the state argued that any reductions from Missouri would have a de minimis or minimal effect on air quality improvements at this receptor due to the larger impacts from other states such as Wisconsin,

[31] August 2018 memo at 4.

[32] *Air Plan Approval; Iowa; Infrastructure State Implementation Plan Requirements for the 2015 Ozone National Ambient Air Quality Standard,* 85 FR 12232 (March 2, 2020). The Agency received adverse comment on this proposed approval and has not taken final action with respect to this proposal.

[33] We note that Congress has placed on the EPA a general obligation to ensure the requirements of the CAA are implemented consistently across states and regions. *See* CAA section 301(a)(2). Where the management and regulation of interstate pollution levels spanning many states is at stake, consistency in application of CAA requirements is paramount.

[34] *See* August 2018 memo, at 4.

Illinois and Indiana. The EPA discusses both of these arguments in this section.

In its analysis, the state argued that because a 2 ppb threshold would capture 68.2% of cumulative upwind state contributions at the Sheboygan receptor, similar to the ''approximately 70 percent of total upwind contribution'' captured on average nationwide at the 1 ppb threshold the EPA identified in the August 2018 memorandum, a 2 ppb threshold is appropriate to use at this receptor. While the EPA had determined that an alternative threshold that would capture a sufficient percentage of upwind state emissions comparable to the amount that would be captured at the level of 1 percent of the NAAQS *may* be appropriate, the Agency also indicated that more analysis would be needed to reach a determinative conclusion of appropriateness. As explained with respect to the alternative 1 ppb threshold that MoDNR sought to use for the for the receptors in Wayne Michigan, Milwaukee, Wisconsin and both Texas receptors, it did not provide any further technical justification to make the determination.

As explained with respect to the potential use of an alternative 1 ppb threshold, the EPA's experience since the issuance of the 2018 memorandum discussing the issue has revealed substantial programmatic and policy difficulties in attempting to implement this approach even for a 1 ppb threshold. At no point did the EPA suggest that a 2 ppb threshold might be appropriate for this purpose under any circumstances. Such a threshold would be higher than the threshold that the EPA has historically used in interstate transport rules that courts have approved (*i.e.,* 1 percent of the NAAQS at issue), or that the EPA has considered even potentially appropriate if it were to achieve functionally the same air quality impacts (*i.e.,* 1 ppb).

The second argument that the state used to exclude the Sheboygan, Wisconsin receptor in Step 2 was related to emissions from other states. The state argued that the primary contributors to the projected ozone concentrations in Sheboygan are the upwind states of Illinois and Indiana and the home state itself, Wisconsin. The EPA's 2018 modeling showed these states would contribute a combined 31.93 ppb in 2023 to the Sheboygan receptor. However, the state's reasoning related to Indiana, Illinois and Wisconsin emissions is inapplicable to the requirements of CAA section 110(a)(2)(D)(i)(I). The good neighbor provision requires states and the EPA to address interstate transport of air pollution that *contributes to* downwind states' ability to attain and maintain NAAQS. Whether emissions from other states also contribute to the same downwind air quality issue is irrelevant in assessing whether a downwind state has an air quality problem, or whether the upwind state at issue state is significantly contributing to that problem. The Ozone NAAQS nonattainment and maintenance problems that result from interstate transport are typically the result of cumulative impacts from multiple states. States are not obligated under CAA section 110(a)(2)(D)(i)(I) to reduce emissions only if doing so would be sufficient in isolation to resolve all downwind nonattainment or maintenance problems. Rather, each state is obligated to eliminate its own ''significant contribution'' or ''interference'' with the ability of other states to attain or maintain the NAAQS.

Indeed, the D.C. Circuit in *Wisconsin* specifically rejected petitioner arguments suggesting that upwind states should be excused from good neighbor obligations on the basis that some other source of emissions (whether international or another upwind state) could be considered the ''but-for'' cause of downwind air quality problem. 938 F.3d 303 at 323–324. The court viewed petitioners' arguments as essentially an argument ''that an upwind State 'contributes significantly' to downwind nonattainment only when its emissions are the sole cause of downwind nonattainment.'' 938 F.3d 303 at 324. The court explained that ''an upwind State can 'contribute' to downwind nonattainment even if its emissions are not the but-for cause.'' *Id.* at 324–325. *See also Catawba County* v. *EPA,* 571 F.3d 20, 39 (D.C. Cir. 2009) (rejecting the argument ''that 'significantly contribute' unambiguously means 'strictly cause' '' because there is ''no reason why the statute precludes EPA from determining that [an] addition of [pollutant] into the atmosphere is significant even though a nearby county's nonattainment problem would still persist in its absence''); *Miss. Comm'n on Envtl. Quality* v. *EPA,* 790 F.3d 138, 163 n.12 (D.C. Cir. 2015) (observing that the argument that ''there likely would have been no violation at all . . . if it were not for the emissions resulting from [another source]'' is ''merely a rephrasing of the but-for causation rule that we rejected in *Catawba County.*''). Therefore, a state is not excused from eliminating its significant contribution on the basis that other states' emissions also contribute some amount of pollution to the same receptors to which the state is linked. As a result, Step 3 analysis of the 4-Step Interstate Transport Framework is necessary.

Thus, the EPA proposes that MoDNR's submittal did not adequately justify the use of an alternative threshold or otherwise establish that it should not be considered linked at Step 2. The EPA proposes to apply the 1 percent of NAAQS threshold, consistent with the discussion in this subsection. Under the proposed 1 percent threshold, both in the modeling available to the state at the time it made its submittal, and under the newly available 2023 modeling discussed below, Missouri is linked to downwind nonattainment and maintenance receptors.[35]

3. Results of the EPA's Step 1 and Step 2 Modeling and Findings for Missouri

As described in section I, the EPA performed air quality modeling to project design values and contributions for 2023 using the 2016v2 emissions platform. The EPA examined these data to determine if emissions in Missouri contribute at or above the threshold of 1 percent of the 2015 8-hour ozone NAAQS (0.70 ppb) to any downwind nonattainment or maintenance receptor in this most recent round of modeling. As shown in Table 2, the data indicate that in 2023, emissions from sources in Missouri contribute greater than 1 percent of the NAAQS to nonattainment or maintenance-only receptors in Racine County and Kenosha County, Wisconsin, and Cook County, Illinois.[36] Therefore, based on the EPA's evaluation of the information submitted by MoDNR, and based on the EPA's most recent modeling results for 2023, the EPA proposes to find that Missouri is linked at steps 1 and 2 and has an obligation to assess potential emissions reductions from sources or other emissions activity at Step 3 of the 4-Step framework.

[35] Because the EPA finds that the MoDNR submittal's arguments with respect to its linkages in the modeling it relied on are not sufficient or technically justified to conclude the state is not linked to downwind receptors, the EPA can also conclude that the same arguments would not be meritorious even if applied with respect to the receptor linkages the EPA finds in its more recent 2023 modeling using the 2016v2 emissions platform.

[36] Design values and contributions at individual monitoring sites nationwide are provide in the file: ''2016v2_DVs_state_contributions.xlsx'' which is included in docket ID No. EPA–HQ–OAR–2021–0663.

TABLE 2—MISSOURI LINKAGE RESULTS BASED ON THE EPA UPDATED 2023 MODELING

Receptor ID	Location	Nonattainment/maintenance	2023 Average design value (ppb)	2023 Maximum design value (ppb)	MO contribution (ppb)
550590025	Kenosha, Wisconsin	Maintenance	69.2	72.3	1.66
550590019	Kenosha, Wisconsin	Nonattainment	72.8	73.7	1.08
170317002	Cook, Illinois	Maintenance	70.1	73.0	0.94
551010020	Racine, Wisconsin	Nonattainment	71.3	73.2	0.92

4. Evaluation of Information Provided Regarding Step 3

At Step 3, of the 4-step interstate transport framework, a state's emissions are further evaluated, in light of multiple factors, including air quality and cost considerations, to determine what, if any, emissions significantly contribute to nonattainment or interfere with maintenance and, thus, must be eliminated under CAA section 110(a)(2)(D)(i)(I).

To evaluate effectively which emissions in the state should be deemed ''significant'' and therefore prohibited, states generally should prepare an accounting of sources and other emissions activity for relevant pollutants and assess potential, additional emissions reduction opportunities and resulting downwind air quality improvements. The EPA has consistently applied this general approach (*i.e.,* Step 3 of the 4-step interstate transport framework) when identifying emissions contributions that the Agency has determined to be ''significant'' (or interfere with maintenance) in each of its prior Federal, regional ozone transport rulemakings, and this interpretation of the statute has been upheld by the Supreme Court. *See EME Homer City,* 572 U.S. 489, 519 (2014). While the EPA has not directed states that they must conduct a Step 3 analysis in precisely the manner the EPA has done in its prior regional transport rulemakings, state implementation plans addressing the obligations in CAA section 110(a)(2)(D)(i)(I) must prohibit ''any source or other type of emissions activity within the State'' from emitting air pollutants which will contribute significantly to downwind air quality problems. Thus, states must complete something similar to the EPA's analysis (or an alternative approach to defining ''significance'' that comports with the statute's objectives) to determine whether and to what degree emissions from a state should be ''prohibited'' to eliminate emissions that will ''contribute significantly to nonattainment in, or interfere with maintenance of'' the NAAQS in any other state.

MoDNR did not conduct such an analysis in its SIP submission, as a result of its conclusions pursuant to Step 1 and Step 2 of its analysis with respect to the six receptors that the EPA previously identified. As explained in connection with the evaluation of MoDNR's Step 1 and Step 2 analyses, the EPA disagrees with those analyses and accordingly the State should have evaluated effectively which emissions in the State should be deemed ''significant'' and therefore prohibited, in its SIP submission. We therefore propose that MoDNR was required to analyze emissions from the sources and other emissions activity from within the state to determine whether its contributions were significant, and we propose to disapprove its submission because MoDNR failed to do so.

5. Evaluation of Information Provided Regarding Step 4

Step 4 of the 4-step interstate transport framework calls for development of permanent and federally enforceable control strategies to achieve the emissions reductions determined to be necessary at step 3 to eliminate significant contribution to nonattainment or interference with maintenance of the NAAQS. As mentioned previously, Missouri's SIP submission did not contain an evaluation of additional emission control opportunities (or establish that no additional controls are required), thus, no information was provided at step 4. As a result, the EPA proposes to disapprove Missouri' submittal on the separate, additional basis that the State has not developed permanent and enforceable emissions reductions necessary to meet the obligations of CAA section 110(a)(2)(d)(i)(I).

6. Conclusion

Based on the EPA's evaluation of the MoDNR's SIP submission, the EPA is proposing to find that the MoDNR's June 10, 2019 SIP submission addressing CAA section 110(a)(2)(D)(i)(I) does not meet the State's interstate transport obligations, because it fails to contain the necessary provisions to eliminate emissions that will contribute significantly to nonattainment or interfere with maintenance of the 2015 8-hour ozone NAAQS in any other state.

IV. Proposed Action

We are proposing to disapprove the MoDNR's June 10, 2019 SIP submission pertaining to interstate transport of air pollution which will significantly contribute to nonattainment or interfere with maintenance of the 2015 8-hour ozone NAAQS in other states. Under CAA section 110(c)(1), disapproval would establish a 2-year deadline for the EPA to promulgate a FIP for Missouri to address the CAA section 110(a)(2)(D)(i)(I) interstate transport requirements pertaining to significant contribution to nonattainment and interference with maintenance of the 2015 8-hour ozone NAAQS in other states, unless the EPA approves a SIP that meets these requirements. Disapproval does not start a mandatory sanctions clock for Missouri.

V. Statutory and Executive Order Reviews

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

This action is not a significant regulatory action and was therefore not submitted to the Office of Management and Budget for review.

B. Paperwork Reduction Act (PRA)

This proposed action does not impose an information collection burden under the PRA because it does not contain any information collection activities.

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA. This action merely proposes to disapprove a SIP submission as not meeting the CAA.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain any unfunded mandate as described in UMRA, 2 U.S.C. 1531–1538, and does

not significantly or uniquely affect small governments. The action imposes no enforceable duty on any state, local or tribal governments or the private sector.

E. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have tribal implications as specified in Executive Order 13175. This action does not apply on any Indian reservation land, any other area where the EPA or an Indian tribe has demonstrated that a tribe has jurisdiction, or non-reservation areas of Indian country. Thus, Executive Order 13175 does not apply to this action.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

The EPA interprets Executive Order 13045 as applying only to those regulatory actions that concern environmental health or safety risks that the EPA has reason to believe may disproportionately affect children, per the definition of ''covered regulatory action'' in section 2–202 of the Executive Order. This action is not subject to Executive Order 13045 because it merely proposes to disapprove a SIP submission as not meeting the CAA.

H. Executive Order 13211, Actions That Significantly Affect Energy Supply, Distribution or Use

This action is not subject to Executive Order 13211, because it is not a significant regulatory action under Executive Order 12866.

I. National Technology Transfer and Advancement Act

This rulemaking does not involve technical standards.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

The EPA believes the human health or environmental risk addressed by this action will not have potential disproportionately high and adverse human health or environmental effects on minority, low-income or indigenous populations. This action merely proposes to disapprove a SIP submission as not meeting the CAA.

K. CAA Section 307(b)(1)

Section 307(b)(1) of the CAA governs judicial review of final actions by the EPA. This section provides, in part, that petitions for review must be filed in the D.C. Circuit: (i) When the agency action consists of ''nationally applicable regulations promulgated, or final actions taken, by the Administrator,'' or (ii) when such action is locally or regionally applicable, if ''such action is based on a determination of nationwide scope or effect and if in taking such action the Administrator finds and publishes that such action is based on such a determination.'' For locally or regionally applicable final actions, the CAA reserves to the EPA complete discretion whether to invoke the exception in (ii).[37]

If the EPA takes final action on this proposed rulemaking the Administrator intends to exercise the complete discretion afforded to him under the CAA to make and publish a finding that the final action (to the extent a court finds the action to be locally or regionally applicable) is based on a determination of ''nationwide scope or effect'' within the meaning of CAA section 307(b)(1). Through this rulemaking action (in conjunction with a series of related actions on other SIP submissions for the same CAA obligations), the EPA interprets and applies section 110(a)(2)(d)(i)(I) of the CAA for the 2015 ozone NAAQS based on a common core of nationwide policy judgments and technical analysis concerning the interstate transport of pollutants throughout the continental U.S. In particular, the EPA is applying here (and in other proposed actions related to the same obligations) the same, nationally consistent 4-step framework for assessing good neighbor obligations for the 2015 ozone NAAQS. The EPA relies on a single set of updated, 2016-base year photochemical grid modeling results of the year 2023 as the primary basis for its assessment of air quality conditions and contributions at steps 1 and 2 of that framework. Further, the EPA proposes to determine and apply a set of nationally consistent policy judgments to apply the 4-step framework. The EPA has selected a nationally uniform analytic year (2023) for this analysis and is applying a nationally uniform approach to nonattainment and maintenance receptors and a nationally uniform approach to contribution threshold analysis.[38] For these reasons, the Administrator intends, if this proposed action is finalized, to exercise the complete discretion afforded to him under the CAA to make and publish a finding that this action is based on one or more determinations of nationwide scope or effect for purposes of CAA section 307(b)(1).[39]

[37] In deciding whether to invoke the exception by making and publishing a finding that an action is based on a determination of nationwide scope or effect, the Administrator takes into account a number of policy considerations, including his judgment balancing the benefit of obtaining the D.C. Circuit's authoritative centralized review versus allowing development of the issue in other contexts and the best use of Agency resources.

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Ozone.

Authority: 42 U.S.C. 7401 *et seq.*

Dated: February 9, 2022.

Meghan A. McCollister,

Regional Administrator, Region 7.

[FR Doc. 2022–03183 Filed 2–18–22; 8:45 am]

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R04–OAR–2021–0841; EPA–HQ–OAR–2021–0663; FRL–9421–01–R4]

Air Plan Disapproval; AL, MS, TN; Interstate Transport Requirements for the 2015 8-Hour Ozone National Ambient Air Quality Standards

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule and withdrawal of proposed rule.

SUMMARY: Pursuant to the Federal Clean Air Act (CAA or the Act), the Environmental Protection Agency (EPA or Agency) is proposing to disapprove State Implementation Plan (SIP) submittals from Alabama, Mississippi,

[38] A finding of nationwide scope or effect is also appropriate for actions that cover states in multiple judicial circuits. In the report on the 1977 Amendments that revised section 307(b)(1) of the CAA, Congress noted that the Administrator's determination that the ''nationwide scope or effect'' exception applies would be appropriate for any action that has a scope or effect beyond a single judicial circuit. See H.R. Rep. No. 95–294 at 323, 324, reprinted in 1977 U.S.C.C.A.N. 1402–03.

[39] The EPA may take a consolidated, single final action on all of the proposed SIP disapproval actions with respect to obligations under CAA section 110(a)(2)(D)(i)(I) for the 2015 ozone NAAQS. Should EPA take a single final action on all such disapprovals, this action would be nationally applicable, and the EPA would also anticipate, in the alternative, making and publishing a finding that such final action is based on a determination of nationwide scope or effect.

and Tennessee regarding the interstate transport requirements for the 2015 8-hour ozone national ambient air quality standards (NAAQS or standard). The ''Good Neighbor'' or ''Interstate Transport'' provision requires that each state's implementation plan contain adequate provisions to prohibit emissions from within the state from significantly contributing to nonattainment or interfering with maintenance of the NAAQS in other states. This requirement is part of the broader set of ''infrastructure'' requirements, which are designed to ensure that the structural components of each state's air quality management program are adequate to meet the state's responsibilities under the CAA. These disapprovals, if finalized, will establish a 2-year deadline for EPA to promulgate a Federal Implementation Plan (FIP) to address the relevant interstate transport requirements, unless EPA approves a subsequent SIP submittal that meets these requirements. Disapproval does not start a mandatory sanctions clock.

DATES: *Comments.* Comments on this proposed rule must be received on or before April 25, 2022.

Withdrawal: As of February 22, 2022, the proposed rule published December 30, 2019, at 84 FR 71854, is withdrawn.

ADDRESSES: You may submit comments, identified by Docket No. EPA–R04–OAR–2021–0841, through the Federal eRulemaking Portal at *https://www.regulations.gov* following the online instructions for submitting comments.

Instructions: All submissions received must include the Docket No. EPA–R04–OAR–2021–0841 for this rulemaking. Comments received may be posted without change to *https://www.regulations.gov/,* including any personal information provided. For detailed instructions on submitting comments and additional information on the rulemaking process, see the ''Public Participation'' heading of the **SUPPLEMENTARY INFORMATION** section of this document. Out of an abundance of caution for members of the public and staff, the EPA Docket Center and Reading Room are open to the public by appointment only to reduce the risk of transmitting COVID–19. The Docket Center staff also continues to provide remote customer service via email, phone, and webform. For further information on EPA Docket Center services and the current status, please visit EPA online at *https://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: Evan Adams of the Air Regulatory Management Section, Air Planning and Implementation Branch, Air and Radiation Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street SW, Atlanta, Georgia 30303–8960. Mr. Adams can be reached by telephone at (404) 562–9009, or via electronic mail at *adams.evan@epa.gov.*

SUPPLEMENTARY INFORMATION: *Public Participation:* Submit your comments, identified by Docket No. EPA–R04–OAR–2021–0841, at *https://www.regulations.gov.* Once submitted, comments cannot be edited or removed from the docket. EPA may publish any comment received to its public docket. Do not submit to EPA's docket at *https://www.regulations.gov* any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system).

There are two dockets supporting this action, EPA–R04–OAR–2021–0841 and EPA–HQ–OAR–2021–0663. Docket No. EPA–R04–OAR–2021–0841 contains information specific to Alabama, Mississippi, and Tennessee, including this notice of proposed rulemaking. Docket No. EPA–HQ–OAR–2021–0663 contains additional modeling files, emissions inventory files, technical support documents, and other relevant supporting documentation regarding interstate transport of emissions for the 2015 8-hour ozone NAAQS which are being used to support this action. All comments regarding information in either of these dockets are to be made in Docket No. EPA–R04–OAR–2021–0841. For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov/dockets/commenting-epa-dockets.* Due to public health concerns related to COVID–19, the EPA Docket Center and Reading Room are open to the public by appointment only. The Docket Center staff also continues to provide remote customer service via email, phone, and webform. For further information and updates on EPA Docket Center services, please visit EPA online at *https://www.epa.gov/dockets.*

EPA continues to carefully and continuously monitor information from the Centers for Disease Control and Prevention (CDC), local area health departments, and Federal partners so that EPA can respond rapidly as conditions change regarding COVID–19.

The indices to Docket No. EPA–R04–OAR–2021–0841 and Docket No. EPA–R04–OAR–2021–0841 are available electronically at *www.regulations.gov.* While all documents in each docket are listed in their respective index, some information may not be publicly available due to docket file size restrictions or content (*e.g.,* CBI).

Table of Contents

I. Background

The following provides background for EPA's proposed actions related to the interstate transport requirements for the 2015 8-hour ozone NAAQS for the states of Alabama, Mississippi, and Tennessee.

A. Description of Statutory Background

On October 1, 2015, EPA promulgated a revision to the ozone NAAQS (2015 8-hour ozone NAAQS), lowering the level of both the primary and secondary standards to 0.070 parts per million (ppm).[1] Section 110(a)(1) of the CAA requires states to submit, within 3 years after promulgation of a new or revised standard, SIP submissions meeting the applicable requirements of section 110(a)(2).[2] One of these applicable requirements is found in CAA section 110(a)(2)(D)(i)(I), otherwise known as the ''good neighbor'' or ''interstate transport'' provision, which generally requires SIPs to contain adequate provisions to prohibit in-state emissions activities from having certain adverse air quality effects on other states due to

[1] National Ambient Air Quality Standards for Ozone, Final Rule, 80 FR 65292 (October 26, 2015). Although the level of the standard is specified in the units of ppm, ozone concentrations are also described in parts per billion (ppb). For example, 0.070 ppm is equivalent to 70 ppb.

[2] SIP revisions that are intended to meet the applicable requirements of section 110(a)(1) and (2) of the CAA are often referred to as infrastructure SIPs and the applicable elements under section 110(a)(2) are referred to as infrastructure requirements.

interstate transport of pollution. There are two so-called ''prongs'' within CAA section 110(a)(2)(D)(i)(I). A SIP for a new or revised NAAQS must contain adequate provisions prohibiting any source or other type of emissions activity within the state from emitting air pollutants in amounts that will significantly contribute to nonattainment of the NAAQS in another state (prong 1) or interfere with maintenance of the NAAQS in another state (prong 2). EPA and states must give independent significance to prong 1 and prong 2 when evaluating downwind air quality problems under CAA section 110(a)(2)(D)(i)(I).[3]

B. Description of EPA's Four Step Interstate Transport Regulatory Process

EPA is using the 4-step interstate transport framework (or 4-step framework) to evaluate the states' implementation plan submittals addressing the interstate transport provision for the 2015 8-hour ozone NAAQS. EPA has addressed the interstate transport requirements of CAA section 110(a)(2)(D)(i)(I) with respect to prior ozone NAAQS in several regional regulatory actions, including the Cross-State Air Pollution Rule (CSAPR), which addressed interstate transport with respect to the 1997 ozone NAAQS as well as the 1997 and 2006 fine particulate matter standards,[4] the Cross-State Air Pollution Rule Update (CSAPR Update) [5] and the Revised CSAPR Update, both of which addressed the 2008 ozone NAAQS.[6]

Through the development and implementation of the CSAPR rulemakings and prior regional rulemakings pursuant to the interstate transport provision,[7] EPA, working in partnership with states, developed the following 4-step interstate transport framework to evaluate a state's obligations to eliminate interstate transport emissions under the interstate transport provision for the ozone NAAQS: (1) Identify monitoring sites that are projected to have problems attaining and/or maintaining the NAAQS (*i.e.,* nonattainment and/or maintenance receptors); (2) identify states that impact those air quality problems in other (*i.e.,* downwind) states sufficiently such that the states are considered ''linked'' and therefore warrant further review and analysis; (3) identify the emissions reductions necessary (if any), applying a multifactor analysis, to eliminate each linked upwind state's significant contribution to nonattainment or interference with maintenance of the NAAQS at the locations identified in Step 1; and (4) adopt permanent and enforceable measures needed to achieve those emissions reductions.

C. Background on EPA's Ozone Transport Modeling Information

In general, EPA has performed nationwide air quality modeling to project ozone design values which are used in combination with measured data to identify nonattainment and maintenance receptors. To quantify the contribution of emissions from specific upwind states on 2023 ozone design values for the identified downwind nonattainment and maintenance receptors, EPA performed nationwide, state-level ozone source apportionment modeling for 2023. The source apportionment modeling provided contributions to ozone at receptors from precursor emissions of anthropogenic nitrogen oxides (NO_X) and volatile organic compounds (VOCs) in individual upwind states.

EPA has released several documents containing projected design values, contributions, and information relevant to evaluating interstate transport with respect to the 2015 8-hour ozone NAAQS. First, on January 6, 2017, EPA published a notice of data availability (NODA) in which the Agency requested comment on preliminary interstate ozone transport data including projected ozone design values and interstate contributions for 2023 using a 2011 base year platform.[8] In the NODA, EPA used the year 2023 as the analytic year for this preliminary modeling because that year aligns with the expected attainment year for Moderate ozone nonattainment areas for the 2015 8-hour ozone NAAQS.[9] On October 27, 2017, EPA released a memorandum (October 2017 memorandum) containing updated modeling data for 2023, which incorporated changes made in response to comments on the NODA, and noted that the modeling may be useful for states developing SIPs to address interstate transport obligations for the 2008 ozone NAAQS.[10] On March 27, 2018, EPA issued a memorandum (March 2018 memorandum) noting that the same 2023 modeling data released in the October 2017 memorandum could also be useful for identifying potential downwind air quality problems with respect to the 2015 8-hour ozone NAAQS at Step 1 of the 4-step interstate transport framework.[11] The March 2018 memorandum also included the then newly available contribution modeling data for 2023 to assist states in evaluating their impact on potential downwind air quality problems for the 2015 8-hour ozone NAAQS under Step 2 of the 4-step interstate transport framework.[12] EPA subsequently issued two more memoranda in August and October 2018, providing additional information to states developing interstate transport SIP submissions for the 2015 8-hour ozone NAAQS concerning, respectively, potential contribution thresholds that may be appropriate to apply in Step 2 of the 4-step interstate transport framework, and considerations for identifying downwind areas that may have problems maintaining the standard at

[3] *See North Carolina* v. *EPA,* 531 F.3d 896, 909–11 (D.C. Cir. 2008).

[4] *See* Federal Implementation Plans: Interstate Transport of Fine Particulate Matter and Ozone and Correction of SIP Approvals, 76 FR 48208 (August 8, 2011).

[5] Cross-State Air Pollution Rule Update for the 2008 Ozone NAAQS, 81 FR 74504 (October 26, 2016).

[6] In 2019, the United States Court of Appeals for the District of Columbia Circuit (D.C. Circuit) remanded CSAPR Update to the extent it failed to require upwind states to eliminate their significant contribution by the next applicable attainment date by which downwind states must come into compliance with the NAAQS, as established under CAA section 181(a). *Wisconsin* v. *EPA,* 938 F.3d 303, 313 (D.C. Cir. 2019). The Revised CSAPR Update for the 2008 Ozone NAAQS, 86 FR 23054 (April 30, 2021), responded to the remand of CSAPR Update in *Wisconsin* and the vacatur of a separate rule, the ''CSAPR Close-Out,'' 83 FR 65878 (December 21, 2018), in *New York* v. *EPA,* 781 F. App'x. 4 (D.C. Cir. 2019).

[7] In addition to CSAPR rulemakings, other regional rulemakings addressing ozone transport include the ''NO_X SIP Call,'' 63 FR 57356 (October 27, 1998), and the ''Clean Air Interstate Rule'' (CAIR), 70 FR 25162 (May 12, 2005).

[8] *See* Notice of Availability of the Environmental Protection Agency's Preliminary Interstate Ozone Transport Modeling Data for the 2015 8-hour Ozone National Ambient Air Quality Standard (NAAQS), 82 FR 1733 (January 6, 2017).

[9] *See* 82 FR 1733, 1735 (January 6, 2017).

[10] *See* Information on the Interstate Transport State Implementation Plan Submissions for the 2008 Ozone National Ambient Air Quality Standards under Clean Air Act Section 110(a)(2)(D)(i)(I), October 27, 2017 (''October 2017 memorandum''), available in Docket No. EPA–HQ–OAR–2021–0663 or at *https://www.epa.gov/interstate-air-pollution-transport/interstate-air-pollution-transport-memos-and-notices.*

[11] *See* Information on the Interstate Transport State Implementation Plan Submissions for the 2015 Ozone National Ambient Air Quality Standards under Clean Air Act Section 110(a)(2)(D)(i)(I), March 27, 2018 (''March 2018 memorandum''), available in Docket No. EPA–HQ–OAR–2021–0663 or at *https://www.epa.gov/interstate-air-pollution-transport/interstate-air-pollution-transport-memos-and-notices.*

[12] The March 2018 memorandum, however, provided, ''While the information in this memorandum and the associated air quality analysis data could be used to inform the development of these SIPs, the information is not a final determination regarding states' obligations under the good neighbor provision. Any such determination would be made through notice-and-comment rulemaking.''

Step 1 of the 4-step interstate transport framework.[13]

Since the release of the modeling data shared in the March 2018 memorandum, EPA performed updated modeling using a 2016-based emissions modeling platform (*i.e.,* 2016v1). This emissions platform was developed under the EPA/Multi-Jurisdictional Organization (MJO)/state collaborative project.[14] This collaborative project was a multi-year joint effort by EPA, MJOs, and states to develop a new, more recent emissions platform for use by EPA and states in regulatory modeling as an improvement over the dated 2011-based platform that EPA had used to project ozone design values and contribution data provided in the 2017 and 2018 memoranda. EPA used the 2016v1 emissions to project ozone design values and contributions for 2023. On October 30, 2020, in the Notice of Proposed Rulemaking for the Revised CSAPR Update, EPA released and accepted public comment on 2023 modeling that used the 2016v1 emissions platform.[15] Although the Revised CSAPR Update addressed transport for the 2008 ozone NAAQS, the projected design values and contributions from the 2016v1 platform are also useful for identifying downwind ozone problems and linkages with respect to the 2015 8-hour ozone NAAQS.[16]

Following the Revised CSAPR Update final rule, EPA made further updates to the 2016 emissions platform to include mobile emissions from EPA's Motor Vehicle Emission Simulator (MOVES) model [17] and updated emissions projections for electric generating units (EGUs) that reflect the emissions reductions from the Revised CSAPR Update, recent information on plant closures, and other sector trends. The construct of the updated emissions platform, 2016v2, is described in the Preparation of Emissions Inventories for the 2016v2 North American Emissions Modeling Platform technical support document (TSD) for this proposed rule and is included in Docket No. EPA–HQ–OAR–2021–0663. EPA performed air quality modeling of the 2016v2 emissions using the most recent public release version of the Comprehensive Air Quality Modeling with Extensions (CAMx) photochemical modeling, version 7.10.[18] EPA proposes to primarily rely on modeling based on the updated and newly available 2016v2 emissions platform in evaluating these submissions with respect to Steps 1 and 2 of the 4-step interstate transport framework. By using the updated modeling results, EPA is using the most current and technically appropriate information for this proposed rulemaking. Section II of this notice and the Air Quality Modeling TSD included in Docket No. EPA–HQ–OAR–2021–0663 for this proposal contain additional detail on the modeling performed using the 2016v2 emissions modeling.

In this notice, EPA is accepting public comment on this updated 2023 modeling, which uses the 2016v2 emissions platform. Details on the air quality modeling and the methods for projecting design values and determining contributions in 2023 are described in the Air Quality Modeling TSD for 2015 8-hour ozone NAAQS Transport SIP Proposed Actions. Comments on EPA's air quality modeling should be submitted in Docket No. EPA–R04–OAR–2021–0841. Comments are not being accepted in Docket No. EPA–HQ–OAR–2021–0663.

States may have chosen to rely on the results of EPA modeling and/or alternative modeling performed by states or Multi-Jurisdictional Organizations (MJOs) to evaluate downwind air quality problems and contributions as part of their submissions. In Section II, EPA evaluates how Alabama, Mississippi, and Tennessee used air quality modeling information in their submissions.

D. EPA's Approach to Evaluating Interstate Transport SIPs for the 2015 8-Hour Ozone NAAQS

EPA proposes to apply a consistent set of policy judgments across all states for purposes of evaluating interstate transport obligations and the approvability of interstate transport SIP submittals for the 2015 8-hour ozone NAAQS. These policy judgments reflect consistency with relevant case law and past agency practice as reflected in CSAPR and related rulemakings. Nationwide consistency in approach is particularly important in the context of interstate ozone transport, which is a regional-scale pollution problem involving many smaller contributors. Effective policy solutions to the problem of interstate ozone transport going back to the NO_x SIP Call have necessitated the application of a uniform framework of policy judgments in order to ensure an ''efficient and equitable'' approach. *See EME Homer City Generation, LP* v. *EPA,* 572 U.S. 489, 519 (2014).

In the March, August, and October 2018 memoranda, EPA recognized that states may be able to establish alternative approaches to addressing their interstate transport obligations for the 2015 8-hour ozone NAAQS that vary from a nationally uniform framework. EPA emphasized in these memoranda, however, that such alternative approaches must be technically justified and appropriate in light of the facts and circumstances of each particular state's submittal. In general, EPA continues to believe that deviation from a nationally consistent approach to ozone transport must be substantially justified and have a well-documented technical basis that is consistent with relevant case law. Where states submitted SIPs that rely on any such potential concepts as may have been identified or suggested in the past, EPA will evaluate whether the state adequately justified the technical and legal basis for doing so.

EPA notes that certain potential concepts included in an attachment to the March 2018 memorandum require unique consideration, and these ideas do not constitute agency guidance with respect to transport obligations for the 2015 8-hour ozone NAAQS. Attachment A to the March 2018 memorandum identified a ''Preliminary List of Potential Flexibilities'' that could potentially inform SIP development.[19] However, EPA made clear in that attachment that the list of ideas were not suggestions endorsed by the Agency but rather ''comments provided in various forums'' on which EPA sought ''feedback from interested stakeholders.'' [20] Further, Attachment A stated, ''EPA is not at this time making any determination that the ideas discussed below are consistent with the requirements of the CAA, nor is EPA specifically recommending that states

[19] March 2018 memorandum, Attachment A.

[20] *Id.* at A–1.

use these approaches.'' [21] Attachment A to the March 2018 memorandum, therefore, does not constitute agency guidance, but was intended to generate further discussion around potential approaches to addressing ozone transport among interested stakeholders. To the extent states sought to develop or rely on these ideas in support of their SIP submittals, EPA will thoroughly review the technical and legal justifications for doing so.

The remainder of this section describes the EPA's proposed framework with respect to analytic year, definition of nonattainment and maintenance receptors, selection of contribution threshold, and multifactor control strategy assessment.

1. Selection of Analytic Year

In general, the states and EPA must implement the interstate transport provision in a manner ''consistent with the provisions of [title I of the CAA.]'' *See* CAA section 110(a)(2)(D)(i). This requires, among other things, that these obligations are addressed consistently with the timeframes for downwind areas to meet their CAA obligations. With respect to ozone NAAQS, under CAA section 181(a), this means obligations must be addressed ''as expeditiously as practicable'' and no later than the schedule of attainment dates provided in CAA section 181(a)(1).[22] Several D.C. Circuit court decisions address the issue of the relevant analytic year for the purposes of evaluating ozone transport air-quality problems. On September 13, 2019, the D.C. Circuit issued a decision in *Wisconsin* v. *EPA,* remanding the CSAPR Update to the extent that it failed to require upwind states to eliminate their significant contribution by the next applicable attainment date by which downwind states must come into compliance with the NAAQS, as established under CAA section 181(a). *See* 938 F.3d 303, 313.

On May 19, 2020, the D.C. Circuit issued a decision in *Maryland* v. *EPA* that cited the *Wisconsin* decision in holding that EPA must assess the impact of interstate transport on air quality at the next downwind attainment date, including Marginal area attainment dates, in evaluating the basis for EPA's denial of a petition under CAA section 126(b). *Maryland* v. *EPA,* 958 F.3d 1185, 1203–04 (D.C. Cir. 2020). The court noted that ''section 126(b) incorporates the Good Neighbor Provision,'' and, therefore, ''EPA must find a violation [of section 126] if an upwind source will significantly contribute to downwind nonattainment at the *next downwind attainment deadline.* Therefore, the agency must evaluate downwind air quality at that deadline, not at some later date.'' *Id.* at 1204 (emphasis added). EPA interprets the court's holding in *Maryland* as requiring the states and the Agency, under the good neighbor provision, to assess downwind air quality as expeditiously as practicable and no later than the next applicable attainment date,[23] which is now the Moderate area attainment date under CAA section 181 for ozone nonattainment. The Moderate area attainment date for the 2015 8-hour ozone NAAQS is August 3, 2024.[24] EPA believes that 2023 is now the appropriate year for analysis of interstate transport obligations for the 2015 8-hour ozone NAAQS, because the 2023 ozone season is the last relevant ozone season during which achieved emissions reductions in linked upwind states could assist downwind states with meeting the August 3, 2024, Moderate area attainment date for the 2015 8-hour ozone NAAQS.

EPA recognizes that the attainment date for nonattainment areas classified as Marginal for the 2015 8-hour ozone NAAQS was August 3, 2021. Under the *Maryland* holding, any necessary emissions reductions to satisfy interstate transport obligations should have been implemented by no later than this date. At the time of the statutory deadline to submit interstate transport SIPs (October 1, 2018), many states relied upon EPA modeling of the year 2023, and no state provided an alternative analysis using a 2021 analytic year (or the prior 2020 ozone season). However, EPA must act on SIP submittals using the information available at the time it takes such action. In this circumstance, EPA does not believe it would be appropriate to evaluate states' obligations under CAA section 110(a)(2)(D)(i)(I) as of an attainment date that is wholly in the past, because the Agency interprets the interstate transport provision as forward looking. *See* 86 FR 23054, 23074; *see also Wisconsin,* 938 F.3d at 322. Consequently, in this proposal EPA will use the analytical year of 2023 to evaluate each state's CAA section 110(a)(2)(D)(i)(I) SIP submission with respect to the 2015 8-hour ozone NAAQS.

2. Step 1 of the 4-Step Interstate Transport Framework

In Step 1, EPA identifies monitoring sites that are projected to have problems attaining and/or maintaining the NAAQS in the 2023 analytic year. Where EPA's analysis shows that a site does not fall under the definition of a nonattainment or maintenance receptor, that site is excluded from further analysis under EPA's 4-step interstate transport framework. For sites that are identified as a nonattainment or maintenance receptor in 2023, EPA proceeds to the next step of the 4-step interstate transport framework by identifying the upwind state's contribution to those receptors.

EPA's approach to identifying ozone nonattainment and maintenance receptors in this action is consistent with the approach used in previous transport rulemakings. EPA's approach gives independent consideration to both the ''contribute significantly to nonattainment'' and the ''interfere with maintenance'' prongs of CAA section 110(a)(2)(D)(i)(I), consistent with the D.C. Circuit's direction in *North Carolina* v. *EPA.*[25]

For the purpose of this proposal, EPA identifies nonattainment receptors as those monitoring sites that are projected to have average design values that exceed the NAAQS and that are also measuring nonattainment based on the most recent monitored design values. This approach is consistent with prior transport rulemakings, such as the CSAPR Update, where EPA defined nonattainment receptors as those areas that both currently measure nonattainment and that EPA projects will be in nonattainment in the future analytic year (*i.e.,* 2023).[26]

In addition, in this proposal, EPA identifies a receptor to be a ''maintenance'' receptor for purposes of

[21] *Id.*

[22] For attainment dates for the 2015 8-hour ozone NAAQS, refer to CAA section 181(a), 40 CFR 51.1303, and Additional Air Quality Designations for the 2015 Ozone National Ambient Air Quality Standards, 83 FR 25776 (June 4, 2018, effective August 3, 2018).

[23] EPA notes that the court in *Maryland* did not have occasion to evaluate circumstances in which EPA may determine that an upwind linkage to a downwind air quality problem exists at Steps 1 and 2 of the interstate transport framework by a particular attainment date, but for reasons of impossibility or profound uncertainty the Agency is unable to mandate upwind pollution controls by that date. *See Wisconsin,* 938 F.3d at 320. The D.C. Circuit noted in *Wisconsin* that upon a sufficient showing, these circumstances may warrant flexibility in effectuating the purpose of the interstate transport provision.

[24] *See* CAA section 181(a); 40 CFR 51.1303; Additional Air Quality Designations for the 2015 Ozone National Ambient Air Quality Standards, 83 FR 25776 (June 4, 2018, effective August 3, 2018).

[25] *See North Carolina* v. *EPA,* 531 F.3d 896, 910–11 (D.C. Cir. 2008) (holding that EPA must give ''independent significance'' to each prong of CAA section 110(a)(2)(D)(i)(I)).

[26] *See* 81 FR 74504 (October 26, 2016). This same concept, relying on both current monitoring data and modeling to define nonattainment receptor, was also applied in CAIR. *See* 70 FR at 25241, 25249 (January 14, 2005); *see also North Carolina,* 531 F.3d at 913–14 (affirming as reasonable EPA's approach to defining nonattainment in CAIR).

defining interference with maintenance, consistent with the method used in CSAPR and upheld by the D.C. Circuit in *EME Homer City Generation, L.P.* v. *EPA,* 795 F.3d 118, 136 (D.C. Cir. 2015).[27] Specifically, EPA identified maintenance receptors as those receptors that would have difficulty maintaining the relevant NAAQS in a scenario that takes into account historical variability in air quality at that receptor. The variability in air quality was determined by evaluating the ''maximum'' future design value at each receptor based on a projection of the maximum measured design value over the relevant period. EPA interprets the projected maximum future design value to be a potential future air quality outcome consistent with the meteorology that yielded maximum measured concentrations in the ambient data set analyzed for that receptor (*i.e.,* ozone conducive meteorology). EPA also recognizes that previously experienced meteorological conditions (*e.g.,* dominant wind direction, temperatures, air mass patterns) promoting ozone formation that led to maximum concentrations in the measured data may reoccur in the future. The maximum design value gives a reasonable projection of future air quality at the receptor under a scenario in which such conditions do, in fact, reoccur. The projected maximum design value is used to identify upwind emissions that, under those circumstances, could interfere with the downwind area's ability to maintain the NAAQS.

Recognizing that nonattainment receptors are also, by definition, maintenance receptors, the EPA often uses the term ''maintenance-only'' to refer to those receptors that are not nonattainment receptors. Consistent with the concepts for maintenance receptors, as described above, the EPA identifies ''maintenance-only'' receptors as those monitoring sites that have projected average design values above the level of the applicable NAAQS, but that are not currently measuring nonattainment based on the most recent official design values. In addition, those monitoring sites with projected average design values below the NAAQS, but with projected maximum design values above the NAAQS are also identified as ''maintenance-only'' receptors, even if they are currently measuring nonattainment based on the most recent official design values.

[27] *See* 76 FR 48208 (August 8, 2011). The CSAPR Update and Revised CSAPR Update also used this approach. *See* 81 FR 74504 (October 26, 2016) and 86 FR 23054 (April 30, 2021).

3. Step 2 of the 4-Step Interstate Transport Framework

In Step 2, EPA quantifies the contribution of each upwind state to each receptor in the 2023 analytic year. The contribution metric used in Step 2 is defined as the average impact from each state to each receptor on the days with the highest ozone concentrations at the receptor based on the 2023 modeling. If a state's contribution value does not equal or exceed the threshold of 1 percent of the NAAQS (*i.e.,* 0.70 ppb for the 2015 8-hour ozone NAAQS), the upwind state is not ''linked'' to a downwind air quality problem, and EPA, therefore, concludes that the state does not significantly contribute to nonattainment or interfere with maintenance of the NAAQS in the downwind states. However, if a state's contribution equals or exceeds the 1 percent threshold, the state's emissions are further evaluated in Step 3, considering both air quality and cost as part of a multi-factor analysis, to determine what, if any, emissions might be deemed ''significant'' and, thus, must be eliminated under CAA section 110(a)(2)(D)(i)(I).

EPA is proposing to rely in the first instance on the 1 percent threshold for the purpose of evaluating a state's contribution to nonattainment or maintenance of the 2015 8-hour ozone NAAQS (*i.e.,* 0.70 ppb) at downwind receptors. This is consistent with the Step 2 approach that EPA applied in CSAPR for the 1997 ozone NAAQS, which has subsequently been applied in the CSAPR Update when evaluating interstate transport obligations for the 2008 ozone NAAQS. EPA continues to find 1 percent to be an appropriate threshold. For ozone, as EPA found in the CAIR, CSAPR, and CSAPR Update, a portion of the nonattainment problems from anthropogenic sources in the U.S. result from the combined impact of relatively small contributions from many upwind states, along with contributions from in-state sources and, in some cases, substantially larger contributions from a subset of particular upwind states. EPA's analysis shows that much of the ozone transport problem being analyzed in this proposed rule is still the result of the collective impacts of contributions from many upwind states. Therefore, application of a consistent contribution threshold is necessary to identify those upwind states that should have responsibility for addressing their contribution to the downwind nonattainment and maintenance problems to which they collectively contribute. Continuing to use 1 percent of the NAAQS as the screening metric to evaluate collective contribution from many upwind states also allows EPA (and states) to apply a consistent framework to evaluate interstate emissions transport under the interstate transport provision from one NAAQS to the next. *See* 81 FR at 74518; *see also* 86 FR at 23085 (reviewing and explaining rationale from CSAPR, 76 FR at 48237–38, for selection of 1 percent threshold).

(a) EPA's Experience With Alternative Step 2 Thresholds

EPA's August 2018 memorandum recognized that in certain circumstances, a state may be able to establish that an alternative contribution threshold of 1 ppb is justifiable. Where a state relies on this alternative threshold, and where that state determined that it was not linked at Step 2 using the alternative threshold, EPA will evaluate whether the state provided a technically sound assessment of the appropriateness of using this alternative threshold based on the facts and circumstances underlying its application in the particular SIP submission.

EPA here shares further evaluation of its experience since the issuance of the August 2018 memorandum regarding use of alternative thresholds at Step 2. This experience leads the Agency to now believe it may not be appropriate to continue to attempt to recognize alternative contribution thresholds at Step 2. The August 2018 memorandum stated that ''it may be reasonable and appropriate'' for states to rely on an alternative threshold of 1 ppb threshold at Step 2.[28] (The memorandum also indicated that any higher alternative threshold, such as 2 ppb, would likely not be appropriate.) However, EPA also provided that ''air agencies should consider whether the recommendations in this guidance are appropriate for each situation.'' Following receipt and review of 49 good neighbor SIP submittals for the 2015 8-hour ozone NAAQS, EPA's experience has been that nearly every state that attempted to rely on a 1 ppb threshold did not provide sufficient information and analysis to support a determination that an alternative threshold was reasonable or appropriate for that state.

For instance, in nearly all submittals, the states did not provide EPA with analysis specific to their state or the receptors to which its emissions are potentially linked. In one case, the proposed approval of Iowa's SIP submittal, EPA expended its own

[28] *See* August 2018 memorandum at 4.

resources to attempt to supplement the information submitted by the state, in order to more thoroughly evaluate the state-specific circumstances that could support approval.[29] It was at EPA's sole discretion to perform this analysis in support of the state's submittal, and the Agency is not obligated to conduct supplemental analysis to fill the gaps whenever it believes a state's analysis is insufficient. The Agency no longer intends to undertake supplemental analysis of SIP submittals with respect to alternative thresholds at Step 2 for purposes of the 2015 8-hour ozone NAAQS.

Furthermore, EPA's experience since 2018 is that allowing for alternative Step 2 thresholds may be impractical or otherwise inadvisable for a number of additional policy reasons. For a regional air pollutant such as ozone, consistency in requirements and expectations across all states is essential. Based on its review of submittals to-date and after further consideration of the policy implications of attempting to recognize an alternative Step 2 threshold for certain states, the Agency now believes the attempted use of different thresholds at Step 2 with respect to the 2015 8-hour ozone NAAQS raises substantial policy consistency and practical implementation concerns.[30] The availability of different thresholds at Step 2 has the potential to result in inconsistent application of good neighbor obligations based solely on the strength of a state's implementation plan submittal at Step 2 of the 4-step interstate transport framework. From the perspective of ensuring effective regional implementation of good neighbor obligations, the more important analysis is the evaluation of the emissions reductions needed, if any, to address a state's significant contribution after consideration of a multifactor analysis at Step 3, including a detailed evaluation that considers air quality factors and cost. Where alternative thresholds for purposes of Step 2 may be ''similar'' in terms of capturing the relative amount of upwind contribution (as described in the August 2018 memorandum), nonetheless, use of an alternative threshold would allow certain states to avoid further evaluation of potential emission controls while other states must proceed to a Step 3 analysis. This can create significant equity and consistency problems among states.

Further, it is not clear that national ozone transport policy is best served by allowing for less stringent thresholds at Step 2. EPA recognized in the August 2018 memorandum that there was some similarity in the amount of total upwind contribution captured (on a nationwide basis) between 1 percent and 1 ppb. However, EPA notes that while this may be true in some sense, that is hardly a compelling basis to move to a 1 ppb threshold. Indeed, the 1 ppb threshold has the disadvantage of losing a certain amount of total upwind contribution for further evaluation at Step 3 (*e.g.,* roughly 7 percent of total upwind state contribution was lost according to the modeling underlying the August 2018 memorandum; [31] in EPA's updated modeling, the amount lost is 5 percent). Considering the core statutory objective of ensuring elimination of all significant contribution to nonattainment or interference of the NAAQS in other states and the broad, regional nature of the collective contribution problem with respect to ozone, there does not appear to be a compelling policy imperative in allowing some states to use a 1 ppb threshold while others rely on a 1 percent of the NAAQS threshold.

Consistency with past interstate transport actions such as CSAPR, and the CSAPR Update and Revised CSAPR Update rulemakings (which used a Step 2 threshold of 1 percent of the NAAQS for two less stringent ozone NAAQS), is also important. Continuing to use a 1 percent of NAAQS approach ensures that as the NAAQS are revised and made more stringent, an appropriate increase in stringency at Step 2 occurs, so as to ensure an appropriately larger amount of total upwind-state contribution is captured for purposes of fully addressing interstate transport. *See* 76 FR 48208, 48237–38 (August 8, 2011).

Therefore, notwithstanding the August 2018 memorandum's recognition of the potential viability of alternative Step 2 thresholds, and in particular, a potentially applicable 1 ppb threshold, EPA's experience since the issuance of that memorandum has revealed substantial programmatic and policy difficulties in attempting to implement this approach. Nonetheless, EPA is not at this time rescinding the August 2018 memorandum. As discussed further below, the basis for disapproval of Alabama, Mississippi, and Tennessee's SIP submissions with respect to the Step 2 analysis is, in the Agency's view, warranted even under the terms of the August 2018 memorandum. EPA invites comment on this broader discussion of issues associated with alternative thresholds at Step 2. Depending on comment and further evaluation of this issue, EPA may determine to rescind the August 2018 memorandum in the future.

4. Step 3 of the 4-Step Interstate Transport Framework

Consistent with EPA's longstanding approach to eliminating significant contribution or interference with maintenance, at Step 3, states linked at Steps 1 and 2 are generally expected to prepare a multifactor assessment of potential emissions controls. EPA's analysis at Step 3 in prior Federal actions addressing interstate transport requirements has primarily focused on an evaluation of cost-effectiveness of potential emissions controls (on a marginal cost-per-ton basis), the total emissions reductions that may be achieved by requiring such controls (if applied across all linked upwind states), and an evaluation of the air quality impacts such emissions reductions would have on the downwind receptors to which a state is linked; other factors may potentially be relevant if adequately supported. In general, where EPA's or alternative air quality and contribution modeling establishes that a state is linked at Steps 1 and 2, it will be insufficient at Step 3 for a state merely to point to its existing rules requiring control measures as a basis for approval. In general, the emissions-reducing effects of all existing emissions control requirements are already reflected in the air quality results of the modeling for Steps 1 and 2. If the state is shown to still be linked to one or more downwind receptor(s), states must provide a well-documented evaluation determining whether their emissions constitute significant contribution or interference with maintenance by evaluating additional available control opportunities by preparing a multifactor assessment. While EPA has not prescribed a particular method for this assessment, EPA expects states at a minimum to present a sufficient technical evaluation. This would typically include information on emissions sources, applicable control technologies, emissions reductions, costs, cost effectiveness, and downwind air quality impacts of the estimated reductions, before concluding that no

[29] Air Plan Approval; Iowa; Infrastructure State Implementation Plan Requirements for the 2015 Ozone National Ambient Air Quality Standard, 85 FR 12232 (March 2, 2020). The Agency received adverse comment on this proposed approval and has not taken final action with respect to this proposal.

[30] EPA notes that Congress has placed on EPA a general obligation to ensure the requirements of the CAA are implemented consistently across states and regions. *See* CAA section 301(a)(2). Where the management and regulation of interstate pollution levels spanning many states is at stake, consistency in application of CAA requirements is paramount.

[31] *See* August 2018 memorandum at 4.

additional emissions controls should be required.[32]

5. Step 4 of the 4-Step Interstate Transport Framework

At Step 4, states (or EPA) develop permanent and federally enforceable control strategies to achieve the emissions reductions determined to be necessary at Step 3 to eliminate significant contribution to nonattainment or interference with maintenance of the NAAQS. For a state linked at Steps 1 and 2 to rely on an emissions control measure at Step 3 to address its interstate transport obligations, that measure must be included in the state's implementation plan so that it is permanent and federally enforceable. *See* CAA section 110(a)(2)(D) (''Each such [SIP] shall . . . contain adequate provisions . . . . .''). *See also* CAA section 110(a)(2)(A); *Committee for a Better Arvin* v. *EPA,* 786 F.3d 1169, 1175–76 (9th Cir. 2015) (holding that measures relied on by a state to meet CAA requirements must be included in the SIP).

II. SIP Submissions and EPA's Evaluation

A. Alabama

The following section provides information related to Alabama's SIP submission addressing interstate transport requirements for the 2015 8-hour ozone NAAQS, and EPA's analysis of Alabama's submission.

1. Summary of Alabama's 2015 Ozone Interstate Transport SIP Submission

On August 20, 2018,[33] Alabama submitted a SIP revision addressing the CAA section 110(a)(2)(D)(i)(I) good neighbor interstate transport requirements for the 2015 8-hour ozone NAAQS.[34] The SIP submission provided Alabama's analysis of its impact to downwind states and concluded that emissions from the State will not significantly contribute to nonattainment or interfere with maintenance of the 2015 8-hour ozone NAAQS in other states, based on modeling results included in EPA's March 2018 memorandum. Alabama's submission relied on the results of EPA's modeling of 2023 using a 2011 base year, as contained in the March 2018 memorandum (which the State attached to its submittal), to identify downwind nonattainment and maintenance receptors that may be impacted by emissions from sources in the State at Step 1 of the 4-step framework.[35]

Alabama Department of Environmental Management (ADEM) reviewed this modeling, concurred with the results, and determined that the future year projections were appropriate for the purposes of evaluating Alabama's impact on nonattainment and maintenance receptors in other states at Step 1. Alabama used this information to find that emissions from Alabama would not contribute above 1 percent of the NAAQS at any projected nonattainment or maintenance receptors at Step 2 of the 4-step framework (using EPA's approach to defining such receptors).

Alabama's August 20, 2018, submittal also identified existing SIP-approved regulations and Federal programs [36] that ADEM noted regulate ozone-precursor emissions from sources in the State, including CSAPR trading programs.[37] Alabama's submission acknowledges that CSAPR does not address interstate transport for the 2015 ozone standard but does provide residual NO_X emissions reductions and notes the adoption of CSAPR NO_X ozone season trading programs into the Alabama SIP on August 31, 2016, and October 6, 2017.[38] Alabama notes that the implementation of the existing SIP-approved regulations and Federal programs provide for a decline in ozone precursors emissions in the State. Alabama also stated that ozone-precursor emissions would continue to decline in the State.

Based on the information from Alabama's transport SIP, ADEM concluded that emissions from Alabama sources will not significantly contribute to nonattainment or interfere with maintenance of the 2015 8-hour ozone NAAQS in any other state.

2. Prior Notices Related to Alabama's SIP Submission

Previously, EPA proposed approval of Alabama's interstate transport provisions for the 2015 8-hour ozone NAAQS as addressed in Alabama's August 20, 2018 SIP submission and based on the contribution modeling provided in the March 2018 memorandum. *See* 84 FR 71854 (December 30, 2019). When EPA completed updated modeling of 2023 in 2020 using a 2016-based emissions modeling platform (2016v1), it became evident that Alabama was projected to be linked to downwind nonattainment and maintenance receptors (see footnote 40 below). As a result, EPA deferred acting on Alabama's SIP submittal when it published a supplemental proposal in 2021 to approve four other southeastern states' good neighbor SIP submissions using the updated 2023 modeling. *See* 86 FR 37942, 37943 (July 19, 2021). The updated 2023 modeling using an updated 2016-based emissions modeling platform (2016v2) confirms the prior 2016-based modeling of 2023 in that it continues to show Alabama is linked to at least one downwind nonattainment or maintenance receptor. Based on this updated modeling using the 2016-based emissions modeling platform, discussed in section I.C above, EPA is now withdrawing its 2019 proposed approval on Alabama's September 13, 2018, interstate transport SIP as published on December 30, 2019, at 84 FR 71854.

3. EPA's Evaluation of Alabama's 2015 Ozone Interstate Transport SIP Submission

EPA is proposing to find that Alabama's August 20, 2018, SIP submission does not meet Alabama's obligations with respect to prohibiting emissions that contribute significantly

[32] As examples of general approaches for how such an analysis could be conducted for their sources, states could look to the CSAPR Update, 81 FR 74504, 74539–51; CSAPR, 76 FR 48208, 48246–63; CAIR, 70 FR 25162, 25195–229; or the NO_X SIP Call, 63 FR 57356, 57399–405. *See also* Revised CSAPR Update, 86 FR 23054, 23086–23116. Consistently across these rulemakings, EPA has developed emissions inventories, analyzed different levels of control stringency at different cost thresholds, and assessed resulting downwind air quality improvements.

[33] The August 20, 2018, SIP submission provided by ADEM was received by EPA on August 27, 2018.

[34] On August 20, 2018, Alabama submitted multiple SIP revisions under one cover letter. EPA is only acting on Alabama's 2015 ozone good neighbor interstate transport SIP requirements in this notice.

[35] EPA notes that Alabama's SIP submission is not organized around EPA's 4-step framework for assessing good neighbor obligations, but EPA summarizes the submission using that framework for clarity here.

[36] Alabama's submission cites the following SIP approved regulations: Administrative Code Rule 335–3–6, ''Control of Organic Emissions'', 335–3–8, ''Control of Nitrogen Oxides Emissions'', 335–3–14–.01, ''General Provisions'', 335–3–14–.02, ''Permit Procedures'', 335–3–14–.03, ''Standards for Granting Permits'', 335–3–14– .04, ''Air Permits Authorizing Construction in in Clean Air Areas [Prevention of Significant Deterioration Permitting (PSD)]'' and 335–3–14–.05, ''Air Permits Authorizing Construction in or Near Nonattainment Areas.'' Alabama's Submission cites the following Federal Rules: EPA's Tier 1 and 2 mobile source rules, EPA's nonroad Diesel Rule, EPA's 2007 Heavy-duty Highway Rule, New Source Performance Standards, National Emission Standards for Hazardous Air Pollutants, and CSAPR.

[37] Alabama's SIP references CSAPR, which covers the NO_X ozone season trading program established in EPA's 2011 CSAPR, 76 FR 48208 (August 8, 2011). In addition, Alabama's submittal includes a reference to the SIP-approved rules that adopted the CSAPR Update, 81 FR 74504 (October 26, 2016). *See* 82 FR 46674 (October 6, 2017).

[38] *See* 81 FR 59869 (August 31, 2016), 82 FR 46674 (October 6, 2017) (adopting Alabama Administrative Code Rule 335–3–8, ''Control of Nitrogen Oxides Emissions'' and adopting revisions to Rule 335–3–8 into the SIP).

to nonattainment or interfere with maintenance of the 2015 8-hour ozone NAAQS in any other state based on EPA's evaluation of the SIP submission using the 4-step interstate transport framework, and EPA is therefore proposing to disapprove Alabama's SIP submission.

(a) Results of EPA's Step 1 and Step 2 Modeling and Findings for Alabama

As described in section I, EPA performed updated air quality modeling to project design values and contributions for 2023. These data were examined to determine if Alabama contributes at or above the threshold of 1 percent of the 2015 8-hour ozone NAAQS (0.70 ppb) to any downwind nonattainment or maintenance receptor. As shown in Table 1, the data [39] indicate that in 2023, emissions from Alabama contribute greater than 1 percent of the standard to a nonattainment receptor in Harris County, Texas (ID#: 482010055) and a maintenance-only receptor in Denton County, Texas (ID#: 481210034).[40]

TABLE 1—ALABAMA LINKAGE RESULTS BASED ON EPA UPDATED 2023 MODELING

Receptor ID	Location	Nonattainment/maintenance	2023 Average design value (ppb)	2023 Maximum design value (ppb)	Alabama contribution (ppb)
482010055	Harris County, Texas	Nonattainment	71.0	72.0	0.88
481210034	Denton County, Texas	Maintenance	70.4	72.2	0.71

(b) Evaluation of Information Provided by Alabama Regarding Step 1

At Step 1 of the 4-step interstate transport framework, Alabama relied on EPA modeling included in the March 2018 memorandum to identify nonattainment and maintenance receptors in 2023. As described in section II.A.3.a, EPA has recently updated this modeling using the most current and technically appropriate information. EPA proposes to rely on EPA's most recent modeling to identify nonattainment and maintenance receptors in 2023. That information establishes that there are two receptors to which Alabama is projected to be linked in 2023.

(c) Evaluation of Information Provided by Alabama Regarding Step 2

At Step 2 of the 4-step interstate transport framework, Alabama relied on EPA modeling released in the March 2018 memorandum to identify upwind state linkages to nonattainment and maintenance receptors in 2023. As described in section I.C of this notice, EPA has recently updated modeling to identify upwind state contributions to nonattainment and maintenance receptors in 2023. In this action, EPA proposes to rely on the Agency's most recently available modeling to identify upwind contributions and ''linkages'' to downwind air quality problems in 2023 using a threshold of 1 percent of the NAAQS. *See* section I.D for a general explanation of the use of 1 percent of the NAAQS.

As shown in Table 1, updated EPA modeling identifies Alabama's maximum contribution to downwind nonattainment and maintenance receptors as greater than 1 percent of the standard (*i.e.,* 0.70 ppb). Therefore, the State is linked to a downwind air quality problem at Steps 1 and 2. Because the entire technical basis for Alabama's interstate transport SIP submission is that Alabama is not linked at Step 2, and thus Alabama's SIP contains the necessary provisions to eliminate emissions that will contribute significantly to nonattainment or interfere with maintenance of the 2015 8-hour ozone NAAQS in any other state, EPA proposes to disapprove Alabama's SIP submission based on EPA's finding that such a linkage does exist.[41]

Although Alabama did not rely on the 1 ppb threshold in its SIP submittal, EPA recognizes that the most recently available EPA modeling at the time Alabama submitted its SIP submittal indicated that Alabama did not contribute above 1 percent of the NAAQS to a projected downwind nonattainment or maintenance receptor. Therefore, Alabama may not have considered analyzing the reasonableness and appropriateness of a 1 ppb threshold at Step 2 of the 4-step interstate transport framework per the August 2018 memorandum. However, EPA's August 2018 memorandum provided that whether use of a 1 ppb threshold is appropriate must be based on an evaluation of state-specific circumstances, and no such evaluation was included in the submittal. EPA's experience with the alternative Step 2 thresholds is further discussed in section I.D.3.a. As discussed there, EPA is considering withdrawing the August 2018 memorandum.

(d) Evaluation of Information Provided by Alabama Regarding Step 3

At Step 3 of the 4-step interstate transport framework, a state's emissions are further evaluated, in light of multiple factors, including air quality and cost considerations, to determine what, if any, emissions significantly contribute to nonattainment or interfere with maintenance and, thus, must be eliminated under CAA section 110(a)(2)(D)(i)(I).

To effectively evaluate which emissions in the state should be deemed ''significant'' and therefore prohibited, states generally should prepare an accounting of sources and other emissions activity for relevant pollutants and assess potential, additional emissions reduction opportunities and resulting downwind air quality improvements. EPA has consistently applied this general approach (*i.e.,* Step 3 of the 4-step interstate transport framework) when identifying emissions contributions that the Agency has determined to be ''significant'' (or interfere with maintenance) in each of its prior Federal, regional ozone transport rulemakings, and this interpretation of the statute has been upheld by the Supreme Court. *See EME Homer City,*

[39] The ozone design values and contributions at individual monitoring sites nationwide are provided in the file ''2016v2_DVs_state_contributions.xlsx'' which is included in Docket No. EPA–HQ–OAR–2021–0663.

[40] These modeling results are consistent with the results of a prior round of 2023 modeling using the 2016v1 emissions platform which became available to the public in the fall of 2020 in the Revised CSAPR Update, as noted in section I. That modeling showed that Alabama had a maximum contribution greater than 0.70 ppb to at least one nonattainment or maintenance-only receptor in 2023. These modeling results are included in the file ''Ozone Design Values And Contributions Revised CSAPR Update.xlsx'' in Docket No. EPA–HQ–OAR–2021–0663.

[41] To the extent that Alabama's submittal included information regarding emissions controls that could be interpreted as relevant to a step 3 analysis, EPA evaluates that information in section II.A.3.d.

572 U.S. 489, 519 (2014). While EPA has not directed states that they must conduct a Step 3 analysis in precisely the manner EPA has done in its prior regional transport rulemakings, state implementation plans addressing the obligations in CAA section 110(a)(2)(D)(i)(I) must prohibit ''any source or other type of emissions activity within the State'' from emitting air pollutants which will contribute significantly to downwind air quality problems. Thus, states must complete something similar to EPA's analysis (or an alternative approach to defining ''significance'' that comports with the statute's objectives) to determine whether and to what degree emissions from a state should be ''prohibited'' to eliminate emissions that will ''contribute significantly to nonattainment in or interfere with maintenance of'' the NAAQS in any other state. Alabama did not conduct such an analysis in its SIP submission.

Based on Alabama's finding that emissions from Alabama do not contribute above 1 percent of the NAAQS at any monitors that are projected to be in nonattainment or maintenance, the SIP submission identified SIP-approved provisions and Federal programs in the context that no further emissions reductions were necessary, and determined that the SIP contained adequate provisions to prohibit emissions that will significantly contribute to nonattainment or interfere with maintenance of the 2015 8-hour ozone NAAQS in any other state. However, the State did not analyze total ozone precursors that continue to be emitted from sources and other emissions activity within the State, evaluate the emissions reduction potential of any additional controls using cost or other metrics, nor evaluate any resulting downwind air quality improvements that could result from such controls.

Among the Federal programs referenced in Alabama's submission was the NO_X ozone season trading program of CSAPR for the 2008 ozone standard, which ADEM adopted into the Alabama SIP.[42] This reference suggests that Alabama may have intended to rely on its electric generating units (EGUs) being subject to CSAPR Update (which reflected a stringency at the nominal marginal cost threshold of $1,400/ton (in 2011 dollars) for the 2008 8-hour ozone NAAQS) to argue that it has already implemented all cost-effective emissions reductions at EGUs.

EPA does not support the concept that reliance on CSAPR Update is appropriate to conclude that no further emissions reductions are necessary under Step 3 for the 2015 8-hour ozone NAAQS. First, CSAPR Update did not regulate non-electric generating units (non-EGUs), and thus this analysis, even for the 2008 ozone NAAQS, was incomplete, and EPA acknowledged at the time that CSAPR Update was not a full remedy for interstate transport under that NAAQS. *See Wisconsin,* 938 F.3d at 318–20. Second, relying on CSAPR Update's (or any other CAA program's) determination of cost-effectiveness without further Step 3 analysis is not approvable. Cost-effectiveness must be assessed in the context of the specific CAA program; assessing cost-effectiveness in the context of ozone transport should reflect a more comprehensive evaluation of the nature of the interstate transport problem, the total emissions reductions available at several cost thresholds, and the air quality impacts of the reductions at downwind receptors. While EPA has not established a benchmark cost-effectiveness value for 2015 8-hour ozone NAAQS interstate transport obligations, it is reasonable to expect control measures or strategies to address interstate transport under this NAAQS to reflect higher marginal control costs because the 2015 8-hour ozone NAAQS is a more stringent and more protective air quality standard. As such, the marginal cost threshold of $1,400/ton for the CSAPR Update (which addresses the 2008 ozone 8-hour NAAQS and is in 2011 dollars) is not an appropriate cost threshold and cannot be approved as a benchmark to use for interstate transport SIP submissions for the 2015 8-hour ozone NAAQS. In addition, the updated EPA modeling captures all existing CSAPR trading programs in the baseline, and that modeling confirms that these control programs were not sufficient to eliminate the Alabama's linkage at Steps 1 and 2 under the 2015 8-hour ozone NAAQS even if the CSAPR Update provisions had been adopted into Alabama's SIP. The State was therefore obligated at Step 3 to assess *additional* control measures using a multifactor analysis.

As mentioned above, EPA has newly available information that indicates sources in Alabama are linked to downwind air quality problems for the 2015 ozone standard. Therefore, EPA proposes to disapprove Alabama's August 20, 2018, interstate transport SIP submission on the separate, additional basis that the SIP submittal did not assess additional emissions control opportunities.

(e) Evaluation of Information Provided by Alabama Regarding Step 4

Step 4 of the 4-step interstate transport framework calls for development of permanent and federally enforceable control strategies to achieve the emissions reductions determined to be necessary at Step 3 to eliminate significant contribution to nonattainment or interference with maintenance of the NAAQS. As mentioned in section II.A.3.d, Alabama's SIP submission did not contain an evaluation of additional emissions control opportunities (or establish that no additional controls are required), thus, no information was provided at Step 4. As a result, EPA proposes to disapprove Alabama's August 20, 2018, submittal on the separate, additional basis that the State has not developed permanent and enforceable emissions reductions necessary to meet the obligations of CAA section 110(a)(2)(d)(i)(I).

4. Conclusion for Alabama

Based on EPA's evaluation of Alabama's SIP submission and after consideration of updated EPA modeling using the 2016-based emissions modeling platform, EPA is proposing to find that the 2015 8-hour ozone NAAQS good neighbor interstate transport portion of Alabama's August 20, 2018, SIP submission addressing CAA section 110(a)(2)(D)(i)(I) does not meet the State's interstate transport obligations because it fails to contain the necessary provisions to eliminate emissions that will contribute significantly to nonattainment or interfere with maintenance of the 2015 8-hour ozone NAAQS in any other state.

B. Mississippi

The following section provides information related to Mississippi's SIP submission addressing interstate transport requirements for the 2015 8-hour ozone NAAQS, and EPA's analysis of Mississippi's submission.

1. Summary of Mississippi's 2015 Ozone Interstate Transport SIP Submission

On September 3, 2019, the Mississippi Department of Environmental Quality (MDEQ) submitted a SIP revision addressing the CAA section 110(a)(2)(D)(i)(I) interstate transport requirements for the 2015 8-hour ozone NAAQS.[43] The SIP

[42] *See* 81 FR 59869 (August 31, 2016), 82 FR 46674 (October 6, 2017) (adopting Alabama Administrative Code Rule 335–3–8, ''Control of Nitrogen Oxides Emissions'' and adopting revisions to Rule 335–3–8 into the SIP).

[43] The September 3, 2019, SIP submission provided by MDEQ was received by EPA on September 6, 2019.

submission provided Mississippi's analysis of its impact to downwind states and concluded that emissions from the State will not significantly contribute to nonattainment or interfere with maintenance of the 2015 8-hour ozone NAAQS in other states.

MDEQ's submission relied on the results of EPA's modeling for the 2015 8-hour ozone NAAQS, contained in the March 2018 memorandum, to identify projected downwind nonattainment and maintenance receptors and contribution linkages in 2023 that may be impacted by emissions from sources in Mississippi at Steps 1 and 2 of the 4-step interstate transport framework,[44] respectively. MDEQ reviewed EPA's March 2018 modeling and found that the modeled contributions for Mississippi were below 1 percent of the NAAQS for all nonattainment and maintenance receptors, except the Deer Park nonattainment receptor in Harris County, Texas (Monitor ID: 482011039). The SIP submission identified Mississippi as linked to the Deer Park receptor with an upwind contribution of 0.79 ppb.

In its submittal, MDEQ discussed EPA's August 2018 memorandum, explaining that 0.79 ppb is 1.12 percent of the 2015 8-hour ozone NAAQS, which is greater than the 1 percent contribution threshold of 0.70 ppb but less than a 1 ppb alternative contribution threshold. The SIP submission also states that the Deer Park receptor design value was projected to be greater than the 2015 ozone standard in 2023, but that the actual 2015–2017 design value was below the NAAQS at 68 ppb. Based on the modeling in the March 2018 memo, along with application of a 1 ppb alternative contribution threshold and information regarding 2015–2017 monitored values at the Deer Park receptor, MDEQ concluded that sources in Mississippi were not linked to downwind nonattainment or maintenance receptors at Step 2, and therefore, the State does not significantly contribute to nonattainment in another state for the 2015 ozone standard. Further, MDEQ stated that the SIP contains adequate provisions to prohibit sources and other types of emissions activities within the State from contributing to nonattainment in another state with respect to the 2015 8-hour ozone NAAQS.

In its submission, MDEQ treated the Deer Park receptor as a maintenance receptor because the most recent measured design value at the time of its submission (*i.e.,* the 2017 design value of 68 ppb) was below the level of the NAAQS at this monitor. Based on MDEQ's interpretation of EPA's October 19, 2018, memorandum, the State eliminated the Deer Park monitor site in Harris County, Texas, as a maintenance receptor in 2023 (although EPA's modeling of 2023 released with the October 2017 memorandum had identified this monitoring site as a nonattainment receptor).

To support eliminating the Deer Park monitor as a receptor, MDEQ's demonstration included: (1) Evaluating ozone season temperatures in the period 2014–2017 in Harris County to determine if conditions were conducive for ozone formation; (2) assessing monitored ozone design values from 2011–2017 at the Deer Park monitor; and (3) reviewing ozone precursor emission trends in the Houston Area, Texas (statewide), and Mississippi (statewide). In its demonstration, MDEQ stated that temperatures in 2015 and 2016 were above average, and in 2014 and 2017 temperatures were near normal. Based on this information, MDEQ concluded that conditions were conducive to ozone formation during this three-year time period (*i.e.,* 2015 to 2017). MDEQ's submission also states that design values from 2011 to 2017 at the Deer Park receptor showed a downward trend and that design values have been meeting the 2015 8-hour ozone NAAQS since 2015. Further, according to the submittal, ozone precursor emissions in Texas and Mississippi both showed a downward trend based on data from 2008, 2011, and 2014. Based on the downward trend in emissions and the fact that the Deer Park monitor was measuring attainment in 2015, 2016, and 2017, MDEQ determined that the Deer Park receptor should be eliminated as a maintenance receptor. Thus, based on the elimination of the Deer Park receptor, along with application of a 1 ppb threshold, Mississippi concluded that the State did not significantly interfere with maintenance (prong 2) in another state for the 2015 ozone standard.

In summary, MDEQ concluded that sources in the State do not significantly contribute to nonattainment or interfere with maintenance in another state, that no further emission reductions were necessary, and that Mississippi's SIP contains adequate provisions to prevent sources and other types of emissions activities within the State from contributing significantly to nonattainment or interfering with maintenance in another state with respect to the 2015 8-hour ozone NAAQS.

2. EPA's Evaluation of Mississippi's 2015 Ozone Interstate Transport SIP Submission

EPA is proposing to find that Mississippi's September 3, 2019, SIP submission does not meet Mississippi's obligations with respect to prohibiting emissions that contribute significantly to nonattainment or interfere with maintenance of the 2015 8-hour ozone NAAQS in any other state based on EPA's evaluation of the SIP submission using the 4-step interstate transport framework, and EPA is therefore proposing to disapprove Mississippi's submission.

(a) Evaluation of Information Provided by Mississippi Regarding Step 1

At Step 1 of the 4-step interstate transport framework, MDEQ relied on EPA modeling released in the March 2018 memorandum to identify nonattainment and maintenance receptors in 2023.

In its submittal, MDEQ attempted to utilize the October 2018 memorandum along with 2014 to 2017 ozone design values (the most recent data available at the time of submittal) to eliminate the Deer Park receptor in Harris County, Texas (Monitor ID: 482011039) as a maintenance receptor. Table 2 of the submittal correctly indicates that this monitoring site was a projected nonattainment receptor, not a maintenance-only receptor, in 2023 based on the EPA's modeling data included in the March 2018 memorandum. However, in its submittal, the State relied on the 2014 to 2017 design values at the Deer Park receptor (*i.e.,* 69 ppb, 67 ppb, and 68 ppb, respectively) as the basis for stating that this receptor met EPA's definition of a maintenance receptor. Based on this information, the State applied an alternative definition of a maintenance receptor utilizing the potential concepts included in the October 2018 memorandum. This memorandum included a description of the approach that EPA has historically used to identify maintenance-only receptors [45] and identified potential alternate ways to define maintenance receptors based on certain criteria suggested in the memorandum including an evaluation of meteorology conductive to ozone formation, review of ozone monitored concentrations, and precursor emissions trends.

[44] EPA notes that Mississippi's September 2, 2019, SIP submission is not organized around EPA's 4-step interstate transport framework for assessing good neighbor obligations, but EPA summarizes the submission using that framework for clarity here.

[45] *See* section I.D, above for a discussion of EPA's approach to identify maintenance receptors.

EPA recognized in the October 2018 memorandum that states could potentially, with sufficient justification, establish an approach to addressing maintenance receptors that gives independent significance to prong 2 in some manner different than EPA's approach. In addition, the October 2018 memorandum identified two potential concepts that states could use to identify maintenance receptors: (1) States may, in some cases, eliminate a site as a maintenance receptor if the site is currently measuring clean data, or (2) in some cases, use a design value from the base period that is not the maximum design value. For either of these alternative methods, to adequately consider areas struggling to meet the NAAQS, EPA also indicated that it expects states to include with their SIP demonstration technical analyses showing that the following three criteria are met:

- Meteorological conditions in the area of the monitoring site were conducive to ozone formation during the period of clean data or during the alternative base period design value used for projections; [46]
- Ozone concentrations have been trending downward at the site since 2011 (and ozone precursor emissions of NO_X and VOC have also decreased); and
- Emissions are expected to continue to decline in the upwind and downwind states out to the attainment date of the receptor.

EPA's October 2018 memorandum explained that the intent of these analyses is to demonstrate that monitoring sites that would be identified as maintenance receptors under EPA's historical approach could nonetheless be shown to be very unlikely to violate the NAAQS in the future analytic year.

However, the analysis provided by Mississippi in its submission has not met the criteria laid out in the guidance. With respect to the first criterion (meteorological conditions), MDEQ assessed ozone design values at the Deer Park site in Houston from 2014 to 2017 and anomalies (*i.e.,* difference compared to the long-term mean) of average temperatures in June, July, and August, summarized from EPA's October 2018 memorandum, to determine whether particular summers had ozone-conducive or unconducive meteorology during the period of clean data. MDEQ stated that temperatures were above average in 2015 and 2016 when the Deer Park monitor measured ozone concentrations below the 2015 8-hour ozone NAAQS and near normal in 2014 and 2017. However, MDEQ's review of meteorological conditions in the vicinity of the Deer Park monitor was limited to temperature anomalies and did not discuss or consider how other meteorological factors identified in the October 2018 memorandum (such as humidity, solar radiation, vertical mixing, and/or other meteorological indicators such as cooling-degree days) confirm whether conditions affecting the monitor may have been conducive to ozone formation in 2015 and 2016 and unconducive in 2014 and 2017.

With respect to the second criterion, MDEQ's submission included information related to ozone design values and ozone precursors. Specifically, the submission included an assessment of ozone design values at the Deer Park monitor from 2011 to 2017, which showed a downward trend in ozone concentrations. However, MDEQ's SIP submission did not include a discussion of the 2018 design value, which showed a violation of the 2015 standard at 71 ppb, even though that data was available and could have been considered in the State's analysis at the time of the submission in 2019.[47] In addition, the 2019 and 2020 design values, 75 ppb and 78 ppb, respectively, also exceeded the NAAQS. The preliminary design value for 2021 is 74 ppb.[48] Although not available at the time of the SIP submission, these more recent data suggest a continuous trend in measured ozone concentrations above the 2015 ozone standard at the Deer Park monitor. Even though MDEQ's review of ozone monitoring data may have shown a decrease in measured concentration from 2011 to 2017, EPA notes a significant increase between the 2017 and 2018 4th highest daily maximum concentration, from 68 ppb to 85 ppb. MDEQ's SIP submission did not consider the 2018 4th high daily maximum concentration as part of its trends analysis even though the information was available at the time the SIP was submitted to EPA. Thus, at the time of the submission, the Deer Park monitor had a 3-year design value of 71 ppb, which violated the 70 ppb ozone standard. Thus, under the terms of the October 2018 memorandum, Mississippi's SIP submission does not adequately establish a basis for eliminating the Deer Park monitoring site as an ozone transport receptor.

MDEQ also assessed total ozone precursor emissions data in 2008, 2011, and 2014, which MDEQ claimed indicated a decrease in ozone precursor (NO_X and VOC) emissions in the Houston metropolitan statistical area, Texas (statewide), and Mississippi (statewide). While EPA acknowledges the general downward trends in NO_X and VOC emissions, the Deer Park monitor ozone concentrations design values through 2020 show recent measured ozone concentrations that exceed the 2015 ozone standard. Further, even accounting for emissions trends, EPA's latest air quality modeling, as presented below, shows that there are now three receptors to which Mississippi contributes in 2023, not just one. Thus, the apparent downward trend in ozone precursors in Texas and Mississippi alone cannot support elimination of either the Deer Park monitor as a receptor (under the information Mississippi relied on) or the three Texas receptors to which EPA now finds Mississippi to be contributing. *See* section II.B.2.c and Table 2 below for results of EPA's 2016v2 Step 1 and Step 2 modeling and findings for Mississippi.

With respect to the third criterion, MDEQ stated that, ''[b]ased on national and regional emissions trends, and current regulations on point sources and mobile sources, emissions are expected to continue to decline in the upwind and downwind states.'' However, the State did not cite any specific regulations controlling sources of ozone precursors or mobile sources or quantify the NO_X emission reduction potential of current regulations for point and mobile sources.

Based on the reasons stated above, EPA does not believe Mississippi's SIP submission provided sufficient justification to eliminate the Deer Park monitor as a maintenance receptor.

(b) Evaluation of Information Provided by Mississippi Regarding Step 2

At Step 2 of the 4-step interstate transport framework, Mississippi relied on EPA's modeling released in the March 2018 memorandum to identify upwind state linkages to nonattainment and maintenance receptors in 2023.

[46] *See* Attachment A of EPA's October 2018 memorandum formation to assess whether particular summers had ozone-conducive or unconducive meteorology within the 10-year period 2008 through 2017. The memorandum states that meteorological conditions including temperature, humidity, winds, solar radiation, and vertical mixing affect the formation and transport of ambient ozone concentrations. The memorandum suggests generally that above average temperatures are an indication that meteorology is conducive to ozone formation and below average temperatures indicate that conditions are unconducive to ozone formation. Within a particular summer season, the degree that meteorology is conducive for ozone formation can vary from region to region and fluctuate with time within a particular region.

[47] The data are given in ''2010_thru_2020 Ozone Design Values.xlsx,'' which is included in Docket No. EPA–HQ–OAR–2021–0663.

[48] This is based on preliminary 2021 data available from the Air Quality System (AQS) as of January 3, 2022. The design values for 2021 have not been certified by state agencies.

As described in section I.C of this notice, EPA has recently updated modeling to identify upwind state contributions to nonattainment and maintenance receptors in 2023. In this proposal, EPA relies on the Agency's most recently available modeling to identify upwind contributions and ''linkages'' to downwind air quality problems in 2023 using a threshold of 1 percent of the NAAQS. *See* section I.D for general explanation of the use of 1 percent of the NAAQS. As shown in Table 2, updated EPA modeling identifies Mississippi's maximum contribution to downwind nonattainment and maintenance receptors to be greater than 1 percent of the standard (*i.e.,* 0.70 ppb). Therefore, the State is linked to a downwind air quality problem at Steps 1 and 2.

MDEQ relied on EPA's August 2018 memorandum in an attempt justify using a 1 ppb alternative contribution threshold at Step 2 as a basis to assert that Mississippi would not be ''linked'' to any projected downwind nonattainment or maintenance receptors. As discussed in EPA's August 2018 memorandum, EPA had suggested that, with appropriate additional analysis, it may be reasonable for states to use a 1 ppb contribution threshold, as an alternative to a 1 percent threshold, at Step 2 of the 4-step interstate transport framework, for the purposes of identifying linkages to downwind receptors. However, based on EPA's updated modeling, the State is projected to contribute greater than both the 1 percent and alternative 1 ppb thresholds. While EPA does not, in this action, approve of the State's application of the 1 ppb threshold, based on its linkages greater than 1 ppb to projected downwind nonattainment or maintenance receptors, the State's use of this alternative threshold at Step 2 of the 4-step interstate framework is inconsequential to EPA's proposed action on this SIP.

In addition, MDEQ's SIP does not include a technical analysis to sufficiently justify use of an alternative 1 ppb threshold at the Deer Park monitor. Echoing EPA's August 2018 memorandum, MDEQ stated that the amount of upwind collective contribution captured with the 1 percent and 1 ppb thresholds is *generally* comparable. In this memorandum, EPA also determined that by capturing a percentage of upwind state emissions comparable to the amount captured at 1 percent, the alternative threshold *may* be appropriate, indicating that a more determinative conclusion of appropriateness would require further analysis. In this regard, MDEQ did not provide any further technical justification to make that determination.

MDEQ also referred to an EPA Guidance on Significant Impact Levels for Ozone and Fine Particles in the Prevention of Significant Deterioration Permitting Program (''SILs Guidance'') as additional justification for use of a 1 ppb threshold. However, MDEQ did not provide discussion or analysis containing information specific to Mississippi or the receptors to which its emissions are potentially linked, which is necessary to thoroughly evaluate the state-specific circumstances that could support approval. In addition, the State did not explain the relevance or applicability of a SILs Guidance to which it made reference. EPA's SILs guidance relates to a different provision of the CAA regarding implementation of the prevention of significant deterioration (PSD) permitting program, *i.e.,* a program that applies in areas that have been designated attainment [49] or unclassifiable for the NAAQS, and it is not applicable to the good neighbor provision, which requires states to eliminate significant contribution or interference with maintenance of the NAAQS at known and ongoing air quality problem areas in other states.

The analytical gaps identified indicate that the submittal's use of a 1 ppb threshold for the State is not approvable. EPA's experience with the alternative Step 2 thresholds is further discussed in section I.D.3.a. As discussed there, EPA is considering withdrawing the August 2018 memorandum.

Despite the linkage EPA determines exists at Step 2, the State argued in its submittal that it should not be considered to significantly contribute to nonattainment or interfere with maintenance of the NAAQS in other states. EPA finds that conclusion is not approvable at Steps 1 or 2. Therefore, based on EPA's evaluation of the information submitted by Mississippi, and based on EPA's most recent modeling results for 2023, EPA proposes to find that Mississippi is linked at Steps 1 and 2 and has an obligation to assess potential emissions reductions from sources or other emissions activity at Step 3 of the 4-step framework.

(c) Results of EPA's 2016v2 Step 1 and Step 2 Modeling and Findings for Mississippi

As described in section I, EPA performed air quality modeling using the 2016v2 emissions platform to project design values and contributions for 2023. These data were examined to determine if Mississippi contributes at or above the threshold of 1 percent of the 2015 8-hour ozone NAAQS (0.70 ppb) to any downwind nonattainment or maintenance receptor. As shown in Table 2, the data [50] indicate that in 2023, emissions from Mississippi contribute greater than 1 percent of the standard to nonattainment or maintenance-only receptors in Denton County, Texas (Monitor ID: 481210034), Harris County, Texas (Monitor ID: 482010055), and Brazoria County, Texas (Monitor ID: 480391004).[51] Note that each of these monitors is currently measuring nonattainment based on 2020 design values of 72 ppb, 76 ppb, and 73 ppb at the Denton County, Harris County, and Brazoria County receptors, respectively.

[49] Pursuant to section 107(d) of the CAA, EPA must designate areas as either ''nonattainment,'' ''attainment,'' or ''unclassifiable.'' Historically for ozone, the EPA has designated most areas that do not meet the definition of nonattainment as ''unclassifiable/attainment.'' This category includes areas that have air quality monitoring data meeting the NAAQS and areas that do not have monitors but for which the EPA has no evidence that the areas may be violating the NAAQS or contributing to a nearby violation. In the designations for the 2015 ozone NAAQS, the EPA reversed the order of the label to be ''attainment/unclassifiable'' to better convey the definition of the designation category and so that the category is more easily distinguished from the separate unclassifiable category. An ''attainment'' designation is reserved for a previous nonattainment area that has been redesignated to attainment as a result of the EPA's approval of a CAA section 175A maintenance plan submitted by the state air agency.

[50] The ozone design values and contributions at individual monitoring sites nationwide are provided in the file ''2016v2_DVs_state_contributions.xlsx'' which is included in Docket No. EPA–HQ–OAR–2021–0663.

[51] These modeling results are consistent with the results of a prior round of 2023 modeling using a the 2016v1 emissions platform that became available to the public in the fall of 2020 in the Revised CSAPR Update, as noted in section I.

TABLE 2—MISSISSIPPI LINKAGE RESULTS BASED ON EPA UPDATED 2023 MODELING

Receptor ID	Location	Nonattainment/ maintenance	2023 average design value (ppb)	2023 maximum design value (ppb)	Mississippi contribution (ppb)
481210034	Denton County, Texas	Maintenance	70.4	72.2	1.14
482010055	Harris County, Texas	Nonattainment	71.0	72.0	1.04
480391004	Brazoria County, Texas	Maintenance	70.1	72.3	0.92

(d) Evaluation of Information Provided by Mississippi Regarding Step 3

At Step 3 of the 4-step interstate transport framework, a state's emissions are further evaluated, in light of multiple factors, including air quality and cost considerations, to determine what, if any, emissions significantly contribute to nonattainment or interfere with maintenance and, thus, must be eliminated under CAA section 110(a)(2)(D)(i)(I).

To effectively evaluate which emissions in the state should be deemed ''significant,'' and therefore prohibited, states generally should prepare an accounting of sources and other emissions activity for relevant pollutants and assess potential, additional emissions reduction opportunities and resulting downwind air quality improvements. EPA has consistently applied this general approach (*i.e.,* Step 3 of the 4-step interstate transport framework) when identifying emissions contributions that the Agency has determined to be ''significant'' (or interfere with maintenance) in each of its prior Federal, regional ozone transport rulemakings, and this interpretation of the statute has been upheld by the Supreme Court. *See EME Homer City,* 572 U.S. 489, 519 (2014). While EPA has not directed states that they must conduct a Step 3 analysis in precisely the manner EPA has done in its prior regional transport rulemakings, state implementation plans addressing the obligations in CAA section 110(a)(2)(D)(i)(I) must prohibit ''any source or other type of emissions activity within the State'' from emitting air pollutants which will contribute significantly to downwind air quality problems. Thus, states must complete something similar to the EPA's analysis (or an alternative approach to defining ''significance'' that comports with the statute's objectives) to determine whether and to what degree emissions from a state should be ''prohibited'' to eliminate emissions that will ''contribute significantly to nonattainment in or interfere with maintenance of'' the NAAQS in any other state. Mississippi did not conduct such an analysis in its SIP submission. Mississippi did not include an accounting of sources or other emissions activity in the State along with an analysis of potential NO_X emissions control technologies, their associated costs, estimated emissions reductions, and downwind air quality improvements.

EPA's evaluation of Mississippi's submittal, in conjunction with its 2016-based modeling of 2023, indicates that ozone-precursor emissions from Mississippi are linked to downwind air quality problems for the 2015 ozone standard at Steps 1 and 2. However, Mississippi's SIP submittal does not include a Step 3 analysis. EPA proposes to find that Mississippi was required to analyze emissions from the sources and other emissions activity from within the State to determine whether its contributions were significant, and EPA proposes to disapprove its submission because Mississippi's submittal failed to do so.

(e) Evaluation of Information Provided by Mississippi Regarding Step 4

Step 4 of the 4-step interstate transport framework calls for development of permanent and federally enforceable control strategies to achieve the emissions reductions determined to be necessary at Step 3 to eliminate significant contribution to nonattainment or interference with maintenance of the NAAQS. As mentioned previously, Mississippi's SIP submittal did not contain an evaluation of additional emission control opportunities (or establish that no additional controls are required), thus, no information was provided at Step 4. As a result, EPA proposes to disapprove Mississippi's submittal on the separate, additional basis that the State has not developed permanent and enforceable emissions reductions necessary to meet the obligations of CAA section 110(a)(2)(d)(i)(I).

3. Conclusion for Mississippi

Based on EPA's evaluation of Mississippi's SIP submission, EPA is proposing to find that Mississippi's September 3, 2019, SIP submission addressing CAA section 110(a)(2)(D)(i)(I) does not meet the State's interstate transport obligations because it fails to contain the necessary provisions to eliminate emissions that will contribute significantly to nonattainment or interfere with maintenance of the 2015 8-hour ozone NAAQS in any other state.

C. Tennessee

The following section provides information related to Tennessee's SIP submission addressing interstate transport requirements for the 2015 8-hour ozone NAAQS, and EPA's analysis of Tennessee's submission.

1. Summary of Tennessee's 2015 Ozone Interstate Transport SIP Submission

On September 13, 2018, Tennessee submitted a SIP revision addressing the CAA section 110(a)(2)(D)(i)(I) interstate transport requirements for the 2015 8-hour ozone NAAQS.[52] [53] The SIP submission provided Tennessee's analysis of its impact to downwind states and concluded that emissions from the State will not significantly contribute to nonattainment or interfere with maintenance of the 2015 8-hour ozone NAAQS in other states. Tennessee's submission relied on EPA's modeling results for the 2015 8-hour ozone NAAQS, contained in the March 2018 memorandum, to identify downwind nonattainment and maintenance receptors that may be impacted by emissions from sources in the State at Steps 1 and 2 of the 4-step framework.[54] The Tennessee Department of Environmental Control (TDEC) reviewed EPA's 2023 modeling, concurred with the results, and determined that EPA's future year NO_X projections were reasonable and account

[52] The September 13, 2019, SIP submission provided by TDEC was received by EPA on September 17, 2018.

[53] On September 18, 2018, Tennessee submitted multiple SIP revisions under one cover letter. EPA is only acting on Tennessee's 2015 ozone good neighbor interstate transport SIP requirements in this notice.

[54] EPA notes that Tennessee's SIP submission is not organized around EPA's 4-step framework for assessing good neighbor obligations, but EPA summarizes the submission using that framework for clarity here.

for source shutdowns, new controls, and fuel switches. TDEC summarized the State's upwind contribution to 26 nonattainment and maintenance receptors and noted Tennessee's largest impact on any potential downwind receptor in 2023 would be 0.31 ppb and 0.65 ppb, respectively. Tennessee found that—based on EPA's 2023 modeling—emissions from Tennessee do not contribute above 1 percent of the NAAQS or above 1 ppb at any monitors that are projected to be in nonattainment or maintenance.

Tennessee's September 13, 2018, SIP submittal asserted that NO_X emissions are considered the primary cause of formation of ozone in the southeast United States, and emphasized a significant reduction in NO_X emissions reductions from coal-fired EGUs and other large NO_X sources leading to improvements in air quality, including reductions attributable to previous transport rulemakings.[55] Additionally, TDEC identifies existing SIP-approved provisions, Federal regulations and programs, court settlements, and statewide source shutdowns that TDEC believes limit ozone precursor emissions in the State.[56]

Based on the information contained in Tennessee's transport SIP, TDEC concluded that Tennessee does not significantly contribute to nonattainment or interfere with maintenance in another state of the 2015 8-hour ozone NAAQS, and that the SIP provides for adequate measures to control ozone precursor emissions.

2. Prior Notices Related to Tennessee's SIP Submission

Previously, EPA proposed approval of Tennessee's interstate transport provisions for the 2015 8-hour ozone NAAQS as addressed in Tennessee's September 13, 2018, SIP submission and based on the contribution modeling provided in the March 2018 memorandum. *See* 84 FR 71854 (December 30, 2019). When EPA completed updated modeling of 2023 in 2020 using a 2016-based emissions modeling platform (2016v1), it became evident that Tennessee was projected to be linked to downwind nonattainment and maintenance receptors (see footnote 57 below). As a result, EPA deferred acting on Tennessee's SIP submittal when it published a supplemental proposal in 2021 to approve four other southeastern states' good neighbor SIP submissions, using the updated 2023 modeling. *See* 86 FR 37942, 37943 (July 19, 2021). The updated 2023 modeling presented in this proposal using an updated 2016-based emissions modeling platform (2016v2) confirms the prior 2016-based modeling of 2023 in that it continues to show Tennessee is linked to at least one downwind nonattainment or maintenance receptor. Based on this updated modeling using the 2016-based emissions modeling platform, discussed in section I.C above, EPA is now withdrawing its 2019 proposed approval on Tennessee's September 13, 2018, interstate transport SIP as published on December 30, 2019 at 84 FR 71854.

3. EPA's Evaluation of Tennessee's 2015 Ozone Interstate Transport SIP Submission

EPA is proposing to find that Tennessee's September 13, 2018, SIP submission does not meet the State's obligations with respect to prohibiting emissions that contribute significantly to nonattainment or interfere with maintenance of the 2015 8-hour ozone NAAQS in any other state based on EPA's evaluation of the SIP submission using the 4-step interstate transport framework, and EPA is therefore proposing to disapprove Tennessee's SIP submission.

(a) Results of EPA's Step 1 and Step 2 Modeling and Findings for Tennessee

As described in section I, EPA performed updated air quality modeling to project design values and contributions for 2023. These data were examined to determine if Tennessee contributes at or above the threshold of 1 percent of the 2015 8-hour ozone NAAQS (0.70 ppb) to any downwind nonattainment or maintenance receptor. As shown in Table 3, the data[57] indicate that in 2023, emissions from Tennessee contribute greater than 1 percent of the standard to the maintenance-only receptor in Denton County, Texas (ID#: 481210034).[58]

TABLE 3—TENNESSEE LINKAGE RESULTS BASED ON EPA UPDATED 2023 MODELING

Receptor ID	Location	Nonattainment/maintenance	2023 Average design value (ppb)	2023 Maximum design value (ppb)	Tennessee contribution (ppb)
481210034	Denton County, Texas	Maintenance	70.4	72.2	0.94

(b) Evaluation of Information Provided by Tennessee Regarding Step 1

At Step 1 of the 4-step interstate transport framework, Tennessee relied on EPA modeling included in the March 2018 memorandum to identify nonattainment and maintenance receptors in 2023. As described previously in section II.C.3.a, EPA has recently updated this modeling using the most current and technically appropriate information. EPA proposes to rely on EPA's most recent modeling to identify nonattainment and maintenance receptors in 2023. That information establishes that there is one receptor to which Tennessee is projected to be linked in 2023.

(c) Evaluation of Information Provided by Tennessee Regarding Step 2

At Step 2 of the 4-step interstate transport framework, Tennessee relied on EPA modeling released in the March 2018 memorandum to identify upwind state linkages to nonattainment and maintenance receptors in 2023. As described in section I.C of this notice,

[55] The Tennessee SIP revision specifically cites the Federal NO_X Budget Trading Program, CAIR, and CSAPR. In addition, the Tennessee SIP revision discusses Tennessee rule 1200–03–27–.12 (NO_X SIP Call requirements for Stationary Boilers and Combustion Turbines), which had not been approved into the SIP at the time of the September 13, 2018, submittal. EPA finalized approval of TAPR 1200–03–27–.12 into the Tennessee SIP on March 2, 2021. *See* 86 FR 12092.

[56] See page 9 through 12 of Tennessee's September 13, 2018, SIP submission for a list of SIP-approved State rules and Federal rules. This can be found in Docket No. EPA–R04–OAR–2021–0841.

[57] The ozone design values and contributions at individual monitoring sites nationwide are provided in the file ''2016v2_DVs_state_contributions.xlsx'' which is included in Docket No. EPA–HQ–OAR–2021–0663.

[58] These modeling results are consistent with the results of a prior round of 2023 modeling using the 2016v1 emissions platform which became available to the public in the fall of 2020 in the Revised CSAPR Update, as noted in section I. That modeling showed that Tennessee had a maximum contribution greater than 0.70 ppb to at least one nonattainment or maintenance-only receptor in 2023. These modeling results are included in the file ''Ozone Design Values And Contributions Revised CSAPR Update.xlsx'' in Docket No. EPA–HQ–OAR–2021–0663.

EPA has recently updated modeling to identify upwind state contributions to nonattainment and maintenance receptors in 2023. In this proposal, EPA relies on the Agency's most recently available modeling to identify upwind contributions and ''linkages'' to downwind air quality problems in 2023 using a threshold of 1 percent of the NAAQS. *See* section I.D for a general explanation of the use of 1 percent of the NAAQS.

As shown in Table 3, updated EPA modeling identifies Tennessee's maximum contribution to a downwind maintenance receptor as greater than 1 percent of the standard (*i.e.,* 0.70 ppb). Therefore, the State is linked to a downwind air quality problem at Steps 1 and 2. Because the entire technical basis for Tennessee's submittal is that the State is not linked at Step 2, EPA proposes to disapprove Tennessee's SIP submission based on EPA's finding that a linkage does exist.[59]

Tennessee references a 1 ppb threshold in its submittal, citing to EPA's SILs Guidance as justification for the use of a 1 ppb threshold. However, Tennessee did not provide additional discussion or analysis containing information specific to Tennessee or the receptors to which its emissions are potentially linked, which is necessary to evaluate the state-specific circumstances that could support approval of an alternative threshold. Nevertheless, EPA recognizes that the most recently available EPA modeling at the time Tennessee submitted its SIP submittal indicated the State did not contribute above 1 percent of the NAAQS to a projected downwind nonattainment or maintenance receptor. Therefore, the State may not have considered conducting an in-depth analysis as to the reasonableness and appropriateness of a 1 ppb threshold at Step 2 of the 4-step interstate transport framework per the August 2018 memorandum. However, EPA's August 2018 memorandum provided that whether use of a 1 ppb threshold is appropriate must be based on an evaluation of state-specific circumstances. Tennessee provided no such analysis. Further, the State did not explain the relevance of the SILs Guidance to which it made reference. This guidance relates to a different provision of the CAA regarding implementation of the PSD permitting program, *i.e.,* a program that applies in areas that have been designated attainment[60] or unclassifiable for the NAAQS, and it is not applicable to the good neighbor provision, which requires states to eliminate significant contribution or interference with maintenance of the NAAQS at known and ongoing air quality problem areas in other states.

EPA's experience with the alternative Step 2 thresholds is further discussed in section I.D.3.a above. As discussed there, EPA is considering withdrawing the August 2018 memorandum.

(d) Evaluation of Information Provided by Tennessee Regarding Step 3

At Step 3 of the 4-step interstate transport framework, a state's emissions are further evaluated, in light of multiple factors, including air quality and cost considerations, to determine what, if any, emissions significantly contribute to nonattainment or interfere with maintenance and, thus, must be eliminated under CAA section 110(a)(2)(D)(i)(I).

To effectively evaluate which emissions in the state should be deemed ''significant'' and therefore prohibited, states generally should prepare an accounting of sources and other emissions activity for relevant pollutants and assess potential, additional emissions reduction opportunities and resulting downwind air quality improvements. EPA has consistently applied this general approach (*i.e.,* Step 3 of the 4-step interstate transport framework) when identifying emissions contributions that the Agency has determined to be ''significant'' (or interfere with maintenance) in each of its prior Federal, regional ozone transport rulemakings, and this interpretation of the statute has been upheld by the Supreme Court. *See EME Homer City,* 572 U.S. 489, 519 (2014). While the EPA has not directed states that they must conduct a Step 3 analysis in precisely the manner the EPA has done in its prior regional transport rulemakings, state implementation plans addressing the obligations in CAA section 110(a)(2)(D)(i)(I) must prohibit ''any source or other type of emissions activity within the State'' from emitting air pollutants which will contribute significantly to downwind air quality problems. Thus, states must complete something similar to the EPA's analysis (or an alternative approach to defining ''significance'' that comports with the statute's objectives) to determine whether and to what degree emissions from a state should be ''prohibited'' to eliminate emissions that will ''contribute significantly to nonattainment in or interfere with maintenance of'' the NAAQS in any other state. Tennessee did not conduct such an analysis in its SIP submission.

The State did not analyze total ozone precursors that continue to be emitted from sources and other emissions activity within the State, evaluate the emissions reduction potential of any additional controls using cost or other metrics, nor evaluate any resulting downwind air quality improvements that could result from such controls. Instead, Tennessee included in its submittal a list of existing emissions control programs and measures in the State. However, EPA's modeling already takes account of such measures. Despite these existing emissions controls, the State is projected in the most recent modeling to be linked to at least one downwind nonattainment or maintenance receptor. The State was therefore obligated at Step 3 to assess *additional* control measures using a multifactor analysis.

As mentioned above, EPA has newly available information that indicates sources in Tennessee are linked to downwind air quality problems for the 2015 ozone standard. Therefore, EPA proposes to disapprove Tennessee's September 18, 2018, SIP submission on the separate, additional basis that the SIP submittal did not assess additional emissions control opportunities.

(e) Evaluation of Information Provided by Tennessee Regarding Step 4

Step 4 of the 4-step interstate transport framework calls for development of permanent and federally enforceable control strategies to achieve the emissions reductions determined to be necessary at Step 3 to eliminate significant contribution to nonattainment or interference with maintenance of the NAAQS. As mentioned in section II.C.3.d, Tennessee's SIP submission did not contain an evaluation of additional emissions control opportunities (or establish that no additional controls are required), thus, no information was provided at Step 4. As a result, EPA proposes to disapprove Tennessee's September 18, 2018, submittal on the separate, additional basis that the State has not developed permanent and enforceable emissions reductions necessary to meet the obligations of CAA section 110(a)(2)(d)(i)(I).

4. Conclusion for Tennessee

Based on EPA's evaluation of Tennessee's SIP submission and after consideration of updated EPA modeling using the 2016-based emissions

[59] To the extent the Tennessee submittal included information regarding emissions controls that could be interpreted as relevant to a Step 3 analysis, EPA evaluates that information in section II.C.3.d.

[60] *See* footnote 49.

modeling platform, EPA is proposing to find that the portion of Tennessee's September 13, 2018, SIP submission addressing CAA section 110(a)(2)(D)(i)(I) does not meet the State's interstate transport obligations because it fails to contain the necessary provisions to eliminate emissions that will contribute significantly to nonattainment or interfere with maintenance of the 2015 8-hour ozone NAAQS in any other state.

III. Proposed Actions

EPA is proposing to disapprove the 2015 ozone good neighbor interstate transport SIP revisions from Alabama, dated August 20, 2018; from Mississippi, dated September 3, 2019; and from Tennessee, dated September 13, 2018. Under CAA section 110(c)(1), if finalized, these disapprovals would establish a 2-year deadline for EPA to promulgate a FIP for Alabama, Mississippi, and Tennessee to address the CAA section 110(a)(2)(D)(i)(I) interstate transport requirements pertaining to significant contribution to nonattainment and interference with maintenance of the 2015 8-hour ozone NAAQS in other states, unless EPA approves a SIP that meets these requirements. However, under the CAA, a good neighbor SIP disapproval does not start a mandatory sanctions clock.

IV. Statutory and Executive Order Reviews

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

These proposed actions are not significant regulatory actions and were therefore not submitted to the Office of Management and Budget for review.

B. Paperwork Reduction Act (PRA)

These proposed actions do not impose an information collection burden under the PRA because they do not contain any information collection activities.

C. Regulatory Flexibility Act (RFA)

These actions merely propose to disapprove SIP submissions as not meeting the CAA for Alabama, Mississippi, and Tennessee. EPA certifies that these proposed rules will not have a significant economic impact on a substantial number of small entities under the RFA (5 U.S.C. 601 *et seq.*)

D. Unfunded Mandates Reform Act (UMRA)

These proposed actions do not contain any unfunded mandate as described in UMRA, 2 U.S.C. 1531–1538, and do not significantly or uniquely affect small governments. These proposed actions impose no enforceable duty on any state, local, or tribal governments or the private sector.

E. Executive Order 13132: Federalism

These proposed actions do not have federalism implications. They will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

These proposed actions do not have tribal implications as specified in Executive Order 13175. These proposed actions do not apply on any Indian reservation land, any other area where EPA or an Indian tribe has demonstrated that a tribe has jurisdiction, or non-reservation areas of Indian country. Thus, Executive Order 13175 does not apply to these actions.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

EPA interprets Executive Order 13045 as applying only to those regulatory actions that concern environmental health or safety risks that EPA has reason to believe may disproportionately affect children, per the definition of ''covered regulatory action'' in section 2–202 of the Executive Order. These proposed actions are not subject to Executive Order 13045 because they merely propose to disapprove SIP submissions from Alabama, Mississippi, and Tennessee as not meeting the CAA.

H. Executive Order 13211, Actions That Significantly Affect Energy Supply, Distribution or Use

These proposed actions are not subject to Executive Order 13211, because they are not significant regulatory actions under Executive Order 12866.

I. National Technology Transfer and Advancement Act

This proposed rulemaking does not involve technical standards.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

EPA believes the human health or environmental risk addressed by these proposed actions will not have potential disproportionately high and adverse human health or environmental effects on minority, low-income or indigenous populations. These proposed actions merely propose to disapprove SIP submissions as not meeting the CAA.

K. CAA Section 307(b)(1)

Section 307(b)(1) of the CAA governs judicial review of final actions by EPA. This section provides, in part, that petitions for review must be filed in the D.C. Circuit: (i) When the agency action consists of ''nationally applicable regulations promulgated, or final actions taken, by the Administrator,'' or (ii) when such action is locally or regionally applicable, if ''such action is based on a determination of nationwide scope or effect and if in taking such action the Administrator finds and publishes that such action is based on such a determination.'' For locally or regionally applicable final actions, the CAA reserves to EPA complete discretion whether to invoke the exception in (ii).[61]

EPA anticipates that this proposed rulemaking, if finalized, would be ''nationally applicable'' within the meaning of CAA section 307(b)(1) because it would take final action on SIP submittals for the 2015 8-hour ozone NAAQS for the states of Alabama, Mississippi, and Tennessee, which are located in three different Federal judicial circuits (the Eleventh Circuit, the Fifth Circuit, and the Sixth Circuit, respectively). It would apply uniform, nationwide analytical methods, policy judgments, and interpretation with respect to the same CAA obligations, *i.e.,* implementation of good neighbor requirements under CAA section 110(a)(2)(D)(i)(I) for the 2015 8-hour ozone NAAQS for states across the country, and final action would be based on this common core of determinations, described in further detail below.

If EPA takes final action on this proposed rulemaking, in the alternative, the Administrator intends to exercise the complete discretion afforded to him under the CAA to make and publish a finding that the final action (to the extent a court finds the action to be locally or regionally applicable) is based on a determination of ''nationwide scope or effect'' within the meaning of CAA section 307(b)(1). Through this

[61] In deciding whether to invoke the exception by making and publishing a finding that an action is based on a determination of nationwide scope or effect, the Administrator takes into account a number of policy considerations, including his judgment balancing the benefit of obtaining the D.C. Circuit's authoritative centralized review versus allowing development of the issue in other contexts and the best use of agency resources.

rulemaking action (in conjunction with a series of related actions on other SIP submissions for the same CAA obligations), EPA interprets and applies section 110(a)(2)(d)(i)(I) of the CAA for the 2015 8-hour ozone NAAQS based on a common core of nationwide policy judgments and technical analysis concerning the interstate transport of pollutants throughout the continental U.S. In particular, EPA is applying here (and in other proposed actions related to the same obligations) the same, nationally consistent 4-step framework for assessing good neighbor obligations for the 2015 8-hour ozone NAAQS. EPA relies on a single set of updated, 2016-base year photochemical grid modeling results of the year 2023 as the primary basis for its assessment of air quality conditions and contributions at Steps 1 and 2 of that framework. Further, EPA proposes to determine and apply a set of nationally consistent policy judgments to apply the 4-step framework. EPA has selected a nationally uniform analytic year (2023) for this analysis and is applying a nationally uniform approach to nonattainment and maintenance receptors and a nationally uniform approach to contribution threshold analysis.[62] For these reasons, the Administrator intends, if this proposed action is finalized, to exercise the complete discretion afforded to him under the CAA to make and publish a finding that this action is based on one or more determinations of nationwide scope or effect for purposes of CAA section 307(b)(1).[63]

[62] A finding of nationwide scope or effect is also appropriate for actions that cover states in multiple judicial circuits. In the report on the 1977 Amendments that revised section 307(b)(1) of the CAA, Congress noted that the Administrator's determination that the ''nationwide scope or effect'' exception applies would be appropriate for any action that has a scope or effect beyond a single judicial circuit. *See* H.R. Rep. No. 95–294 at 323, 324, reprinted in 1977 U.S.C.C.A.N. 1402–03.

[63] EPA may take a consolidated, single final action on all of the proposed SIP disapproval actions with respect to obligations under CAA section 110(a)(2)(D)(i)(I) for the 2015 8-hour ozone NAAQS. Should EPA take a single final action on all such disapprovals, this action would be nationally applicable, and EPA would also anticipate, in the alternative, making and publishing a finding that such final action is based on a determination of nationwide scope or effect.

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Ozone.

AGENCY FOR INTERNATIONAL DEVELOPMENT

60-Day Notice of Public Information Collections

AGENCY: U.S. Agency for International Development.

ACTION: Notice of public information collections.

SUMMARY: The U.S. Agency for International Development (USAID) seeks Office of Management and Budget (OMB) approval to continue the information collections described below. In accordance with the Paperwork Reduction Act of 1995, USAID requests public comment on this collection from all interested individuals and organizations. The purpose of this notice is to allow 60 days for public comment preceding submission of the collections to OMB. Comments are requested concerning: (a) Whether the collections of information are necessary for the proper performance of the functions of the Agency, including whether the information shall have practical utility; (b) the accuracy of the burden estimates; (c) ways to enhance the quality, utility, and clarity of the information collected; and (d) ways to minimize the burden of the collection of information on the respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Submit comments on or before April 25, 2022.

ADDRESSES: You may submit comments by any of the following methods:

1. *Web:* Through the Federal eRulemaking Portal at *http://www.regulations.gov* by following the instructions for submitting comments.
2. *Email: policymailbox@usaid.gov.*

FOR FURTHER INFORMATION CONTACT: Wayne Cohee, at (202) 916–2630 or via email at *policymailbox@usaid.gov.*

SUPPLEMENTARY INFORMATION:

Instructions

All comments must be in writing and submitted through the method(s) specified in the **ADDRESSES** section above. All submissions must include the information collection title. Please include your name, title, organization, postal address telephone number, and email address in the text of the message. Please note that comments submitted in response to this Notice are public record. We recommend that you do not submit detailed personal information, Confidential Business Information, or any information that is otherwise protected from disclosure by statute.

USAID will only address comments that explain why the proposed collection would be inappropriate, ineffective, or unacceptable without a change. Comments that are insubstantial or outside the scope of the notice of request for public comment may not be considered.

OMB No: 0412–0510 (expired).

Title of Information Collection: Applicant and Recipient Information Collected in Response to Standard Provisions in USAID Grants and Cooperative Agreements to Non-Governmental Organizations.

Type of Review: Reinstatement, with change, of a previously approved collection (OMB approval number 0412–0510) for which approval has expired.

Purpose: USAID is authorized to make grants to and enter cooperative agreements with Non-Governmental Organizations in or outside of the United States in furtherance of the purposes and within limitations of the Foreign Assistance Act (FAA). The information collection requirements placed on the public are published in Standard Provisions that are included, as required or as applicable, in Notices of Funding Opportunities to potential applicants and resulting awards to recipients. The pre-award requirements are based on a need for prudent management in the determination that an applicant either has or can obtain the ability to competently manage development assistance programs using public funds. The requirements for information collection during the post-award period are based on the need to prudently administer public funds.

Respondents: USAID grant and cooperative agreement applicants and recipients.

Estimated Number of Annual Responses: 1,210.

Estimated Number of Annual Burden Hours: 22,100.

Estimated Total Public Burden (in cost): $1,303,900.

These estimated totals were calculated using the below burden estimates per response for each of the named Standard Provisions, which are published internally in the Agency's Automated Directives System (ADS) Chapter 303 and included by Agreement Officers, as required or as applicable, in Notices of Funding Opportunities and resulting awards:

ACCOUNTING, AUDIT, AND RECORDS (MARCH 2021)—4 hours
DEBARMENT, SUSPENSION, AND OTHER RESPONSIBILITY MATTERS (JUNE 2012)—4 hours
TRAVEL AND INTERNATIONAL AIR TRANSPORTATION (DECEMBER 2014)—4 hours
OCEAN SHIPMENT OF GOODS (JUNE 2012)—4 hours
TRAFFICKING IN PERSONS (April 2016)—8 hours
USAID IMPLEMENTING PARTNER NOTICES (IPN) PORTAL FOR ASSISTANCE (JULY 2014)—4 hours
MANDATORY DISCLOSURES (NOVEMBER 2020)—40 hours
CONFLICT OF INTEREST (August 2018)—8 hours
NEGOTIATED INDIRECT COST RATES—PREDETERMINED (NOVEMBER 2020)—40 hours
NEGOTIATED INDIRECT COST RATES—PROVISIONAL (Nonprofit) (NOVEMBER 2020)—40 hours
NEGOTIATED INDIRECT COST RATE—PROVISIONAL (Profit) (DECEMBER 2014)—40 hours
INDIRECT COSTS—NEGOTIATED INDIRECT COST RATE AGREEMENT (NICRA) (NOVEMBER 2020)—40 hours
FLY AMERICA ACT RESTRICTIONS (AUGUST 2013)—4 hours
VOLUNTARY POPULATION PLANNING ACTIVITIES—SUPPLEMENTAL REQUIREMENTS (JANUARY 2009)—8 hours
TITLE TO AND CARE OF PROPERTY (COOPERATING COUNTRY TITLE) (NOVEMBER 1985)—16 hours
INVESTMENT PROMOTION (NOVEMBER 2003)—8 hours
REPORTING HOST GOVERNMENT

TAXES (DECEMBER 2014)—8 hours
COST SHARE (JUNE 2012)—24 hours
PROTECTION OF HUMAN RESEARCH SUBJECTS (JUNE 2012)—24 hours
PATENT REPORTING PROCEDURES (NOVEMBER 2020)—16 hours

BILLING CODE 6116–02–P

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

[Doc. No. AMS–AMS–22–0005]

Notice of Request for Extension and Revision of a Currently Approved Information Collection

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, this notice announces the Agricultural Marketing Service's (AMS) intention to request approval, from the Office of Management and Budget, for an extension of and revision to the currently approved information collection National Bioengineered Food Disclosure Standard.

DATES: Comments on this notice must be received by April 25, 2022 to be assured of consideration.

ADDRESSES: Interested persons are invited to submit comments concerning this notice by using the electronic process available at *www.regulations.gov.* Comments may also be filed with the Docket Clerk, 1400 Independence Ave. SW, Room 2069-South, Washington, DC 20250; Fax: (202) 260–8369. All comments should reference the document number and the date and page number of this issue of the **Federal Register**. All comments submitted in response to this notice will be posted without change, including any personal information provided, at *www.regulations.gov* and will be included in the record and made available to the public. All comments received will also be available for public inspection during regular business hours at the address above.

FOR FURTHER INFORMATION CONTACT: Kenneth Becker, Chief, Research and Rulemaking Branch, Food Disclosure and Labeling Division, Fair Trade Practices Program, Agricultural Marketing Service, U.S. Department of Agriculture. telephone (202) 720–4486, email: *kenneth.becker@usda.gov.*

SUPPLEMENTARY INFORMATION:

Agency: USDA, AMS.

Title: National Bioengineered Food Disclosure Standard.

OMB Number: 0581–0315.

Expiration Date of Approval: April 30, 2022.

Type of Request: Extension and revision of a currently approved information collection.

Abstract: The U.S. Department of Agriculture (USDA) administers the Agricultural Marketing Act of 1946 (Title II of the Act of August 14, 1946). P.L. 114–216 amended the Agricultural Marketing Act of 1946, directing the Secretary of Agriculture to establish the National Bioengineered Food Disclosure Standard (7 CFR 66) for disclosing certain foods that are bioengineered or contain bioengineered ingredients. The final rule (National Bioengineered Food Disclosure Standard [7 CFR 66]) fulfils USDA's need to establish requirements and procedures to carry out the new standard. P.L. 114–216 also addressed Federal preemption of State and local genetic engineering labeling requirements and specifies that certification of food under USDA's National Organic Program (7 CFR 205) were considered sufficient to make claims about the absence of bioengineering in the food. AMS gathered industry input and conducted rulemaking on the National Bioengineered Food Disclosure Standards. In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520), AMS is publishing this a 60-day notice on reporting and recordkeeping requirements related to the National Bioengineered Food Disclosure Standard. This collection represents a total burden of 353,952 hours.

Estimate of Burden: Public reporting burden for this collection of information is estimated to average 2.3 hours per response.

Respondents: Importers, food manufacturers, and food retailers.

Estimated Number of Respondents: 155,098.

Estimated Total Annual Responses: 155,098.

Estimated Number of Responses per Respondent: 1.

Estimated Total Annual Burden on Respondents: 353,952 hours.

Comments are invited on: (1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) the accuracy of the agency's estimate of the burden of the proposed collection of information including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

All responses to this notice will be summarized and included in the request for OMB approval. All comments will become a matter of public record.

Erin Morris,

Associate Administrator, Agricultural Marketing Service.

BILLING CODE P

DEPARTMENT OF AGRICULTURE

Submission for OMB Review; Comment Request

The Department of Agriculture has submitted the following information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13. Comments are requested regarding: Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; the accuracy of the agency's estimate of burden including the validity of the methodology and assumptions used; ways to enhance the quality, utility and clarity of the information to be collected; and ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Comments regarding this information collection received by March 24, 2022 will be considered. Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

An agency may not conduct or sponsor a collection of information

unless the collection of information displays a currently valid OMB control number and the agency informs potential persons who are to respond to the collection of information that such persons are not required to respond to the collection of information unless it displays a currently valid OMB control number.

Rural Housing Service

Title: RD 1924 Construction Common Forms.

OMB Control Number: 0575–NEW.

Summary of Collection: The information collection under OMB Number 0575-New will enable the Agencies to effectively administer the policies, methods, and responsibilities in the planning and performing of construction and other development work for the related construction programs.

The Rural Housing Service (RHS) is authorized under various sections of Title V of the Housing Act of 1949, as amended, to provides financial assistance to construct, improve, alter, repair, replace, or rehabilitate dwellings, which will provide modest, decent, safe, and sanitary housing to eligible individuals in rural areas. The Consolidated Farm and Rural Development Act, as amended, authorizes the credit programs of the RHS, RBCS and RUS to provide financial assistance for essential community facilities such as construction of community facilities and water and waste systems; and the improvement, development, and financing of businesses, industries, and employment.

In several sections of both acts, loan limitations are established as percentages of development costs, requiring careful monitoring of those costs. Also, the Secretary is authorized to prescribe regulations to ensure that Federal funds are not wasted or dissipated and that construction will be undertaken economically and will not be of elaborate or extravagant design or materials. The collection of information covered by the forms allows for the planning and performing of construction and other development work.

Need and Use of the Information: The applicant/borrower, contractor, subcontractor, material supplier, equipment lessor, architect, engineer, manufacturer or sponsor of manufactured housing collects the required information. Rural Development provides forms and/or guidelines to assist in the collection and submission of information; however, most of the information may be collected and submitted in the form and content which is accepted and typically used in the normal conduct of planning and performing development work in private industry when a private lender is financing the activity. The information is usually submitted via hand delivery or U.S. Postal Service to the Rural Development Field Office, although receipt through email or USDA Service Center's eForms website is becoming more common. Occasionally, information is submitted directly to the Rural Development State Office. The information is used by Rural Development to determine whether a loan/grant can be approved, to ensure that Rural Development has adequate security for the loans financed, to provide for sound construction and development work and to determine that the requirements of the applicable acts have been met. The information is also used to monitor compliance with the terms and conditions of the loan/grant and to monitor the prudent use of Federal funds.

Applications are submitted through the applicable USDA Rural Development State Office.

Description of Respondents: Individuals or Households.

Number of Respondents: 15.

Frequency of Responses: Annually.

Total Burden Hours: 7.

Rural Housing Service

Title: 1901–E Civil Rights Common Forms.

OMB Control Number: 0575–NEW.

Summary of Collection: The information collection under OMB Number 0575-New will enable the Agencies to effectively administer the policies, methods, and responsibilities in the planning and performing of construction and other development work for the related construction programs.

The Rural Housing Service (RHS), Rural Business and Cooperative Service (RBCS) and Rural Utilities service (RUS) agencies within the Rural Development mission area, hereinafter referred to as Agency, is the credit Agency for agriculture and rural development for the United States Department of Agriculture. The Agency offers offer loans, grants and loan guarantees to help create jobs and support economic development and essential services such as housing; health care; first responder services and equipment; and water, electric and communications infrastructure on an equal opportunity basis. The information collection requirements in this request are needed to comply with civil rights laws and Executive Orders that provide protection and prohibit discrimination on the basis of race, color, national origin, religion, sex, gender identity (including gender expression), sexual orientation, disability, age, marital status, family/parental status, income derived from a public assistance program, political beliefs, reprisal or retaliation for prior civil rights activity.

7 CFR part 1901–E implements the following Civil Rights laws, Executive Orders, and regulations, to collect the necessary information and enforce the civil rights requirements of RD's Federally assisted programs and programs that provide housing. Title VI and Title VIII have overlapping coverage providing protection on the bases of race, color and national origin.

Need and use of the Information: The same information is provided by each program, but it is evaluated differently based on the specific nature of its benefits and services. This information is used by RD to comply with the Department of Justice (DOJ) Title VI Regulation 28 CFR part 42 subpart F to ensure that Federal agencies which extend Federal financial assistance properly enforce Title VI of the Civil Rights Act and similar provisions in Federal grant statutes. Additionally, Section 42.407—''Procedures to Determine Compliance'' established RD requirements to conduct pre-award and post-award compliance reviews. The requirement to conduct compliance reviews is also based on the requirements of Executive Order 12250.

Information is also used internally by RD to monitor and analyze program participation to determine compliance with the civil rights laws applicable to that recipient. The information is also used by the Agency to determine Agency compliance. In the case of RD housing programs, the information will be reported to Congress for the required annual reporting. A compilation of all RD civil rights activities implementing the various civil rights laws and regulations and the number of compliance reviews conducted, including pre-and post-awards, will be reported on the Implementation Plan and submitted to the Department of Justice. This information is made available to USDA officials, officials of other Federal enforcement agencies, and to Congress for reporting purposes.

To ensure compliance with 28 CFR 42.405, RD compliance officers conduct compliance reviews which often involve a visual review of the recipients' posting of the required posters, and review advertising and community outreach to determine if the general public is made aware of the facility and that it is Federally financed, and therefore

eligible for use on an equal opportunity basis. Community contacts are made with business and community leaders and participants in the program to obtain their knowledge and opinions of the facility's operation and determine if there have been allegations of discrimination made in the community.

Compliance officers utilize compliance review forms such as Form 400–8 to comport with the compliance review requirements of DOJ regulation 28 CFR part 42, and Executive Order 12250. The frequency of compliance reviews is based on whether it is a loan or grant and the specific requirements of the program. Grants-only obligations only require a pre-award and a post-award compliance review. Where grants are utilized for revolving loan funds, compliance reviews are done on recipients every five years.

Description of Respondents: Individuals or Households.

Number of Respondents: 3.

Frequency of Responses: Annually.

Total Burden Hours: 0.

Dated: February 16, 2022.

Levi S. Harrell,

Departmental Information Collection Clearance Officer.

BILLING CODE 3410–XV–P

DEPARTMENT OF AGRICULTURE

Submission for OMB Review; Comment Request

February 15, 2022.

The Department of Agriculture has submitted the following information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13. Comments are requested regarding; whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; the accuracy of the agency's estimate of burden including the validity of the methodology and assumptions used; ways to enhance the quality, utility and clarity of the information to be collected; and ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Comments regarding this information collection received by March 24, 2022 will be considered. Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

An agency may not conduct or sponsor a collection of information unless the collection of information displays a currently valid OMB control number and the agency informs potential persons who are to respond to the collection of information that such persons are not required to respond to the collection of information unless it displays a currently valid OMB control number.

Food and Nutrition Service

Title: USDA National Hunger Clearinghouse Database Form (FNS 543).

OMB Control Number: 0584–0474.

Summary of Collection: Section 26(d) of the Richard B. Russell National School Lunch Act (42 U.S.C. 1769g(d)) (the Act), which was added to the Act by section 123 of Public Law 103–448 on November 2, 1994, mandated that FNS enter into a contract with a non-governmental organization to establish and maintain an information clearinghouse (named ''USDA National Hunger Clearinghouse'' or ''Clearinghouse'') for groups that assist low-income individuals or communities regarding nutrition assistance programs or other assistance.

Need and Use of the Information: The Clearinghouse includes a database of non-governmental, grassroots organizations in the areas of hunger and nutrition, along with a mailing list to communicate with these organizations. These organizations enter their information into the database, and Clearinghouse staff use that information to provide the public with information about where they can get food assistance. Surveys (FNS–543) can be obtained online at *www.hungerfreeamerica.org.*

Description of Respondents: Individuals/Households, State, Local, or Tribal government, and Profit/Non-profit Business.

Number of Respondents: 600.

Frequency of Responses: Reporting: Once.

Total Burden Hours: 50.

Ruth Brown,

Departmental Information Collection Clearance Officer.

DEPARTMENT OF AGRICULTURE

Submission for OMB Review; Comment Request

February 16, 2022.

The Department of Agriculture has submitted the following information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13. Comments are requested regarding; whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; the accuracy of the agency's estimate of burden including the validity of the methodology and assumptions used; ways to enhance the quality, utility and clarity of the information to be collected; and ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Comments regarding this information collection received by March 24, 2022 will be considered. Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

An agency may not conduct or sponsor a collection of information unless the collection of information displays a currently valid OMB control number and the agency informs potential persons who are to respond to the collection of information that such persons are not required to respond to the collection of information unless it displays a currently valid OMB control number.

Economic Research Service

Title: Food Security Supplement to the Current Population Survey.

OMB Control Number: 0536–0043.

Summary of Collection: The Food Security Supplement to the Current Population Survey (CPS) is sponsored by USDA as research and evaluation activity authorized under 7 U.S.C. 2204(a). This section outlines duties of the Secretary of Agriculture related to research and development including authorizing the collection of statistics.

The Administrator of the Economic Research Service is authorized to conduct economic and social science research and analyses related to the U.S. food system and consumers under 7 CFR 2.67. The data to be collected will be used to address multiple programmatic and policy development needs of the Food and Nutrition Service (FNS) and other Federal agencies. The U.S. Census Bureau conducts this data collection on USDA's behalf under Title 13, Section 8(b).

Need and use of the Information: The data collected by the food security supplement will be used for monitoring the prevalence of food security, food insecurity, and very low food security within the U.S. population as a whole and in selected population subgroups; conducting research on causes of food insecurity and the role of Federal food and nutrition programs in ameliorating food insecurity; and continuing development and improvement of methods for measuring these conditions. Information will be collected on food spending, use of Federal and community food and nutrition assistance programs, difficulties in obtaining adequate food during the previous 12 months and 30 days due to constrained resources, and conditions that result from inadequate access to food.

Description of Respondents: Individuals or Households.

Number of Respondents: 53,901.

Frequency of Responses: Reporting: Annually.

Total Burden Hours: 6,479.

DEPARTMENT OF AGRICULTURE

Rural Utilities Service

[Docket No. RUS–22–TELECOM–0009]

Rural eConnectivity Program; Correction

AGENCY: Rural Utilities Service, Department of Agriculture.

ACTION: Notice; correction and amendment to Funding Opportunity Announcement (FOA).

SUMMARY: The Rural Utilities Service (RUS) published a Funding Opportunity Announcement (FOA) and solicitation of applications in the **Federal Register** on October 25, 2021, entitled Rural eConnectivity Program (ReConnect Program), announcing its general policy and application procedures for funding under the ReConnect Program established pursuant to the Consolidated Appropriations Act, 2018 (which became law on February 15, 2019) which provides loans, grants, and loan/grant combinations to facilitate broadband deployment in rural areas. The purpose of this notice is to inform the public of changes made to the ReConnect program and to correct the October notice. The two changes are extending the application window until 11:59 a.m.. Eastern on March 9, 2022 and potentially increasing total level of funding.

DATES: Actions described in this notice take effect February 22, 2022.

FOR FURTHER INFORMATION CONTACT: For general inquiries regarding the ReConnect Program, contact Laurel Leverier, Assistant Administrator Telecommunications Program, Rural Utilities Service, U.S. Department of Agriculture (USDA), email: *laurel.leverrier@usda.gov,* telephone (202) 720–9554. For inquiries regarding eligible service areas, please contact ReConnect Program Staff at *https://www.usda.gov/reconnect/contact-us.*

SUPPLEMENTARY INFORMATION:

Background

On October 25, 2021, RUS published a Funding Opportunity Announcement (FOA) and solicitation of applications in the **Federal Register** at 86 FR 58860. The FOA provided the policy and application procedures for the ReConnect Program. In support of the ReConnect Program, the agency identified the application closing date and funding amount for each category.

Since the publication of the FOA, the Agency's application system has been experiencing some issues that have hampered applicants from being able to complete applications. To allow the Agency sufficient time to address all the system issues and to give the applicants adequate time to complete their applications, the Agency has determined that an extension of the current period for submitting applications warranted. The actions taken in this notice will extend the application window until 11:59 a.m. Eastern on March 9, 2022. These actions are being taken by the Agency to ensure a successful third round of funding under the ReConnect Program.

There has also been a variety of new funding sources that meet the goals and purposes of this program. Therefore, to minimize the notices required, RUS may, at its discretion, increase the total level of funding available in this funding round or in any category in this funding round from any available source provided the awards meet the requirements of the statute which made the funding available to the agency.

Summary of Changes

The FOA published in the **Federal Register** on October 25, 2021, FOA must be corrected in regard to the application window being expanded from 11:59 a.m. Eastern on February 22, 2022 to 11:59 a.m. Eastern on March 9, 2022. The FOA must also be corrected to allow RUS at its discretion to increase the total level of funding available.

Corrections

In FR Doc. 2021–23128 appearing on page 58860 in the **Federal Register** of Monday, October 25, 2021, the following corrections are made:

1. On page 58860, second column, under **DATES**, correct ''11:59 a.m. Eastern on February 22, 2022'' to read ''11:59 a.m. Eastern on March 9, 2022''.

2. On page 85560, third column, under Overview, in the Dates section:

i. Correct ''11:59 a.m. Eastern on February 22, 2022'' to read ''11:59 a.m. Eastern on March 9, 2022''; and

ii. Correct the sentence ''Applications will not be accepted after February 22, 2022 until a new application opportunity has been opened with the publication of an additional FOA in the **Federal Register**'' to read ''Applications will not be accepted after March 9, 2022 until a new application opportunity has been opened with the publication of an additional FOA in the **Federal Register**''.

3. On page 58861, first column, at the end of the first full paragraph, add the sentence ''RUS may at its discretion, increase the total level of funding available in this funding round or in any category in this funding round from any available source provided the awards meet the requirements of the statute which made the funding available to the agency.''

Christopher A. McLean,

Acting Administrator, Rural Utilities Service.

COMMISSION ON CIVIL RIGHTS

Notice of Public Meeting of the Tennessee Advisory Committee

AGENCY: Commission on Civil Rights.

ACTION: Announcement of meeting.

SUMMARY: Notice is hereby given, pursuant to the provisions of the rules and regulations of the U.S. Commission

on Civil Rights (Commission), and the Federal Advisory Committee Act (FACA), that a meeting of the Tennessee Advisory Committee to the Commission will convene by conference call on Wednesday, February 23, 2022, at 11:00 a.m. (CT). The purpose is to plan the Committee's upcoming briefings.

DATES: The meeting will be held on: Wednesday, February 23, 2022, 11:00 a.m. CT.

Join via Webex: https://civilrights.webex.com/civilrights/j.php?MTID=m9c8f90d5669efb4844365bf0dcec37a1.

Join via phone: 800–360–9505 USA Toll Free; Access Code: 276 348 210 55#.

FOR FURTHER INFORMATION CONTACT: Victoria Moreno at *vmoreno@usccr.gov* or by phone at 434–515–0204.

SUPPLEMENTARY INFORMATION: This meeting is available to the public through the WebEx link above. If joining only via phone, callers can expect to incur charges for calls they initiate over wireless lines, and the Commission will not refund any incurred charges. Individuals who are deaf, deafblind and hard of hearing may also follow the proceedings by first calling the Federal Relay Service at 1–800–877–8339 and providing the Service with the call-in number found through registering at the web link provided above for the meeting.

Members of the public are entitled to make comments during the open period at the end of the meeting. Members of the public may also submit written comments; the comments must be received in the Regional Programs Unit within 30 days following the respective meeting. Written comments may be emailed to Victoria Moreno at *vmoreno@usccr.gov.* All written comments received will be available to the public.

Persons who desire additional information may contact the Regional Programs Unit at (202) 809–9618. Records and documents discussed during the meeting will be available for public viewing as they become available at the *www.facadatabase.gov.* Persons interested in the work of this advisory committee are advised to go to the Commission's website, *www.usccr.gov,* or to contact the Regional Programs Unit at the above phone number or email address.

Agenda

Wednesday, February 23, 2022; 11:00 a.m. (CT)

1. Welcome & Roll Call
2. Chair's Comments
3. Briefing Planning
4. Next Steps
5. Public Comment
6. Adjourn

Dated: February 16, 2022.

David Mussatt,

Supervisory Chief, Regional Programs Unit.

BILLING CODE P

DEPARTMENT OF COMMERCE

Census Bureau

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Annual Business Survey

The Department of Commerce will submit the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance

with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. We invite the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. Public comments were previously requested via the **Federal Register** on July 6, 2020 during a 60-day comment period. This notice allows for an additional 30 days for public comments.

Agency: U.S. Census Bureau, Department of Commerce.

Title: Annual Business Survey.

OMB Control Number: 0607–1004.

Form Number(s): ABS–1.

Type of Request: Regular submission, Request for a Revision of a Currently Approved Collection.

Number of Respondents: 308,000.

Average Hours per Response: 58 minutes.

Burden Hours: 301,533.

Needs and Uses: In an effort to improve the measurement of business dynamics in the United States, the Census Bureau is conducting the Annual Business Survey (ABS). The ABS combines Census Bureau firm-level collections to reduce respondent burden, increase data quality, reduce operational costs, and operate more efficiently. The ABS replaced the five-year Survey of Business Owners (SBO) for employer businesses, the Annual Survey of Entrepreneurs (ASE), and the Business Research and Development (R&D) and Innovation for Microbusinesses (BRDI–M) surveys. The ABS provides information on selected economic and demographic characteristics for businesses and business owners by sex, ethnicity, race, and veteran status. Further, the survey measures research and development for microbusinesses, new business topics such as innovation and technology, as well as other business characteristics. The ABS is sponsored by the National Center for Science and Engineering Statistics (NCSES) within the National Science Foundation (NSF) and conducted by the Census Bureau for five years (2018–2022).

The ABS includes all nonfarm employer businesses filing Internal Revenue Service (IRS) tax forms as individual proprietorships, partnerships, or any other type of corporation, with receipts of $1,000 or more. The ABS sampled approximately 850,000 employer businesses for survey year 2018 (reference year 2017). Starting with survey year 2019 (reference year 2018), the sample is reduced to approximately 300,000 employer businesses annually (survey years 2019–2022) to reduce the burden on the respondents. The reduced sample size will yield summary-level estimates for women-owned, minority-owned, and veteran-owned businesses at the 2-digit NAICS, U.S., state and metropolitan statistical area (MSA) levels. The Census Bureau uses administrative data to estimate the probability that a firm is minority- or women-owned. Each firm is then placed in one of nine frames for sampling. The sampling frames are: American Indian or Alaskan Native, Asian, Black or African American, Hispanic, Native Hawaiian and Other Pacific Islander, Non-Hispanic White Men, Other, Publicly Owned, and Women. The sample is stratified by state, industry, and frame. The Census Bureau selects some companies with certainty based on volume of sales, payroll, and number of paid employees or NAICS. All certainty cases are sure to be selected and represent only themselves.

Starting with survey year 2021 (reference year 2020), the ABS sample included an additional 8,000 respondents to collect research activities from nonprofit organizations. Historically, nonprofit organizations were in scope to the ABS, however, they were not mailed before the 2021 ABS because the survey does not expect nonprofit organizations to be classifiable by sex, ethnicity, race, or veteran status. To include the nonprofit organizations, the sample size increased to approximately 308,000 (300,000 employer businesses + 8,000 nonprofit organizations). Of note, nonprofit organizations will only see questions relating to research activities and will not be asked any questions relating to owner demographics.

The ABS is designed to allow for incorporating new content each survey year based on topics of relevance. Each year new questions will be submitted to the Office of Management and Budget (OMB) for approval.

Employer businesses will be asked questions about the sex, ethnicity, race, and veteran status for up to four persons owning the majority of rights, equity, or interest in the business (Section B of the questionnaire). Organizations sampled as nonprofits and respondents with 1–9 employees will be asked about research and development (R&D) activities, R&D costs, and R&D capital expenditures (Sections C and D of the questionnaire respectively). Further, employer businesses sampled will be asked about the following topics: Goods, Services, and Business Processes and Technology (Section E of the questionnaire); Design and Intellectual Property (Section F of the questionnaire); Domestic and Foreign Transactions (Section G of the questionnaire); and Coronavirus Pandemic Impact on Research and Development and Business Activities (Section H of the questionnaire). The 2022 ABS includes additional questions on capital expenditures for R&D performers. The R&D capital expenditures is asked of nonprofits and businesses with 1–9 employees (sections C and D of the ABS questionnaire).

The ABS is primarily collected via an electronic or web-based instrument. Respondents selected for the survey receive an initial letter informing them of their requirement to complete the survey as well as instructions on accessing the survey. The 2022 ABS initial mailing is scheduled for July 2022. Responses will be due approximately 30 days from initial mailing. Respondents will also receive a due date reminder approximately one week before responses are due. The Census Bureau plans to conduct two follow-up mailings and an optional third follow-up if deemed necessary based on check-in. Nonrespondents may receive a certified mailing for the second and third follow-up mailings. The Census Bureau may also plan to conduct an email follow-up to select nonrespondents reminding them to submit their report in the electronic instrument. The Census Bureau may include a paper questionnaire during the follow-up activities to assist with collecting data from select nonrespondents. Closeout of mail operations is scheduled for January 2023 but may be extended to allow ample time to receive returned forms if necessary. Response data will be processed as they are received. Upon the close of the collection period, data processing will continue, and records will be edited, reviewed, tabulated, and disseminated.

The Census Bureau, in collaboration with the NCSES, has started discussing topics for the 2023–2027 ABS 5-year cycle. As a result, a draft 5-year content plan has been developed for OMB's review.

Affected Public: Business or other for-profit organizations.

Frequency: Annually.

Respondent's Obligation: Mandatory.

Legal Authority: Title 13, United States Code, Sections 8(b), 131, and 182; Title 42, United States Code, Section 1861–76 (National Science Foundation Act of 1950, as amended); and Section 505 within the America COMPETES Reauthorization Act of 2010 authorize this collection. Sections 224 and 225 of

Title 13, United States Code, require a response from sampled firms.

This information collection request may be viewed at *www.reginfo.gov.* Follow the instructions to view the Department of Commerce collections currently under review by OMB.

Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function and entering either the title of the collection or the OMB Control Number 0607–1004.

Sheleen Dumas,

Department PRA Clearance Officer, Office of the Chief Information Officer, Commerce Department.

Economic Development Administration

Notice of Petitions by Firms for Determination of Eligibility To Apply for Trade Adjustment Assistance

AGENCY: Economic Development Administration, Department of Commerce.

ACTION: Notice and opportunity for public comment.

SUMMARY: The Economic Development Administration (EDA) has received petitions for certification of eligibility to apply for Trade Adjustment Assistance from the firms listed below. Accordingly, EDA has initiated investigations to determine whether increased imports into the United States of articles like or directly competitive with those produced by each of the firms contributed importantly to the total or partial separation of the firms' workers, or threat thereof, and to a decrease in sales or production of each petitioning firm.

SUPPLEMENTARY INFORMATION:

LIST OF PETITIONS RECEIVED BY EDA FOR CERTIFICATION OF ELIGIBILITY TO APPLY FOR TRADE ADJUSTMENT ASSISTANCE

[1/20/2022 through 2/11/2022]

Firm name	Firm address	Date accepted for investigation	Product(s)
Davis Drapery & Interiors, Inc	629 Distributors Row, Harahan, LA 70123	1/21/2022	The firm manufactures window coverings, including blinds, shades, and curtains.
Midstates, Inc	4820 Capital Avenue NE, Aberdeen, SD 57401.	1/26/2022	The firm manufactures printed paper products.
Pavilion USA, LLC	16200 NW 49th Avenue, Miami Gardens, FL 33014.	2/4/2022	The firm manufactures metal furniture for use outdoors.
Palmetto Plating Company, Inc	510 Saco Lowell Road, Easley, SC 29640	2/8/2022	The firm applies protective coatings and finishes to metal parts.
Cooper Enterprises, Inc	89 Curtis Drive, Shelby, OH 44875	2/11/2022	The firm manufactures miscellaneous wooden parts and assemblies.

Any party having a substantial interest in these proceedings may request a public hearing on the matter. A written request for a hearing must be submitted to the Trade Adjustment Assistance Division, Room 71030, Economic Development Administration, U.S. Department of Commerce, Washington, DC 20230, no later than ten (10) calendar days following publication of this notice. These petitions are received pursuant to section 251 of the Trade Act of 1974, as amended.

Please follow the requirements set forth in EDA's regulations at 13 CFR 315.8 for procedures to request a public hearing. The Catalog of Federal Domestic Assistance official number and title for the program under which these petitions are submitted is 11.313, Trade Adjustment Assistance for Firms.

Bryan Borlik,

Director.

BILLING CODE 3510–WH–P

DEPARTMENT OF COMMERCE

Foreign-Trade Zones Board

[S–21–2022]

Foreign-Trade Zone 196—Fort Worth, Texas, Application for Subzone Expansion TTI, Inc., Fort Worth, Texas

An application has been submitted to the Foreign-Trade Zones (FTZ) Board by Alliance Corridor, Inc., grantee of FTZ 196, requesting expanded subzone status for the facilities of TTI, Inc., located in Fort Worth, Texas. The application was submitted pursuant to the provisions of the Foreign-Trade Zones Act, as amended (19 U.S.C. 81a–81u), and the regulations of the FTZ Board (15 CFR part 400). It was formally docketed on February 15, 2022.

The proposed subzone site (3.6 acres) is located at 5050 Mark IV Parkway, Fort Worth, Texas. No authorization for production activity has been requested at this time. The proposed expanded subzone would be subject to the existing activation limit of FTZ 196. Because the proposed new site is located outside of FTZ 196's Alternative Site Framework (ASF) service area, authorization for the expanded subzone would not be under the ASF

In accordance with the FTZ Board's regulations, Camille Evans of the FTZ Staff is designated examiner to review the application and make recommendations to the Executive Secretary.

Public comment is invited from interested parties. Submissions shall be addressed to the FTZ Board's Executive Secretary and sent to: *ftz@trade.gov.* The closing period for their receipt is April 4, 2022. Rebuttal comments in response to material submitted during the foregoing period may be submitted during the subsequent 15-day period to April 18, 2022.

A copy of the application will be available for public inspection in the ''Online FTZ Information Section'' section of the FTZ Board's website, which is accessible via *www.trade.gov/ftz.*

For further information, contact Camille Evans at *Camille.Evans@trade.gov.*

Dated: February 16, 2022.

Andrew McGilvray,

Executive Secretary.

Foreign-Trade Zones Board

[Order No. 2123]

Approval of Subzone Status, OBlockz LLC, Lawrence, Massachusetts

Pursuant to its authority under the Foreign-Trade Zones Act of June 18, 1934, as amended (19 U.S.C. 81a–81u), the Foreign-Trade Zones Board (the Board) adopts the following Order:

Whereas, the Foreign-Trade Zones (FTZ) Act provides for ''. . . the establishment . . . of foreign-trade zones in ports of entry of the United States, to expedite and encourage foreign commerce, and for other purposes,'' and authorizes the Foreign-Trade Zones Board to grant to qualified corporations the privilege of establishing foreign-trade zones in or adjacent to U.S. Customs and Border Protection ports of entry;

Whereas, the Board's regulations (15 CFR part 400) provide for the establishment of subzones for specific uses;

Whereas, the Massachusetts Port Authority, grantee of Foreign-Trade Zone 27, has made application to the Board for the establishment of a subzone at the facility of OBlockz LLC, located in Lawrence, Massachusetts (FTZ Docket B–65–2021, docketed September 23, 2021);

Whereas, notice inviting public comment has been given in the **Federal Register** (86 FR 53945–53946, September 29, 2021) and the application has been processed pursuant to the FTZ Act and the Board's regulations; and,

Whereas, the Board adopts the findings and recommendations of the examiner's memorandum, and finds that the requirements of the FTZ Act and the Board's regulations are satisfied;

Now, therefore, the Board hereby approves subzone status at the facility of OBlockz LLC, located in Lawrence, Massachusetts (Subzone 27S), as described in the application and **Federal Register** notice, subject to the FTZ Act and the Board's regulations, including Section 400.13.

Dated: Feb. 15, 2022.

Lisa W. Wang,

Assistant Secretary for Enforcement and Compliance, Alternate Chairperson, Foreign-Trade Zones Board.

DEPARTMENT OF COMMERCE

International Trade Administration

[A–533–502]

Certain Welded Carbon Steel Standard Pipes and Tubes From India: Initiation of Circumvention Inquiry on the Antidumping Duty Order

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: In response to a request from Bull Moose Tube Company (Bull Moose), Nucor Tubular Products Inc. (Nucor Tubular), Wheatland Tube Company (Wheatland) and the United Steel, Paper and Forestry, Rubber, Manufacturing, Energy, Allied Industrial and Service Workers International Union, AFL–CIO, CLC (the USW) (collectively, the domestic interested parties), the Department of Commerce (Commerce) is initiating a country-wide circumvention inquiry to determine whether imports of certain welded carbon steel standard pipes and tubes (pipe and tube), which are completed in Oman and the United Arab Emirates (UAE) from hot-rolled steel (HRS) produced in India, are circumventing the antidumping duty (AD) order on pipe and tube from India.

DATES: Applicable February 22, 2022.

FOR FURTHER INFORMATION CONTACT: Jacob Keller, AD/CVD Operations, Office I, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–4849.

SUPPLEMENTARY INFORMATION:

Background

On December 16, 2021, pursuant to section 781(b) of the Tariff Act of 1930, as amended (the Act) and 19 CFR 351.226(c) domestic interested parties filed a circumvention inquiry request alleging that pipe and tube completed in Oman and the UAE using HRS manufactured in India are circumventing the *Order*[1] and, accordingly, should be included within the scope of the *Order*.[2] On December 24, 2021, Al Jazeera Steel Products Co. SAOG (Al Jazeera) filed opposition comments in response to the domestic interested parties' request.[3] On January 5, 2022, the domestic interested parties filed rebuttal comments regarding Al Jazeera's opposition comments.[4] On January 11, 2022, Universal Tube and Plastic Industries, Ltd.; KHK Scaffolding and Formwork LLC; and THL Pipe and Tube Industries LLC (collectively, Universal) filed opposition comments.[5] On January 13, 2022, Conares Metal Supply Limited (Conares) filed opposition comments.[6]

On January 6, 2022, we issued a supplemental questionnaire to the domestic interested parties regarding their circumvention inquiry request.[7] On January 18, 2022, the domestic interested parties filed their response to our supplemental questionnaire.[8] On January 24 and 25, 2022, Universal, Ajmal Steel Tubes and Pipes Ind., LLC, and K.D Industries Inc. (UAE Producers), and Conares filed additional opposition comments, respectively.[9]

On January 11, 2022, we extended the deadline to initiate these circumvention inquiries by 15 days, in accordance with 19 CFR 351.226(d)(1).[10] On January 28,

[10] *See* Memoranda, ''Certain Welded Steel Carbon Standard Pipes and Tubes from India: Extension of Time to Determine Whether to Initiate Anti-Circumvention Inquiry,'' dated January 11, 2022;

Continued

2022, we extended, for good cause, the deadline to initiate by an additional 15 days in accordance with 19 CFR 351.302(b).[11]

Scope of the Order

The products covered by the *Order* include certain welded carbon steel standard pipes and tubes with an outside diameter of 0.375 inch or more but not over 16 inches. These products are commonly referred to in the industry as standard pipes and tubes produced to various American Society for Testing Materials (ASTM) specifications, most notably A–53, A–120, or A–135. The antidumping duty order on certain welded carbon steel standard pipes and tubes from India, published on May 12, 1986, included standard scope language which used the import classification system as defined by Tariff Schedules of the United States, Annotated (TSUSA).

The United States developed a system of tariff classification based on the international harmonized system of customs nomenclature. On January 1, 1989, the U.S. tariff schedules were fully converted from the TSUSA to the Harmonized Tariff Schedule (HTS). *See, e.g., Certain Welded Carbon Steel Standard Pipes and Tubes from India; Preliminary Results of Antidumping Duty Administrative Reviews,* 56 FR 26650, 26651 (June 10, 1991). As a result of this transition, the scope language we used in the 1991 **Federal Register** notice is slightly different from the scope language of the original final determination and antidumping duty order.

Until January 1, 1989, such merchandise was classifiable under item numbers 610.3231, 610.3234, 610.3241, 610.3242, 610.3243, 610.3252, 610.3254, 610.3256, 610.3258, and 610.4925 of the TSUSA. This merchandise is currently classifiable under HTS subheadings 7306.30.1000, 7306.30.5025, 7306.30.5032, 7306.30.5040, 7306.30.5055, 7306.30.5085, 7306.30.5090. As with the TSUSA item numbers, the HTS subheadings are provided for convenience and customs purposes.

The written product description remains dispositive.

Merchandise Subject to the Circumvention Inquiry

This circumvention inquiry covers pipe and tube completed in Oman and the UAE using India-origin HRS and subsequently exported from Oman and the UAE to the United States.

Initiation of Circumvention Inquiry

Section 351.226(d) of Commerce's regulations states that if Commerce determines that a request for a circumvention inquiry satisfies the requirements of 19 CFR 351.226(c), then Commerce ''will accept the request and initiate a circumvention inquiry.'' Section 351.226(c)(1) of Commerce's regulations, in turn, requires that each circumvention inquiry request allege ''that the elements necessary for a circumvention determination under section 781 of the Act exist'' and be ''accompanied by information reasonably available to the interested party supporting these allegations.''

Section 781(b)(1) of the Act provides that Commerce may find circumvention of an AD order when merchandise of the same class or kind subject to the order is completed or assembled in a foreign country other than the country to which the order applies. In conducting a circumvention inquiry, under section 781(b)(1) of the Act, Commerce relies on the following criteria: (A) Merchandise imported into the United States is of the same class or kind as any merchandise produced in a foreign country that is the subject of an antidumping or countervailing duty order or finding; (B) before importation into the United States, such imported merchandise is completed or assembled in another foreign country from merchandise which is subject to the order or merchandise which is produced in the foreign country that is subject to the order; (C) the process of assembly or completion in the foreign country referred to in section (B) is minor or insignificant; (D) the value of the merchandise produced in the foreign country to which the AD or countervailing duty order applies is a significant portion of the total value of the merchandise exported to the United States; and (E) the administering authority determines that action is appropriate to prevent evasion of such order or finding.

In determining whether the process of assembly or completion in a third country is minor or insignificant under section 781(b)(1)(C) of the Act, section 781(b)(2) of the Act directs Commerce to consider: (A) The level of investment in the foreign country; (B) the level of research and development in the foreign country; (C) the nature of the production process in the foreign country; (D) the extent of production facilities in the foreign country; and (E) whether or not the value of processing performed in the foreign country represents a small proportion of the value of the merchandise imported into the United States. However, no single factor, by itself, controls Commerce's determination of whether the process of assembly or completion in a third country is minor or insignificant.[12] Accordingly, it is Commerce's practice to evaluate each of these five factors as they exist in the third country, depending on the totality of the circumstances of the particular circumvention inquiry.[13]

In addition, section 781(b)(3) of the Act sets forth additional factors to consider in determining whether to include merchandise assembled or completed in a third country within the scope of an antidumping or countervailing duty order. Specifically, Commerce shall take into account such factors as: (A) The pattern of trade, including sourcing patterns; (B) whether the manufacturer or exporter of the merchandise is affiliated with the person who, in the third country, uses the merchandise to complete or assemble the merchandise which is subsequently imported into the United States; and (C) whether imports of the merchandise into the third country have increased after the initiation of the investigation that resulted in the issuance of such order or finding.

Based on our analysis of the domestic interested parties' circumvention request, Commerce determines that the domestic interested parties have satisfied the criteria under 19 CFR 351.226(c) to warrant the initiation of a circumvention inquiry of the *Order.* For a full discussion of the basis for our decision to initiate this circumvention inquiry, *see* the Circumvention Initiation Memo.[14] As explained in the Circumvention Initiation Memo, the information provided by domestic interested parties warrants initiating

and ''Certain Welded Steel Carbon Standard Pipes and Tubes from India: Revised Extension of Time to Determine Whether to Initiate Anti-Circumvention Inquiry,'' dated January 12, 2022.

[11] *See* Memorandum, ''Certain Welded Carbon Steel Standard Pipes and Tubes from India: Extension of Time to Determine Whether to Initiate Anti-Circumvention Inquiry,'' dated January 28, 2022.

[12] *See* Statement of Administrative Action accompanying the Uruguay Round Agreements Act (SAA), H.R. Doc. No. 103–316 (1994) at 893.

[13] *See Uncovered Innerspring Units from the People's Republic of China: Final Affirmative Determination of Circumvention of the Antidumping Duty Order,* 83 FR 65626 (December 21, 2018), and accompanying Issues and Decision Memorandum at 4.

[14] *See* Memorandum, ''Certain Welded Carbon Steel Standard Pipes and Tubes from India: Initiation of Circumvention Inquiries on the Antidumping Duty Order,'' dated concurrently with, and hereby adopted by, this notice (Circumvention Initiation Memo). This memo is a public document and available electronically online via ACCESS.

this circumvention inquiry on a country-wide basis. Commerce has taken this approach in prior circumvention inquiries, where the facts warranted initiation on a country-wide basis.[15]

Consistent with the approach in the prior circumvention inquiries that were initiated on a country-wide basis, Commerce intends to issue questionnaires to solicit information from producers and exporters in Oman and the UAE concerning their shipments of pipe and tube made from India-origin HRS to the United States. A company's failure to respond completely to Commerce's requests for information may result in the application of partial or total facts available, pursuant to section 776(a) of the Act, which may include adverse inferences, pursuant to section 776(b) of the Act.

Suspension of Liquidation

Pursuant to 19 CFR 351.226(l)(1), Commerce will notify U.S. Customs and Border Protection (CBP) of the initiation and direct CBP to continue the suspension of liquidation of entries of products subject to the circumvention inquiry that were already subject to the suspension of liquidation under the *Order.* Should Commerce issue preliminary or final circumvention determinations, Commerce will follow the suspension of liquidation rules under 19 CFR 351.226(l)(2)–(4).

Notification to Interested Parties

In accordance with 19 CFR 351.226(d) and section 781(b) of the Act, Commerce determines that the domestic interested parties' request for this circumvention inquiry satisfies the requirements of 19 CFR 351.226(c). Accordingly, Commerce is notifying all interested parties of the initiation of this circumvention inquiry to determine whether certain imports of pipe and tube, completed in and exported from Oman and the UAE using HRS inputs manufactured in India, are circumventing the *Order.* In addition, we have included a description of the products that are the subject of this inquiry, and an explanation of the reasons for Commerce's decision to initiate this inquiry as provided above and in the accompanying Circumvention Initiation Memo.[16] In accordance with 19 CFR 351.226(e)(2), Commerce intends to issue its final circumvention determination within 300 days from the date of publication of the notice of initiation of a circumvention inquiry in the **Federal Register**.

This notice is published in accordance with section 781(b) of the Act and 19 CFR 351.226(d)(1)(ii).

Dated: February 14, 2022.

Lisa W. Wang,

Assistant Secretary for Enforcement and Compliance.

International Trade Administration

[A–570–119]

Initiation of Antidumping Duty Changed Circumstances Review: Certain Vertical Shaft Engines Between 225cc and 999cc, and Parts Thereof From the People's Republic of China

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: Based on a request from Honda Power Products (China) Co., Ltd. (Honda), the Department of Commerce (Commerce) is initiating a changed circumstances review (CCR) of the antidumping duty (AD) order on certain vertical shaft engines between 225cc and 999cc, and parts thereof (vertical shaft engines) from the People's Republic of China (China).

DATES: Applicable February 22, 2022.

FOR FURTHER INFORMATION CONTACT: Leo Ayala, AD/CVD Operations, Office VII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–3945.

SUPPLEMENTARY INFORMATION:

Background

On March 4, 2021, Commerce published in the **Federal Register** an amended *final* AD determination and order on vertical shaft engines from China.[1] In the *Amended Final Determination,* Commerce determined an AD cash deposit rate for Jialing-Honda Motors Co., Ltd. (Jialing) of 261.93 percent.[2]

On September 20, 2021, Honda informed Commerce that, as of July 1, 2020, Jialing changed its name to Honda Power Products (China) Co., Ltd.[3] Honda stated the change was in name only and that its business operations remain substantially unchanged.[4] Honda requested that Commerce conduct a CCR and find that Honda is the successor-in-interest to Jialing and assign Jialing's AD cash deposit rate for vertical shaft engines from China to Honda, pursuant to section 751(b) of the Tariff Act of 1930, as amended (the Act), and 19 CFR 351.216(b).[5] Honda made arguments as to why good cause exists for initiating a CCR pursuant to 19 CFR 351.216(c)[6] and also requested that Commerce combine the notice of initiation with a preliminary results of the CCR pursuant to 19 CFR 351.221(c)(3)(ii).

On November 21, 2021, Commerce deemed Honda's request deficient and issued a supplemental questionnaire to Honda requesting additional information.[7] On December 31, 2021,

Honda submitted its response to the supplemental questionnaire.[8] We received no comments from interested parties regarding Honda's CCR Request.

Scope of the Order

The merchandise covered by the *Order* is vertical shaft engines. For a complete description of the scope, *see* the appendix.

Initiation of Changed Circumstances Review

Pursuant to section 751(b)(1)(A) of the Act and 19 CFR 351.216(d), Commerce will conduct a CCR upon receipt of a request from an interested party for a review of an AD order which shows changed circumstances sufficient to warrant a review of the order. In the past, Commerce has used CCRs to address the applicability of cash deposit rates after there have been changes in the name or structure of a respondent, such as a merger or spinoff (*i.e.,* a successor-in-interest determination).[9] The information submitted by Honda supporting its claim that it is the successor-in-interest to Jialing demonstrates changed circumstances sufficient to warrant the initiation of such a review.[10]

Section 751(b)(4)(B) of the Act and 19 CFR 351.216(c) state that, ''in the absence of good cause shown,'' the Secretary of Commerce may not review a final determination less than 24 months after the date of publication of the notice of final determination or notice of suspension of an investigation. The final determination in the less-than-fair-value investigation of vertical shaft engines from China published on January 11, 2021.[11] Therefore, Commerce must also determine whether good cause exists to conduct this review.

Honda asserts that good cause exists because, aside from the name change, it made no changes with respect to ''production, management, customer and supplier relationships or any other aspect of operations.'' [12] Honda argues that a CCR is needed to ensure the appropriate cash deposit rate applies to Honda's entries and that Commerce has previously found in similar situations that a name change, with no further changes in the company's operations, constitutes good cause pursuant to 19 CFR 351.216(c) to initiate a CCR.[13] Based on this explanation, we find that good cause has been shown pursuant to 19 CFR 351.216(c) to initiate a CCR, and conducting this review ensures that the appropriate cash deposit rate applies to Honda.

Therefore, in accordance with section 751(b)(1)(A) of the Act and 19 CFR 351.216(d), we are initiating a CCR based on the information contained in Honda's submission.

Preliminary Results

Section 351.221(c)(3)(ii) of Commerce's regulations permits Commerce to combine the notice of initiation and preliminary results of a CCR if Commerce concludes that expedited action is warranted. However, we are not combining this notice of initiation with the preliminary results because Commerce has determined that it is necessary to issue an additional supplemental questionnaire to Honda regarding Honda's customer base and supplier relationships and to provide interested parties with an opportunity to comment. Commerce intends to publish in the **Federal Register** a notice of the preliminary results of this CCR in accordance with 19 CFR 351.221(b)(4). Consistent with 19 CFR 351.221(c)(3)(i), Commerce will set forth its preliminary factual and legal conclusions in that notice.

Final Results

Unless extended, Commerce intends to issue the final results of this CCR within 270 days of the day of initiation of this CCR, in accordance with 19 CFR 351.216(e).

Notification to Interested Parties

This notice is published in accordance with section 751(b)(1) of the Act, and 19 CFR 351.216(b) and 19 CFR 351.221(b)(1).

Dated: February 14, 2022.

Lisa W. Wang,

Assistant Secretary for Enforcement and Compliance.

Appendix—Scope of the Order

The merchandise covered by this order consists of spark-ignited, non-road, vertical shaft engines, whether finished or unfinished, whether assembled or unassembled, primarily for riding lawn mowers and zero-turn radius lawn mowers. Engines meeting this physical description may also be for other non-hand-held outdoor power equipment such as, including but not limited to, tow-behind brush mowers, grinders, and vertical shaft generators. The subject engines are spark ignition, single or multiple cylinder, air cooled, internal combustion engines with vertical power take off shafts with a minimum displacement of 225 cubic centimeters (cc) and a maximum displacement of 999cc. Typically, engines with displacements of this size generate gross power of between 6.7 kilowatts (kw) to 42 kw.

Engines covered by this scope normally must comply with and be certified under Environmental Protection Agency (EPA) air pollution controls title 40, chapter I, subchapter U, part 1054 of the Code of Federal Regulations standards for small non-road spark-ignition engines and equipment. Engines that otherwise meet the physical description of the scope but are not certified under 40 CFR part 1054 and are not certified under other parts of subchapter U of the EPA air pollution controls are not excluded from the scope of this proceeding. Engines that may be certified under both 40 CFR part 1054 as well as other parts of subchapter U remain subject to the scope of this proceeding.

For purposes of this order, an unfinished engine covers at a minimum a sub-assembly comprised of, but not limited to, the following components: Crankcase, crankshaft, camshaft, piston(s), and connecting rod(s). Importation of these components together, whether assembled or unassembled, and whether or not accompanied by additional components such as an oil pan, manifold, cylinder head(s), valve train, or valve cover(s), constitutes an unfinished engine for purposes of this order. The inclusion of other products such as spark plugs fitted into the cylinder head or electrical devices (*e.g.,* ignition modules, ignition coils) for synchronizing with the motor to supply tension current does not remove the product from the scope. The inclusion of any other components not identified as comprising the unfinished engine subassembly in a third country does not remove the engine from the scope.

The engines subject to this order are typically classified in the Harmonized Tariff Schedule of the United States (HTSUS) at subheadings: 8407.90.1020, 8407.90.1060, and 8407.90.1080. The engine subassemblies that are subject to this order enter under HTSUS subheading 8409.91.9990. Engines subject to this order may also enter under HTSUS subheading 8407.90.9060 and 8407.90.9080. The HTSUS subheadings are provided for convenience and customs purposes only, and the written description of

Pure Magnesium From the People's Republic of China: Final Results of Antidumping Duty Administrative Review; 2020–2021

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Commerce) continues to find that Tianjin Magnesium International Co., Ltd. (TMI) and Tianjin Magnesium Metal Co., Ltd. (TMM) (collectively, TMI/TMM) had no shipments of subject merchandise covered by the antidumping duty order on pure magnesium from the People's Republic of China (China) for the period of review (POR) May 1, 2020, through April 30, 2021.

DATES: Applicable February 22, 2022.

FOR FURTHER INFORMATION CONTACT: Deborah Cohen, AD/CVD Operations, Office III, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–4521.

SUPPLEMENTAL INFORMATION:

Background

On November 15, 2021, Commerce published the *Preliminary Results* of this administrative review in the **Federal Register**.[1] No interested party submitted comments concerning the *Preliminary Results* or requested a hearing in this administrative review. Commerce conducted this administrative review in accordance with section 751 of the Tariff Act of 1930, as amended (the Act).

Scope of the Order [2]

The product covered by the *Order* is pure magnesium from China, regardless of chemistry, form or size, unless expressly excluded from the scope of the *Order.* Pure magnesium is a metal or alloy containing by weight primarily the element magnesium and produced by decomposing raw materials into magnesium metal. Pure primary magnesium is used primarily as a chemical in the aluminum alloying, desulfurization, and chemical reduction industries. In addition, pure magnesium is used as an input in producing magnesium alloy. Pure magnesium encompasses products (including, but not limited to, butt ends, stubs, crowns and crystals) with the following primary magnesium contents:

(1) Products that contain at least 99.95% primary magnesium, by weight (generally referred to as ''ultra pure'' magnesium) Magnesium Alloy'' [3] and are thus outside the scope of the existing antidumping orders on magnesium from China (generally referred to as ''alloy'' magnesium).

(2) Products that contain less than 99.95%, but not less than 99.8%, primary magnesium, by weight (generally referred to as ''pure'' magnesium); and

(3) Products that contain 50% or greater, but less than 99.8% primary magnesium, by weight, and that do not conform to ASTM specifications for alloy magnesium (generally referred to as ''off-specification pure'' magnesium).

''Off-specification pure'' magnesium is pure primary magnesium containing magnesium scrap, secondary magnesium, oxidized magnesium or impurities (whether or not intentionally added) that cause the primary magnesium content to fall below 99.8% by weight. It generally does not contain, individually or in combination, 1.5% or more, by weight, of the following alloying elements: Aluminum, manganese, zinc, silicon, thorium, zirconium and rare earths.

Excluded from the scope of the *Order* are alloy primary magnesium (that meets specifications for alloy magnesium), primary magnesium anodes, granular primary magnesium (including turnings, chips and powder) having a maximum physical dimension (*i.e.,* length or diameter) of one inch or less, secondary magnesium (which has pure primary magnesium content of less than 50% by weight), and remelted magnesium whose pure primary magnesium content is less than 50% by weight.

Pure magnesium products covered by the *Order* are currently classifiable under Harmonized Tariff Schedule of the United States (HTSUS) subheadings 8104.11.00, 8104.19.00, 8104.20.00, 8104.30.00, 8104.90.00, 3824.90.11, 3824.90.19 and 9817.00.90. Although the HTSUS subheadings are provided for convenience and customs purposes, the written description of the scope is dispositive.

Final Determination of No Shipments

In the *Preliminary Results,* Commerce determined TMI/TMM had no shipments of subject merchandise to the United States during the POR.[4] As noted in the *Preliminary Results,* we received no-shipment statements from TMI/TMM,[5] and the statements were consistent with the information we received from U.S. Customs and Border Protection (CBP).[6] Because Commerce did not receive any comments on its preliminary finding, Commerce continues to find that TMI/TMM did not have any shipments of subject merchandise during the POR.

Assessment Rates

Based on record evidence, we have determined that TMI/TMM had no shipments of subject merchandise during the POR, and, therefore, pursuant to Commerce's assessment practice, any suspended entries entered under their case number will be liquidated at the China-wide entity rate.[7]

Commerce intends to issue assessment instructions to CBP no earlier than 35 days after the date of publication of the final results of this review in the **Federal Register**. If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired (*i.e.,* within 90 days of publication).

Cash Deposit Requirements

The following cash deposit requirements will be effective upon publication of the final results of this administrative review for all shipments of the subject merchandise entered, or

[3] The meaning of this term is the same as that used by the American Society for Testing and Materials (ATSM) in its Annual Book for ASTM Standards: Volume 01.02 Aluminum and Magnesium Alloys.

[4] *See Preliminary Results,* 86 FR 62990.

[5] *See Preliminary Results,* 86 FR 62990.

[6] *See* Memorandum, ''Antidumping Duty Administrative Review of Pure Magnesium from the People's Republic of China; 05/01/2020–04/30/2021: Entry Data and No Shipment Inquiry,'' dated August 31, 2021. On August 3, 2021, Commerce issued a no shipment inquiry to U.S. Customs and Border Protection (CBP) with respect to TMI/TMM. On August 4, 2021, CBP responded that it had no evidence of shipments of magnesium metal from China exported by TMI/TMM during the POR.

[7] *See Non-Market Economy Antidumping Proceedings: Assessment of Antidumping Duties,* 76 FR 65694 (October 24, 2011).

withdrawn from warehouse, for consumption on or after the publication date of the final results of review, as provided for by section 751(a)(2)(C) of the Act: (1) For TMI/TMM, which claimed no shipments, the cash deposit rate will remain unchanged from the rate assigned to TMI/TMM in the most recently completed review of the companies; (2) for previously investigated or reviewed Chinese and non-Chinese exporters who are not under review in this segment of the proceeding but who have separate rates, the cash deposit rate will continue to be the exporter-specific rate published for the most recent period; (3) for all Chinese exporters of subject merchandise that have not been found to be entitled to a separate rate, the cash deposit rate will be the China-wide rate of 111.73 percent; [8] and (4) for all non-Chinese exporters of subject merchandise which have not received their own rate, the cash deposit rate will be the rate applicable to Chinese exporter(s) that supplied that non-Chinese exporter. These deposit requirements, when imposed, shall remain in effect until further notice.

Notification to Importers

This notice serves as a final reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in Commerce's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of doubled antidumping duties.

Notification Regarding Administrative Protection Order

This notice also serves as the only reminder to parties subject to administrative protective order (APO) of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of the return of destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and the terms of an APO is a sanctionable violation.

Notification to Interested Parties

This notice is issued and published in accordance with sections 751(a) and 777(i) of the Act, and 19 CFR 351.213(h).

Dated: February 14, 2022.

Lisa W. Wang,

Assistant Secretary for Enforcement and Compliance.

International Trade Administration

[A–570–139]

Certain Mobile Access Equipment and Subassemblies Thereof From the People's Republic of China: Final Affirmative Determination of Sales at Less Than Fair Value

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Commerce) determines that certain mobile access equipment and subassemblies thereof (mobile access equipment) from the People's Republic of China (China) are being, or are likely to be sold, in the United States at less than fair value (LTFV).

DATES: Applicable February 22, 2022.

FOR FURTHER INFORMATION CONTACT: Hermes Pinilla or Andre Gziryan, AD/CVD Operations, Office I, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–3477 or (202) 482–2201, respectively.

SUPPLEMENTARY INFORMATION:

Background

On September 30, 2021, Commerce published in the **Federal Register** its preliminary determination in the LTFV investigation of mobile access equipment from China, in which it also postponed the final determination until February 14, 2022.[1] We invited interested parties to comment on the Preliminary Determination. For a summary of the events that occurred since Commerce published the Preliminary Determination, as well as a full discussion of the issues raised by parties for this final determination, *see* the Issues and Decision Memorandum.[2]

Period of Investigation

The period of investigation is July 1, 2020, through December 31, 2020.

Scope of the Investigation

The products covered by this investigation are mobile access equipment from China. For a complete description of the scope of this investigation, *see* Appendix I.

Scope Comments

On July 26, 2021, we issued a Preliminary Scope Decision Memorandum.[3] As discussed in the *Preliminary Determination*, Commerce did not modify the scope language as it appeared in the *Initiation Notice*.[4] Interested parties were provided an opportunity to comment on the Preliminary Scope Decision Memorandum in scope case and rebuttal briefs.[5] We received comments from interested parties on the Preliminary Scope Decision Memorandum, which we addressed in the Final Scope Decision Memorandum.[6] Commerce is modifying the scope language as it appeared in the *Preliminary Determination*. *See* Appendix I for the final scope of this investigation.

Verification

Commerce was unable to conduct on-site verification of the information relied upon in making its final determination in this investigation. However, we took additional steps in lieu of an on-site verification to verify the information provided by the two mandatory respondents, Zhejiang Dingli Machinery Co., Ltd. (Dingli) and Lingong Group Jinan Heavy Machinery

[1] *See Certain Mobile Access Equipment and Subassemblies Thereof from the People's Republic of China: Preliminary Affirmative Determination of Sales at Less Than Fair Value, Postponement of Final Determination, and Extension of Provisional Measures,* 86 FR 54164 (September 30, 2021) (Preliminary Determination), and accompanying Preliminary Decision Memorandum (PDM).

[2] *See* Memorandum, ''Certain Mobile Access Equipment and Subassemblies Thereof from the People's Republic of China: Decision Memorandum for the Final Affirmative Determination of Sales at Less-Than-Fair-Value,'' dated concurrently with, and hereby adopted by, this notice (Issues and Decision Memorandum).

[4] *See Certain Mobile Access Equipment and Subassemblies Thereof from the People's Republic of China: Initiation of Less-Than-Fair-Value Investigation,* 86 FR 15922, 15927 (March 25, 2021) (*Initiation Notice*).

[5] *See* Preliminary Scope Decision Memorandum at 2.

[6] *See* Memorandum, ''Antidumping Duty and Countervailing Duty Investigations of Certain Mobile Access Equipment and Subassemblies Thereof from the People's Republic of China: Final Scope Decision Memorandum,'' dated October 12, 2021 (Final Scope Decision Memorandum).

Co., Ltd. (LGMG) we relied upon in making this final determination, in accordance with section 782(i) of the Tariff Act of 1930, as amended (the Act).[7]

Analysis of Comments Received

All issues raised in the case and rebuttal briefs that were submitted by interested parties in this investigation are addressed in the Issues and Decision Memorandum. For a list of the issues raised by interested parties and addressed in the Issues and Decision Memorandum, see Appendix II to this notice. The Issues and Decision Memorandum is a public document and is available electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *https://access.trade.gov*. In addition, a complete version of the Issues and Decision Memorandum can be accessed directly at *https://access.trade.gov/public/FRNoticesListLayout.aspx*.

China-Wide Entity and Use of Adverse Facts Available

For the reasons explained in the *Preliminary Determination*, we continue to find that the use of adverse facts available (AFA), pursuant to sections 776(a) and (b) of the Act, is warranted in determining the rate for the China-wide entity.[8] In selecting the AFA rate for the China-wide entity, Commerce's practice it to select a rate that is sufficiently adverse to ensure that the uncooperative party does not obtain a more favorable result by failing to cooperate than if it had fully cooperated.[9] As AFA, we assigned the China-wide entity a dumping margin of 165.30 percent, which is the highest calculated rate in this investigation. Because this constitutes primary information, the statutory corroboration requirement in section 776(c) of the Act does not apply.

Changes Since the Preliminary Determination

Based on our analysis of the comments received, we made certain changes to the margin calculations for Dingli and LGMG. For a discussion of these changes, *see* the ''Changes from the *Preliminary Determination*'' section of the Issues and Decision Memorandum.

Separate Rates

For the final determination, we continue to find that Dingli and LGMG are eligible for separate rates. Generally, Commerce looks to section 735(c)(5)(A) of the Act, which provides instructions for calculating the all-others rate in an investigation, for guidance when calculating the rate for separate rate respondents which we did not individually examine. Because the calculated dumping margins of the mandatory respondents, Dingli and LGMG, are not zero, *de minimis* , or based entirely on facts available, consistent with section 735(c)(5)(A) of the Act and our practice,[10] based on publicly ranged sales data, we assigned the weighted average of these mandatory respondents' margins to all non-individually examined companies that qualified for a separate rate.

Combination Rates

In the *Initiation Notice*,[11] Commerce stated that it would calculate producer/exporter combination rates for the respondents that are eligible for a separate rate in this investigation. For the list of respondents that established eligibility for separate rates and the exporter/producer combination rates applicable to these respondents, *see* the Final Determination section.

Final Determination

Commerce determines that the estimated weighted-average dumping margins are as follows:

Exporter	Producer	Estimated weighted-average dumping margin (percent)	Cash deposit rate (adjusted for subsidy offsets) (percent)
Lingong Group Jinan Heavy Machinery Co., Ltd	Lingong Group Jinan Heavy Machinery Co., Ltd	165.30	165.10
Zhejiang Dingli Machinery Co., Ltd	Zhejiang Dingli Machinery Co., Ltd	31.70	31.54

SEPARATE RATE APPLICABLE TO THE FOLLOWING NON-SELECTED COMPANIES

Non-selected exporter receiving a separate rate	Producer supplying the non-selected exporter receiving a separate rate	Estimated weighted-average dumping margin (percent)	Cash deposit rate (adjusted for subsidy offsets) (percent)
Hunan Sinoboom Intelligent Equipment Co., Ltd	Hunan Sinoboom Intelligent Equipment Co., Ltd	51.83	51.66
Mantall Heavy Industry Co., Ltd	Mantall Heavy Industry Co., Ltd	51.83	51.66
Noblelift Intelligent Equipment Co., Ltd	Noblelift Intelligent Equipment Co., Ltd	51.83	51.66
Oshkosh JLG (Tianjin) Equipment Technology Co., Ltd.	Noblelift Intelligent Equipment Co., Ltd	51.83	51.66
Sany Marine Heavy Industry Co., Ltd	Sany Marine Heavy Industry Co., Ltd	51.83	51.66
Terex (Changzhou) Machinery Co., Ltd	Terex (Changzhou) Machinery Co, Ltd	51.83	51.66
Xuzhou Construction Machinery Group Imp. & Exp. Co., Ltd.	Xuzhou Construction Machinery Group Fire-Fighting Safety Equipment Co., Ltd.	51.83	51.66
China-Wide Entity		165.30	165.14

[10] *See Ball Bearings and Parts Thereof from France, Germany, Italy, Japan, and the United Kingdom: Final Results of Antidumping Duty Administrative Reviews and Rescission of Reviews in Part*, 73 FR 52823, 52824 (September 11, 2008), and accompanying Issues and Decision Memorandum at Comment 16.

[11] *See Initiation Notice,* 86 FR at 15926.

Disclosure

Commerce intends to disclose its calculations and analysis performed to interested parties in this final determination within five days of any public announcement or, if there is no public announcement, within five days of the date of publication of this notice in accordance with 19 CFR 351.224(b).

Continuation of Suspension of Liquidation

In accordance with section 735(c)(1)(B) of the Act, Commerce will instruct U.S. Customs and Border Protection (CBP) to continue to suspend liquidation of all appropriate entries of subject merchandise, as described in the scope of the investigation in Appendix I, entered, or withdrawn from warehouse, for consumption on or after the date of publication of this notice in the **Federal Register** , as discussed below.

Pursuant to section 735(c)(1)(B)(ii) of the Act, upon the publication of this notice, Commerce will instruct CBP to require a cash deposit equal to the weighted-average amount by which the normal value exceeds U.S. price as follows: (1) For the producer/exporter combinations listed in the table above, the cash deposit rate will be the rate identified for that combination in the table; (2) for all combinations of Chinese producers/exporters of subject merchandise that have not established eligibility for their own separate rates, the cash deposit rate will be the rate established for the China-wide entity; and (3) for all non-Chinese exporters of subject merchandise which have not established eligibility for their own separate rates, the cash deposit rate will be the cash deposit rate applicable to the Chinese producer/exporter combination (or China-wide entity) that supplied that non-Chinese exporter.

To determine the cash deposit rate, Commerce normally adjusts the estimated weighted-average dumping margin by the amount of domestic subsidy pass-through and export subsidies determined in a companion CVD proceeding when CVD provisional measures are in effect. For a discussion of the applicable adjustments for this final determination, *see* Issues and Decision Memorandum.[12] These suspension of liquidation instructions will remain in effect until further notice.

International Trade Commission Notification

In accordance with section 735(d) of the Act, we will notify the International Trade Commission (ITC) of our final affirmative determination of sales at LTFV. Because Commerce's final determination is affirmative, in accordance with section 735(b)(2) of the Act, the ITC will make its final determination as to whether the domestic industry in the United States is materially injured, or threatened with material injury, by reason of imports or sales (or the likelihood of sales) for importation of mobile access equipment from China no later than 45 days after this final determination. If the ITC determines that such injury does exist, Commerce will issue an antidumping duty order directing CBP to assess, upon further instructions by Commerce, antidumping duties on all imports of the subject merchandise entered, or withdrawn from warehouse, for consumption on or after the effective date of the suspension of liquidation, as discussed above in the ''Continuation of Suspension of Liquidation'' section of this notice.

Notification Regarding Administrative Protective Order

In the event that the ITC issues a final negative injury determination, this notice will serve as the only reminder to parties subject to an Administrative Protective Order (APO) of their responsibility concerning the destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of the return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

Notification to Interested Parties

This determination is issued and published pursuant to sections 735(d) and 777(i)(1) of the Act, and 19 CFR 351.210(c).

Dated: February 14, 2022.

Lisa W. Wang,

Assistant Secretary for Enforcement and Compliance.

Appendix I

Scope of the Investigation

The merchandise covered by this investigation consists of certain mobile access equipment, which consists primarily of boom lifts, scissor lifts, and material telehandlers, and subassemblies thereof. Mobile access equipment combines a mobile (self-propelled or towed) chassis, with a lifting device (*e.g.* , scissor arms, boom assemblies) for mechanically lifting persons, tools and/or materials capable of reaching a working height of ten feet or more, and a coupler that provides an attachment point for the lifting device, in addition to other components. The scope of this investigation covers mobile access equipment and subassemblies thereof whether finished or unfinished, whether assembled or unassembled, and whether the equipment contains any additional features that provide for functions beyond the primary lifting function.

Subject merchandise includes, but is not limited to, the following subassemblies:

- Scissor arm assemblies, or scissor arm sections, for connection to chassis and platform assemblies. These assemblies include: (1) Pin assemblies that connect sections to form scissor arm assemblies, and (2) actuators that power the arm assemblies to extend and retract. These assemblies may or may not also include blocks that allow sliding of end sections in relation to frame and platform, hydraulic hoses, electrical cables, and/or other components;
- boom assemblies, or boom sections, for connection to the boom turntable, or to the chassis assembly, or to a platform assembly or to a lifting device. Boom assemblies include telescoping sections where the smallest section (or tube) can be nested in the next larger section (or tube) and can slide out for extension and/or articulated sections joined by pins. These assemblies may or may not include pins, hydraulic cylinders, hydraulic hoses, electrical cables, and/or other components;
- chassis assemblies, for connection to scissor arm assemblies, or to boom assemblies, or to boom turntable assemblies. Chassis assemblies include: (1) Chassis frames, and/or (2) frame sections. Chassis assemblies may or may not include axles, wheel end components, steering cylinders, engine assembly, transmission, drive shafts, tires and wheels, crawler tracks and wheels, fuel tank, hydraulic oil tanks, battery assemblies, and/or other components;
- boom turntable assemblies, for connection to chassis assemblies, or to boom assemblies. Boom turntable assemblies include turntable frames. Boom turntable assemblies may or may not include engine assembly, slewing rings, fuel tank, hydraulic oil tank, battery assemblies, counterweights, hoods (enclosures), and/or other components.

Importation of any of these subassemblies, whether assembled or unassembled, constitutes unfinished mobile access equipment for purposes of this investigation.

Processing of finished and unfinished mobile access equipment and subassemblies such as trimming, cutting, grinding, notching, punching, slitting, drilling, welding, joining, bolting, bending, beveling, riveting, minor fabrication, galvanizing, painting, coating, finishing, assembly, or any other processing either in the country of manufacture of the in-scope product or in a third country does not remove the product from the scope. Inclusion of other components not identified as comprising the finished or unfinished mobile access equipment does not remove the product from the scope.

The scope excludes forklifts, vertical mast lifts, mobile self-propelled cranes and motor vehicles that incorporate a scissor arm

[12] See Issues and Decision Memorandum at 4–5.

assembly or boom assembly. Forklifts are material handling vehicles with a working attachment, usually a fork, lifted along a vertical guide rail with the operator seated or standing on the chassis behind the vertical mast. Vertical mast lifts are person and material lifting vehicles with a working attachment, usually a platform, lifted along a vertical guide rail with an operator standing on the platform. Mobile self-propelled cranes are material handling vehicles with a boom attachment for lifting loads of tools or materials that are suspended on ropes, cables, and/or chains, and which contain winches mounted on or near the base of the boom with ropes, cables, and/or chains managed along the boom structure. The scope also excludes motor vehicles (defined as a vehicle driven or drawn by mechanical power and manufactured primarily for use on public streets, roads, and highways, but does not include a vehicle operated only on a rail line pursuant to 49 U.S.C. 30102(a)(7)) that incorporate a scissor arm assembly or boom assembly. The scope further excludes vehicles driven or drawn by mechanical power operated only on a rail line that incorporate a scissor arm assembly or boom assembly. The scope also excludes: (1) Rail line vehicles, defined as vehicles with hi-rail gear or track wheels, and a fixed (non-telescopic) main boom, which perform operations on rail lines, such as laying rails, setting ties, or other rail maintenance jobs; and (2) certain rail line vehicle subassemblies, defined as chassis subassemblies and boom turntable subassemblies for rail line vehicles with a fixed (non-telescopic) main boom.

Certain mobile access equipment subject to this investigation is typically classifiable under subheadings 8427.10.8020, 8427.10.8030, 8427.10.8070, 8427.10.8095, 8427.20.8020, 8427.20.8090, 8427.90.0020 and 8427.90.0090 of the Harmonized Tariff Schedule of the United States (HTSUS). Parts of certain mobile access equipment are typically classifiable under subheading 8431.20.0000 of the HTSUS. While the HTSUS subheadings are provided for convenience and customs purposes only, the written description of the merchandise under investigation is dispositive.

Appendix II

List of Topics Discussed in the Issues and Decision Memorandum

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

National Institute of Standards and Technology

[Docket Number: 220210–0045]

Evaluating and Improving NIST Cybersecurity Resources: The Cybersecurity Framework and Cybersecurity Supply Chain Risk Management

AGENCY: National Institute of Standards and Technology (NIST), Commerce.

ACTION: Notice; request for information.

SUMMARY: The National Institute of Standards and Technology (NIST) is seeking information to assist in evaluating and improving its cybersecurity resources, including the ''Framework for Improving Critical Infrastructure Cybersecurity'' (the ''NIST Cybersecurity Framework,'' ''CSF'' or ''Framework'') and a variety of existing and potential standards, guidelines, and other information, including those relating to improving cybersecurity in supply chains. NIST is considering updating the NIST Cybersecurity Framework to account for the changing landscape of cybersecurity risks, technologies, and resources. In addition, NIST recently announced it would launch the National Initiative for Improving Cybersecurity in Supply Chains (NIICS) to address cybersecurity risks in supply chains. This wide-ranging public-private partnership will focus on identifying tools and guidance for technology developers and providers, as well as performance-oriented guidance for those acquiring such technology. To inform the direction of the NIICS, including how it might be aligned and integrated with the Cybersecurity Framework, NIST is requesting information that will support the identification and prioritization of supply chain-related cybersecurity needs across sectors. Responses to this RFI will inform a possible revision of the Cybersecurity Framework as well as the NIICS initiative.

DATES: Comments in response to this notice must be received by April 25, 2022. Submissions received after that date may not be considered.

Comments may be submitted by any of the following methods:

Electronic submission: Submit electronic public comments via the Federal e-Rulemaking Portal.

1. Go to *www.regulations.gov* and enter NIST–2022–0001 in the search field,

2. Click the ''Comment Now!'' icon, complete the required fields, and

3. Enter or attach your comments.

Electronic submissions may also be sent as an attachment to *CSF-SCRM-RFI@nist.gov* and may be in any of the following unlocked formats: HTML; ASCII; Word; RTF; or PDF. Please submit comments only and include your name, organization's name (if any), and cite ''NIST Cybersecurity RFI'' in all correspondence. Comments containing references, studies, research, and other empirical data that are not widely published should include copies of the referenced materials. Please do not submit additional materials.

Comments received by the deadline may be posted at *www.regulations.gov* and *https://www.nist.gov/cyberframework.* All submissions, including attachments and other supporting materials, may become part of the public record and may be subject to public disclosure. NIST reserves the right to publish relevant comments publicly, unedited and in their entirety. Personal information, such as account numbers or Social Security numbers, or names of other individuals, should not be included. Do not submit confidential

business information, or otherwise sensitive or protected information. Comments that contain profanity, vulgarity, threats, or other inappropriate language or content will not be considered.

FOR FURTHER INFORMATION CONTACT: For questions about this RFI contact: *CSF-SCRM-RFI@nist.gov* or Katherine MacFarland, National Institute of Standards and Technology, 100 Bureau Drive, Stop 2000, Gaithersburg, MD 20899; (301) 975–3359. Direct media inquiries to NIST's Office of Public Affairs at (301) 975–2762. Users of telecommunication devices for the deaf, or a text telephone, may call the Federal Relay Service, toll free at 1–800–877–8339.

Accessible Format: NIST will make the RFI available in alternate formats, such as Braille or large print, upon request by persons with disabilities.

SUPPLEMENTARY INFORMATION: The NIST Cybersecurity Framework consists of standards, methodologies, procedures, and processes that align policy, business, and technological approaches to reduce cybersecurity risks. It is used widely by private and public sector organizations in and outside of the United States and has been translated into multiple languages, speaking to its success as a common resource.

The Cybersecurity Framework was last updated in April 2018. Much has changed in the cybersecurity landscape in terms of threats, capabilities, technologies, education and workforce, and the availability of resources to help organizations to better manage cybersecurity risk. That includes an increased awareness of and emphasis on cybersecurity risks in supply chains, including a decision to launch NIICS. With those changes in mind, NIST seeks to build on its efforts to cultivate trust by advancing cybersecurity and privacy standards and guidelines, technology, measurements, and practices by requesting information about the use, adequacy, and timeliness of the Cybersecurity Framework and the degree to which other NIST resources are used in conjunction with or instead of the Framework. Further, to inform the direction of the NIICS, including how it might be aligned and integrated with the Cybersecurity Framework, NIST is requesting information that will support the identification and prioritization of supply chain-related cybersecurity needs across sectors.

Following is a non-exhaustive list of possible topics that may be addressed in any comments. Comments may address topics in the following list, or any other topic believed to have implications for the improvement of the NIST Cybersecurity Framework or NIST's cybersecurity guidance regarding supply chains. NIST will consider all relevant comments in the development of the revised Framework and guidance regarding supply chains.

Use of the NIST Cybersecurity Framework

1. The usefulness of the NIST Cybersecurity Framework for aiding organizations in organizing cybersecurity efforts via the five functions in the Framework and actively managing risks using those five functions.

2. Current benefits of using the NIST Cybersecurity Framework. Are communications improved within and between organizations and entities (*e.g.,* supply chain partners, customers, or insurers)? Does the Framework allow for better assessment of risks, more effective management of risks, and/or increase the number of potential ways to manage risks? What might be relevant metrics for improvements to cybersecurity as a result of implementation of the Framework?

3. Challenges that may prevent organizations from using the NIST Cybersecurity Framework or using it more easily or extensively (*e.g.,* resource considerations, information sharing restrictions, organizational factors, workforce gaps, or complexity).

4. Any features of the NIST Cybersecurity Framework that should be changed, added, or removed. These might include additions or modifications of: Functions, Categories, or Subcategories; Tiers; Profile Templates; references to standards, frameworks, models, and guidelines; guidance on how to use the Cybersecurity Framework; or references to critical infrastructure versus the Framework's broader use.

5. Impact to the usability and backward compatibility of the NIST Cybersecurity Framework if the structure of the framework such as Functions, Categories, Subcategories, etc. is modified or changed.

6. Additional ways in which NIST could improve the Cybersecurity Framework, or make it more useful.

Relationship of the NIST Cybersecurity Framework to Other Risk Management Resources

7. Suggestions for improving alignment or integration of the Cybersecurity Framework with other NIST risk management resources. As part of the response, please indicate benefits and challenges of using these resources alone or in conjunction with the Cybersecurity Framework. These resources include:

- Risk management resources such as the NIST Risk Management Framework, the NIST Privacy Framework, and Integrating Cybersecurity and Enterprise Risk Management (NISTIR 8286).
- Trustworthy technology resources such as the NIST Secure Software Development Framework, the NIST Internet of Things (IoT) Cybersecurity Capabilities Baseline, and the Guide to Industrial Control System Cybersecurity.
- Workforce management resources such as the National Initiative for Cybersecurity Education (NICE) Workforce Framework for Cybersecurity.

8. Use of non-NIST frameworks or approaches in conjunction with the NIST Cybersecurity Framework. Are there commonalities or conflicts between the NIST framework and other voluntary, consensus resources? Are there commonalities or conflicts between the NIST framework and cybersecurity-related mandates or resources from government agencies? Are there ways to improve alignment or integration of the NIST framework with other frameworks, such as international approaches like the ISO/IEC 27000-series, including ISO/IEC TS 27110?

9. There are numerous examples of international adaptations of the Cybersecurity Framework by other countries. The continued use of international standards for cybersecurity, with a focus on interoperability, security, usability, and resilience can promote innovation and competitiveness while enabling organizations to more easily and effectively integrate new technologies and services. Given this importance, what steps should NIST consider to ensure any update increases international use of the Cybersecurity Framework?

10. References that should be considered for inclusion within NIST's Online Informative References Program. This program is an effort to define standardized relationships between NIST and industry resources and elements of documents, products, and services and various NIST documents such as the NIST Cybersecurity Framework, NIST Privacy Framework, Security and Privacy Controls for Information Systems and Organizations (NIST Special Publication 800–53), NIST Secure Software Development Framework, and the NIST Internet of Things (IoT) Cybersecurity Capabilities Baseline.

Cybersecurity Supply Chain Risk Management

11. National Initiative for Improving Cybersecurity in Supply Chains (NIICS). What are the greatest challenges related to the cybersecurity aspects of supply chain risk management that the NIICS could address? How can NIST build on its current work on supply chain security, including software security work stemming from E.O. 14028, to increase trust and assurance in technology products, devices, and services?

12. Approaches, tools, standards, guidelines, or other resources necessary for managing cybersecurity-related risks in supply chains. NIST welcomes input on such resources in narrowly defined areas (*e.g.* pieces of hardware or software assurance or assured services, or specific to only one or two sectors) that may be useful to utilize more broadly; potential low risk, high reward resources that could be facilitated across diverse disciplines, sectors, or stakeholders; as well as large-scale and extremely difficult areas.

13. Are there gaps observed in existing cybersecurity supply chain risk management guidance and resources, including how they apply to information and communications technology, operational technology, IoT, and industrial IoT? In addition, do NIST software and supply chain guidance and resources appropriately address cybersecurity challenges associated with open-source software? Are there additional approaches, tools, standards, guidelines, or other resources that NIST should consider to achieve greater assurance throughout the software supply chain, including for open-source software?

14. Integration of Framework and Cybersecurity Supply Chain Risk Management Guidance. Whether and how cybersecurity supply chain risk management considerations might be further integrated into an updated NIST Cybersecurity Framework—or whether and how a new and separate framework focused on cybersecurity supply chain risk management might be valuable and more appropriately be developed by NIST.

Alicia Chambers,

NIST Executive Secretariat.

BILLING CODE 3510–13–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[RTID 0648–XB822]

Western Pacific Fishery Management Council; Public Meetings

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of public meetings.

SUMMARY: The Western Pacific Fishery Management Council (Council) will hold its American Samoa Fishery Archipelago Fishery Ecosystem Plan (FEP) Advisory Panel (AP), Mariana Archipelago FEP-Commonwealth of the Northern Mariana Islands (CNMI) AP, Mariana Archipelago FEP-Guam AP, Fishing Industry Advisory Committee (FIAC), and the Hawaii Archipelago FEP AP to discuss and make recommendations on fishery management issues in the Western Pacific Region.

DATES: The meetings will be held between March 8 and March 11, 2022. For specific times and agendas, see **SUPPLEMENTARY INFORMATION**.

ADDRESSES: The meetings will be held by web conference via Webex. Instructions for connecting to the web conference and providing oral public comments will be posted on the Council website at *www.wpcouncil.org.* For assistance with the web conference connection, contact the Council office at (808) 522–8220.

FOR FURTHER INFORMATION CONTACT: Kitty M. Simonds, Executive Director, Western Pacific Fishery Management Council; phone: (808) 522–8220.

SUPPLEMENTARY INFORMATION: The American Samoa Archipelago FEP AP will meet on Tuesday, March 8, 2022, from 6 p.m. to 8 p.m., The Mariana Archipelago FEP–CNMI AP will meet on Thursday, March 10, 2022, from 9 a.m. to 11 a.m., the Mariana Archipelago FEP-Guam AP will meet on Thursday March 10, 2022, from 6:30 p.m. to 8:30 p.m., the FIAC will meet on Thursday, March 10, 2022, from 2 p.m. to 5 p.m., and the Hawaii Archipelago FEP AP will meet on Friday, March 11, from 9 a.m. to 12 noon. All times listed are local island times expect for the FIAC which is in Hawaii Standard Time.

Public Comment periods will be provided in the agendas. The order in which agenda items are addressed may change. The meetings will run as late as necessary to complete scheduled business.

Schedule and Agenda for the American Samoa Archipelago AP Meeting

Tuesday, March 8, 2022, 6 p.m.–8 p.m. (American Samoa Standard Time)

1. Welcome and Introductions
2. Review of Last AP Meeting and Recommendations
3. American Samoa (AS) Fishery Issues and Activities
   - A. Bottomfish
     - i. Options for Revising the Territorial Bottomfish Management Unit Species (BMUS)
     - ii. American Samoa Bottomfish Data Workshop
   - B. Council Coordination Committee (CCC) Working Group on Equity and Environmental Justice (EEJ)
   - C. Fishery Biological Opinions (BiOPs) Update
4. 2022 AP Activities Plan
   - A. Update on Sustainable Fisheries Fund Projects
   - B. Catchit Logit (CILI) Update
   - C. Education and Outreach
5. Feedback From The Fleet
   - A. AS Fishermen Observations
   - B. AP Fishery Issues and Activities
6. Public Comment
7. Discussion and Recommendations
8. Other Business

Schedule and Agenda for the Mariana Archipelago-CNMI AP Meeting

Thursday, March 10, 2022, 9 a.m.–11 a.m. (Marianas Standard Time)

1. Welcome and Introductions
2. Review of Last AP Meeting and Recommendations
3. CNMI Fishery Issues and Activities
   - A. Bottomfish
     - i. Options for Revising the Territorial BMUS
     - ii. Fishery BiOPs Update
   - B. Marianas Sanctuary Nomination
   - C. CILI Updates
   - D. CCC Working Group on EEJ
4. 2022 Advisory Panel Activities Plan
   - A. AP Outreach and Education
5. Feedback From The Fleet
   - A. CNMI Fishermen Observations
   - B. AP Fishery Issues and Activities
6. Discussion and Recommendations
7. Other Business

Schedule and Agenda for the Mariana Archipelago-Guam AP Meeting

Thursday, March 10, 2022, 6:30 p.m.–8:30 p.m. (Marianas Standard Time)

1. Welcome and Introductions
2. Review of Last AP Meeting and Recommendations
3. Guam Fishery Issues and Activities
   - A. Bottomfish
     - i. Options for Revising the Territorial BMUS
     - ii. Fishery BiOPs Update

B. Marianas Sanctuary Nomination
C. CILI Updates
D. CCC Working Group on EEJ
4. 2022 AP Activities Plan
A. AP Outreach and Education
5. Feedback From The Fleet
A. Guam Fishermen Observations
B. AP Fishery Issues and Activities
6. Public Comment
7. Discussion and Recommendations
8. Other Business

Schedule and Agenda for the FIAC Meeting

Thursday, March 10, 2022, 2 p.m.–5 p.m. (Hawaii Standard Time)

1. Welcome and Introductions
2. Status Report on September 2021 FIAC Recommendations
3. Roundtable Update on Fishing/Market Issues/Impacts (billfish, transportation, etc.)
4. Investigating the Relationships Between Imports and Fish Prices
5. Aquaculture Management Final Proposed Environmental Impact Statement and Future Action
6. Northwestern Hawaiian Islands (NWHI) Proposed National Marine Sanctuary 304(1)(5) Council Response
7. International Fisheries
A. New Strategy for Addressing Western and Central Pacific Fisheries Commission Issues
B. Revisiting Western and Central Pacific Ocean Silky Shark MSA 304(i) Obligations
8. False Killer Whale Hook Study Implications
9. CCC Working Group on EEJ
10. Other Issues
11. Public Comment
12. Discussion and Recommendations

Schedule and Agenda for the Hawaii Archipelago AP Meeting

Friday, March 11, 2022, 9 a.m.–12 noon (Hawaii Standard Time)

13. Welcome and Introductions
14. Review of Last AP Meeting and Recommendations
15. Council Issues
A. NWHI Proposed National Marine Sanctuary 304(1)(5) Council Response
B. Specification of the Main Hawaiian Islands Deepwater Shrimp and Precious Coral Annual Catch Limits for Fishing Year 2022–2025
C. False Killer Whale Hook Study Implications
D. CCC Working Group on EEJ
16. AP Plan and Working Group Reports
A. Smart Fish Aggregation Devices
B. FishMaps
17. Hawaii Fishery Issues and Activities
A. Investigating the Relationships Between Imports and Fish Prices
B. Green Turtle Management Update
C. Non-Longline Pelagic Data Workshop
18. Feedback from the Fleet
A. Hawaii Fishermen Observations
B. AP Fishery Issues and Activities
19. Public Comment
20. Discussion and Recommendations
21. Other Business

Special Accommodations

These meetings are accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Kitty M. Simonds, (808) 522–8220 (voice) or (808) 522–8226 (fax), at least 5 days prior to the meeting date.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: February 16, 2022.

Tracey L. Thompson,

Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

BILLING CODE 3510–22–P

COMMODITY FUTURES TRADING COMMISSION

Agency Information Collection Activities: Notice of Intent To Extend Collection 3038–0094: Clearing Member Risk Management

AGENCY: Commodity Futures Trading Commission.

ACTION: Notice.

SUMMARY: The Commodity Futures Trading Commission (''Commission'' or ''CFTC'') is announcing an opportunity for public comment on the proposed renewal of a collection of certain information by the agency. Under the Paperwork Reduction Act (''PRA''), Federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, and to allow 60 days for public comment. This notice solicits comments on the obligation to maintain records related to clearing documentation between a customer and the customer's clearing member, as required under Commission regulations.

DATES: Comments must be submitted on or before April 25, 2022.

ADDRESSES: You may submit comments, identified by ''OMB Control No. 3038–0094'' by any of the following methods:

- The Agency's website, at *https://comments.cftc.gov/*. Follow the instructions for submitting comments through the website.
- *Mail:* Christopher Kirkpatrick, Secretary of the Commission, Commodity Futures Trading Commission, Three Lafayette Centre, 1155 21st Street NW, Washington, DC 20581.
- *Hand Delivery/Courier:* Same as Mail above. Please submit your comments using only one method. All comments must be submitted in English, or if not, accompanied by an English translation. Comments will be posted as received to *https://www.cftc.gov.*

FOR FURTHER INFORMATION CONTACT: Melissa A. D'Arcy, Special Counsel, Division of Clearing and Risk, Commodity Futures Trading Commission, Three Lafayette Centre, 1155 21st Street NW, Washington, DC 20581; (202) 418–5086; email: *mdarcy@cftc.gov.*

SUPPLEMENTARY INFORMATION: Under the PRA, 44 U.S.C. 3501 *et seq.,* Federal agencies must obtain approval from the Office of Management and Budget (''OMB'') for each collection of information they conduct or sponsor. ''Collection of Information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3 and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA, 44 U.S.C. 3506(c)(2)(A), requires Federal agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, the Commission is publishing notice of the proposed extension of the existing collection of information listed below. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.[1]

Title: Clearing Member Risk Management (OMB Control No. 3038–0094). This is a request for an extension of a currently approved information collection.

Abstract: Section 3(b) of the Commodity Exchange Act (''Act'' or ''CEA'') provides that one of the purposes of the Act is to ensure the financial integrity of all transactions subject to the Act and to avoid systemic risk. Section 8a(5) of the CEA authorizes the Commission to promulgate such

[1] The OMB control numbers for the CFTC regulations were published on December 30, 1981. *See* 46 FR 63035 (Dec. 30, 1981).

regulations that it believes are reasonably necessary to effectuate any of the provisions or to accomplish any of the purposes of the CEA. Risk management systems are critical to the avoidance of systemic risk.

Section 4s(j)(2) of the CEA requires each Swap Dealer (''SD'') and Major Swap Participant (''MSP'') to have risk management systems adequate for managing its business. Section 4s(j)(4) requires each SD and MSP to have internal systems and procedures to perform any of the functions set forth in Section 4s.

Section 4d requires Futures Commission Merchants (''FCMs'') to register with the Commission. It further requires FCMs to segregate customer funds. Section 4f requires FCMs to maintain certain levels of capital. Section 4g establishes reporting and recordkeeping requirements for FCMs.

Pursuant to these provisions, the Commission adopted Commission regulation 1.73 which applies to clearing members that are FCMs and Commission regulation 23.609 which applies to clearing members that are SDs or MSPs. These provisions require these clearing members to have procedures to limit the financial risks they incur as a result of clearing trades and liquid resources to meet the obligations that arise. The regulations require each clearing members to: (1) Establish credit and market risk-based limits based on position size, order size, margin requirements, or similar factors; (2) use automated means to screen orders for compliance with the risk-based limits; (3) monitor for adherence to the risk-based limits intra-day and overnight; (4) conduct stress tests of all positions in the proprietary account and all positions in any customer account that could pose material risk to the futures commission merchant at least once per week; (5) evaluate its ability to meet initial margin requirements at least once per week; (6) evaluate its ability to meet variation margin requirements in cash at least once per week; (7) evaluate its ability to liquidate the positions it clears in an orderly manner, and estimate the cost of the liquidation at least once per month; and (8) test all lines of credit at least once per quarter.

Each of these items has been observed by Commission staff as an element of an existing sound risk management program at an SD, MSP, or FCM. The Commission regulations require each clearing member to establish written procedures to comply with this regulation and to keep records documenting its compliance. The information collection obligations imposed by the regulations are necessary to implement certain provisions of the CEA, including ensuring that registrants exercise effective risk management and for the efficient operation of trading venues among SDs, MSPs, and FCMs.

With respect to the collection of information, the CFTC invites comments on:

- Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information will have a practical use;
- The accuracy of the Commission's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Ways to enhance the quality, usefulness, and clarity of the information to be collected; and
- Ways to minimize the burden of collection of information on those who are to respond, including through the use of appropriate automated electronic, mechanical, or other technological collection techniques or other forms of information technology; *e.g.,* permitting electronic submission of responses.

You should submit only information that you wish to make available publicly. If you wish for the Commission to consider information that you believe is exempt from disclosure under the Freedom of Information Act, a petition for confidential treatment of the exempt information may be submitted according to the procedures established in § 145.9 of the Commission Regulations.[2]

The Commission reserves the right, but shall have no obligation, to review, pre-screen, filter, redact, refuse or remove any or all of your submission from *https://www.cftc.gov* that it may deem to be inappropriate for publication, such as obscene language. All submissions that have been redacted or removed that contain comments on the merits of the Information Collection Request will be retained in the public comment file and will be considered as required under the Administrative Procedure Act and other applicable laws, and may be accessible under the Freedom of Information Act.

Burden Statement: The Commission is revising its estimate of the burden for this collection of information from clearing members of derivatives clearing organizations who are swap dealers, major swap participants, and/or futures commission merchants. The respondent burden for this collection is estimated to be as follows:

[2] 17 CFR 145.9.

Estimated Number of Respondents: 167 (108 Clearing Member Swap Dealers and 59 Clearing Member Futures Commission Merchants).

Estimated Average Burden Hours per Respondent: 504 hours.

Estimated Total Annual Burden Hours: 84,168 hours.

Frequency of Collection: As needed.

There are no capital costs or operating and maintenance costs associated with this collection.

BILLING CODE 6351–01–P

COMMODITY FUTURES TRADING COMMISSION

Agency Information Collection Activities: Notice of Intent To Extend Collection 3038–0075: Protection of Collateral of Counterparties to Uncleared Swaps; Treatment of Securities in a Portfolio Margining Account in a Commodity Broker Bankruptcy

AGENCY: Commodity Futures Trading Commission.

ACTION: Notice.

SUMMARY: The Commodity Futures Trading Commission (''Commission'' or ''CFTC'') is announcing an opportunity for public comment on the proposed renewal of a collection of certain information by the agency. Under the Paperwork Reduction Act (''PRA''), Federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, and to allow 60 days for public comment. This notice solicits comments on reporting requirements relating to uncleared swaps between certain affiliated entities electing the exemption under Commission regulation 50.52 (Exemption for swaps between affiliates).

DATES: Comments must be submitted on or before April 25, 2022.

ADDRESSES: You may submit comments, identified by ''OMB Control No. 3038–0075'' by any of the following methods:

- The Agency's website, at *https://comments.cftc.gov/.* Follow the instructions for submitting comments through the website.
- *Mail:* Christopher Kirkpatrick, Secretary of the Commission, Commodity Futures Trading

Commission, Three Lafayette Centre, 1155 21st Street NW, Washington, DC 20581.

• *Hand Delivery/Courier:* Same as Mail above.

Please submit your comments using only one method. All comments must be submitted in English, or if not, accompanied by an English translation. Comments will be posted as received to *https://www.cftc.gov.*

FOR FURTHER INFORMATION CONTACT: Christopher W. Cummings, Special Counsel, Market Participants Division, Commodity Futures Trading Commission, Three Lafayette Centre, 1155 21st Street NW, Washington, DC 20581; (202) 418–5445; email: *ccummings@cftc.gov.*

SUPPLEMENTARY INFORMATION: Under the PRA, 44 U.S.C. 3501 *et seq.,* Federal agencies must obtain approval from the Office of Management and Budget (''OMB'') for each collection of information they conduct or sponsor. ''Collection of Information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3 and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA, 44 U.S.C. 3506(c)(2)(A), requires Federal agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, the Commission is publishing notice of the proposed extension of the existing collection of information listed below. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.[1]

Title: Protection of Collateral of Counterparties to Uncleared Swaps; Treatment of Securities in a Portfolio Margining Account in a Commodity Broker Bankruptcy (OMB Control No. 3038–0075). This is a request for an extension of a currently approved information collection.

Abstract: Section 4s(l) of the Commodity Exchange Act requires swap dealers and major swap participants to notify uncleared swap counterparties that they have the right to request that property provided as margin be segregated, and to report quarterly to counterparties who have not requested segregated accounts that the back office procedures of the swap dealer or major swap participant with respect to margin and collateral comply with the parties' agreement. Regulations 23.701 and 23.704 establish reporting requirements that are mandated by Section 4s(l) and, thus, are necessary to implement the objectives of Section 4s(l). Regulation 23.701 requires that the SD or MSP notify the counterparty at the beginning of the swap trading relationship of the counterparty's right to require segregation of initial margin, and to permit the counterparty to change that election by written notice to the SD or MSP. Regulation 23.704 requires that, in certain circumstances, an SD or MSP must report to the counterparty, on a quarterly basis, that the back office procedures of the swap dealer or major swap participant relating to margin and collateral requirements are in compliance with the agreement of the counterparties. The data required to be compiled and maintained pursuant to Regulations 23.701 and 23.704 would be used by uncleared swap counterparties (and, in some instances, the CFTC and self-regulatory organizations).

With respect to the collection of information, the CFTC invites comments on:

• Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information will have a practical use;

• The accuracy of the Commission's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

• Ways to enhance the quality, usefulness, and clarity of the information to be collected; and

• Ways to minimize the burden of collection of information on those who are to respond, including through the use of appropriate automated electronic, mechanical, or other technological collection techniques or other forms of information technology; *e.g.,* permitting electronic submission of responses.

You should submit only information that you wish to make available publicly. If you wish for the Commission to consider information that you believe is exempt from disclosure under the Freedom of Information Act, a petition for confidential treatment of the exempt information may be submitted according to the procedures established in § 145.9 of the Commission's regulations.[2]

The Commission reserves the right, but shall have no obligation, to review, pre-screen, filter, redact, refuse or remove any or all of your submission from *https://www.cftc.gov* that it may deem to be inappropriate for publication, such as obscene language. All submissions that have been redacted or removed that contain comments on the merits of the Information Collection Request will be retained in the public comment file and will be considered as required under the Administrative Procedure Act and other applicable laws, and may be accessible under the Freedom of Information Act.

Burden Statement: The Commission continues to estimate that the respondent burden for this collection is as follows:

• Regulation 23.701:

Estimated Number of Respondents: 108.

Estimated Average Burden Hours per Respondent: 600 hours.

Estimated Total Annual Burden Hours: 64,800 hours.

Frequency of Collection: Beginning of the swap trading relationship with a counterparty.

• Regulation 23.704:

Estimated Number of Respondents: 108.

Estimated Average Burden Hours per Respondent: 806 hours.

Estimated Total Annual Burden Hours: 87,048 hours.

Frequency of Collection: Quarterly (4 times per year).

• Total Annual Burden for the Collection: 151,848 hours.

There are no capital costs or operating and maintenance costs associated with this collection.

(Authority: 44 U.S.C. 3501 *et seq.*)

Dated: February 16, 2022.

Robert Sidman,

Deputy Secretary of the Commission.

DEPARTMENT OF DEFENSE

Department of the Air Force

[Docket ID: USAF–2021–HQ–0008]

Submission for OMB Review; Comment Request

AGENCY: Air Combat Command (ACC), Department of Defense (DoD).

ACTION: 30-Day information collection notice.

SUMMARY: The Department of Defense has submitted to OMB for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act.

DATES: Consideration will be given to all comments received by March 24, 2022.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Angela Duncan, 571–372–7574, *whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil.*

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Isolated Personnel Report and Personnel Recovery Mission Software Web Application; DD Form 1833; OMB Control Number 0701–0166.

Type of Request: Extension.

Number of Respondents: 2,864.

Responses per Respondent: 1.

Annual Responses: 2,864.

Average Burden per Response: 15 minutes.

Annual Burden Hours: 716.

Needs and Uses: Information collected using the DD Form 1833 is necessary to positively identify, authenticate, support and recover isolated or missing DoD persons of interest. The Isolated Personnel Report (ISOPREP) collects controlled unclassified information in the form of full name and associates the name with sensitive personal identifiable information including date of birth, Social Security number, DoD Identification number, pictures and fingerprints. The ISOPREP also collects confidential information in the form of personal authentication statements and codes known only to the individual who completes the ISOPREP. All personnel completing an initial ISOPREP are required to utilize the Personnel Recovery Mission Software (PRMS) web application. In rare instances where personnel do not have access to PRMS, a hardcopy DD Form 1833 can be completed. In the interest of protecting the force and returning personnel who support the DoD to their units, families and country, the information collected for the ISOPREP is a force requirement for DoD military and civilians serving overseas.

Affected Public: Individuals or households.

Frequency: On occasion.

Respondent's Obligation: Voluntary.

OMB Desk Officer: Ms. Jasmeet Seehra.

You may also submit comments and recommendations, identified by Docket ID number and title, by the following method:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.

Instructions: All submissions received must include the agency name, Docket ID number, and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

DOD Clearance Officer: Ms. Angela Duncan.

Requests for copies of the information collection proposal should be sent to Ms. Duncan at *whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil.*

Dated: February 15, 2022.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

[Docket ID: USA–2021–HQ–0024]

Submission for OMB Review; Comment Request

AGENCY: Department of the Army, Department of Defense (DoD).

ACTION: 30-Day information collection notice.

SUMMARY: The Department of Defense has submitted to OMB for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act.

DATES: Consideration will be given to all comments received by March 24, 2022.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Angela Duncan, 571–372–7574, or *whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil.*

SUPPLEMENTARY INFORMATION: *Title; Associated Form; and OMB Number:* Applications for Department of the Army Permit and Nationwide Permit Pre-Construction Notification Forms; ENG Form 4345, ENG Form 6082; OMB Control Number 0710–0003.

Type of Request: Revision.

Number of Respondents: 62,000.

Responses per Respondent: 1.

Annual Responses: 62,000.

Average Burden per Response: 11 hours.

Annual Burden Hours: 682,000.

Needs and Uses: The information collected is used to evaluate, as required by law, proposed construction or filing in waters of the United States that result in impacts to the aquatic environment and nearby properties, and to determine which type of permit is required if one is needed. Respondents are private landowners, businesses, non-profit organizations, and government agencies. Respondents also include sponsors of proposed and approved mitigation banks and in-lieu fee programs.

Affected Public: Business or other for-profit; individuals or households.

Frequency: On occasion.

Respondent's Obligation: Voluntary.

OMB Desk Officer: Mr. Vlad Dorjets.

You may also submit comments and recommendations, identified by Docket ID number and title, by the following method:

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: National Industrial Security System; DCSA Form 147; OMB Control Number 0705–0006.

Type of Request: Revision.

Number of Respondents: 11,671.

Responses per Respondent: 2.

Annual Responses: 23,342.

Average Burden per Response: 1.5 hours.

Annual Burden Hours: 35,013.

Needs and Uses: The information collection requirement is necessary for DCSA to oversee the National Industrial Security Program (NISP) pursuant to Executive Order 12829. The National Industrial Security System (NISS) is the primary collection instrument for DCSA oversight of the NISP and maintaining data associated with cleared facilities and their oversight. The NISS is the repository of records related to the maintenance of information pertaining to contractor facility security clearances (FCL) and contractor capabilities to protect classified information in its possession. The information is utilized to determine if a company and its key management personnel are eligible for issuance of a facility clearance in accordance with 32 CFR part 117 requirements. In addition, information is utilized to inform Government Contracting Activities of contractor's ability to maintain facility clearance status and/or storage capability as well as to analyze vulnerabilities identified within security programs and ensure proper mitigation actions are taken to preclude unauthorized disclosure of classified information. As part of the FCL process, contractors must also complete and maintain a DCSA Form 147 in NISS. The form provides a single document to record the numerous characteristics of Open Storage Areas that are required to be reviewed for contractor facilities to be approved by DCSA for classified storage.

Affected Public: Business or other for-profit; not-for-profit institutions.

Frequency: As required.

Respondent's Obligation: Voluntary.

DEPARTMENT OF EDUCATION

Applications for New Awards; Magnet Schools Assistance Program

AGENCY: Office of Elementary and Secondary Education, Department of Education.

ACTION: Notice.

SUMMARY: The Department of Education (Department) is issuing a notice inviting applications (NIA) for fiscal year (FY) 2022 for the Magnet Schools Assistance Program (MSAP), Assistance Listing Number 84.165A. This notice relates to the approved information collection under OMB control number 1855–0011.

DATES:

Application Available: February 22, 2022.

Deadline for Notice of Intent to Apply: March 24, 2022.

Deadline for Transmittal of Applications: April 25, 2022.

Deadline for Intergovernmental Review: July 7, 2022.

PreApplication—Webinar Information: No later than March 4, 2022, MSAP will begin holding webinars to provide technical assistance to interested applicants. Detailed information regarding these webinars will be provided on the MSAP website at *https://oese.ed.gov/offices/office-of-discretionary-grants-support-services/school-choice-improvement-programs/magnet-school-assistance-program-msap/.* Recordings of all webinars will be available on the MSAP website following the sessions.

ADDRESSES: For the addresses for obtaining and submitting an application, please refer to our Common Instructions for Applicants to Department of Education Discretionary Grant Programs, published in the **Federal Register** on December 27, 2021 (86 FR 73264) and available at *www.federalregister.gov/d/2021-27979.* Please note that these Common Instructions supersede the version published on February 13, 2019, and, in part, describe the transition from the requirement to register in *SAM.gov* a Data Universal Numbering System (DUNS) number to the implementation of the Unique Entity Identifier (UEI). More information on the phase-out of DUNS numbers is available at *www2.ed.gov/about/offices/list/ofo/docs/unique-entity-identifier-transition-fact-sheet.pdf.*

FOR FURTHER INFORMATION CONTACT: Gillian Cohen-Boyer, U.S. Department of Education, 400 Maryland Avenue SW, Room 3C134, Washington, DC 20202–5970. Telephone: (202) 401–1259. Email: *msap.team@ed.gov.*

If you use a telecommunications device for the deaf (TDD) or a text telephone (TTY), call the Federal Relay Service (FRS), toll free, at 1–800–877–8339.

SUPPLEMENTARY INFORMATION:

Full Text of Announcement

I. Funding Opportunity Description

Purpose of Program: MSAP, authorized under Title IV, part D of the

Elementary and Secondary Education Act of 1965, as amended (ESEA), provides grants to local educational agencies (LEAs) and consortia of LEAs to create or revise magnet schools under required or voluntary desegregation plans.

As written in section 4401(b) of the ESEA, 20 U.S.C. 7231, ''the purpose of MSAP is to assist LEAs in the desegregation of schools by providing financial assistance to eligible LEAs for: (1) The elimination, reduction, or prevention of minority group isolation (MGI) in elementary schools and secondary schools with substantial proportions of minority students, which shall include assisting in the efforts of the United States to achieve voluntary desegregation in public schools; (2) the development, implementation, and expansion of magnet school programs that will assist LEAs in achieving systemic reforms and providing all students the opportunity to meet challenging State academic standards; (3) the development, design, and expansion of innovative educational methods and practices that promote diversity and increase choices in public elementary schools and public secondary schools and public educational programs; (4) courses of instruction within magnet schools that will substantially strengthen the knowledge of academic subjects and the attainment of tangible and marketable career, technological, and professional skills of students attending such schools; (5) improving the capacity of LEAs, including through professional development, to continue operating magnet schools at a high performance level after Federal funding for the magnet schools is terminated; and (6) ensuring that all students enrolled in the magnet school programs have equitable access to high quality education that will enable the students to succeed academically and continue with postsecondary education or employment.''

Background: Since its inception nearly 40 years ago, MSAP has supported LEAs in establishing numerous successful magnet schools, defined under section 4402 of the ESEA, 20 U.S.C. 7231a, as public elementary or secondary schools that offer ''a special curriculum capable of attracting substantial numbers of students of different racial backgrounds.'' In this competition, the Department seeks to focus applicants on effectively addressing the legislative purpose of the MSAP statute—assisting LEAs in the desegregation of schools through the use of magnet schools—by requiring applicants to demonstrate how they intend to align the elements of their proposed MSAP projects with their required (*e.g.,* court-ordered) or voluntary desegregation plans, which must be submitted as a component of their applications under sections 4403 and 4404 of the ESEA, 20 U.S.C. 7231b and 7231c. In accordance with 34 CFR 280.2 and 280.20, under Section III, Part 4 of this notice, applicants must provide context and a summary description for the goals of their desegregation plan and how Federal funding for magnet schools will assist in achieving the LEAs' specific goals related to the reduction, prevention, or elimination of MGI. This information will assist the Department in confirming the LEA's eligibility for an award and inform the Department's review of the applicant's project narrative against the selection criteria outlined in Section V, Part 1 of this notice.

Beyond proposing high-quality projects that provide unique educational opportunities capable of attracting substantial numbers of students of different backgrounds, we encourage applicants to employ a range of strategies to maximize the potential of bringing students together from different racial backgrounds. For example, under section 4407 of the ESEA, 20 U.S.C. 7231f, MSAP permits LEAs to support student transportation to and from magnet schools, provided the transportation costs are sustainable beyond the grant period and the costs do not constitute a significant portion of the LEA's grant funds. Under Competitive Preference Priority 5, we provide competitive preference for applicants that propose to establish, expand, or strengthen inter-district and regional magnet programs consistent with section 4407(a)(8) of the ESEA, 20 U.S.C. 7231f.[1] Responses to Competitive Preference Priority 5 could include, among a range of other activities, establishing and participating in a voluntary, inter-district transfer program for students from varied neighborhoods; making strategic decisions regarding the selection of magnet school sites or revising school boundaries, attendance zones, or feeder patterns to take into account neighboring communities; and formal merging or coordinating among multiple educational jurisdictions in order to pool resources, provide transportation, and expand high-quality public school options for students from low-income backgrounds.

In order to increase the overall diversity of the school settings in which students learn, under Competitive Preference Priority 6, we provide competitive preference to LEAs that propose to connect their projects to broader school and district plans for increasing students' access to high-quality instruction delivered by a diverse group of educators.

In Invitational Priority 1, we encourage applicants to prioritize the establishment of whole-school magnet programs in order to promote learning for students in ways that ensure all students within a school have the opportunity to successfully partake in the special curriculum and meet challenging academic content standards and decrease the likelihood of tracking within schools.

Additionally, the Department is interested in projects that propose to coordinate with relevant government entities—such as housing and transportation authorities, among others—given the impact that other public policy choices may have on the composition of a school's student body. For example, the Department seeks applications connecting MSAP projects to nearby public housing redevelopment projects, such as those funded through the Department of Housing and Urban Development (HUD) Choice Neighborhoods Initiative and the HUD Rental Assistance Demonstration program. Accordingly, under Invitational Priority 2, and more generally through the selection criteria outlined in Section V of this notice, we encourage projects that propose to coordinate efforts with housing and transportation authorities, as well as other Federal, State, or local agencies, or community-based organizations.

Finally, to assist grantees in grounding their programs in the existing knowledge base as well as identifying practices that will improve LEA capacity to continue operating magnet schools at high performance levels beyond the funding period, this competition provides for applicants to address evidence in two ways. Under Competitive Preference Priority 2, applicants may demonstrate that they intend to implement activities that are evidence-based in their proposed MSAP project schools. Additionally, in response to the quality of the project evaluation selection criterion,

[1] We note the FY 2022 House Appropriations Report (H.R. Rep. No. 117–96 at 276 (2021)) directs the Department to include such a priority, citing a 2019 report by the Urban Institute, which indicated that two-thirds of total school segregation in metropolitan areas is due to segregation between, rather than within, school districts. Monarrez, Tómas, Kisida, Brian, and Chingos, Matthew. When is a school segregated? Making sense of segregation 65 years after *Brown* v. *Board of Education.* Urban Institute, September 27, 2019. Retrieved January 3, 2021 from *www.urban.org/research/publication/when-school-segregated-making-sense-segregation-65-years-after-brown-v-board-education.*

applicants should discuss how they will monitor the implementation and results of their MSAP project activities, as well as how they intend to identify practices to be sustained beyond the project period through the final evaluation reports described in Section VI, Part 4(c) of this notice, which should be designed to yield results at the level of promising evidence or higher.

Priorities: This competition includes six competitive preference priories and two invitational priorities. In accordance with 34 CFR 75.105(b)(2)(ii), Competitive Preference Priorities 1 and 3 are from the MSAP regulations at 34 CFR 280.32. In accordance with 34 CFR 75.105(b)(2)(iv), Competitive Preference Priorities 2 and 4 are from section 4406 of the ESEA, 20 U.S.C. 7231e. In accordance with 34 CFR 75.105(b)(2)(v), Competitive Preference Priority 5 is from allowable activities specified in section 4407 of the ESEA, 20 U.S.C. 7231f. Competitive Preference Priority 6 is from the Final Priorities and Definitions—Secretary's Supplemental Priorities and Definitions for Discretionary Grants Programs, published in the **Federal Register** on December 10, 2021 (86 FR 70612) (Supplemental Priorities).

Competitive Preference Priorities: For FY 2022 and any subsequent year in which we make awards from the list of unfunded applications from this competition, these priorities are competitive preference priorities. Under 34 CFR 75.105(c)(2)(i), we award one additional point to an application that meets Competitive Preference Priority 1; up to three additional points to an application, depending on how well the application meets Competitive Preference Priority 2; up to two additional points to an application, depending on how well the application meets Competitive Preference Priority 3; up to three additional points to an application, depending on how well the application meets Competitive Preference Priority 4; up to four additional points to an application depending on how well the application meets Competitive Preference Priority 5; and up to two additional points to an application depending on how well the application meets Competitive Preference Priority 6.

Based on the quality of the applicant's response in addressing any or all of these priorities, an application may be awarded up to a total of 15 additional points. Applicants may apply under any, all, or none of the competitive preference priorities. The maximum possible points for each competitive preference priority are indicated in parentheses following the name of the priority. These points are in addition to any points the application earns under the selection criteria in this notice.

These priorities are:

Competitive Preference Priority 1—Need for Assistance (0 or 1 point).

The Secretary evaluates the applicant's need for assistance by considering—

(1) The costs of fully implementing the magnet schools project as proposed;

(2) The resources available to the applicant to carry out the project if funds under the program were not provided;

(3) The extent to which the costs of the project exceed the applicant's resources; and

(4) The difficulty of effectively carrying out the approved plan and the project for which assistance is sought, including consideration of how the design of the magnet school project—*e.g.,* the type of program proposed, the location of the magnet school within the LEA—impacts the applicant's ability to successfully carry out the approved plan.

Competitive Preference Priority 2—New or Revised Magnet Schools Projects and Strength of Evidence to Support Proposed Projects (up to 3 points).

The Secretary determines the extent to which the applicant proposes to (1) carry out a new, evidence-based magnet school program; (2) significantly revise an existing magnet school program, using evidence-based methods and practices, as available; or (3) replicate an existing magnet school program that has a demonstrated record of success in increasing student academic achievement and reducing isolation of minority groups.

Competitive Preference Priority 3—Selection of Students (up to 2 points).

The Secretary determines the extent to which the applicant proposes to select students to attend magnet schools by methods such as lottery, rather than through academic examination.

Competitive Preference Priority 4—Increasing Racial Integration and Socioeconomic Diversity (up to 3 points).

The Secretary determines the extent to which the applicant proposes to increase racial integration by taking into account socioeconomic diversity in designing and implementing magnet school programs.

Competitive Preference Priority 5—Inter-district and Regional Approaches (up to 4 points).

Under this priority, an applicant must demonstrate that grant funds will be used to enable the LEA, or consortium of such agencies, or other organizations partnered with such agency or consortium, to establish, expand, or strengthen inter-district and regional magnet programs.

Competitive Preference Priority 6—Supporting a Diverse Educator Workforce and Professional Growth to Strengthen Student Learning (up to 2 points).

Projects that are designed to increase the proportion of well-prepared, diverse, and effective educators serving students, with a focus on underserved students, through building or expanding high-poverty school districts' capacity to hire, support, and retain an effective and diverse educator workforce, through one or both of the following:

(a) Adopting or expanding comprehensive, strategic career and compensation systems that provide competitive compensation and include opportunities for educators to serve as mentors and instructional coaches, or to take on additional leadership roles and responsibilities for which educators are compensated.

(b) Developing data systems, timelines, and action plans for promoting inclusive and bias-free human resources practices that promote and support development of educator diversity.

Invitational Priorities: For FY 2022 and any subsequent year in which we make awards from the list of unfunded applications from this competition, these are invitational priorities. Under 34 CFR 75.105(c)(1) we do not give an application that meets these invitational priorities a competitive or absolute preference over other applications.

These priorities are:

Invitational Priority 1—Whole-School Magnet Programs.

Projects that propose to implement ''whole-school magnet'' schools in which all students enrolled in the school participate in the magnet school program, rather than schools that implement magnet programs within schools which are offered to less than the entire school population.

Invitational Priority 2—Coordination Across Agencies and Organizations.

Projects that propose to coordinate efforts with relevant governmental agencies, such as housing or transportation authorities, or community organizations to promote student diversity and achievement in magnet schools. This may include projects coordinated with public housing redevelopment efforts, such as those funded through the HUD Choice Neighborhoods Initiative or the HUD Rental Assistance Demonstration program.

Definitions: The definition of ''evidence-based'' is from 20 U.S.C.

7801. The definitions of ''desegregation'' and ''feeder school'' are from 34 CFR 280.4. The definitions of ''demonstrates a rationale,'' ''experimental study,'' ''logic model,'' ''project component,'' ''promising evidence,'' ''quasi-experimental design study,'' ''relevant outcome,'' and ''What Works Clearinghouse Handbooks'' are from 34 CFR 77.1(c). The definitions of ''children or students with disabilities,'' ''disconnected youth,'' ''educator,'' ''English learner,'' ''military- or veteran-connected student,'' and ''underserved student'' are from the Supplemental Priorities.

Children or students with disabilities means children with disabilities as defined in section 602(3) of the Individuals with Disabilities Education Act (IDEA) (20 U.S.C. 1401(3)) and 34 CFR 300.8, or students with disabilities, as defined in the Rehabilitation Act of 1973 (29 U.S.C. 705(37), 705(202)(B)).

Demonstrates a rationale means a key project component included in the project's logic model is informed by research or evaluation findings that suggest the project component is likely to improve relevant outcomes.

Desegregation, in reference to a plan, means a plan for the reassignment of children or faculty to remedy the illegal separation of minority group children or faculty in the schools of an LEA or a plan for the reduction, elimination, or prevention of minority group isolation in one or more of the schools of an LEA.

Disconnected youth means an individual, between the ages 14 and 24, who may be from a low-income background, experiences homelessness, is in foster care, is involved in the justice system, or is not working or not enrolled in (or at risk of dropping out of) an educational institution.

Educator means an individual who is an early learning (as defined in the Supplemental Priorities) educator, teacher, principal or other school leader, specialized instructional support personnel (*e.g.,* school psychologist, counselor, school social worker, early intervention service personnel), paraprofessional, or faculty.

English learner means an individual who is an English learner as defined in section 8101(20) of the ESEA, or an individual who is an English language learner as defined in section 203(7) of the Workforce Innovation and Opportunity Act.

Evidence-based means an activity, strategy, or intervention that—

(i) Demonstrates a statistically significant effect on improving student outcomes or other relevant outcomes based on—

(A) Strong evidence from at least one well-designed and well-implemented experimental study;

(B) Moderate evidence from at least one well-designed and well-implemented quasi-experimental study; or

(C) Promising evidence from at least one well-designed and well-implemented correlational study with statistical controls for selection bias; or

(ii) (A) Demonstrates a rationale based on high-quality research findings or positive evaluation that such activity, strategy, or intervention is likely to improve student outcomes or other relevant outcomes; and

(B) Includes ongoing efforts to examine the effects of such activity, strategy, or intervention.

Experimental study means a study that is designed to compare outcomes between two groups of individuals (such as students) that are otherwise equivalent except for their assignment to either a treatment group receiving a project component or a control group that does not. Randomized controlled trials, regression discontinuity design studies, and single-case design studies are the specific types of experimental studies that, depending on their design and implementation (*e.g.,* sample attrition in randomized controlled trials and regression discontinuity design studies), can meet What Works Clearinghouse (WWC) standards without reservations as described in the WWC Handbooks):

(i) A randomized controlled trial employs random assignment of, for example, students, teachers, classrooms, or schools to receive the project component being evaluated (the treatment group) or not to receive the project component (the control group).

(ii) A regression discontinuity design study assigns the project component being evaluated using a measured variable (*e.g.,* assigning students reading below a cutoff score to tutoring or developmental education classes) and controls for that variable in the analysis of outcomes.

(iii) A single-case design study uses observations of a single case (*e.g.,* a student eligible for a behavioral intervention) over time in the absence and presence of a controlled treatment manipulation to determine whether the outcome is systematically related to the treatment.

Feeder school means a school from which students are drawn to attend a magnet school.

Logic model (also referred to as a theory of action) means a framework that identifies key project components of the proposed project (*i.e.,* the active ''ingredients'' that are hypothesized to be critical to achieving the relevant outcomes) and describes the theoretical and operational relationships among the key project components and relevant outcomes.

Military- or veteran-connected student means a child participating in an early learning (as defined in the Supplemental Priorities) program, a student enrolled in preschool through grade 12, or a student enrolled in career and technical education or postsecondary education who has a parent or guardian who is a veteran of the uniformed services (as defined by 37 U.S.C. 101), in the Army, Navy, Air Force, Marine Corps, Coast Guard, Space Force, National Guard, Reserves, National Oceanic and Atmospheric Administration, or Public Health Service or is a veteran of the uniformed services with an honorable discharge (as defined by 38 U.S.C. 3311).

Project component means an activity, strategy, intervention, process, product, practice, or policy included in a project. Evidence may pertain to an individual project component or to a combination of project components (*e.g.,* training teachers on instructional practices for English learners and follow-on coaching for these teachers).

Promising evidence means that there is evidence of the effectiveness of a key project component in improving a relevant outcome, based on a relevant finding from one of the following:

(i) A practice guide prepared by WWC reporting a ''strong evidence base'' or ''moderate evidence base'' for the corresponding practice guide recommendation;

(ii) An intervention report prepared by the WWC reporting a ''positive effect'' or ''potentially positive effect'' on a relevant outcome with no reporting of a ''negative effect'' or ''potentially negative effect'' on a relevant outcome; or

(iii) A single study assessed by the Department, as appropriate, that-–

(A) Is an experimental study, a quasi-experimental design study, or a well-designed and well-implemented correlational study with statistical controls for selection bias (*e.g.,* a study using regression methods to account for differences between a treatment group and a comparison group); and

(B) Includes at least one statistically significant and positive (*i.e.,* favorable) effect on a relevant outcome.

Quasi-experimental design study means a study using a design that attempts to approximate an experimental study by identifying a comparison group that is similar to the treatment group in important respects. This type of study, depending on design and implementation (*e.g.,* establishment

of baseline equivalence of the groups being compared), can meet WWC standards with reservations, but cannot meet WWC standards without reservations, as described in the WWC Handbooks.

Relevant outcome means the student outcome(s) or other outcome(s) the key project component is designed to improve, consistent with the specific goals of the program.

Underserved student means a student (which includes students in K–12 programs) in one or more of the following subgroups:

(a) A student who is living in poverty or is served by schools with high concentrations of students living in poverty.
(b) A student of color.
(c) A student who is a member of a federally recognized Indian Tribe.
(d) An English learner.
(e) A child or student with a disability.
(f) A disconnected youth.
(g) A technologically unconnected youth.
(h) A migrant student.
(i) A student experiencing homelessness or housing insecurity.
(j) A lesbian, gay, bisexual, transgender, queer or questioning, or intersex (LGBTQI+) student.
(k) A student who is in foster care.
(l) A student without documentation of immigration status.
(m) A pregnant, parenting, or caregiving student.
(n) A student impacted by the justice system, including a formerly incarcerated student.
(o) A student performing significantly below grade level.
(p) A military- or veteran-connected student.

What Works Clearinghouse (WWC) Handbooks means the standards and procedures set forth in the WWC Standards Handbook, Versions 4.0 or 4.1, and WWC Procedures Handbook, Versions 4.0 or 4.1, or in the WWC Procedures and Standards Handbook, Version 3.0 or Version 2.1 (all incorporated by reference, see § 77.2). Study findings eligible for review under WWC standards can meet WWC standards without reservations, meet WWC standards with reservations, or not meet WWC standards. WWC practice guides and intervention reports include findings from systematic reviews of evidence as described in the WWC Handbooks documentation.

Note: The What Works Clearinghouse Procedures and Standards Handbooks are available at: *https://ies.ed.gov/ncee/wwc/Handbooks.*

Program Authority: 20 U.S.C. 7231–7231j.

Note: Projects will be awarded and must be operated in a manner consistent with discrimination requirements contained in Federal civil rights laws.

Applicable Regulations: (a) The Education Department General Administrative Regulations in 34 CFR parts 75, 77, 79, 81, 82, 84, 97, 98, and 99. (b) The Office of Management and Budget Guidelines to Agencies on Governmentwide Debarment and Suspension (Nonprocurement) in 2 CFR part 180, as adopted and amended as regulations of the Department in 2 CFR part 3485. (c) The Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards in 2 CFR part 200, as adopted and amended as regulations of the Department in 2 CFR part 3474. (d) The regulations for this program in 34 CFR part 280. (e) Supplemental Priorities.

II. Award Information

Type of Award: Discretionary grants.

Estimated Available Funds: The Administration has requested $149,000,000 for the MSAP program for FY 2022, of which we would use an estimated $135,000,000 for awards under this competition. The actual level of funding, if any, depends on final congressional action. However, we are inviting applications to allow enough time to complete the grant process before the end of the current fiscal year, if Congress appropriates funds for this program.

Contingent upon the availability of funds and the quality of applications, we may make additional awards in FY 2023 from the list of unfunded applications from this competition.

Estimated Range of Awards: $1,000,000–$3,500,000 per budget year.

Maximum Award: We will not make an award to an LEA or a consortium of LEAS exceeding $15,000,000 for the project period. Under section 4408(b) of the ESEA, 20 U.S.C. 7231h, grantees may not expend more than 50 percent of the year one grant funds and not more than 15 percent of year two and three grant funds on planning activities. Professional development is not considered to be a planning activity.

Note: Yearly award amounts may vary.

Estimated Number of Awards: 30–40.

Note: The Department is not bound by any estimates in this notice.

Project Period: Up to 60 months.

III. Eligibility Information

1. *Eligible Applicants:* LEAs or consortia of LEAs implementing a desegregation plan as specified in section III. 4 of this notice.

2. *Cost Sharing or Matching:* This program does not require cost sharing or matching.

3. *Subgrantees:* A grantee under this competition may not award subgrants to entities to directly carry out project activities described in its application.

4. *Other—Desegregation Plans:* Per section 4404 of the ESEA and 34 CFR 280.20(e) and (f) of the regulations, to establish eligibility to receive MSAP assistance, applicants must also submit with their applications one of the following types of desegregation plans: (i) A desegregation plan required by a court order; (ii) a desegregation plan required by a State agency or an official of competent jurisdiction; (iii) a desegregation plan required by the Department's Office for Civil Rights (OCR) under Title VI of the Civil Rights Act of 1964 (Title VI); or (iv) a voluntary desegregation plan adopted by the applicant and submitted to the Department for approval as part of the application. Under the MSAP regulations, applicants are required to provide all of the information required in 34 CFR 280.20(a) through (g) in order to satisfy the civil rights eligibility requirements found in 34 CFR 280.2(a)(2) and (b).

Note: While voluntary desegregation plans must be approved by the school board of the submitting LEA or consortium of LEAs, these desegregation plans do not require Department approval prior to application submission. Review of applicants' voluntary desegregation plans is a component of the application review process under section 4404 of the ESEA, 20 U.S.C.7231c, and 34 CFR 280.2(b) to ensure that all grantees receiving funds have desegregation plans that are adequate under Title VI and, for each magnet school for which funding is sought, the magnet school will reduce, eliminate, or prevent MGI within the project period, either in the magnet school or in a feeder school, as appropriate.

In addition to the particular data and other items for required and voluntary desegregation plans described in the application package, per 34 CFR 280.20(e)(f) and(g), an application must include—

- Projected enrollment by race and ethnicity for magnet and feeder schools;
- Signed civil rights assurances; and
- An assurance that the desegregation plan is being implemented or will be implemented if the application is funded.

Finally, under section 4405(b)(1)(A) of the ESEA, 20 U.S.C. 7231d(b)(1)(A), applicants must describe ''how a grant awarded under this part will be used to promote desegregation, including any available evidence on, or if such evidence is not available, a rationale,

based on current research, for how the proposed magnet school programs will increase interaction among students of different social, economic, ethnic, and racial backgrounds.'' To assist applicants in submitting succinct and comprehensive information to this end, the Application Package for this competition includes a Desegregation Plan Form OMB–1855–0011. Through this form, applicants will summarize their desegregation plan and describe: The plan's overarching goals; the definition of MGI being used by the LEA and the specific schools (either magnets or feeders) and racial/ethnic group(s) that have been identified as in need of reduction, prevention, or elimination of MGI; how these particular schools are currently part of the LEA's school configuration and enrollment patterns; and how the MSAP project and its proposed magnets are designed to effectively prevent, reduce, or eliminate MGI in elementary or secondary schools with substantial proportions of minority students.

Note: Section 4401(b)(1) of the ESEA, 20 U.S.C. 7231, describes the desegregation purpose of MSAP as the elimination, reduction, or prevention of MGI in elementary and secondary schools with *substantial* proportions of minority students. In accordance with section 4404 of the ESEA (20 U.S.C. 7231c) and 34 CFR 280.2, projects that are not designed to reduce, eliminate, or prevent MGI and to bring students from different social, economic, ethnic, and racial backgrounds together in accordance with an approved desegregation plan, are not eligible for MSAP funding. Additionally, for the purposes of the MSAP program, ''feeder school'' is defined in 34 CFR 280.4(b) as ''a school from which students are drawn to attend the magnet school,'' and refers to the schools that students attending magnet schools would otherwise have attended had the magnet school not been available.

Applicants are encouraged to elaborate on these summary descriptions and the content of their desegregation plans in the application's project narrative described in Section V of this notice and with an accompanying logic model demonstrating the conceptual framework for and graphically depicting how the applicant intends to achieve the summarized desegregation plan goals outlined above.

Required Desegregation Plans

1. Desegregation plans required by a court order. An applicant that submits a desegregation plan required by a court order must submit complete and signed copies of all court documents demonstrating that the magnet schools are a part of the approved desegregation plan. Examples of the types of documents that would meet this requirement include a Federal or State court order that establishes specific magnet schools, amends a previous order or orders by establishing additional or different specific magnet schools, requires or approves the establishment of one or more unspecified magnet schools, or authorizes the inclusion of magnet schools at the discretion of the applicant.

2. Desegregation plans required by a State agency or official of competent jurisdiction. An applicant submitting a desegregation plan ordered by a State agency or official of competent jurisdiction must provide documentation that shows that the desegregation plan was ordered based upon a determination that State law was violated. In the absence of this documentation, the applicant should consider its desegregation plan to be a voluntary plan and submit the data and information necessary for voluntary plans.

3. Desegregation plans required by OCR under Title VI. An applicant that submits a desegregation plan required by OCR under Title VI must submit a complete copy of the desegregation plan demonstrating that magnet schools are part of the approved plan or that the plan authorizes the inclusion of magnet schools at the discretion of the applicant.

4. Modifications to required desegregation plans. A previously approved desegregation plan that does not include the magnet school or program for which the applicant is now seeking assistance must be modified to include the magnet school component. The modification to the desegregation plan must be approved by the court, agency, or official that originally approved the plan. An applicant that wishes to modify a previously approved OCR Title VI desegregation plan to include different or additional magnet schools must submit the proposed modification for review and approval to the OCR regional office that approved its original plan.

An applicant should indicate in its application if it is seeking to modify its previously approved desegregation plan. However, all applicants must submit proof of approval of all modifications to their plans to the Department by June 22, 2022. Proof of plan modifications should be emailed to Gillian Cohen-Boyer at *msap.team@ed.gov* or mailed to her at: U.S. Department of Education, 400 Maryland Avenue SW, Room 3C134, Washington, DC 20202–5970. Telephone: (202) 401–1259.

Voluntary Desegregation Plans

A voluntary desegregation plan must be approved by the Department each time an application is considered for funding. Even if the Department has approved a voluntary desegregation plan in an LEA in the past, to be reviewed, the desegregation plan must be resubmitted with the application by the application deadline.

The Department will determine on a case-by-case basis whether a district's voluntary plan meets the statutory purpose of reducing, eliminating, or preventing MGI in its magnet or feeder schools, considering the unique circumstances in each district and school. As part of this consideration, the Department will consider, consistent with 20 U.S.C. 7231(b)(1), whether the project is designed to eliminate, reduce, or prevent MGI in elementary and/or secondary schools with substantial proportions of students from any minority group(s). We also note that Congress has recognized that ''segregation exists between minority and nonminority students as well as among students of different minority groups.'' Section 4401(a)(4)(C) of the ESEA, 20 U.S.C. 7231(a)(4)(C). This case-by-case review will include an examination of the factual basis for any proposed increases in enrollment of students from minority groups at district schools; for example, the Department will consider whether a plan to reduce, eliminate, or prevent MGI at a magnet school or at a feeder school would significantly increase MGI at any other magnet or feeder school in the LEA at the grade levels served by the magnet school.

An applicant's voluntary desegregation plan must describe how the LEA defines or identifies MGI; demonstrate how the LEA will reduce, eliminate, or prevent MGI for each magnet school in the proposed project, and, if relevant, at identified feeder schools; and demonstrate that the proposed voluntary desegregation plan is adequate under Title VI.

Under 34 CFR 280.20(f) and (g), applicants with voluntary desegregation plans must submit complete and accurate enrollment forms and other information to demonstrate their eligibility (specific requirements are detailed in the application package).

Voluntary desegregation plan applicants must submit documentation of school board approval or documentation of other official adoption of the plan as required under 34 CFR

280.20(f)(2) when submitting their application. LEAs that were previously under a required desegregation plan, but have achieved unitary status and so are voluntary desegregation plan applicants, typically would not need to include court orders. Rather, such applications should provide the documentation discussed in this section.

5. *Single-Sex Programs:* An applicant proposing to operate a single-sex magnet school or a coeducational magnet school that offers single-sex classes or extracurricular activities will undergo a review of its proposed single-sex educational program to determine compliance with applicable nondiscrimination laws, including the Equal Protection Clause of the U.S. Constitution (as interpreted in *United States* v. *Virginia,* 518 U.S. 515 (1996), and other cases) and Title IX of the Education Amendments of 1972 (20 U.S.C. 1681, *et seq.*) and its regulations—including 34 CFR 106.34. This review may require the applicant to provide additional fact-specific information about the single-sex program.

IV. Application and Submission Information

1. *Application Submission Instructions:* Applicants are required to follow the Common Instructions for Applicants to Department of Education Discretionary Grant Programs, published in the **Federal Register** on December 27, 2021 (86 FR 73264) and available at *www.federalregister.gov/d/2021–27979,* which contain requirements and information on how to submit an application. Please note that these Common Instructions supersede the version published on February 13, 2019, and, in part, describe the transition from the requirement to register in *SAM.gov* a DUNS number to the implementation of the UEI. More information on the phase-out of DUNS numbers is available at *www2.ed.gov/about/offices/list/ofo/docs/unique-entity-identifier-transition-fact-sheet.pdf.*

2. *Submission of Proprietary Information:* Given the types of projects that may be proposed in applications for the MSAP, your application may include business information that you consider proprietary. In 34 CFR 5.11, we define ''business information'' and describe the process we use in determining whether any of that information is proprietary, and thus protected from disclosure under Exemption 4 of the Freedom of Information Act (5 U.S.C. 552, as amended).

Because we plan to make successful applications available to the public, you may wish to request confidentiality of business information.

Consistent with Executive Order 12600, please designate in your application any information that you believe is exempt from disclosure under Exemption 4. In the appropriate Appendix section of your application, under ''Other Attachments Form,'' please list the page number or numbers on which we can find this information. For additional information, please see 34 CFR 5.11(c).

3. *Intergovernmental Review:* This program is subject to Executive Order 12372 and the regulations in 34 CFR part 79. Information about Intergovernmental Review of Federal Programs under Executive Order 12372 is in the application package for this competition.

4. *Funding Restrictions:* Unallowable costs are specified in section 4407 of the ESEA (20 U.S.C. 7231f). We reference additional regulations outlining funding restrictions in the *Applicable Regulations* section of this notice.

5. *Recommended Page Limit:* The application narrative is where you, the applicant, address the selection criteria that reviewers use to evaluate your application. We recommend that you (1) limit the application narrative to 150 pages and (2) use the following standards:

- A ''page'' is 8.5″ x 11″, on one side only, with 1″ margins at the top, bottom, and both sides.
- Double space (no more than three lines per vertical inch) all text in the application narrative, including titles, headings, footnotes, quotations, references, and captions, as well as all text in charts, tables, figures, and graphs.
- Use a font that is either 12 point or larger or no smaller than 10 pitch (characters per inch).
- Use one of the following fonts: Times New Roman, Courier, Courier New, or Arial.

The recommended page limit does not apply to the cover sheet; the budget section, including the narrative budget justification; the assurances, certifications, the desegregation plan and related information, and the tables used to respond to Competitive Preference Priorities 2 and 3; or the one-page abstract, the resumes, or letters of support. However, the recommended page limit does apply to all of the application narrative.

6. *Notice of Intent to Apply:* The Department will be able to review grant applications more efficiently if we know the approximate number of applicants that intend to apply. Therefore, we strongly encourage each potential applicant to notify the Department of their intent to submit an application. To do so, please submit your intent to apply by emailing *msap.team@ed.gov* with the subject line, ''[LEA Name(s)] Intent to Apply.'' Applicants that do not notify the Department of their intent to apply may still apply for funding.

V. Application Review Information

1. *Selection Criteria:* The selection criteria are from 34 CFR 75.210 and 280.31, and sections 4401 and 4405 of the ESEA.

The maximum score for all of the selection criteria is 100 points. The maximum score for each criterion is included in parentheses following the title of the specific selection criterion. Each criterion also includes the factors that reviewers will consider in determining the extent to which an applicant meets the criterion.

Points awarded under these selection criteria are in addition to any points an applicant earns under the competitive preference priorities in this notice. The maximum score that an application may receive under the competitive preference priorities and the selection criteria is 115 points.

(a) *Desegregation (up to 30 points).*

The Secretary reviews each application to determine the quality of the desegregation-related activities, including:

(1) The effectiveness of the applicant's proposed desegregation strategies for the elimination, reduction, or prevention of MGI in elementary schools and secondary schools with substantial proportions of minority students. (ESEA section 4401(b)(1))(up to 6 points)

(2) The effectiveness of its plan to recruit students from different social, economic, ethnic, and racial backgrounds into the magnet schools. (34 CFR 280.31) (up to 6 points)

(3) How it will foster interaction among students of different social, economic, ethnic, and racial backgrounds in classroom activities, extracurricular activities, or other activities in the magnet schools (or, if appropriate, in the schools in which the magnet school programs operate). (34 CFR 280.31) (up to 6 points)

(4) The importance or magnitude of the results or outcomes likely to be attained by the proposed project. (34 CFR 75.210) (up to 6 points)

(5) The extent to which there is a conceptual framework underlying the proposed research or demonstration activities and the quality of that framework. (34 CFR 75.210) (up to 6 points)

(b) *Quality of the project design (up to 30 points).*

The Secretary reviews each application to determine the quality of the project design. In determining the quality of the design of the proposed project, the Secretary considers the following factors:

(1) The manner and extent to which the magnet school program will increase student academic achievement in the instructional areas offered by the school, including any evidence, or if such evidence is not available, a rationale based on current research findings, to support such description. (ESEA section 4405(b)(1)(B)) (up to 6 points)

(2) The extent to which the training or professional development services to be provided by the proposed project are of sufficient quality, intensity, and duration to lead to improvements in practice among the recipients of those services. (34 CFR 75.210) (up to 6 points)

(3) The extent to which each magnet school for which funding is sought will encourage greater parental decision-making and involvement. (34 CFR 280.31) (up to 6 points)

(4) The extent to which the services to be provided by the proposed project involve the collaboration of appropriate partners for maximizing the effectiveness of project services. (34 CFR 75.210) (up to 6 points)

(5) How it will improve the capacity of the LEAs to continue operating magnet schools at a high performance level after Federal funding for the magnet schools is terminated. (ESEA section 4401(b)(5)) (up to 6 points)

(c) *Quality of the management plan (up to 15 points).*

The Secretary considers the quality of the management plan for the proposed project. In determining the quality of the management plan for the proposed project, the Secretary considers the following factors:

(1) The adequacy of the management plan to achieve the objectives of the proposed project on time and within budget, including clearly defined responsibilities, timelines, and milestones for accomplishing project tasks. (34 CFR 75.210) (up to 5 points)

(2) The extent to which the applicant is committed to the magnet school project and has identified other resources to continue support for the magnet school activities when assistance under this program is no longer available. (34 CFR 280.31) (up to 5 points)

(3) The extent to which the costs are reasonable in relation to the number of persons to be served and to the anticipated results and benefits. (34 CFR 75.210) (up to 5 points)

(d) *Quality of personnel (up to 5 points).*

(1) The Secretary reviews each application to determine the qualifications of the personnel the applicant plans to use on the project. The Secretary determines the extent to which—

(a) The project director (if one is used) is qualified to manage the project;

(b) Other key personnel are qualified to manage the project; and

(c) Teachers who will provide instruction in participating magnet schools are qualified to implement the special curriculum of the magnet schools. (34 CFR 280.31) (up to 3 points)

(2) To determine personnel qualifications, the Secretary considers experience and training in fields related to the objectives of the project, including the key personnel's knowledge of and experience in curriculum development and desegregation strategies. (34 CFR 280.31) (up to 2 points)

(e) *Quality of the project evaluation (up to 20 points).*

The Secretary considers the quality of the evaluation to be conducted of the proposed project. In determining the quality of the evaluation, the Secretary considers the following factors:

(1) How the applicant will assess, monitor, and evaluate the impact of the activities funded under this part on student achievement and integration. (ESEA section 4405(b)(1)(D)) (up to 6 points)

(2) The extent to which the methods of evaluation include the use of objective performance measures that are clearly related to the intended outcomes of the project and will produce quantitative and qualitative data to the extent possible. (34 CFR 75.210) (up to 7 points)

(3) The extent to which the methods of evaluation will, if well implemented, produce promising evidence (as defined in 34 CFR 77.1(c)) about the project's effectiveness. (34 CFR 75.210) (up to 7 points)

2. *Review and Selection Process:* We remind potential applicants that in reviewing applications in any discretionary grant competition, the Secretary may consider, under 34 CFR 75.217(d)(3), the past performance of the applicant in carrying out a previous award, such as the applicant's use of funds, achievement of project objectives, and compliance with grant conditions. The Secretary may also consider whether the applicant failed to submit a timely performance report or submitted a report of unacceptable quality.

In addition, in making a competitive grant award, the Secretary requires various assurances, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

3. *Risk Assessment and Specific Conditions:* Consistent with 2 CFR 200.206, before awarding grants under this competition the Department conducts a review of the risks posed by applicants. Under 2 CFR 200.208, the Secretary may impose specific conditions and, under 2 CFR 3474.10, in appropriate circumstances, high-risk conditions on a grant if the applicant or grantee is not financially stable; has a history of unsatisfactory performance; has a financial or other management system that does not meet the standards in 2 CFR part 200, subpart D; has not fulfilled the conditions of a prior grant; or is otherwise not responsible.

4. *Integrity and Performance System:* If you are selected under this competition to receive an award that over the course of the project period may exceed the simplified acquisition threshold (currently $250,000) under 2 CFR 200.206(a)(2), we must make a judgment about your integrity, business ethics, and record of performance under Federal awards—that is, the risk posed by you as an applicant—before we make an award. In doing so, we must consider any information about you that is in the integrity and performance system (currently referred to as the Federal Awardee Performance and Integrity Information System (FAPIIS), accessible through the System for Award Management. You may review and comment on any information about yourself that a Federal agency previously entered and that is currently in FAPIIS.

Please note that, if the total value of your currently active grants, cooperative agreements, and procurement contracts from the Federal Government exceeds $10,000,000, the reporting requirements in 2 CFR part 200, Appendix XII, require you to report certain integrity information to FAPIIS semiannually. Please review the requirements in 2 CFR part 200, Appendix XII, if this grant plus all the other Federal funds you receive exceed $10,000,000.

5. *In General:* In accordance with the Office of Management and Budget's guidance located at 2 CFR part 200, all applicable Federal laws, and relevant Executive guidance, the Department will review and consider applications for funding pursuant to this notice inviting applications in accordance with:

(a) Selecting recipients most likely to be successful in delivering results based

on the program objectives through an objective process of evaluating Federal award applications (2 CFR 200.205);

(b) Prohibiting the purchase of certain telecommunication and video surveillance services or equipment in alignment with section 889 of the National Defense Authorization Act of 2019 (Pub. L. 115–232) (2 CFR 200.216);

(c) Providing a preference, to the extent permitted by law, to maximize use of goods, products, and materials produced in the United States (2 CFR 200.322); and

(d) Terminating agreements in whole or in part to the greatest extent authorized by law if an award no longer effectuates the program goals or agency priorities (2 CFR 200.340).

VI. Award Administration Information

1. *Award Notices:* If your application is successful, we notify your U.S. Representative and U.S. Senators and send you a Grant Award Notification (GAN); or we may send you an email containing a link to access an electronic version of your GAN. We may notify you informally as well.

If your application is not evaluated or not selected for funding, we will notify you.

2. *Administrative and National Policy Requirements:* We identify administrative and national policy requirements in the application package and reference these and other requirements in the *Applicable Regulations* section of this notice.

We reference the regulations outlining the terms and conditions of an award in the *Applicable Regulations* section of this notice and include these and other specific conditions in the GAN. The GAN also incorporates your approved application as part of your binding commitments under the grant.

3. *Open Licensing Requirements:* Unless an exception applies, if you are awarded a grant under this competition, you will be required to openly license to the public grant deliverables created in whole, or in part, with Department grant funds. When the deliverable consists of modifications to pre-existing works, the license extends only to those modifications that can be separately identified and only to the extent that open licensing is permitted under the terms of any licenses or other legal restrictions on the use of pre-existing works. Additionally, a grantee or subgrantee that is awarded competitive grant funds must have a plan to disseminate these public grant deliverables. This dissemination plan can be developed and submitted after your application has been reviewed and selected for funding. For additional information on the open licensing requirements, please refer to 2 CFR 3474.20.

4. *Reporting:* (a) If you apply for a grant under this competition, you must ensure that you have in place the necessary processes and systems to comply with the reporting requirements in 2 CFR part 170 should you receive funding under the competition. This does not apply if you have an exception under 2 CFR 170.110(b).

(b) At the end of your project period, you must submit a final performance report, including financial information, as directed by the Secretary. If you receive a multiyear award, you must submit an annual performance report that provides the most current performance and financial expenditure information as directed by the Secretary under 34 CFR 75.118. The Secretary may also require more frequent performance reports under 34 CFR 75.720(c). For specific requirements on reporting, please go to *www.ed.gov/fund/grant/apply/appforms/appforms.html.*

(c) If awarded a grant, applicants must also submit a final evaluation report addressing the study to produce promising evidence under selection criterion factor (e)(3).

5. *Performance Measures:* For the purposes of reporting under 34 CFR 75.110, the following six performance measures have been established for the MSAP:

(a) The number and percentage of magnet schools receiving assistance whose student enrollment eliminates, reduces, or prevents MGI.

(b) The percentage increase of students from major racial and ethnic groups in magnet schools receiving assistance who score proficient or above on State assessments in reading/language arts as compared to the previous year.

(c) The percentage increase of students from major racial and ethnic groups in magnet schools receiving assistance who score proficient or above on State assessments in mathematics as compared to the previous year.

(d) The percentage of MSAP-funded magnet schools still operating magnet school programs three years after Federal funding ends.

(e) The percentage increase of students from major racial and ethnic groups in MSAP-funded magnet schools still operating magnet school programs who score proficient or above on State assessments in reading/language arts three years after Federal funding ends as compared to the final project year.

(f) The percentage increase of students from major racial and ethnic groups in MSAP-funded magnet schools still operating magnet school programs who score proficient or above on State assessments in mathematics three years after Federal funding ends as compared to the final project year.

6. *Continuation Awards:* In making a continuation award under 34 CFR 75.253, the Secretary considers, among other things: Whether a grantee has made substantial progress in achieving the goals and objectives of the project; whether the grantee has expended funds in a manner that is consistent with its approved application and budget; and, if the Secretary has established performance measurement requirements, whether the grantee has made substantial progress in achieving the performance targets in the grantee's approved application.

In making a continuation award, the Secretary also considers whether the grantee is operating in compliance with the assurances in its approved application, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

VII. Other Information

Accessible Format: On request to the program contact person listed under **FOR FURTHER INFORMATION CONTACT**, individuals with disabilities can obtain this document and a copy of the application package in an accessible format. The Department will provide the requestor with an accessible format that may include Rich Text Format (RTF) or text format (txt), a thumb drive, an MP3 file, braille, large print, audiotape, or compact disc, or other accessible format.

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register**. You may access the official edition of the **Federal Register** and the Code of Federal Regulations at *www.govinfo.gov.* At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Portable Document Format (PDF). To use PDF, you must have Adobe Acrobat Reader, which is available free at the site.

You may also access documents of the Department published in the **Federal Register** by using the article search feature at *www.federalregister.gov.* Specifically, through the advanced search feature at this site, you can limit

your search to documents published by the Department.

Ruth E. Ryder,

Deputy Assistant Secretary for Policy and Programs, Office of Elementary and Secondary Education.

BILLING CODE 4000–01–P

DEPARTMENT OF EDUCATION

Applications for New Awards; Technical Assistance and Dissemination To Improve Services and Results for Children With Disabilities—National Technical Assistance Center to Support Implementation and Scaling Up of Evidence-Based Practices

AGENCY: Office of Special Education and Rehabilitative Services, Department of Education.

ACTION: Notice.

SUMMARY: The Department of Education (Department) is issuing a notice inviting applications for new awards for fiscal year (FY) 2022 for the National Technical Assistance Center to Support Implementation and Scaling Up of Evidence-Based Practices, Assistance Listing Number (ALN) 84.326K. This notice relates to the approved information collection under OMB control number 1820–0028.

DATES:

Applications Available: February 22, 2022.

Deadline for Transmittal of Applications: April 25, 2022.

Deadline for Intergovernmental Review: June 22, 2022.

Pre-Application Webinar Information: No later than February 28, 2022, the Office of Special Education Programs (OSEP) will post details on pre-recorded informational webinars designed to provide technical assistance (TA) to interested applicants. Links to the webinars may be found at *www2.ed.gov/fund/grant/apply/osep/new-osep-grants.html.*

ADDRESSES: For the addresses for obtaining and submitting an application, please refer to our Common Instructions for Applicants to Department of Education Discretionary Grant Programs, published in the **Federal Register** on December 27, 2021 (86 FR 73264) and available at *www.federalregister.gov/d/2021-27979.* Please note that these Common Instructions supersede the version published on February 13, 2019, and, in part, describe the transition from the requirement to register in *SAM.gov* a Data Universal Numbering System (DUNS) number to the implementation of the Unique Entity Identifier (UEI). More information on the phase-out of DUNS numbers is available at *https://www2.ed.gov/about/offices/list/ofo/docs/unique-entity-identifier-transition-fact-sheet.pdf.*

FOR FURTHER INFORMATION CONTACT: Jennifer Coffey, U.S. Department of Education, 400 Maryland Avenue SW, Room 5134, Potomac Center Plaza, Washington, DC 20202–5076. Telephone: (202) 245–6673. Email: *Jennifer.Coffey@ed.gov.*

If you use a telecommunications device for the deaf (TDD) or a text telephone (TTY), call the Federal Relay Service (FRS), toll free, at 1–800–877–8339.

SUPPLEMENTARY INFORMATION:

Full Text of Announcement

I. Funding Opportunity Description

Purpose of Program: The purpose of the Technical Assistance and Dissemination to Improve Services and Results for Children with Disabilities program is to promote academic achievement and to improve results for children with disabilities by providing TA, supporting model demonstration projects, disseminating useful information, and implementing activities that are supported by scientifically based research.

Priority: This competition includes one absolute priority. In accordance with 34 CFR 75.105(b)(2)(v), this priority is from allowable activities specified in sections 663 and 681(d) of the Individuals with Disabilities Education Act (IDEA); 20 U.S.C. 1463 and 1481(d).

Absolute Priority: For FY 2022 and any subsequent year in which we make awards from the list of unfunded applications from this competition, this priority is an absolute priority. Under 34 CFR 75.105(c)(3), we consider only applications that meet this priority.

This priority is:

National Center to Support Implementation and Scaling Up of Evidence-Based Practices.

Background:

The University of Washington's Implementation Science Resource Hub defines ''implementation science'' as ''the scientific study of methods and strategies that facilitate the uptake of evidence-based practice and research into regular use by practitioners and policymakers.'' (The University of Washington, 2021). Implementation science provides the bridge between research and practice, supporting implementation of effective interventions, programs, and practices that can improve results for children with disabilities.

OSEP has supported the use of implementation science since 2007, with the inception of a TA Center created to assist State educational agencies (SEAs) in implementing and scaling up effective practices, such as evidence-based reading, math, and behavior interventions. As a result of this assistance, States are building infrastructure that supports the use and scaling up of effective practices that improve outcomes for children with disabilities (Ruedel et al., 2021). While many of these States report using the frameworks and resources developed and disseminated by OSEP's TA Center, they also report significant challenges to their efforts to create a lasting infrastructure that supports implementation (Ruedel et al., 2021). They struggle to provide support to their districts while keeping an agency-wide focus on building this infrastructure. When supported by a TA Center, partnerships among the SEA, local educational agencies (LEAs), institutions of higher education (IHEs), and regional TA providers can build a lasting statewide infrastructure.

The magnitude of change that must occur at the State, district, and school levels for large-scale use of implementation science requires a specialist who can support collaboration and systemic alignment (Kittelman et al., 2020). There is rarely a sufficient number of TA providers trained in implementation science (Sanetti & Collier-Meek, 2019) to support each district in a State. The work of the SEA is also made more challenging by staff turnover and overall lack of personnel capacity (Weiss & McGuinn, 2017).

A new corps of implementation specialists could be developed through the establishment of implementation science competencies supported via micro-credentials. These implementation specialists would then be available to assist the State, regional, and district levels of the education system. Additionally, by integrating implementation science into doctoral leadership programs, universities could support the development of implementation science competencies in their educator, leader, and scholar preparation programs.

This Center will advance the Secretary's priorities in the areas of supporting a diverse educator workforce and their professional growth to strengthen student learning and strengthening cross-agency coordination and community engagement to advance systemic change. The Center will

support States in implementing evidence-based practices that improve results for children with disabilities. The Center will also expand opportunities for educators to receive the implementation support they need.

Priority:

The purpose of this priority is to fund a cooperative agreement to establish and operate a National Technical Assistance Center to Support Implementation and Scaling Up of Evidence-Based Practices. The Center will support States' use of implementation science to create a statewide infrastructure that supports implementation of evidence-based [1] practices (EBPs). The Center must achieve, at a minimum, the following expected outcomes:

(a) Development of implementation science micro-credentials;

(b) A minimum of 25 individuals trained annually as implementation science specialists through the completion of the micro-credentials;

(c) Creation of a TA hub for OSEP-funded doctoral programs that results in at least five of these programs integrating implementation science into their program of study;

(d) A community of practice (CoP) for IHE faculty interested in learning about implementation science and how to integrate implementation science into their curricula;

(e) Integration of implementation science into the program of study of at least five OSEP-funded State leadership projects (ALN 84.325L);

(f) An infrastructure that facilitates scaling implementation supports, including developing the capacity of regional TA providers, in eight States; [2]

(g) A CoP for States interested in learning more about implementation science, but that are not yet ready for full implementation; and

(h) The integration of implementation science frameworks and related resources into the provision of TA by at least five OSEP-funded TA Centers.

In addition to these programmatic requirements, to be considered for funding under this priority, applicants must meet the application and administrative requirements in this priority, which are:

(a) Demonstrate, in the narrative section of the application under ''Significance,'' how the proposed project will—

(1) Address gaps in State infrastructure to support full implementation and scaling up of EBPs. To meet this requirement, the applicant must—

(i) Present applicable national, State, regional, and local data, and research addressing how SEAs, Regional Education Service Agencies (RESAs), IHEs, and TA providers are integrating implementation science into their services;

(ii) Demonstrate knowledge of current educational issues and policy initiatives relating to implementation science and scaling up EBPs; and

(iii) Present information about the current level of use of implementation science in the field of education; and

(2) Improve outcomes for children with disabilities by assisting with the development of statewide infrastructure that supports full implementation and scaling up of EBPs and indicate the likely magnitude or importance of the improvements.

(b) Demonstrate, in the narrative section of the application under ''Quality of project services,'' how the proposed project will—

(1) Ensure equal access and treatment for members of groups that have traditionally been underrepresented based on race, color, national origin, gender, age, or disability. To meet this requirement, the applicant must describe how it will—

(i) Identify the needs of the intended recipients for TA and information; and

(ii) Ensure that products and services meet the needs of the intended recipients of the grant;

(2) Achieve its goals, objectives, and intended outcomes. To meet this requirement, the applicant must provide—

(i) Measurable intended project outcomes; and

(ii) In Appendix A, the logic model [3] by which the proposed project will achieve its intended outcomes that depicts, at a minimum, the goals and how they will be measured, activities, outputs, and intended outcomes of the proposed project;

(3) Use a conceptual framework (and provide a copy in Appendix A) to develop project plans and activities, describing any underlying concepts, assumptions, expectations, beliefs, or theories, as well as the presumed relationships or linkages among these variables, and any empirical support for this framework;

Note: The following websites provide more information on logic models and conceptual frameworks: *https://osepideasthatwork.org/find-a-resource/cipp-logic-model-outline; https://osepideasthatwork.org/find-a-resource/logic-models-and-performance-measures;* and *www.osepideasthatwork.org/resources-grantees/program-areas/ta-ta/tad-project-logic-model-and-conceptual-framework.*

(4) Be based on current research and make use of EBPs. To meet this requirement, the applicant must describe—

(i) The current research on performance measurement related to implementation science and the EBPs that States are supporting with implementation science;

(ii) The current research about adult learning principles and implementation science that will inform the proposed TA; and

(iii) How the proposed project will incorporate current research and EBPs in the development and delivery of its products and services;

(5) Develop products and provide services that are of high quality and sufficient intensity and duration to achieve the intended outcomes of the proposed project. To address this requirement, the applicant must describe—

(i) How it proposes to identify or develop and expand the knowledge base;

(ii) Its proposed approach to universal, general TA,[4] which must identify the intended recipients, including the type and number of recipients, that will receive the products and services, a description of the products and services that the Center proposes to make available, and the expected impact of those products and services under this approach;

[1] For the purposes of this priority, ''evidence-based'' means, at a minimum, evidence that demonstrates a rationale (as defined in 34 CFR 77.1), where a key project component included in the project's logic model is informed by research or evaluation findings that suggest the project component is likely to improve relevant outcomes.

[2] Florida, New Jersey, and Virginia currently receive TA from the Center funded under the FY 2017 competition. The Center must continue to provide TA to these States, if the States elect. Note that each of the States that elects to continue receiving TA counts as one of the 8 States.

[3] Logic model (34 CFR 77.1) (also referred to as a theory of action) means a framework that identifies key project components of the proposed project (*i.e.,* the active ''ingredients'' that are hypothesized to be critical to achieving the relevant outcomes) and describes the theoretical and operational relationships among the key project components and relevant outcomes.

[4] ''Universal, general TA'' means TA and information provided to independent users through their own initiative, resulting in minimal interaction with TA center staff and including one-time, invited or offered conference presentations by TA center staff. This category of TA also includes information or products, such as newsletters, guidebooks, or research syntheses, downloaded from the TA center's website by independent users. Brief communications by TA center staff with recipients, either by telephone or email, are also considered universal, general TA.

(iii) Its proposed approach to targeted, specialized TA,[5] which must identify—

(A) The intended recipients, including the type and number of recipients, that will receive the products and services under this approach; and

(B) Its proposed approach to measure the readiness of potential TA recipients to work with the project, assessing, at a minimum, their current infrastructure, available resources, and ability to build capacity at the local level; and

(iv) Its proposed approach to intensive, sustained TA,[6] which must identify—

(A) The intended recipients, including the type and number of recipients, that will receive the products and services, a description of the products and services that the Center proposes to make available, and the expected impact of those products and services under this approach;

(B) Its proposed approach to measure the readiness of the SEAs to work with the project, including their commitment to the initiative, alignment of the initiative to their needs, current infrastructure, available resources, and ability of the SEAs to build capacity at the local level;

(C) Its proposed plan for assisting SEAs to build or enhance training systems that include professional development based on adult learning principles and coaching; and

(D) Its proposed plan for working with appropriate levels of the education system (*e.g.,* SEAs, regional TA providers, districts, schools, families) to ensure that there is communication between each level and that there are systems in place to support the use of EBPs;

(6) Develop products and implement services that maximize efficiency. To address this requirement, the applicant must describe—

(i) How the proposed project will use technology to achieve the intended project outcomes;

(ii) With whom the proposed project will collaborate and the intended outcomes of this collaboration; and

(iii) How the proposed project will use non-project resources to achieve the intended project outcomes; and

(7) Develop a dissemination plan that describes how the applicant will systematically distribute information, products, and services to varied intended audiences, using a variety of dissemination strategies, to promote awareness and use of the Center's products and services.

(c) In the narrative section of the application under ''Quality of the project evaluation,'' include an evaluation plan for the project as described in the following paragraphs. The evaluation plan must describe: Measures of progress in implementation, including the criteria for determining the extent to which the project's products and services have met the goals for reaching its target population; measures of intended outcomes or results of the project's activities in order to evaluate those activities; and how well the goals or objectives of the proposed project, as described in its logic model, have been met.

The applicant must provide an assurance that, in designing the evaluation plan, it will—

(1) Designate, with the approval of the OSEP project officer, a project liaison with sufficient dedicated time, experience in evaluation, and knowledge of the project to work in collaboration with the Center to Improve Program and Project Performance (CIPP),[7] the project director, and the OSEP project officer on the following tasks:

(i) Revise the logic model submitted in the application to provide for a more comprehensive measurement of implementation and outcomes and to reflect any changes or clarifications to the model discussed at the kick-off meeting;

(ii) Refine the evaluation design and instrumentation proposed in the application consistent with the revised logic model and using the most rigorous design suitable (*e.g.,* prepare evaluation questions about significant program processes and outcomes; develop quantitative or qualitative data collections that permit both the collection of progress data, including fidelity of implementation, as appropriate, and the assessment of project outcomes; and identify analytic strategies); and

(iii) Revise the evaluation plan submitted in the application such that it—

(A) Clearly specifies the evaluation questions, measures, and associated instruments or sources for data appropriate to answer these questions, suggests analytic strategies for those data, provides a timeline for conducting the evaluation, and includes staff assignments for completing the evaluation activities;

(B) Clearly delineates the data expected to be available by the end of the second project year for use during the project's evaluation (3+2 review) for continued funding described under the heading *Fourth and Fifth Years of the Project;* and

(C) Can be used to assist the project director and the OSEP project officer, with the assistance of CIPP, as needed, to specify the project performance measures to be addressed in the project's annual performance report;

(2) Dedicate sufficient staff time and other resources during the first six months of the project to collaborate with CIPP staff, including regular meetings (*e.g.,* weekly, biweekly, or monthly) with CIPP and the OSEP project officer, in order to accomplish the tasks described in paragraph (c)(1) of this section; and

(3) Dedicate sufficient funds in each budget year to cover the costs of carrying out the tasks described in paragraphs (c)(1) and (2) of this section and revising and implementing the evaluation plan. Please note in your budget narrative the funds dedicated for this activity.

(d) Demonstrate, in the narrative section of the application under ''Adequacy of resources and quality of project personnel,'' how—

(1) The proposed project will encourage applications for employment from persons who are members of groups that have traditionally been underrepresented based on race, color, national origin, gender, age, or disability, as appropriate;

(2) The proposed key project personnel, consultants, and subcontractors have the qualifications and experience to carry out the

[5] ''Targeted, specialized TA'' means TA services based on needs common to multiple recipients and not extensively individualized. A relationship is established between the TA recipient and one or more TA center staff. This category of TA includes one-time, labor-intensive events, such as facilitating strategic planning or hosting regional or national conferences. It can also include episodic, less labor-intensive events that extend over a period of time, such as facilitating a series of conference calls on single or multiple topics that are designed around the needs of the recipients. Facilitating communities of practice can also be considered targeted, specialized TA.

[6] ''Intensive, sustained TA'' means TA services often provided on-site and requiring a stable, ongoing relationship between the TA center staff and the TA recipient. ''TA services'' are defined as negotiated series of activities designed to reach a valued outcome. This category of TA should result in changes to policy, program, practice, or operations that support increased recipient capacity or improved outcomes at one or more systems levels.

[7] The major tasks of CIPP are to guide, coordinate, and oversee the design of formative evaluations for every large discretionary investment (*i.e.,* those awarded $500,000 or more per year and required to participate in the 3+2 process) in OSEP's Technical Assistance and Dissemination; Personnel Development; Parent Training and Information Centers; and Educational Technology, Media, and Materials programs. The efforts of CIPP are expected to enhance individual project evaluation plans by providing expert and unbiased TA in designing the evaluations with due consideration of the project's budget. CIPP does not function as a third-party evaluator.

proposed activities and achieve the project's intended outcomes;

(3) The applicant and any key partners have adequate resources to carry out the proposed activities; and

(4) The proposed costs are reasonable in relation to the anticipated results and benefits.

(e) Demonstrate, in the narrative section of the application under ''Quality of the management plan,'' how—

(1) The proposed management plan will ensure that the project's intended outcomes will be achieved on time and within budget. To address this requirement, the applicant must describe—

(i) Clearly defined responsibilities for key project personnel, consultants, and subcontractors, as applicable; and

(ii) Timelines and milestones for accomplishing the project tasks;

(2) Key project personnel and any consultants and subcontractors will be allocated and how these allocations are appropriate and adequate to achieve the project's intended outcomes;

(3) The proposed management plan will ensure that the products and services provided are of high quality, relevant, and useful to recipients; and

(4) The proposed project will benefit from a diversity of perspectives, including those of families, educators, TA providers, researchers, and policy makers, among others, in its development and operation.

(f) Address the following application requirements. The applicant must—

(1) Include, in Appendix A, personnel-loading charts and timelines, as applicable, to illustrate the management plan described in the narrative;

(2) Include, in the budget, attendance at the following:

(i) A one and one-half day kick-off meeting in Washington, DC, or virtually, after receipt of the award, and an annual planning meeting in Washington, DC, or virtually, with the OSEP project officer and other relevant staff during each subsequent year of the project period.

NOTE: Within 30 days of receipt of the award, a post-award teleconference must be held between the OSEP project officer and the grantee's project director or other authorized representative;

(ii) A two and one-half day project directors' conference in Washington, DC, or virtually, during each year of the project period;

(iii) One annual two-day trip, or virtually, to attend Department briefings, Department-sponsored conferences, and other meetings, as requested by OSEP; and

(iv) A one-day intensive 3+2 review meeting in Washington, DC, or virtually, during the last half of the second year of the project period;

(3) Include, in the budget, a line item for an annual set-aside of 5 percent of the grant amount to support emerging needs that are consistent with the proposed project's intended outcomes, as those needs are identified in consultation with, and approved by, the OSEP project officer. With approval from the OSEP project officer, the project must reallocate any remaining funds from this annual set-aside no later than the end of the third quarter of each budget period;

(4) Maintain a high-quality website, with an easy-to-navigate design, that meets government or industry-recognized standards for accessibility;

(5) Ensure that annual project progress toward meeting project goals is posted on the project website; and

(6) Include, in Appendix A, an assurance to assist OSEP with the transfer of pertinent resources and products and to maintain the continuity of services to States during the transition to this new award period and at the end of this award period, as appropriate.

Fourth and Fifth Years of the Project:

In deciding whether to continue funding the project for the fourth and fifth years, the Secretary will consider the requirements of 34 CFR 75.253(a), including—

(a) The recommendations of a 3+2 review team consisting of experts who have experience and knowledge in implementation science and EBPs. This review will be conducted during a one-day intensive meeting that will be held during the last half of the second year of the project period;

(b) The timeliness with which, and how well, the requirements of the negotiated cooperative agreement have been or are being met by the project; and

(c) The quality, relevance, and usefulness of the project's products and services and the extent to which the project's products and services are aligned with the project's objectives and likely to result in the project achieving its intended outcomes.

Under 34 CFR 75.253, the Secretary may reduce continuation awards or discontinue awards in any year of the project period for excessive carryover balances or a failure to make substantial progress. The Department intends to closely monitor unobligated balances and substantial progress under this program and may reduce or discontinue funding accordingly.

Waiver of Proposed Rulemaking: Under the Administrative Procedure Act (APA) (5 U.S.C. 553) the Department generally offers interested parties the opportunity to comment on proposed priorities. Section 681(d) of IDEA, however, makes the public comment requirements of the APA inapplicable to the priority in this notice.

Program Authority: 20 U.S.C. 1463 and 1481.

Note: Projects will be awarded and must be operated in a manner consistent with the nondiscrimination requirements contained in Federal civil rights laws.

Applicable Regulations: (a) The Education Department General Administrative Regulations in 34 CFR parts 75, 77, 79, 81, 82, 84, 86, 97, 98, and 99. (b) The Office of Management and Budget Guidelines to Agencies on Governmentwide Debarment and Suspension (Nonprocurement) in 2 CFR part 180, as adopted and amended as regulations of the Department in 2 CFR part 3485. (c) The Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards in 2 CFR part 200, as adopted and amended as regulations of the Department in 2 CFR part 3474.

Note: The regulations in 34 CFR part 79 apply to all applicants except federally recognized Indian Tribes.

Note: The regulations in 34 CFR part 86 apply to IHEs only.

II. Award Information

Type of Award: Cooperative agreement.

Estimated Available Funds: The Administration has requested

$49,345,000 for the Technical Assistance and Dissemination to Improve Services and Results for Children with Disabilities program for FY 2022, of which we intend to use an estimated $1,200,000 for this competition. The actual level of funding, if any, depends on final congressional action. However, we are inviting applications to allow enough time to complete the grant process if Congress appropriates funds for this program.

Contingent upon the availability of funds and the quality of applications, we may make additional awards in FY 2023 from the list of unfunded applications from this competition.

Maximum Award: We will not make an award exceeding $1,200,000 for a single budget period of 12 months.

Estimated Number of Awards: 1.

Note: The Department is not bound by any estimates in this notice.

Project Period: Up to 60 months.

III. Eligibility Information

1. *Eligible Applicants:* SEAs; LEAs, including public charter schools that are considered LEAs under State law; IHEs; other public agencies; private nonprofit organizations; freely associated States and outlying areas; Indian Tribes or Tribal organizations; and for-profit organizations.

2. a. *Cost Sharing or Matching:* This competition does not require cost sharing or matching.

b. *Indirect Cost Rate Information:* This program uses an unrestricted indirect cost rate. For more information regarding indirect costs, or to obtain a negotiated indirect cost rate, please see *www2.ed.gov/about/offices/list/ocfo/intro.html.*

c. *Administrative Cost Limitation:* This program does not include any program-specific limitation on administrative expenses. All administrative expenses must be reasonable and necessary and conform to the Cost Principles described in 2 CFR part 200 subpart E of the Uniform Guidance.

3. *Subgrantees:* A grantee under this competition may not award subgrants to entities to directly carry out project activities described in its application. Under 34 CFR 75.708(e), a grantee may contract for supplies, equipment, and other services in accordance with 2 CFR part 200.

4. *Other General Requirements:*

a. Recipients of funding under this competition must make positive efforts to employ and advance in employment qualified individuals with disabilities (see section 606 of IDEA).

b. Applicants for, and recipients of, funding must, with respect to the aspects of their proposed project relating to the absolute priority, involve individuals with disabilities, or parents of individuals with disabilities ages birth through 26, in planning, implementing, and evaluating the project (see section 682(a)(1)(A) of IDEA).

IV. Application and Submission Information

1. *Application Submission Instructions:* Applicants are required to follow the Common Instructions for Applicants to Department of Education Discretionary Grant Programs, published in the **Federal Register** on December 27, 2021 (86 FR 73264) and available at *www.federalregister.gov/d/2021-27979,* which contain requirements and information on how to submit an application. Please note that these Common Instructions supersede the version published on February 13, 2019, and, in part, describe the transition from the requirement to register in *SAM.gov* a DUNS number to the implementation of the UEI. More information on the phase-out of DUNS numbers is available at *https://www2.ed.gov/about/offices/list/ofo/docs/unique-entity-identifier-transition-fact-sheet.pdf.*

2. *Intergovernmental Review:* This competition is subject to Executive Order 12372 and the regulations in 34 CFR part 79. Information about Intergovernmental Review of Federal Programs under Executive Order 12372 is in the application package for this competition.

3. *Funding Restrictions:* We reference regulations outlining funding restrictions in the *Applicable Regulations* section of this notice.

4. *Recommended Page Limit:* The application narrative is where you, the applicant, address the selection criteria that reviewers use to evaluate your application. We recommend that you (1) limit the application narrative to no more than 70 pages and (2) use the following standards:

- A ''page'' is 8.5″ x 11″, on one side only, with 1″ margins at the top, bottom, and both sides.
- Double-space (no more than three lines per vertical inch) all text in the application narrative, including titles, headings, footnotes, quotations, reference citations, and captions, as well as all text in charts, tables, figures, graphs, and screen shots.
- Use a font that is 12 point or larger.
- Use one of the following fonts: Times New Roman, Courier, Courier New, or Arial.

The recommended page limit does not apply to the cover sheet; the budget section, including the narrative budget justification; the assurances and certifications; or the abstract (follow the guidance provided in the application package for completing the abstract), the table of contents, the list of priority requirements, the resumes, the reference list, the letters of support, or the appendices. However, the recommended page limit does apply to all of the application narrative, including all text in charts, tables, figures, graphs, and screen shots.

V. Application Review Information

1. *Selection Criteria:* The selection criteria for this competition are from 34 CFR 75.210 and are listed below:

(a) *Significance (10 points).*

(1) The Secretary considers the significance of the proposed project.

(2) In determining the significance of the proposed project, the Secretary considers the following factors:

(i) The extent to which specific gaps or weaknesses in services, infrastructure, or opportunities have been identified and will be addressed by the proposed project, including the nature and magnitude of those gaps or weaknesses.

(ii) The importance or magnitude of the results or outcomes likely to be attained by the proposed project.

(b) *Quality of project services (35 points).*

(1) The Secretary considers the quality of the services to be provided by the proposed project.

(2) In determining the quality of the services to be provided by the proposed project, the Secretary considers the quality and sufficiency of strategies for ensuring equal access and treatment for eligible project participants who are members of groups that have traditionally been underrepresented based on race, color, national origin, gender, age, or disability.

(3) In addition, the Secretary considers the following factors:

(i) The extent to which the goals, objectives, and outcomes to be achieved by the proposed project are clearly specified and measurable.

(ii) The extent to which the services to be provided by the proposed project reflect up-to-date knowledge from research and effective practice.

(iii) The extent to which the training or professional development services to be provided by the proposed project are of sufficient quality, intensity, and duration to lead to improvements in practice among the recipients of those services.

(iv) The extent to which the TA services to be provided by the proposed project involve the use of efficient strategies, including the use of technology, as appropriate, and the leveraging of non-project resources.

(c) *Quality of the project evaluation (20 points).*

(1) The Secretary considers the quality of the evaluation to be conducted of the proposed project.

(2) In determining the quality of the evaluation, the Secretary considers the following factors:

(i) The extent to which the methods of evaluation are thorough, feasible, and appropriate to the goals, objectives, and outcomes of the proposed project.

(ii) The extent to which the methods of evaluation provide for examining the effectiveness of project implementation strategies.

(d) *Adequacy of resources and quality of project personnel (15 points).*

(1) The Secretary considers the adequacy of resources for the proposed project and the quality of the personnel who will carry out the proposed project.

(2) In determining the quality of project personnel, the Secretary considers the extent to which the applicant encourages applications for employment from persons who are members of groups that have traditionally been underrepresented based on race, color, national origin, gender, age, or disability.

(3) In addition, the Secretary considers the following factors:

(i) The qualifications, including relevant training and experience, of key project personnel.

(ii) The relevance and demonstrated commitment of each partner in the proposed project to the implementation and success of the project.

(iii) The extent to which the budget is adequate to support the proposed project.

(e) *Quality of the management plan (20 points).*

(1) The Secretary considers the quality of the management plan for the proposed project.

(2) In determining the quality of the management plan for the proposed project, the Secretary considers the following factors:

(i) The adequacy of the management plan to achieve the objectives of the proposed project on time and within budget, including clearly defined responsibilities, timelines, and milestones for accomplishing project tasks.

(ii) The extent to which the time commitments of the project director and principal investigator and other key project personnel are appropriate and adequate to meet the objectives of the proposed project.

(iii) How the applicant will ensure that a diversity of perspectives are brought to bear in the operation of the proposed project, including those of parents, teachers, the business community, a variety of disciplinary and professional fields, recipients or beneficiaries of services, or others, as appropriate.

2. *Review and Selection Process:* We remind potential applicants that in reviewing applications in any discretionary grant competition, the Secretary may consider, under 34 CFR 75.217(d)(3), the past performance of the applicant in carrying out a previous award, such as the applicant's use of funds, achievement of project objectives, and compliance with grant conditions. The Secretary may also consider whether the applicant failed to submit a timely performance report or submitted a report of unacceptable quality.

In addition, in making a competitive grant award, the Secretary requires various assurances, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

3. *Additional Review and Selection Process Factors:* In the past, the Department has had difficulty finding peer reviewers for certain competitions because so many individuals who are eligible to serve as peer reviewers have conflicts of interest. The standing panel requirements under section 682(b) of IDEA also have placed additional constraints on the availability of reviewers. Therefore, the Department has determined that for some discretionary grant competitions, applications may be separated into two or more groups and ranked and selected for funding within specific groups. This procedure will make it easier for the Department to find peer reviewers by ensuring that greater numbers of individuals who are eligible to serve as reviewers for any particular group of applicants will not have conflicts of interest. It also will increase the quality, independence, and fairness of the review process, while permitting panel members to review applications under discretionary grant competitions for which they also have submitted applications.

4. *Risk Assessment and Specific Conditions:* Consistent with 2 CFR 200.206, before awarding grants under this competition the Department conducts a review of the risks posed by applicants. Under 2 CFR 200.208, the Secretary may impose specific conditions, and under 2 CFR 3474.10, in appropriate circumstances, high-risk conditions on a grant if the applicant or grantee is not financially stable; has a history of unsatisfactory performance; has a financial or other management system that does not meet the standards in 2 CFR part 200, subpart D; has not fulfilled the conditions of a prior grant; or is otherwise not responsible.

5. *Integrity and Performance System:* If you are selected under this competition to receive an award that over the course of the project period may exceed the simplified acquisition threshold (currently $250,000), under 2 CFR 200.206(a)(2) we must make a judgment about your integrity, business ethics, and record of performance under Federal awards—that is, the risk posed by you as an applicant—before we make an award. In doing so, we must consider any information about you that is in the integrity and performance system (currently referred to as the Federal Awardee Performance and Integrity Information System (FAPIIS)), accessible through the System for Award Management. You may review and comment on any information about yourself that a Federal agency previously entered and that is currently in FAPIIS.

Please note that, if the total value of your currently active grants, cooperative agreements, and procurement contracts from the Federal Government exceeds $10,000,000, the reporting requirements in 2 CFR part 200, Appendix XII, require you to report certain integrity information to FAPIIS semiannually. Please review the requirements in 2 CFR part 200, Appendix XII, if this grant plus all the other Federal funds you receive exceed $10,000,000.

6. *In General:* In accordance with the Office of Management and Budget's guidance located at 2 CFR part 200, all applicable Federal laws, and relevant Executive guidance, the Department will review and consider applications for funding pursuant to this notice inviting applications in accordance with—

(a) Selecting recipients most likely to be successful in delivering results based on the program objectives through an objective process of evaluating Federal award applications (2 CFR 200.205);

(b) Prohibiting the purchase of certain telecommunication and video surveillance services or equipment in alignment with section 889 of the National Defense Authorization Act for Fiscal Year 2019 (Pub. L. 115–232) (2 CFR 200.216);

(c) Providing a preference, to the extent permitted by law, to maximize

use of goods, products, and materials produced in the United States (2 CFR 200.322); and

(d) Terminating agreements in whole or in part to the greatest extent authorized by law if an award no longer effectuates the program goals or agency priorities (2 CFR 200.340).

VI. Award Administration Information

1. *Award Notices:* If your application is successful, we notify your U.S. Representative and U.S. Senators and send you a Grant Award Notification (GAN); or we may send you an email containing a link to access an electronic version of your GAN. We may notify you informally, also.

If your application is not evaluated or not selected for funding, we notify you.

2. *Administrative and National Policy Requirements:* We identify administrative and national policy requirements in the application package and reference these and other requirements in the *Applicable Regulations* section of this notice.

We reference the regulations outlining the terms and conditions of an award in the *Applicable Regulations* section of this notice and include these and other specific conditions in the GAN. The GAN also incorporates your approved application as part of your binding commitments under the grant.

3. *Open Licensing Requirements:* Unless an exception applies, if you are awarded a grant under this competition, you will be required to openly license to the public grant deliverables created in whole, or in part, with Department grant funds. When the deliverable consists of modifications to pre-existing works, the license extends only to those modifications that can be separately identified and only to the extent that open licensing is permitted under the terms of any licenses or other legal restrictions on the use of pre-existing works. Additionally, a grantee that is awarded competitive grant funds must have a plan to disseminate these public grant deliverables. This dissemination plan can be developed and submitted after your application has been reviewed and selected for funding. For additional information on the open licensing requirements please refer to 2 CFR 3474.20.

4. *Reporting:* (a) If you apply for a grant under this competition, you must ensure that you have in place the necessary processes and systems to comply with the reporting requirements in 2 CFR part 170 should you receive funding under the competition. This does not apply if you have an exception under 2 CFR 170.110(b).

(b) At the end of your project period, you must submit a final performance report, including financial information, as directed by the Secretary. If you receive a multiyear award, you must submit an annual performance report that provides the most current performance and financial expenditure information as directed by the Secretary under 34 CFR 75.118. The Secretary may also require more frequent performance reports under 34 CFR 75.720(c). For specific requirements on reporting, please go to *www.ed.gov/fund/grant/apply/appforms/appforms.html.*

5. *Performance Measures:* For the purposes of Department reporting under 34 CFR 75.110, we have established a set of performance measures, including long-term measures, that are designed to yield information on various aspects of the effectiveness and quality of the Technical Assistance and Dissemination to Improve Services and Results for Children With Disabilities program. These measures are:

- *Program Performance Measure 1:* The percentage of technical assistance and dissemination products and services deemed to be of high quality by an independent review panel of experts qualified to review the substantive content of the products and services.
- *Program Performance Measure 2:* The percentage of special education technical assistance and dissemination products and services deemed by an independent review panel of qualified experts to be of high relevance to educational and early intervention policy or practice.
- *Program Performance Measure 3:* The percentage of all special education technical assistance and dissemination products and services deemed by an independent review panel of qualified experts to be useful in improving educational or early intervention policy or practice.
- *Program Performance Measure 4:* The cost efficiency of the Technical Assistance and Dissemination to Improve Services and Results for Children with Disabilities program includes the percentage of milestones achieved in the current annual performance report period and the percentage of funds spent during the current fiscal year.
- *Long-term Program Performance Measure:* The percentage of States receiving special education technical assistance and dissemination services regarding scientifically or evidence-based practices for infants, toddlers, children, and youth with disabilities that successfully promote the implementation of those practices in school districts and service agencies.

The measures apply to projects funded under this competition, and grantees are required to submit data on these measures as directed by OSEP.

Grantees will be required to report information on their project's performance in annual and final performance reports to the Department (34 CFR 75.590).

The Department will also closely monitor the extent to which the products and services provided by the Center meet needs identified by stakeholders and may require the Center to report on such alignment in their annual and final performance reports.

6. *Continuation Awards:* In making a continuation award under 34 CFR 75.253, the Secretary considers, among other things: Whether a grantee has made substantial progress in achieving the goals and objectives of the project; whether the grantee has expended funds in a manner that is consistent with its approved application and budget; and, if the Secretary has established performance measurement requirements, whether the grantee has made substantial progress in achieving the performance targets in the grantee's approved application.

In making a continuation award, the Secretary also considers whether the grantee is operating in compliance with the assurances in its approved application, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

VII. Other Information

Accessible Format: On request to the program contact person listed under **FOR FURTHER INFORMATION CONTACT**, individuals with disabilities can obtain this document and a copy of the application package in an accessible format. The Department will provide the requestor with an accessible format that may include Rich Text Format (RTF) or text format (txt), a thumb drive, an MP3 file, braille, large print, audiotape, or compact disc, or other accessible format.

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register**. You may access the official edition of the **Federal Register** and the Code of Federal Regulations at *www.govinfo.gov.* At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Portable Document Format (PDF). To use PDF you must have

Adobe Acrobat Reader, which is available free at the site.

You may also access documents of the Department published in the **Federal Register** by using the article search feature at *www.federalregister.gov.* Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

Katherine Neas,

Deputy Assistant Secretary, Delegated the authority to perform the functions and duties of the Assistant Secretary for the Office of Special Education and Rehabilitative Services.

[FR Doc. 2022–03680 Filed 2–18–22; 8:45 am]

BILLING CODE 4000–01–P

DEPARTMENT OF EDUCATION

Applications for New Awards; Educational Technology, Media, and Materials for Individuals With Disabilities Program—Stepping-Up Technology Implementation

AGENCY: Office of Special Education and Rehabilitative Services, Department of Education.

ACTION: Notice.

SUMMARY: The Department of Education (Department) is issuing a notice inviting applications for new awards for fiscal year (FY) 2022 for Stepping-up Technology Implementation, Assistance Listing Number 84.327S. This notice relates to the approved information collection under OMB control number 1820–0028.

DATES:

Applications Available: February 22, 2022.

Deadline for Transmittal of Applications: April 25, 2022.

Deadline for Intergovernmental Review: June 22, 2022.

Pre-Application Webinar Information: No later than February 28, 2022, the Office of Special Education Programs (OSEP) will post details on pre-recorded informational webinars designed to provide technical assistance (TA) to interested applicants. Links to the webinars may be found at *www2.ed.gov/fund/grant/apply/osep/new-osep-grants.html.*

ADDRESSES: For the addresses for obtaining and submitting an application, please refer to our Common Instructions for Applicants to Department of Education Discretionary Grant Programs, published in the **Federal Register** on December 27, 2021 (86 FR 73264) and available at *www.federalregister.gov/d/2021–27979.* Please note that these Common Instructions supersede the version published on February 13, 2019, and, in part, describe the transition from the requirement to register in *SAM.gov* a Data Universal Numbering System (DUNS) number to the implementation of the Unique Entity Identifier (UEI). More information on the phase-out of DUNS numbers is available at *https://www2.ed.gov/about/offices/list/ofo/docs/unique-entity-identifier-transition-fact-sheet.pdf.*

FOR FURTHER INFORMATION CONTACT: Richelle Davis, U.S. Department of Education, 400 Maryland Avenue SW, Room 5025, Potomac Center Plaza, Washington, DC 20202–5076. Telephone: (202) 245–7401. Email: *Richelle.Davis@ed.gov.*

If you use a telecommunications device for the deaf (TDD) or a text telephone (TTY), call the Federal Relay Service (FRS), toll free, at 1–800–877–8339.

SUPPLEMENTARY INFORMATION:

Full Text of Announcement

I. Funding Opportunity Description

Purpose of Program: The purposes of the Educational Technology, Media, and Materials for Individuals with Disabilities Program are to improve results for children with disabilities by: (1) Promoting the development, demonstration, and use of technology; (2) supporting educational activities designed to be of educational value in the classroom for children with disabilities; (3) providing support for captioning and video description that is appropriate for use in the classroom; and (4) providing accessible educational materials to children with disabilities in a timely manner.[1]

Priorities: This competition includes one absolute priority and one competitive preference priority. In accordance with 34 CFR 75.105(b)(2)(v), the absolute priority is from allowable activities specified in sections 674(c)(1)(D) and 681(d) of the Individuals with Disabilities Education Act (IDEA); 20 U.S.C. 1474(c)(1)(D) and 1481(d). The competitive preference priority is from the Secretary's Administrative Priorities for Discretionary Grant Programs published in the **Federal Register** on March 9, 2020 (85 FR 13640) (Administrative Priorities).

Absolute Priority: For FY 2022 and any subsequent year in which we make awards from the list of unfunded applications from this competition, this priority is an absolute priority. Under 34 CFR 75.105(c)(3), we consider only applications that meet this priority.

This priority is:

Supporting Early Childhood and K–12 Educators of English Learners (ELs) with Disabilities and ELs at Risk to Deliver Literacy Instruction Based on the Science of Reading.

Background:

Since 2010, the number of ELs in American public schools has increased by five million students (National Center on Education Statistics, 2020). Data has consistently shown poorer academic outcomes for ELs compared to their non-EL peers, particularly in reading (Mancilla-Martinez, 2020). These poor reading outcomes are even more apparent for ELs with disabilities. For example, a greater proportion of ELs with disabilities (4th grade: 89 percent; 8th grade: 89 percent) scored below the basic level on the 2019 National Assessment of Educational Progress (NAEP) in reading, compared to all students with disabilities who scored below the basic level (4th grade: 67 percent; 8th grade: 60 percent) or ELs without disabilities who scored below the basic level (4th grade: 61 percent; 8th grade: 68 percent) (U.S. Department of Education, 2021). This reading achievement gap for ELs has remained static for over a decade. Given EL reading outcomes, increasing equity in educational opportunity and providing supports to improve literacy skills is a pressing educational necessity (Mancilla-Martinez, 2020).

Many educators report using some type of digital learning resource or technologies to provide instruction on a daily or weekly basis to ELs (U.S. Department of Education, 2019). Improving the capacity of educators to use the most appropriate and effective technologies in their delivery of literacy instruction that meet their students' needs is important for improving literacy outcomes. Technology that provides a range of support features (*e.g.,* visual, auditory), in multiple languages, is also viewed by educators as critical for supporting ELs' learning of content and building language and literacy skills. Educators are interested in how technologies can be used to individualize and adapt literacy instruction based on the student's

[1] Applicants should note that other laws, including the Americans with Disabilities Act of 1990 (42 U.S.C. 12101 *et seq.*; 28 CFR part 35) and section 504 of the Rehabilitation Act of 1973, as amended (29 U.S.C. 794; 34 CFR part 104), may require that State educational agencies (SEAs) and local educational agencies (LEAs) provide captioning, video description, and other accessible educational materials to students with disabilities when these materials are necessary to provide equally integrated and equally effective access to the benefits of the educational program or activity, or as part of a ''free appropriate public education'' as defined in 34 CFR 104.33.

individual needs while considering a student's level of English language proficiency.

Technology alone cannot be effective without the necessary professional learning and coaching to support educators on how to use the technology appropriately and effectively. Professional learning should focus on (1) how technology can improve literacy instruction; (2) how to effectively use the technology; (3) supporting meaningful collaborative learning opportunities with other educators and students; (4) aligning the technology enhanced instruction with existing curricula, State standards, and school initiatives; (5) promoting student motivation and engagement in language learning; and (6) fostering parent-teacher partnerships, including understanding the vital role of EL's families, becoming informed and appreciative of the various language and literacy practices, and building relationships between families and schools by changing instructional practices and outreach.

Professional learning should emphasize the vital role that families play in building early literacy skills of ELs, the value of the relationships and interactions of the home and community, and strategies on how to draw on the unique personal and cultural perspectives that ELs bring to the classroom (Grant et al., 2017).

Priority:

The purpose of this priority is to fund three cooperative agreements to establish and operate projects that achieve, at a minimum, the following expected outcomes:

(a) Proven strategies to effectively implement and integrate an existing accessible technology-based tool or approach, based on at least promising evidence,[2] to deliver and improve reading instruction for ELs with, and at risk for, disabilities;

(b) Increased educators'[3] use and knowledge of technology to deliver effective reading instruction for ELs with, or at risk for, disabilities through professional learning and coaching;

(c) Increased educator collaboration and professional learning opportunities to use technology to improve reading outcomes of ELs with, and at risk for, disabilities and to engage families to support their child's learning in the classroom and at home; and

(d) Improved engagement in reading instruction and self-regulated learning opportunities leading to improved reading achievement for ELs with, and at risk for, disabilities.

To be considered for funding under this priority, in the application, applicants must describe how they will—

(a) Build partnerships with early childhood programs or local educational agencies (LEAs), at least one of which is in a rural site,[4] to support educators in the understanding, use, and delivery of a technology-based tool or approach[5] to deliver reading instruction for ELs with, and at risk for, disabilities in PK–12 instructional settings, including classrooms and remote learning environments;

(b) Increase the capacity of educators and families to effectively use and deliver a technology-based tool or approach that supports PK–12 instructional settings, including classrooms and remote learning environments for instruction and professional growth;

(c) Develop an implementation package of accessible products and resources that will help educators and families to effectively use a technology-based tool or approach; and

(d) Evaluate whether the technology-based tool or approach meets the project goals and targeted outcomes.

In addition to these programmatic requirements, to be considered for funding under this priority, applicants must meet the application and administrative requirements in this priority, which are:

(a) Demonstrate, in the narrative section of the application under ''Significance,'' how the proposed project will address the need for a technology-based tool or approach and identify specific gaps and challenges, infrastructure, or opportunities to support educators' development. To meet this requirement the applicant must—

(1) Identify a fully developed technology-based tool or approach that is based on at least promising evidence;

(2) Identify how the technology-based tool or approach will improve educators' pedagogy and their capacity to deliver reading instruction or services for ELs with, and at risk for, disabilities in PK–12 instructional settings, including classrooms and remote learning environments;

(3) Present applicable national, State, regional, or local data demonstrating the need for the identified technology-based tool or approach to support ELs with, and at risk for, disabilities in PK–12 instructional settings, including classrooms and remote learning environments;

(4) Identify current policies, procedures, and practices used by educators that effectively incorporate technology-based tools or approaches to support reading outcomes for ELs with, and at risk for, disabilities;

(5) Identify systemic barriers, gaps, or challenges, including challenges to using the identified technology-based tool or approach; and

(6) Describe the potential impact of the identified technology-based tool or approach on educators, families, and children with disabilities.

(b) Demonstrate, in the narrative section of the application under ''Quality of project services,'' how the proposed project will—

(1) Ensure equal access and treatment for members of groups that have traditionally been underrepresented based on race, color, national origin, gender, age, or disability. To meet this requirement, the applicant must describe how it will—

(i) Identify the needs of the intended recipients for ongoing professional learning and coaching supports; and

(ii) Ensure that products and resources meet the needs of the intended recipients of the grant;

(2) Achieve its goals, objectives, and intended outcomes. To meet this

[2] Promising evidence means that there is evidence of the effectiveness of a key project component in improving a relevant outcome, based on a relevant finding from one of the following: (a) A practice guide prepared by the What Works Clearinghouse (WWC) reporting a ''strong evidence base'' or ''moderate evidence base'' for the corresponding practice recommendation; (b) an intervention report prepared by the WWC reporting a ''positive effect'' or ''potentially positive effect'' on a relevant outcome with no reporting of a ''negative effect'' or ''potentially negative effect'' on a relevant outcome; or (c) a single study assessed by the Department, as appropriate, that is an experimental study, a quasi-experimental design study, or a well-designed and well-implemented correlational study with statistical controls for selection bias (*e.g.,* a study using regression methods to account for differences between a treatment group and a comparison group); and includes at least one statistically significant and positive (*i.e.,* favorable) effect on a relevant outcome. See 34 CFR 77.1 for definitions of ''promising evidence,'' ''experimental study,'' ''moderate evidence,'' ''quasi-experimental design study,'' ''relevant outcome,'' and ''strong evidence.''

[3] For the purpose of this priority, ''educators'' include teachers, early childhood providers, administrators, paraprofessionals, and speech-language pathologists.

[4] ''Rural site'' is based on the National Center for Education Statistics (NCES) revised definitions of school locale types that can be found at *https://nces.ed.gov/surveys/ruraled/definitions.asp.* Rural can be considered as ''fringe, less than or equal to 5 miles from an urbanized area, as well as rural territory that is less than or equal to 2.5 miles from an urban cluster''; ''distant, more than 5 miles but less than or equal to 25 miles from an urbanized area, as well as rural territory that is more than 2.5 miles but less than or equal to 10 miles from an urban cluster''; or ''remote, more than 25 miles from an urbanized area and is also more than 10 miles from an urban cluster.''

[5] ''Technology-based tool or approach'' refers to the technology the applicant is proposing that is supported, at a minimum, by ''promising evidence'' with the population intended.

requirement, the applicant must provide measurable intended project outcomes;

(3) Be based on current research. To meet this requirement, the applicant must—

(i) Describe how the proposed project will align with current research, policies, and practices related to the benefits, services, or opportunities that are available using the technology-based tool or approach;

(ii) Describe how the proposed project will incorporate current and sound research and practices to guide the development and delivery of its products and resources, including accessibility and usability; and

(iii) Document that the technology tool used by the project is fully developed, has been tested and shown to have promising evidence, and addresses, at a minimum, the following principles of universal design for learning (UDL):

(A) Multiple means of presentation so that information can be delivered in more than one way (*e.g.,* specialized software and websites, screen readers that include features such as text-to-speech, changeable color contrast, alterable text size, or selection of different reading levels);

(B) Multiple means of expression that allow knowledge to be exhibited through options such as writing, online concept mapping, or speech-to-text programs, where appropriate; and

(C) Multiple means of engagement to stimulate interest in and motivation for learning (*e.g.,* options among several different learning activities or content for a particular competency or skill and providing opportunities for increased collaboration consistent with UDL principles); and

(4) Develop new products and resources that are of high quality and sufficient intensity and duration to achieve the intended outcomes of the proposed project. To address this requirement, the applicant must—

(i) Provide a plan for recruiting and selecting a wide range of settings where ELs with, and at risk for, disabilities are served, which must include the following:

(A) Three development sites.[6] Development sites are the sites in which iterative development of the products and resources intended to support the implementation of the technology-based tool or approach will occur. The project must start implementing the technology tool with one development site in year one of the project period and two additional development sites in year two.

(B) Four pilot sites. Pilot sites are the sites in which try-out, formative evaluation, and refinement of the products and resources will occur. The project must work with the four pilot sites during years three and four of the project period.

(C) Ten dissemination sites. Dissemination/scale-up sites will be selected if the project is extended for a fifth year. Dissemination/scale-up sites will be used to (1) refine the products for use by educators and students, and (2) evaluate the performance of the technology tool on educators' pedagogy and students' reading outcomes. Dissemination/scale-up sites will receive less TA from the project than development and pilot sites. Also, dissemination/scale-up sites will extend the benefits of the technology tool to additional students. To be selected as a dissemination/scale-up site, eligible sites must commit to working with the project to implement the technology tool.

Note: The following website provides more information about implementation research: *https://nirn.fpg.unc.edu/national-implementation-research-network.*

(D) A site may not serve in more than one category (*i.e.,* development, pilot, dissemination/scale-up).

(E) A minimum of two of the seven development and pilot sites must include rural sites. A minimum of four of the 10 dissemination/scale-up sites must include rural sites.

(ii) Provide information on the development and pilot sites, including student demographics and other pertinent data (*e.g.,* whether the settings are schools identified for comprehensive or targeted support and improvement in accordance with section 1111(c)(4)(C)(iii), (c)(4)(D), or (d)(2)(C)–(D) of the Elementary and Secondary Education Act of 1965, as amended);

(iii) Provide a plan for dissemination, which must address how the project will systematically distribute information, products, and services to varied intended audiences, using a variety of dissemination strategies, to promote awareness and use of the project's products and resources that goes beyond conference presentations and research articles;

(iv) Provide its plan for how the project will sustain project activities that go beyond conference presentations and research articles after funding ends; and

(v) Provide assurances that the final products disseminated to help sites effectively implement the technology-based tool or approach will be both open educational resources (OER) and licensed through an open access licensing authority.

(c) In the narrative section of the application under ''Quality of the project evaluation,'' include an evaluation plan for the project as described in the following paragraphs. The evaluation plan must describe measures of progress in implementation, including the criteria for determining the extent to which the project's products and resources have met the goals for reaching the project's target population; measures of intended outcomes or results of the project's activities to evaluate those activities; and how the project will assess whether the goals or objectives of the proposed project, as described in its logic model,[7] have been met.

The applicant must provide an assurance that, in designing the evaluation plan, it will—

(1) Provide a logic model or conceptual framework that depicts, at a minimum, the goals, activities, project evaluation, methods, performance measures, outputs, and outcomes of the proposed project;

(2) Provide a plan to implement the activities described in this priority;

(3) Provide a plan, linked to the proposed project's logic model or conceptual framework, for a formative evaluation of the proposed project's activities. The plan must describe how the formative evaluation will use clear performance objectives to ensure continuous improvement in the operation of the proposed project, including objective measures of progress in implementing the project and ensuring the quality of products and resources;

(4) Describe a plan or method for assessing—

(i) The development and pilot sites' current educator training use and needs, any current technology investments, and the knowledge and availability of dedicated on-site technology training personnel;

(ii) The readiness of development and pilot sites to pilot or try-out the technology-based tool or approach, including, at a minimum, their current

[6] For this priority, a ''site'' is a school building or early childhood program within the local educational agency (LEA) or early childhood agency (ECA).

[7] Logic model (34 CFR 77.1) (also referred to as a theory of action) means a framework that identifies key project components of the proposed project (*i.e.,* the active ''ingredients'' that are hypothesized to be critical to achieving the relevant outcomes) and describes the theoretical and operational relationships among the key project components and relevant outcomes.

infrastructure, available resources, and ability to build capacity;

(iii) Whether the technology-based tool or approach has achieved its intended outcomes for PK–12 educators, families, and EL students with, and at risk for, disabilities; and

(iv) The ongoing professional learning needs of educators to implement with fidelity;

(5) Collect formative and summative data from the professional learning and coaching to refine and evaluate the products;

(6) If the project is extended to a fifth year—

(i) Provide the implementation package of products and resources developed for the technology-based tool or approach to no fewer than 10 additional school sites, four of which must be rural, in year five; and

(ii) Collect summative data about the success of the project's products and resources in supporting implementation of the technology-based tool or approach for educators and families of ELs with, and at risk for, disabilities; and

(7) By the end of the project period, provide—

(i) Information on the products and resources, as supported by the project evaluation, including accessibility features, that will enable other sites to implement and sustain implementation of the technology-based tool or approach;

(ii) Information in the project's Implementation Report, including data on how intended users (*e.g.,* educators, families, and students) utilized the technology-based tool or approach, how the technology-based tool or approach was implemented with fidelity, and how effective the technology-based tool or approach was in improving reading outcomes for ELs with, and at risk for, disabilities;

(iii) Data on how the technology-based tool or approach changed educators' practices; and

(iv) A plan for disseminating or scaling up the technology-based tool or approach and accompanying products beyond the sites directly involved in the project.

(d) Demonstrate, in the narrative section of the application under ''Adequacy of resources and quality of project personnel,'' how—

(1) The proposed project will encourage applications for employment from persons who are members of groups that have traditionally been underrepresented based on race, color, national origin, gender, age, or disability, as appropriate;

(2) The proposed key project personnel, consultants, and subcontractors have the qualifications and experience to carry out the proposed activities and achieve the project's intended outcomes;

(3) The applicant and any key partners have adequate resources to carry out the proposed activities; and

(4) The proposed costs are reasonable in relation to the anticipated results and benefits.

(e) Demonstrate, in the narrative section of the application under ''Quality of the management plan,'' how—

(1) The proposed management plan will ensure that the project's intended outcomes will be achieved on time and within budget. To address this requirement, the applicant must describe—

(i) Clearly defined responsibilities for key project personnel, consultants, and subcontractors, as applicable; and

(ii) Timelines and milestones for accomplishing the project tasks;

(2) Key project personnel and any consultants and subcontractors will be allocated and how these allocations are appropriate and adequate to achieve the project's intended outcomes;

(3) The proposed management plan will ensure that the products and resources provided are of high quality, relevant, and useful to recipients; and

(4) The proposed project will benefit from a diversity of perspectives, including those of families, educators, researchers, and policy makers, among others, in its development and operation.

(f) Address the following application requirements. The applicant must include—

(1) In Appendix A, personnel-loading charts and timelines, as applicable, to illustrate the management plan described in the narrative;

(2) In Appendix A, the logic model or conceptual framework by which the proposed project will develop project plans and activities and achieve its intended outcomes. The logic model or conceptual framework must include a description of any underlying concepts, assumptions, expectations, beliefs, or theories, as well as the presumed relationships or linkages among these variables, and any empirical support for this framework and depict, at a minimum, the goals, activities, outputs, and intended outcomes of the proposed project.

Note: The following websites provide more information on logic models and conceptual frameworks: *www.osepideasthatwork.org/logicModel* and *www.osepideasthatwork.org/resources-grantees/program-areas/ta-ta/tad-project-logic-model-and-conceptual-framework*; and

(3) In the budget, attendance at the following:

(i) A one and one-half day kick-off meeting in Washington, DC, or virtually, after receipt of the award, and an annual planning meeting in Washington, DC, or virtually, with the Office of Special Education Programs (OSEP) project officer and other relevant staff during each subsequent year of the project period.

Note: Within 30 days of receipt of the award, a post-award teleconference must be held between the OSEP project officer and the grantee's project director or other authorized representative.

(ii) A two and one-half-day project directors' conference in Washington, DC, or virtually, during each year of the project period.

(iii) Two annual two-day trips, or virtually, to attend Department briefings, Department-sponsored conferences, and other meetings, as requested by OSEP.

(iv) A one-day intensive, virtual OSEP review meeting during the last half of the second year of the project period.

Cohort Collaboration and Support

OSEP project officer(s) will provide coordination support among the projects. Each project funded under this priority must—

(a) Participate in monthly conference-call discussions to share and collaborate on implementation and project issues; and

(b) Provide information annually using a template that captures descriptive data on project site selection and the processes for implementation and use of the technology-based tool or approach.

Fifth Year of Project

The Secretary may extend a project one year beyond the initial 48 months to work with dissemination/scale-up sites if the grantee is substantially achieving the intended outcomes of the project (as demonstrated by data gathered as part of the project evaluation) and making a positive contribution to the implementation of a technology-based tool or approach based on at least promising evidence in the development and pilot sites. Each applicant must include in its application a plan for the full 60-month period. In deciding whether to continue funding the project for the fifth year, the Secretary will consider the requirements of 34 CFR 75.253(a), including—

(a) The recommendations of a review team consisting of the OSEP project officer and other experts who have experience and knowledge in

technology implementation for personnel serving children with disabilities. This review will be held during the last half of the second year of the project period;

(b) The timeliness with which, and how well, the requirements of the negotiated cooperative agreement have been or are being met by the project; and

(c) The degree to which the project's activities have changed practices and improved outcomes for PK–12 educators, and ELs with, and at risk for, disabilities.

Under 34 CFR 75.253, the Secretary may reduce continuation awards or discontinue awards in any year of the project period for excessive carryover balances or a failure to make substantial progress. The Department intends to closely monitor unobligated balances and substantial progress under this program and may reduce or discontinue funding accordingly.

Competitive Preference Priority: For FY 2022, this priority is a competitive preference priority. Under 34 CFR 75.105(c)(2)(i), we award an additional three points to an application that meets the competitive preference priority. Applicants should indicate in the abstract if the competitive preference priority is addressed and must address the competitive preference priority in the narrative section.

This priority is:

Applications from New Potential Grantees (0 or 3 points).

(a) Under this priority, an applicant must demonstrate that the applicant has not had an active discretionary grant under the 84.327S program from which it seeks funds, including through membership in a group application submitted in accordance with 34 CFR 75.127–75.129, five years before the deadline date for submission of applications under the program.

(b) For the purpose of this priority, a grant or contract is active until the end of the grant's or contract's project or funding period, including any extensions of those periods that extend the grantee's or contractor's authority to obligate funds.

Waiver of Proposed Rulemaking: Under the Administrative Procedure Act (APA) (5 U.S.C. 553) the Department generally offers interested parties the opportunity to comment on proposed priorities. Section 681(d) of IDEA, however, makes the public comment requirements of the APA inapplicable to the absolute priority in this notice.

Program Authority: 20 U.S.C. 1474 and 1481.

Note: Projects will be awarded and must be operated in a manner consistent with nondiscrimination requirements contained in Federal civil rights laws.

Applicable Regulations: (a) The Education Department General Administrative Regulations in 34 CFR parts 75, 77, 79, 81, 82, 84, 86, 97, 98, and 99. (d) Administrative Priorities.

Note: The regulations in 34 CFR part 79 apply to all applicants except federally recognized Indian Tribes.

Note: The regulations in 34 CFR part 86 apply to institutions of higher education (IHEs) only.

II. Award Information

Type of Award: Cooperative agreements.

Estimated Available Funds: The Administration has requested $29,547,000 for the Educational Technology, Media, and Materials for Individuals with Disabilities program for FY 2022, of which we intend to use an estimated $1,500,000 for this competition. The actual level of funding, if any, depends on final congressional action. However, we are inviting applications to allow enough time to complete the grant process if Congress appropriates funds for this program.

Contingent upon the availability of funds and the quality of applications, we may make additional awards in FY 2023 from the list of unfunded applications from this competition.

Estimated Range of Awards: $450,000 to $500,000 per year.

Estimated Average Size of Awards: $475,000 per year.

Maximum Award: We will not make an award exceeding $2,500,000 for the 60-month project period.

Estimated Number of Awards: 3.

Note: The Department is not bound by any estimates in this notice.

Project Period: Up to 60 months.

III. Eligibility Information

1. *Eligible Applicants:* SEAs; LEAs, including public charter schools that operate as LEAs under State law; IHEs; other public agencies; private nonprofit organizations; freely associated States and outlying areas; Indian Tribes or Tribal organizations; and for-profit organizations.

2. a. *Cost Sharing or Matching:* This program does not require cost sharing or matching.

b. *Indirect Cost Rate Information:* This program uses an unrestricted indirect cost rate. For more information regarding indirect costs, or to obtain a negotiated indirect cost rate, please see *www2.ed.gov/about/offices/list/ocfo/intro.html.*

c. *Administrative Cost Limitation:* This program does not include any program-specific limitation on administrative expenses. All administrative expenses must be reasonable and necessary and conform to the Cost Principles described in 2 CFR part 200 subpart E of the Uniform Guidance.

3. *Subgrantees:* A grantee under this competition may not award subgrants to entities to directly carry out project activities described in its application. Under 34 CFR 75.708(e), a grantee may contract for supplies, equipment, and other services in accordance with 2 CFR part 200.

4. *Other General Requirements:*

a. Recipients of funding under this competition must make positive efforts to employ and advance in employment

qualified individuals with disabilities (see section 606 of IDEA).

b. Applicants for, and recipients of, funding must, with respect to the aspects of their proposed project relating to the absolute priority, involve individuals with disabilities, or parents of individuals with disabilities ages birth through 26, in planning, implementing, and evaluating the project (see section 682(a)(1)(A) of IDEA).

IV. Application and Submission Information

1. *Application Submission Instructions:* Applicants are required to follow the Common Instructions for Applicants to Department of Education Discretionary Grant Programs, published in the **Federal Register** on December 27, 2021 (86 FR 73264) and available at *www.federalregister.gov/d/2021–27979,* which contain requirements and information on how to submit an application. Please note that these Common Instructions supersede the version published on February 13, 2019, and, in part, describe the transition from the requirement to register in SAM.gov a DUNS number to the implementation of the UEI. More information on the phase-out of DUNS numbers is available at *https://www2.ed.gov/about/offices/list/ofo/docs/unique-entity-identifier-transition-fact-sheet.pdf.*

2. *Intergovernmental Review:* This competition is subject to Executive Order 12372 and the regulations in 34 CFR part 79. Information about Intergovernmental Review of Federal Programs under Executive Order 12372 is in the application package for this competition.

3. *Funding Restrictions:* We reference regulations outlining funding restrictions in the *Applicable Regulations* section of this notice.

4. *Recommended Page Limit:* The application narrative is where you, the applicant, address the selection criteria that reviewers use to evaluate your application. We recommend that you (1) limit the application narrative to no more than 50 pages and (2) use the following standards:

- A ''page'' is 8.5″ x 11″, on one side only, with 1″ margins at the top, bottom, and both sides.
- Double-space (no more than three lines per vertical inch) all text in the application narrative, including titles, headings, footnotes, quotations, reference citations, and captions, as well as all text in charts, tables, figures, graphs, and screen shots.
- Use a font that is 12 point or larger.
- Use one of the following fonts: Times New Roman, Courier, Courier New, or Arial.

The recommended page limit does not apply to the cover sheet; the budget section, including the narrative budget justification; the assurances and certifications; or the abstract (follow the guidance provided in the application package for completing the abstract), the table of contents, the list of priority requirements, the resumes, the reference list, the letters of support, or the appendices. However, the recommended page limit does apply to all of the application narrative, including all text in charts, tables, figures, graphs, and screen shots.

V. Application Review Information

1. *Selection Criteria:* The selection criteria for this competition are from 34 CFR 75.210 and are as follows:

(a) *Significance (15 points).*

(1) The Secretary considers the significance of the proposed project.

(2) In determining the significance of the proposed project, the Secretary considers the following factors:

(i) The significance of the problem or issue to be addressed by the proposed project;

(ii) The extent to which specific gaps or weaknesses in services, infrastructure, or opportunities have been identified and will be addressed by the proposed project, including the nature and magnitude of those gaps or weaknesses;

(iii) The potential contribution of the proposed project to increased knowledge or understanding of educational problems, issues, or effective strategies; and

(iv) The potential replicability of the proposed project or strategies, including, as appropriate, the potential for implementation in a variety of settings.

(b) *Quality of project services (30 points).*

(1) The Secretary considers the quality of the services to be provided by the proposed project.

(2) In determining the quality of the services to be provided by the proposed project, the Secretary considers the quality and sufficiency of strategies for ensuring equal access and treatment for eligible project participants who are members of groups that have traditionally been underrepresented based on race, color, national origin, gender, age, or disability.

(3) In addition, the Secretary considers the following factors:

(i) The extent to which the services to be provided by the proposed project reflect up-to-date knowledge from research and effective practice;

(ii) The extent to which the professional learning and coaching services to be provided by the proposed project are of sufficient quality, intensity, and duration to lead to improvements in practice among the recipients of those services;

(iii) The extent to which the services to be provided by the proposed project involve the collaboration of appropriate partners for maximizing the effectiveness of project services;

(iv) The extent to which the services to be provided by the proposed project are appropriate to the needs of the intended recipients or beneficiaries of those services; and

(v) The likely impact of the services to be provided by the proposed project on the intended recipients of those services.

(c) *Quality of the project evaluation (20 points).*

(1) The Secretary considers the quality of the evaluation to be conducted of the proposed project.

(2) In determining the quality of the evaluation, the Secretary considers the following factors:

(i) The extent to which the methods of evaluation are thorough, feasible, and appropriate to the goals, objectives, and outcomes of the proposed project;

(ii) The extent to which the methods of evaluation include the use of objective performance measures that are clearly related to the intended outcomes of the project and will produce quantitative and qualitative data to the extent possible;

(iii) The extent to which the methods of evaluation provide for examining the effectiveness of project implementation strategies;

(iv) The extent to which the methods of evaluation will provide performance feedback and permit periodic assessment of progress toward achieving intended outcomes; and

(v) The extent to which the evaluation plan clearly articulates the key project components, mediators, and outcomes, as well as a measurable threshold for acceptable implementation.

(d) *Adequacy of resources and quality of project personnel (20 points).*

(1) The Secretary considers the adequacy of resources for the proposed project and the quality of the personnel who will carry out the proposed project.

(2) In determining the quality of project personnel, the Secretary considers the extent to which the applicant encourages applications for employment from persons who are members of groups that have traditionally been underrepresented

based on race, color, national origin, gender, age, or disability.

(3) In addition, the Secretary considers the following factors:

(i) The qualifications, including relevant training and experience, of key project personnel;

(ii) The qualifications, including relevant training and experience, of project consultants or subcontractors;

(iii) The adequacy of support, including facilities, equipment, supplies, and other resources, from the applicant organization or the lead applicant organization;

(iv) The relevance and demonstrated commitment of each partner in the proposed project to the implementation and success of the project; and

(v) The extent to which the costs are reasonable in relation to the objectives, design, and potential significance of the proposed project.

(e) *Quality of the management plan (15 points).*

(1) The Secretary considers the quality of the management plan for the proposed project.

(2) In determining the quality of the management plan for the proposed project, the Secretary considers the following factors:

(i) The adequacy of the management plan to achieve the objectives of the proposed project on time and within budget, including clearly defined responsibilities, timelines, and milestones for accomplishing project tasks;

(ii) The extent to which the time commitments of the project director and principal investigator and other key project personnel are appropriate and adequate to meet the objectives of the proposed project;

(iii) How the applicant will ensure that a diversity of perspectives are brought to bear in the operation of the proposed project, including those of parents, teachers, the business community, a variety of disciplinary and professional fields, recipients or beneficiaries of services, or others, as appropriate; and

(iv) The adequacy of procedures for ensuring feedback and continuous improvement in the operation of the proposed project.

2. *Review and Selection Process:* We remind potential applicants that in reviewing applications in any discretionary grant competition, the Secretary may consider, under 34 CFR 75.217(d)(3), the past performance of the applicant in carrying out a previous award, such as the applicant's use of funds, achievement of project objectives, and compliance with grant conditions. The Secretary may also consider whether the applicant failed to submit a timely performance report or submitted a report of unacceptable quality.

In addition, in making a competitive grant award, the Secretary requires various assurances, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

3. *Additional Review and Selection Process Factors:* In the past, the Department has had difficulty finding peer reviewers for certain competitions because so many individuals who are eligible to serve as peer reviewers have conflicts of interest. The standing panel requirements under section 682(b) of IDEA also have placed additional constraints on the availability of reviewers. Therefore, the Department has determined that for some discretionary grant competitions, applications may be separated into two or more groups and ranked and selected for funding within specific groups. This procedure will make it easier for the Department to find peer reviewers by ensuring that greater numbers of individuals who are eligible to serve as reviewers for any particular group of applicants will not have conflicts of interest. It also will increase the quality, independence, and fairness of the review process, while permitting panel members to review applications under discretionary grant competitions for which they also have submitted applications.

4. *Risk Assessment and Specific Conditions:* Consistent with 2 CFR 200.206, before awarding grants under this competition the Department conducts a review of the risks posed by applicants. Under 2 CFR 200.208, the Secretary may impose specific conditions, and under 2 CFR 3474.10, in appropriate circumstances, high-risk conditions on a grant if the applicant or grantee is not financially stable; has a history of unsatisfactory performance; has a financial or other management system that does not meet the standards in 2 CFR part 200, subpart D; has not fulfilled the conditions of a prior grant; or is otherwise not responsible.

5. *Integrity and Performance System:* If you are selected under this competition to receive an award that over the course of the project period may exceed the simplified acquisition threshold (currently $250,000), under 2 CFR 200.206(a)(2) we must make a judgment about your integrity, business ethics, and record of performance under Federal awards—that is, the risk posed by you as an applicant—before we make an award. In doing so, we must consider any information about you that is in the integrity and performance system (currently referred to as the Federal Awardee Performance and Integrity Information System (FAPIIS)), accessible through the System for Award Management. You may review and comment on any information about yourself that a Federal agency previously entered and that is currently in FAPIIS.

Please note that, if the total value of your currently active grants, cooperative agreements, and procurement contracts from the Federal Government exceeds $10,000,000, the reporting requirements in 2 CFR part 200, Appendix XII, require you to report certain integrity information to FAPIIS semiannually. Please review the requirements in 2 CFR part 200, Appendix XII, if this grant plus all the other Federal funds you receive exceed $10,000,000.

6. *In General:* In accordance with the Office of Management and Budget's guidance located at 2 CFR part 200, all applicable Federal laws, and relevant Executive guidance, the Department will review and consider applications for funding pursuant to this notice inviting applications in accordance with—

(a) Selecting recipients most likely to be successful in delivering results based on the program objectives through an objective process of evaluating Federal award applications (2 CFR 200.205);

(b) Prohibiting the purchase of certain telecommunication and video surveillance services or equipment in alignment with section 889 of the National Defense Authorization Act of 2019 (Pub. L. 115—232) (2 CFR 200.216);

(c) Providing a preference, to the extent permitted by law, to maximize use of goods, products, and materials produced in the United States (2 CFR 200.322); and

(d) Terminating agreements in whole or in part to the greatest extent authorized by law if an award no longer effectuates the program goals or agency priorities (2 CFR 200.340).

VI. Award Administration Information

1. *Award Notices:* If your application is successful, we notify your U.S. Representative and U.S. Senators and send you a Grant Award Notification (GAN); or we may send you an email containing a link to access an electronic version of your GAN. We may notify you informally, also.

If your application is not evaluated or not selected for funding, we notify you.

2. *Administrative and National Policy Requirements:* We identify

administrative and national policy requirements in the application package and reference these and other requirements in the *Applicable Regulations* section of this notice.

We reference the regulations outlining the terms and conditions of an award in the *Applicable Regulations* section of this notice and include these and other specific conditions in the GAN. The GAN also incorporates your approved application as part of your binding commitments under the grant.

3. *Open Licensing Requirements:* Unless an exception applies, if you are awarded a grant under this competition, you will be required to openly license to the public grant deliverables created in whole, or in part, with Department grant funds. When the deliverable consists of modifications to pre-existing works, the license extends only to those modifications that can be separately identified and only to the extent that open licensing is permitted under the terms of any licenses or other legal restrictions on the use of pre-existing works.

Additionally, a grantee that is awarded competitive grant funds must have a plan to disseminate these public grant deliverables. This dissemination plan can be developed and submitted after your application has been reviewed and selected for funding. For additional information on the open licensing requirements please refer to 2 CFR 3474.20.

4. *Reporting:* (a) If you apply for a grant under this competition, you must ensure that you have in place the necessary processes and systems to comply with the reporting requirements in 2 CFR part 170 should you receive funding under the competition. This does not apply if you have an exception under 2 CFR 170.110(b).

(b) At the end of your project period, you must submit a final performance report, including financial information, as directed by the Secretary. If you receive a multiyear award, you must submit an annual performance report that provides the most current performance and financial expenditure information as directed by the Secretary under 34 CFR 75.118. The Secretary may also require more frequent performance reports under 34 CFR 75.720(c). For specific requirements on reporting, please go to *www.ed.gov/fund/grant/apply/appforms/appforms.html.*

(c) Under 34 CFR 75.250(b), the Secretary may provide a grantee with additional funding for data collection analysis and reporting. In this case the Secretary establishes a data collection period.

5. *Performance Measures:* For the purposes of reporting under 34 CFR 75.110, we have established a set of performance measures, including long-term measures, that are designed to yield information on various aspects of the effectiveness and quality of the Educational Technology, Media, and Materials (ETechM2) for Individuals with Disabilities program. These measures are:

- *Program Performance Measure 1:* The percentage of ETechM2 program products and services judged to be of high quality by an independent review panel of experts qualified to review the substantial content of the products and services.
- *Program Performance Measure 2:* The percentage of ETechM2 program products and services judged to be of high relevance to improving outcomes for infants, toddlers, children, and youth with disabilities.
- *Program Performance Measure 3:* The percentage of ETechM2 program products and services judged to be useful in improving results for infants, toddlers, children, and youth with disabilities.
- *Program Performance Measure 4.1:* The Federal cost per unit of accessible educational materials funded by the ETechM2 program.
- *Program Performance Measure 4.2:* The Federal cost per unit of accessible educational materials from the National Instructional Materials Access Center funded by the ETechM2 program.
- *Program Performance Measure 4.3:* The Federal cost per unit of video description funded by the ETechM2 program.

These measures apply to projects funded under this competition, and grantees are required to submit data on these measures as directed by OSEP.

Grantees will be required to report information on their project's performance in annual performance reports and additional performance data to the Department (34 CFR 75.590 and 75.591).

6. *Continuation Awards:* In making a continuation award under 34 CFR 75.253, the Secretary considers, among other things: whether a grantee has made substantial progress in achieving the goals and objectives of the project; whether the grantee has expended funds in a manner that is consistent with its approved application and budget; and, if the Secretary has established performance measurement requirements, whether the grantee has made substantial progress in achieving the performance targets in the grantee's approved application.

In making a continuation award, the Secretary also considers whether the grantee is operating in compliance with the assurances in its approved application, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

VII. Other Information

Accessible Format: On request to the program contact person listed under **FOR FURTHER INFORMATION CONTACT**, individuals with disabilities can obtain this document and a copy of the application package in an accessible format. The Department will provide the requestor with an accessible format that may include Rich Text Format (RTF) or text format (txt), a thumb drive, an MP3 file, braille, large print, audiotape, or compact disc, or other accessible format.

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register**. You may access the official edition of the **Federal Register** and the Code of Federal Regulations at *www.govinfo.gov.* At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Portable Document Format (PDF). To use PDF, you must have Adobe Acrobat Reader, which is available free at the site.

You may also access documents of the Department published in the **Federal Register** by using the article search feature at *www.federalregister.gov.* Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

Katherine Neas,

Deputy Assistant Secretary. Delegated the authority to perform the functions and duties of the Assistant Secretary for the Office of Special Education and Rehabilitative Services.

Killamsetty, Pradeep; Notice of Filing

Take notice that on February 11, 2022, Pradeep Killamsetty submitted for filing, application for authority to hold interlocking positions, pursuant to

section 305(b) of the Federal Power Act, 16 U.S.C. 825d (b) and Part 45.8 of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure, 18 CFR part 45.8.

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. Such notices, motions, or protests must be filed on or before the comment date. On or before the comment date, it is not necessary to serve motions to intervene or protests on persons other than the Applicant.

In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (*http://www.ferc.gov*) using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. At this time, the Commission has suspended access to the Commission's Public Reference Room, due to the proclamation declaring a National Emergency concerning the Novel Coronavirus Disease (COVID–19), issued by the President on March 13, 2020. For assistance, contact the Federal Energy Regulatory Commission at *FERCOnlineSupport@ferc.gov* or call toll-free, (886) 208–3676 or TYY, (202) 502–8659.

The Commission strongly encourages electronic filings of comments, protests and interventions in lieu of paper using the ''eFiling'' link at *http://www.ferc.gov.* Persons unable to file electronically may mail similar pleadings to the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426. Hand delivered submissions in docketed proceedings should be delivered to Health and Human Services, 12225 Wilkins Avenue, Rockville, Maryland 20852.

Comment Date: 5:00 p.m. Eastern Time on March 4, 2022.

Dated: February 15, 2022.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP22–16–000]

Georgia-Pacific Consumer Operations LLC; Notice of Schedule for the Preparation of an Environmental Assessment for the Georgia-Pacific Consumer Pipeline Abandonment Project

On November 16, 2021, Georgia-Pacific Consumer Operations LLC (GPC) filed an application in Docket No. CP22–16–000 requesting Authorization pursuant to Section 7(b) of the Natural Gas Act to abandon certain gas pipeline facilities. The proposed project is known as the Georgia-Pacific Consumer Pipeline Abandonment Project (Project) and involves abandoning natural gas transmission pipeline and auxiliary facilities in Union Parish, Louisiana and Ashley County, Arkansas.

On November 30, 2021, the Federal Energy Regulatory Commission (Commission or FERC) issued its Notice of Application for the Project. Among other things, that notice alerted agencies issuing federal authorizations of the requirement to complete all necessary reviews and to reach a final decision on a request for a federal authorization within 90 days of the date of issuance of the Commission staff's environmental document for the Project.

This notice identifies Commission staff's intention to prepare an environmental assessment (EA) for the Project and the planned schedule for the completion of the environmental review.[1]

Schedule for Environmental Review

Issuance of EA	May 27, 2022
90-day Federal Authorization Decision Deadline[2]	August 25, 2022

[1] 40 CFR 1501.10 (2020)

[2] The Commission's deadline applies to the decisions of other federal agencies, and state agencies acting under federally delegated authority, that are responsible for federal authorizations,

Continued

If a schedule change becomes necessary, additional notice will be provided so that the relevant agencies are kept informed of the Project's progress.

Project Description

GPC proposes to abandon in-place approximately 19.5 miles of 8-inch-diameter natural gas transmission pipeline and auxiliary facilities in Union Parish, Louisiana and Ashley County, Arkansas. Additionally, GPC proposes to abandon by removal all aboveground features associated with the 19.5 miles of pipeline.

Background

On February 1, 2022, the Commission issued a *Notice of Scoping Period Requesting Comments on Environmental Issues for the Proposed GPC Pipeline Abandonment Project.* The Notice of Scoping was sent to affected landowners; federal, state, and local government agencies; elected officials; environmental and public interest groups; Native American tribes; other interested parties; and local libraries and newspapers. The Notice of Scoping stated that the scoping period would end on March 3, 2022. All substantive comments received in response to the Notice of Application and Notice of Scoping will be addressed in the EA.

Additional Information

In order to receive notification of the issuance of the EA and to keep track of formal issuances and submittals in specific dockets, the Commission offers a free service called eSubscription. This service provides automatic notification of filings made to subscribed dockets, document summaries, and direct links to the documents. Go to *https://www.ferc.gov/ferc-online/overview* to register for eSubscription.

Additional information about the Project is available from the Commission's Office of External Affairs at (866) 208–FERC or on the FERC website (*www.ferc.gov*). Using the ''eLibrary'' link, select ''General Search'' from the eLibrary menu, enter the selected date range and ''Docket Number'' excluding the last three digits (*i.e.,* CP22–16–000), and follow the instructions. For assistance with access to eLibrary, the helpline can be reached at (866) 208–3676, TTY (202) 502–8659, or at *FERCOnlineSupport@ferc.gov.* The eLibrary link on the FERC website also provides access to the texts of formal documents issued by the Commission, such as orders, notices, and rule makings.

Dated: February 15, 2022.

[Docket No. RM21–9–000]

Technical Conference on Financial Assurance Measures for Hydroelectric Projects; Supplemental Notice of Technical Conference

As announced in the Notice of Technical Conference issued in this proceeding on January 25, 2022, the Federal Energy Regulatory Commission (Commission) will convene a Commission staff-led technical conference to discuss how the Commission may require additional financial assurance mechanisms in the licenses and other authorizations it issues for hydroelectric projects, to ensure that licensees have the capability to carry out license requirements and, particularly, to maintain their projects in safe condition. The technical conference will be held on Tuesday, April 26, 2022, from approximately 11:30 to 4:15 p.m. Eastern time. The conference will be held virtually.

The agenda for this event is attached. The conference will be open for the public to attend virtually, and there is no fee for attendance. A second supplemental notice will be issued prior to the conference with the confirmed panelists. Information on this technical conference will also be posted on the Calendar of Events on the Commission's website, *www.ferc.gov,* prior to the event. Transcripts will be available for a fee from Ace Reporting, (202) 347–3700.

Individuals interested in participating as panelists should self-nominate by 5:00 p.m. Eastern time on Tuesday, March 1, 2022, via email at the following address: *HydroFinancialAssurance@ferc.gov.* The self-nominations should have ''Panelist Self-Nomination'' in the subject line and include the panelist's name, title, organization, mailing address, telephone number, email address, one paragraph biography, photograph, and panel selection.

Commission conferences are accessible under section 508 of the Rehabilitation Act of 1973. For accessibility accommodations, please send an email to *accessibility@ferc.gov,* call toll-free (866) 208–3372 (voice) or (202) 208–8659 (TTY), or send a fax to (202) 208–2106 with the required accommodations.

For more information about this technical conference, please contact *HydroFinancialAssurance@ferc.gov.* For information related to logistics, please contact Sarah McKinley at *sarah.mckinley@ferc.gov* or (202) 502–8368.

Dated: February 15, 2022.

Accession Number: 20220215–5098.

Comment Date: 5 p.m. ET 3/8/22.

Docket Numbers: ER22–1053–000.

Applicants: ISO New England Inc.

Description: § 205(d) Rate Filing: ISO–NE; Exigent Circumstances Filing of Revisions to Section III.13 to be effective 2/16/2022.

Filed Date: 2/15/22.

Accession Number: 20220215–5104.

Comment Date: 5 p.m. ET 3/8/22.

Docket Numbers: ER22–1054–000.

Applicants: AEP Texas Inc.

Description: § 205(d) Rate Filing: AEPTX-Hecate Grid East Valley Generation Interconnection Agreement to be effective 2/3/2022.

Filed Date: 2/15/22.

Accession Number: 20220215–5109.

Comment Date: 5 p.m. ET 3/8/22.

Docket Numbers: ER22–1055–000.

Applicants: Trans Bay Cable LLC.

Description: § 205(d) Rate Filing: Annual TRBAA Filing—2021 to be effective 1/1/2022.

Filed Date: 2/15/22.

Accession Number: 20220215–5124.

Comment Date: 5 p.m. ET 3/8/22

Docket Numbers: ER22–1056–000.

Applicants: Tri-State Generation and Transmission Association, Inc.

Description: § 205(d) Rate Filing: Amendment to Wholesale Electric Service Contracts to be effective 4/17/2022.

Filed Date: 2/15/22.

Accession Number: 20220215–5140.

Comment Date: 5 p.m. ET 3/8/22.

The filings are accessible in the Commission's eLibrary system (*https://elibrary.ferc.gov/idmws/search/fercgensearch.asp*) by querying the docket number.

Any person desiring to intervene or protest in any of the above proceedings must file in accordance with Rules 211 and 214 of the Commission's Regulations (18 CFR 385.211 and 385.214) on or before 5:00 p.m. Eastern time on the specified comment date. Protests may be considered, but intervention is necessary to become a party to the proceeding.

eFiling is encouraged. More detailed information relating to filing requirements, interventions, protests, service, and qualifying facilities filings can be found at: *http://www.ferc.gov/docs-filing/efiling/filing-req.pdf.* For other information, call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Dated: February 15, 2022.

Debbie-Anne A. Reese,

Deputy Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. ID–9394–000]

Fontana, Joseph; Notice of Filing

Take notice that on February 11, 2022, Joseph Fontana submitted for filing, application for authority to hold interlocking positions, pursuant to section 305(b) of the Federal Power Act, 16 U.S.C. 825d (b) and Part 45.8 of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure, 18 CFR part 45.8.

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. Such notices, motions, or protests must be filed on or before the comment date. On or before the comment date, it is not necessary to serve motions to intervene or protests on persons other than the Applicant.

In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (*http://www.ferc.gov*) using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. At this time, the Commission has suspended access to the Commission's Public Reference Room, due to the proclamation declaring a National Emergency concerning the Novel Coronavirus Disease (COVID–19), issued by the President on March 13, 2020. For assistance, contact the Federal Energy Regulatory Commission at *FERCOnlineSupport@ferc.gov* or call toll-free, (886) 208–3676 or TYY, (202) 502–8659.

The Commission strongly encourages electronic filings of comments, protests and interventions in lieu of paper using the ''eFiling'' link at *http://www.ferc.gov.* Persons unable to file electronically may mail similar pleadings to the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426. Hand delivered submissions in docketed proceedings should be delivered to Health and Human Services, 12225 Wilkins Avenue, Rockville, Maryland 20852.

Comment Date: 5:00 p.m. Eastern Time on March 4, 2022.

Dated: February 15, 2022.

BILLING CODE 6717–01–P

FEDERAL COMMUNICATIONS COMMISSION

[OMB 3060–1122; FR ID 71746]

Information Collection Being Submitted for Review and Approval to Office of Management and Budget

AGENCY: Federal Communications Commission.

ACTION: Notice and request for comments.

SUMMARY: As part of its continuing effort to reduce paperwork burdens, as required by the Paperwork Reduction Act (PRA) of 1995, the Federal Communications Commission (FCC or the Commission) invites the general public and other Federal Agencies to take this opportunity to comment on the following information collection. Pursuant to the Small Business Paperwork Relief Act of 2002, the FCC seeks specific comment on how it might ''further reduce the information collection burden for small business concerns with fewer than 25 employees.'' The Commission may not conduct or sponsor a collection of information unless it displays a currently valid Office of Management and Budget (OMB) control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid OMB control number.

DATES: Written comments and recommendations for the proposed information collection should be submitted on or before March 24, 2022.

ADDRESSES: Comments should be sent to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function. Your comment must be submitted into *www.reginfo.gov* per the above instructions for it to be considered. In addition to submitting in *www.reginfo.gov* also send a copy of your comment on the proposed information collection to Nicole Ongele, FCC, via email to *PRA@fcc.gov* and to *Nicole.Ongele@fcc.gov.* Include in the comments the OMB control number as shown in the **SUPPLEMENTARY INFORMATION** below.

FOR FURTHER INFORMATION CONTACT: For additional information or copies of the information collection, contact Nicole Ongele at (202) 418–2991. To view a copy of this information collection request (ICR) submitted to OMB: (1) Go to the web page *http://www.reginfo.gov/public/do/PRAMain,* (2) look for the section of the web page called ''Currently Under Review,'' (3) click on the downward-pointing arrow in the ''Select Agency'' box below the ''Currently Under Review'' heading, (4) select ''Federal Communications Commission'' from the list of agencies presented in the ''Select Agency'' box, (5) click the ''Submit'' button to the right of the ''Select Agency'' box, (6) when the list of FCC ICRs currently under review appears, look for the Title of this ICR and then click on the ICR Reference Number. A copy of the FCC submission to OMB will be displayed.

SUPPLEMENTARY INFORMATION: As part of its continuing effort to reduce paperwork burdens, as required by the Paperwork Reduction Act (PRA) of 1995 (44 U.S.C. 3501–3520), the FCC invited the general public and other Federal Agencies to take this opportunity to comment on the following information collection. Comments are requested concerning: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's burden estimates; (c) ways to enhance the quality, utility, and clarity of the information collected; and (d) ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology. Pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107–198, see 44 U.S.C. 3506(c)(4), the FCC seeks specific comment on how it might ''further reduce the information collection burden for small business concerns with fewer than 25 employees.''

OMB Control Number: 3060–1122.

Title: Preparation of Annual Reports to Congress for the Collection and Expenditure of Fees or Charges for Enhanced 911 (E911) Services under the NET 911 Improvement Act of 2008.

Form Number: Not applicable.

Type of Review: Revision of a currently approved collection.

Respondents: State, Local, and Tribal governments.

Number of Respondents and Responses: 66 Respondents; 66 Responses.

Estimated Time per Response: 55 hours.

Frequency of Response: Annual and one-time reporting requirement.

Obligation to Respond: Voluntary. Statutory authority for this information collection is contained in New and Emerging Technologies 911 Improvement Act of 2008, Public Law 110–283, 122 Stat. 2620 (2008) (NET 911 Act), and the Consolidated Appropriations Act, 2021, Public Law 116–260, Division FF, Title IX, Section 902, Don't Break Up the T-Band Act of 2020 (section 902).

Total Annual Burden: 3,630 hours.

Total Annual Cost: No Cost.

Privacy Act Impact Assessment: No Impact(s).

Nature and Extent of Confidentiality: There is no need for confidentiality.

Needs and Uses: The Federal Communications Commission (Commission) is directed by statute (New and Emerging Technologies 911 Improvement Act of 2008, Public Law 110–283, 122 Stat. 2620 (2008) (NET 911 Act), as amended by the Consolidated Appropriations Act, 2021, Public Law 116–260, Division FF, Title IX, Section 902, Don't Break Up the T-Band Act of 2020 (section 902), to submit an annual ''Fee Accountability Report'' to the Committee on Commerce, Science, and Transportation of the Senate and the Committee on Energy and Commerce of the House of Representatives ''detailing the status in each State of the collection and distribution of [911 fees or charges], and including findings on the amount of revenues obligated or expended by each State or political subdivision thereof for any purpose or function other than the purposes and functions designated in the final rules issued under paragraph (3) as purposes and functions for which the obligation or expenditure of any such fees or charges is acceptable.'' 47 U.S.C. 615a–1(f)(2), as amended. Section 615a–1(f)(3) of the statute directs the Commission, not later than 180 days after December 27, 2020, to ''issue final rules designating purposes and functions for which the obligation or expenditure of 9–1–1 fees or charges, by any State or taxing jurisdiction authorized to impose such a fee or charge, is acceptable.'' 47 U.S.C. 615a–1(f)(3), as amended. The statute directs the Commission to submit its first annual report within one year after the date of enactment of the NET 911 Act. Given that the NET 911 Act was enacted on July 23, 2008, the first annual report was due to Congress on July 22, 2009. In addition, the statute provides that ''[i]f a State or taxing jurisdiction . . . receives a grant under section 942 of this title after December 27, 2020, such State or taxing jurisdiction shall, as a condition of receiving such grant, provide the information requested by the Commission to prepare [the annual Fee Accountability Report to Congress].'' 47 U.S.C. 615a–1(f)(4), as amended.

Description of Information Collection: The Commission will collect information for the annual preparation of the Fee Accountability Report via a web-based survey that appropriate state officials (*e.g.,* state 911 administrators and budget officials) will be able to access to submit data pertaining to the collection and distribution of fees or charges for the support or implementation of 911 or enhanced 911 services, including data regarding whether their respective state collects and distributes such fees or charges, as well as the nature (*e.g.,* amount and method of assessment or collection) and the amount of revenues obligated or expended for any purpose or function other than the purposes and functions designated as acceptable in the Commission's final rules. Consistent with 47 U.S.C. 615a–1(f)(3)(D)(iii), the Commission will request that state officials report this information with respect to 911 fees or charges within their state, including any political subdivision, Indian tribe, and/or village or regional corporation serving any region established pursuant to the Alaska Native Claims Settlement Act within their state boundaries. 47 U.S.C. 615a–1(f)(3)(D)(iii). In addition, consistent with the definition of ''State'' set out in 47 U.S.C. 615b, the Commission will collect this information from the District of Columbia and the inhabited U.S. territories and possessions. 47 U.S.C. 615b.

Federal Communications Commission.

Marlene Dortch,

Secretary, Office of the Secretary.

BILLING CODE 6712–01–P

FEDERAL COMMUNICATIONS COMMISSION

[FR ID 72202]

Open Commission Meeting Friday, February 18, 2022

FEBRUARY 11, 2022. The Federal Communications Commission will hold an Open Meeting on the subjects listed below on Friday, February 18, which is scheduled to commence at 10:30 a.m.

Due to the current COVID–19 pandemic and related agency telework and headquarters access policies, this meeting will be in a wholly electronic format and will be open to the public on the internet via live feed from the FCC's web page at *www.fcc.gov/live* and on the FCC's YouTube channel.

Item No.	Bureau	Subject
1	WIRELINE COMPETITION	*Title:* Promoting Telehealth in Rural America (WC Docket No. 17–310). *Summary:* The Commission will consider a Further Notice of Proposed Rulemaking that would seek comment on reforms to the urban and rural rates determination process for the Rural Health Care Program's Telecommunications Program, revisions to Rural Health Care Program rules governing the internal funding cap on upfront payments and multi-year contracts, and modifications to the Rural Health Care Program invoicing procedures.
2	WIRELINE COMPETITION	*Title:* Aureon Refund Data Order (WC Docket No. 18–60). *Summary:* The Commission will consider an Order requiring Iowa Network Access Division (d/b/a Aureon) to file cost and demand data to enable Commission staff to calculate appropriate refunds due to Aureon's customers after two investigations into Aureon's tariffed switched transport rate.
3	MEDIA	*Title:* Updating Technical Rules for Radio Broadcasters (MB Docket No. 21–263). *Summary:* The Commission will consider a Report and Order to eliminate or amend outmoded or unnecessary broadcast technical rules.
4	ENFORCEMENT	*Title:* Enforcement Bureau Action. *Summary:* The Commission will consider an enforcement action.

The meeting will be webcast with open captioning at: *www.fcc.gov/live.* Open captioning will be provided as well as a text only version on the FCC website. Other reasonable accommodations for people with disabilities are available upon request. In your request, include a description of the accommodation you will need and a way we can contact you if we need more information. Last minute requests will be accepted but may be impossible to fill. Send an email to: *fcc504@fcc.gov* or call the Consumer & Governmental Affairs Bureau at 202–418–0530.

Additional information concerning this meeting may be obtained from the Office of Media Relations, (202) 418–0500. Audio/Video coverage of the meeting will be broadcast live with open captioning over the internet from the FCC Live web page at *www.fcc.gov/live.*

Marlene Dortch,

Secretary.

FEDERAL COMMUNICATIONS COMMISSION

[OMB 3060–1078; FR ID 71187]

Information Collection Being Reviewed by the Federal Communications Commission

AGENCY: Federal Communications Commission.

ACTION: Notice and request for comments.

SUMMARY: As part of its continuing effort to reduce paperwork burdens, and as required by the Paperwork Reduction Act (PRA) of 1995, the Federal Communications Commission (FCC or Commission) invites the general public

and other Federal agencies to take this opportunity to comment on the following information collections. Comments are requested concerning: Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; the accuracy of the Commission's burden estimate; ways to enhance the quality, utility, and clarity of the information collected; ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and ways to further reduce the information collection burden on small business concerns with fewer than 25 employees.

The FCC may not conduct or sponsor a collection of information unless it displays a currently valid OMB control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid OMB control number.

DATES: Written PRA comments should be submitted on or before April 25, 2022. If you anticipate that you will be submitting comments but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below as soon as possible.

ADDRESSES: Direct all PRA comments to Cathy Williams, FCC, via email to *PRA@fcc.gov* and to *Cathy.Williams@fcc.gov.*

FOR FURTHER INFORMATION CONTACT: For additional information about the information collection, contact Cathy Williams at (202) 418–2918.

SUPPLEMENTARY INFORMATION:

OMB Control Number: 3060–1078.

Title: Rules and Regulations Implementing the Controlling the Assault of Non-Solicited Pornography and Marketing Act of 2003, CG Docket No. 04–53.

Form Number: N/A.

Type of Review: Extension of a currently approved collection.

Respondents: Business or other for-profit entities; Not-for-profit institutions; Individuals or households.

Number of Respondents and Responses: 1,908,572 respondents; 1,908,572 responses.

Estimated Time per Response: 1—10 hours (average per response).

Frequency of Response: Recordkeeping requirement; On occasion reporting requirements; Third party disclosure requirement.

Obligation to Respond: Required to obtain or retain benefits. The statutory authority for this information collection is the CAN–SPAM Act of 2003, 15 U.S.C. 7701–7713, Public Law 108–187, 117 Stat. 2719.

Total Annual Burden: 1,237,036 hours.

Total Annual Cost: $624,882.

Needs and Uses: The reporting requirements included under this OMB Control Number 3060–1078 enable the Commission to collect information regarding violations of the Controlling the Assault of Non-Solicited Pornography and Marketing Act of 2003 (CAN–SPAM Act). This information is used to help wireless subscribers stop receiving unwanted commercial mobile services messages.

On August 12, 2004, the Commission released an *Order,* Rules and Regulations Implementing the Controlling the Assault of Non-Solicited Pornography and Marketing Act of 2003, CG Docket No. 04–53, FCC 04–194, published at 69 FR 55765, September 16, 2004, adopting rules to prohibit the sending of commercial messages to any address referencing an internet domain name associated with wireless subscribers' messaging services, unless the individual addressee has given the sender express prior authorization. The information collection requirements consist § 64.3100 (a)(4), (d), (e) and (f) of the Commission's rules.

Federal Communications Commission.

Marlene Dortch,

Secretary, Office of the Secretary.

BILLING CODE 6712–01–P

FEDERAL MARITIME COMMISSION

National Shipper Advisory Committee March 2022 Meeting

AGENCY: Federal Maritime Commission.

ACTION: Notice of Federal Advisory Committee meeting

SUMMARY: Notice is hereby given of a meeting of the National Shipper Advisory Commission (NSAC), pursuant to the Federal Advisory Committee Act.

DATES: The Committee will meet by video conference on March 9, 2022, from 1 p.m. until 3 p.m. Eastern Time. Please note that this meeting may adjourn early if the Committee has completed its business.

ADDRESSES: The meeting will be held via video conference. The link will be provided by email to registrants in advance. Requests to register should be submitted to *nsac@fmc.gov* and contain ''REGISTER FOR NSAC MEETING'' in the subject line. The deadline for members of the public to register to attend the meeting is by 5:00 p.m. Eastern Time on Friday, March 4. Members of the public are encouraged to submit registration requests via email in advance of the deadline. The number of lines may be limited and will be available on a first-come, first-served basis. If you have accessibility concerns and require assistance, contact *secretary@fmc.gov.*

FOR FURTHER INFORMATION CONTACT: Mr. Dylan Richmond, Designated Federal Officer of the National Shipper Advisory Committee, phone: (202) 523–5810; email: *drichmond@fmc.gov.*

SUPPLEMENTARY INFORMATION:

Background: The National Shipper Advisory Committee is a federal advisory committee. It operates under the provisions of the Federal Advisory Committee Act, 5 U.S.C. App., and 46 U.S.C. chapter 425. The Committee was established on January 1, 2021, when the National Defense Authorization Act for Fiscal Year 2021 became law. Public Law 116–283, section 8604, 134 Stat. 3388 (2021). The Committee will provide information, insight, and expertise pertaining to conditions in the ocean freight delivery system to the Commission. Specifically, the Committee will advise the Federal Maritime Commission on policies relating to the competitiveness, reliability, integrity, and fairness of the international ocean freight delivery system. 46 U.S.C. 42502(b).

The purpose of the meeting is for the Committee to hear from its subcommittees that were established at its December 2021 meeting. One subcommittee focuses on data sharing and visibility and the other on fees and surcharges.

Written Comments: Members of the public may submit written comments to NSAC at any time. Comments would be most useful to the Committee if they address the objectives outlined in their charter or the above-mentioned topics. Comments should be addressed to NSAC, c/o Dylan Richmond, Federal Maritime Commission, 800 North Capitol St. NW, Washington, DC 20573 or *nsac@fmc.gov.*

A copy of all meeting documentation will be available at *www.fmc.gov* following the meeting.

By the Commission.

William Cody,

Secretary.

BILLING CODE 6730–02–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Agency for Toxic Substances and Disease Registry

[Docket No. ATSDR–2022–0001]

Availability of Six Draft Toxicological Profiles

AGENCY: Agency for Toxic Substances and Disease Registry (ATSDR), Department of Health and Human Services (HHS).

ACTION: Notice with comment period.

SUMMARY: The Agency for Toxic Substances and Disease Registry (ATSDR), within the Department of Health and Human Services (HHS), announces the opening of a docket to obtain comments on drafts of six updated toxicological profiles: Beryllium, Chloromethane, 1,2-Dichloroethane, Methyl tert-butyl ether (MTBE), N-Nitrosodimethylamine, and Chlorodibenzofurans.

DATES: Written comments must be received on or before May 23, 2022.

ADDRESSES: You may submit comments, identified by Docket Number ATSDR–2022–0001, by either of the following methods:

- *Federal eRulemaking Portal: www.regulations.gov.* Follow the instructions for submitting comments.
- *Mail:* Office of Innovation and Analytics, Agency for Toxic Substances and Disease Registry, 4770 Buford Highway, Mail Stop S102–1, Atlanta, GA 30341–3717. Attn: Docket No. ATSDR–2022–0001.

Instructions: All submissions must include the Agency name and Docket Number. All relevant comments received will be posted without change to *http://www.regulations.gov,* including any personal information provided. Do not submit comments by email. ATSDR does not accept comments by email. For access to the docket to read background documents or comments received, go to *http://www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT: Kambria Haire, Office of Innovation and Analytics, Agency for Toxic Substances and Disease Registry, 4770 Buford Highway, Mail Stop S102–1, Atlanta, GA 30329–4027, Email: *ATSDRToxProfileFRNs@cdc.gov;* Telephone: 1–800–232–4636.

SUPPLEMENTARY INFORMATION: ATSDR has prepared drafts of six updated toxicological profiles based on availability of new health effects and other information since their initial releases. All toxicological profiles issued as ''Drafts for Public Comment'' represent the result of ATSDR's evidence-based evaluations to provide important toxicological information on priority hazardous substances to the public and health professionals. ATSDR is seeking public comments and additional information or reports on studies about the health effects of these six substances for review and potential inclusion in the profiles. ATSDR considers key studies for these substances during the profile development process. This notice solicits any relevant, additional studies. ATSDR will evaluate the quality and relevance of such data or studies for possible inclusion in the profile.

Public Participation

Interested persons or organizations are invited to participate by submitting written views, information, and data. Comments received, including attachments and other supporting materials, are part of the public record and are subject to public disclosure. Comments will be posted on *https://www.regulations.gov.* Therefore, do not include any information in your comment or supporting materials that you consider confidential or inappropriate for public disclosure. If you include your name, contact information, or other information that identifies you in the body of your comments, that information will be on public display. Do not submit comments by email. ATSDR does not accept comments by email. ATSDR will review all submissions and may choose to redact or withhold submissions containing private or proprietary information such as Social Security numbers, medical information, inappropriate language, or duplicate/near duplicate examples of a mass-mail campaign. ATSDR will carefully review and consider all comments submitted in preparation of the Final Toxicological Profiles and may revise the profiles as appropriate.

Legislative Background

The Superfund Amendments and Reauthorization Act of 1986 (SARA) [42 U.S.C. 9601 *et seq.*] amended the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA or Superfund) [42 U.S.C. 9601 *et seq.*] by establishing certain requirements for ATSDR and the U.S. Environmental Protection Agency (EPA) regarding the hazardous substances most commonly found at facilities on the CERCLA National Priorities List. Among these statutory requirements is a mandate for the Administrator of ATSDR to prepare toxicological profiles for each substance included on the priority list of hazardous substances [also called the Substance Priority List (SPL)]. This list identifies 275 hazardous substances that ATSDR and EPA have determined pose the most significant potential threat to human health. The SPL is available online at *www.atsdr.cdc.gov/spl.* ATSDR is also mandated to revise and publish updated toxicological profiles, as necessary, to reflect updated health effects and other information.

In addition, CERCLA provides ATSDR with the authority to prepare toxicological profiles for substances not found on the SPL. CERCLA authorizes ATSDR to establish and maintain an inventory of literature, research, and studies on the health effects of toxic substances (CERCLA Section 104(i)(1)(B); 42 U.S.C. 9604(i)(1)(B)); to respond to requests for health consultations (CERCLA Section 104(i)(4); 42 U.S.C. 9604(i)(4)); and to support the site-specific response actions conducted by the agency (CERCLA Section 104(i)(6); 42 U.S.C. 9604(i)(6)). Public nominations for substances from the SPL (or other substances) for toxicological profile development were requested on April 18, 2018 (83 FR 17177).

ATSDR has now prepared drafts of six updated toxicological profiles based on availability of new health effects and other information since their initial release.

Availability

The Draft Toxicological Profiles are available online at *http://www.atsdr.cdc.gov/ToxProfiles* and at *www.regulations.gov,* Docket No. ATSDR–2022–0001.

Pamela Protzel Berman,

Associate Director, Office of Policy, Planning and Partnerships, Agency for Toxic Substances and Disease Registry.

BILLING CODE 4163–70–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Notice of Award of a Single-Source Cooperative Agreement To Fund Servicos Provinciais de Saúde de Inhambane (SPS Inhambane), Mozambique

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: The Centers for Disease Control and Prevention (CDC), located within the Department of Health and Human Services (HHS), announces the award of approximately $1,000,000 for Year 1 of funding to the Servicos Provinciais de Saúde de Inhambane (SPS Inhambane), Mozambique. The award will strengthen the institutional capacity of SPS Inhambane to plan, coordinate, and supervise HIV-related activities to contribute to accelerated progress towards the 95–95–95 goals (95% of HIV-positive individuals knowing their status, 95% of those receiving ART [Antiretroviral therapy], and 95% of those achieving viral suppression) and ensure sustainable control of the epidemic in Mozambique. Funding amounts for years 2–5 will be set at continuation.

DATES: The period for this award will be September 30, 2022 through September 29, 2027.

FOR FURTHER INFORMATION CONTACT: Meghan Duffy, Center for Global Health, Centers for Disease Control and Prevention, U.S. Embassy Maputo, Avenida Marginal nr 5467, Sommerschield, Distrito Municipal de KaMpfumo Caixa Postal 783 CEP 0101–11 Maputo, Moçambique, Telephone: 800–232–6348, E-Mail: *wwp2@cdc.gov*.

SUPPLEMENTARY INFORMATION: The single-source award will focus on building institutional capacity of the SPS in Inhambane for program development and planning and strengthening program implementation and oversight of activities related to HIV prevention, care, support, and treatment services funded by PEPFAR in Mozambique.

SPS Inhambane is in a unique position to conduct this work, as it is the sole organization tasked with ensuring the execution of health activities at the provincial level in Inhambane [Decree 26/2020]. In Mozambique, the governmental public health infrastructure is organized into the central or national entity of the Mozambique Ministry of Health/Ministério da Saúde (MOH/MISAU), the Provincial Health Directorates (DPSs) that implement activities at the primary healthcare level, and the Provincial Health Service (SPS) that lead all health services within the province of Inhambane. The SPSs in Mozambique are government organizations established by law and mandated to plan, coordinate, and supervise all health-related activities at the tertiary and secondary level, including HIV/AIDS activities, within their provincial jurisdiction.

Summary of the Award

Recipient: SPS Inhambane, Mozambique.

Purpose of the Award: The purpose of this award is to strengthen the institutional capacity of SPS Inhambane to plan, coordinate, and supervise HIV-related activities to contribute to accelerated progress towards the 95–95–95 goals and ensure sustainable control of the epidemic in Mozambique.

Amount of Award: The approximate year 1 funding amount will be $1,000,000 in Federal Fiscal Year (FFY) 2022 funds, subject to the availability of funds. Funding amounts for years 2–5 will be set at continuation.

Authority: This program is authorized under Public Law 108–25 (the United States Leadership Against HIV AIDS, Tuberculosis and Malaria Act of 2003).

Period of Performance: September 30, 2022 through September 29, 2027.

Dated: February 16, 2022.

Terrance Perry,

Chief Grants Management Officer, Centers for Disease Control and Prevention.

[FR Doc. 2022–03723 Filed 2–18–22; 8:45 am]

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Notice of Award of a Single-Source Cooperative Agreement To Fund Cote d'Ivoire Ministry of Health and Public Hygiene and Universal Health Coverage (MSHPCMU)

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: The Centers for Disease Control and Prevention (CDC), located within the Department of Health and Human Services (HHS) announces the award of approximately $3,000,000 for Year 1 of funding to the (MSHPCMU). The award will strengthen the capacities of the Ministry of Health (MOH) at the central and decentralized levels for HIV/TB infection control interventions. Funding amounts for years 2–5 will be set at continuation.

DATES: The period for this award will be September 30, 2022 through September 29, 2027.

FOR FURTHER INFORMATION CONTACT: Titania Techeira, Center for Global Health, Centers for Disease Control and Prevention, CDC Côte d'Ivoire, U.S. Embassy B.P. 730 Abidjan Cidex 03, Telephone: 800–232–6348, E-Mail: *iux2@cdc.gov*.

SUPPLEMENTARY INFORMATION: The single-source award will (1) Provide technical, programmatic, financial, and administrative support to the ministry departments for the implementation, coordination, mobilization, and supervision of key central-level prevention, care, and treatment activities; (2) Link and coordinate specific activities of various health ministry departments at the central and decentralized levels with related activities by other ministries in the multi-sectoral HIV/AIDS response; (3) Develop a sustainability plan which places an emphasis on national commitment to health and HIV/AIDS effort; (4) Plan, monitor, evaluate, and coordinate expanded service delivery of prevention of mother to child transmission (PMTCT), counseling and testing (CT); and anti-retroviral therapy (ART) in collaboration with the national HIV and TB program.

The MOH is the only eligible applicant that can apply for this funding opportunity because it is the sole public sector entity in Cote d'Ivoire mandated by the government to address the public's health needs. This mandate includes: (1) Coordination, monitoring and evaluation of comprehensive STI/TB and HIV prevention, and care and treatment services; (2) Coordination of HIV/AIDS interventions at decentralized levels of the health sector in Cote d'Ivoire; (3) Lead GoCI institution for strengthen the regulatory framework and promote hygiene to prevent diseases related to poor hospital hygiene; (4) Lead the GoCI in strengthening the SI management in the Ivorian national health sector response to HIV/AIDS; and Lead the GoCI for the development of the national M&E plan to monitor and evaluate the implementation of the activities and the results throughout the Ivoirian territory and at different levels of the health pyramid.

Summary of the Award

Recipient: MSHPCMU.

Purpose of the Award: The purpose of this award is to strengthen the capacities of the MOH at the central and decentralized levels for HIV/TB infection control interventions to: (1) Improve the coordination of HIV/AIDS control interventions at the decentralized levels of the health sector; (2) Strengthen the regulatory framework and promote hygiene to prevent HIV infection and healthcare-related infections; and Strengthen the management of SI for the health sector national response.

Amount of Award: The approximate year 1 funding amount will be $3,000,000 in Federal Fiscal Year (FYY) 2022 funds, subject to the availability of funds. Funding amounts for years 2–5 will be set at continuation.

Authority: Public Law 108–25 (the United States Leadership Against HIV AIDS, Tuberculosis and Malaria Act of 2003).

Period of Performance: September 30, 2022 through September 29, 2027.

Dated: February 15, 2022.

Terrance Perry,

Chief Grants Management Officer, Centers for Disease Control and Prevention.

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

[30Day–22–21HD]

Agency Forms Undergoing Paperwork Reduction Act Review

In accordance with the Paperwork Reduction Act of 1995, the Centers for Disease Control and Prevention (CDC) has submitted the information collection request titled the ''One Health Surveillance for Zoonotic SARS–CoV–2 Events'' to the Office of Management and Budget (OMB) for review and approval. CDC previously published a ''Proposed Data Collection Submitted for Public Comment and Recommendations'' notice on August 13, 2021 to obtain comments from the public and affected agencies. CDC received one comment related to the previous notice. This notice serves to allow an additional 30 days for public and affected agency comments.

CDC will accept all comments for this proposed information collection project. The Office of Management and Budget is particularly interested in comments that:

(a) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(b) Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(c) Enhance the quality, utility, and clarity of the information to be collected;

(d) Minimize the burden of the collection of information on those who are to respond, including, through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses; and

(e) Assess information collection costs.

To request additional information on the proposed project or to obtain a copy of the information collection plan and instruments, call (404) 639–7570. Comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function. Direct written comments and/or suggestions regarding the items contained in this notice to the Attention: CDC Desk Officer, Office of Management and Budget, 725 17th Street NW, Washington, DC 20503 or by fax to (202) 395–5806. Provide written comments within 30 days of notice publication.

Proposed Project

One Health Surveillance for Zoonotic SARS–CoV–2 Events—New—National Center for Emerging and Zoonotic Infectious Diseases (NCEZID), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

NCEZID seeks OMB approval for One Health Surveillance for Zoonotic SARS–CoV–2 Events through the use of two forms: One Health Case Investigation Form for Animals with SARS–CoV–2, and Zoonotic SARS–CoV–2 Event Form. Description of these forms and activities associated with this study, including burden to respondents can be found below.

Zoonotic SARS–CoV–2 Event Form: Although it is now well established that SARS–CoV–2 is a zoonotic virus (*i.e.,* can be spread between people and animals), little information exists on the prevalence or likelihood of zoonotic transmission events. Currently, reporting of zoonotic SARS–CoV–2 transmission events is not systematically reported. Without this crucial information, however, interpreting data on SARS–CoV–2 infection in animals, especially the overall contribution of zoonotic transmission to the spread of COVID–19, is incomplete. The information gathered using this surveillance mechanism will provide insight into the role of animals in SARS–CoV–2 transmission and will also provide context for understanding prevalence of linked human and animal infections throughout the nation.

Positive SARS–CoV–2 animal samples must be confirmed by United States Department of Agriculture (USDA) National Veterinary Services Lab (NVSL); however, without the proposed surveillance mechanism, data on linked human and animal transmission events which yield negative results would not be tracked at the national level. CDC and USDA guidance recommends state-level health authorities, namely state public health veterinarians and state animal health officials, are involved in approving and coordinating animal SARS–CoV–2 testing. These officials are therefore the primary target audience for this surveillance form, in addition to tribal, local and territorial health authorities. The Zoonotic SARS–CoV–2 Event form includes questions intended to improve our understanding of the number of cases state officials are asked to consult upon regarding SARS–CoV–2 testing for potential zoonotic transmission events, the proportion of those events that are tested for SARS–CoV–2, and corresponding relevant epidemiological data (epidemiological links to other cases of SARS–CoV–2 in people or animals, clinical signs, etc.), results, etc. This form will fill a needed gap over the next three years.

In addition to the primary reason for the Zooonotic SARS–CoV–2 Event form, it will also be used to replace paper-based reporting for CDC-funded research. Currently, CDC's One Health Office has funded surveillance and research at sites throughout the nation. This surveillance form will be used to report all linked human and animal testing for SARS–CoV–2 to CDC that is occurring through funded surveillance activities, including the status and circumstances for testing. This will relieve the requirement for less secure reporting such as paper-based reporting forms sent through email.

More broadly, we expect this form may be generalized in the future to encapsulate surveillance for other zoonotic respiratory viruses. This surveillance form therefore offers the opportunity to test and iterate upon surveillance mechanisms prior to the advancement of a broader surveillance system.

One Health Case Investigation Form for Animals with SARS–CoV–2: Currently, most animal samples that test positive for SARS–CoV–2 are confirmed by USDA NVSL, and are reported to the World Organization for Animal Health (OIE). However, the information collected is largely restricted to

information on the animal case, including animal species, number of affected animals, and clinical signs. Richer epidemiological data, including the routes that animals become exposed to SARS–CoV–2 and potential transmission events back to people, are needed to better understand the zoonotic potential of SARS–CoV–2, whether transmission is becoming sustained among animal populations, and the public health risks that infected animals may pose. Through this data collection tool, state and local public health and animal health officials will be able to use a standardized approach to collect epidemiological data while conducting One Health epidemiologic investigations over the tool's expected reporting lifespan of three years.

CDC and USDA guidance recommends state-level health authorities, namely state public health veterinarians and state animal health officials, conduct follow-up investigations if and when an animal is identified as positive for SARS–CoV–2. These officials, in addition to other state, tribal, local, and territorial (STLT) collaborators conducting research or surveillance within their jurisdiction are therefore an appropriate target audience for this surveillance form. This form involves voluntary reporting from STLT health officials conducting epidemiological investigations to enter case information and return it to CDC. This tool was designed by CDC staff at the request of STLT partners.

These data will be used to describe the transmission dynamics and natural history of SARS–CoV–2 infection. Specifically, this tool will assist in collecting and compiling data to better understand the zoonotic potential of SARS–CoV–2 from humans or other sources, and the role animals infected with SARS–CoV–2 may play in onward transmission to humans or other animals.

CDC requests approval for an estimated 9,000 annual burden hours for this collection. There are no costs to respondents other than their time to participate.

ESTIMATED ANNUALIZED BURDEN HOURS

Type of respondents	Form name	Number of respondents	Number of responses per respondent	Average burden per response (hours)
State, tribal, local, and territorial health officials.	One Health Case Investigation Form for Animals with SARS–CoV–2.	50	20	1
State, tribal, local, and territorial health officials.	One Health Consultation Form	80	400	15/60

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Notice of Award of a Single-Source Cooperative Agreement To Fund the Eastern Cape Department of Health, South Africa

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: The Centers for Disease Control and Prevention (CDC), located within the Department of Health and Human Services (HHS), announces the award of approximately $1,250,000 for Year 1 of funding to the Eastern Cape Department of Health, South Africa. The award will strengthen public health policy implementation, strengthen Human Resources for Health (HRH) management, improve supply chain management, and strengthen Strategic Information (SI) management for program planning in the Eastern Cape Province of South Africa. Funding amounts for years 2–5 will be set at continuation.

DATES: The period for this award will be September 30, 2022 through September 29, 2027.

FOR FURTHER INFORMATION CONTACT: Rayna Taback-Esra, Center for Global Health, Centers for Disease Control and Prevention, P.O. Box 9536, Pretoria, 0001, South Africa, Telephone: 800–232–6348, Email: *wxk7@cdc.gov.*

SUPPLEMENTARY INFORMATION: The single-source award will fund the Eastern Cape Department of Health to strengthen public health policy implementation, strengthen HRH management, improve supply chain management, and strengthen strategic information management for program planning. Strengthened health systems will support the faster adoption of implementation of key policies and lead to a more efficient HIV/TB program in the Eastern Cape Province of South Africa. The East Cape Department of Health South Africa is in a unique position to conduct this work as it is responsible for the management of the provincial health budget and delivery of all provincial health services.

Summary of the Award

Recipient: Eastern Cape Department of Health, South Africa.

Purpose of the Award: The purpose of this award is to support a more efficient HIV/TB program in the Eastern Cape Province through improved HRH management, enhanced supply chain management, and strengthened SI management.

Amount of Award: The approximate year 1 funding amount will be $1,250,000 in Federal Fiscal Year (FFY) 2022 funds, subject to the availability of funds. Funding amounts for years 2–5 will be set at continuation.

Authority: The program is authorized under Public Law 108–25 (the United States Leadership Against HIV AIDS, Tuberculosis and Malaria Act of 2003).

Period of Performance: September 30, 2022 through September 29, 2027.

Dated: February 15, 2022.

Terrance Perry,

Chief Grants Management Officer, Centers for Disease Control and Prevention.

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Notice of Award of a Single-Source Cooperative Agreement To Fund the Kazakhstan Scientific Center for Dermatology and Infectious Diseases (KSCDID)

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: The Centers for Disease Control and Prevention (CDC), located within the Department of Health and Human Services (HHS), announces the award of approximately $500,000, for Year 1 of funding to the Kazakhstan Scientific Center for Dermatology and Infectious Diseases (KSCDID). The award will reduce new HIV infections and AIDS deaths in Kazakhstan through rapidly expanding prevention, testing, care, and effective treatment services to people living with HIV (PLHIV). Funding amounts for years 2–5 will be set at continuation.

DATES: The period for this award will be September 30, 2022 through September 29, 2027.

FOR FURTHER INFORMATION CONTACT: Patrick Nadol, Center for Global Health, Centers for Disease Control and Prevention, 171 Prospect Mira, Bishkek, 720016, Kyrgyz Republic, Telephone: 800–232–6348, E-Mail: *pen5@cdc.gov.*

SUPPLEMENTARY INFORMATION: The single-source award will implement prevention, testing, care and treatment, laboratory, and strategic information activities in Kazakhstan. KSCDID is in a unique position to conduct this work, as it is the leading organization implementing the National HIV program in Kazakhstan; it will lead and sustain the national HIV services for prevention, testing, care, treatment, and strategic information according to international standards to achieve epidemic control and ensure resilient and sustained health care systems. KSCDID develops policy and regulations, conducts prevention and testing activities, coordinates care and treatment, and is responsible for quality assurance of laboratory services.

Summary of the Award

Recipient: Kazakhstan Scientific Center for Dermatology and Infectious Diseases (KSCDID).

Purpose of the Award: The purpose of this award is to reduce new HIV infections and AIDS deaths in Kazakhstan through rapidly expanding prevention, testing, care, and effective treatment services to PLHIV.

Amount of Award: The approximate year 1 funding amount will be $500,000 in Federal Fiscal Year (FFY) 2022 funds, subject to the availability of funds. Funding amounts for years 2–5 will be set at continuation.

Authority: This program is authorized under Public Law 108–25 (the United States Leadership Against HIV AIDS, Tuberculosis and Malaria Act of 2003).

Period of Performance: September 30, 2022 through September 29, 2027.

Dated: February 15, 2022.

Terrance Perry,

Chief Grants Management Officer, Centers for Disease Control and Prevention.

[30Day–22–1268]

Agency Forms Undergoing Paperwork Reduction Act Review

In accordance with the Paperwork Reduction Act of 1995, the Centers for Disease Control and Prevention (CDC) has submitted the information collection request titled ''Drug Overdose Surveillance and Epidemiology (DOSE)'' to the Office of Management and Budget (OMB) for review and approval. CDC previously published a ''Proposed Data Collection Submitted for Public Comment and Recommendations'' notice on April 26, 2021, to obtain comments from the public and affected agencies. CDC received four comments related to the previous notice. This notice serves to allow an additional 30 days for public and affected agency comments.

CDC will accept all comments for this proposed information collection project. The Office of Management and Budget is particularly interested in comments that:

(a) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(b) Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(c) Enhance the quality, utility, and clarity of the information to be collected;

(d) Minimize the burden of the collection of information on those who are to respond, including, through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses; and

(e) Assess information collection costs.

To request additional information on the proposed project or to obtain a copy of the information collection plan and instruments, call (404) 639–7570. Comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function. Direct written comments and/or suggestions regarding the items contained in this notice to the Attention: CDC Desk Officer, Office of Management and Budget, 725 17th Street NW, Washington, DC 20503 or by fax to (202) 395–5806. Provide written comments within 30 days of notice publication.

Proposed Project

Drug Overdose Surveillance and Epidemiology (DOSE) (OMB Control No. 0920–1268, Exp. 8/31/2022)—Revision—National Center for Injury Prevention and Control (NCIPC), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

In 2020, a total of 91,799 drug overdose deaths occurred, corresponding to an age-adjusted rate of 28.3 per 100,000 population and a 31% increase from the 2019 rate (21.6). From 2013 to 2019, the synthetic opioid-involved death rate increased 1,040%, from 1.0 to 11.4 per 100,000 age-adjusted (3,105 to 36,359). The psychostimulant-involved death rate increased 317%, from 1.2 (3,627) in 2013 to 5.0 (16,167) in 2019. Non-fatal overdoses are on the rise as well; Emergency Department (ED) data from DOSE indicates increases from 2018 to present. In response to the growing severity of the opioid overdose epidemic, the U.S. government declared the opioid overdose epidemic a public health emergency on October 26, 2017. The opioid overdose epidemic is one of the top priorities of the U.S. Department of Health and Human Services (HHS). In

2021, HHS expanded their Overdose Prevention Strategy to focus on four strategic priorities: Primary prevention, harm reduction, evidence-based treatment, and recovery support.

DOSE is a critical element of HHS's first goal under primary prevention to support research and surveillance to collect timelier and more specific data through accelerating the speed at which CDC reports drug overdose data. DOSE data collection integrates, expands, and enhances previous data sharing efforts with public health departments initiated under ESOOS. The goal of DOSE is to conduct surveillance of approximately 75% of all ED visits for drug overdoses through the end of the Overdose Data to Action (OD2A) cooperative agreement in 2023. In 2019, OD2A provided funding for 66 jurisdictions; 47 states and the District of Columbia share data with DOSE. Though we had hoped to capture data from all 50 states and the District of Columbia, only 47 states and the District of Columbia applied for this funding announcement.

Currently, DOSE operates in the 47 states and the District of Columbia currently funded by OD2A (three states did not request CDC funding in the current cycle but may for the next funding cycle in 2023). Of these 48 health departments, 43 share syndromic data with CDC monthly and 26 share at least quarterly discharge data. A total of 33 health departments provide CDC with access to their syndromic surveillance data from EDs in CDC's National Syndromic Surveillance Program (NSSP) system. Access to this timely data has allowed us to improve the situational awareness of federal, state, and local health departments about emerging drug overdose outbreaks and the progression of the opioid overdose epidemic. Health departments have used this data to populate state data dashboards and develop alerts for local communities. In addition, health departments have used this data in concert with public safety partners to gain a better overall picture of outbreaks in their communities.

All data sharing between CDC and health departments in DOSE is driven by two standardized data forms, the Rapid ED overdose data form and the ED discharge overdose data form, and CDC cases definitions of drug, opioid, heroin, fentanyl, all stimulant, cocaine, methamphetamine, benzodiazepine, and other emerging drug overdoses. The Rapid ED Overdose Data Form will be submitted to CDC monthly. For 35 respondents, the estimated burden per response is 30 minutes. For 10 respondents, the estimated burden per response is three hours. The estimated burden per response for the ED Discharge Overdose Data Form is three hours. This form will be submitted four times per year by 28 respondents and once per year by 23 respondents. All information will be collected electronically. The total estimated annualized burden hours are 975.

ESTIMATED ANNUALIZED BURDEN HOURS

Type of respondent	Form name	Number of respondents	Number of responses per respondent	Average burden per response (hours)
Participating health departments sharing aggregate data from local syndromic or hospital discharge file.	Rapid ED overdose data form	10	12	3
Participating health departments sharing case-level ED data with CDC through the NSSP BioSense (OMB No. 0920–0824).	Rapid ED overdose data form	35	12	30/60
Participating health department sharing finalized hospital discharge data on a quarterly basis.	ED discharge overdose data form.	28	4	3
Participating health department sharing finalized hospital discharge data on a yearly basis.	ED discharge overdose data form.	23	1	3

BILLING CODE 4163–19–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Notice of Award of a Single-Source Cooperative Agreement To Fund the Ho Chi Minh City Department of Health (HCMC DOH), Vietnam

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: The Centers for Disease Control and Prevention (CDC), located within the Department of Health and Human Services (HHS), announces the award of approximately $2,000,000 for Year 1 of funding to the Ho Chi Minh City Department of Health (HCMC DOH). The award will strengthen the capacity of the HCMC DOH to provide sustainable evidence-based effective HIV prevention, care and treatment services. As Ho Chi Minh City contributes to 22.6% of the HIV burden, HCMC DOH remains critical to the success of HIV program in Vietnam. This NOFO will contribute directly to the national HIV prevention, care and treatment goals by supporting direct services and will support long-term sustainability of the HIV response through capacity building and technical assistance (TA). Funding amounts for years 2–5 will be set at continuation.

DATES: The period for this award will be September 30, 2022 through September 29, 2027.

FOR FURTHER INFORMATION CONTACT: Amy Bailey, Center for Global Health, Centers for Disease Control and Prevention, 4 Le Duan, District 1, Ho Chi Minh City, Vietnam, Telephone: 800–232–6348, E-Mail: *fue8@cdc.gov.*

SUPPLEMENTARY INFORMATION: The single-source award will strengthen the capacity of the HCMC DOH to provide sustainable, evidence-based, effective HIV/AIDS prevention, care and treatment services.

HCMC DOH is in a unique position to conduct this work as it is mandated to advise and assist the City People's Committee in state management of health and in terms of legal authority and credibility among Vietnamese health institutions, to give direction, guide, coordinate and implement all public health including HIV/AIDS activities in HCMC. As Ho Chi Minh City (HCMC) contributes to 22.6% of the HIV burden, HCMC DOH remains critical to the success of HIV program in

Vietnam. This NOFO will contribute directly to the national HIV prevention, care, and treatment goals by supporting direct services and will support long-term sustainability of the HIV response through capacity building and TA.

Summary of the Award

Recipient: Ho Chi Minh City Department of Health (HCMC DOH).

Purpose of the Award: The purpose of this award is to strengthen the capacity of the HCMC DOH to provide sustainable evidence-based effective HIV prevention, care and treatment services.

Amount of Award: The approximate year 1 funding amount will be $2,000,000 in Federal Fiscal Year (FFY) 2022 funds, subject to the availability of funds. Funding amounts for years 2–5 will be set at continuation.

Authority: This program is authorized under Public Law 108–25 (the United States Leadership Against HIV AIDS, Tuberculosis and Malaria Act of 2003).

Period of Performance: September 30, 2022 through September 29, 2027.

Dated: February 15, 2022.

Terrance Perry,

Chief Grants Management Officer, Centers for Disease Control and Prevention.

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice with comment period.

SUMMARY: The Centers for Disease Control and Prevention (CDC), as part of its continuing effort to reduce public burden and maximize the utility of government information, invites the general public and other federal agencies the opportunity to comment on a proposed and/or continuing information collection, as required by the Paperwork Reduction Act of 1995. This notice invites comment on a proposed information collection project titled Homeless Service Providers Knowledge, Attitudes, and Practices Regarding Body Lice, Fleas and Associated Diseases. This proposed study is designed to improve CDC's understanding of homeless service providers knowledge, attitudes, and practices regarding vector-borne diseases that can affect persons experiencing homelessness.

DATES: CDC must receive written comments on or before April 25, 2022.

ADDRESSES: You may submit comments, identified by Docket No. CDC–2022–0026, by either of the following methods:

- *Federal eRulemaking Portal: regulations.gov.* Follow the instructions for submitting comments.
- *Mail:* Jeffrey M. Zirger, Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE, MS H21–8, Atlanta, Georgia 30329.

Instructions: All submissions received must include the agency name and Docket Number. CDC will post, without change, all relevant comments to *regulations.gov.*

PLEASE NOTE: *Submit all comments through the Federal eRulemaking portal (regulations.gov) or by U.S. mail to the address listed above.*

FOR FURTHER INFORMATION CONTACT: To request more information on the proposed project or to obtain a copy of the information collection plan and instruments, contact Jeffrey M. Zirger, Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE, MS H21–8, Atlanta, Georgia 30329; phone: 404–639–7570; Email: *omb@cdc.gov.*

SUPPLEMENTARY INFORMATION: Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3520), federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. In addition, the PRA also requires federal agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each new proposed collection, each proposed extension of existing collection of information, and each reinstatement of previously approved information collection before submitting the collection to the OMB for approval. To comply with this requirement, we are publishing this notice of a proposed data collection as described below.

The OMB is particularly interested in comments that will help:

1. Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

2. Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

3. Enhance the quality, utility, and clarity of the information to be collected;

4. Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submissions of responses; and

5. Assess information collection costs.

Proposed Project

Homeless Service Providers Knowledge, Attitudes, and Practices Regarding Body Lice, Fleas and Associated Diseases—New—National Center for Emerging and Zoonotic Infectious Diseases (NCEZID), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

This proposed information collection aims to improve CDC's understanding of homeless service providers knowledge, attitudes, and practices regarding vector-borne diseases that can affect persons experiencing homelessness (PEH). Insights gained from this information collection will be used to develop guidance for control of vector-borne diseases among PEH and to improve educational outreach regarding these diseases.

Several bacterial vector-borne diseases that are spread by body lice and fleas disproportionately affect PEH. Given the potential severity of louse- and flea-borne diseases, as well as their disproportionate impact on PEH, understanding the knowledge and gaps in knowledge of urban homeless service providers will allow for targeted education and interventions to reduce the risk of louse- and flea-borne disease among this vulnerable population. This investigation aims to gain insight about gaps in understanding, prevention, and intervention to inform tailored educational campaigns and intervention efforts to reduce risk of infestation with body lice and fleas and their associated diseases.

CDC requests OMB approval for an estimated 38 annual burden hours. There is no cost to respondents other than their time.

ESTIMATED ANNUALIZED BURDEN HOURS

Type of respondents	Form name	Number of respondents	Number of responses per respondent	Average burden per response (in hours)	Total burden (in hours)
Homeless Service Providers—Shelter Workers and Volunteers.	Knowledge, Attitudes, and Practices About Body Lice- and Flea-borne Diseases: Survey for Shelter Workers.	150	1	10/60	25
Homeless Service Providers—Street Outreach Team.	Knowledge, Attitudes, and Practices About Body Lice- and Flea-borne Diseases: Survey for Street/Outreach Workers.	50	1	10/60	9
Supervisor—Shelter	Site Assessment Form for Homeless Service Sites.	30	1	5/60	3
Supervisor—Street Outreach Teams.	Site Assessment Form for Street/Outreach Workers.	10	1	5/60	1
Total	.....	.....	.....	.....	38

Jeffrey M. Zirger,

Lead, Information Collection Review Office, Office of Scientific Integrity, Office of Science, Centers for Disease Control and Prevention.

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Notice of Award of a Single-Source Grant To Fund the International Agency for Research on Cancer

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: The Centers for Disease Control and Prevention (CDC), located within the Department of Health and Human Services (HHS), announces the award of approximately $200,000, with an expected total funding of approximately $1,000,000 over a five-year period to the International Agency for Research on Cancer (IARC). The award will support the IARC Handbooks on Cancer Prevention program which provide comprehensive reviews and consensus evaluations evidence on the effectiveness of preventive interventions that may reduce cancer incidence or mortality in the United States and other countries.

DATES: The period for this award will be July 1, 2022 through June 30, 2027.

FOR FURTHER INFORMATION CONTACT: Mary C. White, National Center for Chronic Disease Prevention and Health Promotion, Centers for Disease Control and Prevention, 4770 Buford Highway, MS S107–4, Atlanta, GA 30341, Telephone: 800–232–6348, Email: *MCWhite@cdc.gov.*

SUPPLEMENTARY INFORMATION: The single-source award will focus on evaluations of the evidence on the effectiveness of preventive interventions that may reduce cancer incidence or mortality in the United States and other countries.

IARC is uniquely qualified for this award because no other organization, within the United States or elsewhere, convenes internationally recognized experts to rigorously evaluate scientific evidence on the effectiveness of preventive interventions that may reduce cancer incidence or mortality.

IARC is the specialized cancer agency of the World Health Organization. To accomplish its mission, the IARC Handbooks on Cancer Prevention program provides definitive, independent evidence-based evaluations of cancer-preventive interventions.

The program was established more than 20 years ago to identify and assess which interventions can prevent cancer or detect cancer at an early stage, to reduce cancer cases worldwide and save lives. The handbooks are regarded as trustworthy sources of information by national and international health agencies around the world.

Summary of the Award

Recipient: The International Agency for Research on Cancer (IARC).

Purpose of the Award: The purpose of this award is to provide a five-year grant to the International Agency for Research on Cancer (IARC) to provide support for the IARC Handbooks on Cancer Prevention program and ensure its continuity over five years. The outcomes include: Expanded dissemination of information about effective strategies and interventions to reduce cancer risk; and expanded utilization of the IARC Handbooks evaluations among health agencies to develop evidence-based interventions or policy recommendations for reducing cancer risk at the population level.

Amount of Award: $200,000 in Federal Fiscal Year (FFY) 2022 funds, with a total estimated $1,000,000 for a five-year period of performance, subject to availability of funds.

Authority: Public Health Service Act, 42 U.S.C. 241(a) and 247b(k)(2).

Period of Performance: July 1, 2022 through June 30, 2027.

Dated: February 15, 2022.

Terrance Perry,

Chief Grants Management Officer, Centers for Disease Control and Prevention.

[FR Doc. 2022–03630 Filed 2–18–22; 8:45 am]

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[Document Identifier: CMS–10786, CMS–10792 and CMS–10575]

Agency Information Collection Activities: Submission for OMB Review; Comment Request

AGENCY: Centers for Medicare & Medicaid Services, Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: The Centers for Medicare & Medicaid Services (CMS) is announcing an opportunity for the public to comment on CMS' intention to collect information from the public. Under the Paperwork Reduction Act of 1995 (PRA), federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, and to allow

a second opportunity for public comment on the notice. Interested persons are invited to send comments regarding the burden estimate or any other aspect of this collection of information, including the necessity and utility of the proposed information collection for the proper performance of the agency's functions, the accuracy of the estimated burden, ways to enhance the quality, utility, and clarity of the information to be collected, and the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

DATES: Comments on the collection(s) of information must be received by the OMB desk officer by March 24, 2022.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain*. Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

To obtain copies of a supporting statement and any related forms for the proposed collection(s) summarized in this notice, you may make your request using one of following:

1. Access CMS' website address at website address at: *https://www.cms.gov/Regulations-and-Guidance/Legislation/PaperworkReductionActof1995/PRA-Listing.html*.

FOR FURTHER INFORMATION CONTACT: William Parham at (410) 786–4669.

SUPPLEMENTARY INFORMATION: Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3520), federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. The term ''collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires federal agencies to publish a 30-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, CMS is publishing this notice that summarizes the following proposed collection(s) of information for public comment:

1. *Type of Information Collection Request:* New collection (Request for a new OMB Control Number); *Title of Information Collection:* Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment (SUPPORT) for Patients and Communities Act Section 1003 Demonstration Evaluation; *Use:* Section 1003 of the SUPPORT Act authorizes the Secretary of HHS, in consultation with the Director of the Agency for Healthcare Research and Quality (AHRQ) and the Assistant Secretary for Mental Health and Substance Use from the Substance Abuse and Mental Health Services Administration (SAMHSA), to conduct a 54-month demonstration project (hereinafter, ''the Demonstration'') which is designed to increase the capacity of Medicaid providers to deliver substance use disorder (SUD) treatment and recovery services.

Section 1003 also requires an evaluation of the demonstration. The evaluation is designed to assess:

- The effectiveness of the Demonstration in increasing the capacity of providers participating under the Medicaid state plan (or a waiver of such plan) to provide substance use disorder treatment or recovery services under such plan (or waiver);
- The activities carried out under the planning grants and demonstration project;
- The extent to which participating states have achieved the stated goals; and
- The strengths and limitations of the planning grants and demonstration project.

This collection of information request is intended to satisfy the reporting requirements, defined in the statute, regarding the impact of the Demonstration. The evaluation of the Demonstration will assess the extent to which the participating states achieved the goals they established to increase substance use treatment or recovery provider capacity under the Medicaid program. This includes both the planning and post-planning periods of the demonstration, as evaluation during both phases will enable CMS and stakeholders to assess the effects of the additional support provided to states during the post-planning period, relative to the planning period only.

Primary data collection will occur in two rounds in year two and year four of the evaluation. In both rounds, data collection will consist of: (1) A survey of providers in all 15 Planning Grant states who are eligible to prescribe and/or administer either buprenorphine or methadone medication for opioid use disorder (OUD), and (2) focus groups of providers in five post-planning period states (two focus groups per state, with six to eight participants in each group) who treat SUD, including OUD.

The survey will gather information on provider experiences related to Medicaid provider enrollment, SUD service delivery, and changes in OUD medication treatment, including barriers and enablers of prescribing and dispensing.

The focus groups will examine the impact of key aspects of implementation, such as perceived burdens associated with Medicaid enrollment or MAT delivery, access to referral placements, value of state-provided TA, and benefits and unanticipated outcomes experienced by providers during the Demonstration. *Form Number:* CMS–10786 (OMB control number: 0938–NEW); *Frequency:* Biennial; *Affected Public:* Private sector (Business or other for-profits and Not-for-profit institutions); *Number of Respondents:* 28,810; *Total Annual Responses:* 14,405; *Total Annual Hours:* 3,689. (For policy questions regarding this collection contact Melanie Brown at 410–786–1095.)

2. *Type of Information Collection Request:* New collection (Request for a new OMB control number); *Title of Information Collection:* Patient-Reported Indicator Survey (PaRIS); *Use:* The Centers for Medicare and Medicaid Services (CMS) invites comments on a proposed new Information Collection Request (ICR) to conduct the International Survey of People Living with Chronic Conditions (hereafter referred to as the PaRIS Survey). This survey has been developed by a collaborative workgroup under the auspices of the Organization for Economic Cooperation and Development (OECD), an international organization that works with governments, policy makers, and citizens to shape policies that foster prosperity, equality, opportunity, and well-being for all.

The OECD launched the PaRIS initiative in 2017 to address gaps in health outcomes measures, particularly regarding user experiences with health care services. OECD member countries, including the U.S., are working together to develop, standardize, and implement indicators that measure outcomes and experiences of health care that matter most to people. The PaRIS Survey will provide a common set of measures that support policy makers across participating countries to improve health care delivery. On behalf of the

Department of Health and Human Services (DHHS) Assistant Secretary for Planning and Evaluation (ASPE), the Office of Enterprise Data and Analytics (OEDA) in CMS has been designated as the lead participant for the U.S.

The PaRIS Survey will help to close critical policy gaps by focusing on: (1) Patient Reported Experience Measures (PREMS) which measure how patients experience health care, and (2) Patient Reported Outcome Measures (PROMS) which measure how patients assess the results of the care they receive. The PaRIS survey includes both PREMS and PROMS items and aims to collect vital information about primary health care, by asking about topics such as the respondent's health, health behaviors, patient activation and confidence in managing their health care, experiences with health care and health providers including access to health care, quality of life, physical functioning, and psychological well-being.

OECD and its member countries will use data collected by the PaRIS Survey to shed light on key questions about how well care in each country is organized around the needs of patients. Results from the survey will show how key outcomes and experiences vary across and within countries. This will allow countries to benchmark and learn from each other's approaches. The survey will also help policy makers in OECD member countries understand how health systems are addressing the needs of persons with chronic health conditions. Findings will foster a dialogue with service providers about how to further improve the performance and people-centeredness of primary health care services.

To facilitate U.S. participation in this important initiative, CMS will leverage the existing sample for the Medicare Current Beneficiary Survey (MCBS). The MCBS is a continuous, multi-purpose survey of a representative national sample of the Medicare population; it is conducted under OMB clearance number 0938–0568. While the MCBS sample includes the population of beneficiaries aged 65 and over and beneficiaries aged 64 and below with certain disabling conditions residing in the U.S., selection for the PaRIS Survey will be limited to beneficiaries aged 65 and over who have seen a medical provider in the last six months to provide a comparable population to survey respondents selected in other participating OECD countries. Interviewers will telephone MCBS respondents and administer the PaRIS Survey by phone as a one-time standalone survey during January through April 2023. Non-response follow-up will be conducted by telephone and in-person as needed. It is estimated that 5,144 Medicare beneficiaries will participate in this 40-minute survey. CMS plans to release a disclosure protected public use file with accompanying methodological documentation. This public use file will also be made available to OECD for analysis and released with data from other participating countries. *Form Number:* CMS–10792 (OMB: 0938-New); Frequency: One-time collection; *Affected Public:* Individuals residing in households; *Total Number of Respondents:* 10,498; *Total Number of Responses:* 10,498; *Total Hours:* 3,814 (For policy questions regarding this collection contact William Long at 410–786–7927.)

3. *Type of Information Collection Request:* Extension of a currently approved collection; *Title of Information Collection:* Generic Clearance for the Health Care Payment Learning and Action Network; *Use:* The Center for Medicare and Medicaid Services (CMS), through the Center for Medicare and Medicaid Innovation, develops and tests innovative new payment and service delivery models in accordance with the requirements of section 1115A and in consideration of the opportunities and factors set forth in section 1115A(b)(2) of the Act. To date, CMS has built a portfolio of models (in operation or recently announced) that have attracted participation from a broad array of health care providers, states, payers, and other stakeholders.

To more effectively partner with stakeholders across the health care system and accelerate system transformation, CMS launched the Health Care Payment Learning and Action Network (LAN) to accelerate the transition to Medicare and non-Medicare alternative payment models by collaborating with a broad array of health care delivery stakeholders, identifying best practices in their implementation, and monitoring the adoption of value-based alternative payment models across the U.S. health care system—to include the percentage of Medicare, Medicaid, and non-Medicare payments tied to (and U.S. lives covered by) alternative payment models that reward the quality of care delivered. *Form Number:* CMS–10575 (OMB control number: 0938–1297); *Frequency:* Occasionally; *Affected Public:* Individuals and Households, State, Local, or Tribal Governments, Federal Government, Private Sector (Business or other for-profits and Not-for-profits); *Number of Respondents:* 30,110; *Number of Responses:* 23,110; *Total Annual Hours:* 26,467. (For questions regarding this collection contact Dustin Allison (303) 437–6123.)

Dated: February 16, 2022.

William N. Parham, III,

Director, Paperwork Reduction Staff, Office of Strategic Operations and Regulatory Affairs.

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: Centers for Medicare & Medicaid Services, Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: The Centers for Medicare & Medicaid Services (CMS) is announcing an opportunity for the public to comment on CMS' intention to collect information from the public. Under the Paperwork Reduction Act of 1995 (the PRA), federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information (including each proposed extension or reinstatement of an existing collection of information) and to allow 60 days for public comment on the proposed action. Interested persons are invited to send comments regarding our burden estimates or any other aspect of this collection of information, including the necessity and utility of the proposed information collection for the proper performance of the agency's functions, the accuracy of the estimated burden, ways to enhance the quality, utility, and clarity of the information to be collected, and the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

DATES: Comments must be received by April 25, 2022.

ADDRESSES: When commenting, please reference the document identifier or OMB control number. To be assured consideration, comments and recommendations must be submitted in any one of the following ways:

1. *Electronically.* You may send your comments electronically to *http://www.regulations.gov.* Follow the instructions for ''Comment or

Submission'' or ''More Search Options'' to find the information collection document(s) that are accepting comments.

2. *By regular mail.* You may mail written comments to the following address: CMS, Office of Strategic Operations and Regulatory Affairs, Division of Regulations Development, Attention: Document Identifier/OMB Control Number: _____, Room C4–26–05, 7500 Security Boulevard, Baltimore, Maryland 21244–1850.

To obtain copies of a supporting statement and any related forms for the proposed collection(s) summarized in this notice, you may make your request using one of following:

1. Access CMS' website address at website address at *https://www.cms.gov/Regulations-and-Guidance/Legislation/PaperworkReductionActof1995/PRA-Listing.*

FOR FURTHER INFORMATION CONTACT: William N. Parham at (410) 786–4669.

SUPPLEMENTARY INFORMATION:

Contents

This notice sets out a summary of the use and burden associated with the following information collections. More detailed information can be found in each collection's supporting statement and associated materials (see **ADDRESSES**).

CMS–10391—Methods for Assuring Access to Covered Medicaid Services Under 42 CFR 447.203 and 447.204

CMS–R–74 Income and Eligibility Verification System Reporting and Supporting Regulations

CMS–R–306 Use of Restraint and Seclusion in Psychiatric Residential Treatment Facilities (PRTFs) for Individuals Under Age 21 and Supporting Regulations

CMS–265–11 Independent Renal Dialysis Facility Cost Report

CMS–10544 Good Cause Processes

Under the PRA (44 U.S.C. 3501–3520), federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. The term ''collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA requires federal agencies to publish a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, CMS is publishing this notice.

Information Collection

1. *Type of Information Collection Request:* Extension of a currently approved collection; *Title of Information Collection:* Methods for Assuring Access to Covered Medicaid Services Under 42 CFR 447.203 and 447.204; *Use:* Current regulations at 42 CFR 447.203(b) require states to develop an access monitoring review plan (AMRP) that is updated at least every three years for: Primary care services, physician specialist services, behavioral health services, pre and post-natal obstetric services (including labor and delivery), and home health services. When states reduce rates for other Medicaid services, they must add those services to the AMRP and monitor the effects of the rate reductions for 3 years. If access issues are detected, a state must submit a corrective action plan to CMS within 90 days and work to address the issues within 12 months. Section 447.203(b)(7) requires that states have mechanisms to obtain ongoing beneficiary and provider feedback. A state is also required to maintain a record of data on public input and how the state responded to the input. Prior to submitting proposals to reduce or restructure Medicaid service payment rates, states must receive input from beneficiaries, providers, and other affected stakeholders on the extent of beneficiary access to the affected services.

The information is used by states to document that access to care is in compliance with section 1902(a)(30)(A) of the Social Security Act, to identify issues with access within a state's Medicaid program, and to inform any necessary programmatic changes to address issues with access to care. CMS uses the information to make informed approval decisions on State plan amendments that propose to make Medicaid rate reductions or restructure payment rates and to provide the necessary information for CMS to monitor ongoing compliance with section 1902(a)(30)(A). Beneficiaries, providers and other affected stakeholders may use the information to raise access issues to state Medicaid agencies and work with agencies to address those issues. *Form Number:* CMS–10391 (OMB control number: 0938–1134); *Frequency:* Annually; *Affected Public:* State, Local, or Tribal Governments); *Number of Respondents:* 51; *Total Annual Responses:* 212; *Total Annual Hours:* 12,262. (For questions regarding this collection contact Jeremy Silanskis at 410–786–1592.)

2. *Type of Information Collection Request:* Extension of a currently approved collection; *Title of Information Collection:* Income and Eligibility Verification System Reporting and Supporting Regulations; *Use:* Section 1137 of the Social Security Act requires that States verify the income and eligibility information contained on the applicant's application and in the applicant's case file through data matches with the agencies and entities identified in this section. The State Medicaid/CHIP agency will report the existence of a system to collect all information needed to determine and redetermine eligibility for Medicaid and CHIP. The State Medicaid/CHIP agency will attest to using the PARIS system in determining beneficiary eligibility in Medicaid or CHIP benefit programs. *Form Number:* CMS–R–74 (OMB control number: 0938–0467); *Frequency:* Occasionally; *Affected Public:* State, Local, or Tribal Governments; *Number of Respondents:* 55; *Total Annual Responses:* 3,241; *Total Annual Hours:* 1,071. (For policy questions regarding this collection contact Stephanie Bell at 410–786–0617.)

3. *Type of Information Collection Request:* Extension of a currently approved collection; *Title of Information Collection:* Use of Restraint and Seclusion in Psychiatric Residential Treatment Facilities (PRTFs) for Individuals Under Age 21 and Supporting Regulations; *Use:* Psychiatric residential treatment facilities are required to report deaths, serious injuries and attempted suicides to the State Medicaid Agency and the Protection and Advocacy Organization. They are also required to provide residents the restraint and seclusion policy in writing, and to document in the residents' records all activities involving the use of restraint and seclusion. *Form Number:* CMS–R–306 (OMB control number: 0938–0833); *Frequency:* Occasionally; *Affected Public:* Private sector (Business or other for-profits); *Number of Respondents:* 390; *Total Annual Responses:* 1,466,823; *Total Annual Hours:* 449,609. (For policy questions regarding this collection contact Kirsten Jensen at 410–786–8146.)

4. *Type of Information Collection Request:* Reinstatement with change; *Title of Information Collection:* Independent Renal Dialysis Facility Cost Report; *Use:* Under the authority of sections 1815(a) and 1833(e) of the Act, CMS requires that providers of services participating in the Medicare program submit information to determine costs

for health care services rendered to Medicare beneficiaries. CMS requires that providers follow reasonable cost principles under 1861(v)(1)(A) of the Act when completing the Medicare cost report (MCR). Regulations at 42 CFR 413.20 and 413.24 require that providers submit acceptable cost reports on an annual basis and maintain sufficient financial records and statistical data, capable of verification by qualified auditors.

ESRD facilities participating in the Medicare program submit these cost reports annually to report cost and statistical data used by CMS to determine reasonable costs incurred for furnishing dialysis services to Medicare beneficiaries and to effect the year-end cost settlement for Medicare bad debts. *Form Number:* CMS–265–11 (OMB control number: 0938–0236); *Frequency:* Annually; *Affected Public:* Private Sector, Business or other for-profits, State, Local, or Tribal Governments); *Number of Respondents:* 7,492; *Total Annual Responses:* 7,492; *Total Annual Hours:* 494,472. (For questions regarding this collection contact Keplinger, Jill C at 410–786–4550.)

5. *Type of Information Collection Request:* Reinstatement without change; *Title of Information Collection:* Good Cause Processes; *Use:* Section 1851(g)(3)(B)(i) of the Act provides that MA organizations may terminate the enrollment of individuals who fail to pay basic and supplemental premiums after a grace period established by the plan. Section 1860D–1(b)(1)(B)(v) of the Act generally directs us to establish rules related to enrollment, disenrollment, and termination for Part D plan sponsors that are similar to those established for MA organizations under section 1851 of the Act. Consistent with these sections of the Act, subpart B in each of the Parts C and D regulations sets forth requirements with respect to involuntary disenrollment procedures at 42 CFR 422.74 and 423.44, respectively. In addition, section 1876(c)(3)(B) establishes that individuals may be disenrolled from coverage as specified in regulations. Thus, current regulations at 42 CFR 417.460 specify that a cost plan, specifically a Health Maintenance Organization (HMO) or competitive medical plan (CMP), may disenroll a member who fails to pay premiums or other charges imposed by the plan for deductible and coinsurance amounts.

These good cause provisions authorize CMS to reinstate a disenrolled individual's enrollment without interruption in coverage if the non-payment is due to circumstances that the individual could not reasonably foresee or could not control, such as an unexpected hospitalization. At its inception, the process of accepting, reviewing, and processing beneficiary requests for reinstatement for good cause was carried out exclusively by CMS. *Form Number:* CMS–10544 (OMB control number: 0938–1271); *Frequency:* Annually; *Affected Public:* Business or other for-profits State, Local, or Tribal Governments); *Number of Respondents:* 312; *Total Annual Responses:* 41,289; *Total Annual Hours:* 27,499. (For questions regarding this collection contact Fabayo, Ronke at (410) 786–4460.)

Dated: February 16, 2022.

William N. Parham, III,

Director, Paperwork Reduction Staff, Office of Strategic Operations and Regulatory Affairs.

BILLING CODE 4120–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

OMB No. 0970–0502

Proposed Information Collection Activity; Behavioral Interventions To Advance Self-Sufficiency Next Generation

AGENCY: Office of Planning, Research, and Evaluation, Administration for Children and Families, HHS.

ACTION: Request for public comment.

SUMMARY: The Office of Planning, Research, and Evaluation (OPRE) in the Administration for Children and Families (ACF), U.S. Department of Health and Human Services (HHS), requests Office of Management and Budget (OMB) approval to extend approval of the ACF Behavioral Interventions to Advance Self-Sufficiency Next Generation (BIAS–NG) Project Overarching Generic (OMB #: 0970–0502; Expiration date: 8/31/2022). Under this overarching generic, ACF collects data as part of rapid cycle testing and evaluation, in order to inform the design of interventions informed by behavioral science and to better understand the mechanisms and effects of such interventions. Interventions have been and will continue to be developed in the program area domains of Temporary Assistance for Needy Families (TANF), child welfare, and Early Head Start/Head Start (EHS/HS). These interventions are intended to improve outcomes for participants in these programs. No changes are proposed.

DATES: *Comments due within 60 days of publication.* In compliance with the requirements of the Paperwork Reduction Act of 1995, ACF is soliciting public comment on the specific aspects of the information collection described above.

ADDRESSES: You can obtain copies of the proposed collection of information and submit comments by emailing *OPREinfocollection@acf.hhs.gov.* Identify all requests by the title of the information collection.

SUPPLEMENTARY INFORMATION:

Description: OPRE is conducting the BIAS–NG project, which uses behavioral insights to design and test interventions intended to improve the efficiency, operations, and efficacy of human services programs. The BIAS–NG project is applying and testing behavioral insights to ACF programs including TANF, Child Welfare, and EHS/HS. This notice is a request for comments on ACF's proposal to extend approval of the overarching generic. Under the approved pilot generic clearance, OPRE has already completed work with five sites and has conducted five tests. The extended approval would allow OPRE to continue to work with at least three additional sites, conducting one or more tests of behavioral interventions. The design and testing of BIAS–NG interventions is rapid and, to the extent possible, iterative. Each specific intervention is designed in consultation with agency leaders and launched as quickly as possible. To maximize the likelihood that the intervention produces measurable, significant, and positive effects on outcomes of interest, rapid cycle evaluation techniques will be employed in which proximate outcomes will be measured to allow the research team to more quickly iterate and adjust the intervention design, informing subsequent tests. Due to the rapid and iterative nature of this work, OPRE sought and received generic clearance to conduct this research. Following standard OMB requirements for generic clearances, once instruments requiring burden are tailored to a specific site and the site's intervention, OPRE submits an individual generic information collection request under this umbrella clearance. Each request includes the individual instrument(s), a justification specific to the individual information collection, a description of the proposed intervention, and any supplementary documents. Each specific information collection includes up to two submissions—one submission for the formative stage research and another submission for any further data

collection requiring burden during the testing phase. The type of information to be collected and the uses of the information is described in the supporting statements, found here: *https://www.reginfo.gov/public/do/PRAViewDocument?ref_nbr=201707-0970-005.*

Respondents: (1) Program Administrators, (2) Program Staff, and (3) Program Clients.

ANNUAL BURDEN ESTIMATES

[TANF, CW, EHS/HS]

Instrument	Number of respondents (TANF, CW, EHS/HS) (total over request period)	Number of responses per respondent (total over request period)	Average burden hours per response (in hours)	Total burden (in hours)	Annual burden (in hours)
Phase 3: Diagnosis and Design					
Administrator interviews/focus groups	48	1	1	48	16
Staff interviews/focus groups	400	1	1	400	133
Client interviews/focus groups	400	1	1	400	133
Client survey	400	1	0.25	100	33
Staff Survey	400	1	0.25	100	33
Phase 4: Evaluation					
Administrator interviews/focus groups	96	1	1	96	32
Staff interviews/focus groups	800	1	1	800	267
Client interviews/focus groups	800	1	1	800	267
Client survey	12,000	1	0.25	3,000	1,000
Staff Survey	1,200	1	0.25	300	100

Estimated Total Annual Burden Hours: 2,014.

Comments: The Department specifically requests comments on (a) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted within 60 days of this publication.

Authority: 42 U.S.C. 1310.

Mary B. Jones,

ACF/OPRE Certifying Officer.

Substance Abuse and Mental Health Services Administration

Notice of Meeting

Pursuant to Public Law 92–463, notice is hereby given that the Substance Abuse and Mental Health Services Administration's (SAMHSA) Center for Substance Abuse Prevention (CSAP) Drug Testing Advisory Board (DTAB) will convene via web conference on March 9, 2022, from 10:00 a.m. ET to 1:00 p.m. ET.

The board will meet in open-session on March 9, 2022, from 10:00 a.m. ET to 1:00 p.m. ET, to discuss the Mandatory Guidelines for Federal Workplace Drug Testing Programs with updates from the Department of Transportation, the Nuclear Regulatory Commission and the Food and Drug

Administration. Other discussion topics include a presentation on the Drug-Free Workplace Program Summit meeting scheduled for May, 2022, NLCP drug testing results, and synthetic urines and adulteration.

Meeting registration information can be completed at *http://snacregister.samhsa.gov/MeetingList.aspx.* Web conference and call information will be sent after completing registration. Meeting information and a roster of DTAB members may be obtained by accessing the SAMHSA Advisory Committees website, *https://www.samhsa.gov/about-us/advisory-councils/meetings* or by contacting the Designated Federal Officer, Lisa S. Davis, M.S.

Committee Name: Substance Abuse and Mental Health Services Administration, Center for Substance Abuse Prevention, Drug Testing Advisory Board.

Dates/Time/Type: March 9, 2022, from 10:00 a.m. to 1:00 p.m.: OPEN.

Place: Substance Abuse and Mental Health Services Administration, 5600 Fishers Lane, Rockville, MD 20857.

Contact: Lisa S. Davis, M.S., Social Science Analyst, Center for Substance Abuse Prevention, 5600 Fishers Lane, Rockville, Maryland 20857, Telephone: (240) 276–1440, Email: *Lisa.Davis@samhsa.hhs.gov.*

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

[Docket No. USCG–2022–0105]

Cooperative Research and Development Agreement—Evaluation of Teledyne FLIR SF280HDEP

AGENCY: Coast Guard, DHS.

ACTION: Notice of intent; request for comments.

SUMMARY: The Coast Guard announces its intent to enter into a cooperative research and development agreement (CRADA) to evaluate and potentially modify target classification technology used in conjunction with electro-optical/infra-red (E.O./IR) systems. The Coast Guard is currently considering partnering with Teledyne FLIR, Inc. and solicits public comment on the possible participation of other parties in the proposed CRADA, and the nature of that participation. The Coast Guard also invites other potential non-Federal participants, who have the interest and capability to bring similar contributions to this type of research, to consider submitting proposals for consideration in similar CRADAs.

DATES: Comments must reach the Coast Guard on or before March 24, 2022. Synopses of proposals regarding future CRADAs must also reach the Coast Guard on or before March 24, 2022

ADDRESSES: Submit comments online at *http://www.regulations.gov* following website instructions. Submit synopses of proposals regarding future CRADAs to Mr. Jay Carey at his address listed in the **FOR FURTHER INFORMATION CONTACT** section.

FOR FURTHER INFORMATION CONTACT: If you have questions on this notice or wish to submit proposals for future CRADAs, contact Mr. Jay Carey, Project Official, Aviation Branch, U.S. Coast Guard Research and Development Center, 1 Chelsea Street, New London, CT 06320, telephone 860–271–2600, email *RDC-info@uscg.mil.*

SUPPLEMENTARY INFORMATION:

Public Participation and Request for Comments

We request public comments on this notice. Although we do not plan to publish responses to comments in the **Federal Register**, we will respond directly to commenters and may modify our proposal in light of comments.

Comments should be marked with docket number USCG–2022–0105 and should provide a reason for each suggestion or recommendation. You should provide personal contact information so that we can contact you if we have questions regarding your comments; but please note that all comments will be posted to the online docket without change and that any personal information you include can be searchable online. For more about privacy and the docket, visit *http://www.regulations.gov/privacyNotice.* We do accept anonymous comments.

We encourage you to submit comments through the Federal Portal at *http://www.regulations.gov.* If your material cannot be submitted using *http://www.regulations.gov,* contact the Coast Guard (see **FOR FURTHER INFORMATION CONTACT**). Documents mentioned in this notice and all public comments, will be in our online docket at *http://www.regulations.gov* and can be viewed by following that website's instructions. Additionally, if you go to the online docket and sign up for email alerts, you will be notified when comments are posted.

Do not submit detailed proposals for future CRADAs to *http://www.regulations.gov.* Instead, submit them directly to the Coast Guard (see **FOR FURTHER INFORMATION CONTACT**).

Discussion

CRADAs are authorized under 15 U.S.C. 3710(a).[1] A CRADA promotes the transfer of technology to the private sector for commercial use, as well as specified research or development efforts that are consistent with the mission of the Federal parties to the CRADA. The Federal party or parties agree with one or more non-Federal parties to share research resources, but the Federal party does not contribute funding.

CRADAs are not procurement contracts. Care is taken to ensure that CRADAs are not used to circumvent the contracting process. CRADAs have a specific purpose and should not be confused with procurement contracts, grants, and other type of agreements.

Under the proposed CRADA, the Coast Guard's Research and Development Center (R&DC) will collaborate with one or more non-Federal participants. Together, the R&DC and the non-Federal participants will identify the capabilities, benefits, risks, and technical limitations of enhancing the SF280HD–EP to operate in support of USCG missions.

We anticipate that the Coast Guard's contributions under the proposed CRADA will include the following:

(1) In conjunction with the non-Federal participant(s), assist in developing the evaluation test plan to be executed under the CRADA;

(2) Provide the small unmanned aircraft system (SUAS) test range, test range support, facilities, and all approvals required for SUAS operation under the CRADA;

(3) Provide airborne targets, operators, and associated equipment necessary to conduct the evaluation test plan;

(4) Coordinate and receive any Unmanned Flight Clearance (UFC) for the evaluations to be executed under this CRADA, as required, to include: Privacy Threshold Analysis, Privacy Impact Assessment, Spectrum Approval with the Office of Information Assurance and Spectrum Policy (CG–65), the Federal Communications Commission (FCC), the National Telecommunications and Information Administration (NTIA) Local Range

[1] The statute confers this authority on the head of each Federal agency. The Secretary of DHS's authority is delegated to the Coast Guard and other DHS organizational elements by DHS Delegation No. 0160.1, para. II.B.34.

spectrum de-confliction/authorization entities

(5) Collaboratively collect and analyze evaluation test plan data; and

(6) Collaboratively develop a final report documenting the methodologies, findings, conclusions, and recommendations of this CRADA work.

We anticipate that the non-Federal participants' contributions under the proposed CRADA will include the following:

(1) Provide SF280HDEP system and all other equipment to conduct the evaluation described in test plan;

(2) Provide all required operators and technicians to conduct the evaluation;

(3) Provide shipment and delivery of all equipment required for the evaluation; and

(4) Provide own travel, personnel, and other expenses as required.

(5) Collaboratively collect and analyze evaluation test plan data; and

(6) Collaboratively develop a final report documenting the methodologies, findings, conclusions, and recommendations of this CRADA work.

The Coast Guard reserves the right to select for CRADA participants all, some, or no proposals submitted for this CRADA. The Coast Guard will provide no funding for reimbursement of proposal development costs. Proposals and any other material submitted in response to this notice will not be returned. Proposals submitted are expected to be unclassified and have no more than five single-sided pages (excluding cover page, DD 1494, JF–12, etc.). The Coast Guard will select proposals at its sole discretion on the basis of:

(1) How well they communicate an understanding of, and ability to meet, the proposed CRADA's goal; and

(2) How well they address the following criteria:

(a) Technical capability to support the non-Federal party contributions described; and

(b) Resources available for supporting the non-Federal party contributions described.

Currently, the Coast Guard is considering Teledyne FLIR, Inc. for participation in this CRADA, because they have a solution in place for providing E.O./IR target auto classification. However, we do not wish to exclude other viable participants from this or future similar CRADAs.

The goal of this CRADA is to evaluate the potential of modifying E.O./IR target auto classification technology. Special consideration will be given to small business firms/consortia, and preference will be given to business units located in the U.S.

This notice is issued under the authority of 5 U.S.C. 552(a) and 15 U.S.C. 3710(a).

Dated: February 16, 2022.

Daniel P. Keane,

Captain, USCG, Commanding Officer, U.S. Coast Guard Research and Development Center.

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

U.S. Customs and Border Protection

[1651–0015]

Application for Extension of Bond for Temporary Importation (Form 3173)

AGENCY: U.S. Customs and Border Protection (CBP), Department of Homeland Security.

ACTION: 60-Day notice and request for comments; revision of an existing collection of information.

SUMMARY: The Department of Homeland Security, U.S. Customs and Border Protection will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995 (PRA). The information collection is published in the **Federal Register** to obtain comments from the public and affected agencies.

DATES: Comments are encouraged and must be submitted (no later than April 25, 2022) to be assured of consideration.

ADDRESSES: Written comments and/or suggestions regarding the item(s) contained in this notice must include the OMB Control Number 1651–0015 in the subject line and the agency name. Please use the following method to submit comments:

Email. Submit comments to: *CBP_PRA@cbp.dhs.gov.*

Due to COVID–19-related restrictions, CBP has temporarily suspended its ability to receive public comments by mail.

FOR FURTHER INFORMATION CONTACT: Requests for additional PRA information should be directed to Seth Renkema, Chief, Economic Impact Analysis Branch, U.S. Customs and Border Protection, Office of Trade, Regulations and Rulings, 90 K Street NE, 10th Floor, Washington, DC 20229–1177, Telephone number 202–325–0056 or via email *CBP_PRA@cbp.dhs.gov.* Please note that the contact information provided here is solely for questions regarding this notice. Individuals seeking information about other CBP programs should contact the CBP National Customer Service Center at 877–227–5511, (TTY) 1–800–877–8339, or CBP website at *https://www.cbp.gov/.*

SUPPLEMENTARY INFORMATION: CBP invites the general public and other Federal agencies to comment on the proposed and/or continuing information collections pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). This process is conducted in accordance with 5 CFR 1320.8. Written comments and suggestions from the public and affected agencies should address one or more of the following four points: (1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) suggestions to enhance the quality, utility, and clarity of the information to be collected; and (4) suggestions to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses. The comments that are submitted will be summarized and included in the request for approval. All comments will become a matter of public record.

Overview of This Information Collection

Title: Application for Extension of Bond for Temporary Importation.

OMB Number: 1651–0015.

Form Number: CBP Form 3173.

Current Actions: CBP proposes to extend the expiration date of this information collection and to revise this information collection to allow electronic submission via the Document Image System (DIS). There is no change to the information collected and no change to CBP Form 3173.

Type of Review: Revision.

Affected Public: Businesses.

Abstract: Imported merchandise which is to remain in the customs territory for a period of one year or less without the payment of duties with the intent to destroy or export is entered as a temporary importation of goods under bond (TIB), as authorized under the Harmonized Tariff Schedule of the United States (HTSUS) (19 U.S.C. 1202).

The general requirements for all TIB categories and specific rules for certain types of goods are set forth the notes to Chapter 98 (HTSUS), and in the U.S. notes, article provisions, and rates of duty columns to subchapter XIII. Consistent with 19 CFR 10.37, when this time period is not sufficient, importers and brokers may request an extension by submitting a CBP Form 3173, ''*Application for Extension of Bond for Temporary Importation*'', either electronically or manually, to the Center Director. The period of time may be extended for not more than two further periods of 1 year each, or such shorter periods as may be appropriate. An Extension may be granted by CBP, upon written or electronic submission of a CBP Form 3173, provided that the articles have not been exported or destroyed before receipt of the application, and liquidated damages have not been assessed under the bond before receipt of the application. TIB extensions requested by the Trade will automatically be accepted in the Automated Customs Environment (ACE), but CBP can deny an extension as necessary. CBP Form 3173 is provided for in 19 CFR 10.37 and is accessible at: *https://www.cbp.gov/newsroom/publications/forms?title=3173.*

CBP published its plan to conduct a test of the National Customs Automation Program (NCAP) concerning document imaging in the **Federal Register** (77 FR 20835), on April 4, 2012. Under the test, certain ACE participants are able to submit electronic images of a specific set of CBP and Participating Government Agency (PGA) forms and supporting information to CBP. Specifically, importers, and brokers, are allowed to submit official CBP documents and specified PGA forms via the Electronic Data Interchange (EDI). Although the first phase of the DIS test was limited to certain CBP and PGA forms, the DIS Guidelines were updated over time to include various entry summary documents.

This information collection is necessary to ensure compliance with 19 CFR 10.37 and the DIS guidance.

Proposed Change:

CBP Form 3173 is considered an entry summary document, and ACE participants will be able to submit the CBP Form 3173 electronically through the Document Image System (DIS).

Type of Information Collection: Application for Extension of Bond for Temporary Importation (Form 3173).

Estimated Number of Respondents: 1,822.

Estimated Number of Annual Responses per Respondent: 14.

Estimated Number of Total Annual Responses: 25,509.

Estimated Time per Response: .217 hours.

Estimated Total Annual Burden Hours: 5,527.

Dated: February 16, 2022.

Seth D. Renkema,

Branch Chief, Economic Impact Analysis Branch, U.S. Customs and Border Protection.

BILLING CODE 9111–14–P

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Docket ID: FEMA–2021–0013; OMB No. 1660–0002]

Agency Information Collection Activities: Proposed Collection; Comment Request; Disaster Assistance Registration

AGENCY: Federal Emergency Management Agency, Department of Homeland Security.

ACTION: 30-Day notice of renewal and request for comments.

SUMMARY: The Federal Emergency Management Agency (FEMA) will submit the information collection abstracted below to the Office of Management and Budget for review and clearance in accordance with the requirements of the Paperwork Reduction Act of 1995. The submission will describe the nature of the information collection, the categories of respondents, the estimated burden (*i.e.,* the time, effort and resources used by respondents to respond) and cost, and the actual data collection instruments FEMA will use. This notice seeks comments concerning Disaster Assistance Registration, COVID–19 Funeral Assistance Registration, and Disaster Assistance Individuals and Households Program (IHP) Occupancy & Ownership Documentation.

DATES: Comments must be submitted on or before March 24, 2022.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection should be made to Director, Information Management Division, 500 C Street SW, Washington, DC 20472, email address *FEMA-Information-Collections-Management@fema.dhs.gov* or Brian Thompson, Supervisory Program Specialist, FEMA, Recovery Directorate at 540–686–3602 or *Brian.Thompson6@fema.dhs.gov.*

SUPPLEMENTARY INFORMATION: The Robert T. Stafford Disaster Relief and Emergency Assistance Act (Pub. L. 93–288) (the Stafford Act), as amended, is the legal basis for FEMA to provide financial assistance and services to individuals who apply for disaster assistance benefits in the event of a Federally-declared disaster. Regulations in Title 44 of the Code of Federal Regulations, Subpart D, ''Federal Assistance to Individuals and Households,'' implement the policy and procedures set forth in section 408 of the Stafford Act. This program provides financial assistance and, if necessary, direct assistance to eligible individuals and households who, as a direct result of a major disaster, have necessary expenses and serious needs that are unable to be met through other means. Individuals and households may apply for assistance (Registration Intake) under the Individuals and Households Program (IHP) in person, via telephone, or internet. FEMA provides financial assistance under the Other Needs Assistance provision of the IHP to individuals or households affected by a major disaster to meet disaster-related funeral expenses under Section 408(e)(1) of the *Robert T. Stafford Disaster Relief and Emergency Assistance Act (Stafford Act), Public Law 93–288, as amended.*

Historically, the agency has utilized a combination of public and commercial validation of ownership and or occupancy, which impacts eligibility for Housing Assistance and some forms of Other Needs Assistance. This update applies to the proposed expansion of the acceptable documentation applicants can submit to FEMA to verify the occupancy and/or ownership of their primary residence and establish eligibility for disaster assistance.

This proposed information collection previously published in the **Federal Register** on November 5, 2021, at 86 FR 61283 with a 60-day public comment period. No comments were received. The purpose of this notice is to notify the public that FEMA will submit the information collection abstracted below

to the Office of Management and Budget for review and clearance.

Collection of Information

Title: Disaster Assistance Registration.

Type of Information Collection: Extension, without change, of a currently approved information collection number.

OMB Number: 1660–0002.

FEMA Forms: FEMA Form FF–104–FY–21–123 (formerly 009–0–1T (English)), Tele-Registration, Disaster Assistance Registration; FEMA Form FF–104–FY–21–123–A (formerly 009–0–1T (Spanish)), Tele-Registration, Registro Para Asistencia De Desatre; FEMA Form FF–104–FY–21–123–COVID–FA (formerly 009–0–1T–COVID–FA (English)), Tele-Registration, COVID–19 Funeral Assistance; FEMA Form FF–104–FY–21–125 (formerly 009–0–1Int (English)), internet, Disaster Assistance Registration; FEMA Form FF–104–FY–21–125–A (formerly 009–0–2Int (Spanish)), internet, Registro Para Asistencia De Desastre; FEMA Form FF–104–FY–21–122 (formerly 009–0–1 (English)), Paper Application/Disaster Assistance Registration; FEMA Form FF–104–FY–21–122–A (formerly 009–0–2 (Spanish)), Solicitud en Papel/Registro Para Asistencia De Desastre; FEMA Form FF–104–FY–21–128 (formerly 009–0–3 (English)), Declaration and Release; FEMA Form FF–104–FY–21–128–A (formerly 009–0–4 (Spanish)), Declaración Y Autorización; FEMA Form FF–104–FY–21–127 (formerly 009–0–5 (English)), Manufactured Housing Unit Revocable License and Receipt for Government Property; FEMA Form FF–104–FY–21–127–A (formerly 009–0–6 (Spanish)), Las Casas Manufacturadas Unidad Licencia Revocable y Recibo de la Propiedad del Gobierno; Requests for Information (RFI).

Abstract: The forms in this collection are used to obtain pertinent information to provide financial assistance, and if necessary, direct assistance to eligible individuals and households who, as a direct result of a disaster or emergency, have uninsured or under-insured, necessary or serious expenses they are unable to meet. This extension, without change, will also support the continued ability to provide COVID–19 Funeral Assistance to individuals who are responsible for a deceased individual's funeral expenses and the expansion of the acceptable documentation applicants can submit to FEMA to verify the occupancy and/or ownership of their primary residence and establish eligibility for disaster assistance.

Affected Public: Individuals or Households.

Estimated Number of Respondents: 2,043,134.

Estimated Number of Responses: 2,043,134.

Estimated Total Annual Burden Hours: 642,031.

Estimated Total Annual Respondent Cost: $25,199,718.

Estimated Respondents' Operation and Maintenance Costs: $0.

Estimated Respondents' Capital and Start-Up Costs: $0.

Estimated Total Annual Cost to the Federal Government: $283,701,377.

Comments

Comments may be submitted as indicated in the **ADDRESSES** caption above. Comments are solicited to (a) evaluate whether the proposed data collection is necessary for the proper performance of the agency, including whether the information shall have practical utility; (b) evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) enhance the quality, utility, and clarity of the information to be collected; and (d) minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Maile Arthur,

Deputy Director, Information Management Division, Office of the Chief Administrative Officer, Mission Support, Federal Emergency Management Agency, Department of Homeland Security.

DEPARTMENT OF HOMELAND SECURITY

U.S. Citizenship and Immigration Services

[OMB Control Number 1615–0028]

Agency Information Collection Activities; Extension, Without Change, of a Currently Approved Collection: Petition to Classify Orphan as an Immediate Relative; Application for Advance Processing of an Orphan Petition; Supplement 1, Listing of an Adult Member of the Household; Supplement 2, Consent to Disclose Information

AGENCY: U.S. Citizenship and Immigration Services, Department of Homeland Security.

ACTION: 30-Day notice.

SUMMARY: The Department of Homeland Security (DHS), U.S. Citizenship and Immigration Services (USCIS) will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995. The purpose of this notice is to allow an additional 30 days for public comments.

DATES: Comments are encouraged and will be accepted until March 24, 2022.

ADDRESSES: Written comments and/or suggestions regarding the item(s) contained in this notice, especially regarding the estimated public burden and associated response time, must be submitted via the Federal eRulemaking Portal website at *http://www.regulations.gov* under e-Docket ID number USCIS–2008–0020. All submissions received must include the OMB Control Number 1615–0028 in the body of the letter, the agency name and Docket ID USCIS–2008–0020.

FOR FURTHER INFORMATION CONTACT: USCIS, Office of Policy and Strategy, Regulatory Coordination Division, Samantha Deshommes, Chief, Telephone number (240) 721–3000 (This is not a toll-free number; comments are not accepted via telephone message.). Please note contact information provided here is solely for questions regarding this notice. It is not for individual case status inquiries. Applicants seeking information about the status of their individual cases can check Case Status Online, available at the USCIS website at *http://www.uscis.gov,* or call the USCIS Contact Center at (800) 375–5283; TTY (800) 767–1833.

SUPPLEMENTARY INFORMATION:

Comments

The information collection notice was previously published in the **Federal Register** on November 24, 2021, at 86 FR 67073, allowing for a 60-day public comment period. USCIS did receive two comments in connection with the 60-day notice.

You may access the information collection instrument with instructions, or additional information by visiting the Federal eRulemaking Portal site at: *http://www.regulations.gov* and enter USCIS–2008–0020 in the search box. The comments submitted to USCIS via this method are visible to the Office of Management and Budget and comply with the requirements of 5 CFR 1320.12(c). All submissions will be posted, without change, to the Federal eRulemaking Portal at *http://www.regulations.gov,* and will include any personal information you provide. Therefore, submitting this information makes it public. You may wish to consider limiting the amount of personal information that you provide in any voluntary submission you make to DHS. DHS may withhold information provided in comments from public viewing that it determines may impact the privacy of an individual or is offensive. For additional information, please read the Privacy Act notice that is available via the link in the footer of *http://www.regulations.gov.*

Written comments and suggestions from the public and affected agencies should address one or more of the following four points:

(1) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Overview of This Information Collection

(1) *Type of Information Collection Request:* Extension, Without Change, of a Currently Approved Collection.

(2) *Title of the Form/Collection:* Petition to Classify Orphan as an Immediate Relative; Application for Advance Processing of an Orphan Petition; Supplement 1, Listing of an Adult Member of the Household; Supplement 2, Consent to Disclose Information.

(3) *Agency form number, if any, and the applicable component of the DHS sponsoring the collection:* I–600; I–600A; I–600/I–600A Supplement 1; I–600/I–600A Supplement 2; USCIS.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract: Primary: Individuals or households.* A U.S. adoptive parent may file a petition to classify an orphan as an immediate relative through Form I–600 under section 101(b)(1)(F) of the INA. A U.S. prospective adoptive parent may file Form I–600A in advance of the Form I–600 filing and USCIS will determine the prospective adoptive parent's eligibility to file Form I–600A and their suitability and eligibility to properly parent an orphan. A U.S. adoptive parent may file a petition to classify an orphan as an immediate relative through Form I–600 under section 101(b)(1)(F) of the INA. If a U.S. prospective/adoptive parent has an adult member of his or her household, as defined at 8 CFR 204.301, the prospective/adoptive parent must include the Supplement 1 when filing both Form I–600A and Form I–600. The U.S. prospective/adoptive parent files Supplement 2 to authorize USCIS to disclose case-related information to adoption service providers that would otherwise be protected under the Privacy Act, 5 U.S.C. 552a. Authorized disclosures will assist USCIS in the adjudication of Forms I–600A and I–600.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* The estimated total number of respondents for the information collection Form I–600 is 1,200 and the estimated hour burden per response is 1 hour; the estimated total number of respondents for the information collection Form I–600A is 2,000 and the estimated hour burden per response is 1 hour; the estimated total number of respondents for the information collection Form I–600A Supplement 1 is 301 and the estimated hour burden per response is 1 hour; the estimated total number of respondents for the information collection Form I–600A Supplement 2 is 1,260 and the estimated hour burden per response is 0.25 hours; the estimated total number of respondents for the Home Study information collection is 2,500 and the estimated hour burden per response is 25 hours; the estimated total number of respondents for the biometrics submission is 2,520 and the estimated hour burden per response is 1.17 hours; and the estimated total number of respondents for the Biometrics—DNA information collection is 2 and the estimated hour burden per response is 6 hours.

(6) *An estimate of the total public burden (in hours) associated with the collection:* The total estimated annual hour burden associated with this collection is 69,276 hours.

(7) *An estimate of the total public burden (in cost) associated with the collection:* The estimated total annual cost burden associated with this collection of information is $7,759,232.

Dated: February 14, 2022.

Jerry L Rigdon,

Deputy Chief, Regulatory Coordination Division, Office of Policy and Strategy, U.S. Citizenship and Immigration Services, Department of Homeland Security.

BILLING CODE 9111–97–P

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[FWS–R2–ES–2021–N028; FXES11140200000–223–FF02ENEH00]

Draft Low Effect Screening Form for a Categorical Exclusion and Candidate Conservation Plan; Texas Kangaroo Rat Candidate Conservation Agreement With Assurances, Montague, Clay, Wichita, Archer, Wilbarger, Baylor, Hardeman, Foard, Childress, Cottle, and Motley Counties, Texas

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of availability; request for public comments.

SUMMARY: We, the U.S. Fish and Wildlife Service, make available a draft low-effect screening form for a categorical exclusion (dCatEx form) under the National Environmental Policy Act and candidate conservation agreement with assurances (CCAA) for normal agricultural operations, recreation, and nature tourism in Montague, Clay, Wichita, Archer, Wilbarger, Baylor, Hardeman, Foard, Childress, Cottle, and Motley Counties, in Texas. Texas Parks & Wildlife Department has applied for an enhancement of survival permit (EOS) under the Endangered Species Act that would authorize incidental take of the Texas kangaroo rat. The dCatEx form evaluates the impacts of, and alternatives to, implementation of the proposed CCAA. We seek public comment on the CCAA, dCatEx form, and EOS application.

DATES: To ensure consideration, written comments must be received or postmarked on or before 11:59 p.m. eastern time on March 24, 2022. We may not consider any comments we receive after the closing date in the final decision on this action.

ADDRESSES: *Accessing Documents:* You may access the dCatEx form and CCAA by any of the following means. In your request for documents, please reference the ''Texas Kangaroo Rat CCAA.''

- *Internet: https://www.fws.gov/southwest/es/arlingtontexas/.*
- *U.S. Mail:* You may obtain a CD–ROM containing the documents (limited supply) or printed copies, by request from Ms. Debra T. Bills, 2005 Northeast Green Oaks Boulevard, Suite 140, Arlington, TX 76006.
- *Email: arles@fws.gov.*

Submitting Comments: You may submit written comments by one of the following methods. In your comments,

please reference ''Texas Kangaroo Rat CCAA.''

- *Email: arles@fws.gov.*
- *U.S. Mail:* Debra T. Bills (street address above).
- *Fax:* 817–277–1129.

We request that you send comments by only one of the above methods.

FOR FURTHER INFORMATION CONTACT: Debra T. Bills, Field Supervisor, by mail (street address above); via phone at 817–277–1100, ext. 22113; or via the Federal Relay Service at 800–877–8339.

SUPPLEMENTARY INFORMATION: Section 9 of the Endangered Species Act (ESA; 16 U.S.C. 1531 *et seq.*) and its implementing regulations prohibit the ''take'' of animal species listed as endangered or threatened. Take is defined under the ESA as to ''harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect listed animal species, or to attempt to engage in such conduct'' (16 U.S.C. 1538). However, under section 10(a) of the ESA, we, the U.S. Fish and Wildlife Service (Service), may issue permits for incidental take if such take is authorized under an enhancement of survival of candidate species permit (EOS permit) and covered by a candidate conservation agreement with assurances (CCAA). ''Incidental take'' is defined by the ESA as take that is incidental to, and not the purpose of, carrying out an otherwise lawful activity. Regulations governing take of endangered and threatened species, respectively, are found in the Code of Federal Regulations at 50 CFR 17.22 and 50 CFR 17.32.

Background

The Texas Parks & Wildlife Department has applied to the Service for an EOS permit under section 10(a)(1)(A) of the ESA. If granted, the requested EOS permit would be in effect upon a listing of the Texas kangaroo rat (*Dipodomys elator*) under the ESA during the 10-year term of the CCAA, and would authorize incidental take of the species. The proposed incidental take would result from activities associated with otherwise lawful activities, including normal agricultural operations, recreation, and nature tourism resulting from ground disturbance and changes in vegetation community composition and structure. The CCAA includes conservation measures to minimize and mitigate direct and indirect impacts to the Texas kangaroo rat and provide net conservation benefits to the species.

Alternatives

Proposed Action

The proposed action involves the issuance of an EOS permit by the Service for the covered activities in the permit area, under section 10(a)(1)(A) of the ESA. The EOS permit would cover incidental take of the covered species associated with annual production and preparation for market of crops, livestock, and livestock products and in the production and harvesting of agriculture, agronomic, horticulture, silviculture, and rangeland commodities within the permit area, in the event the covered species is listed under the ESA during the 10-year term of the CCAA. An application for an EOS permit must include a CCAA that describes the conservation measures the applicant has agreed to undertake to minimize and mitigate for the impacts of the proposed taking of covered species to the maximum extent practicable. The applicant will fully implement the CCAA if approved by the Service. The terms of the CCAA and EOS permit will also ensure that incidental take will not appreciably reduce the likelihood of the survival and recovery of the species in the wild.

No Action Alternative

We have considered one alternative to the proposed action as part of this process: No Action. Under a No Action alternative, the Service would not issue the requested EOS permit, and the applicant would proceed in either of the following ways:

1. The applicant would not plant, cultivate, produce, harvest, process, package, store, or market for wholesale or retail distribution any agricultural commodities. The applicant would not undertake management of agricultural waste.

2. The applicant would conduct the above-described activities, but would do so in a manner that avoids incidental take.

In either of the above two cases in the No Action Alternative, the applicant would not implement the conservation measures described in the CCAA.

Next Steps

We will evaluate the CCAA and comments we receive to determine whether the EOS application meets the requirements of section 10(a) of the ESA (16 U.S.C. 1531 *et seq.*). We will also evaluate whether issuance of a section 10(a)(1)(A) permit would comply with section 7 of the ESA by conducting an intra-Service section 7 consultation. We will use the results of this consultation, in combination with the above findings, in our final analysis to determine whether to issue an EOS permit. If all necessary requirements are met, we will issue the EOS permit to the applicant.

Public Availability of Comments

Written comments we receive become part of the public record associated with this action. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can request in your comment that we withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so. We will not consider anonymous comments. All submissions from organizations or businesses, and from individuals identifying themselves as representatives or officials of organizations or businesses, will be made available for public disclosure in their entirety.

Authority

We provide this notice under the authority of section 10(c) of the ESA and its implementing regulations (50 CFR 17.22 and 50 CFR 17.32) and NEPA (42 U.S.C. 4371 *et seq.*) and its implementing regulations (40 CFR 1506.6).

Amy L. Lueders,

Regional Director, Southwest Region, U.S. Fish and Wildlife Service.

[FR Doc. 2022–03619 Filed 2–18–22; 8:45 am]

BILLING CODE 4333–15–P

DEPARTMENT OF THE INTERIOR

Bureau of Indian Affairs

[2231A2100DD/AAKC001030/A0A501010.999900; OMB Control Number 1076–0183]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Secretarial Elections

AGENCY: Bureau of Indian Affairs, Interior.

ACTION: Notice of information collection; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, we, the Bureau of Indian Affairs (BIA) are proposing to renew an information collection.

DATES: Interested persons are invited to submit comments on or before March 24, 2022.

ADDRESSES: Send written comments on this information collection request (ICR) to the Office of Management and Budget's Desk Officer for the Department of the Interior by email at *OIRA_Submission@omb.eop.gov;* or via facsimile to (202) 395–5806. Please provide a copy of your comments to Steven Mullen, Information Collection Clearance Officer, Office of Regulatory Affairs and Collaborative Action—Indian Affairs, U.S. Department of the Interior, 1001 Indian School Road NW, Suite 229, Albuquerque, New Mexico 87104; or by email to *comments@bia.gov.* Please reference OMB Control Number 1076–0183 in the subject line of your comments.

FOR FURTHER INFORMATION CONTACT: To request additional information about this ICR, contact Jeanette Hanna, Deputy Bureau Director, Indian Services, Office of Indian Services, BIA, by email at *jeanette.hanna@bia.gov* or telephone at (202) 208–2874. You may also view the ICR at *http://www.reginfo.gov/public/do/PRAMain.*

SUPPLEMENTARY INFORMATION: In accordance with the Paperwork Reduction Act of 1995, we provide the general public and other Federal agencies with an opportunity to comment on new, proposed, revised, and continuing collections of information. This helps us assess the impact of our information collection requirements and minimize the public's reporting burden. It also helps the public understand our information collection requirements and provide the requested data in the desired format.

A **Federal Register** notice with a 60-day public comment period soliciting comments on this collection of information was published on September 7, 2021 (86 FR 50153). No comments were received.

As part of our continuing effort to reduce paperwork and respondent burdens, we are again soliciting comments from the public and other Federal agencies on the proposed ICR that is described below. We are especially interested in public comment addressing the following:

(1) Whether or not the collection of information is necessary for the proper performance of the functions of the agency, including whether or not the information will have practical utility;

(2) The accuracy of our estimate of the burden for this collection of information, including the validity of the methodology and assumptions used;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) How might the agency minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of response.

Comments that you submit in response to this notice are a matter of public record. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Abstract: Under the Indian Reorganization Act, Tribes have the right to organize and adopt constitutions, bylaws, and any amendments thereto, and ratify charters of incorporation, through elections called by the Secretary of the Interior, according to rules prescribed by the Secretary. See 25 U.S.C. 476, 477, 503. The Secretary's rules for conducting these elections, known as ''Secretarial elections,'' and approving the results are at 25 CFR 81. In most cases, the Tribe requests a Secretarial election; however, an individual voting member of a Tribe may also request a Secretarial election by petition. These rules also establish the procedures for an individual to petition for a Secretarial election.

The BIA requires the Tribe to submit a formal request for Secretarial election, including: A Tribal resolution; the document or language to be voted on in the election; a list of all Tribal members who are age 18 or older in the next 120 days (when the election will occur), including their last known addresses, voting districts (if any), and dates of birth, in an electronically sortable format.

While much of the information the Tribe prepares for a Secretarial election (*e.g.,* list of members eligible to vote) would be required if the Tribe instead conducted its own Tribal election, the Secretary's rules establish specifics on what a Tribal request or petition for election must contain. These specifics are necessary to ensure the integrity of Secretarial elections and allow the BIA and Tribal personnel the ability to consistently administer elections.

Title of Collection: Secretarial Elections.

OMB Control Number: 1076–0183.

Form Number: N/A.

Type of Review: Extension of a currently approved collection.

Respondents/Affected Public: Federally recognized Tribes and their members.

Total Estimated Number of Annual Respondents: 252,041.

Total Estimated Number of Annual Responses: 252,041.

Estimated Completion Time per Response: Varies from 15 minutes to 40 hours.

Total Estimated Number of Annual Burden Hours: 64,305.

Respondent's Obligation: Required to Obtain a Benefit.

Frequency of Collection: On occasion.

Total Estimated Annual Nonhour Burden Cost: $146,160.

An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq*).

Steven Mullen,

Information Collection Clearance Officer, Office of Regulatory Affairs and Collaborative Action—Indian Affairs.

DEPARTMENT OF THE INTERIOR

Bureau of Indian Affairs

[2231A2100DD/AAKC001030/A0A501010.999900; OMB Control Number 1076–0112]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Tribal Reassumption of Jurisdiction Over Child Custody Proceedings

AGENCY: Bureau of Indian Affairs, Interior.

ACTION: Notice of information collection; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, we, the Bureau of Indian Affairs (BIA) are proposing to renew an information collection.

DATES: Interested persons are invited to submit comments on or before March 24, 2022.

ADDRESSES: Send written comments on this information collection request (ICR) to the Office of Management and Budget's Desk Officer for the Department of the Interior by email at *OIRA_Submission@omb.eop.gov;* or via

facsimile to (202) 395–5806. Please provide a copy of your comments to Steven Mullen, Information Collection Clearance Officer, Office of Regulatory Affairs and Collaborative Action—Indian Affairs, U.S. Department of the Interior, 1001 Indian School Road NW, Suite 229, Albuquerque, New Mexico 87104; or by email to *comments@bia.gov.* Please reference OMB Control Number 1076–0112 in the subject line of your comments.

FOR FURTHER INFORMATION CONTACT: To request additional information about this ICR, contact Jeanette Hanna, Deputy Bureau Director, Indian Services, Office of Indian Services, BIA, by email at *jeanette.hanna@bia.gov* or telephone at (202) 208–2874. You may also view the ICR at *http://www.reginfo.gov/public/do/PRAMain.*

SUPPLEMENTARY INFORMATION: In accordance with the Paperwork Reduction Act of 1995, we provide the general public and other Federal agencies with an opportunity to comment on new, proposed, revised, and continuing collections of information. This helps us assess the impact of our information collection requirements and minimize the public's reporting burden. It also helps the public understand our information collection requirements and provide the requested data in the desired format.

A **Federal Register** notice with a 60-day public comment period soliciting comments on this collection of information was published on September 7, 2021 (86 FR 50153). No comments were received.

As part of our continuing effort to reduce paperwork and respondent burdens, we are again soliciting comments from the public and other Federal agencies on the proposed ICR that is described below. We are especially interested in public comment addressing the following:

(1) Whether or not the collection of information is necessary for the proper performance of the functions of the agency, including whether or not the information will have practical utility;

(2) The accuracy of our estimate of the burden for this collection of information, including the validity of the methodology and assumptions used;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) How might the agency minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of response.

Comments that you submit in response to this notice are a matter of public record. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Abstract: The BIA is seeking to renew the information collection conducted under 25 CFR 13, Tribal Reassumption of Jurisdiction over Child Custody Proceedings, which prescribes procedures by which a federally recognized Tribe that occupies Tribal lands over which a State asserts any jurisdiction pursuant to Federal law may reassume jurisdiction over Indian child proceedings as authorized by the Indian Child Welfare Act, Public Law 95–608, 92 Stat. 3069, 25 U.S.C. 1918.

The collection of information will ensure that the provisions of Public Law 95–608 are met. Any federally recognized Tribe that became subject to State jurisdiction pursuant to the provisions of the Act of August 15, 1953 (67 Stat. 588), as amended by title IV of the Act of April 11, 1968 (82 Stat. 73,78), or pursuant to any other Federal law, may reassume jurisdiction over child custody proceedings. The collection of information provides data that will be used in considering the petition and feasibility of the plan of the Tribe for reassumption of jurisdiction over Indian child custody proceedings. We collect the following information: Full name, address, and telephone number of petitioning Tribe or Tribes; a Tribal resolution; estimated total number of members in the petitioning Tribe of Tribes with an explanation of how the number was estimated; current criteria for Tribal membership; citation to provision in Tribal constitution authorizing the Tribal governing body to exercise jurisdiction over Indian child custody matters; description of Tribal court; copy of any Tribal ordinances or Tribal court rules establishing procedures or rules for exercise of jurisdiction over child custody matters; and all other information required by 25 CFR 13.11.

Title of Collection: Tribal Reassumption of Jurisdiction over Child Custody Proceedings.

OMB Control Number: 1076–0112.

Form Number: None.

Type of Review: Extension of a currently approved collection.

Respondents/Affected Public: Federally recognized Tribes who submit Tribal reassumption petitions for review and approval by the Secretary of the Interior.

Total Estimated Number of Annual Respondents: 1.

Total Estimated Number of Annual Responses: 1.

Estimated Completion Time per Response: 8 hours.

Total Estimated Number of Annual Burden Hours: 8 hours.

Respondent's Obligation: Required to Obtain or Retain a Benefit.

Frequency of Collection: On occasion.

Total Estimated Annual Non-hour Burden Cost: None.

An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq*).

Steven Mullen,

Information Collection Clearance Officer, Office of Regulatory Affairs and Collaborative Action—Indian Affairs.

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) How might the agency minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of response.

Comments that you submit in response to this notice are a matter of public record. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Abstract: Submission of this information allows BIA to determine applicant eligibility for housing services based upon the criteria referenced in 25 CFR 256.9 (repairs and renovation assistance) and 256.10 (replacement housing assistance). Enrolled members of a federally recognized Tribe, who live within a Tribe's designated and approved service area, submit information on an application form. The information is collected on a BIA Form 6407, ''Housing Assistance Application,'' and includes:

A. *Applicant Information including:* Name, current address, telephone number, date of birth, social security number, Tribe, roll number, reservation, marital status, name of spouse, date of birth of spouse, Tribe of spouse, and roll number of spouse.

B. *Family Information including:* Name, date of birth, relationship to applicant, and Tribe/roll number.

C. *Income Information:* Earned and unearned income.

D. *Housing Information including:* Location of the house to be repaired, constructed, or purchased; description of housing assistance for which applying; knowledge of receipt of prior Housing Improvement Program assistance, amount to whom and when; ownership or rental; availability of electricity and name of electric company; type of sewer system; water source; number of bathroom facilities.

E. *Land Information including:* Landowner; legal status of land; or type of interest in land.

F. *General Information including:* Prior receipt of services under the Housing Improvement Program and description of such; ownership of other housing and description of such; identification of Housing and Urban Development-funded house and current status of project; identification of other sources of housing assistance for which the applicant has applied and been denied assistance, if applying for a new housing unit or purchase of an existing standard unit; and advisement and description of any severe health problem, handicap or permanent disability.

G. *Applicant Certification including:* Signature of applicant and date, and signature of spouse and date.

Title of Collection: Bureau of Indian Affairs Housing Improvement Program.

OMB Control Number: 1076–0184.

Form Number: BIA–6407, Tribal Annual Performance Report (TAPR) Excel workbook, and the Government Performance Results Act (GPRA) Reporting Form.

Type of Review: Extension of a currently approved collection.

Respondents/Affected Public: Individuals.

Total Estimated Number of Annual Respondents: 12,292 per year, on average.

Total Estimated Number of Annual Responses: 12,523 per year, on average.

Estimated Completion Time per Response: Varies between 15 and 30 minutes.

Total Estimated Number of Annual Burden Hours: 5,185 hours.

Respondent's Obligation: A response is required to obtain a benefit.

Frequency of Collection: Once per year for the HIP Application, HIP Addendum, and TAPR workbook. Quarterly for the GPRA Reporting form.

Total Estimated Annual Nonhour Burden Cost: $0.

An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq*).

Steven Mullen,

Information Collection Clearance Officer, Office of Regulatory Affairs and Collaborative Action—Indian Affairs.

BILLING CODE 4337–15–P

INTERNATIONAL TRADE COMMISSION

[Investigation Nos. 731–TA–1299, 1300, 1302 (Review)]

Circular Welded Carbon-Quality Steel Pipe From Oman, Pakistan, and the United Arab Emirates; Notice of Commission Determination to Conduct Full Five-Year Reviews

AGENCY: United States International Trade Commission.

ACTION: Notice.

SUMMARY: The Commission hereby gives notice that it will proceed with full reviews pursuant to the Tariff Act of 1930 to determine whether revocation of the antidumping duty orders on circular welded carbon-quality steel pipe from Oman, Pakistan, and the United Arab Emirates would be likely to lead to continuation or recurrence of material injury within a reasonably foreseeable time. A schedule for the reviews will be established and announced at a later date.

DATES: February 4, 2022.

FOR FURTHER INFORMATION CONTACT: Angela Newell (202–205–2060), Office of Investigations, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436. Hearing-impaired persons can obtain information on this matter by contacting the Commission's TDD terminal on 202–205–1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at 202–205–2000. General information concerning the Commission may also be obtained by accessing its internet server (*https://www.usitc.gov*). The public record for these reviews may be viewed on the Commission's electronic docket (EDIS) at *https://edis.usitc.gov.* For further information concerning the conduct of these reviews and rules of general application, consult the Commission's Rules of Practice and Procedure, part 201, subparts A through E (19 CFR part 201), and part 207, subparts A, D, E, and F (19 CFR part 207).

SUPPLEMENTARY INFORMATION: On February 4, 2022, the Commission determined that it should proceed to full reviews in the subject five-year reviews pursuant to section 751(c) of the Tariff Act of 1930 (19 U.S.C. 1675(c)). The Commission found that the domestic interested party group response and the respondent interested party group response from the United Arab Emirates to its notice of institution (86 FR 60289, November 1, 2021) were adequate, and determined to conduct a full review of the order on imports from the United Arab Emirates. The Commission also found that the respondent interested party group responses from Oman and Pakistan were inadequate but determined to conduct full reviews of the orders on circular welded carbon-quality steel pipe from those countries in order to promote administrative efficiency in light of its determination to conduct a full review of the order with respect to the United Arab Emirates. A record of the Commissioners' votes will be available from the Office of the Secretary and at the Commission's website.

Authority: These reviews is being conducted under authority of title VII of the Tariff Act of 1930; this notice is published pursuant to § 207.62 of the Commission's rules.

By order of the Commission.

Issued: February 16, 2022.

Lisa Barton,

Secretary to the Commission.

[FR Doc. 2022–03685 Filed 2–18–22; 8:45 am]

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

Certain Electronic Stud Finders, Metal Detectors and Electrical Scanners

[Investigation No. 337–TA–1221]

Notice of a Final Determination Finding No Violation of Section 337; Termination of the Investigation

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission has determined to affirm in part, modify in part, and reverse in part the Administrative Law Judge's (''ALJ'') final initial determination (''ID''), issued on October 7, 2021, finding no violation of section 337 in the above-referenced investigation as to three asserted patents. The Commission affirms the ID's determination that no violation of section 337 has occurred based on the importation of certain electronic stud finders, metal detectors, and electrical scanners. This investigation is terminated.

FOR FURTHER INFORMATION CONTACT: Benjamin S. Richards, Esq., Office of the General Counsel, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436, telephone (202) 708–5453. Copies of non-confidential documents filed in connection with this investigation may be viewed on the Commission's electronic docket (EDIS) at *https://edis.usitc.gov.* For help accessing EDIS, please email *EDIS3Help@usitc.gov.* General information concerning the Commission may also be obtained by accessing its internet server at *https://www.usitc.gov.* Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: On October 5, 2020, the Commission instituted this investigation based on a complaint filed on behalf of Zircon Corporation of Campbell, California (''Zircon''). 85 FR 62758–59 (Oct. 5, 2020). The complaint alleged violations of section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, based upon the importation into the United States, the sale for importation, and the sale within the United States after importation of certain electronic stud finders, metal detectors, and electrical scanners by reason of infringement of one or more claims of U.S. Patent Nos. 6,989,662 (''the '662 patent''), 7,148,703 (''the '703 patent''), 8,604,771 (''the '771 patent''), and 9,475,185 (''the '185 patent''). *Id.* at 62759. The Commission's notice of investigation named as respondents Stanley Black & Decker, Inc. of New Britain, Connecticut, and Black & Decker (U.S.), Inc. of Towson, Maryland (together, ''Respondents''). *Id.* The Office of Unfair Import Investigations is not participating in this investigation. *Id.*

On April 22, 2021, the ALJ issued a claim construction order based on briefs submitted by the parties. *See* Order No. 20. On June 15, 2021, the ALJ granted a motion for summary determination of no infringement concerning the '703 patent, which terminated that patent from the investigation. *See* Order No. 27, *unreviewed by* Comm'n Notice (July 15, 2021).

On October 7, 2021, the ALJ issued the subject ID, which found no violation of section 337 as to any claim of the remaining asserted patents by Respondents. Also, on October 7, 2021, the ALJ issued his recommended determination (''RD'') on remedy and bonding. The ALJ recommended, upon a finding of violation, that the Commission issue a limited exclusion order and impose a bond in the amount of zero percent of the entered value of any covered products imported during the period of Presidential review.

On October 19, 2021, Zircon and Respondents submitted petitions for review of the ID. On October 27, 2021, Zircon and Respondents submitted responses to the petitions.

On December 6, 2021, the Commission issued notice of its determination to review the ID with respect to (1) the ID's infringement findings for the '662 patent; (2) the ID's findings on the technical prong of the domestic industry requirement for the '662 patent; (3) the ID's obviousness findings for the '662 patent; (4) the ID's infringement findings for the '771 patent; (5) the ID's anticipation and obviousness findings for the '771 patent; (6) the ID's claim construction and infringement findings for the '185

patent; (7) the ID's anticipation and obviousness findings for the '185 patent; and (8) the ID's findings on the economic prong of the domestic industry requirement. In connection with its review of the ID, the Commission sought briefing from the parties on several questions germane to the issues on review and on remedy, bonding, and the public interest.

On December 23, 2021, the parties submitted briefs responding to the questions posed in the Commission's Notice of Review and on remedy, the public interest, and bond. Thereafter, on January 7, 2022, each submitted a reply to the other's brief on review.

Having considered the parties' submissions, the ID, and the record in this investigation, the Commission has determined that no violation of section 337 has occurred based on Respondents' importation, sale for importation, or sale after importation of certain electronic stud finders, metal detectors, and electrical scanners into the United States. The Commission has further determined to affirm, modify, reverse, and take no position on certain portions of the ID, as explained in the Commission's opinion issued concurrently herewith. This investigation is terminated.

The Commission vote for this determination took place on February 15, 2022.

The authority for the Commission's determination is contained in section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and in part 210 of the Commission's Rules of Practice and Procedure (19 CFR 210).

By order of the Commission.

Issued: February 15, 2022.

Lisa Barton,

Secretary to the Commission.

BILLING CODE 7020–02–P

DEPARTMENT OF JUSTICE

Office of Justice Programs

[OJP (NIJ) Docket No. 1795]

Criminal Justice Chatbot Market Survey

AGENCY: National Institute of Justice (NIJ), Justice.

ACTION: Notice of request for information.

SUMMARY: The National Institute of Justice (NIJ) is soliciting information in an upcoming Criminal Justice Testing and Evaluation Consortium (CJTEC) report that will provide a functional overview of how criminal justice stakeholders (*i.e.,* law enforcement, courts, and correctional agencies) can implement chatbots. This report is a follow-on to *Chatbots in the Criminal Justice System;* a report that provides an overview of chatbot technology and examples in the criminal justice system. This RFI is seeking information about best practices for the development and implementation of chatbots in the criminal justice system. The resulting report will educate criminal justice agencies on implementation pathways and will highlight selected chatbot developers and providers with previous experience specific to the criminal justice system or local government. The goal of the report is to be a resource for stakeholders to reference when considering their chatbot development plans.

DATES: Emailed responses must be received (and mailed responses postmarked) by 5:00 p.m. Eastern Time on April 8, 2022.

ADDRESSES: Responses to this request may be submitted electronically by email to Eric Vetter at *evetter@rti.org* with the subject line ''Criminal Justice Chatbot Market Survey Federal Register Response.'' Responses may also be sent by mail to the following address: Criminal Justice Testing and Evaluation Consortium (CJTEC), ATTN: Eric Vetter, Criminal Justice Chatbot Market Survey Federal Register Response, RTI International, P.O. Box 12194, 3040 E Cornwallis Road, Research Triangle Park, NC 27709–2194.

FOR FURTHER INFORMATION CONTACT: For more information on this market survey, please contact Meghan Camello (CJTEC) by telephone at 603–801–5127 or *mcamello@rti.org.* For more information on the NIJ CJTEC, visit *https://nij.ojp.gov/funding/awards/2018-75-cx-k003* and view the description, or contact Steven Schuetz (NIJ) by telephone at 202–514–7663 or at *steven.schuetz@usdoj.gov.* Please note that these are not toll-free telephone numbers.

SUPPLEMENTARY INFORMATION:

Information sought: CJTEC is seeking information and insights into the design, development, and implementation of chatbots in the criminal justice system. Specifically, CJTEC is seeking information about successful implementation that fit one or more of these categories:

- Chatbots designed for the criminal justice community, such as law enforcement, court systems, correctional agencies, and victim service organizations.
- Chatbots designed for other industries or applications that could be applicable to the criminal justice community (*i.e.,* municipal agency).

Usage: Information provided in response to this request may be published in a report on chatbots in the criminal justice system. This RFI is intended to solicit important general information from vendors, developers, industry observers, or the criminal justice community which may lead to later discussions to help understand best practices, case studies, product technical specifications, etc. that might be used in the report.

CJTEC is seeking a response from technology vendors, developers, IT consultancies, or the criminal justice community that includes:

1. Name and description of company/organization.
2. Case studies or user testimonials highlighting criminal justice or similar use cases, including description of product or service.
3. Contact information for a future conversation (name, role, email, phone number).

An independent response should be submitted for each product that respondents would like CJTEC to consider in their report. NIJ encourages respondents to provide information in common file formats, such as Microsoft Word, pdf, or plain text. Each response should include contact information.

Jennifer Scherer,

Acting Director and Principal Deputy Director, National Institute of Justice.

Technologies To Measure Community Perception, Opinion, and/or Satisfaction Related to Law Enforcement: Market Survey

AGENCY: National Institute of Justice (NIJ), Office of Justice Programs, Justice.

ACTION: Notice of request for information.

SUMMARY: The National Institute of Justice (NIJ) is soliciting information for an upcoming Criminal Justice Testing and Evaluation Consortium (CJTEC) report that will provide a functional overview of how law enforcement agencies can utilize technology to measure and monitor community perception, opinion, and/or satisfaction

related to law enforcement, to improve police performance and overall community-police relations. The report will highlight the providers and vendors that are developing and offering technologies that measure/monitor the community's perception, opinion, and/or satisfaction related to law enforcement. The report will also consider sentiment monitoring tools in terms of the broader context of the rapidly evolving marketplace for sentiment analysis products, including the monitoring of customers' perception of brands.

DATES: Emailed responses must be received (and mailed responses postmarked) by 5:00 p.m. Eastern Time on April 8, 2022.

ADDRESSES: Responses to this request may be submitted electronically by email, with the subject line ''Technologies to Measure Community Perception, Opinion, and/or Satisfaction related to Law Enforcement: Market Survey **Federal Register** Response'' to Meghan Camello at *mcamello@rti.org*_ . Responses may also be sent by mail to the following address: Criminal Justice Testing and Evaluation Consortium (CJTEC), ATTN: Meghan Camello, Technologies to Measure Community Perception, Opinion, and/or Satisfaction related to Law Enforcement: Market Survey **Federal Register** Response, RTI International, P.O. Box 12194, 3040 E Cornwallis Road, Research Triangle Park, NC 27709–2194.

FOR FURTHER INFORMATION CONTACT: For more information on this market survey, please contact Meghan Camello (CJTEC) by telephone at 603–801–5127 or *mcamello@rti.org*. For more information on the NIJ CJTEC, visit *https://nij.ojp.gov/funding/awards/2018-75-cx-k003* and view the description, or contact Steven Schuetz (NIJ) by telephone at 202–514–7663 or at *steven.schuetz@usdoj.gov.* Please note that these are not toll-free telephone numbers.

SUPPLEMENTARY INFORMATION:

Information sought: CJTEC is seeking information on products, such as sentiment analysis, measuring, and monitoring technologies, that may be applicable to law enforcement agencies. Specifically, CJTEC is seeking solutions that fit one or more of these categories:

- Tools, technology, and products designed for the law enforcement community to measure or monitor community perception, sentiment, opinion, and/or satisfaction
- Products designed as consumer/corporate sentiment analysis and monitoring technologies that could be applicable to or adapted for the law enforcement community
- Products designed for brand management that may be applicable to or adapted for the law enforcement community

Usage: Information provided in response to this request may be selected for inclusion by CJTEC in a public report on technologies that measure and monitor community perception, opinion, and/or satisfaction related to law enforcement. This RFI is intended to solicit important general information from vendors, which may lead to later discussions to help understand best practices, case studies, product technical specifications, etc. that might be used in the report.

CJTEC is seeking a response from technology vendors that includes:

1. Name and description of product
2. Case studies or user testimonials highlighting law enforcement or similar use cases
3. Research studies on efficacy of the product
4. Contact information for a future conversation (name, role, email, phone number)

An independent response should be submitted for each product that respondents would like CJTEC to consider for inclusion in the publication. NIJ encourages respondents to provide information in common file formats, such as Microsoft Word, pdf, or plain text. Each response should include contact information.

Jennifer Scherer,

Acting Director and Principal Deputy Director, National Institute of Justice.

MSHA will consider only comments postmarked by the U.S. Postal Service or proof of delivery from another delivery service such as UPS or Federal Express on or before the deadline for comments. Persons delivering documents are required to check in at the receptionist's desk in Suite 4E401. Individuals may inspect copies of the petition and comments during normal business hours at the address listed above. Before visiting MSHA in person, call 202–693–9455 to make an appointment in keeping with the Department of Labor's COVID–19 policy. Special health precautions may be required.

FOR FURTHER INFORMATION CONTACT: S. Aromie Noe, Office of Standards, Regulations, and Variances at 202–693–9440 (voice), *petitionsformodification@dol.gov* (email), or 202–693–9441 (facsimile). [These are not toll-free numbers.]

SUPPLEMENTARY INFORMATION: Section 101(c) of the Federal Mine Safety and Health Act of 1977 and Title 30 of the Code of Federal Regulations (CFR) part 44 govern the application, processing, and disposition of petitions for modification.

I. Background

Section 101(c) of the Federal Mine Safety and Health Act of 1977 (Mine Act) allows the mine operator or representative of miners to file a petition to modify the application of any mandatory safety standard to a coal or other mine if the Secretary of Labor determines that:

1. An alternative method of achieving the result of such standard exists which will at all times guarantee no less than the same measure of protection afforded the miners of such mine by such standard; or
2. The application of such standard to such mine will result in a diminution of safety to the miners in such mine.
3. In addition, sections 44.10 and 44.11 of 30 CFR establish the

requirements for filing petitions for modification.

II. Petition for Modification

Docket Number: M–2021–045–C.

Petitioner: Signal Peak Energy, LLC, 100 Portal Drive, Roundup, Montana 59072.

Mine: Bull Mountains Mine No. 1, MSHA ID No. 24–01950, located in Musselshell County, Montana.

Regulation Affected: 30 CFR 75.1002(a) (Installation of electric equipment and conductors; permissibility).

Modification Request: The petitioner requests a modification of 30 CFR 75.1002(a) to permit the use of 3M Versaflo™ TR–800 Powered Air Purifying Respirators (PAPR) within 150 feet of the longwall face.

The petitioner states that:

1. The petitioner uses 3M Airstream™ Headgear-Mounted Powered Air Purifying Respirators to protect its longwall miners from exposure to respirable dust.

2. The 3M Airstream™ system and replacement components production have been discontinued since June 1, 2020. Currently, there are no replacement PAPRs meeting the MSHA standards for permissibility relative to electronic equipment used in potentially explosive atmospheres of underground coal mines.

3. Explosive levels of methane or other explosive gases have never been encountered at Bull Mountains Mine No. 1.

4. The 3M Versaflo™ TR–800 PAPR is not approved by MSHA as permissible equipment, and 3M is not pursuing approval.

5. 3M offers the 3M Versaflo™ TR–800 Intrinsically Safe PAPR motor/blower and battery which qualify as intrinsically safe in the U.S., Canada, and other countries accepting the International Electrotechnical Commission System for Certification to Standards Relating to Equipment for Use in Explosive Atmospheres (IECEx). The 3M Versaflo™ TR–800 PAPR blower is UL-certified with an intrinsically safe (IS) rating of Division 1: IS Class I, II, III; Division 1 (includes Division 2) Groups C, D, E, F, G; T4 under the most current standard (UL 60079, 6th Edition, 2013); ATEX Ce1tified with an IS rating of ia. The TR-800 is rated and marked with Ex ia I Ma, Ex ia IIB T4 Ga, Ex ia me 135oC Da, –20oC <Ta6. The petitioner states that the International Society of Automation/American National Standards Institute (ISA/ANSI) standards are an acceptable alternative to ACRI2001 and provide an equivalent level of protection.

The petitioner proposes the following alternative method:

1. When not in operation, batteries for the 3M Versaflo™ TR–800 PAPR shall be charged on the surface or underground in intake air and not within 150 feet of a worked-out area.

2. The batteries shall be inspected and changed at the surface or underground in intake air.

3. The 3M TR–644N 4 station or the 3M TR–641N battery chargers shall be used.

4. The 3M Versaflo™ TR–800 PAPR shall exclusively use the TR–830 battery pack.

5. Miners shall be trained how to safely use, care for, and inspect the 3M Versaflo™ TR–800 PAPRs.

6. Each 3M Versaflo™ TR–800 PAPR shall be assessed for physical damage and integrity of the unit's case before each use.

7. The 3M Versaflo™ TR–800 PAPR shall not be used if methane levels are found to be at or above 1.0 percent. If the methane levels are higher than 1.0 percent, the equipment shall immediately be de-energized and withdrawn from the affected areas.

8. The 3M Versaflo™ TR–800 PAPR shall not be used in continuous miner sections alongside proximity detection systems.

9. All qualified persons and miners affected shall receive specific training on the terms and conditions of this petition before using the equipment within 150 feet of the longwall face. A record of any training in this petition shall be kept and provided upon request by an authorized representative of MSHA.

The petitioner asserts that the alternative method proposed will at all times guarantee no less than the same measure of protection afforded the miners under the mandatory standard.

Docket Number: M–2021–046–C.

Petitioner: Prairie State Generating Company, LLC, 4274 County Highway 12, Marissa, Illinois, 62257.

Mine: Lively Grove Mine, MSHA ID No. 11–03193, located in St. Clair County, Illinois.

Regulation Affected: 30 CFR 75.1909(b)(6) (Nonpermissible diesel-powered equipment; design and performance requirements).

Modification Request: The petitioner proposes an alternate method in lieu of service brakes on each wheel. Specifically, the petitioner requests to use the dual brake systems on the four rear wheels of the diesel-powered six wheeled Getman Roadbuilder, Model RDG–1540S and Getman Roadbuilder Model RDG–1004 underground road graders operated at the mine.

The petitioner states that:

1. A Proposed Decision and Order was issued on October 19, 2010, granting the petitioner's modification request concerning 30 CFR 75.1909(b)(6) and allowing the petitioner to use the dual brake system on the four rear wheels of the Getman Roadbuilder, Model RDG–1540S.

2. The petitioner recently purchased an additional underground road grader, Getman Roadbuilder Model RDG–1004, serial number 6760.

3. The graders both have dual brake systems on the four rear wheels and are designed to prevent loss of braking due to a single component failure. Each of the brake systems features an accumulator pressure gauge and a low-pressure warning light. The graders are also equipped with: a spring-applied, hydraulic-release wet disc park and supplemental brake; transmission neutralizer; and test button for park brake testing. The independent braking systems are designed to operate even when oil, air, electrical, or transmission pressure fails.

The petitioner proposes:

1. The petitioner will limit the speed of the diesel graders to 10 miles per hour (MPH) in either forward or reverse. This will be accomplished by the following:

a. The shifter for each grader is permanently physically blocked to prevent the grader from being put into 4th gear.

b. The transmission on each grader is modified internally so that the shifter cannot put the grader into 4th gear.

c. Operation of each road grader in gears one through three will limit the speed to 10 miles per hour (MPH) or less.

2. Road grader operators will be trained concerning the provisions of this petition, and this training will be documented on an MSHA 5000–23 form. Grader operator training will include the following:

a. The braking limitations of each road grader.

b. The speed of each road grader is limited to 10 MPH or less.

c. Fourth gear is not available for either road grader.

d. As the angle of a road or slope increases, speed should be reduced by operating at a lower gear.

e. As an alternate means to control the speed of either road grader, the moldboard can be lowered to the mine floor.

The petitioner asserts that the alternative method proposed will at all times guarantee no less than

the same measure of protection afforded the miners under the mandatory standard.

Docket Number: M–2022–001–C.

Petitioner: Signal Peak Energy, LLC, 100 Portal Drive, Roundup, Montana 59072.

Mine: Bull Mountains Mine No. 1, MSHA ID No. 24–01950, located in Musselshell County, Montana.

Regulation Affected: 30 CFR 75.500(d) (Permissible electric equipment.)

Modification Request: The petitioner requests a modification of 30 CFR 75.500(d) to permit the 3M Versaflo™ TR–800 Powered Air Purifying Respirators (PAPR) to be taken into or used inby the last crosscut.

The petitioner states that:

1. The petitioner uses 3M Airstream™ Headgear-Mounted Powered Air Purifying Respirators to protect its longwall miners from exposure to respirable dust.

2. The 3M Airstream™ system and replacement components production have been discontinued since June 1, 2020. Currently, there are no replacement PAPRs meeting the MSHA standards for permissibility relative to electronic equipment used in potentially explosive atmospheres of underground coal mines.

3. Explosive levels of methane or other explosive gases have never been encountered at Bull Mountains Mine No. 1.

4. The 3M Versaflo™ TR–800 PAPR is not approved by MSHA as permissible equipment, and 3M is not pursuing approval.

5. 3M offers the 3M Versaflo™ TR–800 Intrinsically Safe PAPR motor/blower and battery which qualify as intrinsically safe in the U.S., Canada, and other countries accepting the International Electrotechnical Commission System for Certification to Standards Relating to Equipment for Use in Explosive Atmospheres (IECEx). The 3M Versaflo™ TR–800 PAPR blower is UL-certified with an intrinsically safe (IS) rating of Division 1: IS Class I, II, III; Division 1 (includes Division 2) Groups C, D, E, F, G; T4 under the most current standard (UL 60079, 6th Edition, 2013); ATEX Ce1tified with an IS rating of ia. The TR–800 is rated and marked with Ex ia I Ma, Ex ia IIB T4 Ga, Ex ia me 135oC Da, −20oC <Ta<+55oC, under the current standard (International Electrotechnical Commission 60079).

6. The petitioner states that the International Society of Automation/American National Standards Institute (ISA/ANSI) standards are an acceptable alternative to ACRI2001 and provide an equivalent level of protection.

The petitioner proposes the following alternative method:

1. When not in operation, batteries for the 3M Versaflo™ TR–800 PAPR shall be charged on the surface or underground in intake air and not within 150 feet of a worked-out area.

2. The batteries shall be inspected and changed at the surface or underground in intake air.

3. The 3M TR–644N 4 station or the 3M TR–641N battery chargers shall be used.

4. The 3M Versaflo™ TR–800 PAPR shall exclusively use the TR–830 battery pack.

5. Miners shall be trained how to safely use, care for, and inspect the 3M Versaflo™ TR–800 PAPRs.

6. The 3M Versaflo™ TR–800 PAPR shall be assessed for physical damage and integrity of the unit's case before each use.

7. The 3M Versaflo™ TR–800 PAPR shall not be used if methane levels are found to be at or above 1.0 percent. If the methane levels are higher than 1.0 percent, the equipment shall immediately be de-energized and withdrawn from the affected areas.

8. The 3M Versaflo™ TR–800 PAPR shall not be used in continuous miner sections alongside proximity detection systems.

9. All qualified persons and miners affected shall receive specific training on the terms and conditions of this petition before taking or using the equipment inby the last crosscut. A record of any training in the petition shall be kept and provided upon request by an Authorized Representative.

The petitioner asserts that the alternative method proposed will at all times guarantee no less than the same measure of protection afforded the miners under the mandatory standard.

Docket Number: M–2022–002–C.

Petitioner: Signal Peak Energy, LLC, 100 Portal Drive, Roundup, Montana 59072.

Mine: Bull Mountains Mine No. 1, MSHA ID No. 24–01950, located in Musselshell County, Montana.

Regulation Affected: 30 CFR 75.50701(a) (Electric equipment other than power-connection points; outby the last open crosscut; return air; permissibility requirements.)

Modification Request: The petitioner requests a modification of 30 CFR 75.50701(a) to permit the 3M Versaflo™ TR–800 Powered Air Purifying Respirators (PAPR) to be used in return air outby the last open crosscut.

The petitioner states that:

1. The petitioner uses 3M Airstream™ Headgear-Mounted Powered Air Purifying Respirators to protect its longwall miners from exposure to respirable dust.

2. The 3M Airstream™ system and replacement components production have been discontinued since June 1, 2020. Currently, there are no replacement PAPRs meeting the MSHA standards for permissibility relative to electronic equipment used in potentially explosive atmospheres of underground coal mines.

3. Explosive levels of methane or other explosive gases have never been encountered at Bull Mountains Mine No. 1.

4. The 3M Versaflo™ TR–800 PAPR is not approved by MSHA as permissible equipment, and 3M is not pursuing approval.

5. 3M offers the 3M Versaflo™ TR–800 Intrinsically Safe PAPR motor/blower and battery which qualify as intrinsically safe in the U.S., Canada, and other countries accepting the International Electrotechnical Commission System for Certification to Standards Relating to Equipment for Use in Explosive Atmospheres (IECEx). The 3M Versaflo™ TR–800 PAPR blower is UL-certified with an intrinsically safe (IS) rating of Division 1: IS Class I, II, III; Division 1 (includes Division 2) Groups C, D, E, F, G; T4 under the most current standard (UL 60079, 6th Edition, 2013); ATEX Ce1tified with an IS rating of ia. The TR-800 is rated and marked with Ex ia I Ma, Ex ia IIB T4 Ga, Ex ia me 135oC Da, −20oC <Ta<+55oC, under the current standard (International Electrotechnical Commission 60079).

6. The petitioner states that the International Society of Automation/American National Standards Institute (ISA/ANSI) standards are an acceptable alternative to ACRI2001 and provide an equivalent level of protection.

The petitioner proposes the following alternative method:

1. When not in operation, batteries for the 3M Versaflo™ TR–800 PAPR shall be charged on the surface or underground in intake air and not within 150 feet of a worked-out area.

2. The batteries shall be inspected and changed at the surface or underground in intake air.

3. The 3M TR–644N 4 station or the 3M TR–641N battery chargers shall be used.

4. The 3M Versaflo™ TR–800 PAPR shall exclusively use the TR–830 battery pack.

5. Miners shall be trained how to safely use, care for, and inspect the 3M Versaflo™ TR–800 PAPRs.

6. The 3M Versaflo™ TR–800 PAPR shall be assessed for physical damage and integrity of the unit's case before each use.

7. The 3M Versaflo™ TR–800 PAPR shall not be used if methane levels are found to be at or above 1.0 percent. If the methane levels are higher than 1.0 percent, the equipment shall immediately be de-energized and withdrawn from the affected areas.

8. The 3M Versaflo™ TR–800 PAPR shall not be used in continuous miner sections alongside proximity detection systems.

9. All qualified persons and miners affected shall receive specific training on the terms and conditions of the petition before using the equipment in to be used in return air outby the last open crosscut. A record of any training in the petition shall be kept and provided upon request by an Authorized Representative.

The petitioner asserts that the alternative method proposed will at all times guarantee no less than the same measure of protection afforded the miners under the mandatory standard.

Song-ae Aromie Noe,

Acting Director, Office of Standards, Regulations, and Variances.

BILLING CODE 4520–43–P

NUCLEAR REGULATORY COMMISSION

[NRC–2022–0043]

Monthly Notice; Applications and Amendments to Facility Operating Licenses and Combined Licenses Involving No Significant Hazards Considerations

AGENCY: Nuclear Regulatory Commission.

ACTION: Monthly notice.

SUMMARY: Pursuant to section 189.a.(2) of the Atomic Energy Act of 1954, as amended (the Act), the U.S. Nuclear Regulatory Commission (NRC) is publishing this regular monthly notice. The Act requires the Commission to publish notice of any amendments issued, or proposed to be issued, and grants the Commission the authority to issue and make immediately effective any amendment to an operating license or combined license, as applicable, upon a determination by the Commission that such amendment involves no significant hazards consideration (NSHC), notwithstanding the pendency before the Commission of a request for a hearing from any person. This monthly notice includes all amendments issued, or proposed to be issued, from January 7, 2022, to February 3, 2022. The last monthly notice was published on January 25, 2022.

DATES: Comments must be filed by March 24, 2022. A request for a hearing or petitions for leave to intervene must be filed by April 25, 2022.

ADDRESSES: You may submit comments by any of the following methods; however, the NRC encourages electronic comment submission through the Federal rulemaking website:

- *Federal rulemaking website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2022–0043. Address questions about Docket IDs in *Regulations.gov* to Stacy Schumann; telephone: 301–415–0624; email: *Stacy.Schumann@nrc.gov.* For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *Mail comments to:* Office of Administration, Mail Stop: TWFN–7–A60M, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, ATTN: Program Management, Announcements and Editing Staff.

For additional direction on obtaining information and submitting comments, see ''Obtaining Information and Submitting Comments'' in the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: Kay Goldstein, Office of Nuclear Reactor Regulation, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, telephone: 301–415–1506, email: *Kay.Goldstein@nrc.gov.*

SUPPLEMENTARY INFORMATION:

I. Obtaining Information and Submitting Comments

A. Obtaining Information

Please refer to Docket ID NRC–2022–0043, facility name, unit number(s), docket number(s), application date, and subject when contacting the NRC about the availability of information for this action. You may obtain publicly available information related to this action by any of the following methods:

- *Federal Rulemaking Website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2022–0043.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to *PDR.Resource@nrc.gov.* For the convenience of the reader, instructions about obtaining materials referenced in this document are provided in the ''Availability of Documents'' section.
- *NRC's PDR:* You may examine and purchase copies of public documents, by appointment, at the NRC's PDR, Room P1 B35, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852. To make an appointment to visit the PDR, please send an email to *PDR.Resource@nrc.gov* or call 1–800–397–4209 or 301–415–4737, between 8:00 a.m. and 4:00 p.m. (ET), Monday through Friday, except Federal holidays.

B. Submitting Comments

The NRC encourages electronic comment submission through the Federal rulemaking website (*https://www.regulations.gov*). Please include Docket ID NRC–2022–0043, facility name, unit number(s), docket number(s), application date, and subject, in your comment submission.

The NRC cautions you not to include identifying or contact information that you do not want to be publicly disclosed in your comment submission. The NRC will post all comment submissions at *https://www.regulations.gov* as well as enter the comment submissions into ADAMS. The NRC does not routinely edit comment submissions to remove identifying or contact information.

If you are requesting or aggregating comments from other persons for submission to the NRC, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their comment submission. Your request should state that the NRC does not routinely edit comment submissions to remove such information before making the comment submissions available to the public or entering the comment into ADAMS.

II. Notice of Consideration of Issuance of Amendments to Facility Operating Licenses and Combined Licenses and Proposed No Significant Hazards Consideration Determination

For the facility-specific amendment requests shown in this notice, the Commission finds that the licensees' analyses provided, consistent with section 50.91 of title 10 of *the Code of Federal Regulations* (10 CFR), are sufficient to support the proposed determinations that these amendment requests involve NSHC. Under the Commission's regulations in 10 CFR 50.92, operation of the facilities in accordance with the proposed

amendments would not (1) involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) involve a significant reduction in a margin of safety.

The Commission is seeking public comments on these proposed determinations. Any comments received within 30 days after the date of publication of this notice will be considered in making any final determinations.

Normally, the Commission will not issue the amendments until the expiration of 60 days after the date of publication of this notice. The Commission may issue any of these license amendments before expiration of the 60-day period provided that its final determination is that the amendment involves NSHC. In addition, the Commission may issue any of these amendments prior to the expiration of the 30-day comment period if circumstances change during the 30-day comment period such that failure to act in a timely way would result, for example in derating or shutdown of the facility. If the Commission takes action on any of these amendments prior to the expiration of either the comment period or the notice period, it will publish in the **Federal Register** a notice of issuance. If the Commission makes a final NSHC determination for any of these amendments, any hearing will take place after issuance. The Commission expects that the need to take action on any amendment before 60 days have elapsed will occur very infrequently.

A. Opportunity To Request a Hearing and Petition for Leave To Intervene

Within 60 days after the date of publication of this notice, any persons (petitioner) whose interest may be affected by any of these actions may file a request for a hearing and petition for leave to intervene (petition) with respect to that action. Petitions shall be filed in accordance with the Commission's ''Agency Rules of Practice and Procedure'' in 10 CFR part 2. Interested persons should consult a current copy of 10 CFR 2.309. The NRC's regulations are accessible electronically from the NRC Library on the NRC's website at *https://www.nrc.gov/reading-rm/doc-collections/cfr/.* If a petition is filed, the Commission or a presiding officer will rule on the petition and, if appropriate, a notice of a hearing will be issued.

As required by 10 CFR 2.309(d) the petition should specifically explain the reasons why intervention should be permitted with particular reference to the following general requirements for standing: (1) The name, address, and telephone number of the petitioner; (2) the nature of the petitioner's right to be made a party to the proceeding; (3) the nature and extent of the petitioner's property, financial, or other interest in the proceeding; and (4) the possible effect of any decision or order which may be entered in the proceeding on the petitioner's interest.

In accordance with 10 CFR 2.309(f), the petition must also set forth the specific contentions that the petitioner seeks to have litigated in the proceeding. Each contention must consist of a specific statement of the issue of law or fact to be raised or controverted. In addition, the petitioner must provide a brief explanation of the bases for the contention and a concise statement of the alleged facts or expert opinion that support the contention and on which the petitioner intends to rely in proving the contention at the hearing. The petitioner must also provide references to the specific sources and documents on which the petitioner intends to rely to support its position on the issue. The petition must include sufficient information to show that a genuine dispute exists with the applicant or licensee on a material issue of law or fact. Contentions must be limited to matters within the scope of the proceeding. The contention must be one that, if proven, would entitle the petitioner to relief. A petitioner who fails to satisfy the requirements at 10 CFR 2.309(f) with respect to at least one contention will not be permitted to participate as a party.

Those permitted to intervene become parties to the proceeding, subject to any limitations in the order granting leave to intervene. Parties have the opportunity to participate fully in the conduct of the hearing with respect to resolution of that party's admitted contentions, including the opportunity to present evidence, consistent with the NRC's regulations, policies, and procedures.

Petitions must be filed no later than 60 days from the date of publication of this notice. Petitions and motions for leave to file new or amended contentions that are filed after the deadline will not be entertained absent a determination by the presiding officer that the filing demonstrates good cause by satisfying the three factors in 10 CFR 2.309(c)(1)(i) through (iii). The petition must be filed in accordance with the filing instructions in the ''Electronic Submissions (E-Filing)'' section of this document.

If a hearing is requested, and the Commission has not made a final determination on the issue of NSHC, the Commission will make a final determination on the issue of NSHC. The final determination will serve to establish when the hearing is held. If the final determination is that the amendment request involves NSHC, the Commission may issue the amendment and make it immediately effective, notwithstanding the request for a hearing. Any hearing would take place after issuance of the amendment. If the final determination is that the amendment request involves a significant hazards consideration, then any hearing held would take place before the issuance of the amendment unless the Commission finds an imminent danger to the health or safety of the public, in which case it will issue an appropriate order or rule under 10 CFR part 2.

A State, local governmental body, Federally recognized Indian Tribe, or agency thereof, may submit a petition to the Commission to participate as a party under 10 CFR 2.309(h)(1). The petition should state the nature and extent of the petitioner's interest in the proceeding. The petition should be submitted to the Commission no later than 60 days from the date of publication of this notice. The petition must be filed in accordance with the filing instructions in the ''Electronic Submissions (E-Filing)'' section of this document, and should meet the requirements for petitions set forth in this section, except that under 10 CFR 2.309(h)(2) a State, local governmental body, or Federally recognized Indian Tribe, or agency thereof does not need to address the standing requirements in 10 CFR 2.309(d) if the facility is located within its boundaries. Alternatively, a State, local governmental body, Federally recognized Indian Tribe, or agency thereof may participate as a non-party under 10 CFR 2.315(c).

If a petition is submitted, any person who is not a party to the proceeding and is not affiliated with or represented by a party may, at the discretion of the presiding officer, be permitted to make a limited appearance pursuant to the provisions of 10 CFR 2.315(a). A person making a limited appearance may make an oral or written statement of his or her position on the issues but may not otherwise participate in the proceeding. A limited appearance may be made at any session of the hearing or at any prehearing conference, subject to the limits and conditions as may be imposed by the presiding officer. Details regarding the opportunity to make a limited appearance will be provided by the presiding officer if such sessions are scheduled.

B. Electronic Submissions (E-Filing)

All documents filed in NRC adjudicatory proceedings including documents filed by an interested State, local governmental body, Federally recognized Indian Tribe, or designated agency thereof that requests to participate under 10 CFR 2.315(c), must be filed in accordance with 10 CFR 2.302. The E-Filing process requires participants to submit and serve all adjudicatory documents over the internet, or in some cases, to mail copies on electronic storage media, unless an exemption permitting an alternative filing method, as discussed in this notice, is granted. Detailed guidance on electronic submissions is located in the Guidance for Electronic Submissions to the NRC (ADAMS Accession No. ML13031A056) and on the NRC website at *https://www.nrc.gov/site-help/e-submittals.html.*

To comply with the procedural requirements of E-Filing, at least 10 days prior to the filing deadline, the participant should contact the Office of the Secretary by email at *Hearing.Docket@nrc.gov,* or by telephone at 301–415–1677, to (1) request a digital identification (ID) certificate, which allows the participant (or its counsel or representative) to digitally sign submissions and access the E-Filing system for any proceeding in which it is participating; and (2) advise the Secretary that the participant will be submitting a petition or other adjudicatory document (even in instances in which the participant, or its counsel or representative, already holds an NRC-issued digital ID certificate). Based upon this information, the Secretary will establish an electronic docket for the proceeding if the Secretary has not already established an electronic docket.

Information about applying for a digital ID certificate is available on the NRC's public website at *https://www.nrc.gov/site-help/e-submittals/getting-started.html.* After a digital ID certificate is obtained and a docket created, the participant must submit adjudicatory documents in Portable Document Format. Guidance on submissions is available on the NRC's public website at *https://www.nrc.gov/site-help/electronic-sub-ref-mat.html.* A filing is considered complete at the time the document is submitted through the NRC's E-Filing system. To be timely, an electronic filing must be submitted to the E-Filing system no later than 11:59 p.m. Eastern Time on the due date. Upon receipt of a transmission, the E-Filing system timestamps the document and sends the submitter an email confirming receipt of the document. The E-Filing system also distributes an email that provides access to the document to the NRC's Office of the General Counsel and any others who have advised the Office of the Secretary that they wish to participate in the proceeding, so that the filer need not serve the document on those participants separately. Therefore, applicants and other participants (or their counsel or representative) must apply for and receive a digital ID certificate before adjudicatory documents are filed to obtain access to the documents via the E-Filing system.

A person filing electronically using the NRC's adjudicatory E-Filing system may seek assistance by contacting the NRC's Electronic Filing Help Desk through the ''Contact Us'' link located on the NRC's public website at *https://www.nrc.gov/site-help/e-submittals.html,* by email to *MSHD.Resource@nrc.gov,* or by a toll-free call at 1–866–672–7640. The NRC Electronic Filing Help Desk is available between 9 a.m. and 6 p.m., Eastern Time, Monday through Friday, excluding government holidays.

Participants who believe that they have good cause for not submitting documents electronically must file an exemption request, in accordance with 10 CFR 2.302(g), with their initial paper filing stating why there is good cause for not filing electronically and requesting authorization to continue to submit documents in paper format. Such filings must be submitted in accordance with 10 CFR 2.302(b)–(d). Participants filing adjudicatory documents in this manner are responsible for serving their documents on all other participants. Participants granted an exemption under 10 CFR 2.302(g)(2) must still meet the electronic formatting requirement in 10 CFR 2.302(g)(1), unless the participant also seeks and is granted an exemption from 10 CFR 2.302(g)(1).

Documents submitted in adjudicatory proceedings will appear in the NRC's electronic hearing docket, which is publicly available at *https://adams.nrc.gov/ehd,* unless excluded pursuant to an order of the presiding officer. If you do not have an NRC-issued digital ID certificate as previously described, click ''cancel'' when the link requests certificates and you will be automatically directed to the NRC's electronic hearing dockets where you will be able to access any publicly available documents in a particular hearing docket. Participants are requested not to include personal privacy information such as social security numbers, home addresses, or personal phone numbers in their filings unless an NRC regulation or other law requires submission of such information. With respect to copyrighted works, except for limited excerpts that serve the purpose of the adjudicatory filings and would constitute a Fair Use application, participants should not include copyrighted materials in their submission.

The following table provides the plant name, docket number, date of application, ADAMS accession number, and location in the application of the licensees' proposed NSHC determinations. For further details with respect to these license amendment applications, see the applications for amendment, which are available for public inspection in ADAMS. For additional direction on accessing information related to this document, see the ''Obtaining Information and Submitting Comments'' section of this document.

LICENSE AMENDMENT REQUEST(S)

Constellation Energy Generation, LLC; Limerick Generating Station, Units 1 and 2; Montgomery County, PA	
Docket No(s)	50–352, 50–353.
Application date	March 11, 2021, as supplemented by letter(s) dated May 5, 2021, and December 15, 2021.
ADAMS Accession No	ML21070A412, ML21125A215, and ML21349B364.
Location in Application of NSHC	Pages 18–20 of Attachment 1 to Letter dated December 15, 2021.
Brief Description of Amendment(s)	The license amendment request was originally noticed in the **Federal Register** on August 10, 2021 (86 FR 43690). The notice is being reissued in its entirety to include the revised scope, description of the amendment request, and proposed no significant hazards consideration determination. The proposed amendments would modify the licensing basis by revising the license condition in Appendix C to allow the use of an alternate defense-in-depth categorization process, an alternate pressure boundary categorization process, and an alternate seismic Tier 1 categorization process to allow the implementation of risk-informed categorization and treatment of structures, systems and components in accordance with 10 CFR 50.69.
Proposed Determination	NSHC.

LICENSE AMENDMENT REQUEST(S)—Continued

Name of Attorney for Licensee, Mailing Address	Tamra Domeyer, Associate General Counsel, Constellation Energy Generation, LLC, 4300 Winfield Road, Warrenville, IL 60555.
NRC Project Manager, Telephone Number	V. Sreenivas, 301–415–2597.

Constellation Energy Generation, LLC; Limerick Generating Station, Units 1 and 2; Montgomery County, PA

Docket No(s)	50–352, 50–353.
Application date	December 15, 2021.
ADAMS Accession No	ML21349B378.
Location in Application of NSHC	Pages 27–29 of Attachment 1.
Brief Description of Amendment(s)	The proposed amendments would revise technical specification (TS) surveillance requirements for emergency diesel generator (EDG) frequency and voltage tolerances and for emergency core cooling system pump flows. Specifically, the amendments would revise certain frequency and voltage acceptance criteria for steady-state EDG surveillance requirements under TS 3/4.8.1, ''A.C. Sources—Operating.'' The proposed changes are consistent with WCAP–17308–NP–A .Rev 0, ''Treatment of Diesel Generator (DG) Technical Specification Frequency and Voltage Tolerances,'' dated July 2017. The proposed amendments would also revise the flow acceptance criteria of the emergency core cooling system (ECCS) pump surveillance requirements under TS3/4.5.1, ''ECCS-Operating.''
Proposed Determination	NSHC.
Name of Attorney for Licensee, Mailing Address	Tamra Domeyer, Associate General Counsel, Constellation Energy Generation, LLC, 4300 Winfield Road, Warrenville, IL 60555.
NRC Project Manager, Telephone Number	V. Sreenivas, 301–415–2597.

Duke Energy Carolinas, LLC; Catawba Nuclear Station, Units 1 and 2; York County, SC; Duke Energy Carolinas, LLC; McGuire Nuclear Station, Units 1 and 2; Mecklenburg County, NC; Duke Energy Carolinas, LLC; Oconee Nuclear Station, Units 1, 2, and 3; Oconee County, SC; Duke Energy Progress, LLC; Brunswick Steam Electric Plant, Units 1 and 2; Brunswick County, NC; Duke Energy Progress, LLC; H.B. Robinson Steam Electric Plant, Unit No. 2; Darlington County, SC; Duke Energy Progress, LLC; Shearon Harris Nuclear Power Plant, Unit 1; Wake and Chatham Counties, NC; Duke Energy Carolinas, LLC; William States Lee III Nuclear Station, Units 1 and 2; Cherokee County, SC.

Docket No(s)	50–325, 50–324, 50–413, 50–414, 50–400, 50–369, 50–370, 50–269, 50–270, 50–287, 50–261, 52–018, 52–019.
Application date	December 14, 2021.
ADAMS Accession No	ML21348A003.
Location in Application of NSHC	Pages 16–18 of Enclosure 1.
Brief Description of Amendment(s)	The proposed amendments would relocate the Duke Energy Common Emergency Operations Facility (EOF) from 526 South Church Street, Charlotte, NC, to 9700 David Taylor Drive, Charlotte, NC. The new location is approximately nine air miles from the current location. Since the proposed change to the EOF's location results in the EOF being greater than 25 miles from any of the Duke Energy nuclear sites, NRC approval is required per 10 CFR part 50 appendix E, IV.E.8.b.
Proposed Determination	NSHC.
Name of Attorney for Licensee, Mailing Address	Tracey Mitchell LeRoy, Deputy General Counsel, Duke Energy Corporation, 550 South Tryon Street, Mail Code DEC45A, Charlotte, NC 28202.
NRC Project Manager, Telephone Number	Andrew Hon, 301–415–8480.

Duke Energy Carolinas, LLC; Catawba Nuclear Station, Units 1 and 2; York County, SC; Duke Energy Carolinas, LLC; McGuire Nuclear Station, Units 1 and 2; Mecklenburg County, NC; Duke Energy Carolinas, LLC; Oconee Nuclear Station, Units 1, 2, and 3; Oconee County, SC; Duke Energy Progress, LLC; Brunswick Steam Electric Plant, Units 1 and 2; Brunswick County, NC; Duke Energy Progress, LLC; H.B. Robinson Steam Electric Plant, Unit No. 2; Darlington County, SC; Duke Energy Progress, LLC; Shearon Harris Nuclear Power Plant, Unit 1; Wake and Chatham Counties, NC

Docket No(s)	50–325, 50–324, 50–413, 50–414, 50–400, 50–369, 50–370, 50–269, 50–270, 50–287, 50–261.
Application date	January 18, 2022.
ADAMS Accession No	ML22018A236.
Location in Application of NSHC	Pages 9–11 of Enclosure 1.
Brief Description of Amendment(s)	The proposed amendments would modify certain technical specification (TS) surveillance requirements (SRs) by adding exceptions to consider the SR met when automatic valves or dampers are locked, sealed, or otherwise secured in the actuated position, in order to consider the SR met based on TS Task Force (TSTF) Traveler TSTF–541, Revision 2, ''Add Exceptions to Surveillance Requirements for Valves and Dampers Locked in the Actuated Position'' (ADAMS Accession No. ML19240A315), and the associated NRC safety evaluation for TSTF–541, Revision 2 (ADAMS Accession No. ML19323E926).
Proposed Determination	NSHC.
Name of Attorney for Licensee, Mailing Address	Kathryn B. Nolan, Deputy General Counsel, Duke Energy Corporation, 550 South Tryon Street (DEC45A), Charlotte, NC 28202.
NRC Project Manager, Telephone Number	Luke Haeg, 301–415–0272.

Duke Energy Carolinas, LLC; McGuire Nuclear Station, Units 1 and 2; Mecklenburg County, NC

Docket No(s)	50–369, 50–370.
Application date	December 20, 2021.
ADAMS Accession No	ML21355A362.
Location in Application of NSHC	Pages 9 and 10 of Enclosure.
Brief Description of Amendment(s)	The proposed amendments would revise McGuire's Unit 1 and 2 Technical Specification 3.4.3, ''RCS Pressure and Temperature (P/T) Limits,'' to reflect that Unit 1's P/T limit curves are applicable up to 54 effective full power years (EFPY) and that Unit 2's P/T limit curves are applicable up to 38.6 EFPY.
Proposed Determination	NSHC.
Name of Attorney for Licensee, Mailing Address	Tracey Mitchell LeRoy, Deputy General Counsel, Duke Energy Corporation, 550 South Tryon Street, Mail Code DEC45A, Charlotte, NC 28202.
NRC Project Manager, Telephone Number	John Klos, 301–415–5136.

Duke Energy Progress, LLC; H.B. Robinson Steam Electric Plant, Unit No. 2; Darlington County, SC

Docket No(s)	50–261.
Application date	December 9, 2021, as supplemented by letter dated January 6, 2022.
ADAMS Accession No	ML21343A047, ML22006A240.
Location in Application of NSHC	Pages 2–3 of the Enclosure.

LICENSE AMENDMENT REQUEST(S)—Continued

Brief Description of Amendment(s)	The proposed amendment would adopt Technical Specifications Task Force (TSTF) Traveler TSTF–577, Revision 1, ''Revised Frequencies for Steam Generator Tube Inspections.'' Additionally, Duke Energy proposed a steam generator tube inspection period of 72 effective full power months for the Robinson inspection period that began December 8, 2020. This is a variation from the TS changes described in TSTF–577 because the enhanced probe inspection method has not previously been used for steam generator tube inspections at Robinson. For all future steam generator tube inspections, the enhanced probe inspection method will be utilized.
Proposed Determination	NSHC.
Name of Attorney for Licensee, Mailing Address	Tracey Mitchell LeRoy, Deputy General Counsel, Duke Energy Corporation, 550 South Tryon Street, Mail Code DEC45A, Charlotte, NC 28202.
NRC Project Manager, Telephone Number	Tanya Hood, 301–415–1387.

Duke Energy Progress, LLC; H.B. Robinson Steam Electric Plant, Unit No. 2; Darlington County, SC

Docket No(s)	50–261.
Application date	December 9, 2021.
ADAMS Accession No	ML21343A087.
Location in Application of NSHC	Pages 5–6 of the Enclosure 1.
Brief Description of Amendment(s)	The proposed amendment would revise Technical Specification (TS) 3.4.3, ''RCS [Reactor Coolant System] Pressure and Temperature (P/T) Limits.'' Specifically, a portion of TS Figure 3.4.3–2 (P/T limit cooldown curves) is being corrected because it does not reflect the data approved in Amendment No. 248.
Proposed Determination	NSHC.
Name of Attorney for Licensee, Mailing Address	Tracey Mitchell LeRoy, Deputy General Counsel, Duke Energy Corporation, 550 South Tryon Street, Mail Code DEC45A, Charlotte, NC 28202.
NRC Project Manager, Telephone Number	Tanya Hood, 301–415–1387.

Energy Harbor Nuclear Corp. and Energy Harbor Nuclear Generation LLC; Beaver Valley Power Station, Units 1 and 2; Beaver County, PA

Docket No(s)	50–334, 50–412.
Application date	September 15, 2021.
ADAMS Accession No	ML21258A319.
Location in Application of NSHC	Pages 3–5 of Enclosure.
Brief Description of Amendment(s)	Energy Harbor Nuclear Corp. requests adoption of Technical Specifications Task Force (TSTF) Traveler, TSTF–577–A, Revision 1, ''Revised Frequencies for Steam Generator Tube Inspections.'' The technical specifications related to steam generator tube inspections and reporting would be revised based on operating history.
Proposed Determination	NSHC.
Name of Attorney for Licensee, Mailing Address	Rick Giannantonio, General Counsel, Energy Harbor Nuclear Corp., Mail Stop A–GO–15, 76 South Main Street, Akron, OH 44308.
NRC Project Manager, Telephone Number	Sujata Goetz, 301–415–8004.

Energy Northwest; Columbia Generating Station; Benton County, WA

Docket No(s)	50–397.
Application date	November 9, 2021.
ADAMS Accession No	ML21314A224.
Location in Application of NSHC	Pages 24–25 of the Enclosure.
Brief Description of Amendment(s)	The proposed amendment would modify the Columbia Generating Station licensing basis by the addition of a license condition to allow for the implementation of the provisions of 10 CFR 50.69, ''Risk-informed categorization and treatment of structures, systems and components for nuclear power reactors.''
Proposed Determination	NSHC.
Name of Attorney for Licensee, Mailing Address	Kathleen Galioto, Assistant General Counsel, Energy Northwest, MD 1020, P.O. Box 968, Richland, WA 99352.
NRC Project Manager, Telephone Number	Mahesh Chawla, 301–415–8371.

Entergy Operations, Inc.; Arkansas Nuclear One, Unit 1; Pope County, AR

Docket No(s)	50–313.
Application date	September 30, 2021, as supplemented by letter dated December 2, 2021.
ADAMS Accession No	ML21274A874, ML21337A245.
Location in Application of NSHC	Pages 28—29 of the Enclosure.
Brief Description of Amendment(s)	The proposed amendment would revise the Dose Equivalent I–131 and the reactor coolant system (RCS) primary activity limits required by Technical Specification (TS) 3.4.12, ''RCS Specific Activity,'' for Arkansas Nuclear One, Unit 1. In addition, the primary-to-secondary leak rate limit provided in TS 3.4.13, ''RCS Operational Leakage,'' would be revised. These proposed changes are proposed to address non-conservative inputs used in the steam generator tube rupture accident, the main steam line break accident, and the control rod ejection accident dose consequence calculations.
Proposed Determination	NSHC.
Name of Attorney for Licensee, Mailing Address	Anna Vinson Jones, Assistant General Counsel, Entergy Services, Inc.,101 Constitution Avenue NW, Suite 200 East, Washington, DC 20001.
NRC Project Manager, Telephone Number	Thomas Wengert, 301–415–4037.

Indiana Michigan Power Company; Donald C. Cook Nuclear Plant, Units 1 and 2; Berrien County, MI

Docket No(s).	50–315, 50–316.
Application date	November 8, 2021.
ADAMS Accession No	ML21312A518.
Location in Application of NSHC	Pages 2–3 of Enclosure 2.
Brief Description of Amendment(s)	The proposed amendments would revise the technical specifications to adopt Technical Specifications Task Force (TSTF) Traveler, TSTF–577, Revision 1, ''Revised Frequencies for Steam Generator Tube Inspections.''
Proposed Determination	NSHC.
Name of Attorney for Licensee, Mailing Address	Robert B. Haemer, Senior Nuclear Counsel, Indiana Michigan Power Company, One Cook Place, Bridgman, MI 49106.

LICENSE AMENDMENT REQUEST(S)—Continued

NRC Project Manager, Telephone Number	Scott Wall, 301–415–2855.

National Institute of Standards and Technology (NIST), National Bureau of Standards test reactor, Montgomery County, Maryland

Docket No(s)	50–184.
Application date	December 23, 2021, as supplemented by NSHC Supplement Rev.1 letter dated January 11, 2022.
ADAMS Accession No	ML21361A246 (Package), ML22012A090.
Location in Application of NSHC	Pages 2–4 of supplement.
Brief Description of Amendment(s)	The proposed amendment would revise Technical Specification (TS) 3.9.2.1, removing permission to use height checks to verify latching of fuel elements and requiring that both a rotational check and visual verification be performed to verify latching of fuel elements. The proposed TS revisions would provide additional confidence that a fuel element is properly latched and will remain in position during reactor operation. Proper latching of the fuel element during operation ensures adequate cooling flow to the fuel element preventing overheating of the element during normal reactor operations. Specifically, the proposed amendment would revise TS 3.9.2.1 by changing the specification statement from ''shall be accomplished by one of the following methods,'' to ''shall be accomplished by both of the following methods.'' Additionally, TS 3.9.2.1.1 ''Elevation check of the fuel element with main pump flow,'' is deleted entirely.
Proposed Determination	NSHC.
Name of Attorney for Licensee, Mailing Address	Henry N. Wixon, Chief of Counsel, National Institute of Standards and Technology, 100 Bureau Drive, Stop 1052, Room A534, Gaithersburg, MD 20899–1052.
NRC Project Manager, Telephone Number	Patrick G. Boyle, 301–415–3936.

Northern States Power Company; Monticello Nuclear Generating Plant; Wright County, MN

Docket No(s)	50–263.
Application date	December 13, 2021.
ADAMS Accession No	ML21348A718.
Location in Application of NSHC	Pages 19 and 20 of Enclosure.
Brief Description of Amendment(s)	The proposed amendment would revise the Monticello Nuclear Generating Plant Technical Specifications (TSs). Specifically, the amendment would revise TS 3.8.3, ''Diesel Fuel Oil, Lube Oil, and Starting Air,'' and TS 3.8.2 ''AC Sources—Shutdown,'' to allow the common fuel oil storage tank to be out of service for up to 14 days to perform inspection required by license renewal.
Proposed Determination	NSHC.
Name of Attorney for Licensee, Mailing Address	Peter M. Glass, Assistant General Counsel, Xcel Energy, 414 Nicollet Mall—401–8, Minneapolis, MN 55401.
NRC Project Manager, Telephone Number	Robert Kuntz, 301–415–3733.

Southern Nuclear Operating Company, Inc.; Joseph M. Farley Nuclear Plant, Units 1 and 2; Houston County, AL

Docket No(s)	50–348, 50–364.
Application date	December 13, 2021.
ADAMS Accession No	ML21348A733.
Location in Application of NSHC	Pages E–14 and E–15 of Enclosure.
Brief Description of Amendment(s)	The proposed amendment would revise the peak calculated containment internal pressure for the design basis loss-of-coolant accident (LOCA) described in the Joseph M. Farley Nuclear Plant, Units 1 and 2, Technical Specifications 5.5.17, ''Containment Leakage Rate Testing Program.''
Proposed Determination	NSHC.
Name of Attorney for Licensee, Mailing Address	Millicent Ronnlund, Vice President and General Counsel, Southern Nuclear Operating Co., Inc., P.O. Box 1295, Birmingham, AL 35201–1295.
NRC Project Manager, Telephone Number	Stephanie Devlin-Gill, 301–415–5301.

Southern Nuclear Operating Company, Inc.; Joseph M. Farley Nuclear Plant, Units 1 and 2; Houston County, AL; Southern Nuclear Operating Company, Inc.; Vogtle Electric Generating Plant, Units 1 and 2; Burke County, GA

Docket No(s)	50–348, 50–364, 50–424, 50–425.
Application date	December 21, 2021.
ADAMS Accession No	ML21356B499.
Location in Application of NSHC	Pages E–2 and E–3 of Enclosure.
Brief Description of Amendment(s)	The proposed amendment would adopt the NRC-approved Technical Specification Task Force (TSTF) Traveler 269–A, Revision 2, ''Allow Administrative Means of Position Verification for Locked or Sealed Valves.'' The proposed amendment would modify Technical Specification 3.6.3, ''Containment Isolation Valves.'' Consistent with TSTF–269–A, Notes would be added to allow isolation devices that are locked, sealed or otherwise secured be verified by use of administrative means.
Proposed Determination	NSHC.
Name of Attorney for Licensee, Mailing Address	Millicent Ronnlund, Vice President and General Counsel, Southern Nuclear Operating Co., Inc., P.O. Box 1295, Birmingham, AL 35201–1295.
NRC Project Manager, Telephone Number	John Lamb, 301–415–3100.

Southern Nuclear Operating Company, Inc.; Joseph M. Farley Nuclear Plant, Units 1 and 2; Houston County, AL; Southern Nuclear Operating Company, Inc.; Vogtle Electric Generating Plant, Units 1 and 2; Burke County, GA

Docket No(s)	50–348, 50–364, 50–424, 50–425.
Application date	December 22, 2021.
ADAMS Accession No	ML21356B484.
Location in Application of NSHC	Pages E–8 and E–9 of Enclosure.
Brief Description of Amendment(s)	The proposed amendment would revise the Farley Technical Specifications (TS) by relocating some detailed information from TS 5.5.16, ''Main Steamline Inspection Program,'' to the Farley Updated Final Safety Analysis Report (UFSAR). The proposed amendment would also revise the Vogtle TS by relocating some detailed information from TS 5.5.16, ''MS [Main Steam] and FW [Feedwater] Piping Inspection Program,'' to the Vogtle UFSAR.
Proposed Determination	NSHC.
Name of Attorney for Licensee, Mailing Address	Millicent Ronnlund, Vice President and General Counsel, Southern Nuclear Operating Co., Inc., P.O. Box 1295, Birmingham, AL 35201–1295.
NRC Project Manager, Telephone Number	John Lamb, 301–415–3100.

LICENSE AMENDMENT REQUEST(S)—Continued

Southern Nuclear Operating Company, Inc.; Vogtle Electric Generating Plant, Units 1 and 2; Burke County, GA	
Docket No(s)	50–424, 50–425.
Application date	December 22, 2021.
ADAMS Accession No	ML21356B485.
Location in Application of NSHC	Pages E–6 and E–8 of Enclosure.
Brief Description of Amendment(s)	The proposed amendment would adopt the NRC-approved Technical Specification Task Force (TSTF)–283–A, Revision 3, ''Modify Section 3.8 Mode Restriction Notes.'' The proposed amendment would modify Technical Specifications (TS) 3.8.1, ''AC Sources—Operating'', and TS 3.8.4, ''DC Sources—Operating.'' Consistent with TSTF–283–A, Notes would be added to allow greater flexibility in performing Surveillance Requirements in Modes 1, 2, 3, or 4.
Proposed Determination	NSHC.
Name of Attorney for Licensee, Mailing Address	Millicent Ronnlund, Vice President and General Counsel, Southern Nuclear Operating Co., Inc., P.O. Box 1295, Birmingham, AL 35201–1295.
NRC Project Manager, Telephone Number	John Lamb, 301–415–3100.
Susquehanna Nuclear, LLC and Allegheny Electric Cooperative, Inc.; Susquehanna Steam Electric Station, Units 1 and 2; Luzerne County, PA	
Docket No(s)	50–387, 50–388.
Application date	October 5, 2021, as supplemented by letter dated December 16, 2021.
ADAMS Accession No	ML21279A026, ML21350A265.
Location in Application of NSHC	Pages 9–11 of Enclosure 1 of October 5, 2021 submittal, and Page 2 of supplement dated December 16, 2021.
Brief Description of Amendment(s)	The proposed amendments would revise the instrumentation allowable values for the core spray and the low pressure cooling injection systems' reactor steam dome pressure low initiation and injection permissive instrumentation functions in Table 3.3.5.1–1 in Technical Specification 3.3.5.1, ''Emergency Core Cooling System (ECCS) Instrumentation.'' The proposed amendments would also modify the associated analytical limits and setpoint values for these functions.
Proposed Determination	NSHC.
Name of Attorney for Licensee, Mailing Address	Damon D. Obie, Esq, 835 Hamilton St., Suite 150, Allentown, PA 18101.
NRC Project Manager, Telephone Number	Audrey Klett, 301–415–0489.
Tennessee Valley Authority; Browns Ferry Nuclear Plant, Units 1, 2, and 3; Limestone County, AL	
Docket No(s)	50–259, 50–260, 50–296.
Application date	November 5, 2021.
ADAMS Accession No	ML21309A038.
Location in Application of NSHC	Pages E–9—E–12 of the Enclosure.
Brief Description of Amendment(s)	The proposed amendments would allow the use of a manually operated chilled water cross-tie line between the Browns Ferry Nuclear Plant (Browns Ferry), Unit 3, control bay chilled water system and the Browns Ferry, Unit 1/2 control bay chilled water system to be used in the event of an abnormal condition when both trains of the Unit 1/2 chilled water system are inoperable. The proposed amendments also would revise Browns Ferry, Units 1, 2, and 3, Technical Specification 3.8.7, ''Distribution Systems—Operating,'' to provide a one-time use exception to the Required Actions during the installation and testing of the cross-tie.
Proposed Determination	NSHC.
Name of Attorney for Licensee, Mailing Address	David Fountain, Executive VP and General Counsel, Tennessee Valley Authority, 400 West Summit Hill Drive, WT 6A, Knoxville, TN 37902.
NRC Project Manager, Telephone Number	Kimberly Green, 301–415–1627.
Tennessee Valley Authority; Browns Ferry Nuclear Plant, Units 1, 2, and 3; Limestone County, AL	
Docket No(s)	50–259, 50–260, 50–296.
Application date	December 3, 2021.
ADAMS Accession No	ML21337A227.
Location in Application of NSHC	Pages E–4 and E–5 of the Enclosure.
Brief Description of Amendment(s)	The proposed amendments would revise a few of the instrument testing and calibration definitions in the Browns Ferry Nuclear Plant (Browns Ferry), Units 1, 2, and 3 technical specifications (TSs), as well as incorporate the surveillance frequency control program in a couple of the same definitions. The proposed amendments are based on Technical Specification Task Force (TSTF) Traveler TSTF–205–A, Revision 3, ''Revision of Channel Calibration, Channel Functional Test, and Related Definitions,'' and TSTF–563–A, ''Revise Instrument Testing Definitions to Incorporate the Surveillance Frequency Control Program.'' Additionally, the proposed amendments would rescind the consolidation of several previously approved surveillance requirements approved in Amendment Nos. 315, 338, and 298 for Browns Ferry, Units 1, 2, and 3, respectively, and restore the surveillance requirements to their prior status with the frequencies as ''In accordance with the Surveillance Frequency Control Program.''
Proposed Determination	NSHC.
Name of Attorney for Licensee, Mailing Address	David Fountain, Executive VP and General Counsel, Tennessee Valley Authority, 400 West Summit Hill Drive, WT 6A, Knoxville, TN 37902.
NRC Project Manager, Telephone Number	Kimberly Green, 301–415–1627.
Tennessee Valley Authority; Watts Bar Nuclear Plant, Units 1 and 2; Rhea County, TN	
Docket No(s)	50–390, 50–391.
Application date	December 9, 2021.
ADAMS Accession No	ML21344A027.
Location in Application of NSHC	Pages E–3 and E–4 of the Enclosure.
Brief Description of Amendment(s)	The proposed amendments would revise several instrumentation testing and calibration definitions in the Watts Bar Nuclear Plant, Units 1 and 2, technical specifications, as well as incorporate the surveillance frequency control program in a few of the same definitions. The proposed amendments are based on Technical Specification Task Force (TSTF) Traveler TSTF–205–A, Revision 3, ''Revision of Channel Calibration, Channel Functional Test, and Related Definitions,'' and TSTF–563–A, ''Revise Instrument Testing Definitions to Incorporate the Surveillance Frequency Control Program.''
Proposed Determination	NSHC.

LICENSE AMENDMENT REQUEST(S)—Continued

Name of Attorney for Licensee, Mailing Address	David Fountain, Executive VP and General Counsel, Tennessee Valley Authority, 400 West Summit Hill Drive, WT 6A, Knoxville, TN 37902.
NRC Project Manager, Telephone Number	Kimberly Green, 301–415–1627.
Union Electric Company; Callaway Plant, Unit No. 1; Callaway County, MO	
Docket No(s)	50–483
Application date	September 28, 2021, as supplemented by letter dated December 1, 2021.
ADAMS Accession No	ML21272A167 (Package), ML21335A451 (Package).
Location in Application of NSHC	Pages 158–160 of Enclosure 1 of the Supplement.
Brief Description of Amendment(s)	The proposed amendments would revise the technical specifications and authorize changes to the final safety analysis report to support a full-scope application of the regulations in 10 CFR 50.67, ''Alternative Source Term,'' and described in NRC Regulatory Guide 1.183, Revision 0, ''Alternative Radiological Source Terms for Evaluating Design Basis Accidents at Nuclear Power Reactors.'' Specifically, the amendments would revise technical specification (TS) 3.7.10, ''Control Room Emergency Ventilation System (CREVS), TS 5.5.11, Ventilation Filter Testing Program,'' and TS 5.5.17, ''Control Room Envelope Habitability Program.''
Proposed Determination	NSHC.
Name of Attorney for Licensee, Mailing Address	Jay E. Silberg, Pillsbury Winthrop Shaw Pittman LLP, 1200 17th St., NW, Washington, DC 20036.
NRC Project Manager, Telephone Number	Mahesh Chawla, 301–415–8371.
Union Electric Company; Callaway Plant, Unit No. 1; Callaway County, MO	
Docket No(s)	50–483.
Application date	October 21, 2021, as supplemented by letter dated November 24, 2021.
ADAMS Accession No	ML21294A393 (Package), ML21328A182 (Package).
Location in Application of NSHC	Pages 6–8 of Attachment 1.
Brief Description of Amendment(s)	The proposed amendment would adopt Technical Specifications Task Force (TSTF) Traveler TSTF–505, Revision 2, ''Provide Risk-Informed Extended Completion Times—RITSTF [Risk-Informed TSTF] Initiative 4b,'' and TSTF–439, Revision 2, ''Eliminate Second Completion Times Limiting Time from Discovery of Failure to Meet an LCO [Limiting Condition for Operation]'' and would time completion times contained in the applicable technical specifications (TSs). The amendment would modify the TS requirements to add a new TS 5.5.19, ''Risk Informed Completion Time Program,'' to 5.0, ''Administrative Controls.''
Proposed Determination	NSHC.
Name of Attorney for Licensee, Mailing Address	Jay E. Silberg, Pillsbury Winthrop Shaw Pittman LLP, 1200 17th St., NW, Washington, DC 20036.
NRC Project Manager, Telephone Number	Mahesh Chawla, 301–415–8371.
Wolf Creek Nuclear Operating Corporation; Wolf Creek Generating Station, Unit 1; Coffey County, KS	
Docket No(s)	50–482.
Application date	January 12, 2022.
ADAMS Accession No	ML22012A217.
Location in Application of NSHC	Pages 3–4 of Attachment I.
Brief Description of Amendment(s)	The proposed amendment would remove the Table of Contents from the Wolf Creek Generating Station, Unit 1, Technical Specifications and place it under the licensee control.
Proposed Determination	NSHC.
Name of Attorney for Licensee, Mailing Address	Thomas C. Poindexter, Morgan, Lewis and Bockius LLP, 1111 Pennsylvania Avenue NW, Washington, DC 20004–2541.
NRC Project Manager, Telephone Number	Samson Lee, 301–415–3168.

III. Notice of Issuance of Amendments to Facility Operating Licenses and Combined Licenses

During the period since publication of the last monthly notice, the Commission has issued the following amendments. The Commission has determined for each of these amendments that the application complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission's rules and regulations. The Commission has made appropriate findings as required by the Act and the Commission's rules and regulations in 10 CFR chapter I, which are set forth in the license amendment.

A notice of consideration of issuance of amendment to facility operating license or combined license, as applicable, proposed NSHC determination, and opportunity for a hearing in connection with these actions, was published in the **Federal Register** as indicated in the safety evaluation for each amendment.

Unless otherwise indicated, the Commission has determined that these amendments satisfy the criteria for categorical exclusion in accordance with 10 CFR 51.22. Therefore, pursuant to 10 CFR 51.22(b), no environmental impact statement or environmental assessment need be prepared for these amendments. If the Commission has prepared an environmental assessment under the special circumstances provision in 10 CFR 51.22(b) and has made a determination based on that assessment, it is so indicated in the safety evaluation for the amendment.

For further details with respect to each action, see the amendment and associated documents such as the Commission's letter and safety evaluation, which may be obtained using the ADAMS accession numbers indicated in the following table. The safety evaluation will provide the ADAMS accession numbers for the application for amendment and the **Federal Register** citation for any environmental assessment. All of these items can be accessed as described in the ''Obtaining Information and Submitting Comments'' section of this document.

LICENSE AMENDMENT ISSUANCE(S)

Constellation Energy Generation, LLC; Braidwood Station, Units 1 and 2, Will County, IL; Byron Station, Unit Nos. 1 and 2, Ogle County, IL; Constellation Energy Generation, LLC; Calvert Cliffs Nuclear Power Plant, Units 1 and 2, and Independent Spent Fuel Storage Installation; Calvert County, MD; Constellation Energy Generation, LLC; Clinton Power Station, Unit No. 1; DeWitt County, IL; Constellation Energy Generation, LLC; LaSalle County Station, Units 1 and 2; LaSalle County, IL; Constellation Energy Generation, LLC; Limerick Generating Station, Units 1 and 2; Montgomery County, PA; Constellation Energy Generation, LLC; Peach Bottom Atomic Power Station, Units 1, 2, and 3; York County, PA; Constellation Energy Generation, LLC; Quad Cities Nuclear Power Station, Units 1 and 2; Rock Island County, IL; Constellation Energy Generation, LLC; Three Mile Island Nuclear Station, Unit 1; Dauphin County, PA; Constellation Energy Generation, LLC: Dresden Nuclear Power Plant, Units 1, 2, and 3; Grundy County, IL; Constellation FitzPatrick, LLC and Constellation Energy Generation, LLC; James A FitzPatrick Nuclear Power Plant; Oswego County, NY; Nine Mile Point Nuclear Station, LLC and Constellation Energy Generation, LLC; Nine Mile Point Nuclear Station, Units 1 and 2; Oswego County, NY; PSEG Nuclear LLC; Salem Nuclear Generating Station, Unit Nos. 1 and 2; Salem County, NJ; R. E. Ginna Nuclear Power Plant, LLC and Constellation Energy Generation, LLC; R. E. Ginna Nuclear Power Plant; Wayne County, NY

Docket No(s)	50–456, 50–457, 50–454, 50–455, 50–317, 50–318, 72–008, 50–461, 50–010, 50–237, 50–249, 50–333, 50–373, 50–374, 50–352, 50–353, 50–220, 50–410, 50–171, 50–277, 50–278, 50–254, 50–265, 50–244, 50–272, 50–311, 50–289.
Amendment Date	February 1, 2022.
ADAMS Accession No	ML22021B662 (Package).
Amendment No(s)	Braidwood 224 (U–1), 224 (U–2); Byron 226 (U–1), 226 (U–2); Calvert Cliffs 343 (U–1), 321 (U–2), 12 (ISFSI); Clinton 243; Dresden 50 (U–1), 277 (U–2), 270 (U–3); FitzPatrick 347; Lasalle 254 (U–1), 240 (U–2); Limerick 255 (U–1), 217 (U–2); Nine Mile Point 247 (U–1), 189 (U–2); Peach Bottom 17 (U–1), 340 (U–2), 343 (U–3); Quad Cities 289 (U–1), 285 (U–2); Ginna 147; Salem 341 (U–1), 322, (U–2); TMI 302 (U–1).
Brief Description of Amendment(s)	By order dated November 16, 2021 (ADAMS Accession No. ML21277A192), the NRC staff approved the license transfer application dated February 25, 2021 (ADAMS Accession No. ML21057A273), as supplemented, that was submitted by Exelon Generation Company, LLC, on behalf of itself and Exelon Corporation; Exelon FitzPatrick, LLC; Nine Mile Point Nuclear Station, LLC; R. E. Ginna Nuclear Power Plant, LLC; and Calvert Cliffs Nuclear Power Plant, LLC. A copy of the NRC staff safety evaluation (ADAMS Accession No. ML21277A248) related to the license transfer application was provided with the order. The license amendments reflect the transfer transaction that closed on February 1, 2022.
Public Comments Received as to Proposed NSHC (Yes/No).	No.

Dominion Energy Nuclear Connecticut, Inc.; Millstone Power Station, Unit No. 3; New London County, CT

Docket No(s)	50–423.
Amendment Date	January 7, 2022.
ADAMS Accession No	ML21326A099.
Amendment No(s)	281 (Unit 3).
Brief Description of Amendment(s)	The amendment modified the technical specifications by revising the Reactor Core Safety Limit 2.1.1.2 peak fuel centerline temperature to reflect the fuel centerline temperature specified in Topical Report WCAP–17642–P–A, Revision 1, ''Westinghouse Performance Analysis and Design Model (PAD5)''
Public Comments Received as to Proposed NSHC (Yes/No).	No.

Duke Energy Florida, LLC; Crystal River Unit 3 Nuclear Generating Plant; Citrus County, FL

Docket No(s)	50–302.
Amendment Date	November 24, 2021.
ADAMS Accession No	ML21322A270.
Amendment No(s)	260 (Unit 3).
Brief Description of Amendment(s)	The amendment revised the Crystal River Nuclear Plant, Unit 3 (CR3), Independent Spent Fuel Storage Installation (ISFSI) Security Plan, Training and Qualification Plan, and Safeguards Contingency Plan, as well as updated (1) the existing physical security license condition in the facility operating license and (2) the order responses related to additional security measures and fingerprinting for unescorted access at the CR3 ISFSI.
Public Comments Received as to Proposed NSHC (Yes/No).	No.

Duke Energy Progress, LLC; Shearon Harris Nuclear Power Plant, Unit 1; Wake and Chatham Counties, NC

Docket No(s)	50–400.
Amendment Date	January 19, 2022.
ADAMS Accession No	ML21316A248.
Amendment No(s)	188.
Brief Description of Amendment(s)	The amendment revised the facility operating license condition associated with the adoption of 10 CFR 50.69, ''Risk-informed Categorization and Treatment of Structures, Systems and Components for Nuclear Power Reactors'' to reflect an alternative approach to the one provided in Nuclear Energy Institute's (NEI) 00–04, ''10 CFR 50.69 SSC Categorization Guideline,'' Revision 0 (ADAMS Accession No. ML052910035), for evaluating the impact of the seismic hazard in the 10 CFR 50.69 categorization process, and to also delete the license condition that required the completion of certain implementation items prior to the implementation of 10 CFR 50.69.
Public Comments Received as to Proposed NSHC (Yes/No).	No.

Duke Energy Progress, LLC; Shearon Harris Nuclear Power Plant, Unit 1; Wake and Chatham Counties, NC

Docket No(s)	50–400.
Amendment Date	January 20, 2022.
ADAMS Accession No	ML21320A001.
Amendment No(s)	189.
Brief Description of Amendment(s)	The amendment revises the Technical Specifications to reflect the transition of the licensee-controlled plant procedure PLP–106, ''Technical Specification Equipment List Program,'' to a licensee-controlled Technical Requirements Manual.

LICENSE AMENDMENT ISSUANCE(S)—Continued

Public Comments Received as to Proposed NSHC (Yes/No).	No.

Energy Harbor Nuclear Corp. and Energy Harbor Nuclear Generation LLC; Perry Nuclear Power Plant, Unit 1; Lake County, OH

Docket No(s)	50–440.
Amendment Date	January 10, 2022.
ADAMS Accession No	ML21322A260.
Amendment No(s)	197.
Brief Description of Amendment(s)	The amendment revises Technical Specifications (TS) 3.4.9, ''Residual Heat Removal (RHR) Shutdown Cooling System—Hot Shutdown,'' and TS 3.4.10, ''Residual Heat Removal (RHR) Shutdown Cooling System—Cold Shutdown,'' in accordance with Technical Specifications Task Force (TSTF) Traveler, TSTF–566, Revision 0, ''Revise Actions for Inoperable RHR Shutdown Cooling Subsystem,'' and TSTF–580, Revision 1, ''Provide Exception from Entering Mode 4 With No Operable RHR Shutdown Cooling.''
Public Comments Received as to Proposed NSHC (Yes/No).	No.

Energy Northwest; Columbia Generating Station; Benton County, WA

Docket No(s)	50–397.
Amendment Date	January 13, 2022.
ADAMS Accession No	ML21293A164.
Amendment No(s)	266.
Brief Description of Amendment(s)	The amendment removed License Condition (LC) 2.C.(34) and revised LC 2.C.(35). The LC 2.C.(34) is no longer applicable because the Columbia Generating Station (Columbia) Final Safety Analysis Report has been updated to include the license renewal commitments. The revision to LC 2.C.(35) clarified that future changes to the license renewal commitments, as dictated by operating experience, are made under the provisions of 10 CFR 50.59, ''Changes, tests, and experiments.'' The changes do not result in changes to the technical specifications or operating requirements for Columbia.
Public Comments Received as to Proposed NSHC (Yes/No).	No.

Exelon Generation Company, LLC; Braidwood Station, Units 1 and 2; Will County, IL; Exelon Generation Company, LLC; Braidwood Station, Units 1 and 2; Will County, IL; Exelon Generation Company, LLC; Byron Station, Unit Nos. 1 and 2, Ogle County, IL; Exelon Generation Company, LLC; Calvert Cliffs Nuclear Power Plant, Unit Nos. 1 and 2; Calvert County, MD; Exelon Generation Company, LLC, Clinton Power Station, Unit No. 1, DeWitt County, IL; Exelon Generation Company, LLC; Dresden Nuclear Power Station, Units 2 and 3; Grundy County, IL; Exelon Generation Company, LLC and Exelon FitzPatrick, LLC; James A. FitzPatrick Nuclear Power Plant; Oswego County, NY; Exelon Generation Company, LLC, LaSalle County Station, Units 1 and 2; LaSalle County, IL; Exelon Generation Company, LLC; Limerick Generating Station, Units 1 and 2; Montgomery County, PA; Exelon Generation Company, LLC; Nine Mile Point Nuclear Station, Units 1 and 2; Oswego County, NY; Exelon Generation Company, LLC and PSEG Nuclear LLC; Peach Bottom Atomic Power Station, Units 2 and 3; York and Lancaster Counties, PA; Exelon Generation Company, LLC; Quad Cities Nuclear Power Station, Units 1 and 2; Rock Island County, IL; Exelon Generation Company, LLC; R. E. Ginna Nuclear Power Plant; Wayne County, NY; Exelon Generation Company, LLC; Limerick Generating Station, Units 1 and 2; Montgomery County, PA

Docket No(s)	50–456, 50–457, 50–454, 50–455, 50–317, 50–318, 50–461, 50–237, 50–249, 50–333, 50–373, 50–374, 50–352, 50–353, 50–410, 50–277, 50–278, 50–254, 50–265, 50–244.
Amendment Date	January 13, 2022.
ADAMS Accession No	ML21347A038.
Amendment No(s)	Braidwood 223 (U–1) 223 (U–2); Byron 225 (U–1) 225 (U–2); Calvert Cliffs 341 (U–1) 319 (U–2); Clinton 242; Dresden 276 (U–2) 269 (U–3); FitzPatrick 346; LaSalle 253 (U–1) 239 (U–2); Limerick 254 (U–1) 216 (U–2); Nine Mile Point 188 (U–2); Peach Bottom 339 (U–2) 342 (U–3); Quad Cities 288 (U–1) 284 (U–2); Ginna 146.
Brief Description of Amendment(s)	The amendments revised the reactor coolant leakage requirements in the technical specifications for each facility based on Technical Specifications Task Force (TSTF) Traveler TSTF 554, Revision 1, ''Revise Reactor Coolant Leakage Requirements,'' (ADAMS Accession No. ML20016A233).
Public Comments Received as to Proposed NSHC (Yes/No).	Yes.

Exelon Generation Company, LLC; Calvert Cliffs Nuclear Power Plant, Units 1 and 2; Calvert County, MD

Docket No(s)	50–317, 50–318.
Amendment Date	January 13, 2022.
ADAMS Accession No	ML21347A864.
Amendment No(s)	342 (Unit 1) and 320 (Unit 2).
Brief Description of Amendment(s)	The amendments incorporated changes to the Updated Final Safety Analysis Report and the Technical Requirements Manual to allow for a full core offload without the availability of being supplemented with one loop of the shutdown cooling system during certain refueling outages. The amendments also incorporated a change in calculational methodology used in the Calvert Cliffs spent fuel pool heat-up analysis.
Public Comments Received as to Proposed NSHC (Yes/No).	No.

Florida Power & Light Company, et al.; St. Lucie Plant, Unit Nos. 1 and 2; St. Lucie County, FL

Docket No(s)	50–335, 50–389.
Amendment Date	January 14, 2022.
ADAMS Accession No	ML21342A209.
Amendment No(s)	252 (Unit 1) and 207 (Unit 2).

LICENSE AMENDMENT ISSUANCE(S)—Continued

Brief Description of Amendment(s)	The amendments extended technical specification (TS) requirements to permit the use of Risk Informed Completion Times (RICTs) to the 120-Volt alternating current (AC) Instrument Bus TS, in accordance with TSTF–505, Revision 2, ''Provide Risk-Informed Completion Times RITSTF Initiative 4b,'' and Nuclear Energy Institute (NEI) 06–09, ''Risk-Informed Technical Specifications Initiative 4b, Risk Managed Technical Specifications (RMTS) Guidelines.'' Accordingly, these amendments revised License Condition J of the St. Lucie 1 Renewed Facility Operating License (RFOL) and License Condition O of the St. Lucie 2 RFOL, respectively, each of which adds the amendment numbers resulting from this amendment request and deletes the first listed condition specifying activities to be completed prior to implementing the RICT Program. The amendments also modified Unit 1 TS 3.8.2.1 Action b and Unit 2 TS 3.8.3.1 Action b to permit the use of a RICT for the 120 VAC instrument buses.
Public Comments Received as to Proposed NSHC (Yes/No).	No.

NextEra Energy Duane Arnold, LLC; Duane Arnold Energy Center; Linn County, IA

Docket No(s)	50–331.
Amendment Date	January 21, 2022.
ADAMS Accession No	ML21172A217.
Amendment No(s)	315.
Brief Description of Amendment(s)	The U.S. Nuclear Regulatory Commission (NRC, Commission) has issued Amendment No. 315 to Renewed Facility Operating License No. DPR 49, for the Duane Arnold Energy Center (DAEC), operated by NextEra Energy Duane Arnold, LLC. The amendment consists of revisions to the Renewed Facility Operating License and the technical specifications (TS) in response to DAEC's application dated February 19, 2021 (ADAMS Accession No. ML21050A189), as supplemented on January 3, 2022 (ADAMS Package Accession No. ML22004A010). These revisions reflect the removal of all spent nuclear fuel from the DAEC spent fuel pool and its transfer to dry cask storage within an onsite Independent Spent Fuel Storage Installation (ISFSI). These changes more fully reflect the permanently shutdown status of the decommissioning facility, as well as the reduced scope of structures, systems, and components necessary to ensure plant safety once all spent fuel has been permanently moved to the DAEC ISFSI, an activity which is currently scheduled for completion in mid-2022. The changes also include the relocation of administrative controls from the TS to the DAEC Quality Assurance Topical Report, as well as deletion of the remaining TS Bases, except for certain environmental reporting requirements which are required to remain in the TS in accordance with 10 CFR 50.36a(a)(2). The changes shall be implemented within 60 days following submittal of written notification to the NRC that all spent nuclear fuel assemblies have been transferred out of the DAEC SFP and placed in dry storage within the ISFSI.
Public Comments Received as to Proposed NSHC (Yes/No).	No.

Southern Nuclear Operating Company, Inc.; Joseph M. Farley Nuclear Plant, Units 1 and 2; Houston County, AL; Southern Nuclear Operating Company, Inc.; Vogtle Electric Generating Plant, Units 1 and 2; Burke County, GA

Docket No(s)	50–348, 50–364, 50–424, 50–425.
Amendment Date	January 26, 2022.
ADAMS Accession No	ML21344A003.
Amendment No(s)	Farley—239 (Unit 1) and 236 (Unit 2), Vogtle—212 (Unit 1), and 195 (Unit 2).
Brief Description of Amendment(s)	The amendments revised TS 3.1.7, ''Rod Position Indication,'' TS 3.2.1, ''Heat Flux Hot Channel Factor (FQ(Z)),'' and TS 3.3.1, ''Reactor Trip System (RTS) Instrumentation,'' to allow the use of an alternate means of determining power distribution information. The amendments allow the use of a dedicated online core power distribution monitoring system (PDMS) to perform surveillance of core thermal limits. The PDMS to be used at Farley, Units 1 and 2; and Vogtle, Units 1 and 2, is the Westinghouse proprietary core analysis system called ''Best Estimate Analyzer for Core Operations—Nuclear'' (BEACONTM).
Public Comments Received as to Proposed NSHC (Yes/No).	No.

Southern Nuclear Operating Company, Inc.; Edwin I. Hatch Nuclear Plant, Units 1 and 2; Appling County, GA; Southern Nuclear Operating Company, Inc.; Joseph M. Farley Nuclear Plant, Units 1 and 2; Houston County, AL; Southern Nuclear Operating Company, Inc.; Vogtle Electric Generating Plant, Units 1 and 2; Burke County, GA

Docket No(s)	50–321, 50–364, 50–366, 50–348, 50–424, 50–425.
Amendment Date	February 2, 2022.
ADAMS Accession No	ML21349A518.
Amendment No(s)	Farley—240 (Unit 1) and 237 (Unit 2), Hatch—314 (Unit 1) and 259 (Unit 2), Vogtle—213 (Unit 1), and 196 (Unit 2).
Brief Description of Amendment(s)	In its application dated September 29, 2021, the licensee requested that the U.S. Nuclear Regulatory Commission (NRC, the Commission) process the proposed license amendment request under the Consolidated Line Item Improvement Process. The amendments revised the technical specifications related to reactor coolant system operational leakage and the definition of the term ''LEAKAGE'' based on Technical Specifications Task Force (TSTF) Traveler TSTF–554, Revision 1, ''Revise Reactor Coolant Leakage Requirements,'' (TSTF–554) (ADAMS Accession No. ML20016A233), and the associated NRC staff safety evaluation of TSTF–554 (ADAMS Accession No. ML20322A024).
Public Comments Received as to Proposed NSHC (Yes/No).	No.

Tennessee Valley Authority; Watts Bar Nuclear Plant, Unit 1; Rhea County, TN

Docket No(s)	50–390.
Amendment Date	January 18, 2022.
ADAMS Accession No	ML21334A295.
Amendment No(s)	151 (Unit 1).
Brief Description of Amendment(s)	The amendment revised the existing Note in the Limiting Condition for Operation for Watts Bar Nuclear Plant, Unit 1, Technical Specification 3.7.12, ''Auxiliary Building Gas Treatment System (ABGTS),'' to allow the auxiliary building secondary containment enclosure boundary to be opened, at specific controlled access points, on a continuous basis, during the Watts Bar Nuclear Plant, Unit 2, Cycle 4 refueling outage, when the replacement steam generators will be installed.

LICENSE AMENDMENT ISSUANCE(S)—Continued

Public Comments Received as to Proposed NSHC (Yes/No).	No.
Tennessee Valley Authority; Watts Bar Nuclear Plant, Unit 2; Rhea County, TN	
Docket No(s)	50–391.
Amendment Date	January 12, 2022.
ADAMS Accession No	ML21334A389.
Amendment No(s)	59 (Unit 2).
Brief Description of Amendment(s)	The amendment revised the steam generator (SG) tube rupture analysis to utilize the new primary and secondary side mass releases and new reactor coolant system and SG masses associated with the Unit 2 replacement SGs.
Public Comments Received as to Proposed NSHC (Yes/No).	No.
Tennessee Valley Authority; Watts Bar Nuclear Plant, Unit 2; Rhea County, TN	
Docket No(s)	50–391.
Amendment Date	January 25, 2022.
ADAMS Accession No	ML21306A287.
Amendment No(s)	60 (Unit 2).
Brief Description of Amendment(s)	The amendment revised the Watts Bar Nuclear Plant, Unit 2, technical specifications (TSs) to delete several requirements for steam generator (SG) tube inspection and repair methodologies that will no longer apply following installation of the replacement SGs. The amendment also revised TS 5.7.2.12.d.2 to reflect the SG inspection interval criteria for Alloy 690 thermally treated tubing. Additionally, the amendment revised Watts Bar, Unit 2's license condition 2.C.(4) to delete the reference to PAD4TCD, which will no longer apply following the installation of the replacement SGs.
Public Comments Received as to Proposed NSHC (Yes/No).	No.

Dated: February 15, 2022.

For the Nuclear Regulatory Commission.

Caroline L. Carusone,

Deputy Director, Division of Operating Reactor Licensing, Office of Nuclear Reactor Regulation.

BILLING CODE 7590–01–P

SECURITIES AND EXCHANGE COMMISSION

[Investment Company Act Release No. 34507; File No. 812–15288]

Thrivent ETF Trust, et al.

AGENCY: Securities and Exchange Commission (''Commission'').

ACTION: Notice.

Notice of an application under section 6(c) of the Investment Company Act of 1940 (the ''Act'') for an exemption from sections 2(a)(32), 5(a)(1), 22(d) and 22(e) of the Act and rule 22c–1 under the Act and under sections 6(c) and 17(b) of the Act for an exemption from sections 17(a)(1) and 17(a)(2) of the Act.

SUMMARY OF APPLICATION: Applicants request an order (''Order'') that permits: (a) The Funds (as defined below) to issue shares (''Shares'') redeemable in large aggregations only (''creation units''); (b) secondary market transactions in Shares to occur at negotiated market prices rather than at net asset value; (c) certain Funds to pay redemption proceeds, under certain circumstances, more than seven days after the tender of Shares for redemption; and (d) certain affiliated persons of a Fund to deposit securities into, and receive securities from, the Fund in connection with the purchase and redemption of creation units. The relief in the Order would incorporate by reference terms and conditions of the same relief of a previous order granting the same relief sought by applicants, as that order may be amended from time to time (''Reference Order'').[1]

APPLICANTS: Thrivent ETF Trust, Thrivent Distributors, LLC, and Thrivent Asset Management, LLC.

FILING DATES: The application was filed on December 7, 2021, and amended on January 25, 2022.

HEARING OR NOTIFICATION OF HEARING: An order granting the requested relief will be issued unless the Commission orders a hearing. Interested persons may request a hearing on any application by emailing the Commission's Secretary at *Secretarys-Office@sec.gov* and serving applicants with a copy of the request by email, if an email address is listed for the relevant applicant below, or personally or by mail, if a physical address is listed for the relevant applicant below. Hearing requests should be received by the Commission by 5:30 p.m. on March 14, 2022, and should be accompanied by proof of service on applicants, in the form of an affidavit or, for lawyers, a certificate of service. Pursuant to rule 0–5 under the Act, hearing requests should state the nature of the writer's interest, any facts bearing upon the desirability of a hearing on the matter, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by emailing the Commission's Secretary.

ADDRESSES: The Commission: *Secretarys-Office@sec.gov.* Applicants: John D. Jackson, Thrivent ETF Trust, *jay.jackson@thrivent.com;* Brian McCabe, ESQ, Ropes & Gray LLP, *brian.mccabe@ropesgray.com;* Jeremy Smith, ESQ, *jeremy.smith@ropesgray.com.*

FOR FURTHER INFORMATION CONTACT: Lisa Reid Ragen, Branch Chief, at (202) 551–6825 (Division of Investment Management, Chief Counsel's Office).

SUPPLEMENTARY INFORMATION: For Applicants' representations, legal analysis, and conditions, please refer to Applicants' amended and restated application, dated January 25, 2021, which may be obtained via the Commission's website by searching for the file number at the top of this document, or for an Applicant using the Company name search field, on the SEC's EDGAR system. The SEC's EDGAR system may be searched at *https://www.sec.gov/edgar/searchedgar/legacy/companysearch.html.* You may also call the SEC's Public Reference Room at (202) 551–8090.

For the Commission, by the Division of Investment Management, under delegated authority.

Extension:
Form N–8A

Notice is hereby given that, pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission (the ''Commission'') has submitted to the Office of Management and Budget (''OMB'') a request for extension of the previously approved collection of information discussed below.

The Investment Company Act of 1940 (''Investment Company Act'') (15 U.S.C. 80a–1 *et seq.*) requires investment companies to register with the Commission before they conduct any business in interstate commerce. Section 8(a) of the Investment Company Act provides that an investment company shall be deemed to be registered upon receipt by the Commission of a notification of registration in such form as the Commission prescribes. Form N–8A (17 CFR 274.10) is the form for notification of registration that the Commission has adopted under section 8(a). The purpose of such notification of registration provided on Form N–8A is to notify the Commission of the existence of investment companies required to be registered under the Investment Company Act and to enable the Commission to administer the provisions of the Investment Company Act with respect to those companies. After an investment company has filed its notification of registration under section 8(a), the company is then subject to the provisions of the Investment Company Act which govern certain aspects of its organization and activities, such as the composition of its board of directors and the issuance of senior securities. Form N–8A requires an investment company to provide its name, state of organization, form of organization, classification, the name and address of each investment adviser of the investment company, the current value of its total assets, and certain other information readily available to the investment company. If the investment company is filing a registration statement as required by Section 8(b) of the Investment Company Act concurrently with its notification of registration, Form N–8A requires only that the registrant file the cover page (giving its name, address, and agent for service of process) and sign the form in order to effect registration.

Based on recent filings of notifications of registration on Form N–8A, we estimate that about 101 investment companies file such notifications each year. An investment company must only file a notification of registration on Form N–8A once. The currently approved average hour burden per investment company of preparing and filing a notification of registration on Form N–8A is one hour. Based on the Commission staff's experience with the requirements of Form N–8A and with disclosure documents generally—and considering that investment companies that are filing notifications of registration on Form N–8A simultaneously with the registration statement under the Investment Company Act are only required by Form N–8A to file a signed cover page—we continue to believe that this estimate is appropriate. Therefore, we estimate that the total annual hour burden to prepare and file notifications of registration on Form N–8A is 101 hours. The currently approved cost burden of Form N–8A is $449. We are updating the estimated costs burden to $496 to account for the effects of inflation. Therefore, we estimate that the total annual cost burden associated with preparing and filing notifications of registration on Form N–8A is about $50,096.

Estimates of average burden hours and costs are made solely for the purposes of the Paperwork Reduction Act, and are not derived from a comprehensive or even representative survey or study of the costs of Commission rules and forms. Compliance with the collection of information requirements of Form N–8A is mandatory. Responses to the collection of information will not be kept confidential. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

The public may view the background documentation for this information collection at the following website, *www.reginfo.gov.* Comments should be directed to: (i) Desk Officer for the Securities and Exchange Commission, Office of Information and Regulatory Affairs, Office of Management and Budget, Room 10102, New Executive Office Building, Washington, DC 20503, or by sending an email to: *Lindsay.M.Abate@omb.eop.gov;* and (ii) David Bottom, Director/Chief Information Officer, Securities and Exchange Commission, c/o John R. Pezzullo, 100 F Street NE, Washington, DC 20549 or send an email to: *PRA_Mailbox@sec.gov.* Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

Dated: February 15, 2022.

J. Matthew DeLesDernier,

Assistant Secretary.

[FR Doc. 2022–03622 Filed 2–18–22; 8:45 am]

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–94258; File No. SR–PEARL–2022–03]

Self-Regulatory Organizations; MIAX PEARL LLC; Notice of Filing of a Proposed Rule Change To Amend the MIAX PEARL Options Fee Schedule To Adopt a Tiered-Pricing Structure for Certain Connectivity Fees; Suspension of and Order Instituting Proceedings To Determine Whether To Approve or Disapprove the Proposed Rule Change

February 15, 2022.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on February 1, 2022, MIAX PEARL, LLC (''MIAX Pearl'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') a proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons and is, pursuant to Section 19(b)(3)(C) of the Act, hereby: (i) Temporarily suspending the rule change; and (ii) instituting proceedings to determine whether to approve or disapprove the proposed rule change.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange is filing a proposal to amend the MIAX Pearl Options Fee Schedule (the ''Fee Schedule'') to amend certain connectivity fees.

The text of the proposed rule change is available on the Exchange's website at *http://www.miaxoptions.com/rule-filings,* at MIAX's principal office, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV [sic] below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend the Fee Schedule to adopt a tiered-pricing structure for the 10 gigabit (''Gb'') ultra-low latency (''ULL'') fiber connection available to Members [3] and non-Members. The Exchange initially filed this proposal on July 30, 2021, with the proposed fee changes effective beginning August 1, 2021 (''First Proposed Rule Change'').[4] The First Proposed Rule Change was published for comment in the **Federal Register** on August 17, 2021.[5] The Commission received one comment letter on the First Proposed Rule Change.[6] The Exchange withdrew the First Proposed Rule Change on September 24, 2021 and re-submitted the proposal on September 24, 2021, with the proposed fee changes being immediately effective (''Second Proposed Rule Change'').[7] The Second Proposed Rule Change was published for comment in the **Federal Register** on October 4, 2021.[8] The Second Proposed Rule Change provided additional justification for the proposed fee changes and addressed certain points raised in the single comment letter that was submitted on the First Proposed Rule Change. The Commission received four comment letters from three separate commenters on the Second Proposed Rule Change.[9] The Commission suspended the Second Proposed Rule Change on November 22, 2021.[10] The Exchange withdrew the Second Proposed Rule Change on December 1, 2021 and submitted a revised proposal for immediate effectiveness (''Third Proposed Rule Change'').[11] The Third Proposed Rule Change meaningfully attempted to address issues or questions that have been raised by providing additional justification and explanation for the proposed fee changes and directly respond to the points raised in SIG Letters 1, 2, and 3, as well as the SIFMA Letter submitted on the First and Second Proposed Rule Changes,[12] and feedback provided by Commission Staff during a telephone conversation on November 18, 2021 relating to the Second Proposed Rule Change. The Third Proposed Rule Change was published for comment in the **Federal Register** on December 20, 2021.[13] The Exchange receive no comment letters on the Third Proposed Rule Change. The Commission suspended the Third Proposed Rule Change on January 27, 2022.[14] The Exchange withdrew the Third Proposed Rule Change on February 1, 2022 and now submits this proposal for immediate effectiveness (''Fourth Proposed Rule Change''). This Fourth Proposed Rule Change provides additional justification and explanation for the proposed fee changes.

10Gb ULL Tiered-Pricing Structure

The Exchange proposes to amend Sections 5)a)–b) of the Fee Schedule to provide for a tiered-pricing structure for 10Gb ULL connections for Members and non-Members. Prior to the First Proposed Rule Change, the Exchange assessed Members and non-Members a flat monthly fee of $10,000 per 10Gb ULL connection for access to the Exchange's primary and secondary facilities.

The Exchange now proposes to move from a flat monthly fee per connection to a tiered-pricing structure under which the monthly fee would vary depending on the number of 10Gb ULL connections each Member or non-Member elects to purchase per exchange. Specifically, the Exchange proposes to decrease the fee for the first and second 10Gb ULL connections for each Member and non-Member from the current flat monthly fee of $10,000 to $9,000 per connection. To encourage more efficient connectivity usage, the Exchange proposes to increase the per connection fee for Members and non-Members that purchase more than two 10Gb ULL connections. In particular, (i) the third and fourth 10Gb ULL connections for each Member or non-Member will increase from the current flat monthly fee of $10,000 to $11,000 per connection; and (ii) for the fifth 10Gb ULL connection, and each 10Gb ULL connection purchased by Members and non-Members thereafter, the fee will increase from the flat monthly fee

[3] The term ''Member'' means an individual or organization that is registered with the Exchange pursuant to Chapter II of these Rules for purposes of trading on the Exchange as an ''Electronic Exchange Member'' or ''Market Maker.'' Members are deemed ''members'' under the Exchange Act. *See* Exchange Rule 100.

[5] *Id.*

[6] *See* Letter from Richard J. McDonald, Susquehanna International Group, LLC (''SIG''), to Vanessa Countryman, Secretary, Commission, dated September 7, 2021 (''SIG Letter 1'').

[7] *See* Securities Exchange Act Release No. 93162 (September 28, 2021), 86 FR 54739 (October 4, 2021) (SR–PEARL–2021–45).

[8] *Id.*

[9] *See* letters from Richard J. McDonald, SIG, to Vanessa Countryman, Secretary, Commission, dated October 1, 2021 (''SIG Letter 2'') and October 26, 2021 (''SIG Letter 3''). *See also* letter from Tyler Gellasch, Executive Director, Healthy Markets Association (''HMA''), to Hon. Gary Gensler, Chair, Commission, dated October 29, 2021 (commenting on SR–CboeEDGA–2021–017, SR–CboeBYX–2021–020, SR–Cboe–BZX–2021–047, SR–CboeEDGX–2021–030, SR–MIAX–2021–41, SR–PEARL–2021–45, and SR–EMERALD–2021–29 and stating that ''MIAX has repeatedly filed to change its connectivity fees in a way that will materially lower costs for many users, while increasing the costs for some of its heaviest of users. These filings have been withdrawn and repeatedly refiled. *Each time, however, the filings contain significantly greater information about who is impacted and how than other filings that have been permitted to take effect without suspension*'') (*emphasis added*) (''HMA Letter''); *and* Ellen Green, Managing Director, Equity and Options Market Structure, Securities Industry and Financial Markets Association (''SIFMA''), to Vanessa Countryman, Secretary, Commission, dated November 26, 2021 (''SIFMA Letter'').

[10] *See* Securities Exchange Act Release No. 93639 (November 22, 2021), 86 FR 67758 (November 29, 2021).

[11] *See* Securities Exchange Act Release No. 93774 (December 14, 2021), 86 FR 71952 (December 20, 2021) (SR–PEARL–2021–57).

[12] The Exchange notes that while the HMA Letter applauds the level of disclosure the Exchange included in the First and Second Proposed Rule Changes, the HMA Letter does not raise specific issues with the First or Second Proposed Rule Changes. Rather, it references the Exchange's proposals by way of comparison to show the varying levels of transparency in exchange fees filings and recommends changes to the Commission's review process of exchange fee filings generally. Therefore, the Exchange does not feel it is necessary to address the issues raised in the HMA Letter.

[13] *See supra* note 11.

[14] *See* Securities Exchange Act Release No. 94088 (January 27, 2022) (Suspension of and Order Instituting Proceedings to Determine Whether to Approve or Disapprove Proposed Rule Changes to Amend the Fee Schedules to Adopt a Tiered-Pricing Structure for Certain Connectivity Fees).

of $10,000 to $13,000 per connection. The proposed 10Gb ULL tiered-pricing structure and fees are collectively referred to herein as the ''Proposed Access Fees.''

The Exchange believes the other exchanges' connectivity fees are a useful example of alternative approaches to providing and charging for connectivity and provides the below table for comparison purposes only to show how its proposed fees compare to fees currently charged by other options exchanges for similar connectivity. As shown by the below table, the Exchange's proposed highest tier is still less than fees charged for similar connectivity provided by other options exchanges.

Exchange	Type of port	Monthly fee
MIAX Pearl Options (as proposed)	10Gb ULL	1–2 connection. $9,000.00 3–4 connections. $11,000.00 5 or more. $13,000.00.
The NASDAQ Stock Market LLC (''NASDAQ'') [15].	10Gb Ultra fiber	$15,000.00.
Nasdaq ISE LLC (''ISE'') [16]	10Gb Ultra fiber	$15,000.00.
Nasdaq PHLX LLC (''PHLX'') [17]	10Gb Ultra Fiber	$15,000.00.
NYSE American LLC (''Amex'') [18]	10Gb LX LCN	$22,000.00.

The Exchange will continue to assess monthly Member and non-Member network connectivity fees for connectivity to the primary and secondary facilities in any month the Member or non-Member is credentialed to use any of the Exchange APIs or market data feeds in the production environment. The Exchange proposes to pro-rate the fees when a Member or non-Member makes a change to the connectivity (by adding or deleting connections) with such pro-rated fees based on the number of trading days that the Member or non-Member has been credentialed to utilize any of the Exchange APIs or market data feeds in the production environment through such connection, divided by the total number of trading days in such month multiplied by the applicable monthly rate. The Exchange will continue to assess monthly Member and non-Member network connectivity fees for connectivity to the disaster recovery facility in each month during which the Member or non-Member has established connectivity with the disaster recovery facility.

The Exchange's MIAX Express Network Interconnect (''MENI'') can be configured to provide Members and non-Members of the Exchange network connectivity to the trading platforms, market data systems, test systems, and disaster recovery facilities of both the Exchange and its affiliate, Miami International Securities Exchange, LLC (''MIAX''), via a single, shared connection. Members and non-Members utilizing the MENI to connect to the trading platforms, market data systems, test systems, and disaster recovery facilities of the Exchange and MIAX via a single, shared connection will continue to only be assessed one monthly connectivity fee per connection, regardless of the trading platforms, market data systems, test systems, and disaster recovery facilities accessed via such connection.

2. Statutory Basis

The Exchange believes that the Proposed Access Fees are consistent with Section 6(b) of the Act [19] in general, and furthers the objectives of Section 6(b)(4) of the Act [20] in particular, in that they provide for the equitable allocation of reasonable dues, fees and other charges among Members and other persons using any facility or system which the Exchange operates or controls. The Exchange also believes the Proposed Access Fees further the objectives of Section 6(b)(5) of the Act [21] in that they are designed to promote just and equitable principles of trade, remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general protect investors and the public interest and are not designed to permit unfair discrimination between customers, issuers, brokers and dealers.

On March 29, 2019, the Commission issued an Order disapproving a proposed fee change by the BOX Market LLC Options Facility to establish connectivity fees for its BOX Network (the ''BOX Order'').[22] On May 21, 2019, the Commission Staff issued guidance ''to assist the national securities exchanges and FINRA . . . in preparing Fee Filings that meet their burden to demonstrate that proposed fees are consistent with the requirements of the Securities Exchange Act.'' [23] Based on both the BOX Order and the Guidance, the Exchange believes that the Proposed Access Fees are consistent with the Act because they (i) are reasonable, equitably allocated, not unfairly discriminatory, and not an undue burden on competition; (ii) comply with the BOX Order and the Guidance; (iii) are supported by evidence (including comprehensive revenue and cost data and analysis) that they are fair and reasonable because they will not result in excessive pricing or supra-competitive profit; and (iv) utilize a cost-based justification framework that is substantially similar to a framework previously used by the Exchange, and its affiliates MIAX Emerald, LLC (''MIAX Emerald'') and MIAX, to amend other non-transaction fees.[24]

The Proposed Access Fees Will Not Result in a Supra-Competitive Profit

The Exchange believes that exchanges, in setting fees of all types, should meet very high standards of transparency to demonstrate why each new fee or fee amendment meets the requirements of the Act that fees be reasonable, equitably allocated, not unfairly discriminatory, and not create an undue burden on competition among market participants. The Exchange believes this high standard is especially

[24] *See* Securities Exchange Act Release Nos. 91460 (April 2, 2021), 86 FR 18349 (SR–EMERALD–2021–11) (proposal to adopt port fees, increase connectivity fees, and increase additional limited service ports); 91033 (February 1, 2021), 86 FR 8455 (February 5, 2021) (SR–EMERALD–2021–03) (proposal to adopt trading permit fees); 90980 (January 25, 2021), 86 FR 7602 (January 29, 2021) (SR–MIAX–2021–02) (proposal to increase connectivity fees).

important when an exchange imposes various access fees for market participants to access an exchange's marketplace. The Exchange deems connectivity to be access fees. It records these fees as part of its ''Access Fees'' revenue in its financial statements.

In the Guidance, the Commission Staff stated that, ''[a]s an initial step in assessing the reasonableness of a fee, staff considers whether the fee is constrained by significant competitive forces.'' [25] The Guidance further states that, ''. . . even where an SRO cannot demonstrate, or does not assert, that significant competitive forces constrain the fee at issue, a cost-based discussion may be an alternative basis upon which to show consistency with the Exchange Act.'' [26] In its Guidance, the Commission Staff further states that, ''[i]f an SRO seeks to support its claims that a proposed fee is fair and reasonable because it will permit recovery of the SRO's costs, or will not result in excessive pricing or supracompetitive profit, specific information, including quantitative information, should be provided to support that argument.'' [27] The Exchange does not assert that the Proposed Access Fees are constrained by competitive forces. Rather, the Exchange asserts that the Proposed Access Fees are reasonable because they will permit recovery of the Exchange's costs in providing access services to supply 10Gb ULL connectivity and will not result in the Exchange generating a supra-competitive profit.

The Guidance defines ''supra-competitive profit'' as ''profits that exceed the profits that can be obtained in a competitive market.'' [28] The Commission Staff further states in the Guidance that ''the SRO should provide an analysis of the SRO's baseline revenues, costs, and profitability (before the proposed fee change) and the SRO's expected revenues, costs, and profitability (following the proposed fee change) for the product or service in question.'' [29] The Exchange provides this analysis below.

Based on this analysis, the Exchange believes the Proposed Access Fees are reasonable and do not result in a ''supra-competitive'' [30] profit. The Exchange believes that it is important to demonstrate that the Proposed Access Fees are based on its costs and reasonable business needs. The Exchange believes the Proposed Access Fees will allow the Exchange to offset expenses the Exchange has and will incur, and that the Exchange provides sufficient transparency (described below) into the costs and revenue underlying the Proposed Access Fees. Accordingly, the Exchange provides an analysis of its revenues, costs, and profitability associated with the Proposed Access Fees. This analysis includes information regarding its methodology for determining the costs and revenues associated with the Proposed Access Fees. As a result of this analysis, the Exchange believes the Proposed Access Fees are fair and reasonable as a form of cost recovery plus present the possibility of a reasonable return for the Exchange's aggregate costs of offering connectivity to the Exchange and MIAX.

The Proposed Access Fees are based on a cost-plus model. In determining the appropriate fees to charge, the Exchange considered its costs and MIAX's costs to provide connectivity, using what it believes to be a conservative methodology (*i.e.,* that strictly considers only those costs that are most clearly directly related to the provision and maintenance of 10Gb ULL connectivity) to estimate such costs,[31] as well as the relative costs of providing and maintaining 10Gb ULL connectivity, and set fees that are designed to cover its costs with a limited return in excess of such costs. However, as discussed more fully below, such fees may also result in the Exchange recouping less than all of its costs of providing and maintaining 10Gb ULL connectivity because of the uncertainty of forecasting subscriber decision making with respect to firms' connectivity needs and the likely potential for increased costs to procure the third-party services described below.

To determine the Exchange's costs to provide access services associated with the Proposed Access Fees, the Exchange conducted an extensive cost review in which the Exchange analyzed nearly every expense item in the Exchange's general expense ledger to determine whether each such expense relates to the Proposed Access Fees, and, if such expense did so relate, what portion (or percentage) of such expense actually supports access services associated with the Proposed Access Fees.

The Exchange also provides detailed information regarding the Exchange's cost allocation methodology—namely, information that explains the Exchange's rationale for determining that it was reasonable to allocate certain expenses described in this filing towards the cost to the Exchange to provide the access services associated with the Proposed Access Fees. The Exchange conducted a thorough internal analysis to determine the portion (or percentage) of each expense to allocate to the support of access services associated with the Proposed Access Fees. This analysis [32] included discussions with each Exchange department head to determine the expenses that support access services associated with the Proposed Access Fees. This included numerous meetings between the Exchange's Chief Information Officer, Chief Financial Officer, Head of Strategic Planning and Operations, Chief Technology Officer, various members of the Legal Department, and other group leaders. The Exchange reviewed each individual expense to determine if such expense was related to the Proposed Access Fees. Once the expenses were identified, the Exchange department heads, with the assistance of our internal finance department, reviewed such expenses holistically on an Exchange-wide level to determine what portion of that expense supports providing access services for the Proposed Access Fees. The sum of all such portions of expenses represents the total cost to the Exchange to provide access services associated with the Proposed Access Fees. For the avoidance of doubt, no expense amount was allocated twice.

The internal cost analysis conducted by the Exchange is a proprietary process that is designed to make a fair and reasonable assessment of costs and resources allocated to support the provision of access services associated with the Proposed Access Fees. The Exchange acknowledges that this assessment can only capture a moment in time and that costs and resource allocations may change. That is why the Exchange has historically, and on an ongoing basis, periodically revisits its costs and resource allocations to ensure it is appropriately allocating resources to properly provide services to the Exchange's constituents. Any requirement that an exchange should

[25] *See* Guidance, *supra* note 23.

[26] *Id.*

[27] *Id.*

[28] *Id.*

[29] *Id.*

[30] *Id.*

[31] For example, the Exchange only included the costs associated with providing and supporting connectivity and excluded from its connectivity cost calculations any cost not directly associated with providing and maintaining such connectivity. Thus, the Exchange notes that this methodology underestimates the total costs of providing and maintaining connectivity.

[32] A description of the Exchange's methodology for determining the portion (or percentage) of each expense to allocate to the Proposed Access Fees is being provided in response to comments from SIG and SIFMA. *See* SIG Letter 3 *and* SIFMA Letter, *supra* note 9.

conduct a periodic re-evaluation on a set timeline of its cost justification and amend its fees accordingly should be established by the Commission holistically, applied to all exchanges and not just through pending fee proposals, such as this filing. In order to be fairly applied, such a mandate should be applied to existing access fees as well.

In accordance with the Guidance, the Exchange has provided sufficient detail to support a finding that the proposed fees are consistent with the Exchange Act. The proposal includes a detailed description of the Exchange's costs and how the Exchange determined to allocate those costs related to the proposed fees. In fact, the detail and analysis provided in this proposed rule change far exceed the level of disclosure provided in other exchange fee filings that have not been suspended by the Commission during its 60-day suspension period. A finding that this proposed rule change is inconsistent with the Exchange Act would run contrary to the Commission Staff's treatment of other recent exchange fee proposals that have not been suspended and remain in effect today.[33] For example, a proposed fee filing that closely resembles the Exchange's current filing was submitted in 2020 by the Cboe Exchange, Inc. (''Cboe'') and increased fees for Cboe's 10Gb connections.[34] This filing was submitted on September 2, 2020, nearly 15 months after the Staff's Guidance was issued. In that filing, the Cboe stated that the ''proposed changes were not designed with the objective to generate an overall increase in access fee revenue.'' [35] This filing provided no cost based data to support its assertion that the proposal was intended to be revenue neutral. Among other things, Cboe did not provide a description of the costs underlying its provision of 10Gb connections to show that this particular fee did not generate a supra-competitive profit or describe how any potential profit may be offset by increased costs associated with another fee included in its proposal. This filing, nonetheless, was not suspended by the Commission and remains in effect today.

The Exchange believes exchanges, like all businesses, should be provided flexibility when allocating costs and resources they deem necessary to operate their business, including providing market data and access services. The Exchange notes that costs and resource allocations may vary from business to business and, likewise, costs and resource allocations may differ from exchange to exchange when it comes to providing market data and access services. It is a business decision that must be evaluated by each exchange as to how to allocate internal resources and what costs to incur internally or via third parties that it may deem necessary to support its business and its provision of market data and access services to market participants. An exchange's costs may also vary based on fees charged by third parties and periodic increases to those fees that may be outside of the control of an exchange.[36]

To determine the Exchange's projected revenue associated with the Proposed Access Fees, the Exchange analyzed the number of Members and non-Members currently utilizing the 10Gb ULL fiber connection and used a recent monthly billing cycle representative of 2021 monthly revenue. The Exchange also provided its baseline by analyzing July 2021, the monthly billing cycle prior to the Proposed Access Fees going into effect, and compared it to its expenses for that month.[37] As discussed below, the Exchange does not believe it is appropriate to factor into its analysis future revenue growth or decline into its projections for purposes of these calculations, given the uncertainty of such projections due to the continually changing access needs of market participants and potential increase in internal and third party expenses. The Exchange is presenting its revenue and expense associated with the Proposed Access Fees in this filing in a manner that is consistent with how the Exchange presents its revenue and expense in its Audited Unconsolidated Financial Statements. The Exchange's most recent Audited Unconsolidated Financial Statement is for 2020. However, since the revenue and expense associated with the Proposed Access Fees were not in place in 2020 or for the first seven months of 2021, the Exchange believes its 2020 Audited Unconsolidated Financial Statement is not representative of its current total annualized revenue and costs associated with the Proposed Access Fees. Accordingly, the Exchange believes it is more appropriate to analyze the Proposed Access Fees utilizing its 2021 revenue and costs, as described herein, which utilize the same presentation methodology as set forth in the Exchange's previously-issued Audited Unconsolidated Financial Statements. Based on this analysis, the Exchange believes that the Proposed Access Fees are reasonable because they will allow the Exchange to recover its costs associated with providing access services related to the Proposed Access Fees and not result in excessive pricing or supra-competitive profit.

As outlined in more detail below, the Exchange and MIAX project that the final annualized expense for 2021 to provide all network connectivity services (that is, the shared network connectivity of all connectivity alternatives of the Exchange and MIAX, but excluding MIAX Emerald) to be approximately $15.9 million per annum or an average of $1,325,000 per month. The Exchange implemented the Proposed Access Fees on August 1, 2021 in the First Proposed Rule Change. For July 2021, prior to the Proposed Access Fees, the Exchange and MIAX Members and non-Members purchased a total of 156 10Gb ULL connections for which the Exchange and MIAX charged a total of approximately $1,547,620 (this includes MIAX Pearl Options and MIAX Members and non-Members dropping or adding connections mid-month, resulting a pro-rated charge at times). This resulted in a profit of $222,620 for that month (a profit margin of 14.4%). For the month of October 2021, which includes the tiered rates for 10Gb ULL connectivity for the Proposed Access Fees, MIAX Pearl Options and MIAX Exchange Members and non-Members purchased a total of 154 10Gb ULL connections for which the Exchange and MIAX charged a total of approximately $1,684,000 for that month (also including pro-rated connection charges). This resulted in a profit of $359,000 for that month for a profit margin of 21.3% (a modest 6.9% profit margin increase from July 2021 to October 2021 from 14.4% to 21.3%). The Exchange believes that the Proposed Access Fees are reasonable because they only generate an additional 6.9% of profit margin per-month (reflecting a 21.3% profit

[33] *See, e.g.,* Securities Exchange Act Release Nos. 91339 (March 17, 2021), 86 FR 15524 (March 23, 2021) (SR–CboeBZX–2021–020) (increasing fees for a market data product while not providing a cost based justification for the increase); 93293 (October 21, 2021), 86 FR 57716 (October 18, 2021) (SR–PHLX–2021–058) (increasing fees for historical market data while not providing a cost based justification for the increase); 92970 (September 14, 2021), 86 FR 52261 (September 20, 2021) (SR–CboeBZX–2021–047) (adopting fees for a market data related product while not providing a cost based justification for the fees); and 89826 (September 10, 2021), 85 FR 57900 (September 16, 2021) (SR–CBOE–2020–086) (increasing connectivity fees without including a cost based justification).

[34] *See* Securities Exchange Act Release No. 89826 (September 10, 2020), 85 FR 57900 (September 16, 2020) (SR–CBOE–2020–086) (increasing connectivity fees without including a cost based justification).

[36] *See supra* note 32.

[37] *Id.*

margin).[38] The Exchange cautions that this profit margin is likely to fluctuate from month to month based on the uncertainty of predicting how many connections may be purchased from month to month as Members and non-Members are able to add and drop connections at any time based on their own business decisions. This profit margin may also decrease due to the significant inflationary pressure on capital items that the Exchange needs to purchase to maintain the Exchange's technology and systems.[39]

The Exchange and MIAX have been subject to price increases upwards of 30% during the past year on network equipment due to supply chain shortages. This, in turn, results in higher overall costs for ongoing system maintenance, but also to purchase the items necessary to ensure ongoing system resiliency, performance, and determinism. These costs are expected to continue to go up as the U.S. economy continues to struggle with supply chain and inflation related issues.

As mentioned above, the Exchange and MIAX project that the annualized expense for 2021 to provide network connectivity services (all connectivity alternatives) to be approximately $15.9 million per annum or an average of $1,325,000 per month and that these costs are expected to increase not only due to anticipated significant inflationary pressure, but also periodic fee increases by third parties.[40] The Exchange notes that there are material costs associated with providing the infrastructure and headcount to fully-support access to the Exchange. The Exchange incurs technology expense related to establishing and maintaining Information Security services, enhanced network monitoring and customer reporting, as well as Regulation SCI mandated processes, associated with its network technology. While some of the expense is fixed, much of the expense is not fixed, and thus increases the cost to the Exchange to provide access services associated with the Proposed Access Fees. For example, new Members to the Exchange may require the purchase of additional hardware to support those Members as well as enhanced monitoring and reporting of customer performance that the Exchange and its affiliates provide. Further, as the total number Members increases, the Exchange and its affiliates may need to increase their data center footprint and consume more power, resulting in increased costs charged by their third-party data center provider. Accordingly, the cost to the Exchange and its affiliates to provide access to its Members is not fixed. The Exchange believes the Proposed Access Fees are a reasonable attempt to offset a portion of the costs to the Exchange associated with providing access to its network infrastructure.

The Exchange only has four primary sources of revenue and cost recovery mechanisms to fund all of its operations: transaction fees, access fees (which includes the Proposed Access Fees), regulatory fees, and market data fees. Accordingly, the Exchange must cover all of its expenses from these four primary sources of revenue and cost recovery mechanisms. Until recently, the Exchange has operated at a cumulative net annual loss since it launched operations in 2017.[41] This is a result of providing a low cost alternative to attract order flow and encourage market participants to experience the high determinism and resiliency of the Exchange's trading Systems.[42] To do so, the Exchange chose to waive the fees for some non-transaction related services or provide them at a very marginal cost, which was not profitable to the Exchange. This resulted in the Exchange forgoing revenue it could have generated from assessing higher fees.

The Exchange believes that the Proposed Access Fees are fair and reasonable because they will not result in excessive pricing or supra-competitive profit, when comparing the total annual expense that the Exchange projects to incur in connection with providing these access services versus the total annual revenue that the Exchange projects to collect in connection with services associated with the Proposed Access Fees. As mentioned above, for 2021,[43] the total annual expense for MIAX Pearl Options and MIAX for providing the access services associated with the Proposed Access Fees is projected to be approximately $15.9 million, or approximately $1,325,000 per month. This projected total annual expense is comprised of the following, all of which are directly related to the access services associated with the Proposed Access Fees: (1) Third-party expense, relating to fees paid by the Exchange to third-parties for certain products and services; and (2) internal expense, relating to the internal costs of the Exchange to provide the services associated with the Proposed Access Fees.[44] As noted above, the Exchange believes it is more appropriate to analyze the Proposed Access Fees utilizing its 2021 revenue and costs, which utilize the same presentation methodology as set forth in the Exchange's previously-issued Audited Unconsolidated Financial Statements.[45] The $15.9 million projected total annual expense is directly related to the access services associated with the Proposed Access Fees, and not any other product or service offered by the Exchange or MIAX. It does not include general costs of operating matching engines and other trading technology. No expense amount was allocated twice. Further, the Exchange notes that, with respect to the MIAX Pearl Options' expenses included

[38] The Exchange notes that this profit margin differs from the First and Second Proposed Rule Changes because the Exchange now has the benefit of using a more recent billing cycle under the Proposed Access Fees (October 2021) and comparing it to a baseline month (July 2021) from before the Proposed Access Fees were in effect.

And it's about to get worse'', by Holly Ellyatt, CNBC, *available at https://www.cnbc.com/2021/10/18/supply-chain-chaos-is-hitting-global-growth-and-could-get-worse.html* (October 18, 2021); *and* ''There will be things that people can't get, at Christmas, White House warns'' by Jarrett Renshaw and Trevor Hunnicutt, Reuters, *available at https://www.reuters.com/world/us/americans-may-not-get-some-christmas-treats-white-house-officials-warn-2021-10-12/* (October 12, 2021).

[40] For example, on October 20, 2021, ICE Data Services announced a 3.5% price increase effective January 1, 2022 for most services. The price increase by ICE Data Services includes their SFTI network, which is relied on by a majority of market participants, including the Exchange. *See* email from ICE Data Services to the Exchange, dated October 20, 2021. The Exchange further notes that on October 22, 2019, the Exchange was notified by ICE Data Services that it was raising its fees charged to the Exchange by approximately 11% for the SFTI network.

[41] The Exchange has incurred a cumulative loss of $86 million since its inception in 2017 to 2020, the last year for which the Exchange's Form 1 data is available. *See* Exchange's Form 1/A, Application for Registration or Exemption from Registration as a National Securities Exchange, filed July 28, 2021, *available at https://www.sec.gov/Archives/edgar/vprr/2100/21000461.pdf.*

[42] The term ''System'' means the automated trading system used by the Exchange for the trading of securities. *See* Exchange Rule 100.

[43] The Exchange has not yet finalized its 2021 year end results.

[44] The percentage allocations used in this proposed rule change may differ from past filings from the Exchange or its affiliates due to, among other things, changes in expenses charged by third-parties, adjustments to internal resource allocations, and different system architecture of the Exchange as compared to its affiliates.

[45] For example, the Exchange previously noted that all third-party expense described in its prior fee filing was contained in the information technology and communication costs line item under the section titled ''Operating Expenses Incurred Directly or Allocated From Parent,'' in the Exchange's 2019 Form 1 Amendment containing its financial statements for 2018. *See* Securities Exchange Act Release No. 87876 (December 31, 2019), 85 FR 757 (January 7, 2020) (SR–PEARL–2019–36). Accordingly, the third-party expense described in this filing is attributed to the same line item for the Exchange's 2021 Form 1 Amendment, which will be filed in 2022.

herein, those expenses only cover the MIAX Pearl options market; expenses associated with MIAX Pearl Equities are accounted for separately and are not included within the scope of this filing.

As discussed above, the Exchange conducted an extensive cost review in which the Exchange analyzed nearly every expense item in the Exchange's general expense ledger (this includes over 150 separate and distinct expense items) to determine whether each such expense relates to the access services associated with the Proposed Access Fees, and, if such expense did so relate, what portion (or percentage) of such expense actually supports those services, and thus bears a relationship that is, ''in nature and closeness,'' directly related to those services. In performing this calculation, the Exchange considered other services and to which the expense may be applied and how much of the expense is directly and/or indirectly utilized in providing those other services. The sum of all such portions of expenses represents the total cost of the Exchange to provide access services associated with the Proposed Access Fees.

External Expense Allocations

For 2021, expenses relating to fees paid by the Exchange and MIAX to third-parties for products and services necessary to provide the access services associated with the Proposed Access Fees is projected to be $3.9 million. This includes, but is not limited to, a portion of the fees paid to: (1) Equinix for data center services, including for the primary, secondary, and disaster recovery locations of the Exchange's trading system infrastructure; (2) Zayo Group Holdings, Inc. (''Zayo'') for network services (fiber and bandwidth products and services) linking the Exchange's and its affiliates' office locations in Princeton, New Jersey and Miami, Florida, to all data center locations; (3) Secure Financial Transaction Infrastructure (''SFTI''),[46] which supports connectivity and feeds for the entire U.S. options industry; (4) various other services providers (including Thompson Reuters, NYSE, Nasdaq, and Internap), which provide content, connectivity services, and infrastructure services for critical components of options connectivity and network services; and (5) various other hardware and software providers (including Dell and Cisco, which support the production environment in which Members connect to the network to trade, receive market data, etc.).

For clarity, the Exchange took a conservative approach in determining the expense and the percentage of that expense to be allocated to providing access services in connection with the Proposed Access Fees. Only a portion of all fees paid to such third-parties is included in the third-party expenses described herein, and no expense amount is allocated twice. Accordingly, the Exchange does not allocate its entire information technology and communication costs to the access services associated with the Proposed Access Fees. This may result in the Exchange under allocating an expense to the provision of access services in connection with the Proposed Access Fees and such expenses may actually be higher or increase above what the Exchange utilizes within this proposal. Further, the Exchange notes that expenses associated with its affiliate, MIAX Emerald, are accounted for separately and are not included within the scope of this filing. Further, as part its ongoing assessment of costs and expenses (described above), the Exchange recently conducted a periodic thorough review of its expenses and resource allocations which, in turn, resulted in revised percentage allocations in this filing. Therefore, the percentage allocations used in this proposed rule change may differ from past filings from the Exchange or its affiliates due to, among other things, changes in expenses charged by third-parties, adjustments to internal resource allocations, and different system architecture of the Exchange as compared to its affiliates.

The Exchange believes it is reasonable to allocate such third-party expense described above towards the total cost to the Exchange and MIAX to provide the access services associated with the Proposed Access Fees. In particular, the Exchange believes it is reasonable to allocate the identified portion of the Equinix expense because Equinix operates the data centers (primary, secondary, and disaster recovery) that host the Exchange's network infrastructure. This includes, among other things, the necessary storage space, which continues to expand and increase in cost, power to operate the network infrastructure, and cooling apparatuses to ensure the Exchange's network infrastructure maintains stability. Without these services from Equinix, the Exchange would not be able to operate and support the network and provide the access services associated with the Proposed Access Fees to its Members and their customers. The Exchange did not allocate all of the Equinix expense toward the cost of providing the access services associated with the Proposed Access Fees, only that portion which the Exchange identified as being specifically mapped to providing the access services associated with the Proposed Access Fees. According to the Exchange's calculations, it allocated approximately 62% of the total applicable Equinix expense to providing the access services associated with the Proposed Access Fees. The Exchange believes this allocation is reasonable because it represents the Exchange's actual cost to provide the access services associated with the Proposed Access Fees, and not any other service, as supported by its cost review.[47]

The Exchange believes it is reasonable to allocate the identified portion of the Zayo expense because Zayo provides the internet, fiber and bandwidth connections with respect to the network, linking the Exchange with its affiliates, MIAX and MIAX Emerald, as well as the data center and disaster recovery locations. As such, all of the trade data, including the billions of messages each day per exchange, flow through Zayo's infrastructure over the Exchange's network. Without these services from Zayo, the Exchange would not be able to operate and support the network and provide the access services associated with the Proposed Access Fees. The Exchange did not allocate all of the Zayo expense toward the cost of providing the access services associated with the Proposed Access Fees, only the portion which the Exchange identified as being specifically mapped to providing the Proposed Access Fees. According to the Exchange's calculations, it allocated approximately 62% of the total applicable Zayo expense to providing the access services associated with the Proposed Access Fees. The Exchange believes this allocation is reasonable because it represents the Exchange's actual cost to provide the access services associated with the Proposed Access Fees, and not any other service, as supported by its cost review.[48]

The Exchange believes it is reasonable to allocate the identified portions of the

[46] *See supra* note 40.

[47] As noted above, the percentage allocations used in this proposed rule change may differ from past filings from the Exchange or its affiliates due to, among other things, changes in expenses charged by third-parties, adjustments to internal resource allocations, and different system architecture of the Exchange as compared to its affiliates. Again, as part its ongoing assessment of costs and expenses, the Exchange recently conducted a periodic thorough review of its expenses and resource allocations which, in turn, resulted in a revised percentage allocations in this filing.

[48] *Id.*

SFTI expense and various other service providers' (including Thompson Reuters, NYSE, Nasdaq, and Internap) expense because those entities provide connectivity and feeds for the entire U.S. options industry, as well as the content, connectivity services, and infrastructure services for critical components of the network. Without these services from SFTI and various other service providers, the Exchange would not be able to operate and support the network and provide access to its Members and their customers. The Exchange did not allocate all of the SFTI and other service providers' expense toward the cost of providing the access services associated with the Proposed Access Fees, only the portions which the Exchange identified as being specifically mapped to providing the access services associated with the Proposed Access Fees. According to the Exchange's calculations, it allocated approximately 75% of the total applicable SFTI and other service providers' expense to providing the access services associated with the Proposed Access Fees. The Exchange believes this allocation is reasonable because it represents the Exchange's actual cost to provide the access services associated with the Proposed Access Fees.[49]

The Exchange believes it is reasonable to allocate the identified portion of the other hardware and software provider expense because this includes costs for dedicated hardware licenses for switches and servers, as well as dedicated software licenses for security monitoring and reporting across the network. Without this hardware and software, the Exchange would not be able to operate and support the network and provide access to its Members and their customers. The Exchange did not allocate all of the hardware and software provider expense toward the cost of providing the access services associated with the Proposed Access Fees, only the portions which the Exchange identified as being specifically mapped to providing the access services associated with the Proposed Access Fees. According to the Exchange's calculations, it allocated approximately 51% of the total applicable hardware and software provider expense to providing the access services associated with the Proposed Access Fees. The Exchange believes this allocation is reasonable because it represents the Exchange's actual cost to provide the access services associated with the Proposed Access Fees.[50]

Internal Expense Allocations

For 2021, total projected internal expenses relating to the Exchange and MIAX providing the access services associated with the Proposed Access Fees are projected to be approximately $12 million. This includes, but is not limited to, costs associated with: (1) Employee compensation and benefits for full-time employees that support the access services associated with the Proposed Access Fees, including staff in network operations, trading operations, development, system operations, business, as well as staff in general corporate departments (such as legal, regulatory, and finance) that support those employees and functions (including an increase as a result of the higher determinism project); (2) depreciation and amortization of hardware and software used to provide the access services associated with the Proposed Access Fees, including equipment, servers, cabling, purchased software and internally developed software used in the production environment to support the network for trading; and (3) occupancy costs for leased office space for staff that provide the access services associated with the Proposed Access Fees. The breakdown of these costs is more fully-described below.

For clarity, and as stated above, the Exchange took a conservative approach in determining the expense and the percentage of that expense to be allocated to providing access services in connection with the Proposed Access Fees. Only a portion of all such internal expenses are included in the internal expense herein, and no expense amount is allocated twice. Accordingly, the Exchange does not allocate its entire costs contained in those items to the access services associated with the Proposed Access Fees. This may result in the Exchange under allocating an expense to the provision of access services in connection with the Proposed Access Fees and such expenses may actually be higher or increase above what the Exchange utilizes within this proposal. Further, as part its ongoing assessment of costs and expenses (described above), the Exchange recently conducted a periodic thorough review of its expenses and resource allocations which, in turn, resulted in a revised percentage allocations in this filing.

The Exchange believes it is reasonable to allocate such internal expense described above towards the total cost to the Exchange and MIAX to provide the access services associated with the Proposed Access Fees. In particular, the Exchange's and MIAX's combined employee compensation and benefits expense relating to providing the access services associated with the Proposed Access Fees is projected to be $6.1 million, which is only a portion of the approximately $12.6 million (for MIAX) and $9.2 million (for MIAX Pearl Options) total projected expense for employee compensation and benefits. The Exchange believes it is reasonable to allocate the identified portion of such expense because this includes the time spent by employees of several departments, including Technology, Back Office, Systems Operations, Networking, Business Strategy Development (who create the business requirement documents that the Technology staff use to develop network features and enhancements), Trade Operations, Finance (who provide billing and accounting services relating to the network), and Legal (who provide legal services relating to the network, such as rule filings and various license agreements and other contracts). As part of the extensive cost review conducted by the Exchange, the Exchange reviewed the amount of time spent by employees on matters relating to the provision of access services associated with the Proposed Access Fees. Without these employees, the Exchange would not be able to provide the access services associated with the Proposed Access Fees to its Members and their customers. The Exchange did not allocate all of the employee compensation and benefits expense toward the cost of the access services associated with the Proposed Access Fees, only the portions which the Exchange identified as being specifically mapped to providing the access services associated with the Proposed Access Fees. According to the Exchange's calculations, it allocated approximately 28% of the total applicable employee compensation and benefits expense to providing the access services associated with the Proposed Access Fees. The Exchange believes this allocation is reasonable because it represents the Exchange's actual cost to provide the access services associated with the Proposed Access Fees, and not any other service, as supported by its cost review.[51]

The Exchange's and MIAX's depreciation and amortization expense relating to providing the services associated with the Proposed Access

[49] *Id. See also supra* note 40 (regarding SFTI's announced fee increases).

[50] *See supra* note 47.

[51] *Id.*

Fees is projected to be $5.3 million, which is only a portion of the $4.8 million (for MIAX) and $2.9 million (for MIAX Pearl Options) total projected expense for depreciation and amortization. The Exchange believes it is reasonable to allocate the identified portion of such expense because such expense includes the actual cost of the computer equipment, such as dedicated servers, computers, laptops, monitors, information security appliances and storage, and network switching infrastructure equipment, including switches and taps that were purchased to operate and support the network and provide the access services associated with the Proposed Access Fees. Without this equipment, the Exchange would not be able to operate the network and provide the access services associated with the Proposed Access Fees to its Members and their customers. The Exchange did not allocate all of the depreciation and amortization expense toward the cost of providing the access services associated with the Proposed Access Fees, only the portion which the Exchange identified as being specifically mapped to providing the access services associated with the Proposed Access Fees. According to the Exchange's calculations, it allocated approximately 70% of the total applicable depreciation and amortization expense to providing the access services associated with the Proposed Access Fees, as these access services would not be possible without relying on such. The Exchange believes this allocation is reasonable because it represents the Exchange's actual cost to provide the access services associated with the Proposed Access Fees, and not any other service, as supported by its cost review.[52]

The Exchange's and MIAX's occupancy expense relating to providing the services associated with the Proposed Access Fees is projected to be approximately $0.6 million, which is only a portion of the $0.6 million (for MIAX) and $0.5 million (for MIAX Pearl Options) total projected expense for occupancy. The Exchange believes it is reasonable to allocate the identified portion of such expense because such expense represents the portion of the Exchange's cost to rent and maintain a physical location for the Exchange's staff who operate and support the network, including providing the access services associated with the Proposed Access Fees. This amount consists primarily of rent for the Exchange's Princeton, New Jersey office, as well as various related costs, such as physical security, property management fees, property taxes, and utilities. The Exchange operates its Network Operations Center (''NOC'') and Security Operations Center (''SOC'') from its Princeton, New Jersey office location. A centralized office space is required to house the staff that operates and supports the network. The Exchange currently has approximately 200 employees. Approximately two-thirds of the Exchange's staff are in the Technology department, and the majority of those staff have some role in the operation and performance of the access services associated with the Proposed Access Fees. Accordingly, the Exchange believes it is reasonable to allocate the identified portion of its occupancy expense because such amount represents the Exchange's actual cost to house the equipment and personnel who operate and support the Exchange's network infrastructure and the access services associated with the Proposed Access Fees. The Exchange did not allocate all of the occupancy expense toward the cost of providing the access services associated with the Proposed Access Fees, only the portion which the Exchange identified as being specifically mapped to operating and supporting the network. According to the Exchange's calculations, it allocated approximately 53% of the total applicable occupancy expense to providing the access services associated with the Proposed Access Fees. The Exchange believes this allocation is reasonable because it represents the Exchange's cost to provide the access services associated with the Proposed Access Fees, and not any other service, as supported by its cost review.[53]

The Exchange notes that a material portion of its total overall expense is allocated to the provision of access services (including connectivity, ports, and trading permits). The Exchange believes this is reasonable and in line, as the Exchange operates a technology-based business that differentiates itself from its competitors based on its more deterministic and resilient trading systems that rely on access to a high performance network, resulting in significant technology expense. Over two-thirds of Exchange staff are technology-related employees. The majority of the Exchange's expense is technology-based. As described above, the Exchange and MIAX have only four primary sources of fees to recover their costs; thus, the Exchange believes it is reasonable to allocate a material portion of its total overall expense towards access fees.

Based on the above, the Exchange believes that its provision of access services associated with the Proposed Access Fees will not result in excessive pricing or supra-competitive profit. As discussed above, the Exchange projects that its annualized expense for 2021 to provide network connectivity services (all connectivity alternatives) to be approximately $15.9 million per annum or an average of $1,325,000 per month. The Exchange implemented the Proposed Access Fees on August 1, 2021. For July 2021, prior to the Proposed Access Fees, Exchange Members and non-Members purchased a total of 156 10Gb ULL connections for which the Exchange and MIAX charged approximately $1,547,620. This resulted in a profit of $222,620 (a profit margin of 14.4%) for that month (including pro-rated charges). For the month of October 2021, which includes the tiered 10Gb ULL connectivity fees pursuant to the Proposed Access Fees, the Exchange and MIAX had Members and non-Members purchasing a total of 154 10Gb ULL connections for which the Exchange and MIAX charged a total of approximately $1,684,000 (including pro-rated charges). This resulted in a profit of $359,000 for that month for a profit margin of 21.3% (a modest 6.9% profit margin increase from July 2021 to October 2021 from 14.4% to 21.3%). The Exchange believes that the Proposed Access Fees are reasonable because they only generate an additional 6.9% of profit margin per month (reflecting a 21.3% profit margin).[54] The Exchange believes this modest increase in profit margin will allow it to continue to recoup its expenses and continue to invest in its technology infrastructure. Therefore, the Exchange also believes that this proposed profit margin increase is reasonable because it represents a reasonable rate of return.

Again, the Exchange cautions that this profit margin may fluctuate from month to month based in the uncertainty of predicting how many connections may be purchased from month to month as Members and non-Members are free to add and drop connections at any time based on their own business decisions. Notwithstanding that the revenue (and profit margin) may vary from month to month due to changes in connections and to changes to the Exchange's expenses, the number of connections has not materially changed over the prior months. Consequently, the Exchange believes that the months it has used as a baseline to perform its assessment are representative of

[52] *Id.*

[53] *Id.*

[54] *See supra* note 31.

reasonably anticipated costs and expenses. This profit margin may also decrease due to the significant inflationary pressure on capital items that it needs to purchase to maintain the Exchange's technology and systems.[55] Accordingly, the Exchange believes its total projected revenue for the providing the access services associated with the Proposed Access Fees will not result in excessive pricing or supra-competitive profit.

The Exchange believes that conducting the above analysis on a per month basis is reasonable as the revenue generated from access services subject to the proposed fee generally remains static from month to month. The Exchange also conducted the above analysis on a per month basis to comply with the Commission Staff's Guidance, which requires a baseline analysis to assist in determining whether the proposal generates a supra-competitive profit. This monthly analysis was also provided in response to comment received on prior submissions of this proposed rule change.

The Exchange reiterates that it only has four primary sources of revenue and cost recovery mechanisms: Transaction fees, access fees (which includes the Proposed Access Fees), regulatory fees, and market data fees. Accordingly, the Exchange must cover all of its expenses from these four primary sources of revenue and cost recovery mechanisms. As a result, each of these fees cannot be ''flat'' and cover only the expenses directly related to the fee that is charged. The above revenue and associated profit margin therefore are not solely intended to cover the costs associated with providing access services subject to the Proposed Access Fees.

The Exchange believes it is reasonable, equitable and not unfairly discriminatory to allocate the respective percentages of each expense category described above towards the total cost to the Exchange of operating and supporting the network, including providing the access services associated with the Proposed Access Fees because the Exchange performed a line-by-line item analysis of nearly every expense of the Exchange, and has determined the expenses that directly relate to providing access to the Exchange. Further, the Exchange notes that, without the specific third-party and internal expense items listed above, the Exchange would not be able to provide the access services associated with the Proposed Access Fees to its Members and their customers. Each of these expense items, including physical hardware, software, employee compensation and benefits, occupancy costs, and the depreciation and amortization of equipment, have been identified through a line-by-line item analysis to be integral to providing access services. The Proposed Access Fees are intended to recover the costs of providing access to the Exchange's System. Accordingly, the Exchange believes that the Proposed Access Fees are fair and reasonable because they do not result in excessive pricing or supra-competitive profit, when comparing the actual costs to the Exchange versus the projected annual revenue from the Proposed Access Fees.

The Proposed Tiered-Pricing Structure Is Not Unfairly Discriminatory and Provides for the Equitable Allocation of Fees, Dues, and Other Charges

The Exchange believes the proposed tiered-pricing structure is reasonable, fair, equitable, and not unfairly discriminatory because it will apply to all Members and non-Members in the same manner based on the amount of 10Gb ULL connectivity they require based on their own business decisions and usage of Exchange resources. All similarly situated Members and non-Members would be subject to the same fees. The fees do not depend on any distinction between Members and non-Members because they are solely determined by the individual Members' or non-Members' business needs and its impact on Exchange resources.

The proposed tiered-pricing structure is not unfairly discriminatory and provides for the equitable allocation of fees, dues, and other charges because it is designed to encourage Members and non-Members to be more efficient and economical when determining how to connect to the Exchange and the amount of the fees are based on the number of connections a Member or non-Member utilizes. Charging an incrementally higher fee to a Member or non-Member that utilizes numerous connections is directly related to the increased costs the Exchange incurs in providing and maintaining those additional connections. The proposed tiered pricing structure should also enable the Exchange to better monitor and provide access to the Exchange's network to ensure sufficient capacity and headroom in the System.

The Exchange believes that the proposal to move to a tiered-pricing structure for its 10Gb ULL connections is reasonable, equitably allocated and not unfairly discriminatory because the majority of Members and non-Members that purchase 10Gb ULL connections will either save money or pay the same amount after the tiered-pricing structure is implemented. After the effective date of the First Proposed Rule Change on August 1, 2021, approximately 80% of the firms that purchased at least one 10Gb ULL connection experienced a decrease in their monthly connectivity fees while only approximately 20% of firms experienced an increase in their monthly connectivity fees as a result of the proposed tiered-pricing structure when compared to the flat monthly fee structure. To illustrate, firms that purchase only one 10Gb ULL connection per month used to pay the flat rate of $10,000 per month for that one 10Gb ULL connection. Pursuant to the proposed tiered-pricing structure, these firms now pay $9,000 per month for that same one 10Gb ULL connection, saving $1,000 per month or $12,000 annually. Further, firms that purchase two 10Gb ULL connections per month previously paid a flat rate of $20,000 per month ($10,000 × 2) for those two 10Gb ULL connections. Pursuant to the proposed tiered-pricing structure, these firms now pay $18,000 per month ($9,000 × 2) for those two 10Gb ULL connections, saving $2,000 per month or $24,000 annually.

To achieve a consistent, premium network performance, the Exchange must build out and continue to maintain a network that has the capacity to handle the message rate requirements of not only firms that consume minimal Exchange connectivity resources, but also those firms that most heavily consume Exchange connectivity resources, network consumers, and purchasers of 10Gb ULL connectivity. 10Gb ULL connectivity is not an unlimited resource as the Exchange needs to purchase additional equipment to satisfy requests for additional connections. The Exchange also needs to provide personnel to set up new connections, service requests related to adding new and/or deleting existing connections, respond to performance queries from, and to maintain those connections on behalf of Members and non-Members. Also, those firms that utilize 10Gb ULL connectivity typically generate a disproportionate amount of messages and order traffic, usually billions per day across the Exchange. These billions of messages per day consume the Exchange's resources and significantly contribute to the overall network connectivity expense for storage and network transport capabilities. The Exchange also has to purchase additional storage capacity on an ongoing basis to ensure it has sufficient capacity to store these

[55] *See supra* note 39.

messages as part of it surveillance program and to satisfy its record keeping requirements under the Exchange Act.[56] Thus, as the number of connections an entity has increases, certain other costs incurred by the Exchange that are correlated to, though not directly affected by, connection costs (*e.g.,* storage costs, surveillance costs, service expenses) also increase.

The Exchange sought to design the proposed tiered-pricing structure to set the amount of the fees to relate to the number of connections a firm purchases. The more connections purchased by a firm likely results in greater expenditure of Exchange resources and increased cost to the Exchange. With this in mind, the Exchange proposes to decrease the monthly fees for those firms who connect to the Exchange as part of their best execution obligations and generally tend to send the least amount of orders and messages over those connections. The Exchange notes that firms that primarily route orders seeking best execution generally only purchase a limited number of connections. Those firms also generally send fewer orders and messages over those connections, resulting in less strain on Exchange resources. Therefore, the connectivity costs will likely be lower for these firms based on the proposed tiered-pricing structure.

On a similar note, the Exchange proposes to increase the fee for those firms that purchase more connections resulting in greater expenditure of Exchange resources and increased cost to the Exchange. The Exchange notes that these firms that purchase more than two to four 10Gb ULL connections essentially do so for competitive reasons amongst themselves and choose to utilize numerous connections based on their business needs and desire to attempt to access the market quicker by using the connection with the least amount of latency. These firms are generally engaged in sending liquidity removing orders to the Exchange and seek to add more connections so they can access resting liquidity ahead of their competitors. For instance, a Member may have just sent numerous messages and/or orders over one of their 10Gb ULL connections that are in queue to be processed. That same Member then seeks to enter an order to remove liquidity from the Exchange's Book. That Member may choose to send that order over one or more of their other 10Gb ULL connections with less message and/or order traffic to ensure that their liquidity taking order accesses the Exchange quicker because that connection's queue is shorter. These firms also tend to frequently add and drop connections mid-month to determine which connections have the least latency, which results in increased costs to the Exchange to frequently make changes in the data center and provide the additional technical and personnel support necessary to satisfy these requests.

The firms that engage in the above-described liquidity removing and advanced trading strategies typically require multiple connections and, therefore, generate higher costs by utilizing more of the Exchange's resources. Those firms may also conduct other latency measurements over their connections and drop and simultaneously add connections mid-month based on their own assessment of their performance. This results in Exchange staff processing such requests, potentially purchasing additional equipment, and performing the necessary network engineering to replace those connections in the data center. Therefore, the Exchange believes it is equitable for these firms to experience increased connectivity costs based on their disproportionate pull on Exchange resources to provide the additional connectivity.

In addition, the proposed tiered-pricing structure is equitable because it is designed to encourage Members and non-Members to be more efficient and economical when determining how to connect to the Exchange. Section 6(b)(5) of the Exchange Act requires the Exchange to provide access on terms that are not unfairly discriminatory.[57] As stated above, 10Gb ULL connectivity is not an unlimited resource and the Exchange's network is limited in the amount of connections it can provide. However, the Exchange must accommodate requests for additional connectivity and access to the Exchange's System to ensure that the Exchange is able to provide access on non-discriminatory terms and ensure sufficient capacity and headroom in the System. To accommodate requests for additional connectivity on top of current network capacity constraints, requires that the Exchange purchase additional equipment to satisfy these requests. The Exchange also needs to provide personnel to set up new connections and to maintain those connections on behalf of Members and non-Members. The proposed tiered-pricing structure is equitable because it is designed to encourage Members and non-Members to be more efficient and economical in selecting the amount of connectivity they request while balancing that against the Exchange's increased expenses when expanding its network to accommodate additional connectivity.

The Proposed Fees Are Reasonable When Compared to the Fees of Other Options Exchanges With Similar Market Share

The Exchange does not have visibility into other equities exchanges' costs to provide connectivity or their fee markup over those costs, and therefore cannot use other exchange's connectivity fees as a benchmark to determine a reasonable markup over the costs of providing connectivity. Nevertheless, the Exchange believes the other exchanges' connectivity fees are a useful example of alternative approaches to providing and charging for connectivity. To that end, the Exchange believes the proposed tiered-pricing structure for 10Gb ULL connections is reasonable because the proposed highest tier is still less than fees charged for similar connectivity provided by other options exchanges with comparable market shares. For example, NASDAQ (equity options market share of 8.88% as of November 26, 2021 for the month of November)[58] charges a monthly fee of $10,000 per 10Gb fiber connection and $15,000 per 10Gb Ultra fiber connection.[59] The highest tier of the Exchange's proposed fee structure for a 10Gb ULL connection is $13,000 for the fifth and subsequent connections, which is $2,000 per month less than NASDAQ and, unlike NASDAQ, the Exchange does not charge installation fees. For market participants with fewer connections, the difference is even more stark. For a market participant with two connections to the Exchange and two connections to NASDAQ, the difference in connection fees would be $12,000 per month. The Exchange notes that the same connectivity fees described above for NASDAQ also apply to its affiliates, ISE[60] (equity options market share of 7.96% as of November 26, 2021 for the month of November)[61] and PHLX (equity options market share of 9.31% as of November 26, 2021 for the month

[56] 17 CFR 240.17a–1 (recordkeeping rule for national securities exchanges, national securities associations, registered clearing agencies and the Municipal Securities Rulemaking Board).

[59] *See* NASDAQ Rules, General 8: Connectivity, Section 1. Co-Location Services.

[60] *See* ISE Rules, General 8: Connectivity.

[61] *See supra* note 58.

of November).[62] Amex (equity options market share of 5.05% as of November 26, 2021 for the month of November) [63] charges $15,000 per connection initially plus $22,000 monthly per 10Gb LX LCN circuit connection.[64] Again, the highest tier of the Exchange's proposed fee structure for a 10Gb ULL connection is $9,000 per month lower than the Amex connectivity fee after the first month.

In the each of the above cases, the Exchange's highest tier in the proposed tiered-pricing structure only applies to the fifth and additional connections and is still significantly lower than that of competing options exchanges with similar market share. Despite proposing lower or similar fees to that of competing options exchanges with similar market share, the Exchange believes that it provides a premium network experience to its Members and non-Members via a highly deterministic System, enhanced network monitoring and customer reporting, and a superior network infrastructure than markets with higher market shares and more expensive connectivity alternatives. Each of the connectivity rates in place at competing options exchanges were filed with the Commission for immediate effectiveness and remain in place today.

The Exchange further believes that the Proposed Access Fees are reasonable, equitably allocated and not unfairly discriminatory because, for one 10Gb ULL connection, the Exchange provides each Member or non-Member access to all twelve (12) matching engines on MIAX Pearl and a vast majority choose to connect to all twelve (12) matching engines. The Exchange believes that other exchanges require firms to connect to multiple matching engines.[65]

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

With respect to intra-market competition, the Exchange does not believe that the proposed rule change would place certain market participants at the Exchange at a relative disadvantage compared to other market participants or affect the ability of such market participants to compete. As stated above, the Exchange does not believe its proposed pricing will impose a barrier to entry to smaller participants and notes that its proposed connectivity pricing structure for its 10Gb ULL connections is associated with relative usage of the various market participants. Further, the majority of firms that purchase 10Gb ULL connections may either save money or pay the same amount after the tiered-pricing structure is implemented. While total cost may be increased for market participants with larger capacity needs or for business/technical preferences, such options provide far more capacity and are purchased by those that consume more resources from the network. Accordingly, the proposed tiered-pricing structure does not favor certain categories of market participants in a manner that would impose an undue burden on competition; rather, the allocation reflects the network resources consumed by the various usage of market participants—lowest bandwidth consuming members pay the least, and highest bandwidth consuming members pay the most, particularly since higher bandwidth consumption translates to higher costs to the Exchange.

The Exchange also does not believe that the proposed rule change will result in any burden on inter-market competition that is not necessary or appropriate in furtherance of the purposes of the Act. As discussed above, options market participants are not forced to connect to all options exchanges. The Exchange operates in a highly competitive environment, and as discussed above, its ability to price access and connectivity is constrained by competition among exchanges and third parties. There are other options markets of which market participants may connect to trade options. There is also a possible range of alternative strategies, including routing to the exchange through another participant or market center or accessing the Exchange indirectly. For example, there are 15 other U.S. options exchanges, which the Exchange must consider in its pricing discipline in order to compete for market participants. In this competitive environment, market participants are free to choose which competing exchange or reseller to use to satisfy their business needs. As a result, the Exchange believes this proposed rule change permits fair competition among national securities exchanges. Accordingly, the Exchange does not believe its proposed fee changes impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

Regrettably, the Exchange believes that the application of the Guidance to date has adversely affected inter-market competition by impeding the ability of smaller, low cost exchanges to adopt or increase fees for their market data and access services (including connectivity and port products and services). Since the adoption of the Guidance, and even more so recently, it has become harder, particularly for smaller, low cost exchanges, to adopt or increase fees to generate revenue necessary to invest in systems, provide innovative trading products and solutions, and improve competitive standing to the benefit of the affected exchanges' market participants. Although the Staff Guidance has served an important policy goal of improving disclosures and requiring exchanges to justify that their market data and access fee proposals are fair and reasonable, it has also negatively impacted exchanges, and particularly many smaller, low cost exchanges, that seek to adopt or increase fees despite providing enhanced disclosures and rationale to support their proposed fee changes.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

As described above, the Exchange received one comment letter on the First Proposed Rule Change and four comment letters on the Second Proposed Rule Change.[66] The Exchange responded to the comment letters in the Third Proposed Rule Change and repeats its response in is filing. No comment letters were received in response to the Third Proposed Rule Change.

HMA Letter

The HMA Letter does not raise specific issues with the First or Second Proposed Rule Changes. Instead the HMA Letter is generally critical of the exchange fee filing process contained in Section 19(b)(3)(A)(ii) of the Act,[67] and Rule 19b–4(f)(2) thereunder,[68] and other exchanges' fee filings in recent years. The HMA Letter, however, applauds the

[65] *See* Specialized Quote Interface Specification, Nasdaq PHLX, Nasdaq Options Market, Nasdaq BX Options, Version 6.5a, Section 2, Architecture (revised August 16, 2019), *available at http://www.nasdaqtrader.com/content/technicalsupport/specifications/TradingProducts/SQF6.5a-2019-Aug.pdf*. The Exchange notes that it is unclear whether the NASDAQ exchanges include connectivity to each matching engine for the single fee or charge per connection, per matching engine. *See also* NYSE Technology FAQ and Best Practices: Options, Section 5.1 (How many matching engines are used by each exchange?) (September 2020). The Exchange notes that NYSE provides a link to an Excel file detailing the number of matching engines per options exchange, with Arca and Amex having 19 and 17 matching engines, respectively.

[66] *See supra* note 9.

[67] 15 U.S.C. 78s(b)(3)(A)(ii).

[68] 17 CFR 240.19b–4.

level of disclosure the Exchange included in the First and Second Proposed Rule Changes and was supportive of the efforts made by the Exchange and its affiliates to provide transparency and justify their proposed fees. The HMA Letter specifically notes that:

''MIAX has repeatedly filed to change its connectivity fees in a way that will materially lower costs for many users, while increasing the costs for some of its heaviest of users. These filings have been withdrawn and repeatedly refiled. Each time, however, the filings contain significantly greater information about who is impacted and how than other filings that have been permitted to take effect without suspension. For example, MIAX detailed the associated projected revenues generated from the connectivity fees by user class, again in a clear attempt to comply with the SRO Fee Filing Guidance.'' [69]

As the HMA Letter notes, the Exchange refiled its same fee proposals to include significantly greater information about who is impacted and how, primarily at the request of the Commission Staff and in response to comments. The Exchange is again refiling its proposal to include more information surrounding the proposed fees and to respond to commenters.

SIG Letter 2

SIG Letter 2 argues that the Exchange, in withdrawing the First Proposed Rule Change and refiling the Second Proposed Rule Change, ''improperly circumvent[ed] the procedural protections embedded in Exchange Act Section 19(b)(3)(C), and subvert[ed] the balance of interests upheld therein.'' [70] SIG's assertion that the Exchange's entire reason for withdrawing and refiling was to subvert the protections of the Exchange Act are entirely without merit. The Exchange withdrew the First Proposed Rule Change and replaced it with the Second Proposed Rule Change in good faith to provide additional justification and explanation for the proposed fee changes and did so in compliance with the Exchange Act. The same is true in this filing, where the Exchange withdrew the Second Proposed Rule Change and submitted this filing to provide additional justification and explanation for the proposed fee changes and directly responds to certain points raised in SIG Letters 1, 2, and 3, as well as the SIFMA Letter submitted on the First and Second Proposed Rule Changes.

As SIG well knows, exchanges are able withdraw and refile various proposals (including fee changes and other rule changes) with the Commission for a multitude of reasons, not the least of which is to address feedback and comments from market participants and Commission Staff. The Exchange is well within the bounds of the Act and the rules and regulations thereunder to withdraw a proposed rule change and replace it with a new proposed rule change in good faith and to enhance the filing to ensure it complies with the requirements of the Act.

SIG Letters 1 and 3

As an initial matter, SIG Letter 1 cites Rule 700(b)(3) of the Commission's Rules of Fair Practice which places ''the burden to demonstrate that a proposed rule change is consistent with the Act on the self-regulatory organization that proposed the rule change'' and states that a ''mere assertion that the proposed rule change is consistent with those requirements . . . is not sufficient.'' [71] SIG Letter 1's assertion that the Exchange has not met this burden is without merit, especially considering the overwhelming amounts of revenue and cost information the Exchange included in the First and Second Proposed Rule Changes and this filing.

Until recently, the Exchange operated at a net annual loss since it launched operations in 2017.[72] As stated above, the Exchange believes that exchanges in setting fees of all types should meet very high standards of transparency to demonstrate why each new fee or fee increase meets the requirements of the Act that fees be reasonable, equitably allocated, not unfairly discriminatory, and not create an undue burden on competition among market participants. The Exchange believes this high standard is especially important when an exchange imposes various access fees for market participants to access an exchange's marketplace. The Exchange believes it has achieved this standard in this filing and in the First Proposed Rule Change, Second Proposed Rule Change. Similar justifications for the proposed fee change included in the First and Second Proposed Rule Changes, but also in this filing, were previously included in similar fee changes filed by the Exchange and its affiliates, MIAX Emerald and MIAX, and SIG did not submit a comment letter on those filings.[73] Those filings were not suspended by the Commission and continue to remain in effect. The justification included in each of the prior filings was the result of numerous withdrawals and re-filings of the proposals to address comments received from Commission Staff over many months. The Exchange and its affiliates have worked diligently with Commission Staff on ensuring the justification included in past fee filings fully support an assertion that those fee changes are consistent with the Act.[74] The Exchange leveraged its past work with Commission Staff to ensure the justification provided herein and in the First and Second Proposed Rule Changes include the same level of detail (or more) as the prior fee changes that survived Commission scrutiny. The Exchange's detailed disclosures in fee filings have also been applauded by one industry group which noted, ''[the Exchange's] filings contain significantly greater information about who is impacted and how than other filings

The Exchange initially filed a proposal to remove the cap on the number of additional Limited Service MEO Ports available to Members on April 9, 2021. *See* SR–PEARL–2021–17. On April 22, 2021, the Exchange withdrew SR–PEARL–2021–17 and refiled that proposal (without increasing the actual fee amounts) to provide further clarification regarding the Exchange's revenues, costs, and profitability any time more Limited Service MEO Ports become available, in general, (including information regarding the Exchange's methodology for determining the costs and revenues for additional Limited Service MEO Ports). *See* SR–PEARL–2021–20. On May 3, 2021, the Exchange withdrew SR–PEARL–2021–20 and refiled that proposal to further clarify its cost methodology. *See* SR–PEARL–2021–22. On May 10, 2021, the Exchange withdrew SR–PEARL–2021–22 and refiled that proposal as SR–PEARL–2021–23. *See* Securities Exchange Act Release No. 91858 (May 12, 2021), 86 FR 26967 (May 18, 2021) (SR–PEARL–2021–23).

that have been permitted to take effect without suspension.'' [75] That same commenter also noted their ''worry that the Commission's process for reviewing and evaluating exchange filings may be inconsistently applied.'' [76]

Therefore, a finding by the Commission that the Exchange has not met its burden to show that the proposed fee change is consistent with the Act would be different than the Commission's treatment of similar past filings, would create further ambiguity regarding the standards exchange fee filings should satisfy, and is not warranted here.

In addition, the arguments in SIG Letter 1 do not support their claim that the Exchange has not met its burden to show the proposed rule change is consistent with the Act. Prior to, and after submitting the First Proposed Rule Change, the Exchange solicited feedback from its Members, including SIG. SIG relayed their concerns regarding the proposed change. The Exchange then sought to work with SIG to address their concerns and gain a better understanding of the access/connectivity/quoting infrastructure of other exchanges. In response, SIG provided no substantive suggestions on how to amend the First Proposed Rule Change to address their concerns and instead chose to submit three comment letters. One could argue that SIG is using the comment letter process not to raise legitimate regulatory concerns regarding the proposal, but to inhibit or delay proposed fee changes by the Exchange.

Nonetheless, the Exchange has enhanced its cost and revenue analysis and data in this Third [sic] Proposed Rule Change to further justify that the Proposed Access Fees are reasonable in accordance with the Commission Staff's Guidance. Among other things, these enhancements include providing baseline information in the form of data from the month before the Proposed Access Fees became effective.

The Exchange now responds to SIG remaining claims below. SIG Letter 3 first summarizes its arguments made in SIG Letters 1 and 2 and incorporates those arguments by reference. The Exchange responded to the arguments in SIG Letter 2 above. SIG Letter 3 incorporates the following arguments from SIG Letter 1, which the Exchange will first respond to in turn, below:

> ''(1) The prospect that a member may withdraw from the Exchanges if a fee is too costly is not a basis for asserting that the fee is reasonable; (2) profit margin comparisons do not support the Exchanges' claims that they will not realize a supracompetitive profit, the Exchanges' respective profit margins of 30% (for MIAX and Pearl) and 51% (for Emerald) in relation to connectivity fees are high in any event, and comparisons to competing exchanges' overall operating profit margins are an inapt ''apples-to-oranges'' comparison; (3) the Exchanges provide no support for their claim that their proposed tiered pricing structure is needed to encourage efficiency in connectivity usage; (4) the Exchanges provided no support for their claim that the tiered pricing structure allows them to better monitor connectivity usage, nor that this is an appropriate basis for the pricing structure in any event; (5) the Exchanges' claim that firms who purchase more 10Gb ULL lines generate ''higher'' costs is misleading, and they offered no support for this claim in any event; (6) no other exchange has tiered connectivity pricing; (7) the recoupment of investment for exchange infrastructure has no supporting nexus with the claim that the proposed fees are reasonable, equitably allocated, and not unfairly discriminatory; and (8) the recoupment of investment claim belies the Exchanges' claim of encouraging efficiency in connectivity usage.'' [77]

The Exchange's Examples of Members Terminating Their Exchange Access Shows That Members Have Choice Whether To Connect to an Exchange Based on Fees

SIG asserts that ''the prospect that a member may withdraw from the Exchanges if a fee is too costly is not a basis for asserting that the fee is reasonable.'' [78] SIG misinterprets the Exchange's argument here. The Exchange provided the examples of firms terminating access to certain markets due to fees to support its assertion that firms, including market makers, are not required to connect to all markets and may drop access if fees become too costly for their business models and alternative or substitute forms of connectivity are available to those firms who choose to terminate access. The Commission Staff Guidance also provides that ''[a] statement that substitute products or services are available to market participants in the relevant market (*e.g.,* equities or options) can demonstrate competitive forces if supported by evidence that substitute products or services exist.'' [79] Nonetheless, the Third [sic] Proposed Rule Change no longer makes this assertion as a basis for the proposed fee change and, therefore, the Exchange believes it is not necessary to respond to this portion of SIG Letters 1 and 3.

The Proposed Fees Will Not Result in Excessive Pricing or Supra-Competitive Profit

Next, SIG asserts that the Exchange's ''profit margin comparisons do not support the Exchange's claims that they will not realize a supracompetitive profit,'' that ''the Exchanges' respective profit margins of 30% (for MIAX and Pearl) and 51% (for Emerald) in relation to connectivity fees are high in any event,'' and ''comparisons to competing exchanges' overall operating profit margins are an inapt 'apples-to-oranges' comparison.''

The Exchange has provided ample data that the proposed fees would not result in excessive pricing or a supra-competitive profit. In this Third [sic] Proposed Rule Change, the Exchange no longer utilizes a comparison of its profit margin to that of other options exchanges as a basis that the Proposed Access Fees are reasonable. Rather, the Exchange has enhanced its cost and revenue analysis and data in this Third [sic] Proposed Rule Change to further justify that the Proposed Access Fees are reasonable in accordance with the Commission Staff's Guidance. Therefore, the Exchange believes it is no longer necessary to respond to this portion of SIG Letters 1 and 3.

The Proposed Tiered Pricing Structure Is Not Unfairly Discriminatory

SIG challenges the proposed fees by arguing that ''the Exchange[ ] provide[s] no support for [its] claim that [the] proposed tiered pricing structure is needed to encourage efficiency in connectivity usage and the Exchange[ ] provided no support for [the] claim that the tiered pricing structure allows them to better monitor connectivity usage, nor that this is an appropriate basis for the pricing structure in any event.'' The Exchange provided additional justification to support that the Proposed Access Fees are equitable and not unfairly discriminatory above in response to SIG's assertions.

Firms That Purchase More 10Gb ULL Generate Higher Exchange Costs

SIG argues that ''the Exchanges' claim that firms who purchase more 10Gb ULL lines generate 'higher' costs is misleading,'' and that the Exchange has ''offered no support for this claim in any event.'' As described above, the Exchange sought to design the proposed tiered-pricing structure to set the amount of the fees to relate to the number of connections a firm purchases and the Exchange believes it provided

[75] *See* HMA Letter, *supra* note 9.

[76] *Id.* (providing examples where non-transaction fee filings by other exchanges have been permitted to remain effective and not suspended by the Commission despite less disclosure and justification).

[77] *See* SIG Letter 3, *supra* note 9.

[78] *Id.*

[79] *See* Guidance, *supra* note 23.

ample justification for the proposed tiered-pricing structure in the First and Second Proposed Rule Changes. Nonetheless, the Exchange provides additional justification to support that the Proposed Access Fees are equitable and not unfairly discriminatory above in response to SIG's assertions.

The Proposed Tiered-Pricing Structure for 10Gb ULL Connectivity Will Provide Cost Savings for the Majority of Exchange Members

The SIG Letter incorrectly asserts that no other exchange has tiered connectivity pricing. Numerous other exchanges provide tiered fee structures for various other types of access to their platforms, including trading permits and ports.[80] The Exchange provided adequate evidence that most firms would incur cost savings under the Proposed Access Fees in the First and Second Proposed Rule Changes and this filing. Nonetheless, the Exchange believes it provided additional justification to support that the Proposed Access Fees are equitable and not unfairly discriminatory above in response to SIG's assertions.

Recoupment of Exchange Infrastructure Costs

Nowhere in this proposal or in the First Proposed Rule Change did the Exchange assert that it benefits competition to allow a new exchange entrant to recoup their infrastructure costs. Rather, the Exchange asserts above that its ''proposed fees are reasonable, equitably allocated and not unfairly discriminatory because the Exchange, and its affiliates, are still recouping the initial expenditures from building out their systems while the legacy exchanges have already paid for and built their systems.'' The Exchange no longer makes this assertion in this filing and, therefore, does not believe is it necessary to respond to SIG's assertion here.

[80] *See* Cboe Exchange, Inc. Fee Schedule, Logical Connectivity Fees ($750 per port per month for the first 5 BOE/FIX Logical Ports and $800 per port per month for each port over 5; $1,500 per port per month for the first 5 BOE Bulk Logical Ports, $2,500 per port per month for ports 6–30, and $3,000 per port per month for each port over 30); Cboe BXZ Exchange, Inc. Options Fee Schedule, Options Logical Port Fees, Ports with Bulk Quoting Capabilities ($1,500 per port per month for the first and second ports, $2,500 per port per month for three or more); Nasdaq Stock Market LLC, Options 7, Pricing Schedule, Section 3 ($1,500 per port per month for the first 5 SQF ports; $1,000 per port per month for SQF ports 15–20; and $500 per port per month for all SQF ports over 21); NYSE American Options Fee Schedule, Section V.A., Port Fees and NYSE Arca Options Fee Schedule, Port Fees (both charging $450 per port for order/quote entry ports 1–40 and $150 per port for ports 41 and greater).

SIFMA Letter

In sum, the SIFMA Letter asserts that the Exchange has failed to demonstrate that the Proposed Access Fees are reasonable for three reasons:

(i) ''The Exchanges' ''platform competition'' argument that competition for order flow constrains pricing for market data or other products and services exclusively offered by an exchange does not demonstrate that the fees are reasonable.''

(ii) ''. . . order flow competition alone between exchanges does not demonstrate that the fees for the products and services subject to the Proposal are reasonable.''

(iii) ''the Exchanges' argument that the products and services subject to the Proposals are optional does not reflect marketplace reality, nor does it demonstrate that the proposed fees are reasonable.''

The Exchange responds to each of SIFMA's challenges in turn below.

The Exchange Never Set Forth a ''Platform Competition'' Argument

The SIFMA Letter asserts that the Exchange's ''platform competition'' argument that competition for order flow constrains pricing for market data or other products and services exclusively offered by an exchange does not demonstrate that the fees are reasonable.'' [81] The Exchange does not believe it is necessary to respond to this assertion because it has never set forth a ''platform competition'' [82] argument to justify the Proposed Access Fees in the First or Second Proposed Rule Change nor does it do so in this filing.

The Exchange Is Not Arguing That Order Flow Competition Alone Demonstrates That the Proposed Fees Are Reasonable

The SIFMA Letter asserts that ''order flow competition alone between exchanges does not demonstrate that the fees for the products and services subject to the Proposal are reasonable.'' [83] The Exchange never directly asserted in the First or Second Proposed Rule Changes, nor does it do so in this filing, that order flow competition, alone, demonstrated that the Proposed Access Fees are reasonable and has removed any language that could imply this argument from this filing.

[81] *See* SIFMA Letter, *supra* note 9.

[82] Pursuant to the Guidance, ''platform theory generally asserts that when a business offers facilities that bring together two or more distinct types of customers, it is the overall return of the platform, rather than the return of any particular fees charged to a type of customer, that should be used to assess the competitiveness of the platform's market.'' *See* Guidance, *supra* note 23.

[83] *See* SIFMA Letter, *supra* note 9.

Other SIFMA Assertions

SIFMA also challenges or asserts: (i) The substitutability or optionality of 10Gb ULL connections, (ii) whether the Exchange has shown that the fees are equitable and non-discriminatory; (iii) that a tiered pricing structure will impose higher cost on all market participants; (iv) that a tiered pricing structure will encourage market participants to be more economical with the usage; (v) greater number of connections use greater Exchange resources; and (vi) that the Exchange has not provided extensive information regarding its cost data and how it determined it cost analysis. The Exchange believes that these assertions by SIFMA basically echo assertions made in SIG Letters 1 and 3 and that it provided a response to these assertions under its response to SIG above or in provided enhanced transparency and justification in this filing.

III. Suspension of the Proposed Rule Change

Pursuant to Section 19(b)(3)(C) of the Act,[84] at any time within 60 days of the date of filing of a proposed rule change pursuant to Section 19(b)(1) of the Act,[85] the Commission summarily may temporarily suspend the change in the rules of a self-regulatory organization (''SRO'') if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. As discussed below, the Commission believes a temporary suspension of the proposed rule change is necessary and appropriate to allow for additional analysis of the proposed rule change's consistency with the Act and the rules thereunder.

As the Exchange further details above, the Exchange first filed a proposed rule change proposing fee changes as proposed herein on July 30, 2021, with the proposed fee changes effective beginning August 1, 2021. That proposal, SR–PEARL–2021–36, was published for comment in the **Federal Register** on August 17, 2021.[86] On September 24, 2021 the Exchange withdrew SR–PEARL–2021–36 and filed a proposed rule change proposing fee changes as proposed herein. That proposal, SR–PEARL–2021–45, was

[84] 15 U.S.C. 78s(b)(3)(C).

[85] 15 U.S.C. 78s(b)(1).

[86] *See* Securities Exchange Act Release No. 92644 (August 11, 2021), 86 FR 46055 (August 17, 2021) (SR–PEARL–2021–36). The Commission received one comment letter on that proposal. Comment for SR–PEARL–2021–36 can be found at: *https://www.sec.gov/comments/sr-pearl-2021-36/srpearl202136.htm.*

published for comment in the **Federal Register** on October 4, 2021.[87] The Commission received four comment letters from three separate commenters on SR–PEARL–2021–45.[88] On November 22, 2021, pursuant to Section 19(b)(3)(C) of the Act, the Commission: (1) Temporarily suspended the proposed rule change; and (2) instituted proceedings to determine whether to approve or disapprove the proposed rule change.[89] On December 1, 2021, the Exchange withdrew SR–PEARL–2021–45 and filed a proposed rule change proposing fee changes as proposed herein. That filing, SR–PEARL–2021–57,[90] was published for comment in the **Federal Register** on December 20, 2021.[91] On January 27, 2022, pursuant to Section 19(b)(3)(C) of the Act, the Commission: (1) Temporarily suspended the proposed rule change (SR–PEARL–2021–57) and (2) instituted proceedings to determine whether to approve or disapprove the proposal.[92] On February 1, 2022, the Exchange withdrew SR–PEARL–2021–57 and filed the instant filing, which is substantially similar.

When exchanges file their proposed rule changes with the Commission, including fee filings like the Exchange's present proposal, they are required to provide a statement supporting the proposal's basis under the Act and the rules and regulations thereunder applicable to the exchange.[93] The instructions to Form 19b–4, on which exchanges file their proposed rule changes, specify that such statement ''should be sufficiently detailed and specific to support a finding that the proposed rule change is consistent with [those] requirements.'' [94]

Among other things, exchange proposed rule changes are subject to Section 6 of the Act, including Sections 6(b)(4), (5), and (8), which requires the rules of an exchange to: (1) Provide for the equitable allocation of reasonable fees among members, issuers, and other persons using the exchange's facilities; [95] (2) perfect the mechanism of a free and open market and a national market system, protect investors and the public interest, and not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers; [96] and (3) not impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.[97]

In temporarily suspending the Exchange's fee change, the Commission intends to further consider whether the proposal to modify fees for certain connectivity options and implement a tiered pricing fee structure is consistent with the statutory requirements applicable to a national securities exchange under the Act. In particular, the Commission will consider whether the proposed rule change satisfies the standards under the Act and the rules thereunder requiring, among other things, that an exchange's rules provide for the equitable allocation of reasonable fees among members, issuers, and other persons using its facilities; not permit unfair discrimination between customers, issuers, brokers or dealers; and do not impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.[98]

Therefore, the Commission finds that it is appropriate in the public interest, for the protection of investors, and otherwise in furtherance of the purposes of the Act, to temporarily suspend the proposed rule change.[99]

IV. Proceedings To Determine Whether To Approve or Disapprove the Proposed Rule Change

The Commission is instituting proceedings pursuant to Sections 19(b)(3)(C) [100] and 19(b)(2)(B) [101] of the Act to determine whether the Exchange's proposed rule change should be approved or disapproved. Institution of such proceedings is appropriate at this time in view of the legal and policy issues raised by the proposed rule change. Institution of proceedings does not indicate that the Commission has reached any conclusions with respect to any of the issues involved. Rather, as described below, the Commission seeks and encourages interested persons to provide comments on the proposed rule change to inform the Commission's analysis of whether to approve or disapprove the proposed rule change.

Pursuant to Section 19(b)(2)(B) of the Act,[102] the Commission is providing notice of the grounds for possible disapproval under consideration. The Commission is instituting proceedings to allow for additional analysis of whether the Exchange has sufficiently demonstrated how the proposed rule change is consistent with Sections 6(b)(4),[103] 6(b)(5),[104] and 6(b)(8) [105] of the Act. Section 6(b)(4) of the Act requires that the rules of a national securities exchange provide for the equitable allocation of reasonable dues, fees, and other charges among its members and issuers and other persons using its facilities. Section 6(b)(5) of the Act requires that the rules of a national securities exchange be designed, among other things, to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system and, in general, to protect investors and the public interest, and not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers. Section 6(b)(8) of the Act requires that the rules of a national securities exchange not impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

The Commission asks that commenters address the sufficiency of the Exchange's statements in support of the proposal, in addition to any other comments they may wish to submit about the proposed rule change. In particular, the Commission seeks comment on the following aspects of the proposal and asks commenters to submit data where appropriate to support their views:

[87] *See* Securities Exchange Act Release No. 93162 (September 28, 2021), 86 FR 54739 (October 4, 2021) (SR–PEARL–2021–45).

[99] For purposes of temporarily suspending the proposed rule change, the Commission has considered the proposed rule's impact on efficiency, competition, and capital formation. *See* 15 U.S.C. 78c(f).

[100] 15 U.S.C. 78s(b)(3)(C). Once the Commission temporarily suspends a proposed rule change, Section 19(b)(3)(C) of the Act requires that the Commission institute proceedings under Section 19(b)(2)(B) to determine whether a proposed rule change should be approved or disapproved.

[101] 15 U.S.C. 78s(b)(2)(B).

[102] 15 U.S.C. 78s(b)(2)(B). Section 19(b)(2)(B) of the Act also provides that proceedings to determine whether to disapprove a proposed rule change must be concluded within 180 days of the date of publication of notice of the filing of the proposed rule change. *See id.* The time for conclusion of the proceedings may be extended for up to 60 days if the Commission finds good cause for such extension and publishes its reasons for so finding, or if the exchange consents to the longer period. *See id.*

[103] 15 U.S.C. 78f(b)(4).

[104] 15 U.S.C. 78f(b)(5).

[105] 15 U.S.C. 78f(b)(8).

1. *Cost Estimates and Allocation.* The Exchange states that it is not asserting that the Proposed Access Fees are constrained by competitive forces, but rather set forth a ''cost-plus model,'' employing a ''conservative methodology'' that ''strictly considers only those costs that are most clearly directly related to the provision and maintenance of 10Gb ULL connectivity to estimate such costs.'' [106] Setting forth its costs in providing 10Gb ULL connectivity, and as summarized in greater detail above, the Exchange projects $15.9 million in aggregate (between the Exchange and MIAX) annual estimated costs for 2021 as the sum of: (1) $3.9 million in third-party expenses paid in total to Equinix (62% of the total applicable expense) for data center services; Zayo Group Holdings, for network services (62% of the total applicable expense); SFTI for connectivity support, Thompson Reuters, NYSE, Nasdaq, and Internap and others (75% of the total applicable expense) for content, connectivity services, and infrastructure services; and various other hardware and software providers (51% of the total applicable expense) supporting the production environment, and (2) $12 million in internal expenses, allocated to (a) employee compensation and benefit costs ($6.1 million, approximately 28% of the Exchange's and MIAX's total applicable employee compensation and benefits expense); (b) depreciation and amortization ($5.3 million, approximately 70% of the Exchange's and MIAX's total applicable depreciation and amortization expense); and (c) occupancy costs ($0.6 million, approximately 53% of the Exchange's and MIAX's total applicable occupancy expense). Do commenters believe that the Exchange has provided sufficient detail about how it determined which costs are most clearly directly associated with providing and maintaining 10Gb ULL connectivity? The Exchange describes a ''proprietary'' process involving all Exchange department heads, including the finance department and numerous meetings between the Exchange's Chief Information Officer, Chief Financial Officer, Head of Strategic Planning and Operations, Chief Technology Officer, various members of the Legal Department, and other group leaders, but do not specify further what principles were applied in making these determinations or arriving at particular allocations. Do commenters believe further explanation is necessary? For employee compensation and benefit costs, for example, the Exchange calculated an allocation of employee time in several departments, including Technology, Back Office, Systems Operations, Networking, Business Strategy Development, Trade Operations, Finance, and Legal, but do not provide the job titles and salaries of persons whose time was accounted for, or explain the methodology used to determine how much of an employee's time is devoted to that specific activity. What are commenters' views on whether the Exchange has provided sufficient detail on the identity and nature of services provided by third parties? Across all of the Exchange's projected costs, what are commenters' views on whether the Exchange has provided sufficient detail on the elements that go into connectivity costs, including how shared costs are allocated and attributed to connectivity expenses, to permit an independent review and assessment of the reasonableness of purported cost-based fees and the corresponding profit margin thereon? Should the Exchange be required to identify for what services or fees the remaining percentage of un-allocated expenses are attributable to (*e.g.,* what services or fees are associated with the 30% of applicable depreciation and amortization expenses the Exchange does not allocate to the Proposed Access Fees)? Do commenters believe that the costs projected for 2021 are generally representative of expected costs going forward (to the extent commenters consider 2021 to be a typical or atypical year), or should an exchange present an estimated range of costs with an explanation of how profit margins could vary along the range of estimated costs? Should the Exchange use cost projections or actual costs estimated for 2021 in a filing made in 2022, or make cost projections for 2022?

2. *Revenue Estimates and Profit Margin Range.* The Exchange provides a single monthly revenue figure as the basis for calculating the profit margin of 21.3%. Do commenters believe this is reasonable? If not, why not? The Exchange states that their proposed fee structure is ''designed to cover its costs with a limited return in excess of such costs,'' and that ''revenue and associated profit margin [ ] are not solely intended to cover the costs associated with providing access services subject to the Proposed Access Fees,'' and believes that a 21.3% margin is a limited return over such costs.[107] The profit margin is also dependent on the accuracy of the cost projections which, if inflated (intentionally or unintentionally), may render the projected profit margin meaningless. The Exchange acknowledges that this margin may fluctuate from month to month due to changes in the number of connections purchased, and that costs may increase. They also state that the number of connections has not materially changed over the prior months and so the months that the Exchange has used as a baseline to perform its assessment are representative of reasonably anticipated costs and expenses.[108] The Exchange does not account for the possibility of cost decreases, however. What are commenters' views on the extent to which actual costs (or revenues) deviate from projected costs (or revenues)? Do commenters believe that the Exchange's methodology for estimating the profit margin is reasonable? Should the Exchange provide a range of profit margins that they believe are reasonably possible, and the reasons therefor?

3. *Reasonable Rate of Return.* Do commenters agree with the Exchange that its expected 21.3% profit margin would constitute a reasonable rate of return over cost for 10GB ULL connectivity? If not, what would commenters consider to be a reasonable rate of return and/or what methodology would they consider to be appropriate for determining a reasonable rate of return? What are commenters' views regarding what factors should be considered in determining what constitutes a reasonable rate of return for 10Gb ULL connectivity fees? Do commenters believe it relevant to an assessment of reasonableness that the Exchange's proposed fees for 10Gb ULL connections, even at the highest tier, are lower than those of other options exchanges to which the Exchange has compared the Proposed Access Fees? Should an assessment of reasonable rate of return include consideration of factors other than costs; and if so, what factors should be considered, and why?

4. *Periodic Reevaluation.* The Exchange has addressed whether it believes a material deviation from the anticipated profit margin would warrant the need to make a rule filing pursuant to Section 19(b) of the Act to increase or decrease the fees accordingly, stating that ''[a]ny requirement that an exchange should conduct a periodic re-evaluation on a set timeline of its cost justification and amend its fees accordingly should be established by the Commission holistically, applied to all exchanges and not just through pending fee proposals, such as this filing,'' and that ''[i]n order to be fairly applied, such a mandate should be applied to existing access fees as well.'' [109] In light of the impact that the number of subscribers has on connectivity profit margins, and the potential for costs to decrease (or increase) over time, what are commenters' views on the need for exchanges to commit to reevaluate, on an ongoing and periodic basis, their cost-based connectivity fees to ensure that they stay in line with their stated profitability target and do not become unreasonable over time, for example, by failing to adjust for efficiency gains, cost increases or decreases, and changes in subscribers? How formal should that process be, how often should that reevaluation occur, and what metrics and thresholds should be considered? How soon after a new connectivity fee change is implemented should an exchange assess whether its subscriber estimates were accurate and at what threshold should an exchange commit to file a fee change if its estimates were inaccurate? Should an initial review take place within the first 30 days after a connectivity fee is implemented? 60 days? 90 days? Some other period?

5. *Tiered Structure for 10Gb ULL Connections.* The Exchange states that the proposed tiered fee structure is designed to decrease the monthly fees for those firms that connect to the Exchange as part of their best execution obligations and generally tend to send the least amount of orders and messages over those connections, because such firms generally only purchase a limited number of connections, and also ''generally send fewer orders and messages over those connections, resulting in less strain on Exchange resources.'' [110] According to the Exchange, 80% of firms have not experienced a fee increase as a result of the tiered structure.

[106] *See supra* Section II.A.2.

[107] *See supra* Section II.A.2.

[108] *See id.*

[109] *See supra* Section II.A.2.

[110] *See id.*

However, firms that purchase five or more connections will see a 30% increase in their fees for each connection above the fourth. Regarding these firms, the Exchange has not asserted that it is 30% more costly for the Exchange to offer such connections to these firms, but instead argues generally that these firms are ''likely'' to result in greater expenditure of Exchange resources and increased cost to the Exchange and that as the number of connections an entity has increases, certain other costs incurred by the Exchange that are correlated to, though not directly affected by, connection costs (*e.g.,* storage costs, surveillance costs, service expenses) also increase.[111] Do commenters believe that the price differences between the tiers are supported by the Exchange's assertions that it set the level of its proposed fees in a manner that it is equitable and not unfairly discriminatory? Do commenters believes the Exchange should demonstrate how the proposed tiered fee levels correlate with tiered costs (*e.g.,* by providing cost information broken down by tier, messaging and order volumes through the additional 10Gb ULL connections by tier, and/or mid-month add/drop of connection rates by tier)? Do commenters believe that the Exchange should provide more detail about the costs that firms purchasing three or more or five or more 10Gb ULL connections impose on the Exchange, to permit an assessment of the Exchange's statement that the Proposed Access Fees ''do not depend on any distinction between Members and non-Members because they are solely determined by the individual Members' or non-Members' business needs and its impact on Exchange resources?'' [112]

Under the Commission's Rules of Practice, the ''burden to demonstrate that a proposed rule change is consistent with the Exchange Act and the rules and regulations issued thereunder . . . is on the [SRO] that proposed the rule change.'' [113] The description of a proposed rule change, its purpose and operation, its effect, and a legal analysis of its consistency with applicable requirements must all be sufficiently detailed and specific to support an affirmative Commission finding,[114] and any failure of an SRO to provide this information may result in the Commission not having a sufficient basis to make an affirmative finding that a proposed rule change is consistent with the Act and the applicable rules and regulations.[115] Moreover, ''unquestioning reliance'' on an SRO's representations in a proposed rule change would not be sufficient to justify Commission approval of a proposed rule change.[116]

The Commission believes it is appropriate to institute proceedings to allow for additional consideration and comment on the issues raised herein, including as to whether the proposal is consistent with the Act, any potential comments or supplemental information provided by the Exchange, and any additional independent analysis by the Commission.

V. Commission's Solicitation of Comments

The Commission requests written views, data, and arguments with respect to the concerns identified above as well as any other relevant concerns. In particular, the Commission invites the written views of interested persons concerning whether the proposal is consistent with Sections 6(b)(4), 6(b)(5), and 6(b)(8), or any other provision of the Act, or the rules and regulations thereunder. The Commission asks that commenters address the sufficiency and merit of the Exchange's statements in support of the proposal, in addition to any other comments they may wish to submit about the proposed rule change. Although there do not appear to be any issues relevant to approval or disapproval that would be facilitated by an oral presentation of views, data, and arguments, the Commission will consider, pursuant to Rule 19b–4, any request for an opportunity to make an oral presentation.[117]

Interested persons are invited to submit written data, views, and arguments regarding whether the proposal should be approved or disapproved by March 15, 2022. Any person who wishes to file a rebuttal to any other person's submission must file that rebuttal by March 29, 2022.

Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File No. SR–PEARL–2022–03 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–PEARL–2022–03. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–PEARL–2022–03 and should be submitted on or before March 15, 2022. Rebuttal comments should be submitted by March 29, 2022.

VI. Conclusion

It is therefore ordered, pursuant to Section 19(b)(3)(C) of the Act,[118] that File Numbers SR–PEARL–2022–03 be, and hereby is, temporarily suspended. In addition, the Commission is instituting proceedings to determine whether the proposed rule change should be approved or disapproved.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[119]

J. Matthew DeLesDernier,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Investment Company Act Release No. 34505; File No. 812–15243]

Alpha Architect ETF Trust and Empowered Funds, LLC

AGENCY: Securities and Exchange Commission (''Commission'' or ''SEC'').

ACTION: Notice.

Notice of an application under section 6(c) of the Investment Company Act of 1940 (''Act'') for an exemption from section 15(a) of the Act. The requested exemption would permit an investment adviser to hire and replace certain subadvisers without shareholder approval.

APPLICANTS: Alpha Architect ETF Trust (the ''Trust''), a Delaware statutory trust registered under the Act as an open-end management investment company, and Empowered Funds, LLC, Pennsylvania limited liability company registered as an investment adviser under the Investment Advisers Act of 1940 (the ''Adviser'' or ''Empowered'' and, collectively with the Trust, the ''Applicants'').

FILING DATES: The application was filed on June 28, 2021 and amended on December 17, 2021.

HEARING OR NOTIFICATION OF HEARING: An order granting the requested relief will be issued unless the Commission orders a hearing. Interested persons may request a hearing on any application by emailing the Commission's Secretary at *Secretarys-Office@sec.gov* and serving the Applicants with a copy of the request by email, if an email address is listed for the relevant Applicant below, or personally or by mail, if a physical address is listed for the relevant Applicant below. Hearing requests should be received by the Commission by 5:30 p.m. on March 14, 2022, and should be accompanied by proof of service on the Applicants, in the form of an affidavit, or, for lawyers, a certificate of service. Pursuant to rule 0–5 under the Act, hearing requests should state the nature of the writer's interest, any facts bearing upon the desirability of a hearing on the matter, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by emailing the Commission's Secretary.

ADDRESSES: The Commission: *Secretarys-Office@sec.gov.* Applicants: Michael Pellegrino, Esq. at *mp@pell-law.com.*

FOR FURTHER INFORMATION CONTACT: Jill Ehrlich, Senior Counsel, or Lisa Reid Ragen, Branch Chief, at (202) 551–6825 (Division of Investment Management, Chief Counsel's Office).

SUPPLEMENTARY INFORMATION: For Applicants' representations, legal analysis, and conditions, please refer to Applicants' amended and restated application, dated December 17, 2021, which may be obtained via the Commission's website by searching for the file number at the top of this document, or for an Applicant using the Company name search field, on the SEC's EDGAR system. The SEC's EDGAR system may be searched at *https://www.sec.gov/edgar/searchedgar/legacy/companysearch.html.* You may also call the SEC's Public Reference Room at (202) 551–8090.

Summary of the Application

1. The Adviser serves as the investment adviser to the Funds pursuant to investment advisory agreements with the Trust on behalf of each Fund (collectively, the ''Advisory Agreements'').[1] The Adviser is responsible for the overall management of the Funds' business affairs and selecting investments according to the Funds' investment objectives, policies, and restrictions, subject to the authority of the board of trustees of the Trust (''Board''). The Advisory Agreements permit the Adviser, subject to the approval of the Board, to delegate to one or more unaffiliated subadvisers (each, a ''Subadviser'' and collectively, the ''Subadvisers'') the responsibility to provide the day-to-day portfolio investment management of each Fund, subject to the supervision and direction of the Adviser. The primary responsibility for managing the Funds will remain vested in the Adviser. The Adviser will hire, evaluate, allocate assets to and oversee the Subadvisers, including determining whether a Subadviser should be terminated, at all times subject to the authority of the Board.

2. Applicants request an exemption to permit the Adviser, subject to Board approval, to hire certain Subadvisers pursuant to subadvisory agreements (''Subadvisory Agreements'') and materially amend existing Subadvisory Agreements without obtaining the shareholder approval required under section 15(a) of the Act.[2]

3. Applicants agree that any order granting the requested relief will be subject to the terms and conditions stated in the application. Such terms and conditions provide for, among other safeguards, appropriate disclosure to Fund shareholders and notification about subadvisory changes and enhanced Board oversight to protect the interests of the Funds' shareholders.

4. Section 6(c) of the Act provides that the Commission may exempt any person, security, or transaction or any class or classes of persons, securities, or transactions from any provisions of the Act, or any rule thereunder, if such relief is necessary or appropriate in the public interest and consistent with the protection of investors and purposes fairly intended by the policy and provisions of the Act. Applicants believe that the requested relief meets this standard because, as further explained in the application, the Advisory Agreements will remain subject to shareholder approval, while the role of the Subadvisers is substantially similar to that of individual portfolio managers, so that requiring shareholder approval of Subadvisory Agreements would impose unnecessary delays and expenses on the Funds.

For the Commission, by the Division of Investment Management, under delegated authority.

Dated: February 15, 2022.

J. Matthew DeLesDernier,

Assistant Secretary.

[FR Doc. 2022–03644 Filed 2–18–22; 8:45 am]

BILLING CODE 8011–01–P

[1] Applicants request relief with respect to any existing or future series of the Trust and any other existing or future registered open-end management investment company or series thereof that: (a) Is advised by Empowered, or any entity controlling, controlled by or under common control with Empowered or its successors (each, also an ''Adviser''); (b) uses the manager-of-managers structure described in the application; and (c) complies with the terms and conditions of the application (any such series, a ''Fund'' and collectively, the ''Funds''). For purposes of the requested order, ''successor'' is limited to an entity that results from a reorganization into another jurisdiction or a change in the type of business organization.

[2] The requested relief will not extend to any subadviser that is an affiliated person, as defined in section 2(a)(3) of the Act, of the Trust, a Fund or the Adviser, other than by reason of serving as a subadviser to one or more of the Funds.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–94257; File No. SR–EMERALD–2022–04]

Self-Regulatory Organizations; MIAX Emerald LLC; Notice of Filing of a Proposed Rule Change To Amend the MIAX Emerald Fee Schedule To Adopt a Tiered-Pricing Structure for Certain Connectivity Fees; Suspension of and Order Instituting Proceedings To Determine Whether To Approve or Disapprove the Proposed Rule Change

February 15, 2022.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on February 1, 2022, MIAX Emerald, LLC (''MIAX Emerald'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') a proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons and is, pursuant to Section 19(b)(3)(C) of the Act, hereby: (i) Temporarily suspending the rule change; and (ii) instituting proceedings to determine whether to approve or disapprove the proposed rule change.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange is filing a proposal to amend the MIAX Emerald Fee Schedule (the ''Fee Schedule'') to amend certain connectivity fees.

The text of the proposed rule change is available on the Exchange's website at *http://www.miaxoptions.com/rule-filings,* at MIAX's principal office, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV [sic] below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend the Fee Schedule to adopt a tiered-pricing structure for the 10 gigabit (''Gb'') ultra-low latency (''ULL'') fiber connection available to Members [3] and non-Members. The Exchange initially filed this proposal on July 30, 2021, with the proposed fee changes effective beginning August 1, 2021 (''First Proposed Rule Change'').[4] The First Proposed Rule Change was published for comment in the **Federal Register** on August 17, 2021.[5] The Commission received one comment letter on the First Proposed Rule Change.[6] The Exchange withdrew the First Proposed Rule Change on September 24, 2021 and re-submitted the proposal on September 24, 2021, with the proposed fee changes being immediately effective (''Second Proposed Rule Change'').[7] The Second Proposed Rule Change was published for comment in the **Federal Register** on October 4, 2021.[8] The Second Proposed Rule Change provided additional justification for the proposed fee changes and addressed certain points raised in the single comment letter that was submitted on the First Proposed Rule Change. The Commission received four comment letters from three separate commenters on the Second Proposed Rule Change.[9] The Commission suspended the Second Proposed Rule Change on November 22, 2021.[10] The Exchange withdrew the Second Proposed Rule Change on December 1, 2021 and submitted a revised proposal for immediate effectiveness (''Third Proposed Rule Change'').[11] The Third Proposed Rule Change meaningfully attempted to address issues or questions that have been raised by providing additional justification and explanation for the proposed fee changes and directly respond to the points raised in SIG Letters 1, 2, and 3, as well as the SIFMA Letter submitted on the First and Second Proposed Rule Changes,[12] and feedback provided by Commission Staff during a telephone conversation on November 18, 2021 relating to the Second Proposed Rule Change. The Third Proposed Rule Change was published for comment in the **Federal Register** on December 20, 2021.[13] The Exchange receive no comment letters on the Third Proposed Rule Change. The Commission suspended the Third Proposed Rule Change on January 27, 2022.[14] The Exchange withdrew the Third Proposed Rule Change on February 1, 2022 and now submits this proposal for immediate effectiveness (''Fourth Proposed Rule Change''). This Fourth Proposed Rule Change provides additional justification and explanation for the proposed fee changes.

10Gb ULL Tiered-Pricing Structure

The Exchange proposes to amend Sections 5)a)–b) of the Fee Schedule to

[3] The term ''Member'' means an individual or organization approved to exercise the trading rights associated with a Trading Permit. Members are deemed ''members'' under the Exchange Act. *See* Exchange Rule 100.

[8] *Id.*

[9] *See* letters from Richard J. McDonald, SIG, to Vanessa Countryman, Secretary, Commission, dated October 1, 2021 (''SIG Letter 2'') and October 26, 2021 (''SIG Letter 3''). *See also* letter from Tyler Gellasch, Executive Director, Healthy Markets Association (''HMA''), to Hon. Gary Gensler, Chair, Commission, dated October 29, 2021 (commenting on SR–CboeEDGA–2021–017, SR–CboeBYX–2021–020, SR–Cboe–BZX–2021–047, SR–CboeEDGX–2021–030, SR–MIAX–2021–41, SR–PEARL–2021–45, and SR–EMERALD–2021–29 and stating that ''MIAX has repeatedly filed to change its connectivity fees in a way that will materially lower costs for many users, while increasing the costs for some of its heaviest of users. These filings have been withdrawn and repeatedly refiled. *Each time, however, the filings contain significantly greater information about who is impacted and how than other filings that have been permitted to take effect without suspension*'') (*emphasis added*) (''HMA Letter''); *and* Ellen Green, Managing Director, Equity and Options Market Structure, Securities Industry and Financial Markets Association (''SIFMA''), to Vanessa Countryman, Secretary, Commission, dated November 26, 2021 (''SIFMA Letter'').

[10] *See* Securities Exchange Act Release No. 93644 (November 22, 2021), 86 FR 67750 (November 29, 2021).

[11] *See* Securities Exchange Act Release No. 93776 (December 14, 2021), 86 FR 71983 (December 20, 2021) (SR–EMERALD–2021–42).

[12] The Exchange notes that while the HMA Letter applauds the level of disclosure the Exchange included in the First and Second Proposed Rule Changes, the HMA Letter does not raise specific issues with the First or Second Proposed Rule Changes. Rather, it references the Exchange's proposals by way of comparison to show the varying levels of transparency in exchange fees filings and recommends changes to the Commission's review process of exchange fee filings generally. Therefore, the Exchange does not feel it is necessary to address the issues raised in the HMA Letter.

[13] *See supra* note 11.

[14] *See* Securities Exchange Act Release No. 94089 (January 27, 2022) (Suspension of and Order Instituting Proceedings to Determine Whether to Approve or Disapprove Proposed Rule Change to Amend the MIAX Emerald Fee Schedule to Adopt a Tiered Pricing Structure for Certain Connectivity Fees).

provide for a tiered-pricing structure for 10Gb ULL connections for Members and non-Members. Prior to the First Proposed Rule Change, the Exchange assessed Members and non-Members a flat monthly fee of $10,000 per 10Gb ULL connection for access to the Exchange's primary and secondary facilities.

The Exchange now proposes to move from a flat monthly fee per connection to a tiered-pricing structure under which the monthly fee would vary depending on the number of 10Gb ULL connections each Member or non-Member elects to purchase per exchange. Specifically, the Exchange proposes to decrease the fee for the first and second 10Gb ULL connections for each Member and non-Member from the current flat monthly fee of $10,000 to $9,000 per connection. To encourage more efficient connectivity usage, the Exchange proposes to increase the per connection fee for Members and non-Members that purchase more than two 10Gb ULL connections. In particular, (i) the third and fourth 10Gb ULL connections for each Member or non-Member will increase from the current flat monthly fee of $10,000 to $11,000 per connection; and (ii) for the fifth 10Gb ULL connection, and each 10Gb ULL connection purchased by Members and non-Members thereafter, the fee will increase from the flat monthly fee of $10,000 to $13,000 per connection. The proposed 10Gb ULL tiered-pricing structure and fees are collectively referred to herein as the ''Proposed Access Fees.''

The Exchange believes the other exchanges' connectivity fees are a useful example of alternative approaches to providing and charging for connectivity and provides the below table for comparison purposes only to show how its proposed fees compare to fees currently charged by other options exchanges for similar connectivity. As shown by the below table, the Exchange's proposed highest tier is still less than fees charged for similar connectivity provided by other options exchanges.

Exchange	Type of port	Monthly fee
MIAX Emerald (as proposed)	10Gb ULL	1–2 connection. $9,000.00 3–4 connections. $11,000.00 5 or more. $13,000.00.
The NASDAQ Stock Market LLC ("NASDAQ") [15].	10Gb Ultra fiber	$15,000.00
Nasdaq ISE LLC ("ISE") [16]	10Gb Ultra fiber	$15,000.00
Nasdaq PHLX LLC ("PHLX") [17]	10Gb Ultra Fiber	$15,000.00
NYSE American LLC ("Amex") [18]	10Gb LX LCN	$22,000.00

The Exchange will continue to assess monthly Member and non-Member network connectivity fees for connectivity to the primary and secondary facilities in any month the Member or non-Member is credentialed to use any of the Exchange APIs or market data feeds in the production environment. The Exchange proposes to pro-rate the fees when a Member or non-Member makes a change to the connectivity (by adding or deleting connections) with such pro-rated fees based on the number of trading days that the Member or non-Member has been credentialed to utilize any of the Exchange APIs or market data feeds in the production environment through such connection, divided by the total number of trading days in such month multiplied by the applicable monthly rate. The Exchange will continue to assess monthly Member and non-Member network connectivity fees for connectivity to the disaster recovery facility in each month during which the Member or non-Member has established connectivity with the disaster recovery facility.

2. Statutory Basis

The Exchange believes that the Proposed Access Fees are consistent with Section 6(b) of the Act [19] in general, and furthers the objectives of Section 6(b)(4) of the Act [20] in particular, in that they provide for the equitable allocation of reasonable dues, fees and other charges among Members and other persons using any facility or system which the Exchange operates or controls. The Exchange also believes the Proposed Access Fees further the objectives of Section 6(b)(5) of the Act [21] in that they are designed to promote just and equitable principles of trade, remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general protect investors and the public interest and are not designed to permit unfair discrimination between customers, issuers, brokers and dealers.

On March 29, 2019, the Commission issued an Order disapproving a proposed fee change by the BOX Market LLC Options Facility to establish connectivity fees for its BOX Network (the ''BOX Order'').[22] On May 21, 2019, the Commission Staff issued guidance ''to assist the national securities exchanges and FINRA . . . in preparing Fee Filings that meet their burden to demonstrate that proposed fees are consistent with the requirements of the Securities Exchange Act.'' [23] Based on both the BOX Order and the Guidance, the Exchange believes that the Proposed Access Fees are consistent with the Act because they (i) are reasonable, equitably allocated, not unfairly discriminatory, and not an undue burden on competition; (ii) comply with the BOX Order and the Guidance; (iii) are supported by evidence (including comprehensive revenue and cost data and analysis) that they are fair and reasonable because they will not result in excessive pricing or supra-competitive profit; and (iv) utilize a cost-based justification framework that is substantially similar to a framework previously used by the Exchange, and its affiliates Miami International Securities Exchange, LLC (''MIAX'') and MIAX PEARL, LLC (''MIAX Pearl''), to amend other non-transaction fees.[24]

The Proposed Access Fees Will Not Result in a Supra-Competitive Profit

The Exchange believes that exchanges, in setting fees of all types, should meet very high standards of transparency to demonstrate why each new fee or fee amendment meets the requirements of the Act that fees be reasonable, equitably allocated, not unfairly discriminatory, and not create an undue burden on competition among market participants. The Exchange believes this high standard is especially important when an exchange imposes various access fees for market participants to access an exchange's marketplace. The Exchange deems connectivity to be access fees. It records these fees as part of its ''Access Fees'' revenue in its financial statements.

In Guidance, the Commission Staff stated that, ''[a]s an initial step in assessing the reasonableness of a fee, staff considers whether the fee is constrained by significant competitive forces.'' [25] The Guidance further states that, ''. . . even where an SRO cannot demonstrate, or does not assert, that significant competitive forces constrain the fee at issue, a cost-based discussion may be an alternative basis upon which to show consistency with the Exchange Act.'' [26] In its Guidance, the Commission Staff further states that, ''[i]f an SRO seeks to support its claims that a proposed fee is fair and reasonable because it will permit recovery of the SRO's costs, or will not result in excessive pricing or supra-competitive profit, specific information, including quantitative information, should be provided to support that argument.'' [27] The Exchange does not assert that the Proposed Access Fees are constrained by competitive forces. Rather, the Exchange asserts that the Proposed Access Fees are reasonable because they will permit recovery of the Exchange's costs in providing access services to supply 10Gb ULL connectivity and will not result in the Exchange generating a supra-competitive profit.

The Guidance defines ''supra-competitive profit'' as ''profits that exceed the profits that can be obtained in a competitive market.'' [28] The Commission Staff further states in the Guidance that ''the SRO should provide an analysis of the SRO's baseline revenues, costs, and profitability (before the proposed fee change) and the SRO's expected revenues, costs, and profitability (following the proposed fee change) for the product or service in question.'' [29] The Exchange provides this analysis below.

Based on this analysis, the Exchange believes the Proposed Access Fees are reasonable and do not result in a ''supra-competitive'' [30] profit. The Exchange believes that it is important to demonstrate that the Proposed Access Fees are based on its costs and reasonable business needs. The Exchange believes the Proposed Access Fees will allow the Exchange to offset expenses the Exchange has and will incur, and that the Exchange provides sufficient transparency (described below) into the costs and revenue underlying the Proposed Access Fees. Accordingly, the Exchange provides an analysis of its revenues, costs, and profitability associated with the Proposed Access Fees. This analysis includes information regarding its methodology for determining the costs and revenues associated with the Proposed Access Fees. As a result of this analysis, the Exchange believes the Proposed Access Fees are fair and reasonable as a form of cost recovery plus present the possibility of a reasonable return for the Exchange's aggregate costs of offering connectivity to the Exchange.

The Proposed Access Fees are based on a cost-plus model. In determining the appropriate fees to charge, the Exchange considered its costs to provide connectivity, using what it believes to be a conservative methodology (*i.e.,* that strictly considers only those costs that are most clearly directly related to the provision and maintenance of 10Gb ULL connectivity) to estimate such costs,[31] as well as the relative costs of providing and maintaining 10Gb ULL connectivity, and set fees that are designed to cover its costs with a limited return in excess of such costs. However, as discussed more fully below, such fees may also result in the Exchange recouping less than all of its costs of providing and maintaining 10Gb ULL connectivity because of the uncertainty of forecasting subscriber decision making with respect to firms' connectivity needs and the likely potential for increased costs to procure the third-party services described below.

To determine the Exchange's costs to provide access services associated with the Proposed Access Fees, the Exchange conducted an extensive cost review in which the Exchange analyzed nearly every expense item in the Exchange's general expense ledger to determine whether each such expense relates to the Proposed Access Fees, and, if such expense did so relate, what portion (or percentage) of such expense actually supports access services associated with the Proposed Access Fees.

The Exchange also provides detailed information regarding the Exchange's cost allocation methodology—namely, information that explains the Exchange's rationale for determining that it was reasonable to allocate certain expenses described in this filing towards the cost to the Exchange to provide the access services associated with the Proposed Access Fees. The Exchange conducted a thorough internal analysis to determine the portion (or percentage) of each expense to allocate to the support of access services associated with the Proposed Access Fees. This analysis [32] included discussions with each Exchange department head to determine the expenses that support access services associated with the Proposed Access Fees. This included numerous meetings between the Exchange's Chief Information Officer, Chief Financial Officer, Head of Strategic Planning and Operations, Chief Technology Officer, various members of the Legal Department, and other group leaders. The Exchange reviewed each individual expense to determine if such expense was related to the Proposed Access Fees. Once the expenses were identified, the Exchange department heads, with the assistance of our internal finance department, reviewed such expenses holistically on an Exchange-wide level to determine what portion of that expense supports providing access services for the Proposed Access Fees. The sum of all such portions of expenses represents the total cost to the Exchange to provide access services associated with the Proposed Access Fees. For the avoidance of doubt, no expense amount was allocated twice.

The internal cost analysis conducted by the Exchange is a proprietary process that is designed to make a fair and

[25] *See* Guidance, *supra* note 23.

[26] *Id.*

[27] *Id.*

[28] *Id.*

[29] *Id.*

[30] *Id.*

[31] For example, the Exchange only included the costs associated with providing and supporting connectivity and excluded from its connectivity cost calculations any cost not directly associated with providing and maintaining such connectivity. Thus, the Exchange notes that this methodology underestimates the total costs of providing and maintaining connectivity.

[32] A description of the Exchange's methodology for determining the portion (or percentage) of each expense to allocate to the Proposed Access Fee is being provide in response to comments from SIG and SIFMA. *See* SIG Letter 3 *and* SIFMA Letter, *supra* note 9.

reasonable assessment of costs and resources allocated to support the provision of access services associated with the Proposed Access Fees. The Exchange acknowledges that this assessment can only capture a moment in time and that costs and resource allocations may change. That is why the Exchange has historically, and on an ongoing basis, periodically revisits its costs and resource allocations to ensure it is appropriately allocating resources to properly provide services to the Exchange's constituents. Any requirement that an exchange should conduct a periodic re-evaluation on a set timeline of its cost justification and amend its fees accordingly should be established by the Commission holistically, applied to all exchanges and not just through pending fee proposals, such as this filing. In order to be fairly applied, such a mandate should be applied to existing access fees as well.

In accordance with the Guidance, the Exchange has provided sufficient detail to support a finding that the proposed fees are consistent with the Exchange Act. The proposal includes a detailed description of the Exchange's costs and how the Exchange determined to allocate those costs related to the proposed fees. In fact, the detail and analysis provided in this proposed rule change far exceed the level of disclosure provided in other exchange fee filings that have not been suspended by the Commission during its 60-day suspension period. A finding that this proposed rule change is inconsistent with the Exchange Act would run contrary to the Commission Staff's treatment of other recent exchange fee proposals that have not been suspended and remain in effect today.[33] For example, a proposed fee filing that closely resembles the Exchange's current filing was submitted in 2020 by the Cboe Exchange, Inc. (''Cboe'') and increased fees for Cboe's 10Gb connections.[34] This filing was submitted on September 2, 2020, nearly 15 months after the Staff's Guidance was issued. In that filing, the Cboe stated that the ''proposed changes were not designed with the objective to generate an overall increase in access fee revenue.'' [35] This filing provided no cost based data to support its assertion that the proposal was intended to be revenue neutral. Among other things, Cboe did not provide a description of the costs underlying its provision of 10Gb connections to show that this particular fee did not generate a supra-competitive profit or describe how any potential profit may be offset by increased costs associated with another fee included in its proposal. This filing, nonetheless, was not suspended by the Commission and remains in effect today.

The Exchange believes exchanges, like all businesses, should be provided flexibility when allocating costs and resources they deem necessary to operate their business, including providing market data and access services. The Exchange notes that costs and resource allocations may vary from business to business and, likewise, costs and resource allocations may differ from exchange to exchange when it comes to providing market data and access services. It is a business decision that must be evaluated by each exchange as to how to allocate internal resources and what costs to incur internally or via third parties that it may deem necessary to support its business and its provision of market data and access services to market participants. An exchange's costs may also vary based on fees charged by third parties and periodic increases to those fees that may be outside of the control of an exchange.[36]

To determine the Exchange's projected revenue associated with the Proposed Access Fees, the Exchange analyzed the number of Members and non-Members currently utilizing the 10Gb ULL fiber connection and used a recent monthly billing cycle representative of 2021 monthly revenue. The Exchange also provided its baseline by analyzing July 2021, the monthly billing cycle prior to the Proposed Access Fees going into effect, and compared it to its expenses for that month.[37] As discussed below, the Exchange does not believe it is appropriate to factor into its analysis future revenue growth or decline into its projections for purposes of these calculations, given the uncertainty of such projections due to the continually changing access needs of market participants and potential increase in internal and third party expenses. The Exchange is presenting its revenue and expense associated with the Proposed Access Fees in this filing in a manner that is consistent with how the Exchange presents its revenue and expense in its Audited Unconsolidated Financial Statements. The Exchange's most recent Audited Unconsolidated Financial Statement is for 2020. However, since the revenue and expense associated with the Proposed Access Fees were not in place in 2020 or for the first seven months of 2021, the Exchange believes its 2020 Audited Unconsolidated Financial Statement is not representative of its current total annualized revenue and costs associated with the Proposed Access Fees. Accordingly, the Exchange believes it is more appropriate to analyze the Proposed Access Fees utilizing its 2021 revenue and costs, as described herein, which utilize the same presentation methodology as set forth in the Exchange's previously-issued Audited Unconsolidated Financial Statements. Based on this analysis, the Exchange believes that the Proposed Access Fees are reasonable because they will allow the Exchange to recover its costs associated with providing access services related to the Proposed Access Fees and not result in excessive pricing or supra-competitive profit.

As outlined in more detail below, the Exchange projects that the final annualized expense for 2021 to provide network connectivity services (all connectivity alternatives) to be approximately $7.2 million per annum or an average of $600,000 per month. The Exchange implemented the Proposed Access Fees on August 1, 2021 in the First Proposed Rule Change. For July 2021, prior to the Proposed Access Fees, the Exchange Members and non-Members purchased a total of 98 10Gb ULL connections for which the Exchange charged approximately $971,905 (this includes Members and non-Members dropping or adding connections mid-month, resulting a pro-rated charge at times). This resulted in a profit of $371,905 for that month (a profit margin of 38%). For the month of October 2021, which includes the varying rates for 10Gb ULL connectivity for the Proposed Access Fees, Exchange Members and non-Members purchased a total of 100 10Gb ULL connections for which the Exchange charged approximately $1,146,714 for that

[33] *See, e.g.,* Securities Exchange Act Release Nos. 91339 (March 17, 2021), 86 FR 15524 (March 23, 2021) (SR–CboeBZX–2021–020) (increasing fees for a market data product while not providing a cost based justification for the increase); 93293 (October 21, 2021), 86 FR 57716 (October 18, 2021) (SR–PHLX–2021–058) (increasing fees for historical market data while not providing a cost based justification for the increase); 92970 (September 14, 2021), 86 FR 52261 (September 20, 2021) (SR–CboeBZX–2021–047) (adopting fees for a market data related product while not providing a cost based justification for the fees); and 89826 (September 10, 2021), 85 FR 57900 (September 16, 2021) (SR–CBOE–2020–086) (increasing connectivity fees without including a cost based justification).

[34] *See* Securities Exchange Act Release No. 89826 (September 10, 2020), 85 FR 57900 (September 16, 2020) (SR–CBOE–2020–086) (increasing connectivity fees without including a cost based justification).

[35] *See id.* at 57909.

[36] *See supra* note 32.

[37] *Id.*

month (also including pro-rated connection charges). This resulted in a profit of $546,714 for that month (a modest 9% profit margin increase from July 2021 to October 2021 from 38% to 47%). The Exchange believes that the Proposed Access Fees are reasonable because they only generate an additional 9% of profit margin per-month (reflecting a 47% profit margin). The Exchange cautions that this profit margin is likely to fluctuate from month to month based on the uncertainty of predicting how many connections may be purchased from month to month as Members and non-Members are able to add and drop connections at any time based on their own business decisions. This profit margin may also decrease due to the significant inflationary pressure on capital items that the Exchange needs to purchase to maintain the Exchange's technology and systems.[38] The Exchange has been subject to price increases upwards of 30% during the past year on network equipment due to supply chain shortages. This, in turn, results in higher overall costs for ongoing system maintenance, but also to purchase the items necessary to ensure ongoing system resiliency, performance, and determinism. These costs are expected to continue to go up as the U.S. economy continues to struggle with supply chain and inflation related issues.

As mentioned above, the Exchange projects that its annualized expense for 2021 to provide network connectivity services (all connectivity alternatives) to be approximately $7.2 million per annum or an average of $600,000 per month and that these costs are expected to increase not only due to anticipated significant inflationary pressure, but also periodic fee increases by third parties.[39] The Exchange notes that there are material costs associated with providing the infrastructure and headcount to fully-support access to the Exchange. The Exchange incurs technology expense related to establishing and maintaining Information Security services, enhanced network monitoring and customer reporting, as well as Regulation SCI mandated processes, associated with its network technology. While some of the expense is fixed, much of the expense is not fixed, and thus increases the cost to the Exchange to provide access services associated with the Proposed Access Fees. For example, new Members to the Exchange may require the purchase of additional hardware to support those Members as well as enhanced monitoring and reporting of customer performance that the Exchange and its affiliates provide. Further, as the total number Members increases, the Exchange and its affiliates may need to increase their data center footprint and consume more power, resulting in increased costs charged by their third-party data center provider. Accordingly, the cost to the Exchange and its affiliates to provide access to its Members is not fixed. The Exchange believes the Proposed Access Fees are a reasonable attempt to offset a portion of the costs to the Exchange associated with providing access to its network infrastructure.

The Exchange only has four primary sources of revenue and cost recovery mechanisms to fund all of its operations: Transaction fees, access fees (which includes the Proposed Access Fees), regulatory fees, and market data fees. Accordingly, the Exchange must cover all of its expenses from these four primary sources of revenue and cost recovery mechanisms. Until recently, the Exchange has operated at a cumulative net annual loss since it launched operations in 2019.[40] This is a result of providing a low cost alternative to attract order flow and encourage market participants to experience the high determinism and resiliency of the Exchange's trading Systems.[41] To do so, the Exchange chose to waive the fees for some non-transaction related services or provide them at a very marginal cost, which was not profitable to the Exchange. This resulted in the Exchange forgoing revenue it could have generated from assessing higher fees.

The Exchange believes that the Proposed Access Fees are fair and reasonable because they will not result in excessive pricing or supra-competitive profit, when comparing the total annual expense that the Exchange projects to incur in connection with providing these access services versus the total annual revenue that the Exchange projects to collect in connection with services associated with the Proposed Access Fees. As mentioned above, for 2021,[42] the total annual expense for providing the access services associated with the Proposed Access Fees is projected to be approximately $7.2 million, or approximately $600,000 per month. This projected total annual expense is comprised of the following, all of which are directly related to the access services associated with the Proposed Access Fees: (1) Third-party expense, relating to fees paid by the Exchange to third parties for certain products and services; and (2) internal expense, relating to the internal costs of the Exchange to provide the services associated with the Proposed Access Fees.[43] As noted above, the Exchange believes it is more appropriate to analyze the Proposed Access Fees utilizing its 2021 revenue and costs, which utilize the same presentation methodology as set forth in the Exchange's previously-issued Audited Unconsolidated Financial Statements.[44] The $7.2 million projected total annual expense is directly related to the access services associated with the Proposed Access Fees, and not any other product or service offered by the Exchange. It does not include general costs of operating matching engines and other trading

[38] *See* ''Supply chain chaos is already hitting global growth. And it's about to get worse'', by Holly Ellyatt, CNBC, *available at https://www.cnbc.com/2021/10/18/supply-chain-chaos-is-hitting-global-growth-and-could-get-worse.html* (October 18, 2021); *and* ''There will be things that people can't get, at Christmas, White House warns'' by Jarrett Renshaw and Trevor Hunnicutt, Reuters, *available at https://www.reuters.com/world/us/americans-may-not-get-some-christmas-treats-white-house-officials-warn-2021-10-12/* (October 12, 2021).

[39] For example, on October 20, 2021, ICE Data Services announced a 3.5% price increase effective January 1, 2022 for most services. The price increase by ICE Data Services includes their SFTI network, which is relied on by a majority of market participants, including the Exchange. *See* email from ICE Data Services to the Exchange, dated October 20, 2021. The Exchange further notes that on October 22, 2019, the Exchange was notified by ICE Data Services that it was raising its fees charged to the Exchange by approximately 11% for the SFTI network.

[40] The Exchange has incurred a cumulative loss of $22 million since its inception in 2019 to 2020, the last year for which the Exchange's Form 1 data is available. *See* Exchange's Form 1/A, Application for Registration or Exemption from Registration as a National Securities Exchange, filed July 28, 2021, *available at https://sec.report/Document/9999999997-21-004557/*.

[41] The term ''System'' means the automated trading system used by the Exchange for the trading of securities. *See* Exchange Rule 100.

[42] The Exchange has not yet finalized its 2021 year end results.

[43] The percentage allocations used in this proposed rule change may differ from past filings from the Exchange or its affiliates due to, among other things, changes in expenses charged by third-parties, adjustments to internal resource allocations, and different system architecture of the Exchange as compared to its affiliates.

[44] For example, the Exchange previously noted that all third-party expense described in its prior fee filing was contained in the information technology and communication costs line item under the section titled ''Operating Expenses Incurred Directly or Allocated From Parent,'' in the Exchange's 2019 Form 1 Amendment containing its financial statements for 2018. *See* Securities Exchange Act Release No. 87877 (December 31, 2019), 85 FR 738 (January 7, 2020) (SR–EMERALD–2019–39). Accordingly, the third-party expense described in this filing is attributed to the same line item for the Exchange's 2021 Form 1 Amendment, which will be filed in 2022.

technology. No expense amount was allocated twice.

As discussed above, the Exchange conducted an extensive cost review in which the Exchange analyzed nearly every expense item in the Exchange's general expense ledger (this includes over 150 separate and distinct expense items) to determine whether each such expense relates to the access services associated with the Proposed Access Fees, and, if such expense did so relate, what portion (or percentage) of such expense actually supports those services, and thus bears a relationship that is, ''in nature and closeness,'' directly related to those services. In performing this calculation, the Exchange considered other services and to which the expense may be applied and how much of the expense is directly and/or indirectly utilized in providing those other services. The sum of all such portions of expenses represents the total cost of the Exchange to provide access services associated with the Proposed Access Fees.

External Expense Allocations

For 2021, expenses relating to fees paid by the Exchange to third-parties for products and services necessary to provide the access services associated with the Proposed Access Fees is projected to be $1.7 million. This includes, but is not limited to, a portion of the fees paid to: (1) Equinix for data center services, including for the primary, secondary, and disaster recovery locations of the Exchange's trading system infrastructure; (2) Zayo Group Holdings, Inc. (''Zayo'') for network services (fiber and bandwidth products and services) linking the Exchange's and its affiliates' office locations in Princeton, New Jersey and Miami, Florida, to all data center locations; (3) Secure Financial Transaction Infrastructure (''SFTI''),[45] which supports connectivity and feeds for the entire U.S. options industry; (4) various other services providers (including Thompson Reuters, NYSE, Nasdaq, and Internap), which provide content, connectivity services, and infrastructure services for critical components of options connectivity and network services; and (5) various other hardware and software providers (including Dell and Cisco, which support the production environment in which Members connect to the network to trade, receive market data, etc.).

For clarity, the Exchange took a conservative approach in determining the expense and the percentage of that expense to be allocated to providing access services in connection with the Proposed Access Fees. Only a portion of all fees paid to such third-parties is included in the third-party expenses described herein, and no expense amount is allocated twice. Accordingly, the Exchange does not allocate its entire information technology and communication costs to the access services associated with the Proposed Access Fees. This may result in the Exchange under allocating an expense to the provision of access services in connection with the Proposed Access Fees and such expenses may actually be higher or increase above what the Exchange utilizes within this proposal. Further, the Exchange notes that expenses associated with its affiliates, MIAX and MIAX Pearl (the options and equities markets), are accounted for separately and are not included within the scope of this filing. Further, as part its ongoing assessment of costs and expenses (described above), the Exchange recently conducted a periodic thorough review of its expenses and resource allocations which, in turn, resulted in revised percentage allocations in this filing. Therefore, the percentage allocations used in this proposed rule change may differ from past filings from the Exchange or its affiliates due to, among other things, changes in expenses charged by third-parties, adjustments to internal resource allocations, and different system architecture of the Exchange as compared to its affiliates. The Exchange notes that the expense allocations differ from the Exchange's filing earlier this year, SR–EMERALD–2021–11, because that prior filing pertained to several different access fees, which the Exchange had not been charging for since the Exchange launched operations in March 2019.[46] In SR–EMERALD–2021–11, the Exchange sought to adopt fees for FIX Ports, MEI Ports, Purge Ports, Clearing Trade Drop Ports, and FIX Drop Copy Ports, all of which had been free for market participants for over two years.

The Exchange believes it is reasonable to allocate such third-party expense described above towards the total cost to the Exchange to provide the access services associated with the Proposed Access Fees. In particular, the Exchange believes it is reasonable to allocate the identified portion of the Equinix expense because Equinix operates the data centers (primary, secondary, and disaster recovery) that host the Exchange's network infrastructure. This includes, among other things, the necessary storage space, which continues to expand and increase in cost, power to operate the network infrastructure, and cooling apparatuses to ensure the Exchange's network infrastructure maintains stability. Without these services from Equinix, the Exchange would not be able to operate and support the network and provide the access services associated with the Proposed Access Fees to its Members and their customers. The Exchange did not allocate all of the Equinix expense toward the cost of providing the access services associated with the Proposed Access Fees, only that portion which the Exchange identified as being specifically mapped to providing the access services associated with the Proposed Access Fees. According to the Exchange's calculations, it allocated approximately 62% of the total applicable Equinix expense to providing the access services associated with the Proposed Access Fees. The Exchange believes this allocation is reasonable because it represents the Exchange's actual cost to provide the access services associated with the Proposed Access Fees, and not any other service, as supported by its cost review.[47]

The Exchange believes it is reasonable to allocate the identified portion of the Zayo expense because Zayo provides the internet, fiber and bandwidth connections with respect to the network, linking the Exchange with its affiliates, MIAX Pearl and MIAX, as well as the data center and disaster recovery locations. As such, all of the trade data, including the billions of messages each day per exchange, flow through Zayo's infrastructure over the Exchange's network. Without these services from Zayo, the Exchange would not be able to operate and support the network and provide the access services associated with the Proposed Access Fees. The Exchange did not allocate all of the Zayo expense toward the cost of providing the access services associated with the Proposed Access Fees, only the portion which the Exchange identified as being specifically mapped to providing the Proposed Access Fees. According to the Exchange's

[45] *See supra* note 39.

[46] *See* Securities Exchange Act Release No. 91460 (April 2, 2021), 86 FR 18349 (April 8, 2021) (SR–EMERALD–2021–11).

[47] As noted above, the percentage allocations used in this proposed rule change may differ from past filings from the Exchange or its affiliates due to, among other things, changes in expenses charged by third-parties, adjustments to internal resource allocations, and different system architecture of the Exchange as compared to its affiliates. Again, as part its ongoing assessment of costs and expenses, the Exchange recently conducted a periodic thorough review of its expenses and resource allocations which, in turn, resulted in a revised percentage allocations in this filing.

calculations, it allocated approximately 62% of the total applicable Zayo expense to providing the access services associated with the Proposed Access Fees. The Exchange believes this allocation is reasonable because it represents the Exchange's actual cost to provide the access services associated with the Proposed Access Fees, and not any other service, as supported by its cost review.[48]

The Exchange believes it is reasonable to allocate the identified portions of the SFTI expense and various other service providers' (including Thompson Reuters, NYSE, Nasdaq, and Internap) expense because those entities provide connectivity and feeds for the entire U.S. options industry, as well as the content, connectivity services, and infrastructure services for critical components of the network. Without these services from SFTI and various other service providers, the Exchange would not be able to operate and support the network and provide access to its Members and their customers. The Exchange did not allocate all of the SFTI and other service providers' expense toward the cost of providing the access services associated with the Proposed Access Fees, only the portions which the Exchange identified as being specifically mapped to providing the access services associated with the Proposed Access Fees. According to the Exchange's calculations, it allocated approximately 89% of the total applicable SFTI and other service providers' expense to providing the access services associated with the Proposed Access Fees. The Exchange believes this allocation is reasonable because it represents the Exchange's actual cost to provide the access services associated with the Proposed Access Fees.[49]

The Exchange believes it is reasonable to allocate the identified portion of the other hardware and software provider expense because this includes costs for dedicated hardware licenses for switches and servers, as well as dedicated software licenses for security monitoring and reporting across the network. Without this hardware and software, the Exchange would not be able to operate and support the network and provide access to its Members and their customers. The Exchange did not allocate all of the hardware and software provider expense toward the cost of providing the access services associated with the Proposed Access Fees, only the portions which the Exchange identified as being specifically mapped to providing the access services associated with the Proposed Access Fees. According to the Exchange's calculations, it allocated approximately 51% of the total applicable hardware and software provider expense to providing the access services associated with the Proposed Access Fees. The Exchange believes this allocation is reasonable because it represents the Exchange's actual cost to provide the access services associated with the Proposed Access Fees.[50]

Internal Expense Allocations

For 2021, total projected internal expenses relating to the Exchange providing the access services associated with the Proposed Access Fees are projected to be approximately $5.5 million. This includes, but is not limited to, costs associated with: (1) Employee compensation and benefits for full-time employees that support the access services associated with the Proposed Access Fees, including staff in network operations, trading operations, development, system operations, business, as well as staff in general corporate departments (such as legal, regulatory, and finance) that support those employees and functions (including an increase as a result of the higher determinism project); (2) depreciation and amortization of hardware and software used to provide the access services associated with the Proposed Access Fees, including equipment, servers, cabling, purchased software and internally developed software used in the production environment to support the network for trading; and (3) occupancy costs for leased office space for staff that provide the access services associated with the Proposed Access Fees. The breakdown of these costs is more fully-described below.

For clarity, and as stated above, the Exchange took a conservative approach in determining the expense and the percentage of that expense to be allocated to providing access services in connection with the Proposed Access Fees. Only a portion of all such internal expenses are included in the internal expense herein, and no expense amount is allocated twice. Accordingly, the Exchange does not allocate its entire costs contained in those items to the access services associated with the Proposed Access Fees. This may result in the Exchange under allocating an expense to the provision of access services in connection with the Proposed Access Fees and such expenses may actually be higher or increase above what the Exchange utilizes within this proposal. Further, as part its ongoing assessment of costs and expenses (described above), the Exchange recently conducted a periodic thorough review of its expenses and resource allocations which, in turn, resulted in a revised percentage allocations in this filing.

The Exchange believes it is reasonable to allocate such internal expense described above towards the total cost to the Exchange to provide the access services associated with the Proposed Access Fees. In particular, the Exchange's employee compensation and benefits expense relating to providing the access services associated with the Proposed Access Fees is projected to be approximately $3.2 million, which is only a portion of the approximately $9.7 million total projected expense for employee compensation and benefits. The Exchange believes it is reasonable to allocate the identified portion of such expense because this includes the time spent by employees of several departments, including Technology, Back Office, Systems Operations, Networking, Business Strategy Development (who create the business requirement documents that the Technology staff use to develop network features and enhancements), Trade Operations, Finance (who provide billing and accounting services relating to the network), and Legal (who provide legal services relating to the network, such as rule filings and various license agreements and other contracts). As part of the extensive cost review conducted by the Exchange, the Exchange reviewed the amount of time spent by employees on matters relating to the provision of access services associated with the Proposed Access Fees. Without these employees, the Exchange would not be able to provide the access services associated with the Proposed Access Fees to its Members and their customers. The Exchange did not allocate all of the employee compensation and benefits expense toward the cost of the access services associated with the Proposed Access Fees, only the portions which the Exchange identified as being specifically mapped to providing the access services associated with the Proposed Access Fees. According to the Exchange's calculations, it allocated approximately 33% of the total applicable employee compensation and benefits expense to providing the access services associated with the Proposed Access Fees. The Exchange believes this allocation is reasonable because it

[48] *Id.*

[49] *Id. See also supra* note 39 (regarding SFTI's announced fee increases).

[50] *See supra* note 47.

represents the Exchange's actual cost to provide the access services associated with the Proposed Access Fees, and not any other service, as supported by its cost review.[51]

The Exchange's depreciation and amortization expense relating to providing the services associated with the Proposed Access Fees is projected to be $2 million, which is only a portion of the $3.1 million total projected expense for depreciation and amortization. The Exchange believes it is reasonable to allocate the identified portion of such expense because such expense includes the actual cost of the computer equipment, such as dedicated servers, computers, laptops, monitors, information security appliances and storage, and network switching infrastructure equipment, including switches and taps that were purchased to operate and support the network and provide the access services associated with the Proposed Access Fees. Without this equipment, the Exchange would not be able to operate the network and provide the access services associated with the Proposed Access Fees to its Members and their customers. The Exchange did not allocate all of the depreciation and amortization expense toward the cost of providing the access services associated with the Proposed Access Fees, only the portion which the Exchange identified as being specifically mapped to providing the access services associated with the Proposed Access Fees. According to the Exchange's calculations, it allocated approximately 63% of the total applicable depreciation and amortization expense to providing the access services associated with the Proposed Access Fees, as these access services would not be possible without relying on such. The Exchange believes this allocation is reasonable because it represents the Exchange's actual cost to provide the access services associated with the Proposed Access Fees, and not any other service, as supported by its cost review.[52]

The Exchange's occupancy expense relating to providing the services associated with the Proposed Access Fees is projected to be approximately $0.3 million, which is only a portion of the $0.5 million total projected expense for occupancy. The Exchange believes it is reasonable to allocate the identified portion of such expense because such expense represents the portion of the Exchange's cost to rent and maintain a physical location for the Exchange's staff who operate and support the network, including providing the access services associated with the Proposed Access Fees. This amount consists primarily of rent for the Exchange's Princeton, New Jersey office, as well as various related costs, such as physical security, property management fees, property taxes, and utilities. The Exchange operates its Network Operations Center (''NOC'') and Security Operations Center (''SOC'') from its Princeton, New Jersey office location. A centralized office space is required to house the staff that operates and supports the network. The Exchange currently has approximately 200 employees. Approximately two-thirds of the Exchange's staff are in the Technology department, and the majority of those staff have some role in the operation and performance of the access services associated with the Proposed Access Fees. Accordingly, the Exchange believes it is reasonable to allocate the identified portion of its occupancy expense because such amount represents the Exchange's actual cost to house the equipment and personnel who operate and support the Exchange's network infrastructure and the access services associated with the Proposed Access Fees. The Exchange did not allocate all of the occupancy expense toward the cost of providing the access services associated with the Proposed Access Fees, only the portion which the Exchange identified as being specifically mapped to operating and supporting the network. According to the Exchange's calculations, it allocated approximately 53% of the total applicable occupancy expense to providing the access services associated with the Proposed Access Fees. The Exchange believes this allocation is reasonable because it represents the Exchange's cost to provide the access services associated with the Proposed Access Fees, and not any other service, as supported by its cost review.[53]

The Exchange notes that a material portion of its total overall expense is allocated to the provision of access services (including connectivity, ports, and trading permits). The Exchange believes this is reasonable and in line, as the Exchange operates a technology-based business that differentiates itself from its competitors based on its more deterministic and resilient trading systems that rely on access to a high performance network, resulting in significant technology expense. Over two-thirds of Exchange staff are technology-related employees. The majority of the Exchange's expense is technology-based. As described above, the Exchange has only four primary sources of fees to recover their costs; thus, the Exchange believes it is reasonable to allocate a material portion of its total overall expense towards access fees.

Based on the above, the Exchange believes that its provision of access services associated with the Proposed Access Fees will not result in excessive pricing or supra-competitive profit. As discussed above, the Exchange projects that its annualized expense for 2021 to provide network connectivity services (all connectivity alternatives) to be approximately $7.2 million per annum or an average of $600,000 per month. The Exchange implemented the Proposed Access Fees on August 1, 2021. For July 2021, prior to the Proposed Access Fees, Exchange Members and non-Members purchased a total of 98 10Gb ULL connections for which the Exchange charged approximately $971,905. This resulted in a profit of $371,905 (a profit margin of 38%) for that month (including pro-rated charges). For the month of October 2021, which includes the varying 10Gb ULL connectivity fees pursuant to the Proposed Access Fees, the Exchange had Members and non-Members purchasing a total of 100 10Gb ULL connections for which the Exchange charged approximately $1,146,714 (including pro-rated charges). This resulted in a profit of $546,714 for that month (a modest 9% profit margin increase from July 2021 to October 2021 from 38% to 47%). The Exchange believes that the Proposed Access Fees are reasonable because they only generate an additional 9% of profit margin per month (reflecting a 47% profit margin). The Exchange believes this modest increase in profit margin will allow it to continue to recoup its expenses and continue to invest in its technology infrastructure. Therefore, the Exchange also believes that this proposed profit margin increase is reasonable because it represents a reasonable rate of return.

Again, the Exchange cautions that this profit margin may fluctuate from month to month based in the uncertainty of predicting how many connections may be purchased from month to month as Members and non-Members are free to add and drop connections at any time based on their own business decisions. Notwithstanding that the revenue (and profit margin) may vary from month to month due to changes in connections and to changes to the Exchange's expenses, the number of connections has not materially changed over the prior months. Consequently, the Exchange believes that the months it has

[51] *Id.*

[52] *Id.*

[53] *Id.*

used as a baseline to perform its assessment are representative of reasonably anticipated costs and expenses. This profit margin may also decrease due to the significant inflationary pressure on capital items that it needs to purchase to maintain the Exchange's technology and systems.[54] Accordingly, the Exchange believes its total projected revenue for the providing the access services associated with the Proposed Access Fees will not result in excessive pricing or supra-competitive profit.

The Exchange believes that conducting the above analysis on a per month basis is reasonable as the revenue generated from access services subject to the proposed fee generally remains static from month to month. The Exchange also conducted the above analysis on a per month basis to comply with the Commission Staff's Guidance, which requires a baseline analysis to assist in determining whether the proposal generates a supra-competitive profit. This monthly analysis was also provided in response to comment received on prior submissions of this proposed rule change.

The Exchange reiterates that it only has four primary sources of revenue and cost recovery mechanisms: Transaction fees, access fees (which includes the Proposed Access Fees), regulatory fees, and market data fees. Accordingly, the Exchange must cover all of its expenses from these four primary sources of revenue and cost recovery mechanisms. As a result, each of these fees cannot be ''flat'' and cover only the expenses directly related to the fee that is charged. The above revenue and associated profit margin therefore are not solely intended to cover the costs associated with providing access services subject to the Proposed Access Fees.

The Exchange believes it is reasonable, equitable and not unfairly discriminatory to allocate the respective percentages of each expense category described above towards the total cost to the Exchange of operating and supporting the network, including providing the access services associated with the Proposed Access Fees because the Exchange performed a line-by-line item analysis of nearly every expense of the Exchange, and has determined the expenses that directly relate to providing access to the Exchange. Further, the Exchange notes that, without the specific third-party and internal expense items listed above, the Exchange would not be able to provide the access services associated with the Proposed Access Fees to its Members and their customers. Each of these expense items, including physical hardware, software, employee compensation and benefits, occupancy costs, and the depreciation and amortization of equipment, have been identified through a line-by-line item analysis to be integral to providing access services. The Proposed Access Fees are intended to recover the costs of providing access to the Exchange's System. Accordingly, the Exchange believes that the Proposed Access Fees are fair and reasonable because they do not result in excessive pricing or supra-competitive profit, when comparing the actual costs to the Exchange versus the projected annual revenue from the Proposed Access Fees.

The Proposed Tiered-Pricing Structure Is Not Unfairly Discriminatory and Provides for the Equitable Allocation of Fees, Dues, and Other Charges

The Exchange believes the proposed tiered-pricing structure is reasonable, fair, equitable, and not unfairly discriminatory because it will apply to all Members and non-Members in the same manner based on the amount of 10Gb ULL connectivity they require based on their own business decisions and usage of Exchange resources. All similarly situated Members and non-Members would be subject to the same fees. The fees do not depend on any distinction between Members and non-Members because they are solely determined by the individual Members' or non-Members' business needs and its impact on Exchange resources.

The proposed tiered-pricing structure is not unfairly discriminatory and provides for the equitable allocation of fees, dues, and other charges because it is designed to encourage Members and non-Members to be more efficient and economical when determining how to connect to the Exchange and the amount of the fees are based on the number of connections a Member or non-Member utilizes. Charging an incrementally higher fee to a Member or non-Member that utilizes numerous connections is directly related to the increased costs the Exchange incurs in providing and maintaining those additional connections. The proposed tiered pricing structure should also enable the Exchange to better monitor and provide access to the Exchange's network to ensure sufficient capacity and headroom in the System.

The Exchange believes that the proposal to move to a tiered-pricing structure for its 10Gb ULL connections is reasonable, equitably allocated and not unfairly discriminatory because the majority of Members and non-Members that purchase 10Gb ULL connections will either save money or pay the same amount after the tiered-pricing structure is implemented. After the effective date of the First Proposed Rule Change on August 1, 2021, approximately 60% of the firms that purchased at least one 10Gb ULL connection experienced a decrease in their monthly connectivity fees while only approximately 40% of firms experienced an increase in their monthly connectivity fees as a result of the proposed tiered-pricing structure when compared to the flat monthly fee structure. To illustrate, firms that purchase only one 10Gb ULL connection per month used to pay the flat rate of $10,000 per month for that one 10Gb ULL connection. Pursuant to the proposed tiered-pricing structure, these firms now pay $9,000 per month for that same one 10Gb ULL connection, saving $1,000 per month or $12,000 annually. Further, firms that purchase two 10Gb ULL connections per month previously paid a flat rate of $20,000 per month ($10,000 × 2) for those two 10Gb ULL connections. Pursuant to the proposed tiered-pricing structure, these firms now pay $18,000 per month ($9,000 × 2) for those two 10Gb ULL connections, saving $2,000 per month or $24,000 annually.

To achieve a consistent, premium network performance, the Exchange must build out and continue to maintain a network that has the capacity to handle the message rate requirements of not only firms that consume minimal Exchange connectivity resources, but also those firms that most heavily consume Exchange connectivity resources, network consumers, and purchasers of 10Gb ULL connectivity. 10Gb ULL connectivity is not an unlimited resource as the Exchange needs to purchase additional equipment to satisfy requests for additional connections. The Exchange also needs to provide personnel to set up new connections, service requests related to adding new and/or deleting existing connections, respond to performance queries from, and to maintain those connections on behalf of Members and non-Members. Also, those firms that utilize 10Gb ULL connectivity typically generate a disproportionate amount of messages and order traffic, usually billions per day across the Exchange. These billions of messages per day consume the Exchange's resources and significantly contribute to the overall network connectivity expense for storage and network transport capabilities. The Exchange also has to purchase additional storage capacity on

[54] *See supra* note 38.

an ongoing basis to ensure it has sufficient capacity to store these messages as part of it surveillance program and to satisfy its record keeping requirements under the Exchange Act.[55] Thus, as the number of connections an entity has increases, certain other costs incurred by the Exchange that are correlated to, though not directly affected by, connection costs (*e.g.,* storage costs, surveillance costs, service expenses) also increase.

The Exchange sought to design the proposed tiered-pricing structure to set the amount of the fees to relate to the number of connections a firm purchases. The more connections purchased by a firm likely results in greater expenditure of Exchange resources and increased cost to the Exchange. With this in mind, the Exchange proposes to decrease the monthly fees for those firms who connect to the Exchange as part of their best execution obligations and generally tend to send the least amount of orders and messages over those connections. The Exchange notes that firms that primarily route orders seeking best-execution generally only purchase a limited number of connections. Those firms also generally send fewer orders and messages over those connections, resulting in less strain on Exchange resources. Therefore, the connectivity costs will likely be lower for these firms based on the proposed tiered-pricing structure.

On a similar note, the Exchange proposes to increase the fee for those firms that purchase more connections resulting in greater expenditure of Exchange resources and increased cost to the Exchange. The Exchange notes that these firms that purchase more than two to four 10Gb ULL connections essentially do so for competitive reasons amongst themselves and choose to utilize numerous connections based on their business needs and desire to attempt to access the market quicker by using the connection with the least amount of latency. These firms are generally engaged in sending liquidity removing orders to the Exchange and seek to add more connections so they can access resting liquidity ahead of their competitors. For instance, a Member may have just sent numerous messages and/or orders over one of their 10Gb ULL connections that are in queue to be processed. That same Member then seeks to enter an order to remove liquidity from the Exchange's Book. That Member may choose to send that order over one or more of their other 10Gb ULL connections with less message and/or order traffic to ensure that their liquidity taking order accesses the Exchange quicker because that connection's queue is shorter. These firms also tend to frequently add and drop connections mid-month to determine which connections have the least latency, which results in increased costs to the Exchange to frequently make changes in the data center and provide the additional technical and personnel support necessary to satisfy these requests.

The firms that engage in the above-described liquidity removing and advanced trading strategies typically require multiple connections and, therefore, generate higher costs by utilizing more of the Exchange's resources. Those firms may also conduct other latency measurements over their connections and drop and simultaneously add connections mid-month based on their own assessment of their performance. This results in Exchange staff processing such requests, potentially purchasing additional equipment, and performing the necessary network engineering to replace those connections in the data center. Therefore, the Exchange believes it is equitable for these firms to experience increased connectivity costs based on their disproportionate pull on Exchange resources to provide the additional connectivity.

In addition, the proposed tiered-pricing structure is equitable because it is designed to encourage Members and non-Members to be more efficient and economical when determining how to connect to the Exchange. Section 6(b)(5) of the Exchange Act requires the Exchange to provide access on terms that are not unfairly discriminatory.[56] As stated above, 10Gb ULL connectivity is not an unlimited resource and the Exchange's network is limited in the amount of connections it can provide. However, the Exchange must accommodate requests for additional connectivity and access to the Exchange's System to ensure that the Exchange is able to provide access on non-discriminatory terms and ensure sufficient capacity and headroom in the System. To accommodate requests for additional connectivity on top of current network capacity constraints, requires that the Exchange purchase additional equipment to satisfy these requests. The Exchange also needs to provide personnel to set up new connections and to maintain those connections on behalf of Members and non-Members. The proposed tiered-pricing structure is equitable because it is designed to encourage Members and non-Members to be more efficient and economical in selecting the amount of connectivity they request while balancing that against the Exchange's increased expenses when expanding its network to accommodate additional connectivity.

The Proposed Fees Are Reasonable When Compared to the Fees of Other Options Exchanges With Similar Market Share

The Exchange does not have visibility into other equities exchanges' costs to provide connectivity or their fee markup over those costs, and therefore cannot use other exchange's connectivity fees as a benchmark to determine a reasonable markup over the costs of providing connectivity. Nevertheless, the Exchange believes the other exchange's connectivity fees are a useful example of alternative approaches to providing and charging for connectivity. To that end, the Exchange believes the proposed tiered-pricing structure for 10Gb ULL connections is reasonable because the proposed highest tier is still less than fees charged for similar connectivity provided by other options exchanges with comparable market shares. For example, NASDAQ (equity options market share of 8.88% as of November 26, 2021 for the month of November) [57] charges a monthly fee of $10,000 per 10Gb fiber connection and $15,000 per 10Gb Ultra fiber connection.[58] The highest tier of the Exchange's proposed fee structure for a 10Gb ULL connection is $13,000 for the fifth and subsequent connections, which is $2,000 per month less than NASDAQ and, unlike NASDAQ, the Exchange does not charge installation fees. For market participants with fewer connections, the difference is even more stark. For a market participant with two connections to the Exchange and two connections to NASDAQ, the difference in connection fees would be $12,000 per month. The Exchange notes that the same connectivity fees described above for NASDAQ also apply to its affiliates, ISE [59] (equity options market share of 7.96% as of November 26, 2021 for the month of November) [60] and PHLX (equity options market share of 9.31% as of November 26, 2021 for the month

[59] *See* ISE Rules, General 8: Connectivity.

[60] *See supra note 57.*

of November).[61] Amex (equity options market share of 5.05% as of November 26, 2021 for the month of November) [62] charges $15,000 per connection initially plus $22,000 monthly per 10Gb LX LCN circuit connection.[63] Again, the highest tier of the Exchange's proposed fee structure for a 10Gb ULL connection is $9,000 per month lower than the Amex connectivity fee after the first month.

In the each of the above cases, the Exchange's highest tier in the proposed tiered-pricing structure only applies to the fifth and additional connections and is still significantly lower than that of competing options exchanges with similar market share. Despite proposing lower or similar fees to that of competing options exchanges with similar market share, the Exchange believes that it provides a premium network experience to its Members and non-Members via a highly deterministic System, enhanced network monitoring and customer reporting, and a superior network infrastructure than markets with higher market shares and more expensive connectivity alternatives. Each of the connectivity rates in place at competing options exchanges were filed with the Commission for immediate effectiveness and remain in place today.

The Exchange further believes that the Proposed Access Fees are reasonable, equitably allocated and not unfairly discriminatory because, for one 10Gb ULL connection, the Exchange provides each Member or non-Member access to all twelve (12) matching engines on MIAX Emerald and a vast majority choose to connect to all twelve (12) matching engines. The Exchange believes that other exchanges require firms to connect to multiple matching engines.[64]

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

With respect to intra-market competition, the Exchange does not believe that the proposed rule change would place certain market participants at the Exchange at a relative disadvantage compared to other market participants or affect the ability of such market participants to compete. As stated above, the Exchange does not believe its proposed pricing will impose a barrier to entry to smaller participants and notes that its proposed connectivity pricing structure for its 10Gb ULL connections is associated with relative usage of the various market participants. Further, the majority of firms that purchase 10Gb ULL connections may either save money or pay the same amount after the tiered-pricing structure is implemented. While total cost may be increased for market participants with larger capacity needs or for business/technical preferences, such options provide far more capacity and are purchased by those that consume more resources from the network. Accordingly, the proposed tiered-pricing structure does not favor certain categories of market participants in a manner that would impose an undue burden on competition; rather, the allocation reflects the network resources consumed by the various usage of market participants—lowest bandwidth consuming members pay the least, and highest bandwidth consuming members pay the most, particularly since higher bandwidth consumption translates to higher costs to the Exchange.

The Exchange also does not believe that the proposed rule change will result in any burden on inter-market competition that is not necessary or appropriate in furtherance of the purposes of the Act. As discussed above, options market participants are not forced to connect to all options exchanges. The Exchange operates in a highly competitive environment, and as discussed above, its ability to price access and connectivity is constrained by competition among exchanges and third parties. There are other options markets of which market participants may connect to trade options. There is also a possible range of alternative strategies, including routing to the exchange through another participant or market center or accessing the Exchange indirectly. For example, there are 15 other U.S. options exchanges, which the Exchange must consider in its pricing discipline in order to compete for market participants. In this competitive environment, market participants are free to choose which competing exchange or reseller to use to satisfy their business needs. As a result, the Exchange believes this proposed rule change permits fair competition among national securities exchanges. Accordingly, the Exchange does not believe its proposed fee changes impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

Regrettably, the Exchange believes that the application of the Guidance to date has adversely affected inter-market competition by impeding the ability of smaller, low cost exchanges to adopt or increase fees for their market data and access services (including connectivity and port products and services). Since the adoption of the Guidance, and even more so recently, it has become harder, particularly for smaller, low cost exchanges, to adopt or increase fees to generate revenue necessary to invest in systems, provide innovative trading products and solutions, and improve competitive standing to the benefit of the affected exchanges' market participants. Although the Staff Guidance has served an important policy goal of improving disclosures and requiring exchanges to justify that their market data and access fee proposals are fair and reasonable, it has also negatively impacted exchanges, and particularly many smaller, low cost exchanges, that seek to adopt or increase fees despite providing enhanced disclosures and rationale to support their proposed fee changes.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

As described above, the Exchange received one comment letter on the First Proposed Rule Change and four comment letters on the Second Proposed Rule Change.[65] The Exchange responded to the comment letters in the Third Proposed Rule Change and repeats its response in is filing. No comment letters were received in response to the Third Proposed Rule Change.

HMA Letter

The HMA Letter does not raise specific issues with the First or Second Proposed Rule Changes. Instead the HMA Letter is generally critical of the exchange fee filing process contained in Section 19(b)(3)(A)(ii) of the Act,[66] and Rule 19b–4(f)(2) thereunder,[67] and other exchanges' fee filings in recent years.

[61] *See id. See also* PHLX Rules, General 8: Connectivity.

[62] *See supra note 57.*

[63] *See* Amex Fee Schedule, Section IV.

[64] *See* Specialized Quote Interface Specification, Nasdaq PHLX, Nasdaq Options Market, Nasdaq BX Options, Version 6.5a, Section 2, Architecture (revised August 16, 2019), *available at http://www.nasdaqtrader.com/content/technicalsupport/specifications/TradingProducts/SQF6.5a-2019-Aug.pdf*. The Exchange notes that it is unclear whether the NASDAQ exchanges include connectivity to each matching engine for the single fee or charge per connection, per matching engine. *See also* NYSE Technology FAQ and Best Practices: Options, Section 5.1 (How many matching engines are used by each exchange?) (September 2020). The Exchange notes that NYSE provides a link to an Excel file detailing the number of matching engines per options exchange, with Arca and Amex having 19 and 17 matching engines, respectively.

[65] *See supra* note 9.

[66] 15 U.S.C. 78s(b)(3)(A)(ii).

[67] 17 CFR 240.19b–4.

The HMA Letter, however, applauds the level of disclosure the Exchange included in the First and Second Proposed Rule Changes and was supportive of the efforts made by the Exchange and its affiliates to provide transparency and justify their proposed fees. The HMA Letter specifically notes that:

''MIAX has repeatedly filed to change its connectivity fees in a way that will materially lower costs for many users, while increasing the costs for some of its heaviest of users. These filings have been withdrawn and repeatedly refiled. Each time, however, the filings contain significantly greater information about who is impacted and how than other filings that have been permitted to take effect without suspension. For example, MIAX detailed the associated projected revenues generated from the connectivity fees by user class, again in a clear attempt to comply with the SRO Fee Filing Guidance.'' [68]

As the HMA Letter notes, the Exchange refiled its same fee proposals to include significantly greater information about who is impacted and how, primarily at the request of the Commission Staff and in response to comments. The Exchange is again refiling its proposal to include more information surrounding the proposed fees and to respond to commenters.

SIG Letter 2

SIG Letter 2 argues that the Exchange, in withdrawing the First Proposed Rule Change and refiling the Second Proposed Rule Change, ''improperly circumvent[ed] the procedural protections embedded in Exchange Act Section 19(b)(3)(C), and subvert[ed] the balance of interests upheld therein.'' [69] SIG's assertion that the Exchange's entire reason for withdrawing and refiling was to subvert the protections of the Exchange Act are entirely without merit. The Exchange withdrew the First Proposed Rule Change and replaced it with the Second Proposed Rule Change in good faith to provide additional justification and explanation for the proposed fee changes and did so in compliance with the Exchange Act. The same is true in this filing, where the Exchange withdrew the Second Proposed Rule Change and submitted this filing to provide additional justification and explanation for the proposed fee changes and directly responds to certain points raised in SIG Letters 1, 2, and 3, as well as the SIFMA Letter submitted on the First and Second Proposed Rule Changes.

As SIG well knows, exchanges are able withdraw and refile various proposals (including fee changes and other rule changes) with the Commission for a multitude of reasons, not the least of which is to address feedback and comments from market participants and Commission Staff. The Exchange is well within the bounds of the Act and the rules and regulations thereunder to withdraw a proposed rule change and replace it with a new proposed rule change in good faith and to enhance the filing to ensure it complies with the requirements of the Act.

SIG Letters 1 and 3

As an initial matter, SIG Letter 1 cites Rule 700(b)(3) of the Commission's Rules of Fair Practice which places ''the burden to demonstrate that a proposed rule change is consistent with the Act on the self-regulatory organization that proposed the rule change'' and states that a ''mere assertion that the proposed rule change is consistent with those requirements . . . is not sufficient.'' [70] SIG Letter 1's assertion that the Exchange has not met this burden is without merit, especially considering the overwhelming amounts of revenue and cost information the Exchange included in the First and Second Proposed Rule Changes and this filing.

Until recently, the Exchange operated at a net annual loss since it launched operations in 2019.[71] As stated above, the Exchange believes that exchanges in setting fees of all types should meet very high standards of transparency to demonstrate why each new fee or fee increase meets the requirements of the Act that fees be reasonable, equitably allocated, not unfairly discriminatory, and not create an undue burden on competition among market participants. The Exchange believes this high standard is especially important when an exchange imposes various access fees for market participants to access an exchange's marketplace. The Exchange believes it has achieved this standard in this filing and in the First Proposed Rule Change, Second Proposed Rule Change. Similar justifications for the proposed fee change included in the First and Second Proposed Rule Changes, but also in this filing, were previously included in similar fee changes filed by the Exchange and its affiliates, MIAX and MIAX Pearl Options, and SIG did not submit a comment letter on those filings.[72] Those filings were not suspended by the Commission and continue to remain in effect. The justification included in each of the prior filings was the result of numerous withdrawals and re-filings of the proposals to address comments received from Commission Staff over many months. The Exchange and its affiliates have worked diligently with Commission Staff on ensuring the justification included in past fee filings fully support an assertion that those fee changes are consistent with the Act.[73] The Exchange leveraged its past work with Commission Staff to ensure the justification provided herein and in the First and Second Proposed Rule Changes include the same level of detail (or more) as the prior fee changes that survived Commission scrutiny. The Exchange's detailed disclosures in fee filings have also been applauded by one industry group which noted, ''[the Exchange's] filings contain significantly greater information about who is impacted and how than other filings

[73] *See, e.g.,* Securities Exchange Act Release No. 90196 (October 15, 2020), 85 FR 67064 (October 21, 2020) (SR–EMERALD–2020–11) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Its Fee Schedule To Adopt One-Time Membership Application Fees and Monthly Trading Permit Fees). *See* Securities Exchange Act Release Nos. 90601 (December 8, 2020), 85 FR 80864 (December 14, 2020) (SR–EMERALD–2020–18) (re-filing with more detail added in response to Commission Staff's feedback and after withdrawing SR–EMERALD–2020–11); *and* 91033 (February 1, 2021), 86 FR 8455 (February 5, 2021) (SR–EMERALD–2021–03) (re-filing with more detail added in response to Commission Staff's feedback and after withdrawing SR–EMERALD–2020–18). The Exchange initially filed a proposal to remove the cap on the number of additional Limited Service MEO Ports available to Members on April 9, 2021. *See* SR–PEARL–2021–17. On April 22, 2021, the Exchange withdrew SR–PEARL–2021–17 and refiled that proposal (without increasing the actual fee amounts) to provide further clarification regarding the Exchange's revenues, costs, and profitability any time more Limited Service MEO Ports become available, in general, (including information regarding the Exchange's methodology for determining the costs and revenues for additional Limited Service MEO Ports). *See* SR–PEARL–2021–20. On May 3, 2021, the Exchange withdrew SR–PEARL–2021–20 and refiled that proposal to further clarify its cost methodology. *See* SR–PEARL–2021–22. On May 10, 2021, the Exchange withdrew SR–PEARL–2021–22 and refiled SR–PEARL–2021–23. *See* Securities Exchange Act Release No. 91858 (May 12, 2021), 86 FR 26967 (May 18, 2021) (SR–PEARL–2021–23).

that have been permitted to take effect without suspension.'' [74] That same commenter also noted their ''worry that the Commission's process for reviewing and evaluating exchange filings may be inconsistently applied.'' [75]

Therefore, a finding by the Commission that the Exchange has not met its burden to show that the proposed fee change is consistent with the Act would be different than the Commission's treatment of similar past filings, would create further ambiguity regarding the standards exchange fee filings should satisfy, and is not warranted here.

In addition, the arguments in SIG Letter 1 do not support their claim that the Exchange has not met its burden to show the proposed rule change is consistent with the Act. Prior to, and after submitting the First Proposed Rule Change, the Exchange solicited feedback from its Members, including SIG. SIG relayed their concerns regarding the proposed change. The Exchange then sought to work with SIG to address their concerns and gain a better understanding of the access/connectivity/quoting infrastructure of other exchanges. In response, SIG provided no substantive suggestions on how to amend the First Proposed Rule Change to address their concerns and instead chose to submit three comment letters. One could argue that SIG is using the comment letter process not to raise legitimate regulatory concerns regarding the proposal, but to inhibit or delay proposed fee changes by the Exchange.

Nonetheless, the Exchange has enhanced its cost and revenue analysis and data in this Third [sic] Proposed Rule Change to further justify that the Proposed Access Fees are reasonable in accordance with the Commission Staff's Guidance. Among other things, these enhancements include providing baseline information in the form of data from the month before the Proposed Access Fees became effective.

The Exchange now responds to SIG remaining claims below. SIG Letter 3 first summarizes its arguments made in SIG Letters 1 and 2 and incorporates those arguments by reference. The Exchange responded to the arguments in SIG Letter 2 above. SIG Letter 3 incorporates the following arguments from SIG Letter 1, which the Exchange will first respond to in turn, below:

''(1) The prospect that a member may withdraw from the Exchanges if a fee is too costly is not a basis for asserting that the fee is reasonable; (2) profit margin comparisons do not support the Exchanges' claims that they will not realize a supracompetitive profit, the Exchanges' respective profit margins of 30% (for MIAX and Pearl) and 51% (for Emerald) in relation to connectivity fees are high in any event, and comparisons to competing exchanges' overall operating profit margins are an inapt ''apples-to-oranges'' comparison; (3) the Exchanges provide no support for their claim that their proposed tiered pricing structure is needed to encourage efficiency in connectivity usage; (4) the Exchanges provided no support for their claim that the tiered pricing structure allows them to better monitor connectivity usage, nor that this is an appropriate basis for the pricing structure in any event; (5) the Exchanges' claim that firms who purchase more 10Gb ULL lines generate ''higher'' costs is misleading, and they offered no support for this claim in any event; (6) no other exchange has tiered connectivity pricing; (7) the recoupment of investment for exchange infrastructure has no supporting nexus with the claim that the proposed fees are reasonable, equitably allocated, and not unfairly discriminatory; and (8) the recoupment of investment claim belies the Exchanges' claim of encouraging efficiency in connectivity usage.'' [76]

The Exchange's Examples of Members Terminating Their Exchange Access Shows That Members Have Choice Whether To Connect to an Exchange Based on Fees

SIG asserts that ''the prospect that a member may withdraw from the Exchanges if a fee is too costly is not a basis for asserting that the fee is reasonable.'' [77] SIG misinterprets the Exchange's argument here. The Exchange provided the examples of firms terminating access to certain markets due to fees to support its assertion that firms, including market makers, are not required to connect to all markets and may drop access if fees become too costly for their business models and alternative or substitute forms of connectivity are available to those firms who choose to terminate access. The Commission Staff Guidance also provides that ''[a] statement that substitute products or services are available to market participants in the relevant market (*e.g.,* equities or options) can demonstrate competitive forces if supported by evidence that substitute products or services exist.'' [78] Nonetheless, the Third [sic] Proposed Rule Change no longer makes this assertion as a basis for the proposed fee change and, therefore, the Exchange believes it is not necessary to respond to this portion of SIG Letters 1 and 3.

The Proposed Fees Will Not Result in Excessive Pricing or Supra-Competitive Profit

Next, SIG asserts that the Exchange's ''profit margin comparisons do not support the Exchange's claims that they will not realize a supracompetitive profit,'' that ''the Exchanges' respective profit margins of 30% (for MIAX and Pearl) and 51% (for Emerald) in relation to connectivity fees are high in any event,'' and ''comparisons to competing exchanges' overall operating profit margins are an inapt 'apples-to-oranges' comparison.''

The Exchange has provided ample data that the proposed fees would not result in excessive pricing or a supra-competitive profit. In this Third [sic] Proposed Rule Change, the Exchange no longer utilizes a comparison of its profit margin to that of other options exchanges as a basis that the Proposed Access Fees are reasonable. Rather, the Exchange has enhanced its cost and revenue analysis and data in this Third [sic] Proposed Rule Change to further justify that the Proposed Access Fees are reasonable in accordance with the Commission Staff's Guidance. Therefore, the Exchange believes it is no longer necessary to respond to this portion of SIG Letters 1 and 3.

The Proposed Tiered Pricing Structure Is Not Unfairly Discriminatory

SIG challenges the proposed fees by arguing that ''the Exchange[ ] provide[s] no support for [its] claim that [the] proposed tiered pricing structure is needed to encourage efficiency in connectivity usage and the Exchange[ ] provided no support for [the] claim that the tiered pricing structure allows them to better monitor connectivity usage, nor that this is an appropriate basis for the pricing structure in any event.'' The Exchange provided additional justification to support that the Proposed Access Fees are equitable and not unfairly discriminatory above in response to SIG's assertions.

Firms That Purchase More 10Gb ULL Generate Higher Exchange Costs

SIG argues that ''the Exchanges' claim that firms who purchase more 10Gb ULL lines generate 'higher' costs is misleading,'' and that the Exchange has ''offered no support for this claim in any event.'' As described above, the Exchange sought to design the proposed tiered-pricing structure to set the amount of the fees to relate to the number of connections a firm purchases and the Exchange believes it provided

[74] *See* HMA Letter, *supra* note 9.

[75] *Id.* (providing examples where non-transaction fee filings by other exchanges have been permitted to remain effective and not suspended by the Commission despite less disclosure and justification).

[76] *See* SIG Letter 3, *supra* note 9.

[77] *Id.*

[78] *See* Guidance, *supra* note 23.

ample justification for the proposed tiered-pricing structure in the First and Second Proposed Rule Changes. Nonetheless, the Exchange provides additional justification to support that the Proposed Access Fees are equitable and not unfairly discriminatory above in response to SIG's assertions.

The Proposed Tiered-Pricing Structure for 10Gb ULL Connectivity Will Provide Cost Savings for the Majority of Exchange Members

The SIG Letter incorrectly asserts that no other exchange has tiered connectivity pricing. Numerous other exchanges provide tiered fee structures for various other types of access to their platforms, including trading permits and ports.[79] The Exchange provided adequate evidence that most firms would incur cost savings under the Proposed Access Fees in the First and Second Proposed Rule Changes and this filing. Nonetheless, the Exchange believes it provided additional justification to support that the Proposed Access Fees are equitable and not unfairly discriminatory above in response to SIG's assertions.

Recoupment of Exchange Infrastructure Costs

Nowhere in this proposal or in the First Proposed Fee change did the Exchange assert that it benefits competition to allow a new exchange entrant to recoup their infrastructure costs. Rather, the Exchange asserts above that its ''proposed fees are reasonable, equitably allocated and not unfairly discriminatory because the Exchange, and its affiliates, are still recouping the initial expenditures from building out their systems while the legacy exchanges have already paid for and built their systems.'' The Exchange no longer makes this assertion in this filing and, therefore, does not believe is it necessary to respond to SIG's assertion here.

SIFMA Letter

In sum, the SIFMA Letter asserts that the Exchange has failed to demonstrate that the Proposed Access Fees are reasonable for three reasons:

(i) ''The Exchanges' ''platform competition'' argument that competition for order flow constrains pricing for market data or other products and services exclusively offered by an exchange does not demonstrate that the fees are reasonable.''

(ii) ''. . . order flow competition alone between exchanges does not demonstrate that the fees for the products and services subject to the Proposal are reasonable.''

(iii) ''the Exchanges' argument that the products and services subject to the Proposals are optional does not reflect marketplace reality, nor does it demonstrate that the proposed fees are reasonable.''

The Exchange responds to each of SIFMA's challenges in turn below.

The Exchange Never Set Forth a ''Platform Competition'' Argument

The SIFMA Letter asserts that the Exchange's ''platform competition'' argument that competition for order flow constrains pricing for market data or other products and services exclusively offered by an exchange does not demonstrate that the fees are reasonable.'' [80] The Exchange does not believe it is necessary to respond to this assertion because it has never set forth a ''platform competition'' [81] argument to justify the Proposed Access Fees in the First or Second Proposed Rule Change nor does it do so in this filing.

The Exchange Is Not Arguing That Order Flow Competition Alone Demonstrates That the Proposed Fees Are Reasonable

The SIFMA Letter asserts that ''order flow competition alone between exchanges does not demonstrate that the fees for the products and services subject to the Proposal are reasonable.'' [82] The Exchange never directly asserted in the First or Second Proposed Rule Changes, nor does it do so in this filing, that order flow competition, alone, demonstrated that the Proposed Access Fees are reasonable and has removed any language that could imply this argument from this filing.

Other SIFMA Assertions

SIFMA also challenges or asserts: (i) The substitutability or optionality of 10Gb ULL connections, (ii) whether the Exchange has shown that the fees are equitable and non-discriminatory; (iii) that a tiered pricing structure will impose higher cost on all market participants; (iv) that a tiered pricing structure will encourage market participants to be more economical with the usage; (v) greater number of connections use greater Exchange resources; and (vi) that the Exchange has not provided extensive information regarding its cost data and how it determined it cost analysis. The Exchange believes that these assertions by SIFMA basically echo assertions made in SIG Letters 1 and 3 and that it provided a response to these assertions under its response to SIG above or in provided enhanced transparency and justification in this filing.

III. Suspension of the Proposed Rule Change

Pursuant to Section 19(b)(3)(C) of the Act,[83] at any time within 60 days of the date of filing of a proposed rule change pursuant to Section 19(b)(1) of the Act,[84] the Commission summarily may temporarily suspend the change in the rules of a self-regulatory organization (''SRO'') if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. As discussed below, the Commission believes a temporary suspension of the proposed rule change is necessary and appropriate to allow for additional analysis of the proposed rule change's consistency with the Act and the rules thereunder.

As the Exchange further details above, the Exchange first filed a proposed rule change proposing fee changes as proposed herein on July 30, 2021, with the proposed fee changes effective beginning August 1, 2021. That proposal, SR–EMERALD–2021–23, was published for comment in the **Federal Register** on August 17, 2021.[85] On September 24, 2021 the Exchange withdrew SR–EMERALD–2021–23 and filed a proposed rule change proposing fee changes as proposed herein. That proposal, SR–EMERALD–2021–29, was

[79] *See* Cboe Exchange, Inc. Fee Schedule, Logical Connectivity Fees ($750 per port per month for the first 5 BOE/FIX Logical Ports and $800 per port per month for each port over 5; $1,500 per port per month for the first 5 BOE Bulk Logical Ports, $2,500 per port per month for ports 6–30, and $3,000 per port per month for each port over 30); Cboe BXZ Exchange, Inc. Options Fee Schedule, Options Logical Port Fees, Ports with Bulk Quoting Capabilities ($1,500 per port per month for the first and second ports, $2,500 per port per month for three or more); Nasdaq Stock Market LLC, Options 7, Pricing Schedule, Section 3 ($1,500 per port per month for the first 5 SQF ports; $1,000 per port per month for SQF ports 15–20; and $500 per port per month for all SQF ports over 21); NYSE American Options Fee Schedule, Section V.A., Port Fees and NYSE Arca Options Fee Schedule, Port Fees (both charging $450 per port for order/quote entry ports 1–40 and $150 per port for ports 41 and greater).

[80] *See* SIFMA Letter, *supra* note 9.

[81] Pursuant to the Guidance, ''platform theory generally asserts that when a business offers facilities that bring together two or more distinct types of customers, it is the overall return of the platform, rather than the return of any particular fees charged to a type of customer, that should be used to assess the competitiveness of the platform's market.'' *See* Guidance, *supra* note 23.

[82] *See* SIFMA Letter, *supra* note 9.

[83] 15 U.S.C. 78s(b)(3)(C).

[84] 15 U.S.C. 78s(b)(1).

[85] *See* Securities Exchange Act Release No. 92645 (August 11, 2021), 86 FR 46048 (August 17, 2021) (SR–EMERALD–2021–23). The Commission received one comment letter on that proposal. Comment for SR–EMERALD–2021–23 can be found at: *https://www.sec.gov/comments/sr-emerald-2021-23/sremerald202123.htm.*

published for comment in the **Federal Register** on October 4, 2021.[86] The Commission received four comment letters from three separate commenters on SR–EMERALD–2021–29.[87] On November 22, 2021, pursuant to Section 19(b)(3)(C) of the Act, the Commission: (1) Temporarily suspended the proposed rule change; and (2) instituted proceedings to determine whether to approve or disapprove the proposed rule change.[88] On December 1, 2021, the Exchange withdrew SR–EMERALD–2021–29 and filed a proposed rule change proposing fee changes as proposed herein. That filing, SR–EMERALD–2021–42,[89] was published for comment in the **Federal Register** on December 20, 2021.[90] On January 27, 2022, pursuant to Section 19(b)(3)(C) of the Act, the Commission: (1) Temporarily suspended the proposed rule change (SR–EMERALD–2021–42) and (2) instituted proceedings to determine whether to approve or disapprove the proposal.[91] On February 1, 2022, the Exchange withdrew SR–EMERALD–2021–42 and filed the instant filing, which is substantially similar.

When exchanges file their proposed rule changes with the Commission, including fee filings like the Exchange's present proposal, they are required to provide a statement supporting the proposal's basis under the Act and the rules and regulations thereunder applicable to the exchange.[92] The instructions to Form 19b–4, on which exchanges file their proposed rule changes, specify that such statement ''should be sufficiently detailed and specific to support a finding that the proposed rule change is consistent with [those] requirements.'' [93]

Among other things, exchange proposed rule changes are subject to Section 6 of the Act, including Sections 6(b)(4), (5), and (8), which requires the rules of an exchange to: (1) Provide for the equitable allocation of reasonable fees among members, issuers, and other persons using the exchange's facilities; [94] (2) perfect the mechanism of a free and open market and a national market system, protect investors and the public interest, and not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers; [95] and (3) not impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.[96]

In temporarily suspending the Exchange's fee change, the Commission intends to further consider whether the proposal to modify fees for certain connectivity options and implement a tiered pricing fee structure is consistent with the statutory requirements applicable to a national securities exchange under the Act. In particular, the Commission will consider whether the proposed rule change satisfies the standards under the Act and the rules thereunder requiring, among other things, that an exchange's rules provide for the equitable allocation of reasonable fees among members, issuers, and other persons using its facilities; not permit unfair discrimination between customers, issuers, brokers or dealers; and do not impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.[97]

Therefore, the Commission finds that it is appropriate in the public interest, for the protection of investors, and otherwise in furtherance of the purposes of the Act, to temporarily suspend the proposed rule change.[98]

IV. Proceedings To Determine Whether To Approve or Disapprove the Proposed Rule Change

The Commission is instituting proceedings pursuant to Sections 19(b)(3)(C) [99] and 19(b)(2)(B) [100] of the Act to determine whether the Exchange's proposed rule change should be approved or disapproved. Institution of such proceedings is appropriate at this time in view of the legal and policy issues raised by the proposed rule change. Institution of proceedings does not indicate that the Commission has reached any conclusions with respect to any of the issues involved. Rather, as described below, the Commission seeks and encourages interested persons to provide comments on the proposed rule change to inform the Commission's analysis of whether to approve or disapprove the proposed rule change.

Pursuant to Section 19(b)(2)(B) of the Act,[101] the Commission is providing notice of the grounds for possible disapproval under consideration. The Commission is instituting proceedings to allow for additional analysis of whether the Exchange has sufficiently demonstrated how the proposed rule change is consistent with Sections 6(b)(4),[102] 6(b)(5),[103] and 6(b)(8) [104] of the Act. Section 6(b)(4) of the Act requires that the rules of a national securities exchange provide for the equitable allocation of reasonable dues, fees, and other charges among its members and issuers and other persons using its facilities. Section 6(b)(5) of the Act requires that the rules of a national securities exchange be designed, among other things, to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system and, in general, to protect investors and the public interest, and not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers. Section 6(b)(8) of the Act requires that the rules of a national securities exchange not impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

The Commission asks that commenters address the sufficiency of the Exchange's statements in support of the proposal, in addition to any other comments they may wish to submit about the proposed rule change. In particular, the Commission seeks comment on the following aspects of the proposal and asks commenters to submit data where appropriate to support their views:

[103] 15 U.S.C. 78f(b)(5).

[104] 15 U.S.C. 78f(b)(8).

1. *Cost Estimates and Allocation.* The Exchange states that it is not asserting that the Proposed Access Fees are constrained by competitive forces, but rather set forth a ''cost-plus model,'' employing a ''conservative methodology'' that ''strictly considers only those costs that are most clearly directly related to the provision and maintenance of 10Gb ULL connectivity to estimate such costs.'' [105] Setting forth its costs in providing 10Gb ULL connectivity, and as summarized in greater detail above, the Exchange projects $7.2 million in aggregate annual estimated costs for 2021 as the sum of: (1) $1.7 million in third-party expenses paid in total to Equinix (62% of the total applicable expense) for data center services; Zayo Group Holdings, for network services (62% of the total applicable expense); SFTI for connectivity support, Thompson Reuters, NYSE, Nasdaq, and Internap and others (89% of the total applicable expense) for content, connectivity services, and infrastructure services; and various other hardware and software providers (51% of the total applicable expense) supporting the production environment, and (2) $5.5 million in internal expenses, allocated to (a) employee compensation and benefit costs ($3.2 million, approximately 33% of the Exchange's total applicable employee compensation and benefits expense); (b) depreciation and amortization ($2 million, approximately 63% of the Exchange's total applicable depreciation and amortization expense); and (c) occupancy costs ($0.3 million, approximately 53% of the Exchange's total applicable occupancy expense). Do commenters believe that the Exchange has provided sufficient detail about how it determined which costs are most clearly directly associated with providing and maintaining 10Gb ULL connectivity? The Exchange describes a ''proprietary'' process involving all Exchange department heads, including the finance department and numerous meetings between the Exchange's Chief Information Officer, Chief Financial Officer, Head of Strategic Planning and Operations, Chief Technology Officer, various members of the Legal Department, and other group leaders, but do not specify further what principles were applied in making these determinations or arriving at particular allocations. Do commenters believe further explanation is necessary? For employee compensation and benefit costs, for example, the Exchange calculated an allocation of employee time in several departments, including Technology, Back Office, Systems Operations, Networking, Business Strategy Development, Trade Operations, Finance, and Legal, but do not provide the job titles and salaries of persons whose time was accounted for, or explain the methodology used to determine how much of an employee's time is devoted to that specific activity. What are commenters' views on whether the Exchange has provided sufficient detail on the identity and nature of services provided by third parties? Across all of the Exchange's projected costs, what are commenters' views on whether the Exchange has provided sufficient detail on the elements that go into connectivity costs, including how shared costs are allocated and attributed to connectivity expenses, to permit an independent review and assessment of the reasonableness of purported cost-based fees and the corresponding profit margin thereon? Should the Exchange be required to identify for what services or fees the remaining percentage of un-allocated expenses are attributable to (*e.g.,* what services or fees are associated with the 37% of applicable depreciation and amortization expenses the Exchange does not allocate to the Proposed Access Fees)? Do commenters believe that the costs projected for 2021 are generally representative of expected costs going forward (to the extent commenters consider 2021 to be a typical or atypical year), or should an exchange present an estimated range of costs with an explanation of how profit margins could vary along the range of estimated costs? Should the Exchange use cost projections or actual costs estimated for 2021 in a filing made in 2022, or make cost projections for 2022?

2. *Revenue Estimates and Profit Margin Range.* The Exchange provides a single monthly revenue figure as the basis for calculating the profit margin of 47%. Do commenters believe this is reasonable? If not, why not? The Exchange states that their proposed fee structure is ''designed to cover its costs with a limited return in excess of such costs,'' and that ''revenue and associated profit margin [ ] are not solely intended to cover the costs associated with providing access services subject to the Proposed Access Fees,'' and believes that a 47% margin is a limited return over such costs.[106] The profit margin is also dependent on the accuracy of the cost projections which, if inflated (intentionally or unintentionally), may render the projected profit margin meaningless. The Exchange acknowledges that this margin may fluctuate from month to month due to changes in the number of connections purchased, and that costs may increase. They also state that the number of connections has not materially changed over the prior months and so the months that the Exchange has used as a baseline to perform its assessment are representative of reasonably anticipated costs and expenses.[107] The Exchange does not account for the possibility of cost decreases, however. What are commenters' views on the extent to which actual costs (or revenues) deviate from projected costs (or revenues)? Do commenters believe that the Exchange's methodology for estimating the profit margin is reasonable? Should the Exchange provide a range of profit margins that they believe are reasonably possible, and the reasons therefor?

3. *Reasonable Rate of Return.* Do commenters agree with the Exchange that its expected 47% profit margin would constitute a reasonable rate of return over cost for 10GB ULL connectivity? If not, what would commenters consider to be a reasonable rate of return and/or what methodology would they consider to be appropriate for determining a reasonable rate of return? What are commenters' views regarding what factors should be considered in determining what constitutes a reasonable rate of return for 10Gb ULL connectivity fees? Do commenters believe it relevant to an assessment of reasonableness that the Exchange's proposed fees for 10Gb ULL connections, even at the highest tier, are lower than those of other options exchanges to which the Exchange has compared the Proposed Access Fees? What are commenters' views regarding the difference in profit margins between the Exchange, at 47%, and that of its affiliates (MIAX and PEARL Options), at 21.3%? Do commenters believe that this profit margin difference between affiliates for the same Proposed Access Fees is appropriate given the Exchange's Proposed Access Fees are not for shared 10Gb ULL connectivity; why or why not? Should an assessment of reasonable rate of return include consideration of factors other than costs; and if so, what factors should be considered, and why?

4. *Periodic Reevaluation.* The Exchange has addressed whether it believes a material deviation from the anticipated profit margin would warrant the need to make a rule filing pursuant to Section 19(b) of the Act to increase or decrease the fees accordingly, stating that ''[a]ny requirement that an exchange should conduct a periodic re-evaluation on a set timeline of its cost justification and amend its fees accordingly should be established by the Commission holistically, applied to all exchanges and not just through pending fee proposals, such as this filing,'' and that ''[i]n order to be fairly applied, such a mandate should be applied to existing access fees as well.'' [108] In light of the impact that the number of subscribers has on connectivity profit margins, and the potential for costs to decrease (or increase) over time, what are commenters' views on the need for exchanges to commit to reevaluate, on an ongoing and periodic basis, their cost-based connectivity fees to ensure that they stay in line with their stated profitability target and do not become unreasonable over time, for example, by failing to adjust for efficiency gains, cost increases or decreases, and changes in subscribers? How formal should that process be, how often should that reevaluation occur, and what metrics and thresholds should be considered? How soon after a new connectivity fee change is implemented should an exchange assess whether its subscriber estimates were accurate and at what threshold should an exchange commit to file a fee change if its estimates were inaccurate? Should an initial review take place within the first 30 days after a connectivity fee is implemented? 60 days? 90 days? Some other period?

5. *Tiered Structure for 10Gb ULL Connections.* The Exchange states that the proposed tiered fee structure is designed to decrease the monthly fees for those firms that connect to the Exchange as part of their best execution obligations and generally tend to send the least amount of orders and messages over those connections, because such firms generally only purchase a limited number of

[105] *See supra* Section II.A.2.

[106] *See supra* Section II.A.2.

[107] *See id.*

[108] *See supra* Section II.A.2.

connections, and also ''generally send fewer orders and messages over those connections, resulting in less strain on Exchange resources.'' [109] According to the Exchange, 80% of firms have not experienced a fee increase as a result of the tiered structure. However, firms that purchase five or more connections will see a 30% increase in their fees for each connection above the fourth. Regarding these firms, the Exchange has not asserted that it is 30% more costly for the Exchange to offer such connections to these firms, but instead argues generally that these firms are ''likely'' to result in greater expenditure of Exchange resources and increased cost to the Exchange and that as the number of connections an entity has increases, certain other costs incurred by the Exchange that are correlated to, though not directly affected by, connection costs (*e.g.,* storage costs, surveillance costs, service expenses) also increase.[110] Do commenters believe that the price differences between the tiers are supported by the Exchange's assertions that it set the level of its proposed fees in a manner that it is equitable and not unfairly discriminatory? Do commenters believes the Exchange should demonstrate how the proposed tiered fee levels correlate with tiered costs (*e.g.,* by providing cost information broken down by tier, messaging and order volumes through the additional 10Gb ULL connections by tier, and/or mid-month add/drop of connection rates by tier)? Do commenters believe that the Exchange should provide more detail about the costs that firms purchasing three or more or five or more 10Gb ULL connections impose on the Exchange, to permit an assessment of the Exchange's statement that the Proposed Access Fees ''do not depend on any distinction between Members and non-Members because they are solely determined by the individual Members' or non-Members' business needs and its impact on Exchange resources?'' [111]

Under the Commission's Rules of Practice, the ''burden to demonstrate that a proposed rule change is consistent with the Exchange Act and the rules and regulations issued thereunder . . . is on the [SRO] that proposed the rule change.'' [112] The description of a proposed rule change, its purpose and operation, its effect, and a legal analysis of its consistency with applicable requirements must all be sufficiently detailed and specific to support an affirmative Commission finding,[113] and any failure of an SRO to provide this information may result in the Commission not having a sufficient basis to make an affirmative finding that a proposed rule change is consistent with the Act and the applicable rules and regulations.[114] Moreover, ''unquestioning reliance'' on an SRO's representations in a proposed rule change would not be sufficient to justify Commission approval of a proposed rule change.[115]

The Commission believes it is appropriate to institute proceedings to allow for additional consideration and comment on the issues raised herein, including as to whether the proposal is consistent with the Act, any potential comments or supplemental information provided by the Exchange, and any additional independent analysis by the Commission.

V. Commission's Solicitation of Comments

The Commission requests written views, data, and arguments with respect to the concerns identified above as well as any other relevant concerns. In particular, the Commission invites the written views of interested persons concerning whether the proposal is consistent with Sections 6(b)(4), 6(b)(5), and 6(b)(8), or any other provision of the Act, or the rules and regulations thereunder. The Commission asks that commenters address the sufficiency and merit of the Exchange's statements in support of the proposal, in addition to any other comments they may wish to submit about the proposed rule change. Although there do not appear to be any issues relevant to approval or disapproval that would be facilitated by an oral presentation of views, data, and arguments, the Commission will consider, pursuant to Rule 19b-4, any request for an opportunity to make an oral presentation.[116]

Interested persons are invited to submit written data, views, and arguments regarding whether the proposal should be approved or disapproved by March 15, 2022. Any person who wishes to file a rebuttal to any other person's submission must file that rebuttal by March 29, 2022.

Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File No. SR–EMERALD–2022–04 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–EMERALD–2022–04. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–EMERALD–2022–04 and should be submitted on or before March 15, 2022. Rebuttal comments should be submitted by March 29, 2022.

VI. Conclusion

It is therefore ordered, pursuant to Section 19(b)(3)(C) of the Act,[117] that File Numbers SR–EMERALD–2022–04 be, and hereby is, temporarily suspended. In addition, the Commission is instituting proceedings to determine whether the proposed rule change should be approved or disapproved.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–94260; File No. SR–EMERALD–2022–05]

Self-Regulatory Organizations; MIAX Emerald, LLC; Notice of Filing of a Proposed Rule Change To Amend Its Fee Schedule To Adopt a Tiered-Pricing Structure for Additional Limited Service MIAX Emerald Express Interface Ports; Suspension of and Order Instituting Proceedings To Determine Whether To Approve or Disapprove the Proposed Rule Change

February 15, 2022.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on February 1, 2022, MIAX Emerald, LLC (''MIAX Emerald'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') a proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons and is, pursuant to Section 19(b)(3)(C) of the Act, hereby: (i) Temporarily suspending the rule change; and (ii) instituting proceedings to determine whether to approve or disapprove the proposed rule change.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange is filing a proposal to amend the MIAX Emerald Fee Schedule (the ''Fee Schedule'') to amend certain port fees.

The text of the proposed rule change is available on the Exchange's website at *http://www.miaxoptions.com/rule-filings,* at MIAX's principal office, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV [sic] below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend the Fee Schedule to adopt a tiered-pricing structure for additional Limited Service MIAX Emerald Express Interface (''MEI'') Ports [3] available to Market Makers.[4] The Exchange believes a tiered-pricing structure will encourage Market Makers to be more efficient and economical when determining how to connect to the Exchange. This should also enable the Exchange to better monitor and provide access to the Exchange's network to ensure sufficient capacity and headroom in the System.[5]

The Exchange initially filed the proposed fee changes on August 2, 2021, with the changes being immediately effective.[6] The First Proposed Rule Change was published for comment in the **Federal Register** on August 19, 2021.[7] The Commission received one comment letter on the First Proposed Rule Change.[8] The Exchange withdrew the First Proposed Rule Change on September 27, 2021 and resubmitted its proposal (''Second Proposed Rule Change'').[9] On September 28, 2021, the Exchange withdrew the Second Proposed Rule Change and re-submitted the proposal on September 28, 2021, with the proposed fee changes being immediately effective (''Third Proposed Rule Change'').[10] The Third Proposed Rule Change was published for comment in the **Federal Register** on October 5, 2021.[11] The Third Proposed Rule Change provided additional justification for the proposed fee changes and addressed certain points raised in the single comment letter that was submitted on the First Proposed Rule Change. The Commission received four comment letters from three separate commenters on the Third Proposed Rule Change.[12] The Commission suspended the Third Proposed Rule Change on November 22, 2021.[13] The Exchange withdrew the Third Proposed Rule Change on December 1, 2021 and submitted a revised proposal for immediate effectiveness (''Fourth Proposed Rule Change'').[14] The Fourth Proposed Rule Change meaningfully attempted to address issues or questions that have been raised by providing additional justification and explanation for the proposed fee changes and directly respond to the points raised in

[118] 17 CFR 200.30–3(a)(12), (57) and (58).

[12] *See* letters from Richard J. McDonald, SIG, to Vanessa Countryman, Secretary, Commission, dated October 1, 2021 (''SIG Letter 2'') and October 26, 2021 (''SIG Letter 3''); *and* Ellen Green, Managing Director, Equity and Options Market Structure, Securities Industry and Financial Markets Association (''SIFMA''), to Vanessa Countryman, Secretary, Commission, dated November 26, 2021 (''SIFMA Letter'').

The Exchange notes that the Healthy Markets Association (''HMA'') submitted a comment letter on a related filing to amend fees for 10Gb ULL connections, on which SIG Letters 1, 2, and 3 as well as the SIFMA Letter also commented. *See* letter from Tyler Gellasch, Executive Director, HMA (''HMA''), to Hon. Gary Gensler, Chair, Commission, dated October 29, 2021 (commenting on SR–CboeEDGA–2021–017, SR–CboeBYX–2021–020, SR–Cboe–BZX–2021–047, SR–CboeEDGX–2021–030, SR–MIAX–2021–41, SR–PEARL–2021–45, and SR–EMERALD–2021–29 and stating that ''MIAX has repeatedly filed to change its connectivity fees in a way that will materially lower costs for many users, while increasing the costs for some of its heaviest of users. These filings have been withdrawn and repeatedly refiled. *Each time, however, the filings contain significantly greater information about who is impacted and how than other filings that have been permitted to take effect without suspension*'') (*emphasis added*) (''HMA Letter'').

[13] *See* Securities Exchange Act Release No. 93644 (November 22, 2021), 86 FR 67745 (November 29, 2021).

[14] *See* Securities Exchange Act Release No. 93772 (December 14, 2021), 86 FR 71965 (December 20, 2021) (SR–EMERALD–2021–43).

SIG Letters 1, 2, and 3, as well as the SIFMA Letter submitted on the First and Second [sic] Proposed Rule Changes,[15] and feedback provided by Commission Staff during a telephone conversation on November 18, 2021 relating to the Third Proposed Rule Change. The Fourth Proposed Rule Change was published for comment in the **Federal Register** on December 20, 2021.[16] The Exchange receive no comment letters on the Fourth Proposed Rule Change. The Commission suspended the Fourth Proposed Rule Change on January 27, 2022.[17] The Exchange withdrew the Fourth Proposed Rule Change on February 1, 2022 and now submits this proposal for immediate effectiveness (''Fifth Proposed Rule Change''). This Fifth Proposed Rule Change provides additional justification and explanation for the proposed fee changes.

Additional Limited Service MEI Port Tiered-Pricing Structure

The Exchange proposes to amend the fees for additional Limited Service MEI Ports. Currently, the Exchange allocates two (2) Full Service MEI Ports[18] and two (2) Limited Service MEI Ports[19] per matching engine[20] to which each Market Maker connects. Market Makers may also request additional Limited Service MEI Ports for each matching engine to which they connect. The Full Service MEI Ports, Limited Service MEI Ports and the additional Limited Service MEI Ports all include access to the Exchange's primary and secondary data centers and its disaster recovery center. Market Makers may request additional Limited Service MEI Ports. Prior to the First Proposed Rule Change, Market Makers were assessed a $100 monthly fee for each additional Limited Service MEI Port for each matching engine.

The Exchange now proposes to move from a flat monthly fee per additional Limited Service MEI Port for each matching engine to a tiered-pricing structure for additional Limited Service MEI Ports for each matching engine under which the monthly fee would vary depending on the number of additional Limited Service MEI Ports the Market Maker elects to purchase. Specifically, the Exchange will continue to provide the first and second additional Limited Service MEI Ports for each matching engine free of charge, as described above, per the initial allocation of Limited Service MEI Ports that Market Makers receive. The Exchange now proposes the following tiered-pricing structure: (i) The third and fourth additional Limited Service MEI Ports for each matching engine will increase from the current flat monthly fee of $100 to $200 per port; (ii) the fifth and sixth additional Limited Service MEI Ports for each matching engine will increase from the current flat monthly fee of $100 to $300 per port; and (iii) the seventh to the twelfth additional Limited Service MEI Ports will increase from the current monthly flat fee of $100 to $400 per port (collectively, the ''Proposed Access Fees'').

The Exchange believes the other exchanges' port fees are a useful example of alternative approaches to providing and charging for port access and provides the below table for comparison purposes only to show how its proposed fees compare to fees currently charged by other options exchanges for similar port access. As shown by the below table, the Exchange's proposed highest tier is still less than fees charged for similar port access provided by other options exchanges.

Exchange	Type of port	Monthly fee (per port)
MIAX Emerald (as proposed)	Additional Limited Service MEI Port	1–2 ports. FREE (not changed in this proposal), 3–4 ports. $200, 5–6 ports. $300, 7–12 ports. $400.
NYSE American, LLC (''Amex'')[21]	Order/Quote Entry Port	$450.
NYSE Arca, Inc. (''Arca'')[22]	Order/Quote Entry Port	$450.
The NASDAQ Stock Market LLC (''NASDAQ'')[23].	SQF Port	1–5 ports. $1,500.00, 6–20 ports. $1,000.00, 21 or more ports. $500.

2. Statutory Basis

The Exchange believes that its proposal to amend its Fee Schedule is consistent with Section 6(b) of the Act[24] in general, and furthers the objectives of Section 6(b)(4) of the Act[25] in particular, in that it provides for the equitable allocation of reasonable dues, fees and other charges among Exchange Members and issuers and other persons using any facility or system which the Exchange operates or controls. The Exchange also believes the proposal furthers the objectives of Section 6(b)(5) of the Act[26] in that it is designed to promote just and equitable principles of trade, remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general protect investors

[15] The Exchange notes that while the HMA Letter applauds the level of disclosure the Exchange included in the First and Second [sic] Proposed Rule Changes, the HMA Letter does not raise specific issues with the First or Second [sic] Proposed Rule Changes. Rather, it references the Exchange's proposals by way of comparison to show the varying levels of transparency in exchange fees filings and recommends changes to the Commission's review process of exchange fee filings generally. Therefore, the Exchange does not feel it is necessary to address the issues raised in the HMA Letter.

[16] *See supra* note 14.

[17] *See* Securities Exchange Act Release No. 94087 (January 27, 2022) (Suspension of and Order Instituting Proceedings to Determine Whether to Approve or Disapprove Proposed Rule Changes to Amend Fee Schedules to Adopt Tiered-Pricing Structures for Additional Limited Service MIAX and MIAX Emerald Express Interface Ports).

[18] ''Full Service MEI Ports'' means a port which provides Market Makers with the ability to send Market Maker simple and complex quotes, eQuotes, and quote purge messages to the MIAX Emerald System. Full Service MEI Ports are also capable of receiving administrative information. Market Makers are limited to two Full Service MEI Ports per Matching Engine. *See* the Definitions Section of the Fee Schedule.

[19] ''Limited Service MEI Ports'' means a port which provides Market Makers with the ability to send simple and complex eQuotes and quote purge messages only, but not Market Maker Quotes, to the MIAX Emerald System. Limited Service MEI Ports are also capable of receiving administrative information. Market Makers initially receive two Limited Service MEI Ports per Matching Engine. *See* the Definitions Section of the Fee Schedule.

[20] ''Matching Engine'' means a part of the MIAX Emerald electronic system that processes options orders and trades on a symbol-by-symbol basis. Some Matching Engines will process option classes with multiple root symbols, and other Matching Engines may be dedicated to one single option root symbol (for example, options on SPY may be processed by one single Matching Engine that is dedicated only to SPY). A particular root symbol may only be assigned to a single designated Matching Engine. A particular root symbol may not be assigned to multiple Matching Engines. *See* the Definitions Section of the Fee Schedule.

and the public interest and is not designed to permit unfair discrimination between customers, issuers, brokers and dealers.

On March 29, 2019, the Commission issued an Order disapproving a proposed fee change by the BOX Market LLC Options Facility to establish connectivity fees for its BOX Network (the ''BOX Order'').[27] On May 21, 2019, the Commission Staff issued guidance ''to assist the national securities exchanges and FINRA . . . in preparing Fee Filings that meet their burden to demonstrate that proposed fees are consistent with the requirements of the Securities Exchange Act.'' [28] Based on both the BOX Order and the Guidance, the Exchange believes that the Proposed Access Fees are consistent with the Act because they (i) are reasonable, equitably allocated, not unfairly discriminatory, and not an undue burden on competition; (ii) comply with the BOX Order and the Guidance; (iii) are supported by evidence (including comprehensive revenue and cost data and analysis) that they are fair and reasonable because they will not result in excessive pricing or supra-competitive profit; and (iv) utilize a cost-based justification framework that is substantially similar to a framework previously used by the Exchange, and its affiliates Miami International Securities Exchange, LLC (''MIAX'') and MIAX PEARL, LLC (''MIAX Pearl''), to amend other non-transaction fees.[29]

The Proposed Access Fees Will Not Result in a Supra-Competitive Profit

The Exchange believes that exchanges, in setting fees of all types, should meet very high standards of transparency to demonstrate why each new fee or fee amendment meets the requirements of the Act that fees be reasonable, equitably allocated, not unfairly discriminatory, and not create an undue burden on competition among market participants. The Exchange believes this high standard is especially important when an exchange imposes various access fees for market participants to access an exchange's marketplace. The Exchange deems ports to be access fees. It records these fees as part of its ''Access Fees'' revenue in its financial statements.

In the Guidance, the Commission Staff stated that, ''[a]s an initial step in assessing the reasonableness of a fee, staff considers whether the fee is constrained by significant competitive forces.'' [30] The Guidance further states that, ''. . . even where an SRO cannot demonstrate, or does not assert, that significant competitive forces constrain the fee at issue, a cost-based discussion may be an alternative basis upon which to show consistency with the Exchange Act.'' [31] In its Guidance, the Commission Staff further states that, ''[i]f an SRO seeks to support its claims that a proposed fee is fair and reasonable because it will permit recovery of the SRO's costs, or will not result in excessive pricing or supracompetitive profit, specific information, including quantitative information, should be provided to support that argument.'' [32] The Exchange does not assert that the Proposed Access Fees are constrained by competitive forces. Rather, the Exchange asserts that the Proposed Access Fees are reasonable because they will permit recovery of the Exchange's costs in providing access services to supply additional Limited Service MEI Ports and will not result in the Exchange generating a supra-competitive profit.

The Guidance defines ''supra-competitive profit'' as ''profits that exceed the profits that can be obtained in a competitive market.'' [33] The Commission Staff further states in the Guidance that ''the SRO should provide an analysis of the SRO's baseline revenues, costs, and profitability (before the proposed fee change) and the SRO's expected revenues, costs, and profitability (following the proposed fee change) for the product or service in question.'' [34] The Exchange provides this analysis below.

Based on this analysis, the Exchange believes the Proposed Access Fees are reasonable and do not result in a ''supra-competitive'' [35] profit. The Exchange believes that it is important to demonstrate that the Proposed Access Fees are based on its costs and reasonable business needs. The Exchange believes the Proposed Access Fees will allow the Exchange to offset expenses the Exchange has and will incur, and that the Exchange provides sufficient transparency (described below) into the costs and revenue underlying the Proposed Access Fees. Accordingly, the Exchange provides an analysis of its revenues, costs, and profitability associated with the Proposed Access Fees. This analysis includes information regarding its methodology for determining the costs and revenues associated with the Proposed Access Fees. As a result of this analysis, the Exchange believes the Proposed Access Fees are fair and reasonable as a form of cost recovery plus present the possibility of a reasonable return for the Exchange's aggregate costs of offering additional Limited Service MEI Port access to the Exchange.

The Proposed Access Fees are based on a cost-plus model. In determining the appropriate fees to charge, the Exchange considered its costs to provide port access, using what it believes to be a conservative methodology (*i.e.,* that strictly considers only those costs that are most clearly directly related to the provision and maintenance of additional Limited Service MEI Ports) to estimate such costs,[36] as well as the relative costs of providing and maintaining additional Limited Service MEI Ports, and set fees that are designed to cover its costs with a limited return in excess of such costs. However, as discussed more fully below, such fees may also result in the Exchange recouping less than all of its costs of providing and maintaining additional Limited Service MEI Ports because of the uncertainty of forecasting subscriber decision making with respect to firms' additional Limited Service MEI Port needs and the likely potential for increased costs to procure the third-party services described below.

To determine the Exchange's costs to provide access services associated with the Proposed Access Fees, the Exchange conducted an extensive cost review in which the Exchange analyzed nearly every expense item in the Exchange's general expense ledger to determine whether each such expense relates to the Proposed Access Fees, and, if such expense did so relate, what portion (or

[36] For example, the Exchange only included the costs associated with providing and supporting additional Limited Service MEI Ports and excluded from its cost calculations any cost not directly associated with providing and maintaining such ports. Thus, the Exchange notes that this methodology underestimates the total costs of providing and maintaining additional Limited Service MEI Ports.

percentage) of such expense actually supports access services associated with the Proposed Access Fees.

The Exchange also provides detailed information regarding the Exchange's cost allocation methodology—namely, information that explains the Exchange's rationale for determining that it was reasonable to allocate certain expenses described in this filing towards the cost to the Exchange to provide the access services associated with the Proposed Access Fees. The Exchange conducted a thorough internal analysis to determine the portion (or percentage) of each expense to allocate to the support of access services associated with the Proposed Access Fees. This analysis [37] included discussions with each Exchange department head to determine the expenses that support access services associated with the Proposed Access Fees. This included numerous meetings between the Exchange's Chief Information Officer, Chief Financial Officer, Head of Strategic Planning and Operations, Chief Technology Officer, various members of the Legal Department, and other group leaders. The Exchange reviewed each individual expense to determine if such expense was related to the Proposed Access Fees. Once the expenses were identified, the Exchange department heads, with the assistance of our internal finance department, reviewed such expenses holistically on an Exchange-wide level to determine what portion of that expense supports providing access services for the Proposed Access Fees. The sum of all such portions of expenses represents the total cost to the Exchange to provide access services associated with the Proposed Access Fees. For the avoidance of doubt, no expense amount was allocated twice.

The internal cost analysis conducted by the Exchange is a proprietary process that is designed to make a fair and reasonable assessment of costs and resources allocated to support the provision of access services associated with the Proposed Access Fees. The Exchange acknowledges that this assessment can only capture a moment in time and that costs and resource allocations may change. That is why the Exchange has historically, and on an ongoing basis, periodically revisits its costs and resource allocations to ensure it is appropriately allocating resources to properly provide services to the Exchange's constituents. Any requirement that an exchange should conduct a periodic re-evaluation on a set timeline of its cost justification and amend its fees accordingly should be established by the Commission holistically, applied to all exchanges and not just pending fee proposals such as this filing. In order to be fairly applied, such a mandate should be applied to existing access fees as well.

In accordance with the Guidance, the Exchange has provided sufficient detail to support a finding that the proposed fees are consistent with the Exchange Act. The proposal includes a detailed description of the Exchange's costs and how the Exchange determined to allocate those costs related to the proposed fees. In fact, the detail and analysis provided in this proposed rule change far exceed the level of disclosure provided in other exchange fee filings that have not been suspended by the Commission during its 60-day suspension period. A finding that this proposed rule change is inconsistent with the Exchange Act would run contrary to the Commission Staff's treatment of other recent exchange fee proposals that have not been suspended and remain in effect today.[38] For example, a proposed fee filing that closely resembles the Exchange's current filing was submitted in 2020 by the Cboe Exchange, Inc. (''Cboe'') and increased fees for Cboe's 10Gb connections.[39] This filing was submitted on September 2, 2020, nearly 15 months after the Staff's Guidance was issued. In that filing, the Cboe stated that the ''proposed changes were not designed with the objective to generate an overall increase in access fee revenue.'' [40] This filing provided no cost based data to support its assertion that the proposal was intended to be revenue neutral. Among other things, Cboe did not provide a description of the costs underlying its provision of 10Gb connections to show that this particular fee did not generate a supra-competitive profit or describe how any potential profit may be offset by increased costs associated with another fee included in its proposal. This filing, nonetheless, was not suspended by the Commission and remains in effect today.

The Exchange believes exchanges, like all businesses, should be provided flexibility when allocating costs and resources they deem necessary to operate their business, including providing market data and access services. The Exchange notes that costs and resource allocations may vary from business to business and, likewise, costs and resource allocations may differ from exchange to exchange when it comes to providing market data and access services. It is a business decision that must be evaluated by each exchange as to how to allocate internal resources and what costs to incur internally or via third parties that it may deem necessary to support its business and its provision of market data and access services to market participants. An exchange's costs may also vary based on fees charged by third parties and periodic increases to those fees that may be outside of the control of an exchange.

To determine the Exchange's projected revenue associated with the Proposed Access Fees, the Exchange analyzed the number of Market Makers currently utilizing additional Limited Service MEI Ports and used a recent monthly billing cycle representative of 2021 monthly revenue. The Exchange also provided its baseline by analyzing July 2021, the monthly billing cycle prior to the Proposed Access Fees going into effect, and compared it to its expenses for that month.[41] As discussed below, the Exchange does not believe it is appropriate to factor into its analysis future revenue growth or decline into its projections for purposes of these calculations, given the uncertainty of such projections due to the continually changing access needs of market participants and potential increase in internal and third party expenses. The Exchange is presenting its revenue and expense associated with the Proposed Access Fees in this filing in a manner that is consistent with how the Exchange presents its revenue and expense in its Audited Unconsolidated Financial Statements. The Exchange's most recent Audited Unconsolidated Financial Statement is for 2020. However, since the revenue and

[37] A description of the Exchange's methodology for determining the portion (or percentage) of each expense to allocate to the Proposed Access Fee is being provide in response to comments from SIG and SIFMA. *See* SIG Letter 3 *and* SIFMA Letter, *supra* note 12.

[40] *See id.* at 57909.

[41] *Id.*

expense associated with the Proposed Access Fees were not in place in 2020 or for the first seven months of 2021, the Exchange believes its 2020 Audited Unconsolidated Financial Statement is not representative of its current total annualized revenue and costs associated with the Proposed Access Fees. Accordingly, the Exchange believes it is more appropriate to analyze the Proposed Access Fees utilizing its 2021 revenue and costs, as described herein, which utilize the same presentation methodology as set forth in the Exchange's previously-issued Audited Unconsolidated Financial Statements. Based on this analysis, the Exchange believes that the Proposed Access Fees are reasonable because they will allow the Exchange to recover its costs associated with providing access services related to the Proposed Access Fees and not result in excessive pricing or supra-competitive profit.

As outlined in more detail below, the Exchange projects that the final annualized expense for 2021 to provide additional Limited Service MEI Ports to be approximately $880,000 per annum or an average of $73,333.33 per month. The Exchange implemented the Proposed Access Fees on August 1, 2021 in the First Proposed Rule Change. For July 2021, prior to the Proposed Access Fees, the Exchange Members and non-Members purchased a total of 625 additional Limited Service MEI Ports for which the Exchange charged approximately $62,500. This resulted in a loss of $10,833.33 for that month (a loss margin of approximately 17.3%). For the month of November 2021, which includes the tiered rates for additional Limited Service MEI Ports for the Proposed Access Fees, Exchange Members and non-Members increased the number of additional Limited Service MEI Ports they purchased resulting in a total of 860 additional Limited Service MEI Ports for which the Exchange charged approximately $216,600 for that month. This resulted in a profit of $143,266.67 for that month (a profit margin of approximately 66%, after experiencing monthly losses prior to the Proposed Access Fees. The Exchange believes that the Proposed Access Fees are reasonable because they are designed to generate a revenue per-month after experiencing monthly losses prior to the Proposed Access Fees. The Exchange cautions that this profit margin is likely to fluctuate from month to month based on the uncertainty of predicting how many ports may be purchased from month to month as Members and non-Members are able to add and drop ports at any time based on their own business decisions. This profit margin may also decrease due to the significant inflationary pressure on capital items that the Exchange needs to purchase to maintain the Exchange's technology and systems.[42] The Exchange has been subject to price increases upwards of 30% during the past year on network equipment due to supply chain shortages. This, in turn, results in higher overall costs for ongoing system maintenance, but also to purchase the items necessary to ensure ongoing system resiliency, performance, and determinism. These costs are expected to continue to go up as the U.S. economy continues to struggle with supply chain and inflation related issues.

Further, the Exchange chose to provide additional Limited Service MEI Ports at a discounted price to attract order flow and encourage market participants to experience the determinism and resiliency of the Exchange's trading systems. This resulted in the Exchange forgoing revenue it could have generated from assessing higher fees. The Exchange could have sought to charge higher fees at the outset, but that could have served to discourage participation on the Exchange. Instead, the Exchange chose to provide a low cost exchange alternative to the options industry which resulted in lower initial revenues, or in this case, a monthly loss. The Exchange is now trying to amend its fee structure to enable it to continue to maintain and improve its overall market and systems while also providing a highly reliable and deterministic trading system to the marketplace.

As mentioned above, the Exchange projects that its annualized expense for 2021 to provide additional Limited Service MEI Ports to be approximately $880,000 per annum or an average of $73,333.33 per month and that these costs are expected to increase not only due to anticipated significant inflationary pressure, but also periodic fee increases by third parties.[43] The Exchange notes that there are material costs associated with providing the infrastructure and headcount to fully-support access to the Exchange. The Exchange incurs technology expense related to establishing and maintaining Information Security services, enhanced network monitoring and customer reporting, as well as Regulation SCI mandated processes, associated with its network technology. While some of the expense is fixed, much of the expense is not fixed, and thus increases the cost to the Exchange to provide access services associated with the Proposed Access Fees. For example, new Members to the Exchange may require the purchase of additional hardware to support those Members as well as enhanced monitoring and reporting of customer performance that the Exchange and its affiliates provide. Further, as the total number Members increases, the Exchange and its affiliates may need to increase their data center footprint and consume more power, resulting in increased costs charged by their third-party data center provider. Accordingly, the cost to the Exchange and its affiliates to provide access to its Members is not fixed. The Exchange believes the Proposed Access Fees are a reasonable attempt to offset a portion of the costs to the Exchange associated with providing access to its network infrastructure.

The Exchange only has four primary sources of revenue and cost recovery mechanisms to fund all of its operations: Transaction fees, access fees (which includes the Proposed Access Fees), regulatory fees, and market data fees. Accordingly, the Exchange must cover all of its expenses from these four primary sources of revenue and cost recovery mechanisms. Until recently, the Exchange has operated at a cumulative net annual loss since it launched operations in 2019.[44] This is a result of providing a low cost alternative to attract order flow and encourage market participants to experience the high determinism and resiliency of the Exchange's trading

[42] *See* ''Supply chain chaos is already hitting global growth. And it's about to get worse'', by Holly Ellyatt, CNBC, *available at https://www.cnbc.com/2021/10/18/supply-chain-chaos-is-hitting-global-growth-and-could-get-worse.html* (October 18, 2021); *and* ''There will be things that people can't get, at Christmas, White House warns'' by Jarrett Renshaw and Trevor Hunnicutt, Reuters, *available at https://www.reuters.com/world/us/americans-may-not-get-some-christmas-treats-white-house-officials-warn-2021-10-12/* (October 12, 2021).

[43] For example, on October 20, 2021, ICE Data Services announced a 3.5% price increase effective January 1, 2022 for most services. The price increase by ICE Data Services includes their SFTI network, which is relied on by a majority of market participants, including the Exchange. *See* email from ICE Data Services to the Exchange, dated October 20, 2021. The Exchange further notes that on October 22, 2019, the Exchange was notified by ICE Data Services that it was raising its fees charged to the Exchange by approximately 11% for the SFTI network.

[44] The Exchange has incurred a cumulative loss of $22 million since its inception in 2019 to 2020, the last year for which the Exchange's Form 1 data is available. *See* Exchange's Form 1/A, Application for Registration or Exemption from Registration as a National Securities Exchange, filed July 28, 2021, *available at https://sec.report/Document/9999999997-21-004557/*.

Systems. To do so, the Exchange chose to waive the fees for some non-transaction related services or provide them at a very marginal cost, which was not profitable to the Exchange. This resulted in the Exchange forgoing revenue it could have generated from assessing higher fees.

The Exchange believes that the Proposed Access Fees are fair and reasonable because they will not result in excessive pricing or supra-competitive profit, when comparing the total annual expense that the Exchange projects to incur in connection with providing these access services versus the total annual revenue that the Exchange projects to collect in connection with services associated with the Proposed Access Fees. As mentioned above, for 2021,[45] the total annual expense for providing the access services associated with the Proposed Access Fees is projected to be approximately $880,000.00, or approximately $73,333.33 per month. This projected total annual expense is comprised of the following, all of which are directly related to the access services associated with the Proposed Access Fees: (1) Third-party expense, relating to fees paid by the Exchange to third-parties for certain products and services; and (2) internal expense, relating to the internal costs of the Exchange to provide the services associated with the Proposed Access Fees.[46] As noted above, the Exchange believes it is more appropriate to analyze the Proposed Access Fees utilizing its 2021 revenue and costs, which utilize the same presentation methodology as set forth in the Exchange's previously-issued Audited Unconsolidated Financial Statements.[47] The $880,000 projected total annual expense is directly related to the access services associated with the Proposed Access Fees, and not any other product or service offered by the Exchange. It does not include general costs of operating matching engines and other trading technology. No expense amount was allocated twice.

As discussed above, the Exchange conducted an extensive cost review in which the Exchange analyzed nearly every expense item in the Exchange's general expense ledger (this includes over 150 separate and distinct expense items) to determine whether each such expense relates to the access services associated with the Proposed Access Fees, and, if such expense did so relate, what portion (or percentage) of such expense actually supports those services, and thus bears a relationship that is, ''in nature and closeness,'' directly related to those services. In performing this calculation, the Exchange considered other services and to which the expense may be applied and how much of the expense is directly and or indirectly utilized in providing those other services. The sum of all such portions of expenses represents the total cost of the Exchange to provide access services associated with the Proposed Access Fees.

External Expense Allocations

For 2021, total third-party expense, relating to fees paid by the Exchange to third-parties for certain products and services for the Exchange to be able to provide the access services associated with the Proposed Access Fees, is projected to be $0.05 million. This includes, but is not limited to, a portion of the fees paid to: (1) Equinix, for data center services, for the primary, secondary, and disaster recovery locations of the Exchange's trading system infrastructure; (2) Zayo Group Holdings, Inc. (''Zayo'') for network services (fiber and bandwidth products and services) linking the Exchange's office locations in Princeton, New Jersey and Miami, Florida, to all data center locations; (3) Secure Financial Transaction Infrastructure (''SFTI''),[48] which supports connectivity and feeds for the entire U.S. options industry; (4) various other services providers (including Thompson Reuters, NYSE, Nasdaq, and Internap), which provide content, connectivity services, and infrastructure services for critical components of options connectivity and network services; and (5) various other hardware and software providers (including Dell and Cisco, which support the production environment in which Members connect to the network to trade, receive market data, etc.). For clarity, only a portion of all fees paid to such third-parties is included in the third-party expense herein, and no expense amount is allocated twice. Accordingly, the Exchange does not allocate its entire information technology and communication costs to the access services associated with the Proposed Access Fees.

For clarity, the Exchange took a conservative approach in determining the expense and the percentage of that expense to be allocated to providing access services in connection with the Proposed Access Fees. Only a portion of all fees paid to such third-parties is included in the third-party expenses described herein, and no expense amount is allocated twice. Accordingly, the Exchange does not allocate its entire information technology and communication costs to the access services associated with the Proposed Access Fees. Further, the Exchange notes that, with respect to the expenses included herein, those expenses only cover the MIAX Emerald market; expenses associated with MIAX Pearl for its options and equities markets and MIAX, are accounted for separately and are not included within the scope of this filing. As noted above, the percentage allocations used in this proposed rule change may differ from past filings from the Exchange or its affiliates due to, among other things, changes in expenses charged by third-parties, adjustments to internal resource allocations, and different system architecture of the Exchange as compared to its affiliates. Further, as part its ongoing assessment of costs and expenses, the Exchange recently conducted a periodic thorough review of its expenses and resource allocations which, in turn, resulted in a revised percentage allocations in this filing.

The Exchange believes it is reasonable to allocate such third-party expense described above towards the total cost to the Exchange to provide the access services associated with the Proposed Access Fees. In particular, the Exchange believes it is reasonable to allocate the identified portion of the Equinix expense because Equinix operates the data centers (primary, secondary, and disaster recovery) that host the Exchange's network infrastructure. This includes, among other things, the necessary storage space, which

[45] The Exchange has not yet finalized its 2021 year end results.

[46] The percentage allocations used in this proposed rule change may differ from past filings from the Exchange or its affiliates due to, among other things, changes in expenses charged by third-parties, adjustments to internal resource allocations, and different system architecture of the Exchange as compared to its affiliates.

[47] For example, the Exchange previously noted that all third-party expense described in its prior fee filing was contained in the information technology and communication costs line item under the section titled ''Operating Expenses Incurred Directly or Allocated From Parent,'' in the Exchange's 2019 Form 1 Amendment containing its financial statements for 2018. *See* Securities Exchange Act Release No. 87877 (December 31, 2019), 85 FR 738 (January 7, 2020) (SR–EMERALD–2019–39). Accordingly, the third-party expense described in this filing is attributed to the same line item for the Exchange's 2021 Form 1 Amendment, which will be filed in 2022.

[48] In fact, on October 22, 2019, the Exchange was notified by SFTI that it is again raising its fees charged to the Exchange by approximately 11%, without having to show that such fee change complies with the Act by being reasonable, equitably allocated, and not unfairly discriminatory. It is unfathomable to the Exchange that, given the critical nature of the infrastructure services provided by SFTI, that its fees are not required to be rule-filed with the Commission pursuant to Section 19(b)(1) of the Act and Rule 19b–4 thereunder. *See* 15 U.S.C. 78s(b)(1) and 17 CFR 240.19b–4, respectively.

continues to expand and increase in cost, power to operate the network infrastructure, and cooling apparatuses to ensure the Exchange's network infrastructure maintains stability. Without these services from Equinix, the Exchange would not be able to operate and support the network and provide the access services associated with the Proposed Access Fees to its Members and their customers. The Exchange did not allocate all of the Equinix expense toward the cost of providing the access services associated with the Proposed Access Fees, only that portion which the Exchange identified as being specifically mapped to providing the access services associated with the Proposed Access Fees. According to the Exchange's calculations, it allocated approximately 2.05% of the total applicable Equinix expense to providing the access services associated with the Proposed Access Fees. The Exchange believes this allocation is reasonable because it represents the Exchange's actual cost to provide the access services associated with the Proposed Access Fees, and not any other service, as supported by its cost review.[49]

The Exchange believes it is reasonable to allocate the identified portion of the Zayo expense because Zayo provides the internet, fiber and bandwidth connections with respect to the network, linking the Exchange with its affiliates, MIAX Pearl and MIAX, as well as the data center and disaster recovery locations. As such, all of the trade data, including the billions of messages each day per exchange, flow through Zayo's infrastructure over the Exchange's network. Without these services from Zayo, the Exchange would not be able to operate and support the network and provide the access services associated with the Proposed Access Fees. The Exchange did not allocate all of the Zayo expense toward the cost of providing the access services associated with the Proposed Access Fees, only the portion which the Exchange identified as being specifically mapped to providing the Proposed Access Fees. According to the Exchange's calculations, it allocated approximately 1.64% of the total applicable Zayo expense to providing the access services associated with the Proposed Access Fees. The Exchange believes this allocation is reasonable because it represents the Exchange's actual cost to provide the access services associated with the Proposed Access Fees, and not any other service, as supported by its cost review.[50]

The Exchange believes it is reasonable to allocate the identified portions of the SFTI expense and various other service providers' (including Thompson Reuters, NYSE, Nasdaq, and Internap) expense because those entities provide connectivity and feeds for the entire U.S. options industry, as well as the content, connectivity services, and infrastructure services for critical components of the network. Without these services from SFTI and various other service providers, the Exchange would not be able to operate and support the network and provide access to its Members and their customers. The Exchange did not allocate all of the SFTI and other service providers' expense toward the cost of providing the access services associated with the Proposed Access Fees, only the portions which the Exchange identified as being specifically mapped to providing the access services associated with the Proposed Access Fees. According to the Exchange's calculations, it allocated approximately 2.05% of the total applicable SFTI and other service providers' expense to providing the access services associated with the Proposed Access Fees. The Exchange believes this allocation is reasonable because it represents the Exchange's actual cost to provide the access services associated with the Proposed Access Fees.[51]

The Exchange believes it is reasonable to allocate the identified portion of the other hardware and software provider expense because this includes costs for dedicated hardware licenses for switches and servers, as well as dedicated software licenses for security monitoring and reporting across the network. Without this hardware and software, the Exchange would not be able to operate and support the network and provide access to its Members and their customers. The Exchange did not allocate all of the hardware and software provider expense toward the cost of providing the access services associated with the Proposed Access Fees, only the portions which the Exchange identified as being specifically mapped to providing the access services associated with the Proposed Access Fees. According to the Exchange's calculations, it allocated approximately 1.23% of the total applicable hardware and software provider expense to providing the access services associated with the Proposed Access Fees. The Exchange believes this allocation is reasonable because it represents the Exchange's actual cost to provide the access services associated with the Proposed Access Fees.[52]

Internal Expense Allocations

For 2021, total projected internal expense, relating to the Exchange providing the access services associated with the Proposed Access Fees, is projected to be $0.83 million. This includes, but is not limited to, costs associated with: (1) Employee compensation and benefits for full-time employees that support the access services associated with the Proposed Access Fees, including staff in network operations, trading operations, development, system operations, and business that support those employees and functions (including an increase as a result of the higher determinism project); (2) depreciation and amortization of hardware and software used to provide the access services associated with the Proposed Access Fees, including equipment, servers, cabling, purchased software and internally developed software used in the production environment to support the network for trading; and (3) occupancy costs for leased office space for staff that provide the access services associated with the Proposed Access Fees. The breakdown of these costs is more fully-described below.

For clarity, and as stated above, the Exchange took a conservative approach in determining the expense and the percentage of that expense to be allocated to providing access services in connection with the Proposed Access Fees. Only a portion of all such internal expenses are included in the internal expense herein, and no expense amount is allocated twice. Accordingly, the Exchange does not allocate its entire costs contained in those items to the access services associated with the Proposed Access Fees. This may result in the Exchange under allocating an expense to the provision of access services in connection with the Proposed Access Fees and such expenses may actually be higher or increase above what the Exchange utilizes within this proposal. Further, as part its ongoing assessment of costs and expenses (described above), the Exchange recently conducted a periodic

[49] As noted above, the percentage allocations used in this proposed rule change may differ from past filings from the Exchange or its affiliates due to, among other things, changes in expenses charged by third-parties, adjustments to internal resource allocations, and different system architecture of the Exchange as compared to its affiliates. Again, as part its ongoing assessment of costs and expenses, the Exchange recently conducted a periodic thorough review of its expenses and resource allocations which, in turn, resulted in a revised percentage allocations in this filing.

[50] *Id.*

[51] *Id.*

[52] *Id.*

thorough review of its expenses and resource allocations which, in turn, resulted in a revised percentage allocations in this filing.

The Exchange believes it is reasonable to allocate such internal expense described above towards the total cost to the Exchange to provide the access services associated with the Proposed Access Fees. In particular, the Exchange's employee compensation and benefits expense relating to providing the access services associated with the Proposed Access Fees is projected to be approximately $0.76 million, which is only a portion of the $9.74 million total projected expense for employee compensation and benefits. The Exchange believes it is reasonable to allocate the identified portion of such expense because this includes the time spent by employees of several departments, including Technology, Back Office, Systems Operations, Networking, Business Strategy Development (who create the business requirement documents that the Technology staff use to develop network features and enhancements), and Trade Operations. As part of the extensive cost review conducted by the Exchange, the Exchange reviewed the amount of time spent by each employee on matters relating to the provision of access services associated with the Proposed Access Fees. Without these employees, the Exchange would not be able to provide the access services associated with the Proposed Access Fees to its Members and their customers. The Exchange did not allocate all of the employee compensation and benefits expense toward the cost of the access services associated with the Proposed Access Fees, only the portion which the Exchange identified as being specifically mapped to providing the access services associated with the Proposed Access Fees. According to the Exchange's calculations, it allocated approximately 7.81% of the total applicable employee compensation and benefits expense to providing the access services associated with the Proposed Access Fees. The Exchange believes this allocation is reasonable because it represents the Exchange's actual cost to provide the access services associated with the Proposed Access Fees, and not any other service, as supported by its cost review.[53]

The Exchange's depreciation and amortization expense relating to providing the services associated with the Proposed Access Fees is projected to be $0.06 million, which is only a portion of the $3.13 million total projected expense for depreciation and amortization. The Exchange believes it is reasonable to allocate the identified portion of such expense because such expense includes the actual cost of the computer equipment, such as dedicated servers, computers, laptops, monitors, information security appliances and storage, and network switching infrastructure equipment, including switches and taps that were purchased to operate and support the network and provide the access services associated with the Proposed Access Fees. Without this equipment, the Exchange would not be able to operate the network and provide the access services associated with the Proposed Access Fees to its Members and their customers. The Exchange did not allocate all of the depreciation and amortization expense toward the cost of providing the access services associated with the Proposed Access Fees, only the portion which the Exchange identified as being specifically mapped to providing the access services associated with the Proposed Access Fees. According to the Exchange's calculations, it allocated approximately 1.92% of the total applicable depreciation and amortization expense to providing the access services associated with the Proposed Access Fees, as these access services would not be possible without relying on such. The Exchange believes this allocation is reasonable because it represents the Exchange's actual cost to provide the access services associated with the Proposed Access Fees, and not any other service, as supported by its cost review.[54]

The Exchange's occupancy expense relating to providing the services associated with the Proposed Access Fees is projected to be $0.01 million, which is only a portion of the $0.52 million total projected expense for occupancy. The Exchange believes it is reasonable to allocate the identified portion of such expense because such expense represents the portion of the Exchange's cost to rent and maintain a physical location for the Exchange's staff who operate and support the network, including providing the access services associated with the Proposed Access Fees. This amount consists primarily of rent for the Exchange's Princeton, NJ office, as well as various related costs, such as physical security, property management fees, property taxes, and utilities. The Exchange operates its Network Operations Center (''NOC'') and Security Operations Center (''SOC'') from its Princeton, New Jersey office location. A centralized office space is required to house the staff that operates and supports the network. The Exchange currently has approximately 200 employees. Approximately two-thirds of the Exchange's staff are in the Technology department, and the majority of those staff have some role in the operation and performance of the access services associated with the Proposed Access Fees. Accordingly, the Exchange believes it is reasonable to allocate the identified portion of its occupancy expense because such amount represents the Exchange's actual cost to house the equipment and personnel who operate and support the Exchange's network infrastructure and the access services associated with the Proposed Access Fees. The Exchange did not allocate all of the occupancy expense toward the cost of providing the access services associated with the Proposed Access Fees, only the portion which the Exchange identified as being specifically mapped to operating and supporting the network. According to the Exchange's calculations, it allocated approximately 1.93% of the total applicable occupancy expense to providing the access services associated with the Proposed Access Fees. The Exchange believes this allocation is reasonable because it represents the Exchange's cost to provide the access services associated with the Proposed Access Fees, and not any other service, as supported by its cost review.[55]

The Exchange notes that a material portion of its total overall expense is allocated to the provision of access services (including connectivity, ports, and trading permits). The Exchange believes this is reasonable and in line, as the Exchange operates a technology-based business that differentiates itself from its competitors based on its more deterministic and resilient trading systems that rely on access to a high performance network, resulting in significant technology expense. Over two-thirds of Exchange staff are technology-related employees. The majority of the Exchange's expense is technology-based. As described above, the Exchange has only four primary sources of fees to recover their costs; thus, the Exchange believes it is reasonable to allocate a material portion of its total overall expense towards access fees.

Based on the above, the Exchange believes that its provision of access services associated with the Proposed Access Fees will not result in excessive pricing or supra-competitive profit. As discussed above, the Exchange projects

[53] *Id.*

[54] *Id.*

[55] *Id.*

that its annualized expense for 2021 to provide the access services associated with the Proposed Access Fees to be approximately $880,000 per annum or an average of $73,333.33 per month. The Exchange implemented the Proposed Access Fees on August 1, 2021 in the First Proposed Rule Change. For July 2021, prior to the Proposed Access Fees, the Exchange Members and non-Members purchased a total of 625 additional Limited Service MEI Ports for which the Exchange charged approximately $62,500. This resulted in a loss of $10,833.33 for that month (a loss margin of approximately 17.3%). For the month of November 2021, which includes the tiered rates for additional Limited Service MEI Ports for the Proposed Access Fees, Exchange Members and non-Members increased the number of additional Limited Service MEI Ports they purchased resulting in a total of 860 additional Limited Service MEI Ports for which the Exchange charged approximately $216,600 for that month. This resulted in a profit of $143,266.67 for that month (a profit margin of approximately 66%), after experiencing monthly losses prior to the Proposed Access Fees. The Exchange believes that the Proposed Access Fees are reasonable because they are designed to generate a revenue per-month after experiencing monthly losses prior to the Proposed Access Fees. The Exchange believes this profit margin will allow it to begin to recoup its expenses and continue to invest in its technology infrastructure. Therefore, the Exchange also believes that this proposed profit margin increase is reasonable because it represents a reasonable rate of return.

Again, the Exchange cautions that this profit margin may fluctuate from month to month based in the uncertainty of predicting how many ports may be purchased from month to month as Members and non-Members are free to add and drop ports at any time based on their own business decisions. Notwithstanding that the revenue (and profit margin) may vary from month to month due to changes in ports and to changes to the Exchange's expenses, the number of ports has not materially changed over the previous months. Consequently, the Exchange believes that the months it has used as a baseline to perform its assessment are representative of reasonably anticipated costs and expenses. This profit margin may also decrease due to the significant inflationary pressure on capital items that it needs to purchase to maintain the Exchange's technology and systems.[56] Accordingly, the Exchange believes its total projected revenue for the providing the access services associated with the Proposed Access Fees will not result in excessive pricing or supra-competitive profit.

The Exchange believes that conducting the above analysis on a per month basis is reasonable as the revenue generated from access services subject to the proposed fee generally remains static from month to month. The Exchange also conducted the above analysis on a per month basis to comply with the Commission Staff's Guidance, which requires a baseline analysis to assist in determining whether the proposal generates a supra-competitive profit. This monthly analysis was also provided in response to comment received on prior submissions of this proposed rule change.

The Exchange reiterates that it only has four primary sources of revenue and cost recovery mechanisms: Transaction fees, access fees (which includes the Proposed Access Fees), regulatory fees, and market data fees. Accordingly, the Exchange must cover all of its expenses from these four primary sources of revenue and cost recovery mechanisms. As a result, each of these fees cannot be ''flat'' and cover only the expenses directly related to the fee that is charged. The above revenue and associated profit margin therefore are not solely intended to cover the costs associated with providing access services subject to the Proposed Access Fees.

The Exchange believes it is reasonable, equitable and not unfairly discriminatory to allocate the respective percentages of each expense category described above towards the total cost to the Exchange of operating and supporting the network, including providing the access services associated with the Proposed Access Fees because the Exchange performed a line-by-line item analysis of nearly every expense of the Exchange, and has determined the expenses that directly relate to providing access to the Exchange. Further, the Exchange notes that, without the specific third-party and internal expense items listed above, the Exchange would not be able to provide the access services associated with the Proposed Access Fees to its Members and their customers. Each of these expense items, including physical hardware, software, employee compensation and benefits, occupancy costs, and the depreciation and amortization of equipment, have been identified through a line-by-line item analysis to be integral to providing access services. The Proposed Access Fees are intended to recover the costs of providing access to the Exchange's System. Accordingly, the Exchange believes that the Proposed Access Fees are fair and reasonable because they do not result in excessive pricing or supra-competitive profit, when comparing the actual costs to the Exchange versus the projected annual revenue from the Proposed Access Fees.

The Proposed Tiered-Pricing Structure Is Not Unfairly Discriminatory and Provides for the Equitable Allocation of Fees, Dues, and Other Charges

The Exchange believes the proposed tiered-pricing structure is reasonable, fair, equitable, and not unfairly discriminatory because it will apply to all Members and non-Members in the same manner based on the amount of Limited Service MEI Ports they require based on their own business decisions and usage of Exchange resources. All similarly situated Members and non-Members would be subject to the same fees. The fees do not depend on any distinction between Members and non-Members because they are solely determined by the individual Members' or non-Members' business needs and its impact on Exchange resources.

The proposed tiered-pricing structure is not unfairly discriminatory and provides for the equitable allocation of fees, dues, and other charges because it is designed to encourage Members and non-Members to be more efficient and economical when determining how to connect to the Exchange and the amount of the fees are based on the number of ports a Market Maker utilizes. Charging an incrementally higher fee to a Market Maker that utilizes numerous ports is directly related to the increased costs the Exchange incurs in providing and maintaining those additional ports. The proposed tiered pricing structure should also enable the Exchange to better monitor and provide access to the Exchange's network to ensure sufficient capacity and headroom in the System while still providing the first and second additional Limited Service MEI Ports for each matching engine free of charge.

To achieve a consistent, premium network performance, the Exchange must build out and continue to maintain a network that has the capacity to handle the message rate requirements of not only firms that consume minimal Exchange access resources, but also those firms that most heavily consume Exchange access resources, network consumers, and purchasers of Limited Service MEI Ports. Limited Service MEI Ports is not an unlimited resource as the Exchange needs to purchase additional

[56] *See supra* note 42.

equipment to satisfy requests for additional ports. The Exchange also needs to provide personnel to set up new ports, service requests related to adding new and/or deleting existing ports, respond to performance queries, and to maintain those ports on behalf of Members and non-Members. Also, those firms that utilize additional Limited Service MEI Ports typically generate a disproportionate amount of messages and order traffic, usually billions per day across the Exchange. These billions of messages per day consume the Exchange's resources and significantly contribute to the overall network access expense for storage and network transport capabilities. The Exchange also has to purchase additional storage capacity on an ongoing basis to ensure it has sufficient capacity to store these messages as part of it surveillance program and to satisfy its record keeping requirements under the Exchange Act.[57] Thus, as the number of ports an entity has increases, certain other costs incurred by the Exchange that are correlated to, though not directly affected by, port costs (*e.g.,* storage costs, surveillance costs, service expenses) also increase.

The Exchange sought to design the proposed tiered-pricing structure to set the amount of the fee to relate to the number of ports a firm purchases. The Exchange notes that Limited Service MEI Ports are primarily utilized by firms that engage in advanced trading strategies and typically request multiple Limited Service MEI Ports, beyond the two per matching engine that are currently provided free of charge. Accordingly, the firms engaged in advanced trading strategies generate higher costs by utilizing more of the Exchange's resources. Those firms purchase higher amounts of Limited Service MEI Ports tend to have specific business oriented market making and trading strategies, as opposed to firms engaging solely in order routing as part of their best-execution obligations.

The use of such additional Limited Service MEI Ports is a voluntary business decision of each Market Maker. Additional Limited Service MEI Ports are primarily used by Market Makers seeking to remove liquidity and, for competitive reasons, a Market Maker may choose to utilize numerous ports in an attempt to access the market quicker by using one port that may have less latency. The more ports purchased by a Market Maker likely results in greater expenditure of Exchange resources and increased cost to the Exchange. With this in mind, the Exchange will continue to provide the first and second additional Limited Service MEI Ports free of charge. The Exchange notes that firms that primarily route orders seeking best-execution generally do not utilize additional Limited Service MEI Ports. Those firms also generally send less orders and messages over those connections, resulting in less strain on Exchange resources.

On a similar note, the Exchange proposes to increase the fee for those firms that purchase more ports resulting in greater expenditure of Exchange resources and increased cost to the Exchange. The Exchange notes that these firms that purchase numerous additional Limited Service MEI Ports essentially do so for competitive reasons amongst themselves and choose to utilize numerous ports based on their business needs and desire to attempt to access the market quicker by using the connection with the least amount of latency. These firms are generally engaged in sending liquidity removing orders to the Exchange and seek to add more ports so they can access resting liquidity ahead of their competitors. For instance, a Member may have just sent numerous messages and/or orders over one or more of their additional Limited Service MEI Ports that are in queue to be processed. That same Member then seeks to enter an order to remove liquidity from the Exchange's Book. That Member may choose to send that order over one or more of their other additional Limited Service MEI Ports with less message and/or order traffic to ensure that their liquidity taking order accesses the Exchange quicker because that connection's queue is shorter. These firms also tend to frequently add and drop ports mid-month to determine which ports have the least latency, which results in increased costs to the Exchange to constantly make changes in the data center.

The firms that engage in the above-described liquidity removing and advanced trading strategies typically require multiple ports and, therefore, generate higher costs by utilizing more of the Exchange's resources. Those firms may also conduct other latency measurements over their ports and drop and simultaneously add ports mid-month based on their own assessment of their performance. This results in Exchange staff processing such requests, potentially purchasing additional equipment, and performing the necessary network engineering to replace those ports in the data center. Therefore, the Exchange believes it is equitable for these firms to experience increased port costs based on their disproportionate pull on Exchange resources to provide the additional port access.

In addition, the proposed tiered-pricing structure is equitable because it is designed to encourage Members and non-Members to be more efficient and economical when determining how to connect to the Exchange. Section 6(b)(5) of the Exchange Act requires the Exchange to provide access on terms that are not unfairly discriminatory.[58] As stated above, Additional Limited Service MEI Ports are not an unlimited resource and the Exchange's network is limited in the amount of ports it can provide. However, the Exchange must accommodate requests for additional Limited Service MEI Ports and access to the Exchange's System to ensure that the Exchange is able to provide access on non-discriminatory terms and ensure sufficient capacity and headroom in the System. To accommodate requests for additional Limited Service MEI Ports on top of current network capacity constraints, requires that the Exchange to purchase additional equipment to satisfy these requests. The Exchange also needs to provide personnel to set up new ports and to maintain those ports on behalf of Members and non-Members. The proposed tiered-pricing structure is equitable because it is designed to encourage Market Makers to be more efficient and economical in selecting the amount of additional Limited Service MEI Ports they request while balancing that against the Exchange's increased expenses when expanding its network to accommodate additional Limited Service MEI Ports.

The Proposed Fees Are Reasonable When Compared to the Fees of Other Options Exchanges With Similar Market Share

The Exchange does not have visibility into other equities exchanges' costs to provide port access or their fee markup over those costs, and therefore cannot use other exchange's port fees as a benchmark to determine a reasonable markup over the costs of providing port access. Nevertheless, the Exchange believes the other exchange's port fees are a useful example of alternative approaches to providing and charging for port access. To that end, the Exchange believes the proposed tiered-pricing structure for Limited Service MEI Ports is reasonable because the proposed highest tier is still less than fees charged for similar port access provided by other options exchanges

[57] 17 CFR 240.17a–1 (recordkeeping rule for national securities exchanges, national securities associations, registered clearing agencies and the Municipal Securities Rulemaking Board).

[58] 15 U.S.C. 78f(b)(5).

with comparable market shares. For example, Amex (equity options market share of 5.05% as of November 26, 2021 for the month of November) [59] and Arca (equity options market share of 14.88% as of November 26, 2021 for the month of November) [60] both charge $450 per port for order/quote entry ports 1–40 and $150 per port for ports 41 and greater,[61] all on a per matching engine basis, with Amex and Arca having 17 match engines and 19 match engines, respectively.[62] Similarly, NASDAQ (equity options market share of 8.88% as of November 23, 2021 for the month of November) [63] charges $1,500 per port for SQF ports 1–5, $1,000 per SQF port for ports 6–20, and $500 per SQF port for ports 21 and greater,[64] all on a per matching engine basis, with NASDAQ having multiple matching engines.[65] The NASDAQ SQF Interface Specification provides that PHLX/NOM/BX Options trading infrastructures may consist of multiple matching engines with each matching engine trading only a range of option underlyings. Further, the SQF infrastructure is such that the firms connect to one or more servers residing directly on the matching engine infrastructure. Since there may be multiple matching engines, firms will need to connect to each engine's infrastructure in order to establish the ability to quote the symbols handled by that engine.[66]

In the each of the above cases, the Exchange's highest tier in the proposed tiered-pricing structure is similar to or significantly lower than that of competing options exchanges with similar market share. Despite proposing lower or similar fees to that of competing options exchanges with similar market share, the Exchange believes that it provides a premium network experience to its Members and non-Members via a highly deterministic System, enhanced network monitoring and customer reporting, and a superior network infrastructure than markets with higher market shares and more expensive port alternatives. Each of the port rates in place at competing options exchanges were filed with the Commission for immediate effectiveness and remain in place today.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

With respect to intra-market competition, the Exchange does not believe that the proposed rule change would place certain market participants at the Exchange at a relative disadvantage compared to other market participants or affect the ability of such market participants to compete. As stated above, the Exchange does not believe its proposed pricing will impose a barrier to entry to smaller participants and notes that the proposed pricing structure is associated with relative usage of the various market participants. Firms that are primarily order routers seeking best-execution do not utilize Limited Service MEI Ports on MIAX Emerald and therefore will not pay the fees associated with the tiered-pricing structure. Rather, the fees described in the proposed tiered-pricing structure will only be allocated to Market Making firms that engage in advanced trading strategies and typically request multiple Limited Service MEI Ports, beyond the two that are free. Accordingly, the firms engaged in a Market Making business generate higher costs by utilizing more of the Exchange's resources. Those Market Making firms that purchase higher amounts of additional Limited Service MEI Ports tend to have specific business oriented market making and trading strategies, as opposed to firms engaging solely in best-execution order routing business. Additionally, the use of such additional Limited Service MEI Ports is entirely voluntary.

The Exchange also does not believe that the proposed rule change will result in any burden on inter-market competition that is not necessary or appropriate in furtherance of the purposes of the Act. As discussed above, options market participants are not forced to access all options exchanges. The Exchange operates in a highly competitive environment, and as discussed above, its ability to price access and ports is constrained by competition among exchanges and third parties. There are other options markets of which market participants may access in order to trade options. There is also a possible range of alternative strategies, including routing to the exchange through another participant or market center or accessing the Exchange indirectly. For example, there are 15 other U.S. options exchanges, which the Exchange must consider in its pricing discipline in order to compete for market participants. In this competitive environment, market participants are free to choose which competing exchange to use to satisfy their business needs. As a result, the Exchange believes this proposed rule change permits fair competition among national securities exchanges. Accordingly, the Exchange does not believe its proposed fee changes impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

Regrettably, the Exchange believes that the application of the Guidance to date has adversely affected inter-market competition by impeding the ability of smaller, low cost exchanges to adopt or increase fees for their market data and access services (including connectivity and port products and services). Since the adoption of the Guidance, and even more so recently, it has become harder, particularly for smaller, low cost exchanges, to adopt or increase fees to generate revenue necessary to invest in systems, provide innovative trading products and solutions, and improve competitive standing to the benefit of the affected exchanges' market participants. Although the Staff Guidance has served an important policy goal of improving disclosures and requiring exchanges to justify that their market data and access fee proposals are fair and reasonable, it has also negatively impacted exchanges, and particularly many smaller, low cost exchanges, that seek to adopt or increase fees despite providing enhanced disclosures and rationale to support their proposed fee changes.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

As described above, the Exchange received one comment letter on the First Proposed Rule Change [67] and three comment letters on the Second [sic] Proposed Rule Change.[68] The Exchange responded to the comment letters in the Fourth Proposed Rule Change and repeats its response in is filing. No comment letters were received in

response to the Fourth Proposed Rule Change.

SIG Letter 2

SIG Letter 2 argues that the Exchange, in withdrawing the First Proposed Rule Change and refiling the Second [sic] Proposed Rule Change, ''improperly circumvent[ed] the procedural protections embedded in Exchange Act Section 19(b)(3)(C), and subvert[ed] the balance of interests upheld therein.'' [69] SIG's assertion that the Exchange's entire reason for withdrawing and refiling was to subvert the protections of the Exchange Act are entirely without merit. The Exchange withdrew the First Proposed Rule Change and replaced it with the Second [sic] Proposed Rule Change in good faith to provide additional justification and explanation for the proposed fee changes and did so in compliance with the Exchange Act. The same is true in this filing, where the Exchange withdrew the Second [sic] Proposed Rule Change and submitted this filing to provide additional justification and explanation for the proposed fee changes and directly responds to certain points raised in SIG Letters 1, 2, and 3, as well as the SIFMA Letter submitted on the First and Second [sic] Proposed Rule Changes.

As SIG well knows, exchanges are able withdraw and refile various proposals (including fee changes and other rule changes) with the Commission for a multitude of reasons, not the least of which is to address feedback and comments from market participants and Commission Staff. The Exchange is well within the bounds of the Act and the rules and regulations thereunder to withdraw a proposed rule change and replace it with a new proposed rule change in good faith and to enhance the filing to ensure it complies with the requirements of the Act.

SIG Letters 1 and 3

As an initial matter, SIG Letter 1 cites Rule 700(b)(3) of the Commission's Rules of Fair Practice which places ''the burden to demonstrate that a proposed rule change is consistent with the Act on the self-regulatory organization that proposed the rule change'' and states that a ''mere assertion that the proposed rule change is consistent with those requirements . . . is not sufficient.'' [70] SIG Letter 1's assertion that the Exchange has not met this burden is without merit, especially considering the overwhelming amounts of revenue and cost information the Exchange included in the First and Second [sic] Proposed Rule Changes and this filing.

Until recently, the Exchange operated at a net annual loss since it launched operations in 2019.[71] As stated above, the Exchange believes that exchanges in setting fees of all types should meet very high standards of transparency to demonstrate why each new fee or fee increase meets the requirements of the Act that fees be reasonable, equitably allocated, not unfairly discriminatory, and not create an undue burden on competition among market participants. The Exchange believes this high standard is especially important when an exchange imposes various access fees for market participants to access an exchange's marketplace. The Exchange believes it has achieved this standard in this filing and in the First and Second [sic] Proposed Rule Changes. Similar justifications for the proposed fee change included in the First and Second [sic] Proposed Rule Changes, but also in this filing, were previously included in similar fee changes filed by the Exchange and its affiliates, MIAX and MIAX Pearl, and SIG did not submit a comment letter on those filings.[72] Those filings were not suspended by the Commission and continue to remain in effect. The justification included in each of the prior filings was the result of numerous withdrawals and re-filings of the proposals to address comments received from Commission Staff over many months. The Exchange and its affiliates have worked diligently with Commission Staff on ensuring the justification included in past fee filings fully support an assertion that those fee changes are consistent with the Act.[73] The Exchange leveraged its past work with Commission Staff to ensure the justification provided herein and in the First and Second [sic] Proposed Rule Changes include the same level of detail (or more) as the prior fee changes that survived Commission scrutiny. The Exchange's detailed disclosures in fee filings have also been applauded by one industry group which noted, ''[the Exchange's] filings contain significantly greater information about who is impacted and how than other filings that have been permitted to take effect without suspension.'' [74] That same commenter also noted their ''worry that the Commission's process for reviewing and evaluating exchange filings may be inconsistently applied.'' [75]

Therefore, a finding by the Commission that the Exchange has not met its burden to show that the proposed fee change is consistent with the Act would be different than the Commission's treatment of similar past filings, would create further ambiguity regarding the standards exchange fee filings should satisfy, and is not warranted here.

In addition, the arguments in SIG Letter 1 do not support their claim that the Exchange has not met its burden to show the proposed rule change is consistent with the Act. Prior to, and after submitting the First Proposed Rule Change, the Exchange solicited feedback from its Members, including SIG. SIG relayed their concerns regarding the proposed change. The Exchange then sought to work with SIG to address their

[75] *Id.* (providing examples where non-transaction fee filings by other exchanges have been permitted to remain effective and not suspended by the Commission despite less disclosure and justification).

concerns and gain a better understanding of the access/connectivity/quoting infrastructure of other exchanges. In response, SIG provided no substantive suggestions on how to amend the First Proposed Rule Change to address their concerns and instead chose to submit three comment letters. One could argue that SIG is using the comment letter process not to raise legitimate regulatory concerns regarding the proposal, but to inhibit or delay proposed fee changes by the Exchange. With regards to the First and Second [sic] Proposed Rule Changes, the SIG Letter does not directly address the proposed fees or lay out specific arguments as to why the proposal is not consistent with Section 6(b)(4) of the Act. Rather, it simply describes the proposed fee change and flippantly states that its claims concerning the 10Gb ULL fee change proposals by the Exchange, and its affiliates, apply to these changes. Nonetheless, the Exchange submits the below response to the SIG Letter concerning the First Proposed Rule Change.

Furthermore, the Exchange has enhanced its cost and revenue analysis and data in this Fourth [sic] Proposed Rule Change to further justify that the Proposed Access Fees are reasonable in accordance with the Commission Staff's Guidance. Among other things, these enhancements include providing baseline information in the form of data from the month before the Proposed Access Fees became effective.

The Exchange now responds to SIG's remaining claims below. SIG Letter 3 first summarizes its arguments made in SIG Letters 1 and 2 and incorporates those arguments by reference. The Exchange responded to the arguments in SIG Letter 2 above. SIG Letter 3 incorporates the following arguments regarding additional Limited Service MEI Port fees from SIG Letter 1 (while excluding arguments that pertain solely to connectivity), which the Exchange will first respond to in turn, below:

''(1) The prospect that a member may withdraw from the Exchanges if a fee is too costly is not a basis for asserting that the fee is reasonable; (2) profit margin comparisons do not support the Exchanges' claims that they will not realize a supracompetitive profit . . . and comparisons to competing exchanges' overall operating profit margins are an inapt ''apples-to-oranges'' comparison . . . (7) the recoupment of investment for exchange infrastructure has no supporting nexus with the claim that the proposed fees are reasonable, equitably allocated, and not unfairly discriminatory . . . .'' [76]

General

First, the SIG Letter 1 states that additional Limited Service MEI Ports ''are critical to Exchange members to be competitive *and to provide essential protection from adverse market events*'' (*emphasis added*).[77] The Exchange notes that this statement is generally not true for additional Limited Service MEI Ports as those ports are completely voluntary and used primarily for entering liquidity removing orders and not risk protection activities like purging quotes resting on the MIAX Emerald Book. Additional Limited Service MEI Ports are essentially used for competitive reasons and Market Makers may choose to utilize one or two Limited Service MEI Ports that are provided for free, or purchase additional Limited Service MEI Ports based on their business needs and desire to attempt to access the market quicker by using one port that may have less latency. For instance, a Market Maker may have just sent numerous messages and/or orders over one of their additional Limited Service MEI Ports that are in queue to be processed. That same Market Maker then seeks to enter an order to remove liquidity from the Exchange's Book. That Market Maker may choose to send that order simultaneously over all of their Limited Service MEI Ports that they elected to purchase to ensure that their liquidity taking order accesses the Exchange as quickly as possible.

If the Exchanges Were To Attempt To Establish Unreasonable Pricing, Then No Market Participant Would Join or Connect to the Exchange, and Existing Market Participants Would Disconnect

SIG asserts that ''the prospect that a member may withdraw from the Exchanges if a fee is too costly is not a basis for asserting that the fee is reasonable.'' [78] SIG misinterprets the Exchange's argument here. The Exchange provided the examples of firms terminating access to certain markets due to fees to support its assertion that firms, including market makers, are not required to connect to all markets and may drop access if fees become too costly for their business models and alternative or substitute forms of access are available to those firms who choose to terminate access. The Commission Staff Guidance also provides that ''[a] statement that substitute products or services are available to market participants in the relevant market (*e.g.,* equities or options) can demonstrate competitive forces if supported by evidence that substitute products or services exist.'' [79] Nonetheless, the Fourth [sic] Proposed Rule Change no longer makes this assertion as a basis for the proposed fee change and, therefore, the Exchange believes it is not necessary to respond to this portion of SIG Letters 1 and 3.

The Proposed Access Fees Will Not Result in Excessive Pricing or Supra-Competitive Profit

Next, SIG asserts that the Exchange's ''profit margin comparisons do not support the Exchanges' claims that they will not realize a supracompetitive profit,'' and ''comparisons to competing exchanges' overall operating profit margins are an inapt 'apples-to-oranges' comparison.'' [80]

The Exchange has provided ample data that the Proposed Access Fees would not result in excessive pricing or a supra-competitive profit. In this Fourth [sic] Proposed Rule Change, the Exchange no longer utilizes a comparison of its profit margin to that of other options exchanges as a basis that the Proposed Access Fees are reasonable. Rather, the Exchange has enhanced its cost and revenue analysis and data in this Fourth [sic] Proposed Rule Change to further justify that the Proposed Access Fees are reasonable in accordance with the Commission Staff's Guidance. Therefore, the Exchange believes it is no longer necessary to respond to this portion of SIG Letters 1 and 3.

Recoupment of Exchange Infrastructure Costs

Nowhere in this proposal or in the First, Second [sic], or Third [sic] Proposed Rule Changes did the Exchange assert that it benefits competition to allow a new exchange entrant to recoup their infrastructure costs. Rather, the Exchange asserts above that its ''proposed fees are reasonable, equitably allocated and not unfairly discriminatory because the Exchange, and its affiliates, are still recouping the initial expenditures from building out their systems while the legacy exchanges have already paid for and built their systems.'' The Exchange no longer makes this assertion in this filing and, therefore, does not believe is it necessary to respond to SIG's assertion here.

The Proposed Tiered Pricing Structure Is Not Unfairly Discriminatory

SIG challenges the proposed fees by arguing that ''the Exchange[ ] provide[s] no support for [its] claim that [the] proposed tiered pricing structure is needed to encourage efficiency in connectivity usage and the Exchange[ ] provided no support for [the] claim that the tiered pricing structure allows them to better monitor connectivity usage, nor that this is an appropriate basis for the pricing structure in any event.'' The Exchange provided additional justification to support that the Proposed Access Fees are equitable and not unfairly discriminatory above in response to SIG's assertions.

SIFMA Letter

In sum, the SIFMA Letter asserts that the Exchange has failed to demonstrate that the Proposed Access Fees are reasonable for three reasons:

(i) ''The Exchanges' ''platform competition'' argument that competition for order flow constrains pricing for market data or other products and services exclusively offered by an exchange does not demonstrate that the fees are reasonable.''

(ii) ''. . . order flow competition alone between exchanges does not demonstrate that the fees for the products and services subject to the Proposal are reasonable.''

(iii) ''the Exchanges' argument that the products and services subject to the Proposals are optional does not reflect marketplace reality, nor does it demonstrate that the proposed fees are reasonable.''

The Exchange responds to each of SIFMA's challenges in turn below.

The Exchange Never Set Forth a ''Platform Competition'' Argument

The SIFMA Letter asserts that the Exchange's ''platform competition'' argument that competition for order flow constrains pricing for market data or other products and services exclusively offered by an exchange does not demonstrate that the fees are reasonable.'' The Exchange does not believe it is necessary to respond to this assertion because it has never set forth a ''platform competition'' [81] argument to justify the Proposed Access Fees in the First or Second [sic] Proposed Rule Changes nor does it do so in this filing.

The Exchange Is Not Arguing That Order Flow Competition Alone Demonstrates That the Proposed Fees Are Reasonable
