No. 59

March 28, 2022

Pages 17141–17936

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097-6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see [www.federalregister.gov](http://www.federalregister.gov).

The seal of the National Archives and Records Administration authenticates the **Federal Register** as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at [www.govinfo.gov](http://www.govinfo.gov), a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, [gpocusthelp.com](mailto:gpocusthelp.com).

The annual subscription price for the **Federal Register** paper edition is \$860 plus postage, or \$929, for a combined **Federal Register**, **Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is \$330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register**, including postage, is based on the number of pages: \$11 for an issue containing less than 200 pages; \$22 for an issue containing 200 to 400 pages; and \$33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for \$3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see [bookstore.gpo.gov](http://bookstore.gpo.gov).

There are no restrictions on the republication of material appearing in the **Federal Register**.

**How To Cite This Publication:** Use the volume number and the page number. Example: 87 FR 12345.

**Postmaster:** Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

**Title 3—****Proclamation 10351 of March 23, 2022****The President****Death of Madeleine Korbelt Albright****By the President of the United States of America****A Proclamation**

Madeleine Albright was a force. She defied convention and broke barriers again and again. She was an immigrant fleeing persecution. A refugee in need of safe haven. And like so many before her—and after—she was proudly American.

As the devoted mother of three beloved daughters, she worked tirelessly raising them while earning her doctorate degree and starting her career in American diplomacy. She took her talents first to the Senate as a staffer for Senator Edmund Muskie followed by the National Security Council under President Carter. And then to the United Nations where she served as United States Ambassador, and ultimately, made history as our first woman Secretary of State, appointed by President Clinton. A scholar, teacher, bestselling author, and later accomplished business woman, she always believed America was the indispensable Nation, and inspired the next generation of public servants to follow her lead, including countless women leaders around the world. Madeleine was always a force for goodness, grace, and decency—and for freedom.

As a mark of respect for former Secretary of State Madeleine Korbelt Albright and her life of service to our Nation, I hereby order, by the authority vested in me as President of the United States by the Constitution and the laws of the United States of America, that the flag of the United States shall be flown at half-staff at the White House and upon all public buildings and grounds, at all military posts and naval stations, and on all naval vessels of the Federal Government in the District of Columbia and throughout the United States and its Territories and possessions until sunset on March 27, 2022. I also direct that the flag shall be flown at half-staff for the same length of time at all United States embassies, legations, consular offices, and other facilities abroad, including all military facilities and naval vessels and stations.

IN WITNESS WHEREOF, I have hereunto set my hand this twenty-third day of March, in the year of our Lord two thousand twenty-two, and of the Independence of the United States of America the two hundred and forty-sixth.

A handwritten signature in black ink, appearing to read "Joe Biden", written in a cursive style.

# Rules and Regulations

Federal Register

Vol. 87, No. 59

Monday, March 28, 2022

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents.

## BUREAU OF CONSUMER FINANCIAL PROTECTION

### 12 CFR Chapter X

#### Bulletin 2022–05: Unfair and Deceptive Acts or Practices That Impede Consumer Reviews

**AGENCY:** Bureau of Consumer Financial Protection.

**ACTION:** Compliance bulletin.

**SUMMARY:** Reviews of products and services help to promote fair, transparent, and competitive markets. When firms frustrate the ability of consumers to post honest reviews of products and services that they use, they may be engaged in conduct prohibited by the Consumer Financial Protection Act (CFPA). The Consumer Financial Protection Bureau (Bureau) is issuing this bulletin to remind regulated entities of the CFPA's requirements and explain how the Bureau intends to exercise its enforcement and supervisory authorities on this issue.

**DATES:** This bulletin is applicable as of March 28, 2022.

**FOR FURTHER INFORMATION CONTACT:** Christopher Shelton, Senior Counsel, Legal Division, at 202–435–7700. If you require this document in an alternative electronic format, please contact [CFPB\\_Accessibility@cfpb.gov](mailto:CFPB_Accessibility@cfpb.gov).

#### SUPPLEMENTARY INFORMATION:

##### I. Background

###### A. Role of Consumer Reviews

Numerous studies and surveys have confirmed the importance of online reviews across the economy. For example, one prominent study estimated that a one-star rating increase on Yelp.com translated to an increase of 5 to 9 percent in revenues for a restaurant.<sup>1</sup> Another study found that a one-point boost in a hotel's online

ratings on travel sites is tied to an 11 percent jump in room rates, on average.<sup>2</sup> To date, academic research has not focused specifically on markets for consumer financial products and services. But online reviews are also commonplace in many of those markets, and the Bureau expects them to play an increasing role in helping consumers choose between financial providers. This can create an incentive for dishonest market participants to attempt to manipulate the review process, rather than compete based on the value of their services, which can frustrate a competitive marketplace.

The Bureau notes that consumer reviews can be important to two groups of consumers: The consumers who read and rely upon reviews, as well as the consumers who take the time to express their viewpoints by writing them in the first place. Of course, these groups can be overlapping. Firms that interfere with consumer reviews can harm both of these groups.

###### B. Public Policy Regarding Consumer Reviews

Congress unanimously enacted the Consumer Review Fairness Act in 2016, in response to abuses by companies that restricted consumer reviews.<sup>3</sup> As the legislative history of the statute explains, the “wide availability” of consumer reviews “has caused consumers to rely on them more heavily as credible indicators of product or service quality. In turn, businesses have sought to avoid negative reviews . . . through provisions of form contracts with consumers restricting such reviews. These provisions typically impose monetary or other penalties for publishing negative comments regarding the provider's services or products.”<sup>4</sup> The legislative history explains that these “gag clauses or non-disparagement clauses” are harmful to consumers.<sup>5</sup>

As discussed below, the Consumer Review Fairness Act protects “covered communications.” A covered communication is defined as “a written, oral, or pictorial review, performance assessment of, or other similar analysis of, including by electronic means, the

goods, services, or conduct of a person by an individual who is party to a form contract with respect to which such person is also a party.”<sup>6</sup> For simplicity, this bulletin will refer to “covered communications” as consumer reviews.

Relatedly, a “form contract” is defined as a contract with standardized terms that is: “used by a person in the course of selling or leasing the person's goods or services;” and “imposed on an individual without a meaningful opportunity for such individual to negotiate the standardized terms.”<sup>7</sup>

The Consumer Review Fairness Act provides, with limited exceptions, that “a provision of a form contract is void from the inception of such contract” if the provision:

A. Prohibits or restricts the ability of an individual who is a party to the form contract to engage in a covered communication;

B. Imposes a penalty or fee against an individual who is a party to the form contract for engaging in a covered communication; or

C. Transfers or requires an individual who is a party to the form contract to transfer to any person any intellectual property rights in review or feedback content, with the exception of a non-exclusive license to use the content, that the individual may have in any otherwise lawful covered communication about such person or the goods or services provided by such person.<sup>8</sup>

For simplicity, this bulletin will refer to these various types of provisions as restrictions on consumer reviews.

##### II. Violations of the Consumer Financial Protection Act (CFPA)

Sections 1031 and 1036 of the CFPA prohibit a covered person or service provider from engaging in an “unfair, deceptive, or abusive act or practice” that is “in connection with any transaction with a consumer for a consumer financial product or service, or the offering of a consumer financial product or service.”<sup>9</sup> There are a

<sup>6</sup> 15 U.S.C. 45b(a)(2). The statute clarifies that the term “pictorial” includes pictures, photographs, video, illustrations, and symbols. 15 U.S.C. 45b(a)(4).

<sup>7</sup> 15 U.S.C. 45b(a)(3)(A). However, the term “form contract” does not include an employer-employee or independent contractor contract. 15 U.S.C. 45b(a)(3)(B).

<sup>8</sup> 15 U.S.C. 45b(b)(1) (emphasis added). There are additional rules of construction, 15 U.S.C. 45b(b)(2), and exceptions, 15 U.S.C. 45b(b)(3).

<sup>9</sup> 12 U.S.C. 5531, 5536. For definitions of “covered person,” “service provider,” and “consumer financial product or service,” see section 1002 of the CFPA, 12 U.S.C. 5481, and the associated regulation, 12 CFR part 1001.

<sup>2</sup> Chris Anderson, *The Impact of Social Media on Lodging Performance*, 12(15) *Cornell Hospitality Report* 6, 11 (2012).

<sup>3</sup> Public Law 114–258, 130 Stat. 1355 (2016) (codified at 15 U.S.C. 45b).

<sup>4</sup> H.R. Rep. No. 114–731, at 5 (2016).

<sup>5</sup> *Id.*

<sup>1</sup> Michael Luca, *Reviews, Reputation, and Revenue: The Case of Yelp.com*, Harv. Bus. Sch. Working Paper No. 12–016, 14 (2016).

number of ways that covered persons or service providers could violate this prohibition by interfering with consumer reviews.

*A. Deceiving Consumers Who Wish To Leave Consumer Reviews, Using Purported Contractual Restrictions That Are Unenforceable*

“An act or practice is deceptive if: (1) There is a representation, omission, or practice that (2) is likely to mislead consumers acting reasonably under the circumstances, and (3) the representation, omission, or practice is material.”<sup>10</sup>

It is well-established that material misrepresentations to consumers that are unsupported under applicable law can be deceptive.<sup>11</sup> In particular, including an unenforceable material term in a consumer contract is deceptive, because it misleads consumers into believing the contract term is enforceable. The Bureau’s examiners have repeatedly cited such unenforceable contract provisions in their supervisory work.<sup>12</sup> Moreover, disclaimers in a contract such as “subject to applicable law” do not cure the misrepresentation caused by the inclusion of an unenforceable contract term. Additionally, subsequent disclaimers cannot cure a misrepresentation.<sup>13</sup>

Consistent with these principles, it would generally be deceptive to include a restriction on consumer reviews in a form contract, given that the restriction would be void under the Consumer Review Fairness Act. Consumers can be expected to read the language to mean what it says: That they are restricted in their ability to provide consumer reviews. But that is not the case, since the provision is void under applicable law. And the option to post candid reviews about products or services would be material to the many American consumers who do so. Moreover, the Bureau believes that enforcing the deception prohibition is particularly important in this context,

<sup>10</sup> *CFPB v. Gordon*, 819 F.3d 1179, 1192 (9th Cir. 2016) (internal quotation marks and punctuation omitted).

<sup>11</sup> *See, e.g., FTC v. World Media Brokers*, 415 F.3d 758, 763 (7th Cir. 2005).

<sup>12</sup> *See, e.g., Supervisory Highlights: Summer 2017*, 82 FR 48703, 48708 (Oct. 19, 2017) (deceptive waivers of borrowers’ rights in loss mitigation agreements that were unenforceable under 12 CFR part 1026 (Regulation Z), implementing the Truth in Lending Act); *Supervisory Highlights, Issue 24, Summer 2021*, 86 FR 36108, 36117 (July 8, 2021) (deceptive waivers of rights in security deed riders that were unenforceable under 12 CFR part 1024 (Regulation X), implementing the Real Estate Settlement Procedures Act).

<sup>13</sup> *See, e.g., FTC v. IAB Marketing Assoc., LP*, 746 F.3d 1228, 1233 (11th Cir. 2014).

given that consumer reviews are a significant driver of competition in the modern economy.

In addition, if a covered person or service provider attempts to pressure a consumer to remove an already posted negative review, by invoking a restriction on consumer reviews that is void under the Consumer Review Fairness Act, that would also generally be a deceptive act or practice. Note that this would be an additional deceptive act or practice, not a precondition for establishing the kind of deceptive act or practice already described. Damage can be done by chilling consumers’ reviews even if, unknown to the consumer, the covered person or service provider does not later follow up by invoking the contract provision against consumers who post negative reviews. Accordingly, in other contexts, Bureau examiners have found unenforceable contract provisions to be deceptive regardless of whether the provision is ultimately enforced.<sup>14</sup> But if a covered person or service provider does invoke the void contract provision against the consumer (for example, by claiming that the consumer is contractually required to remove a negative review, or that the consumer is contractually required to stop posting such reviews, or assessing a penalty or fee if the consumer does not remove a negative review), that can be expected to further deepen the materially misleading impression that the affected consumers would have. It would be natural for consumers to believe that they need to remove existing negative reviews, stop posting such reviews, or pay the purported penalty or fee, which is not the case.

*B. Unfairly Depriving Consumers of Information Using Restrictions on Consumer Reviews*

In addition to deceiving consumers who wish to leave reviews, purported contractual restrictions on consumer reviews can unfairly harm the many other consumers who rely upon reviews when deciding what products and services to purchase.

Under section 1031(c) of the CFPRA, an act or practice is unfair if: (A) It causes or is likely to cause substantial injury to consumers which is not reasonably avoidable by consumers; and (B) such substantial injury is not outweighed by countervailing benefits to consumers or to competition.<sup>15</sup>

In applying the CFPRA’s unfairness prohibition, the Bureau finds persuasive the reasoning of the Federal Trade Commission (FTC) in *FTC v. Roca Labs, Inc.*<sup>16</sup>

<sup>14</sup> *See* matters cited in note 12.

<sup>15</sup> 12 U.S.C. 5531(c).

*Inc.*<sup>16</sup> *Roca Labs* was an enforcement action that predated the Consumer Review Fairness Act, but it was cited in the that statute’s legislative history.<sup>17</sup> In *Roca Labs*, the FTC alleged that the Defendants’ use of “contractual provisions that prohibit purchasers from speaking or publishing truthful or nondefamatory negative comments or reviews about the Defendants, their products, or their employees” was unfair under the Federal Trade Commission Act.<sup>18</sup> The defendants’ conduct “caused or are likely to cause purchasers to refrain from commenting negatively about the Defendants or their products. By depriving prospective purchasers of this truthful, negative information, Defendants’ practices have resulted or are likely to result in consumers buying Roca Labs products they would not otherwise have bought.”<sup>19</sup> This substantial injury was not reasonably avoidable by consumers or outweighed by countervailing benefits to consumers or to competition.<sup>20</sup> The Bureau intends to apply similar unfairness principles if it encounters a covered person or service provider, acting within the scope of the CFPRA, who uses contractual restrictions to restrict consumer reviews.

*C. Deceiving Consumers Who Read Consumer Reviews About the Nature of Those Reviews*

Whether or not there are any contractual restrictions on consumer reviews, covered persons or service providers can engage in a deceptive act or practice by manipulating consumers’ comprehension of the set of reviews that are available. Two recent FTC matters illustrate this concern.

First, in the *Sunday Riley* matter, the FTC alleged that a company instructed its employees to leave reviews of its products on a third-party website, and also to “dislike” negative reviews left by real customers.<sup>21</sup> The FTC found that this was deceptive. By engaging in this conduct, the company had “represented, directly or indirectly, expressly or by implication, that certain reviews . . . reflected the experiences

<sup>16</sup> Complaint, *FTC v. Roca Labs, Inc.*, No. 8:15-cv-02231 (M.D. Fla. filed Sept. 24, 2015), <https://www.ftc.gov/system/files/documents/cases/150928rocalabscmpt.pdf>.

<sup>17</sup> H.R. Rep. No. 114–731, at 5 (2016) (citing *id.*).

<sup>18</sup> Complaint at 27, *FTC v. Roca Labs, Inc.*, No. 8:15-cv-02231.

<sup>19</sup> *Id.* at 22.

<sup>20</sup> *Id.* at 27.

<sup>21</sup> Complaint, *In the Matter of Sunday Riley Modern Skincare, LLC*, File No. 192–3008 (F.T.C. Nov. 6, 2020), [https://www.ftc.gov/system/files/documents/cases/192\\_3008\\_c4729\\_sunday\\_riley\\_complaint.pdf](https://www.ftc.gov/system/files/documents/cases/192_3008_c4729_sunday_riley_complaint.pdf).

or opinions of users of the products.”<sup>22</sup> But the company “failed to disclose that the online consumer reviews were written by” the company’s employees, which “would be material to consumers . . . in connection with a purchase or use decision.”<sup>23</sup> And, although in *Sunday Riley* the posters were the company’s own employees, the Bureau notes that another way that companies can deceive consumers is by paying non-employees to post reviews that are materially misleading.

Second, in the *Fashion Nova* matter, a company that sold products through a website allegedly had “four- and five-star reviews automatically post to the website, but did not approve or publish hundreds of thousands lower-starred, more negative reviews.”<sup>24</sup> The FTC found that this was a deceptive act or practice, misleading consumers who read the website into believing that the posted ratings accurately reflected the consumer reviews submitted.<sup>25</sup>

Of course, there are also numerous other ways that firms could improperly manipulate consumer reviews. The Bureau intends to carefully scrutinize whether covered persons or service providers are skewing consumers’ understanding of consumer reviews in a manner that is deceptive (or unfair or abusive).

### III. Conclusion

In summary, covered persons and service providers are liable under the CFPRA if they deceive consumers using restrictions on consumer reviews that are unenforceable under the Consumer Review Fairness Act, if they unfairly deprive consumers of information by using such restrictions, or if they deceive consumers who read reviews about the nature of those reviews. If the Bureau identifies a violation of the CFPRA, it intends to use its authorities to hold the violators accountable.

### IV. Regulatory Matters

This is a general statement of policy under the Administrative Procedure Act (APA). It provides background information about applicable law and articulates considerations relevant to the Bureau’s exercise of its authorities. It does not confer any rights of any kind. As a general statement of policy, it is exempt from the APA’s notice-and-comment rulemaking requirements.<sup>26</sup>

Because no notice of proposed rulemaking is required, the Regulatory Flexibility Act does not require an initial or final regulatory flexibility analysis.<sup>27</sup> It also does not impose any new or revise any existing recordkeeping, reporting, or disclosure requirements on covered entities or members of the public that would be collections of information requiring approval by the Office of Management and Budget under the Paperwork Reduction Act of 1995.<sup>28</sup>

### Federal Aviation Administration

#### 14 CFR Part 21

[Docket No. FAA–2020–1092]

#### Airworthiness Criteria: Special Class Airworthiness Criteria for the Airobotics Inc. OPTIMUS 1–EX Unmanned Aircraft

**AGENCY:** Federal Aviation Administration (FAA), Department of Transportation (DOT).

**ACTION:** Issuance of final airworthiness criteria.

**SUMMARY:** The FAA announces the special class airworthiness criteria for the Airobotics Inc. Model OPTIMUS 1–EX unmanned aircraft (UA). This document sets forth the airworthiness criteria the FAA finds to be appropriate and applicable for the UA design.

**DATES:** These airworthiness criteria are effective April 27, 2022.

**FOR FURTHER INFORMATION CONTACT:** Christopher J. Richards, Emerging Aircraft Strategic Policy Section, AIR–618, Strategic Policy Management Branch, Policy and Innovation Division, Aircraft Certification Service, Federal Aviation Administration, 6020 28th Avenue South, Room 103, Minneapolis, MN 55450, telephone (612) 253–4559.

#### SUPPLEMENTARY INFORMATION:

##### Background

Airobotics Inc. (Airobotics) applied to the FAA on September 25, 2019, for a special class type certificate under title 14, Code of Federal Regulations (14 CFR), § 21.17(b) for the Model

OPTIMUS 1–EX unmanned aircraft system (UAS).

The Model OPTIMUS 1–EX consists of a rotorcraft UA and its associated elements (AE) including communication links and components that control the UA. The Model OPTIMUS 1–EX UA has a maximum gross takeoff weight of 23 pounds. It is approximately 70 inches in width, 70 inches in length, and 13 inches in height. The Model OPTIMUS 1–EX UA uses battery-powered electric motors for vertical takeoff, landing, and forward flight. The UAS operations would rely on high levels of automation and may include multiple UA operated by a single pilot, up to a ratio of 20 UA to 1 pilot. Airobotics anticipates operators will use the Model OPTIMUS 1–EX for surveying, mapping, inspection of critical infrastructure, and patrolling. The proposed concept of operations (CONOPS) for the Model OPTIMUS 1–EX identifies a maximum operating altitude of 400 feet above ground level (AGL), a maximum cruise speed of 27 knots, operations beyond the visual line of sight (BVLOS) of the pilot, and operations over human beings. Airobotics has not requested type certification for flight into known icing for the Model OPTIMUS 1–EX.

The FAA issued a notice of proposed airworthiness criteria for the Airobotics Model OPTIMUS 1–EX UAS, which published in the **Federal Register** on November 20, 2020 (85 FR 74280).

#### Summary of Changes From the Proposed Airworthiness Criteria

Based on the comments received, these final airworthiness criteria reflect the following changes, as explained in more detail under Discussion of Comments: A new section containing definitions; revisions to the CONOPS requirement; changing the term “critical part” to “flight essential part” in D&R.135; changing the basis of the durability and reliability testing from population density to limitations prescribed for the operating environment identified in the applicant’s CONOPS per D&R.001; and, for the demonstration of certain required capabilities and functions as required by D&R.310.

Additionally, the FAA re-evaluated its approach to type certification of low-risk UA using durability and reliability testing. Safe UAS operations depend and rely on both the UA and the AE. As explained in FAA Memorandum AIR600–21–AIR–600–PM01, dated July 13, 2021, the FAA has revised the airworthiness criteria to define a boundary between the UA type certification and subsequent operational evaluations and approval processes for

<sup>24</sup> Complaint at 2. *In the Matter of Fashion Nova, LLC*, File No. 192–3138 (F.T.C. Jan. 25, 2022), [https://www.ftc.gov/system/files/documents/cases/192\\_3138\\_fashion\\_nova\\_complaint.pdf](https://www.ftc.gov/system/files/documents/cases/192_3138_fashion_nova_complaint.pdf).

<sup>25</sup> *Id.*

<sup>26</sup> 5 U.S.C. 553(b).

<sup>27</sup> 5 U.S.C. 603(a), 604(a).

<sup>28</sup> 44 U.S.C. 3501–3521.

the UAS (*i.e.*, waivers, exemptions, and/or operating certificates).

To reflect that these airworthiness criteria rely on durability and reliability (D&R) testing for certification, the FAA changed the prefix of each section from “UAS” to “D&R.”

Lastly, the FAA revised D&R.001(g) to clarify that the operational parameters listed in that paragraph are examples and not an all-inclusive list.

### Discussion of Comments

The FAA received responses from 26 commenters. The majority of the commenters were individuals. In addition to the individuals' comments, the FAA also received comments from a U.S. congressman, the European Union Aviation Safety Agency (EASA), the City of Deer Park, Texas, unmanned aircraft manufacturers and operators, a helicopter operator, and organizations such as the Air Line Pilots Association (ALPA), Commercial Drone Alliance (CDA), Deer Park Chamber of Commerce, Droneport Texas, LLC, the National Agricultural Aviation Association (NAAA), Northeast UAS Airspace Integration Research Alliance, Inc. (NUAIR), and the Small UAV Coalition.

### Support

*Comment Summary:* ALPA, CDA, the City of Deer Park, Deer Park Chamber of Commerce, NUAIR, the Small UAV Coalition, U.S. Congressman Brian Babin, several UAS operators, and several individual commenters expressed support for type certification as a special class of aircraft and establishing airworthiness criteria under § 21.17(b). CDA and the Small UAV Coalition also supported the FAA's proposed use of performance-based standards.

### Terminology: Loss of Flight

*Comment Summary:* An individual commenter requested the FAA define the term “loss of flight” and clarify how it is different from “loss of control.” The commenter questioned whether loss of flight meant the UA could not continue its intended flight plan but could safely land or terminate the flight.

*FAA Response:* The FAA has added a new section, D&R.005, to define the terms “loss of flight” and “loss of control” for the purposes of these airworthiness criteria. “Loss of flight” refers to a UA's inability to complete its flight as planned, up to and through its originally planned landing. “Loss of flight” includes scenarios where the UA experiences controlled flight into terrain or obstacles, or any other collision, or a loss of altitude that is severe or non-

recoverable. “Loss of flight” includes deploying a parachute or ballistic recovery system that leads to an unplanned landing outside the operator's designated recovery zone.

“Loss of control” means an unintended departure of an aircraft from controlled flight. It includes control reversal or an undue loss of longitudinal, lateral, and directional stability and control. It also includes an upset or entry into an unscheduled or uncommanded attitude with high potential for uncontrolled impact with terrain. “Loss of control” means a spin, loss of control authority, loss of aerodynamic stability, divergent flight characteristic, or similar occurrence, which could generally lead to a crash.

### Terminology: Skill and Alertness of Pilot

*Comment Summary:* Two commenters requested the FAA clarify terminology with respect to piloting skill and alertness. Droneport Texas LLC stated that the average pilot skill and alertness is currently undefined, as remote pilots do not undergo oral or practical examinations to obtain certification. NUAIR noted that, despite the definition of “exceptional piloting skill and alertness” in Advisory Circular (AC) 23–8C, *Flight Test Guide for Certification of Part 23 Airplanes*, there is a significant difference between the average skill and alertness of a remote pilot certified under 14 CFR part 107 and a pilot certified under 14 CFR part 61. The commenter requested the FAA clarify the minimum qualifications and ratings to perform as a remote pilot of a UAS with a type certificate.

*FAA Response:* These airworthiness criteria do not require exceptional piloting skill and alertness for testing. The FAA included this as a requirement to ensure the applicant passes testing by using pilots of average skill who have been certificated under part 61, as opposed to highly trained pilots with thousands of hours of flight experience.

### Concept of Operations

The FAA proposed a requirement for the applicant to submit a CONOPS describing the UAS and identifying the intended operational concepts. The FAA explained in the preamble of the notice of proposed airworthiness criteria that the information in the CONOPS would determine parameters for testing and flight manual operating limitations.

*Comment Summary:* One commenter stated that the airworthiness criteria are generic and requested the FAA add language to proposed UAS.001 to clarify that some of the criteria may not be relevant or necessary.

*FAA Response:* Including the language requested by the commenter would be inappropriate, as these airworthiness criteria are project-specific. Thus, in this case, each element of these airworthiness criteria is a requirement specific to the type certification of Airobotics's proposed UA design.

*Comment Summary:* ALPA requested the criteria specify that the applicant's CONOPS contain sufficient detail to determine the parameters and extent of testing, as well as operating limitations placed on the UAS for its operational uses.

*FAA Response:* The FAA agrees and has updated D&R.001 to clarify that the information required for inclusion in the CONOPS proposal (D&R.001(a) through (g)) must be described in sufficient detail to determine the parameters and extent of testing and operating limitations.

*Comment Summary:* ALPA requested the CONOPS include a description of a means to ensure separation from other aircraft and perform collision avoidance maneuvers. ALPA stated that its requested addition to the CONOPS is critical to the safety of other airspace users, as manned aircraft do not easily see most UAs.

*FAA Response:* The FAA agrees and has updated D&R.001 to require that the applicant identify collision avoidance equipment (whether onboard the UA or part of the AE), if the applicant requests to include that equipment.

*Comment Summary:* ALPA requested the FAA add security-related (other than cyber-security) requirements to the CONOPS criteria, including mandatory reporting of security occurrences, security training and awareness programs for all personnel involved in UAS operations, and security standards for the transportation of goods, similar to those for manned aviation.

*FAA Response:* The type certificate only establishes the approved design of the UA. Operations and operational requirements, including those regarding security occurrences, security training, and package delivery security standards (other than cybersecurity airworthiness design requirements) are beyond the scope of the airworthiness criteria established by this document and are not required for type certification.

*Comment Summary:* UAS.001(c) proposed to require that the applicant's CONOPS include a description of meteorological conditions. ALPA requested the FAA change UAS.001(c) to require a description of meteorological and environmental conditions and their operational limits. ALPA stated the CONOPS should

include maximum wind speeds, maximum or minimum temperatures, maximum density altitudes, and other relevant phenomena that will limit operations or cause operations to terminate.

*FAA Response:* D&R.001(c) and D&R.125 address meteorological conditions, while D&R.001(g) addresses environmental considerations. The FAA determined that these criteria are sufficient to cover the weather phenomena mentioned by the commenter without specifically requiring identification of related operational limits.

### Control Station

To address the risks associated with loss of control of the UA, the FAA proposed that the applicant design the control station to provide the pilot with all information necessary for continued safe flight and operation.

*Comment Summary:* ALPA and two individual commenters requested the FAA revise the proposed criteria to add requirements for the control station. Specifically, these commenters requested the FAA include the display of data and alert conditions to the pilot, physical security requirements for both the control station and the UAS storage area, design requirements that minimize negative impact of extended periods of low pilot workload, transfer of control between pilots, and human factors/human machine interface considerations for handheld controls. NUAIR requested the FAA designate the control station as a flight critical component for operations.

EASA and an individual commenter requested the FAA consider flexibility in some of the proposed criteria. EASA stated that the list of information in proposed UAS.100 is too prescriptive and contains information that may not be relevant for highly automated systems. The individual commenter requested that the FAA allow part-time or non-continuous displays of required information that do not influence the safety of the flight.

*FAA Response:* Although the scope of the proposed airworthiness criteria applied to the entire UAS, the FAA has re-evaluated its approach to type certification of low-risk unmanned aircraft using durability and reliability testing. A UA is an aircraft that is operated without the possibility of direct human intervention from within or on the aircraft.<sup>1</sup> A UAS is defined as a UA and its AE, including communication links and the components that control the UA, that

are required to operate the UAS safely and efficiently in the national airspace system.<sup>2</sup> As explained in FAA Memorandum AIR600–21–AIR–600–PM01, dated July 13, 2021, the FAA determined it will apply the regulations for type design approval, production approval, conformity, certificates of airworthiness, and maintenance to only the UA and not to the AE. However, because safe UAS operations depend and rely on both the UA and the AE, the FAA will consider the AE in assessing whether the UA meets the airworthiness criteria that comprise the certification basis.

While the AE items themselves will be outside the scope of the UA type design, the applicant will provide sufficient specifications for any aspect of the AE, including the control station, which could affect airworthiness. The FAA will approve either the specific AE or minimum specifications for the AE, as identified by the applicant, as part of the type certificate by including them as an operating limitation in the type certificate data sheet and flight manual. The FAA may impose additional operating limitations specific to the AE through conditions and limitations for inclusion in the operational approval (*i.e.*, waivers, exemptions, or a combination of these). In accordance with this approach, the FAA will consider the entirety of the UAS for operational approval and oversight.

Accordingly, the FAA has revised the criteria by replacing proposed section UAS.100, applicable to the control station design, with D&R.100, UA Signal Monitoring and Transmission, with substantively similar criteria that apply to the UA design.

The FAA has also added a new section, D&R.105, UAS AE Required for Safe UA Operations, which requires the applicant to provide information concerning the specifications of the AE. The FAA has moved the alert function requirement proposed in UAS.100(a) to new section D&R.105(a)(1)(i). As part of the clarification of the testing of the interaction between the UA and AE, the FAA has added a requirement to D&R.300(h) for D&R testing to use minimum specification AE. This addition requires the applicant to demonstrate that the limits proposed for those AE will allow the UA to operate as expected throughout its service life.

Finally, the FAA has revised references throughout the airworthiness criteria from “UAS” to “UA,” as appropriate, to reflect the FAA determination that the regulations for type design approval, production

approval, conformity, certificates of airworthiness, and maintenance apply to only the UA.

### Software

The FAA proposed criteria on verification, configuration management, and problem reporting to minimize the existence of errors associated with UAS software.

*Comment Summary:* ALPA requested the FAA add language to the proposed criteria to ensure that some level of software engineering principles are used without being too prescriptive.

*FAA Response:* By combining the software testing requirement of D&R.110(a) with successful completion of the requirements in the entire “Testing” subpart, the acceptable level of software assurance will be identified and demonstrated. The configuration management system required by D&R.110(b) will ensure that the software is adequately documented and traceable both during and after the initial type certification activities.

*Comment Summary:* EASA suggested the criteria require that the applicant establish and correctly implement system requirements or a structured software development process for critical software.

*FAA Response:* Direct and specific evaluation of the software development process is more detailed than what the FAA intended with the proposed criteria, which use D&R testing to evaluate the UAS as a whole system, rather than evaluating individual components within the UA. Successful completion of the testing requirements provides confidence that the components that make up the UA provide an acceptable level of safety, commensurate to the low-risk nature of this aircraft. The FAA finds no change to the airworthiness criteria is needed.

*Comment Summary:* Two individual commenters requested the FAA require the manned aircraft software certification methodology in RTCA DO–178C, *Software Considerations in Airborne Systems and Equipment Certification*, for critical UA software.

*FAA Response:* Under these airworthiness criteria, only software that may affect the safe operation of the UA must be verified by test. To verify by test, the applicant will need to provide an assessment showing that other software is not subject to testing because it has no impact on the safe operation of the UA. For software that is subject to testing, the FAA may accept multiple options for software qualification, including DO–178C. Further, specifying that applicants must comply with DO–178 would be inconsistent with the

<sup>1</sup> See 49 U.S.C. 44801(11).

<sup>2</sup> See 49 U.S.C. 44801(12).

FAA's intent to issue performance-based airworthiness criteria.

*Comment Summary:* NAAA stated that an overreliance of software in aircraft has been and continues to be a source of accidents and requested the FAA include criteria to prevent a midair collision.

*FAA Response:* The proper functioning of software is an important element of type certification, particularly with respect to flight controls and navigation. The airworthiness criteria in D&R.110 are meant to provide an acceptable level of safety commensurate with the risk posed by this UA. Additionally, the airworthiness criteria require contingency planning per D&R.120 and the demonstration of the UA's ability to detect and avoid other aircraft in D&R.310, if requested by the applicant. The risk of a midair collision will be minimized by the operating limitations that result from testing based on the operational parameters identified by the applicant in its CONOPS (such as geographic operating boundaries, airspace classes, and congestion of the proposed operating area), rather than by specific mitigations built into the aircraft design itself. These criteria are sufficient due to the low-risk nature of the Model OPTIMUS 1-EX.

### Cybersecurity

Because the UA requires a continuous wireless connection, the FAA proposed criteria to address the risks to the UAS from cybersecurity threats.

*Comment Summary:* ALPA requested adding a requirement for cybersecurity protection for navigation and position reporting systems such as Global Navigation Satellite System (GNSS). ALPA further requested the FAA include criteria to address specific cybersecurity vulnerabilities, such as jamming (denial of signal) and spoofing (false position data is inserted). ALPA stated that, for navigation, UAS primarily use GNSS—an unencrypted, open-source, low power transmission that can be jammed, spoofed, or otherwise manipulated.

*FAA Response:* The FAA will assess elements directly influencing the UA for cybersecurity under D&R.115 and will assess the AE as part of any operational approvals an operator may seek. D&R.115 (proposed as UAS.115) addresses intentional unauthorized electronic interactions, which includes, but is not limited to, hacking, jamming, and spoofing. These airworthiness criteria require the high-level outcome the UA must meet, rather than discretely identifying every aspect of cybersecurity the applicant will address.

### Contingency Planning

The FAA proposed criteria requiring that the UAS be designed to automatically execute a predetermined action in the event of a loss of communication between the pilot and the UA. The FAA further proposed that the predetermined action be identified in the Flight Manual and that the UA be precluded from taking off when the quality of service is inadequate.

*Comment Summary:* ALPA requested the criteria encompass more than loss or degradation of the command and control (C2) link, as numerous types of critical part or systems failures can occur that include degraded capabilities, whether intermittent or sustained. ALPA requested the FAA add language to the proposed criteria to address specific failures such as loss of a primary navigation sensor, degradation or loss of navigation capability, and simultaneous impact of C2 and navigation links.

*FAA Response:* The airworthiness criteria address the issues raised by the commenter. Specifically, D&R.120(a) addresses actions the UA will automatically and immediately take when the operator no longer has control of the UA. Should the specific failures identified by ALPA result in the operator's loss of control, then the criteria require the UA to execute a predetermined action. Degraded navigation performance does not raise the same level of concern as a degraded or lost C2 link. For example, a UA may experience interference with a GPS signal on the ground, but then find acceptable signal strength when above a tree line or other obstruction. The airworthiness criteria require that neither degradation nor complete loss of GPS or C2, as either condition would be a failure of that system, result in unsafe loss of control or containment. The applicant must demonstrate this by test to meet the requirements of D&R.305(a)(3).

Under the airworthiness criteria, the minimum performance requirements for the C2 link, defining when the link is degraded to an unacceptable level, may vary among different UAS designs. The level of degradation that triggers a loss is dependent upon the specific UA characteristics; this level will be defined by the applicant and demonstrated to be acceptable by testing as required by D&R.305(a)(2) and D&R.310(a)(1).

*Comment Summary:* An individual commenter requested the FAA use distinct terminology for "communication," used for communications with air traffic control, and "C2 link," used for command and

control between the remote pilot station and UA. The commenter questioned whether, in the proposed criteria, the FAA stated "loss of communication between the pilot and the UA" when it intended to state "loss of C2 link."

*FAA Response:* Communication extends beyond the C2 link and specific control inputs. This is why D&R.001 requires the applicant's CONOPS to include a description of the command, control, and communications functions. As long as the UA operates safely and predictably per its lost link contingency programming logic, a C2 interruption does not constitute a loss of control.

*Comment Summary:* Elsie Ltd. requested the FAA include criteria to ensure the reliability of the C2 link during BVLOS commercial operations. Specifically, the commenter stated that C2 links should utilize all available network infrastructures; the communication platform should demonstrate reliability over time, long distances, and harsh environmental conditions; and communication hardware and software should be able to interchange and operate through different IP links.

*FAA Response:* The airworthiness criteria address the issues raised by the commenter by requiring successful demonstration of the aircraft system, including C2 reliability. D&R.300(b) and (h) require flight test evaluation of the entire UAS addressing flight distances, duration, wind, and weather, among other elements. Additionally, D&R.305(a)(2) requires demonstration that failure of the C2 link will not result in a loss of containment or control of the UA, and D&R.310(a)(1) requires demonstration of the system's capability to regain command and control of the UA after the C2 link has been lost. These tests are intended to demonstrate that the system has sufficient reliability and capability regardless of environmental consideration.

### Lightning

The FAA proposed criteria to address the risks that would result from a lightning strike, accounting for the size and physical limitations of a UAS that could preclude traditional lightning protection features. The FAA further proposed that without lightning protection for the UA, the Flight Manual must include an operating limitation to prohibit flight into weather conditions with potential lightning.

*Comment Summary:* An individual requested the FAA revise the criteria to include a similar design mitigation or operating limitation for High Intensity Radiated Fields (HIRF). The commenter noted that HIRF is included in proposed

UAS.300(e) as part of the expected environmental conditions that must be replicated in testing.

*FAA Response:* The airworthiness criteria, which are adopted as proposed, address the issue raised by the commenter. The applicant must identify tested HIRF exposure capabilities, if any, in the Flight Manual to comply with the criteria in D&R.200(a)(5). Information regarding HIRF capabilities is necessary for safe operation because proper communication and software execution may be impeded by HIRF-generated interference, which could result in loss of control of the UA. It is not feasible to measure HIRF at every potential location where the UA will operate; thus, requiring operating limitations for HIRF as requested by the commenter would be impractical.

#### **Adverse Weather Conditions**

The FAA proposed criteria either requiring that design characteristics protect the UAS from adverse weather conditions or prohibiting flight into known adverse weather conditions. The criteria proposed to define adverse weather conditions as rain, snow, and icing.

*Comment Summary:* ALPA and two individual commenters requested the FAA expand the proposed definition of adverse weather conditions. These commenters noted that because of the size and physical limitations of the Model OPTIMUS 1-EX, adverse weather should also include wind, downdraft, low-level wind shear (LLWS), microburst, and extreme mechanical turbulence.

*FAA Response:* No additional language needs to be added to the airworthiness criteria to address wind effects. The wind conditions specified by the commenters are part of normal UA flight operations. The applicant must demonstrate by flight test that the UA can withstand wind without failure to meet the requirements of D&R.300(b)(9). The FAA developed the criteria in D&R.130 to address adverse weather conditions (rain, snow, and icing) that would require additional design characteristics for safe operation. Any operating limitations necessary for operation in adverse weather or wind conditions will be included in the Flight Manual as required by D&R.200.

*Comment Summary:* One commenter questioned whether the criteria proposed in UAS.130(c)(2), requiring a means to detect adverse weather conditions for which the UAS is not certificated to operate, is a prescriptive requirement to install an onboard detection system. The commenter requested, if that was the case, that the

FAA allow alternative procedures to avoid flying in adverse weather conditions.

*FAA Response:* The language referred to by the commenter is not a prescriptive design requirement for an onboard detection system. The applicant may use any acceptable source to monitor weather in the area, whether onboard the UA or from an external source.

#### **Critical Parts**

The FAA proposed criteria for critical parts that were substantively the same as those in the existing standards for normal category rotorcraft under § 27.602, with changes to reflect UAS terminology and failure conditions. The criteria proposed to define a critical part as a part, the failure of which could result in a loss of flight or unrecoverable loss of control of the aircraft.

*Comment Summary:* EASA requested the FAA avoid using the term “critical part,” as it is a well-established term for complex manned aircraft categories and may create incorrect expectations on the oversight process for parts.

*FAA Response:* For purposes of the airworthiness criteria established for the Airobotics Model OPTIMUS 1-EX, the FAA has changed the term “critical part” to “flight essential part.”

*Comment Summary:* An individual commenter requested the FAA revise the proposed criteria such that a failure of a flight essential part would only occur if there is risk to third parties.

*FAA Response:* The definition of “flight essential” does not change regardless of whether on-board systems are capable of safely landing the UA when it is unable to continue its flight plan. Tying the definition of a flight essential part to the risk to third parties would result in different definitions for the part depending on where and how the UA is operated. These criteria for the Model OPTIMUS 1-EX UA apply the same approach as for manned aircraft.

#### **Flight Manual**

The FAA proposed criteria for the Flight Manual that were substantively the same as the existing standards for normal category airplanes, with minor changes to reflect UAS terminology.

*Comment Summary:* ALPA requested the FAA revise the criteria to include normal, abnormal, and emergency operating procedures along with their respective checklist. ALPA further requested the checklist be contained in a quick reference handbook (QRH).

*FAA Response:* The FAA did not intend for the airworthiness criteria to exclude abnormal procedures from the

flight manual. In these final airworthiness criteria, the FAA has changed “normal and emergency operating procedures” to “operating procedures” to encompass all operating conditions and align with 14 CFR 23.2620, which includes the airplane flight manual requirements for normal category airplanes. The FAA has not made any changes to add language that would require the checklists to be included in a QRH. FAA regulations do not require manned aircraft to have a QRH for type certification. Therefore, it would be inconsistent for the FAA to require a QRH for the Airobotics Model OPTIMUS 1-EX UA.

*Comment Summary:* ALPA requested the FAA revise the airworthiness criteria to require that the Flight Manual and QRH be readily available to the pilot at the control station.

*FAA Response:* ALPA’s request regarding the Flight manual addresses an operational requirement, similar to 14 CFR 91.9 and is therefore not appropriate for type certification airworthiness criteria. Also, as previously discussed, FAA regulations do not require a QRH. Therefore, it would be inappropriate to require it to be readily available to the pilot at the control station.

*Comment Summary:* Droneport Texas LLC requested the FAA revise the airworthiness criteria to add required Flight Manual sections for routine maintenance and mission-specific equipment and procedures. The commenter stated that the remote pilot or personnel on the remote pilot-in-command’s flight team accomplish most routine maintenance, and that the flight team usually does UA rigging with mission equipment.

*FAA Response:* The requested change is appropriate for a maintenance document rather than a flight manual because it addresses maintenance procedures rather than the piloting functions. The FAA also notes that, similar to the criteria for certain manned aircraft, the airworthiness criteria require that the applicant prepare instructions for continued airworthiness (ICA) in accordance with appendix A to part 23. As the applicant must provide any maintenance instructions and mission-specific information necessary for safe operation and continued operational safety of the UA, in accordance with D&R.205, no changes to the airworthiness criteria are necessary.

*Comment Summary:* An individual commenter requested the FAA revise the criteria in proposed UAS.200(b) to require that “other information” referred to in proposed UAS.200(a)(5) be approved by the FAA. The commenter

noted that, as proposed, only the information listed in UAS.200(a)(1) through (4) must be FAA approved.

*FAA Response:* The change requested by the commenter would be inconsistent with the FAA's airworthiness standards for flight manuals for manned aircraft. Sections 23.2620(b), 25.1581(b), 27.1581(b), and 29.1581(b) include requirements for flight manuals to include operating limitations, operating procedures, performance information, loading information, and other information that is necessary safe operation because of design, operating, or handling characteristics, but limit FAA approval to operating limitations, operating procedures, performance information, and loading information.

Under § 23.2620(b)(1), for low-speed level 1 and level 2 airplanes, the FAA only approves the operating limitations. In applying a risk-based approach, the FAA has determined it would not be appropriate to hold the lowest risk UA to a higher standard than what is required for low speed level 1 and level 2 manned aircraft. Accordingly, the FAA has revised the airworthiness criteria to only require FAA approval of the operating limitations.

*Comment Summary:* NUAIR requested the FAA recognize that § 23.2620 is only applicable to the aircraft and does not address off-aircraft components such as the control station, control and non-payload communications (CNPC) data link, and launch and recovery equipment. The commenter noted that this is also true of industry consensus-based standards designed to comply with § 23.2620.

*FAA Response:* As explained in more detail in the Control Station section of this document, the FAA has revised the airworthiness criteria for the AE. The FAA will approve AE or minimum specifications for the AE that could affect airworthiness as an operating limitation in the UA flight manual. The FAA will establish the approved AE or minimum specifications as operating limitations and include them in the UA type certificate data sheet and Flight Manual in accordance with D&R.105(c). The establishment of requirements for and the approval of AE will be in accordance with FAA Memorandum AIR600-21-AIR-600-PM01, dated July 13, 2021.

### Durability and Reliability

The FAA proposed durability and reliability testing that would require the applicant to demonstrate safe flight of the UAS across the entire operational envelope and up to all operational limitations, for all phases of flight and

all aircraft configurations described in the applicant's CONOPS, with no failures that result in a loss of flight, loss of control, loss of containment, or emergency landing outside the operator's recovery area. The FAA further proposed that the unmanned aircraft would only be certificated for operations within the limitations, and for flight over areas no greater than the maximum population density, as described in the applicant's CONOPS and demonstrated by test.

*Comment Summary:* ALPA requested that the proposed certification criteria require all flights during testing be completed in both normal and non-normal or off-nominal scenarios with no failures that result in a loss of flight, loss of control, loss of containment, or emergency landing outside of the operator's recovery zone. Specifically, ALPA stated that testing must not require exceptional piloting skill or alertness and include, at a minimum: All phases of the flight envelope, including the highest UA to pilot ratios; the most adverse combinations of the conditions and configuration; the environmental conditions identified in the CONOPS; the different flight profiles and routes identified in the CONOPS; and exposure to EMI and HIRF.

*FAA Response:* No change is necessary because the introductory text and paragraphs (b)(7), (b)(9), (b)(10), (b)(13), (c), (d), (e), and (f) of D&R.300, which are adopted as proposed, contain the specific testing requirements requested by ALPA.

*Comment Summary:* Droneport Texas LLC requested the FAA revise the testing criteria to include, for operation at night, testing both with and without night vision aids. The commenter stated that because small UAS operation at night is waivable under 14 CFR part 107, manufacturers will likely make assumptions concerning a pilot's familiarity with night vision device-aided and unaided operations.

*FAA Response:* Under D&R.300(b)(11), the applicant must demonstrate by flight test that the UA can operate at night without failure using whatever equipment is onboard the UA itself. The pilot's familiarity, or lack thereof, with night vision equipment does not impact whether the UA is reliable and durable to complete testing without any failures.

*Comment Summary:* EASA requested the FAA clarify how testing durability and reliability commensurate to the maximum population density, as proposed, aligns with the Specific Operations Risk Assessment (SORA) approach that is open to operational mitigation, reducing the initial ground

risk. An individual commenter requested the FAA provide more details about the correlation between the number of flight hours tested and the CONOPS environment (e.g., population density). The commenter stated that this is one of the most fundamental requirements, and the FAA should ensure equal treatment to all current and future applicants.

*FAA Response:* In developing these testing criteria, the FAA sought to align the risk of UAS operations with the appropriate level of protection for human beings on the ground. The FAA proposed establishing the maximum population density demonstrated by durability and reliability testing as an operating limitation on the type certificate. However, the FAA has re-evaluated its approach and determined it to be more appropriate to connect the durability and reliability demonstrated during certification testing with the operating environment defined in the CONOPS.

Basing testing on maximum population density may result in limitations not commensurate with many actual operations. As population density broadly refers to the number of people living in a given area per square mile, it does not allow for evaluating variation in a local operating environment. For example, an operator may have a route in an urban environment with the actual flight path along a greenway; the number of human beings exposed to risk from the UA operating overhead would be significantly lower than the population density for the area. Conversely, an operator may have a route over an industrial area where few people live, but where, during business hours, there may be highly dense groups of people. Specific performance characteristics such as altitude and airspeed also factor into defining the boundaries for safe operation of the UA.

Accordingly, the FAA has revised D&R.300 to require the UA design to be durable and reliable when operated under the limitations prescribed for its operating environment. The information in the applicant's CONOPS will determine the operating environment for testing. For example, the minimum hours of reliability testing will be less for a UA conducting agricultural operations in a rural environment than if the same aircraft will be conducting package deliveries in an urban environment. The FAA will include the limitations that result from testing as operating limitations on the type certificate data sheet and in the UA Flight Manual. The FAA intends for this process to be similar to the process for

establishing limitations prescribed for special purpose operations for restricted category aircraft. This allows for added flexibility in determining appropriate operating limitations, which will more closely reflect the operating environment.

Finally, a comparison of these criteria with EASA's SORA approach is beyond the scope of this document because the SORA is intended to result in an operational approval rather than a type certificate.

*Comment Summary:* EASA requested the FAA clarify how reliability at the aircraft level to ensure high-level safety objectives would enable validation of products under applicable bilateral agreements.

*FAA Response:* As the FAA and international aviation authorities are still developing general airworthiness standards for UA, it would be speculative for the FAA to comment on the validation process for any specific UA.

*Comment Summary:* EASA requested the FAA revise the testing criteria to include a compliance demonstration related to adverse combinations of the conditions and configurations and with respect to weather conditions and average pilot qualification.

*FAA Response:* No change is necessary because D&R.300(b)(7), (b)(9), (b)(10), (c), and (f), which are adopted as proposed, contain the specific testing requirements requested by EASA.

*Comment Summary:* EASA noted that, under the proposed criteria, testing involving a large number of flight hours will limit changes to the configuration.

*FAA Response:* Like manned aircraft, the requirements of 14 CFR part 21, subpart D, apply to UA for changes to type certificates. The FAA is developing procedures for processing type design changes for UA type certificated using durability and reliability testing.

*Comment Summary:* EASA requested the FAA clarify whether the proposed testing criteria would require the applicant to demonstrate aspects that do not occur during a successful flight, such as the deployment of emergency recovery systems and fire protection/post-crash fire. EASA asked if these aspects are addressed by other means and what would be the applicable airworthiness criteria.

*FAA Response:* Equipment not required for normal operation of the UA do not require an evaluation for their specific functionality. D&R testing will show that the inclusion of any such equipment does not prevent normal operation. Therefore, the airworthiness criteria would not require functional

testing of the systems described by EASA.

*Comment Summary:* An individual commenter requested the FAA specify the acceptable percentage of failures in the testing that would result in a "loss of flight." The Small UAV Coalition requested the FAA clarify what constitutes an emergency landing outside an operator's landing area, as some UAS designs could include an onboard health system that initiates a landing to lessen the potential of a loss of control event. The commenter suggested that, in those cases, a landing in a safe location should not invalidate the test.

*FAA Response:* The airworthiness criteria require that all test points and flight hours occur with no failures result in a loss of flight, control, containment, or emergency landing outside the operator's recovery zone. The FAA has determined that there is no acceptable percentage of failures in testing. In addition, while the recovery zone may differ for each UAS design, an emergency or unplanned landing outside of a designated landing area would result in a test failure.

*Comment Summary:* The Small UAV Coalition requested that a single failure during testing not automatically restart counting the number of flight test operations set for a particular population density; rather, the applicant should have the option to identify the failure through root-cause and fault-tree analysis and provide a validated mitigation to ensure it will not recur. An individual commenter requested the FAA to clarify whether the purpose of the tests is to show compliance with a quantitative safety objective. The commenter further requested the FAA allow the applicant to reduce the number of flight testing hours if the applicant can present a predicted safety and reliability analysis.

*FAA Response:* The intent of the testing criteria is for the applicant to demonstrate the aircraft's durability and reliability through a successful accumulation of flight testing hours. The FAA does not intend to require analytical evaluation to be part of this process. However, the applicant will comply with these testing criteria using a means of compliance, accepted by the FAA, through the issue paper process. The means of compliance will be dependent on the CONOPS the applicant has proposed to meet.

#### **Probable Failures**

The FAA proposed criteria to evaluate how the UAS functions after probable failures, including failures related to propulsion systems, C2 link, GPS,

critical flight control components with a single point of failure, control station, and any other equipment identified by the applicant.

*Comment Summary:* Droneport Texas LLC requested the FAA add a bird strike to the list of probable failures. The commenter stated that despite sense and avoid technologies, flocks of birds can overcome the maneuver capabilities of a UA and result in multiple, unintended failures.

*FAA Response:* Unlike manned aircraft, where aircraft size, design, and construct are critical to safe control of the aircraft after encountering a bird strike, the FAA determined testing for bird strike capabilities is not necessary for the Model OPTIMUS 1-EX UA. The FAA has determined that a bird strike requirement is not necessary because the smaller size and lower operational speed of the OPTIMUS 1-EX reduce the likelihood of a bird strike, combined with the reduced consequences of failure due to no persons onboard. Instead, the FAA is using a risk-based approach to tailor airworthiness requirements commensurate to the low-risk nature of the Model OPTIMUS 1-EX UA.

*Comment Summary:* ALPA requested the FAA require that all probable failure tests occur at the critical phase and mode of flight and at the highest aircraft-to-pilot ratio. ALPA stated the proposed criteria are critically important for systems that rely on a single source to perform multi-label functions, such as GNSS, because failure or interruption of GNSS will lead to loss of positioning, navigation, and timing (PNT) and functions solely dependent on PNT, such as geo-fencing and contingency planning.

*FAA Response:* No change is necessary because D&R.300(c) requires that the testing occur at the critical phase and mode of flight and at the highest UA-to-pilot ratio.

*Comment Summary:* Droneport Texas LLC requested the FAA add recovery from vortex ring state (VRS) to the list of probable failures. The commenter stated the UA uses multiple rotors for lift and is therefore susceptible to VRS. The commenter further stated that because recovery from settling with power is beyond a pilot's average skill for purposes of airworthiness testing, the aircraft must be able to sense and recover from this condition without pilot assistance.

*FAA Response:* D&R.305 addresses probable failures related to specific components of the UAS. VRS is an aerodynamic condition a UA may encounter during flight testing; it is not a component subject to failure.

*Comment Summary:* Droneport Texas LLC also requested the FAA add a response to the Air Traffic Control-Zero (ATC-Zero) command to the list of probable failures. The commenter stated, based on lessons learned after the attacks on September 11, 2001, aircraft that can fly BVLOS should be able to respond to an ATC-Zero condition.

*FAA Response:* The commenter's request is more appropriate for the capabilities and functions testing criteria in D&R.310 than probable failures testing in D&R.305. D&R.310(a)(3) requires the applicant to demonstrate by test that the pilot has the ability to safely discontinue a flight. A pilot may discontinue a flight for a wide variety of reasons, including responding to an ATC-zero command.

*Comment Summary:* EASA stated the proposed language seems to require an additional analysis and safety assessment, which would be appropriate for the objective requirement of ensuring a probable failure does not result in a loss of containment or control. EASA further stated that an applicant's basic understanding of the systems architecture and effects of failures is essential.

*FAA Response:* The FAA agrees with the expectation that applicants understand the system architecture and effects of failures of a proposed design, which is why the criteria include a requirement for the applicant to test the specific equipment identified in D&R.305 and identify any other equipment that is not specifically identified in D&R.305 for testing. As the intent of the criteria is for the applicant to demonstrate compliance through testing, some analysis may be necessary to properly identify the appropriate equipment to be evaluated for probable failures.

*Comment Summary:* An individual requested that probable failure testing apply not only to critical flight control components with a single point of failure, but also to any critical part with a single point of failure.

*FAA Response:* The purpose of probable failure testing in D&R.305 is to demonstrate that if certain equipment fails, it will fail safely. Adding probable failure testing for critical (now flight essential) parts would not add value to testing. If a part is essential for flight, its failure by definition in D&R.135(a) could result in a loss of flight or unrecoverable loss of control. For example, on a traditional airplane design, failure of a wing spar in flight would lead to loss of the aircraft. Because there is no way to show that a

wing spar can fail safely, the applicant must provide its mandatory replacement time if applicable, structural inspection interval, and related structural inspection procedure in the Airworthiness Limitations section of the ICA. Similarly, under these airworthiness criteria, parts whose failure would inherently result in loss of flight or unrecoverable loss of control are not subjected to probable failure testing. Instead, they must be identified as flight essential components and included in the ICA.

To avoid confusion pertaining to probable failure testing, the FAA has removed the word "critical" from D&R.305(a)(5). In the final airworthiness criteria, probable failure testing required by D&R.305(a)(5) applies to "Flight control components with a single point of failure."

### Capabilities and Functions

The FAA proposed criteria to require the applicant to demonstrate by test the minimum capabilities and functions necessary for the design. UAS.310(a) proposed to require the applicant to demonstrate, by test, the capability of the UAS to regain command and control of the UA after a C2 link loss, the sufficiency of the electrical system to carry all anticipated loads, and the ability of the pilot to override any pre-programming in order to resolve a potential unsafe operating condition in any phase of flight. UAS.310(b) proposed to require the applicant to demonstrate by test certain features if the applicant requests approval of those features (geo-fencing, external cargo, etc.). UAS.310(c) proposed to require the design of the UAS to safeguard against an unintended discontinuation of flight or release of cargo, whether by human action or malfunction.

*Comment Summary:* ALPA stated the pilot-in-command must always have the capability to input control changes to the UA and override any pre-programming without delay as needed for the safe management of the flight. The commenter requested that the FAA retain the proposed criteria that would allow the pilot to command to: Regain command and control of the UA after loss of the C2 link; safely discontinue the flight; and dynamically re-route the UA. In support, ALPA stated the ability of the pilot to continually command (re-route) the UA, including termination of the flight if necessary, is critical for safe operations and should always be available to the pilot.

Honeywell requested the FAA revise paragraphs (a)(3) and (a)(4) of the criteria (UAS.310) to allow for either the pilot or an augmenting system to safely

discontinue the flight and re-route the UA. The commenter stated that a system comprised of detect and avoid, onboard autonomy, and ground system can be used for these functions. Therefore, the criteria should not require that only the pilot can do them.

An individual commenter requested the FAA remove UAS.310(a)(4) of the proposed criteria because requiring the ability for the pilot to dynamically re-route the UA is too prescriptive and redundant with the proposed requirement in UAS.310(a)(3), the ability of the pilot to discontinue the flight safely.

*FAA Response:* Because the pilot in command is directly responsible for the operation of the UA, the pilot must have the capability to command actions necessary for continued safety. This includes commanding a change to the flight path or, when appropriate, safely terminating a flight. The FAA notes that the ability for the pilot to safely discontinue a flight means the pilot has the means to terminate the flight and immediately and safely return the UA to the ground. This is different from the pilot having the means to dynamically re-route the UA, without terminating the flight, to avoid a conflict.

Therefore, the final airworthiness criteria include D&R.310(a) as proposed (UAS.310(a)).

*Comment Summary:* ALPA requested the FAA revise the criteria to require that all equipment, systems, and installations conform, at a minimum, to the standards of § 25.1309.

*FAA Response:* The FAA determined that traditional methodologies for manned aircraft, including the system safety analysis required by § 23.2510, § 25.1309, § 27.1309, or § 29.1309, would be inappropriate to require for the Airobotics Model OPTIMUS 1-EX due to its smaller size and reduced level of complexity. Instead, the FAA finds that system reliability through testing will ensure the safety of this design.

*Comment Summary:* ALPA requested the FAA revise the criteria to add a requirement to demonstrate the ability of the UA and pilot to perform all of the contingency plans identified in proposed UAS.120.

*FAA Response:* No change is necessary because D&R.120 and D&R.305(a)(2), together, require what ALPA requests in its comment. Under D&R.120, the applicant must design the UA to execute a predetermined action in the event of a loss of the C2 link. D&R.305(a)(2) requires the applicant to demonstrate by test that a lost C2 link will not result in a loss of containment or control of the UA. Thus, if the applicant does not demonstrate the

predetermined contingency plan resulting from a loss of the C2 link when conducting D&R.305 testing, the test would be a failure due to loss of containment.

*Comment Summary:* ALPA and an individual commenter requested the FAA revise the criteria so that geo-fencing is a required feature and not optional due to the safety concerns that could result from a UA exiting its operating area.

*FAA Response:* To ensure safe flight, the applicant must test the proposed safety functions, such as geo-fencing, that are part of the type design of the Model OPTIMUS 1-EX UA. The FAA determined that geo-fencing is an optional feature because it is one way, but not the only way, to ensure a safely contained operation.

*Comment Summary:* ALPA requested the FAA revise the criteria so that capability to detect and avoid other aircraft and obstacles is a required feature and not optional.

*FAA Response:* D&R.310(a)(4) requires the applicant demonstrate the ability for the pilot to safely re-route the UA in flight to avoid a dynamic hazard. The FAA did not prescribe specific design features such as a collision avoidance system to meet D&R.310(a)(4) because there are multiple means to minimize the risk of collision.

*Comment Summary:* McMahon Helicopter Services requested that the airworthiness criteria require a demonstration of sense-and-avoid technology that will automatically steer the UA away from manned aircraft, regardless of whether the manned aircraft has a transponder. NAAA and an individual commenter requested that the FAA require ADS-B in/out and traffic avoidance software on all UAS. The Small UAV Coalition requested the FAA establish standards for collision avoidance technology, as the proposed criteria are not sufficient for compliance with the operational requirement to see and avoid other aircraft (§ 91.113). The commenters stated that these technologies are necessary to avoid a mid-air collision between UA and manned aircraft.

*FAA Response:* D&R.310(a)(4) requires the applicant demonstrate the ability for the UA to be safely re-routed in flight to avoid a dynamic hazard. The FAA did not prescribe specific design features, such as the technologies suggested by the commenters, to meet D&R.310(a)(4) because they are not the only means for complying with the operational requirement to see and avoid other aircraft. If an applicant chooses to equip their UA with onboard collision avoidance technology, those capabilities

and functions must be demonstrated by test per D&R.310(b)(5).

#### Verification of Limits

The FAA proposed to require an evaluation of the UA's performance, maneuverability, stability, and control with a factor of safety.

*Comment Summary:* EASA requested that the FAA revise its approach to require a similar compliance demonstration as EASA's for "light UAS." EASA stated the FAA's proposed criteria for verification of limits, combined with the proposed Flight Manual requirements, seem to replace a traditional Subpart Flight.<sup>3</sup> EASA further stated the FAA's approach in the proposed airworthiness criteria might necessitate more guidance and means of compliance than the traditional structure.

*FAA Response:* The FAA's airworthiness criteria will vary from EASA's light UAS certification requirements, resulting in associated differences in compliance demonstrations. At this time, comment on means of compliance and related guidance material, which are still under development with the FAA and with EASA, would be speculative.

#### Propulsion

*Comment Summary:* ALPA requested the FAA conduct an analysis to determine battery reliability and safety, taking into account wind and weather conditions and their effect on battery life. ALPA expressed concern with batteries as the only source of power for an aircraft in the NAS. ALPA further requested the FAA not grant exemptions for battery reserve requirements.

*FAA Response:* Because batteries are a flight essential part, the applicant must establish mandatory instructions or life limits for batteries under the requirements of D&R.135. In addition, when the applicant conducts its D&R testing, D&R.300(i) prevents the applicant from exceeding the maintenance intervals or life limits for those batteries. To the extent the commenter's request addresses fuel reserves, that is an operational requirement, not a certification requirement, and therefore beyond the scope of this document.

#### Additional Airworthiness Criteria Identified by Commenters

*Comment Summary:* McMahon Helicopter Services requested that the criteria require anti-collision and

navigation lighting certified to existing FAA standards for brightness and size. The commenter stated that these standards were based on human factors for nighttime and daytime recognition and are not simply a lighting requirement. An individual commenter requested that the criteria include a requirement for position lighting and anti-collision beacons meeting TSO-30c Level III. NAAA requested the criteria require a strobe light and high visibility paint scheme to aid in visual detection of the UA by other aircraft.

*FAA Response:* The FAA determined it is unnecessary for these airworthiness criteria to prescribe specific design features for anti-collision or navigation lighting. The FAA will address anti-collision lighting as part of any operational approval, similar to the rules in 14 CFR 107.29(a)(2) and (b) for small UAS.

*Comment Summary:* ALPA requested the FAA add a new section with minimum standards for Global Navigation Satellite System (GNSS), as the UAS will likely rely heavily upon GNSS for navigation and to ensure that the UA does not stray outside of its approved airspace. ALPA stated that technological advances have made such devices available at an appropriate size, weight, and power for UAs.

*FAA Response:* The airworthiness criteria in D&R.100 (UA Signal Monitoring and Transmission), D&R.110 (Software), D&R.115 (Cybersecurity), and D&R.305(a)(3) (probable failures related to GPS) sufficiently address design requirements and testing of navigation systems. Even if the applicant uses a TSO-approved GNSS, these airworthiness criteria require a demonstration that the UA operates successfully without loss of containment. Successful completion of these tests demonstrates that the navigation subsystems are acceptable.

*Comment Summary:* ALPA requested the FAA revise the criteria to add a new section requiring equipment to comply with the FAA's new rules on Remote Identification of Unmanned Aircraft (86 FR 4390, Jan. 15, 2021). An individual commenter questioned the need for public tracking and identification of drones in the event of a crash or violation of FAA flight rules.

*FAA Response:* The FAA issued the final rule, Remote Identification of Unmanned Aircraft, after providing an opportunity for public notice and comment. The final rule is codified at 14 CFR part 89. Part 89 contains the remote identification requirements for unmanned aircraft certificated and produced under part 21 after September 16, 2022.

<sup>3</sup> In the FAA's aircraft airworthiness standards (parts 23, 25, 27, and 29), subpart B of each is titled Flight.

*Comment Summary:* ParaZero Ltd. requested the FAA revise the criteria to add a parachute system requirement. The commenter stated equipping a UA with an autonomous parachute system has substantial safety benefits.

*FAA Response:* Though an arresting system such as a parachute may provide safety benefits in some cases, because of the reduced consequences of failure due to no persons onboard, the FAA is not requiring such a system for UA. Instead, the FAA is using a risk-based approach to tailor airworthiness requirements commensurate to the low-risk nature of the Model OPTIMUS 1-EX UA.

### Pilot Ratio

*Comment Summary:* ALPA, NAAA and one individual questioned the safety of multiple Model OPTIMUS 1-EX UA operated by a single pilot, up to a ratio of 20 UA to 1 pilot. ALPA stated that even with high levels of automation, the pilot must still manage the safe operation and maintain situational awareness of multiple aircraft in their flight path, aircraft systems, integration with traffic, obstacles, and other hazards during normal, abnormal, and emergency conditions. As a result, ALPA recommended the FAA conduct additional studies to better understand the feasibility of a single pilot operating multiple UA before developing airworthiness criteria. The Small UAV Coalition requested the FAA provide criteria for an aircraft-to-pilot ratio higher than 20:1.

*FAA Response:* These airworthiness criteria are specific to the Model OPTIMUS 1-EX UA and, as discussed previously in this preamble, operations of the Model OPTIMUS 1-EX UA may include multiple UA operated by a single pilot, up to a ratio of 20 UA to 1 pilot. Additionally, these airworthiness criteria require the applicant to demonstrate the durability and reliability of the UA design by flight test, at the highest aircraft-to-pilot ratio, without exceptional piloting skill or alertness. In addition, D&R.305(c) requires the applicant to demonstrate probable failures by test at the highest aircraft-to-pilot ratio. Should the pilot ratio cause a loss of containment or control of the UA, then the applicant will fail this testing.

*Comment Summary:* ALPA stated that to allow a UAS-pilot ratio of up to 20:1 safely, the possibility that the pilot will need to intervene with multiple UA simultaneously must be “extremely remote.” ALPA questioned whether this is feasible given the threat of GNSS interference or unanticipated wind gusts exceeding operational limits.

*FAA Response:* The FAA’s guidance in AC 23.1309-1E, *System Safety Analysis and Assessment for Part 23 Airplanes* defines “extremely remote failure conditions” as failure conditions not anticipated to occur during the total life of an airplane, but which may occur a few times when considering the total operational life of all airplanes of the same type. When assessing the likelihood of a pilot needing to intervene with multiple UA simultaneously, the minimum reliability requirements will be determined based on the applicant’s proposed CONOPS.

### Noise

*Comment Summary:* An individual commenter expressed concern about noise pollution.

*FAA Response:* The Model OPTIMUS 1-EX will need to comply with FAA noise certification standards. If the FAA determines that 14 CFR part 36 does not contain adequate standards for this design, the agency will propose and seek public comment on a rule of particular applicability for noise requirements under a separate rulemaking docket.

### Operating Altitude

*Comment Summary:* ALPA, McMahon Helicopter Services, and NAAA commented on the operation of UAS at or below 400 feet AGL. ALPA, McMahon Helicopter Services, and NAAA requested the airworthiness criteria contain measures for safe operation at low altitudes so that UAS are not a hazard to manned aircraft, especially operations involving helicopters; air tours; agricultural applications; emergency medical services; air tanker firefighting; power line and pipeline patrol and maintenance; fish and wildlife service; animal control; military and law enforcement; seismic operations; ranching and livestock relocation; and mapping.

*FAA Response:* The type certificate only establishes the approved design of the UA. These airworthiness criteria require the applicant show compliance for the UA altitude sought for type certification. While this may result in operating limitations in the flight manual, the type certificate is not an approval for operations. Operations and operational requirements are beyond the scope of this document.

### Guidance Material

*Comment Summary:* NUAIR requested the FAA complete and publish its draft AC 21.17-XX, *Type Certification Basis for Unmanned Aircraft Systems (UAS)*, to provide

additional guidance, including templates, to those who seek a type design approval for UAS. NUAIR also requested the FAA recognize the industry consensus-based standards applicable to UAS, as Transport Canada has by publishing its AC 922-001, *Remotely Piloted Aircraft Systems Safety Assurance*.

*FAA Response:* The FAA will continue to develop policy and guidance for UA type certification and will publish guidance as soon as practicable. The FAA encourages consensus standards bodies to develop means of compliance and submit them to the FAA for acceptance. Regarding Transport Canada AC 922-001, that AC addresses operational approval rather than type certification.

### Safety Management

*Comment Summary:* ALPA requested the FAA ensure that operations, including UA integrity, fall under the safety management system. ALPA further requested the FAA convene a Safety Risk Management Panel before allowing operators to commence operations and that the FAA require operators to have an active safety management system, including a non-punitive safety culture, where incident and continuing airworthiness issues can be reported.

*FAA Response:* The type certificate only establishes the approved design of the UA, including the Flight Manual and ICA. Operations and operational requirements, including safety management and oversight of operations and maintenance, are beyond the scope of this document.

### Process

*Comment Summary:* ALPA supported the FAA’s type certification of UAS as a “special class” of aircraft under § 21.17(b) but requested that it be temporary.

*FAA Response:* As the FAA stated in its notice of policy issued August 11, 2020 (85 FR 58251, September 18, 2020), the FAA will use the type certification process under § 21.17(b) for some unmanned aircraft with no occupants onboard. The FAA further stated in its policy that it may also issue type certificates under § 21.17(a) for airplane and rotorcraft UAS designs where the airworthiness standards in part 23, 25, 27, or 29, respectively, are appropriate. The FAA, in the future, may consider establishing appropriate generally applicable airworthiness standards for UA that are not certificated under the existing standards in part 23, 25, 27, or 29.

### Out of Scope Comments

The FAA received and reviewed several comments that were general, stated the commenter's viewpoint or opposition without a suggestion specific to the proposed criteria, or did not make a request the FAA can act on. These comments are beyond the scope of this document.

### Applicability

These airworthiness criteria, established under the provisions of § 21.17(b), are applicable to the Airobotics Model OPTIMUS 1-EX UA. Should Airobotics wish to apply these airworthiness criteria to other UA models, it must submit a new type certification application.

### Conclusion

This action affects only certain airworthiness criteria for the Airobotics Model OPTIMUS 1-EX UA. It is not a standard of general applicability.

### Authority Citation

The authority citation for these airworthiness criteria is as follows:

**Authority** 49 U.S.C. 106(g), 40113, and 44701-44702, 44704.

### Airworthiness Criteria

Pursuant to the authority delegated to me by the Administrator, the following airworthiness criteria are issued as part of the type certification basis for the Airobotics Model OPTIMUS 1-EX unmanned aircraft. The FAA finds that compliance with these criteria appropriately mitigates the risks associated with the design and concept of operations and provides an equivalent level of safety to existing rules.

### General

#### *D&R.001 Concept of Operations*

The applicant must define and submit to the FAA a concept of operations (CONOPS) proposal describing the unmanned aircraft system (UAS) operation in the national airspace system for which unmanned aircraft (UA) type certification is requested. The CONOPS proposal must include, at a minimum, a description of the following information in sufficient detail to determine the parameters and extent of testing and operating limitations:

- (a) The intended type of operations;
- (b) UA specifications;
- (c) Meteorological conditions;
- (d) Operators, pilots, and personnel responsibilities;
- (e) Control station, support equipment, and other associated elements (AE) necessary to meet the airworthiness criteria;

(f) Command, control, and communication functions;

(g) Operational parameters (such as population density, geographic operating boundaries, airspace classes, launch and recovery area, congestion of proposed operating area, communications with air traffic control, line of sight, and aircraft separation); and

(h) Collision avoidance equipment, whether onboard the UA or part of the AE, if requested.

#### *D&R.005 Definitions*

For purposes of these airworthiness criteria, the following definitions apply.

(a) *Loss of Control*: Loss of control means an unintended departure of an aircraft from controlled flight. It includes control reversal or an undue loss of longitudinal, lateral, and directional stability and control. It also includes an upset or entry into an unscheduled or uncommanded attitude with high potential for uncontrolled impact with terrain. A loss of control means a spin, loss of control authority, loss of aerodynamic stability, divergent flight characteristics, or similar occurrence, which could generally lead to crash.

(b) *Loss of Flight*: Loss of flight means a UA's inability to complete its flight as planned, up to and through its originally planned landing. It includes scenarios where the UA experiences controlled flight into terrain, obstacles, or any other collision, or a loss of altitude that is severe or non-reversible. Loss of flight also includes deploying a parachute or ballistic recovery system that leads to an unplanned landing outside the operator's designated recovery zone.

### Design and Construction

#### *D&R.100 UA Signal Monitoring and Transmission*

The UA must be designed to monitor and transmit to the AE all information required for continued safe flight and operation. This information includes, at a minimum, the following:

- (a) Status of all critical parameters for all energy storage systems;
- (b) Status of all critical parameters for all propulsion systems;
- (c) Flight and navigation information as appropriate, such as airspeed, heading, altitude, and location; and
- (d) Communication and navigation signal strength and quality, including contingency information or status.

#### *D&R.105 UAS AE Required for Safe UA Operations*

(a) The applicant must identify and submit to the FAA all AE and interface

conditions of the UAS that affect the airworthiness of the UA or are otherwise necessary for the UA to meet these airworthiness criteria. As part of this requirement—

(1) The applicant may identify either specific AE or minimum specifications for the AE.

(i) If minimum specifications are identified, they must include the critical requirements of the AE, including performance, compatibility, function, reliability, interface, pilot alerting, and environmental requirements.

(ii) Critical requirements are those that if not met would impact the ability to operate the UA safely and efficiently.

(2) The applicant may use an interface control drawing, a requirements document, or other reference, titled so that it is clearly designated as AE interfaces to the UA.

(b) The applicant must show the FAA the AE or minimum specifications identified in paragraph (a) of this section meet the following:

(1) The AE provide the functionality, performance, reliability, and information to assure UA airworthiness in conjunction with the rest of the design;

(2) The AE are compatible with the UA capabilities and interfaces;

(3) The AE must monitor and transmit to the pilot all information required for safe flight and operation, including but not limited to those identified in D&R.100; and

(4) The minimum specifications, if identified, are correct, complete, consistent, and verifiable to assure UA airworthiness.

(c) The FAA will establish the approved AE or minimum specifications as operating limitations and include them in the UA type certificate data sheet and Flight Manual.

(d) The applicant must develop any maintenance instructions necessary to address implications from the AE on the airworthiness of the UA. Those instructions will be included in the instructions for continued airworthiness (ICA) required by D&R.205.

#### *D&R.110 Software*

To minimize the existence of software errors, the applicant must:

(a) Verify by test all software that may impact the safe operation of the UA;

(b) Utilize a configuration management system that tracks, controls, and preserves changes made to software throughout the entire life cycle; and

(c) Implement a problem reporting system that captures and records defects and modifications to the software.

*D&R.115 Cybersecurity*

(a) UA equipment, systems, and networks, addressed separately and in relation to other systems, must be protected from intentional unauthorized electronic interactions that may result in an adverse effect on the security or airworthiness of the UA. Protection must be ensured by showing that the security risks have been identified, assessed, and mitigated as necessary.

(b) When required by paragraph (a) of this section, procedures and instructions to ensure security protections are maintained must be included in the ICA.

*D&R.120 Contingency Planning*

(a) The UA must be designed so that, in the event of a loss of the command and control (C2) link, the UA will automatically and immediately execute a safe predetermined flight, loiter, landing, or termination.

(b) The applicant must establish the predetermined action in the event of a loss of the C2 link and include it in the UA Flight Manual.

(c) The UA Flight Manual must include the minimum performance requirements for the C2 data link defining when the C2 link is degraded to a level where remote active control of the UA is no longer ensured. Takeoff when the C2 link is degraded below the minimum link performance requirements must be prevented by design or prohibited by an operating limitation in the UA Flight Manual.

*D&R.125 Lightning*

(a) Except as provided in paragraph (b) of this section, the UA must have design characteristics that will protect the UA from loss of flight or loss of control due to lightning.

(b) If the UA has not been shown to protect against lightning, the UA Flight Manual must include an operating limitation to prohibit flight into weather conditions conducive to lightning activity.

*D&R.130 Adverse Weather Conditions*

(a) For purposes of this section, "adverse weather conditions" means rain, snow, and icing.

(b) Except as provided in paragraph (c) of this section, the UA must have design characteristics that will allow the UA to operate within the adverse weather conditions specified in the CONOPS without loss of flight or loss of control.

(c) For adverse weather conditions for which the UA is not approved to operate, the applicant must develop operating limitations to prohibit flight

into known adverse weather conditions and either:

(1) Develop operating limitations to prevent inadvertent flight into adverse weather conditions; or

(2) Provide a means to detect any adverse weather conditions for which the UA is not certificated to operate and show the UA's ability to avoid or exit those conditions.

*D&R.135 Flight Essential Parts*

(a) A flight essential part is a part, the failure of which could result in a loss of flight or unrecoverable loss of UA control.

(b) If the type design includes flight essential parts, the applicant must establish a flight essential parts list. The applicant must develop and define mandatory maintenance instructions or life limits, or a combination of both, to prevent failures of flight essential parts. Each of these mandatory actions must be included in the Airworthiness Limitations Section of the ICA.

**Operating Limitations and Information***D&R.200 Flight Manual*

The applicant must provide a Flight Manual with each UA.

(a) The UA Flight Manual must contain the following information:

- (1) UA operating limitations;
- (2) UA operating procedures;
- (3) Performance information;
- (4) Loading information; and
- (5) Other information that is necessary

for safe operation because of design, operating, or handling characteristics.

(b) Those portions of the UA Flight Manual containing the information specified in paragraph (a)(1) of this section must be approved by the FAA.

*D&R.205 Instructions for Continued Airworthiness*

The applicant must prepare ICA for the UA in accordance with Appendix A to Part 23, as appropriate, that are acceptable to the FAA. The ICA may be incomplete at type certification if a program exists to ensure their completion prior to delivery of the first UA or issuance of a standard airworthiness certificate, whichever occurs later.

**Testing***D&R.300 Durability and Reliability*

The UA must be designed to be durable and reliable when operated under the limitations prescribed for its operating environment, as documented in its CONOPS and included as operating limitations on the type certificate data sheet and in the UA Flight Manual. The durability and

reliability must be demonstrated by flight test in accordance with the requirements of this section and completed with no failures that result in a loss of flight, loss of control, loss of containment, or emergency landing outside the operator's recovery area.

(a) Once a UA has begun testing to show compliance with this section, all flights for that UA must be included in the flight test report.

(b) Tests must include an evaluation of the entire flight envelope across all phases of operation and must address, at a minimum, the following:

- (1) Flight distances;
- (2) Flight durations;
- (3) Route complexity;
- (4) Weight;
- (5) Center of gravity;
- (6) Density altitude;
- (7) Outside air temperature;
- (8) Airspeed;
- (9) Wind;
- (10) Weather;
- (11) Operation at night, if requested;
- (12) Energy storage system capacity;

and

- (13) Aircraft to pilot ratio.

(c) Tests must include the most adverse combinations of the conditions and configurations in paragraph (b) of this section.

(d) Tests must show a distribution of the different flight profiles and routes representative of the type of operations identified in the CONOPS.

(e) Tests must be conducted in conditions consistent with the expected environmental conditions identified in the CONOPS, including electromagnetic interference (EMI) and high intensity radiated fields (HIRF).

(f) Tests must not require exceptional piloting skill or alertness.

(g) Any UAS used for testing must be subject to the same worst-case ground handling, shipping, and transportation loads as those allowed in service.

(h) Any UA used for testing must use AE that meet, but do not exceed, the minimum specifications identified under D&R.105. If multiple AE are identified, the applicant must demonstrate each configuration.

(i) Any UAS used for testing must be maintained and operated in accordance with the ICA and UA Flight Manual. No maintenance beyond the intervals established in the ICA will be allowed to show compliance with this section.

(j) If cargo operations or external-load operations are requested, tests must show, throughout the flight envelope and with the cargo or external-load at the most critical combinations of weight and center of gravity, that—

- (1) The UA is safely controllable and maneuverable; and

(2) The cargo or external-load are retainable and transportable.

#### *D&R.305 Probable Failures*

The UA must be designed such that a probable failure will not result in a loss of containment or control of the UA. This must be demonstrated by test.

(a) Probable failures related to the following equipment, at a minimum, must be addressed:

- (1) Propulsion systems;
- (2) C2 link;
- (3) Global Positioning System (GPS);
- (4) Flight control components with a single point of failure;
- (5) Control station; and
- (6) Any other AE identified by the applicant.

(b) Any UA used for testing must be operated in accordance with the UA Flight Manual.

(c) Each test must occur at the critical phase and mode of flight, and at the highest aircraft-to-pilot ratio.

#### *D&R.310 Capabilities and Functions*

(a) All of the following required UAS capabilities and functions must be demonstrated by test:

(1) Capability to regain command and control of the UA after the C2 link has been lost.

(2) Capability of the electrical system to power all UA systems and payloads.

(3) Ability for the pilot to safely discontinue the flight.

(4) Ability for the pilot to dynamically re-route the UA.

(5) Ability to safely abort a takeoff.

(6) Ability to safely abort a landing and initiate a go-around.

(b) The following UAS capabilities and functions, if requested for approval, must be demonstrated by test:

(1) Continued flight after degradation of the propulsion system.

(2) Geo-fencing that contains the UA within a designated area, in all operating conditions.

(3) Positive transfer of the UA between control stations that ensures only one control station can control the UA at a time.

(4) Capability to release an external cargo load to prevent loss of control of the UA.

(5) Capability to detect and avoid other aircraft and obstacles.

(c) The UA must be designed to safeguard against inadvertent discontinuation of the flight and inadvertent release of cargo or external load.

#### *D&R.315 Fatigue*

The structure of the UA must be shown to withstand the repeated loads expected during its service life without

failure. A life limit for the airframe must be established, demonstrated by test, and included in the ICA.

#### *D&R.320 Verification of Limits*

The performance, maneuverability, stability, and control of the UA within the flight envelope described in the UA Flight Manual must be demonstrated at a minimum of 5% over maximum gross weight with no loss of control or loss of flight.

Issued in Washington, DC, on March 22, 2022.

**BILLING CODE 4910-13-P**

## DEPARTMENT OF TRANSPORTATION

### Federal Aviation Administration

#### 14 CFR Part 21

[Docket No. FAA-2020-1089]

#### **Airworthiness Criteria: Special Class Airworthiness Criteria for the Percepto Robotics, Ltd. Percepto System 2.4 Unmanned Aircraft**

**AGENCY:** Federal Aviation Administration (FAA), Department of Transportation (DOT).

**ACTION:** Issuance of final airworthiness criteria.

**SUMMARY:** The FAA announces the special class airworthiness criteria for the Percepto Robotics, Ltd. Model Percepto System 2.4 unmanned aircraft (UA). This document sets forth the airworthiness criteria the FAA finds to be appropriate and applicable for the UA design.

**DATES:** These airworthiness criteria are effective April 27, 2022.

**FOR FURTHER INFORMATION CONTACT:** Christopher J. Richards, Emerging Aircraft Strategic Policy Section, AIR-618, Strategic Policy Management Branch, Policy and Innovation Division, Aircraft Certification Service, Federal Aviation Administration, 6020 28th Avenue South, Room 103, Minneapolis, MN 55450, telephone (612) 253-4559.

#### **SUPPLEMENTARY INFORMATION:**

##### **Background**

Percepto Robotics, Ltd., (Percepto) applied to the FAA on August 1, 2019, for a special class type certificate under title 14, Code of Federal Regulations (14 CFR), § 21.17(b) for the Model Percepto System 2.4 UA.

The Model Percepto System 2.4 consists of a rotorcraft UA and its associated elements (AE) including communication links and components that control the UA. The Model Percepto System 2.4 UA has a maximum gross takeoff weight of 25 pounds. It is approximately 49 inches in width, 49 inches in length, and 12 inches in height. The Model Percepto System 2.4 UA uses battery-powered electric motors for vertical takeoff, landing, and forward flight. The UAS operations would rely on high levels of automation and may include multiple UA operated by a single pilot, up to a ratio of 20 UA to 1 pilot. Percepto anticipates operators will use the Model Percepto System 2.4 for inspection or surveying of critical infrastructure. The proposed concept of operations (CONOPS) for the Model Percepto System 2.4 identifies a maximum operating altitude of 400 feet above ground level (AGL), a maximum cruise speed of 24 knots, operations beyond visual line of sight (BVLOS) of the pilot, and operations over human beings. Percepto has not requested type certification for flight into known icing for the Model Percepto System 2.4.

The FAA issued a notice of proposed airworthiness criteria for the Percepto Model Percepto System 2.4, which published in the **Federal Register** on November 23, 2020 (85 FR 74618).

#### **Summary of Changes From the Proposed Airworthiness Criteria**

Based on the comments received, these final airworthiness criteria reflect the following changes, as explained in more detail under Discussion of Comments: A new section containing definitions; revisions to the CONOPS requirement; changing the term “critical part” to “flight essential part” in D&R.135; changing the basis of the durability and reliability testing from population density to limitations prescribed for the operating environment identified in the applicant’s CONOPS per D&R.001; and, for the demonstration of certain required capabilities and functions as required by D&R.310.

Additionally, the FAA re-evaluated its approach to type certification of low-risk UA using durability and reliability testing. Safe UAS operations depend and rely on both the UA and the AE. As explained in FAA Memorandum AIR600-21-AIR-600-PM01, dated July 13, 2021, the FAA has revised the airworthiness criteria to define a boundary between the UA type certification and subsequent operational evaluations and approval processes for the UAS (*i.e.*, waivers, exemptions, and/or operating certificates).

To reflect that these airworthiness criteria rely on durability and reliability (D&R) testing for certification, the FAA changed the prefix of each section from “UAS” to “D&R.”

Lastly, the FAA revised D&R.001(g) to clarify that the operational parameters listed in that paragraph are examples and not an all-inclusive list.

#### Discussion of Comments

The FAA received responses from 15 commenters. The majority of the commenters were individuals. In addition to the individuals' comments, the FAA also received comments from the European Union Aviation Safety Agency (EASA), unmanned aircraft manufacturers, a helicopter operator, and organizations such as the Air Line Pilots Association (ALPA), Droneport Texas, LLC, the National Agricultural Aviation Association (NAAA), Northeast UAS Airspace Integration Research Alliance, Inc. (NUAIR), and the Small UAV Coalition.

#### Support

*Comment Summary:* ALPA, NUAIR, and the Small UAV Coalition expressed support for type certification as a special class of aircraft and establishing airworthiness criteria under § 21.17(b). The Small UAV Coalition also supported the FAA's proposed use of performance-based standards.

#### Terminology: Loss of Flight

*Comment Summary:* An individual commenter requested the FAA define the term “loss of flight” and clarify how it is different from “loss of control.” The commenter questioned whether loss of flight meant the UA could not continue its intended flight plan but could safely land or terminate the flight.

*FAA Response:* The FAA has added a new section, D&R.005, to define the terms “loss of flight” and “loss of control” for the purposes of these airworthiness criteria. “Loss of flight” refers to a UA's inability to complete its flight as planned, up to and through its originally planned landing. “Loss of flight” includes scenarios where the UA experiences controlled flight into terrain or obstacles, or any other collision, or a loss of altitude that is severe or non-recoverable. “Loss of flight” includes deploying a parachute or ballistic recovery system that leads to an unplanned landing outside the operator's designated recovery zone.

“Loss of control” means an unintended departure of an aircraft from controlled flight. It includes control reversal or an undue loss of longitudinal, lateral, and directional stability and control. It also includes an

upset or entry into an unscheduled or uncommanded attitude with high potential for uncontrolled impact with terrain. “Loss of control” means a spin, loss of control authority, loss of aerodynamic stability, divergent flight characteristic, or similar occurrence, which could generally lead to a crash.

#### Terminology: Skill and Alertness of Pilot

*Comment Summary:* Two commenters requested the FAA clarify terminology with respect to piloting skill and alertness. Droneport Texas LLC stated that the average pilot skill and alertness is currently undefined, as remote pilots do not undergo oral or practical examinations to obtain certification. NUAIR noted that, despite the definition of “exceptional piloting skill and alertness” in Advisory Circular (AC) 23–8C, *Flight Test Guide for Certification of Part 23 Airplanes*, there is a significant difference between the average skill and alertness of a remote pilot certified under 14 CFR part 107 and a pilot certified under 14 CFR part 61. The commenter requested the FAA clarify the minimum qualifications and ratings to perform as a remote pilot of a UAS with a type certificate.

*FAA Response:* These airworthiness criteria do not require exceptional piloting skill and alertness for testing. The FAA included this as a requirement to ensure the applicant passes testing by using pilots of average skill who have been certificated under part 61, as opposed to highly trained pilots with thousands of hours of flight experience.

#### Concept of Operations

The FAA proposed a requirement for the applicant to submit a CONOPS describing the UAS and identifying the intended operational concepts. The FAA explained in the preamble of the notice of proposed airworthiness criteria that the information in the CONOPS would determine parameters for testing and flight manual operating limitations.

*Comment Summary:* One commenter stated that the airworthiness criteria are generic and requested the FAA add language to proposed UAS.001 to clarify that some of the criteria may not be relevant or necessary.

*FAA Response:* Including the language requested by the commenter would be inappropriate, as these airworthiness criteria are project-specific. Thus, in this case, each element of these airworthiness criteria is a requirement specific to the type certification of Percepto's proposed UA design.

*Comment Summary:* ALPA requested the criteria specify that the applicant's

CONOPS contain sufficient detail to determine the parameters and extent of testing, as well as operating limitations placed on the UAS for its operational uses.

*FAA Response:* The FAA agrees and has updated D&R.001 to clarify that the information required for inclusion in the CONOPS proposal (D&R.001(a) through (g)) must be described in sufficient detail to determine the parameters and extent of testing and operating limitations.

*Comment Summary:* ALPA requested the CONOPS include a description of a means to ensure separation from other aircraft and perform collision avoidance maneuvers. ALPA stated that its requested addition to the CONOPS is critical to the safety of other airspace users, as manned aircraft do not easily see most UAs.

*FAA Response:* The FAA agrees and has updated D&R.001 to require that the applicant identify collision avoidance equipment (whether onboard the UA or part of the AE), if the applicant requests to include that equipment.

*Comment Summary:* ALPA requested the FAA add security-related (other than cyber-security) requirements to the CONOPS criteria, including mandatory reporting of security occurrences, security training and awareness programs for all personnel involved in UAS operations, and security standards for the transportation of goods, similar to those for manned aviation.

*FAA Response:* The type certificate only establishes the approved design of the UA. Operations and operational requirements, including those regarding security occurrences, security training, and package delivery security standards (other than cybersecurity airworthiness design requirements) are beyond the scope of the airworthiness criteria established by this document and are not required for type certification.

*Comment Summary:* UAS.001(c) proposed to require that the applicant's CONOPS include a description of meteorological conditions. ALPA requested the FAA change UAS.001(c) to require a description of meteorological and environmental conditions and their operational limits. ALPA stated the CONOPS should include maximum wind speeds, maximum or minimum temperatures, maximum density altitudes, and other relevant phenomena that will limit operations or cause operations to terminate.

*FAA Response:* D&R.001(c) and D&R.125 address meteorological conditions, while D&R.001(g) addresses environmental considerations. The FAA determined that these criteria are

sufficient to cover the weather phenomena mentioned by the commenter without specifically requiring identification of related operational limits.

### Control Station

To address the risks associated with loss of control of the UA, the FAA proposed that the applicant design the control station to provide the pilot with all information necessary for continued safe flight and operation.

*Comment Summary:* ALPA and two individual commenters requested the FAA revise the proposed criteria to add requirements for the control station. Specifically, these commenters requested the FAA include the display of data and alert conditions to the pilot, physical security requirements for both the control station and the UAS storage area, design requirements that minimize negative impact of extended periods of low pilot workload, transfer of control between pilots, and human factors/human machine interface considerations for handheld controls. NUAIR requested the FAA designate the control station as a flight critical component for operations.

EASA and an individual commenter requested the FAA consider flexibility in some of the proposed criteria. EASA stated that the list of information in proposed UAS.100 is too prescriptive and contains information that may not be relevant for highly automated systems. The individual commenter requested that the FAA allow part-time or non-continuous displays of required information that do not influence the safety of the flight.

*FAA Response:* Although the scope of the proposed airworthiness criteria applied to the entire UAS, the FAA has re-evaluated its approach to type certification of low-risk unmanned aircraft using durability and reliability testing. A UA is an aircraft that is operated without the possibility of direct human intervention from within or on the aircraft.<sup>1</sup> A UAS is defined as a UA and its AE, including communication links and the components that control the UA, that are required to operate the UAS safely and efficiently in the national airspace system.<sup>2</sup> As explained in FAA Memorandum AIR600–21–AIR–600–PM01, dated July 13, 2021, the FAA determined it will apply the regulations for type design approval, production approval, conformity, certificates of airworthiness, and maintenance to only the UA and not to the AE. However,

because safe UAS operations depend and rely on both the UA and the AE, the FAA will consider the AE in assessing whether the UA meets the airworthiness criteria that comprise the certification basis.

While the AE items themselves will be outside the scope of the UA type design, the applicant will provide sufficient specifications for any aspect of the AE, including the control station, which could affect airworthiness. The FAA will approve either the specific AE or minimum specifications for the AE, as identified by the applicant, as part of the type certificate by including them as an operating limitation in the type certificate data sheet and flight manual. The FAA may impose additional operating limitations specific to the AE through conditions and limitations for inclusion in the operational approval (*i.e.*, waivers, exemptions, or a combination of these). In accordance with this approach, the FAA will consider the entirety of the UAS for operational approval and oversight.

Accordingly, the FAA has revised the criteria by replacing proposed section UAS.100, applicable to the control station design, with D&R.100, UA Signal Monitoring and Transmission, with substantively similar criteria that apply to the UA design.

The FAA has also added a new section, D&R.105, UAS AE Required for Safe UA Operations, which requires the applicant to provide information concerning the specifications of the AE. The FAA has moved the alert function requirement proposed in UAS.100(a) to new section D&R.105(a)(1)(i). As part of the clarification of the testing of the interaction between the UA and AE, the FAA has added a requirement to D&R.300(h) for D&R testing to use minimum specification AE. This addition requires the applicant to demonstrate that the limits proposed for those AE will allow the UA to operate as expected throughout its service life.

Finally, the FAA has revised references throughout the airworthiness criteria from “UAS” to “UA,” as appropriate, to reflect the FAA determination that the regulations for type design approval, production approval, conformity, certificates of airworthiness, and maintenance apply to only the UA.

### Software

The FAA proposed criteria on verification, configuration management, and problem reporting to minimize the existence of errors associated with UAS software.

*Comment Summary:* ALPA requested the FAA add language to the proposed

criteria to ensure that some level of software engineering principles are used without being too prescriptive.

*FAA Response:* By combining the software testing requirement of D&R.110(a) with successful completion of the requirements in the entire “Testing” subpart, the acceptable level of software assurance will be identified and demonstrated. The configuration management system required by D&R.110(b) will ensure that the software is adequately documented and traceable both during and after the initial type certification activities.

*Comment Summary:* EASA suggested the criteria require that the applicant establish and correctly implement system requirements or a structured software development process for critical software.

*FAA Response:* Direct and specific evaluation of the software development process is more detailed than what the FAA intended with the proposed criteria, which use D&R testing to evaluate the UAS as a whole system, rather than evaluating individual components within the UA. Successful completion of the testing requirements provides confidence that the components that make up the UA provide an acceptable level of safety, commensurate to the low-risk nature of this aircraft. The FAA finds no change to the airworthiness criteria is needed.

*Comment Summary:* Two individual commenters requested the FAA require the manned aircraft software certification methodology in RTCA DO–178C, *Software Considerations in Airborne Systems and Equipment Certification*, for critical UA software.

*FAA Response:* Under these airworthiness criteria, only software that may affect the safe operation of the UA must be verified by test. To verify by test, the applicant will need to provide an assessment showing that other software is not subject to testing because it has no impact on the safe operation of the UA. For software that is subject to testing, the FAA may accept multiple options for software qualification, including DO–178C. Further, specifying that applicants must comply with DO–178 would be inconsistent with the FAA’s intent to issue performance-based airworthiness criteria.

*Comment Summary:* NAAA stated that an overreliance of software in aircraft has been and continues to be a source of accidents and requested the FAA include criteria to prevent a midair collision.

*FAA Response:* The proper functioning of software is an important element of type certification, particularly with respect to flight

<sup>1</sup> See 49 U.S.C. 44801(11).

<sup>2</sup> See 49 U.S.C. 44801(12).

controls and navigation. The airworthiness criteria in D&R.110 are meant to provide an acceptable level of safety commensurate with the risk posed by this UA. Additionally, the airworthiness criteria require contingency planning per D&R.120 and the demonstration of the UA's ability to detect and avoid other aircraft in D&R.310, if requested by the applicant. The risk of a midair collision will be minimized by the operating limitations that result from testing based on the operational parameters identified by the applicant in its CONOPS (such as geographic operating boundaries, airspace classes, and congestion of the proposed operating area), rather than by specific mitigations built into the aircraft design itself. These criteria are sufficient due to the low-risk nature of the Model Percepto System 2.4.

### Cybersecurity

Because the UA requires a continuous wireless connection, the FAA proposed criteria to address the risks to the UAS from cybersecurity threats.

*Comment Summary:* ALPA requested adding a requirement for cybersecurity protection for navigation and position reporting systems such as Global Navigation Satellite System (GNSS). ALPA further requested the FAA include criteria to address specific cybersecurity vulnerabilities, such as jamming (denial of signal) and spoofing (false position data is inserted). ALPA stated that, for navigation, UAS primarily use GNSS—an unencrypted, open-source, low power transmission that can be jammed, spoofed, or otherwise manipulated.

*FAA Response:* The FAA will assess elements directly influencing the UA for cybersecurity under D&R.115 and will assess the AE as part of any operational approvals an operator may seek. D&R.115 (proposed as UAS.115) addresses intentional unauthorized electronic interactions, which includes, but is not limited to, hacking, jamming, and spoofing. These airworthiness criteria require the high-level outcome the UA must meet, rather than discretely identifying every aspect of cybersecurity the applicant will address.

### Contingency Planning

The FAA proposed criteria requiring that the UAS be designed to automatically execute a predetermined action in the event of a loss of communication between the pilot and the UA. The FAA further proposed that the predetermined action be identified in the Flight Manual and that the UA be precluded from taking off when the quality of service is inadequate.

*Comment Summary:* ALPA requested the criteria encompass more than loss or degradation of the command and control (C2) link, as numerous types of critical part or systems failures can occur that include degraded capabilities, whether intermittent or sustained. ALPA requested the FAA add language to the proposed criteria to address specific failures such as loss of a primary navigation sensor, degradation or loss of navigation capability, and simultaneous impact of C2 and navigation links.

*FAA Response:* The airworthiness criteria address the issues raised by ALPA. Specifically, D&R.120(a) addresses actions the UA will automatically and immediately take when the operator no longer has control of the UA. Should the specific failures identified by ALPA result in the operator's loss of control, then the criteria require the UA to execute a predetermined action. Degraded navigation performance does not raise the same level of concern as a degraded or lost C2 link. For example, a UA may experience interference with a GPS signal on the ground, but then find acceptable signal strength when above a tree line or other obstruction. The airworthiness criteria require that neither degradation nor complete loss of GPS or C2, as either condition would be a failure of that system, result in unsafe loss of control or containment. The applicant must demonstrate this by test to meet the requirements of D&R.305(a)(3).

Under the airworthiness criteria, the minimum performance requirements for the C2 link, defining when the link is degraded to an unacceptable level, may vary among different UAS designs. The level of degradation that triggers a loss is dependent upon the specific UA characteristics; this level will be defined by the applicant and demonstrated to be acceptable by testing as required by D&R.305(a)(2) and D&R.310(a)(1).

*Comment Summary:* An individual commenter requested the FAA use distinct terminology for “communication,” used for communications with air traffic control, and “C2 link,” used for command and control between the remote pilot station and UA. The commenter questioned whether, in the proposed criteria, the FAA stated “loss of communication between the pilot and the UA” when it intended to state “loss of C2 link.”

*FAA Response:* Communication extends beyond the C2 link and specific control inputs. This is why D&R.001 requires the applicant's CONOPS to include a description of the command, control, and communications functions.

As long as the UA operates safely and predictably per its lost link contingency programming logic, a C2 interruption does not constitute a loss of control.

### Lightning

The FAA proposed criteria to address the risks that would result from a lightning strike, accounting for the size and physical limitations of a UAS that could preclude traditional lightning protection features. The FAA further proposed that without lightning protection for the UA, the Flight Manual must include an operating limitation to prohibit flight into weather conditions with potential lightning.

*Comment Summary:* An individual requested the FAA revise the criteria to include a similar design mitigation or operating limitation for High Intensity Radiated Fields (HIRF). The commenter noted that HIRF is included in proposed UAS.300(e) as part of the expected environmental conditions that must be replicated in testing.

*FAA Response:* The airworthiness criteria, which are adopted as proposed, address the issue raised by the commenter. The applicant must identify tested HIRF exposure capabilities, if any, in the Flight Manual to comply with the criteria in D&R.200(a)(5). Information regarding HIRF capabilities is necessary for safe operation because proper communication and software execution may be impeded by HIRF-generated interference, which could result in loss of control of the UA. It is not feasible to measure HIRF at every potential location where the UA will operate; thus, requiring operating limitations for HIRF as requested by the commenter would be impractical.

### Adverse Weather Conditions

The FAA proposed criteria either requiring that design characteristics protect the UAS from adverse weather conditions or prohibiting flight into known adverse weather conditions. The criteria proposed to define adverse weather conditions as rain, snow, and icing.

*Comment Summary:* ALPA and two individual commenters requested the FAA expand the proposed definition of adverse weather conditions. These commenters noted that because of the size and physical limitations of the Model Percepto System 2.4, adverse weather should also include wind, downdraft, low-level wind shear (LLWS), microburst, and extreme mechanical turbulence.

*FAA Response:* No additional language needs to be added to the airworthiness criteria to address wind effects. The wind conditions specified

by the commenters are part of normal UA flight operations. The applicant must demonstrate by flight test that the UA can withstand wind without failure to meet the requirements of D&R.300(b)(9). The FAA developed the criteria in D&R.130 to address adverse weather conditions (rain, snow, and icing) that would require additional design characteristics for safe operation. Any operating limitations necessary for operation in adverse weather or wind conditions will be included in the Flight Manual as required by D&R.200.

*Comment Summary:* One commenter questioned whether the criteria proposed in UAS.130(c)(2), requiring a means to detect adverse weather conditions for which the UAS is not certificated to operate, is a prescriptive requirement to install an onboard detection system. The commenter requested, if that was the case, that the FAA allow alternative procedures to avoid flying in adverse weather conditions.

*FAA Response:* The language referred to by the commenter is not a prescriptive design requirement for an onboard detection system. The applicant may use any acceptable source to monitor weather in the area, whether onboard the UA or from an external source.

### Critical Parts

The FAA proposed criteria for critical parts that were substantively the same as those in the existing standards for normal category rotorcraft under § 27.602, with changes to reflect UAS terminology and failure conditions. The criteria proposed to define a critical part as a part, the failure of which could result in a loss of flight or unrecoverable loss of control of the aircraft.

*Comment Summary:* EASA requested the FAA avoid using the term “critical part,” as it is a well-established term for complex manned aircraft categories and may create incorrect expectations on the oversight process for parts.

*FAA Response:* For purposes of the airworthiness criteria established for the Percepto Model Percepto System 2.4, the FAA has changed the term “critical part” to “flight essential part.”

*Comment Summary:* An individual commenter requested the FAA revise the proposed criteria such that a failure of a flight essential part would only occur if there is risk to third parties.

*FAA Response:* The definition of “flight essential” does not change regardless of whether on-board systems are capable of safely landing the UA when it is unable to continue its flight plan. Tying the definition of a flight essential part to the risk to third parties

would result in different definitions for the part depending on where and how the UA is operated. These criteria for the Model Percepto System 2.4 UA apply the same approach as for manned aircraft.

### Flight Manual

The FAA proposed criteria for the Flight Manual that were substantively the same as the existing standards for normal category airplanes, with minor changes to reflect UAS terminology.

*Comment Summary:* ALPA requested the FAA revise the criteria to include normal, abnormal, and emergency operating procedures along with their respective checklist. ALPA further requested the checklist be contained in a quick reference handbook (QRH).

*FAA Response:* The FAA did not intend for the airworthiness criteria to exclude abnormal procedures from the flight manual. In these final airworthiness criteria, the FAA has changed “normal and emergency operating procedures” to “operating procedures” to encompass all operating conditions and align with 14 CFR 23.2620, which includes the airplane flight manual requirements for normal category airplanes. The FAA has not made any changes to add language that would require the checklists to be included in a QRH. FAA regulations do not require manned aircraft to have a QRH for type certification. Therefore, it would be inconsistent for the FAA to require a QRH for the Percepto Model Percepto System 2.4 UA.

*Comment Summary:* ALPA requested the FAA revise the airworthiness criteria to require that the Flight Manual and QRH be readily available to the pilot at the control station.

*FAA Response:* ALPA’s request regarding the Flight manual addresses an operational requirement, similar to 14 CFR 91.9 and is therefore not appropriate for type certification airworthiness criteria. Also, as previously discussed, FAA regulations do not require a QRH. Therefore, it would be inappropriate to require it to be readily available to the pilot at the control station.

*Comment Summary:* Droneport Texas LLC requested the FAA revise the airworthiness criteria to add required Flight Manual sections for routine maintenance and mission-specific equipment and procedures. The commenter stated that the remote pilot or personnel on the remote pilot-in-command’s flight team accomplish most routine maintenance, and that the flight team usually does UA rigging with mission equipment.

*FAA Response:* The requested change is appropriate for a maintenance document rather than a flight manual because it addresses maintenance procedures rather than the piloting functions. The FAA also notes that, similar to the criteria for certain manned aircraft, the airworthiness criteria require that the applicant prepare instructions for continued airworthiness (ICA) in accordance with appendix A to part 23. As the applicant must provide any maintenance instructions and mission-specific information necessary for safe operation and continued operational safety of the UA, in accordance with D&R.205, no changes to the airworthiness criteria are necessary.

*Comment Summary:* An individual commenter requested the FAA revise the criteria in proposed UAS.200(b) to require that “other information” referred to in proposed UAS.200(a)(5) be approved by the FAA. The commenter noted that, as proposed, only the information listed in UAS.200(a)(1) through (4) must be FAA approved.

*FAA Response:* The change requested by the commenter would be inconsistent with the FAA’s airworthiness standards for flight manuals for manned aircraft. Sections 23.2620(b), 25.1581(b), 27.1581(b), and 29.1581(b) include requirements for flight manuals to include operating limitations, operating procedures, performance information, loading information, and other information that is necessary safe operation because of design, operating, or handling characteristics, but limit FAA approval to operating limitations, operating procedures, performance information, and loading information.

Under § 23.2620(b)(1), for low-speed level 1 and level 2 airplanes, the FAA only approves the operating limitations. In applying a risk-based approach, the FAA has determined it would not be appropriate to hold the lowest risk UA to a higher standard than what is required for low speed level 1 and level 2 manned aircraft. Accordingly, the FAA has revised the airworthiness criteria to only require FAA approval of the operating limitations.

*Comment Summary:* NUAIR requested the FAA recognize that § 23.2620 is only applicable to the aircraft and does not address off-aircraft components such as the control station, control and non-payload communications (CNPC) data link, and launch and recovery equipment. The commenter noted that this is also true of industry consensus-based standards designed to comply with § 23.2620.

*FAA Response:* As explained in more detail in the Control Station section of

this document, the FAA has revised the airworthiness criteria for the AE. The FAA will approve AE or minimum specifications for the AE that could affect airworthiness as an operating limitation in the UA flight manual. The FAA will establish the approved AE or minimum specifications as operating limitations and include them in the UA type certificate data sheet and Flight Manual in accordance with D&R.105(c). The establishment of requirements for, and the approval of AE will be in accordance with FAA Memorandum AIR600-21-AIR-600-PM01, dated July 13, 2021.

### Durability and Reliability

The FAA proposed durability and reliability testing that would require the applicant to demonstrate safe flight of the UAS across the entire operational envelope and up to all operational limitations, for all phases of flight and all aircraft configurations described in the applicant's CONOPS, with no failures that result in a loss of flight, loss of control, loss of containment, or emergency landing outside the operator's recovery area. The FAA further proposed that the unmanned aircraft would only be certificated for operations within the limitations, and for flight over areas no greater than the maximum population density, as described in the applicant's CONOPS and demonstrated by test.

*Comment Summary:* ALPA requested that the proposed certification criteria require all flights during testing be completed in both normal and non-normal or off-nominal scenarios with no failures that result in a loss of flight, loss of control, loss of containment, or emergency landing outside of the operator's recovery zone. Specifically, ALPA stated that testing must not require exceptional piloting skill or alertness and include, at a minimum: All phases of the flight envelope, including the highest UA to pilot ratios; the most adverse combinations of the conditions and configuration; the environmental conditions identified in the CONOPS; the different flight profiles and routes identified in the CONOPS; and exposure to EMI and HIRF.

*FAA Response:* No change is necessary because the introductory text and paragraphs (b)(7), (b)(9), (b)(10), (b)(13), (c), (d), (e), and (f) of D&R.300, which are adopted as proposed, contain the specific testing requirements requested by ALPA.

*Comment Summary:* Droneport Texas LLC requested the FAA revise the testing criteria to include, for operation at night, testing both with and without night vision aids. The commenter stated

that because small UAS operation at night is waivable under 14 CFR part 107, manufacturers will likely make assumptions concerning a pilot's familiarity with night vision device-aided and unaided operations.

*FAA Response:* Under D&R.300(b)(11), the applicant must demonstrate by flight test that the UA can operate at night without failure using whatever equipment is onboard the UA itself. The pilot's familiarity, or lack thereof, with night vision equipment does not impact whether the UA is reliable and durable to complete testing without any failures.

*Comment Summary:* EASA requested the FAA clarify how testing durability and reliability commensurate to the maximum population density, as proposed, aligns with the Specific Operations Risk Assessment (SORA) approach that is open to operational mitigation, reducing the initial ground risk. An individual commenter requested the FAA provide more details about the correlation between the number of flight hours tested and the CONOPS environment (e.g., population density). The commenter stated that this is one of the most fundamental requirements, and the FAA should ensure equal treatment to all current and future applicants.

*FAA Response:* In developing these testing criteria, the FAA sought to align the risk of UAS operations with the appropriate level of protection for human beings on the ground. The FAA proposed establishing the maximum population density demonstrated by durability and reliability testing as an operating limitation on the type certificate. However, the FAA has re-evaluated its approach and determined it to be more appropriate to connect the durability and reliability demonstrated during certification testing with the operating environment defined in the CONOPS.

Basing testing on maximum population density may result in limitations not commensurate with many actual operations. As population density broadly refers to the number of people living in a given area per square mile, it does not allow for evaluating variation in a local operating environment. For example, an operator may have a route in an urban environment with the actual flight path along a greenway; the number of human beings exposed to risk from the UA operating overhead would be significantly lower than the population density for the area. Conversely, an operator may have a route over an industrial area where few people live, but where, during business hours, there

may be highly dense groups of people. Specific performance characteristics such as altitude and airspeed also factor into defining the boundaries for safe operation of the UA.

Accordingly, the FAA has revised D&R.300 to require the UA design to be durable and reliable when operated under the limitations prescribed for its operating environment. The information in the applicant's CONOPS will determine the operating environment for testing. For example, the minimum hours of reliability testing will be less for a UA conducting agricultural operations in a rural environment than if the same aircraft will be conducting package deliveries in an urban environment. The FAA will include the limitations that result from testing as operating limitations on the type certificate data sheet and in the UA Flight Manual. The FAA intends for this process to be similar to the process for establishing limitations prescribed for special purpose operations for restricted category aircraft. This allows for added flexibility in determining appropriate operating limitations, which will more closely reflect the operating environment.

Finally, a comparison of these criteria with EASA's SORA approach is beyond the scope of this document because the SORA is intended to result in an operational approval rather than a type certificate.

*Comment Summary:* EASA requested the FAA clarify how reliability at the aircraft level to ensure high-level safety objectives would enable validation of products under applicable bilateral agreements.

*FAA Response:* As the FAA and international aviation authorities are still developing general airworthiness standards for UA, it would be speculative for the FAA to comment on the validation process for any specific UA.

*Comment Summary:* EASA requested the FAA revise the testing criteria to include a compliance demonstration related to adverse combinations of the conditions and configurations and with respect to weather conditions and average pilot qualification.

*FAA Response:* No change is necessary because D&R.300(b)(7), (b)(9), (b)(10), (c), and (f), which are adopted as proposed, contain the specific testing requirements requested by EASA.

*Comment Summary:* EASA noted that, under the proposed criteria, testing involving a large number of flight hours will limit changes to the configuration.

*FAA Response:* Like manned aircraft, the requirements of 14 CFR part 21, subpart D, apply to UA for changes to

type certificates. The FAA is developing procedures for processing type design changes for UA type certificated using durability and reliability testing.

*Comment Summary:* EASA requested the FAA clarify whether the proposed testing criteria would require the applicant to demonstrate aspects that do not occur during a successful flight, such as the deployment of emergency recovery systems and fire protection/post-crash fire. EASA asked if these aspects are addressed by other means and what would be the applicable airworthiness criteria.

*FAA Response:* Equipment not required for normal operation of the UA do not require an evaluation for their specific functionality. D&R testing will show that the inclusion of any such equipment does not prevent normal operation. Therefore, the airworthiness criteria would not require functional testing of the systems described by EASA.

*Comment Summary:* An individual commenter requested the FAA specify the acceptable percentage of failures in the testing that would result in a “loss of flight.” The Small UAV Coalition requested the FAA clarify what constitutes an emergency landing outside an operator’s landing area, as some UAS designs could include an onboard health system that initiates a landing to lessen the potential of a loss of control event. The commenter suggested that, in those cases, a landing in a safe location should not invalidate the test.

*FAA Response:* The airworthiness criteria require that all test points and flight hours occur with no failures result in a loss of flight, control, containment, or emergency landing outside the operator’s recovery zone. The FAA has determined that there is no acceptable percentage of failures in testing. In addition, while the recovery zone may differ for each UAS design, an emergency or unplanned landing outside of a designated landing area would result in a test failure.

*Comment Summary:* The Small UAV Coalition requested that a single failure during testing not automatically restart counting the number of flight test operations set for a particular population density; rather, the applicant should have the option to identify the failure through root-cause and fault-tree analysis and provide a validated mitigation to ensure it will not recur. An individual commenter requested the FAA to clarify whether the purpose of the tests is to show compliance with a quantitative safety objective. The commenter further requested the FAA allow the applicant to reduce the

number of flight testing hours if the applicant can present a predicted safety and reliability analysis.

*FAA Response:* The intent of the testing criteria is for the applicant to demonstrate the aircraft’s durability and reliability through a successful accumulation of flight testing hours. The FAA does not intend to require analytical evaluation to be part of this process. However, the applicant will comply with these testing criteria using a means of compliance, accepted by the FAA, through the issue paper process. The means of compliance will be dependent on the CONOPS the applicant has proposed to meet.

#### Probable Failures

The FAA proposed criteria to evaluate how the UAS functions after probable failures, including failures related to propulsion systems, C2 link, GPS, critical flight control components with a single point of failure, control station, and any other equipment identified by the applicant.

*Comment Summary:* Droneport Texas LLC requested the FAA add a bird strike to the list of probable failures. The commenter stated that despite sense and avoid technologies, flocks of birds can overcome the maneuver capabilities of a UA and result in multiple, unintended failures.

*FAA Response:* Unlike manned aircraft, where aircraft size, design, and construct are critical to safe control of the aircraft after encountering a bird strike, the FAA determined testing for bird strike capabilities is not necessary for the Model Percepto System 2.4 UA. The FAA has determined that a bird strike requirement is not necessary because the smaller size and lower operational speed of the Percepto System 2.4 reduce the likelihood of a bird strike, combined with the reduced consequences of failure due to no persons onboard. Instead, the FAA is using a risk-based approach to tailor airworthiness requirements commensurate to the low-risk nature of the Model Percepto System 2.4 UA.

*Comment Summary:* ALPA requested the FAA require that all probable failure tests occur at the critical phase and mode of flight and at the highest aircraft-to-pilot ratio. ALPA stated the proposed criteria are critically important for systems that rely on a single source to perform multi-label functions, such as GNSS, because failure or interruption of GNSS will lead to loss of positioning, navigation, and timing (PNT) and functions solely dependent on PNT, such as geo-fencing and contingency planning.

*FAA Response:* No change is necessary because D&R.300(c) requires that the testing occur at the critical phase and mode of flight and at the highest UA-to-pilot ratio.

*Comment Summary:* Droneport Texas LLC requested the FAA add recovery from vortex ring state (VRS) to the list of probable failures. The commenter stated the UA uses multiple rotors for lift and is therefore susceptible to VRS. The commenter further stated that because recovery from settling with power is beyond a pilot’s average skill for purposes of airworthiness testing, the aircraft must be able to sense and recover from this condition without pilot assistance.

*FAA Response:* D&R.305 addresses probable failures related to specific components of the UAS. VRS is an aerodynamic condition a UA may encounter during flight testing; it is not a component subject to failure.

*Comment Summary:* Droneport Texas LLC also requested the FAA add a response to the Air Traffic Control-Zero (ATC-Zero) command to the list of probable failures. The commenter stated, based on lessons learned after the attacks on September 11, 2001, aircraft that can fly BVLOS should be able to respond to an ATC-Zero condition.

*FAA Response:* The commenter’s request is more appropriate for the capabilities and functions testing criteria in D&R.310 than probable failures testing in D&R.305. D&R.310(a)(3) requires the applicant to demonstrate by test that the pilot has the ability to safely discontinue a flight. A pilot may discontinue a flight for a wide variety of reasons, including responding to an ATC-zero command.

*Comment Summary:* EASA stated the proposed language seems to require an additional analysis and safety assessment, which would be appropriate for the objective requirement of ensuring a probable failure does not result in a loss of containment or control. EASA further stated that an applicant’s basic understanding of the systems architecture and effects of failures is essential.

*FAA Response:* The FAA agrees with the expectation that applicants understand the system architecture and effects of failures of a proposed design, which is why the criteria include a requirement for the applicant to test the specific equipment identified in D&R.305 and identify any other equipment that is not specifically identified in D&R.305 for testing. As the intent of the criteria is for the applicant to demonstrate compliance through

testing, some analysis may be necessary to properly identify the appropriate equipment to be evaluated for probable failures.

*Comment Summary:* An individual requested that probable failure testing apply not only to critical flight control components with a single point of failure, but also to any critical part with a single point of failure.

*FAA Response:* The purpose of probable failure testing in D&R.305 is to demonstrate that if certain equipment fails, it will fail safely. Adding probable failure testing for critical (now flight essential) parts would not add value to testing. If a part is essential for flight, its failure by definition in D&R.135(a) could result in a loss of flight or unrecoverable loss of control. For example, on a traditional airplane design, failure of a wing spar in flight would lead to loss of the aircraft. Because there is no way to show that a wing spar can fail safely, the applicant must provide its mandatory replacement time if applicable, structural inspection interval, and related structural inspection procedure in the Airworthiness Limitations section of the ICA. Similarly, under these airworthiness criteria, parts whose failure would inherently result in loss of flight or unrecoverable loss of control are not subjected to probable failure testing. Instead, they must be identified as flight essential components and included in the ICA.

To avoid confusion pertaining to probable failure testing, the FAA has removed the word “critical” from D&R.305(a)(5). In the final airworthiness criteria, probable failure testing required by D&R.305(a)(5) applies to “Flight control components with a single point of failure.”

### Capabilities and Functions

The FAA proposed criteria to require the applicant to demonstrate by test the minimum capabilities and functions necessary for the design. UAS.310(a) proposed to require the applicant to demonstrate, by test, the capability of the UAS to regain command and control of the UA after a C2 link loss, the sufficiency of the electrical system to carry all anticipated loads, and the ability of the pilot to override any pre-programming in order to resolve a potential unsafe operating condition in any phase of flight. UAS.310(b) proposed to require the applicant to demonstrate by test certain features if the applicant requests approval of those features (geo-fencing, external cargo, etc.). UAS.310(c) proposed to require the design of the UAS to safeguard against an unintended discontinuation

of flight or release of cargo, whether by human action or malfunction.

*Comment Summary:* ALPA stated the pilot-in-command must always have the capability to input control changes to the UA and override any pre-programming without delay as needed for the safe management of the flight. The commenter requested that the FAA retain the proposed criteria that would allow the pilot to command to: Regain command and control of the UA after loss of the C2 link; safely discontinue the flight; and dynamically re-route the UA. In support, ALPA stated the ability of the pilot to continually command (re-route) the UA, including termination of the flight if necessary, is critical for safe operations and should always be available to the pilot.

Honeywell requested the FAA revise paragraphs (a)(3) and (a)(4) of the criteria (UAS.310) to allow for either the pilot or an augmenting system to safely discontinue the flight and re-route the UA. The commenter stated that a system comprised of detect and avoid, onboard autonomy, and ground system can be used for these functions. Therefore, the criteria should not require that only the pilot can do them.

An individual commenter requested the FAA remove UAS.310(a)(4) of the proposed criteria because requiring the ability for the pilot to dynamically re-route the UA is too prescriptive and redundant with the proposed requirement in UAS.310(a)(3), the ability of the pilot to discontinue the flight safely.

*FAA Response:* Because the pilot in command is directly responsible for the operation of the UA, the pilot must have the capability to command actions necessary for continued safety. This includes commanding a change to the flight path or, when appropriate, safely terminating a flight. The FAA notes that the ability for the pilot to safely discontinue a flight means the pilot has the means to terminate the flight and immediately and safely return the UA to the ground. This is different from the pilot having the means to dynamically re-route the UA, without terminating the flight, to avoid a conflict.

Therefore, the final airworthiness criteria include D&R.310(a) as proposed (UAS.310(a)).

*Comment Summary:* ALPA requested the FAA revise the criteria to require that all equipment, systems, and installations conform, at a minimum, to the standards of § 25.1309.

*FAA Response:* The FAA determined that traditional methodologies for manned aircraft, including the system safety analysis required by § 23.2510, § 25.1309, § 27.1309, or § 29.1309,

would be inappropriate to require for the Percepto Model Percepto System 2.4 due to its smaller size and reduced level of complexity. Instead, the FAA finds that system reliability through testing will ensure the safety of this design.

*Comment Summary:* ALPA requested the FAA revise the criteria to add a requirement to demonstrate the ability of the UA and pilot to perform all of the contingency plans identified in proposed UAS.120.

*FAA Response:* No change is necessary because D&R.120 and D&R.305(a)(2), together, require what ALPA requests in its comment. Under D&R.120, the applicant must design the UA to execute a predetermined action in the event of a loss of the C2 link. D&R.305(a)(2) requires the applicant to demonstrate by test that a lost C2 link will not result in a loss of containment or control of the UA. Thus, if the applicant does not demonstrate the predetermined contingency plan resulting from a loss of the C2 link when conducting D&R.305 testing, the test would be a failure due to loss of containment.

*Comment Summary:* ALPA and an individual commenter requested the FAA revise the criteria so that geo-fencing is a required feature and not optional due to the safety concerns that could result from a UA exiting its operating area.

*FAA Response:* To ensure safe flight, the applicant must test the proposed safety functions, such as geo-fencing, that are part of the type design of the Model Percepto System 2.4 UA. The FAA determined that geo-fencing is an optional feature because it is one way, but not the only way, to ensure a safely contained operation.

*Comment Summary:* ALPA requested the FAA revise the criteria so that capability to detect and avoid other aircraft and obstacles is a required feature and not optional.

*FAA Response:* D&R.310(a)(4) requires the applicant demonstrate the ability for the pilot to safely re-route the UA in flight to avoid a dynamic hazard. The FAA did not prescribe specific design features such as a collision avoidance system to meet D&R.310(a)(4) because there are multiple means to minimize the risk of collision.

*Comment Summary:* McMahan Helicopter Services requested that the airworthiness criteria require a demonstration of sense-and-avoid technology that will automatically steer the UA away from manned aircraft, regardless of whether the manned aircraft has a transponder. NAAA and an individual commenter requested that the FAA require ADS-B in/out and

traffic avoidance software on all UAS. The Small UAV Coalition requested the FAA establish standards for collision avoidance technology, as the proposed criteria are not sufficient for compliance with the operational requirement to see and avoid other aircraft (§ 91.113). The commenters stated that these technologies are necessary to avoid a mid-air collision between UA and manned aircraft.

*FAA Response:* D&R.310(a)(4) requires the applicant demonstrate the ability for the UA to be safely re-routed in flight to avoid a dynamic hazard. The FAA did not prescribe specific design features, such as the technologies suggested by the commenters, to meet D&R.310(a)(4) because they are not the only means for complying with the operational requirement to see and avoid other aircraft. If an applicant chooses to equip their UA with onboard collision avoidance technology, those capabilities and functions must be demonstrated by test per D&R.310(b)(5).

#### Verification of Limits

The FAA proposed to require an evaluation of the UA's performance, maneuverability, stability, and control with a factor of safety.

*Comment Summary:* EASA requested that the FAA revise its approach to require a similar compliance demonstration as EASA's for "light UAS." EASA stated the FAA's proposed criteria for verification of limits, combined with the proposed Flight Manual requirements, seem to replace a traditional Subpart Flight.<sup>3</sup> EASA further stated the FAA's approach in the proposed airworthiness criteria might necessitate more guidance and means of compliance than the traditional structure.

*FAA Response:* The FAA's airworthiness criteria will vary from EASA's light UAS certification requirements, resulting in associated differences in compliance demonstrations. At this time, comment on means of compliance and related guidance material, which are still under development with the FAA and with EASA, would be speculative.

#### Propulsion

*Comment Summary:* ALPA requested the FAA conduct an analysis to determine battery reliability and safety, taking into account wind and weather conditions and their effect on battery life. ALPA expressed concern with batteries as the only source of power for

an aircraft in the NAS. ALPA further requested the FAA not grant exemptions for battery reserve requirements.

*FAA Response:* Because batteries are a flight essential part, the applicant must establish mandatory instructions or life limits for batteries under the requirements of D&R.135. In addition, when the applicant conducts its D&R testing, D&R.300(i) prevents the applicant from exceeding the maintenance intervals or life limits for those batteries. To the extent the commenter's request addresses fuel reserves, that is an operational requirement, not a certification requirement, and therefore beyond the scope of this document.

#### Additional Airworthiness Criteria Identified by Commenters

*Comment Summary:* McMahon Helicopter Services requested that the criteria require anti-collision and navigation lighting certified to existing FAA standards for brightness and size. The commenter stated that these standards were based on human factors for nighttime and daytime recognition and are not simply a lighting requirement. An individual commenter requested that the criteria include a requirement for position lighting and anti-collision beacons meeting TSO-30c Level III. NAAA requested the criteria require a strobe light and high visibility paint scheme to aid in visual detection of the UA by other aircraft.

*FAA Response:* The FAA determined it is unnecessary for these airworthiness criteria to prescribe specific design features for anti-collision or navigation lighting. The FAA will address anti-collision lighting as part of any operational approval, similar to the rules in 14 CFR 107.29(a)(2) and (b) for small UAS.

*Comment Summary:* ALPA requested the FAA add a new section with minimum standards for Global Navigation Satellite System (GNSS), as the UAS will likely rely heavily upon GNSS for navigation and to ensure that the UA does not stray outside of its approved airspace. ALPA stated that technological advances have made such devices available at an appropriate size, weight, and power for UAs.

*FAA Response:* The airworthiness criteria in D&R.100 (UA Signal Monitoring and Transmission), D&R.110 (Software), D&R.115 (Cybersecurity), and D&R.305(a)(3) (probable failures related to GPS) sufficiently address design requirements and testing of navigation systems. Even if the applicant uses a TSO-approved GNSS, these airworthiness criteria require a demonstration that the UA operates

successfully without loss of containment. Successful completion of these tests demonstrates that the navigation subsystems are acceptable.

*Comment Summary:* ALPA requested the FAA revise the criteria to add a new section requiring equipment to comply with the FAA's new rules on Remote Identification of Unmanned Aircraft (86 FR 4390, Jan. 15, 2021). An individual commenter questioned the need for public tracking and identification of drones in the event of a crash or violation of FAA flight rules.

*FAA Response:* The FAA issued the final rule, Remote Identification of Unmanned Aircraft, after providing an opportunity for public notice and comment. The final rule is codified at 14 CFR part 89. Part 89 contains the remote identification requirements for unmanned aircraft certificated and produced under part 21 after September 16, 2022.

#### Pilot Ratio

*Comment Summary:* ALPA, NAAA, and an individual questioned the safety of multiple Model Percepto System 2.4 UA operated by a single pilot, up to a ratio of 20 UA to 1 pilot. ALPA stated that even with high levels of automation, the pilot must still manage the safe operation and maintain situational awareness of multiple aircraft in their flight path, aircraft systems, integration with traffic, obstacles, and other hazards during normal, abnormal, and emergency conditions. As a result, ALPA recommended the FAA conduct additional studies to better understand the feasibility of a single pilot operating multiple UA before developing airworthiness criteria. The Small UAV Coalition requested the FAA provide criteria for an aircraft-to-pilot ratio higher than 20:1.

*FAA Response:* These airworthiness criteria are specific to the Model Percepto System 2.4 UA and, as discussed previously in this preamble, operations of the Percepto Model Percepto System 2.4 UA may include multiple UA operated by a single pilot, up to a ratio of 20 UA to 1 pilot. Additionally, these airworthiness criteria require the applicant to demonstrate the durability and reliability of the UA design by flight test, at the highest aircraft-to-pilot ratio, without exceptional piloting skill or alertness. In addition, D&R.305(c) requires the applicant to demonstrate probable failures by test at the highest aircraft-to-pilot ratio. Should the pilot ratio cause a loss of containment or control of the UA, then the applicant will fail this testing.

<sup>3</sup> In the FAA's aircraft airworthiness standards (parts 23, 25, 27, and 29), subpart B of each is titled Flight.

*Comment Summary:* ALPA stated that to allow a UAS-pilot ratio of up to 20:1 safely, the possibility that the pilot will need to intervene with multiple UA simultaneously must be “extremely remote.” ALPA questioned whether this is feasible given the threat of GNSS interference or unanticipated wind gusts exceeding operational limits.

*FAA Response:* The FAA’s guidance in AC 23.1309–1E, *System Safety Analysis and Assessment for Part 23 Airplanes* defines “extremely remote failure conditions” as failure conditions not anticipated to occur during the total life of an airplane, but which may occur a few times when considering the total operational life of all airplanes of the same type. When assessing the likelihood of a pilot needing to intervene with multiple UA simultaneously, the minimum reliability requirements will be determined based on the applicant’s proposed CONOPS.

### Noise

*Comment Summary:* An individual commenter expressed concern about noise pollution.

*FAA Response:* The Model Percepto System 2.4 will need to comply with FAA noise certification standards. If the FAA determines that 14 CFR part 36 does not contain adequate standards for this design, the agency will propose and seek public comment on a rule of particular applicability for noise requirements under a separate rulemaking docket.

### Operating Altitude

*Comment Summary:* ALPA, McMahon Helicopter Services, and NAAA commented on the operation of UAS at or below 400 feet AGL. ALPA, McMahon Helicopter Services, and NAAA requested the airworthiness criteria contain measures for safe operation at low altitudes so that UAS are not a hazard to manned aircraft, especially operations involving helicopters; air tours; agricultural applications; emergency medical services; air tanker firefighting; power line and pipeline patrol and maintenance; fish and wildlife service; animal control; military and law enforcement; seismic operations; ranching and livestock relocation; and mapping.

*FAA Response:* The type certificate only establishes the approved design of the UA. These airworthiness criteria require the applicant show compliance for the UA altitude sought for type certification. While this may result in operating limitations in the flight manual, the type certificate is not an approval for operations. Operations and

operational requirements are beyond the scope of this document.

### Guidance Material

*Comment Summary:* NUAIR requested the FAA complete and publish its draft AC 21.17–XX, *Type Certification Basis for Unmanned Aircraft Systems (UAS)*, to provide additional guidance, including templates, to those who seek a type design approval for UAS. NUAIR also requested the FAA recognize the industry consensus-based standards applicable to UAS, as Transport Canada has by publishing its AC 922–001, *Remotely Piloted Aircraft Systems Safety Assurance*.

*FAA Response:* The FAA will continue to develop policy and guidance for UA type certification and will publish guidance as soon as practicable. The FAA encourages consensus standards bodies to develop means of compliance and submit them to the FAA for acceptance. Regarding Transport Canada AC 922–001, that AC addresses operational approval rather than type certification.

### Safety Management

*Comment Summary:* ALPA requested the FAA ensure that operations, including UA integrity, fall under the safety management system. ALPA further requested the FAA convene a Safety Risk Management Panel before allowing operators to commence operations and that the FAA require operators to have an active safety management system, including a non-punitive safety culture, where incident and continuing airworthiness issues can be reported.

*FAA Response:* The type certificate only establishes the approved design of the UA, including the Flight Manual and ICA. Operations and operational requirements, including safety management and oversight of operations and maintenance, are beyond the scope of this document.

### Process

*Comment Summary:* ALPA supported the FAA’s type certification of UAS as a “special class” of aircraft under § 21.17(b) but requested that it be temporary.

*FAA Response:* As the FAA stated in its notice of policy issued August 11, 2020 (85 FR 58251, September 18, 2020), the FAA will use the type certification process under § 21.17(b) for some unmanned aircraft with no occupants onboard. The FAA further stated in its policy that it may also issue type certificates under § 21.17(a) for airplane and rotorcraft UAS designs

where the airworthiness standards in part 23, 25, 27, or 29, respectively, are appropriate. The FAA, in the future, may consider establishing appropriate generally applicable airworthiness standards for UA that are not certificated under the existing standards in part 23, 25, 27, or 29.

### Out of Scope Comments

The FAA received and reviewed several comments that were general, stated the commenter’s viewpoint or opposition without a suggestion specific to the proposed criteria, or did not make a request the FAA can act on. These comments are beyond the scope of this document.

### Applicability

These airworthiness criteria, established under the provisions of § 21.17(b), are applicable to the Percepto Model Percepto System 2.4 UA. Should Percepto wish to apply these airworthiness criteria to other UA models, it must submit a new type certification application.

### Conclusion

This action affects only certain airworthiness criteria for the Percepto Model Percepto System 2.4 UA. It is not a standard of general applicability.

### Authority Citation

The authority citation for these airworthiness criteria is as follows:

**Authority:** 49 U.S.C. 106(g), 40113, and 44701–44702, 44704.

### Airworthiness Criteria

Pursuant to the authority delegated to me by the Administrator, the following airworthiness criteria are issued as part of the type certification basis for the Percepto Model Percepto System 2.4 unmanned aircraft. The FAA finds that compliance with these criteria appropriately mitigates the risks associated with the design and concept of operations and provides an equivalent level of safety to existing rules.

### General

#### *D&R.001 Concept of Operations*

The applicant must define and submit to the FAA a concept of operations (CONOPS) proposal describing the unmanned aircraft system (UAS) operation in the national airspace system for which unmanned aircraft (UA) type certification is requested. The CONOPS proposal must include, at a minimum, a description of the following information in sufficient detail to determine the parameters and extent of testing and operating limitations:

- (a) The intended type of operations;
- (b) UA specifications;
- (c) Meteorological conditions;
- (d) Operators, pilots, and personnel responsibilities;

(e) Control station, support equipment, and other associated elements (AE) necessary to meet the airworthiness criteria;

(f) Command, control, and communication functions;

(g) Operational parameters (such as population density, geographic operating boundaries, airspace classes, launch and recovery area, congestion of proposed operating area, communications with air traffic control, line of sight, and aircraft separation); and

(h) Collision avoidance equipment, whether onboard the UA or part of the AE, if requested.

#### *D&R.005 Definitions*

For purposes of these airworthiness criteria, the following definitions apply.

(a) *Loss of Control*: Loss of control means an unintended departure of an aircraft from controlled flight. It includes control reversal or an undue loss of longitudinal, lateral, and directional stability and control. It also includes an upset or entry into an unscheduled or uncommanded attitude with high potential for uncontrolled impact with terrain. A loss of control means a spin, loss of control authority, loss of aerodynamic stability, divergent flight characteristics, or similar occurrence, which could generally lead to crash.

(b) *Loss of Flight*: Loss of flight means a UA's inability to complete its flight as planned, up to and through its originally planned landing. It includes scenarios where the UA experiences controlled flight into terrain, obstacles, or any other collision, or a loss of altitude that is severe or non-reversible. Loss of flight also includes deploying a parachute or ballistic recovery system that leads to an unplanned landing outside the operator's designated recovery zone.

#### **Design and Construction**

##### *D&R.100 UA Signal Monitoring and Transmission*

The UA must be designed to monitor and transmit to the AE all information required for continued safe flight and operation. This information includes, at a minimum, the following:

- (a) Status of all critical parameters for all energy storage systems;
- (b) Status of all critical parameters for all propulsion systems;

(c) Flight and navigation information as appropriate, such as airspeed, heading, altitude, and location; and

(d) Communication and navigation signal strength and quality, including contingency information or status.

##### *D&R.105 UAS AE Required for Safe UA Operations*

(a) The applicant must identify and submit to the FAA all AE and interface conditions of the UAS that affect the airworthiness of the UA or are otherwise necessary for the UA to meet these airworthiness criteria. As part of this requirement—

(1) The applicant may identify either specific AE or minimum specifications for the AE.

(i) If minimum specifications are identified, they must include the critical requirements of the AE, including performance, compatibility, function, reliability, interface, pilot alerting, and environmental requirements.

(ii) Critical requirements are those that if not met would impact the ability to operate the UA safely and efficiently.

(2) The applicant may use an interface control drawing, a requirements document, or other reference, titled so that it is clearly designated as AE interfaces to the UA.

(b) The applicant must show the FAA the AE or minimum specifications identified in paragraph (a) of this section meet the following:

(1) The AE provide the functionality, performance, reliability, and information to assure UA airworthiness in conjunction with the rest of the design;

(2) The AE are compatible with the UA capabilities and interfaces;

(3) The AE must monitor and transmit to the pilot all information required for safe flight and operation, including but not limited to those identified in D&R.100; and

(4) The minimum specifications, if identified, are correct, complete, consistent, and verifiable to assure UA airworthiness.

(c) The FAA will establish the approved AE or minimum specifications as operating limitations and include them in the UA type certificate data sheet and Flight Manual.

(d) The applicant must develop any maintenance instructions necessary to address implications from the AE on the airworthiness of the UA. Those instructions will be included in the instructions for continued airworthiness (ICA) required by D&R.205.

##### *D&R.110 Software*

To minimize the existence of software errors, the applicant must:

(a) Verify by test all software that may impact the safe operation of the UA;

(b) Utilize a configuration management system that tracks, controls, and preserves changes made to software throughout the entire life cycle; and

(c) Implement a problem reporting system that captures and records defects and modifications to the software.

##### *D&R.115 Cybersecurity*

(a) UA equipment, systems, and networks, addressed separately and in relation to other systems, must be protected from intentional unauthorized electronic interactions that may result in an adverse effect on the security or airworthiness of the UA. Protection must be ensured by showing that the security risks have been identified, assessed, and mitigated as necessary.

(b) When required by paragraph (a) of this section, procedures and instructions to ensure security protections are maintained must be included in the ICA.

##### *D&R.120 Contingency Planning*

(a) The UA must be designed so that, in the event of a loss of the command and control (C2) link, the UA will automatically and immediately execute a safe predetermined flight, loiter, landing, or termination.

(b) The applicant must establish the predetermined action in the event of a loss of the C2 link and include it in the UA Flight Manual.

(c) The UA Flight Manual must include the minimum performance requirements for the C2 data link defining when the C2 link is degraded to a level where remote active control of the UA is no longer ensured. Takeoff when the C2 link is degraded below the minimum link performance requirements must be prevented by design or prohibited by an operating limitation in the UA Flight Manual.

##### *D&R.125 Lightning*

(a) Except as provided in paragraph (b) of this section, the UA must have design characteristics that will protect the UA from loss of flight or loss of control due to lightning.

(b) If the UA has not been shown to protect against lightning, the UA Flight Manual must include an operating limitation to prohibit flight into weather conditions conducive to lightning activity.

##### *D&R.130 Adverse Weather Conditions*

(a) For purposes of this section, "adverse weather conditions" means rain, snow, and icing.

(b) Except as provided in paragraph (c) of this section, the UA must have

design characteristics that will allow the UA to operate within the adverse weather conditions specified in the CONOPS without loss of flight or loss of control.

(c) For adverse weather conditions for which the UA is not approved to operate, the applicant must develop operating limitations to prohibit flight into known adverse weather conditions and either:

(1) Develop operating limitations to prevent inadvertent flight into adverse weather conditions; or

(2) Provide a means to detect any adverse weather conditions for which the UA is not certificated to operate and show the UA's ability to avoid or exit those conditions.

#### *D&R.135 Flight Essential Parts*

(a) A flight essential part is a part, the failure of which could result in a loss of flight or unrecoverable loss of UA control.

(b) If the type design includes flight essential parts, the applicant must establish a flight essential parts list. The applicant must develop and define mandatory maintenance instructions or life limits, or a combination of both, to prevent failures of flight essential parts. Each of these mandatory actions must be included in the Airworthiness Limitations Section of the ICA.

#### **Operating Limitations and Information**

##### *D&R.200 Flight Manual*

The applicant must provide a Flight Manual with each UA.

(a) The UA Flight Manual must contain the following information:

- (1) UA operating limitations;
- (2) UA operating procedures;
- (3) Performance information;
- (4) Loading information; and

(5) Other information that is necessary for safe operation because of design, operating, or handling characteristics.

(b) Those portions of the UA Flight Manual containing the information specified in paragraph (a)(1) of this section must be approved by the FAA.

##### *D&R.205 Instructions for Continued Airworthiness*

The applicant must prepare ICA for the UA in accordance with Appendix A to Part 23, as appropriate, that are acceptable to the FAA. The ICA may be incomplete at type certification if a program exists to ensure their completion prior to delivery of the first UA or issuance of a standard airworthiness certificate, whichever occurs later.

#### **Testing**

##### *D&R.300 Durability and Reliability*

The UA must be designed to be durable and reliable when operated under the limitations prescribed for its operating environment, as documented in its CONOPS and included as operating limitations on the type certificate data sheet and in the UA Flight Manual. The durability and reliability must be demonstrated by flight test in accordance with the requirements of this section and completed with no failures that result in a loss of flight, loss of control, loss of containment, or emergency landing outside the operator's recovery area.

(a) Once a UA has begun testing to show compliance with this section, all flights for that UA must be included in the flight test report.

(b) Tests must include an evaluation of the entire flight envelope across all phases of operation and must address, at a minimum, the following:

- (1) Flight distances;
- (2) Flight durations;
- (3) Route complexity;
- (4) Weight;
- (5) Center of gravity;
- (6) Density altitude;
- (7) Outside air temperature;
- (8) Airspeed;
- (9) Wind;
- (10) Weather;
- (11) Operation at night, if requested;
- (12) Energy storage system capacity; and

(13) Aircraft to pilot ratio.

(c) Tests must include the most adverse combinations of the conditions and configurations in paragraph (b) of this section.

(d) Tests must show a distribution of the different flight profiles and routes representative of the type of operations identified in the CONOPS.

(e) Tests must be conducted in conditions consistent with the expected environmental conditions identified in the CONOPS, including electromagnetic interference (EMI) and high intensity radiated fields (HIRF).

(f) Tests must not require exceptional piloting skill or alertness.

(g) Any UAS used for testing must be subject to the same worst-case ground handling, shipping, and transportation loads as those allowed in service.

(h) Any UA used for testing must use AE that meet, but do not exceed, the minimum specifications identified under D&R.105. If multiple AE are identified, the applicant must demonstrate each configuration.

(i) Any UAS used for testing must be maintained and operated in accordance with the ICA and UA Flight Manual. No

maintenance beyond the intervals established in the ICA will be allowed to show compliance with this section.

(j) If cargo operations or external-load operations are requested, tests must show, throughout the flight envelope and with the cargo or external-load at the most critical combinations of weight and center of gravity, that—

- (1) The UA is safely controllable and maneuverable; and
- (2) The cargo or external-load are retainable and transportable.

##### *D&R.305 Probable Failures*

The UA must be designed such that a probable failure will not result in a loss of containment or control of the UA. This must be demonstrated by test.

(a) Probable failures related to the following equipment, at a minimum, must be addressed:

- (1) Propulsion systems;
- (2) C2 link;
- (3) Global Positioning System (GPS);
- (4) Flight control components with a single point of failure;
- (5) Control station; and
- (6) Any other AE identified by the applicant.

(b) Any UA used for testing must be operated in accordance with the UA Flight Manual.

(c) Each test must occur at the critical phase and mode of flight, and at the highest aircraft-to-pilot ratio.

##### *D&R.310 Capabilities and Functions*

(a) All of the following required UAS capabilities and functions must be demonstrated by test:

(1) Capability to regain command and control of the UA after the C2 link has been lost.

(2) Capability of the electrical system to power all UA systems and payloads.

(3) Ability for the pilot to safely discontinue the flight.

(4) Ability for the pilot to dynamically re-route the UA.

(5) Ability to safely abort a takeoff.

(6) Ability to safely abort a landing and initiate a go-around.

(b) The following UAS capabilities and functions, if requested for approval, must be demonstrated by test:

(1) Continued flight after degradation of the propulsion system.

(2) Geo-fencing that contains the UA within a designated area, in all operating conditions.

(3) Positive transfer of the UA between control stations that ensures only one control station can control the UA at a time.

(4) Capability to release an external cargo load to prevent loss of control of the UA.

(5) Capability to detect and avoid other aircraft and obstacles.

(c) The UA must be designed to safeguard against inadvertent discontinuation of the flight and inadvertent release of cargo or external load.

#### *D&R.315 Fatigue*

The structure of the UA must be shown to withstand the repeated loads expected during its service life without failure. A life limit for the airframe must be established, demonstrated by test, and included in the ICA.

#### *D&R.320 Verification of Limits*

The performance, maneuverability, stability, and control of the UA within the flight envelope described in the UA Flight Manual must be demonstrated at a minimum of 5% over maximum gross weight with no loss of control or loss of flight.

Issued in Washington, DC, on March 22, 2022.

## DEPARTMENT OF TRANSPORTATION

### Federal Aviation Administration

#### 14 CFR Part 21

[Docket No. FAA-2020-1090]

#### **Airworthiness Criteria: Special Class Airworthiness Criteria for the Flytrex, Inc. FTX-M600P Unmanned Aircraft**

**AGENCY:** Federal Aviation Administration (FAA), Department of Transportation (DOT).

**ACTION:** Issuance of final airworthiness criteria.

**SUMMARY:** The FAA announces the special class airworthiness criteria for the Flytrex, Inc. Model FTX-M600P unmanned aircraft (UA). This document sets forth the airworthiness criteria the FAA finds to be appropriate and applicable for the UA design.

**DATES:** These airworthiness criteria are effective April 27, 2022.

**FOR FURTHER INFORMATION CONTACT:** Christopher J. Richards, Emerging Aircraft Strategic Policy Section, AIR-618, Strategic Policy Management Branch, Policy and Innovation Division, Aircraft Certification Service, Federal Aviation Administration, 6020 28th Avenue South, Room 103, Minneapolis, MN 55450, telephone (612) 253-4559.

**SUPPLEMENTARY INFORMATION:**

#### **Background**

Flytrex, Inc., (Flytrex) applied to the FAA on March 18, 2019, for a special class type certificate under title 14, Code of Federal Regulations (14 CFR), § 21.17(b) for the Model FTX-M600P unmanned aircraft system (UAS).

The Model FTX-M600P consists of a rotorcraft UA and its associated elements (AE) including communication links and components that control the UA. The Model FTX-M600P UA has a maximum gross takeoff weight of 34 pounds. It is approximately 53 inches in width, 53 inches in length, and 31 inches in height. The Model FTX-M600P UA uses battery-powered electric motors for vertical takeoff, landing, and forward flight. The UAS operations would rely on high levels of automation and may include multiple UA operated by a single pilot, up to a ratio of 20 UA to 1 pilot. Flytrex anticipates operators will use the Model FTX-M600P for delivering packages. The proposed concept of operations (CONOPS) for the Model FTX-M600P identifies a maximum operating altitude of 230 feet above ground level (AGL), a maximum cruise speed of 30 knots (34 mph), operations beyond visual line of sight (BVLOS) of the pilot, and operations over human beings. Flytrex has not requested type certification for flight into known icing for the Model FTX-M600P.

The FAA issued a notice of proposed airworthiness criteria for the Flytrex FTX-M600P UAS, which published in the **Federal Register** on November 23, 2020 (85 FR 74622).

#### **Summary of Changes From the Proposed Airworthiness Criteria**

Based on the comments received, these final airworthiness criteria reflect the following changes, as explained in more detail under Discussion of Comments: A new section containing definitions; revisions to the CONOPS requirement; changing the term “critical part” to “flight essential part” in D&R.135; changing the basis of the durability and reliability testing from population density to limitations prescribed for the operating environment identified in the applicant’s CONOPS per D&R.001; and, for the demonstration of certain required capabilities and functions as required by D&R.310.

Additionally, the FAA re-evaluated its approach to type certification of low-risk UA using durability and reliability testing. Safe UAS operations depend and rely on both the UA and the AE. As explained in FAA Memorandum AIR600-21-AIR-600-PM01, dated July

13, 2021, the FAA has revised the airworthiness criteria to define a boundary between the UA type certification and subsequent operational evaluations and approval processes for the UAS (*i.e.*, waivers, exemptions, and/or operating certificates).

To reflect that these airworthiness criteria rely on durability and reliability (D&R) testing for certification, the FAA changed the prefix of each section from “UAS” to “D&R.”

Lastly, the FAA revised D&R.001(g) to clarify that the operational parameters listed in that paragraph are examples and not an all-inclusive list.

#### **Discussion of Comments**

The FAA received responses from 14 commenters. The majority of the commenters were individuals. In addition to the individuals’ comments, the FAA also received comments from the European Union Aviation Safety Agency (EASA), unmanned aircraft manufacturers, a helicopter operator, and organizations such as the Air Line Pilots Association (ALPA), Droneport Texas, LLC, the National Agricultural Aviation Association (NAAA), Northeast UAS Airspace Integration Research Alliance, Inc. (NUAIR), and the Small UAV Coalition.

#### **Support**

*Comment Summary:* ALPA, NUAIR, and the Small UAV Coalition expressed support for type certification as a special class of aircraft and establishing airworthiness criteria under § 21.17(b). The Small UAV Coalition also supported the FAA’s proposed use of performance-based standards.

#### **Terminology: Loss of Flight**

*Comment Summary:* An individual commenter requested the FAA define the term “loss of flight” and clarify how it is different from “loss of control.” The commenter questioned whether loss of flight meant the UA could not continue its intended flight plan but could safely land or terminate the flight.

*FAA Response:* The FAA has added a new section, D&R.005, to define the terms “loss of flight” and “loss of control” for the purposes of these airworthiness criteria. “Loss of flight” refers to a UA’s inability to complete its flight as planned, up to and through its originally planned landing. “Loss of flight” includes scenarios where the UA experiences controlled flight into terrain or obstacles, or any other collision, or a loss of altitude that is severe or non-recoverable. “Loss of flight” includes deploying a parachute or ballistic recovery system that leads to an

unplanned landing outside the operator's designated recovery zone.

"Loss of control" means an unintended departure of an aircraft from controlled flight. It includes control reversal or an undue loss of longitudinal, lateral, and directional stability and control. It also includes an upset or entry into an unscheduled or uncommanded attitude with high potential for uncontrolled impact with terrain. "Loss of control" means a spin, loss of control authority, loss of aerodynamic stability, divergent flight characteristic, or similar occurrence, which could generally lead to a crash.

#### **Terminology: Skill and Alertness of Pilot**

*Comment Summary:* Two commenters requested the FAA clarify terminology with respect to piloting skill and alertness. Droneport Texas LLC stated that the average pilot skill and alertness is currently undefined, as remote pilots do not undergo oral or practical examinations to obtain certification. NUAIR noted that, despite the definition of "exceptional piloting skill and alertness" in Advisory Circular (AC) 23-8C, *Flight Test Guide for Certification of Part 23 Airplanes*, there is a significant difference between the average skill and alertness of a remote pilot certified under 14 CFR part 107 and a pilot certified under 14 CFR part 61. The commenter requested the FAA clarify the minimum qualifications and ratings to perform as a remote pilot of a UAS with a type certificate.

*FAA Response:* These airworthiness criteria do not require exceptional piloting skill and alertness for testing. The FAA included this as a requirement to ensure the applicant passes testing by using pilots of average skill who have been certificated under part 61, as opposed to highly trained pilots with thousands of hours of flight experience.

#### **Concept of Operations**

The FAA proposed a requirement for the applicant to submit a CONOPS describing the UAS and identifying the intended operational concepts. The FAA explained in the preamble of the notice of proposed airworthiness criteria that the information in the CONOPS would determine parameters for testing and flight manual operating limitations.

*Comment Summary:* One commenter stated that the airworthiness criteria are generic and requested the FAA add language to proposed UAS.001 to clarify that some of the criteria may not be relevant or necessary.

*FAA Response:* Including the language requested by the commenter would be inappropriate, as these

airworthiness criteria are project-specific. Thus, in this case, each element of these airworthiness criteria is a requirement specific to the type certification of Flytrex's proposed UA design.

*Comment Summary:* ALPA requested the criteria specify that the applicant's CONOPS contain sufficient detail to determine the parameters and extent of testing, as well as operating limitations placed on the UAS for its operational uses.

*FAA Response:* The FAA agrees and has updated D&R.001 to clarify that the information required for inclusion in the CONOPS proposal (D&R.001(a) through (g)) must be described in sufficient detail to determine the parameters and extent of testing and operating limitations.

*Comment Summary:* ALPA requested the CONOPS include a description of a means to ensure separation from other aircraft and perform collision avoidance maneuvers. ALPA stated that its requested addition to the CONOPS is critical to the safety of other airspace users, as manned aircraft do not easily see most UAs.

*FAA Response:* The FAA agrees and has updated D&R.001 to require that the applicant identify collision avoidance equipment (whether onboard the UA or part of the AE), if the applicant requests to include that equipment.

*Comment Summary:* ALPA requested the FAA add security-related (other than cyber-security) requirements to the CONOPS criteria, including mandatory reporting of security occurrences, security training and awareness programs for all personnel involved in UAS operations, and security standards for the transportation of goods, similar to those for manned aviation.

*FAA Response:* The type certificate only establishes the approved design of the UA. Operations and operational requirements, including those regarding security occurrences, security training, and package delivery security standards (other than cybersecurity airworthiness design requirements) are beyond the scope of the airworthiness criteria established by this document and are not required for type certification.

*Comment Summary:* UAS.001(c) proposed to require that the applicant's CONOPS include a description of meteorological conditions. ALPA requested the FAA change UAS.001(c) to require a description of meteorological and environmental conditions and their operational limits. ALPA stated the CONOPS should include maximum wind speeds, maximum or minimum temperatures, maximum density altitudes, and other

relevant phenomena that will limit operations or cause operations to terminate.

*FAA Response:* D&R.001(c) and D&R.125 address meteorological conditions, while D&R.001(g) addresses environmental considerations. The FAA determined that these criteria are sufficient to cover the weather phenomena mentioned by the commenter without specifically requiring identification of related operational limits.

#### **Control Station**

To address the risks associated with loss of control of the UA, the FAA proposed that the applicant design the control station to provide the pilot with all information necessary for continued safe flight and operation.

*Comment Summary:* ALPA and two individual commenters requested the FAA revise the proposed criteria to add requirements for the control station. Specifically, these commenters requested the FAA include the display of data and alert conditions to the pilot, physical security requirements for both the control station and the UAS storage area, design requirements that minimize negative impact of extended periods of low pilot workload, transfer of control between pilots, and human factors/human machine interface considerations for handheld controls. NUAIR requested the FAA designate the control station as a flight critical component for operations.

EASA and an individual commenter requested the FAA consider flexibility in some of the proposed criteria. EASA stated that the list of information in proposed UAS.100 is too prescriptive and contains information that may not be relevant for highly automated systems. The individual commenter requested that the FAA allow part-time or non-continuous displays of required information that do not influence the safety of the flight.

*FAA Response:* Although the scope of the proposed airworthiness criteria applied to the entire UAS, the FAA has re-evaluated its approach to type certification of low-risk unmanned aircraft using durability and reliability testing. A UA is an aircraft that is operated without the possibility of direct human intervention from within or on the aircraft.<sup>1</sup> A UAS is defined as a UA and its AE, including communication links and the components that control the UA, that are required to operate the UAS safely and efficiently in the national airspace

<sup>1</sup> See 49 U.S.C. 44801(11).

system.<sup>2</sup> As explained in FAA Memorandum AIR600–21–AIR–600–PM01, dated July 13, 2021, the FAA determined it will apply the regulations for type design approval, production approval, conformity, certificates of airworthiness, and maintenance to only the UA and not to the AE. However, because safe UAS operations depend and rely on both the UA and the AE, the FAA will consider the AE in assessing whether the UA meets the airworthiness criteria that comprise the certification basis.

While the AE items themselves will be outside the scope of the UA type design, the applicant will provide sufficient specifications for any aspect of the AE, including the control station, which could affect airworthiness. The FAA will approve either the specific AE or minimum specifications for the AE, as identified by the applicant, as part of the type certificate by including them as an operating limitation in the type certificate data sheet and flight manual. The FAA may impose additional operating limitations specific to the AE through conditions and limitations for inclusion in the operational approval (*i.e.*, waivers, exemptions, or a combination of these). In accordance with this approach, the FAA will consider the entirety of the UAS for operational approval and oversight.

Accordingly, the FAA has revised the criteria by replacing proposed section UAS.100, applicable to the control station design, with D&R.100, UA Signal Monitoring and Transmission, with substantively similar criteria that apply to the UA design.

The FAA has also added a new section, D&R.105, UAS AE Required for Safe UA Operations, which requires the applicant to provide information concerning the specifications of the AE. The FAA has moved the alert function requirement proposed in UAS.100(a) to new section D&R.105(a)(1)(i). As part of the clarification of the testing of the interaction between the UA and AE, the FAA has added a requirement to D&R.300(h) for D&R testing to use minimum specification AE. This addition requires the applicant to demonstrate that the limits proposed for those AE will allow the UA to operate as expected throughout its service life.

Finally, the FAA has revised references throughout the airworthiness criteria from “UAS” to “UA,” as appropriate, to reflect the FAA determination that the regulations for type design approval, production approval, conformity, certificates of

airworthiness, and maintenance apply to only the UA.

### Software

The FAA proposed criteria on verification, configuration management, and problem reporting to minimize the existence of errors associated with UAS software.

*Comment Summary:* ALPA requested the FAA add language to the proposed criteria to ensure that some level of software engineering principles are used without being too prescriptive.

*FAA Response:* By combining the software testing requirement of D&R.110(a) with successful completion of the requirements in the entire “Testing” subpart, the acceptable level of software assurance will be identified and demonstrated. The configuration management system required by D&R.110(b) will ensure that the software is adequately documented and traceable both during and after the initial type certification activities.

*Comment Summary:* EASA suggested the criteria require that the applicant establish and correctly implement system requirements or a structured software development process for critical software.

*FAA Response:* Direct and specific evaluation of the software development process is more detailed than what the FAA intended with the proposed criteria, which use D&R testing to evaluate the UAS as a whole system, rather than evaluating individual components within the UA. Successful completion of the testing requirements provides confidence that the components that make up the UA provide an acceptable level of safety, commensurate to the low-risk nature of this aircraft. The FAA finds no change to the airworthiness criteria is needed.

*Comment Summary:* Two individual commenters requested the FAA require the manned aircraft software certification methodology in RTCA DO–178C, *Software Considerations in Airborne Systems and Equipment Certification*, for critical UA software.

*FAA Response:* Under these airworthiness criteria, only software that may affect the safe operation of the UA must be verified by test. To verify by test, the applicant will need to provide an assessment showing that other software is not subject to testing because it has no impact on the safe operation of the UA. For software that is subject to testing, the FAA may accept multiple options for software qualification, including DO–178C. Further, specifying that applicants must comply with DO–178 would be inconsistent with the

FAA’s intent to issue performance-based airworthiness criteria.

*Comment Summary:* NAAA stated that an overreliance of software in aircraft has been and continues to be a source of accidents and requested the FAA include criteria to prevent a midair collision.

*FAA Response:* The proper functioning of software is an important element of type certification, particularly with respect to flight controls and navigation. The airworthiness criteria in D&R.110 are meant to provide an acceptable level of safety commensurate with the risk posed by this UA. Additionally, the airworthiness criteria require contingency planning per D&R.120 and the demonstration of the UA’s ability to detect and avoid other aircraft in D&R.310, if requested by the applicant. The risk of a midair collision will be minimized by the operating limitations that result from testing based on the operational parameters identified by the applicant in its CONOPS (such as geographic operating boundaries, airspace classes, and congestion of the proposed operating area), rather than by specific mitigations built into the aircraft design itself. These criteria are sufficient due to the low-risk nature of the Model FTX–M600P.

### Cybersecurity

Because the UA requires a continuous wireless connection, the FAA proposed criteria to address the risks to the UAS from cybersecurity threats.

*Comment Summary:* ALPA requested adding a requirement for cybersecurity protection for navigation and position reporting systems such as Global Navigation Satellite System (GNSS). ALPA further requested the FAA include criteria to address specific cybersecurity vulnerabilities, such as jamming (denial of signal) and spoofing (false position data is inserted). ALPA stated that, for navigation, UAS primarily use GNSS—an unencrypted, open-source, low power transmission that can be jammed, spoofed, or otherwise manipulated.

*FAA Response:* The FAA will assess elements directly influencing the UA for cybersecurity under D&R.115 and will assess the AE as part of any operational approvals an operator may seek. D&R.115 (proposed as UAS.115) addresses intentional unauthorized electronic interactions, which includes, but is not limited to, hacking, jamming, and spoofing. These airworthiness criteria require the high-level outcome the UA must meet, rather than discretely identifying every aspect of cybersecurity the applicant will address.

<sup>2</sup> See 49 U.S.C. 44801(12).

## Contingency Planning

The FAA proposed criteria requiring that the UAS be designed to automatically execute a predetermined action in the event of a loss of communication between the pilot and the UA. The FAA further proposed that the predetermined action be identified in the Flight Manual and that the UA be precluded from taking off when the quality of service is inadequate.

*Comment Summary:* ALPA requested the criteria encompass more than loss or degradation of the command and control (C2) link, as numerous types of critical part or systems failures can occur that include degraded capabilities, whether intermittent or sustained. ALPA requested the FAA add language to the proposed criteria to address specific failures such as loss of a primary navigation sensor, degradation or loss of navigation capability, and simultaneous impact of C2 and navigation links.

*FAA Response:* The airworthiness criteria address the issues raised by ALPA. Specifically, D&R.120(a) addresses actions the UA will automatically and immediately take when the operator no longer has control of the UA. Should the specific failures identified by ALPA result in the operator's loss of control, then the criteria require the UA to execute a predetermined action. Degraded navigation performance does not raise the same level of concern as a degraded or lost C2 link. For example, a UA may experience interference with a GPS signal on the ground, but then find acceptable signal strength when above a tree line or other obstruction. The airworthiness criteria require that neither degradation nor complete loss of GPS or C2, as either condition would be a failure of that system, result in unsafe loss of control or containment. The applicant must demonstrate this by test to meet the requirements of D&R.305(a)(3).

Under the airworthiness criteria, the minimum performance requirements for the C2 link, defining when the link is degraded to an unacceptable level, may vary among different UAS designs. The level of degradation that triggers a loss is dependent upon the specific UA characteristics; this level will be defined by the applicant and demonstrated to be acceptable by testing as required by D&R.305(a)(2) and D&R.310(a)(1).

*Comment Summary:* An individual commenter requested the FAA use distinct terminology for "communication," used for communications with air traffic control, and "C2 link," used for command and

control between the remote pilot station and UA. The commenter questioned whether, in the proposed criteria, the FAA stated "loss of communication between the pilot and the UA" when it intended to state "loss of C2 link."

*FAA Response:* Communication extends beyond the C2 link and specific control inputs. This is why D&R.001 requires the applicant's CONOPS to include a description of the command, control, and communications functions. As long as the UA operates safely and predictably per its lost link contingency programming logic, a C2 interruption does not constitute a loss of control.

## Lightning

The FAA proposed criteria to address the risks that would result from a lightning strike, accounting for the size and physical limitations of a UAS that could preclude traditional lightning protection features. The FAA further proposed that without lightning protection for the UA, the Flight Manual must include an operating limitation to prohibit flight into weather conditions with potential lightning.

*Comment Summary:* An individual requested the FAA revise the criteria to include a similar design mitigation or operating limitation for High Intensity Radiated Fields (HIRF). The commenter noted that HIRF is included in proposed UAS.300(e) as part of the expected environmental conditions that must be replicated in testing.

*FAA Response:* The airworthiness criteria, which are adopted as proposed, address the issue raised by the commenter. The applicant must identify tested HIRF exposure capabilities, if any, in the Flight Manual to comply with the criteria in D&R.200(a)(5). Information regarding HIRF capabilities is necessary for safe operation because proper communication and software execution may be impeded by HIRF-generated interference, which could result in loss of control of the UA. It is not feasible to measure HIRF at every potential location where the UA will operate; thus, requiring operating limitations for HIRF as requested by the commenter would be impractical.

## Adverse Weather Conditions

The FAA proposed criteria either requiring that design characteristics protect the UAS from adverse weather conditions or prohibiting flight into known adverse weather conditions. The criteria proposed to define adverse weather conditions as rain, snow, and icing.

*Comment Summary:* ALPA and two individual commenters requested the FAA expand the proposed definition of

adverse weather conditions. These commenters noted that because of the size and physical limitations of the Model FTX-M600P, adverse weather should also include wind, downdraft, low-level wind shear (LLWS), microburst, and extreme mechanical turbulence.

*FAA Response:* No additional language needs to be added to the airworthiness criteria to address wind effects. The wind conditions specified by the commenters are part of normal UA flight operations. The applicant must demonstrate by flight test that the UA can withstand wind without failure to meet the requirements of D&R.300(b)(9). The FAA developed the criteria in D&R.130 to address adverse weather conditions (rain, snow, and icing) that would require additional design characteristics for safe operation. Any operating limitations necessary for operation in adverse weather or wind conditions will be included in the Flight Manual as required by D&R.200.

*Comment Summary:* One commenter questioned whether the criteria proposed in UAS.130(c)(2), requiring a means to detect adverse weather conditions for which the UAS is not certificated to operate, is a prescriptive requirement to install an onboard detection system. The commenter requested, if that was the case, that the FAA allow alternative procedures to avoid flying in adverse weather conditions.

*FAA Response:* The language referred to by the commenter is not a prescriptive design requirement for an onboard detection system. The applicant may use any acceptable source to monitor weather in the area, whether onboard the UA or from an external source.

## Critical Parts

The FAA proposed criteria for critical parts that were substantively the same as those in the existing standards for normal category rotorcraft under § 27.602, with changes to reflect UAS terminology and failure conditions. The criteria proposed to define a critical part as a part, the failure of which could result in a loss of flight or unrecoverable loss of control of the aircraft.

*Comment Summary:* EASA requested the FAA avoid using the term "critical part," as it is a well-established term for complex manned aircraft categories and may create incorrect expectations on the oversight process for parts.

*FAA Response:* For purposes of the airworthiness criteria established for the Flytex Model FTX-M600P, the FAA has changed the term "critical part" to "flight essential part."

*Comment Summary:* An individual commenter requested the FAA revise the proposed criteria such that a failure of a flight essential part would only occur if there is risk to third parties.

*FAA Response:* The definition of “flight essential” does not change regardless of whether on-board systems are capable of safely landing the UA when it is unable to continue its flight plan. Tying the definition of a flight essential part to the risk to third parties would result in different definitions for the part depending on where and how the UA is operated. These criteria for the Model FTX-M600P UA apply the same approach as for manned aircraft.

### Flight Manual

The FAA proposed criteria for the Flight Manual that were substantively the same as the existing standards for normal category airplanes, with minor changes to reflect UAS terminology.

*Comment Summary:* ALPA requested the FAA revise the criteria to include normal, abnormal, and emergency operating procedures along with their respective checklist. ALPA further requested the checklist be contained in a quick reference handbook (QRH).

*FAA Response:* The FAA did not intend for the airworthiness criteria to exclude abnormal procedures from the flight manual. In these final airworthiness criteria, the FAA has changed “normal and emergency operating procedures” to “operating procedures” to encompass all operating conditions and align with 14 CFR 23.2620, which includes the airplane flight manual requirements for normal category airplanes. The FAA has not made any changes to add language that would require the checklists to be included in a QRH. FAA regulations do not require manned aircraft to have a QRH for type certification. Therefore, it would be inconsistent for the FAA to require a QRH for the Flytrex Model FTX-M600P UA.

*Comment Summary:* ALPA requested the FAA revise the airworthiness criteria to require that the Flight Manual and QRH be readily available to the pilot at the control station.

*FAA Response:* ALPA’s request regarding the Flight manual addresses an operational requirement, similar to 14 CFR 91.9 and is therefore not appropriate for type certification airworthiness criteria. Also, as previously discussed, FAA regulations do not require a QRH. Therefore, it would be inappropriate to require it to be readily available to the pilot at the control station.

*Comment Summary:* Droneport Texas LLC requested the FAA revise the

airworthiness criteria to add required Flight Manual sections for routine maintenance and mission-specific equipment and procedures. The commenter stated that the remote pilot or personnel on the remote pilot-in-command’s flight team accomplish most routine maintenance, and that the flight team usually does UA rigging with mission equipment.

*FAA Response:* The requested change is appropriate for a maintenance document rather than a flight manual because it addresses maintenance procedures rather than the piloting functions. The FAA also notes that, similar to the criteria for certain manned aircraft, the airworthiness criteria require that the applicant prepare instructions for continued airworthiness (ICA) in accordance with appendix A to part 23. As the applicant must provide any maintenance instructions and mission-specific information necessary for safe operation and continued operational safety of the UA, in accordance with D&R.205, no changes to the airworthiness criteria are necessary.

*Comment Summary:* An individual commenter requested the FAA revise the criteria in proposed UAS.200(b) to require that “other information” referred to in proposed UAS.200(a)(5) be approved by the FAA. The commenter noted that, as proposed, only the information listed in UAS.200(a)(1) through (4) must be FAA approved.

*FAA Response:* The change requested by the commenter would be inconsistent with the FAA’s airworthiness standards for flight manuals for manned aircraft. Sections 23.2620(b), 25.1581(b), 27.1581(b), and 29.1581(b) include requirements for flight manuals to include operating limitations, operating procedures, performance information, loading information, and other information that is necessary safe operation because of design, operating, or handling characteristics, but limit FAA approval to operating limitations, operating procedures, performance information, and loading information.

Under § 23.2620(b)(1), for low-speed level 1 and level 2 airplanes, the FAA only approves the operating limitations. In applying a risk-based approach, the FAA has determined it would not be appropriate to hold the lowest risk UA to a higher standard than what is required for low speed level 1 and level 2 manned aircraft. Accordingly, the FAA has revised the airworthiness criteria to only require FAA approval of the operating limitations.

*Comment Summary:* NUAIR requested the FAA recognize that § 23.2620 is only applicable to the

aircraft and does not address off-aircraft components such as the control station, control and non-payload communications (CNPC) data link, and launch and recovery equipment. The commenter noted that this is also true of industry consensus-based standards designed to comply with § 23.2620.

*FAA Response:* As explained in more detail in the Control Station section of this document, the FAA has revised the airworthiness criteria for the AE. The FAA will approve AE or minimum specifications for the AE that could affect airworthiness as an operating limitation in the UA flight manual. The FAA will establish the approved AE or minimum specifications as operating limitations and include them in the UA type certificate data sheet and Flight Manual in accordance with D&R.105(c). The establishment of requirements for, and the approval of AE will be in accordance with FAA Memorandum AIR600-21-AIR-600-PM01, dated July 13, 2021.

### Durability and Reliability

The FAA proposed durability and reliability testing that would require the applicant to demonstrate safe flight of the UAS across the entire operational envelope and up to all operational limitations, for all phases of flight and all aircraft configurations described in the applicant’s CONOPS, with no failures that result in a loss of flight, loss of control, loss of containment, or emergency landing outside the operator’s recovery area. The FAA further proposed that the unmanned aircraft would only be certificated for operations within the limitations, and for flight over areas no greater than the maximum population density, as described in the applicant’s CONOPS and demonstrated by test.

*Comment Summary:* ALPA requested that the proposed certification criteria require all flights during testing be completed in both normal and non-normal or off-nominal scenarios with no failures that result in a loss of flight, loss of control, loss of containment, or emergency landing outside of the operator’s recovery zone. Specifically, ALPA stated that testing must not require exceptional piloting skill or alertness and include, at a minimum: All phases of the flight envelope, including the highest UA to pilot ratios; the most adverse combinations of the conditions and configuration; the environmental conditions identified in the CONOPS; the different flight profiles and routes identified in the CONOPS; and exposure to EMI and HIRF.

*FAA Response:* No change is necessary because the introductory text

and paragraphs (b)(7), (b)(9), (b)(10), (b)(13), (c), (d), (e), and (f) of D&R.300, which are adopted as proposed, contain the specific testing requirements requested by ALPA.

*Comment Summary:* Droneport Texas LLC requested the FAA revise the testing criteria to include, for operation at night, testing both with and without night vision aids. The commenter stated that because small UAS operation at night is waivable under 14 CFR part 107, manufacturers will likely make assumptions concerning a pilot's familiarity with night vision device-aided and unaided operations.

*FAA Response:* Under D&R.300(b)(11), the applicant must demonstrate by flight test that the UA can operate at night without failure using whatever equipment is onboard the UA itself. The pilot's familiarity, or lack thereof, with night vision equipment does not impact whether the UA is reliable and durable to complete testing without any failures.

*Comment Summary:* EASA requested the FAA clarify how testing durability and reliability commensurate to the maximum population density, as proposed, aligns with the Specific Operations Risk Assessment (SORA) approach that is open to operational mitigation, reducing the initial ground risk. An individual commenter requested the FAA provide more details about the correlation between the number of flight hours tested and the CONOPS environment (e.g., population density). The commenter stated that this is one of the most fundamental requirements, and the FAA should ensure equal treatment to all current and future applicants.

*FAA Response:* In developing these testing criteria, the FAA sought to align the risk of UAS operations with the appropriate level of protection for human beings on the ground. The FAA proposed establishing the maximum population density demonstrated by durability and reliability testing as an operating limitation on the type certificate. However, the FAA has re-evaluated its approach and determined it to be more appropriate to connect the durability and reliability demonstrated during certification testing with the operating environment defined in the CONOPS.

Basing testing on maximum population density may result in limitations not commensurate with many actual operations. As population density broadly refers to the number of people living in a given area per square mile, it does not allow for evaluating variation in a local operating environment. For example, an operator

may have a route in an urban environment with the actual flight path along a greenway; the number of human beings exposed to risk from the UA operating overhead would be significantly lower than the population density for the area. Conversely, an operator may have a route over an industrial area where few people live, but where, during business hours, there may be highly dense groups of people. Specific performance characteristics such as altitude and airspeed also factor into defining the boundaries for safe operation of the UA.

Accordingly, the FAA has revised D&R.300 to require the UA design to be durable and reliable when operated under the limitations prescribed for its operating environment. The information in the applicant's CONOPS will determine the operating environment for testing. For example, the minimum hours of reliability testing will be less for a UA conducting agricultural operations in a rural environment than if the same aircraft will be conducting package deliveries in an urban environment. The FAA will include the limitations that result from testing as operating limitations on the type certificate data sheet and in the UA Flight Manual. The FAA intends for this process to be similar to the process for establishing limitations prescribed for special purpose operations for restricted category aircraft. This allows for added flexibility in determining appropriate operating limitations, which will more closely reflect the operating environment.

Finally, a comparison of these criteria with EASA's SORA approach is beyond the scope of this document because the SORA is intended to result in an operational approval rather than a type certificate.

*Comment Summary:* EASA requested the FAA clarify how reliability at the aircraft level to ensure high-level safety objectives would enable validation of products under applicable bilateral agreements.

*FAA Response:* As the FAA and international aviation authorities are still developing general airworthiness standards for UA, it would be speculative for the FAA to comment on the validation process for any specific UA.

*Comment Summary:* EASA requested the FAA revise the testing criteria to include a compliance demonstration related to adverse combinations of the conditions and configurations and with respect to weather conditions and average pilot qualification.

*FAA Response:* No change is necessary because D&R.300(b)(7), (b)(9),

(b)(10), (c), and (f), which are adopted as proposed, contain the specific testing requirements requested by EASA.

*Comment Summary:* EASA noted that, under the proposed criteria, testing involving a large number of flight hours will limit changes to the configuration.

*FAA Response:* Like manned aircraft, the requirements of 14 CFR part 21, subpart D, apply to UA for changes to type certificates. The FAA is developing procedures for processing type design changes for UA type certificated using durability and reliability testing.

*Comment Summary:* EASA requested the FAA clarify whether the proposed testing criteria would require the applicant to demonstrate aspects that do not occur during a successful flight, such as the deployment of emergency recovery systems and fire protection/post-crash fire. EASA asked if these aspects are addressed by other means and what would be the applicable airworthiness criteria.

*FAA Response:* Equipment not required for normal operation of the UA do not require an evaluation for their specific functionality. D&R testing will show that the inclusion of any such equipment does not prevent normal operation. Therefore, the airworthiness criteria would not require functional testing of the systems described by EASA.

*Comment Summary:* An individual commenter requested the FAA specify the acceptable percentage of failures in the testing that would result in a "loss of flight." The Small UAV Coalition requested the FAA clarify what constitutes an emergency landing outside an operator's landing area, as some UAS designs could include an onboard health system that initiates a landing to lessen the potential of a loss of control event. The commenter suggested that, in those cases, a landing in a safe location should not invalidate the test.

*FAA Response:* The airworthiness criteria require that all test points and flight hours occur with no failures result in a loss of flight, control, containment, or emergency landing outside the operator's recovery zone. The FAA has determined that there is no acceptable percentage of failures in testing. In addition, while the recovery zone may differ for each UAS design, an emergency or unplanned landing outside of a designated landing area would result in a test failure.

*Comment Summary:* The Small UAV Coalition requested that a single failure during testing not automatically restart counting the number of flight test operations set for a particular population density; rather, the applicant

should have the option to identify the failure through root-cause and fault-tree analysis and provide a validated mitigation to ensure it will not recur. An individual commenter requested the FAA to clarify whether the purpose of the tests is to show compliance with a quantitative safety objective. The commenter further requested the FAA allow the applicant to reduce the number of flight testing hours if the applicant can present a predicted safety and reliability analysis.

*FAA Response:* The intent of the testing criteria is for the applicant to demonstrate the aircraft's durability and reliability through a successful accumulation of flight testing hours. The FAA does not intend to require analytical evaluation to be part of this process. However, the applicant will comply with these testing criteria using a means of compliance, accepted by the FAA, through the issue paper process. The means of compliance will be dependent on the CONOPS the applicant has proposed to meet.

#### Probable Failures

The FAA proposed criteria to evaluate how the UAS functions after probable failures, including failures related to propulsion systems, C2 link, GPS, critical flight control components with a single point of failure, control station, and any other equipment identified by the applicant.

*Comment Summary:* Droneport Texas LLC requested the FAA add a bird strike to the list of probable failures. The commenter stated that despite sense and avoid technologies, flocks of birds can overcome the maneuver capabilities of a UA and result in multiple, unintended failures.

*FAA Response:* Unlike manned aircraft, where aircraft size, design, and construct are critical to safe control of the aircraft after encountering a bird strike, the FAA determined testing for bird strike capabilities is not necessary for the Model FTX-M600P UA. The FAA has determined that a bird strike requirement is not necessary because the smaller size and lower operational speed of the FTX-M600P reduce the likelihood of a bird strike, combined with the reduced consequences of failure due to no persons onboard. Instead, the FAA is using a risk-based approach to tailor airworthiness requirements commensurate to the low-risk nature of the Model FTX-M600P UA.

*Comment Summary:* ALPA requested the FAA require that all probable failure tests occur at the critical phase and mode of flight and at the highest aircraft-to-pilot ratio. ALPA stated the

proposed criteria are critically important for systems that rely on a single source to perform multi-label functions, such as GNSS, because failure or interruption of GNSS will lead to loss of positioning, navigation, and timing (PNT) and functions solely dependent on PNT, such as geo-fencing and contingency planning.

*FAA Response:* No change is necessary because D&R.300(c) requires that the testing occur at the critical phase and mode of flight and at the highest UA-to-pilot ratio.

*Comment Summary:* Droneport Texas LLC requested the FAA add recovery from vortex ring state (VRS) to the list of probable failures. The commenter stated the UA uses multiple rotors for lift and is therefore susceptible to VRS. The commenter further stated that because recovery from settling with power is beyond a pilot's average skill for purposes of airworthiness testing, the aircraft must be able to sense and recover from this condition without pilot assistance.

*FAA Response:* D&R.305 addresses probable failures related to specific components of the UAS. VRS is an aerodynamic condition a UA may encounter during flight testing; it is not a component subject to failure.

*Comment Summary:* Droneport Texas LLC also requested the FAA add a response to the Air Traffic Control-Zero (ATC-Zero) command to the list of probable failures. The commenter stated, based on lessons learned after the attacks on September 11, 2001, aircraft that can fly BVLOS should be able to respond to an ATC-Zero condition.

*FAA Response:* The commenter's request is more appropriate for the capabilities and functions testing criteria in D&R.310 than probable failures testing in D&R.305. D&R.310(a)(3) requires the applicant to demonstrate by test that the pilot has the ability to safely discontinue a flight. A pilot may discontinue a flight for a wide variety of reasons, including responding to an ATC-zero command.

*Comment Summary:* EASA stated the proposed language seems to require an additional analysis and safety assessment, which would be appropriate for the objective requirement of ensuring a probable failure does not result in a loss of containment or control. EASA further stated that an applicant's basic understanding of the systems architecture and effects of failures is essential.

*FAA Response:* The FAA agrees with the expectation that applicants understand the system architecture and

effects of failures of a proposed design, which is why the criteria include a requirement for the applicant to test the specific equipment identified in D&R.305 and identify any other equipment that is not specifically identified in D&R.305 for testing. As the intent of the criteria is for the applicant to demonstrate compliance through testing, some analysis may be necessary to properly identify the appropriate equipment to be evaluated for probable failures.

*Comment Summary:* An individual requested that probable failure testing apply not only to critical flight control components with a single point of failure, but also to any critical part with a single point of failure.

*FAA Response:* The purpose of probable failure testing in D&R.305 is to demonstrate that if certain equipment fails, it will fail safely. Adding probable failure testing for critical (now flight essential) parts would not add value to testing. If a part is essential for flight, its failure by definition in D&R.135(a) could result in a loss of flight or unrecoverable loss of control. For example, on a traditional airplane design, failure of a wing spar in flight would lead to loss of the aircraft. Because there is no way to show that a wing spar can fail safely, the applicant must provide its mandatory replacement time if applicable, structural inspection interval, and related structural inspection procedure in the Airworthiness Limitations section of the ICA. Similarly, under these airworthiness criteria, parts whose failure would inherently result in loss of flight or unrecoverable loss of control are not subjected to probable failure testing. Instead, they must be identified as flight essential components and included in the ICA.

To avoid confusion pertaining to probable failure testing, the FAA has removed the word "critical" from D&R.305(a)(5). In the final airworthiness criteria, probable failure testing required by D&R.305(a)(5) applies to "Flight control components with a single point of failure."

#### Capabilities and Functions

The FAA proposed criteria to require the applicant to demonstrate by test the minimum capabilities and functions necessary for the design. UAS.310(a) proposed to require the applicant to demonstrate, by test, the capability of the UAS to regain command and control of the UA after a C2 link loss, the sufficiency of the electrical system to carry all anticipated loads, and the ability of the pilot to override any pre-programming in order to resolve a

potential unsafe operating condition in any phase of flight. UAS.310(b) proposed to require the applicant to demonstrate by test certain features if the applicant requests approval of those features (geo-fencing, external cargo, etc.). UAS.310(c) proposed to require the design of the UAS to safeguard against an unintended discontinuation of flight or release of cargo, whether by human action or malfunction.

*Comment Summary:* ALPA stated the pilot-in-command must always have the capability to input control changes to the UA and override any pre-programming without delay as needed for the safe management of the flight. The commenter requested that the FAA retain the proposed criteria that would allow the pilot to command to: Regain command and control of the UA after loss of the C2 link; safely discontinue the flight; and dynamically re-route the UA. In support, ALPA stated the ability of the pilot to continually command (re-route) the UA, including termination of the flight if necessary, is critical for safe operations and should always be available to the pilot.

Honeywell requested the FAA revise paragraphs (a)(3) and (a)(4) of the criteria (UAS.310) to allow for either the pilot or an augmenting system to safely discontinue the flight and re-route the UA. The commenter stated that a system comprised of detect and avoid, onboard autonomy, and ground system can be used for these functions. Therefore, the criteria should not require that only the pilot can do them.

An individual commenter requested the FAA remove UAS.310(a)(4) of the proposed criteria because requiring the ability for the pilot to dynamically re-route the UA is too prescriptive and redundant with the proposed requirement in UAS.310(a)(3), the ability of the pilot to discontinue the flight safely.

*FAA Response:* Because the pilot in command is directly responsible for the operation of the UA, the pilot must have the capability to command actions necessary for continued safety. This includes commanding a change to the flight path or, when appropriate, safely terminating a flight. The FAA notes that the ability for the pilot to safely discontinue a flight means the pilot has the means to terminate the flight and immediately and safely return the UA to the ground. This is different from the pilot having the means to dynamically re-route the UA, without terminating the flight, to avoid a conflict.

Therefore, the final airworthiness criteria include D&R.310(a) as proposed (UAS.310(a)).

*Comment Summary:* ALPA requested the FAA revise the criteria to require that all equipment, systems, and installations conform, at a minimum, to the standards of § 25.1309.

*FAA Response:* The FAA determined that traditional methodologies for manned aircraft, including the system safety analysis required by § 23.2510, § 25.1309, § 27.1309, or § 29.1309, would be inappropriate to require for the Flytrex Model FTX-M600P due to its smaller size and reduced level of complexity. Instead, the FAA finds that system reliability through testing will ensure the safety of this design.

*Comment Summary:* ALPA requested the FAA revise the criteria to add a requirement to demonstrate the ability of the UA and pilot to perform all of the contingency plans identified in proposed UAS.120.

*FAA Response:* No change is necessary because D&R.120 and D&R.305(a)(2), together, require what ALPA requests in its comment. Under D&R.120, the applicant must design the UA to execute a predetermined action in the event of a loss of the C2 link. D&R.305(a)(2) requires the applicant to demonstrate by test that a lost C2 link will not result in a loss of containment or control of the UA. Thus, if the applicant does not demonstrate the predetermined contingency plan resulting from a loss of the C2 link when conducting D&R.305 testing, the test would be a failure due to loss of containment.

*Comment Summary:* ALPA and an individual commenter requested the FAA revise the criteria so that geo-fencing is a required feature and not optional due to the safety concerns that could result from a UA exiting its operating area.

*FAA Response:* To ensure safe flight, the applicant must test the proposed safety functions, such as geo-fencing, that are part of the type design of the Model FTX-M600P UA. The FAA determined that geo-fencing is an optional feature because it is one way, but not the only way, to ensure a safely contained operation.

*Comment Summary:* ALPA requested the FAA revise the criteria so that capability to detect and avoid other aircraft and obstacles is a required feature and not optional.

*FAA Response:* D&R.310(a)(4) requires the applicant demonstrate the ability for the pilot to safely re-route the UA in flight to avoid a dynamic hazard. The FAA did not prescribe specific design features such as a collision avoidance system to meet D&R.310(a)(4) because there are multiple means to minimize the risk of collision.

*Comment Summary:* McMahan Helicopter Services requested that the airworthiness criteria require a demonstration of sense-and-avoid technology that will automatically steer the UA away from manned aircraft, regardless of whether the manned aircraft has a transponder. NAAA and an individual commenter requested that the FAA require ADS-B in/out and traffic avoidance software on all UAS. The Small UAV Coalition requested the FAA establish standards for collision avoidance technology, as the proposed criteria are not sufficient for compliance with the operational requirement to see and avoid other aircraft (§ 91.113). The commenters stated that these technologies are necessary to avoid a mid-air collision between UA and manned aircraft.

*FAA Response:* D&R.310(a)(4) requires the applicant demonstrate the ability for the UA to be safely re-routed in flight to avoid a dynamic hazard. The FAA did not prescribe specific design features, such as the technologies suggested by the commenters, to meet D&R.310(a)(4) because they are not the only means for complying with the operational requirement to see and avoid other aircraft. If an applicant chooses to equip their UA with onboard collision avoidance technology, those capabilities and functions must be demonstrated by test per D&R.310(b)(5).

#### Verification of Limits

The FAA proposed to require an evaluation of the UA's performance, maneuverability, stability, and control with a factor of safety.

*Comment Summary:* EASA requested that the FAA revise its approach to require a similar compliance demonstration as EASA's for "light UAS." EASA stated the FAA's proposed criteria for verification of limits, combined with the proposed Flight Manual requirements, seem to replace a traditional Subpart Flight.<sup>3</sup> EASA further stated the FAA's approach in the proposed airworthiness criteria might necessitate more guidance and means of compliance than the traditional structure.

*FAA Response:* The FAA's airworthiness criteria will vary from EASA's light UAS certification requirements, resulting in associated differences in compliance demonstrations. At this time, comment on means of compliance and related guidance material, which are still under

<sup>3</sup> In the FAA's aircraft airworthiness standards (parts 23, 25, 27, and 29), subpart B of each is titled Flight.

development with the FAA and with EASA, would be speculative.

### Propulsion

*Comment Summary:* ALPA requested the FAA conduct an analysis to determine battery reliability and safety, taking into account wind and weather conditions and their effect on battery life. ALPA expressed concern with batteries as the only source of power for an aircraft in the NAS. ALPA further requested the FAA not grant exemptions for battery reserve requirements.

*FAA Response:* Because batteries are a flight essential part, the applicant must establish mandatory instructions or life limits for batteries under the requirements of D&R.135. In addition, when the applicant conducts its D&R testing, D&R.300(i) prevents the applicant from exceeding the maintenance intervals or life limits for those batteries. To the extent the commenter's request addresses fuel reserves, that is an operational requirement, not a certification requirement, and therefore beyond the scope of this document.

### Additional Airworthiness Criteria Identified by Commenters

*Comment Summary:* McMahon Helicopter Services requested that the criteria require anti-collision and navigation lighting certified to existing FAA standards for brightness and size. The commenter stated that these standards were based on human factors for nighttime and daytime recognition and are not simply a lighting requirement. An individual commenter requested that the criteria include a requirement for position lighting and anti-collision beacons meeting TSO-30c Level III. NAAA requested the criteria require a strobe light and high visibility paint scheme to aid in visual detection of the UA by other aircraft.

*FAA Response:* The FAA determined it is unnecessary for these airworthiness criteria to prescribe specific design features for anti-collision or navigation lighting. The FAA will address anti-collision lighting as part of any operational approval, similar to the rules in 14 CFR 107.29(a)(2) and (b) for small UAS.

*Comment Summary:* ALPA requested the FAA add a new section with minimum standards for Global Navigation Satellite System (GNSS), as the UAS will likely rely heavily upon GNSS for navigation and to ensure that the UA does not stray outside of its approved airspace. ALPA stated that technological advances have made such devices available at an appropriate size, weight, and power for UAs.

*FAA Response:* The airworthiness criteria in D&R.100 (UA Signal Monitoring and Transmission), D&R.110 (Software), D&R.115 (Cybersecurity), and D&R.305(a)(3) (probable failures related to GPS) sufficiently address design requirements and testing of navigation systems. Even if the applicant uses a TSO-approved GNSS, these airworthiness criteria require a demonstration that the UA operates successfully without loss of containment. Successful completion of these tests demonstrates that the navigation subsystems are acceptable.

*Comment Summary:* ALPA requested the FAA revise the criteria to add a new section requiring equipment to comply with the FAA's new rules on Remote Identification of Unmanned Aircraft (86 FR 4390, Jan. 15, 2021). An individual commenter questioned the need for public tracking and identification of drones in the event of a crash or violation of FAA flight rules.

*FAA Response:* The FAA issued the final rule, Remote Identification of Unmanned Aircraft, after providing an opportunity for public notice and comment. The final rule is codified at 14 CFR part 89. Part 89 contains the remote identification requirements for unmanned aircraft certificated and produced under part 21 after September 16, 2022.

### Pilot Ratio

*Comment Summary:* ALPA questioned the safety of multiple Model FTX-M600P UA operated by a single pilot, up to a ratio of 20 UA to 1 pilot. ALPA stated that even with high levels of automation, the pilot must still manage the safe operation and maintain situational awareness of multiple aircraft in their flight path, aircraft systems, integration with traffic, obstacles, and other hazards during normal, abnormal, and emergency conditions. As a result, ALPA recommended the FAA conduct additional studies to better understand the feasibility of a single pilot operating multiple UA before developing airworthiness criteria. The Small UAV Coalition requested the FAA provide criteria for an aircraft-to-pilot ratio higher than 20:1.

*FAA Response:* These airworthiness criteria are specific to the Model FTX-M600P UA and, as discussed previously in this preamble, operations of the Model FTX-M600P UA may include multiple UA operated by a single pilot, up to a ratio of 20 UA to 1 pilot. Additionally, these airworthiness criteria require the applicant to demonstrate the durability and reliability of the UA design by flight

test, at the highest aircraft-to-pilot ratio, without exceptional piloting skill or alertness. In addition, D&R.305(c) requires the applicant to demonstrate probable failures by test at the highest aircraft-to-pilot ratio. Should the pilot ratio cause a loss of containment or control of the UA, then the applicant will fail this testing.

*Comment Summary:* ALPA stated that to allow a UAS-pilot ratio of up to 20:1 safely, the possibility that the pilot will need to intervene with multiple UA simultaneously must be "extremely remote." ALPA questioned whether this is feasible given the threat of GNSS interference or unanticipated wind gusts exceeding operational limits.

*FAA Response:* The FAA's guidance in AC 23.1309-1E, *System Safety Analysis and Assessment for Part 23 Airplanes* defines "extremely remote failure conditions" as failure conditions not anticipated to occur during the total life of an airplane, but which may occur a few times when considering the total operational life of all airplanes of the same type. When assessing the likelihood of a pilot needing to intervene with multiple UA simultaneously, the minimum reliability requirements will be determined based on the applicant's proposed CONOPS.

### Noise

*Comment Summary:* An individual commenter expressed concern about noise pollution.

*FAA Response:* The Model FTX-M600P will need to comply with FAA noise certification standards. If the FAA determines that 14 CFR part 36 does not contain adequate standards for this design, the agency will propose and seek public comment on a rule of particular applicability for noise requirements under a separate rulemaking docket.

### Operating Altitude

*Comment Summary:* ALPA, McMahon Helicopter Services, and NAAA commented on the operation of UAS at or below 400 feet AGL. ALPA, McMahon Helicopter Services, and NAAA requested the airworthiness criteria contain measures for safe operation at low altitudes so that UAS are not a hazard to manned aircraft, especially operations involving helicopters; air tours; agricultural applications; emergency medical services; air tanker firefighting; power line and pipeline patrol and maintenance; fish and wildlife service; animal control; military and law enforcement; seismic operations; ranching and livestock relocation; and mapping.

*FAA Response:* The type certificate only establishes the approved design of the UA. These airworthiness criteria require the applicant show compliance for the UA altitude sought for type certification. While this may result in operating limitations in the flight manual, the type certificate is not an approval for operations. Operations and operational requirements are beyond the scope of this document.

### Guidance Material

*Comment Summary:* NUAIR requested the FAA complete and publish its draft AC 21.17-XX, *Type Certification Basis for Unmanned Aircraft Systems (UAS)*, to provide additional guidance, including templates, to those who seek a type design approval for UAS. NUAIR also requested the FAA recognize the industry consensus-based standards applicable to UAS, as Transport Canada has by publishing its AC 922-001, *Remotely Piloted Aircraft Systems Safety Assurance*.

*FAA Response:* The FAA will continue to develop policy and guidance for UA type certification and will publish guidance as soon as practicable. The FAA encourages consensus standards bodies to develop means of compliance and submit them to the FAA for acceptance. Regarding Transport Canada AC 922-001, that AC addresses operational approval rather than type certification.

### Safety Management

*Comment Summary:* ALPA requested the FAA ensure that operations, including UA integrity, fall under the safety management system. ALPA further requested the FAA convene a Safety Risk Management Panel before allowing operators to commence operations and that the FAA require operators to have an active safety management system, including a non-punitive safety culture, where incident and continuing airworthiness issues can be reported.

*FAA Response:* The type certificate only establishes the approved design of the UA, including the Flight Manual and ICA. Operations and operational requirements, including safety management and oversight of operations and maintenance, are beyond the scope of this document.

### Process

*Comment Summary:* ALPA supported the FAA's type certification of UAS as a "special class" of aircraft under § 21.17(b) but requested that it be temporary.

*FAA Response:* As the FAA stated in its notice of policy issued August 11, 2020 (85 FR 58251, September 18, 2020), the FAA will use the type certification process under § 21.17(b) for some unmanned aircraft with no occupants onboard. The FAA further stated in its policy that it may also issue type certificates under § 21.17(a) for airplane and rotorcraft UAS designs where the airworthiness standards in part 23, 25, 27, or 29, respectively, are appropriate. The FAA, in the future, may consider establishing appropriate generally applicable airworthiness standards for UA that are not certificated under the existing standards in part 23, 25, 27, or 29.

### Out of Scope Comments

The FAA received and reviewed several comments that were general, stated the commenter's viewpoint or opposition without a suggestion specific to the proposed criteria, or did not make a request the FAA can act on. These comments are beyond the scope of this document.

### Applicability

These airworthiness criteria, established under the provisions of § 21.17(b), are applicable to the Flytrex Model FTX-M600P UA. Should Flytrex wish to apply these airworthiness criteria to other UA models, it must submit a new type certification application.

### Conclusion

This action affects only certain airworthiness criteria for the Flytrex Model FTX-M600P UA. It is not a standard of general applicability.

### Authority Citation

The authority citation for these airworthiness criteria is as follows:

**Authority:** 49 U.S.C. 106(g), 40113, and 44701-44702, 44704.

### Airworthiness Criteria

Pursuant to the authority delegated to me by the Administrator, the following airworthiness criteria are issued as part of the type certification basis for the Flytrex Model FTX-M600P unmanned aircraft. The FAA finds that compliance with these criteria appropriately mitigates the risks associated with the design and concept of operations and provides an equivalent level of safety to existing rules.

### General

#### *D&R.001 Concept of Operations*

The applicant must define and submit to the FAA a concept of operations (CONOPS) proposal describing the

unmanned aircraft system (UAS) operation in the national airspace system for which unmanned aircraft (UA) type certification is requested. The CONOPS proposal must include, at a minimum, a description of the following information in sufficient detail to determine the parameters and extent of testing and operating limitations:

- (a) The intended type of operations;
- (b) UA specifications;
- (c) Meteorological conditions;
- (d) Operators, pilots, and personnel responsibilities;
- (e) Control station, support equipment, and other associated elements (AE) necessary to meet the airworthiness criteria;
- (f) Command, control, and communication functions;
- (g) Operational parameters (such as population density, geographic operating boundaries, airspace classes, launch and recovery area, congestion of proposed operating area, communications with air traffic control, line of sight, and aircraft separation); and
- (h) Collision avoidance equipment, whether onboard the UA or part of the AE, if requested.

#### *D&R.005 Definitions*

For purposes of these airworthiness criteria, the following definitions apply.

(a) *Loss of Control:* Loss of control means an unintended departure of an aircraft from controlled flight. It includes control reversal or an undue loss of longitudinal, lateral, and directional stability and control. It also includes an upset or entry into an unscheduled or uncommanded attitude with high potential for uncontrolled impact with terrain. A loss of control means a spin, loss of control authority, loss of aerodynamic stability, divergent flight characteristics, or similar occurrence, which could generally lead to crash.

(b) *Loss of Flight:* Loss of flight means a UA's inability to complete its flight as planned, up to and through its originally planned landing. It includes scenarios where the UA experiences controlled flight into terrain, obstacles, or any other collision, or a loss of altitude that is severe or non-reversible. Loss of flight also includes deploying a parachute or ballistic recovery system that leads to an unplanned landing outside the operator's designated recovery zone.

### Design and Construction

#### *D&R.100 UA Signal Monitoring and Transmission*

The UA must be designed to monitor and transmit to the AE all information

required for continued safe flight and operation. This information includes, at a minimum, the following:

- (a) Status of all critical parameters for all energy storage systems;
- (b) Status of all critical parameters for all propulsion systems;
- (c) Flight and navigation information as appropriate, such as airspeed, heading, altitude, and location; and
- (d) Communication and navigation signal strength and quality, including contingency information or status.

**D&R.105 UAS AE Required for Safe UA Operations**

(a) The applicant must identify and submit to the FAA all AE and interface conditions of the UAS that affect the airworthiness of the UA or are otherwise necessary for the UA to meet these airworthiness criteria. As part of this requirement—

(1) The applicant may identify either specific AE or minimum specifications for the AE.

(i) If minimum specifications are identified, they must include the critical requirements of the AE, including performance, compatibility, function, reliability, interface, pilot alerting, and environmental requirements.

(ii) Critical requirements are those that if not met would impact the ability to operate the UA safely and efficiently.

(2) The applicant may use an interface control drawing, a requirements document, or other reference, titled so that it is clearly designated as AE interfaces to the UA.

(b) The applicant must show the FAA the AE or minimum specifications identified in paragraph (a) of this section meet the following:

(1) The AE provide the functionality, performance, reliability, and information to assure UA airworthiness in conjunction with the rest of the design;

(2) The AE are compatible with the UA capabilities and interfaces;

(3) The AE must monitor and transmit to the pilot all information required for safe flight and operation, including but not limited to those identified in D&R.100; and

(4) The minimum specifications, if identified, are correct, complete, consistent, and verifiable to assure UA airworthiness.

(c) The FAA will establish the approved AE or minimum specifications as operating limitations and include them in the UA type certificate data sheet and Flight Manual.

(d) The applicant must develop any maintenance instructions necessary to address implications from the AE on the airworthiness of the UA. Those

instructions will be included in the instructions for continued airworthiness (ICA) required by D&R.205.

**D&R.110 Software**

To minimize the existence of software errors, the applicant must:

(a) Verify by test all software that may impact the safe operation of the UA;

(b) Utilize a configuration management system that tracks, controls, and preserves changes made to software throughout the entire life cycle; and

(c) Implement a problem reporting system that captures and records defects and modifications to the software.

**D&R.115 Cybersecurity**

(a) UA equipment, systems, and networks, addressed separately and in relation to other systems, must be protected from intentional unauthorized electronic interactions that may result in an adverse effect on the security or airworthiness of the UA. Protection must be ensured by showing that the security risks have been identified, assessed, and mitigated as necessary.

(b) When required by paragraph (a) of this section, procedures and instructions to ensure security protections are maintained must be included in the ICA.

**D&R.120 Contingency Planning**

(a) The UA must be designed so that, in the event of a loss of the command and control (C2) link, the UA will automatically and immediately execute a safe predetermined flight, loiter, landing, or termination.

(b) The applicant must establish the predetermined action in the event of a loss of the C2 link and include it in the UA Flight Manual.

(c) The UA Flight Manual must include the minimum performance requirements for the C2 data link defining when the C2 link is degraded to a level where remote active control of the UA is no longer ensured. Takeoff when the C2 link is degraded below the minimum link performance requirements must be prevented by design or prohibited by an operating limitation in the UA Flight Manual.

**D&R.125 Lightning**

(a) Except as provided in paragraph (b) of this section, the UA must have design characteristics that will protect the UA from loss of flight or loss of control due to lightning.

(b) If the UA has not been shown to protect against lightning, the UA Flight Manual must include an operating limitation to prohibit flight into weather conditions conducive to lightning activity.

**D&R.130 Adverse Weather Conditions**

(a) For purposes of this section, “adverse weather conditions” means rain, snow, and icing.

(b) Except as provided in paragraph (c) of this section, the UA must have design characteristics that will allow the UA to operate within the adverse weather conditions specified in the CONOPS without loss of flight or loss of control.

(c) For adverse weather conditions for which the UA is not approved to operate, the applicant must develop operating limitations to prohibit flight into known adverse weather conditions and either:

(1) Develop operating limitations to prevent inadvertent flight into adverse weather conditions; or

(2) Provide a means to detect any adverse weather conditions for which the UA is not certificated to operate and show the UA’s ability to avoid or exit those conditions.

**D&R.135 Flight Essential Parts**

(a) A flight essential part is a part, the failure of which could result in a loss of flight or unrecoverable loss of UA control.

(b) If the type design includes flight essential parts, the applicant must establish a flight essential parts list. The applicant must develop and define mandatory maintenance instructions or life limits, or a combination of both, to prevent failures of flight essential parts. Each of these mandatory actions must be included in the Airworthiness Limitations Section of the ICA.

**Operating Limitations and Information**

**D&R.200 Flight Manual**

The applicant must provide a Flight Manual with each UA.

(a) The UA Flight Manual must contain the following information:

- (1) UA operating limitations;
- (2) UA operating procedures;
- (3) Performance information;
- (4) Loading information; and
- (5) Other information that is necessary for safe operation because of design, operating, or handling characteristics.

(b) Those portions of the UA Flight Manual containing the information specified in paragraph (a)(1) of this section must be approved by the FAA.

**D&R.205 Instructions for Continued Airworthiness**

The applicant must prepare ICA for the UA in accordance with Appendix A to Part 23, as appropriate, that are acceptable to the FAA. The ICA may be incomplete at type certification if a program exists to ensure their

completion prior to delivery of the first UA or issuance of a standard airworthiness certificate, whichever occurs later.

### Testing

#### *D&R.300 Durability and Reliability*

The UA must be designed to be durable and reliable when operated under the limitations prescribed for its operating environment, as documented in its CONOPS and included as operating limitations on the type certificate data sheet and in the UA Flight Manual. The durability and reliability must be demonstrated by flight test in accordance with the requirements of this section and completed with no failures that result in a loss of flight, loss of control, loss of containment, or emergency landing outside the operator's recovery area.

(a) Once a UA has begun testing to show compliance with this section, all flights for that UA must be included in the flight test report.

(b) Tests must include an evaluation of the entire flight envelope across all phases of operation and must address, at a minimum, the following:

- (1) Flight distances;
- (2) Flight durations;
- (3) Route complexity;
- (4) Weight;
- (5) Center of gravity;
- (6) Density altitude;
- (7) Outside air temperature;
- (8) Airspeed;
- (9) Wind;
- (10) Weather;
- (11) Operation at night, if requested;
- (12) Energy storage system capacity;

and

- (13) Aircraft to pilot ratio.

(c) Tests must include the most adverse combinations of the conditions and configurations in paragraph (b) of this section.

(d) Tests must show a distribution of the different flight profiles and routes representative of the type of operations identified in the CONOPS.

(e) Tests must be conducted in conditions consistent with the expected environmental conditions identified in the CONOPS, including electromagnetic interference (EMI) and high intensity radiated fields (HIRF).

(f) Tests must not require exceptional piloting skill or alertness.

(g) Any UAS used for testing must be subject to the same worst-case ground handling, shipping, and transportation loads as those allowed in service.

(h) Any UA used for testing must use AE that meet, but do not exceed, the minimum specifications identified under D&R.105. If multiple AE are

identified, the applicant must demonstrate each configuration.

(i) Any UAS used for testing must be maintained and operated in accordance with the ICA and UA Flight Manual. No maintenance beyond the intervals established in the ICA will be allowed to show compliance with this section.

(j) If cargo operations or external-load operations are requested, tests must show, throughout the flight envelope and with the cargo or external-load at the most critical combinations of weight and center of gravity, that—

- (1) The UA is safely controllable and maneuverable; and
- (2) The cargo or external-load are retainable and transportable.

#### *D&R.305 Probable Failures*

The UA must be designed such that a probable failure will not result in a loss of containment or control of the UA. This must be demonstrated by test.

(a) Probable failures related to the following equipment, at a minimum, must be addressed:

- (1) Propulsion systems;
- (2) C2 link;
- (3) Global Positioning System (GPS);
- (4) Flight control components with a single point of failure;
- (5) Control station; and
- (6) Any other AE identified by the applicant.

(b) Any UA used for testing must be operated in accordance with the UA Flight Manual.

(c) Each test must occur at the critical phase and mode of flight, and at the highest aircraft-to-pilot ratio.

#### *D&R.310 Capabilities and Functions*

(a) All of the following required UAS capabilities and functions must be demonstrated by test:

- (1) Capability to regain command and control of the UA after the C2 link has been lost.
- (2) Capability of the electrical system to power all UA systems and payloads.
- (3) Ability for the pilot to safely discontinue the flight.
- (4) Ability for the pilot to dynamically re-route the UA.

(5) Ability to safely abort a takeoff.

(6) Ability to safely abort a landing and initiate a go-around.

(b) The following UAS capabilities and functions, if requested for approval, must be demonstrated by test:

- (1) Continued flight after degradation of the propulsion system.
- (2) Geo-fencing that contains the UA within a designated area, in all operating conditions.

(3) Positive transfer of the UA between control stations that ensures only one control station can control the UA at a time.

(4) Capability to release an external cargo load to prevent loss of control of the UA.

(5) Capability to detect and avoid other aircraft and obstacles.

(c) The UA must be designed to safeguard against inadvertent discontinuation of the flight and inadvertent release of cargo or external load.

#### *D&R.315 Fatigue*

The structure of the UA must be shown to withstand the repeated loads expected during its service life without failure. A life limit for the airframe must be established, demonstrated by test, and included in the ICA.

#### *D&R.320 Verification of Limits*

The performance, maneuverability, stability, and control of the UA within the flight envelope described in the UA Flight Manual must be demonstrated at a minimum of 5% over maximum gross weight with no loss of control or loss of flight.

Issued in Washington, DC, on March 22, 2022.

## DEPARTMENT OF HOMELAND SECURITY

### Coast Guard

#### 33 CFR Part 100

[Docket No. USCG-2022-0183]

### Special Local Regulations; Seventh Coast Guard District, Blessing of the Fleet—St. Augustine

**AGENCY:** Coast Guard, Department of Homeland Security (DHS).

**ACTION:** Notification of enforcement of regulation.

**SUMMARY:** The Coast Guard will enforce special local regulations for the Blessing of the Fleet—St. Augustine on April 10, 2022, to provide for the safety of life on navigable waterways during this event. Our regulation for marine events within the Seventh Coast Guard District identifies the regulated area for this event in St. Augustine, FL. During the enforcement periods, the operator of any vessel in the regulated area must comply with directions from the Patrol Commander or any Official Patrol displaying a Coast Guard ensign.

**DATES:** The regulations in 33 CFR 100.701, Table 1 to § 100.701, section (c), Item 8, will be enforced from 12:00 p.m. until 3:00 p.m., on April 10, 2022.

**FOR FURTHER INFORMATION CONTACT:** If you have questions about this notification of enforcement, call or email MST2 Shawn Keeman, Sector Jacksonville, Waterways Management Division, U.S. Coast Guard; telephone 904-714-7661, email [Shawn.R.Keeman@uscg.mil](mailto:Shawn.R.Keeman@uscg.mil).

**SUPPLEMENTARY INFORMATION:** The Coast Guard will enforce special local regulations in 33 CFR 100.701, Table 1 to § 100.701, section (c), Item 8, for the Blessing of the Fleet—St. Augustine regulated from 12:00 a.m. until 3:00 p.m., on April 10, 2022. This action is being taken to provide for the safety of life on navigable waterways during the event. Our regulation for recurring marine events within the Seventh Coast Guard District, § 100.701, Table 1 to § 100.701, section (c), Item 8, specifies the location of the regulated area for the Blessing of the Fleet—St. Augustine which encompasses portions of the Matanzas River at the St. Augustine Municipal Marina. During the enforcement periods, as reflected in in § 100.701, if you are the operator of a vessel in the regulated area you must comply with directions from the Patrol Commander or any Official Patrol displaying a Coast Guard ensign.

In addition to this notification of enforcement in the **Federal Register**, the Coast Guard plans to provide notification of this enforcement period via the Local Notice to Mariners, marine information broadcasts, local radio stations and area newspapers.

Dated: March 22, 2022.

**M.R. Vlaun,**

## DEPARTMENT OF HOMELAND SECURITY

### Coast Guard

#### 33 CFR Part 100

[Docket No. USCG-2022-0162]

#### Special Local Regulations; Seventh Coast Guard District, Mug Race

**AGENCY:** Coast Guard, Department of Homeland Security (DHS).

**ACTION:** Notification of enforcement of regulation.

**SUMMARY:** The Coast Guard will enforce the special local regulations for the Mug Race on May 7, 2022, to provide for the safety of life on navigable waterways during this event. Our regulation for marine events within the Seventh Coast Guard District identifies the regulated area for this event on the St Johns River from Palatka, FL, to Jacksonville, FL. During the enforcement periods, the operator of any vessel in the regulated area must comply with directions from the Patrol Commander or any Official Patrol displaying a Coast Guard ensign.

**DATES:** The regulations in 33 CFR 100.701, Table 1 to § 100.701, section (c), Item 14, will be enforced from 7:00 a.m. until 9:00 p.m. on May 7, 2022.

**FOR FURTHER INFORMATION CONTACT:** If you have questions about this notification of enforcement, call or email MST2 Shawn Keeman, Sector Jacksonville, Waterways Management Division, U.S. Coast Guard; telephone 904-714-7661, email [Shawn.R.Keeman@uscg.mil](mailto:Shawn.R.Keeman@uscg.mil).

**SUPPLEMENTARY INFORMATION:** The Coast Guard will enforce special local regulations in 33 CFR 100.701, Table 1 to § 100.701, section (c), Item 14, for the 68th Mug Race regulated from 7:00 a.m. until 9:00 p.m., on May 7, 2022. This action is being taken to provide for the safety of life on navigable waterways during the event. Our regulation for recurring marine events within the Seventh Coast Guard District, § 100.701, Table 1 to § 100.701, section (c), Item 14, specifies the location of the regulated area for the Mug Race which encompasses portions of the St Johns River from Palatka, FL, at the U.S. 17 Bridge, to Jacksonville, FL, near the I-295 Bridge. During the enforcement periods, as reflected in in § 100.701, if you are the operator of a vessel in the regulated area you must comply with directions from the Patrol Commander or any Official Patrol displaying a Coast Guard ensign.

In addition to this notification of enforcement in the **Federal Register**, the Coast Guard plans to provide notification of this enforcement period via the Local Notice to Mariners and/or marine information broadcasts.

Dated: March 11, 2022.

## FEDERAL COMMUNICATIONS COMMISSION

### 47 CFR Parts 64 and 76

[GN Docket No. 17-142; FCC 22-12; FR ID 76238]

#### Improving Competitive Broadband Access to Multiple Tenant Environments

**AGENCY:** Federal Communications Commission.

**ACTION:** Final rule.

**SUMMARY:** In this document, the Federal Communications Commission (Commission or FCC) adopts final rules to improve competition for communications services in multi-tenant environments. The rules prohibit telecommunications carriers and covered multichannel video programming distributors (MVPDs) from entering into certain revenue sharing agreements with a building owner that keep competitive providers out of buildings. The rules also require providers to inform tenants about the existence of exclusive marketing arrangements in simple, easy-to-understand language that is readily accessible. The Commission adopted the Report and Order in conjunction with a Declaratory Ruling in GN Docket No. 17-142 in which the Commission clarifies that existing Commission rules regarding cable inside wiring prohibit so-called sale-and-leaseback arrangements that block competitive access to alternative providers.

**DATES:**

*Effective date:* This rule is effective April 27, 2022.

*Compliance dates:* See paragraph 77 of the **SUPPLEMENTARY INFORMATION** for information on the compliance dates for 47 CFR 64.2500(c), (d), and (e) and 76.2000(b), (c), and (d).

**FOR FURTHER INFORMATION CONTACT:** For further information, please contact Benjamin (Jesse) Goodwin, Competition Policy Division, Wireline Competition Bureau, at (202) 418-0958 or [Benjamin.Goodwin@fcc.gov](mailto:Benjamin.Goodwin@fcc.gov). For additional information concerning the Paperwork Reduction Act proposed information collection requirements contained in this document, send an email to [PRA@fcc.gov](mailto:PRA@fcc.gov) or contact Nicole Ongele at (202) 418-2991.

**SUPPLEMENTARY INFORMATION:** This is a summary of the Commission's Report and Order in GN Docket No 17-142, FCC 22-12, adopted on February 11, 2022, and released on February 15, 2022. The full text of this document is available for public inspection at the

following internet address: <https://docs.fcc.gov/public/attachments/FCC-22-12A1.pdf>. To request materials in accessible formats for people with disabilities (e.g., braille, large print, electronic files, audio format, etc.) or to request reasonable accommodations (e.g., accessible format documents, sign language interpreters, CART, etc.), send an email to [fcc504@fcc.gov](mailto:fcc504@fcc.gov) or call the Consumer & Governmental Affairs Bureau at (202) 418-0530 (voice) or (202) 418-0432 (TTY).

This document contains new or modified information collection requirements subject to the Paperwork Reduction Act of 1995 (PRA), Public Law 104-13. It will be submitted to the Office of Management and Budget (OMB) for review under section 3507(d) of the PRA. OMB, the general public, and other Federal agencies will invite to comment on the new or modified information collection requirements contained in this proceeding. Comments should address: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's burden estimates; (c) ways to enhance the quality, utility, and clarity of the information collected; (d) ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and (e) way to further reduce the information collection burden on small business concerns with fewer than 25 employees. In addition, pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107-198, *see* 44 U.S.C. 3506(c)(4), we seek specific comment on how we might further reduce the information collection burden for small business concerns with fewer than 25 employees.

## Synopsis

### I. Introduction

1. Millions of people work and live in multiple tenant environments (MTEs), with a third of Americans residing in apartments, condominiums, or other multiunit buildings. And MTEs disproportionately serve residents in lower-income and marginalized communities. Access to high-quality, affordable communications service—including broadband internet access service—has become essential to all Americans, including those living and working in MTEs. The COVID-19 pandemic has brought into sharp focus the critical importance of these

communications services as never before. Increasingly we rely on telework, remote learning, telehealth and other online applications to meet our personal and professional needs—all of which require access to broadband internet access service or other high-quality, affordable communications services. Despite the importance of these services, the millions of people across the nation living and working in MTEs face obstacles to obtaining the benefits of competitive choice of fixed broadband, voice, and video services. By MTEs, we specifically mean “commercial or residential premises such as apartment buildings, condominium buildings, shopping malls, or cooperatives that are occupied by multiple entities.” The term MTE, as we use it here, encompasses everything within the scope of two other terms the Commission has used in the past—multiple dwelling unit and multiunit premises. When referring to residential MTEs, past Commission rules and actions have sometimes used the term multiple dwelling unit, or MDU. In this document, we use the term “residential MTE” coterminously with “MDU.”

2. To ensure competitive choice of communications services for those living and working in MTEs, and to address practices that undermine longstanding rules promoting competition in MTEs, we take three specific actions. First, we adopt new rules prohibiting providers from entering into certain types of revenue sharing agreements that are used to evade our existing rules. Second, we adopt new rules requiring providers to disclose the existence of exclusive marketing arrangements in simple, easy-to-understand language. Third, we clarify that existing Commission rules regarding cable inside wiring prohibit so-called “sale-and-leaseback” arrangements which effectively deny access to alternative providers. In taking these actions in this document, we promote tenant choice and competition in the provision of communications services to the benefit of those who live and work in MTEs.

### II. Background

3. Over the last 30 years, recognizing the need to promote competition in emerging technologies, Congress and the Commission have demonstrated a strong commitment to promoting access to telecommunications, cable, and broadband services in MTEs. In 1992, Congress passed the Cable Television Consumer Protection and Competition Act (1992 Cable Act) to, among other things, promote competition in cable communications. And in the

Telecommunications Act of 1996 (the Act), Congress directed the Commission to promote competition between telecommunications carriers, as well as prohibit certain unfair practices by covered multichannel video programming distributors (MVPDs). Following this congressional direction, and acknowledging the millions of Americans that live and work in MTEs, the Commission adopted rules prohibiting telecommunications carriers and covered MVPDs from entering into certain exclusionary agreements in MTEs and governing the disposition of cable inside wiring in residential MTEs.

4. *Prohibitions on Exclusive Access Agreements.* The Commission has long prohibited agreements between providers of certain communications services and MTE owners that grant the provider exclusive access and rights to provide service to the MTE. In two orders adopted in 2000 and 2008, respectively, the Commission prohibited telecommunications carriers from entering into or enforcing exclusivity contracts with MTE owners in both commercial and residential MTEs. And in 2007, the Commission prohibited certain MVPDs from entering into or enforcing exclusivity contracts with residential MTE owners. The Commission concluded that exclusive access contracts harm competition and “discourage the deployment of broadband facilities to American consumers” by impeding entry of competitive providers. And it highlighted that “[b]y far the greatest harm that exclusivity clauses cause residents of [residential MTEs] is that they deny those residents another choice of MVPD service and thus deny them the benefits of increased competition.” Noting the “inextricabl[e] link” between “broadband deployment and entry into the MVPD business,” the Commission determined that deployment of the former would be hampered by impediments to the latter. While the Commission has prohibited exclusivity contracts that explicitly prohibit entrance by competitors, in 2010 it declined to prohibit MVPDs from entering into exclusive marketing arrangements because it could not “conclude, based on the record, that they hinder significantly or prevent other MVPDs from providing service to [residential MTE] residents.”

5. *Cable Inside Wiring.* Separately, pursuant to specific congressional direction, in 1993 the Commission promulgated inside wiring rules to facilitate competitive access to unused cable wiring, including in residential MTEs. In a series of Orders in the decade to follow, the Commission

refined and expanded on those rules. These cable inside wiring rules govern the disposition of cable wiring owned by an MVPD after a subscriber (including one living in a residential MTE), or a residential MTE owner, terminates service. They apply to both cable home wiring, which is the wiring inside an MTE resident's unit, and home run wiring, which is the dedicated wiring that runs from a common space (such as a telecommunications closet) to an MTE resident's unit. Generally speaking, the rules require MVPDs, after termination of service, to either remove the wiring; abandon and not disable the wiring; or sell it to another party such as the subscriber, residential MTE owner, or an alternative provider. The Commission's stated objective with these rules is to "foster opportunities for [MVPDs] to provide service in" residential MTEs by governing the disposition of wiring after the MTE owner or tenant terminates service. The rules are designed to promote competitive choice by "enabl[ing] subscribers to subscribe to services offered by an alternative MVPD without incurring additional installation costs or experiencing disruption in programming."

6. *Recent Developments.* In 2017, the Commission released a Notice of Inquiry (NOI) with the goal of "promoting competition and easing deployment of broadband services within MTEs." The *2017 MTE NOI* sought comment on the state of broadband competition within MTEs, ways to facilitate greater consumer choice and enhance broadband deployment in MTEs, and a variety of specific practices that may impede competition in MTEs. Among those specific practices, it sought comment on (1) revenue sharing agreements, whereby a provider compensates an MTE owner with a portion of the provider's revenue generated from the building's subscribers; (2) exclusive wiring arrangements, in which an MTE owner agrees to make wiring within its control available to a provider on an exclusive basis, and related sale-and-leaseback arrangements, in which a provider sells wiring it owns to an MTE owner and then leases that wiring back on an exclusive basis; and (3) exclusive marketing arrangements, including whether to revisit the 2010 decision not to take action regarding MVPD exclusive marketing arrangements (75 FR 12458, March 16, 2010).

7. In 2019, the Commission released a notice of proposed rulemaking that again sought comment about these practices and others that could have the

effect of dampening competition or deployment (*2019 Improving Competitive Broadband Access to Multiple Tenant Environments Notice of Proposed Rulemaking (2019 MTE NPRM)* (84 FR 37219, July 31, 2019)). The Commission raised various proposals, including whether providers should be required to disclose the existence of contractual provisions like revenue sharing agreements or exclusive marketing arrangements. It additionally sought comment on the Commission's authority to target different kinds of entities, including telecommunications providers, MVPDs, and broadband-only providers.

8. On July 9, 2021, President Biden released an Executive order encouraging the Commission to examine issues previously raised in this proceeding. In September 2021, the Wireline Competition Bureau issued a Public Notice seeking to refresh the record on the issues raised in the *2019 MTE NPRM* and on developments that may have occurred in the intervening two years. The *2021 MTE NPRM* (86 FR 52120, September 20, 2021) specifically sought comment on revenue sharing agreements; exclusive wiring arrangements, including sale-and-leaseback arrangements; and exclusive marketing arrangements.

### III. Report and Order

9. In light of the evidence in the record, we take steps to promote competitive choice in MTEs and target three specific practices that frustrate competition, impede deployment by competitive providers, and reduce choice for Americans living and working in MTEs. In this document, we adopt new rules prohibiting practices which undermine the Commission's longstanding prohibition on exclusive access contracts. We prohibit telecommunications carriers and MVPDs from entering into exclusive and graduated revenue sharing agreements. And we require that telecommunications carriers and MVPDs include disclaimers on marketing materials distributed to MTE tenants that inform tenants of the existence of an exclusive marketing arrangement. Through these actions, we halt practices that serve as an end run around our rules intended to foster competition, and we promote all the benefits that competition entails by addressing practices which limit consumer choice. While we take these specific steps in this document, we do not address other issues raised in this record, including but not limited to exclusive wiring arrangements, bulk billing, and rooftop antenna and

Distributed Antenna Systems (DAS) facilities access.

#### A. Need for Action

10. We act in this document to promote consumer choice and address practices that undermine our pro-competitive rules against exclusive access contracts. Twenty years ago, the Commission first prohibited exclusive access contracts between telecommunications carriers and commercial MTE owners. In the eight years to follow, it expanded that prohibition to cover different types of providers and MTE owners. It took these steps to promote competition and broadband deployment, consistent with Congress's policies and goals. The Commission last explored MTE exclusivity in 2010 when it declined to prohibit two practices by MVPDs in residential MTEs—bulk billing and exclusive marketing arrangements—on the basis that the record before it did not demonstrate that these practices "hinder significantly or prevent other MVPDs from providing service to [residential MTE] residents." The Commission stated at the time that it "may review marketplace conditions again, however, if future events show that any of these practices is having new and significant anti-competitive effects."

11. The record before us demonstrates that new practices have emerged that negatively impact competition, contrary to the goals of our rules against exclusive access contracts. The practices we address in this document—exclusive and graduated revenue sharing and exclusive marketing arrangements—reduce the opportunities for competitive providers to offer service to MTE tenants. Many commenters, including small competitive providers, advocacy groups, and MTE residents, document challenges in providing and obtaining services due to the obstacles these practices, alone or in combination with others, pose for access. Despite our prohibition on exclusive access agreements, the use of some of these practices has had the same practical effect of barring competitive entry to MTEs. Further, as many commenters state, the COVID-19 pandemic has underscored the critical role that broadband plays in MTE tenants' lives. As other commenters highlight, the practices identified in the *2021 MTE NPRM* may limit an MTE resident's ability to enroll in the Emergency Broadband Benefit Program with the participating provider of their choice. And the United States Small Business Administration Office of Advocacy identified the importance of

competition in MTEs to small businesses in America.

12. We disagree with those commenters who claim that the market for broadband service in MTEs make actions like those we take in this document unnecessary. The Real Estate Associations highlight internal survey data that they say demonstrates that competition is strong; claim these numbers compare favorably to the Commission's own data regarding Americans' access to broadband generally, including in single-family homes; and argue that action to promote competition in MTEs is consequently unnecessary. We disagree that these statistics, which other commenters rely on, are reason to delay action. First, the experiences of numerous commenters strongly indicate otherwise. Second, the survey information provided by the Real Estate Associations is largely conclusory and provided without the underlying data that would enable the Commission to assess its reliability or general applicability—for example, whether all or just some units in a building have access to the alternative providers present. Third, even taken at face value, the figures provided by the Real Estate Associations comparing broadband deployment in MTEs to that in other forms of housing do not compare favorably given that one would expect broadband deployment to be significantly higher in MTEs due to their density. The record reflects that exclusivity practices in an MTE can have ripple effects in the community around it, including for non-MTEs, as providers demonstrate hesitancy to make capital investments in markets where they may be denied entry to MTEs. Our actions in this document will promote competition and deployment in urban areas generally, as they reduce barriers to new entrants. Finally, we reject the Real Estate Associations' assertion that unless competition in MTEs is *worse* than it is elsewhere in the U.S., the Commission cannot act. We take these steps in this document to target anti-competitive practices in MTEs pursuant to the Commission's longstanding goal of promoting competition in these buildings.

#### B. Scope of Rules

13. The rules we adopt in this document address practices that have emerged that undermine the goals of our rules prohibiting exclusive access contracts. We thus apply these obligations only to those entities and in those contexts where our exclusive access contract prohibitions already apply. To that end, our rules addressing

certain types of revenue sharing agreements and exclusive marketing arrangements apply to communications services provided by (1) telecommunications carriers in both commercial and residential MTEs, and (2) MVPDs subject to section 628(b) in residential MTEs. (MVPDs covered by section 628(b) include a “cable operator, a satellite cable programming vendor in which a cable operator has an attributable interest, or a satellite broadcast programming vendor.”)

14. We decline to alter the scope of these rules at this time. Commenters argue we should subject broadband-only providers to our rules governing MTE access, citing the potential benefits of doing so and the potential harms that could result from regulatory asymmetry if we did not. Relatedly, some commenters argue we should consider differences between residential and commercial MTEs in assessing the types of practices we address in this document. However, our actions in this document reflect an incremental approach to the problems identified. In tackling these issues in our *2007 Exclusive Service Contracts* and *2008 Competitive Networks Orders* (73 FR 1080, January 7, 2008; 73 FR 28049, May 15, 2008), we did not extend our decisions to broadband-only providers, and we applied rules differently to commercial and residential MTEs. This action builds on those previous determinations and so we adopt the approach taken in those prior orders. We proceed incrementally, and will continue to monitor competition in MTEs to determine whether we should alter the scope of our rules to cover other providers or differently distinguish between commercial and residential MTEs in response to any new information that comes to light. Even though we decline to alter the scope of our rules at this time to the full extent some commenters advocate, we believe that our actions in this document will reap substantial benefits for consumers by promoting choice in MTEs.

15. To that end, we limit our rules regarding certain revenue sharing agreements and exclusive marketing arrangements to telecommunications carriers and covered MVPDs, and the specific MTE contexts described. References to “providers,” “MTEs,” and “MTE owners” in this document should be read to apply only to these entities and in these contexts. We further underscore that, when we refer to revenue sharing agreements and exclusive marketing arrangements, we do not refer only to standalone contracts but also clauses in contracts that

include other terms. Where a revenue sharing agreement or exclusive marketing arrangement is part of a larger contract, the remainder of that contract is unaffected by these rules.

#### C. Prohibition of Certain Revenue Sharing Agreements

16. To promote broadband competition and deployment in MTEs, we adopt rules prohibiting providers from entering into or enforcing two types of revenue sharing agreements with MTE owners that are particularly harmful and which amount to de facto exclusive access agreements. First, we prohibit providers from entering into exclusive revenue sharing agreements with an MTE owner. Second, we prohibit providers from entering into graduated revenue sharing agreements with an MTE owner. In the *2019 MTE NPRM*, the Commission sought comment on whether it should restrict provider use of revenue sharing agreements. Upon review of the record, we now take this incremental step and adopt targeted rules addressing two specific types of agreements that we find by their structure and effect to be anti-competitive.

17. In the *2019 MTE NPRM*, the Commission defined a revenue sharing agreement as an agreement whereby “the building owner receives consideration from the communications provider in return for giving the provider access to the building and its tenants.” The Commission further explained that this “consideration can take many forms, ranging from a *pro rata* share of the revenue generated from tenants' subscription service fees, to a one-time payment calculated on a per-unit basis (sometimes called a door fee), to provider contributions to building infrastructure, such as WiFi service for common areas.” The Commission acknowledged explanations from MTE owners that they enter into these agreements because they “enable MTE owners to use the consideration they receive from communications providers to offset infrastructure costs associated with providing broadband service to tenants.” And it similarly acknowledged concerns from competitive providers and others that they “reduce incentives for [MTE] owners to grant access to competitive providers when any subscriber gained by such a provider means reduced income to the building owner.”

18. In light of the record developed since the Commission first sought comment on revenue sharing agreements in 2017, we prohibit providers from entering into or enforcing two particularly problematic

types of revenue sharing agreements—exclusive and graduated—that undermine tenant choice and competition in MTEs and are at odds with our long-existing bans on exclusive access. We will continue to monitor the impact of revenue sharing agreements on competition in MTEs, including those not specifically covered by the prohibitions we adopt in this document. We disagree with commenters that argue we should not act because the payments at issue are not significant enough to drive MTE owner behavior, and because revenue sharing is passed through from MTE owners to their tenants. The record contains substantial evidence of the anti-competitive effects of these agreements on prospective competitors and tenant choice. Regardless of the motivation of MTE owners, the practices we address concern provider agreements with third parties that limit their competitors' ability to provide service. Further, no commenter effectively supports the argument that prohibitions of these two types of revenue sharing agreements undermine an MTE owner's incentive for deploying communications infrastructure, especially in light of the importance of communications service to attracting tenants. And as we explain below, no commenter effectively rebuts the argument that these two types of revenue sharing agreements impede the ability of competitive providers to provide service in the MTEs where present, and thus impede those tenants' choice of providers.

19. We adopt this approach over alternatives suggested in the record. We find this targeted prohibition is preferable to a disclosure requirement, in light of commenters who argue that simply informing tenants or competitors about anti-competitive revenue sharing agreements may not address their anti-competitive effects. And we decline to style this rule as a rebuttable presumption and allow a provider to show an agreement is related to MTE owner costs and therefore permitted; our decision in this document turns on the anti-competitive nature of the types of agreements identified.

#### 1. Exclusive Revenue Sharing Agreements

20. We prohibit a provider from entering into or enforcing an exclusive revenue sharing agreement with an MTE owner. In an exclusive revenue sharing agreement, the communications provider offers the MTE owner consideration in return for the provider obtaining access to the building and its tenants, and prohibits the MTE owner from accepting similar consideration

from any other provider. Thus, an exclusive revenue sharing agreement allows a communications provider to prevent other providers from sharing payments with the MTE owner.

21. We find that exclusive revenue sharing agreements are anti-competitive and amount to de facto exclusive access agreements. We agree with Starry that “exclusive revenue shar[ing] serves no legitimate purpose other than to inhibit new entry in an MTE . . . .” Similar to the graduated revenue sharing agreements discussed below, the structure of an exclusive revenue sharing agreement financially disincentivizes the MTE owner from allowing competing providers access to the building and its tenants. When an exclusive revenue sharing agreement is in place, a new provider is unable to provide compensation to the MTE owner akin to that offered by the incumbent. Because each subscriber that switches from the incumbent to a competitive provider decreases the compensation the MTE owner receives, the owner has an incentive to block alternative providers' access to the building. As INCOMPAS explains, these agreements effectively “eliminate consumer choice while simultaneously benefiting the property owner and their preferred provider.” No commenter expresses support for these agreements. Accordingly, we prohibit providers from entering into or enforcing exclusive revenue sharing agreements.

22. We find that the competitive benefits of our prohibition on exclusive revenue sharing agreements, in the form of increased subscriber choice and more competitive pricing and service, substantially outweigh the minimal compliance costs associated with this rule.

#### 2. Graduated Revenue Sharing Agreements

23. We also prohibit providers from entering into or enforcing graduated revenue sharing agreements with MTE owners. In a graduated revenue sharing agreement, sometimes known as “tiered” or “success-based” agreements, a provider pays an MTE owner a greater percentage of revenue as its penetration in the building increases. Under such an agreement, as a provider serves more tenants in an MTE, the MTE owner receives a greater level of compensation for each tenant. (In one example, a provider offered a five percent revenue share when it served 51–55 percent of the building with video service; a seven percent revenue share when it served 56–60 percent; an eight percent revenue share when it served 61–65 percent; a nine percent revenue share when it

served 66–71 percent of the building, and a ten percent revenue share when it served greater than 72 percent of the building.) Therefore, the more tenants in an MTE that a provider furnishes service to, the more compensation the MTE owner receives on a *pro rata* basis.

24. We find that graduated revenue sharing agreements are anti-competitive and amount to de facto exclusive access agreements. We agree with INCOMPAS that, because graduated revenue sharing agreements “discourage competitive entry to MTEs and . . . circumvent the prohibition on exclusive access agreements,” we should “ban graduated revenue sharing agreements.” As the Small Business Administration Office of Advocacy explains, these types of agreements “provide an MTE owner with an incentive to exclude competitors so that they can achieve maximum returns under the agreement.” (Although Commission rules prohibit providers from entering into exclusive access agreements, even where a building owner and provider do not have an exclusive access agreement, a competitor will be unable to serve the building if the MTE owner unilaterally elects to exclude other providers in order to profit from a graduated revenue sharing arrangement.) We agree with Starry that this type of structure is “specifically designed to (1) incentivize the building to help the incumbent provider maximize the number of subscribers in the building; and (2) act as an economic penalty if the building allows in a new entrant.” The record convinces us they do “not serve any other legitimate purpose—the revenue share increase is not associated with any increased cost for the provider or the building.” Accordingly, we prohibit providers from entering into or enforcing graduated revenue sharing agreements.

25. We disagree with the few commenters who express support for graduated revenue sharing agreements. Honest Networks claims that they are a “powerful inducement for MTE owners to work with [competitive providers],” because the agreements enable providers to “demonstrate value for MTE owners.” But Honest Networks does not address the argument that these agreements discourage competitive entry once at least one provider is in the building. Like those who argue that revenue sharing agreements generally can ensure return on investment, we understand Honest Networks' claim to be that it relies on the exclusivity provided by a graduated revenue sharing agreement to compete and that this exclusivity can benefit competitive providers. We agree with

the City of San Francisco, which argues that the fact “[t]hat some market participants might benefit from barriers to entry imposed on potential competitors is not a compelling reason to allow for them.” And contrary to Honest Networks’ claim that graduated revenue sharing agreements are good for competitive providers, INCOMPAS provides examples of competitive providers that were prevented from offering service to one or more MTEs due to graduated revenue sharing agreements. As we have explained, in the *2019 MTE NPRM*, the Commission defined a revenue sharing agreement as an agreement in which a provider compensates an MTE owner *in exchange for access to a building and its tenants*. This definition hinges on the MTE owner’s provision of building access in exchange for payment, but graduated payments discourage MTE owners from allowing competitive entry in the manner we have described regardless of what they are in exchange for. We therefore extend this prohibition to include graduated compensation that is in exchange for anything between an MTE owner and covered provider that relates to providing communications service to tenants. We do so to eliminate the ability of providers to easily circumvent this prohibition: A provider could simply provide graduated payment in exchange for a practice such as exclusive marketing and achieve the same anti-competitive effects. To this end, we disagree with those that argue we should condition our ban on graduated revenue sharing agreements to ones used as a condition of access, because this limitation would allow providers to easily evade our prohibition.

26. The record indicates that the benefits of our new rule substantially outweigh its costs. By our action in this document, we remove MTE owners’ disincentive to permit service by competing providers, and subscribers will benefit from increased choice as a result of entrance by competing providers, as well as more competitive pricing and service. By contrast, no commenter in the record indicates that this prohibition will be costly.

### 3. Prohibition of Enforcing Existing Graduated or Exclusive Revenue Sharing Agreements

27. Our prohibition on graduated and exclusive revenue sharing agreements applies both to agreements entered into after the effective date of these rules and those already in existence when these rules become effective. The rules we adopt thus prohibit providers from (1) executing new graduated or exclusive

revenue sharing agreements, and (2) enforcing existing graduated or exclusive revenue sharing agreements on a going forward basis. Applying this prohibition to future enforcement of existing agreements will promote competitive entry to MTEs where these agreements are already in effect—to the benefit of MTE tenants—and is consistent with the Commission’s approach when it prohibited exclusive access agreements in residential MTEs.

28. When the Commission prohibited exclusive access agreements in residential MTEs—for both telecommunications carriers and covered MVPDs—it applied that prohibition to agreements already in effect. In the *2008 Competitive Networks Order*, it found that “leav[ing] existing exclusivity contracts in effect would allow the competitive harms we have identified to continue for some time, even years,” and that it was “in the public interest to prohibit such contracts from being enforced.” The Commission further concluded that “immediately prohibiting the enforcement of such provisions is more appropriate than phasing them out or waiting until contracts expire and are replaced by contracts without exclusivity provisions . . . [because] such approaches would only serve to further delay the entry of competition to customers in the buildings at issue.” In the *2007 Exclusive Service Contracts Order*, the Commission similarly reasoned that both existing and new exclusivity clauses had the “same competition- and broadband-detering effect that harms consumers.” Because a prohibition that did not cover the exclusivity agreements currently in effect would “allow the vast majority of the harms caused by such clauses to continue for years . . . [or] indefinitely in the cases of exclusivity clauses that last perpetually or contemplate automatic renewal,” it found that it was “strongly in the public interest to prohibit such clauses from being enforced.” In both orders, the Commission found that affected parties were on notice that the Commission could adopt such a prohibition because “the validity of exclusivity provisions . . . ha[d] been subject to question for some time.”

29. On review, the United States Court of Appeals for the D.C. Circuit upheld the Commission’s prohibition enforcing existing exclusive access contracts adopted in the *2007 Exclusive Service Contracts Order*. The Court found that the Commission’s rule was not retroactive, because it had “impaired the future value of past bargains but ha[d] not rendered past

actions illegal or otherwise sanctionable.” It further concluded the Commission satisfied its obligation to balance the effect of “upsetting prior expectations or existing investments against the benefits of applying their rules to those preexisting interests.”

30. We undertake that same balancing and find that the benefits of the prohibition we adopt in this document on enforcing existing graduated and exclusive revenue sharing agreements substantially outweigh the costs. The record reflects that these types of revenue sharing agreements already exist and already cause the anti-competitive harms we have identified. To leave existing contracts unaddressed would allow these harms to continue for a period of years or even indefinitely. Indeed, the record reflects that these agreements may last perpetually. Prohibiting existing contracts from being enforced will serve the public interest by preventing such anti-competitive conduct from being grandfathered in indefinitely, and by allowing tenants of impacted MTEs to realize the benefits of competition and consumer choice.

31. We find that our prohibition does not disturb legitimate expectations of MTE and provider investors affected by this rule. First, the anti-competitive structure of the two types of revenue sharing agreements we prohibit in this document conflict with the Commission’s long-existing rules designed to promote broadband deployment and competition in MTEs. Second, this rule does not prevent providers from offering service to those MTE tenants who wish to continue to subscribe to their service. Third, the lawfulness of revenue sharing agreements has been under the Commission’s scrutiny for nearly five years. In the *2017 MTE NOI*, the Commission sought “comment on how to best address revenue sharing agreements”; in the *2019 MTE NPRM* it asked whether it should “restrict the use of revenue sharing agreements”; and in 2021 the Wireline Competition Bureau refreshed the record and asked if the Commission should “restrict the use of revenue sharing agreements” and “address specific types of revenue sharing agreements.” Finally, the record gives us no reason to uniquely differentiate between commercial and residential MTEs for purposes of this rule, and accordingly we apply the prohibition on enforcing existing, covered revenue-sharing contracts to all MTE contexts covered by this document. Our analysis is not changed by record claims that existing revenue sharing agreements—particularly

graduated revenue sharing agreements—are numerous. We find that this only underscores the importance of reaching these existing agreements to protect MTE tenants from their harmful effects.

32. *Compliance Dates.* For existing contracts with exclusive and graduated revenue sharing agreements, compliance with the prohibition on enforcing such agreements will be required 180 days after publication of the Report and Order in the **Federal Register**. We direct the Wireline Competition Bureau to release a Public Notice announcing the compliance date of the rules for existing contracts. We agree with Altice that adopting a delayed compliance date for existing contracts “would allow time for providers to conduct the extensive contract renegotiations that would be required if existing graduated revenue sharing provisions are rendered void by the Commission’s decision.” While Altice suggests the need for a one-year transition period for providers to comply with the new prohibition on enforcing existing graduated and exclusive revenue sharing arrangements, we find that 180 days strikes the right balance between giving providers sufficient time to bring their existing arrangements into compliance and ensuring that MTE tenants promptly benefit from the rules we adopt in this document. For new contracts, the prohibition on entering into exclusive and graduated revenue sharing arrangements will take effect 30 days after publication of the Report and Order in the **Federal Register** and will bar such arrangements in new contracts from that point forward.

#### *D. Required Disclosure of Exclusive Marketing Arrangements*

33. We require providers to disclose the existence of exclusive marketing arrangements that they have with MTE owners. Such disclosure must be included on all written marketing material directed at tenants or prospective tenants of an MTE subject to the arrangement and must explain in clear, conspicuous, legible, and visible language that the provider has the right to exclusively market its communications services to tenants in the MTE, that such a right does not suggest that the provider is the only entity that can provide communications services to tenants in the MTE, and that service from an alternative provider may be available. We sought comment on whether to require this type of disclosure in the *2019 MTE NPRM* because of the potential for exclusive marketing arrangements to be used to impede MTE entrance by competitive providers, frustrating the goals and

intent of our exclusive access prohibition. The record reflects that the nature of exclusive marketing arrangements has changed since the Commission last addressed them in 2010, and we find that this limited disclosure requirement will alleviate tenant confusion identified in the record, prevent the evasion of our exclusive access rules, and, in turn, promote competition in MTEs.

34. As the Commission explained in the *2019 MTE NPRM*, an exclusive marketing arrangement is “an arrangement, either written or in practice, between an MTE owner and a service provider that gives the service provider, usually in exchange for some consideration, the exclusive right to certain means of marketing its service to tenants of the MTE.” As Consolidated Communications and Zply Fiber explain, exclusive marketing arrangements “give only one broadband provider the right to send sales representatives into an MTE or distribute marketing materials, such as door hangers, in the property.” They further state that “[u]nder exclusive marketing arrangements, MTE owners will often identify that single company as the ‘preferred’ provider and steer tenants toward that provider’s service.”

35. The record reflects that tenants in MTEs with exclusive marketing arrangements are confused about the availability of competitive service in the MTE and that this confusion dampens competition. Honest Networks states that “exclusive marketing arrangements create confusion and lower choice for tenants,” and Consolidated Communications and Zply Fiber explain that they do so by “creating confusion as to whether it is even possible to obtain service from another company.” Crown Castle asserts that “exclusive marketing arrangements between a MTE and a common carrier providing service directly to tenants often confuses MTE tenants . . . [who] may believe the carriers’ exclusive marketing [arrangement] with the MTE means that a carrier has an exclusive right to provide services within the building.” This confusion has the cascading effect of artificially limiting competition for communications services for MTE tenants because when tenants lack awareness of competitive options, their choice is narrowed to the entity with the exclusive arrangement. Some commenters contend that even MTE owners and their agents are confused about the specific nature of an exclusive marketing arrangement, believing it to be an exclusive access agreement fully barring competition in the MTE. Competitive providers explain

that in MTEs with exclusive marketing arrangements they achieve lower penetration and less revenue, and that, consequently, competition in these MTEs is dampened and tenants cannot realize the benefits of competitive choice.

36. We are persuaded by this record to adopt a disclosure requirement to alleviate confusion and, in turn, promote competition. In 2010, the Commission determined that the record at the time did not “support prohibiting or regulating exclusive marketing arrangements in order to protect competition or consumers.” The Commission found that, at the time, “[t]he balance of consumer harms and benefits for marketing exclusivity is thus significantly pro-consumer.” However, over a decade later, the evidence in the record paints a different picture. Based on the record now before us, we agree with commenters such as INCOMPAS and ACA Connects that a disclosure requirement for exclusive marketing arrangements will help level the playing field by increasing transparency for consumers about provider options and reducing confusion among MTE tenants about the availability of competitive communications services in an MTE, thus promoting competition for such services in the MTE. Indeed, we find that when an exclusive marketing arrangement causes tenant confusion it can lead to de facto exclusive access—frustrating the goals of our exclusive access prohibition—by impeding entrance by third parties. The disclosure requirement we adopt addresses this issue at its source by alleviating this confusion. And we agree with Lumen that tenants “deserve to know when this is occurring.”

37. We disagree with commenters who assert that a disclosure requirement would not be beneficial because it would not provide tenants with useful information or because tenants see advertisements for competitors elsewhere. We find that, based on the compelling evidence in the current record, when only one company has the ability to market its communications services to MTE tenants, tenants often are not aware that other providers can serve the MTE or are given incorrect information that effectively limits their choice of providers—thus negatively impacting competition. We further disagree with commenters who assert that exclusive marketing arrangements do not preclude competition and so action is unnecessary; we find more persuasive the detailed record evidence of de facto exclusivity faced by competitive providers confronting an

exclusive marketing arrangement in an MTE. While some commenters argue we should prohibit exclusive marketing arrangements entirely, in this document we take this incremental step in light of record developments since the Commission last considered exclusive marketing arrangements in 2010, and we will continue to monitor the impact of exclusive marketing arrangements on competition in MTEs.

38. We require that the disclosure meet the following three requirements: It must (1) be included on all written marketing material from the provider directed at tenants or prospective tenants of the affected MTE; (2) identify the existence of the exclusive marketing arrangement and include a plain-language description of the arrangement and what it means; and (3) be made in a manner that it is clear, conspicuous, and legible. The term “written marketing material” includes electronic or print material. Written marketing material is “directed at” a tenant or prospective tenant of an MTE if it (1) contains specific mention of the MTE; (2) is provided directly to the tenant or prospective tenant because of its relationship (or prospective relationship) to the MTE, regardless of the means by which it is provided (including, but not limited to, being sent via email, regular mail, mailbox insert, or door hanger); or (3) given to a third party, including the MTE owner, with the understanding it will be directed at tenants or prospective tenants of the MTE. It does not, however, include general-purpose marketing material that incidentally reaches tenants or prospective tenants of the MTE (e.g., general area media or online advertising, website promotions). We disagree that this disclosure needs to be made to other parties such as competitors or the Commission, as some commenters suggest, because these commenters do not explain how a broader disclosure would resolve confusion on the part of MTE tenants (and prospective tenants).

39. In terms of the language of the disclosure, we require the provider to disclose that it has the right to exclusively market its communications services to tenants in the MTE, that such a right does not mean that the provider is the only entity that can provide such services to tenants in the MTE, and that service from an alternative provider may be available. The wording we expect for this requirement differs slightly from the wording proposed by INCOMPAS that would have providers notify MTE tenants that they “may select the broadband provider of their choice.” We believe that the INCOMPAS wording is

overly broad, and instead require only communication that service from another provider may be available. The latter disclosure is vital because this requirement is intended to alleviate the confusion caused to MTE tenants by the existence of an exclusive marketing arrangement and whether such an arrangement precludes competitive providers in the MTE. To this end, we agree with commenters who argue that the disclosure need not include the business terms and conditions of the arrangements because they are not necessary to counteract any confusion and, in turn, promote competition.

40. In terms of the disclosure being clear, conspicuous, and legible, we require that the disclosure be in plain language, easy to read, and as visible as any other business or legal terms in the marketing material being directed to the MTE tenants. We find that a disclosure is clear, conspicuous, and legible, and therefore is effectively communicated, “when it is displayed in a manner that is readily noticeable, readable . . . and understandable to the audience to whom it is disseminated.” While we do not specify the precise fashion or formatting in which the required disclosure must be made, indicia of effective disclosures include “us[ing] clear and unambiguous language, avoid[ing] small type, plac[ing] any qualifying information close to the claim being qualified, and avoid[ing] making inconsistent statements or using distracting elements that could undercut or contradict the disclosure.” With regard to formatting, a simple typeface, legible font size, and ample white space would also be indicia of an effective disclosure.

41. This obligation applies to all exclusive marketing arrangements—both those that are already in place and those that are agreed to after the effective date of these rules. For new arrangements, we will enforce compliance with the disclosure requirement after the Office of Management and Budget completes its review of the new requirement pursuant to the Paperwork Reduction Act. To the extent a provider is operating under an exclusive marketing arrangement that is already in place, its disclosure obligation extends to marketing material produced after the compliance date applicable to existing marketing arrangements. We will not enforce compliance with the disclosure requirement for existing exclusive marketing arrangements until the later of (1) the Office of Management and Budget completing its review of the new requirements pursuant to the Paperwork Reduction Act, or (2) 180 days after

publication of the Report and Order in the **Federal Register**. We adopt a delayed compliance date for the disclosure requirement for existing exclusive marketing arrangements in order to give providers adequate time to bring their marketing materials into compliance with our new rules and to meet existing expectations regarding their production. To promote compliance, we direct the Wireline Competition Bureau to announce by Public Notice the compliance dates for new and existing exclusive marketing arrangements.

42. We find that the costs to providers for implementing this disclosure requirement will be outweighed by the benefits to consumers and MTEs of having accurate knowledge of exclusive marketing arrangements and the corresponding impact of such arrangements. We believe complying with the written disclosure requirement should present minimal cost, given that the provider simply needs to include a brief, legible disclosure on marketing material it is otherwise planning to design, print (where appropriate), and send to tenants and prospective tenants of an MTE where it has an exclusive marketing arrangement. We do not believe a more onerous disclosure requirement—such as an affirmative, recurring disclosure—is necessary to achieve this end. Rather, we find these minimal requirements for disclosure will alleviate confusion by making MTE tenants aware of the existence of an exclusive marketing arrangement and helping them understand that it does not preclude competition for individual customers in an MTE. And, to the extent MTE owners and their agents are confused by exclusive marketing arrangements, these disclosures should alleviate that confusion because they are likely to see the marketing material.

#### *E. Legal Authority*

43. We conclude that sections 201(b) and 628(b) of the Act provide us with authority for the rules we adopt in this document. We find authority over telecommunications carriers under section 201(b), which provides that “[a]ll charges, practices, classifications, and regulations for and in connection with such communication service, shall be just and reasonable, and any such charge, practice, classification, or regulation that is unjust or unreasonable is declared to be unlawful.” Further, it provides that “[t]he Commission may prescribe such rules and regulations as may be necessary in the public interest to carry out the provisions of this chapter.” We find that the revenue sharing agreements identified above and

a provider's failure to disclose exclusive marketing arrangements fall under our explicit statutory authority to address "unreasonable practice[s]." Section 201(b) served as the basis for the Commission's prohibition on exclusive access contracts between telecommunications carriers and MTE owners. The conduct we address in this document serves to undermine that prohibition by enabling telecommunications carriers to restrict access by alternative providers to MTEs; accordingly, we find authority under section 201(b) to prohibit certain revenue sharing agreements and to require limited disclosure of exclusive marketing arrangements by telecommunications carriers.

44. We find authority over covered MVPDs under section 628(b), which makes unlawful "unfair methods of competition or unfair or deceptive acts or practices, the purpose or effect of which is to hinder significantly or to prevent any [MVPD] from providing satellite cable programming or satellite broadcast programming to subscribers or consumers." This is the same statutory provision that provided ample authority for the Commission's prohibition on exclusive access contracts between covered MVPDs and residential MTE owners—there, the Commission found that "the use of an exclusivity clause by a cable operator to 'lock up' a [residential MTE] owner is an unfair method of competition or unfair act or practice because it can be used to impede the entry of competitors into the market and foreclose competition based on the quality and price of competing service offerings." We conclude that the same reasoning applies here. We find that the practices discussed above—the identified revenue sharing agreements and failure to disclose exclusive marketing arrangements—are "unfair methods of competition" that significantly hinder and in some cases prevent competing MVPDs from serving MTEs. As detailed above, graduated revenue sharing and exclusive revenue sharing agreements amount to de facto exclusive access agreements—effectively preventing competitors, including those providing satellite cable and broadcast programming, from serving MTE tenants—by incentivizing MTE owners to favor one provider to the exclusion of others. Exclusive marketing arrangements lacking appropriate disclaimers to tenants significantly hinder and, in some cases, prevent competing providers from gaining access to MTEs where MTE tenants, and even MTE owners and their agents, erroneously believe the agreements

preclude competitive access, and from competing for business in MTEs when they gain access. This confusion leads tenants to believe they have no choice in providers and prevents competing providers who have access to the building from advertising their service, resulting in de facto exclusive access.

45. We disagree with the Real Estate Associations that our actions in this document effectively regulate MTE owners rather than providers, and consequently that we lack authority to take them. We also reject the Real Estate Associations' argument that regulation of revenue sharing agreements is tantamount to "utility-style regulation" of payments to landlords. As we explain above, our prohibition on graduated and exclusive revenue sharing agreements stems from the exclusionary, anti-competitive effects these practices have, and we do not herein regulate the amount of payment MTE owners may receive. The rules we adopt in this document address practices by telecommunications carriers and covered MVPDs that serve as an impediment to competition for the services they offer in MTEs. The fact that these practices involve agreements with a third party does not eliminate our ability to address them. The U.S. Court of Appeals for the D.C. Circuit rejected just such an argument when it upheld the Commission's MVPD exclusive access regulations. As T-Mobile explains, "[t]he Commission's authority is not diminished" even where our actions "may also affect property owners." We agree that "the Commission has the power to prevent carriers from restricting other carriers from deploying equipment and serving customers through participation in restrictive transactions" and that "[t]he Commission routinely adopts rules based on its clear regulatory authority that may have an impact on unregulated parties." Indeed, the Commission has previously found we possess "ample authority to prohibit exclusivity provisions in agreements for the provision of telecommunications service to . . . MTEs." This authority extends to "contractual or other arrangements between common carriers and other entities, even those entities that are generally not subject to Commission regulation." We therefore conclude that our actions in this document are authorized pursuant to sections 201(b) and 628(b).

46. We also disagree with the Real Estate Associations' argument that a disclosure requirement of the type mandated in this document may violate the First Amendment. As an initial matter, inasmuch as the Real Estate

Associations argue that the disclosure requirement would violate the First Amendment rights of MTE owners, we do not in this document place any disclosure obligations on MTE owners. To the extent they argue this requirement violates the First Amendment rights of service providers, we find that this requirement does not unconstitutionally burden commercial speech. The Supreme Court has explained that the commercial speaker's "constitutionally protected interest in not providing any particular factual information . . . is minimal." The Court explained further that disclosure requirements are consistent with the First Amendment provided they are "reasonably related to the [government's] interest in preventing deception of consumers." Here, through a purely factual statement, the disclosure requirement will address the deception created by exclusive marketing arrangements that competitive communications services are unavailable. Thus, the disclosure requirement is "reasonably related to the [governmental] interest" of alleviating tenant confusion about their competitive communications options and thus allowing them to enjoy the benefits of competition for services in MTEs. This finding is consistent with past Commission decisions regarding pro-consumer disclosure requirements on entities under our jurisdiction. And while we do not, in this document, rely on the authority recently provided by Congress to address digital discrimination, we will explore the use of that authority if we determine further action is needed to address discrimination and promote access to broadband internet access service in MTEs.

#### IV. Procedural Matters

47. *Final Regulatory Flexibility Analysis.* Pursuant to the Regulatory Flexibility Act of 1980 (RFA), as amended, the Commission's Final Regulatory Flexibility Analysis is set forth in Appendix B. The Commission's Consumer and Governmental Affairs Bureau, Reference Information Center, will send a copy of the Report and Order and Declaratory Ruling, including the FRFA, to the Chief Counsel for Advocacy of the Small Business Administration (SBA).

48. As required by the Regulatory Flexibility Act of 1980, as amended, an Initial Regulatory Flexibility Analysis (IRFA) was incorporated into the 2019 MTE NPRM. The Commission sought written public comments on the proposals in the 2019 MTE NPRM, including comments on the IRFA. No

comments were filed addressing the IRFA. This present Final Regulatory Flexibility Analysis (FRFA) conforms to the RFA.

*A. Need for, and Objectives of, the Rules*

49. This document takes action to promote competition in multiple tenant environments (MTEs) by addressing two practices that impede competition for communications service in MTEs. First, this document adopts rules prohibiting providers from entering into two types of revenue sharing agreements which discourage competition and have no connection to costs borne by MTE owners: Exclusive and graduated revenue sharing agreements. Second, it adopts rules requiring providers to disclose the existence of exclusive marketing arrangements in simple, easy-to-understand language. Both of these practices undercut the goals of the Commission's longstanding rules prohibiting exclusive access contracts in MTEs, and by adopting these rules we promote competition and tenant choice in MTEs.

*B. Summary of Significant Issues Raised by Public Comments in Response to the IRFA*

50. There were no comments filed that specifically addressed the proposed rules and policies presented in the IRFA.

*C. Response to Comments by the Chief Counsel for Advocacy of the SBA*

51. Pursuant to the Small Business Jobs Act of 2010, which amended the RFA, the Commission is required to respond to any comments filed by the Chief Counsel for Advocacy of the Small Business Administration (SBA), and to provide a detailed statement of any change made to the proposed rules as a result of those comments. However, the Chief Counsel did not file any comments in response to the proposed rules in this proceeding.

*D. Description and Estimate of the Number of Small Entities to Which the Rules Will Apply*

52. The RFA directs agencies to provide a description of and, where feasible, an estimate of the number of small entities that may be affected by the proposed rules and by the rule revisions on which the 2019 MTE NPRM seeks comment, if adopted. The RFA generally defines the term "small entity" as having the same meaning as the terms "small business," "small organization," and "small governmental jurisdiction." In addition, the term "small business" has the same meaning as the term "small-business concern"

under the Small Business Act. A "small-business concern" is one which: (1) Is independently owned and operated; (2) is not dominant in its field of operation; and (3) satisfies any additional criteria established by the SBA.

53. *Small Businesses, Small Organizations, Small Governmental Jurisdictions.* Our actions, over time, may affect small entities that are not easily categorized at present. We therefore describe here, at the outset, three broad groups of small entities that could be directly affected herein. First, while there are industry specific size standards for small businesses that are used in the regulatory flexibility analysis, according to data from the Small Business Administration's (SBA) Office of Advocacy, in general a small business is an independent business having fewer than 500 employees. These types of small businesses represent 99.9% of all businesses in the United States, which translates to 32.5 million businesses.

54. Next, the type of small entity described as a "small organization" is generally "any not-for-profit enterprise which is independently owned and operated and is not dominant in its field." The Internal Revenue Service (IRS) uses a revenue benchmark of \$50,000 or less to delineate its annual electronic filing requirements for small exempt organizations. Nationwide, for tax year 2018, there were approximately 571,709 small exempt organizations in the U.S. reporting revenues of \$50,000 or less according to the registration and tax data for exempt organizations available from the IRS.

55. Finally, the small entity described as a "small governmental jurisdiction" is defined generally as "governments of cities, counties, towns, townships, villages, school districts, or special districts, with a population of less than fifty thousand." U.S. Census Bureau data from the 2017 Census of Governments indicates that there were 90,075 local governmental jurisdictions consisting of general purpose governments and special purpose governments in the United States. Of this number there were 36,931 general purpose governments (county, municipal and town or township) with populations of less than 50,000 and 12,040 special purpose governments— independent school districts with enrollment populations of less than 50,000. Accordingly, based on the 2017 U.S. Census of Governments data, we estimate that at least 48,971 entities fall into the category of "small governmental jurisdictions."

1. Wireline Carriers

56. *Wired Telecommunications Carriers.* The U.S. Census Bureau defines this industry as "establishments primarily engaged in operating and/or providing access to transmission facilities and infrastructure that they own and/or lease for the transmission of voice, data, text, sound, and video using wired communications networks.

Transmission facilities may be based on a single technology or a combination of technologies. Establishments in this industry use the wired telecommunications network facilities that they operate to provide a variety of services, such as wired telephony services, including voice over internet protocol (VoIP) services, wired (cable) audio and video programming distribution, and wired broadband internet services. By exception, establishments providing satellite television distribution services using facilities and infrastructure that they operate are included in this industry." The SBA has developed a small business size standard for Wired Telecommunications Carriers, which consists of all such companies having 1,500 or fewer employees. U.S. Census Bureau data for 2012 shows that there were 3,117 firms that operated that year. Of this total, 3,083 operated with fewer than 1,000 employees. Thus, under this size standard, the majority of firms in this industry can be considered small.

57. *Local Exchange Carriers (LECs).* Neither the Commission nor the SBA has developed a size standard for small businesses specifically applicable to local exchange services. The closest applicable North American Industry Classification System (NAICS) Code category is Wired Telecommunications Carriers. Under the applicable SBA size standard, such a business is small if it has 1,500 or fewer employees. U.S. Census Bureau data for 2012 shows that there were 3,117 firms that operated for the entire year. Of that total, 3,083 operated with fewer than 1,000 employees. Thus under this category and the associated size standard, the Commission estimates that the majority of local exchange carriers are small entities.

58. *Incumbent LECs.* Neither the Commission nor the SBA has developed a small business size standard specifically for incumbent local exchange services. The closest applicable NAICS Code category is Wired Telecommunications Carriers. Under the applicable SBA size standard, such a business is small if it has 1,500 or fewer employees. U.S. Census Bureau data for 2012 indicates that 3,117 firms

operated the entire year. Of this total, 3,083 operated with fewer than 1,000 employees. Consequently, the Commission estimates that most providers of incumbent local exchange service are small businesses that may be affected by our actions. According to Commission data, one thousand three hundred and seven (1,307) Incumbent Local Exchange Carriers reported that they were incumbent local exchange service providers. Of this total, an estimated 1,006 have 1,500 or fewer employees. Thus, using the SBA's size standard the majority of incumbent LECs can be considered small entities.

59. *Competitive Local Exchange Carriers (Competitive LECs), Competitive Access Providers (CAPs), Shared-Tenant Service Providers, and Other Local Service Providers.* Neither the Commission nor the SBA has developed a small business size standard specifically for these service providers. The appropriate NAICS Code category is Wired Telecommunications Carriers. Under the applicable SBA size standard, such a business is small if it has 1,500 or fewer employees. U.S. Census Bureau data for 2012 indicates that 3,117 firms operated for the entire year. Of that number, 3,083 operated with fewer than 1,000 employees. Based on these data, the Commission concludes that the majority of Competitive LECs, CAPs, Shared-Tenant Service Providers, and Other Local Service Providers, are small entities. According to Commission data, 1,442 carriers reported that they were engaged in the provision of either competitive local exchange services or competitive access provider services. Of these 1,442 carriers, an estimated 1,256 have 1,500 or fewer employees. In addition, 17 carriers have reported that they are Shared-Tenant Service Providers, and all 17 are estimated to have 1,500 or fewer employees. Also, 72 carriers have reported that they are Other Local Service Providers. Of this total, 70 have 1,500 or fewer employees. Consequently, based on internally researched FCC data, the Commission estimates that most providers of competitive local exchange service, competitive access providers, Shared-Tenant Service Providers, and Other Local Service Providers are small entities.

60. *Interexchange Carriers (IXCs).* Neither the Commission nor the SBA has developed a small business size standard specifically for Interexchange Carriers. The closest applicable NAICS Code category is Wired Telecommunications Carriers. The applicable size standard under SBA rules is that such a business is small if

it has 1,500 or fewer employees. U.S. Census Bureau data for 2012 indicates that 3,117 firms operated for the entire year. Of that number, 3,083 operated with fewer than 1,000 employees. According to internally developed Commission data, 359 companies reported that their primary telecommunications service activity was the provision of interexchange services. Of this total, an estimated 317 have 1,500 or fewer employees. Consequently, the Commission estimates that the majority of interexchange service providers are small entities.

61. *Cable System Operators (Telecom Act Standard).* The Communications Act of 1934, as amended, also contains a size standard for small cable system operators, which is "a cable operator that, directly or through an affiliate, serves in the aggregate fewer than one percent of all subscribers in the United States and is not affiliated with any entity or entities whose gross annual revenues in the aggregate exceed \$250,000,000." As of 2019, there were approximately 48,646,056 basic cable video subscribers in the United States. Accordingly, an operator serving fewer than 486,460 subscribers shall be deemed a small operator if its annual revenues, when combined with the total annual revenues of all its affiliates, do not exceed \$250 million in the aggregate. Based on available data, we find that all but five cable operators are small entities under this size standard. We note that the Commission neither requests nor collects information on whether cable system operators are affiliated with entities whose gross annual revenues exceed \$250 million. Therefore we are unable at this time to estimate with greater precision the number of cable system operators that would qualify as small cable operators under the definition in the Communications Act.

## 2. Wireless Carriers

62. *Wireless Telecommunications Carriers (except Satellite).* This industry comprises establishments engaged in operating and maintaining switching and transmission facilities to provide communications via the airwaves. Establishments in this industry have spectrum licenses and provide services using that spectrum, such as cellular services, paging services, wireless internet access, and wireless video services. The appropriate size standard under SBA rules is that such a business is small if it has 1,500 or fewer employees. For this industry, U.S. Census Bureau data for 2012 shows that there were 967 firms that operated for

the entire year. Of this total, 955 firms employed fewer than 1,000 employees and 12 firms employed 1000 employees or more. Thus under this category and the associated size standard, the Commission estimates that the majority of wireless telecommunications carriers (except satellite) are small entities.

63. The Commission's own data—available in its Universal Licensing System—indicate that, as of August 31, 2018, there are 265 Cellular licensees that will be affected by our actions. The Commission does not know how many of these licensees are small, as the Commission does not collect that information for these types of entities. Similarly, according to internally developed Commission data, 413 carriers reported that they were engaged in the provision of wireless telephony, including cellular service, Personal Communications Service (PCS), and Specialized Mobile Radio (SMR) Telephony services. Of this total, an estimated 261 have 1,500 or fewer employees, and 152 have more than 1,500 employees. Thus, using available data, we estimate that the majority of wireless firms can be considered small.

64. *Satellite Telecommunications.* This category comprises firms "primarily engaged in providing telecommunications services to other establishments in the telecommunications and broadcasting industries by forwarding and receiving communications signals via a system of satellites or reselling satellite telecommunications." Satellite telecommunications service providers include satellite and earth station operators. The category has a small business size standard of \$35 million or less in average annual receipts, under SBA rules. For this category, U.S. Census Bureau data for 2012 shows that there were a total of 333 firms that operated for the entire year. Of this total, 299 firms had annual receipts of less than \$25 million. Consequently, we estimate that the majority of satellite telecommunications providers are small entities.

## 3. Resellers

65. *Local Resellers.* The SBA has not developed a small business size standard specifically for Local Resellers. The SBA category of Telecommunications Resellers is the closest NAICS code category for local resellers. The Telecommunications Resellers industry comprises establishments engaged in purchasing access and network capacity from owners and operators of telecommunications networks and

reselling wired and wireless telecommunications services (except satellite) to businesses and households. Establishments in this industry resell telecommunications. They do not operate transmission facilities and infrastructure. Mobile virtual network operators (MVNOs) are included in this industry. Under the SBA's size standard, such a business is small if it has 1,500 or fewer employees. U.S. Census Bureau data from 2012 shows that 1,341 firms provided resale services for the entire year. Of that number, all of the firms operated with fewer than 1,000 employees. Thus, under this category and the associated SBA small business size standard, the majority of these resellers can be considered small entities. According to Commission data, 213 carriers have reported that they are engaged in the provision of local resale services. Of these, an estimated 211 have 1,500 or fewer employees and two have more than 1,500 employees. Consequently, the Commission estimates that the majority of local resellers are small entities.

66. *Toll Resellers.* The closest NAICS Code category is Telecommunications Resellers. The Telecommunications Resellers industry comprises establishments engaged in purchasing access and network capacity from owners and operators of telecommunications networks and reselling wired and wireless telecommunications services (except satellite) to businesses and households. Establishments in this industry resell telecommunications; they do not operate transmission facilities and infrastructure. MVNOs are included in this industry. The SBA small business size standard for Telecommunications Resellers classifies a business as small if it has 1,500 or fewer employees. U.S. Census Bureau data from 2012 shows that 1,341 firms provided resale services for the entire year. Of that number, 1,341 operated with fewer than 1,000 employees. Thus, under this category and the associated SBA small business size standard, the majority of these resellers can be considered small entities. According to Commission data, 881 carriers have reported that they are engaged in the provision of toll resale services. Of this total, an estimated 857 have 1,500 or fewer employees. Consequently, the Commission estimates that the majority of toll resellers are small entities.

67. *Prepaid Calling Card Providers.* The most appropriate NAICS code-based category for defining prepaid calling card providers is Telecommunications Resellers. This industry comprises establishments

engaged in purchasing access and network capacity from owners and operators of telecommunications networks and reselling wired and wireless telecommunications services (except satellite) to businesses and households. Establishments in this industry resell telecommunications; they do not operate transmission facilities and infrastructure. MVNOs are included in this industry. Under the applicable SBA size standard, such a business is small if it has 1,500 or fewer employees. U.S. Census Bureau data for 2012 shows that 1,341 firms provided resale services during that year. Of that number, 1,341 operated with fewer than 1,000 employees. Thus, under this category and the associated small business size standard, the majority of these prepaid calling card providers can be considered small entities. According to the Commission's Form 499 Filer Database, 86 active companies reported that they were engaged in the provision of prepaid calling cards. The Commission does not have data regarding how many of these companies have 1,500 or fewer employees, however, the Commission estimates that the majority of the 86 active prepaid calling card providers that may be affected by these rules are likely small entities.

#### 4. Other Entities

68. *All Other Telecommunications.* The "All Other Telecommunications" category is comprised of establishments primarily engaged in providing specialized telecommunications services, such as satellite tracking, communications telemetry, and radar station operation. This industry also includes establishments primarily engaged in providing satellite terminal stations and associated facilities connected with one or more terrestrial systems and capable of transmitting telecommunications to, and receiving telecommunications from, satellite systems. Establishments providing internet services or VoIP services via client-supplied telecommunications connections are also included in this industry. The SBA has developed a small business size standard for "All Other Telecommunications," which consists of all such firms with annual receipts of \$35 million or less. For this category, U.S. Census Bureau data for 2012 shows that there were 1,442 firms that operated for the entire year. Of those firms, a total of 1,400 had annual receipts less than \$25 million and 15 firms had annual receipts of \$25 million to \$49,999,999. Thus, the Commission estimates that the majority of "All Other Telecommunications" firms potentially

affected by our action can be considered small.

#### *E. Description of Projected Reporting, Recordkeeping, and Other Compliance Requirements for Small Entities*

69. This document adopts new rules requiring telecommunications carriers and covered MVPDs to include a disclosure on all written marketing material directed at tenants or prospective tenants of an MTE subject to an exclusive marketing arrangement that explains in plain language that the provider has the right to exclusively market its communication services to tenants in the MTE. Some telecommunications carriers and covered MVPDs required to make these disclosures may be small.

#### *F. Steps Taken To Minimize the Significant Economic Impact on Small Entities, and Significant Alternatives Considered*

70. The RFA requires an agency to describe any significant alternatives that it has considered in reaching its proposed approach, which may include the following four alternatives (among others): (1) The establishment of differing compliance or reporting requirements or timetables that take into account the resources available to small entities; (2) the clarification, consolidation, or simplification of compliance and reporting requirements under the rules for such small entities; (3) the use of performance rather than design standards; and (4) an exemption from coverage of the rule, or any part thereof, for such small entities.

71. This document declined to adopt potentially more onerous disclosure requirements on providers, such as an affirmative annual disclosure to MTE residents or disclosure to third parties such as competitive providers and the Commission. The Commission found that this more limited disclosure requirement adequately addressed record concerns regarding exclusive marketing arrangements while minimizing the burden on affected providers. This determination will minimize the burden of the disclosure requirement on small providers. The Commission further adopted these rules to promote competition in MTEs, including competition by small providers.

#### *G. Report to Congress*

72. The Commission will send a copy of the Report and Order, including the FRFA, in a report to be sent to Congress pursuant to the Congressional Review Act. In addition, the Commission will send a copy of the Report and Order,

including the FRFA, to the Chief Counsel for Advocacy of the SBA. A copy of the Report and Order and FRFA (or summaries thereof) will also be published in the **Federal Register**.

73. *Paperwork Reduction Act*. This document contains new or modified information collection requirements subject to the Paperwork Reduction Act of 1995 (PRA), Public Law 104–13. It will be submitted to the Office of Management and Budget (OMB) for review under section 3507(d) of the PRA. OMB, the general public, and other Federal agencies will be invited to comment on the new or modified information collection requirements contained in this proceeding. In addition, we note that pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107–198, we previously sought comment on how the Commission might further reduce the information collection burden for small business concerns with fewer than 25 employees.

74. *Congressional Review Act*. The Commission has determined, and the Administrator of the Office of Information and Regulatory Affairs, Office of Management and Budget, concurs, that this rule is “non-major” under the Congressional Review Act, 5 U.S.C. 804(2). The Commission will send a copy of the Report and Order and Declaratory Ruling to Congress and the Government Accountability Office pursuant to 5 U.S.C. 801(a)(1)(A).

75. *People with Disabilities*. To request materials in accessible formats for people with disabilities (Braille, large print, electronic files, audio format), send an email to [fcc504@fcc.gov](mailto:fcc504@fcc.gov) or call the Consumer & Governmental Affairs Bureau at 202–418–0530 (voice).

## V. Ordering Clauses

76. *It is ordered* that pursuant to the authority contained in sections 1 through 4, 201(b), 303(r), 601(4), 601(6), 624(i), and 628 of the Communications Act of 1934, as amended, 47 U.S.C. 151 through 154, 201(b), 303(r), 521(4), 521(6), 544(i), and 548, and §§ 1.4(b)(1) and 1.103(a) of the Commission’s rules, 47 CFR 1.4(b)(1), 1.103(a), the Report and Order *is adopted*.

77. *It is further ordered* that parts 64 and 76 of the Commission’s rules *are amended* and such amendments *shall be effective* 30 days after publication in the **Federal Register**, except that compliance with §§ 64.2500(c)(2)(ii) and (d)(2) and 76.2000(b)(2)(ii) and (c)(2) of the Commission’s rules, 47 CFR 64.2500(c)(2)(ii), (d)(2), 76.2000(b)(2)(ii), (c)(2), will not be required until 180 days after publication in the **Federal Register**; compliance with §§ 64.2500(e)

and 76.2000(d) of the Commission’s rules, 47 CFR 64.2500(e), 76.2000(d), will not be required until the Office of Management and Budget completes its review under the Paperwork Reduction Act; and compliance with §§ 64.2500(e)(2)(ii) and 76.2000(d)(2)(ii) of the Commission’s rules, 47 CFR 64.2500(e)(2)(ii), 76.2000(d)(2)(ii), will not be required until the later of 180 days after publication in the **Federal Register** or the date that the Office of Management and Budget completes its review of the requirements in §§ 64.2500(e) and 76.2000(d) pursuant to the Paperwork Reduction Act. The Commission directs the Wireline Competition Bureau to announce compliance dates for §§ 64.2500(e) and 76.2000(d) by subsequent notification in the **Federal Register** and to cause 47 CFR 64.2500(e) and 76.2000(d) to be revised accordingly.

78. *It is further ordered* that, pursuant to 47 CFR 1.4(b)(1), the period for filing petitions for reconsideration or petitions for judicial review with respect to all aspects of the Report and Order and Declaratory Ruling will commence on the date that a summary of the Report and Order and Declaratory Ruling is published in the **Federal Register**.

79. *It is further ordered* that the Commission *shall send* a copy of the Report and Order and Declaratory Ruling to Congress and to the Government Accountability Office pursuant to the Congressional Review Act, see 5 U.S.C. 801(a)(1)(A).

80. *It is further ordered* that the Commission’s Consumer & Governmental Affairs Bureau, Reference Information Center *shall send* a copy of the Report and Order and Declaratory Ruling, including the Final Regulatory Flexibility Analysis, to the Chief Counsel for Advocacy of the Small Business Administration.

## List of Subjects in 47 CFR Parts 64 and 76

Communications, Communications common carriers, Communications equipment, Internet, Telecommunications.

Federal Communications Commission.

**Marlene Dortch**,  
Secretary.

## Final Rules

For the reasons discussed in the preamble, the Federal Communications Commission amends 47 CFR parts 64 and 76 as follows:

## PART 64—MISCELLANEOUS RULES RELATING TO COMMON CARRIERS

■ 1. The authority citation for part 64 continues to read as follows:

**Authority:** 47 U.S.C. 151, 152, 154, 201, 202, 217, 218, 220, 222, 225, 226, 227, 227b, 228, 251(a), 251(e), 254(k), 255, 262, 276, 403(b)(2)(B), (c), 616, 620, 716, 1401–1473, unless otherwise noted; Pub. L. 115–141, Div. P, sec. 503, 132 Stat. 348, 1091.

■ 2. Amend § 64.2500 by revising the section heading and adding paragraphs (c) through (e) to read as follows:

### § 64.2500 Prohibited agreements and required disclosures.

\* \* \* \* \*

(c) No common carrier shall enter into or enforce any contract regarding the provision of communications service in a multiunit premise, written or oral, in which it gives the multiunit premise owner compensation on a graduated basis.

(1) *Definition*. For purposes of this paragraph (c), a “graduated basis” means that the compensation a common carrier pays to a multiunit premise owner for each tenant served increases as the total number of tenants served by the common carrier in the multiunit premise increases.

(2) *Compliance dates*—(i) *Compliance date for new contracts*. After April 27, 2022, no common carrier shall enter into any contract regarding the provision of communications service in a multiunit premise, written or oral, in which it gives the multiunit premise owner compensation on a graduated basis.

(ii) *Compliance date for existing contracts*. After September 26, 2022, no common carrier shall enforce any contract regarding the provision of communications service in a multiunit premise, written or oral, in existence as of April 27, 2022, in which it gives the multiunit premise owner compensation on a graduated basis.

(d) No common carrier shall enter into or enforce any contract regarding the provision of communications service in a multiunit premise, written or oral, in which it receives the exclusive right to provide the multiunit premise owner compensation in return for access to the multiunit premise and its tenants.

(1) *Compliance date for new contracts*. After April 27, 2022, no common carrier shall enter into any contract, written or oral, in which it receives the exclusive right to provide the multiunit premise owner compensation in return for access to the multiunit premise and its tenants.

(2) *Compliance date for existing contracts*. After September 26, 2022, no

common carrier shall enforce any contract regarding the provision of communications service in a multiunit premise written or oral, in existence as of April 27, 2022, in which it receives the exclusive right to provide the multiunit premise owner compensation in return for access to the multiunit premise and its tenants.

(e) A common carrier shall disclose the existence of any contract regarding the provision of communications service in a multiunit premise, written or oral, in which it receives the exclusive right to market its service to tenants of a multiunit premise.

(1) Such disclosure must:

(i) Be included on all written marketing material, whether electronic or in print, that is directed at tenants or prospective tenants of the affected multiunit premise;

(ii) Identify the existence of the contract and include a plain-language description of the arrangement, including that the provider has the right to exclusively market its communications services to tenants in the multiunit premise, that such a right does not mean that the provider is the only entity that can provide such services to tenants in the multiunit premise, and that service from an alternative provider may be available; and

(iii) Be made in a manner that is clear, conspicuous, and legible.

(2)(i) *Compliance date for new contracts.* Paragraph (e) of this section contains an information-collection and/or recordkeeping requirement. Compliance with paragraph (e) will not be required for new contracts until this paragraph (e)(2)(i) is removed or contains a compliance date for new contracts, which will not occur until after the Office of Management and Budget completes its review of such requirements pursuant to the Paperwork Reduction Act.

(ii) *Compliance date for existing contracts.* For contracts in existence as of the compliance date for new contracts in paragraph (e)(2)(i) of this section, compliance with paragraph (e) of this section will not be required until the later of September 26, 2022 or the date that the Office of Management and Budget completes its review of the requirements in paragraph (e) pursuant to the Paperwork Reduction Act.

**PART 76—MULTICHANNEL VIDEO AND CABLE TELEVISION SERVICE**

■ 3. The authority citation for part 76 continues to read as follows:

**Authority:** 47 U.S.C. 151, 152, 153, 154, 301, 302, 302a, 303, 303a, 307, 308, 309, 312,

315, 317, 325, 338, 339, 340, 341, 503, 521, 522, 531, 532, 534, 535, 536, 537, 543, 544, 544a, 545, 548, 549, 552, 554, 556, 558, 560, 561, 571, 572, 573.

■ 4. Amend § 76.2000 by redesignating paragraph (b) as paragraph (e) and adding paragraphs (b) through (d) to read as follows:

**§ 76.2000 Exclusive access to multiple dwelling units generally.**

\* \* \* \* \*

(b) *Prohibition of graduated revenue sharing agreements.* No cable operator or other provider of MVPD service subject to 47 U.S.C. 548 shall enter into or enforce any contract regarding the provision of communications service in a MDU, written or oral, in which it gives the MDU owner compensation on a graduated basis.

(1) *Definition.* For purposes of this paragraph (b), a “graduated basis” means that the compensation a cable operator or other provider of MVPD service subject to 47 U.S.C. 548 pays to a MDU owner for each tenant served increases as the total number of tenants served by the cable operator or other provider of MVPD service subject to 47 U.S.C. 548 in the MDU increases.

(2) *Compliance dates—(i) Compliance date for new contracts.* After April 27, 2022, no cable operator or other provider of MVPD service subject to 47 U.S.C. 548 shall enter into any contract regarding the provision of communications service in a MDU, written or oral, in which it gives the MDU owner compensation on a graduated basis.

(ii) *Compliance date for existing contracts.* After September 26, 2022, no cable operator or other provider of MVPD service subject to 47 U.S.C. 548 shall enforce any contract regarding the provision of communications service in an MDU, written or oral, in existence as of April 27, 2022, in which it gives the MDU owner compensation on a graduated basis.

(c) *Prohibition of exclusive revenue sharing agreements.* No cable operator or other provider of MVPD service subject to 47 U.S.C. 548 shall enter into or enforce any contract regarding the provision of communications service in a MDU, written or oral, in which it receives the exclusive right to provide the MDU owner compensation in return for access to the MDU and its tenants.

(1) *Compliance date for new contracts.* After April 27, 2022, no cable operator or other provider of MVPD service subject to 47 U.S.C. 548 shall enter into any contract, written or oral, in which it receives the exclusive right to provide the MDU owner

compensation in return for access to the MDU and its tenants.

(2) *Compliance date for existing contracts.* After September 26, 2022, no cable operator or other provider of MVPD service subject to 47 U.S.C. 548 shall enforce any contract regarding the provision of communications service in a MDU, written or oral, in existence as of April 27, 2022, in which it receives the exclusive right to provide the MDU owner compensation in return for access to the MDU and its tenants.

(d) *Required disclosure of exclusive marketing arrangements.* A cable operator or other provider of MVPD service subject to 47 U.S.C. 548 shall disclose the existence of any contract regarding the provision of communications service in a MDU, written or oral, in which it receives the exclusive right to market its service to tenants of a MDU.

(1) Such disclosure must:

(i) Be included on all written marketing material, whether electronic or in print, that is directed at tenants or prospective tenants of the affected MDU;

(ii) Identify the existence of the contract and include a plain-language description of the arrangement, including that the provider has the right to exclusively market its communications services to tenants in the MDU, that such a right does not mean that the provider is the only entity that can provide such services to tenants in the MDU, and that service from an alternative provider may be available; and

(iii) Be made in a manner that is clear, conspicuous, and legible.

(2)(i) *Compliance date for new contracts.* Paragraph (d) of this section contains an information-collection and/or recordkeeping requirement. Compliance with paragraph (d) will not be required until this paragraph (d)(2)(i) is removed or contains a compliance date, for new contracts, which will occur after the Office of Management and Budget completes its review of such requirements pursuant to the Paperwork Reduction Act.

(ii) *Compliance date for existing contracts.* For contracts in existence as of the compliance date for new contracts in paragraph (d)(2)(i) of this section, compliance with paragraph (d) of this section will not be required until the later of September 26, 2022 or the date that the Office of Management and Budget completes its review of the requirements in paragraph (d) pursuant to the Paperwork Reduction Act.

\* \* \* \* \*

**DEPARTMENT OF COMMERCE****National Oceanic and Atmospheric Administration****50 CFR Part 665**

[Docket No. 220318–0074]

RIN 0648–BK90

**Pacific Island Fisheries; 2022–2025 Annual Catch Limits and Accountability Measures for Main Hawaiian Islands Uku (Gray Jobfish)**

**AGENCY:** National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

**ACTION:** Final rule.

**SUMMARY:** In this final rule, NMFS implements an annual catch limit (ACL) of 295,419 lb (134 metric tons (t)), an annual catch target (ACT) of 291,010 lb (132 t), and accountability measures (AM) for main Hawaiian Islands (MHI) uku for fishing years 2022, 2023, 2024, and 2025. These ACLs and ACTs apply to the total combined commercial and non-commercial catch of uku. As an in-season accountability measure, if NMFS projects that the total catch will reach the ACT in any given fishing year, we would close commercial and non-commercial uku fisheries in Federal waters for the remainder of the fishing year. As a post-season AM, if NMFS determines that the most recent three-year average total catch exceeded the ACL in a fishing year, we would reduce the ACL and ACT for the following fishing year by the amount of the overage. This rule supports the long-term sustainability of MHI uku.

**DATES:** The final rule is effective April 27, 2022.

**ADDRESSES:** Copies of the Fishery Ecosystem Plan for the Hawaii Archipelago (FEP) are available from the Western Pacific Fishery Management Council (Council), 1164 Bishop St., Suite 1400, Honolulu, HI 96813, tel. 808–522–8220, fax 808–522–8226, or [www.wpcouncil.org](http://www.wpcouncil.org).

Copies of the environmental analyses and other supporting documents for this action are available from <https://www.regulations.gov/docket?D=NOAA-NMFS-2021-0088>, or from Michael D. Tosatto, Regional Administrator, NMFS Pacific Islands Regional Office (PIRO), 1845 Wasp Blvd., Bldg. 176, Honolulu, HI 96818.

**FOR FURTHER INFORMATION CONTACT:** David O'Brien, NMFS PIRO Sustainable Fisheries, 808–725–5038.

**SUPPLEMENTARY INFORMATION:** NMFS and the Council manage the MHI uku fishery

in Federal waters around Hawaii under the Fishery Ecosystem Plan for the Hawaiian Archipelago (FEP), as authorized by the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act). NMFS is required under the regulations at 50 CFR 665.4 to specify an ACL, and optionally specify an ACT, for MHI uku each fishing year based on a recommendation from the Council. The specification of an ACT reduces the likelihood that the ACL will be exceeded.

The Council recommended that NMFS implement ACLs, ACTs, and AMs for MHI uku for 2022, 2023, 2024, and 2025. The fishing year for MHI uku is the calendar year. The Council recommended an ACL of 295,419 lb and ACT of 291,010 lb based on a 2020 MHI uku stock assessment, in consideration of the risk of overfishing, past fishery performance, the acceptable biological catch recommendation from its Scientific and Statistical Committee, and with opportunity for public input.

As an in-season AM, if NMFS projects that total catch will reach the ACT, we would close Federal waters to the commercial and non-commercial fisheries for MHI uku for the remainder of the fishing year. As a post-season AM, if NMFS determines that the most recent three-year average MHI uku total catch exceeds the ACL in any given year, NMFS would reduce the ACL and ACT for the subsequent fishing year by the amount of the overage with a subsequent rulemaking.

You may find additional background information on this action in the preamble to the proposed rule published on December 27, 2021 (86 FR 73234).

**Comments and Response**

On December 27, 2021, NMFS published a proposed rule, a draft Environmental Assessment, and regulatory impact review for public comment (86 FR 73234). The comment period ended January 26, 2022. NMFS received no comments on the proposed rule.

**Changes From the Proposed Rule**

This final rule contains minor housekeeping corrections to the proposed rule. The regulation at 50 CFR 665.211 implements annual catch limits for two fisheries, the MHI Deep 7 bottomfish fishery and the MHI uku fishery, the latter of which is the subject of this final rule. Since the MHI uku proposed rule published, a MHI Deep 7 final rule implementing ACLs and AMs for fishing years 2021–2024 became effective (February 22, 2022, 87 FR

3045) and amended 50 CFR 665.211. This MHI uku final rule considers section 665.211 as amended by the MHI Deep 7 final rule and, therefore, differs slightly from what we presented in the MHI uku proposed rule. Specifically, 50 CFR 665.211(a) as amended by this MHI uku final rule now reflects the Deep 7 ACLs for fishing years 2021–22, 2022–23, and 2023–24. In addition, the Deep 7 final rule added a new paragraph at 50 CFR 665.211(f) and so this MHI uku final rule, instead of redesignating paragraph (e) as paragraph (f) and adding a new paragraph (e) as stated in the MHI uku proposed rule, redesignates paragraph (f) as paragraph (g) and adds a new paragraph (f). These housekeeping changes have no material effect on management of the uku bottomfish fishery.

**Classification**

Pursuant to section 304(b)(3) of the Magnuson-Stevens Act, the NMFS Assistant Administrator has determined that this final rule is consistent with the FEP, other provisions of the Magnuson-Stevens Act, and other applicable law.

The Chief Counsel for Regulation of the Department of Commerce certified to the Chief Counsel for Advocacy of the Small Business Administration during the proposed rule stage that this action would not have a significant economic impact on a substantial number of small entities. The factual basis for the certification was published in the proposed rule and is not repeated here. NMFS received no comments regarding this certification. As a result, a regulatory flexibility analysis was not required and none was prepared.

This final rule has been determined to be not significant for purposes of Executive Order 12866.

This final rule contains no information collection requirements under the Paperwork Reduction Act of 1995.

**List of Subjects in 50 CFR Part 665**

Accountability measures, Annual catch limits, Bottomfish, Fisheries, Fishing, Hawaii, Pacific Islands.

Dated: March 21, 2022.

**Samuel D. Rauch, III,**  
Deputy Assistant Administrator for  
Regulatory Programs, National Marine  
Fisheries Service.

For the reasons set out in the preamble, NMFS amends 50 CFR part 665 as follows:

**PART 665—FISHERIES IN THE WESTERN PACIFIC**

■ 1. The authority citation for 50 CFR part 665 continues to read as follows:

Authority: 16 U.S.C. 1801 *et seq.*

republish newly redesignated paragraph (g) to read as follows:

**§ 665.211 Annual Catch Limits (ACL) and Annual Catch Targets (ACT).**

(a) In accordance with § 665.4, the ACLs and ACTs for MHI bottomfish fisheries for each fishing year are as follows:

■ 2. In § 665.211 revise the section heading and paragraphs (a) and (b), redesignate paragraph (f) as paragraph (g), add a new paragraph (f), and

Fishery	2021–22 ACT (lb)	2022–23 ACT (lb)	2023–24 ACT (lb)
Deep 7 bottomfish .....	492,000	492,000	492,000

Fishery	2022 ACT (lb)	2023 ACT (lb)	2024 ACT (lb)	2025 ACT (lb)
Uku .....	295,419	295,419	295,419	295,419

Fishery	2022 ACT (lb)	2023 ACT (lb)	2024 ACT (lb)	2025 ACT (lb)
Uku .....	291,010	291,010	291,010	291,010

(b) When a bottomfish ACL or ACT is projected to be reached based on analyses of available information, the Regional Administrator shall publish a document to that effect in the **Federal Register** and shall use other means to notify permit holders. The document will include an advisement that the fishery will be closed beginning at a specified date, which is not earlier than seven days after the date of filing the closure notice for public inspection at the Office of the Federal Register, until the end of the fishing year in which the ACL or ACT is reached.

\* \* \* \* \*

(f) If the average total landings of uku in the most recent three years exceed the specified ACL in a fishing year, the Regional Administrator will reduce the uku ACL and ACT for the subsequent year by the amount of the overage in a separate rulemaking.

(g) Fishing for, and the resultant possession or sale of, any bottomfish MUS by vessels legally registered to Mau Zone, Ho’omaluu Zone, or PRIA bottomfish fishing permits and conducted in compliance with all other laws and regulations, is exempted from this section.

[FR Doc. 2022–06285 Filed 3–25–22; 8:45 am]

BILLING CODE 3510–22–P

**DEPARTMENT OF COMMERCE**

**National Oceanic and Atmospheric Administration**

**50 CFR Part 679**

[Docket No. 220216–0049; RTID 0648–XB790]

**Fisheries of the Exclusive Economic Zone Off Alaska; Pacific Cod by Catcher/Processors Using Hook-and-Line Gear in the Western Regulatory Area of the Gulf of Alaska**

**AGENCY:** National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

**ACTION:** Temporary rule; closure.

**SUMMARY:** NMFS is prohibiting directed fishing for Pacific cod by catcher/processors using hook-and-line (HAL) gear in the Western Regulatory Area of the Gulf of Alaska (GOA). This action is necessary to prevent exceeding the A season allowance of the 2022 Pacific cod total allowable catch (TAC) apportioned to catcher/processors using HAL gear in the Western Regulatory Area of the GOA.

**DATES:** Effective 1200 hours, Alaska local time (A.l.t.), March 23, 2022, through 1200 hours, A.l.t., June 10, 2022.

**FOR FURTHER INFORMATION CONTACT:** Obren Davis, 907–586–7241.

**SUPPLEMENTARY INFORMATION:** NMFS manages the groundfish fishery in the GOA exclusive economic zone according to the Fishery Management Plan for Groundfish of the Gulf of Alaska (FMP) prepared by the North Pacific Fishery Management Council

under authority of the Magnuson-Stevens Fishery Conservation and Management Act. Regulations governing fishing by U.S. vessels in accordance with the FMP appear at subpart H of 50 CFR part 600 and 50 CFR part 679.

The A season allowance of the 2022 Pacific cod TAC apportioned to catcher/processors using HAL gear in the Western Regulatory Area of the GOA is 732 metric tons (mt) as established by the final 2022 and 2023 harvest specifications for groundfish in the GOA (87 FR 11599, March 2, 2022).

In accordance with § 679.20(d)(1)(i), the Regional Administrator has determined that the A season allowance of the 2022 Pacific cod TAC apportioned to catcher/processors using HAL gear in the Western Regulatory Area of the GOA will soon be reached. Therefore, the Regional Administrator is establishing a directed fishing allowance of 722 mt and is setting aside the remaining 10 mt as bycatch to support other anticipated groundfish fisheries. In accordance with § 679.20(d)(1)(iii), the Regional Administrator finds that this directed fishing allowance has been reached. Consequently, NMFS is prohibiting directed fishing for Pacific cod by catcher/processors using HAL gear in the Western Regulatory Area of the GOA.

While this closure is effective the maximum retainable amounts at § 679.20(e) and (f) apply at any time during a trip.

**Classification**

NMFS issues this action pursuant to section 305(d) of the Magnuson-Stevens Act. This action is required by 50 CFR part 679, which was issued pursuant to

section 304(b), and is exempt from review under Executive Order 12866.

Pursuant to 5 U.S.C. 553(b)(B), there is good cause to waive prior notice and an opportunity for public comment on this action, as notice and comment would be impracticable and contrary to the public interest, as it would prevent NMFS from responding to the most recent fisheries data in a timely fashion and would delay the closure of Pacific cod by catcher/processors using HAL

gear in the Western Regulatory Area of the GOA. NMFS was unable to publish a notice providing time for public comment because the most recent, relevant data only became available as of March 22, 2022.

The Assistant Administrator for Fisheries, NOAA also finds good cause to waive the 30-day delay in the effective date of this action under 5 U.S.C. 553(d)(3). This finding is based upon the reasons provided above for

waiver of prior notice and opportunity for public comment.

**Authority:** 16 U.S.C. 1801 *et seq.*

Dated: March 23, 2022.

**Ngagne Jafnar Gueye,**

*Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.*

[FR Doc. 2022-06459 Filed 3-23-22; 4:15 pm]

**BILLING CODE 3510-22-P**

# Proposed Rules

Federal Register

Vol. 87, No. 59

Monday, March 28, 2022

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

## DEPARTMENT OF TRANSPORTATION

### Federal Aviation Administration

#### 14 CFR Part 39

[Docket No. FAA-2022-0380; Project Identifier MCAI-2021-01178-T]

RIN 2120-AA64

### Airworthiness Directives; Airbus SAS Airplanes

**AGENCY:** Federal Aviation Administration (FAA), DOT.

**ACTION:** Notice of proposed rulemaking (NPRM).

**SUMMARY:** The FAA proposes to adopt a new airworthiness directive (AD) for certain Airbus SAS Model A330-200 series airplanes, Model A330-200 Freighter series airplanes, and Model A330-300 series airplanes. This proposed AD was prompted by a determination that certain service information specified in AD 2018-20-19 contained instructions that could be misleading, resulting in a necessary inspection not being accomplished on certain airplanes. This proposed AD would require a rototest for certain modified airplanes for any crack around the right-side upper and lower bulk door support or door latch fitting holes at certain bulk cargo door frames, or repetitive inspections for any crack at certain fittings, and on-condition actions, as specified in a European Union Aviation Safety Agency (EASA) AD, which is proposed for incorporation by reference. The FAA is proposing this AD to address the unsafe condition on these products.

**DATES:** The FAA must receive comments on this proposed AD by May 12, 2022.

**ADDRESSES:** You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to <https://www.regulations.gov>. Follow the instructions for submitting comments.
- *Fax:* 202-493-2251.

- *Mail:* U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE, Washington, DC 20590.

- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For material that will be incorporated by reference (IBR) in this AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email [ADs@easa.europa.eu](mailto:ADs@easa.europa.eu); internet [www.easa.europa.eu](http://www.easa.europa.eu). You may find this material on the EASA website at <https://ad.easa.europa.eu>.

#### Examining the AD Docket

You may examine the AD docket at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2022-0380; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The street address for Docket Operations is listed above.

**FOR FURTHER INFORMATION CONTACT:** Vladimir Ulyanov, Aerospace Engineer, Large Aircraft Section, FAA, International Validation Branch, 2200 South 216th St., Des Moines, WA 98198; telephone and fax 206-231-3229; email [vladimir.ulyanov@faa.gov](mailto:vladimir.ulyanov@faa.gov).

#### SUPPLEMENTARY INFORMATION:

##### Comments Invited

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under **ADDRESSES**. Include "Docket No. FAA-2022-0380; Project Identifier MCAI-2021-01178-T" at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to [https://](https://www.regulations.gov)

[www.regulations.gov](http://www.regulations.gov), including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this NPRM.

#### Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as "PROPIN." The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to Vladimir Ulyanov, Aerospace Engineer, Large Aircraft Section, FAA, International Validation Branch, 2200 South 216th St., Des Moines, WA 98198; telephone and fax 206-231-3229; email [vladimir.ulyanov@faa.gov](mailto:vladimir.ulyanov@faa.gov). Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

#### Background

EASA, which is the Technical Agent for the Member States of the European Union, has issued EASA AD 2021-0233, dated October 27, 2021 (EASA AD 2021-0233) (also referred to as the MCAI), to correct an unsafe condition for certain Airbus SAS Model A330-200 series airplanes, Model A330-200 Freighter series airplanes, and Model A330-300 series airplanes.

This proposed AD was prompted by a determination that tartaric sulfuric anodizing (TSA)/chromic acid anodizing (CAA) surface treatment in the door fitting attachment holes leads to a detrimental effect on fatigue behavior; and that certain service information specified in AD 2018-20-19, Amendment 39-19453 (83 FR 52126, October 16, 2018) (AD 2018-20-19) contains instructions that could be misleading, resulting in a necessary inspection not being accomplished on certain airplanes. The potentially

misleading instructions are for an optional action, and apply only to model A330-200, A330-200 Freighter, and A330-300 airplanes, therefore this AD does not propose to supersede AD 2018-20-19. The FAA is proposing this AD to address possible fatigue cracks in the bulk cargo door frames, caused by TSA/CAA surface treatment in frame (FR) 67 and FR 69 bulk cargo door frame attachment holes. Cracks in the bulk cargo door frames can cause the in-flight loss of a bulk cargo door, damage to the airplane, and subsequent reduced control of the airplane. See the MCAI for additional background information.

AD 2018-20-19 superseded AD 2017-16-07, Amendment 39-18984 (82 FR 41874, September 5, 2017) (AD 2017-16-07), and applies to certain Airbus SAS Model A330-200 series airplanes, Model A330-200 Freighter series airplanes, Model A330-300 series airplanes, Model A340-200 series airplanes, and Model A340-300 series airplanes. AD 2018-20-19 was prompted by a determination that only airplanes having manufacturer serial numbers (MSNs) 0400 through 1779 inclusive are affected by TSA/CAA surface treatment in the door fitting attachment holes, and that airplanes having MSNs 0001 through 0399 inclusive were excluded from AD 2017-16-07. AD 2018-20-19 requires new inspections of certain attachment holes for residual surface treatment and cracking, and corrective action if necessary; and provides an optional terminating action for the inspections. Since AD 2018-20-09 was issued, it was determined that the service bulletin used for the optional modification on certain airplanes, Airbus Service Bulletin A330-53-3275, dated September 8, 2017, contained instructions that could be misleading. As a result, the special detailed inspection (rototest inspection) that was intended to be accomplished prior to accomplishing the optional modification may not have been accomplished on all airplanes. This proposed AD would therefore require a rototest for any crack around the holes at the holes of the upper and lower door support fittings of FR67 and FR69 on the right hand side and the holes at door latch fittings of FR69 on the right hand

side, or repetitive detailed inspections for cracks of the frame around the fittings, or high frequency eddy current (HFEC) and ultrasonic inspections of the upper door supper fitting holes and rototests of the lower door fitting holes of the door latch fittings at FR69, and on-condition actions.

These proposed actions would be required for Airbus SAS Model A330-200 series airplanes, Model A330-200 Freighter series airplanes, and Model A330-300 series airplanes, MSN 1 through 1779 inclusive, on which Airbus Service Bulletin A330-53-3275 was embodied, except those airplanes on which during the embodiment of that service bulletin the rototest inspection was accomplished with no defect detected or any defects corrected, as applicable, as specified in Airbus Service Bulletin A330-53-3275.

**Related Service Information Under 1 CFR Part 51**

EASA AD 2021-0233 specifies procedures for a rototest for any crack around the holes at the upper and lower door support fittings of frame (FR)67 and FR69 right hand side and the holes at door latch fitting of FR69 right hand side; or repetitive detailed inspections of the frame around the fittings, or HFEC and ultrasonic inspections of the upper door supper fitting holes and rototests of the lower door fitting holes of the door latch fittings at FR69 for any crack; and on-condition actions. On-condition actions include installing new (never installed on an airplane) bushes to the latch fittings of FR69 and repair, and a rototest of the support fittings and the frame holes at FR67.

This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the ADDRESSES section.

**FAA’s Determination**

These products have been approved by the aviation authority of another country and are approved for operation in the United States. Pursuant to the FAA’s bilateral agreement with the State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA is issuing this NPRM after determining

that the unsafe condition described previously is likely to exist or develop in other products of these same type designs.

**Proposed AD Requirements in this NPRM**

This proposed AD would require accomplishing the actions specified in EASA AD 2021-0233 described previously, except for any differences identified as exceptions in the regulatory text of this proposed AD.

**Explanation of Required Compliance Information**

In the FAA’s ongoing efforts to improve the efficiency of the AD process, the FAA developed a process to use some civil aviation authority (CAA) ADs as the primary source of information for compliance with requirements for corresponding FAA ADs. The FAA has been coordinating this process with manufacturers and CAAs. As a result, the FAA proposes to incorporate EASA AD 2021-0233 by reference in the FAA final rule. This proposed AD would, therefore, require compliance with EASA AD 2021-0233 in its entirety through that incorporation, except for any differences identified as exceptions in the regulatory text of this proposed AD. Using common terms that are the same as the heading of a particular section in EASA AD 2021-0233 does not mean that operators need comply only with that section. For example, where the AD requirement refers to “all required actions and compliance times,” compliance with this AD requirement is not limited to the section titled “Required Action(s) and Compliance Time(s)” in EASA AD 2021-0233. Service information required by EASA AD 2021-0233 for compliance will be available at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2022-0380 after the FAA final rule is published.

**Costs of Compliance**

The FAA estimates that this proposed AD would affect 109 airplanes of U.S. registry. The FAA estimates the following costs to comply with this proposed AD:

**ESTIMATED COSTS FOR REQUIRED ACTIONS**

Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Up to 15 work-hours × \$85 per hour = \$1,275 .....	\$0	Up to \$1,275 .....	Up to \$138,975.

The FAA estimates the following costs to do any necessary on-condition action that would be required based on

the results of any required or optional actions. The FAA has no way of

determining the number of aircraft that might need this on-condition action:

ESTIMATED COSTS OF ON-CONDITION ACTIONS

Labor cost	Parts cost	Cost per product
3 work-hours × \$85 per hour = \$255 .....	\$1,915	\$2,340

The FAA has received no definitive data on which to base the cost estimates for the repairs specified in this proposed AD.

**Authority for This Rulemaking**

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency’s authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

**Regulatory Findings**

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

- (1) Is not a “significant regulatory action” under Executive Order 12866,
- (2) Would not affect intrastate aviation in Alaska, and
- (3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

**List of Subjects in 14 CFR Part 39**

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

**The Proposed Amendment**

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

**PART 39—AIRWORTHINESS DIRECTIVES**

■ 1. The authority citation for part 39 continues to read as follows:

**Authority:** 49 U.S.C. 106(g), 40113, 44701.

**§ 39.13 [Amended]**

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

**Airbus SAS:** Docket No. FAA–2022–0380; Project Identifier MCAI–2021–01178–T.

**(a) Comments Due Date**

The FAA must receive comments on this airworthiness directive (AD) by May 12, 2022.

**(b) Affected ADs**

None.

**(c) Applicability**

This AD applies to the Airbus SAS airplanes identified in paragraphs (c)(1) through (3) of this AD, certificated in any category, as identified in European Union Aviation Safety Agency (EASA) AD 2021–0233, dated October 27, 2021 (EASA AD 2021–0233).

(1) Model A330–201, –202, –203, –223, and –243 airplanes.

(2) Model A330–223F and –243F airplanes.

(3) Model A330–301, –302, –303, –321, –322, –323, –341, –342, and –343 airplanes.

**(d) Subject**

Air Transport Association (ATA) of America Code 53, Fuselage.

**(e) Unsafe Condition**

This AD was prompted by a determination that tartaric sulfuric anodizing (TSA)/chromic acid anodizing (CAA) surface treatment in the door fitting attachment holes leads to a detrimental effect on fatigue behavior; and that certain service information specified in AD 2018–20–19 contains instructions that could be misleading, resulting in a necessary inspection not being accomplished on certain airplanes. The FAA is issuing this AD to address possible fatigue cracks in the bulk cargo door frames, caused by TSA/CAA surface treatment in frame (FR) 67 and FR 69 cargo door frame attachment holes. Cracks in the bulk cargo door frames

can cause the in-flight loss of a bulk cargo door, damage to the airplane, and subsequent reduced control of the airplane.

**(f) Compliance**

Comply with this AD within the compliance times specified, unless already done.

**(g) Requirements**

Except as specified in paragraph (h) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, EASA AD 2021–0233.

**(h) Exceptions to EASA AD 2021–0233**

(1) Where EASA AD 2021–0233 refers to its effective date, this AD requires using the effective date of this AD.

(2) The “Remarks” section of EASA AD 2021–0233 does not apply to this AD.

(3) Where paragraph (4) of EASA AD 2021–0233 specifies to “accomplish those instructions accordingly” if discrepancies are detected, for this AD a discrepancy is any crack, and if any cracking is detected, the cracking must be repaired before further flight using a method approved by the Manager, Large Aircraft Section, International Validation Branch, FAA; or EASA; or Airbus SAS’s EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(4) Where paragraph (4) of EASA AD 2021–0233 specifies to “contact Airbus for approved repair instructions,” for this AD use “accomplish corrective actions in accordance with the instructions of the SB and contact the Manager, Large Aircraft Section, International Validation Branch, FAA; or EASA; or Airbus SAS’s EASA DOA for approved repair instructions. If approved by the DOA, the approval must include the DOA-authorized signature”

(5) Although the service information referenced in EASA AD 2021–0233 specifies to do a check of the aircraft records for accomplishment of certain service information, and specifies that action as “RC,” (required for compliance), this AD does not include that requirement.

(6) Where the Applicability section of EASA AD 2021–0233 refers to “defects,” for this AD “defects” are cracks.

**(i) No Reporting Requirement**

Although the service information referenced in EASA AD 2021–0233 specifies to submit certain information to the manufacturer, this AD does not include that requirement.

**(j) Additional AD Provisions**

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs)*: The Manager, Large Aircraft Section, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the Large Aircraft Section, International Validation Branch, send it to the attention of the person identified in paragraph (k)(2) of this AD. Information may be emailed to: [9-AVS-AIR-730-AMOC@faa.gov](mailto:9-AVS-AIR-730-AMOC@faa.gov). Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(2) *Contacting the Manufacturer*: For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, Large Aircraft Section, International Validation Branch, FAA; or EASA; or Airbus SAS's EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(3) *Required for Compliance (RC)*: Except as required by paragraphs (h)(3) and (4), (i), and (j)(2) of this AD, if any service information contains procedures or tests that are identified as RC, those procedures and tests must be done to comply with this AD; any procedures or tests that are not identified as RC are recommended. Those procedures and tests that are not identified as RC may be deviated from using accepted methods in accordance with the operator's maintenance or inspection program without obtaining approval of an AMOC, provided the procedures and tests identified as RC can be done and the airplane can be put back in an airworthy condition. Any substitutions or changes to procedures or tests identified as RC require approval of an AMOC.

**(k) Related Information**

(1) For EASA AD 2021-0233, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email [ADs@easa.europa.eu](mailto:ADs@easa.europa.eu); Internet [www.easa.europa.eu](http://www.easa.europa.eu). You may find this EASA AD on the EASA website at <https://ad.easa.europa.eu>. You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206-231-3195. This material may be found in the AD docket at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2022-0380.

(2) For more information about this AD, contact Vladimir Ulyanov, Aerospace Engineer, Large Aircraft Section, FAA, International Validation Branch, 2200 South 216th St., Des Moines, WA 98198; telephone and fax 206-231-3229; email [vladimir.ulyanov@faa.gov](mailto:vladimir.ulyanov@faa.gov).

Issued on March 22, 2022.

**Lance T. Gant,**

*Director, Compliance & Airworthiness Division, Aircraft Certification Service.*

[FR Doc. 2022-06392 Filed 3-25-22; 8:45 am]

**BILLING CODE 4910-13-P**

**DEPARTMENT OF TRANSPORTATION****Federal Aviation Administration****14 CFR Part 39**

**[Docket No. FAA-2022-0294; Project Identifier MCAI-2021-00550-R]**

**RIN 2120-AA64**

**Airworthiness Directives; Airbus Helicopters Deutschland GmbH (AHD) Helicopters**

**AGENCY:** Federal Aviation Administration (FAA), DOT.

**ACTION:** Notice of proposed rulemaking (NPRM).

**SUMMARY:** The FAA proposes to adopt a new airworthiness directive (AD) for all Airbus Helicopters Deutschland GmbH (AHD) Model MBB-BK117 A-1, MBB-BK117 A-3, MBB-BK117 A-4, MBB-BK117 B-1, MBB-BK117 B-2, MBB-BK117 C-1, MBB-BK117 C-2, and MBB-BK117 D-2 helicopters. This proposed AD was prompted by the FAA's determination that aging of the elastomeric material of certain tension torsion straps (TT-Straps), during the period since manufacturing date up to first flight on a helicopter, may affect its structural characteristics. This proposed AD would require the replacement of certain TT-Straps, implementation of storage life limits for TT-Straps, a prohibition on installing certain TT-Straps and conditions for installation of certain other TT-Straps, as specified in a European Union Aviation Safety Agency (EASA) AD, which is proposed for incorporation by reference (IBR). The FAA is proposing this AD to address the unsafe condition on these products.

**DATES:** The FAA must receive comments on this proposed AD by May 12, 2022.

**ADDRESSES:** You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to <https://www.regulations.gov>. Follow the instructions for submitting comments.
- *Fax:* (202) 493-2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5

p.m., Monday through Friday, except Federal holidays.

For EASA material that is proposed for IBR in this AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; phone: +49 221 8999 000; email: [ADs@easa.europa.eu](mailto:ADs@easa.europa.eu); internet: [www.easa.europa.eu](http://www.easa.europa.eu). You may find the EASA material on the EASA website at <https://ad.easa.europa.eu>. You may view this material at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy., Room 6N-321, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call (817) 222-5110. The EASA material is also available at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2022-0294.

**Examining the AD Docket**

You may examine the AD docket at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2022-0294; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, the EASA AD, any comments received, and other information. The street address for Docket Operations is listed above.

**FOR FURTHER INFORMATION CONTACT:**

Kristi Bradley, Program Manager, COS Program Management Section, Operational Safety Branch, Compliance & Airworthiness Division, FAA, 10101 Hillwood Pkwy., Fort Worth, TX 76177; phone: (817) 222-5110; email: [kristin.bradley@faa.gov](mailto:kristin.bradley@faa.gov).

**SUPPLEMENTARY INFORMATION:****Comments Invited**

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under **ADDRESSES**. Include "Docket No. FAA-2022-0294; Project Identifier MCAI-2021-00550-R" at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to <https://www.regulations.gov>, including any personal information you provide. The

agency will also post a report summarizing each substantive verbal contact received about this NPRM.

**Confidential Business Information**

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as “PROPIN.” The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to Kristi Bradley, Program Manager, COS Program Management Section, Operational Safety Branch, Compliance & Airworthiness Division, FAA, 10101 Hillwood Pkwy., Fort Worth, TX 76177; phone: (817) 222-5110; email: [kristin.bradley@faa.gov](mailto:kristin.bradley@faa.gov). Any commentary that the FAA receives that is not specifically designated as CBI will be placed in the public docket for this rulemaking.

**Background**

EASA, which is the Technical Agent for the Member States of the European Union, has issued EASA AD 2021-0122, dated May 6, 2021 (EASA AD 2021-0122), to correct an unsafe condition for all Airbus Helicopters Deutschland GmbH (AHD) (formerly Eurocopter Deutschland GmbH, Eurocopter Hubschrauber GmbH, Messerschmitt-Bölkow-Blohm GmbH; Airbus Helicopters Inc., formerly American Eurocopter LLC) Model MBB-BK117 A-1, MBB-BK117 A-3, MBB-BK117 A-4,

MBB-BK117 B-1, MBB-BK117 B-2, MBB-BK117 C-1, MBB-BK117 C-2, and MBB-BK117 D-2 helicopters.

This proposed AD was prompted by a determination that aging of the elastomeric material of certain TT-Straps, during the period since manufacturing date up to first flight on a helicopter, may affect its structural characteristics. The FAA is proposing this AD to address aging of the elastomeric material of certain TT-Straps, which could lead to premature failure of a TT-Strap, possibly resulting in loss of control of the helicopter. See EASA AD 2021-0122 for additional background information.

**Related Service Information Under 1 CFR Part 51**

EASA AD 2021-0122 requires the replacement of certain TT-straps, implementation of storage life limits for TT-Straps since cure date, a prohibition on installing certain TT-Straps, and provides conditions for installation of certain other TT-Straps. This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the ADDRESSES section.

**FAA’s Determination**

These helicopters have been approved by EASA and are approved for operation in the United States. Pursuant to the FAA’s bilateral agreement with the European Union, EASA has notified the FAA about the unsafe condition described in its AD. The FAA is proposing this AD after evaluating all known relevant information and determining that the unsafe condition described previously is likely to exist or develop on other helicopters of the same type design.

**Proposed AD Requirements in This NPRM**

This proposed AD would require accomplishing the actions specified in EASA AD 2021-0122, described

previously, as incorporated by reference, except for any differences identified as exceptions in the regulatory text of this proposed AD.

**Explanation of Required Compliance Information**

In the FAA’s ongoing efforts to improve the efficiency of the AD process, the FAA developed a process to use some civil aviation authority (CAA) ADs as the primary source of information for compliance with requirements for corresponding FAA ADs. The FAA has been coordinating this process with manufacturers and CAAs. As a result, the FAA proposes to incorporate EASA AD 2021-0122 by reference in the FAA final rule. This proposed AD would, therefore, require compliance with EASA AD 2021-0122 in its entirety through that incorporation, except for any differences identified as exceptions in the regulatory text of this proposed AD. Using common terms that are the same as the heading of a particular section in EASA AD 2021-0122 does not mean that operators need comply only with that section. For example, where the AD requirement refers to “all required actions and compliance times,” compliance with this AD requirement is not limited to the section titled “Required Action(s) and Compliance Time(s)” in EASA AD 2021-0122. Service information referenced in EASA AD 2021-0122 for compliance will be available at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2022-0294 after the FAA final rule is published.

**Costs of Compliance**

The FAA estimates that this AD, if adopted as proposed, would affect 213 helicopters of U.S. Registry. Labor rates are estimated at \$85 per work-hour. Based on these numbers, the FAA estimates the following costs to comply with this proposed AD.

**ESTIMATED COSTS**

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Replace the TT-Strap .....	5 work-hours × \$85 per hour = \$425 .....	\$4,800	\$5,225	\$1,112,925

**Authority for This Rulemaking**

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more

detail the scope of the Agency’s authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, part A, subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA

with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an

unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

### Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

- (1) Is not a “significant regulatory action” under Executive Order 12866,
- (2) Would not affect intrastate aviation in Alaska, and
- (3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

### List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

### The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

## PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

**Authority:** 49 U.S.C. 106(g), 40113, 44701.

### § 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

#### Airbus Helicopters Deutschland GmbH

(AHD): Docket No. FAA–2022–0294; Project Identifier MCAI–2021–00550–R.

#### (a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) by May 12, 2022.

#### (b) Affected ADs

None.

#### (c) Applicability

This AD applies to all Airbus Helicopters Deutschland GmbH (AHD) MBB–BK117 A–1, MBB–BK117 A–3, MBB–BK117 A–4, MBB–BK117 B–1, MBB–BK117 B–2, MBB–BK117 C–1, MBB–BK117 C–2, and MBB–BK117 D–2 helicopters, certificated in any category.

#### (d) Subject

Joint Aircraft Service Component (JASC) Code: 6200, Main Rotor System.

#### (e) Unsafe Condition

This AD was prompted by the FAA’s determination that aging of the elastomeric material of certain tension torsion straps (TT-Straps), during the period since manufacturing date up to first flight on a helicopter, may affect its structural characteristics. The FAA is issuing this AD to address aging of the elastomeric material of certain TT-Straps. The unsafe condition, if not addressed, could result in premature failure of a TT-Strap, possibly resulting in loss of control of the helicopter.

#### (f) Compliance

Comply with this AD within the compliance times specified, unless already done.

#### (g) Requirements

Except as specified in paragraph (h) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, European Union Aviation Safety Agency (EASA) AD 2021–0122, dated May 6, 2021 (EASA AD 2021–0122).

#### (h) Exceptions to EASA AD 2021–0122

(1) Where EASA AD 2021–0122 refers to its effective date, this AD requires using the effective date of this AD.

(2) Where EASA AD 2021–0122 specifies the “cure date” of a TT-Strap, the cure date can be determined using the information provided in the service information specified in EASA AD 2021–0122, or contacting Airbus Helicopters Deutschland GmbH for applicable instructions. If the option of contacting Airbus Helicopters Deutschland GmbH for instructions is chosen, those instructions must be approved by the Manager, General Aviation & Rotorcraft Section, International Validation Branch, FAA; or EASA; or Airbus Helicopters’ EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(3) This AD does not mandate compliance with the “Remarks” section of EASA AD 2021–0122.

(4) Where the service information referenced in EASA AD 2021–0122 specifies scrapping a part, this AD requires removing that part from service.

(5) Where paragraph (1) of EASA AD 2021–0122 specifies to replace each Lord TT-Strap and Bendix TT-Strap “in accordance with the instructions of the applicable ASB,” for this AD, the replacement must be done using FAA-approved procedures.

(6) Where EASA AD 2021–0122 refers to the airworthiness limitations items of the aircraft maintenance manual (AMM) for the definition of service life limit (SLL), this AD requires using the life limits specified in paragraphs (h)(6)(i) through (iii) of this AD, as applicable.

(i) For Bendix TT-Strap P/N 2604067 and P/N 117–14110: Before 10 years or 25,000 flight cycles on the part, whichever occurs first.

(ii) For Lord TT-Strap P/N J17322–1 and P/N 117–14111: Before 12 years or 40,000 flight cycles on the part, whichever occurs first.

(iii) For Lord TT-Strap P/N B622M10T1001: Before 12 years or 30,000

flight cycles on the part, whichever occurs first.

(7) Where table 1 of EASA AD 2021–0122 specifies a compliance time of “During the next helicopter periodical inspection or within 2 months, whichever occurs later after the effective date of this AD, but not exceeding the SLL,” for this AD, the compliance time is “Within 2 months after the effective date of this AD but not exceeding the applicable SLL specified in paragraphs (h)(6)(i) through (iii) of this AD.

#### (i) Special Flight Permit

Special flight permits, as described in 14 CFR 21.197 and 21.199, are not allowed.

#### (j) Alternative Methods of Compliance (AMOCs)

(1) The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the International Validation Branch, send it to the attention of the person identified in paragraph (k)(2) of this AD. Information may be emailed to: 9-AVS-AIR-730-AMOC@faa.gov.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

#### (k) Related Information

(1) For EASA AD 2021–0122, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; phone: +49 221 8999 000; email: [ADs@easa.europa.eu](mailto:ADs@easa.europa.eu); internet: [www.easa.europa.eu](http://www.easa.europa.eu). You may find the EASA material on the EASA website at <https://ad.easa.europa.eu>. You may view this material at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy., Room 6N–321, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call (817) 222–5110. This material may be found in the AD docket at <https://www.regulations.gov> by searching for and locating Docket No. FAA–2022–0294.

(2) For more information about this AD, contact Kristi Bradley, Program Manager, COS Program Management Section, Operational Safety Branch, Compliance & Airworthiness Division, FAA, 10101 Hillwood Pkwy., Fort Worth, TX 76177; phone: (817) 222–5110; email: [kristin.bradley@faa.gov](mailto:kristin.bradley@faa.gov).

Issued on March 22, 2022.

#### Lance T. Gant,

Director, Compliance & Airworthiness Division, Aircraft Certification Service.

[FR Doc. 2022–06358 Filed 3–25–22; 8:45 am]

BILLING CODE 4910–13–P

**DEPARTMENT OF TRANSPORTATION****Federal Aviation Administration****14 CFR Part 39**

[Docket No. FAA-2022-0293; Project Identifier MCAI-2021-01125-G]

RIN 2120-AA64

**Airworthiness Directives; Alexander Schleicher GmbH & Co. Segelflugzeugbau Gliders**

**AGENCY:** Federal Aviation Administration (FAA), DOT.

**ACTION:** Notice of proposed rulemaking (NPRM).

**SUMMARY:** The FAA proposes to supersede Airworthiness Directive (AD) 75-23-03, which applies to all Alexander Schleicher GmbH & Co. Segelflugzeugbau (Alexander Schleicher) Model Ka2B, Ka 6, Ka 6 B, Ka 6 BR, Ka 6 C, Ka 6 CR, K 7, K 8, and AS-K 13 gliders. AD 75-23-03 requires visually inspecting the glue joint between the elevator nose rib number 1 and the nose plywood skin and replacing the glue joint if insufficient glue adhesion is found. Since the FAA issued AD 75-23-03, the European Union Aviation Safety Agency (EASA) superseded prior EASA ADs for the unsafe condition on these products. This proposed AD would add the Model K 8 B gliders to the applicability and would require repetitively inspecting the glue joint at elevator rib number 1 and repairing any damage found. The FAA is proposing this AD to address the unsafe condition on these products.

**DATES:** The FAA must receive comments on this proposed AD by May 12, 2022.

**ADDRESSES:** You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to <https://www.regulations.gov>. Follow the instructions for submitting comments.

- *Fax:* (202) 493-2251.

- *Mail:* U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE, Washington, DC 20590.

- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this NPRM, contact Alexander Schleicher GmbH & Co. Segelflugzeugbau, Alexander-Schleicher-Str. 1, Poppenhausen, Germany D-36163; phone: +49 (0) 06658 89-0; email: [info@alexander-schleicher.de](mailto:info@alexander-schleicher.de);

website: <https://www.alexander-schleicher.de>. You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 901 Locust, Kansas City, MO 64106. For information on the availability of this material at the FAA, call (817) 222-5110.

**Examining the AD Docket**

You may examine the AD docket at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2022-0293; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, the MCAI, any comments received, and other information. The street address for Docket Operations is listed above.

**FOR FURTHER INFORMATION CONTACT:** Jim Rutherford, Aviation Safety Engineer, General Aviation & Rotorcraft Section, International Validation Branch, FAA, 901 Locust, Room 301, Kansas City, MO 64106; phone: (816) 329-4165; email: [jim.rutherford@faa.gov](mailto:jim.rutherford@faa.gov).

**SUPPLEMENTARY INFORMATION:**

**Comments Invited**

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under **ADDRESSES**. Include “Docket No. FAA-2022-0293; Project Identifier MCAI-2021-01125-G” at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend the proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to <https://www.regulations.gov>, including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this NPRM.

**Confidential Business Information**

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as

private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as “PROPIN.” The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to Jim Rutherford, Aviation Safety Engineer, General Aviation & Rotorcraft Section, International Validation Branch, 901 Locust, Room 301, Kansas City, MO 64106. Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

**Background**

The FAA issued AD 75-23-03, Amendment 39-2414 (40 FR 50706, October 31, 1975) (AD 75-23-03) for all Alexander Schleicher Model Ka2B, Ka 6, Ka 6 B, Ka 6 BR, Ka 6 C, Ka 6 CR, K 7, K 8, and AS-K 13 gliders. AD 75-23-03 was prompted by mandatory continuing airworthiness information (MCAI) originated by Luftfahrt-Bundesamt (LBA), which, at the time, was the airworthiness authority for Germany. AD 75-23-03 requires a one-time inspection of the glue joint at elevator rib number 1 for glue adhesion and repair if necessary.

**Actions Since AD 75-23-03 Was Issued**

Since the FAA issued AD 75-23-03, EASA, which is the Technical Agent for the Member States of the European Union, superseded LBA’s prior AD on this unsafe condition and issued EASA AD 2021-0230, dated October 14, 2021, (referred to after this as “the MCAI”), for Alexander Schleicher GmbH & Co. Segelflugzeugbau Model AS-K 13, ASK 16, ASK 16B, ASK 18, ASK 18 B, K 8, K 8 B, K 8 C, K 7, Ka 6, Ka 6 B, Ka 6 BR, Ka 6 C, Ka 6 CR, and Ka 6 sailplanes (gliders). The MCAI states:

An occurrence was reported of structural failure of an elevator during winch launching of a K 7 sailplane. Subsequent investigation results determined that the occurrence was due to damaged glue of the elevator’s rib No. 1.

This condition, if not detected and corrected, could affect the structural integrity of an elevator, possibly resulting in reduced control of the aeroplane.

To address this potential unsafe condition, Schleicher issued the glued joint inspection TN [Technical Note], as defined in this [EASA] AD, to provide inspection instructions and LBA Germany issued AD 72-7 (later revised) to require those actions.

Since that [LBA Germany] AD was issued, additional similar occurrences were reported of structural elevator failure, also on

(powered) sailplanes originally not affected by LBA 72-7/3. Prompted by this development, Schleicher issued the applicable TN, providing inspections instructions for all (powered) sailplanes having an elevator of a similar design and making the inspections dependent also on the number of take-offs.

For the reason described above, this [EASA] AD supersedes LBA Germany AD 72-7/3 [dated December 13, 1989] and requires repetitive inspections of the elevator and, depending on findings, accomplishment of applicable corrective action(s).

You may examine the MCAI in the AD docket at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2022-0293.

### Related Service Information Under 14 CFR Part 51

The FAA reviewed Alexander Schleicher GmbH & Co. Segelflugzeugbau Appendix 01-2021, Flight and Operating Manual, dated March 1, 2021. This service information specifies procedures for protecting the glider from moisture and repetitively inspecting the glue joint between elevator rib number 1 and the plywood skin.

This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the ADDRESSES section.

### FAA's Determination

This product has been approved by the aviation authority of another country, and is approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI and service information referenced above. The FAA is issuing this NPRM after determining the unsafe condition described previously is likely to exist or develop on other products of the same type design.

### Proposed AD Requirements in This NPRM

This proposed AD would supersede AD 75-23-03 without retaining any of its actions. This proposed AD would require repetitively inspecting the glue joint between elevator rib number 1 and the plywood skin and repairing if necessary. This proposed AD would also add Model K 8 B gliders to the applicability.

### Differences Between This Proposed AD and the MCAI

The MCAI applies to Model ASK 16, ASK 16B, ASK 18, ASK 18 B, K 8 C, and

Ka % gliders and this proposed AD would not because they do not have an FAA type certificate.

This proposed AD would include the Model Ka2B glider whereas the MCAI does not.

Although the technical notes required by the MCAI specify to report findings of damage to the manufacturer, this proposed AD would not require that action.

### Costs of Compliance

The FAA estimates that this AD, if adopted as proposed, would affect 83 gliders of U.S. registry. The FAA also estimates that it would take 4 work-hours per glider to inspect the glue joint at elevator rib number 1 and would require parts costing \$50. The average labor rate is \$85 per work-hour.

Based on these figures, the FAA estimates the cost on U.S. operators to be \$32,370 or \$390 per glider, per inspection cycle.

The FAA estimates that replacing the glue joint, if necessary, would take 8 work-hours and would require parts costing \$250 for an estimated cost of \$930 per glider. The FAA has no way of determining the number of gliders that may need this action.

### Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, Section 106, describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

### Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that the proposed regulation:

(1) Is not a "significant regulatory action" under Executive Order 12866,

(2) Would not affect intrastate aviation in Alaska, and

(3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

### List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

### The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

### PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

**Authority:** 49 U.S.C. 106(g), 40113, 44701.

#### § 39.13 [Amended]

- 2. The FAA amends § 39.13 by:
  - a. Removing Airworthiness Directive 75-23-03, Amendment 39-2414 (40 FR 50706, October 31, 1975), and
  - b. Adding the following new airworthiness directive:

#### Alexander Schleicher GmbH & Co.

**Segelflugzeugbau:** Docket No. FAA-2022-0293; Project Identifier MCAI-2021-01125-G.

#### (a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) by May 12, 2022.

#### (b) Affected ADs

This AD replaces AD 75-23-03, Amendment 39-2414 (40 FR 50706, October 31, 1975).

#### (c) Applicability

This AD applies to Alexander Schleicher GmbH & Co. Segelflugzeugbau Model Ka2B, Ka 6, Ka 6 B, Ka 6 BR, Ka 6 C, Ka 6 CR, K 7, K 8, K 8 B, and AS-K 13 gliders, all serial numbers, certificated in any category.

#### (d) Subject

Joint Aircraft System Component (JASC) Code 5521, Elevator, Spar/Rib Structure.

#### (e) Unsafe Condition

This AD was prompted by mandatory continuing airworthiness information (MCAI) originated by an aviation authority of another country to identify and correct an unsafe condition on an aviation product. The MCAI describes the unsafe condition as structural failure of an elevator during winch launching. The FAA is issuing this AD to

prevent structural failure of an elevator, which could lead to loss of glider control.

#### (f) Compliance

Comply with this AD within the compliance times specified, unless already done.

#### (g) Actions

Within 30 days after the effective date of this AD and thereafter at intervals not to exceed 12 months or 500 flight cycles, whichever occurs first, inspect the glue joint between elevator rib number 1 and the plywood skin for damage by following section 3 of Alexander Schleicher GmbH & Co. Segelflugzeugbau Appendix 01–2021, Flight and Operating Manual, dated March 1, 2021. For purposes of this AD, a flight cycle would be counted anytime the glider launches and then lands. If there is any damage on the glue joint, repair before further flight.

#### (h) Alternative Methods of Compliance (AMOCs)

(1) The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the International Validation Branch, send it to the attention of the person identified in paragraph (i)(1) of this AD and email to: [9-AVS-AIR-730-AMOC@faa.gov](mailto:9-AVS-AIR-730-AMOC@faa.gov).

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

#### (i) Related Information

(1) For more information about this AD, contact Jim Rutherford, Aviation Safety Engineer, General Aviation & Rotorcraft Section, International Validation Branch, FAA, 901 Locust, Room 301, Kansas City, MO 64106; phone: (816) 329-4165; email: [jim.rutherford@faa.gov](mailto:jim.rutherford@faa.gov).

(2) Refer to European Union Aviation Safety Agency (EASA) AD 2021-0230, dated October 14, 2021, for related information. You may examine the EASA AD in the AD docket at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2022-0293.

(3) For service information identified in this AD, contact Alexander Schleicher GmbH & Co. Segelflugzeugbau, Alexander-Schleicher-Str. 1, Poppenhausen, Germany D-36163; phone: +49 (0) 06658 89-0; email: [info@alexander-schleicher.de](mailto:info@alexander-schleicher.de); website: <https://www.alexander-schleicher.de>. You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 901 Locust, Kansas City, MO 64106. For information on the availability of this material at the FAA, call (817) 222-5110.

Issued on March 22, 2022.

**Lance T. Gant,**

*Director, Compliance & Airworthiness Division, Aircraft Certification Service.*

**BILLING CODE 4910-13-P**

## DEPARTMENT OF TRANSPORTATION

### Federal Aviation Administration

#### 14 CFR Part 39

**[Docket No. FAA-2022-0297; Project Identifier MCAI-2021-01099-R]**

**RIN 2120-AA64**

#### Airworthiness Directives; Airbus Helicopters

**AGENCY:** Federal Aviation Administration (FAA), DOT.

**ACTION:** Notice of proposed rulemaking (NPRM).

**SUMMARY:** The FAA proposes to adopt a new airworthiness directive (AD) for all Airbus Helicopters Model AS350B, AS350BA, AS350B1, AS350B2, AS350B3, AS350D, EC130B4, and EC130T2 helicopters. This proposed AD was prompted by the identification of certain parts needing maintenance actions, including life limits and maintenance tasks. This proposed AD would require incorporating into maintenance records requirements (airworthiness limitations), as specified in a European Union Aviation Safety Agency (EASA) AD, which is proposed for incorporation by reference (IBR). The FAA is proposing this AD to address the unsafe condition on these products.

**DATES:** The FAA must receive comments on this proposed AD by May 12, 2022.

**ADDRESSES:** You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- **Federal eRulemaking Portal:** Go to <https://www.regulations.gov>. Follow the instructions for submitting comments.

- **Fax:** (202) 493-2251.

- **Mail:** U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE, Washington, DC 20590.

- **Hand Delivery:** Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For material that is proposed for IBR in this AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email [ADs@easa.europa.eu](mailto:ADs@easa.europa.eu); internet [www.easa.europa.eu](http://www.easa.europa.eu). You may find this

material on the EASA website at <https://ad.easa.europa.eu>. You may view this material at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy., Room 6N-321, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call (817) 222-5110. This material is also available at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2022-0297.

#### Examining the AD Docket

You may examine the AD docket at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2022-0297; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, the EASA AD, any comments received, and other information. The street address for Docket Operations is listed above.

**FOR FURTHER INFORMATION CONTACT:** Andrea Jimenez, Aerospace Engineer, COS Program Management Section, Operational Safety Branch, Compliance & Airworthiness Division, FAA, 1600 Stewart Ave., Suite 410, Westbury, NY 11590; telephone (516) 228-7330; email [andrea.jimenez@faa.gov](mailto:andrea.jimenez@faa.gov).

#### SUPPLEMENTARY INFORMATION:

##### Comments Invited

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under **ADDRESSES**. Include “Docket No. FAA-2022-0297; Project Identifier MCAI-2021-01099-R” at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to <https://www.regulations.gov>, including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this NPRM.

##### Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt

from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as "PROPIN." The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to Andrea Jimenez, Aerospace Engineer, COS Program Management Section, Operational Safety Branch, Compliance & Airworthiness Division, FAA, 1600 Stewart Ave., Suite 410, Westbury, NY 11590; telephone (516) 228-7330; email [andrea.jimenez@faa.gov](mailto:andrea.jimenez@faa.gov). Any commentary that the FAA receives that is not specifically designated as CBI will be placed in the public docket for this rulemaking.

### Background

EASA, which is the Technical Agent for the Member States of the European Union, has issued EASA AD 2021-0194R1, dated October 8, 2021 (EASA AD 2021-0194R1), to correct an unsafe condition for all Airbus Helicopters, formerly Eurocopter, Eurocopter France, and Aerospatiale, Model AS 350 B, AS 350 BA, AS 350 BB, AS 350 B1, AS 350 B2, AS 350 B3, AS 350 D, EC 130 B4, and EC 130 T2 helicopters. Model AS 350 BB helicopters are not certificated by the FAA and are not included on the U.S. type certificate data sheet; this proposed AD therefore does not include those helicopters in the applicability.

This proposed AD was prompted by the identification of certain parts needing maintenance actions, including life limits and maintenance tasks. The FAA is proposing this AD to address the failure of certain parts, which could result in the loss of control of the helicopter. See EASA AD 2021-0194R1 for additional background information.

### Relationship Between Proposed AD and ADs 2011-22-05 R1 and 2016-25-20

This NPRM would not propose to supersede AD 2011-22-05 R1, Amendment 39 17765 (79 FR 14169, March 13, 2014) (AD 2011-22-05 R1); and AD 2016-25-20, Amendment 39-18746 (81 FR 94954, December 27, 2016) (AD 2016-25-20). Rather, the FAA has determined that a stand-alone AD would be more appropriate to address the changes in the EASA AD. This proposed AD would require incorporating into maintenance records

requirements (airworthiness limitations). Accomplishment of the proposed actions would then terminate all of the requirements of AD 2011-22-05 for Model AS350B, AS350BA, AS350B1, AS350B2, AS350B3, and AS350D helicopters only; and all requirements of AD 2016-25-20 for Model AS350B, AS350BA, AS350B1, AS350B2, AS350B3, AS350D, EC130B4, and EC130T2 helicopters only.

### Related Service Information Under 1 CFR Part 51

EASA AD 2021-0194R1 requires certain actions and associated thresholds and intervals, including life limits and maintenance tasks.

This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the ADDRESSES section.

### FAA's Determination

These helicopters have been approved by EASA and are approved for operation in the United States. Pursuant to the FAA's bilateral agreement with the European Union, EASA has notified the FAA about the unsafe condition described in its AD. The FAA is proposing this AD after evaluating all known relevant information and determining that the unsafe condition described previously is likely to exist or develop on other helicopters of these same type designs.

### Proposed AD Requirements in This NPRM

This proposed AD would require incorporating into maintenance records requirements (airworthiness limitations), which are specified in EASA AD 2021-0194R1 described previously, except as discussed under "Differences Between this Proposed AD and the EASA AD."

### ADs Mandating Airworthiness Limitations

The FAA has previously mandated airworthiness limitations by mandating each airworthiness limitation task (e.g., inspections and replacements (life limits)) as an AD requirement or issuing ADs that require revising the airworthiness limitations section (ALS) of the existing maintenance manual or instructions for continued airworthiness to incorporate new or revised inspections and life limits. This proposed AD, however, would require operators to incorporate into maintenance records required by 14 CFR 91.417(a)(2) or 135.439(a)(2), as applicable for your rotorcraft, the requirements (airworthiness limitations)

specified in an EASA AD. The FAA does not intend this as a substantive change. For these ADs, the ALS requirements for operators are the same but are complied with differently. Requiring the incorporation of the new ALS requirements into the maintenance records, rather than requiring individual ALS tasks (e.g., repetitive inspections and replacements), requires operators to record AD compliance once after updating the maintenance records, rather than after every time the ALS task is completed.

In addition, paragraph (h) of this proposed AD would allow operators to incorporate later approved revisions of the ALS document as specified in the Ref. Publications section of EASA AD 2021-0194R1 without the need for an alternative method of compliance (AMOC).

### Differences Between This Proposed AD and the EASA AD

Paragraph (1) of EASA AD 2021-0194R1 requires compliance with actions and associated thresholds and intervals, including life limits and maintenance tasks, from September 3, 2021, the effective date of EASA AD 2021-0194, dated August 20, 2021 (EASA AD 2021-0194). Paragraph (3) of EASA AD 2021-0194R1 requires incorporating the actions and associated thresholds and intervals, including life limits and maintenance tasks, into the approved maintenance program within 12 months after the effective date of EASA AD 2021-0194. This proposed AD would require incorporating into maintenance records requirements (airworthiness limitations) within 30 days after the effective date of this AD.

### Explanation of Required Compliance Information

In the FAA's ongoing efforts to improve the efficiency of the AD process, the FAA developed a process to use some civil aviation authority (CAA) ADs as the primary source of information for compliance with requirements for corresponding FAA ADs. The FAA has been coordinating this process with manufacturers and CAAs. As a result, the FAA proposes to incorporate EASA AD 2021-0194R1 by reference in the FAA final rule. Service information referenced in EASA AD 2021-0194R1 for compliance will be available at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2022-0297 after the FAA final rule is published.

### Costs of Compliance

The FAA estimates that this AD, if adopted as proposed, would affect 1,191

helicopters of U.S. Registry. Labor rates are estimated at \$85 per work-hour. Based on these numbers, the FAA estimates the following costs to comply with this proposed AD. Incorporating requirements (airworthiness limitations) into maintenance records would require about 2 work-hours for a cost of \$170 per helicopter and a cost of \$202,470 for the U.S. fleet.

#### Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

#### Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

- (1) Is not a "significant regulatory action" under Executive Order 12866,
- (2) Would not affect intrastate aviation in Alaska, and
- (3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

#### List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

#### The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

### PART 39—AIRWORTHINESS DIRECTIVES

- 1. The authority citation for part 39 continues to read as follows:

**Authority:** 49 U.S.C. 106(g), 40113, 44701.

#### § 39.13 [Amended]

- 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

**Airbus Helicopters:** Docket No. FAA–2022–0297; Project Identifier MCAI–2021–01099–R.

#### (a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) by May 12, 2022.

#### (b) Affected ADs

This AD affects AD 2011–22–05 R1, Amendment 39–17765 (79 FR 14169, March 13, 2014) (AD 2011–22–05 R1); and AD 2016–25–20, Amendment 39–18746 (81 FR 94954, December 27, 2016) (AD 2016–25–20).

#### (c) Applicability

This AD applies to all Airbus Helicopters Model AS350B, AS350BA, AS350B1, AS350B2, AS350B3, AS350D, EC130B4, and EC130T2 helicopters, certificated in any category.

#### (d) Subject

Joint Aircraft Service Component (JASC) Codes: 2400, Electrical Power System; 2800, Aircraft Fuel System; 2900, Hydraulic Power System; 5200, Doors; 5300, Fuselage Structure; 6200, Main Rotor System; 6300, Main Rotor Drive System; 6400, Tail Rotor System; 6500, Tail Rotor Drive System; and 6700, Rotorcraft Flight Control.

#### (e) Unsafe Condition

This AD was prompted by the identification of certain parts needing maintenance actions, including life limits and maintenance tasks. The FAA is issuing this AD to address the failure of certain parts, which could result in the loss of control of the helicopter.

#### (f) Compliance

Comply with this AD within the compliance times specified, unless already done.

#### (g) Required Actions

Within 30 days after the effective date of this AD, incorporate into maintenance records required by 14 CFR 91.417(a)(2) or 135.439(a)(2), as applicable for your rotorcraft, the requirements (airworthiness limitations) specified in paragraph (1) of European Union Aviation Safety Agency (EASA) AD 2021–0194R1, dated October 8, 2021 (EASA AD 2021–0194R1).

#### (h) Provisions for Alternative Requirements (Airworthiness Limitations)

After the action required by paragraph (g) of this AD has been done, no alternative requirements (airworthiness limitations) are allowed unless they are approved as

specified in the provisions of the "Ref. Publications" section of EASA AD 2021–0194R1.

#### (i) Terminating Action for ADs 2011–22–05 R1 and 2016–25–20

(1) Accomplishing the actions required by this AD terminates all requirements of AD 2011–22–05 R1 for Model AS350B, AS350BA, AS350B1, AS350B2, AS350B3, and AS350D helicopters only.

(2) Accomplishing the actions required by this AD terminates all requirements of AD 2016–25–20 for Model AS350B, AS350BA, AS350B1, AS350B2, AS350B3, AS350D, EC130B4, and EC130T2 helicopters only.

#### (j) Special Flight Permit

Special flight permits, as described in 14 CFR 21.197 and 21.199, are prohibited.

#### (k) Alternative Methods of Compliance (AMOCs)

(1) The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the International Validation Branch, send it to the attention of the person identified in paragraph (l)(2) of this AD. Information may be emailed to: [9-AVS-AIR-730-AMOC@faa.gov](mailto:9-AVS-AIR-730-AMOC@faa.gov).

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

#### (l) Related Information

(1) For EASA AD 2021–0194R1, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email [ADs@easa.europa.eu](mailto:ADs@easa.europa.eu); internet [www.easa.europa.eu](http://www.easa.europa.eu). You may find this EASA AD on the EASA website at <https://ad.easa.europa.eu>. You may view this material at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy., Room 6N–321, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call (817) 222–5110. This material may be found in the AD docket at <https://www.regulations.gov> by searching for and locating Docket No. FAA–2022–0297.

(2) For more information about this AD, contact Andrea Jimenez, Aerospace Engineer, COS Program Management Section, Operational Safety Branch, Compliance & Airworthiness Division, FAA, 1600 Stewart Ave., Suite 410, Westbury, NY 11590; telephone (516) 228–7330; email [andrea.jimenez@faa.gov](mailto:andrea.jimenez@faa.gov).

Issued on March 22, 2022.

**BILLING CODE 4910–13–P**

**DEPARTMENT OF TRANSPORTATION****Federal Aviation Administration****14 CFR Part 39**

[Docket No. FAA-2022-0296; Project Identifier MCAI-2021-01064-E]

RIN 2120-AA64

**Airworthiness Directives; Rolls-Royce Deutschland Ltd & Co KG (Type Certificate Previously Held by Rolls-Royce plc) Turbofan Engines**

**AGENCY:** Federal Aviation Administration (FAA), DOT.

**ACTION:** Notice of proposed rulemaking (NPRM).

**SUMMARY:** The FAA proposes to supersede Airworthiness Directive (AD) 2021-15-01, which applies to all Rolls-Royce Deutschland Ltd & Co KG (RRD) Trent XWB-75, Trent XWB-79, Trent XWB-79B, Trent XWB-84, and Trent XWB-97 model turbofan engines. AD 2021-15-01 requires revisions to the airworthiness limitations section (ALS) of the Rolls-Royce (RR) Trent XWB time limits manual (TLM) and the operator's existing approved aircraft maintenance program (AMP). Since the FAA issued AD 2021-15-01, the manufacturer has revised the TLM life limits and updated mandatory inspection intervals of certain critical rotating parts. This proposed AD would require revisions to the ALS of the RR Trent XWB TLM and the operator's existing approved AMP, as specified in a European Union Aviation Safety Agency (EASA) AD, which is proposed for incorporation by reference (IBR). The FAA is proposing this AD to address the unsafe condition on these products.

**DATES:** The FAA must receive comments on this proposed AD by May 12, 2022.

**ADDRESSES:** You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to <https://www.regulations.gov>. Follow the instructions for submitting comments.

- *Fax:* (202) 493-2251.

- *Mail:* U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE, Washington, DC 20590.

- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For material that is proposed for IBR in this AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; phone: +49 221 8999 000;

email: [ADs@easa.europa.eu](mailto:ADs@easa.europa.eu). You may find this material on the EASA website at <https://ad.easa.europa.eu>. For the material identified in this AD that is not incorporated by reference, contact Rolls-Royce plc, Corporate Communications, P.O. Box 31, Derby, DE24 8BJ, United Kingdom; phone: +44 (0)1332 242424; fax: +44 (0)1332 249936; website: <https://www.rolls-royce.com/contact-us.aspx>.

**Examining the AD Docket**

You may examine the AD docket at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2022-0296; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, the EASA AD, any comments received, and other information. The street address for Docket Operations is listed above.

**FOR FURTHER INFORMATION CONTACT:** Nicholas Paine, Aviation Safety Engineer, ECO Branch, FAA, 1200 District Avenue, Burlington, MA 01803; phone: (781) 238-7116; email: [nicholas.j.paine@faa.gov](mailto:nicholas.j.paine@faa.gov).

**SUPPLEMENTARY INFORMATION:**

**Comments Invited**

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under **ADDRESSES**. Include "Docket No. FAA-2022-0296; Project Identifier MCAI-2021-01064-E" at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to <https://www.regulations.gov>, including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact we receive about this proposed AD.

**Confidential Business Information**

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as "PROPIN." The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to Nicholas Paine, Aviation Safety Engineer, ECO Branch, FAA, 1200 District Avenue, Burlington, MA 01803. Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

**Background**

The FAA issued AD 2021-15-01, Amendment 39-21648 (86 FR 36487, July 12, 2021) (AD 2021-15-01), for all RRD Trent XWB-75, Trent XWB-79, Trent XWB-79B, Trent XWB-84, and Trent XWB-97 model turbofan engines. AD 2021-15-01 was prompted by the manufacturer revising the TLM to incorporate repairs to the low-pressure compressor (LPC) blades and introduce a new fan blade inspection. AD 2021-15-01 requires revisions to the ALS of the RR Trent XWB TLM and the operator's existing approved AMP. The agency issued AD 2021-15-01 to prevent the failure of critical rotating parts.

**Actions Since AD 2021-15-01 Was Issued**

Since the FAA issued AD 2021-15-10, EASA, which is the Technical Agent for the Member States of the European Union, has issued EASA AD 2021-0217, dated September 23, 2021 (EASA AD 2021-0217), to address an unsafe condition for all RRD Trent XWB-75, Trent XWB-79, Trent XWB-79B, Trent XWB-84, and Trent XWB-97 model turbofan engines.

This proposed AD was prompted by the manufacturer revising the TLM to introduce new instructions for repairs to the LPC blades and fan blade inspections. The FAA is proposing this AD to prevent the failure of critical rotating parts. This condition, if not addressed, could result in failure of one

or more engines, loss of thrust control, and loss of the airplane. See EASA AD 2021–0217 for additional background information.

**FAA’s Determination**

This product has been approved by the aviation authority of another country, and is approved for operation in the United States. Pursuant to the FAA’s bilateral agreement with the State of Design Authority, the FAA has been notified of the unsafe condition described in the EASA AD. The FAA is issuing this AD after determining that the unsafe condition described previously is likely to exist or develop in other products of the same type design.

**Related Service Information Under 1 CFR Part 51**

The FAA reviewed EASA AD 2021–0217. EASA AD 2021–0217 describes actions for the incorporation of revised life limits and updated mandatory inspection intervals of certain critical rotating parts into the ALS of the RR Trent XWB TLM, as applicable to each engine model, and the operator’s existing approved AMP. This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in ADDRESSES.

**Other Related Service Information**

The FAA reviewed Rolls-Royce Airworthiness Limitations (Mandatory parts lives), TRENTXWB–A–05–10–01–00A01–030A–D, Revision 016, dated May 1, 2021, of the Rolls-Royce Trent XWB TLM TRENTXWB–K0680–TIME0–01; Rolls-Royce Airworthiness Limitations (Mandatory Parts Lives), TRENTXWB–B–05–10–01–00A01–030A–D, Revision 003, dated April 19, 2021, of the Rolls-Royce Trent XWB TLM TRENTXWB–K0680–TIME0–01; Rolls-Royce Airworthiness Limitations (Mandatory inspections), TRENTXWB–A–05–20–01–00A01–030A–D, Revision

015, dated May 1, 2021, of the Rolls-Royce Trent XWB TLM TRENTXWB–K0680–TIME0–01; and Rolls-Royce Airworthiness Limitations (Mandatory inspections), TRENTXWB–B–05–20–01–00A01–030A–D, Revision 008, dated April 19, 2021, of the Rolls-Royce Trent XWB TLM TRENTXWB–K0680–TIME0–01. These sections of the TLM specify inspection intervals and life limits, differentiated by engine model, for critical rotating parts.

**Proposed AD Requirements in This NPRM**

This proposed AD would require accomplishing the actions specified in EASA AD 2021–0217, described previously, as incorporated by reference, except for any differences identified as exceptions in the regulatory text of this proposed AD.

**Explanation of Required Compliance Information**

In the FAA’s ongoing efforts to improve the efficiency of the AD process, the FAA developed a process to use some civil aviation authority (CAA) ADs as the primary source of information for compliance with requirements for corresponding FAA ADs. The FAA has since coordinated with other manufacturers and CAAs to use this process. As a result, the FAA proposes to incorporate by reference EASA AD 2021–0217 in the FAA final rule. Service information required by the EASA AD for compliance will be available at <https://www.regulations.gov> by searching for and locating Docket No. FAA–2022–0296 after the FAA final rule is published.

**Differences Between This Proposed AD and the EASA AD**

*Definitions*

Where EASA AD 2021–0217 defines the AMP as the approved Aircraft Maintenance Programme on the basis of which the operator or the owner ensures the continuing airworthiness of each

operated engine, this proposed AD defines the AMP as the Aircraft Maintenance Program on the basis of which the operator or the owner ensures the continuing airworthiness of each operated airplane.

*Compliance*

Where EASA AD 2021–0217 requires revising the approved AMP within 12 months after the effective date of EASA AD 2021–0217, this proposed AD requires revising the approved AMP and ALS within 120 days after the effective date of this AD.

*Mandatory Inspections*

This proposed AD does not require compliance with paragraph (1), Mandatory Inspections and Replacement of Life Limited Parts, of EASA AD 2021–0217.

*Corrective Action(s)*

This proposed AD does not require compliance with paragraph (2), Corrective Action(s), of EASA AD 2021–0217.

*Credit*

This proposed AD does not require compliance with paragraph (4), Credit, of EASA AD 2021–0217.

*Recording AD Compliance*

This proposed AD does not require compliance with paragraph (5), Recording AD Compliance, of EASA AD 2021–0217.

*Remarks*

This proposed AD does not require compliance with the “Remarks” section of EASA AD 2021–0217.

**Costs of Compliance**

The FAA estimates that this AD, if adopted as proposed, would affect 30 engines installed on airplanes of U.S. registry.

The FAA estimates the following costs to comply with this proposed AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Revise the ALS of the RR Trent XWB TLM and the operator’s existing approved AMP.	1 work-hour × \$85 per hour = \$85 .....	\$0	\$85	\$2,550

**Authority for This Rulemaking**

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII:

Aviation Programs, describes in more detail the scope of the Agency’s authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section

44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds

necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

### Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

- (1) Is not a “significant regulatory action” under Executive Order 12866,
- (2) Would not affect intrastate aviation in Alaska, and
- (3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

### List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

### The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

### PART 39—AIRWORTHINESS DIRECTIVES

- 1. The authority citation for part 39 continues to read as follows:

**Authority:** 49 U.S.C. 106(g), 40113, 44701.

#### § 39.13 [Amended]

- 2. The FAA amends § 39.13 by:
  - a. Removing Airworthiness Directive 2021–15–01, Amendment 39–21648 (86 FR 36487, July 12, 2021); and
  - b. Adding the following new airworthiness directive:

**Rolls-Royce Deutschland Ltd & Co KG (Type Certificate previously held by Rolls-Royce plc):** Docket No. FAA–2022–0296; Project Identifier MCAI–2021–01064–E.

#### (a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) action by May 12, 2022.

#### (b) Affected ADs

This AD replaces AD 2021–15–01, Amendment 39–21648 (86 FR 36487, July 12, 2021).

#### (c) Applicability

This AD applies to Rolls-Royce Deutschland Ltd & Co KG Trent XWB–75, Trent XWB–79, Trent XWB–79B, Trent XWB–84, and Trent XWB–97 model turbofan engines.

#### (d) Subject

Joint Aircraft System Component (JASC) Code 7200, Engine Turbine/Turboprop.

#### (e) Unsafe Condition

This AD was prompted by the manufacturer revising the time limits manual (TLM) to incorporate revised life limits and updated mandatory inspection intervals of certain critical rotating parts. The FAA is issuing this AD to prevent the failure of critical rotating parts. The unsafe condition, if not addressed, could result in failure of one or more engines, loss of thrust control, and loss of the airplane.

#### (f) Compliance

Comply with this AD within the compliance times specified, unless already done.

#### (g) Required Actions

Except as specified in paragraph (h) of this AD: Perform all required actions within the compliance times specified in, and in accordance with, European Union Aviation Safety Agency (EASA) AD 2021–0217.

#### (h) Exceptions to EASA AD 2021–0217

(1) Where EASA AD 2021–0217 defines the AMP as the approved Aircraft Maintenance Programme on the basis of which the operator or the owner ensures the continuing airworthiness of each operated engine, this AD defines the AMP as the Aircraft Maintenance Program on the basis of which the operator or the owner ensures the continuing airworthiness of each operated airplane.

(2) Where EASA AD 2021–0217 requires revising the approved aircraft maintenance program (AMP) within 12 months after the effective date of EASA AD 2021–0217, this AD requires revising the approved AMP and airworthiness limitations section (ALS) within 120 days after the effective date of this AD.

(3) This AD does not require compliance with paragraph (1), Mandatory Inspections and Replacement of Life Limited Parts, of EASA AD 2021–0217.

(4) This AD does not require compliance with paragraph (2), Corrective Action(s), of EASA AD 2021–0217.

(5) This AD does not require compliance with paragraph (4), Credit, of EASA AD 2021–0217.

(6) This AD does not require compliance with paragraph (5), Recording AD Compliance, of EASA AD 2021–0217.

(7) This AD does not require compliance with the “Remarks” section of EASA AD 2021–0217.

#### (i) Alternative Methods of Compliance (AMOCs)

(1) The Manager, ECO Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19,

send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the certification office, send it to the attention of the person identified in paragraph (j)(2) of this AD and email to: [ANE-AD-AMOC@faa.gov](mailto:ANE-AD-AMOC@faa.gov).

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

#### (j) Related Information

(1) For more information about EASA AD 2021–0217, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; phone: +49 221 8999 000; email: [ADS@easa.europa.eu](mailto:ADS@easa.europa.eu). You may find this material on the EASA website at <https://ad.easa.europa.eu>. You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 1200 District Avenue, Burlington, MA 01803. For information on the availability of this material at the FAA, call (817) 222–5110. This material may be found in the AD docket at <https://www.regulations.gov> by searching for and locating Docket No. FAA–2022–0296.

(2) For more information about this AD, contact Nicholas Paine, Aviation Safety Engineer, ECO Branch, FAA, 1200 District Avenue, Burlington, MA 01803; phone: (781) 238–7116; email: [nicholas.j.paine@faa.gov](mailto:nicholas.j.paine@faa.gov).

(3) For service information identified in this AD, contact Rolls-Royce plc, Corporate Communications, P.O. Box 31, Derby, DE24 8BJ, United Kingdom; phone: +44 (0)1332 242424; fax: +44 (0)1332 249936; website: <https://www.rolls-royce.com/contact-us.aspx>. You may view this referenced service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 1200 District Avenue, Burlington, MA 01803. For information on the availability of this material at the FAA, call (817) 222–5110.

Issued on March 22, 2022.

**Lance T. Gant,**

*Director, Compliance & Airworthiness Division, Aircraft Certification Service.*

## DEPARTMENT OF TRANSPORTATION

### Federal Aviation Administration

#### 14 CFR Part 39

[Docket No. FAA–2022–0291; Project Identifier MCAI–2021–01321–A]

RIN 2120–AA64

### Airworthiness Directives; British Aerospace (Operations) Limited and British Aerospace Regional Aircraft Airplanes

**AGENCY:** Federal Aviation Administration (FAA), DOT.

**ACTION:** Notice of proposed rulemaking (NPRM).

**SUMMARY:** The FAA proposes to supersede Airworthiness Directive (AD) 2017–15–06, which applies to British Aerospace Regional Aircraft Model HP.137 Jetstream Mk.1, Jetstream Series 200 and 3101, and Jetstream Model 3201 airplanes. AD 2017–15–06 requires repetitively inspecting the main landing gear (MLG) for cracks and, if cracks are found, replacing the MLG with an airworthy part. Since the FAA issued AD 2017–15–06, the Civil Aviation Authority (CAA) of the United Kingdom superseded the mandatory continuing airworthiness information (MCAI) issued by the European Aviation Safety Agency (EASA) to correct an unsafe condition on these products. This proposed AD would retain the initial inspection and the calculation of hours time-in-service to flight cycle (FC) actions required by AD 2017–15–06, but would decrease the repetitive inspection interval time from 1,200 flight cycles to 900 flight cycles. The FAA is proposing this AD to address the unsafe condition on these products.

**DATES:** The FAA must receive comments on this proposed AD by May 12, 2022.

**ADDRESSES:** You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to <https://www.regulations.gov>. Follow the instructions for submitting comments.

- *Fax:* (202) 493–2251.

- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For British Aerospace service information identified in this NPRM, contact BAE Systems (Operations) Ltd., Customer Information Department, Prestwick International Airport, Ayrshire, KA9 2RW, United Kingdom; phone: +44 3300 488727; fax: +44 1292 675704; email: [RAPublications@baesystems.com](mailto:RAPublications@baesystems.com); website: <https://www.baesystems.com/Businesses/RegionalAircraft/>. For Héroux Devtek service information identified in this NPRM, contact Héroux Devtek Product Support, 8, Pembroke Court, Manor Park, Runcorn, Cheshire, WA7 1TG, United Kingdom; phone: (855) 679–5450; email: [technical\\_support@herouxdevtek.com](mailto:technical_support@herouxdevtek.com); website: <https://www.herouxdevtek.com/en/contact-us>. You may view this service information at the Airworthiness Products Section, Operational Safety Branch, FAA, 901

Locust, Kansas City, MO 64106. For information on the availability of this material at the FAA, call (817) 222–5110.

#### Examining the AD Docket

You may examine the AD docket at <https://www.regulations.gov> by searching for and locating Docket No. FAA–2022–0291; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, the MCAI, any comments received, and other information. The street address for Docket Operations is listed above.

#### FOR FURTHER INFORMATION CONTACT:

Doug Rudolph, Aviation Safety Engineer, General Aviation & Rotorcraft Section, International Validation Branch, FAA, 901 Locust, Room 301, Kansas City, MO 64106; phone: (816) 329–4059; email: [doug.rudolph@faa.gov](mailto:doug.rudolph@faa.gov).

#### SUPPLEMENTARY INFORMATION:

##### Comments Invited

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under **ADDRESSES**. Include “Docket No. FAA–2022–0291; Project Identifier MCAI–2021–01321–A” at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend the proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to <https://www.regulations.gov>, including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this proposed AD.

##### Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or

responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as “PROPIN.” The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to Doug Rudolph, Aviation Safety Engineer, General Aviation & Rotorcraft Section, International Validation Branch, FAA, 901 Locust, Room 301, Kansas City, MO 64106. Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

#### Background

The FAA issued AD 2017–15–06, Amendment 39–18966 (82 FR 34846, July 27, 2017) (AD 2017–15–06), for British Aerospace Regional Aircraft Model HP.137 Jetstream Mk.1, Jetstream Series 200 and 3101, and Jetstream Model 3201 airplanes. AD 2017–15–06 was prompted by MCAI originated by EASA, which is the Technical Agent for the Member States of the European Union. EASA issued EASA AD 2017–0053, dated March 24, 2017, to correct an unsafe condition identified as cracks in the MLG fitting at the pintle to cylinder interface, which could cause failure of the MLG.

AD 2017–15–06 requires repetitively inspecting the MLG and, if cracks are found, replacing the MLG with an airworthy part. The FAA issued AD 2017–15–06 to detect and correct cracks in the MLG, which could lead to structural failure of the MLG and result in loss of control during takeoffs and landings.

#### Actions Since AD 2017–15–06 Was Issued

Since the FAA issued AD 2017–15–06, the CAA superseded EASA AD 2017–0053, dated March 24, 2017, and issued CAA AD G–2021–0015 dated November 24, 2021 (referred to after this as “the MCAI”). The MCAI states:

Cracks were found during early fatigue testing and in service on the main landing gear (MLG) main fitting at the pintle to cylinder interface.

This condition if not detected and corrected, could lead to structural failure of the MLG, possibly resulting in loss of control of the aeroplane during take-off or landing runs.

To address this unsafe condition, BAE Systems (Operations) Ltd published several Service Bulletins (ISB) which, in 1996, were consolidated into a single bulletin, SB 32–JA960142, to provide instructions for inspection. CAA issued AD 005–03–96

accordingly to require repetitive inspections of the MLG.

In 2014 a crack was found which was below the critical crack length, but unusually large compared to similar cracks previously found in service. Further investigation into the subject determined that the existing inspection intervals remain valid but also showed that the assumed detectable defect size of a 1.27mm [millimeters] (0.05 in) [inch] crack could not be guaranteed using the then defined accomplishment instructions for a high frequency eddy current (HFEC) or fluorescent dye penetrant (FDP) inspection.

Consequently, BAE Systems (Operations) Ltd issued SB 32-JA960142 Revision 4, which provided an improved procedure for HFEC and FDP inspection to ensure the detection of cracks of 1.27 mm (0.05 in) length.

In response to this revision, EASA issued AD 2017-0053 (corrected 24 March 2017) addressing the need for revised inspection procedures.

Recently, an operator performing [EASA] AD 2017-0053 (referencing SB 32-JA960142 rev 4) identified 3 crack indications (13 mm, 3 mm & 8 mm) in close proximity, the total length of which was approximately 38 mm. This was an unusual report based of reported findings over the 24 years since the SB was initially released. In depth laboratory investigation of the discrepant part was undertaken, which found that the material was to specification and the cracks were fatigue in nature. The investigation was unable to establish a reason for the cracks being different in nature to those previously reported.

In response, a further damage tolerance analysis was performed, which identified the need to reduce the repeat inspection interval defined in [EASA] AD 2017-0053. That is, a reduction from a repeat of 1,200 flight cycles (FC) to a repeat of 900 FC.

For the reasons described above, this [CAA] AD retains the requirements of CAA UK AD 005-03-96 (superseded by EASA AD) and EASA AD 2017-0053 (superseded by this CAA AD) and requires the accomplishment of repetitive inspections in accordance with new repetitive inspection requirements.

You may examine the MCAI in the AD docket at <https://www.regulations.gov> by searching for and locating Docket No. FAA-2022-0291.

**Related Service Information Under 1 CFR Part 51**

The FAA reviewed British Aerospace Jetstream Series 3100 & 3200 Service Bulletin 32-JA960142, Revision 5, dated December 13, 2019. This service information specifies procedures for doing a fluorescent penetrant inspection for cracks in the MLG. Alternatively, this service information specifies conducting an eddy current inspection for cracks in the MLG in accordance with Héroux Devtek Service Bulletin No. 32-56, Revision 4, dated August 16, 2016, which was incorporated by reference as of August 31, 2017 (82 FR 34846).

This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in **ADDRESSES**.

**Other Related Service Information**

The FAA reviewed British Aerospace Jetstream Series 3100 & 3200 Service Bulletin 32-JA960142, Revision 4, dated October 21, 2016. This service information specifies procedures for doing a fluorescent penetrant inspection for cracks in the MLG. Alternatively, this service information specifies conducting an eddy current inspection for cracks in the MLG in accordance with Héroux Devtek Service Bulletin No. 32-56, Revision 4, dated August 16, 2016. This service information also specifies corrective actions if any crack found exceeds a certain length.

**FAA’s Determination**

This product has been approved by the aviation authority of another country and is approved for operation in the United States. Pursuant to the FAA’s bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI and service information referenced above. The FAA is issuing this NPRM after determining the unsafe condition described previously is likely to exist or develop on other products of the same type design.

**Proposed AD Requirements in This NPRM**

This proposed AD would retain the initial inspection, the calculation of hours time-in-service to flight cycle (FC) action, and replacement as necessary required by AD 2017-15-06, but would decrease the repetitive inspection interval time from 1,200 flight cycles to 900 flight cycles.

**Differences Between This Proposed AD and the MCAI**

The MCAI does not apply to the Model HP.137 Jetstream Mk.1 or Model Jetstream Series 200, whereas this proposed AD would include those models because they have an FAA type certificate and share a similar type design in the affected area.

The MCAI and service information apply to Model Jetstream Series 3100 and Jetstream Series 3200 airplanes, which are identified on the FAA type certificates as Jetstream Model 3101 and Jetstream Model 3201 airplanes, respectively.

The MCAI gives credit for inspections and corrective actions accomplished before the effective date of the MCAI using BAE Systems (Operations) Ltd SB 32-JA960142 Revision 5, Revision 4, or Revision 3. This proposed AD would not give credit for Revision 3, as AD 2017-15-06 did not provide credit and the FAA did not receive any requests to use Revision 3 as an alternative method of compliance.

The MCAI requires compliance with all of the accomplishment instructions in the service information, which includes reporting the inspection results (if there is a crack) to the manufacturer. This proposed AD would not require reporting information to the manufacturer.

**Costs of Compliance**

The FAA estimates that this AD, if adopted as proposed, would affect 18 airplanes of U.S. registry.

The FAA estimates the following costs to comply with this proposed AD:

**ESTIMATED COSTS**

Action	Labor cost	Parts cost	Cost per airplane	Cost on U.S. operators
Inspection .....	6 work-hours × \$85 per hour = \$510.	Not applicable .....	\$510	\$9,180 per inspection cycle.

The FAA estimates the following costs to replace the MLG based on the

results of the proposed inspection. The FAA has no way of determining the

number of airplanes that might need this replacement:

ON-CONDITION COSTS

Action	Labor cost	Parts cost	Cost per airplane
Replace the MLG .....	1 work-hour × \$85 per hour = \$85 .....	\$5,000	\$1,530

**Authority for This Rulemaking**

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, Section 106, describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the Agency’s authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701, General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

**Regulatory Findings**

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that the proposed regulation:

- (1) Is not a “significant regulatory action” under Executive Order 12866,
- (2) Would not affect intrastate aviation in Alaska, and
- (3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

**List of Subjects in 14 CFR Part 39**

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

**The Proposed Amendment**

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

**PART 39—AIRWORTHINESS DIRECTIVES**

■ 1. The authority citation for part 39 continues to read as follows:

**Authority:** 49 U.S.C. 106(g), 40113, 44701.

**§ 39.13 [Amended]**

- 2. The FAA amends § 39.13 by:
  - a. Removing Airworthiness Directive 2017–15–06, Amendment 39–18966 (82 FR 34846, July 27, 2017); and
  - b. Adding the following new airworthiness directive:

**British Aerospace (Operations) Limited and British Aerospace Regional Aircraft:**  
Docket No. FAA–2022–0291; Project Identifier MCAI–2021–01321–A.

**(a) Comments Due Date**

The FAA must receive comments on this airworthiness directive (AD) by May 12, 2022.

**(b) Affected ADs**

This AD replaces AD 2017–15–06, Amendment 39–18966 (82 FR 34846, July 27, 2017) (AD 2017–15–06).

**(c) Applicability**

This AD applies to British Aerospace (Operations) Limited Model HP.137 Jetstream Mk.1, Jetstream Series 200, and Jetstream Model 3101 airplanes and British Aerospace Regional Aircraft Model Jetstream Model 3201 airplanes, all serial numbers, certificated in any category.

**(d) Subject**

Joint Aircraft System Component (JASC) Code 3211, Main Landing Gear Attach Section.

**(e) Unsafe Condition**

This AD was prompted by cracks found on the main landing gear (MLG) main fitting at the pintle to cylinder interface. The FAA is issuing this AD to detect and correct cracks in the MLG. The unsafe condition, if not addressed, could cause failure of the MLG, which could result in loss of control of the airplane during takeoffs and landings.

**(f) Compliance**

Comply with this AD within the compliance times specified, unless already done.

**(g) Actions**

- (1) Within the compliance times listed in paragraph (g)(1)(i) or (ii) of this AD, as applicable, inspect the MLG for cracks by following Appendix 1, sections A through G, of British Aerospace Jetstream Series 3100 & 3200 Service Bulletin 32–JA960142, Revision 5, dated December 13, 2019; or the

Accomplishment Instructions, sections A through D(6), in Héroux Devtek Service Bulletin 32–56, Revision 4, dated August 16, 2016.

(i) For airplanes that have been inspected in accordance with AD 2017–15–06: Before the MLG accumulates 900 flight cycles since the effective date of this AD, whichever occurs later, and thereafter at intervals not to exceed 900 flight cycles.

(ii) For airplanes that have not been inspected in accordance with AD 2017–15–06: Before the MLG accumulates 8,000 flight cycles since first installation on an airplane or within 50 flight cycles after the effective date of this AD, whichever occurs later, and thereafter at intervals not to exceed 900 flight cycles.

(2) If any crack is found during any inspection required by paragraph (g)(1) of this AD, before further flight, replace the MLG with an airworthy MLG and continue the inspections as required by paragraph (g)(1) of this AD.

(3) The compliance times in paragraphs (g)(1)(i) and (ii) of this AD are presented in flight cycles (landings). If the number of total flight cycles is unknown, for purposes of this AD, the number of flight cycles is the hours time-in-service (TIS) accumulated on the airplane multiplied by 0.75. For example:

- (i) 100 hours TIS × 0.75 = 75 flight cycles.
- (ii) 1,000 hours TIS × 0.75 = 750 flight cycles.

**(h) Alternative Methods of Compliance (AMOCs)**

(1) The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the certification office, send it to the attention of the person identified in paragraph (i)(1) of this AD and email to: 9-AVS-AIR-730-AMOC@faa.gov.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

**(i) Related Information**

(1) For more information about this AD, contact Doug Rudolph, Aviation Safety Engineer, General Aviation & Rotorcraft Section, International Validation Branch, FAA, 901 Locust, Room 301, Kansas City, MO 64106; phone: (816) 329–4059; email: doug.rudolph@faa.gov.

(2) Refer to Civil Aviation Authority (CAA) AD G–2021–0015, dated November 24, 2021, for more information. You may examine the CAA AD in the AD docket at

<https://www.regulations.gov> by searching for and locating Docket No. FAA–2022–0291.

(3) For British Aerospace service information identified in this AD, contact BAE Systems (Operations) Ltd., Customer Information Department, Prestwick International Airport, Ayrshire, KA9 2RW, United Kingdom; phone: +44 3300 488727; fax: +44 1292 675704; email: [RApublications@baesystems.com](mailto:RApublications@baesystems.com); website: <https://www.baesystems.com/Businesses/RegionalAircraft/>. For Héroux Devtek service information identified in this AD, contact Héroux Devtek Product Support, 8, Pembroke Court, Manor Park, Runcorn, Cheshire, WA7 1TG, United Kingdom; phone: (855) 679–5450; email: [technical\\_support@herouxdevtek.com](mailto:technical_support@herouxdevtek.com); website: <https://www.herouxdevtek.com/en/contact-us>. You may view this service information at the Airworthiness Products Section, Operational Safety Branch, FAA, 901 Locust, Kansas City, MO 64106. For information on the availability of this material at the FAA, call (817) 222–5110.

Issued on March 22, 2022.

**Lance T. Gant,**

Director, Compliance & Airworthiness Division, Aircraft Certification Service.

## DEPARTMENT OF TRANSPORTATION

### Office of the Secretary

#### 14 CFR Part 382

[Docket No. DOT–OST–2021–0137]

RIN 2105–AE89

#### Accessible Lavatories on Single-Aisle Aircraft: Part 2

**AGENCY:** Office of the Secretary (OST), U.S. Department of Transportation (DOT).

**ACTION:** Notice of proposed rulemaking.

**SUMMARY:** The U.S. Department of Transportation (Department or DOT) proposes in this notice of proposed rulemaking (NPRM) to require airlines to ensure that at least one lavatory on new single-aisle aircraft with 125 or more passenger seats is large enough to permit a passenger with a disability (with the help of an assistant, if necessary) to approach, enter, and maneuver within the aircraft lavatory, as necessary, to use all lavatory facilities and leave by means of the aircraft's on-board wheelchair.

**DATES:** Comments should be filed by May 27, 2022. Late-filed comments will be considered to the extent practicable.

**ADDRESSES:** You may file comments identified by docket number DOT–OST–2021–0137 by any of the following methods:

- **Federal eRulemaking Portal:** Go to <https://www.regulations.gov> and follow the online instructions for submitting comments.

- **Mail:** Docket Management Facility, U.S. Department of Transportation, 1200 New Jersey Ave. SE, West Building Ground Floor, Room W12–140, Washington, DC 20590–0001.

- **Hand Delivery or Courier:** West Building Ground Floor, Room W12–140, 1200 New Jersey Ave. SE, between 9:00 a.m. and 5:00 p.m. ET, Monday through Friday, except Federal holidays.

- **Fax:** (202) 493–2251.

**Instructions:** You must include the agency name and docket number DOT–OST–2021–0137 or the Regulation Identifier Number (RIN) for the rulemaking at the beginning of your comment. All comments received will be posted without change to <https://www.regulations.gov>, including any personal information provided.

**Confidential Business Information (CBI):** CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as “PROPIN” to indicate that it contains proprietary information. DOT will treat such marked submissions as confidential under the Freedom of Information Act (FOIA), and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to Robert Gorman, Senior Trial Attorney, Office of Aviation Consumer Protection, U.S. Department of Transportation, 1200 New Jersey Ave. SE, Washington, DC 20590, [robert.gorman@dot.gov](mailto:robert.gorman@dot.gov) (email). Any commentary that DOT receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

**Privacy Act:** Anyone can search the electronic form of all comments received in any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review DOT's complete Privacy Act statement in the **Federal Register** published on April 11, 2000 (65 FR 19477–78), or you may visit <https://www.transportation.gov/privacy>.

**Docket:** For access to the docket to read background documents or comments received, go to <https://www.regulations.gov>, or to the street address listed above. Follow the online instructions for accessing the dockets.

**FOR FURTHER INFORMATION CONTACT:** Robert Gorman, Senior Trial Attorney, Office of Aviation Consumer Protection, U.S. Department of Transportation, 1200 New Jersey Ave. SE, Washington, DC 20590, 202–366–9342, 202–366–7152 (fax), [robert.gorman@dot.gov](mailto:robert.gorman@dot.gov) (email). You may also contact Blane Workie, Assistant General Counsel, Office of Aviation Consumer Protection, U.S. Department of Transportation, 1200 New Jersey Ave. SE, Washington, DC 20590, 202–366–9342, 202–366–7152 (fax), [blane.workie@dot.gov](mailto:blane.workie@dot.gov).

#### SUPPLEMENTARY INFORMATION:

##### I. Background

Like all individuals, those with disabilities rely on transportation for all aspects of their lives. Transportation connects individuals to jobs and services, and it opens the door to opportunity. The Department is committed to removing transportation barriers that exist for people with disabilities. This includes challenges posed by inaccessible lavatories on single-aisle aircraft.

The following proposed rule is the result of a negotiated rulemaking in 2016 that was produced through the consensus of multiple disability organizations, a wide variety of aviation industry members, and other stakeholders. As we explain below, the Department made a commitment to the stakeholders that if they reached consensus on the terms of a rulemaking, the Department would act in good faith to issue a proposed rule that reflects those terms as closely as possible. This NPRM is the product of the Department's commitment to stakeholders during that process.

At the same time that DOT honors its past commitments, the Department also recognizes that it is the affirmative responsibility of the Federal Government to advance equity, civil rights, and equal opportunity for all individuals, including individuals with disabilities.<sup>1</sup> The Department has concerns that the considerable length of time that this NPRM proposes to allow for much-needed accessibility improvements may not advance equity, civil rights or equal opportunity for persons with disabilities quickly enough. Over 25 million Americans have mobility issues that may require

<sup>1</sup> See Executive Order 13985 (January 20, 2021), Section 1.

accommodations when flying.<sup>2</sup> As the U.S. population ages (with an estimated 30 percent of the population being over age 65 by 2030), it is expected that the need for accommodating passengers with mobility impairments will only increase.<sup>3</sup> As the Department moves forward with this rulemaking, including the drafting of any final rule, the Department will firmly bear in mind its commitment to equity, including seeking information relating to whether these accessibility improvements can be implemented more quickly than currently proposed. The Department now presents these terms for public comment and further recommendations that will enhance the rule and access of passengers with disabilities to the National Airspace System.

#### A. Statutory Authority

The Air Carrier Access Act (ACAA), 49 U.S.C. 41705, prohibits discrimination in airline service on the basis of disability by U.S. and foreign air carriers. However, it does not specify how U.S. and foreign air carriers must act to avoid such discrimination or how the Department should regulate with respect to these issues. The Department's authority to regulate nondiscrimination in airline service is found in the ACAA in conjunction with its rulemaking authority under 49 U.S.C. 40113, which states that the Department may take action that it considers necessary to carry out this part, including prescribing regulations. The Department, through reasonable interpretation of its statutory authority, has issued regulations that require carriers to provide nondiscriminatory service to individuals with disabilities.

#### B. Need for a Rulemaking

Single-aisle aircraft are increasingly being used by airlines for long-haul flights because the fuel efficiency and range of the aircraft have improved. The percentage of flights between 1,500 and 3,000 miles flown by single-aisle aircraft increased from 77 percent in 1997 to 89 percent in 2018.<sup>4</sup> These flights can last four or more hours. At present, there is no requirement that airlines provide accessible lavatories on single-aisle

aircraft. Airlines are required to provide information on whether the aircraft expected to make a particular flight has an accessible lavatory to an individual with a disability who states that he or she uses a wheelchair for boarding.<sup>5</sup> The inability to access and use the lavatory on long flights can present significant challenges to passengers with disabilities and poses a deterrent for some passengers with disabilities to traveling by air, limiting their independence and freedom to travel.

On January 2, 2020, the Department published an NPRM titled "Accessible Lavatories on Single-Aisle Aircraft: Part 1" (Part 1 NPRM).<sup>6</sup> The Part 1 NPRM proposed various accessibility improvements for lavatories on single-aisle aircraft, but did not propose to expand the size of the lavatories themselves. This action—Accessible Lavatories on Single-Aisle Aircraft: Part 2—would substantially increase access for passengers with disabilities because it proposes to increase the size of lavatories on large single-aisle aircraft.

#### C. History of Regulations Governing Accessible Lavatories on Aircraft

In 1988, the Department conducted a negotiated rulemaking to develop ACAA regulations. The negotiated rulemaking included representatives of the airline industry, the disability community, and other stakeholders.<sup>7</sup> In March 1990, the Department issued final ACAA regulations, found at 14 CFR part 382.

The 1990 ACAA rule required twin-aisle aircraft to have at least one accessible lavatory, if lavatories were installed on the aircraft. In the context of twin-aisle aircraft, an accessible lavatory is one that: (1) Permits a qualified individual with a disability to enter, maneuver as necessary to use all lavatory facilities, and leave, by means of the aircraft's on-board wheelchair (OBW);<sup>8</sup> (2) affords privacy to persons using the OBW equivalent to that afforded ambulatory users; and (3) provides door locks, accessible call buttons, grab bars, faucets and other controls, and dispensers usable by qualified individuals with a disability,

including wheelchair users and persons with manual impairments.<sup>9</sup> The 1990 ACAA rule, as written, does not expressly require the lavatory to be large enough to permit a passenger to enter the lavatory with an assistant who can help the individual transfer from the OBW to and from the toilet seat (a "dependent transfer" or "assisted transfer").

In the preamble to the 1990 ACAA rule, the Department stated that by requiring accessible lavatories on *twin* aisle aircraft, the result would be "new aircraft with the greatest passenger capacities, and which make the longest flights, having a lavatory that handicapped persons can readily use."<sup>10</sup> However the Department noted airlines' concerns that providing accessible lavatories on *single*-aisle aircraft may require airlines to remove seats in order to install a lavatory of sufficient size to meet the accessibility standards of the existing rule. The Department found that those "cost and feasibility concerns" were "worth serious consideration,"<sup>11</sup> and ultimately decided at the time that it was unable to "obtain sufficient information to make a sound decision" on whether requiring accessible lavatories on single-aisle aircraft would impose an undue burden on airlines.<sup>12</sup> Accordingly, at the time, the Department declined to require accessible lavatories on single-aisle aircraft due to lack of information regarding technical or economic feasibility.<sup>13</sup> Instead, accessible lavatories on single-aisle aircraft were made optional.<sup>14</sup>

The 1990 ACAA rule also set standards for the availability and design of OBWs. The rule generally requires airlines to provide OBWs in two circumstances: (1) If the aircraft has an accessible lavatory; or (2) on the request of a passenger with a disability, even if the aircraft does not have an accessible lavatory.<sup>15</sup> The rule also sets basic standards for OBW design, including

<sup>9</sup> 14 CFR 382.63(a).

<sup>10</sup> 55 FR 8008, 8021 (March 6, 1990).

<sup>11</sup> *Id.*

<sup>12</sup> *Id.*

<sup>13</sup> *Id.*

<sup>14</sup> 14 CFR 382.63(b).

<sup>15</sup> The requirement for airlines to provide an OBW is limited to aircraft with a design seat capacity of more than 60 passenger seats, with certain exceptions for specific types of smaller aircraft. 14 CFR 382.65(a). There are two limitations to the rule that airlines must provide OBWs on request when the lavatory itself is not accessible. First, the basis of the passenger's request must be that the passenger can use an inaccessible lavatory, but cannot reach it without the use of an OBW. Second, airlines may require passengers to provide up to 48 hours' advance notice to provide this service. 14 CFR 382.27(c)(7).

<sup>5</sup> 14 CFR 382.41.

<sup>6</sup> 85 FR 27 (January 2, 2020); RIN 2105-AE88. Information on the Part 1 NPRM can be found at [www.regulations.gov](http://www.regulations.gov); Docket DOT-OST-2019-0180.

<sup>7</sup> 53 FR 23574 (June 22, 1988).

<sup>8</sup> An OBW is a wheelchair that is used to transport a person with a disability between the aircraft seat and the lavatory. OBWs are stowed onboard the aircraft. An OBW should not be confused with an aisle chair, which is used for explaining and deplaning. Aisle chairs transport passengers between the jet bridge and the passenger's seat on the aircraft. Aisle chairs are generally kept in the airport, rather than on the aircraft itself.

<sup>2</sup> See U.S. Government Accountability Office, "Aviation Consumer Protection: Few U.S. Aircraft Have Lavatories Designed to Accommodate Passengers with Reduced Mobility" (GAO-20-258), available at <https://www.gao.gov/assets/710/703687.pdf>, at 5.

<sup>3</sup> *Id.* at 6.

<sup>4</sup> TS T-100 All Segment data, retrieved December 20, 2018 from [https://www.transtats.bts.gov/Tables.asp?DB\\_ID=111&DB\\_Name=Air%20Carrier%20Statistics%20%28Form%2041%20Traffic%29-%20All%20Carriers&DB\\_Short\\_Name=Air%20Carriers](https://www.transtats.bts.gov/Tables.asp?DB_ID=111&DB_Name=Air%20Carrier%20Statistics%20%28Form%2041%20Traffic%29-%20All%20Carriers&DB_Short_Name=Air%20Carriers).

elements such as footrests, movable armrests, adequate restraint systems, handles, and wheel locks.<sup>16</sup> The rule provides that the OBW must be designed to be compatible with the aisle width, maneuvering space, and seat height of the aircraft on which it is used, and must be easily pushed, pulled, and turned within the aircraft by airline personnel.<sup>17</sup>

In the 1990 ACAA rule, the Department announced its intention to issue an advance notice of proposed rulemaking (ANPRM) to seek comment on the issue of whether to require accessible lavatories on single-aisle aircraft.<sup>18</sup> In 1992, the Department convened an advisory committee to study this issue. The committee issued a report that discussed various lavatory designs, along with potential associated costs.<sup>19</sup>

As originally enacted, the ACAA covered only U.S. air carriers. However, on April 5, 2000, Congress enacted the Wendell H. Ford Aviation Investment and Reform Act for the 21st Century (AIR-21), which, among other things, amended the ACAA to include foreign air carriers.<sup>20</sup> In response to the AIR-21 requirements, the Department, on May 18, 2000, issued a notice announcing the Department's plan to initiate a rulemaking modifying part 382 to cover foreign carriers. On November 4, 2004, the Department issued an NPRM announcing its intention to apply the ACAA rule to foreign carriers.<sup>21</sup> During the course of this rulemaking, the Department received many comments expressing the view that the existing requirements concerning accessible lavatories were inadequate. Commenters at that time stated that accessible lavatories should be required in all aircraft, including single-aisle aircraft.

On May 13, 2008, the Department published a final rule amending part 382 to cover foreign air carriers.<sup>22</sup> The 2008 final rule requires foreign air carriers operating twin-aisle aircraft to provide accessible lavatories with respect to new aircraft that were ordered after May 13, 2009, or which were delivered after May 13, 2010.<sup>23</sup> (For U.S. carriers, the requirement applies to twin-aisle aircraft that were initially

ordered after April 5, 1990, or which were delivered after April 5, 1992.) In the preamble to the 2008 final rule, the Department acknowledged that single-aisle aircraft sometimes make lengthy flights, and that providing accessible lavatories on single-aisle aircraft would be a significant improvement in airline service for passengers with disabilities. However, the Department again ultimately declined to impose a requirement for accessible lavatories on single-aisle aircraft, given concerns that the "revenue loss and other cost impacts" could be too great.<sup>24</sup>

#### D. DOT ACCESS Advisory Committee

##### 1. Formation and History of Committee

On December 7, 2015, the Department issued a **Federal Register** document indicating that it was exploring the feasibility of conducting a negotiated rulemaking with respect to six accessibility issues, including accessibility of lavatories on single-aisle aircraft.<sup>25</sup> As part of this process, the Department hired a neutral convener to assist the Department in determining whether any or all of the six issues would be appropriate for a negotiated rulemaking. The convener found that the following three issues would be appropriate for a negotiated rulemaking: (1) Whether to require accessible in-flight entertainment and strengthen accessibility requirements for other in-flight communications; (2) whether to require an accessible lavatory on new single-aisle aircraft over a certain size; and (3) whether to amend the definition of "service animals" that may accompany passengers with a disability on a flight.<sup>26</sup>

The Department established and appointed members to the Advisory Committee on Accessible Air Transportation (ACCESS Advisory Committee or Committee) to negotiate and develop proposed regulations addressing accessible in-flight entertainment, accessible lavatories, and service animals.<sup>27</sup> The Committee comprised members representing various stakeholders including the Department, airlines, flight attendants, disability advocacy groups, academic or

nonprofit institutions having technical expertise in accessibility research and development, and aircraft manufacturers.<sup>28</sup> The Committee formed subcommittees of stakeholders to study and make recommendations on the three topics, depending on the stakeholders' areas of interest and expertise. During the first meeting, the Department informed the Committee that if it came to a consensus on the terms of a proposed rule, the Department would exercise good faith efforts to implement that consensus to the extent possible.<sup>29</sup> The Committee gathered data, conducted meetings and site visits, and engaged in negotiations from May 2016 through November 2016.

##### 2. Information Gathering

The Committee gathered information concerning the benefits of improving the accessibility of lavatories on single-aisle aircraft. The Committee learned that single-aisle aircraft were being increasingly used for longer-haul flights, on which accessible lavatories were not available.<sup>30</sup>

Paralyzed Veterans of America (PVA) presented survey data showing that for a majority of respondents, the inability to use a lavatory would be reason to choose not to fly.<sup>31</sup> PVA reported that some passengers with disabilities choose to fly shorter routes, go to the lavatory before entering the aircraft, or dehydrate themselves before flying to alleviate the need to use the lavatory on the aircraft.<sup>32</sup> More than 500 of 725 respondents to PVA's survey indicated that the biggest hindrance was the size and space/design of the lavatory itself.<sup>33</sup> A majority of survey respondents also indicated that an OBW would be necessary to reach the lavatory.<sup>34</sup> Survey respondents noted a number of issues with current OBWs, including lack of access to an OBW, not knowing that OBWs are available, inability to

<sup>28</sup> A full list of ACCESS Advisory Committee members and other information on the Committee may be found at <https://www.transportation.gov/access-advisory-committee>; see also <https://www.regulations.gov/docket?D=DOT-OST-2015-0246> (ACCESS Advisory Committee docket).

<sup>29</sup> Under the ground rules of the Committee, consensus was defined as "no more than two negative votes in each issue area," with abstentions not counting as negative votes. <https://www.transportation.gov/office-general-counsel/negotiated-regulations/access-committee-ground-rules>.

transfer from the OBW to the toilet, and the narrowness of the aisle in relation to the OBW.<sup>35</sup>

### 3. Developments in Accessible Lavatory Design and OBW Design

The ACCESS Advisory Committee proceedings provided an opportunity for manufacturers to demonstrate improvements to the accessibility of lavatories on single-aisle aircraft. For example, at the first meeting on May 17–18, 2016, one aircraft manufacturer (Airbus) presented information about its SpaceFlex lavatories. During normal operations, they function as two lavatories, separated by a dividing wall. On request, however, the dividing wall can be removed by a flight attendant, creating a single large space for the passenger and an assistant to enter and use the facilities.<sup>36</sup> SpaceFlex lavatories are installed in the rear section of the aircraft against the back wall, in the area that is often used for galley space (where drinks, meals, snacks, and service carts are stowed). DOT has learned that SpaceFlex lavatories are used primarily, but not exclusively, by low-cost airlines.

Another aircraft manufacturer (Bombardier) presented information about the accessibility features of its single-aisle “C-Series” aircraft. This manufacturer explained that C-Series lavatories were designed to permit passengers with reduced mobility the ability to transfer independently from the OBW to the toilet seat with the lavatory door closed.<sup>37</sup> The manufacturer explained that accessible lavatories were a design feature of the aircraft from its inception,<sup>38</sup> and that “clean sheet” designs can take many years to produce. The C-Series is now majority-owned by Airbus and is known as the Airbus A220; seating capacity ranges from 100 to 160 passengers. The accessibility lavatory feature of the Airbus 220 is optional for carriers.

The Committee also learned about a prototype OBW, developed by the University of Hamburg, with a cantilevered design that would permit the OBW to enter the lavatory space by

positioning the OBW seat over the toilet lid.

### 4. Development of a Tiered Approach to Accessibility

During the ACCESS Advisory Committee’s negotiations, stakeholders recognized that there were various ways to improve accessibility of lavatories, with varying costs and timelines for implementation. For example, the lavatory interior could be upgraded to include features such as accessible handles, faucets, and call buttons; airlines could also improve elements such as crew training and information about lavatory accessibility. Finally, the OBW design could be improved to enable a passenger with a disability to enter the lavatory. There was agreement that these improvements, which would not require increasing the floor dimensions (“footprint”) of the lavatory itself, could be implemented relatively quickly and thus became known as “short term” (or “Tier 1”) improvements.

The stakeholders also discussed various accessibility options that would increase the footprint of the lavatory, but not to the full size of a twin-aisle aircraft lavatory.<sup>39</sup> Finally, the stakeholders discussed the highest tier of accessibility: Expansion of lavatories to have the footprint (and accessibility features) of lavatories on twin-aisle aircraft. Here, airlines took the position that lavatories with larger footprints would take up space that could otherwise be filled by a row of seats. Airlines and manufacturers argued that airlines would lose considerable revenue from increasing the footprint of the lavatory because it would result in the loss of a row of seats. Airlines and manufacturers calculated that an industry-wide loss of three seats could result in lost revenue of \$33.3 billion over 25 years (net present value).<sup>40</sup> They argued that these costs could only be incurred if implementation of these improvements took place over the span of many years. These accessibility improvements became known as “long term” (or “Tier 3”) improvements.

### 5. Consensus and Production of Term Sheet

On November 22, 2016, the ACCESS Advisory Committee reached consensus on recommendations for new regulatory proposals to improve the accessibility of

lavatories on single-aisle aircraft.<sup>41</sup> The accessible lavatory Term Sheet states that the proposed standards would apply to new single-aisle aircraft. The agreement includes recommendations for both short-term and long-term accessibility improvements.

#### a. Recommendations on Short-Term Improvements

The Committee agreed to a series of improvements that would be required on new single-aisle aircraft delivered 3 years after the effective date of the DOT final rule that implements the agreement.<sup>42</sup> First, the Committee agreed that airlines operating aircraft with 60 or more passenger seats<sup>43</sup> would be required to: (1) Train flight attendants to proficiency with respect to transfers to and from the OBW and with respect to accessibility features of the lavatory and the OBW; (2) publish lavatory accessibility information and provide it on request; and (3) remove the International Symbol of Accessibility from lavatories that are not capable of facilitating a seated independent transfer.

Next, single-aisle aircraft with 125 or more passenger seats would also be required to have at least one lavatory with a number of accessibility features, including accessible door locks, flush handles, call buttons, faucets, and assist handles.

Finally, single-aisle aircraft with 125 or more passenger seats<sup>44</sup> would also be required to include an OBW that: (1) Permits passage in the aircraft aisle; (2) fits within an available certificated OBW stowage space; and (3) accomplishes its functions without requiring modification to the interior arrangement of the aircraft or the lavatory. The Term Sheet calls on the

<sup>41</sup> <https://www.transportation.gov/office-general-counsel/negotiated-regulations/final-resolution-access-committee>.

<sup>42</sup> The proposed rule text refers to “all new single-aisle aircraft” above a specific seating capacity that are “delivered” on or after a certain date. This phrasing makes clear that the proposed rule is not limited to newly-certificated aircraft models. Instead, it also applies to newly-manufactured aircraft of existing models.

<sup>43</sup> All references to seat capacity in the Term Sheet are references to Federal Aviation Administration (FAA)-certificated maximum seat capacities.

<sup>44</sup> The Committee accepted the airline industry’s proposal that a 125-seat threshold was a reasonable proxy for relatively long flight times (over 2–3 hours), where the need to use the lavatory would be greatest. Airlines presented data that aircraft with 125-seats or more reflected 87% of single-aisle available seat miles, and that only a small proportion of flights lasting over 2–3 hours were conducted by aircraft under with a capacity under 125 seats. See [https://www.transportation.gov/sites/dot.gov/files/docs/3a.P4.Lav\\_OEM\\_Airline%20Accessible%20Lav.Position.8.15.16..pdf](https://www.transportation.gov/sites/dot.gov/files/docs/3a.P4.Lav_OEM_Airline%20Accessible%20Lav.Position.8.15.16..pdf), slide 20).

<sup>35</sup> *Id.* at 3.

<sup>36</sup> <https://www.transportation.gov/sites/dot.gov/files/docs/Airbus%20Presentation%20on%20Lav.pdf>. This is the version of SpaceFlex known as “V1.” Airbus also produces a “SpaceFlex V2,” which does not increase the size of the lavatory, but provides a transfer seat to assist passengers in transitioning from the OBW to the aircraft toilet seat.

<sup>37</sup> [https://www.transportation.gov/sites/dot.gov/files/docs/P3.Lav\\_2.Block\\_Bombardier%20Presentation.v2.2016.07.11.pdf](https://www.transportation.gov/sites/dot.gov/files/docs/P3.Lav_2.Block_Bombardier%20Presentation.v2.2016.07.11.pdf).

<sup>38</sup> <https://www.transportation.gov/sites/dot.gov/files/docs/resources/individuals/aviation-consumer-protection/285871/july-meeting-minutes.pdf>.

<sup>39</sup> These became known as “Tier 2” improvements, but were not adopted by the Committee.

<sup>40</sup> [https://www.transportation.gov/sites/dot.gov/files/docs/3a.OEM\\_Airline%20Accessible%20Lav.Position.8.15.16..pdf](https://www.transportation.gov/sites/dot.gov/files/docs/3a.OEM_Airline%20Accessible%20Lav.Position.8.15.16..pdf).

Department to develop OBW standards, in consultation with stakeholders, and to publish those standards in a proposed rule. The Term Sheet indicates that standards for an over-the-toilet design OBW should be established, if feasible.

#### b. Recommendations on Long-Term Improvements

The Committee also agreed to expand the footprint of lavatories on single-aisle aircraft, but with a longer time frame for implementation. Specifically, new single-aisle aircraft with 125 or more passenger seats would be required to include at least one lavatory of sufficient size to permit a qualified individual with a disability to perform a seated independent (unassisted) and dependent (assisted) transfer from the OBW to and from the toilet within a closed space. The lavatory would afford an equivalent level of privacy to the persons using the OBW as that afforded to ambulatory users. The lavatory would also include the interior accessibility improvements found in Tier 1.

Under the agreement, these improvements would be required on qualifying aircraft: (1) That were initially ordered 18 years after the effective date of the final rule implementing the agreement, or (2) that were delivered 20 years after the effective date of such a final rule; or (3) for which an application for a new type-certificate is filed after 1 year from the effective date of the final rule. The agreement does not call for retrofitting of existing aircraft to meet the new expanded size requirements, but it does require that airlines comply with the Tier 1 standards if they replace lavatories on older aircraft.<sup>45</sup>

While the Department agreed in 2016 to propose these time frames for implementation, the Department remains very concerned about the length of time that individuals with disabilities have had to wait to receive these much-needed accessibility improvements. As we indicate in Part IV below, the Department requests comment on these requirements, including supporting data for any comments that suggest more rapid

implementation intervals, criteria other than type-certification for required action, or for options that would require retrofitting of existing aircraft.

#### E. Conducting Lavatory Rulemakings in Two Phases

In June 2019, the Department announced that the most appropriate course of action was to conduct two separate accessible lavatory rulemakings: One for short-term improvements, and one for long-term improvements. The NPRM addressing short-term improvements was published as the Part 1 NPRM. In that rulemaking, the Department proposed improvements to lavatory interiors, additional training and information procedures relating to lavatory accessibility, and improvements to the aircraft's OBW. The comment period to the Part 1 NPRM closed on March 2, 2020. During the comment period, a large majority of individuals expressed the view that the Department should issue a rule expanding the size of lavatories on single aisle aircraft, even though the NPRM itself did not seek comment on this issue.

After reviewing the comments from the Part 1 NPRM, the Department has determined that it is prudent to gather additional information about OBW design before issuing a final rule. Accordingly, the Department intends to hold a public hearing regarding OBW design. The Department will then review the information gathered in that public hearing, along with the comments that it received to the Part 1 NPRM and this NPRM, which is the Part 2 NPRM focused on long-term improvements. Any final rule on accessible lavatories would address the proposals in both these NPRMs.

#### F. Government Accountability Office Review

On January 7, 2020, the U.S. Government Accountability Office (GAO) published a review of commercial aircraft lavatories.<sup>46</sup> The report found that the fleets of the top eight U.S. domestic carriers, as measured by the number of 2018 passenger trips, largely consist of single-aisle aircraft.<sup>47</sup> Of those eight carriers that were studied, five use single-aisle aircraft exclusively.<sup>48</sup> According to GAO, in 2018, 99 percent of U.S. aircraft

departures for domestic flights occurred on single-aisle aircraft.<sup>49</sup>

GAO also surveyed various types of lavatories that are currently available to be installed on single-aisle aircraft, including the Airbus SpaceFlex V1, the SpaceFlex V2, the accessible design for the Airbus A220 (formerly the Bombardier C-Series), and the Boeing Pax Plus.<sup>50</sup> GAO found that, “[w]hile aircraft manufacturers offer lavatories designed to accommodate passengers with mobility impairments, carriers do not often choose to acquire them.”<sup>51</sup> In total, approximately 4.5 percent of the combined fleet of those eight carriers have lavatories designed to provide some measure of greater access for passengers with disabilities.<sup>52</sup> Specifically, according to GAO, of the eight carriers studied, four had single-aisle aircraft within their fleet with lavatories designed to accommodate passengers with mobility impairments.<sup>53</sup> Moreover, all of the aircraft in U.S. fleets with any lavatory accommodations for passengers with mobility impairments were manufactured by Airbus.<sup>54</sup> According to GAO, “[d]espite Boeing’s offering of the Pax Plus lavatories since 2017, Boeing officials told us that no U.S. carriers have ordered these lavatories for their current or future single-aisle Boeing aircraft.”<sup>55</sup>

Consistent with the general findings of the ACCESS Advisory Committee, the carriers with the largest percentage of accessible lavatories in their fleets tend to be low-cost carriers with fewer requirements for galley space.<sup>56</sup> GAO confirmed that airlines take into account cost tradeoffs (in terms of lost revenue from removed seats) when determining whether to install accessible lavatories. According to GAO, some airline officials contend that fewer seats in circulation may lead to higher costs for carriers, and subsequently higher costs for consumers.<sup>57</sup>

Consistent with prior findings, GAO reports that according to stakeholder groups, passengers with disabilities may encounter significant difficulties when attempting to fly on single-aisle aircraft; that many report anxiety over flying, or

<sup>45</sup> See Term Sheet, “Tier 3” Agreement, section (c) (“You are not required to retrofit cabin interiors of existing aircraft to comply with the requirements of this section. However, if you replace a lavatory on a single aisle aircraft, you must replace it with an accessible lavatory as defined in section 382.xx (tier I section)”). [https://www.transportation.gov/sites/dot.gov/files/docs/Annex%20A.Lav\\_Agreed%20Text.pdf](https://www.transportation.gov/sites/dot.gov/files/docs/Annex%20A.Lav_Agreed%20Text.pdf).

As with the current rule, accessible lavatories would not be required if the airline chooses not to install any lavatories on the aircraft. In practice, however, airlines generally choose to install at least one lavatory onboard aircraft.

<sup>46</sup> GAO, “Aviation Consumer Protection: Few U.S. Aircraft Have Lavatories Designed to Accommodate Passengers with Reduced Mobility” (GAO-20-258), available at <https://www.gao.gov/assets/710/703687.pdf>.

<sup>47</sup> *Id.* at 3.

<sup>51</sup> *Id.* at 14.

<sup>52</sup> *Id.*

<sup>53</sup> *Id.*

<sup>54</sup> *Id.* at 15. According to the GAO report, three airlines have aircraft in their fleet with the SpaceFlex V1 installed. One airline has Airbus A220 aircraft in its fleet; these aircraft have lavatories that can accommodate an OBW, but not both an OBW and an assistant. *Id.*, at 13, 15.

<sup>55</sup> *Id.* at 14.

<sup>56</sup> *Id.* at 16.

<sup>57</sup> *Id.* at 15.

that they avoid flying and choose to take ground transportation instead.<sup>58</sup> GAO reports that airlines and DOT receive few reports of inaccessible lavatories on single-aisle aircraft; however, that low number could be explained by passengers either knowing that such lavatories are not required, or avoiding air travel, or taking the precautionary measures described above.

## II. Discussion of Proposed Rule Text

In this NPRM, the Department proposes long-term improvements for accessible lavatories on single-aisle aircraft. The proposed rule text is intended to track the ACCESS Advisory Committee's consensus Term Sheet as closely as possible.

In keeping with the ACCESS Advisory Committee's agreement, these proposed improvements would apply to single-aisle aircraft with an FAA-certificated maximum seating capacity of 125 or more seats that are: (1) Ordered 18 years after the effective date of the final rule; (2) delivered 20 years after the effective date of the final rule; or (3) of a new type-certificated design filed with the FAA or a foreign carrier's aviation safety authority more than one year after the effective date of the final rule. In general, the purpose of this requirement would be to afford airlines and aircraft manufacturers sufficient time to determine and implement a means of installing larger lavatories on *current* type-certificated aircraft, while also effectively requiring *new* type-certificated aircraft to incorporate larger lavatories as part of the aircraft's design.

The proposed rule would require the lavatory to be large enough to permit a qualified individual with a disability<sup>59</sup> to approach the lavatory, enter, maneuver within as necessary to use all lavatory facilities, and leave by means of

the aircraft's OBW.<sup>60</sup> The lavatory would also be of sufficient size to permit an assistant to enter the lavatory along with the passenger to facilitate an assisted transfer between the OBW and the toilet. While the proposed rule does not explicitly state that the lavatory would need to be large enough to accommodate both individuals with the door closed, it does provide that the assisted transfer must take place within a closed space that affords to persons using the OBW privacy equivalent to that afforded ambulatory users.

The proposed rule would also require the lavatory to have certain accessible interior features. These features would be identical to those the Department proposed in the Part 1 NPRM (applicable to new single-aisle aircraft delivered 3 years after the effective date of the final rule derived from that NPRM).<sup>61</sup> Those features are set forth in the rule text.

The Department seeks comment on its proposal to increase the footprint of the lavatory on single-aisle aircraft to permit a passenger with a disability (with the help of an assistant, if necessary) to approach, enter, and maneuver within the aircraft lavatory, as necessary, to use all lavatory facilities and leave by means of the aircraft's on-board wheelchair. The Department specifically seeks comment on the costs, benefits, feasibility and compliance timeframes of this proposal.

The Department has identified an alternative that would be similar to the NPRM's proposal, with the only difference being that the lavatory would *not* be required to be large enough to also accommodate an attendant. Under this alternative, the lavatory would be required to be large enough to permit a passenger equivalent in size to a 95th percentile male to enter the lavatory

using the OBW, transfer between the OBW and the toilet, use all facilities within a closed space that affords privacy equivalent to that afforded to ambulatory users, and exit using the OBW. Could such an alternative be implemented on an earlier time frame than the timeframe proposed for lavatories that would be large enough to accommodate a passenger with a disability and his or her attendant? The Department seeks comment on the costs, benefits, and feasibility of this alternative. Comments submitted in response to the Part 1 NPRM regarding changes to the interior of the lavatory, training requirements, and improvements to the OBW need not be resubmitted.

The Department notes that the ACCESS Advisory Committee's agreement would not result in high levels of accessibility in single-aisle aircraft lavatories for a long period of time, and that it would not guarantee such accessibility in aircraft outfitted for fewer than 125 seats which, based upon current trends and practices, are capable of performing an increasing number of missions in the U.S. domestic market, including mid-continental and trans-continental flights of significant duration. Failure to achieve consistent and high levels of accessibility could result in ongoing or increasing barriers to travel requiring future action, not to mention create hardships for persons with disabilities that all members of the ACCESS Advisory Committee wished to avoid. Accordingly, the Department solicits specific comments on whether there are different or more effective performance-based standards that could achieve the ACCESS Advisory Committee's and the Department's goals of improving accessibility on single-aisle aircraft more quickly.

## III. Summary of Regulatory Impact Analysis

The Department has prepared a preliminary regulatory evaluation in support of the NPRM, available in the docket. The Department's analysis builds on the approach to estimating impacts that the airlines and manufacturers prepared for the negotiated rulemaking proceedings. During the proceedings, industry maintained that accessible lavatories on single-aisle aircraft would have larger footprints and take up space that could otherwise be filled by a row of seats. They presented an analysis of potential economic impacts assuming an industry-wide loss of one row of three seats per aircraft, a 2018 compliance date, and a requirement to retrofit

<sup>58</sup> *Id.* at 16–17.

<sup>59</sup> The Term Sheet describes the passenger with a disability and the assistant as being "equivalent in size to a 95th percentile male," but is unclear as to whether the term refers to height, weight, or both. The Department considers 95th percentile to apply to both height and weight. There does not appear to be a specific and universally-accepted method for calculating the height and weight of a 95th percentile male; moreover, that measurement may change over time. One recent publication from SAE International suggests that a 95th percentile male would be 6 feet 1 inches (1.86m) and 227 pounds (103kg). See <https://saemobilus.sae.org/content/2021-01-0918>. We seek comment on the appropriate method of calculating the height and weight of a 95th percentile male.

"Qualified individual with a disability" is defined in 14 CFR 382.3 in relevant part as an individual who "buys or otherwise validly obtains, or makes a good faith effort to obtain, a ticket for air transportation on a carrier and presents himself or herself at the airport for the purpose of traveling on the flight to which the ticket pertains; and meets reasonable, nondiscriminatory contract of carriage requirements applicable to all passengers."

<sup>60</sup> In the Part 1 NPRM, the Department proposes various improvements to the design of the OBW itself. One of those proposed improvements is that the OBW include an "over-the-toilet" design. This feature would permit the passenger to enter the lavatory while seated on the OBW, with the seat of the OBW situated over the top of the closed toilet lid. This OBW design would permit passengers with disabilities to perform non-toileting functions in privacy, within smaller lavatories. One key benefit of the larger lavatory design is that it permits the OBW to be situated adjacent to the toilet seat, so that the passenger can transfer to and from the toilet to perform toileting functions.

<sup>61</sup> The Part 1 NPRM calls for airlines to provide a visual barrier, on request, to afford to passengers with disabilities to use the lavatory with the door open while providing a level of privacy equivalent to that provided to ambulatory users. This feature would not be required in this proposal as the Department is proposed to require a lavatory of sufficient size to permit equivalent levels of privacy. We seek comment, however, on whether and to what extent visual barriers would benefit passengers with disabilities if airlines were required to comply with this proposal.

existing aircraft.<sup>62</sup> The analysis estimated that airlines would experience a revenue loss of \$33.3 billion (\$35.9 billion in 2019 dollars) for the 25-year period from 2018 through 2042.<sup>63</sup>

The final terms of the negotiated rulemaking differ from the assumptions used in the industry analysis and affect the estimates. While the analysis assumed a 2018 compliance date and a requirement to retrofit existing aircraft, the proposed rule applies only to new deliveries of aircraft delivered beginning 20 years after the effective date of the final rule. The longer time horizon significantly reduces the industry estimate of impacts through the effects of discounting, as does removing the requirement for retrofitting of existing aircraft. While industry projected that traveling public would experience at least some of these impacts in the form of higher fares, reduced service to marginally profitable locations, and reduced seat availability, it did not provide an estimate of consumer impacts.

A key uncertainty in the Department's analysis is the degree of seat loss the industry will experience due to an accessible lavatory requirement. On the one hand, several existing designs would not require carriers to remove seats, as discussed in the "Government Accountability Office Review" section, suggesting that a universal loss of three seats is likely an overestimate. Airlines could comply with the requirements of the proposed rule using existing aircraft and lavatory designs that would not require any seat removal. On the other hand, airlines have demonstrated a trend of reducing the size of lavatories on aircraft to fit as many seats as possible.<sup>64</sup> Given this trend, requiring accessible lavatories in place of shrinking lavatories may lead to losses of seats for future aircraft relative to the

world without this proposed rule (the baseline scenario). According to industry, the loss of "even a small number of seats . . . has tremendous opportunity costs" and "a loss of even one seat affects the selling of all other seats."<sup>65</sup> Total available seats, including unoccupied seats, are part of industry planning and business strategy, and the loss of seats could disrupt those processes.

In the absence of an alternative estimate of seat loss, we retain for the purposes of this NPRM the airlines' estimate of an industry-wide loss of three seats per single-aisle aircraft for this analysis. However, in our judgment, given existing designs and practical limits to downsizing of existing lavatories, the loss of three seats likely overestimates the effects of the rule on cabin configuration and total available seats. We seek information, data, and comment on what estimates of the costs of seat loss would be most appropriate.

Manufacturing and installing accessible lavatories may impose additional costs. During the negotiated rulemaking meetings, aircraft manufacturers and airlines did not emphasize any cost differential between current lavatories and accessible lavatories, except for retrofitting and taking aircraft out of service to make modifications. Because the agreement only applies to new aircraft, we assume that any additional cost of manufacturing and installing an accessible lavatory at the design phase of aircraft production is *de minimis* relative to the cost of an aircraft.

The primary benefit of the proposed rule is that passengers with disabilities would have privacy and dignity while using the lavatory. These passengers would no longer have to consider risky alternatives such as dehydrating before flight or withholding bodily functions. Accessible lavatories could also expand the market for travel by people with disabilities if they have latent demand for air travel and the rule enables travel that was previously deterred. In addition, other passengers may also derive ancillary benefits from having larger lavatories, including the ability to perform tasks that might not be possible

otherwise, such as changing a child's diaper or assisting a child using the toilet. Finally, members of the public may feel that improving accessibility for travelers with disabilities has a social value.

Given available data, we cannot currently quantify these benefits. There is significant uncertainty regarding the size of the affected population in the baseline and the extent to which this proposed rule will remove barriers to air travel for current and potential passengers. Without the ability to measure the size of the affected population, the extent to which the lack of accessible lavatories creates barriers to air travel, and the degree that the requirements of this proposed rule improve travel experience and encourage additional travel, it is not currently possible to quantitatively evaluate or monetize impacts. However, we seek information that may help do so.

Other economic impacts of the proposed rule depend on the degree to which adding accessible lavatories reduces the number of passengers on flights. The Department preliminarily estimated the effects of removing three departure seats per aircraft based on industry feedback, although this estimate may overstate the economic effects of the rule. The Department also used published estimates of the price elasticity of air travel demand to estimate potential increases to airfare that would allow airlines to offset a portion of the revenue lost from the removal of seats by passing on impacts to passengers. As noted above, we seek additional data and information on these issues.

The Department's regulatory impact analysis, summarized in Table 1 and available in the docket, illustrates the potential economic effects of the proposed rule. Total societal (economic) costs are the sum of lost producer and consumer surplus due to the reduction in the number of passengers transported. The annualized costs, discounted to 2022, are \$212 million at a 3% discount rate or \$85 million at a 7% discount rate. The proposed rule would also result in a transfer from passengers to airlines due to airlines increasing airfare to recapture lost revenue. The annualized transfers are \$933 million at a 3% discount rate or \$373 million at a 7% discount rate.

<sup>64</sup> Scott McCartney (August 29, 2018). "You're Not Getting Bigger, the Airplane Bathroom Is Getting Smaller." *Wall Street Journal*. Retrieved October 14, 2021 from <https://www.wsj.com/articles/youre-not-getting-bigger-the-airplane-bathroom-is-getting-smaller-1535553108>.

<sup>65</sup> "Aircraft Lavatory Accessibility Joint Airline and Manufacturer Presentation," available at [https://www.transportation.gov/sites/dot.gov/files/docs/3a.OEM\\_Airline%20Accessible%20Lav.Position.8.15.16..pdf](https://www.transportation.gov/sites/dot.gov/files/docs/3a.OEM_Airline%20Accessible%20Lav.Position.8.15.16..pdf).

TABLE 1—SUMMARY OF ECONOMIC IMPACTS DUE TO PROPOSED RULE  
[2019 dollars]

	25-Year total (3% discount)	Annualized (3% discount)	25-Year total (7% discount)	Annualized (7% discount)
Benefits .....	Not quantified ...	Not quantified ...	Not quantified ...	Not quantified.
Costs:				
Lost producer surplus .....	\$3,563,259,980	\$204,630,435 ...	\$954,736,436 ...	\$81,926,427.
Lost consumer surplus .....	\$136,530,910 ...	\$7,840,679 .....	\$33,459,393 .....	\$2,871,168.
Total societal costs .....	\$3,699,790,890	\$212,471,114 ...	\$988,195,830 ...	\$84,797,595.
Transfers:				
From passengers to airlines .....	\$16,241,111,323	\$932,692,447 ...	\$4,352,911,148	\$373,525,557.

**Note:** Estimates calculated using midpoint elasticities of domestic air travel demand identified in literature.

Because we could not quantify and monetize benefits, it is not possible to make a judgment regarding the relationship between benefits and costs based upon a net benefits calculation. We conducted a supplementary analysis to provide some insight into how passengers and airlines might experience these costs.

Table 2 summarizes the results of the supplementary analysis. Passengers flying in 2066—the year when all single-aisle aircraft would be assumed to have accessible lavatories and fewer available seats—would experience the largest increases in ticket prices. Domestic passengers would pay an additional \$2.22 per ticket on average; international passengers would pay an additional \$9.13. Passengers flying in earlier years, when some aircraft would not have accessible lavatories and reduced seating, would experience smaller airfare increases. The increase in ticket prices would more than offset any revenue loss that the airlines would directly experience due to a reduction in passenger seats, but the net revenue increase would be modest.

TABLE 2—OTHER ECONOMIC IMPACTS DUE TO PROPOSED RULE

Item	Amount in 2066
Increase in ticket price (domestic) .....	\$2.66
Increase in ticket price (international) .....	10.88
Net revenue loss (gross revenue loss less transfer from passengers) .....	– 24,010,938

**Note:** Estimates calculated using midpoint elasticities of domestic air travel demand identified in literature.

**IV. Request for Data and Comments**

The Department solicits written data, analysis, views, and recommendations from interested persons concerning the information and issues addressed in this NPRM. Comments submitted in response to the Part 1 NPRM need not

be resubmitted, as they are already being considered. The Department specifically seeks comment on the following questions related to this rulemaking:

*A. General*

The Department currently requires airlines to ensure that at least one lavatory on twin-aisle aircraft is accessible. To what extent do accessible lavatories on twin-aisle aircraft meet the needs of passengers with disabilities, particularly passengers with mobility impairments? Are accessible lavatories on twin-aisle aircraft large enough to accommodate an assistant to assist the passenger with transfers between the OBW and the toilet?

To what extent are lavatories meeting the size parameters of this proposal already available for installation on single-aisle aircraft? To the extent that such lavatories are available on the market but are not being installed, what are the market forces driving this decision?

How important is it for airlines to distinguish themselves in the marketplace based on factors such as robust galley service? What additional costs or revenue loss would be incurred if galley space were sacrificed in order to accommodate an accessible lavatory? How do airlines assess this tradeoff against the increase in the number of seats (typically an entire row) that could be added under such a design, in addition to providing accessibility?

What are the future trends for voluntary adoption of larger lavatories in single-aisle aircraft, particularly given demographic trends tending toward an aging population? What market incentives, if any, exist to encourage airlines to install accessible lavatories on single-aisle aircraft? Would airlines benefit from advertising (or otherwise indicating) that their aircraft have accessible lavatories? Are carriers able to distinguish themselves in the marketplace based on the availability of accessible lavatories? If a carrier does

have aircraft in its fleet with accessible lavatories, how would passengers with disabilities know or ensure that their specific flight is being operated using an aircraft equipped with an accessible lavatory?

Are other innovative accessible lavatory options, not discussed in this NPRM, being developed? If so, what tradeoffs, costs, and benefits are associated with such lavatories? For example, could a side-by-side aisle-facing lavatory design (such as is found on the Boeing 737–900ER) be adapted (such as by including movable walls) to provide the desired level of accessibility while also preserving both existing galley space and total seating capacity?

*B. Time Frame for Adoption*

The ACCESS Advisory Committee agreed to require lavatories on new aircraft ordered 18 years or delivered 20 years after the effective date of a final rule. Airlines and aircraft manufacturers that participated in the ACCESS Advisory Committee indicated that this time frame was the earliest acceptable time frame for adopting new standards, but did not provide a thorough explanation for why implementation must be delayed to that degree. As a frame of reference, FAA regulations allow manufacturers 5 years from the date of application to finish designing (obtaining approval of) a new transport-category airplane.

If the useful life of an aircraft is roughly 25 years, then approximately 4 percent of aircraft would be replaced annually, on average. Under these assumptions and the current implementation dates of the rule, it would take approximately 25 years for one-quarter of all qualifying aircraft to be deployed with accessible features, 30 years for half of all qualifying aircraft, and 45 years for essentially all qualifying aircraft to have the accessibility features described in this NPRM.

Are these extended implementation timeframes appropriate or necessary?

Why or why not? Specifically, we note that the negotiated rulemaking took place five years ago, in 2016. At that time, the Department expressed its intent to expeditiously issue an NPRM reflecting the stakeholders' Term Sheet. The Term Sheet itself contains compliance dates that are tied to the date that the Department issues a final rule. How should the Department take into account the lapse of time between the Term Sheet and this NPRM when drafting its final rule? Are there alternative timeframes that could yield benefits sooner without imposing an undue burden?

Are new type-certificated single-aisle aircraft currently being developed that would include lavatories of the size equivalent to that proposed here (*i.e.*, lavatories that are large enough to permit a passenger with a disability to approach, enter, and maneuver within the aircraft lavatory with the help of an assistant if needed)? If so, when and how would such aircraft be placed into service? What share of the total commercial aircraft fleet and available seat miles would be represented by such aircraft at different points in the future?

Do any new type-certificated single-aisle aircraft include lavatories that would not be large enough to accommodate an assistant but large enough to permit a passenger equivalent in size to a 95th percentile male to enter the lavatory using the OBW, transfer between the OBW and the toilet, use all facilities within a closed space that affords privacy equivalent to that afforded to ambulatory users, and exit using the OBW? Do lavatories of this size already exist in the marketplace? What is a realistic timeframe for implementation of this alternative? If it is feasible to install lavatories that are large enough to accommodate a person with a disability unassisted on an earlier schedule than lavatories that are large enough to accommodate a person with a disability assisted and unassisted, would that be more beneficial to persons with disabilities? Why or why not?

Should the Department adopt a different tiered or phased model for implementation? For example, should the Department require tiered implementation of accessibility standards for different sizes of carriers, different sizes of aircraft, aircraft used for longer routes or aircraft used for routes that are busier than others? Should implementation of accessibility standards be phased in or should requirements be scoped based on the scheduled flight time? What are the pros and cons of these various approaches? Is it appropriate to focus implementation

of accessibility standards first on the entities that would be least burdened? Would a different approach allow technology or design principles to develop more efficiently than the Department's proposed approach? If so, how would the Department calculate the costs and benefits of a different approach?

#### C. Applicability

The agreement of the ACCESS Advisory Committee would apply the requirement for an accessible lavatory only to aircraft with maximum seating capacity of 125 seats or more. We seek comment on this recommended standard. Should the threshold for requiring an accessible lavatory be higher or lower than 125 seats? How would the application of a different threshold affect the potential costs and benefits of the rule?

The airlines' and manufacturers' analysis also presented information on the percentage of available seat miles (ASMs) on single-aisle aircraft on flights over 2 hours and over 3 hours in duration. However, the ACCESS Advisory Committee ultimately did not recommend setting a performance-based standard that would limit the applicability of the requirement for an accessible lavatory only to aircraft used on flights with a scheduled duration. It is the Department's understanding from discussions during the ACCESS Advisory Committee proceedings that both airlines and advocates favored the seating-capacity approach over the scheduled-duration approach because the Committee believed that seating-capacity approach provides greater predictability as to when accessible lavatories would be available, particularly in cases of unexpected aircraft swaps.

Therefore, the Department seeks updated comment on this conclusion. How can the rule be framed to provide the greatest predictability as to when accessible lavatories would be available for disabled passengers? The Department also seek comment on alternative performance-based standards, such as requiring only a certain percentage of a carrier's flights between city-pairs to have accessible lavatories. Such a percentage standard could be accompanied by a requirement for carriers to provide advance information on the accessibility of lavatories and to rebook and/or compensate disabled passengers if an aircraft change made accessible lavatories unavailable. How would the application of a performance-based standard affect the potential costs and benefits of the rule? What challenges

would airlines face in managing their fleets to ensure such a standard is met? Have there been any changes in airline fleet management practices or capabilities since the time of the rulemaking committee's report that might make meeting such a standard more feasible today or in the future?

#### D. Economic Information

The Department seeks information to help it better understand the benefits of the rule, including data that would assist it in quantifying and/or monetizing those benefits. Relevant information to estimate benefits for people with disabilities includes the number of travelers with disabilities, estimates of latent air travel demand for people who do not currently travel due to inaccessible lavatories, and the associated costs to individuals from practices such as dehydrating or holding bodily functions for extended periods. Other relevant information includes information to quantify benefits for other passengers, who may benefit from having the additional space in accessible lavatories, as well as the public, who may derive value from ensuring that people who need accessible lavatories on flights have them. Data on passenger use of lavatories for flights of varying duration would also be useful.

In the regulatory analysis, the Department assumed that aircraft ordered with accessible lavatory features had identical costs to aircraft ordered without accessible lavatories. The Department seeks information on whether any cost differential exists between the two types of aircraft and how that differential compares with the total cost of new aircraft.

Finally, the Department seeks additional information to evaluate the extent to which the proposed rule would require removal of passenger or revenue seats, and how the traveling public and industry would experience the economic impacts. The airlines and manufacturers noted that airlines may respond to seat losses by adjusting schedules, seat pitch, prices, and other aspects of their service but did not quantify these effects in their analysis. The Department estimated impacts to industry and consumers by using published estimates of the price elasticity of demand for air travel and assumed an industry-wide loss of three revenue seats per aircraft. In practical terms, what would be the size of a lavatory that accommodates a passenger with a disability and an attendant equivalent in size to a 95th-percentile male? How would these dimensions affect the features of lavatory interiors

such as assist handles, faucets and other controls, if these features must meet the needs of and be usable by qualified individuals with a disability whether equivalent in size to a 95th percentile male or a 5th percentile female? What are the benefits of basing the size of a lavatory that accommodates a passenger with a disability and an attendant equivalent on the size of a 95th-percentile male? What are the cost effects of these dimensions, including on potential seat loss? What additional data should the Department consider when determining cost impacts, including potential seat loss?

We seek comment on other approaches to or data that could be used for estimating effects on the industry and the market, as well as how these effects might be allocated between airlines and consumers.

## V. Regulatory Analyses and Notices

*A. Executive Order 12866 (Regulatory Planning and Review), Executive Order 13563 (Improving Regulation and Regulatory Review), and 49 CFR Part 5, Subpart B (DOT Rulemaking Procedures)*

Executive Orders 12866 (“Regulatory Planning and Review”) and 13563 (“Improving Regulation and Regulatory Review”) require agencies to regulate in the “most cost-effective manner,” to make a “reasoned determination that the benefits of the intended regulation justify its costs,” and to develop regulations that “impose the least burden on society.” The proposed rule, which implements the terms of a negotiated rulemaking agreement, is economically significant under Executive Order 12866 because the estimated economic effects exceed the \$100 million annual threshold for significance defined by the order. More information on the economic effects is available in the “Summary of Regulatory Impact Analysis” section, as well as the regulatory impact analysis available in the docket. Accordingly, the proposed rule has been reviewed by the Office of Management and Budget.

Executive Orders 12866 and 13563 also require agencies to provide a meaningful opportunity for public participation. Accordingly, the Department has asked commenters to answer a variety of questions to elicit practical information about relevant data and analytic approaches, as described in “Request for Data and Comments.” These comments will help the Department evaluate the economic effects of the proposed rule.

## B. Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires an agency to review regulations to assess their impact on small entities unless the agency determines that a rule is not expected to have a significant economic impact on a substantial number of small entities. A direct air carrier or foreign air carrier is a small business if it provides air transportation only with small aircraft (*i.e.*, aircraft with up to 60 seats/18,000-pound payload capacity). The regulatory initiative discussed in this NPRM would apply only to carriers that operate aircraft with FAA-certificated maximum capacity of more than 60 seats. Therefore, by definition, the initiative would not have a significant economic impact on a substantial number of small entities.

## C. Executive Order 13132 (Federalism)

This NPRM has been analyzed in accordance with the principles and criteria contained in Executive Order 13132 (“Federalism”). This NPRM does not include any provision that: (1) Has substantial direct effects on the States, the relationship between the National Government and the States, or the distribution of power and responsibilities among the various levels of government; (2) imposes substantial direct compliance costs on State and local governments; or (3) preempts State law. States are already preempted from regulating in this area by the Airline Deregulation Act, 49 U.S.C. 41713. Therefore, the consultation and funding requirements of Executive Order 13132 do not apply.

## D. Executive Order 13175

This NPRM has been analyzed in accordance with the principles and criteria contained in Executive Order 13175 (“Consultation and Coordination with Indian Tribal Governments”). Because none of the topics on which we are seeking comment would significantly or uniquely affect the communities of the Indian Tribal governments or impose substantial direct compliance costs on them, the funding and consultation requirements of Executive Order 13175 do not apply.

## E. Paperwork Reduction Act

Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 *et seq.*), no person is required to respond to a collection of information unless it displays a valid Office of Management and Budget (OMB) control number. This NPRM does not propose any new information collection burdens.

## F. Unfunded Mandates Reform Act

The Department has determined that the requirements of Title II of the Unfunded Mandates Reform Act of 1995 do not apply to this NPRM.

## List of Subjects in 14 CFR Part 382

Air carriers, Civil rights, Consumer protection, Individuals with disabilities, Reporting and recordkeeping requirements.

Issued in Washington, DC, under authority delegated in 49 CFR 1.27(n).

**John E. Putnam,**

*Deputy General Counsel.*

In consideration of the foregoing, the Department proposes to amend 14 CFR part 382 as follows:

## PART 382—NONDISCRIMINATION ON THE BASIS OF DISABILITY IN AIR TRAVEL

■ 1. The authority citation for part 382 continues to read as follows:

**Authority:** 49 U.S.C. 41705.

### Subpart E—Accessibility of Aircraft and Service Animals on Aircraft

■ 2. Section 382.64 is added to read as follows:

#### § 382.64 What are the requirements for large accessible lavatories on single-aisle aircraft?

(a) As a carrier, you must ensure that all new single-aisle aircraft that you operate with an FAA-certificated maximum seating capacity of 125 seats or more in which lavatories are provided, shall include at least one lavatory of sufficient size to:

(1) Permit a qualified individual with a disability equivalent in size to a 95th percentile male to approach, enter, maneuver within as necessary to use all lavatory facilities, and leave, by means of the aircraft’s on-board wheelchair, in a closed space that affords privacy equivalent to that afforded to ambulatory users; and

(2) Permit an assistant equivalent in size to a 95th percentile male to assist a qualified individual with a disability, including assisting in transfers between the toilet and the aircraft’s on-board wheelchair, within a closed space that affords privacy equivalent to that afforded to ambulatory users.

(b) The lavatory required in paragraph (a) of this section shall include the following features:

(1) Grab bars must be provided and positioned as required to meet the needs of individuals with disabilities.

(2) Lavatory faucets must have controls with tactile information concerning temperature. Alternatively,

carriers may comply with this requirement by ensuring that lavatory water temperature is adjusted to eliminate the risk of scalding for all passengers. Automatic or hand-operated faucets shall dispense water for a minimum of five seconds for each application or while the hand is below the faucet.

(3) Attendant call buttons and door locks must be accessible to an individual seated within the lavatory.

(4) Lavatory controls and dispensers must be discernible through the sense of touch. Operable parts within the lavatory must be operable with one hand and must not require tight grasping, pinching, or twisting of the wrist.

(5) The lavatory door sill must provide minimum obstruction to the passage of the on-board wheelchair across the sill while preventing the leakage of fluids from the lavatory floor and trip hazards during an emergency evacuation.

(6) Toe clearance must not be reduced from current measurements.

(c) You are not required to retrofit cabin interiors of existing single-aisle aircraft to comply with the requirements of paragraph (a) of this section.

(d) As a carrier, you must comply with the requirements of this section with respect to new aircraft that you operate that were originally ordered after [DATE 18 YEARS AFTER THE EFFECTIVE DATE OF THE FINAL RULE] or delivered after [DATE 20 YEARS AFTER THE EFFECTIVE DATE OF THE FINAL RULE] or are part of a new type-certificated design filed with the FAA or a foreign carrier's safety authority after [DATE ONE YEAR AFTER THE EFFECTIVE DATE OF THE FINAL RULE].

[FR Doc. 2022-05869 Filed 3-25-22; 8:45 am]

BILLING CODE 4910-9X-P

## DEPARTMENT OF THE TREASURY

### Internal Revenue Service

#### 26 CFR Part 1

[REG-121508-18]

RIN 1545-BO97

#### Multiple Employer Plans

**AGENCY:** Internal Revenue Service (IRS), Treasury.

**ACTION:** Notice of proposed rulemaking and notice of public hearing; withdrawal of notice of proposed rulemaking.

**SUMMARY:** This document sets forth proposed regulations relating to certain

multiple employer plans (MEPs) described in the Internal Revenue Code (the "Code"). The proposed regulations provide an exception, if certain requirements are met, to the application of the "unified plan rule" for MEPs in the event of a failure by one or more employers participating in the plan to take actions required of them to satisfy the applicable requirements of the Code. These proposed regulations would affect certain MEPs, participants in those MEPs (and their beneficiaries), employers participating in those MEPs, and plan administrators of those MEPs. This document also withdraws proposed regulations published in the **Federal Register** on July 3, 2019, amending the application of the unified plan rule to MEPs and provides a notice of a public hearing.

**DATES:** Written or electronic comments must be received by May 27, 2022. A public hearing on these proposed regulations has been scheduled for Wednesday, June 22, 2022, at 10 a.m. EST. Requests to speak and outlines of topics to be discussed at the public hearing must be received by May 27, 2022. If no outlines are received by May 27, 2022, the public hearing will be cancelled. Requests to attend the public hearing must be received by 5 p.m. EST on Friday, June 17, 2022. The telephonic hearing will be made accessible to people with disabilities. Requests for special assistance during the telephonic hearing must be received by Thursday, June 16, 2022.

**ADDRESSES:** Commenters are strongly encouraged to submit public comments electronically. Submit electronic submissions via the Federal eRulemaking Portal at [www.regulations.gov](http://www.regulations.gov) (indicate IRS and REG-121508-18) by following the online instructions for submitting comments. Once submitted to the Federal eRulemaking Portal, comments cannot be edited or withdrawn. The IRS expects to have limited personnel available to process public comments that are submitted on paper through mail. Until further notice, any comments submitted on paper will be considered to the extent practicable. The Department of the Treasury (Treasury Department) and the IRS will publish for public availability any comment submitted electronically, and to the extent practicable on paper, to its public docket. Send paper submissions to: CC:PA:LPD:PR (REG-121508-18), Room 5203, Internal Revenue Service, P.O. Box 7604, Ben Franklin Station, Washington, DC 20044.

For those requesting to speak during the hearing, send an outline of topic

submissions electronically via the Federal eRulemaking Portal at [www.regulations.gov](http://www.regulations.gov) (indicate IRS and REG-121508-18).

Individuals who want to testify (by telephone) at the public hearing must send an email to [publichearings@irs.gov](mailto:publichearings@irs.gov) to receive the telephone number and access code for the hearing. The subject line of the email must contain the regulation number REG-121508-18 and the word TESTIFY. For example, the subject line may say: Request to TESTIFY at Hearing for REG-121508-18. The email should include a copy of the speaker's public comments and outline of topics. Individuals who want to attend the public hearing by telephone must also send an email to [publichearings@irs.gov](mailto:publichearings@irs.gov) to receive the telephone number and access code for the hearing. The subject line of the email must contain the regulation number REG-121508-18 and the word ATTEND. For example, the subject line may say: Request to ATTEND Hearing for REG-121508-18. To request special assistance during the telephonic hearing contact the Publications and Regulations Branch of the Office of Associate Chief Counsel (Procedure and Administration) by sending an email to [publichearings@irs.gov](mailto:publichearings@irs.gov) (preferred) or by telephone at (202) 317-5177 (not a toll-free number).

**FOR FURTHER INFORMATION CONTACT:**

Concerning the regulations, Pamela Kinard at (202) 317-6000 or Tom Morgan at (202) 317-6700; concerning submission of comments or requests for a public hearing, Regina Johnson (202) 317-5177 (not toll-free numbers) or by sending an email to [publichearings@irs.gov](mailto:publichearings@irs.gov).

**SUPPLEMENTARY INFORMATION:**

#### Background

This document sets forth proposed amendments to the Income Tax Regulations (26 CFR part 1) under section 413(c) of the Code and proposed regulations under section 413(e) of the Code. This document also withdraws proposed regulations under section 413(c) that were published in the **Federal Register** on July 3, 2019 (84 FR 31777) (section 413(c) proposed regulations).

#### I. General Rules Relating to MEPs Including the Unified Plan Rule

Section 413(c) provides rules for a plan maintained by more than one employer.<sup>1</sup> A plan described in section

<sup>1</sup> Section 210 of the Employee Retirement Income Security Act of 1974, Public Law 93-406 (88 Stat. 829), as amended (ERISA), also provides rules

413(c) often is referred to as a multiple employer plan (MEP) or a section 413(c) plan.

Final regulations under section 413 were published in the **Federal Register** on November 9, 1979, 44 FR 65061 (the final section 413 regulations). The final section 413 regulations apply to MEPs described in section 413(c) and to collectively bargained plans described in section 413(b) (plans that are maintained pursuant to certain collective-bargaining agreements between employee representatives and one or more employers).

Pursuant to section 413(c) and the final section 413 regulations, all of the employers maintaining a MEP (participating employers) are treated as a single employer for purposes of certain Code requirements, which include the following requirements:

- Under section 413(c)(1) and 26 CFR 1.413-2(b), the rules addressing plan participation under section 410(a) and the regulations thereunder are applied as if all employees of each of the employers that maintain the plan are employed by a single employer;
- under section 413(c)(2) and § 1.413-2(c), in determining whether a MEP is, with respect to each participating employer, a plan for the exclusive benefit of its employees (and their beneficiaries), all of the employees participating in the plan are treated as employees of each such employer; and
- under section 413(c)(3) and § 1.413-2(d), the minimum vesting standards under section 411 are applied as if all employers that maintain the plan constitute a single employer.

Other rules are applied separately to each participating employer. For example, under § 1.413-2(a)(3)(ii), the minimum coverage requirements of section 410(b) generally are applied to a MEP on an employer-by-employer basis.

A plan is not described in section 413(c) unless it is maintained by more than one employer and is a single plan under section 414(l). See §§ 1.413-2(a)(2)(i) and 1.413-1(a)(2). Under § 1.414(l)-1(b), a plan is a single plan if and only if, on an ongoing basis, all of the plan assets are available to pay benefits to employees who are covered by the plan and their beneficiaries.

relating to plans maintained by more than one employer. Similar to section 413(c) of the Code, section 210(a) of ERISA states that the minimum participation standards, minimum vesting standards, and benefit accrual requirements under sections 202, 203, and 204 of ERISA, respectively, shall be applied as if all employees of each of the employers were employed by a single employer. Under section 101 of Reorganization Plan No. 4 of 1978 (5 U.S.C. App.), the Secretary of the Treasury has interpretive jurisdiction over section 413 of the Code, as well as ERISA section 210.

Under § 1.413-2(a)(3)(iv), the qualification of a MEP “is determined with respect to all employers maintaining the section 413(c) plan” (sometimes referred to as the unified plan rule). Therefore, the failure by one employer maintaining the plan (or by the plan itself) to satisfy an applicable qualification requirement will result in the disqualification of the section 413(c) plan for all employers maintaining the plan.

The section 413(c) proposed regulations, which are being withdrawn, would have created an exception to the unified plan rule for certain defined contribution MEPs. The exception generally would have been available, provided that certain conditions were satisfied, if a participating employer in a MEP was solely responsible for a qualification failure that the employer was unable or unwilling to correct, or if a participating employer failed to comply with a plan administrator’s request for information about a qualification failure that the plan administrator reasonably believed might exist.

Written comments responding to the section 413(c) proposed regulations were received, and a public hearing was held on December 11, 2019. The provisions of these proposed regulations were informed by the comments received with respect to the section 413(c) proposed regulations.

## II. SECURE Act Provisions Related to MEPs

Section 101(a) of the Setting Every Community Up for Retirement Enhancement Act of 2019 (SECURE Act), which was enacted on December 20, 2019, as Division O of the Further Consolidated Appropriations Act of 2020, Public Law 116-94 (133 Stat. 2534), added section 413(e) to the Code. Section 413(e) creates a statutory exception to the unified plan rule for certain types of MEPs and directs the Secretary to issue guidance that is appropriate to carry out that provision. A MEP is eligible for the exception to the unified plan rule if it is a section 413(c) defined contribution plan<sup>2</sup> described in section 401(a) or consists of individual retirement accounts described in section 408 (including by reason of section 408(c)),<sup>3</sup> provided that

<sup>2</sup> Although section 403(b) plans are defined contribution plans, they are not plans described in section 401(a) or 408. Therefore, section 413(e)(1) does not apply to section 403(b) plans.

<sup>3</sup> Prior to the SECURE Act, section 413(c)(2) of the Code provided, “For purposes of section 401(a), in determining whether the plan of an employer is for the exclusive benefit of his employees and their beneficiaries all plan participants shall be

the MEP either is maintained by employers that have a “common interest” or has a “pooled plan provider.”<sup>4</sup> Section 413(e)(1) provides that, with certain exceptions, this type of MEP will not be treated as failing to meet the applicable requirements under the Code merely because one or more employers of employees covered by the plan fail to take actions that are required for the plan to meet those requirements.

Section 413(e)(2)(A) provides that section 413(e)(1) will not apply unless the terms of the plan provide that, in the case of any employer in the plan failing to take the actions described in section 413(e)(1), the assets of the plan attributable to employees of that employer (or beneficiaries of those employees) will be transferred to a plan maintained only by that employer (or its successor), to an eligible retirement plan as defined in section 402(c)(8)(B) for each individual whose account is transferred, or to any other arrangement that the Secretary determines is appropriate, unless the Secretary determines it is in the best interests of those employees (and their beneficiaries) to retain the assets in the plan. Section 413(e)(2)(A) also states that section 413(e)(1) will not apply unless the terms of the plan provide that, in the case of any employer failing to take the actions described in section 413(e)(1), the employer (and not the plan or any other employer in the plan) will be liable for any liabilities with respect to the plan attributable to employees of that employer (or their beneficiaries), except to the extent provided by the Secretary.

Section 413(e)(2)(B) provides that, if the pooled plan provider of a plan described in section 413(e)(1)(B) does not perform substantially all of the administrative duties required by section 413(e)(3)(A)(i) for any plan year, the Secretary may provide that the determination as to whether the plan meets the applicable Code requirements for a plan described in section 401(a) or a plan that consists of individual retirement accounts described in section 408 (including by reason of section 408(c)), whichever is applicable, will be

considered his employees.” Section 101(a)(2) of the SECURE Act amended section 413(c)(2) of the Code so that it applies for purposes of section 408(c) of the Code in addition to section 401(a) of the Code.

<sup>4</sup> Section 101(c) of the SECURE Act also amended title I of ERISA to introduce the term “pooled plan provider,” as well as the term “pooled employer plan” for a plan with a pooled plan provider. See ERISA sections 3(44) and 3(43), respectively. These ERISA provisions do not address compliance under the Code for plans described in section 401(a) or 408, but the requirements for pooled plan providers and pooled employer plans are otherwise similar to the requirements in section 413(e).

made in the same manner as would be made without regard to section 413(e)(1).

Section 413(e)(3)(A) provides that, for purposes of section 413(e), the term pooled plan provider means, with respect to any plan, a person who:

- Is designated by the terms of the plan as a named fiduciary (within the meaning of section 402(a)(2) of ERISA), as the plan administrator, and as the person responsible to perform specified administrative duties;
- registers as a pooled plan provider with the Secretary, and provides such other information to the Secretary as the Secretary may require, before beginning operations as a pooled plan provider;
- acknowledges in writing that such person is a named fiduciary (within the meaning of section 402(a)(2) of ERISA), and the plan administrator, with respect to the plan; and
- is responsible for ensuring that all persons who handle assets of, or who are fiduciaries of, the plan are bonded in accordance with section 412 of ERISA.<sup>5</sup>

The administrative duties for which the pooled plan provider is responsible are the duties (including conducting proper testing with respect to the plan and the employees of each employer in the plan) that are reasonably necessary to ensure that (1) the plan meets any requirements under ERISA or the Code applicable to a plan described in section 401(a) or to a plan that consists of individual retirement accounts described in section 408, whichever is applicable, and (2) each employer in the plan takes actions that the Secretary or the pooled plan provider determines are necessary for the plan to meet those requirements, including providing to the pooled plan provider any disclosures or other information that the Secretary may require or that the pooled plan provider otherwise determines are necessary to administer the plan or to allow the plan to meet the requirements of section 401(a) or 408. In determining whether a person meets the requirements to be a pooled plan provider with respect to any plan, all persons who perform services for the plan and who are treated as a single employer under section 414(b), (c), (m), or (o) are treated as one person.

Section 413(e)(3)(B) provides that the Secretary may perform audits, examinations, and investigations of pooled plan providers as may be necessary to enforce and carry out the

purposes of section 413(e). Section 413(e)(3)(D) provides that each employer in a plan with a pooled plan provider is treated as the plan sponsor with respect to the portion of the plan attributable to employees of the employer (or their beneficiaries), except with respect to the administrative duties of the pooled plan provider described in section 413(e)(3)(A)(i).

Section 413(e)(4)(A) directs the Secretary to issue guidance that the Secretary determines appropriate to carry out section 413(e), including guidance: (i) Identifying the administrative duties and other actions required to be performed by a pooled plan provider under section 413(e); (ii) describing the procedures to be taken to terminate a plan which fails to meet the requirements to be a plan described in section 413(e)(1), including the proper treatment of, and actions needed to be taken by, any employer in the plan and the assets and liabilities of the plan attributable to employees of the employer (or their beneficiaries); and (iii) identifying appropriate cases to which the rules of section 413(e)(2)(A) will apply to employers in the plan failing to take the actions described in section 413(e)(1), taking into account whether the failure of an employer or pooled plan provider to provide any disclosures or other information, or to take any other action, necessary to administer a plan or to allow a plan to meet requirements applicable to the plan under section 401(a) or 408, whichever is applicable, has continued over a period of time that demonstrates a lack of commitment to compliance.

Section 413(e)(4)(B) states that an employer or pooled plan provider will not be treated as failing to meet a requirement of guidance issued pursuant to section 413(e)(4) if, before the guidance is issued, the employer or pooled plan provider complies in good faith with a reasonable interpretation of the provisions of section 413(e) to which the guidance relates.

Section 413(e)(5) requires the Secretary to publish model plan language which meets the requirements of section 413(e) and section 3(43) and (44) of ERISA and which may be adopted in order for a plan to be treated as a plan that has a pooled plan provider.

Section 101(e)(2) of the SECURE Act states that nothing in the amendments made by section 101(a) of the SECURE Act shall be construed as limiting the authority of the Secretary of the Treasury or the Secretary's delegate (determined without regard to such amendments) to provide for the proper treatment of a failure to meet any

requirement applicable under the Code with respect to one employer (and its employees) in a multiple employer plan.

## Explanation of Provisions

### I. Overview

The proposed regulations provide guidance to implement the exception to the unified plan rule for section 413(e) plans (unified plan exception). The proposed regulations define a section 413(e) plan as a defined contribution plan described in section 401(a), or a plan that consists of individual retirement accounts described in section 408 (including accounts described in sections 408(c), 408(k), or 408(p)), that is a section 413(c) plan (as defined in § 1.413–2(a)(2)) and that (1) is maintained by employers that have a common interest other than having adopted the plan or (2) has a pooled plan provider. Because a section 413(e) plan is a type of section 413(c) plan, a section 413(e) plan is subject to all of the rules of section 413(c), including the rules for participation in section 413(c)(1) and the rules for vesting in section 413(c)(3).<sup>6</sup>

These proposed regulations do not provide guidance on whether a section 413(e) plan is maintained by employers that have a common interest other than having adopted the plan. The Treasury Department and the IRS request comments on what (if any) guidance would be helpful regarding whether employers have such a common interest, including how any guidance should be coordinated with guidance issued by the Department of Labor. An employer that desires to participate in a section 413(e) plan may choose to participate in a defined contribution plan described in section 401(a) or 408 with a pooled plan provider in order to ensure that the plan is a plan described in section 413(e).<sup>7</sup>

Under the unified plan exception, a section 413(e) plan is not treated as failing to meet the requirements under the Code applicable to a plan described in section 401(a) or to a plan that consists of individual retirement accounts described in section 408 (including accounts described in section 408(c), 408(k), or 408(p)), whichever is applicable, merely because of a

<sup>6</sup> For rules relating to section 413(c) plans, see § 1.413–2.

<sup>7</sup> The Department of Labor has advised the Treasury Department and the IRS that an arrangement with a pooled plan provider can qualify as a pooled employer plan under section 3(43)(A) of ERISA without regard to whether the arrangement could be structured as a plan maintained by employers that have a common interest other than having adopted the plan. See also 86 FR 51488, 51490, n.12.

<sup>5</sup> The Department of Labor has issued guidance on the application of the bonding provision in its final rule on registration requirements for pooled plan providers. See 85 FR 72934, 72936 n.5 (November 16, 2020).

participating employer failure.<sup>8</sup> For the unified plan exception to apply, the proposed regulations provide that certain conditions must be satisfied, including that the section 413(e) plan administrator must notify the participating employer of the participating employer failure and, in certain circumstances, transfer amounts attributable to the employees of the unresponsive participating employer to a separate plan maintained by the employer or provide an election to certain participants to remain in the plan or to have their accounts transferred to another eligible retirement plan.

In addition to defining a section 413(e) plan, the proposed regulations provide a number of other definitions, including the following: (1) A section 413(e) plan administrator is the plan administrator, within the meaning of section 414(g), of a section 413(e) plan; (2) a participating employer is one of the employers maintaining a section 413(e) plan; (3) an unresponsive participating employer is a participating employer that has a participating employer failure; (4) an employee is a current or former employee of a participating employer; (5) a beneficiary is a beneficiary of a deceased employee or an alternate payee (as defined in section 414(p)) with respect to an employee; and (6) a participating employer is one of the employers maintaining a section 413(e) plan. As discussed in the following paragraphs, the proposed regulations also include definitions for the following terms: (1) Participating employer failure, (2) amounts attributable to the employees of the unresponsive participating employer, and (3) pooled plan provider.

The proposed regulations define a participating employer failure in a section 413(e) plan as a failure to provide information or a failure to take action. A failure to provide information is defined as a failure of a participating employer (or any person that is treated as a single employer with that employer under section 414(b), (c), (m), or (o)) to

<sup>8</sup> Section 1.416-1, Q&A G-2, includes a rule similar to the unified plan rule, providing that a failure by a MEP to satisfy section 416 with respect to employees of one participating employer means that all participating employers in the MEP are maintaining a plan that is not a qualified plan. This rule is based on the unified plan rule in § 1.413-2(a)(3)(iv). Therefore, if a section 413(e) plan has an unresponsive employer that fails to satisfy section 416 and the section 413(e) plan meets the conditions for the exception to the unified plan rule, the section 413(e) plan will not be disqualified for the section 416 failure. The rules in § 1.416-1 are outside the scope of these proposed regulations, but the Treasury Department and the IRS intend to address the topic in a broader guidance project updating the regulations under section 416.

respond in a timely manner to a reasonable request by the section 413(e) plan administrator for data, documents, or any other information that the plan administrator reasonably believes is necessary to determine whether a section 413(e) plan is in compliance with a requirement of section 401(a) or 408 as it relates to the participating employer. A failure to take action is defined as a failure of a participating employer (or any person that is treated as a single employer with that employer under section 414(b), (c), (m), or (o)) to comply in a timely manner with a reasonable request by a section 413(e) plan administrator to take action needed for the section 413(e) plan to satisfy a requirement of section 401(a) or 408 as it relates to the participating employer. For purposes of these definitions, a section 413(e) plan administrator's request would not be considered reasonable if it fails to give the employer sufficient time to provide information or take action (and, consequently, a participating employer's failure to respond to an unreasonable request would not be considered a participating employer failure).

The proposed regulations define amounts attributable to the employees of the unresponsive participating employer as plan assets and account balances held by a section 413(e) plan on behalf of employees of an unresponsive participating employer that are attributable to their employment with the unresponsive participating employer. The proposed regulations provide rules that apply if there is no separate accounting for amounts that are attributable to employment with the unresponsive participating employer and with other participating employers.<sup>9</sup> If a participant's account balance includes amounts that are attributable to current employment with the unresponsive participating employer and to previous employment with one or more other participating employers, the entire account balance is treated as attributable to employment with the unresponsive participating employer. On the other hand, if a participant's account balance includes amounts that are attributable to current employment with a participating employer that is not the unresponsive participating employer and to previous employment with the

<sup>9</sup> In defining the amounts attributable to the employees of the unresponsive participating employer, the references in these proposed regulations to circumstances in which there is no "separate accounting" are not intended to address the recordkeeping obligations under Title I of ERISA, including sections 107 and 209 of ERISA, of an employer, plan administrator, or other plan fiduciary.

unresponsive participating employer, none of the account balance is treated as attributable to employment with the unresponsive participating employer. For purposes of this definition, a participant's most recent employment with a participating employer in the MEP will be treated as the participant's current employment.

Under the proposed regulations, the term pooled plan provider means, with respect to any plan, a person who: (1) Registers as a pooled plan provider with the Commissioner; (2) is designated by the terms of the plan as a named fiduciary (within the meaning of section 402(a)(2) of ERISA), as the plan administrator, and as the person required to perform certain administrative duties; (3) acknowledges in writing that, with respect to the plan, it is a named fiduciary and the plan administrator; and (4) is responsible for ensuring that all persons who handle assets of, or who are fiduciaries of, the plan are bonded in accordance with section 412 of ERISA.

The requirement to register as a pooled plan provider with the Commissioner is fulfilled by satisfying the parallel requirement under ERISA to register as a pooled plan provider with the Department of Labor. On November 16, 2020, the Department of Labor issued final regulations under section 3(44) of ERISA (29 CFR 2510.3-44) with respect to the registration requirement. See 85 FR 72934.

Consistent with section 413(e)(3)(A)(i), the proposed regulations require a pooled plan provider to perform all administrative duties that are reasonably necessary to ensure that: (1) The plan meets any applicable requirement under ERISA or the Code for a plan described in section 401(a) or for a plan that consists of individual retirement accounts described in section 408 (including accounts described in section 408(c), 408(k), or 408(p)), whichever is applicable, and (2) each participating employer takes actions, including providing any disclosures or other information, that are necessary for the plan to meet those requirements.<sup>10</sup>

The administrative duties of a pooled plan provider include, but are not limited to, the following:

(1) Monitoring compliance with the terms of the plan, and Code and ERISA requirements;

<sup>10</sup> In determining whether a person meets the requirements to be a pooled plan provider with respect to any section 413(e) plan, all persons who perform services for the plan and who are treated as a single employer under section 414(b), (c), (m), or (o) are treated as one person.

(2) Maintaining accurate plan data, including providing up-to-date participant and beneficiary information;

(3) Performing and conducting coverage, top-heavy, and discrimination testing under sections 401(a)(4), (k), and (m), 408(k), 410, and 416, if applicable;

(4) Processing all employee transactions (such as investment changes, loans, and distributions);

(5) Satisfying Code and ERISA reporting and notice requirements (such as reporting requirements under sections 6047 (Form 1099-R, “Distributions From Pensions, Annuities, Retirement or Profit-Sharing Plans, IRAs, Insurance Contracts, etc.”) and 6058 (Form 5500, “Annual Return/Report of Employee Benefit Plan”), and notice requirements under sections 401(k)(12)(D) and (13)(E) and 402(f)); and

(6) Updating the plan to reflect statutory changes to the Code and ERISA, to the extent the responsibility for updating the plan document has been delegated to the section 413(e) plan administrator.

## II. Conditions for Application of Exception to Unified Plan Rule

### A. In General

The proposed regulations provide that, under the unified plan exception, a section 413(e) plan is not disqualified on account of a participating employer failure, provided that the plan satisfies certain conditions, which are described in Parts II.B through II.G of this Explanation of Provisions.

### B. Plan Language

The proposed regulations provide that the terms of the section 413(e) plan document must include language describing the procedures that will be followed to address a participating employer failure, including a description of the notices that the section 413(e) plan administrator will send in the case of a participating employer failure (described in Part II.C of this Explanation of Provisions, titled “Notice Requirements”). The plan must also state that the section 413(e) plan administrator will send the first notice (or, if applicable, the combined first and second notice) by specified deadlines that depend on the type of failure. With respect to a failure to provide information, the specified deadline for sending the first notice is 12 months following the end of the plan year for which the information is necessary to determine whether the section 413(e) plan is in compliance with a requirement of section 401(a) or 408. With respect to a failure to take action,

the specified deadline is 24 months following the end of the plan year in which the failure to satisfy a requirement of section 401(a) or 408 occurs.

In addition, the plan terms must describe the actions that the section 413(e) plan administrator will take if, by the end of the 60-day period following the date the final notice is provided, the unresponsive participating employer does not take appropriate remedial action with respect to the failure or initiate a spinoff of amounts attributable to the employees of the unresponsive participating employer to a separate single-employer plan that is maintained by the employer. The terms of the section 413(e) plan must also provide that if an unresponsive participating employer does not either take appropriate remedial action or initiate a spinoff by that deadline, participants who are employees of the unresponsive participating employer have a nonforfeitable right to the amounts credited to their accounts that are attributable to employment with the unresponsive participating employer, determined in the same manner as if the plan had terminated pursuant to section 411(d)(3). In connection with the finalization of these proposed regulations, the Treasury Department and the IRS intend to publish guidance in the Internal Revenue Bulletin setting forth model language that may be used for this purpose.

The section 413(c) proposed regulations provided that a plan was ineligible for the unified plan exception if the plan was under examination before the first notice with respect to a participating employer failure was provided to an unresponsive participating employer. These proposed regulations do not include that condition. However, see the discussion in Part VI of this Explanation of Provisions, titled “Coordination with EPCRS,” on correcting a failure to send the first notice by the specified deadline, including when a plan is under examination.

### C. Notice Requirements

The proposed regulations require the section 413(e) plan administrator to provide up to three notices regarding a participating employer failure to the unresponsive participating employer; with the final notice, if applicable, also being provided to participants who are employees of the employer (and their beneficiaries) and the Department of Labor.<sup>11</sup>

<sup>11</sup> As described in Part II.E.2 of this Explanation of Provisions, titled “Failure to Provide Information

The first notice must describe the participating employer failure (or failures), as well as the actions the unresponsive participating employer must take to remedy the failure, and the employer’s option to initiate a spinoff of amounts attributable to the employees of the unresponsive participating employer to a separate single-employer plan that is maintained by the employer. The first notice must also explain the consequences under the terms of the plan if the unresponsive participating employer neither takes appropriate remedial action with respect to the participating employer failure nor initiates a spinoff, including that participants who are employees of the employer will not have any further contributions made to the plan on their behalf and that individuals who are responsible for the failure may have adverse tax consequences.

If, by the end of the 60-day period following the date the first notice is provided, the unresponsive participating employer neither takes appropriate remedial action with respect to the participating employer failure nor initiates a spinoff (as described in Part II.D of this Explanation of Provisions, titled “Actions by Unresponsive Participating Employer”), then the section 413(e) plan administrator must provide a second notice to the employer. The second notice must be provided no later than 30 days after the expiration of the 60-day period following the date the first notice is provided. The second notice must include the information required to be included in the first notice. The second notice must also state that, if, within 60 days following the date the second notice is provided, the unresponsive participating employer neither takes appropriate remedial action with respect to the participating employer failure nor initiates a spinoff, then a final notice describing the participating employer failure and the consequences of not correcting the failure will be provided to participants who are employees of the employer (and their beneficiaries) and to the Department of Labor.

The proposed regulations provide that if, by the end of the 60-day period following the date the second notice is provided, the unresponsive participating employer neither takes appropriate remedial action with respect to the participating employer failure nor initiates a spinoff, then the

that Becomes a Failure to Take Action,” if the notices relate to a failure to provide information that becomes a failure to take action, then a new series of notices may be required.

section 413(e) plan administrator must provide a final notice to the employer. The final notice must be provided no later than 30 days after the expiration of the 60-day period following the date the second notice is provided. Within this time period, the final notice must also be provided to participants who are employees of the unresponsive participating employer (and their beneficiaries) and to the Office of Enforcement of the Employee Benefits Security Administration in the Department of Labor (or its successor office).<sup>12</sup> The final notice must include the information required to be included in the first notice and specify the final deadline for an unresponsive participating employer to take action (which is 60 days after the final notice is provided). The final notice must also state that the notice is being provided to participants who are employees of the unresponsive participating employer (and their beneficiaries) and to the Department of Labor.

The section 413(c) proposed regulations also required plan administrators to send up to three notices with respect to a participating employer failure, but provided a 90-day period between notices. The shorter 60-day period between notices in these proposed regulations is provided in response to comments recommending that the overall notice period be shortened.

#### *D. Actions by Unresponsive Participating Employer*

The proposed regulations provide that after the unresponsive participating employer has received notice of the participating employer failure, the employer has the opportunity to either take appropriate remedial action or initiate a spinoff. The final deadline for the unresponsive participating employer to take one of these actions is 60 days after the final notice is provided. The consequences of the employer's failure to meet this deadline are described in Part II.F of this Explanation of Provisions, titled "Required Actions Following Employer's Failure to Meet Deadline."

The proposed regulations provide that if a participating employer failure is a failure to provide information, the unresponsive participating employer takes appropriate remedial action with respect to that failure if the employer (or any person that is treated as a single

employer with the employer under section 414(b), (c), (m), or (o)) provides the data, documents, or other information requested by a section 413(e) plan administrator (or arranges for that information to be provided to the section 413(e) plan administrator). If a participating employer failure is a failure to take action, the unresponsive participating employer takes appropriate remedial action with respect to the failure if the employer (or any person that is treated as a single employer with the employer under section 414(b), (c), (m), or (o)) takes all actions requested by the section 413(e) plan administrator, such as making corrective contributions, needed for the section 413(e) plan to satisfy the applicable requirements of section 401(a) or 408.

As an alternative to taking appropriate remedial action with respect to a failure to provide information or a failure to take action, the proposed regulations provide that an unresponsive participating employer may, after receiving notice of the participating employer failure, initiate a spinoff. An unresponsive participating employer initiates a spinoff by directing the section 413(e) plan administrator to spin off amounts attributable to the employees of the unresponsive participating employer to a separate single-employer plan that is maintained by the employer in a manner consistent with the terms of the section 413(e) plan. If the section 413(e) plan is described in section 401(a), then the spun-off plan must also be a section 401(a) plan. If the section 413(e) plan consists of individual retirement accounts described in section 408 (including accounts described in section 408(c), (k), or (p)), then the spun-off plan must also consist of individual retirement accounts described in section 408. The section 413(e) plan administrator must implement the spinoff, as described in Part II.E.2 of this Explanation of Provisions, titled "Implementing a Spinoff."

#### *E. Actions by Section 413(e) Plan Administrator Relating to Remedial Action or Employer-Initiated Spinoff*

##### **1. Failure To Provide Information That Becomes a Failure To Take Action**

The proposed regulations describe when a failure to provide information becomes a failure to take action. This situation could occur if an unresponsive participating employer takes appropriate remedial action with respect to a failure to provide information, and the section 413(e) plan administrator determines that, based on

the information provided by the employer, there is a failure to satisfy a requirement of section 401(a) or 408 as it relates to that employer's participation in the section 413(e) plan. If the section 413(e) plan administrator makes a reasonable request for the employer to take the actions needed to satisfy the requirement, and the employer does not comply in a timely manner with that request, then the failure to provide information becomes a failure to take action.

If a failure to provide information becomes a failure to take action, a section 413(e) plan will be eligible for the unified plan exception with respect to the failure to take action by satisfying the conditions set forth in the proposed regulations with respect to that failure. In satisfying those conditions, notices provided during the period that the failure was a failure to provide information are not taken into account. For example, a final notice that the section 413(e) plan administrator provided in connection with the failure to provide information would not satisfy the final notice requirement with respect to the failure to take action.

However, in response to comments on the section 413(c) proposed regulations that there were too many notices required in cases in which the failure to provide information became a failure to take action, the proposed regulations permit the section 413(e) plan administrator to reduce the number of notices that it sends to the employer in this situation. Specifically, if the section 413(e) plan administrator had provided the second notice with respect to a failure to provide information before it became a failure to take action, then the section 413(e) plan administrator may satisfy the requirement to send a first and second notice with respect to the failure to take action by sending a combined first and second notice to the unresponsive participating employer, provided that (1) the section 413(e) plan administrator's request to take action (described in the first paragraph under this Part II.E of this Explanation of Provisions) is made as soon as reasonably practicable after the determination of the failure to satisfy a requirement of section 401(a) or 408 as it relates to that employer's participation in the section 413(e) plan, and (2) the section 413(e) plan administrator provides the combined first and second notice with respect to the failure to take action not later than 24 months following the end of the plan year in which the failure to satisfy a requirement of section 401(a) or 408 occurs. The combined first and second notice must include information similar

<sup>12</sup> The notice to the Department of Labor should be mailed to the Employee Benefits Security Administration's Office of Enforcement (or its successor office). The Office of Enforcement is currently located at 200 Constitution Ave. NW, Suite 600, Washington, DC 20210.

to the information required for the first and second notices described in Part II.C of this Explanation of Provisions, titled “Notice Requirements.” For example, the combined first and second notice must describe the participating employer failure, the actions the unresponsive participating employer would need to take to remedy the failure, and the consequences under the terms of the plan if the employer neither takes appropriate remedial action with respect to the failure nor initiates a spinoff of amounts attributable to the employees of the unresponsive participating employer. In addition, the combined first and second notice must specify that, if, within 60 days following the date the combined first and second notice is provided, the unresponsive participating employer neither takes appropriate remedial action with respect to the participating employer failure nor initiates a spinoff, then the final notice described in Part II.C of this Explanation of Provisions, titled “Notice Requirements,” will be provided to participants who are employees of the employer (and their beneficiaries) and to the Department of Labor.

## 2. Implementing a Spinoff

The proposed regulations provide that if, instead of taking appropriate remedial action (as described in Part II.D of this Explanation of Provisions, titled “Actions by Unresponsive Participating Employer”), an unresponsive participating employer initiates a spinoff of amounts attributable to the employees of the unresponsive participating employer to a separate single-employer plan established and maintained by the employer, or to a separate plan sponsored by the employer that consists of individual retirement accounts, then the section 413(e) plan administrator must implement and complete the spinoff as soon as reasonably practicable after the employer initiates the spinoff. Under a safe harbor in the proposed regulations in § 1.413–3(d)(2), the section 413(e) plan administrator is treated as satisfying this requirement if the spinoff is completed within 180 days of the date on which the unresponsive participating employer initiates the spinoff. Comments are requested on whether there are any circumstances in which it would be appropriate for any of the amounts attributable to the employees of the unresponsive participating employer to remain in the MEP after the employer has specifically directed that there be a spinoff, and, if so, what those circumstances are, and for which

employees this treatment may be appropriate.

### *F. Required Actions Following Employer's Failure To Meet Deadline*

The proposed regulations provide that if, by the final deadline (60 days after the final notice is provided), an unresponsive participating employer neither takes appropriate remedial action nor initiates a spinoff, then as soon as reasonably practicable after that deadline, the section 413(e) plan administrator must: (1) Stop accepting contributions from the unresponsive participating employer and its employees; (2) provide notice to participants who are employees of the unresponsive participating employer (and their beneficiaries); and (3) to the extent provided in the proposed regulations, provide participants who are employees of the unresponsive participating employer (and their beneficiaries) with an election regarding treatment of their plan accounts. In addition, the section 413(e) plan administrator must distribute benefits as soon as administratively feasible following an individual's election or following the section 413(e) plan administrator's determination that it is not required to provide an individual with an election.<sup>13</sup>

The notice to participants required by § 1.413–3(e)(1)(ii)(B) and (e)(2) of the proposed regulations must state that: (1) No further contributions will be made to the section 413(e) plan on behalf of participants who are employees of the unresponsive participating employer; (2) participants who are employees of the unresponsive participating employer have a nonforfeitable right to amounts credited to their accounts that are attributable to employment with the unresponsive participating employer; and (3) a participant who is an employee of the unresponsive participating employer (or, if applicable, any beneficiary of the participant) will receive additional information regarding the disposition of the participant's or beneficiary's account.

To satisfy the election requirement in § 1.413–3(e)(1)(ii)(C) of the proposed regulations, except as otherwise provided by the proposed regulations, a section 413(e) plan administrator must

<sup>13</sup> Whether an action is taken as soon as administratively feasible is determined under all the facts and circumstances. See Rev. Rul. 89–87, 1989–2 CB 81 (Whether a distribution is made as soon as administratively feasible after the date of plan termination specified by an employer is to be determined under all the facts and circumstances of a given case but, generally, a distribution that is not completed within one year following the date of termination will be presumed not to have been made as soon as administratively feasible.)

provide participants who are employees of the unresponsive participating employer (and their beneficiaries) with an election to have amounts attributable to the employees of the unresponsive participating employer (1) directly rolled over to an eligible retirement plan within the meaning of section 402(c)(8), or (2) remain in the section 413(e) plan. With respect to this election, under a default rule in § 1.413–3(e)(3)(ii) of the proposed regulations, an individual who fails to make an affirmative election is treated as having elected to have those amounts remain in the section 413(e) plan.

The option to remain in the plan is consistent with section 413(e)(2)(A), which requires the terms of the plan to provide, in part, that the plan assets attributable to the employees of the unresponsive participating employer will be transferred to an eligible retirement plan or to another arrangement that the Secretary determines is appropriate, unless the Secretary determines that it is in their best interests to retain the assets in the plan. The Treasury Department and the IRS have determined that it is in the best interest of an individual who elects to remain in the section 413(e) plan to have that election followed. In addition, the default rule with respect to that election, under which the account of an individual who does not make an affirmative election will remain in the section 413(e) plan, is consistent with the consent requirements of section 411(a)(11).

The proposed regulations provide that if an individual elects to have amounts attributable to the employees of the unresponsive participating employer remain in the section 413(e) plan, those amounts must remain in the section 413(e) plan until a distribution is made under the terms of the plan without regard to section 413(e). Although the terms of the section 413(e) plan continue to apply to a participant remaining in the plan, the section 413(e) plan administrator may not have contact with the participating employer after contributions have ceased (and, therefore, may not be notified about the individual's severance from employment with the employer). Accordingly, the proposed regulations provide that, in determining whether a participant is entitled to a distribution upon severance from employment, a section 413(e) plan administrator may rely on the participant's representation that the participant has experienced a severance from employment, unless the section 413(e) plan administrator has actual knowledge to the contrary.

The option to remain in the plan is not available to an individual if plan terms would have provided for a mandatory distribution of those amounts had the participant experienced a severance from employment. Instead, those amounts must be distributed from the section 413(e) plan. In this situation, the proposed regulations provide rules for the disposition of the mandatory distribution, based on the applicability of section 401(a)(31) under the terms of the plan that would apply in the case of a severance from employment. Comments are requested on whether there should be special rules for mandatory distributions that apply in this situation, including in cases involving missing participants.

The proposed regulations provide that the portion of the mandatory distribution that is an eligible rollover distribution subject to section 401(a)(31)(B) must be directly rolled over to an eligible retirement plan. In accordance with section 401(a)(31)(B), the section 413(e) plan administrator must provide the individual with an election for the rollover to be made either to an eligible retirement plan chosen by the individual or to an individual retirement plan of a designated trustee or issuer. For example, a section 413(e) plan administrator is not required to provide the option to remain in the plan to an individual with an account balance of \$3,000 if, consistent with sections 401(a)(31)(B) and 411(a)(11), plan terms require mandatory distributions with respect to a participant who experiences a severance from employment with an account balance of up to \$5,000 and automatic rollover of distributions with respect to a participant who experiences a severance from employment with an account balance that exceeds \$1,000.

For any portion of the mandatory distribution that is an eligible rollover distribution subject to section 401(a)(31)(A) (but not section 401(a)(31)(B)), the section 413(e) plan administrator must provide the individual with an election in accordance with section 401(a)(31)(A) for that portion to be rolled over directly to an eligible retirement plan chosen by the individual or, if no eligible retirement plan is chosen, paid directly to the individual.

For the portion of a mandatory distribution that is not subject to the requirement to offer a direct rollover option under section 401(a)(31), the section 413(e) plan administrator must pay the individual. For example, a section 413(e) plan administrator is not

required to provide an election to an individual with an account balance of less than \$200 if, consistent with section 411(a)(11) and § 1.401(a)(31), Q&A-11, plan terms require that mandatory distributions of less than \$200 be paid directly to distributees.

Giving an individual an election to have amounts transferred to an individual retirement plan generally does not mean that a distribution may be paid directly to the individual. However, if, pursuant to the proposed regulations, an individual makes an election to have an amount directly rolled over to an eligible retirement plan, and a portion of the amount is not an eligible rollover distribution described in section 402(c)(4), then that portion must be paid directly to the individual. For example, the portion of a distribution that would be a required minimum distribution under section 401(a)(9) must be paid directly to the individual rather than directly rolled over. In addition, if an individual is otherwise entitled to a distribution from the section 413(e) plan without regard to section 413(e), the individual may elect to have amounts paid directly to the individual.

Any election that is provided to an individual pursuant to the proposed regulations must include an effective opportunity for the individual to make the election. Whether an individual has an effective opportunity is determined based on all the relevant facts and circumstances, including the adequacy of notice of the availability of the election, the period of time during which the election may be made, and any other conditions on the election.

#### *G. Duties of a Pooled Plan Provider*

The proposed regulations provide that, if a section 413(e) plan has a pooled plan provider during the plan year of a participating employer failure, the unified plan exception will not apply unless the pooled plan provider performs substantially all of the administrative duties that are required of the pooled plan provider for that year.

### **III. Other Rules**

#### *A. Form of Notices and Elections*

Any notice required to be provided or election required to be made under the proposed regulations must be in written or electronic form. For notices and elections provided to or made by participants and beneficiaries, see generally § 1.401(a)-21 for rules permitting the use of electronic media to provide applicable notices and make

participant elections with respect to retirement plans.

#### *B. Status of Spun-Off Plan*

In the case of any plan that is spun off in accordance with the proposed regulations, any participating employer failure that would have caused the section 413(e) plan to fail to meet the requirements of section 401(a) or 408, as applicable, but for the application of the unified plan exception, will result in the spun-off plan failing to meet those requirements.

#### *C. Responsible Parties*

The proposed regulations provide that a participating employer demonstrates a lack of commitment to compliance if the participating employer fails to take appropriate remedial action or initiate a spinoff by the final deadline (60 days after the final notice). The IRS reserves the right to pursue appropriate remedies under the Code against any party (such as the owner of the participating employer) who is responsible for the failure to satisfy the requirements of section 401(a) or 408, as applicable, even in the party's capacity as a participant or beneficiary (such as by not treating a section 413(e) plan distribution made with respect to the owner of a participating employer as an eligible rollover distribution).

### **IV. Updates to Section 413(c) Regulations**

The proposed regulations update existing § 1.413-2 to reflect legislation enacted after the regulations were issued. The proposed regulations update the rules for determining the number of employers maintaining a plan for purposes of the requirement in § 1.413-2(a)(2)(i)(B) of the proposed regulations that a section 413(c) plan must be maintained by more than one employer. For purposes of that requirement, the proposed regulations include a rule that the number of employers maintaining a plan is determined by treating any employers described in section 414(m) (relating to affiliated service groups) as if such employers are a single employer. The existing regulations in § 1.413-2(a)(2) were issued in 1979 and, therefore, did not address section 414(m), which was added by section 201(a) of the Miscellaneous Revenue Act of 1980, Public Law 96-605 (94 Stat. 3521). Section 414(m) provides that all employers in an affiliated service group shall be treated as a single employer for certain purposes.

The proposed regulations also modify the definition of a section 413(c) plan and the unified plan rule in the final section 413(c) regulations to apply to a

plan that consists of individual retirement accounts under section 408, remove a reference to section 405(a) from the final section 413(c) regulations (because that section was repealed), and modify the final section 413(c) regulations to add that the exclusive benefit provision in section 413(c)(2) applies for purposes of section 408(c).<sup>14</sup>

## V. Withdrawal of Section 413(c) Proposed Regulations

Because section 101 of the SECURE Act amended the Code with respect to the unified plan rule after the issuance of the section 413(c) proposed regulations, the Treasury Department and the IRS withdraw the section 413(c) proposed regulations.

## VI. Coordination With EPCRS

### A. In General

Under EPCRS,<sup>15</sup> a failure to follow plan terms is an operational failure that adversely affects plan qualification. An operational failure would include, for example, a section 413(e) plan administrator's failure to provide the first notice by the applicable deadline included in plan terms, discussed in Part II.B of this Explanation of Provisions, titled "Plan Language." EPCRS sets forth three programs for correcting operational failures.

Under the Self-Correction Program (SCP), a plan sponsor that follows established compliance practices and procedures may correct operational failures without paying a fee or sanction. A plan sponsor of a qualified plan (for example, a plan that is intended to satisfy section 401(a)) may correct significant operational failures under SCP if the plan has a favorable determination letter or a favorable opinion or advisory letter.<sup>16</sup> In general, correction of a significant operational failure through SCP must be completed by the last day of the correction period,

which generally ends on the last day of the third plan year following the plan year for which the failure occurred.<sup>17</sup> However, the correction period for a significant operational failure that occurs for any plan year ends on the first date the plan or plan sponsor is under examination<sup>18</sup> for that plan year.<sup>19</sup>

Under the Voluntary Correction Program (VCP), a plan sponsor, at any time before audit, may file a VCP submission, pay an applicable user fee, implement corrective actions, and satisfy any other conditions in an IRS compliance statement for correction of an operational failure in a qualified plan, SEP, or SIMPLE IRA Plan. In general, if the plan or plan sponsor is under examination, VCP is not available.

Under the Audit Closing Agreement Program (Audit CAP), if an operational failure (other than a failure corrected through SCP or VCP) is identified on audit, the plan sponsor may correct the failure and pay a sanction. The sanction imposed will bear a reasonable relationship to the nature, extent, and severity of the failure, and will be based on a number of factors,<sup>20</sup> including the maximum payment amount (which is approximately equal to the tax the IRS could collect upon plan disqualification).

### B. Using EPCRS To Correct an Operational Failure to Timely Provide the First Notice

A section 413(e) plan administrator's failure to provide the first notice with respect to a participating employer failure by the applicable deadline included in plan terms would not affect the section 413(e) plan's eligibility for the unified plan exception. However, the failure to follow plan terms would result in an operational failure treated as a significant operational failure under EPCRS that is independent of any underlying participating employer failure.

Whether SCP, VCP, or Audit CAP is available to correct an operational failure to provide the first notice by the applicable deadline will be determined under the rules of EPCRS. Because the failure is a significant operational

failure, the failure may be corrected under SCP only if correction is completed (or substantially completed) by the end of the correction period, and the correction period generally ends on the last day of the third plan year following the plan year containing the deadline for sending the first notice. For example, if the deadline for sending the first notice is December 31, 2024, a failure to provide notice by that deadline generally may be corrected through SCP until December 31, 2027 (assuming the plan year is the calendar year). If, however, the plan or plan sponsor comes under examination for 2024 beginning on July 1, 2026, the correction period for SCP ends on July 1, 2026, and SCP is no longer available (unless the correction had been substantially completed by that date).

A failure to provide the first notice by the deadline included in the terms of the plan may also be corrected under VCP. If, for example, the deadline for sending the first notice is December 31, 2024, and the correction period under SCP ends on December 31, 2027, then a VCP application may be submitted with respect to the failure in 2028 or in a later year, provided that neither the plan nor the plan sponsor is under examination for the plan year ending December 31, 2024. If SCP and VCP are not available with respect to a failure, the failure may be corrected under Audit CAP.

### C. Resolution of Participating Employer Failure

If the unresponsive participating employer provides the information requested by the section 413(e) plan administrator in connection with a failure to provide information, there is no longer a failure to provide information. If the unresponsive participating employer takes the action requested by the plan administrator in connection with a failure to take action (and the plan satisfies the requirements of SCP, VCP, or Audit CAP, as applicable, with respect to the underlying failure), there is no longer a failure to take action. In either case, if a participating employer failure no longer exists, an operational failure to provide the first notice by the deadline included in plan terms with respect to that participating employer failure is treated as corrected.

### Proposed Applicability Date

These regulations are proposed to apply beginning on the date of publication of the Treasury decision adopting these rules as final regulations in the **Federal Register**. Pursuant to section 413(e)(4)(B), until the final

<sup>14</sup> Section 414(l) does not apply to a plan that consists of individual retirement accounts described in section 408. Therefore, in § 1.413-2(a)(2)(i)(A), the proposed regulations limit the cross references to section 413(a) and § 1.413-1(a)(2) to apply only to qualified plans.

<sup>15</sup> The Employee Plans Compliance Resolution System (EPCRS) is a comprehensive system of correction programs for sponsors of certain retirement plans, including plans that are intended to satisfy the requirements of sections 401(a), 408(k), and 408(p). EPCRS provides procedures for an employer to correct a plan's failure to satisfy an applicable qualification requirement so that the failure does not result in disqualification of the plan. EPCRS has been updated and expanded several times, most recently in Rev. Proc. 2021-30, 2021-1.R.B. 324. The discussion in this Part VI of this Explanation of Provisions is limited to the application of EPCRS to qualified plans under section 401(a). See Rev. Proc. 2021-30 for rules under sections 408(k) and 408(p).

<sup>16</sup> See section 4.03 of Rev. Proc. 2021-30.

<sup>17</sup> Section 9 of Rev. Proc. 2021-30 addresses the period for correcting significant operational failures under SCP, including some exceptions to this general rule.

<sup>18</sup> Under examination is defined in section 5.08 of Rev. Proc. 2021-30.

<sup>19</sup> If correction has been substantially completed (as described in section 9.03 of Rev. Proc. 2021-30) before the end of the correction period, correction is permitted to be completed after the end of the correction period.

<sup>20</sup> See section 14 of Rev. Proc. 2021-30.

regulations are published, an employer or pooled plan provider may rely on a good faith, reasonable interpretation of the provisions of section 413(e) to which the final regulations relate. Compliance with these proposed regulations is considered reliance on a good faith, reasonable interpretation of the provisions of section 413(e) to which the final regulations relate.

#### Availability of IRS Documents

For copies of recently issued revenue procedures, revenue rulings, notices and other guidance published in the Internal Revenue Bulletin, please visit the IRS website at [www.irs.gov](http://www.irs.gov) or contact the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

#### Special Analyses

##### I. Regulatory Impact Analysis

These regulations are not subject to review under section 6(b) of Executive Order 12866 pursuant to the Memorandum of Agreement (April 11, 2018) between the Treasury Department and the Office of Management and Budget regarding review of tax regulations.

##### II. Paperwork Reduction Act

The following provisions of the proposed regulations contain a collection of information: (1) § 1.413-3(a)(2)(i) (requirement to adopt plan language); (2) § 1.413-3(a)(2)(ii)(A), (b), and (d)(1)(ii) (requirement to provide notice with respect to a participating employer failure); (3) § 1.413-3(a)(3) (requirements to be a pooled plan provider); (4) § 1.413-3(e)(1)(ii)(B) and (e)(2) (requirement to provide notice to certain participants and beneficiaries); and (5) § 1.413-3(e)(1)(ii)(C), (e)(3), and (e)(4) (requirement to provide an election to certain participants and beneficiaries). The collection of information contained in proposed § 1.413-3 will generally be carried out by section 413(e) plan administrators seeking to satisfy the conditions for the exception to the unified plan rule. The collection of information in this notice of proposed rulemaking has been submitted to the Office of Management and Budget for review in accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3507(d)).

##### 1. Plan Language Requirement, § 1.413-3(a)(2)(i)

Section 1.413-3(a)(2)(i) states that, as one of the conditions of the exception to the unified plan rule, a section 413(e) plan must include plan language that sets forth the procedures that will be followed to address participating

employer failures. Thus, a section 413(e) plan will not be eligible for the exception to the unified plan rule if it does not satisfy this plan-language requirement. In general, the plan language requirement is a one-time paperwork burden for each section 413(e) plan. In addition, after final regulations are issued, the IRS intends to publish model plan language, which will help to minimize the burden.

We estimate that the burden for this requirement under the Paperwork Reduction Act of 1995 will be 3 hours per section 413(e) plan. Given the potential benefits of satisfying the conditions for the unified plan exception, we assume that approximately 95 percent of section 413(e) plans (4,275 section 413(e) plans<sup>21</sup>) will be amended to satisfy this condition. Therefore, the total burden of this requirement is estimated to be 12,825 hours (4,275 section 413(e) plans times 3 hours). However, because a section 413(e) plan that adopts an amendment will generally do so on a one-time basis, to determine an annual estimate, the total time is divided by three, or 4,275 hours annually (section 413(e) plans times 1 hour).

##### 2. Notice Requirements, § 1.413-3(a)(2)(ii)(A), (b), and (d)(1)(ii)

Section 1.413-3(a)(ii)(A) of the proposed regulations provide that notice is another condition of the exception to the unified plan rule. In most cases, § 1.413-3(b) of the proposed regulations would require a section 413(e) plan administrator to send up to three notices informing an unresponsive participating employer of a participating employer failure and the consequences if the employer fails to take remedial action or initiate a spinoff from the section 413(e) plan. After each notice is provided, the employer has 60 days to take appropriate remedial action or initiate a spinoff from the section 413(e) plan. If the employer takes those actions after the first or second notice is provided, subsequent notices are not required. Thus, it is possible that a section 413(e) plan administrator will send fewer than three notices to an employer. However, because the notice requirements only apply if an employer has already been unresponsive to the section 413(e) plan administrator's requests, we assume that

in most cases, all three notices will be provided.

Section 1.413-3(d)(1)(ii) of the proposed regulations provide that if a failure to provide information becomes a failure to take action, the section 413(e) plan administrator may be required to send up to two (rather than three) notices with respect to the failure to take action by combining the first and second notices. This rule applies if the section 413(e) plan administrator had provided the second notice with respect to the failure to provide information and certain other conditions are satisfied.

We estimate that the burden of preparing the notices will be an average of 3 hours per unresponsive participating employer. We estimate that approximately 450 section 413(e) plans (10 percent of the 4,500 total estimated section 413(e) plans described in footnote 20) will provide notice with respect to one unresponsive participating employer per year. We estimate that approximately 10 percent of section 413(e) plans (10 percent of 4,500 section 413(e) plans is 450 section 413(e) plans) will provide notice with respect to one unresponsive participating employer per year. Therefore, we estimate a burden of 1,350 hours (450 section 413(e) plans times 3 hours). As with all estimates in this collection of information, we expect to be able to adjust these estimates based on experience after the regulations are finalized.

The notices must be sent to the unresponsive participating employer and the final notice will also be sent to plan participants who are employees of the unresponsive participating employer (and their beneficiaries) and to the Department of Labor. We estimate that, on average, a section 413(e) plan administrator will send the final notice to approximately 50 plan participants who are employees of the unresponsive participating employer (and their beneficiaries). Based on the estimate in the previous paragraph that 450 section 413(e) plans will provide notice with respect to one unresponsive participating employer per year, we estimate the burden of distributing these notices to be an average of 2 hours per section 413(e) plan, for a total burden of 900 hours (450 section 413(e) plans times 2 hours).

##### 3. Requirements for Pooled Plan Providers, § 1.413-3(a)(3)

Under the proposed regulations, the term pooled plan provider means, with respect to any plan, a person who satisfies the following requirements: (1) Registers as a pooled plan provider with the Commissioner (§ 1.413-

<sup>21</sup> This calculation uses data from the 2018 Form 5500, "Annual Return/Report of Employee Benefit Plan." These filings indicate that there are approximately 4,523 defined contribution MEPs. See 2018 Form 5500 Annual Reports Abstract ([dol.gov](http://dol.gov)). We estimate that 4,500 defined contribution MEPs will satisfy the requirements to be a section 413(e) plan.

3(a)(3)(i)(A)); (2) is designated by the terms of the plan as a named fiduciary (within the meaning of section 402(a)(2) of ERISA), as the plan administrator, and as the person required to perform certain administrative duties (§ 1.413–3(a)(3)(i)(B)); (3) acknowledges in writing that, with respect to the plan, it is a named fiduciary and the plan administrator (§ 1.413–3(a)(3)(i)(C)); and (4) is responsible for ensuring that all persons who handle assets of, or who are fiduciaries of, the plan are bonded in accordance with section 412 of ERISA (§ 1.413–3(a)(3)(i)(D)).

Pursuant to proposed § 1.413–3(a)(3)(i)(A), the requirement to register as a pooled plan provider under section 413(e) is fulfilled by satisfying the parallel requirement under ERISA to register as a pooled plan provider with the Department of Labor. On November 16, 2020, the Department of Labor issued final regulations under section 3(44) of ERISA (29 CFR 2510.3–44) with respect to the registration requirement. See 85 FR 72934. The OMB Control Number associated with the requirement in those regulations is 1210–0164.

With respect to § 1.413–3(a)(3)(i)(B) and (C), the Department of Labor estimates that roughly 3,200 pooled plan providers will file an original registration, and that there will be 3,460 supplemental filings in the first year. See 85 FR 72952. A supplemental filing may amend the original registration to include information for pooled employer plans that either begin or cease operations, or it can be used to make certain other changes to the initial filing. Based on this data, we estimate that in the first year a large number of the estimated supplemental filings, or 3,000, will be used to report the beginning of pooled employer plan operations. In subsequent years, we estimate that approximately 450 plans with pooled plan providers will commence operations.<sup>22</sup> We estimate the combined burden of § 1.413–3(a)(3)(i)(B) and (C) to be an average of 15 minutes per section 413(e) plan, for a total initial burden of 750 hours (3,000 section 413(e) plans times 15 minutes) and a total annual burden of 112.5 hours (450 section 413(e) plans times 15 minutes).

#### 4. Notice to Participants, § 1.413–3(e)(1)(ii)(B) and (e)(2)

If an unresponsive participating employer neither takes appropriate

remedial action nor initiates a spinoff by the deadline in the proposed regulations, then the section 413(e) plan administrator must provide notice to participants who are employees of the unresponsive participating employer (and their beneficiaries) stating the following: (1) No further contributions will be made to the section 413(e) plan on their behalf; (2) they have a nonforfeitable right to amounts credited to their accounts that are attributable to employment with the unresponsive participating employer; and (3) they will receive additional information regarding the disposition of their accounts. We estimate that in a given year, 5 percent of all section 413(e) plans (225 section 413(e) plans) will provide this notice, and that each notice will be sent to approximately 50 individuals. We also estimate that the burden for this requirement is 1 hour. Based on this number, we estimate that the burden of preparing and distributing the notices will be 225 hours (225 section 413(e) plans times 1 hour).

#### 5. Election, § 1.413–3(e)(1)(ii)(C), (e)(3) and (4)

If an unresponsive participating employer neither takes appropriate remedial action nor initiates a spinoff by the deadline in the proposed regulations, then the section 413(e) plan administrator generally must provide participants who are employees of the unresponsive participating employer (and their beneficiaries) with an election to have amounts attributable to the employees of the unresponsive participating employer directly rolled over to an eligible retirement plan within the meaning of section 402(c)(8) or remain in the section 413(e) plan. A participant whose account is subject to the mandatory distribution rules will have an alternative election. We estimate that in a given year, 5 percent of all section 413(e) plans (225 section 413(e) plans) will provide an election, and that each election will be sent to approximately 50 individuals. We also estimate that the burden for this requirement is 3 hours. Based on this number, we estimate that the burden for this requirement will be 675 hours (225 section 413(e) plans times 3 hours).

Comments on the collection of information should be sent to the Office of Management and Budget, Attn: Desk Officer for the Department of the Treasury, Office of Information and Regulatory Affairs, Washington, DC 20503, with copies to the Internal Revenue Service, Attn: IRS Reports Clearance Officer, SE:W:CAR:MP:T:T:SP; Washington, DC 20224. Comments on the collection of

information should be received by May 27, 2022. Comments are specifically requested concerning:

Whether the proposed collection of information is necessary for the proper performance of the functions of the IRS, including whether the information will have practical utility;

The accuracy of the estimated burden associated with the proposed collection of information;

How the quality, utility, and clarity of the information to be collected may be enhanced;

How the burden of complying with the proposed collections of information may be minimized, including through the application of automated collection techniques or other forms of information technology; and

Estimates of capital or start-up costs and costs of operation, maintenance, and purchase of service to provide information.

*Estimated total average annual recordkeeping burden:* 7,750 hours.

*Estimated average annual burden per response:* 1 hour, 43 minutes.

*Estimated number of recordkeepers:* 4,500.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid control number assigned by the Office of Management and Budget.

Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

### III. Regulatory Flexibility Act

It is hereby certified that these proposed regulations will not have a significant economic impact on a substantial number of small entities pursuant to the Regulatory Flexibility Act (5 U.S.C. chapter 6). This certification is based on the fact that the proposed regulations reflect the statutory changes to section 413 made by section 101 of the SECURE Act. More specifically, these regulations merely conform existing regulations under section 413(c) and implement new regulations under section 413(e) in a manner that is consistent with the new statutory language.

Although these proposed regulations might affect a substantial number of small entities, the economic impact of these proposed regulations is not expected to be significant. These regulations are not expected to result in economically meaningful changes in

<sup>22</sup> This estimate was informed by the Department of Labor's estimate of the number of pooled employer plans expected to commence operations. See 85 FR 72952–3

behavior for MEPs and participating employers. While MEPs may be an efficient way to reduce costs and complexity associated with establishing and maintaining defined contribution plans, some employers may be reluctant to join a MEP because of the potential adverse impact of the unified plan rule. These proposed regulations will implement a statutory exception to the unified plan rule, thus eliminating a potential barrier to an employer joining a MEP.

It is unlikely that the exception to the unified plan rule will be used often in a section 413(e) MEP. In general, it is expected that participating employers in defined contribution MEPs will comply with applicable requirements for a defined contribution plan. Accordingly, the use of the exception to the unified plan rule by a section 413(e) plan is expected to be rare.

For the reasons stated, a regulatory flexibility analysis under the Regulatory Flexibility Act is not required. The Treasury Department and the IRS invite comments on the impact of these regulations on small entities. Pursuant to section 7805(f) of the Code, this notice of proposed rulemaking has been submitted to the Chief Counsel of Advocacy of the Small Business Administration for comment on its impact on small business.

### Comments and Public Hearing

Before these proposed amendments to the regulations are adopted as final regulations, consideration will be given to comments that are submitted timely to the IRS as prescribed in the preamble under the **ADDRESSES** section. The Treasury Department and the IRS request comments on all aspects of the proposed regulations. Comments are specifically requested on what (if any) guidance would be helpful regarding whether employers have a common interest other than having adopted a plan, as described in Part I.A of the Explanation of Provisions, titled "Overview." Comments are also specifically requested on the rules for mandatory distributions for employees of an unresponsive participating employer, as described in Part II.F of the Explanation of Provisions, titled "Required Actions Following Employer's Failure to Meet Deadline."

Any electronic comments submitted, and to the extent practicable any paper comments submitted, will be made available at [www.regulations.gov](http://www.regulations.gov) or upon request.

A telephonic public hearing has been scheduled for June 22, 2022, beginning at 10 a.m. EST. The rules of 26 CFR 601.601(a)(3) apply to the hearing.

Persons who wish to present oral comments by telephone at the hearing must submit electronic or written comments and an outline of the topics to be addressed and the time to be devoted to each topic by May 27, 2022 as prescribed in the preamble under the **ADDRESSES** section.

A period of 10 minutes will be allocated to each person for making comments. After the deadline for receiving outlines has passed, the IRS will prepare an agenda containing the schedule of speakers. Copies of the agenda will be made available at [www.regulations.gov](http://www.regulations.gov), search IRS and REG-121508-18. Copies of the agenda will also be available by emailing a request to [publichearings@irs.gov](mailto:publichearings@irs.gov). Please put "REG-121508-18 Agenda Request" in the subject line of the email.

### Drafting Information

The principal authors of these regulations are Jamie Dvoretzky and Pamela Kinard, Office of Associate Chief Counsel (Employee Benefits, Exempt Organizations, and Employment Taxes (EEE)). However, other personnel from the IRS and the Treasury Department participated in the development of these regulations.

### Withdrawal of Proposed Amendments to the Regulations

Under the authority of 26 U.S.C. 7805, the notice of proposed rulemaking that was published in the **Federal Register** on Wednesday, July 3, 2019 (84 FR 31777) is withdrawn.

### List of Subjects in 26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

### Proposed Amendments to the Regulations

Accordingly, 26 CFR part 1 is proposed to be amended as follows:

#### PART 1—INCOME TAXES

■ **Paragraph 1.** The authority citation for part 1 continues to read in part as follows:

**Authority:** 26 U.S.C. 7805 \* \* \*

■ **Par. 2.** Amend § 1.413-2 by revising paragraph (a)(2), (a)(3)(iv), (a)(4), and (c) to read as follows:

#### § 1.413-2 Special rules for plans maintained by more than one employer.

(a) \* \* \*

(2) *Section 413(c) plan*—(i) *Definition of section 413(c) plan.* A plan (and each trust which is part of such plan) is a section 413(c) plan if—

(A) The plan is a single plan (which for a qualified plan is a single plan

within the meaning of section 413(a) and § 1.413-1(a)(2)); and

(B) The plan is maintained by more than one employer.

(ii) *Determining the number of employers maintaining the plan.* For purposes of paragraph (a)(2)(i)(B) of this section, the number of employers maintaining a plan is determined by treating any employers described in section 414(b) (relating to a controlled group of corporations), any employers described in section 414(c) (relating to trades or businesses under common control), or any employers described in section 414(m) (relating to affiliated service groups), whichever is applicable, as if such employers are a single employer.

(iii) *Master or prototype plans and common trust funds.* A master or prototype plan is not a section 413(c) plan unless such a plan is described in this paragraph (a)(2). Similarly, the mere fact that a plan, or plans, utilize a common trust fund or otherwise pool plan assets for investment purposes does not, by itself, result in a particular plan being treated as a section 413(c) plan.

(3) \* \* \*

(iv) Whether a section 413(c) plan complies with the requirements of section 401(a), 403(a), or 408 is determined with respect to all participating employers. Consequently, the failure by one participating employer (or by the plan itself) to satisfy an applicable requirement of those sections will result in the section 413(c) plan failing to satisfy that requirement with respect to all employers maintaining the section 413(c) plan. However, the rules in this paragraph (a)(3)(iv) do not apply to the extent provided in section 413(e) and § 1.413-3.

(4) *Applicability dates*—(i) *General applicability date.* Except as otherwise provided in paragraph (a)(4)(ii) of this section, section 413(c) and this section apply to a plan for plan years beginning after December 31, 1953.

(ii) *Special applicability date.* Paragraphs (a)(2), (a)(3)(iv), and (c) of this section apply beginning on the date of publication of the Treasury decision adopting these rules as final regulations in the **Federal Register**. For earlier periods, the rules of paragraphs (a)(2), (a)(3)(iv), and (c) of 26 CFR 1.413-2 (revised as of April 1, 2021) apply.

\* \* \* \* \*

(c) *Exclusive benefit.* In the case of a plan subject to this section, in determining whether the plan of an employer is for the exclusive benefit of its employees (and their beneficiaries)

for purposes of sections 401(a) and 408(c), all of the employees participating in the plan shall be treated as employees of the employer.

\* \* \* \* \*

■ **Par. 3.** Section 1.413-3 is added to read as follows:

**§ 1.413-3 Special Rules for Section 413(e) Plans**

(a) *Exception to unified plan rule for section 413(e) plans—(1) In general.* Notwithstanding § 1.413-2(a)(3)(iv), a section 413(e) plan will not be treated as failing to meet the requirements under the Code applicable to a plan described in section 401(a) or to a plan that consists of individual retirement accounts described in section 408 (including accounts described in section 408(c), 408(k), or 408(p)), whichever is applicable, merely because of a participating employer failure, provided that the conditions in paragraph (a)(2) of this section are satisfied.

(2) *Conditions for exception to general rule.* The conditions for the exception to the unified plan rule in paragraph (a)(1) of this section are set forth in paragraphs (a)(2)(i) through (iii) of this section.

(i) *Plan language.* The terms of the section 413(e) plan must set forth the procedures that will be followed to address a participating employer failure, including:

(A) A description of the notices that the section 413(e) plan administrator will send in the case of a participating employer failure, pursuant to paragraph (b) of this section;

(B) A statement that the section 413(e) plan administrator will send the first notice described in paragraph (b)(1) of this section (or, if applicable, the combined first and second notice described in paragraph (d)(1)(ii) of this section) by a specified deadline (which, for a failure to provide information, is 12 months following the end of the plan year for which the information is necessary to determine whether the section 413(e) plan is in compliance with a requirement of section 401(a) or 408 and which, for a failure to take action, is 24 months following the end of the plan year in which the failure to satisfy a requirement of section 401(a) or 408) occurs;

(C) A description of the actions that the section 413(e) plan administrator will take if, by the final deadline described in paragraph (c)(1) of this section, an unresponsive participating employer does not either take appropriate remedial action pursuant to paragraph (c)(2) of this section or initiate a spinoff pursuant to paragraph (c)(3) of this section; and

(D) A statement that if an unresponsive participating employer does not either take appropriate remedial action or initiate a spinoff by the final deadline described in paragraph (c)(1) of this section, participants who are employees of the unresponsive participating employer have a nonforfeitable right to the amounts credited to their accounts that are attributable to employment with the unresponsive participating employer, determined in the same manner as if the plan had terminated pursuant to section 411(d)(3).

(ii) *Section 413(e) plan administrator obligations.* A section 413(e) plan administrator must—

(A) Satisfy the notice requirements described in paragraph (b) of this section with respect to the participating employer failure (taking into account the rules for a combined first and second notice described in paragraph (d)(1)(ii) of this section);

(B) Implement a spinoff in accordance with paragraph (d)(2) of this section if an unresponsive participating employer initiates a spinoff pursuant to paragraph (c)(3) of this section; and

(C) Take the actions required in paragraph (e) of this section if an unresponsive participating employer fails either to take appropriate remedial action with respect to the participating employer failure (as described in paragraph (c)(2) of this section) or initiate a spinoff (as described in paragraph (c)(3) of this section) by the final deadline described in paragraph (c)(1) of this section.

(iii) *Pooled plan providers.* If the section 413(e) plan has a pooled plan provider during the plan year of the participating employer failure, the pooled plan provider must perform substantially all of the administrative duties that are required of the pooled plan provider pursuant to paragraph (a)(3)(ii) of this section for the plan year.

(3) *Section 413(e) plans administered by pooled plan providers—(i) Requirements to be a pooled plan provider.* With respect to a section 413(e) plan, for purposes of this section, a pooled plan provider is a person who—

(A) Registers as a pooled plan provider with the Commissioner by satisfying the registration requirements in section 3(44)(A)(ii) of the Employee Retirement Income Security Act of 1974, Public Law 93-406 (88 Stat. 829), as amended (ERISA), in accordance with guidance issued by the Department of Labor,

(B) Is designated by the terms of the plan as a named fiduciary (within the meaning of section 402(a)(2) of ERISA),

as the plan administrator, and as the person required to perform the administrative duties described in paragraph (a)(3)(ii) of this section,

(C) Acknowledges in writing that, with respect to the plan, it is a named fiduciary and the plan administrator, and

(D) Is responsible for ensuring that all persons who handle assets of, or who are fiduciaries of, the plan are bonded in accordance with section 412 of ERISA.

(ii) *Administrative duties required of pooled plan provider—(A) In general.* A pooled plan provider is required to perform all administrative duties that are reasonably necessary to ensure that the plan meets any applicable requirement under ERISA or the Code for a plan described in section 401(a) or for a plan that consists of individual retirement accounts described in section 408 (including accounts described in section 408(c), 408(k), or 408(p)), whichever is applicable, and each participating employer takes actions, including providing any disclosures or other information, that are necessary for the plan to meet the requirements described in this paragraph (a)(3)(ii)(A).

(B) *Administrative duties.* The administrative duties of a pooled plan provider include, but are not limited to, the following:

(1) Monitoring compliance with the terms of the plan, and Code and ERISA requirements;

(2) Maintaining accurate plan data, including up-to-date participant and beneficiary information;

(3) Performing and conducting coverage, top-heavy, and discrimination testing under sections 401(a)(4), (k), and (m), 408(k), 410, and 416, if applicable;

(4) Processing all employee transactions (such as investment changes, loans, and distributions);

(5) Satisfying Code and ERISA reporting and notice requirements (such as reporting requirements under sections 6047 and 6058 and notice requirements under sections 401(k)(12)(D) and (13)(E) and 402(f)); and

(6) Updating the plan to reflect statutory changes to the Code and ERISA, to the extent the responsibility for updating the plan document has been delegated to the section 413(e) plan administrator.

(iii) *Aggregation rules.* In determining whether a person meets the requirements to be a pooled plan provider with respect to any section 413(e) plan, all persons who perform services for the plan and who are treated as a single employer under section

414(b), (c), (m), or (o) are treated as one person.

(4) *Definitions.* The following definitions apply for purposes of this section:

(i) *Amounts attributable to the employees of the unresponsive participating employer.* Amounts attributable to the employees of the unresponsive participating employer are plan assets and account balances held by a section 413(e) plan on behalf of employees of an unresponsive participating employer that are attributable to their employment with the unresponsive participating employer. If there is no separate accounting for amounts that are attributable to employment with the unresponsive participating employer and with other participating employers, and a participant's account balance includes amounts that are attributable to current employment with the unresponsive participating employer and to previous employment with one or more other participating employers, the entire account balance is treated as attributable to employment with the unresponsive participating employer. On the other hand, if a participant's account balance includes amounts that are attributable to current employment with a participating employer that is not the unresponsive participating employer and to previous employment with the unresponsive participating employer, none of the account balance is treated as attributable to employment with the unresponsive participating employer. For purposes of this paragraph (a)(4)(i), a participant's most recent employment with a participating employer in the section 413(e) plan will be treated as the participant's current employment.

(ii) *Beneficiary.* A beneficiary is a beneficiary of a deceased employee or an alternate payee (as defined in section 414(p)) with respect to an employee.

(iii) *Employee.* An employee is a current or former employee of a participating employer.

(iv) *Failure to provide information.* A failure to provide information is a failure of a participating employer (or any person that is treated as a single employer with that employer under section 414(b), (c), (m), or (o)) to respond in a timely manner to a reasonable request by the section 413(e) plan administrator for data, documents, or any other information that the plan administrator reasonably believes is necessary to determine whether a section 413(e) plan is in compliance with a requirement of section 401(a) or 408 as it relates to the participating employer.

(v) *Failure to take action.* A failure to take action is a failure of a participating employer (or any person that is treated as a single employer with that employer under section 414(b), (c), (m), or (o)) to comply in a timely manner with a reasonable request by a section 413(e) plan administrator to take action needed for the section 413(e) plan to satisfy a requirement of section 401(a) or 408 as it relates to the participating employer.

(vi) *Participating employer.* A participating employer is one of the employers maintaining a section 413(e) plan.

(vii) *Participating employer failure.* A participating employer failure in a section 413(e) plan is a failure to provide information (as defined in paragraph (a)(4)(iv) of this section) or a failure to take action (as defined in paragraph (a)(4)(v) of this section).

(viii) *Section 413(e) plan.* A section 413(e) plan is a defined contribution plan described in section 401(a) or a plan that consists of individual retirement accounts described in section 408 (including accounts described in section 408(c), (k), or (p)) that—

(A) Is a section 413(c) plan (as defined in § 1.413–2(a)(2)), and

(B) Is maintained by employers that all have a common interest other than having adopted the plan or has a pooled plan provider as described in paragraph (a)(3) of this section.

(ix) *Section 413(e) plan administrator.* A section 413(e) plan administrator is the plan administrator, within the meaning of section 414(g), of a section 413(e) plan.

(x) *Unresponsive participating employer.* An unresponsive participating employer is a participating employer that has a participating employer failure.

(b) *Notice.* The section 413(e) plan administrator satisfies the notice requirements with respect to a participating employer failure if it satisfies the requirements of this paragraph (b).

(1) *First notice.* The section 413(e) plan administrator must provide notice to the unresponsive participating employer describing the participating employer failure, the actions the employer must take to remedy the failure, and the employer's option to initiate a spinoff of amounts attributable to the employees of the unresponsive participating employer to a separate single-employer plan that is maintained by the employer. In addition, the notice must explain the consequences under the terms of the plan if the unresponsive participating employer neither takes appropriate remedial action with respect to the participating employer

failure nor initiates a spinoff, including that participants who are employees of the employer will not have any further contributions made to the plan on their behalf and that individuals who are responsible for the failure may have adverse tax consequences.

(2) *Second notice.* If, by the end of the 60-day period following the date the first notice described in paragraph (b)(1) of this section is provided, the unresponsive participating employer neither takes appropriate remedial action with respect to the participating employer failure nor initiates a spinoff, then the section 413(e) plan administrator must provide a second notice to the employer. The second notice must be provided no later than 30 days after the expiration of the 60-day period described in the preceding sentence. The second notice must include the information required to be included in the first notice. The second notice must also state that if, within 60 days following the date the second notice is provided, the unresponsive participating employer neither takes appropriate remedial action with respect to the participating employer failure nor initiates a spinoff, then a final notice describing the participating employer failure and the consequences of not correcting the failure will be provided to participants who are employees of the employer (and their beneficiaries) and to the Department of Labor.

(3) *Final notice.* If, by the end of the 60-day period following the date the second notice described in paragraph (b)(2) of this section is provided, the unresponsive participating employer neither takes appropriate remedial action with respect to the participating employer failure nor initiates a spinoff, then the section 413(e) plan administrator must provide a final notice to the employer. The final notice must be provided no later than 30 days after the expiration of the 60-day period described in the preceding sentence. Within this time period, the final notice must also be provided to participants who are employees of the unresponsive participating employer (and their beneficiaries) and to the Office of Enforcement of the Employee Benefits Security Administration in the Department of Labor (or its successor office). The final notice must include the information required to be included in the first notice and specify the final deadline for an unresponsive participating employer to take action set forth in paragraph (c)(1) of this section. The final notice must also state that the notice is being provided to participants who are employees of the unresponsive

participating employer (and their beneficiaries) and to the Department of Labor.

(c) *Actions by unresponsive participating employer*—(1) *In general.* An unresponsive participating employer takes appropriate remedial action with respect to a participating employer failure if it satisfies the requirements of paragraph (c)(2) of this section. Alternatively, an unresponsive participating employer initiates a spinoff for purposes of paragraph (a)(2) of this section if the employer satisfies the requirements of paragraph (c)(3) of this section. The final deadline for an unresponsive participating employer to take one of these actions is 60 days after the final notice described in paragraph (b)(3) of this section is provided to the employer.

(2) *Appropriate remedial action*—(i) *Appropriate remedial action with respect to a failure to provide information.* If a participating employer failure is a failure to provide information, the unresponsive participating employer takes appropriate remedial action with respect to that failure if the employer provides the data, documents, or other information requested by a section 413(e) plan administrator (or arranges for that information to be provided to the section 413(e) plan administrator).

(ii) *Appropriate remedial action with respect to a failure to take action.* If a participating employer failure is a failure to take action, the unresponsive participating employer takes appropriate remedial action with respect to the failure if the employer (or any person that is treated as a single employer with the employer under section 414(b), (c), (m), or (o)), takes all actions requested by the section 413(e) plan administrator, such as making corrective contributions, needed for the section 413(e) plan to satisfy the applicable requirements of section 401(a) or 408.

(3) *Employer-initiated spinoff.* After receiving a notice described in paragraph (b) of this section, an unresponsive participating employer initiates a spinoff pursuant to this paragraph (c)(3) by directing the section 413(e) plan administrator to spin off amounts attributable to the employees of the unresponsive participating employer to a separate single-employer plan that is maintained by the employer in a manner consistent with the terms of the section 413(e) plan. If the section 413(e) plan is described in section 401(a), then the spun-off plan must also be a section 401(a) plan. If the section 413(e) plan consists of individual retirement accounts described in section

408 (including accounts described in section 408(c), 408(k), or 408(p)), then the spun-off plan must also consist of individual retirement accounts described in section 408.

(d) *Section 413(e) plan administrator's response to employer's remedial action*—(1) *Rules for a failure to provide information that becomes a failure to take action*—(i) *In general.* This paragraph (d)(1) provides rules that apply if a failure to provide information becomes a failure to take action. This situation could occur if the unresponsive participating employer takes appropriate remedial action by providing the information described in paragraph (c)(2)(i) of this section and, based on this information, the section 413(e) plan administrator determines that there is a failure to satisfy a requirement of section 401(a) or 408 as it relates to that employer's participation in the section 413(e) plan. If the section 413(e) plan administrator makes a reasonable request for the employer to take the actions needed to satisfy the requirement, and the employer does not comply in a timely manner with that request, then, in accordance with paragraph (a)(4)(v) of this section, the failure to provide information becomes a failure to take action. In that case, the section 413(e) plan will be eligible for the exception in paragraph (a)(1) of this section with respect to the failure to take action by satisfying the conditions set forth in paragraph (a)(2) of this section with respect to that failure, taking into account the rules of this paragraph (d)(1).

(ii) *Ability to combine first and second notices in certain circumstances.* For purposes of applying paragraph (a)(2)(ii)(A) of this section in the case of a failure to provide information that becomes a failure to take action, notices provided during the period that the failure was a failure to provide information are not taken into account. For example, a final notice that the section 413(e) plan administrator provided in connection with the failure to provide information would not satisfy the final notice requirement with respect to the failure to take action. However, if the section 413(e) plan administrator had provided the second notice described in paragraph (b)(2) of this section with respect to a failure to provide information before it became a failure to take action, then the section 413(e) plan administrator may satisfy the requirement to send a first and second notice with respect to the failure to take action by sending a combined first and second notice that includes the information described in paragraph

(d)(1)(iii) of this section to the unresponsive participating employer, provided that—

(A) The section 413(e) plan administrator's request to take action described in paragraph (d)(1)(i) of this section is made as soon as reasonably practicable after the determination of the failure to satisfy a requirement of section 401(a) or 408 as it relates to that employer's participation in the section 413(e) plan; and

(B) The section 413(e) plan administrator provides the combined first and second notice with respect to the failure to take action not later than 24 months following the end of the plan year in which the failure to satisfy a requirement of section 401(a) or 408 occurs.

(iii) *Contents of combined first and second notice.* To satisfy the requirements of a combined first and second notice described in paragraph (d)(1)(ii) of this section, the notice must—

(A) Describe the participating employer failure, the actions the unresponsive participating employer would need to take to remedy the failure, and the employer's option to initiate a spinoff of amounts attributable to the employees of the unresponsive participating employer to a separate single-employer plan that is maintained by the employer,

(B) Explain the consequences under the terms of the plan if the unresponsive participating employer neither takes appropriate remedial action with respect to the participating employer failure nor initiates a spinoff, including that participants who are employees of the employer will not have any further contributions made to the plan on their behalf and that individuals who are responsible for the failure may have adverse tax consequences, and

(C) Specify that if, within 60 days following the date the combined first and second notice is provided, the unresponsive participating employer neither takes appropriate remedial action with respect to the participating employer failure nor initiates a spinoff, then a notice describing the participating employer failure and the consequences of not correcting the failure will be provided to participants who are employees of the employer (and their beneficiaries) and to the Department of Labor.

(2) *Implementing employer-initiated spinoff.* If an unresponsive participating employer initiates a spinoff pursuant to paragraph (c)(3) of this section by directing the section 413(e) plan administrator to spin off amounts attributable to the employees of the

unresponsive participating employer to a separate single-employer plan established and maintained by the employer, or to a separate plan sponsored by the employer that consists of individual retirement accounts, then the section 413(e) plan administrator must implement and complete the spinoff as soon as reasonably practicable after the employer initiates the spinoff. The section 413(e) plan administrator is treated as satisfying the requirement of the prior sentence if the spinoff is completed within 180 days of the date on which the unresponsive participating employer initiates the spinoff.

(e) *Required actions following employer's failure to meet deadline*—(1) *In general*—(i) *Deadline for action*. If, by the final deadline described in paragraph (c)(1) of this section, the unresponsive participating employer neither takes appropriate remedial action pursuant to paragraph (c)(2) of this section nor initiates a spinoff pursuant to paragraph (c)(3) of this section, then the requirements of paragraph (e)(1)(ii) and (iii) of this section must be satisfied.

(ii) *Requirements for section 413(e) plan administrator*. As soon as reasonably practicable after the final deadline described in paragraph (e)(1)(i) of this section, the section 413(e) plan administrator must—

(A) Stop accepting contributions from the unresponsive participating employer and its employees;

(B) Provide notice to participants who are employees of the unresponsive participating employer (and their beneficiaries) as described in paragraph (e)(2) of this section; and

(C) Provide participants who are employees of the unresponsive participating employer (and their beneficiaries) with an election regarding treatment of their plan accounts to the extent provided in paragraph (e)(3) or (4) of this section.

(iii) *Timing of distributions*. The section 413(e) plan administrator must distribute benefits as soon as administratively feasible following an individual's election that is made pursuant to paragraph (e)(3) or (4) of this section or following the section 413(e) plan administrator's determination that it is not required to provide an individual with an election pursuant to paragraph (e)(4)(iv) of this section.

(2) *Contents of notification*. The notice required under paragraph (e)(1)(ii)(B) of this section must include the information described in this paragraph (e)(2).

(i) *No contributions*. The notice must state that no further contributions will

be made to the section 413(e) plan on behalf of participants who are employees of the unresponsive participating employer.

(ii) *Full vesting*. The notice must state that participants who are employees of the unresponsive participating employer have a nonforfeitable right to amounts credited to their accounts that are attributable to employment with the unresponsive participating employer.

(iii) *Information about disposition of accounts*. The notice must state that a participant who is an employee of the unresponsive participating employer (or, if applicable, any beneficiary of the participant) will receive additional information regarding the disposition of the participant's or beneficiary's account.

(3) *Election for direct rollover or to remain in section 413(e) plan*—(i) *General rule*. Except as provided in paragraph (e)(4) of this section, a section 413(e) plan administrator must provide participants who are employees of the unresponsive participating employer (and their beneficiaries) with an election to have amounts attributable to the employees of the unresponsive participating employer—

(A) Subject to the rules of paragraph (e)(5) of this section, directly rolled over to an eligible retirement plan within the meaning of section 402(c)(8); or

(B) Remain in the section 413(e) plan.

(ii) *Default*. An individual who fails to make an affirmative election described in paragraph (e)(3)(i)(A) of this section is treated as having elected to have the amounts described in paragraph (e)(3)(i) of this section remain in the section 413(e) plan.

(iii) *Individuals remaining in section 413(e) plan*. If, pursuant to paragraph (e)(3)(i)(B) of this section, an individual elects to have the amounts described in paragraph (e)(3)(i) of this section remain in the section 413(e) plan, those amounts must remain in the section 413(e) plan until a distribution is made under the terms of the plan without regard to section 413(e). To determine whether a participant is entitled to a distribution upon severance from employment under the terms of the plan without regard to section 413(e), a section 413(e) plan administrator may rely on the participant's representation that the participant has experienced a severance from employment unless the plan administrator has actual knowledge to the contrary.

(4) *Rules for individuals subject to mandatory distributions*—(i) *No election to remain in plan*. The option to remain in the plan described in paragraph (e)(3)(i)(B) of this section with respect to amounts described in paragraph (e)(3)(i)

of this section is not available to an individual if the terms of the plan would have provided for a mandatory distribution of those amounts had the participant experienced a severance from employment. Instead, those amounts must be distributed from the section 413(e) plan.

(ii) *Mandatory distributions subject to automatic rollover*. The portion of the mandatory distribution that is an eligible rollover distribution subject to section 401(a)(31)(B) must be directly rolled over to an eligible retirement plan. In accordance with section 401(a)(31)(B), the section 413(e) plan administrator must provide the individual with an election for the eligible retirement plan to be—

(A) An eligible retirement plan chosen by the individual, or

(B) An individual retirement plan of a designated trustee or issuer.

(iii) *Mandatory distributions not subject to automatic rollover*. For the portion of the mandatory distribution that is an eligible rollover distribution subject to section 401(a)(31)(A) (but not section 401(a)(31)(B)), the section 413(e) plan administrator must provide the individual with an election in accordance with section 401(a)(31)(A) for that portion to be—

(A) Rolled over directly to an eligible retirement plan chosen by the individual; or

(B) If no eligible retirement plan is chosen pursuant to paragraph (e)(4)(iii)(A) of this section, paid directly to the individual.

(iv) *Individuals who are ineligible for direct rollover*. For any portion of a mandatory distribution that is not subject to the requirement to offer a direct rollover option under section 401(a)(31), the section 413(e) plan administrator must pay the individual. For example, a section 413(e) plan administrator is not required to provide an election to an individual with an account balance of less than \$200 if, consistent with section 411(a)(11) and § 1.401(a)(31)–1, Q&A–11, plan terms require that mandatory distributions of less than \$200 be paid directly to distributees.

(5) *Amounts not eligible for rollover*. If an individual makes an election to have an amount described in paragraph (e)(3)(i) of this section directly rolled over to an eligible retirement plan pursuant to paragraph (e)(3) or (4) of this section, and a portion of the amount is not an eligible rollover distribution described in section 402(c)(4), then that portion must be paid directly to the individual. For example, the portion of a distribution that would be a required minimum distribution under section

401(a)(9) must be paid directly to the individual.

(6) *Effective opportunity to make election.* Any election that is provided to an individual pursuant to paragraph (e)(3) or (4) of this section must include an effective opportunity for the individual to make the election.

Whether an individual has an effective opportunity to make an election is determined based on all the relevant facts and circumstances, including the adequacy of notice of the availability of the election, the period of time during which the election may be made, and any other conditions on the election.

(f) *Other rules—(1) Form of notices and elections.* Any notice provided or election made pursuant to paragraph (b) or (e) of this section must be in written or electronic form. For notices and elections provided to or made by participants and beneficiaries, see generally § 1.401(a)-21 for rules permitting the use of electronic media to provide applicable notices and make participant elections with respect to retirement plans.

(2) *Status of spun-off plan.* In the case of any plan that is spun off in accordance with paragraph (d)(2) of this section, any participating employer failure that would have caused the section 413(e) plan to fail to meet the requirements of section 401(a) or 408, as applicable, but for the application of the exception set forth in paragraph (a)(1) of this section, will result in the spun-off plan failing to meet those requirements.

(3) *Responsible parties.* A participating employer demonstrates a lack of commitment to compliance if the participating employer fails to take appropriate remedial action pursuant to paragraph (c)(2) of this section or initiate a spinoff pursuant to paragraph (c)(3) of this section by the final deadline described in paragraph (c)(1) of this section. The IRS reserves the right to pursue appropriate remedies under the Code against any party (such as the owner of the participating employer) who is responsible for the failure to satisfy the requirements of section 401(a) or 408, as applicable, even in the party's capacity as a participant or beneficiary (such as by not treating a section 413(e) plan distribution made with respect to the owner of a participating employer as an eligible rollover distribution).

(g) *Applicability date.* This section applies beginning on [PUBLICATION DATE OF FINAL RULE].

**Douglas W. O'Donnell,**  
*Deputy Commissioner for Services and Enforcement.*

**RIN 1625-AC74**

### Electronic Chart and Navigational Equipment Carriage Requirements

**AGENCY:** Coast Guard, Homeland Security (DHS).

**ACTION:** Advance notice of proposed rulemaking.

**SUMMARY:** The Coast Guard seeks public input regarding the modification of the chart and navigational equipment carriage requirements in the Code of Federal Regulations (CFR). This advance notice of proposed rulemaking (ANPRM) outlines the Coast Guard's broad strategy to revise its CFR chart and navigational equipment carriage requirements to implement statutory electronic-chart-use provisions for commercial U.S.-flagged vessels and certain foreign-flagged vessels operating in the waters of the United States. This ANPRM is necessary to obtain additional information from the public before issuing a notice of proposed rulemaking. It will allow us to verify the extent of the requirements for the rule, such as how widely electronic charts currently are used, which types of vessels are using them, the appropriate equipment requirements for different vessel classes, and where the vessels operate, and will thereby allow us to tailor electronic chart requirements to vessel class and location.

**DATES:** Comments and related material must be received by the Coast Guard on or before June 27, 2022.

**ADDRESSES:** You may submit comments identified by docket number USCG-2021-0291 using the Federal eRulemaking Portal at [www.regulations.gov](http://www.regulations.gov). See the "Public Participation and Request for

Comments" portion of the **SUPPLEMENTARY INFORMATION** section for further instructions on submitting comments.

**FOR FURTHER INFORMATION CONTACT:** For information about this document, call or email John Stone, Office of Navigation Systems (CG-NAV-2), Coast Guard; telephone 202-372-1093, email [John.M.Stone2@uscg.mil](mailto:John.M.Stone2@uscg.mil).

#### I. Public Participation and Request for Comments

The Coast Guard views public participation as essential to effective rulemaking, and will consider all comments and material received during the comment period. Your comment can help shape the outcome of this rulemaking. If you submit a comment, please include the docket number for this rulemaking, indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation.

*Submitting comments.* We encourage you to submit comments through the Federal Decision Making Portal at [www.regulations.gov](http://www.regulations.gov). To do so, go to [www.regulations.gov](http://www.regulations.gov), type USCG-2021-0291 in the search box and click "Search." Next, look for this document in the Search Results column, and click on it. Then click on the Comment option. If you cannot submit your material by using [www.regulations.gov](http://www.regulations.gov), call or email the person in the **FOR FURTHER INFORMATION CONTACT** section of this advance notice of proposed rulemaking document (ANPRM) for alternate instructions.

*Viewing material in docket.* To view documents mentioned in this ANPRM as being available in the docket, find the docket as described in the previous paragraph, and then select "Supporting & Related Material" in the Document

Type column. Public comments will also be placed in our online docket and can be viewed by following instructions on [www.regulations.gov](http://www.regulations.gov) Frequently Asked Questions web page. We review all comments received, but we will only post comments that address the topic of the proposed rule. We may choose not to post off-topic, inappropriate, or duplicate comments that we receive.

**Personal information.** We accept anonymous comments. Comments we post to <https://www.regulations.gov> will include any personal information you have provided. For more about privacy and submissions in response to this document, see Department of Homeland Security's eRulemaking System of Records notice (85 FR 14226, March 11, 2020).

**Public meeting.** We do not plan to hold a public meeting, but we will consider doing so if we determine from public comments that a meeting would be helpful. We would issue a separate **Federal Register** document to announce the date, time, and location of such a meeting.

## III. Basis and Purpose

### A. Purpose of the Advance Notice of Proposed Rulemaking (ANPRM)

This advance notice of proposed rulemaking (ANPRM) seeks comments regarding possible modifications to the chart and navigational equipment carriage requirements in titles 33 and 46 of the Code of Federal Regulations (CFR). This ANPRM outlines the Coast

Guard's broad strategy to revise its CFR chart and navigational-equipment carriage requirements, to implement statutory electronic-chart-use provisions for commercial U.S.-flagged vessels, to include self-propelled vessels of at least 65 feet in overall length, passenger vessels for hire, towing vessels of more than 26 feet in overall length and 600 horsepower, and certain foreign-flagged vessels operating in the waters of the United States.

In this ANPRM, we are seeking information on how widely electronic charts are used, which types of vessels are using them, and where the vessels operate, as well as views on the appropriate equipment requirements for different vessel classes. The information obtained from this ANPRM will assist in drafting a proposed rule that tailors electronic charts requirements to vessel class and location.

### B. Statutory Authority

Title 46 of the United States Code (U.S.C.) Section 3105(a)(1) deems certain vessels "equipped with and operating electronic navigational charts that are produced by a government hydrographic<sup>1</sup> office or conform to a standard acceptable to the Secretary" as compliant with charting requirements under title 33 or 46 of the CFR.<sup>2</sup> Additionally, 46 U.S.C. 3105(a)(2)(C) permits the granting of waivers to vessels that use "software-based, platform independent electronic chart systems the Secretary determines are capable of displaying electronic navigational charts with necessary scale and detail to ensure safe navigation for the intended voyage."

These acceptable standards and capabilities need to be clarified because paper and raster charts<sup>3</sup> are being

<sup>1</sup>The International Hydrographic Organization (IHO) defines hydrography as, "the branch of applied sciences which deals with the measurement and description of the physical features of oceans, seas, coastal areas, lakes and rivers, as well as the prediction of their change over time, for the primary purpose of safety of navigation and in support of all other marine activities, including economic development, security and defense, scientific research, and environmental protection." This definition was accessed on October 10, 2021 from: <https://iho.int/en/importance-of-hydrography>. Recognized hydrographic offices in the United States include the National Oceanic and Atmospheric Administration (NOAA), the U.S. Army Corps of Engineers (USACE), and the National Geospatial-Intelligence Agency (NGA).

<sup>2</sup>Public Law 108–293 (2004), codified at 33 U.S.C. 1223a, revised and re-codified at 46 U.S.C. 3105 (Pub. L. 115–282, Section 402(a)(1) (2018)). 46 U.S.C. 3105 was recently amended by section 8301 of the "William M. (MAC) Thornberry National Defense Authorization Act for Fiscal Year 2021" (Pub. L. 116–283).

<sup>3</sup>A raster chart is an electronic reproduction (a picture) made from a detailed scanning of a paper chart.

discontinued<sup>4</sup> and replaced by born-digital<sup>5</sup> electronic navigational charts (ENCs). This clarification is necessary because ENCs require additional equipment, such as a display system, for the mariner to safely and effectively navigate.

Under 46 U.S.C. 70001(a)(3), the Coast Guard generally "may require vessels to install and use specified navigation equipment, communications equipment, electronic relative motion analyzer equipment, or any electronic or other device necessary to comply with a vessel traffic service or that is necessary in the interests of vessel safety." Upon completion of the National Oceanic and Atmospheric Administration (NOAA) "Sunset Plan,"<sup>6</sup> traditional paper charts may no longer be available for some waterways or certified safe for navigation for some vessels, which we discuss in more detail in section IV.A of this ANPRM. Therefore, it may be necessary to require electronic chart and related navigational equipment carriage on certain vessels.

## IV. Background

The regulations in titles 33 and 46 of the CFR require certain vessels to carry currently corrected nautical charts, marine charts, and publications when operating in U.S. waters, as well as equipment necessary to ensure safe navigation (see table 1 in this ANPRM for a list of regulations containing these requirements). At the time these regulations were issued in 1951,<sup>7</sup> paper charts were the only available form of charts. Since that time, paper charts have evolved into electronic charts.

Section 410 of the Coast Guard and Maritime Transportation Act of 2004 required certain vessels operating on the navigable waters of the United States be equipped with and operate electronic charts.<sup>8</sup> At the time, however, recognized hydrographic authorities did not maintain a full portfolio of electronic charts, and an affordable means for a mariner to display and safely use electronic charts was not available on the market. Consequently, the Coast Guard did not issue implementation regulations. Since the enactment of section 410 in 2004,

<sup>4</sup>See NOAA, "Sunsetting Traditional NOAA Paper Charts End of Paper and Raster Nautical Chart Production Introduction of NOAA Custom Charts" (November 14, 2019), available at <https://nauticalcharts.noaa.gov/publications/docs/raster-sunset.pdf>. This document was accessed on October 5, 2021.

<sup>5</sup>Born-digital means to be produced in digital form, rather than being converted from print to digital form.

<sup>6</sup>Id.

<sup>7</sup>16 FR 1511, 1542 (February 14, 1951).

<sup>8</sup>See Public Law 108–293 (2004).

charting systems manufacturers have developed multiple systems that are available to mariners for use, and recognized hydrographic authorities now provide a full suite of electronic charts.

#### A. “Sunsetting” of Raster Navigational Charts

NOAA is the U.S. hydrographic authority for nautical charts covering the U.S. shoreline, Great Lakes, and waters within the U.S. Exclusive Economic Zone. NOAA is undertaking a 5-year “sunsetting” program to gradually end the production of its raster navigational charts (RNC) and paper nautical charts.<sup>9</sup> Production of all NOAA’s RNCs and NOAA’s paper nautical charts is scheduled to cease by January 2025.<sup>10</sup>

#### B. Transition to Electronic Navigational Charts, and Electronic Chart Display and Information Systems

In the 1990s, electronic chart technology took a leap forward with the creation of ENC.<sup>11</sup> ENCs consist of a series of data points and lines that define the shape and size of features to be displayed on a computer. These data points and lines are linked to a database within the ENC that can provide additional information about each charted feature. Layers of ENC information, such as geographic place names or bathymetry, can be turned on and off to reduce clutter when not needed. Charted objects, such as regulated area restrictions, can be selected to have the chart display system show more information about the feature. The chart display can be zoomed in or out to have the depiction of features expanded or shrunk. When zoomed in, the size of text and symbols displayed on the ENC remains the same. This is an improvement over RNCs; when RNCs are zoomed in, the display becomes increasingly blocky or pixelated.

Because ENCs are machine readable, they can interface with existing shipboard navigational systems, such as electronic position fixing devices (EPFDs), speed distance measuring equipment (for example, radar and speed logs), gyrocompasses and transmitting heading devices, and automatic identification systems (AIS).

<sup>9</sup> See NOAA’s notice and request for comments, “Sunsetting of Raster Nautical Charts,” 84 FR 62512, November 15, 2019.

<sup>10</sup> See NOAA’s Raster Charts Products website, available at Farewell to Traditional Nautical Charts ([noaa.gov](https://noaa.gov)).

<sup>11</sup> See NOAA’s “Transforming the NOAA ENC. Implementing the National Charting Plan.” <https://nauticalcharts.noaa.gov/publications/docs/enc-transformation.pdf>.

This allows ENCs to be oriented in the direction of the vessel’s transit and provide warnings or alerts for low water, restricted areas, and course deviations.

The development and availability of ENCs was such a significant change in charting that, in 2002, the International Maritime Organization (IMO) amended its definition of a *nautical chart* in the International Convention for the Safety of Life at Sea (SOLAS), as amended.<sup>12</sup> SOLAS, Chapter V, Regulation 2 defines *Nautical chart or nautical publication* as “a special-purpose map or book, or a specially compiled database from which such a map or book is derived, that is issued officially by or on the authority of a Government, authorized Hydrographic Office or other relevant government institution and is designed to meet the requirements of marine navigation.”

The U.S. Army Corps of Engineers began production of Inland Electronic Navigational Charts (IENC) in 2001. In 2002, NOAA announced that its ENC met the SOLAS definition of a nautical chart and subsequently renamed their ENC product, “NOAA ENC®,” through a statement of policy.<sup>13</sup> In 2002, the Coast Guard certified the Electronic Chart Display and Information System (ECDIS) as meeting the nautical chart requirements in 33 CFR 164.33(a)(1), because it met the same navigational safety concerns as paper nautical charts.<sup>14</sup> During this time, foreign government hydrographic offices also began producing ENCs.

In an effort to standardize electronic charting data, the International Hydrographic Organization (IHO) further defined<sup>15</sup> and created standards and specifications relevant to an ENC in 1996. The IHO also recognized the manufacturer’s role in ENC distribution by acknowledging and defining the transformation of the entire ENC contents and updates accessed by the display system (referred to as a system electronic navigational chart).<sup>16 17</sup> The

<sup>12</sup> These amendments came into force on January 7, 2002.

<sup>13</sup> 67 FR 39695, June 10, 2002.

<sup>14</sup> See Coast Guard notice of policy, “Carriage of Navigation Equipment for Ships on International Voyages” (67 FR 53382, August 15, 2002); and notice of policy; extension, “Carriage of Navigation Equipment for Ships on International Voyages” (69 FR 42192, July 14, 2004).

<sup>15</sup> See IHO S–32 Hydrographic Dictionary, *electronic navigational chart*, available at: <http://iho-ohi.net/S32>. This website was accessed on October 5, 2021.

<sup>16</sup> IHO Resolutions of the International Hydrographic Organization, Publication M–3, 2nd Edition—2010, Updated August 2018. This document is available at: [https://iho.int/iho\\_pubs/misc/M3-E-AUGUST18.pdf](https://iho.int/iho_pubs/misc/M3-E-AUGUST18.pdf). This website was accessed on January 19, 2022.

IMO amended its definition of the term *ENC* to include conformity to IHO standards in 2006 with Resolution MSC.232(82), “Adoption of the Revised Performance Standards for Electronic Chart Display and Information Systems (ECDIS).”<sup>18</sup> In 2009, SOLAS Chapter V, Regulation 19 mandated that certain commercial vessels on international voyages use ENCs as well as ECDIS.

Since 2002, charting system manufacturers have developed other systems in addition to ECDIS, such as Electronic Chart Systems (ECS) and Chart Radars that can display ENC data. In response to this development, the Coast Guard recognizes that an ECDIS is not the only way to display ENC data. More information is provided by ENC displays integrated with navigational equipment, including real-time vessel position, and additional data layers, such as bathymetry, which can be used to trigger automatic safety alarms in equipped navigational systems. As a result, use of ENCs in an ECDIS or other electronic chart system may enhance situational awareness and navigational safety beyond the ability of paper nautical charts.

#### C. Existing Chart Carriage and Associated Navigational Equipment Carriage Regulations

Table 1 lists the parts, subparts, and sections in titles 33 and 46 of the CFR that contain the existing chart carriage and associated navigational equipment carriage requirements by vessel class. These CFR references are being considered for updating in a future rulemaking or rulemakings, informed by comments received from this ANPRM, to allow for electronic charts, electronic chart systems, and any integration with new or existing navigational equipment. This table is provided for information and is not intended to suggest that a future rule would modify every regulation in this table. Only necessary regulations pertaining to chart carriage and navigational equipment carriage

<sup>17</sup> According to the IHO S–32 Hydrographic Dictionary, *system electronic navigational chart*, is a database, in the manufacturer’s internal ECDIS (the display system) format, resulting from the lossless transformation of the entire ENC contents and updates. This database is accessed by ECDIS (the display system) for the display generation and other navigational functions and is the equivalent to an up-to-date paper chart.

<sup>18</sup> *ENC* means the database, standardized as to content, structure and format, issued for use with ECDIS by or on the authority of a Government, authorized Hydrographic Office or other relevant government institution, and conform to IHO standards. The ENC contains all the chart information necessary for safe navigation and may contain supplementary information in addition to that contained in the paper chart (such as sailing directions), which may be considered necessary for safe navigation.

would be addressed in a future rulemaking.

TABLE 1—EXISTING CHART CARRIAGE AND ASSOCIATED NAVIGATIONAL EQUIPMENT CARRIAGE REGULATIONS IN 33 AND 46 CFR

Vessel type	Chart carriage regulations	Navigational equipment carriage regulations
Self-propelled Vessels ≥ 1600 Gross Tons (GT) .....	33 CFR 164.33 .....	33 CFR 164.35; 33 CFR 164.41; 33 CFR 164.46.
Vessels ≥ 10,000 GT .....	33 CFR 164.33 .....	33 CFR 164.35; 33 CFR 164.37; 33 CFR 164.38; 33 CFR 164.40; 33 CFR 164.41; 33 CFR 164.46.
Towing Vessels ≥ 12 Meters .....	33 CFR 164.72(b); 46 CFR 140.705.	33 CFR 164.46; 33 CFR 164.72; 46 CFR 140.725.
Commercial Fishing Vessels .....	46 CFR 28.225 .....	33 CFR 164.46; 46 CFR part 28.
Tank Vessels .....	46 CFR 35.20–1 .....	33 CFR 164.46; 46 CFR part 32, subpart 32.15.
Passenger Vessels (U.S. or foreign) > 100 GT .....	46 CFR 78.05–5 .....	33 CFR 164.46; 46 CFR part 77.
Cargo Vessels .....	46 CFR 97.05–5 .....	33 CFR 164.46; 46 CFR part 96.
Mobile Offshore Drilling Units .....	46 CFR 109.565 .....	33 CFR 164.46; 46 CFR part 108.
Passenger Vessels (U.S.) < 100 GT Carrying > 150 Passengers or with Overnight Accommodations for > 49 Passengers.	46 CFR 121.420 .....	33 CFR 164.46; 46 CFR part 121.
Offshore Supply Vessels .....	46 CFR 130.330 .....	33 CFR 164.46; 46 CFR part 130.
Public Nautical School Ships .....	46 CFR 167.65–45 .....	33 CFR 164.46; 46 CFR part 167, subpart 167.40.
Sailing School Vessels .....	46 CFR 169.809 .....	33 CFR 164.46; 46 CFR part 169, subpart 169.700.
Passenger Vessels (U.S.) < 100 GT Carrying ≤ 150 Passengers or with Overnight Accommodations for ≤ 49 Passengers.	46 CFR 184.420 .....	33 CFR 164.46; 46 CFR part 184.
Oceanographic Research Vessels .....	46 CFR 196.05–5 .....	33 CFR 164.46; 46 CFR part 195.
Uninspected Vessels <sup>19</sup> .....	46 CFR 26.03–4 .....	Not Applicable.

D. Current Electronic Chart Systems Carriage and Equivalency Guidance

In 2005, the Coast Guard solicited the assistance of the Radio Technical Commission for Maritime Services (RTCM)<sup>20</sup> to expand its standard, RTCM 10900.6, “RTCM Standard for Electronic Chart Systems (ECS),” to enhance the use of AIS and better provide for electronic chart carriage. In three subsequent editions, the RTCM standard addressed the backup requirements for SOLAS ECDIS and the use of electronic charts on non-SOLAS class vessels. The updated 7th edition of RTCM’s ECS standard (10900.7) was published on April 5, 2017. This edition established four classes of ECS and supported integration of other installed navigational equipment, including radar, AIS, heading input, and electronic position fixing systems.

These developments led the Coast Guard to pursue new or modified standards to ECS, and were a key consideration for guidance issued via Navigation and Vessel Inspection Circular (NVIC) 01–16, “Use of

Electronic Charts and Publications in Lieu of Paper Charts, Maps and Publications.” NVIC 01–16 was issued on February 3, 2016 to address the use of electronic charts domestically.<sup>21</sup> NVIC 01–16 established an equivalency to the chart and publication carriage requirements in titles 33 and 46 of the CFR by permitting the use of ENC’s in lieu of paper charts, under certain circumstances. NVIC 01–16 was updated in 2017<sup>22</sup> and in 2020<sup>23</sup> to reflect changes in available technology and in the use of electronic publications. The decline in the use of paper nautical charts and rise in use of ENC’s that started over two decades ago has continued since NVIC 01–16 was issued in 2016.<sup>24</sup> The Coast Guard anticipates that any rule resulting from this ANPRM would supersede NVIC 01–16.

<sup>21</sup> Although it has been revised by a subsequent document, the original NVIC 01–16 is available to view at [NVIC\\_01-16\\_electronic\\_charts\\_and\\_publications.pdf](https://www.nvics.com/Portals/9/DCO%20Documents/5p/5ps/NVIC/2016/NVIC_01-16_ElectronicChartsAndPubsCh1.pdf) (menlosecurity.com). This document was accessed on October 5, 2021.

<sup>22</sup> 82 FR 32851, July 18, 2017. Although it has been revised by a subsequent document, NVIC 01–16 (Change 1) is available to view at [https://www.navcen.uscg.gov/pdf/electronic\\_charting/NVIC\\_01-16\\_ElectronicChartsAndPubsCh1.pdf](https://www.navcen.uscg.gov/pdf/electronic_charting/NVIC_01-16_ElectronicChartsAndPubsCh1.pdf). This document was accessed on October 5, 2021.

<sup>23</sup> 85 FR 31789, May 27, 2020. NVIC 01–16 (Change 2) is available at [https://www.dco.uscg.mil/Portals/9/DCO%20Documents/5p/5ps/NVIC/2016/NVIC\\_01-16\\_Ch-2\\_Final\\_2020-05-21.pdf?ver=2020-05-26-172404-563](https://www.dco.uscg.mil/Portals/9/DCO%20Documents/5p/5ps/NVIC/2016/NVIC_01-16_Ch-2_Final_2020-05-21.pdf?ver=2020-05-26-172404-563). This document was accessed on October 5, 2021.

<sup>24</sup> See footnote 5 of this ANPRM for the link to the NOAA Sunsetting Paper.

V. ANPRM Discussion

With this ANPRM, the Coast Guard seeks information and public input to assist us in establishing, through a future rulemaking, acceptable electronic chart and related navigational equipment carriage regulations in titles 33 and 46 CFR. The intent of changing the CFR sections referenced in table 1 would be to provide safe navigation and carriage requirements based on ENC chart data produced by U.S. hydrographic offices.

More than 50 years ago, when the Coast Guard mandated chart carriage on certain commercial vessels,<sup>25</sup> the only charts available to meet the requirements were paper charts. Under the existing regulations referenced in table 1, not all vessels are required to carry an electronic position fixing device, heading input device, or ECDIS. The current domestic chart and navigational equipment carriage regulations were not written for an electronic chart-only environment. Although both 46 U.S.C. 3105 and NVIC 01–16 (Change 2) provide for equivalencies between paper and electronic charts, they do not change existing CFR requirements.

VI. Information Requested

With this ANPRM, the Coast Guard seeks public participation in order to obtain additional information before issuing a notice of proposed rulemaking

<sup>25</sup> 16 FR 1511, 1542, February 14, 1951.

<sup>19</sup> Under existing 46 CFR part 25, subpart 25.10, manufacturers, distributors, and dealers must install navigation lights on uninspected vessels. However, we are considering adding new requirements in 46 CFR part 25 for electronic chart systems, and any integration with new or existing navigational equipment.

<sup>20</sup> The RTCM is an international non-profit scientific, professional and educational organization that is actively engaged in the development of international standards for maritime radio navigation and radio communication systems.

with proposed regulatory text. The information we obtain from you, the public, should allow us to better develop requirements that better ensure safe navigation and carriage based on ENC's. We seek information on how widely used electronic charts are today, what types of vessels are equipped and operate with electronic charts, where these vessels typically operate, and what are appropriate equipment requirements for different vessel classes. The more detailed information you provide, the better informed the Coast Guard will be when considering possible modifications to existing carriage requirements. We are particularly interested in detailed reasons for your answers, and in explanations of any calculations you make or other information on how you reach your determinations when responding to these questions.

Specifically, we seek responses to the following questions:

*Question 1.* Should electronic charts and related navigational equipment be required on certain vessels not on international voyages even if paper charts are available for use and certified for navigation? If yes, which vessels? Please explain why.

*Question 2.* Title 46 U.S.C. 3105 allows for self-propelled commercial vessels of at least 65 feet in overall length, vessels carrying more than a number of passengers for hire determined by the Secretary, and towing vessels of more than 26 feet in overall length and 600 horsepower, while operating on the navigable waters of the United States, equipped with and operating electronic navigational charts that are produced by a government hydrographic office or conform to a standard acceptable to the Secretary, to be deemed in compliance with any requirement under title 33 or 46, Code of Federal Regulations, to have a chart, marine chart, or map on board. Paragraph (a)(1)(D) of this statute gives the Secretary discretion to provide electronic chart equivalency standards for any other vessel not specified. For which types of vessels not listed in the statute should the Coast Guard consider creating electronic chart equivalency standards? What types of vessels, if any, should be excluded? Please explain why.

*Question 3.* Paragraph (a)(1)(B) of 46 U.S.C. 3105 allows for "a vessel carrying more than a number of passengers for hire determined by the Secretary" to be equipped with and operating electronic charts to meet chart requirements under titles 33 and 46 of the CFR. If we were to establish electronic chart carriage regulations, should we set the number

of passengers the same as in 46 CFR chapter I, subchapter K, which applies to passenger vessels carrying more than 150 passengers or with overnight accommodations for more than 49 passengers? If not, what number of passengers for hire should the Coast Guard use as a minimum for electronic chart carriage regulations?

*Question 4.* The National Technology Transfer and Advancement Act (note to 15 U.S.C. 272) directs agencies to use voluntary consensus standards in their regulatory activities. The Coast Guard is aware of two voluntary industry consensus standards that provide standards for ECDIS/ECS: (1) International Electrotechnical Commission (IEC) 61174:2015;<sup>26</sup> and (2) RTCM 10900.7.<sup>27</sup> What other voluntary industry standards should we consider? Which of these voluntary industry standards should be adopted, and why? Would these standards provide sufficient requirements for the vessel categories listed in 46 U.S.C. 3105? If adopted, are these voluntary consensus standards too prescriptive or do they contain too many requirements for certain vessel classes? If so, why?

*Question 5.* The Secretary of Homeland Security may allow for exemptions and waivers, as stated in 46 U.S.C. 3105(a)(2)(C), to permit vessels as described in subparagraphs (A) through (D) of paragraph (1) "that operate solely landward of the baseline from which the territorial sea of the United States is measured to utilize software-based, platform-independent electronic chart systems that the Secretary determines are capable of displaying electronic navigational charts with necessary scale and detail to ensure safe navigation for the intended voyage." Should any vessels be exempted from electronic chart system requirements? What standard, if any, should vessels operating inside the U.S. territorial sea baseline be required to meet? If your vessel is currently in this category and is using electronic charting systems, what types of software and hardware are you using?

*Question 6.* Regarding EPFDs, NVIC 01-16 (Change 2) states that position updates must be in real-time (delivered less than every 2 seconds), sound (8-to-20-meter accuracy), and have a minimum resolution of 0.001 minutes (devices dependent on cellular connection are not acceptable) in accordance with the Federal Radionavigation Plan, IMO Resolution MSC.112(73), and IEC 61108-1. Should we incorporate these standards in

regulations for EPFDs used with ENC's for navigational functions? If not, what standard(s) should they meet? Please explain why.

*Question 7.* Should electronic navigational equipment listed in A through F below, which is required for carriage on certain vessels, be digitally integrated<sup>28</sup> with electronic nautical charts and navigational systems? Why or why not? What cyber security concerns should be considered if electronic nautical charts and navigation systems are integrated with this equipment?

(A) EPFD providing position information;

(B) AIS;

(C) Gyro compass or other means to determine a vessel's heading by vessel-borne non-magnetic means and transmit heading information;

(D) Marine radar;

(E) Magnetic compass; or

(F) Voyage data recorder or simplified voyage data recorder.

*Question 8.* Current chart carriage requirements described in 33 CFR 164.33 require charts to be "of a large enough scale and have enough detail to make safe navigation of the area possible." Should a specific scale be identified in regulation? Why or why not?

*Question 9.* When a vessel is reliant on ENC or IENC charts, should the Coast Guard require the following back-up arrangements?

(A) An equivalent system to that being used to view electronic charts as the primary means, connected to a power supply separate and independent from the primary system;

(B) A non-equivalent ECS meeting a recognized standard, connected to a power supply and independent from the primary system;

(C) Other; please specify; or

(D) No back-up arrangement required.

*Question 10.* Does your vessel have backup power capability? Should an ECS be connected to a backup power supply separate and independent from the primary system? What would be the cost of installing a backup source? For the purpose of understanding your response, please include the type and size of the vessel for which you are providing your response.

*Question 11.* If you operate a vessel, are a vessel owner, or work in an industry with vessels subject to the chart and navigational equipment carriage requirements in titles 33 and 46

<sup>26</sup> IEC 61174:2015 ECDIS standard.

<sup>27</sup> RTCM 10900.7 ECS standard.

<sup>28</sup> See IEC 61162 Digital Interfaces for Navigation Equipment within a Ship and National Marine Electronics Association (NMEA) 0183 Interface Standard.

of the CFR, how prevalent are electronic chart display systems within the vessel class with which you are knowledgeable? For example, in your vessel class or industry, would you consider electronic chart display systems to be very uncommon, uncommon, somewhat common, common, or very common? For reference, the Coast Guard will attempt to quantify non-numerical responses to questions for the purposes of an economic analysis. We will consider “very uncommon” to represent an adoption rate of 20 percent or less; “uncommon” to represent an adoption rate between 20 and 40 percent; “somewhat common” to represent an adoption rate between 40 and 60 percent; “common” to represent an adoption rate between 60 and 80 percent; and “very common” to represent an adoption rate of 80 percent or greater. For us to better understand the context of your response, please provide the particular area of the maritime industry or vessel class that your estimate is for, and the basis for that estimate.

**Question 12a.** If your vessel lacks the navigational equipment necessary to use and display ENC charts, what is your vessel type, what equipment are you currently lacking, and what would be the estimated cost of procuring and installing this equipment? Please let us know who would procure and set up the equipment, and provide an estimate for how long these processes would take. Will your company be able to use existing vessel or shoreside maintenance personnel, or will an outside marine electrician contractor or other technician have to be hired? Are there situations where retrofitting a vessel with such equipment may not be possible? If so, why and what vessel type?

**Question 12b.** If the additional ENC equipment would require updates to your vessel’s electrical system, please provide an estimate of the expected costs to the vessel owner. If you cannot provide a cost estimate, what type of technician would perform the update to the electrical system and how long do you estimate that would take? Would the vessel need to be docked or out of service for any of the modifications described in this question? If so, for how long? Please indicate the type of vessel in your response.

**Question 13.** How many hours per month do you currently spend updating paper charts? What are the costs of maintaining a corrected chart portfolio? How often do you replace paper charts? If you or your company make the updates internally who is in charge of

updating them (master, mate, shore-based company employee, etc.)? If you contract with a service, how much do you pay for the services provided?

**Question 14.** What are the ongoing costs for the necessary electronic chart display system software, such as a charting application or subscription service? How often are technicians required to maintain or service the ECS and how much does this service cost? How often do you anticipate replacing or upgrading an electronic chart display system and what is the estimated cost to replace or upgrade it?

**Question 15.** If the Coast Guard were to propose electronic chart and navigational equipment carriage requirements, what persons, entities, or organizations would be positively or negatively impacted? For example, a positive impact may include instances where an individual, vessel owner, or company may experience cost savings from time saved by no longer manually updating charts or an increase in revenue from selling electronic chart display systems or software, while a negative impact may result from an individual, vessel owner, or company taking on additional equipment costs to be in compliance.

**Question 16.** Are there additional measures that should be considered to relieve an economic burden if the Coast Guard were to issue a rule to establish electronic chart and navigational equipment carriage requirements? What would you consider to be the expected costs and associated benefits of the additional measures? Please provide the data and calculations for the determination of such costs and/or benefits.

**Question 17.** Because of the similarities between an RTCM Class “A” ECS and an ECDIS, NVIC 1–16 (Change 2) encourages mariners operating an RTCM Class “A” ECS to complete Coast Guard approved ECDIS training. For all other mariners operating other ECS systems NVIC 01–16 (Change 2) identifies training topics for mariner familiarization. Is a Coast Guard approved ECDIS course appropriate training for mariners on vessels equipped with ECS? Should ECS specific training be required for officers in charge of a navigational watch on vessels equipped with ECS? What would you consider to be the estimated costs for such training?

Dated: March 23, 2022.

**J.W. Mauger,**

## DEPARTMENT OF HOMELAND SECURITY

### Coast Guard

#### 33 CFR Part 165

[USCG–2022–0064]

RIN 1625–AA00

#### Safety Zone; Blue Angels at Kaneohe Bay Air Show; Oahu, HI

**AGENCY:** Coast Guard, Homeland Security (DHS).

**ACTION:** Notice of proposed rulemaking.

**SUMMARY:** The Coast Guard is proposing to establish a temporary safety zone while the U.S. Navy Blue Angels Squadron conducts aerobatic performances over Kaneohe Bay, Oahu, Hawaii, from 9:00 a.m. through 5:00 p.m., August 12–14, 2022. This safety zone is necessary to protect watercraft and the general public from hazards associated with the U.S. Navy Blue Angels aircraft low flying, high powered jet aerobatics over open waters. Vessels desiring to transit through the zone can request permission by contacting the Honolulu Captain of the Port (COTP) or his designated representative. We invite your comments on this proposed rulemaking.

**DATES:** Comments and related material must be received by the Coast Guard on or before April 27, 2022.

**ADDRESSES:** You may submit comments identified by docket number USCG–2022–0064 using the Federal Decision Making Portal at <https://www.regulations.gov>. See the “Public Participation and Request for Comments” portion of the **SUPPLEMENTARY INFORMATION** section for further instructions on submitting comments.

**FOR FURTHER INFORMATION CONTACT:** If you have questions about this proposed rulemaking, call or email Chief Petty Officer Bradley Lindsey, Waterways Management Division, U.S. Coast Guard Sector Honolulu; telephone (808) 541–4363, email [Bradley.w.lindsey@uscg.mil](mailto:Bradley.w.lindsey@uscg.mil).

#### SUPPLEMENTARY INFORMATION:

##### I. Table of Abbreviations

CFR Code of Federal Regulations  
 DHS Department of Homeland Security  
 FR Federal Register  
 NPRM Notice of proposed rulemaking  
 § Section  
 U.S.C. United States Code

##### II. Background, Purpose, and Legal Basis

On January 27, 2022, Kaneohe Bay Air Show 2022 coordinators informed the

U.S. Coast Guard of a State of Hawaii approved Air Show plan that include an aerial performance “show box” extending beyond the Kaneohe Bay Naval Defensive Sea Area as established by Executive Order 8681 of February 14, 1941. Within this “show box,” the U.S. Navy Blue Angels Squadron will conduct aerobatic performances, exhibiting their aircraft’s maximum performance capabilities, over Kaneohe Bay, Oahu, Hawaii, during a 3-day period. Taking into account the hazards associated within this “show box” during the Squadron’s high powered multiple jet aircraft performances, and that Kaneohe Bay normally experiences heavy waterway traffic during the weekends, the COTP determined that a safety zone for the portions of the “show box” that extend beyond the Kaneohe Bay Naval Defensive Sea would be appropriate to ensure the safety of all watercraft and the general public during the Blue Angels’ performances. The Coast Guard is proposing this rulemaking under authority in 46 U.S.C. 70034 (previously 33 U.S.C. 1231).

### III. Discussion of Proposed Rule

The COTP proposes to establish a temporary safety zone while the U.S. Navy Blue Angels Squadron conducts aerobatic performances over Kaneohe Bay, Oahu, Hawaii, from 9:00 a.m. through 5:00 p.m., August 12–14, 2022. This safety zone would encompass a small area of the Kaneohe Bay Naval Defensive Sea Area, including an area that extends approximately 200 yards northeast and 1000 yards southwest of the Naval Defensive Sea Area and is bound by the following points: 21°26.159’ N, 157°47.312’ W; then south to 21°25.890’ N, 157°47.250’ W; then northeast to 21°27.943’ N, 157°44.953’ W; then west to 21°28.016’ N, 157°45.250’ W; and returning southwest to the starting point. This safety zone will extend from the surface of the water to the ocean floor. These safety zones are necessary to protect watercraft and the general public from hazards associated with the U.S. Navy Blue Angels aircraft low flying, high powered jet aerobatics over open waters. Vessels requiring emergency transit through the zone may request permission by contacting the on scene Patrol Commander on VHF channel 16 (156.800 MHz) or the Honolulu Captain of the Port at telephone number 808–842–2600. The regulatory text we are proposing appears at the end of this document.

### IV. Regulatory Analyses

We developed this proposed rule after considering numerous statutes and

Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

#### A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This NPRM has not been designated a “significant regulatory action,” under Executive Order 12866. Accordingly, the NPRM has not been reviewed by the Office of Management and Budget (OMB).

This regulatory action determination is based on the size, location, and duration of the safety zone. Vessels will be able to transit in the temporary safety zones with permission from the Honolulu COTP or his designated representative and transit around the zone freely.

#### B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term “small entities” comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this proposed rule would not have a significant economic impact on a substantial number of small entities.

Vessels will be allowed to transit in and around the temporary safety zones in Kaneohe Bay once permission to enter is granted. While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section IV.A above this proposed rule would not have a significant economic impact on any vessel owner or operator. Before the effective period, we will issue maritime advisories widely available to the Oahu maritime and tourist communities.

If you think that your business, organization, or governmental jurisdiction qualifies as a small entity and that this proposed rule would have a significant economic impact on it, please submit a comment (see **ADDRESSES**) explaining why you think it qualifies and how and to what degree this rule would economically affect it.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121),

we want to assist small entities in understanding this proposed rule. If the proposed rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section. The Coast Guard will not retaliate against small entities that question or complain about this proposed rule or any policy or action of the Coast Guard.

#### C. Collection of Information

This proposed rule would not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

#### D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132 (Federalism), if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this proposed rule under that order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this proposed rule does not have tribal implications under Executive Order 13175 (Consultation and Coordination with Indian Tribal Governments) because it would not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. If you believe this proposed rule has implications for federalism or Indian tribes, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

#### E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of \$100,000,000 (adjusted for inflation) or more in any one year. Though this proposed rule would not result in such an expenditure, we do discuss the potential effects of this proposed rule elsewhere in this preamble.

### F. Environment

We have analyzed this proposed rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have made a preliminary determination that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This proposed rule involves a safety zone that extends the Kaneohe Bay Naval Defensive Sea Area on both ends that would prevent vessels from entering the fight paths for the Air Show. Normally such actions are categorically excluded from further review under paragraph L60(a) of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A preliminary Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble. We seek any comments or information that may lead to the discovery of a significant environmental impact from this proposed rule.

### G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places, or vessels.

### V. Public Participation and Request for Comments

We view public participation as essential to effective rulemaking, and will consider all comments and material received during the comment period. Your comment can help shape the outcome of this rulemaking. If you submit a comment, please include the docket number for this rulemaking, indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation.

**Submitting comments.** We encourage you to submit comments through the Federal Decision Making Portal at <https://www.regulations.gov>. To do so, go to <https://www.regulations.gov>, type USCG–2022–0064 in the search box and click “Search.” Next, look for this document in the Search Results column, and click on it. Then click on the

Comment option. If you cannot submit your material by using <https://www.regulations.gov>, call or email the person in the **FOR FURTHER INFORMATION CONTACT** section of this proposed rule for alternate instructions.

**Viewing material in docket.** To view documents mentioned in this proposed rule as being available in the docket, find the docket as described in the previous paragraph, and then select “Supporting & Related Material” in the Document Type column. Public comments will also be placed in our online docket and can be viewed by following instructions on the <https://www.regulations.gov> Frequently Asked Questions web page. We review all comments received, but we will only post comments that address the topic of the proposed rule. We may choose not to post off-topic, inappropriate, or duplicate comments that we receive.

**Personal information.** We accept anonymous comments. Comments we post to <https://www.regulations.gov> will include any personal information you have provided. For more about privacy and submissions to the docket in response to this document, see DHS’s eRulemaking System of Records notice (85 FR 14226, March 11, 2020).

### List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard is proposing to amend 33 CFR part 165 as follows:

### PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

**Authority:** 46 U.S.C. 70034, 70051; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 00170.1, Revision No. 01.2.

■ 2. Add § 165.T14–0064 to read as follows:

#### § 165.T14–0064 Safety Zone; Blue Angels at Kaneohe Bay Air Show, Oahu, Hawaii.

(a) **Location.** The following area is a safety zone: All waters contained within an area composing of one box on Kaneohe Bay Naval Defensive Sea Area as established by Executive Order 8681 of February 14, 1941, in Kaneohe Bay, Oahu, Hawaii. This safety zone extends approximately 200 yards northeast and 1000 yards southwest of the Naval Defensive Sea Area and is bound by the following points: 21°26.159′ N, 157°47.312′ W; then south to 21°25.890′ N, 157°47.250′ W; then northeast to

21°27.943′ N, 157°44.953′ W; then west to 21°28.016′ N, 157°45.250′ W; and returning southwest to the starting point. This safety zone extends from the surface of the water to the ocean floor. These coordinates are based upon the National Oceanic and Atmospheric Administration Coast Survey, Pacific Ocean, Oahu, Hawaii, chart 19359 (NAD 83).

(b) **Definitions.** As used in this section, *designated representative* means a Coast Guard Patrol Commander, including a Coast Guard coxswain, petty officer, or other officer operating a Coast Guard vessel and a Federal, State, and local officer designated by or assisting the Captain of the Port Honolulu (COTP) in the enforcement of the safety zone.

(c) **Regulations.** (1) Under the general safety zone regulations in subpart C of this part, you may not enter the safety zone described in paragraph (a) of this section unless authorized by the COTP or the COTP’s designated representative.

(2) To seek permission to enter, contact the COTP or the COTP’s representative on VHF channel 16 (156.800 MHz) or the Honolulu Captain of the Port at telephone number 808–842–2600. Those in the safety zone must comply with all lawful orders or directions given to them by the COTP or the COTP’s designated representative.

(d) **Enforcement period.** This section will be enforced daily between the hours of 9:00 a.m. through 5:00 p.m., August 12–14, 2022.

Dated: March 21, 2022.

**A.B. Avanni,**

*Captain, U.S. Coast Guard, Captain of the Port Honolulu.*

[FR Doc. 2022–06455 Filed 3–25–22; 8:45 am]

**BILLING CODE 9110–04–P**

## DEPARTMENT OF COMMERCE

### National Oceanic and Atmospheric Administration

#### 50 CFR Part 300

[Docket No. 220321–0075]

RIN 0648–BK84

### International Fisheries; Pacific Tuna Fisheries; Fishing Restrictions for Tropical Tuna and Silky Shark in the Eastern Pacific Ocean for 2022 and Beyond

**AGENCY:** National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

**ACTION:** Proposed rule; request for comments.

**SUMMARY:** NMFS proposes regulations under the Tuna Conventions Act (TCA) of 1950, as amended, to implement Resolution C–21–04 (*Conservation Measures for Tropical Tunas in the Eastern Pacific Ocean During 2022–2024*) and Resolution C–21–06 (*Conservation Measures for Shark Species, with Special Emphasis on the Silky Shark (Carcharhinus Falciformis), for the Years 2022 and 2023*), which were adopted at the Resumed 98th Meeting of the Inter-American Tropical Tuna Commission (IATTC) in October 2021. This proposed rule implements the C–21–04 fishing management measures for tropical tuna (*i.e.*, bigeye tuna (*Thunnus obesus*), yellowfin tuna (*Thunnus albacares*), and skipjack tuna (*Katsuwonus pelamis*)) in the eastern Pacific Ocean (EPO). The fishing restrictions would apply to purse seine vessels of class sizes 4–6 (carrying capacity of 182 metric tons (mt) or greater) and longline vessels greater than 24 meters (m) in overall length that fish for tropical tuna in the EPO. To implement Resolution C–21–06, which extended the previous IATTC resolution on silky shark for 2 years, NMFS is proposing for existing regulations on silky shark to continue in effect with no proposed amendments. This proposed rule is necessary for the conservation of tropical tuna stocks and silky shark in the EPO and for the United States to satisfy its obligations as a member of the IATTC.

**DATES:** Comments on the proposed rule and supporting documents must be submitted in writing by April 27, 2022.

**ADDRESSES:** You may submit comments on this document, identified by NOAA–NMFS–2021–0136, by any of the following methods:

- **Electronic Submission:** Submit all electronic public comments via the Federal e-Rulemaking Portal. Go to <https://www.regulations.gov> and enter “NOAA–NMFS–2021–0136” in the Search box. Click on the “Comment” icon, complete the required fields, and enter or attach your comments.

- **Mail:** Submit written comments to Rachael Wadsworth, NMFS West Coast Region Long Beach Office, 501 W Ocean Blvd., Suite 4200, Long Beach, CA 90802. Include the identifier “NOAA–NMFS–2021–0136” in the comments.

**Instructions:** Comments must be submitted by one of the above methods to ensure they are received, documented, and considered by NMFS. Comments sent by any other method, to any other address or individual, or received after the end of the comment

period, may not be considered. All comments received are a part of the public record and will generally be posted for public viewing on [www.regulations.gov](http://www.regulations.gov) without change. All personal identifying information (*e.g.*, name, address, etc.) submitted voluntarily by the sender will be publicly accessible. Do not submit confidential business information, or otherwise sensitive or protected information. NMFS will accept anonymous comments (enter “N/A” in the required fields if you wish to remain anonymous).

Copies of supporting documents that were prepared for this proposed rule, including the regulatory impact review (RIR) are available via the Federal e-Rulemaking Portal: <http://www.regulations.gov>, docket NOAA–NMFS–2021–0136, or contact Rachael Wadsworth, NMFS WCR SFD, NMFS West Coast Region Long Beach Office, 501 W Ocean Blvd., Suite 4200, Long Beach, CA 90802, or [WCR.HMS@noaa.gov](mailto:WCR.HMS@noaa.gov).

**FOR FURTHER INFORMATION CONTACT:** Rachael Wadsworth, NMFS WCR, at (206) 561–3457.

#### **SUPPLEMENTARY INFORMATION:**

##### **Background on the IATTC**

The United States is a member of the IATTC, which was established under the 1949 Convention for the Establishment of an Inter-American Tropical Tuna Commission (1949 Convention). In 2003, the IATTC updated the 1949 Convention through the adoption of the Convention for the Strengthening of the IATTC Established by the 1949 Convention between the United States of America and the Republic of Costa Rica (Antigua Convention). The Antigua Convention entered into force in 2010. The United States acceded to the Antigua Convention on February 24, 2016. The full text of the Antigua Convention is available at: [https://www.iattc.org/PDFFiles/IATTC-Instruments/\\_English/IATTC\\_Antigua\\_Convention%20Jun%202003.pdf](https://www.iattc.org/PDFFiles/IATTC-Instruments/_English/IATTC_Antigua_Convention%20Jun%202003.pdf).

The IATTC consists of 21 member nations and 5 cooperating non-member nations. The IATTC facilitates scientific research, as well as the conservation and management, of tuna and tuna-like species in the IATTC Convention Area. The IATTC Convention Area is defined as waters of the EPO within the area bounded by the west coast of the Americas and by 50° N latitude, 150° W longitude, and 50° S latitude. The IATTC maintains a scientific research and fishery monitoring program and regularly assesses the status of tuna,

sharks, and billfish stocks in the IATTC Convention Area to determine appropriate catch limits and other measures deemed necessary to promote sustainable fisheries and prevent the overexploitation of these stocks.

##### **International Obligations of the United States Under the Antigua Convention**

As a Party to the Antigua Convention and a member of the IATTC, the United States is legally bound to implement decisions of the IATTC under the Tuna Conventions Act of 1950, as amended, 16 U.S.C. 951 *et seq.* (Pub. L. 114–81) (TCA). The TCA directs the Secretary of Commerce, in consultation with the Secretary of State and, with respect to enforcement measures, the U.S. Coast Guard, to promulgate such regulations as may be necessary to carry out the United States’ obligations under the Antigua Convention, including recommendations and decisions adopted by the IATTC. The authority of the Secretary of Commerce to promulgate such regulations has been delegated to NMFS.

##### **IATTC Resolutions on Tropical Tuna Conservation and Silky Shark**

The IATTC held multiple annual meetings, virtually, in June, August, and October 2021. The IATTC ultimately adopted a new tropical tuna Resolution, Resolution C–21–04 (*Conservation Measures for Tropical Tunas in the Eastern Pacific Ocean During 2022–2024*), at the Resumed 98th Meeting of the IATTC in October 2021. The IATTC also adopted Resolution C–21–06 (*Conservation Measures for Shark Species, with Special Emphasis on the Silky Shark (Carcharhinus Falciformis), for the Years 2022 and 2023*). This Resolution is a two-year extension of the previous resolution on silky shark, which was set to expire at the end of the 2021 calendar year.

Many of the provisions of the newly adopted Resolution C–21–04 are identical in content to those contained in the previous IATTC resolutions on tropical tuna management that were in place from 2018–2021 (C–20–06; *Tropical Tunas Conservation in the EPO during 2021, pursuant to RES C–20–05; and C–17–02; Multiannual Program for the Conservation of Tuna in the Eastern Pacific Ocean During 2018–2020*). Resolution C–21–04 continues to include provisions for a 72-day EPO fishing closure period for purse seine vessels, exemptions from that closure period due to *force majeure*, a 31-day time/area EPO fishing closure period for purse seine vessels, catch limits of bigeye tuna caught in the EPO for longline vessels greater than 24 m in

overall length, catch limit transfer requirements for bigeye tuna, a requirement that all tropical tuna be retained and landed (with some exceptions), and restrictions on the use and design of fish aggregating devices (FADs).

In addition to the existing measures, Resolution C-21-04 contains new measures not included in previous tropical tuna resolutions. These include a system of additional closure days for purse seine vessels that exceed an annual catch level of 1,200 mt for bigeye tuna and amendments to provisions related to *force majeure* exemptions from the 72-day closure period requirement. The Resolution also includes several new restrictions on FADs that include a gradual reduction in the number of active FADs allowed, additional reporting requirements for satellite buoys including activations and deactivations, and specification of circumstances where activations and deactivations are allowed. The Resolution also includes requirements for reporting cannery data and Vessel Monitoring Systems (VMS) data to the IATTC.

### Proposed Regulations

This proposed rule would be implemented under the TCA (16 U.S.C. 951 *et seq.*) and proposes changes to part 300, subpart C of title 50 of the Code of Federal Regulations (CFR). Although Resolutions C-21-04 and C-21-06 are in effect through 2024 and 2023 respectively, NMFS does not intend for the proposed regulations to expire concurrently with the Resolutions. Instead, because the IATTC will likely continue to adopt similar conservation and management measures upon expiration of those resolutions, and to avoid a lapse in the management of the fishery that may occur between expiration of the proposed regulations and implementation of new measures adopted by the IATTC, the proposed regulations would remain in effect until they are amended or replaced.

The TCA gives NMFS the authority to . . . promulgate such regulations as may be necessary to carry out the United States international obligations under the Convention and this chapter, including recommendations and decisions adopted by the Commission. 16 U.S.C. 955(a). In past years, NMFS has implemented IATTC resolutions for specific calendar years, and this approach has led to lapses in management in the affected fisheries in subsequent years. Given the time-consuming nature of the U.S. domestic rulemaking process, combined with the increasingly frequent delayed adoption

of IATTC resolutions, implementing domestic measures that do not expire until new measures are in place is necessary to carry out the United States' international obligations under the Antigua Convention and the TCA because it will ensure there is no lapse in management of the tropical tuna fishery or silky shark measures in the EPO.

Thus, unless a date is specified in the text of the regulation, the proposed regulations would remain in effect until they are amended or replaced. NMFS does intend to publish proposed and final rules to implement new resolutions adopted by the IATTC as expeditiously as possible; however, this approach would allow existing regulations to remain in force and prevent any lapse in regulatory coverage caused by expirations. Because the IATTC adopted Resolution C-21-04 as a three-year conservation and management measure (2022-2024), the supporting analyses for this rule (discussed later in the Classification section) cover a three-year time period, with the understanding that these analyses would need to be supplemented should the measures remain in effect for more than three years. Likewise, the supporting analyses for Resolution C-21-06, which was adopted as a two-year conservation measure (2022-2023), cover a two-year period, with the understanding that these analyses would also need to be supplemented should the measures remain in effect for more than two years.

#### *Tuna Conservation Measures for 2022 and Beyond*

The proposed rule would implement the provisions of Resolution C-21-04 and applies to U.S. commercial fishing vessels using purse seine and longline gear to catch tropical tuna in the IATTC Convention Area. Several provisions included in Resolution C-21-04 do not need to be implemented through this proposed rule because they were already codified in regulations and are not set to expire. The continuing and new tropical tuna provisions are described below.

First, this proposed rule would maintain a 750 mt catch limit on bigeye tuna caught by longline vessels greater than 24 m in overall length in the IATTC Convention Area (50 CFR 300.25(a)(2)). Second, the proposed rule would maintain the prohibition on purse seine vessels of class size 4 to 6 (*i.e.*, vessels with a carrying capacity greater than 182 mt) from fishing for tropical tuna in the IATTC Convention Area for a period of 72 days (50 CFR 300.25(e)(1)). Specifically, vessels will

continue to be prohibited from fishing in the EPO for 72 days during one of the following two periods: (1) From July 29 to October 8; or (2) from November 9 to January 19 of the following year (50 CFR 300.25(e)(1)(i) and (ii)). Third, the proposed rule would maintain a closure period (*i.e.*, Corralito closure) for the purse seine fishery for tropical tuna within the area of 96° and 110° W and between 4° N and 3° S from 0000 hours on October 9 to 2400 hours on November 8 (50 CFR 300.25(e)(5)). The three regulations described in this paragraph would be amended by this proposed rule solely to specify that they apply beyond the 2021 calendar year and would no longer be linked to specific years in the regulations. Due to the addition of new requirements in § 300.25(e) (discussed later in this section), the closure requirement described in § 300.25(e)(5) would also be moved to § 300.25(e)(6).

This proposed rule would also continue, for 2022 and beyond, several other regulations that were in effect in 2021 but that did not specify in the regulatory text the calendar years to which they apply. Therefore, under this proposed rule, those regulations would continue to be in effect with no changes or with minor clarifying revisions, as indicated below:

- Provisions related to transferring longline catch limits for bigeye tuna between IATTC members (50 CFR 300.25(a)(5)).
- Provisions related to selection of a 72-day closure period (50 CFR 300.25(e)(2) and (3)). Due to the addition of new regulations in § 300.25(e), these provisions would be moved from § 300.25(e)(2) and (3) to § 300.25(e)(3) and (4), and they would also include minor non-substantive clarifying revisions.
- Provisions related to exemptions from the 72-day closure period requirement due to *force majeure* (50 CFR 300.25(e)(4)). Due to the addition of new requirements in § 300.25(e), these provisions would be moved from § 300.25(e)(4) to § 300.25(e)(5). The regulation would also include non-substantive revisions intended to clarify eligibility for a *force majeure* exemption.
- Requirements related to stowing gear during time/area closure periods (50 CFR 300.25(e)(6)). Due to the addition of new requirements in § 300.25(e), this requirement would be moved from § 300.25(e)(6) to § 300.25(e)(7).
- A requirement for all tropical tuna to be retained on board and landed (with certain exceptions) (50 CFR 300.27(a)).

- A number of restrictions related to FADs for purse seine vessels in the IATTC Convention Area (50 CFR 300.22(a)(3); 50 CFR 300.28). Due to proposed changes to § 300.22, the FAD restrictions in § 300.22(a)(3) would be moved to § 300.22(c). The regulation would include some non-substantive revisions intended to clarify the existing reporting requirements for Active FADs.
- The prohibitions against failing to comply with gear-stowing restrictions, retention requirements, and FAD-related restrictions (50 CFR 300.24(e), (f), (m), (nn), (oo), and (pp)).

This proposed rule would implement several new fishing restrictions on purse seine vessels, in accordance with Resolution C–21–04. The new restrictions include a system of additional closure days for class 4–6 purse seine vessels that exceed specified annual catch levels for bigeye tuna (see proposed 50 CFR 300.25(e)(2)). These catch levels would begin at 1,200 mt of bigeye tuna with 10 additional closure days and would increase incrementally by 300 mt and 3 additional closure days beyond that level. In 2023 and 2024, U.S. purse seine vessels that exceed a certain annual catch level of bigeye tuna would be required to increase the number of closure days they observe in the following year, as specified in Table 1.

TABLE 1—BIGEYE TUNA CATCH LEVELS AND CORRESPONDING ADDITIONAL CLOSURE DAYS

Catch level (mt) exceeded	Additional closure days observed
1,200 .....	10
1,500 .....	13
1,800 .....	16
2,100 .....	19
2,400 .....	22

In addition, the proposed rule would implement minor revisions to *force majeure* exemptions from the 72-day closure period requirement to clarify when to submit information to NMFS and that the exemption does not apply to the additional closure days (see proposed 50 CFR 300.25(e)(5)(i)–(vi)).

The proposed rule would also implement several new restrictions on FADs. These include proposed changes to 50 CFR 300.28(c) to provide for a gradual reduction in the number of active FADs allowed from 2022 to 2024 and beyond, additional reporting requirements for satellite buoys, including specific information about activations and deactivations, in proposed 50 CFR 300.22(c)(3), and (4), and specification of circumstances

where activations and deactivations are allowed in the proposed changes to 50 CFR 300.28(d) and (e). The proposed rule would also implement new requirements for vessel owners or operators to report cannery data directly to the IATTC, and to also make the data available to NMFS upon request, no later than 10 days after completion of unloading and the last day of grading by size (see proposed 50 CFR 300.22(d)). Cannery data reported to NMFS would be treated as confidential in accordance with NOAA Administrative Order 216–100 for confidential fisheries data, and data provided from NMFS to IATTC or directly to IATTC from vessel owners or operators would be kept confidential according to IATTC confidentiality standards. Further instructions about reporting would be included in a compliance guide available with the final rule. The proposed changes to 50 CFR 300.21 would add definitions for “activation of a satellite buoy,” “deactivation of a satellite buoy,” “reactivation of a satellite buoy,” “signal loss,” and would revise the “Active FAD” definition. The corresponding prohibitions listed in proposed 50 CFR 300.24 are also updated accordingly. Finally, this action also notifies the public that, consistent with the VMS reporting requirements specified in paragraph 25 of Resolution C–21–04 and beginning on January 1, 2023, NMFS would report VMS data, which vessels are currently required to submit under 50 CFR 300.26, to the IATTC. VMS data reported from NMFS to the IATTC would be kept confidential according to IATTC confidentiality standards.

In addition to implementing the measures in the tropical tuna resolution, the proposed rule would also slightly reorganize 50 CFR part 300, subpart C and clarify existing regulations pertaining to the IATTC Regional Vessel Register (RVR). Specifically, the regulations in 50 CFR 300.23, “Persons and vessels exempted,” would be moved to 50 CFR 300.20, “Purpose and scope,” and the regulations pertaining to the RVR, currently found in 50 CFR 300.22(b), would be moved to 50 CFR 300.23, which would be renamed “IATTC Regional Vessel Register.” This change is intended to provide easier access to the RVR regulations. The RVR regulations in 50 CFR 300.23 would also include some minor housekeeping edits for clarifying purposes.

*Silky Shark Regulations*

The IATTC also extended existing conservation measures for silky shark without change (see Resolution C–21–06). Therefore, under this proposed rule

the silky shark regulations in 50 CFR 300.27 (e) and (f) would continue to be in effect without change. Those regulations prohibit U.S. purse seine and longline vessels from retaining on board, transshipping, storing, or landing any part or whole carcass of a silky shark, with the exception of silky shark caught by purse seine that is not seen during fishing operations and is delivered into the vessel hold. Even though the text of those regulations will remain unchanged, NMFS is proposing to change the title of § 300.27(e) to make clear that paragraph applies to both purse seine and longline vessels.

**Classification**

The NMFS Assistant Administrator has determined that this proposed rule is consistent with the TCA and other applicable laws, subject to further consideration after public comment.

This proposed rule has been determined to be not significant for purposes of Executive Order 12866.

This proposed rule includes changes to collection of information requirements for purposes of the Paperwork Reduction Act of 1995. The existing collection of information requirements for longline vessels would continue to apply under OMB Control Number 0648–0214 (*Pacific Islands Region Logbook Family of Forms*). NMFS is amending the supporting statement for the *West Coast Region Pacific Tuna Fisheries Logbook, Fish Aggregating Device Form, and Observer Safety Reporting*, Office of Management and Business (OMB) Paperwork Reduction Act (PRA) requirements (OMB Control No. 0648–0148) to include the new data collection requirements for deactivations and reactivations of satellite buoys associated with FADs and for cannery data as described in the preamble. NMFS estimates that the public reporting burden for the collection of information for satellite buoys associated with FADs will average 3 minutes per form and average 5 minutes for cannery data, including time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

NMFS requests any comments on the addition of the FAD buoy and cannery data collection to the PRA package, including whether the paperwork would unnecessarily burden any vessel owners and operators. Public comment is sought regarding: Whether this proposed collection of information is necessary for the proper performance of the functions of the agency, including

whether the information shall have practical utility; the accuracy of the burden estimate; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the collection of information, including through the use of automated collection techniques or other forms of information technology. Send comments on these or any other aspects of the collection of information to the **ADDRESSES** above, and by email to [OIRA\\_Submission@omb.eop.gov](mailto:OIRA_Submission@omb.eop.gov), or fax to (202) 395-5806.

Notwithstanding any other provision of the law, no person is required to respond to, and no person shall be subject to penalty for failure to comply with, a collection of information subject to the requirements of the PRA, unless that collection of information displays a currently valid OMB control number. All currently approved NOAA collections of information may be viewed at: <https://www.reginfo.gov/public/do/PRAMain>.

Pursuant to the Regulatory Flexibility Act, 5 U.S.C. 605(b), the Chief Counsel for Regulation of the Department of Commerce certified to the Chief Counsel for Advocacy of the Small Business Administration that this proposed rule, if adopted, would not have a significant economic impact on a substantial number of small entities. The rationale for the certification is provided in the following paragraphs.

The action proposed would implement provisions of Resolution C-21-04 and C-21-06. This action would apply to U.S. commercial fishing vessels using longline and purse seine gear and fishing for tropical tuna stocks in the IATTC Convention Area. There are three objectives of the proposed action: (1) Manage U.S. fishing activities for tropical tuna in the EPO for the benefit of maximizing harvests while avoiding overfishing, (2) maintain mitigation measures for silky shark, and (3) fulfill the international obligations of the United States as a member of the IATTC.

As described under “Proposed Regulations” several regulations are already in place and would not be substantively amended through this rulemaking. Without the proposed action, U.S. fisheries would be allowed to target tropical tuna in the Convention Area without restrictions (except for existing permit requirements). This may contribute to overfishing conditions of tuna resources and fewer conservation measures for silk sharks. Managing stocks at or above levels able to produce maximum sustainable yield is intended to benefit both the stocks and the fisheries in the EPO by allowing for the

production of the stocks to be maintained at levels where the largest catch can be taken over time. The implementation of Resolution C-21-04 and C-21-06 through the proposed action will result in the sharing of sustainable benefits from Pacific tuna fishery resources among the IATTC member and cooperating non-member countries. The entities directly affected by the actions of this proposed rule are: (1) U.S. purse seine vessels that fish for tuna or tuna-like species in the IATTC Convention Area, and (2) U.S. longline vessels greater than 24 meters in overall length that catch bigeye tuna in the IATTC Convention Area.

For Regulatory Flexibility Act (RFA) compliance purposes only, NMFS issued a final rule establishing a small business size standard of \$11 million in annual gross receipts for all businesses primarily engaged in the commercial fishing industry (NAICS 11411) (80 FR 81194, Dec. 29, 2015). The \$11 million standard became effective on July 1, 2016 and replaced previous U.S. Small Business Administration small business standards for the finfish (NAICS 114111), shellfish (NAICS 114112), and other marine fishing (NAICS 114119) sectors of the U.S. commercial fishing industry in all NMFS rules subject to the RFA after July 1, 2016. *Id.* at 81194.

NMFS prepared analyses for this regulatory action based on these size standards. All of the entities directly regulated by this regulatory action are commercial finfish fishing businesses. Under these size standards, the U.S. purse seine vessels regulated by this action include both large and small businesses. The longline vessels this action applies to are considered to be small businesses.

#### *U.S. Purse Seine Vessels Fishing in the IATTC Convention Area*

There are two components to the U.S. tuna purse seine fishery in the EPO: (1) Large purse seine vessels (class size 6; greater than 363 mt carrying capacity) that typically have been based in the western and central Pacific Ocean (WCPO), and (2) coastal purse seine vessels with smaller fish hold volumes (size class 2-3; between 46-181 mt carrying capacity) that are based on the U.S. West Coast. Although Resolution C-21-04 and the proposed regulations include restrictions for class size 4-5 (182-363 mt carrying capacity) purse seine vessels, there are currently no U.S. vessels of class sizes 4-5 registered to fish in the IATTC Convention Area, nor have there been in the past ten years. Therefore, the proposed regulations for class size 4-5 purse seine vessels are not

expected to have any impact on U.S. vessel owners or operators.

As of January 2022, there are 15 class size 6 U.S. purse seine vessels registered to fish in the IATTC Convention Area. From 2005 through 2014, three or fewer class 6 purse seine vessels fished in the Convention Area. From 2015 and onward, more than three purse seine vessels fished in the Convention Area. The U.S. class size 6 purse seine vessels target skipjack tuna by fishing on floating objects and unassociated sets; they also catch and retain yellowfin and bigeye tuna. In addition, one U.S. class 6 purse seine vessel has permission to fish on dolphins in 2022 and may be eligible to fish on dolphins in the future. This vessel could also fish on floating objects and unassociated sets as it has done in the past. Prior to 2017, no U.S. purse seine vessel had fished on dolphins in over 10 years.

For large purse seine vessels that fished exclusively in the EPO, ex-vessel price information is not available to NMFS because these vessels did not land on the U.S. West Coast, and the cannery receipts are not available through the IATTC. However, Regional Purse Seine Logbook (RPL) data from NMFS’ Pacific Islands Fisheries Science Center (PIFSC), and observer data from the IATTC may be used as a proxy for fish landings by large U.S. purse seiners, in lieu of cannery receipts. Because neither gross receipts nor ex-vessel price information specific to individual fishing vessels are available to NMFS, NMFS applied indicative regional cannery prices—as approximations of ex-vessel prices—to annual catches of individual vessels obtained from RPLs and IATTC observer data, to estimate the vessels’ annual receipts. Indicative regional cannery prices are available through 2020 (developed by the Pacific Islands Forum Fisheries Agency; available at <https://www.ffa.int/node/425>). NMFS estimated vessels’ annual receipts during 2019-2020. Using this approach, NMFS estimates that, among the affected vessels, the range in annual average receipts in 2019-2020 was \$400,000 to \$15 million with an average of approximately \$8 million.

NMFS estimates the number of affected U.S. purse seine vessels using the number with Western and Central Pacific Fisheries Commission (WCPFC) Area Endorsements, which are the NMFS-issued authorizations required for a vessel to fish commercially for highly migratory species (HMS) on the high seas in the WCPFC Convention Area. As of January 2021, the number of U.S. purse seine vessels with WCPFC Area Endorsements was 14. Based on limited financial information about the

affected fishing fleets, and using individual vessels as proxies for individual businesses, NMFS believes that over half of the vessels in the purse seine fleet are considered to be small entities for purposes of the RFA; that is, they are independently owned and operated and not dominant in their fields of operation, and have annual receipts of no more than \$11 million.

#### *U.S. Longline Vessels That Fish in the IATTC Convention Area*

As of January 2021, the IATTC Regional Vessel Register lists 149 U.S. longline vessels that have the option to fish in the IATTC Convention Area, 35 of which are large-scale longline vessels (*i.e.*, greater than 24 m in overall length). The majority of these longline vessels have Hawaii Longline Limited Access Permits (issued under 50 CFR 665.13). Under the Hawaii longline limited access program, no more than 164 permits may be issued. The Hawaii longline fisheries include a tuna-targeting (including bigeye tuna) deep-set fishery and swordfish-targeting shallow set fishery. Additionally, there are U.S. longline vessels based on the U.S. West Coast, some of which operate under the Pacific Highly Migratory Species (HMS) permit and high seas permits. U.S. West Coast-based longline vessels operating under the Pacific HMS permit fish primarily in the EPO and are currently restricted to fishing with deep-set longline gear outside of the U.S. West Coast exclusive economic zone.

There have been fewer than three U.S. West Coast-based vessels operating under the HMS permit since 2005; therefore, landings and ex-vessel revenue information is not disclosed. However, the number of Hawaii-permitted longline vessels that have landed in U.S. West Coast ports has increased from one vessel in 2006 to 12 vessels in 2020. In 2020, 837 mt of HMS (excluding striped marlin, pelagic thresher shark, and bigeye thresher shark) were landed in West Coast ports by Hawaii permitted longline vessels with a total ex-vessel revenue of about \$4.7 million. The average ex-vessel revenue for each vessel is approximately \$393,000. This is well below the \$11 million threshold for finfish harvesting businesses.

#### *Economic Impacts*

The proposed action is not expected to have a significant adverse economic impact on the profitability of a substantial number of small entities or a disproportionate economic effect on small entities relative to large entities. The entities impacted by the action related to purse seine vessels are

considered to include both large and small businesses, and the entities impacted by the action related to longline vessels are considered to be small businesses. All of the measures in the Resolution on silky shark have been in place for years and therefore make no changes to current requirements. The majority of the provisions in the tropical tuna Resolution maintain purse seine regulations that have been in place for years and are therefore routine for the purse seine fleet. However, as described above, there are some new provisions included in the new tropical tuna Resolution. The proposed changes to the 2022 regulations to implement these new provisions, and the expected economic effects of these changes, are discussed in detail below.

*Additional closure days:* The proposed action would add 10 closure days for purse seine vessels that catch more than 1,200 mt of bigeye tuna, and would add 3 additional closure days for every additional 300 mt caught beyond the 1,200 mt. In reviewing catch levels for U.S. purse seine vessels from 2017–2020, only one U.S. vessel caught more than 1,200 mt in a single year. Thus, it is not expected that many, if any, U.S. vessels will need to adhere to additional closure days. For vessels that may need to observe additional closure days, the majority of vessels have the option to fish in the WCPO, pending closures in the WCPFC Convention Area.

*FAD limits and buoy restrictions:* With respect to limits on active FADs, all large U.S. purse seine vessels currently on the IATTC Regional Vessel Register have a well volume of 1,200 m<sup>3</sup> or more. Therefore, the limits of 400 and 340 active FADs per large U.S. purse seine vessel would apply in 2022 and beyond, respectively. According to 2018–2020 purse seine effort data provided by IATTC scientific staff, the average number of active FADs per U.S. vessel is approximately 90 and the maximum number per vessel is 271. Thus, these proposed regulations are not expected to reduce the number of active FADs any U.S. purse seine vessel has in the water. As a result, these measures are not expected to reduce the profitability of the fishery, and no disproportionate impacts between small and large businesses are expected. The proposed action to impose restrictions on buoy deactivations and reactivations are not expected to change the fishing behavior of the U.S. fleet. In addition, although there are additional reporting requirements for active FADs, deactivations, and reactivations, vessel operators are already expected to be collecting the necessary information from satellite companies as part of

current operations, and therefore reporting this additional information is not expected to impose an additional burden that would reduce profitability.

*Reporting requirements:* The proposed action would also implement requirements for reporting cannery data to the IATTC and making data available to NMFS upon request, as well as requirements for NMFS to report VMS data to the IATTC beginning in 2023. Cannery data is already collected by purse seine vessel owners as a part of current operations. Vessel owners would not need to change any reporting requirements for VMS data because data is already provided to NMFS and NMFS would provide to IATTC. Therefore, neither of these reporting requirements are expected to reduce the profitability of the fishery or have disproportionate impacts between small and large businesses.

*Force Majeure:* The proposed action would make minor revisions to *force majeure* regulations for consistency with the Resolution and for clarification purposes. For example, the revisions would clarify that U.S. vessel managers send NMFS requests “no later than 20 calendar days after the end of the period of inactivity due to *force majeure*,” versus the existing “within 20 calendar days after the vessel has been unable to proceed to sea for 72 days.” This would give vessels more flexibility, consistent with the Resolution, on the timing of when they submit their requests. The proposed action would also make minor edits such as updating contact information for *force majeure* requests and clarifying that *force majeure* does not apply to additional closure days for exceeding bigeye tuna catch levels. Since 2013, when the *force majeure* provisions first went into effect, the United States has requested *force majeure* exemptions five times. Because U.S. *force majeure* events are rare and unpredictable, it is difficult to speculate future situations where a U.S. vessel would need to request *force majeure*. The economic effects from these revisions would likely be positive for vessels that are granted an exemption due to *force majeure*, as the proposed measure is expected to provide relief to U.S. purse seine vessels that experience an unforeseen circumstance and would otherwise fish fewer days in a calendar year.

*Silky shark:* Under the proposed action, existing silky shark regulations would continue to be in effect without change. The existing regulations prohibit retention on longline vessels and purse seine vessels, with an exception for silky shark that is not seen during fishing operations and is

delivered into the vessel hold. U.S. longline vessels fishing in the IATTC Convention Area, whether under the Hawaii Longline Limited Access Permit or the Pacific HMS permit, do not target silky shark and all those caught incidentally, are released. For purse seine vessels, the proposed action would continue to allow exemptions for silky shark not seen during fishing operations and delivered into the vessel hold. In these situations, the silky shark may be stored on board and landed, but the vessel owner or operator must surrender the whole silky shark to the responsible government authority present at the point of landing. If the governmental authorities are unavailable, the whole silky shark surrendered must not be sold or bartered but must be donated for purposes of domestic human consumption. It is not expected that the proposed rule would change the vessels' fishing practices, due to the continuation of existing regulations. The proposed action is not expected to reduce profitability; thus, compliance with this measure is not expected to impose negative economic impacts on U.S. longline vessels fishing in the IATTC Convention Area.

In summary, the proposed action is not expected to substantially change the typical fishing practices of affected vessels. Any impact to the income of U.S. vessels is expected to be minor. Therefore, NMFS has determined that the action is not expected to have a significant economic impact on a substantial number of small entities, or a disproportionate economic impact on the small entities relative to the large entities. Therefore, an Initial Regulatory Flexibility Analysis is not required and none has been prepared.

**List of Subjects in 50 CFR Part 300**

Administrative practice and procedure, Fish, Fisheries, Fishing, Marine resources, Reporting and recordkeeping requirements, Treaties.

Dated: March 22, 2022.

**Samuel D. Rauch, III**

*Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.*

For the reasons set out in the preamble, 50 CFR part 300, subpart C is proposed to be amended as follows:

**PART 300—INTERNATIONAL FISHERIES REGULATIONS**

■ 1. The authority citation for 50 CFR part 300, subpart C, continues to read as follows:

**Authority:** 16 U.S.C. 951 *et seq.*

■ 2. Revise § 300.20 to read as follows:

**§ 300.20 Purpose and scope.**

(a) The regulations in this subpart are issued under the authority of the Tuna Conventions Act of 1950, as amended, (Act) and apply to persons and vessels subject to the jurisdiction of the United States. The regulations implement recommendations and other decisions of the Inter-American Tropical Tuna Commission (IATTC) for the conservation and management of stocks of tunas and tuna-like species and other species of fish taken by vessels fishing for tunas and tuna-like species in the IATTC Convention Area. The Secretary of Commerce, in consultation with the Secretary of State and, with respect to enforcement measures, the U.S. Coast Guard, may promulgate such regulations as may be necessary to carry out the U.S. international obligations under the Convention for the Establishment of an Inter-American Tropical Tuna Commission (Convention), the Convention for the Strengthening of the Inter-American Tropical Tuna Commission Established by the 1949 Convention between the United States of America and the Republic of Costa Rica (Antigua Convention), and the Act, including recommendations and other decisions adopted by the IATTC.

(b) This subpart does not apply to:  
(1) any person or vessel authorized by the IATTC, the Assistant Administrator, or any state of the United States to engage in fishing for research purposes; or

(2) any person or vessel engaged in sport fishing for personal use.

■ 3. Amend § 300.21 by revising “Active FAD” and “Fish aggregating device (FAD)” and adding definitions, in alphabetical order, for “Activation of a satellite buoy,” “Deactivation of a satellite buoy,” “Reactivation of a satellite buoy,” “Satellite buoy,” and “Signal loss,” to read as follows:

**§ 300.21 Definitions.**

*Active FAD* means a FAD deployed at sea where activation of the satellite buoy has occurred and the satellite buoy is transmitting its location and is being tracked by the vessel owner or operator. A FAD shall be considered an Active FAD unless/until the vessel owner or operator is no longer tracking its location and the vessel owner or operator notifies the IATTC that the FAD is deactivated.

*Activation of a satellite buoy* means the act of initializing network service for receiving the satellite buoy’s position. Activation is done by the buoy supplier company at the request of the vessel

owner or manager. Following activation, the vessel owner pays for the communication service. The buoy can be transmitting or not, depending if it has been switched on.

\* \* \* \* \*

*Deactivation of a satellite buoy* means the act of canceling network service for receiving the satellite buoy’s position. Deactivation is done by the buoy supplier company at the request of the vessel owner or manager. Following deactivation, the communication service is no longer paid for and the buoy stops transmitting.

\* \* \* \* \*

*Fish aggregating device (FAD)* means anchored, drifting, floating or submerged objects deployed and/or tracked by vessels, including through the use of radio and/or satellite buoys, for the purpose of aggregating target tuna species for purse-seine fishing operations.

\* \* \* \* \*

*Reactivation of a satellite buoy* means the act of re-initializing network service for transmission of a satellite buoy’s position after deactivation. The procedure is the same as the one to be followed for activation of a satellite buoy.

\* \* \* \* \*

*Satellite buoy* means a buoy that uses a satellite network service to indicate its geographical position and is compliant with requirements in § 300.28(a) of this section to be clearly marked with a unique identification code.

\* \* \* \* \*

*Signal loss* means the situation in which, without any intervention of the owner, operator, or manager, a satellite buoy cannot be located by the owner on a monitoring device. The main causes of signal loss are buoy retrieved by another vessel or person (at-sea or on-shore), FAD sinking, and buoy failure.

\* \* \* \* \*

■ 4. Revise § 300.22 to read as follows:

**§ 300.22 Recordkeeping and reporting requirements.**

(a) *Logbooks*—(1) *General logbook reporting.* The master or other person in charge of a commercial fishing vessel or commercial passenger fishing vessel (CPFV) authorized to fish for tuna and tuna-like species in the Convention Area, or a person authorized in writing to serve as the agent for either person, must keep an accurate log of operations conducted from the fishing vessel.

(2) *Longline and other non-purse seine logbooks.* Maintaining and submitting any logbook required by existing state or federal regulation will

be sufficient to comply with paragraph (a)(1) of this section.

(3) *Purse seine logbooks.* For purse seine vessels greater than 400 st (362.8 mt) carrying capacity that are authorized to purse seine for tuna in the Convention Area, the log must include for each day the date, noon position (stated in latitude and longitude or in relation to known physical features), and the tonnage of fish on board, by species. The record and bridge log maintained and submitted at the request of the IATTC will be sufficient to comply with this paragraph (a)(3) and with paragraph (a)(1) of this section, provided the items of information specified by the IATTC are accurately entered in the log. For purse seine vessels of 400 st (362.8 mt) carrying capacity or less, maintaining and submitting any logbook required by existing state or federal regulation will be sufficient to comply with paragraph (a)(1) of this section.

(b) *Whale shark encirclement reporting.* The owner and operator of a purse seine fishing vessel of the United States that encircles a whale shark (*Rhincodon typus*) while commercially fishing in the Convention Area must ensure that the incident is recorded on the log that is required by paragraphs (a)(1) and (a)(3) of this section. The log must include the following information: The number of individual whale sharks with which the vessel interacted, details of how and why the encirclement happened, where it occurred, steps taken to ensure safe release, and an assessment of the life status of the whale shark upon release (including whether the animal was released alive, but subsequently died), as may be further specified by NMFS.

(c) *FAD reporting*—(1) *Reporting on FAD interactions.* U.S. purse seine vessel operators must provide the observer with the FAD identification code and, as appropriate, the other information in the FAD interaction standard format provided by the HMS Branch. U.S. vessel owners and operators, without an observer onboard, must ensure that any interaction or activity with a FAD is reported using a FAD interaction standard format provided by the HMS Branch. The owner and operator shall ensure that the form is submitted within 30 days of each landing or transshipment of tuna or tuna-like species to the address specified by the HMS Branch.

(2) *Reporting on Active FADs.* U.S. vessel owners and operators must record or maintain daily information on buoy location and acoustic data for all Active FADs that have been deployed in the water in the IATTC Convention Area

and report that information to the IATTC, using a format and address provided by the HMS Branch. Daily information on buoy location must include date, time, buoy identifier, latitude, longitude, IMO number, and speed. Daily acoustic data will vary depending on the buoy company, but must include company, buoy identifier, latitude, longitude, date, time, and available layers of data. Further instructions on reporting data specific for different buoys companies are available in a compliance guide. This information must be submitted for each calendar month no later than 90 days after the month covered by the report.

(3) *Deactivation of Active FADs.* U.S. vessel owners and operators must report any deactivation of a satellite buoy, including the reason for deactivation, date, latitude, longitude, buoy identifier, and speed. This information must be reported to the IATTC, using a format and address provided by the HMS Branch. This information must be submitted for each calendar month no later than 90 days after the month covered by the report.

(4) *Reactivation of Active FADs.* U.S. vessel owners and operators must report any remote reactivation of a satellite buoy, including the reason for remote reactivation, date, latitude, longitude, buoy identifier, speed. This information must be reported to the IATTC, using a format and address provided by the HMS Branch. This information must be submitted for each calendar month no later than 90 days after the month covered by the report.

(d) *Cannery reporting.* U.S. vessel owners and operators must report processing plant data for fish caught in the IATTC Convention Area to the IATTC, and also make the data available to NMFS upon request, no later than 10 days after completion of unloading and the last day of grading by size. Instructions for reporting are available in a compliance guide.

■ 5. Revise § 300.23 to read as follows:

**§ 300.23 IATTC Regional Vessel Register.**

(a) *IATTC Regional Vessel Register (Vessel Register).* The Vessel Register shall include, consistent with resolutions of the IATTC, all commercial fishing vessels and CPFVs authorized to fish for tuna and tuna-like species in the Convention Area. Except as provided under paragraph (a)(1) of this section, tuna purse seine vessels must be listed on the Vessel Register and categorized as active under paragraph (c)(2) of this section in order to fish for tuna and tuna-like species in the Convention Area.

(1) *Exception from requirement for inclusion on the Vessel Register.* Once per year, a vessel that is permitted and authorized under an alternative international tuna purse seine fisheries management regime in the Pacific Ocean may exercise an option to fish with purse seine gear to target tuna in the Convention Area without the vessel's capacity counted towards the cumulative carrying capacity described under paragraph (c)(1)(i) of this section. This exception is for a single fishing trip that does not exceed 90 days in duration. At any time during the calendar year, a vessel exercising this exception shall follow the procedures, where applicable, described in paragraph (c) of this section. No more than 32 of such trips are allowed each calendar year. After the commencement of the 32nd such trip, the Regional Administrator shall announce, in the **Federal Register** and by other appropriate means, that no more such trips are allowed for the remainder of the calendar year. Under § 216.24(b)(6)(iii)(C) of this title, vessel assessment fees must be paid for vessels exercising this option.

(2) *Requirements for inclusion of purse seine vessels on the Vessel Register.* Inclusion on the tuna purse seine portion of the Vessel Register is valid through December 31 of each year. New tuna purse seine vessels may be added to the Vessel Register at any time to replace those previously removed by the Regional Administrator, provided that the total capacity of the replacement vessel or vessels does not exceed that of the tuna purse seine vessel or vessels being replaced.

(b) *Vessel information to be collected for the Vessel Register.*

(1) *Required information.* Information on each commercial fishing vessel or CPFV authorized to use purse seine, longline, drift gillnet, harpoon, troll, rod and reel, or pole and line fishing gear to fish for tuna and tuna-like species in the Convention Area for sale shall be collected by the Regional Administrator to conform to IATTC resolutions governing the Vessel Register. This information initially includes, but is not limited to, the vessel name and registration number; the name and business address of the owner(s) and managing owner(s); a photograph of the vessel with the registration number legible; previous vessel name(s) and previous flag (if known and if any); port of registry; International Radio Call Sign; IMO number (if applicable); vessel length, beam, and moulded depth; gross tonnage, fish hold capacity in cubic meters, and carrying capacity in metric tons and cubic meters; engine

horsepower; date and place where built; and type of fishing method or methods used. The required information shall be collected as part of existing information collections as described in this and other parts of the CFR.

(2) *IMO numbers.* For the purpose of this section, an “IMO number” is the unique six or seven digit number issued for a vessel under the ship identification number scheme adopted by the International Maritime Organization (IMO) and managed by the entity identified by the IMO (currently IHS Maritime) and is also known as a Lloyd’s Register number.

(3) *Requirements for IMO numbers.* The owner of a fishing vessel of the United States used for commercial fishing for tuna and tuna-like species in the IATTC Convention Area shall ensure that an IMO number has been issued for the vessel if the vessel’s Certificate of Documentation issued under 46 CFR part 67 indicates that the vessel’s total internal volume is 100 gross register tons or greater or 100 gross tonnage or greater. In addition, the owner of a fishing vessel of the United States engaging in fishing activities for tuna or tuna-like species in the IATTC Convention Area, and for which a high seas fishing permit under § 300.333 is required, shall ensure that an IMO number has been issued for the vessel if the vessel’s total internal volume is less than 100 gross registered tons or less than 100 gross tons, but equal to or greater than 12 meters in overall length, as indicated in the vessel’s Certificate of Documentation issued under 46 CFR part 67 or State documentation. A vessel owner may request that an IMO number be issued for a vessel by following the instructions given by the administrator of the IMO ship identification number scheme; those instructions are currently available on the website of IHS Markit, <https://imonumbers.lrfairplay.com/>.

(4) *Request for exemption.* In the event that a fishing vessel owner, after following the instructions given by the designated manager of the IMO ship identification number scheme, is unable to ensure that an IMO number is issued for the fishing vessel, the fishing vessel owner may request an exemption from the requirement from the Regional Administrator. The request must be sent by mail to NMFS HMS Branch, West Coast Region, 501 W Ocean Blvd., Suite 4200, Long Beach, CA 90802, or by email to [wcr.hms@noaa.gov](mailto:wcr.hms@noaa.gov), and must include the vessel’s name, the vessel’s official number, a description of the steps taken to request an IMO number, and a description of any responses from the administrator of the IMO ship identification number scheme.

(5) *Exemption process.* Upon receipt of a request for an exemption under paragraph (b)(4) of this section, the Regional Administrator will, to the extent they determine appropriate, assist the fishing vessel owner in requesting an IMO number. If the Regional Administrator determines that the fishing vessel owner has followed all appropriate procedures and yet is unable to obtain an IMO number for the fishing vessel, they will issue an exemption from the requirements of paragraph (b)(3) of this section for the vessel and its owner and notify the owner of the exemption. The Regional Administrator may limit the duration of the exemption. The Regional Administrator may rescind an exemption at any time. If an exemption is rescinded, the fishing vessel owner must comply with the requirements of paragraph (b)(3) of this section within 30 days of being notified of the rescission. If the ownership of a fishing vessel changes, an exemption issued to the former fishing vessel owner becomes void.

(c) *Purse seine Vessel Register listing.* For a tuna purse seine vessel to be listed on the Vessel Register and to be categorized as either “active” or “inactive” in the following calendar year, the vessel owner or managing owner must submit to the Regional Administrator the required permit applications, written notifications, and fees as described under § 216.24(b) of this title and under paragraphs (c)(2) and (3) of this section as well as payment of the vessel assessment fee, where applicable, to the IATTC.

(1) *Restrictions for purse seine vessels.* The following restrictions apply:

(i) The cumulative carrying capacity of all tuna purse seine vessels on the Vessel Register may not exceed 31,866 cubic meters in a given year; and

(ii) A purse seine vessel in excess of 400 st (362.8 mt) carrying capacity may not be added to active status on the Vessel Register unless the captain of the vessel has obtained a valid operator permit under § 216.24(b)(2) of this title.

(2) *Active status for purse seine vessels.* As early as August 1 of each year, vessel owners or managing owners may request that a purse seine vessel qualified to be listed on the Vessel Register under paragraph (a)(2) of this section be categorized as active for the following calendar year. To request a purse seine vessel in excess of 400 st (362.8 mt) carrying capacity be listed on the Vessel Register and be categorized as active, the vessel owner or managing owner must submit to the Regional Administrator the vessel permit application and payment of the permit

application fee and submit to the IATTC payment of the vessel assessment fee.

(i) To request a purse seine vessel of 400 st (362.8 mt) carrying capacity or less be listed on the Vessel Register and be categorized as active, the vessel owner or managing owner must submit to the HMS Branch written notification including, but not limited to, a vessel photograph, the vessel information as described under paragraph (b) of this section, and the owner or managing owner’s signature, business email address, and business telephone and fax numbers. If a purse seine vessel of 400 st (362.8 mt) carrying capacity or less is required by the Agreement on the IDCP to carry an observer, the vessel owner or managing owner must also submit payment of the vessel assessment fee to the IATTC.

(ii) The Regional Administrator must receive the vessel permit application or written notification and payment of the permit application fee and payment confirmation of the vessel assessment fee no later than September 15 for vessels for which a DML was requested for the following year and no later than November 30 for vessels for which a DML was not requested for the following year. Submission of the vessel permit application or written notification and payment of the vessel assessment fee and permit application fee will be interpreted by the Regional Administrator as a request for a vessel to be categorized as active.

(3) *Inactive status for purse seine vessels.*

(i) From August 1 through November 30 of each year, vessel owners or managing owners may request that purse seine vessels qualified to be listed on the Vessel Register under paragraph (a)(2) of this section be categorized as inactive for the following calendar year. To request a purse seine vessel in excess of 400 st (362.8 mt) carrying capacity be listed on the Vessel Register and categorized as inactive for the following calendar year, the vessel owner or managing owner must submit to the IATTC payment of the associated vessel assessment fee. Payment of the vessel assessment fee consistent with inactive status will be interpreted by the Regional Administrator as a request for the vessel to be categorized as inactive.

(ii) To request a tuna purse seine vessel of 400 st (362.8 mt) carrying capacity or less be listed on the Vessel Register and categorized as inactive for the following calendar year, the vessel owner or managing owner must submit to the HMS Branch a written notification including, but not limited to, the vessel name and registration number and the vessel owner or

managing owner's name, signature, business address, business email address, and business telephone and fax numbers. Payment of the vessel assessment fee is not required for vessels of 400 st (362.8 mt) carrying capacity or less to be categorized as inactive.

(iii) At any time during the year, a vessel owner or managing owner may request that a tuna purse seine vessel qualified to be listed on the Vessel Register under paragraph (a)(2) of this section be categorized as inactive for the remainder of the calendar year, provided the cumulative carrying capacity described in (c)(1)(i) of this section is not exceeded. To request a purse seine vessel in excess of 400 st (362.8 mt) carrying capacity be listed on the Vessel Register and categorized as inactive for the remainder of the calendar year, the vessel owner or managing owner must submit to the IATTC payment of the associated vessel assessment fee. To request a tuna purse seine vessel of 400 st (362.8 mt) carrying capacity or less be listed on the Vessel Register and categorized as inactive for the remainder of the calendar year, the vessel owner or managing owner must submit to the HMS Branch written notification as described in (c)(3)(i) of this section. Payment of the vessel assessment fee is not required for such vessels.

(iv) The vessel owner or managing owner of a purse seine vessel listed as active on the Vessel Register that has sunk may request the vessel be listed as sunk and categorized as inactive on the Vessel Register. To request the vessel be listed as sunk and categorized as inactive on the Vessel Register, the vessel owner or managing owner must submit to the HMS Branch written notification within 30 days of the vessel's sinking. Written notification shall include, but is not limited to, the vessel name, date of sinking, registration number, the vessel owner or managing owner's name, signature, business address, business email address, and business telephone and fax numbers. For subsequent calendar years, vessel assessment fee payment shall be made as described in paragraph (c)(3) of this section.

(v) A vessel listed as inactive or sunk on the Vessel Register for more than two consecutive calendar years after January 21, 2020, requesting active status will be prioritized according to the hierarchy under paragraph (e) of this section. A vessel listed as inactive or sunk on the Vessel Register for more than two consecutive calendar years after January 21, 2020, will be removed from the

Vessel Register as described in paragraph (f)(9) of this section.

(d) *Frivolous requests for purse seine vessels on the Vessel Register.*

(1) Except as described under paragraph (d)(2) of this section, requests for active status under paragraph (c)(2) of this section will be considered frivolous if, for a vessel categorized as active on the Vessel Register in a given calendar year:

(i) Less than 20 percent of the vessel's total landings, by weight, in that same year is comprised of tuna harvested by purse seine in the Convention Area; or

(ii) The vessel did not fish for tuna at all in the Convention Area in that same year.

(2) Requests described under paragraph (d)(1) of this section will not be considered frivolous requests if:

(i) The vessel's catch pattern fell within the criteria described in paragraph (d)(1) of this section as a result of *force majeure* or other extraordinary circumstances as determined by the Regional Administrator; or

(ii) The vessel's carrying capacity is 400 st (362.8 mt) or less and there was at least one documented landing of tuna caught by the vessel in the Convention Area in the calendar year prior to the year in which the request is made and through November 15 of the year of the request, unless the vessel was not able to make a landing as a result of *force majeure* or other extraordinary circumstances as determined by the Regional Administrator.

(iii) The vessel was listed as inactive before January 21, 2020, and has not been listed as inactive for more than two consecutive calendar years since January 21, 2020.

(e) *Listing hierarchy for purse seine vessels on the Vessel Register.* Requests for active status and inactive status will be prioritized according to the following hierarchy:

(1) Requests received for replacement vessels with a carrying capacity equal to or less than a vessel removed from the Vessel Register under a request described in paragraph (j) of this section;

(2) Requests received for vessels that were categorized as active in the previous year, unless the request was determined to be frivolous by the Regional Administrator under paragraph (c)(2) of this section;

(3) Requests received for vessels that were categorized as inactive under paragraph (c)(3) of this section in the previous year, unless that vessel has been listed as inactive or sunk under paragraph (c)(3) of this section for more

than 2 consecutive calendar years after January 21, 2020;

(4) Requests for vessels not described in paragraphs (e)(1) through (3) of this section, and requests, if applicable, by replacement vessels for the portion of the carrying capacity greater than the amount authorized to the vessel that was replaced under paragraph (j) of this section, will be prioritized on a first-come, first-served basis according to the date and time of receipt, provided that the associated vessel assessment fee is paid by the applicable deadline described in § 216.24(b)(6)(iii) of this title; and

(5) Requests received from owners or managing owners of vessels that were determined by the Regional Administrator to have made a frivolous request for active status under paragraph (d) of this section or that have been listed as inactive or sunk as described in paragraph (c)(3) of this section for more than two consecutive calendar years after January 21, 2020.

(f) *Removal from the Vessel Register.* A vessel may be removed from the Vessel Register by the Regional Administrator under any of the following circumstances:

(1) The vessel has sunk and the vessel owner or managing owner has not submitted written notification as described in paragraph (c)(3)(iv) of this section.

(2) By written request of the vessel's owner or managing owner.

(3) Following a final agency action on a permit sanction for a violation.

(4) For failure to pay a penalty or for default on a penalty payment agreement resulting from a final agency action for a violation.

(5) The U.S. Maritime Administration or the U.S. Coast Guard notifies NMFS that:

(i) The owner has submitted an application for transfer of the vessel to foreign registry and flag; or

(ii) The documentation for the vessel has been or will be deleted for any reason.

(6) The vessel does not have a valid state registration or U.S. Coast Guard certificate of documentation.

(7) For tuna purse seine vessels, by written notification from the owner or managing owner of the intent to transfer the vessel to foreign registry and flag, as described in paragraph (i) of this section.

(8) For tuna purse seine vessels, the request for active status on the Vessel Register has been determined to be a frivolous request.

(9) For tuna purse seine vessels, the vessel has been listed as inactive or sunk on the Vessel Register for more

than two consecutive calendar years after January 21, 2020.

(g) *Process for removal from the Vessel Register.* When a vessel is removed from the Vessel Register under paragraph (f) of this section, the Regional Administrator shall promptly notify the vessel owner in writing of the removal and the reasons therefore. For a removal from the Vessel Register under § 300.30(f)(3), the Regional Administrator will not accept a request to reinstate the vessel to the Vessel Register for the term of the permit sanction. For a removal from the Vessel Register under § 300.30(f)(4), the Regional Administrator will not accept a request to reinstate the vessel to the Vessel Register until such time as payment is made on the penalty or penalty agreement, or such other duration as NOAA and the vessel owner may agree upon.

(h) *Procedures for replacing purse seine vessels removed from the Vessel Register.*

(1) A purse seine vessel that was previously listed on the Vessel Register, but not included for a given year or years, may be added back to the Vessel Register and categorized as inactive at any time during the year, provided the cumulative carrying capacity described in (c)(1)(i) of this section is not exceeded. The owner or managing owner of a purse seine vessel of more than 400 st (362.8 mt) carrying capacity must pay the vessel assessment fee associated with inactive status. The owner or managing owner of a purse seine vessel of 400 st (362.8 mt) carrying capacity or less must submit written notification as described in paragraph (c)(3) of this section.

(2) A purse seine vessel may be added to the Vessel Register and categorized as active in order to replace a vessel or vessels removed from active or inactive status under paragraph (f) of this section, provided the total carrying capacity described in (c)(1)(i) of this section is not exceeded and the owner submits a complete request under paragraph (h)(4) of this section.

(3) Notification of available capacity after a purse seine vessel has been removed from the Vessel Register will be conducted as follows:

(i) After a purse seine vessel categorized as active or inactive is removed from the Vessel Register, the Regional Administrator will notify owners or managing owners of vessels eligible for, but not included on, the Vessel Register that replacement capacity is available on the active or inactive list of the Vessel Register.

(ii) When a purse seine vessel categorized as active or inactive on the

Vessel Register has been removed from the Vessel Register under the procedures described in paragraph (j) of this section, the Regional Administrator will not make available the capacity of the vessel removed from the Vessel Register, and will reserve that capacity for a replacement vessel for a period of 2 years from the date of notification described in (j)(4) of this section. The replacement vessel will be eligible to be listed as active on the Vessel Register at the same carrying capacity or less as that of the vessel it is replacing. If the replacement vessel has a carrying capacity greater than the vessel being replaced, the vessel owner or managing owner may request additional carrying capacity allocated to the vessel in accordance with paragraph (e)(4) of this section. If additional carrying capacity is not available, the replacement vessel must reduce its carrying capacity to no more than the previously authorized carrying capacity amount for the vessel being replaced by complying with the protocol for sealing wells adopted by the IATTC, prior to it being listed as active on the Vessel Register. Such a vessel may apply for additional carrying capacity as it becomes available under the procedures described in (e)(4) of this section.

(4) Vessel owners or managing owners may request a purse seine vessel of 400 st (362.8 mt) carrying capacity or less be categorized as active to replace a vessel or vessels removed from the Vessel Register by submitting to the HMS Branch written notification as described in paragraph (c)(2) of this section and, only if the vessel is required by the Agreement on the IDCP to carry an observer, payment of the vessel assessment fee to the IATTC within 10 business days after submission of the written notification. The replacement vessel will be eligible to be categorized as active on the Vessel Register at the same carrying capacity or less as that of the vessel or vessels it is replacing. If the replacement vessel has a carrying capacity greater than the vessel being replaced, the vessel owner or managing owner may request additional carrying capacity allocated to the vessel in accordance with paragraph (e)(4) of this section. If additional carrying capacity is not available, the replacement vessel must reduce its capacity to no more than the previously authorized carrying capacity for the vessel or vessels being replaced by complying with the protocol for sealing wells adopted by the IATTC, prior to it being listed as active on the Vessel Register. Such a vessel may apply for additional carrying capacity as it becomes available.

Payments received will be subject to a 10 percent surcharge for vessels that were listed as active on the Vessel Register in the previous calendar year, but not listed as inactive at the beginning of the calendar year for which active status was requested.

(5) Vessel owners or managing owners may request a purse seine vessel in excess of 400 st (362.8 mt) carrying capacity be categorized as active to replace a vessel or vessels removed from the Vessel Register by submitting to the Regional Administrator the vessel permit application as described under § 216.24(b) of this title and payment of the vessel assessment fee to the IATTC and payment of the permit application fee to the Regional Administrator within 10 business days after submission of the vessel permit application for the replacement vessel. The replacement vessel will be eligible to be categorized as active on the Vessel Register at the same carrying capacity as that of the vessel or vessels it is replacing. If the replacement vessel has a carrying capacity greater than the vessel being replaced, the vessel owner or managing owner may request additional carrying capacity allocated to the vessel in accordance with paragraph (e)(4) of this section. If additional carrying capacity is not available, the replacement vessel must reduce its carrying capacity to no more than the previously authorized carrying capacity for the vessel or vessels being replaced by complying with the protocol for sealing wells adopted by the IATTC, prior to it being listed as active on the Vessel Register. Such a vessel may apply for additional carrying capacity as it becomes available. The replacement vessel will also only be eligible to be categorized as active on the Vessel Register if the captain of the replacement vessel possesses an operator permit under § 216.24(b) of this title. Payments received will be subject to a 10 percent surcharge for vessels that were listed as active on the Vessel Register in the previous calendar year, but not listed as inactive at the beginning of the calendar year for which active status was requested.

(6) The Regional Administrator will forward requests to replace vessels removed from the Vessel Register within 15 days of receiving each request.

(i) *Transfers of purse seine vessels to a foreign registry and flag.* The owner or managing owner of a purse seine vessel listed on the Vessel Register must provide written notification to the Regional Administrator prior to submitting an application for transfer of the vessel to foreign registry and flag. Written notification must be submitted

to the Regional Administrator at least 10 business days prior to submission of the application for transfer. The written notification must include the vessel name and registration number; the expected date that the application for transfer will be submitted; and the vessel owner or managing owner's name and signature. Vessels that require approval by the U.S. Maritime Administration prior to transfer of the vessel to foreign registry and flag will not be subject to the notification requirement described in this paragraph.

(j) *Aging fleet provision for purse seine vessels.*

(1) The vessel owner or managing owner of a purse seine vessel listed as active or inactive on the Vessel Register may request to replace the current vessel with a new or used vessel without losing the vessel's placement in the hierarchy of requests for active status as described in paragraph (e) of this section. The replacement vessel will be eligible to be listed as active on the Vessel Register at the same carrying capacity or less as that of the vessel it is replacing. If the replacement vessel has a carrying capacity greater than the vessel being replaced, the vessel owner or managing owner may request additional carrying capacity be allocated to the vessel in accordance with paragraph (e)(4) of this section. If additional carrying capacity is not available at the time the request to be listed as active on the Vessel Register is received by the Regional Administrator, the replacement vessel must reduce its carrying capacity to no more than the previously authorized carrying capacity of the vessel being replaced by complying with the protocol for sealing wells adopted by the IATTC, prior to it being listed as active on the Vessel Register. Such a vessel may apply for additional carrying capacity as it becomes available under the procedures described in paragraph (e)(4) of this section. This aging fleet provision may be used only once per vessel by the vessel owner or managing owner.

(2) A request made under this provision may include a request to remove the vessel from the Vessel Register. The Regional Administrator will ensure the amount of carrying capacity equal to or less of the vessel being replaced will be available for the replacement vessel for up to 2 years from the date of notification described in paragraph (j)(4) of this section.

(3) To request a vessel be replaced under this provision, the vessel owner or managing owner must submit to the HMS Branch written notification including, but not limited to, the vessel

name and registration number, the vessel owner or managing owner's name, signature, business address, business email address, and business telephone and fax numbers, and the expected month and year the replacement vessel will be ready to fish in the Convention Area.

(4) Within 30 days of receiving each request described in (j)(3) of this section, the Regional Administrator shall notify the vessel owner or managing owner in writing whether the request has been accepted or denied, and the reasons therefore.

■ 6. Amend § 300.24 by revising paragraphs (n), (ff), (kk), and (ll) to read as follows:

**§ 300.24 Prohibitions.**

\* \* \* \* \*

(n) Use a fishing vessel of class size 4–6 to fish with purse seine gear in the IATTC Convention Area in contravention of § 300.25(e).

\* \* \* \* \*

(ff) Fail to provide information to an observer or record or report data on FADs as required in § 300.22(c).

\* \* \* \* \*

(kk) When deploying a FAD, activate the satellite buoy attached to a FAD in a location other than on a purse seine vessel at sea as required in § 300.28(b).

(ll) Fail to activate a satellite buoy before deploying a FAD at sea as required in § 300.28(b).

\* \* \* \* \*

■ 7. Amend § 300.25 by revising paragraphs (a)(2) and (e) as follows:

**§ 300.25 Fisheries management.**

(a) \* \* \*

(2) There is a limit of 750 metric tons of bigeye tuna that may be caught by longline gear in the Convention Area by U.S. commercial fishing vessels that are over 24 meters in overall length. The catch limit within a calendar year is subject to increase if the United States receives a transfer of catch limit from another IATTC member or cooperating non-member, per paragraph (a)(5) of this section.

\* \* \* \* \*

(e) *Purse seine closures*—(1) *72-day closure.* A U.S. commercial purse seine fishing vessel that is of class size 4–6 (more than 182 metric tons carrying capacity) may not be used to fish with purse seine gear in the Convention Area for 72 days during one of the following two periods:

(i) From 0000 hours Coordinated Universal Time (UTC) July 29 to 2400 hours UTC October 8, or

(ii) From 0000 hours UTC November 9 to 2400 hours UTC January 19 of the following year.

(2) *Additional closure days for vessels that exceed bigeye tuna catch levels.* In 2023 and 2024, U.S. purse seine vessels that exceed a certain annual catch level of bigeye tuna must increase the number of closure days they observe in the following year, as specified in the following table.

TABLE 1 TO PARAGRAPH (E)(2)

Catch level (mt) exceeded	Additional closure days observed
1,200	10
1,500	13
1,800	16
2,100	19
2,400	22

(i) The additional days of closure must be added to one of the two closure periods indicated in paragraph (e)(1). For vessels observing the first closure period, the additional days must be added at the beginning of the closure period. For vessels observing the second closure period, the additional days must be added to the end of the closure period. The HMS Branch will confirm the determination of annual catch levels for U.S. purse vessels based on information provided by the IATTC and notify any U.S. vessel that exceeds a given catch level.

(ii) [Reserved]

(3) *Choice of closure period.* A vessel owner, manager, or association representative of a vessel that is subject to the requirements of paragraph (e)(1) of this section must provide written notification to the Regional Administrator declaring which one of the two closure periods identified in paragraph (e)(1) of this section their vessel will observe in that year. This written notification must be submitted by email to [wcr.hms@noaa.gov](mailto:wcr.hms@noaa.gov) and must be received no later than May 15 of the relevant calendar year. The written notification must include the vessel name and registration number, the closure dates that will be observed by that vessel, and the vessel owner or managing owner's name, signature, business address, and business telephone number.

(4) *Default closure period.* If written notification is not submitted per paragraph (e)(3) of this section for a vessel subject to the requirements under paragraph (e)(1) of this section, that vessel must observe the second closure period under paragraph (e)(1)(ii) of this section.

(5) *Request for exemption due to force majeure.* A vessel may request a reduced closure period if a *force majeure* event renders the vessel unable

to proceed to sea outside one of the two closure periods specified in paragraph (e)(1) of this section for at least 75 continuous days. A vessel will only be eligible for an exemption due to *force majeure* if the vessel was disabled in the course of fishing operations by mechanical and/or structural failure, fire, or explosion.

(i) A request for an exemption due to *force majeure* must be made to the Highly Migratory Species Branch no later than 20 calendar days after the end of the period of inactivity due to *force majeure*. The request must be made via email to [wcr.hms@noaa.gov](mailto:wcr.hms@noaa.gov) or by contacting the HMS Branch. The request must include the name and official number of the vessel, vessel owner or manager's name and signature, and evidence to support the request, which may include but is not limited to photographs, repair bills, certificates of departure from port, and in the case of a marine casualty, a completed copy of the U.S. Coast Guard Form CG-2692A (See 46 CFR 4.05-10).

(ii) If accepted by the Sustainable Fisheries Division, the request for exemption due to *force majeure* will be forwarded to the IATTC Director. If declined by the Sustainable Fisheries Division, the applicant may provide additional information or documentation to the Sustainable Fisheries Division with a request that the initial decision be reconsidered by email to [wcr.hms@noaa.gov](mailto:wcr.hms@noaa.gov), or by contacting the HMS Branch Chief.

(iii) If the request for an exemption due to *force majeure* is accepted by the IATTC, the vessel may observe a reduced closure period of 40 consecutive days in the same year during which the *force majeure* event occurred, in one of the two closure periods described in paragraph (e)(1) of this section. After a request is accepted by the IATTC, the vessel owner or manager must specify to the HMS Branch which 40 consecutive days the vessel will observe for their reduced closure period.

(iv) If the request for an exemption due to *force majeure* is accepted by the IATTC and the vessel has already observed a closure period described in paragraph (e)(1) of this section in the same year during which the *force majeure* event occurred, the vessel may observe a reduced closure period of 40 consecutive days the following year, in one of the two closure periods described in paragraph (e)(1) of this section.

(v) An exemption due to *force majeure* will only apply to the 72-day closure period required under paragraph (e)(1) of this section. Vessels that are both granted a reduced 40-day initial

closure period due to *force majeure* under paragraph (e)(5) and required to observe additional closure days for exceeding bigeye tuna catch levels under paragraph (e)(2) must observe the reduced closure period consecutively with the additional closure days by adding the additional closure days to either the beginning of the first reduced closure period or the end of the second reduced closure period.

(vi) Any purse seine vessel for which a *force majeure* request is accepted by the IATTC must carry an observer aboard authorized pursuant to the International Agreement on the International Dolphin Conservation Program, unless that vessel has been granted an exemption from the Regional Administrator.

(6) *31-day area closure.* A U.S. fishing vessel of class size 4-6 (more than 182 metric tons carrying capacity) may not be used from 0000 hours on October 9 to 2400 hours on November 8 to fish with purse seine gear within the area bounded at the east and west by 96° and 110° W longitude and bounded at the north and south by 4° N and 3° S latitude.

(7) *Requirement to stow gear.* At all times while a vessel is in a time/area closed period established under paragraphs (e)(1) or (6) of this section, unless fishing under the exception under paragraph (e)(5) of this section, the fishing gear of the vessel must be stowed in a manner as not to be readily available for fishing. In particular, the boom must be lowered as far as possible so that the vessel cannot be used for fishing, but so that the skiff is accessible for use in emergency situations; the helicopter, if any, must be tied down; and launches must be secured.

\* \* \* \* \*

■ 8. Amend § 300.27 by revising paragraph (e) to read as follows:

**§ 300.27 Incidental catch and tuna retention requirements.**

\* \* \* \* \*

(e) *Silky shark restrictions for purse seine and longline vessels.* The crew, operator, and owner of a commercial purse seine or longline fishing vessel of the United States used to fish for tuna or tuna-like species is prohibited from retaining on board, transshipping, storing, or landing any part or whole carcass of a silky shark (*Carcharhinus falciformis*) that is caught in the IATTC Convention Area, except as provided in paragraph (f) of this section.

\* \* \* \* \*

■ 9. Amend § 300.28 by:

- (a) Revising paragraphs (b) and (c),
- (b) Redesignating paragraphs (d)-(e) as paragraphs (f)-(g),

- (c) Adding new paragraphs (d) and (e), and,
- (d) Revising the introductory text to newly redesignated paragraph (g).

The revisions and additions read as follows:

**§ 300.28 FAD restrictions.**

\* \* \* \* \*

(b) *Activating FADs for purse seine vessels.* When deploying a FAD in the IATTC Convention Area, a vessel owner, operator, or crew must activate the satellite buoy while the FAD is onboard the purse seine vessel and before it is deployed in the water.

(c) *Restrictions on Active FADs for purse seine vessels.* U.S. vessel owners and operators of purse-seine vessels with the following well volume in cubic meters (m<sup>3</sup>) must not have more than the following number of Active FADs per vessel in the IATTC Convention Area at any one time during the following years.

Well volume (m <sup>3</sup> )	Active FAD limit
<b>For 2022 calendar year</b>	
1,200 or more .....	400
426-1,199 .....	270
213-425 .....	110
0-212 .....	66
<b>For 2023 calendar year</b>	
1,200 or more .....	340
426-1,199 .....	255
213-425 .....	105
0-212 .....	64
<b>For 2024 calendar year and beyond</b>	
1,200 or more .....	340
426-1,199 .....	210
213-425 .....	85
0-212 .....	50

(d) *Restrictions on satellite buoy deactivations.* A vessel owner or operator that deactivates a satellite buoy attached to a FAD must comply with the reporting requirements for buoy deactivations in § 300.22 (c)(3) of this subpart. A U.S. vessel owner or operator shall only deactivate a satellite buoy attached to a FAD that was activated in the IATTC Convention Area in the following circumstances:

- (1) Complete loss of signal reception;
- (2) Beaching;
- (3) Appropriation of a FAD by a third party;
- (4) Temporarily during a selected closure period;
- (5) For being outside of the area between the meridians 150° W and 100° W, and the parallels 8° N and 10° S; the area between the meridian 100° W and

the coast of the American continent and the parallels 5° N and 15°S; or  
(6) Transfer of ownership.

(e) *Restrictions on satellite buoy reactivations.* A vessel owner or operator that reactivates a satellite buoy must comply with the reporting requirements for satellite buoy reactivations in § 300.22 (c)(4) of this subpart. A U.S. vessel owner or operator shall only remotely reactivate a satellite

buoy at sea that was activated in the IATTC Convention Area in the following circumstances:

- (1) To assist in the recovery of a beached FAD;
- (2) After a temporary deactivation during the closure period; or
- (3) Transfer of ownership while the FAD is at sea.

\* \* \* \* \*

(g) *FAD design requirements to reduce entanglements.* All FADs onboard or deployed in the IATTC Convention Area by U.S. vessel owners, operators, or crew, must comply with the following design requirements:

\* \* \* \* \*

### Animal and Plant Health Inspection Service

[Docket No. APHIS–2022–0013]

#### Notice of Request for Revision to and Extension of Approval of an Information Collection; National Management Information System

**AGENCY:** Animal and Plant Health Inspection Service, USDA.

**ACTION:** Revision to and extension of approval of an information collection; comment request.

**SUMMARY:** In accordance with the Paperwork Reduction Act of 1995, this notice announces the Animal and Plant Health Inspection Service's intention to request a revision to and extension of approval of an information collection associated with the national management information system for cooperative wildlife damage management programs.

**DATES:** We will consider all comments that we receive on or before May 27, 2022.

**ADDRESSES:** You may submit comments by either of the following methods:

- *Federal eRulemaking Portal:* Go to [www.regulations.gov](http://www.regulations.gov). Enter APHIS–2022–0013 in the Search field. Select the Documents tab, then select the Comment button in the list of documents.
- *Postal Mail/Commercial Delivery:* Send your comment to Docket No. APHIS–2022–0013, Regulatory Analysis and Development, PPD, APHIS, Station 3A–03.8, 4700 River Road, Unit 118, Riverdale, MD 20737–1238.

Supporting documents and any comments we receive on this docket may be viewed at [regulations.gov](http://regulations.gov) or in our reading room, which is located in Room 1620 of the USDA South Building, 14th Street and Independence Avenue SW, Washington, DC. Normal

reading room hours are 8 a.m. to 4:30 p.m., Monday through Friday, except holidays. To be sure someone is there to help you, please call (202) 799–7039 before coming.

**FOR FURTHER INFORMATION CONTACT:** For information on the national management information system for cooperative wildlife damage management programs, contact Mr. Andrew Hubble, Wildlife Services, APHIS, 4700 River Road, Unit 87, Riverdale, MD 20737; (301) 851–4014. For more detailed information about the information collection process, contact Mr. Joseph Moxey, APHIS' Paperwork Reduction Act Coordinator, at (301) 851–2483.

#### SUPPLEMENTARY INFORMATION:

*Title:* National Management Information System.

*OMB Control Number:* 0579–0335.

*Type of Request:* Revision to and extension of approval of an information collection.

*Abstract:* In accordance with the Act of March 2, 1931 (46 Stat. 1468–1469; 7 U.S.C. 8351 to 8352, as amended) and the Act of December 22, 1987 (Pub. L. 100–202, 101(k), 101 Stat. 1329–331, 7 U.S.C. 8353) and 16 U.S.C. 667, the Animal and Plant Health Inspection Service (APHIS), Wildlife Services (WS) officers, agents, and employees are authorized to conduct a program of wildlife services that resolves conflicts to allow people and wildlife to coexist. To conduct these services, WS enter into agreements with States, local jurisdictions, individuals, and public and private agencies, organizations, and institutions.

WS is responsible for assisting the public with mitigating wildlife damage. Through its technical assistance approach, WS offers advice through telephone or onsite consultations, training sessions, demonstration projects, and other means. Mitigation activities are then performed by the requester. WS also provides a cooperative direct control approach where goods, services, and expertise are provided on a cost-reimbursable basis. WS collects only information needed to determine appropriate courses of action for providing effective services. Information is used by the agency to:

- Identify cooperators appropriately;
- Identify lands on which WS personnel will work;

- Differentiate between cooperators (*i.e.*, property owners, land managers, or resource owners) who request assistance to manage damage caused by wildlife;

- Identify the land areas on which wildlife damage management activities would be conducted;

- Identify the relationship between resources or property, WS' protection of such resources or property, and the damage caused by wildlife;

- Determine the methods or damage management activities to deal with the damage;

- Establish a record that a cooperative agreement has been entered into with a cooperator;

- Document that permission has been obtained from landowners to go on the cooperator's property;

- Record wildlife damage occurrences on cooperator's property and steps to address them;

- Record occurrences that may have affected non-target species or humans during, or related to, WS project actions; and

- Determine satisfaction with service to help WS evaluate, modify, and improve its programs.

Information collection activities include work initiation documents, assistance requests, project reports, order forms and sales records, equipment issuances, migratory bird damage reports, reports of injury or death to non-target animals, accident reports, and pilot proficiency reviews.

We are asking the Office of Management and Budget (OMB) to approve our use of these information collection activities, as described, for an additional 3 years.

The purpose of this notice is to solicit comments from the public (as well as affected agencies) concerning our information collection. These comments will help us:

(1) Evaluate whether the collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of our estimate of the burden of the collection of information, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who

are to respond, through use, as appropriate, of automated, electronic, mechanical, and other collection technologies; e.g., permitting electronic submission of responses.

*Estimate of burden:* The public burden for this collection of information is estimated to average 0.05 hours per response.

*Respondents:* State, local, and Tribal governments; businesses, not-for-profits, and other public sector organizations; and individuals who request services from WS or engage in wildlife damage management projects with WS.

*Estimated annual number of respondents:* 77,715.

*Estimated annual number of responses per respondent:* 1.

*Estimated annual number of responses:* 86,277.

*Estimated total annual burden on respondents:* 4,003 hours. (Due to averaging, the total annual burden hours may not equal the product of the annual number of responses multiplied by the reporting burden per response.)

All responses to this notice will be summarized and included in the request for OMB approval. All comments will also become a matter of public record.

Done in Washington, DC, this 23rd day of March 2022.

**Anthony Shea.**

*Administrator, Animal and Plant Health Inspection Service.*

### Forest Service

#### Information Collection; Secure Rural Schools Act

**AGENCY:** Forest Service, USDA.

**ACTION:** Notice; request for comment.

**SUMMARY:** In accordance with the Paperwork Reduction Act of 1995, the Forest Service is seeking comments from all interested individuals and organizations on the renewal with revisions of a currently approved information collection, *Secure Rural Schools Act*.

**DATES:** Comments must be received in writing on or before May 27, 2022 to be assured of consideration. Comments received after that date will be considered to the extent practicable.

**ADDRESSES:** Comments concerning this notice should be addressed to Juana Rosas, National Partnership Coordinator, National Partnership Office, USDA Forest Service, Yates Building, 1400 Independence Avenue,

Mailstop #1158, Washington, DC 20250. Comments also may be submitted by email to: Secure Rural Schools at [sm.fs.srsinbox@usda.gov](mailto:sm.fs.srsinbox@usda.gov).

Comments also may be submitted by email to [sm.fs.srsinbox@usda.gov](mailto:sm.fs.srsinbox@usda.gov). Comments submitted in response to this notice may be made available to the public through relevant websites and upon request. For this reason, please do not include in your comments information of a confidential nature, such as sensitive personal information or proprietary information. If you send an email comment, your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the internet. Please note that responses to this public comment request containing any routine notice about the confidentiality of the communication will be treated as public comments that may be made available to the public notwithstanding the inclusion of the routine notice.

The public may inspect the draft supporting statement and/or comments received at USDA Forest Service, Yates Building, 1400 Independence Avenue, Mailstop #1158, Washington, DC 20250 during normal business hours. Visitors are encouraged to call ahead to (202) 720-2791 to facilitate entry to the building. The public may request an electronic copy of the draft supporting statement and/or any comments received be sent via return email. Requests should be emailed to [sm.fs.srsinbox@usda.gov](mailto:sm.fs.srsinbox@usda.gov).

#### FOR FURTHER INFORMATION CONTACT:

Brianna Gallegos, USDA Forest Service, Yates Building, 1400 Independence Avenue, Mailstop #1158, Washington, DC 20250, [sm.fs.srsinbox@usda.gov](mailto:sm.fs.srsinbox@usda.gov). Individuals who use telecommunication devices for the deaf (TDD) may call the Federal Relay Service (FRS) at 1-800-877-8339 twenty-four hours a day, every day of the year, including holidays. Individuals who use telecommunication devices for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1-800-877-8339 twenty-four hours a day, every day of the year, including holidays.

#### SUPPLEMENTARY INFORMATION:

*Title:* Secure Rural Schools Act.  
*OMB Number:* 0596-0220.

*Type of Request:* Renewal with revisions of a currently approved information collection and New Title II Project Proposal Form.

*Abstract:* The Secure Rural Schools and Community Self-Determination Act of 2000 (the Act) (16 U.S.C. 7101 *et seq.*), as reauthorized in Public Law 117-58, requires the appropriate official

of a county that receives funds under Title III of the Act to submit to the appropriate Secretary an annual certification that the funds expended have been used as authorized. The appropriate official of each participating county will be requested to report the amount of Title III funds expended in the applicable year in these categories as specified in the Act:

(1) To carry out authorized activities under the Firewise Communities Program;

(2) To reimburse the participating county for search and rescue and other emergency services, including firefighting and law enforcement patrols;

(3) To provide or expand access to broadband telecommunications services at local schools or the technology and connectivity necessary for students to use a digital learning tool at or outside of the local school campus;

(4) To cover training costs and equipment purchases directly related to the emergency service described in paragraph (2); and

(5) To develop and carry out community wildfire protection plans. The information collection will identify the participating county, the year in which the expenditures were made, the name, title, and signature of the certifying official, and the date of the certification. The certification will include a statement that all expenditures were for uses authorized under the Act and that the proposed uses were published and had a 60-day comment period and were submitted to the appropriate Secure Rural Schools Act resource advisory committee(s), if any, as described in Section 302(b) of the Act.

The information collection will request the county to certify the amount of Title III funds received since October of 2008 that has not been obligated as of September 30th of the previous year. This collection is necessary in the certification due on February 1 the following year after payments are received to determine the amount of Title III funds that must be returned to the United States Treasury under section 304(b) of the Act. Collection of this information is consistent with a recent audit of county uses of Title III funds by the Government Accountability Office (<http://www.gao.gov/products/GAO-12-775>). A county's procedure for and documentation of its obligation of Title III funds should be consistent with its procedures to obligate funds from other Federal sources.

The information collection will request the county to certify the amount

of Title III funds received to determine the amount of Title III funds that must be returned to the United States Treasury under section 304(b) of the Act. The Department of the Interior and the Bureau of Land Management are also authorized to participate in this information collection because the Bureau of Land Management administers Federal lands in western Oregon covered by the Act. The information will be reviewed by the appropriate Secretary, or designee, to verify that participating counties have certified that funds were expended as authorized in the Act and to identify amounts not obligated. The information also may be used by the Department of the Interior because it is relevant to its Payments in Lieu of Taxes (PILT) program.

The information will be collected in the form of conventional correspondence such as a letter and, at the respondent's option, attached tables or similar graphic display. The Forest Service provides an optional form for the convenience of respondents. At the respondent's discretion, the information may be submitted by hard copy and/or electronically scanned and included as an attachment to electronic mail. This becomes record keeping for audit purposes.

The Secure Rural Schools and Community Self-Determination Act of 2000 (the Act) (16 U.S.C. 7101 *et seq.*), as reauthorized in Public Law 117-58, requests Resource Advisor Committees (RAC's) who receive funds under Title II of the Act to submit proposal to the appropriate RAC Forest Service Designated Federal Officer (DFOs) that the funds are being requested for that specific project. Counties typically receive 20% or less of Secure Rural Schools funds under Title II, which are used by willing Federal agencies, State and local governments, private and nonprofit entities, and landowners for protection, restoration and enhancement of fish and wildlife habitat, and other natural resource objectives on Federal land and on non-Federal land where projects would benefit these resources on Federal land.

Rather than being distributed to the State, Title II funds are retained by the Forest Service and are allocated to specific projects that have been reviewed and recommended by a local Resource Advisory Committee.

Projects are considered for Title II funding if they make additional investments in, and create employment opportunities through:

Improvement of existing infrastructure maintenance.

Implementation of stewardship objectives that enhance forest ecosystems;

Restoration and improvement of land health and water quality.

Projects must comply with all applicable Federal laws and regulations.

Projects must be consistent with the applicable resource management plan and with any watershed or subsequent plan developed pursuant to the resource management plan. The funds may be used for projects that have broad-based support and with objectives that include: Road, trail, and infrastructure maintenance or obliteration; soil productivity improvement; forest ecosystem health improvements; watershed restoration and maintenance; wildlife and fish habitat restoration, maintenance, and improvement; noxious and exotic weeds control; and native species re-establishment.

At least 50% of all project funds are to be used for projects that are primarily dedicated to road maintenance, decommissioning, or obliteration; or to restoration of streams and watersheds.

*Affected Public:* Eligible counties and Federal agencies, state and local government, private entities.

*Estimate of Annual Burden per Respondent:* 1.

*Type of Respondents:* Respondents are county officials. The determination of who is the appropriate certifying official is at the discretion of the county and borough and will vary depending on county or borough organization. For unorganized boroughs in Alaska and for participating counties in Vermont, a state official may provide the information. Respondents of 91 RACs are expected to respond each year.

*Estimated Annual Number of Respondents:* 344 county officials and 91 RACs.

*Estimated Annual Number of Responses per Respondent:* 1.

*Estimated Total Annual Burden on Respondents:* 1 hour.

*Comment is Invited:* Comment is invited on: (1) Whether this collection of information is necessary for the stated purposes and the proper performance of the functions of the Agency, including whether the information will have practical or scientific utility; (2) the accuracy of the Agency's estimate of the burden of the collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including the use of automated, electronic, mechanical, or other technological collection

techniques or other forms of information technology.

All comments received in response to this notice, including names and addresses when provided, will be a matter of public record. Comments will be summarized and included in the submission request toward Office of Management and Budget approval.

**Ellen Shaw,**

*Acting Director, National Partnership Office.*

### Forest Service

#### Notice of Proposed New Fee Site

**AGENCY:** Forest Service, Agriculture (USDA).

**ACTION:** Notice of proposed new fee site.

**SUMMARY:** The National Forests and Grasslands in Texas is proposing to charge a new fee at one recreation site listed in **SUPPLEMENTARY INFORMATION** of this notice. Funds from fees would be used for operation, maintenance, and improvements of the recreation site. An analysis of nearby developed recreation sites with similar amenities shows the proposed fees are reasonable and typical of similar sites in the area.

**DATES:** If approved, the new fee would be implemented no earlier than six months following the publication of this notice in the **Federal Register**.

**ADDRESSES:** National Forests and Grasslands in Texas, 2221 North Raguett Street, Lufkin, TX 75904.

**FOR FURTHER INFORMATION CONTACT:** Benjamin Richardson, Recreation Program Manager, 936-707-6225, [Benjamin.Richardson@usda.gov](mailto:Benjamin.Richardson@usda.gov).

**SUPPLEMENTARY INFORMATION:** The Federal Recreation Lands Enhancement Act (Title VII, Pub. L. 108-447) directed the Secretary of Agriculture to publish a six-month advance notice in the **Federal Register** whenever new recreation fee areas are established. The fees are only proposed at this time and will be determined upon further analysis and public comment. Reasonable fees, paid by users of these sites, will help ensure that the Forests can continue maintaining and improving recreation sites like this for future generations.

As part of this proposal, a \$5 day-use fee per vehicle with a \$40 annual pass option at Boykin Springs Recreation Area would be added to improve services and facilities. The full suite of Interagency passes would be honored.

New fees would provide increased visitor opportunities, as well as increased staffing to address operations and maintenance needs and enhance customer service. Once public involvement is complete, these new fees will be reviewed by a Recreation Resource Advisory Committee prior to a final decision and implementation.

Dated: March 23, 2022.

**Sandra Watts,**

*Acting Associate Deputy Chief, National Forest System.*

### Forest Service

#### Notice of Proposed New Fee Sites

**AGENCY:** Forest Service, Agriculture (USDA).

**ACTION:** Notice of proposed new fee sites.

**SUMMARY:** The Tonto National Forest is proposing to charge new fees at multiple recreation sites listed in **SUPPLEMENTARY INFORMATION** of this notice. Funds from fees would be used for operation, maintenance, and improvements of these recreation sites. Many sites have recently been reconstructed or amenities are being added to improve services and experiences. An analysis of nearby developed recreation sites with similar amenities shows the proposed fees are reasonable and typical of similar sites in the area.

**DATES:** If approved, the new fee would be implemented no earlier than six months following the publication of this notice in the **Federal Register**.

**ADDRESSES:** Tonto National Forest, Attention: Recreation Fees, 1009 E Hwy. 260, Payson, Arizona 85541.

**FOR FURTHER INFORMATION CONTACT:** Greg Schuster, Tonto Fee Program Manager, (480) 292-0291 or [tontorecreationcomments@usda.gov](mailto:tontorecreationcomments@usda.gov).

**SUPPLEMENTARY INFORMATION:** The Federal Recreation Lands Enhancement Act (Title VII, Pub. L. 108-447) directed the Secretary of Agriculture to publish a six-month advance notice in the **Federal Register** whenever new recreation fee areas are established. The fees are only proposed at this time and will be determined upon further analysis and public comment. Reasonable fees, paid by users of these sites, will help ensure that the Forest can continue maintaining and improving recreation sites like this for future generations.

As part of this proposal, East Verde and Flowing Springs picnic sites are proposed at \$12 day-use fee per vehicle. The full suite of Interagency passes would be honored. Additionally, the Tonto National Forest proposes to charge fees at five Off-Highway Vehicle (OHV) zones. These zones are currently in use by the public and are in high demand due to their easy access from the Phoenix metro area and the growing popularity of OHV use. The five OHV zones include Bulldog Canyon, The Rolls, Lower Sycamore, St. Clair, and Desert Vista. OHV permits will be sold through [Recreation.gov](http://Recreation.gov) and administered by the Tonto National Forest. Permits are required for all OHV operators (not passengers) and are proposed at \$100 per year, \$50 per month, and \$10 per day.

New fees would provide increased visitor opportunities as well as increased staffing to address operations and maintenance needs and enhance customer service. Once public involvement is complete, these new fees will be reviewed by a Recreation Resource Advisory Committee prior to a final decision and implementation.

Permits will be available through [www.recreation.gov](http://www.recreation.gov) or by calling 1-877-444-6777. The reservation service charges a \$6.00 fee for permits.

Dated: March 23, 2022.

### Forest Service

#### Trinity County Resource Advisory Committee

**AGENCY:** Forest Service, Agriculture (USDA).

**ACTION:** Notice of meeting.

**SUMMARY:** The Trinity County Resource Advisory Committee (RAC) will hold a virtual meeting by phone and/or video conference. The committee is authorized under the Secure Rural Schools and Community Self-Determination Act (the Act) and operates in compliance with the Federal Advisory Committee Act. The purpose of the committee is to improve collaborative relationships and to provide advice and recommendations to the Forest Service concerning projects and funding consistent with Title II of the Act, as well as to make recommendations on recreation fee

proposals for sites on the Shasta-Trinity National Forest within Trinity County, consistent with the Federal Lands Recreation Enhancement Act. RAC information and virtual meeting information can be found at the following website: <https://www.fs.usda.gov/main/stnf/workingtogether/advisorycommittees>.

**DATES:** The meeting will be held on April 25, 2022, 4:30 p.m.–6:30 p.m., Pacific Daylight Time.

All RAC meetings are subject to cancellation. For status of the meetings prior to attendance, please contact the person listed under **FOR FURTHER INFORMATION CONTACT**.

**ADDRESSES:** Details for how to join the meeting are listed in the above website link under **SUMMARY**.

Written comments may be submitted as described under **SUPPLEMENTARY INFORMATION**. All comments, including names and addresses when provided, are placed in the record and are available for public inspection and copying. The public may inspect comments received at the Weaverville Ranger Station. Please call ahead at 530-623-2121 to facilitate entry into the building.

**FOR FURTHER INFORMATION CONTACT:** Lejon Hamann, RAC Coordinator, by phone at 530-410-1935 or via email at [lejon.hamann@usda.gov](mailto:lejon.hamann@usda.gov).

Individuals who use telecommunication devices for the deaf and hard of hearing (TDD) may call the Federal Relay Service (FRS) at 1-800-877-8339, 24 hours per day, every day of the year, including holidays.

**SUPPLEMENTARY INFORMATION:** The purpose of the meeting is to cover the following:

1. Roll call;
2. Comments from the Designated Federal Officer (DFO);
3. Approve minutes from last meeting;
4. Discuss, recommend, approve projects;
5. Public comment period; and
6. Closing comments from the DFO.

The meeting is open to the public. The agenda will include time for people to make oral statements of three minutes or less. Individuals wishing to make an oral statement should request in writing by the Thursday before the meeting, to be scheduled on the agenda. Anyone who would like to bring related matters to the attention of the committee may file written statements with the committee staff before or after the meeting. Written comments and requests for time for oral comments must be sent to Lejon Hamann, RAC Coordinator, 3644 Avtech Parkway, Redding, California 96002 or by email to [lejon.hamann@usda.gov](mailto:lejon.hamann@usda.gov).

*Meeting Accommodations:* Please make requests in advance for sign language interpreter services, assistive listening devices, or other reasonable accommodation. For access to proceedings, please contact the person listed in the section titled **FOR FURTHER INFORMATION CONTACT**. All reasonable accommodation requests are managed on a case-by-case basis.

Equal opportunity practices, in line with USDA policies, will be followed in all membership appointments to the RAC. To help ensure that recommendations of the RAC have taken into account the needs of the diverse groups served by the Department, membership shall include, to the extent practicable, individuals with demonstrated ability to represent minorities, women, and persons with disabilities.

The USDA prohibits discrimination in all of its programs and activities on the basis of race, color, national origin, religion, sex, gender identity (including gender expression), sexual orientation, disability, age, marital status, family/parental status, political beliefs, income derived from a public assistance program, or reprisal or retaliation for prior civil rights activity in any program or activity conducted or funded by USDA (not all bases apply to all programs).

Dated: March 22, 2022.

### Forest Service

#### Wenatchee-Okanogan Resource Advisory Committee

**AGENCY:** Forest Service, Agriculture (USDA).

**ACTION:** Notice of meeting.

**SUMMARY:** The Wenatchee-Okanogan Resource Advisory Committee (RAC) will hold a virtual meeting by phone and/or video conference. The committee is authorized under the Secure Rural Schools and Community Self-Determination Act (the Act) and operates in compliance with the Federal Advisory Committee Act. The purpose of the committee is to improve collaborative relationships and to provide advice and recommendations to the Forest Service concerning projects and funding consistent with Title II of the Act, and to also make recommendations on recreation fee

proposals for sites on the Okanogan-Wenatchee National Forest within Okanogan, Chelan, Kittitas, and Yakima Counties, consistent with the Federal Lands Recreation Enhancement Act. RAC information and virtual meeting information can be found at the following website: [https://www.fs.usda.gov/detail/okawen/workingtogether/advisorycommittees/?cid=fsbdev3\\_053646](https://www.fs.usda.gov/detail/okawen/workingtogether/advisorycommittees/?cid=fsbdev3_053646).

**DATES:** The meeting will be held on April 27, 2022, from 9:00 a.m.–4:00 p.m., Pacific Daylight Time.

All RAC meetings are subject to cancellation. For status of meetings prior to attendance, please contact the person listed under **FOR FURTHER INFORMATION CONTACT**.

**ADDRESSES:** The meeting will be held virtually via telephone and/or video. Details for meeting participation can be found on the website linked in the **SUMMARY**.

Written comments may be submitted as described under **SUPPLEMENTARY INFORMATION**. All comments, including names and addresses when provided, are placed in the record and are available for public inspection and copying. The public may inspect comments received upon request.

**FOR FURTHER INFORMATION CONTACT:** Robin DeMario, RAC Coordinator, by phone at 509-664-9292 or via email at [robin.demario@usda.gov](mailto:robin.demario@usda.gov).

Individuals who use telecommunication devices for the deaf and hard of hearing (TDD) may call the Federal Relay Service (FRS) at 1-800-877-8339, 24 hours a day, every day of the year, including holidays.

**SUPPLEMENTARY INFORMATION:** The purpose of the meeting is to:

1. Hear from Title II project proponents and discuss project proposals; and
2. Make funding recommendations on Title II projects.

Meetings are open to the public. The agenda will include time for individuals to make oral statements of three minutes or less. Individuals wishing to make an oral statement at the meeting should request in writing by April 22, 2022, to be scheduled on the agenda for the meeting. Anyone who would like to bring related matters to the attention of the committee may file written statements with the committee staff before or after the meeting. Written comments and requests for time for oral comments must be sent to Robin DeMario, RAC Coordinator, at 215 Melody Lane, Wenatchee, Washington 98801 or by email to [robin.demario@usda.gov](mailto:robin.demario@usda.gov).

*Meeting Accommodations:* Please make requests in advance for sign language interpreter services, assistive listening devices, or other reasonable accommodation. For access to proceedings, please contact the person listed in the section titled **FOR FURTHER INFORMATION CONTACT**. All reasonable accommodation requests are managed on a case-by-case basis.

Equal opportunity practices, in line with USDA policies, will be followed in all membership appointments to the RAC. To help ensure that recommendations of the RAC have taken into account the needs of the diverse groups served by the Department, membership shall include, to the extent practicable, individuals with demonstrated ability to represent minorities, women, and persons with disabilities.

## COMMISSION ON CIVIL RIGHTS

### Notice of Public Meeting of the North Carolina Advisory Committee to the U.S. Commission on Civil Rights

**AGENCY:** U.S. Commission on Civil Rights.

**ACTION:** Announcement of virtual business meeting.

**SUMMARY:** Notice is hereby given, pursuant to the provisions of the rules and regulations of the U.S. Commission on Civil Rights (Commission) and the Federal Advisory Committee Act, that the North Carolina Advisory Committee (Committee) to the U.S. Commission on Civil Rights will hold a virtual business meeting via Webex at 12:00 p.m. ET on Tuesday, April 19, 2022, to discuss next steps regarding the report on Legal Financial Obligations in the state.

**DATES:** The meeting will take place on Tuesday, April 19, 2022, from 12:00 p.m.–1:30 p.m. ET.

**Link To Join (Audio/Visual):** <https://tinyurl.com/f4duk4tf>.

**Telephone (Audio Only):** Dial (800) 360-9505 USA Toll Free; Access code: 2761 845 7469.

**FOR FURTHER INFORMATION CONTACT:**

Victoria Moreno, DFO, at [vmoreno@usccr.gov](mailto:vmoreno@usccr.gov) or (434) 515-0204.

**SUPPLEMENTARY INFORMATION:**

Committee meetings are available to the public through the conference link above. Any interested member of the public may listen to the meeting. An open comment period will be provided to allow members of the public to make a statement as time allows. If joining via phone, callers can expect to incur regular charges for calls they initiate over wireless lines, according to their wireless plan. The Commission will not refund any incurred charges. Individuals who are deaf, deafblind, and hard of hearing may also follow the proceedings by first calling the Federal Relay Service at (800) 877-8339 and providing the Service with the conference details found through registering at the web link above. To request additional accommodations, please email [vmoreno@usccr.gov](mailto:vmoreno@usccr.gov) at least ten (10) days prior to the meeting.

Members of the public are also entitled to submit written comments; the comments must be received in the regional office within 30 days following the meeting. Written comments may be emailed to Liliana Schiller at [lschiller@usccr.gov](mailto:lschiller@usccr.gov). Persons who desire additional information may contact the Regional Programs Coordination Unit at (312) 353-8311.

Records generated from this meeting may be inspected and reproduced at the Regional Programs Coordination Unit, as they become available, both before and after the meeting. Records of the meeting will be available via [www.facadatabase.gov](http://www.facadatabase.gov) under the Commission on Civil Rights, North Carolina Advisory Committee link. Persons interested in the work of this Committee are directed to the Commission's website, <http://www.usccr.gov>, or may contact the Regional Programs Coordination Unit at the above phone number.

#### Agenda

- I. Welcome & Roll Call
- II. Committee Discussion
- III. Public Comment
- IV. Next Steps
- V. Adjournment

Dated: Friday, March 23, 2022.

## DEPARTMENT OF COMMERCE

### Foreign-Trade Zones Board

[B-9-2022]

#### Proposed Foreign-Trade Zone— Plaquemines Parish, Louisiana Under Alternative Site Framework

An application has been submitted to the Foreign-Trade Zones (FTZ) Board by the Plaquemines Port, Harbor & Terminal District (PPHTD) to establish a foreign-trade zone in Plaquemines Parish, Louisiana, under the alternative site framework (ASF) adopted by the FTZ Board (15 CFR Sec. 400.2(c)). The ASF is an option for grantees for the establishment or reorganization of zones and can permit significantly greater flexibility in the designation of new “subzones” or “usage-driven” FTZ sites for operators/users located within a grantee’s “service area” in the context of the FTZ Board’s standard 2,000-acre activation limit for a zone project. The application was submitted pursuant to the provisions of the Foreign-Trade Zones Act, as amended (19 U.S.C. 81a–81u), and the regulations of the FTZ Board (15 CFR part 400). It was formally docketed on March 22, 2022. The applicant is authorized to make the proposal under Louisiana Revised Statutes, Title 51, Sections 61–65.

The proposed zone would be the second zone for the New Orleans U.S. Customs and Border Protection port of entry. The existing zone is as follows: FTZ 2, New Orleans (Grantee: Port of New Orleans, Board Order 12, July 16, 1946).

The applicant’s proposed service area under the ASF would be Plaquemines Parish, Louisiana. If approved, the applicant would be able to serve sites throughout the service area based on companies’ needs for FTZ designation. The application indicates that the proposed service area is within and adjacent to the New Orleans Customs and Border Protection port of entry.

The proposed zone would include a “magnet” site: Proposed Site 1 (276.6 acres)—PPHTD Parcel No. 8337286, located on Highway 23 near Hermitage Road in Port Sulphur. The ASF allows for the possible exemption of one magnet site from the “sunset” time limits that generally apply to sites under the ASF, and the applicant proposes that Site 1 be so exempted.

The application indicates a need for zone services in the Plaquemines Parish, Louisiana, area. Several firms have indicated an interest in using zone procedures for warehousing/distribution activities for a variety of products. Specific production approvals are not being sought at this time. Such requests would be made to the FTZ Board on a case-by-case basis.

In accordance with the FTZ Board's regulations, Camille Evans of the FTZ Staff is designated examiner to evaluate and analyze the facts and information presented in the application and case record and to report findings and recommendations to the FTZ Board.

Public comment is invited from interested parties. Submissions shall be addressed to the FTZ Board's Executive Secretary and sent to: [ftz@trade.gov](mailto:ftz@trade.gov). The closing period for their receipt is May 27, 2022. Rebuttal comments in response to material submitted during the foregoing period may be submitted during the subsequent 15-day period to June 13, 2022.

A copy of the application will be available for public inspection in the "Online FTZ Information Section" section of the FTZ Board's website, which is accessible via [www.trade.gov/ftz](http://www.trade.gov/ftz).

For further information, contact Camille Evans at [Camille.Evans@trade.gov](mailto:Camille.Evans@trade.gov).

Dated: March 22, 2022.

**Andrew McGilvray,**  
Executive Secretary.

## DEPARTMENT OF COMMERCE

### Foreign-Trade Zones Board

[B-79-2021]

#### Foreign-Trade Zone (FTZ) 138— Columbus, Ohio; Authorization of Limited Production Activity; Fluvitex USA, Inc.; (Quilts, Comforters and Cushions); Groveport, Ohio

On November 23, 2021, Fluvitex USA, Inc., submitted a notification of proposed production activity to the FTZ Board for its facility within FTZ 138, in Groveport, Ohio.

The notification was processed in accordance with the regulations of the FTZ Board (15 CFR part 400), including notice in the **Federal Register** inviting public comment (86 FR 67903-67904, November 30, 2021). On March 23, 2022, the applicant was notified of the FTZ Board's decision that further review of part of the proposed activity

is warranted. The FTZ Board authorized the production activity described in the notification on a limited basis, subject to the FTZ Act and the Board's regulations, including Section 400.14, and further subject to a restriction requiring all foreign-status materials be admitted to the zone in privileged foreign status (19 CFR 146.41) with the exception of foreign-status polybags.

Dated: March 23, 2022.

**Andrew McGilvray,**  
Executive Secretary.

## DEPARTMENT OF COMMERCE

### Bureau of Industry and Security

#### Reporting for Calendar Year 2021 on Offsets Agreements Related to Sales of Defense Articles or Defense Services to Foreign Countries or Foreign Firms

**AGENCY:** Bureau of Industry and Security, Department of Commerce.

**ACTION:** Notice; annual reporting requirements.

**SUMMARY:** This notice is to remind the public that U.S. firms are required to report annually to the Department of Commerce (Commerce) information on contracts for the sale of defense articles or defense services to foreign countries or foreign firms that are subject to offsets agreements exceeding \$5,000,000 in value. U.S. firms are also required to report annually to Commerce information on offsets transactions completed in performance of existing offsets commitments for which offsets credit of \$250,000 or more has been claimed from the foreign representative. This year, such reports must include relevant information from calendar year 2021 and must be submitted to Commerce no later than June 15, 2022.

**ADDRESSES:** Submit reports in both hard copy and electronically. Address the hard copy to "Offsets Program Manager, U.S. Department of Commerce, Office of Strategic Industries and Economic Security, Bureau of Industry and Security (BIS), Room 3876, Washington, DC 20230." Submit electronic copies to [OffsetReport@bis.doc.gov](mailto:OffsetReport@bis.doc.gov).

**FOR FURTHER INFORMATION CONTACT:** Emily Noel and Marina Youssef, Office of Strategic Industries and Economic Security, Bureau of Industry and Security, U.S. Department of Commerce, telephone: 202-482-4506; email: [OffsetReport@bis.doc.gov](mailto:OffsetReport@bis.doc.gov).

**SUPPLEMENTARY INFORMATION:**

## Background

Section 723(a)(1) of the Defense Production Act of 1950, as amended (DPA) (50 U.S.C. 4568 (2022)) requires the President to submit an annual report to Congress on the impact of offsets on the U.S. defense industrial base. Section 723(a)(2) directs the Secretary of Commerce (Secretary) to prepare the President's report and to develop and administer the regulations necessary to collect offsets data from U.S. defense exporters.

The authorities of the Secretary regarding offsets have been delegated to the Under Secretary of Commerce for Industry and Security. The regulations associated with offsets reporting are set forth in part 701 of title 15 of the Code of Federal Regulations (Offsets Regulations). Offsets are compensation practices required as a condition of purchase in either government-to-government or commercial sales of defense articles and/or defense services, as defined by the Arms Export Control Act (22 U.S.C. 2778) and the International Traffic in Arms Regulations (22 CFR 120-130). Offsets are also applicable to certain items controlled on the Commerce Control list (CCL) and with an Export Control Classification Number (ECCN) including the numeral "6" as its third character. The CCL is found in supplement no. 1 to part 774 of the Export Administration Regulations.

*An example of an offset is as follows:* A company that is selling a fleet of military aircraft to a foreign government may agree to offset the cost of the aircraft by providing training assistance to plant managers in the purchasing country. Although this distorts the true price of the aircraft, the foreign government may require this sort of extra compensation as a condition of awarding the contract to purchase the aircraft. As described in the Offsets Regulations, U.S. firms are required to report information on contracts for the sale of defense articles or defense services to foreign countries or foreign firms that are subject to offsets agreements exceeding \$5,000,000 in value. U.S. firms are also required to report annually information on offsets transactions completed in performance of existing offsets commitments for which offsets credit of \$250,000 or more has been claimed from the foreign representative.

Commerce's annual report to Congress includes an aggregated summary of the data reported by industry in accordance with the offsets regulation and the DPA (50 U.S.C. 4568 (2022)). As provided by section 723(c) of the DPA, BIS will not

publicly disclose individual firm information it receives through offsets reporting unless the firm furnishing the information specifically authorizes public disclosure. The information collected is sorted and organized into an aggregate report of national offsets data, and therefore does not identify company-specific information.

To enable BIS to prepare the next annual offset report reflecting calendar year 2021 data, affected U.S. firms must submit required information on offsets agreements and offsets transactions from calendar year 2022 to BIS no later than June 15, 2022.

**Thea D. Rozman Kendler,**  
Assistant Secretary for Export  
Administration.

**BILLING CODE 3510-JT-P**

## DEPARTMENT OF COMMERCE

### International Trade Administration

[A-580-914]

#### Superabsorbent Polymers From the Republic of Korea: Postponement of Preliminary Determination in the Less-Than-Fair-Value Investigation

**AGENCY:** Enforcement and Compliance, International Trade Administration, Department of Commerce.

**DATES:** Applicable March 28, 2022.

**FOR FURTHER INFORMATION CONTACT:** Charles DeFilippo or Elfi Blum, AD/CVD Operations, Office VII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482-3979 or (202) 482-0197, respectively.

#### SUPPLEMENTARY INFORMATION:

##### Background

On November 22, 2021, the Department of Commerce (Commerce) initiated a less-than-fair-value (LTFV) investigation of imports of certain superabsorbent polymers (SAP) from Korea.<sup>1</sup> Currently, the preliminary determination is due no later than April 11, 2022.

##### Postponement of Preliminary Determination

Section 733(b)(1)(A) of the Tariff Act of 1930, as amended (the Act), requires Commerce to issue the preliminary determination in an LTFV investigation

<sup>1</sup> See *Certain Superabsorbent Polymers from the Republic of Korea: Initiation of Less-Than-Fair Value Investigation*, 86 FR 67915 (November 30, 2021) (*Initiation Notice*).

within 140 days after the date on which Commerce initiated the investigation. However, section 733(c)(1) of the Act permits Commerce to postpone the preliminary determination until no later than 190 days after the date on which Commerce initiated the investigation if: (A) The petitioner<sup>2</sup> makes a timely request for a postponement; or (B) Commerce concludes that the parties concerned are cooperating, that the investigation is extraordinarily complicated, and that additional time is necessary to make a preliminary determination. Under 19 CFR 351.205(e), the petitioner must submit a request for postponement 25 days or more before the scheduled date of the preliminary determination and must state the reasons for the request. Commerce will grant the request unless it finds compelling reasons to deny the request.

On March 14, 2022, the petitioner submitted a timely request that Commerce postpone the preliminary determination in the LTFV investigation.<sup>3</sup> The petitioner stated that it requests postponement because it has identified deficiencies in the respondent's questionnaire responses that should be addressed in advance of the preliminary determination, and so Commerce can issue supplemental questionnaires to the respondent and develop the record regarding these deficiencies.<sup>4</sup>

For the reasons stated above, and because there are no compelling reasons to deny the request, Commerce, in accordance with section 733(c)(1)(A) of the Act, is postponing the deadline for the preliminary determination by 50 days (*i.e.*, 190 days after the date on which this investigation was initiated). As a result, Commerce will issue its preliminary determination no later than May 31, 2022. In accordance with section 735(a)(1) of the Act and 19 CFR 351.210(b)(1), the deadline for the final determination of this investigation will continue to be 75 days after the date of the preliminary determination, unless postponed at a later date.

##### Notification to Interested Parties

This notice is issued and published pursuant to section 733(c)(2) of the Act and 19 CFR 351.205(f)(1).

<sup>2</sup> The petitioner is the Ad Hoc Coalition of American SAP Producers.

<sup>3</sup> See Petitioner's Letter, "Certain Superabsorbent Polymers from the Republic of Korea—Petitioner's Request for Postponement of Preliminary Determination," dated March 14, 2022.

<sup>4</sup> *Id.*

Dated: March 22, 2022.

## DEPARTMENT OF COMMERCE

### International Trade Administration

[C-580-837]

#### Certain Cut-to-Length Carbon-Quality Steel Plate From Korea: Notice of Court Decision Not in Harmony With the Results of Countervailing Duty Administrative Review; Notice of Amended Final Results

**AGENCY:** Enforcement and Compliance, International Trade Administration, Department of Commerce.

**SUMMARY:** On March 18, 2022, the U.S. Court of International Trade (CIT) issued its final judgment in *Hyundai Steel Company v. United States*, Court no. 21-00012, sustaining the Department of Commerce (Commerce)'s final remand results pertaining to the administrative review of the countervailing duty (CVD) order on certain cut-to-length carbon-quality steel plate (CTL plate) from Korea covering the period January 1, 2018, through December 31, 2018. Commerce is notifying the public that the CIT's final judgment is not in harmony with Commerce's final results of the administrative review, and that Commerce is amending the final results with respect to the countervailable subsidy rate assigned to Hyundai Steel Company (Hyundai Steel).

**DATES:** Applicable March 28, 2022.

**FOR FURTHER INFORMATION CONTACT:** John Conniff, AD/CVD Operations, Office III, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482-1009.

#### SUPPLEMENTARY INFORMATION:

##### Background

On December 28, 2020, Commerce published its *Final Results* in the 2018 CVD administrative review of CTL plate from Korea. Commerce determined that a countervailable *ad valorem* subsidy rate of 0.50 existed for Hyundai Steel during the period of review.<sup>1</sup>

<sup>1</sup> See *Certain Cut-to-Length Carbon-Quality Steel Plate from the Republic of Korea: Final Results of Countervailing Duty Administrative Review; Calendar Year 2018*, 85 FR 84296 (December 28, 2020) (*Final Results*).

Hyundai Steel appealed Commerce’s *Final Results*. On November 9, 2021, the CIT granted Commerce’s request for a voluntary remand of its determination of the countervailability of the reduction for sewerage fees program in the *Final Results*.<sup>2</sup>

In its final remand redetermination, issued on February 4, 2022, Commerce found that the reduction for sewerage fees program was not countervailable.<sup>3</sup> On March 18, 2022, the CIT sustained Commerce’s final redetermination.<sup>4</sup>

**Timken Notice**

In its decision in *Timken*,<sup>5</sup> as clarified by *Diamond Sawblades*,<sup>6</sup> the U.S. Court of Appeals for the Federal Circuit held that, pursuant to section 516A(c) and (e) of the Tariff Act of 1930, as amended (the Act), Commerce must publish a notice of court decision that is not “in harmony” with a Commerce determination and must suspend liquidation of entries pending a “conclusive” court decision. The CIT’s March 18, 2022, judgment constitutes a final decision of the CIT that is not in harmony with Commerce’s *Final Results*. Thus, this notice is published in fulfillment of the publication requirements of *Timken*.

**Amended Final Results**

Because there is now a final court judgment, Commerce is amending its *Final Results* with respect to Hyundai Steel as follows:

Producer or exporter	Weighted-average dumping margin (percent)
Hyundai Steel .....	* 0.49

\* Indicates a *de minimis* subsidy rate.

**Cash Deposit Requirements**

Because Hyundai Steel has a superseding cash deposit rate, *i.e.*, there have been final results published in a subsequent administrative review, we will not issue revised cash deposit instructions to U.S. Customs and Border Protection (CBP). This notice will not affect the current cash deposit rate.

<sup>2</sup> See *Order Granting Motion to Remand Case, Hyundai Steel v. United States*, Court No. 21–00012 (November 9, 2021) (*Remand Order*).

<sup>3</sup> See *Final Results of Redetermination Pursuant to Court Remand*, Court No. 21–00012, dated February 4, 2022.

<sup>4</sup> See *Judgment Sustaining Remand Redetermination*, Court No. 21–00012, dated March 18, 2022.

<sup>5</sup> See *Timken Co. v. United States*, 893 F.2d 337 (Fed. Cir. 1990) (*Timken*).

<sup>6</sup> See *Diamond Sawblades Manufacturers Coalition v. United States*, 626 F.3d 1374 (Fed. Cir. 2010) (*Diamond Sawblades*).

**Liquidation of Suspended Entries**

At this time, Commerce remains enjoined by CIT order from liquidating entries that were produced and/or exported by Hyundai Steel, and were entered, or withdrawn from warehouse, for consumption during the period January 1, 2018, through December 31, 2018. These entries will remain enjoined pursuant to the terms of the injunction during the pendency of any appeals process.

In the event the CIT’s ruling is not appealed, or, if appealed, upheld by a final and conclusive court decision, Commerce intends to instruct CBP to assess countervailing duties on unliquidated entries of subject merchandise produced and/or exported by Hyundai Steel in accordance with 19 CFR 351.212(b). We will instruct CBP to assess countervailing duties on all appropriate entries covered by this review when the *ad valorem* rate is not zero or *de minimis*. Where an *ad valorem* subsidy rate is zero or *de minimis*,<sup>7</sup> we will instruct CBP to liquidate the appropriate entries without regard to countervailing duties.

**Notification to Interested Parties**

This notice is issued and published in accordance with sections 516A(c) and (e) and 777(i)(1) of the Act.

Dated: March 22, 2022.

**Lisa W. Wang,**  
*Assistant Secretary for Enforcement and Compliance.*

**DEPARTMENT OF COMMERCE**

**National Oceanic and Atmospheric Administration**

**Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; NOAA Office of Education Higher Education Scholarship, Fellowship and Internship Programs**

**AGENCY:** National Oceanic and Atmospheric Administration (NOAA), Commerce.

**ACTION:** Notice of information collection, request for comment.

**SUMMARY:** The Department of Commerce, in accordance with the Paperwork Reduction Act of 1995 (PRA), invites the general public and other Federal agencies to comment on proposed, and continuing information

<sup>7</sup> See 19 CFR 351.106(c)(2).

collections, which helps us assess the impact of our information collection requirements and minimize the public’s reporting burden. The purpose of this notice is to allow for 60 days of public comment preceding submission of the collection to OMB.

**DATES:** To ensure consideration, written or on-line comments must be submitted on or before May 27, 2022.

**ADDRESSES:** Interested persons are invited to submit written comments to Adrienne Thomas, NOAA PRA Officer, at *NOAA.PRA@noaa.gov*. Please reference OMB Control Number 0648–0568 in the subject line of your comments. Do not submit Confidential Business Information or otherwise sensitive or protected information.

**FOR FURTHER INFORMATION CONTACT:** Requests for additional information or specific questions related to collection activities should be directed to Natasha White, Management and Program Analyst, NOAA Office of Education, 1315 East-West Hwy., Silver Spring, MD 20910, 301–628–2906 or *Natasha.White@noaa.gov*.

**SUPPLEMENTARY INFORMATION:**

**I. Abstract**

This request is for extension and revision of a current information collection.

The National Oceanic and Atmospheric Administration (NOAA) Office of Education is sponsoring the information collection herein described. The Administrator of NOAA is authorized by section 4002 of the America COMPETES Act, Public Law 110–69, to establish and administer a Graduate Sciences Program and two undergraduate scholarship programs to enhance understanding of ocean, coastal, Great Lakes, and atmospheric science and stewardship by the general public and other coastal stakeholders, including underrepresented groups in ocean and atmospheric science and policy careers. In addition, NOAA’s Administrator is authorized by section 214 of the Consolidated Appropriations Act, 2005, *Public Law 108–447*, to establish and administer the Ernest F. Hollings Undergraduate Scholarship Program to support undergraduate studies in oceanic and atmospheric science, research, technology, and education that support NOAA’s mission and programs.

The NOAA Office of Education collects, evaluates, and assesses student data and information for the purpose of selecting successful candidates for scholarships, fellowships and internships, generating internal NOAA

reports, and articles to demonstrate the success of its program.

The purpose of the NOAA Educational Partnership Program with Minority Serving Institutions (EPP/MSI) is to educate, train and graduate students in NOAA mission-aligned disciplines to build a pool of candidates eligible for the future NOAA workforce. The EPP/MSI program is strongly committed to broadening the participation of Minority Serving Institutions such as Historically Black Colleges and Universities, Hispanic Serving Institutions, Indian Tribally Controlled Colleges and Universities, Alaska Native-Serving Institutions, and Native Hawaiian-Serving Institutions. The EPP/MSI program has five program components: The Undergraduate Scholarship Program (USP); the Cooperative Science Centers (CSCs); Graduate Fellowship Program (GFP); the Graduate Sciences Program (GSP); and the Environmental Entrepreneurship Program (EEP). The GSP and EEP programs are no longer actively supporting students, however alumni of those programs may provide updates to EPP/MSI of educational and career changes.

The Ernest F. Hollings Undergraduate Scholarship Program was established to increase undergraduate training in oceanic and atmospheric science, research, technology, and education and foster multidisciplinary training opportunities. In an effort to increase the diversity of candidates applying to the Hollings Scholarship, the Hollings Preparation Program (HPP) was established in 2019.

The NOAA Office of Education requires all applicants to NOAA's Undergraduate Scholarship Programs to complete an application in order to be considered. The application package requires two faculty and/or academic advisors to complete a student scholar reference form in support of the scholarship application. Undergraduate scholarship recipients are required to complete a Student Scholarship Training Record to track their time, attendance, and accomplishments during their internships. Student scholar alumni are also requested to provide information to NOAA for internal tracking purposes. This information informs NOAA whether NOAA-funded students pursue and complete post-graduate NOAA-related science degrees, are employed by NOAA or a NOAA contractor, or in fields related to NOAA's mission.

NOAA EPP/MSI CSC grant award recipients are required to update the student tracker database with the required student information in order to

assess compliance with award performance measures. While supported by NOAA scholarship and internship programs, the Office of Education surveys students and mentors to gain feedback on experiences and to assess program impact. Feedback collected from surveys will be used to improve programs to ensure the highest quality experience for supported students.

In compliance with Service Equity Assessment (E.O. 13985, Section 5) NOAA identified a lack of demographic information on people that work for (FTE, contractor, or grantee), or are interns, students or grantees of NOAA as a barrier to measuring the success of stated Diversity, Equity, Inclusion, and Justice (DEIJ) goals, and gaining approval to collect such data will be important moving forward. NOAA has a continuing commitment to monitor the operation of its review and award processes to identify and address any inequities based on gender, race, ethnicity, or disability of its proposed applicants. To gather information needed for this important task, the applicant(s) should submit the requested information for each identified applicant(s) with each proposal using the proposed optional demographic survey. Submission of the requested information is voluntary and is not a precondition of award unless otherwise noted by the opportunity. Any individual not wishing to submit some or all the information should check the box provided for this purpose. Upon receipt of the application, this form will be separated from the application. This form will not be duplicated, and it will not be a part of the review process (unless specified by the opportunity). Data will be confidential.

The collected data supports the Office of Education's program performance measures. To measure the impact of these programs, the data collected are compared to the available data in the national education databases (e.g., National Science Foundation and National Center for Education Statistics) and NOAA workforce management database. Furthermore, the student data collection identifies degree and NOAA mission-aligned discipline pipeline areas, guiding NOAA's effort to recruit for its mission-aligned educational and training programs and future workforce.

This information collection includes several changes to the type and amount of information being collected as described below:

1. Updates to Student Scholarship Application and Reference Forms
2. Addition of Student and Mentor Surveys

3. Addition of the Hollings Preparation Program Application and Surveys
4. Graduate Fellowship Program Application and References
5. Addition of Student Opportunities Optional Demographic Data Collection
6. Removal of the Dr. Nancy Foster and the National Marine Fisheries Service (NMFS) Recruiting, Training, and Research (RTR) Program
7. Revision of the collection title.

## II. Method of Collection

Electronic applications and electronic forms are required from participants, and the primary methods of submission are email and internet transmission of electronic forms. Less than 1% of the application and reference forms may be mailed.

## III. Data

*OMB Control Number:* 0648-0568.

*Form Number(s):* None.

*Type of Review:* Regular submission (extension and revision of a current information collection).

*Affected Public:* Individuals or households; business or other for-profit; not-for-profit institutions; Federal, State, Local or Tribal Government.

*Estimated Number of Respondents:* 4,769.

*Estimated Time per Response:* Hollings and EPP/MSI Application—12 hours; Hollings and EPP/MSI Reference—1 hour; Alumni Update Form—0.1 hours; Student Tracker Form—28 hours; EPP/MSI Graduate Fellowship Application—12 hours; EPP/MSI Graduate Fellowship References—1 hour; Student Training Record Form—0.5 hours; Hollings and EPP/MSI Student Surveys—0.25 hours; Hollings and EPP/MSI Applicant Survey—0.1 hours; Hollings and EPP/MSI Mentor Surveys—0.5 hours; Hollings Preparation Program Application—1 hour; Hollings Preparation Program Surveys—0.33 hours; Student Opportunities Optional Demographic Data Collection—0.25 hours.

*Estimated Total Annual Burden Hours:* 12,067.50.

*Estimated Total Annual Cost to Public:* \$75 in recordkeeping/reporting costs.

*Respondent's Obligation:* Voluntary or Required to Obtain or Retain Benefits.

*Legal Authority:* The America COMPETES Act, Public Law 110-69, Section 4002; The Consolidated Appropriations Act, 2005, Public Law 108-447, Section 214; Executive Orders 13985 and 14035.

#### IV. Request for Comments

We are soliciting public comments to permit the Department/Bureau to: (a) Evaluate whether the proposed information collection is necessary for the proper functions of the Department, including whether the information will have practical utility; (b) Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used; (c) Evaluate ways to enhance the quality, utility, and clarity of the information to be collected; and (d) Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this ICR. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

**Sheleen Dumas,**

**ACTION:** 30-Day information collection notice.

**SUMMARY:** The Department of Defense has submitted to OMB for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act.

**DATES:** Consideration will be given to all comments received by April 27, 2022.

**ADDRESSES:** Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to [www.reginfo.gov/public/do/PRAMain](http://www.reginfo.gov/public/do/PRAMain). Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

**FOR FURTHER INFORMATION CONTACT:** Angela Duncan, 571-372-7574, [whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil](mailto:whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil).

**SUPPLEMENTARY INFORMATION:**

*Title; Associated Form; and OMB Number:* Police Records Check; DD Form 369; OMB Control Number 0704-0007.

*Type of Request:* Extension.

*Number of Respondents:* 175,000.

*Responses per Respondent:* 1.

*Annual Responses:* 175,000.

*Average Burden per Response:* 27 minutes.

*Annual Burden Hours:* 78,750 hours.

*Needs and Uses:* Title 10, U.S. Code, Sections 504, 505 and 12102 establish minimal standards for enlistment into the Armed Forces. Among other items, these sections specifically prohibit the enlistment of those convicted of a felony. The Services have therefore developed standards which address the acceptability for Service persons with

police records, adverse juvenile adjudications or court convictions. The standards are designed to screen out categories of persons who have probability of either becoming serious disciplinary problems or may not be able to adjust to the disciplinary demands of the Armed Forces. This information collection is needed to identify persons who may be undesirable for military service. The existence of a police record is one of the factors considered in establishing eligibility for enlistment or entry into highly sensitive career fields. Therefore, verification data from the individual and law enforcement agencies must be obtained before enlistment can occur. The form associated with this information collection is DD Form 369, “Police Record Check.” It is used by recruiters to inquire on applicants’ backgrounds prior to acceptance to the Armed Forces, when, in the judgment of the recruiter, an applicant may be withholding information of prior offense history.

*Affected Public:* Individuals or households.

*Frequency:* On occasion.

*Respondent’s Obligation:* Voluntary.

*OMB Desk Officer:* Ms. Jasmeet Seehra.

You may also submit comments and recommendations, identified by Docket ID number and title, by the following method:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.

*Instructions:* All submissions received must include the agency name, Docket ID number, and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at <http://www.regulations.gov> as they are received without change, including any personal identifiers or contact information.

*DoD Clearance Officer:* Ms. Angela Duncan.

Requests for copies of the information collection proposal should be sent to Ms. Duncan at [whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil](mailto:whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil).

Dated: March 22, 2022.

**SUPPLEMENTARY INFORMATION:**

*Title; Associated Form; and OMB Number:* Pentagon Reservation Parking Permit Application; DD Form 1199; OMB Control Number 0704–0395.

*Type of Request:* Extension.  
*Number of Respondents:* 4,200.  
*Responses per Respondent:* 1.  
*Annual Responses:* 4,200.  
*Average Burden per Response:* 5 minutes.

*Annual Burden Hours:* 350.  
*Needs and Uses:* WHS requires the collection of information from members of the public assigned to the Pentagon, Mark Center, and Suffolk buildings to obtain an authorized parking permit to park in a controlled parking facility without being enrolled in the Mass Transit Benefit Program. The authority is promulgated in 10 U.S.C. 2674 Operation and Control of Pentagon Reservation and Defense Facilities in National Capital Region; Administrative Instruction Number 88, Pentagon Reservation Vehicle Parking Program, and Executive Order 9397 (SSN), as amended.

*Affected Public:* Individuals or households.

**SUPPLEMENTARY INFORMATION:**

*Title; Associated Form; and OMB Number:* Innovative Readiness Training Community Application; OMB Control Number 0704–0583.

*Type of Request:* Revision.  
*Number of Respondents:* 100.  
*Responses per Respondent:* 1.  
*Annual Responses:* 100.  
*Average Burden per Response:* 5.5 hours.

*Annual Burden Hours:* 550 hours.

*Needs and Uses:* This information collection is necessary to support the DoD’s Innovative Readiness Training (IRT) program. Each year the military collects voluntary applications from communities to participate in IRT missions. Communities respond to the collection as they will have a chance to receive incidental support and services from the DoD during the conduct of the IRT mission and training. Currently the majority of missions are in the form of civil engineering projects or medical care. IRT, however, is not limited to this, and any application is considered for its potential training value and incidental community benefit. This information allows the best possible match between the community and military training requirements while ensuring each applicant is eligible to receive support and services under 10 U.S.C. 2012.

*Affected Public:* State, local, and tribal governments.

*Frequency:* On occasion.

*Respondent’s Obligation:* Voluntary.

## DEPARTMENT OF DEFENSE

### Office of the Secretary

[Docket ID: DoD-2022-HA-0013]

#### Submission for OMB Review; Comment Request

**AGENCY:** Defense Health Agency (DHA), Department of Defense (DoD).

**ACTION:** 30-Day information collection notice.

**SUMMARY:** The Department of Defense has submitted to OMB for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act.

**DATES:** Consideration will be given to all comments received by April 27, 2022.

**ADDRESSES:** Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to [www.reginfo.gov/public/do/PRAMain](http://www.reginfo.gov/public/do/PRAMain). Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

**FOR FURTHER INFORMATION CONTACT:** Angela Duncan, 571-372-7574, [whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil](mailto:whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil).

#### SUPPLEMENTARY INFORMATION:

*Title; Associated Form; and OMB Number:* Assistance Reporting Tool; OMB Control Number 0720-0060.

*Type of Request:* Extension.

*Number of Respondents:* 174,385.

*Responses per Respondent:* 1.

*Annual Responses:* 174,385.

*Average Burden per Response:* 15 minutes.

*Annual Burden Hours:* 43,596.3.

*Needs and Uses:* The Assistance Reporting Tool (ART) is a secure web-based system that captures feedback on and authorization related to TRICARE benefits. Users are comprised of Military Health System (MHS) customer service personnel, to include Beneficiary Counseling and Assistance Coordinators, Debt Collection Assistance Officers, personnel, family support, recruiting command, case managers, and others who serve in a customer service support role. The ART is also the primary means by which DHA-Great Lakes staff capture medical

authorization determinations and claims assistance information for remotely located service members, line of duty care, and for care under the Transitional Care for Service-related Conditions benefit. ART data reflects the customer service mission within the MHS: It helps customer service staff prioritize and manage their case workload; it allows users to track beneficiary inquiry workload and resolution, of which a major component is educating beneficiaries on their TRICARE benefits.

*Affected Public:* Individuals or households.

*Frequency:* On occasion.

*Respondent's Obligation:* Voluntary.

*OMB Desk Officer:* Ms. Julie Wise.

You may also submit comments and recommendations, identified by Docket ID number and title, by the following method:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.

*Instructions:* All submissions received must include the agency name, Docket ID number, and title for this **Federal Register** document. ## DEPARTMENT OF DEFENSE

### Office of the Secretary

[Docket ID DoD-2021-OS-0112]

#### Submission for OMB Review; Comment Request

**AGENCY:** Chief Information Officer (CIO), Department of Defense (DoD).

**ACTION:** 30-Day information collection notice.

**SUMMARY:** The Department of Defense has submitted to OMB for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act.

**DATES:** Consideration will be given to all comments received by April 27, 2022.

**ADDRESSES:** Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to [www.reginfo.gov/public/do/PRAMain](http://www.reginfo.gov/public/do/PRAMain). Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

**FOR FURTHER INFORMATION CONTACT:** Angela Duncan, 571-372-7574, [whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil](mailto:whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil).

#### SUPPLEMENTARY INFORMATION:

*Title; Associated Form; and OMB Number:* System Authorization Access Request Form; DD Form 2875; OMB Control Number 0704-SAAR.

*Type of Request:* New Request.

*Number of Respondents:* 900,000.

*Responses per Respondent:* 8.

*Annual Responses:* 7,200,000.

*Average Burden per Response:* 5 minutes.

*Annual Burden Hours:* 600,000.

*Needs and Uses:* The information collection is necessary for validating the trustworthiness of individuals who request access to DoD systems and information. When an individual requires access to a DoD information system, application, or database, he/she retrieves the DD Form 2875. Executive Order 10450 “Security Requirements for Government Employment” establishes the security requirements for government employment. The requestor’s security requirements (background investigation and clearance information) are identified on the DD Form 2875 and validated by the cognizant Security Manager. Collection of the requestor’s information ensures that any system access granted is consistent with the interests of the national security.

*Affected Public:* Individuals or households.

*Frequency:* As required.

*Respondent's Obligation:* Voluntary.

*OMB Desk Officer:* Ms. Jasmeet Seehra.

You may also submit comments and recommendations, identified by Docket ID number and title, by the following method:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.

## DEPARTMENT OF DEFENSE

### Office of the Secretary

[Docket ID DoD-2022-OS-0036]

#### Proposed Collection; Comment Request

**AGENCY:** The Office of the Director of Administration and Management, Department of Defense (DoD).

**ACTION:** 60-Day information collection notice.

**SUMMARY:** In compliance with the *Paperwork Reduction Act of 1995*, the Pentagon Force Protection Agency announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

**DATES:** Consideration will be given to all comments received by May 27, 2022.

**ADDRESSES:** You may submit comments, identified by docket number and title, by any of the following methods:

*Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.

*Mail:* Department of Defense, Office of the Assistant to the Secretary of Defense for Privacy, Civil Liberties, and Transparency, Regulatory Directorate, 4800 Mark Center Drive, Attn: Mailbox

24, Suite 08D09, Alexandria, VA 22350-1700.

*Instructions:* All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at <http://www.regulations.gov> as they are received without change, including any personal identifiers or contact information.

**FOR FURTHER INFORMATION CONTACT:** To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to 9000 Defense Pentagon, 5B890 Washington, DC 20301, ATTN: Mr. Dajonte Holsey or call 703-571-2939.

#### SUPPLEMENTARY INFORMATION:

*Title; Associated Form; and OMB Number:* Pentagon Facilities Access Control System; DD Form 2249; OMB Control Number 0704-AAFV.

*Needs and Uses:* The information will be used by the Pentagon Pass Office to conduct a National Crime Information Center check of all members of the public 18 years and older that request access to the Pentagon or a Pentagon facility. The method for collecting the required information depends on the status of the individual making the request and the length of time that they require access. There are two collection methods, the DD Form 2249 and the Visitor Management System (VMS) Registration Portal. The DD Form 2249 is used for individuals who already have a Personal Identity Verification (PIV) Card or Common Access Card (CAC). Individuals who do not meet the criteria for a PIV or CAC and require access into the Pentagon or a Pentagon facility can also fill out the DD Form 2249 to request a Pentagon Facility Alternate Credential. The VMS Registration Portal is filled out by individuals who are deemed visitors and do not have swipe access into the Pentagon or Pentagon facilities. These individuals must be registered by a sponsor and their visits must also be initiated by a sponsor.

#### DD Form 2249

*Affected Public:* Individuals or households.

*Annual Burden Hours:* 7,867.

*Number of Respondents:* 47,200.

*Responses per Respondent:* 1.

*Annual Responses:* 47,200.

*Average Burden per Response:* 10 minutes.

*Frequency:* On Occasion.

#### VMS Registration Portal

*Affected Public:* Individuals or households.

*Annual Burden Hours:* 24,617.

*Number of Respondents:* 211,000.

*Responses per Respondent:* 1.

*Annual Responses:* 211,000.

*Average Burden per Response:* 7 minutes.

*Frequency:* On Occasion.

Dated: March 22, 2022.

**Aaron T. Siegel,**

*Alternate OSD Federal Register Liaison Officer, Department of Defense.*

#### Submission for OMB Review; Comment Request

**AGENCY:** Defense Health Agency (DHA), Department of Defense (DoD).

**ACTION:** 30-Day information collection notice.

**SUMMARY:** The Department of Defense has submitted to OMB for clearance the

following proposal for collection of information under the provisions of the Paperwork Reduction Act.

**DATES:** Consideration will be given to all comments received by April 27, 2022.

**ADDRESSES:** Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to [www.reginfo.gov/public/do/PRAMain](http://www.reginfo.gov/public/do/PRAMain). Find this particular information collection by selecting "Currently under 30-day Review—Open for Public Comments" or by using the search function.

**FOR FURTHER INFORMATION CONTACT:**

Angela Duncan, 571-372-7574, [whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil](mailto:whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil).

**SUPPLEMENTARY INFORMATION:**

*Title; Associated Form; and OMB Number:* Diagnosis Related Groups Reimbursement Two Parts; OMB Control Number 0720-0017.

*Type of Request:* Extension.

*Number of Respondents:* 5,600.

*Responses per Respondent:* 1.

*Annual Responses:* 5,600.

*Average Burden per Response:* 1 hour.

*Annual Burden Hours:* 5,600.

*Needs and Uses:* The Department of Defense Authorization Act, 1984, Public Law 98-94 amended Title 10, section 1079(j)(2)(A) of the U.S.C. provided the Civilian Health and Medical Program of the Uniformed Services (CHAMPUS) with the statutory authority to reimburse institutional providers based on diagnosis-related groups (DRGs). The TRICARE/CHAMPUS DRG-based payment system is modeled on the Medicare Prospective Payment System and was implemented on October 1, 1987. The TRICARE/CHAMPUS DRG-based payments apply only to hospital's operating costs and do not include any amounts for hospitals' capital or direct medical education costs. Any hospital subject to the DRG-based payment system, except for children's hospitals (whose capital and direct medical education costs are incorporated in the children's hospital differential), who want to be reimbursed for allowed capital and direct medical education costs must submit a request for payment to the TRICARE/CHAMPUS contractor. The request allows TRICARE to collect the information necessary to properly reimburse hospitals for its share of these costs.

*Affected Public:* Individuals or households.

*Frequency:* On occasion.

*Respondent's Obligation:* Voluntary.

*OMB Desk Officer:* Ms. Julie Wise.

*Annual Burden Hours:* 11,156.3.

*Needs and Uses:* The DoD is required to provide and account for personnel, medical training and readiness and to establish a joint strategy to justify Medical Resources for Readiness and Peacetime Care. In response, the Assistant Secretary of Defense, Health Affairs/TRICARE Management Activity and the Service Surgeon Generals of the Army, Navy and Air Force approved the development of a single joint electronic database to provide visibility of and to support the preparedness of all Military Healthcare System (MHS) medical personnel (to meet national security emergencies). The Defense Medical Human Resources System Internet is a DoD application that provides the MHS with a joint comprehensive enterprise human resource system with capabilities to manage human capital across the entire spectrum of medical facilities and personnel types.

*Affected Public:* Individuals or households.

*Frequency:* On occasion.

*Respondent's Obligation:* Voluntary.

*OMB Desk Officer:* Ms. Julie Wise.

You may also submit comments and recommendations, identified by Docket ID number and title, by the following method:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.

*Instructions:* All submissions received must include the agency name, Docket ID number, and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at <http://www.regulations.gov> as they are received without change, including any personal identifiers or contact information.

*DoD Clearance Officer:* Ms. Angela Duncan.

Requests for copies of the information collection proposal should be sent to Ms. Duncan at [whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil](mailto:whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil).

Dated: March 22, 2022.

**Aaron T. Siegel,**

*Alternate OSD Federal Register Liaison Officer, Department of Defense.*

**BILLING CODE 5001–06–P**

## DEPARTMENT OF DEFENSE

### Office of the Secretary

[Docket ID DoD–2021–OS–0121]

### Submission for OMB Review; Comment Request

**AGENCY:** Washington Headquarters Services (WHS), Department of Defense (DoD).

**ACTION:** 30-Day information collection notice.

**SUMMARY:** The Department of Defense has submitted to OMB for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act.

**DATES:** Consideration will be given to all comments received by April 27, 2022.

**ADDRESSES:** Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to [www.reginfo.gov/public/do/PRAMain](http://www.reginfo.gov/public/do/PRAMain). Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

**FOR FURTHER INFORMATION CONTACT:**

Angela Duncan, 571–372–7574, [whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil](mailto:whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil).

**SUPPLEMENTARY INFORMATION:**

*Title; Associated Form; and OMB Number:* Fast Track Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery; OMB Control Number 0704–0553.

*Type of Request:* Extension.  
*Number of Respondents:* 1,200,000.  
*Responses per Respondent:* 1.  
*Annual Responses:* 1,200,000.  
*Average Burden per Response:* 15 minutes.

*Annual Burden Hours:* 300,000.  
*Needs and Uses:* The information collection provides a means to garner qualitative customer and stakeholder feedback in an efficient, timely manner, in accordance with the Administration’s commitment to improving service delivery. By qualitative feedback, we mean information that provides useful insights on perceptions and opinions, but are not statistical surveys that yield quantitative results that can be generalized to the population of study. This feedback will provide insights into customer or stakeholder perceptions, experiences and expectations, provide an early warning of issues with service, or focus attention on areas where communication, training or changes in operations might improve delivery of products or services. These collections

will allow for ongoing, collaborative and actionable communications between the Agency and its customers and stakeholders. It will also allow feedback to contribute directly to the improvement of program management.

The solicitation of feedback will target areas such as: Timeliness, appropriateness, accuracy of information, courtesy, efficiency of service delivery, and resolution of issues with service delivery. Responses will be assessed to plan and inform efforts to improve or maintain the quality of service offered to the public. If this information is not collected, vital feedback from customers and stakeholders on the Agency’s services will be unavailable.

The Agency will only submit a collection for approval under this generic clearance if it meets the following conditions:

- The collections are voluntary;
- The collections are low-burden for respondents (based on considerations of total burden hours, total number of respondents, or burden-hours per respondent) and are low-cost for both the respondents and the Federal Government;
- The collections are noncontroversial and do not raise issues of concern to other Federal agencies;
- Any collection is targeted to the solicitation of opinions from respondents who have experience with the program or may have experience with the program in the near future;
- Personally identifiable information is collected only to the extent necessary and is not retained;
- Information gathered will be used only internally for general service improvement and program management purposes and is not intended for release outside of the agency;
- Information gathered will not be used for the purpose of substantially informing influential policy decisions; and
- Information gathered will yield qualitative information; the collections will not be designed or expected to yield statistically reliable results or used as though the results are generalizable to the population of study.

Feedback collected under this generic clearance provides useful information, but it does not yield data that can be generalized to the overall population. This type of generic clearance for qualitative information will not be used for quantitative information collections that are designed to yield reliably actionable results, such as monitoring trends over time or documenting program performance. Such data uses require more rigorous designs that

address: The target population to which generalizations will be made, the sampling frame, the sample design (including stratification and clustering), the precision requirements or power calculations that justify the proposed sample size, the expected response rate, methods for assessing potential nonresponse bias, the protocols for data collection, and any testing procedures that were or will be undertaken prior to fielding the study. Depending on the degree of influence the results are likely to have, such collections may still be eligible for submission for other generic mechanisms that are designed to yield quantitative results.

*Affected Public:* Individuals or households; Businesses or other for-profits; Not-for-profit institutions; Federal Government; State, Local, or Tribal Governments.

*Frequency:* On occasion.

*Respondent's Obligation:* Voluntary.

*OMB Desk Officer:* Ms. Jasmeet Seehra.

You may also submit comments and recommendations, identified by Docket ID number and title, by the following method:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.

*Instructions:* All submissions received must include the agency name, Docket ID number, and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at <http://www.regulations.gov> as they are received without change, including any personal identifiers or contact information.

*DoD Clearance Officer:* Ms. Angela Duncan.

Requests for copies of the information collection proposal should be sent to Ms. Duncan at [whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil](mailto:whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil).

Dated: March 22, 2022.

**Aaron T. Siegel,**

*Alternate OSD Federal Register Liaison Officer, Department of Defense.*

## DEPARTMENT OF DEFENSE

### Department of the Army, Corps of Engineers

#### Notice of Virtual Public and Tribal Meetings Regarding the Review of Nationwide Permit 12; Establishment of a Public Docket; Request for Input

**AGENCY:** Department of the Army, U.S. Army Corps of Engineers, DoD.

**ACTION:** Notice; announcement of virtual public and tribal meeting dates and solicitation of input.

**SUMMARY:** The Department of the Army and the U.S. Army Corps of Engineers (Corps) (together, "Army"), are publishing this notice to announce a formal review of Nationwide Permit (NWP) 12 for Oil or Natural Gas Pipeline Activities. This review includes a series of public and tribal virtual meetings to gather input to inform future potential decision-making related to NWP 12 as well as a public docket to gather written comments.

**DATES:** Written recommendations must be received on or before May 27, 2022. The Army will hold public virtual meetings on the following dates: May 10, 2022, May 12, 2022, May 17, 2022, and May 19, 2022. In addition, the Army will hold tribal virtual meetings on the following dates: May 11, 2022 and May 18, 2022. Please refer to the **SUPPLEMENTARY INFORMATION** section below for additional information on these virtual meetings.

**ADDRESSES:** You may send written feedback, identified by Docket ID No. COE-2022-0003, by any of the following methods:

- *Federal eRulemaking Portal:* <https://www.regulations.gov/> (our preferred method). Follow the online instructions for submitting written feedback.

- *Email:* [usarmy.pentagon.hqda-asa-cw.mbx.asa-cw-reporting@army.mil](mailto:usarmy.pentagon.hqda-asa-cw.mbx.asa-cw-reporting@army.mil) and [nationwidepermit12@usace.army.mil](mailto:nationwidepermit12@usace.army.mil). Include Docket ID No. COE-2022-0003 in the subject line of the message.

*Instructions:* All submissions received must include Docket ID No. COE-2022-0003. Written feedback received may be posted without change to <https://www.regulations.gov/>, including any personal information provided. Out of an abundance of caution for the health of members of the public and staff and to reduce the risk of transmitting COVID-19, the Army cannot currently accept hand delivery of comments. The Army encourages the public to submit written feedback via <https://www.regulations.gov/> or email, as there

may be a delay in processing mail and faxes.

**FOR FURTHER INFORMATION CONTACT:** Stacey Jensen, in writing at the Office of the Assistant Secretary of the Army (Civil Works), 108 Army Pentagon, Washington, DC 20310-0108; by telephone at 703-697-4671; and by email at [usarmy.pentagon.hqda-asa-cw.mbx.asa-cw-reporting@army.mil](mailto:usarmy.pentagon.hqda-asa-cw.mbx.asa-cw-reporting@army.mil); or, David Olson, in writing at Regulatory Program, Headquarters, U.S. Army Corps of Engineers at 441 G. Street NW, Washington, DC 20314; by telephone at 202-761-4922; and by email at [nationwidepermit12@usace.army.mil](mailto:nationwidepermit12@usace.army.mil).

#### **SUPPLEMENTARY INFORMATION:**

##### **I. Background**

On January 13, 2021, the Department of the Army, U.S. Army Corps of Engineers (Corps) published a final rule (86 FR 2744) reissuing and modifying 12 existing Nationwide Permits (NWPs) and issuing four new NWPs, as well as the NWP general conditions and definitions. In addition, the Corps published another final rule (86 FR 73522) reissuing 40 NWPs and issuing one new NWP on December 27, 2021. Both sets of NWPs are currently set to expire on March 14, 2026.

The NWPs authorize certain activities under Section 404 of the Clean Water Act and Section 10 of the Rivers and Harbors Act of 1899 with no more than minimal individual and cumulative adverse effects to the environment. Section 404(e) of the Clean Water Act provides the statutory authority for NWP issuance, after notice and opportunity for public hearing, for a period of no more than five years after the date of issuance (33 U.S.C. 1344(e)). Nationwide permits are a type of general permit and are designed to regulate with little, if any, delay or paperwork certain activities in federally jurisdictional waters and wetlands (see 33 CFR 330.1(b)). This program can incentivize project proponents to reduce the adverse effects of their planned activities that would otherwise require an individual permit under Section 404 of the Clean Water Act and/or Section 10 of the Rivers and Harbors Act of 1899, in order to qualify for NWP authorization. The categories of activities authorized by NWPs must be similar in nature, cause only minimal adverse environmental effects when performed separately, and have only minimal cumulative adverse effects on the environment (see 33 U.S.C. 1344(e)(1)). By regulation, NWPs can be modified, reissued, revoked, or suspended before they expire (see 33 CFR 330.5).

NWPs were first issued by the Corps in 1977 (42 FR 37122) to authorize categories of activities that have minimal adverse effects on the aquatic environment, for the purpose of streamlining the authorization process for those minor activities. One such activity authorized in 1977 was for “Utility lines,” which included “any pipe or pipeline for the transportation of any gaseous, liquid, liquifiable, or slurry substance, for any purpose, and any cable, line, or wire for the transmission for any purpose of electrical energy, telephone and telegraph messages, and radio and television communication” (42 FR 37146). Over the iterations of the NWPs issued since 1977, this NWP has evolved and is commonly referred to as “NWP 12.”

During the previous Administration, a review effort was conducted consistent with Executive Order 13783, *Promoting Energy Independence and Economic Growth*, concluding with a report issued by the Office of the Assistant Secretary of the Army for Civil Works on October 25, 2017. The November 28, 2017 issue of the **Federal Register** (82 FR 56192) published a notice of availability for that report. The report included recommendations for modifying NWP 12 (e.g., lowering the number of Pre-Construction Notification (PCN) requirements) which informed the current version of NWP 12.

In the NWPs published in January 2021 (86 FR 2744), NWP 12 was modified and reissued expressly for “Oil or Natural Gas Pipeline Activities.” That final rule limited NWP 12 to only include oil or natural gas pipelines rather than all utility lines, as in previous NWP 12 versions. The January 2021 NWP 12 also removed a number of PCN requirements previously required for the NWP but also included a new PCN requirement for new oil or natural gas pipelines greater than 250 miles in length.

For ease of reference, the full text of the current NWP 12 issued on January 13, 2021 can be found at 86 FR 2860. Note that the general conditions and definitions, such as “single and complete linear project” (86 FR 2877), issued under the same rule action in January 2021 also apply to NWP 12.

## II. Review of the Nationwide Permit 12

Pursuant to Corps regulations, the Chief of Engineers is authorized at any time to consider whether modifications or other future actions on an existing NWP 12 may be appropriate. If the Chief of Engineers determines that an action may be appropriate, it implements any such action through the procedures set forth in 33 CFR 330.5.

President Biden signed an Executive Order on January 20, 2021, providing that “[i]t is, therefore, the policy of my Administration to listen to the science; to improve public health and protect our environment; to ensure access to clean air and water; to limit exposure to dangerous chemicals and pesticides; to hold polluters accountable, including those who disproportionately harm communities of color and low-income communities; to reduce greenhouse gas emissions; to bolster resilience to the impacts of climate change; to restore and expand our national treasures and monuments; and to prioritize both environmental justice and the creation of the well-paying union jobs necessary to deliver on these goals.” Protecting Public Health and the Environment and Restoring Science to Tackle the Climate Crisis, Executive Order 13990, 86 FR 7037 (Jan. 25, 2021). The order further “directs all executive departments and agencies (agencies) to immediately review . . . the promulgation of Federal regulations and other actions during the last 4 years that conflict with these important national objectives, and to immediately commence work to confront the climate crisis.” See also Fact Sheet: List of Agency Actions for Review, available at <https://www.whitehouse.gov/briefing-room/statements-releases/2021/01/20/fact-sheet-list-of-agency-actions-for-review/> (last visited on March 22, 2022), which included the January 2021 “Reissuance and Modification of Nationwide Permits” (86 FR 2744) in the “list of agency actions that heads of the relevant agencies will review in accordance with the Executive Order.”

Therefore, in conformance with Executive Order 13990, and for the reasons below, this **Federal Register** notice announces a formal review of NWP 12 to determine whether any future actions may be appropriate under 33 CFR 330.5 for NWP 12 prior to its March 14, 2026 expiration. The Army seeks input on the appropriate balance for allowing efficient authorization processes with due consideration for the potential effects of oil and natural gas pipelines as well as the need to engage and inform the public, particularly communities that potentially may be impacted by pipeline construction and operations.

Previous uses of NWP 12 have raised concerns identified in Executive Order 13990, such as environmental justice, climate change impacts, drinking water impacts, and notice to impacted communities. By way of example, in one recent scenario associated with the now defunct Byhalia oil pipeline, the Corps is aware that disadvantaged

communities in Memphis, Tennessee expressed environmental justice concerns that the proposed pipeline was to be located in an area which was already the site of many industrial and emission sources, would result in increased air emissions, and would be routed through a drinking water well field providing drinking water to communities and businesses in Memphis from the Memphis Sand Aquifer. The opposition to the Byhalia pipeline identified a concern that the NWP 12 process, as applied to the specific pipeline in question, did not afford any opportunity for notice to the community, a written comment period or a public hearing prior to the Corps providing authorization for the pipeline. In July 2021, the Plains All American Pipeline Company announced that it would not be proceeding with the Byhalia pipeline project or NWP 12. The Army would be interested in receiving comments on potential revisions to NWP 12, including potential off-ramps, to address the type of concerns raised in the Byhalia pipeline situation.

Before deciding on a path forward regarding any potential future actions which may be taken on NWP 12, the Army wants to gather public and tribal input on NWP 12 to make an informed decision. One important function of this engagement is to receive input from all stakeholders and perspectives. A series of questions are posed below in the Stakeholder Engagement Section to assist in receiving such input. The Army encourages comments on all aspects of NWP 12, to include consideration for going beyond the current construct towards what any new or revised NWP 12 should look like.

The Army acknowledges that there is not a single Federal agency charged with the responsibility for regulating oil pipeline routes or construction as well as the fact that the Corps has limited statutory authorities for construction of such pipelines in jurisdictional waters. However, that does not preclude consideration of alignment of the NWP 12 with Administration priorities and policies established in Executive Order 13990 (86 FR 7037), Executive Order 14008, “Tackling the Climate Crisis at Home and Abroad” (86 FR 7619), as well as due consideration of environmental justice and climate change factors. In addition, input related to compliance with the statutory authority for the NWP program (Section 404(e) of the Clean Water Act) is also of pertinent interest. The Army further acknowledges that current world events have highlighted the unstable nature of energy production and that domestic oil and natural gas production and

distribution will be considered in the review of NWP 12.

### III. Stakeholder Engagement

The Army poses a series of questions detailed below for stakeholder input. These questions are only guideposts for comments. Input on all aspects of NWP 12 are welcome. Written input to the docket as well as verbal input during the virtual meetings are strongly encouraged.

(1) As part of any future action the Army may take with respect to NWP 12, should the Army consider utilization of the procedures in 33 CFR 330.5 in advance of the current cycle for nationwide permit review?

(2) Should modifications be considered to further ensure NWP 12 has no more than minimal individual and cumulative adverse environmental effects under Section 404(e) of the Clean Water Act?

(3) Should modifications to NWP 12 be considered to provide notice to and an opportunity to be heard by potentially impacted communities, particularly with regard to environmental justice communities?

(4) Would it be prudent for the Corps to consider further limits on the NWP 12, PCN requirements, general conditions, and the ability of division and district engineers to modify, suspend, and revoke NWP authorizations to further ensure that the NWP 12 causes no more than minimal cumulative adverse environmental effects at the national, regional, and site scales?

(5) Should distinctions be drawn between new construction of oil and natural gas pipelines and maintenance of existing oil and natural gas pipelines?

(6) Should distinctions be drawn between oil pipelines and natural gas pipelines, especially in consideration of differences in overall Federal regulation of different types of pipelines?

(7) Does the NWP 12 verification process ensure that environmental justice and climate change factors are adequately considered?

(8) Are the PCN requirements for the current NWP 12 adequate?

(9) Should there be new triggers for oil or natural gas pipeline activities in jurisdictional waters that mandate review under an individual permit?

### IV. Public Meetings and Outreach

The Army will hold a series of public virtual meetings intended to solicit input to inform its review of potential future actions regarding NWP 12. The Army will hold four virtual meetings open to all stakeholders and an additional two virtual meetings specific

for tribal input. Registration information for the public and tribal virtual meetings is below. Separate notification to tribal leaders is also being provided.

Registration of members of the public who wish to attend the virtual meeting is required. Spots are limited and those unable to attend are encouraged to provide written comments to the docket which will be given equal consideration. Attendees will be asked to provide their name, title, affiliation, and contact information to include email address and daytime telephone number at registration.

Registration instructions can be found at the following website: <https://www.army.mil/article/254909>. Persons or organizations wishing to provide verbal input during the meetings will be selected on a first-come, first-serve basis. Due to the expected number of participants, individuals will be asked to limit their spoken presentation to three minutes. Once the speaking slots are filled, participants may be placed on a standby list to speak or continue to register to listen to the input.

Supporting materials and written feedback from those who do not have an opportunity to speak can be submitted to the docket as described above. The schedule for the NWP 12 virtual meetings is as follows:

#### Public virtual meetings:

—May 10, 2022, from 1 p.m. to 3 p.m. Eastern,

—May 12, 2022, from 6 p.m. to 8 p.m. Eastern,

—May 17, 2022, from 1 p.m. to 3 p.m. Eastern, and

—May 19, 2022, from 2 p.m. to 4 p.m. Eastern.

#### Tribal virtual meetings:

—May 11, 2022, from 1 p.m. to 3 p.m. Eastern, and

—May 18, 2022, from 2 p.m. to 4 p.m. Eastern.

**Michael L. Connor,**

*Assistant Secretary of the Army (Civil Works).*

**BILLING CODE 3720-58-P**

## DEPARTMENT OF DEFENSE

### Department of the Navy

[Docket ID USN-2022-HQ-0009]

#### Proposed Collection; Comment Request

**AGENCY:** Department of the Navy, Department of Defense (DoD).

**ACTION:** 60-Day information collection notice.

**SUMMARY:** In compliance with the *Paperwork Reduction Act of 1995*, the Department of the Navy announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

**DATES:** Consideration will be given to all comments received by May 27, 2022.

**ADDRESSES:** You may submit comments, identified by docket number and title, by any of the following methods:

*Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.

*Mail:* Department of Defense, Office of the Assistant to the Secretary of Defense for Privacy, Civil Liberties, and Transparency, Regulatory Directorate, 4800 Mark Center Drive, Attn: Mailbox 24, Suite 08D09, Alexandria, VA 22350-1700.

*Instructions:* All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at <http://www.regulations.gov> as they are received without change, including any personal identifiers or contact information.

**FOR FURTHER INFORMATION CONTACT:** To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to the Commanding General, Marine Corps Recruiting Command (G3), Officer Programs, 3280 Russell Road, Quantico, VA 22134-5103, ATTN: Captain David P. Foley, or contact Head, Officer Programs or Deputy, Officer Programs at 703-784-9449.

#### SUPPLEMENTARY INFORMATION:

*Title; Associated Form; and OMB*

*Number:* Personal Information Questionnaire; NAVMC 100064; OMB Control Number 0703-0012.

*Needs and Uses:* The Officer Selection Officer (OSO) will forward a Personal

Information Questionnaire (PIQ) form to individuals to be named by the applicant for completion and return as character references. The questionnaire establishes a pattern of moral character on individuals applying for the Marine Corps Officer Program.

**Affected Public:** Individuals or households.

**Annual Burden Hours:** 4,175.

**Number of Respondents:** 16,700.

**Responses per Respondent:** 1.

**Annual Responses:** 16,700.

**Average Burden per Response:** 15 minutes.

**Frequency:** On occasion.

The OSO will forward a Personal Information Questionnaire (PIQ) form to individuals to be named by the applicant for completion and return as character references. The PIQ is used to provide Headquarters, U.S. Marine Corps with a standardized method in rating officer program applicants in the areas of character, leadership, ability, and suitability for service as a commissioned officer. The OSO must ensure the integrity of the PIQ process by not allowing applicants to directly handle PIQ forms. All PIQs will be dated and are valid for one year. Individuals completing the form have volunteered to complete the form prior to being sent the questionnaire.

Dated: March 22, 2022.

**Aaron T. Siegel,**

*Alternate OSD Federal Register Liaison Officer, Department of Defense.*

## DEPARTMENT OF EDUCATION

[Docket No.: ED-2022-SCC-0041]

### Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; Part D Discretionary Grant Application—Individuals With Disabilities Education Act (1894-0001)

**AGENCY:** Office of Special Education and Rehabilitative Services (OSERS), Department of Education (ED).

**ACTION:** Notice.

**SUMMARY:** In accordance with the Paperwork Reduction Act of 1995, ED is proposing an extension without change of a currently approved collection.

**DATES:** Interested persons are invited to submit comments on or before April 27, 2022.

**ADDRESSES:** Written comments and recommendations for proposed information collection requests should be sent within 30 days of publication of this notice to [www.reginfo.gov/public/do/PRAMain](http://www.reginfo.gov/public/do/PRAMain). Find this information collection request by selecting "Department of Education" under "Currently Under Review," then check "Only Show ICR for Public Comment" checkbox. Comments may also be sent to [ICDocketmgr@ed.gov](mailto:ICDocketmgr@ed.gov).

**FOR FURTHER INFORMATION CONTACT:** For specific questions related to collection activities, please contact Justin Hampton, (202) 245-6111.

**SUPPLEMENTARY INFORMATION:** The Department of Education (ED), in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department

assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand the Department's information collection requirements and provide the requested data in the desired format. ED is soliciting comments on the proposed information collection request (ICR) that is described below. The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

*Title of Collection:* Part D Discretionary Grant Application—Individuals with Disabilities Education Act (1894–0001).

*OMB Control Number:* 1820–0028.

*Type of Review:* Extension without change of a currently approved collection.

*Respondents/Affected Public:* State, Local, and Tribal Governments.

*Total Estimated Number of Annual Responses:* 800.

*Total Estimated Number of Annual Burden Hours:* 21,200.

*Abstract:* The collection of information (Part D Discretionary Grant Application—Individuals with Disabilities Education Act) is necessary to ensure that potential applicants provide the information necessary for the Department of Education to ascertain the eligibility of the applicant and determine the programmatic responsiveness and technical quality of the application. Under the Individuals with Disabilities Education Act discretionary grants are authorized to support technology, State personnel development, personnel preparation, parent training and information, and technical assistance activities. In making competitive grant awards under this collection, applicants shall use the SF–424 series and those forms and instructions prescribed by the Secretary. The Individuals with Disabilities Education Act, which provides the programmatic authority for this collection, requires that grant awards under these programs be made through competition.

This collection is being submitted under the Streamlined Clearance Process for Discretionary Grant Information Collections (1894–0001). Therefore, the 30-day public comment period notice will be the only public comment notice published for this information collection.

Dated: March 23, 2022.

**Juliana Pearson,**

*PRA Coordinator, Strategic Collections and Clearance, Governance and Strategy Division, Office of Chief Data Officer, Office of Planning, Evaluation and Policy Development.*

## ELECTION ASSISTANCE COMMISSION

### Sunshine Act Meetings

**AGENCY:** U.S. Election Assistance Commission.

**ACTION:** Notice of public meeting agenda; correction.

**SUMMARY:** The U.S. Election Assistance Commission published a document in the **Federal Register** of March 21, 2022, regarding the scheduled meeting to vote on the Adoption of Voluntary Voting System Guidelines (VVSG) Lifecycle Policy 1.0. The notice contained an incorrect time.

**FOR FURTHER INFORMATION CONTACT:** Kristen Muthig, Telephone: (202) 897–9285, Email: [kmuthig@eac.gov](mailto:kmuthig@eac.gov).

**SUPPLEMENTARY INFORMATION:**

### Correction

In the **Federal Register** of March 21, 2022, in FR Doc. 2022–06025, on page 15982 in the first column, the **DATES** section should be corrected to read:

**DATES:** Tuesday, April 5, 2022, 2:30 p.m.–3:30 p.m. Eastern.

**Amanda Joiner,**

*Acting General Counsel, U.S. Election Assistance Commission.*

## DEPARTMENT OF ENERGY

### Environmental Management Site-Specific Advisory Board, Idaho Cleanup Project

**AGENCY:** Office of Environmental Management, Department of Energy.

**ACTION:** Notice of open meeting.

**SUMMARY:** This notice announces an in-person/virtual hybrid meeting of the Environmental Management Site-

Specific Advisory Board (EM SSAB), Idaho Cleanup Project (ICP). The Federal Advisory Committee Act requires that public notice of this meeting be announced in the **Federal Register**.

**DATES:** Tuesday, April 26, 2022; 8:00 a.m.–4:00 p.m.

The opportunities for public comment are at 10:15 a.m. and 3:45 p.m. MT.

These times are subject to change; please contact the ICP Citizens Advisory Board (CAB) Administrator (below) for confirmation of times prior to the meeting.

**ADDRESSES:** This meeting will be open to the public in-person at the Shoshone-Bannock Hotel and Event Center (address below) or virtually via Zoom. To attend virtually, please contact Jordan Davies, ICP CAB Administrator, by email [jdavies@northwindgrp.com](mailto:jdavies@northwindgrp.com) or phone (720) 452–7379, no later than 5:00 p.m. MT on Monday, April 25, 2022.

Board members, Department of Energy (DOE) representatives, agency liaisons, and support staff will participate in-person, strictly following COVID–19 precautionary measures, at: Shoshone-Bannock Hotel and Event Center, 777 Bannock Trail, Pocatello, ID 83202.

**FOR FURTHER INFORMATION CONTACT:** Jordan Davies, ICP CAB Administrator, by phone (720) 452–7379 or email [jdavies@northwindgrp.com](mailto:jdavies@northwindgrp.com) or visit the Board's internet homepage at <https://energy.gov/em/icpcab>.

### SUPPLEMENTARY INFORMATION:

*Purpose of the Board:* The purpose of the Board is to make recommendations to DOE–EM and site management in the areas of environmental restoration, waste management, and related activities.

*Tentative Agenda* (agenda topics may change up to the day of the meeting; please contact Jordan Davies for the most current agenda):

1. Shoshone-Bannock Tribes' Welcoming Prayer
2. Recent Public Outreach
3. Integrated Waste Treatment Unit (IWTU) Update
4. Fiscal Year 2023 Budget
5. Idaho Environmental Coalition, LLC (IEC) Contract Task 3
6. Cultural Repatriation
7. DOE Idaho National Laboratory Programmatic Agreement for National Historic Preservation Act

*Public Participation:* The in-person/online virtual hybrid meeting is open to the public either in-person at the Shoshone-Bannock Hotel and Event Center or via Zoom. To sign-up for

public comment, please contact the ICP CAB Administrator (above) no later than 5:00 p.m. MT on Monday, April 25, 2022. In addition to participation in the live public comment sessions identified above, written statements may be filed with the Board either five days before or five days after the meeting by sending them to the ICP CAB Administrator at the aforementioned email address. Written public comment received prior to the meeting will be read into the record. The Deputy Designated Federal Officer is empowered to conduct the meeting in a fashion that will facilitate the orderly conduct of business. Individuals wishing to make public comments will be provided a maximum of five minutes to present their comments.

*Minutes:* Minutes will be available by writing or calling Jordan Davies, ICP CAB Administrator, phone (720) 452-7379 or email [jdavies@northwindgrp.com](mailto:jdavies@northwindgrp.com). Minutes will also be available at the following website: <https://www.energy.gov/em/icpcab/listings/cab-meetings>.

Signed in Washington, DC, on March 22, 2022.

**LaTanya Butler,**

*Deputy Committee Management Officer.*

[FR Doc. 2022-06422 Filed 3-25-22; 8:45 am]

BILLING CODE 6450-01-P

## DEPARTMENT OF ENERGY

### Environmental Management Site-Specific Advisory Board, Northern New Mexico

**AGENCY:** Office of Environmental Management, Department of Energy.

**ACTION:** Notice of open virtual meeting.

**SUMMARY:** This notice announces an online virtual combined open meeting of the Consent Order Committee and Risk Evaluation and Management Committee of the Environmental Management Site-Specific Advisory Board (EM SSAB), Northern New Mexico. The Federal Advisory Committee Act requires that public notice of this online virtual meeting be announced in the **Federal Register**.

**DATES:** Wednesday, April 20, 2022; 1:00 p.m.–4:00 p.m.

**ADDRESSES:** This meeting will be held virtually via WebEx. To attend, please contact Menice Santistevan by email, [Menice.Santistevan@em.doe.gov](mailto:Menice.Santistevan@em.doe.gov), no later than 5:00 p.m. MT on Friday, April 15, 2022.

**FOR FURTHER INFORMATION CONTACT:** Menice Santistevan, Northern New Mexico Citizens' Advisory Board

(NNMCAB), 94 Cities of Gold Road, Santa Fe, NM 87506. Phone (505) 699-0631 or Email: [Menice.Santistevan@em.doe.gov](mailto:Menice.Santistevan@em.doe.gov).

#### SUPPLEMENTARY INFORMATION:

*Purpose of the Board:* The purpose of the Board is to make recommendations to DOE-EM and site management in the areas of environmental restoration, waste management, and related activities.

*Purpose of the Consent Order Committee (COC):* It is the mission of the COC to review the Consent Order, evaluate its strengths and weaknesses, and make recommendation as to how to improve the Consent Order. It is also within the mission of this committee to review and ensure implementation of NNM CAB Recommendation 2019-02, Improving the Utility of the Consent Order with Supplementary Information. The COC will work with the NNM CAB Risk Evaluation and Management Committee to review the risk-based approaches used to determine the prioritization of cleanup actions, as well as the "relative risk ranking" of the campaigns, targets, and milestones by the NNM CAB, to be recommended for use by the DOE EM Los Alamos Field Office (EM-LA) both within and outside of those activities covered by the Consent Order.

*Purpose of the Risk Evaluation and Management Committee (REMC):* The REMC provides external citizen-based oversight and recommendations to the DOE EM-LA on human and ecological health risk resulting from historical, current, and future hazardous and radioactive legacy waste operations at Los Alamos National Laboratory (LANL). The REMC will, to the extent feasible, stay informed of DOE EM-LA and LANL's environmental restoration and long-term environmental stewardship programs and plans. The REMC will also work with the NNM CAB COC to provide DOE EM-LA and LANL with the public's desires in determining cleanup priorities. The REMC will prepare recommendations that represent to the best of committee's knowledge and ability to determine, the public's position on human and ecological health risk issues pertaining to direct radiation or contaminant exposure to soils, air, surface and groundwater quality, or the agricultural and ecological environment.

#### Tentative Agenda

- Approval of Agenda
- Old Business
  - Committee Work Plans
- New Business
- Primer on Radiological Terms

- Public Comment Period
- Update from Deputy Designated Federal Officer

*Public Participation:* The online virtual meeting is open to the public. To sign up for public comment, please contact Menice Santistevan by email, [Menice.Santistevan@em.doe.gov](mailto:Menice.Santistevan@em.doe.gov), no later than 5:00 p.m. MT on Friday, April 15, 2022. Written statements may be filed with the Committees either before or within five days after the meeting by sending them to Menice Santistevan at the aforementioned email address. The Deputy Designated Federal Officer is empowered to conduct the meeting in a fashion that will facilitate the orderly conduct of business. Individuals wishing to make public comments will be provided a maximum of five minutes to present their comments.

*Minutes:* Minutes will be available by emailing or calling Menice Santistevan at the email address or telephone number listed above. Minutes and other Board documents are on the internet at: <http://energy.gov/em/nmcb/meeting-materials>.

Signed in Washington, DC, on March 22, 2022.

**LaTanya Butler,**

*Deputy Committee Management Officer.*

## DEPARTMENT OF ENERGY

### DOE/NSF Nuclear Science Advisory Committee

**AGENCY:** Office of Science, Department of Energy.

**ACTION:** Notice of open virtual meeting.

**SUMMARY:** This notice announces a meeting of the DOE/NSF Nuclear Science Advisory Committee (NSAC). The Federal Advisory Committee Act requires that public notice of these meetings be announced in the **Federal Register**.

**DATES:** Thursday, April 28, 2022; 10 a.m.–3:15 p.m. (eastern time).

**ADDRESSES:** This meeting is open to the public. This meeting will be held digitally via Zoom. Information to participate can be found on the website closer to the meeting date at: <https://science.osti.gov/np/nsac/meetings>.

**FOR FURTHER INFORMATION CONTACT:** Brenda L. May, U.S. Department of Energy; SC-36/Germantown Building, 1000 Independence Avenue SW, Washington, DC 20585-1290; Telephone: 301-903-0536 or email: [brenda.may@science.doe.gov](mailto:brenda.may@science.doe.gov).

**SUPPLEMENTARY INFORMATION:**

*Purpose of the Board:* The purpose of the Board is to provide advice and guidance on a continuing basis to the Department of Energy and the National Science Foundation on scientific priorities within the field of basic nuclear science research.

### Tentative Agenda

Thursday, April 28, 2022

- Call to Order, Introductions, Review of the Agenda
- Perspectives from Department of Energy and National Science Foundation
- Update from the Department of Energy and National Science Foundation's Nuclear Physics Office's
- Presentation of New Charge for Nuclear Data
- Discussion of the Nuclear Data Charge
- Long Range Plan Discussion
- NSAC Business/Discussions
- Public Comment

*Public Participation:* The meeting is open to the public. Please check the website below for updates and information on how to view the meeting. If you would like to file a written statement with the Committee, you may do so either before or after the meeting. If you would like to make oral statements regarding any of these items on the agenda, you should contact Brenda L. May at [Brenda.May@science.doe.gov](mailto:Brenda.May@science.doe.gov). You must make your request for an oral statement at least five business days before the meeting. Reasonable provision will be made to include the scheduled oral statements on the agenda. The Chairperson of the Committee will conduct the meeting to facilitate the orderly conduct of business. Public comment will follow the 10-minute rule.

*Minutes:* The minutes of the meeting will be available for review on the U.S. Department of Energy's Office of Nuclear Physics website at <https://science.osti.gov/np/nsac/meetings>.

Signed in Washington, DC, on March 14, 2022.

### ENVIRONMENTAL PROTECTION AGENCY

[EPA-HQ-OPPT-2019-0104; FRL-9473-01-OCSPP]

### Safer Choice Partner of the Year Awards for 2022; Call for Submissions

**AGENCY:** Environmental Protection Agency (EPA).

**ACTION:** Notice.

**SUMMARY:** The Safer Choice program in the Environmental Protection Agency (EPA) is accepting submissions for its 2022 Safer Choice Partner of the Year Awards. EPA developed the Partner of the Year Awards to recognize the leadership contributions of Safer Choice partners and stakeholders who, over the past year, have shown achievement in the design, manufacture, selection and use of products with safer chemicals, that further outstanding or innovative source reduction. EPA especially encourages submission of award applications that show how the applicant's work in the design, manufacture, selection and use of those products promotes environmental justice, bolsters resilience to the impacts of climate change, results in cleaner air or water, or improves drinking water quality. All Safer Choice stakeholders and program participants in good standing are eligible for recognition. Interested parties who would like to be considered for this award should submit to EPA information about their accomplishments and contributions during 2021. There is no form associated with this year's application. EPA will recognize award winners at a Safer Choice Partner of the Year Awards ceremony in the fall of 2022.

**DATES:** Submissions are due on or before May 31, 2022.

**ADDRESSES:** Please submit materials by email to [saferchoice\\_support@abtassoc.com](mailto:saferchoice_support@abtassoc.com) and copy [rutsch.linda@epa.gov](mailto:rutsch.linda@epa.gov). The docket for this action, identified by docket information (ID) number EPA-HQ-OPPT-2019-0104, is available at <http://www.regulations.gov>. Candidates interested in learning more about the Partner of the Year Awards should refer to the Safer Choice website at <https://www.epa.gov/saferchoice/safer-choice-partner-year-awards>.

Due to public health concerns related to COVID-19, the EPA Docket Center and Reading Room are open to visitors by appointment only. For further information on the EPA Docket Center (EPA/DC) services, docket contact information and the current status of the EPA/DC and Reading Room, please visit <https://www.epa.gov/dockets>.

#### FOR FURTHER INFORMATION CONTACT:

Linda Rutsch, Data Gathering and Analysis Division (7406M), Office of Pollution Prevention and Toxics, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460-0001; telephone number: (202) 343-9924; email address: [rutsch.linda@epa.gov](mailto:rutsch.linda@epa.gov).

#### SUPPLEMENTARY INFORMATION:

### I. Does this action apply to me?

You may be affected by this action if you are a Safer Choice program partner or stakeholder. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Affected entities may include:

- Other Basic Inorganic Chemical Manufacturing (NAICS code 325180).
- All Other Basic Organic Chemical Manufacturing (Primary) (NAICS code 325199).
- Pesticide and Other Agricultural Chemical Manufacturing (NAICS code 325320).
- Paint and Coating Manufacturing (NAICS code 325510).
- Adhesive Manufacturing (NAICS code 325520).
- Soap and Other Detergent Manufacturing (NAICS code 325611).
- Polish and Other Sanitation Good Manufacturing (NAICS code 325612).
- Surface Active Agent Manufacturing (Primary) (NAICS code 325613).
- Toilet Preparation Manufacturing (NAICS code 325620).
- Photographic Film, Paper, Plate, and Chemical Manufacturing (NAICS code 325992).
- All Other Miscellaneous Chemical Product and Preparation Manufacturing (NAICS code 325998).
- Service Establishment Equipment and Supplies Merchant Wholesalers (Primary) (NAICS code 423850).
- Other Chemical and Allied Products Merchant Wholesalers (Primary) (NAICS code 424690).
- Supermarkets and Other Grocery (except Convenience) Stores (Primary) (NAICS code 445110).
- All Other Specialty Food Stores (NAICS code 445299).
- Pharmacies and Drug Stores (NAICS code 446110).
- Office Supplies and Stationery Stores (NAICS code 453210).
- All Other Miscellaneous Store Retailers (except Tobacco Stores) (Primary) (NAICS code 453998).
- Electronic Shopping and Mail-Order Houses (NAICS code 454110).
- Research and Development in Biotechnology (except Nanobiotechnology) (Primary) (NAICS code 541714).
- Facilities Support Services (NAICS code 561210).
- Janitorial Services (NAICS code 561720).
- Carpet and Upholstery Cleaning Services (NAICS code 561740).
- Elementary and Secondary Schools (NAICS code 611110).

- Colleges, Universities, and Professional Schools (NAICS code 611310).
- Promoters of Performing Arts, Sports, and Similar Events with Facilities (NAICS code 711310).
- Dry Cleaning and Laundry Services (NAICS code 8123).
- Civic and Social Organizations (Primary) (NAICS code 813410).
- Business Associations (Primary) (NAICS code 813910).
- Other General Government Support (NAICS code 921190).
- Administration of Air and Water Resource and Solid Waste Management Programs (Primary) (NAICS code 924110).

## II. What is the Safer Choice program?

As part of its environmental mission, the Safer Choice program partners with businesses to help consumers and commercial buyers identify products with safer chemical ingredients, without sacrificing quality or performance. Toward this end, the Safer Choice program certifies products containing ingredients that have met the program's specific and rigorous human health and environmental toxicological criteria. The Safer Choice program allows companies to use its label on certified products that contain safer ingredients and perform, as determined by expert evaluation. The Safer Choice program certification represents a high level of achievement in formulating products that are safer for people and the environment. The purpose of the Partner of the Year Awards is to recognize the leadership contributions of Safer Choice partners and stakeholders who, over the past year, have shown achievement in the design, manufacture, selection and use of products with safer chemicals, that further outstanding or innovative source reduction. EPA especially encourages submission of award applications that show how the applicant's work in the design, manufacture, selection and use of those products promotes environmental justice, bolsters resilience to the impacts of climate change, results in cleaner air or water, or improves drinking water quality.

## III. How can I participate?

To be considered for a Partner of the Year Award, candidates should notify the Safer Choice program of their interest. They should submit supporting information on their accomplishments and contributions focusing on calendar year 2021. There is no form associated with this year's application. Candidates interested in learning more about the Partner of the Year Awards should refer

to the Safer Choice website: <https://www.epa.gov/saferchoice/safer-choice-partner-year-awards>.

## ENVIRONMENTAL PROTECTION AGENCY

**[EPA-HQ-OPP-2021-0743; FRL-9182-01-OCSP]**

### Agency Information Collection Activities; Proposed Renewal and Request for Comment; Reporting in the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Grant Database

**AGENCY:** Environmental Protection Agency (EPA).

**ACTION:** Notice.

**SUMMARY:** In compliance with the Paperwork Reduction Act (PRA), this document announces the availability of and solicits public comment on the following Information Collection Request (ICR) that EPA is planning to submit to the Office of Management and Budget (OMB). The ICR, entitled: "Reporting in the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Grant Database," identified by EPA ICR No. 2511.03 and OMB Control No. 2070-0198, represents the renewal of an existing ICR that is scheduled to expire on December 31, 2022. Before submitting the ICR to OMB for review and approval under the PRA, EPA is soliciting comments on specific aspects of the proposed information collection that is summarized in this document. The ICR and accompanying material are available in the docket for public review and comment.

**DATES:** Comments must be received on or before May 27, 2022.

**ADDRESSES:** Submit your comments, identified by docket identification (ID) number EPA-HQ-OPP-2021-0743, through the Federal eRulemaking Portal at <https://www.regulations.gov>. Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Additional instructions on commenting or visiting the docket, along with more information

about dockets generally, is available at <https://www.epa.gov/dockets>.

**FOR FURTHER INFORMATION CONTACT:** Carolyn Siu, Mission Support Division 7101M), Office of Program Support, Office of Chemical Safety and Pollution Prevention, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460-0001; telephone number: (202) 566-1205; email address: [siu.carolyn@epa.gov](mailto:siu.carolyn@epa.gov).

## SUPPLEMENTARY INFORMATION:

### I. What information is EPA particularly interested in?

Pursuant to PRA section 3506(c)(2)(A) (44 U.S.C. 3506(c)(2)(A)), EPA specifically solicits comments and information to enable it to:

1. Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility.

2. Evaluate the accuracy of the Agency's estimates of the burden of the proposed collection of information, including the validity of the methodology and assumptions used.

3. Enhance the quality, utility, and clarity of the information to be collected.

4. Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of responses. In particular, EPA is requesting comments from very small businesses (those that employ less than 25) on examples of specific additional efforts that EPA could make to reduce the paperwork burden for very small businesses affected by this collection.

### II. What information collection activity or ICR does this action apply to?

**Title:** Reporting in the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Grant Database.

**ICR numbers:** EPA ICR No. 2511.03; OMB Control No.: 2070-0198.

**ICR status:** The existing ICR is currently scheduled to expire on December 31, 2022. Under the PRA, 44 U.S.C. 3501 *et seq.*, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information, unless it displays a currently valid OMB control number. The OMB control numbers are displayed either by publication in the **Federal Register** or by other appropriate means, such as on the related collection

instrument or form, if applicable. The display of OMB control numbers for certain EPA regulations is consolidated in 40 CFR part 9.

*Abstract:* This ICR describes the burden activities for the electronic collection of information for the pre-award burden activity for creating a work plan and the post-award and after-the-grant award activities related to reporting accomplishments to implement EPA's FIFRA State and Tribal Assistance Grant (STAG) program (7 U.S.C. 136u).

In 2019, a workgroup comprised of EPA, state and tribal representatives converted the FIFRA Work Plan and Report Template (FIFRA Template), which was in Excel, into a pilot program of a web-based system housed in the Central Data Exchange (CDX) platform, called the FIFRA Grant Database (FGD). When the permanent use of the pilot program is approved by OMB, then the use of the FGD will become mandatory, replacing the excel web-based system entirely.

This ICR also augments the ICR entitled "EPA's General Regulation for Assistance Programs ICR" (OMB Control No. 2030-0020; EPA ICR No. 0938.18) which accounts for the current PRA burden for the minimum management requirements for all recipients of EPA grants or cooperative agreements (assistance agreements). This ICR provides the burden assessment for the FIFRA program specific activities associated with using a standardized online template for only the STAG program reporting.

The ICR supporting statement, which is available in the docket along with other related materials, provides a detailed explanation of the collection activities and the burden estimate that is only briefly summarized in this document.

*Burden statement:* The annual public reporting and recordkeeping burden for this collection of information is estimated to average 87.55 hours per response. Burden is defined in 5 CFR 1320.3(b).

*Respondents/affected entities:* Entities potentially affected by this ICR are state, local governments, Indian tribes, and U.S. territories that are grantees of Federal funds participating in the FIFRA STAG program. The corresponding North American Industry Classification System (NAICS) codes for respondents include: 9241 (Administration of Environmental Quality programs); and 92115 (American Indians and Alaska Native Tribal Governments).

*Respondent's obligation to respond:* Mandatory, as per FIFRA sections 23(a)(1) and 23(a)(2).

*Frequency of response:* Biannually.

*Total estimated number of potential respondents:* 81.

*Total estimated average number of responses for each respondent:* 2.

*Total estimated annual burden hours:* 26,195 hours.

*Total estimated annual costs:* \$ 2,102,179, which includes an estimated cost of \$ 0 for non-burden hour paperwork costs, e.g., capital investment or maintenance and operational costs.

### III. Are there changes in the estimates from the last approval?

Due to an error, the annual burden hours for "per-event" were incorrectly estimated at 46.15 hours to conduct STAG grant activities. The correct number is 323.4 hours "per event" for conducting STAG activities. For this renewal ICR, there is no increase over the currently approved ICR in terms of the per event annual paperwork burden hours for grantees to use the FIFRA grant Database. The FIFRA STAG Grant online template annual overall burden since the renewal ICR remains the same; all 81 recipients may use the reporting tool and instructions. The overall burden hours are therefore also the same at 26,195 hours. The burden cost in this ICR has increased relative to the previous ICR due to updating the wages. These changes are characterized as adjustments.

In addition, OMB has requested that EPA move towards using the 18-question format for ICR Supporting Statements used by other federal agencies and departments and that is based on the submission instructions established by OMB in 1995, replacing the alternate format developed by EPA and OMB prior to 1995. The Agency does not expect this change in format to result in substantive changes to the information collection activities or related estimated burden and costs.

### IV. What is the next step in the process for this ICR?

EPA will consider comments received and amend the ICR as appropriate. The final ICR package will then be submitted to OMB for review and approval pursuant to 5 CFR 1320.12. EPA will issue another **Federal Register** document pursuant to 5 CFR 1320.5(a)(1)(iv) to announce the submission of the ICR to OMB and the opportunity to submit additional comments to OMB.

If you have any questions about this ICR or the approval process, please

contact the person listed under **FOR FURTHER INFORMATION CONTACT.**

*Authority:* 44 U.S.C. 3501 *et seq.*

Dated: March 22, 2022.

## FEDERAL COMMUNICATIONS COMMISSION

[**IB Docket No. 16-185; DA 22-255; FRS 79035**]

### Announcement of Renewal of the World Radiocommunication Conference Advisory Committee and Solicitation of Members

**AGENCY:** Federal Communications Commission.

**ACTION:** Notice.

**SUMMARY:** In accordance with the Federal Advisory Committee Act, the Federal Communications Commission announces its intent to renew the World Radiocommunication Conference Advisory Committee (WRC Advisory Committee) and its solicitation of members. The renewal will be effective for a two-year period beginning March 31, 2022, following consultation with the Committee Management Secretariat, General Services Administration. The WRC Advisory Committee is a federal advisory committee under the Federal Advisory Committee Act. The Commission seeks applications from interested organizations, institutions, or other entities from both the public and private sectors that wish to be considered for membership on the Committee.

**DATES:** To be renewed for two years, starting March 31, 2022; Nominations, including contact information and the statement of qualifications, should be submitted by email to [WRC-23@fcc.gov](mailto:WRC-23@fcc.gov) by March 31, 2022.

**ADDRESSES:** Federal Communications Commission, 45 L Street NE, Washington, DC 20554.

**FOR FURTHER INFORMATION CONTACT:** Dante Ibarra, Designated Federal Officer (DFO), WRC Advisory Committee, FCC International Bureau, Global Strategy and Negotiations Division, at (202) 418-0610. Email: [dante.ibarra@fcc.gov](mailto:dante.ibarra@fcc.gov).

**SUPPLEMENTARY INFORMATION:** After consultation with the Committee Management Secretariat, General Services Administration, the Commission intends to renew the charter of the WRC Advisory Committee

for two years, commencing March 31, 2022. Its scope of activities is to address issues contained in the agenda for the 2023 World Radio Conference (WRC-23). Each organization, institution or entity (organizational applicant) may propose one primary representative. Organizational applicants are also encouraged to propose one alternate representative. Submission of the nomination of the organizational applicant's primary representative or alternative representative should include the nominated person's complete contact information (email address, telephone number and mailing address) as well as a resume. Similarly, those requesting appointment in their individual capacities (and not as an organizational applicant) should also provide complete contact information and a resume with their submission. The public notice DA 22-255 includes additional information on the membership application process and can be found at <https://www.fcc.gov/document/fcc-announces-rechartering-and-solicitation-members-wac>. Because the Commission recognizes that technologies and spectrum priorities may evolve over the course of the multi-year WRC-23 preparatory cycle and that the expertise or experience relevant to the mission of this Committee may change over time, the Commission will continue to accept applications for Committee Membership on a rolling basis after the initial March 31, 2022 deadline. The WRC-23 Advisory Committee will continue to provide to the FCC advice, data, and technical analyses, and will formulate recommendations relating to the preparation of U.S. proposals and positions for WRC-23.

Federal Communications Commission.

**Nese Guendelsberger,**

*Deputy Chief, International Bureau.*

## FEDERAL COMMUNICATIONS COMMISSION

[OMB 3060-0742; FR ID 78661]

### Information Collection Being Reviewed by the Federal Communications Commission

**AGENCY:** Federal Communications Commission.

**ACTION:** Notice and request for comments.

**SUMMARY:** As part of its continuing effort to reduce paperwork burdens, and as required by the Paperwork Reduction

Act (PRA) of 1995, the Federal Communications Commission (FCC or the Commission) invites the general public and other Federal agencies to take this opportunity to comment on the following information collection. Comments are requested concerning: Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; the accuracy of the Commission's burden estimate; ways to enhance the quality, utility, and clarity of the information collected; ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and ways to further reduce the information collection burden on small business concerns with fewer than 25 employees. The FCC may not conduct or sponsor a collection of information unless it displays a currently valid control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid Office of Management and Budget (OMB) control number.

**DATES:** Written PRA comments should be submitted on or before May 27, 2022. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below as soon as possible.

**ADDRESSES:** Direct all PRA comments to Nicole Ongele, FCC, via email [PRA@fcc.gov](mailto:PRA@fcc.gov) and to [nicole.ongele@fcc.gov](mailto:nicole.ongele@fcc.gov).

**FOR FURTHER INFORMATION CONTACT:** For additional information about the information collection, contact Nicole Ongele, (202) 418-2991.

**SUPPLEMENTARY INFORMATION:**

*OMB Control Number:* 3060-0742.

*Title:* Sections 52.21 through 52.36,

Telephone Number Portability, 47 CFR part 52, subpart (C), and CC Docket No. 95-116.

*Form Number:* N/A.

*Type of Review:* Revision of a currently approved collection.

*Respondents:* Business or other for profit entities.

*Number of Respondents and Responses:* 3,626 respondents; 10,002,000 responses.

*Estimated Time per Response:* 0.0666 hours-10 hours.

*Frequency of Response:* On occasion and one-time reporting requirements, recordkeeping requirement, and third party disclosure requirement.

*Obligation to Respond:* Required to obtain or retain benefits. Statutory authority for this information collection is contained in 47 U.S.C. 151, 152, 154(i), 201-205, 215, 251(b)(2), 251(e)(2) and 332 of the Communications Act of 1934, as amended.

*Total Annual Burden:* 673,410 hours.

*Total Annual Cost:* No cost.

*Privacy Impact Assessment:* No impact(s).

*Nature and Extent of Confidentiality:*

The Commission is not requesting respondents to submit confidential information to the Commission. If the respondents wish confidential treatment of their information, they may request confidential treatment under 47 CFR 0.459 of the Commission's rules.

*Needs and Uses:* Section 251(b)(2) of the Communications Act of 1934, as amended, requires LECs to "provide, to the extent technically feasible, number portability in accordance with requirements prescribed by the Commission." Through the LNP process, consumers have the ability to retain their phone number when switching telecommunications service providers, enabling them to choose a provider that best suits their needs and enhancing competition. In the Porting Interval Order and Further Notice, the Commission mandated a one business day porting interval for simple wireline-to-wireline and intermodal port requests. The information collected in the standard local service request data fields is necessary to complete simple wireline-to-wireline and intermodal ports within the one business day porting interval mandated by the Commission and will be used to comply with Section 251 of the Telecommunications Act of 1996.

Federal Communications Commission.

**Marlene Dortch,**

*Secretary, Office of the Secretary.*

## DEPARTMENT OF DEFENSE

### GENERAL SERVICES ADMINISTRATION

### NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

[OMB Control No. 9000-0069; Docket No. 2022-0053; Sequence No. 10]

### Information Collection; Indirect Cost Rate Proposals, Payments to Small Business Subcontractors, and Bankruptcy Notifications

**AGENCY:** Department of Defense (DOD), General Services Administration (GSA),

and National Aeronautics and Space Administration (NASA).

**ACTION:** Notice and request for comments.

**SUMMARY:** In accordance with the Paperwork Reduction Act of 1995, and the Office of Management and Budget (OMB) regulations, DoD, GSA, and NASA invite the public to comment on a revision concerning indirect cost rate proposals, payments to small business subcontractors, and bankruptcy notifications.

DoD, GSA, and NASA invite comments on: Whether the proposed collection of information is necessary for the proper performance of the functions of Federal Government acquisitions, including whether the information will have practical utility; the accuracy of the estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including the use of automated collection techniques or other forms of information technology. OMB has approved this information collection for use through September 30, 2022. DoD, GSA, and NASA propose that OMB extend its approval for use for three additional years beyond the current expiration date.

**DATES:** DoD, GSA, and NASA will consider all comments received by May 27, 2022.

**ADDRESSES:** DoD, GSA, and NASA invite interested persons to submit comments on this collection through <https://www.regulations.gov> and follow the instructions on the site. This website provides the ability to type short comments directly into the comment field or attach a file for lengthier comments. If there are difficulties submitting comments, contact the GSA Regulatory Secretariat Division at 202-501-4755 or [GSARegSec@gsa.gov](mailto:GSARegSec@gsa.gov).

**Instructions:** All items submitted must cite OMB Control No. 9000-0069, Indirect Cost Rate Proposals, Payments to Small Business Subcontractors, and Bankruptcy Notifications. Comments received generally will be posted without change to <https://www.regulations.gov>, including any personal and/or business confidential information provided. To confirm receipt of your comment(s), please check [www.regulations.gov](https://www.regulations.gov), approximately two-to-three days after submission to verify posting.

**FOR FURTHER INFORMATION CONTACT:** Zenaida Delgado, Procurement Analyst,

at telephone 202-969-7207, or [zenaida.delgado@gsa.gov](mailto:zenaida.delgado@gsa.gov).

**SUPPLEMENTARY INFORMATION:**

**A. OMB Control Number, Title, and Any Associated Form(s)**

9000-0069, Indirect Cost Rate Proposals, Payments to Small Business Subcontractors, and Bankruptcy Notifications.

**B. Need and Uses**

DoD, GSA, and NASA are combining OMB Control Nos. for the Federal Acquisition Regulation (FAR) by FAR part. This consolidation is expected to improve industry's ability to easily and efficiently identify burdens associated with a given FAR part. The review of the information collections by FAR part allows improved oversight to ensure there is no redundant or unaccounted for burden placed on industry. Lastly, combining information collections in a given FAR part is also expected to reduce the administrative burden associated with processing multiple information collections.

This justification supports the revision of OMB Control No. 9000-0069 and combines it with the previously approved information collections under OMB Control No. 9000-0196, with the new title "Indirect Cost Rate Proposals, Payments to Small Business Subcontractors, and Bankruptcy Notifications". Upon approval of this consolidated information collection, OMB Control No. 9000-0196 will be discontinued. The burden requirements previously approved under the discontinued number will be covered under OMB Control No. 9000-0069.

This clearance covers the information that contractors must submit to comply with the following FAR requirements:

*FAR 52.216-7, Allowable Cost and Payment.* This clause requires the contractor to submit an adequate final indirect cost rate proposal to the contracting officer and the auditor within the 6-month period following the expiration of each of its fiscal years. The proposed rates shall be based on the contractor's actual cost experience for that period. Paragraphs (d)(2)(iii) and (iv) of this clause provide a list of the data required to be submitted. The data is customary business financial information that the contractor can access from its automated business systems.

*FAR 52.216-15, Predetermined Indirect Cost Rates.* This clause repeats the requirement in the FAR clause at 52.216-7, paragraph (d), for the contractor to submit an adequate final indirect cost rate proposal, however it

does not impose any additional reporting requirements.

*FAR 52.242-4, Certification of Final Indirect Costs.* This clause requires the contractor's final indirect cost rate proposal to be certified to establish or modify the rates used to reimburse the contractor for the costs of performing under the contract. The supporting cost data are the cost accounting information normally prepared by organizations under sound management and accounting practices. This clause is incorporated into all solicitations and contracts that provide for establishment of final indirect cost rates, but the Department of Energy may provide an alternate clause for its Management and Operating contracts.

The contracting officer and auditor use the proposal and supporting data provided under the FAR clauses at 52.216-7, 52.216-15, and 52.242-4 to verify and analyze the indirect costs and to determine the final indirect cost rates or to prepare the Government negotiating position if negotiation of the rates is required under the contract terms.

*FAR 52.242-5, Payments to Small Business Subcontractors.* This clause requires the prime contractor to self-report to the contracting officer when the prime contractor makes late or reduced payments to small business subcontractors. The notice shall include the reason(s) for making the reduced or untimely payment. The contracting officer uses the information to record the identity of contractors with a history of late or reduced payments to small business subcontractors in the Federal Awardee Performance and Integrity Information System. The contracting officer considers and evaluates the contractor's written explanation for a reduced or an untimely payment to determine whether the reduced or untimely payment is justified.

*FAR 52.242-13, Bankruptcy.* This clause requires contractors to notify the contracting officer within five days after initiating the proceedings relating to bankruptcy filing. The contracting officer uses the notification received under this clause to ensure the contractor's ability to perform its government contract.

**C. Annual Burden**

*Respondents:* 6,265.

*Total Annual Responses:* 6,265.

*Total Burden Hours:* 1,504,083.

*Obtaining Copies:* Requesters may obtain a copy of the information collection documents from the GSA Regulatory Secretariat Division, by calling 202-501-4755 or emailing [GSARegSec@gsa.gov](mailto:GSARegSec@gsa.gov). Please cite OMB

Control No. 9000–0069, Indirect Cost Rate Proposals, Payments to Small Business Subcontractors, and Bankruptcy Notifications.

## DEPARTMENT OF HEALTH AND HUMAN SERVICES

### Centers for Disease Control and Prevention

[60Day–22–0850; Docket No. CDC–2022–0039]

#### Proposed Data Collection Submitted for Public Comment and Recommendations

**AGENCY:** Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

**ACTION:** Notice with comment period.

**SUMMARY:** The Centers for Disease Control and Prevention (CDC), as part of its continuing effort to reduce public burden and maximize the utility of government information, invites the general public and other federal agencies the opportunity to comment on a proposed and/or continuing information collection, as required by the Paperwork Reduction Act of 1995. This notice invites comment on a proposed information collection project titled, Laboratory Response Network (LRN). The LRN is created to maintain an integrated national and international network of laboratories that can respond to suspected acts of biological, chemical, or radiological terrorism and other public health emergencies.

**DATES:** CDC must receive written comments on or before May 27, 2022.

**ADDRESSES:** You may submit comments, identified by Docket No. CDC–2022–0039 by either of the following methods:

- *Federal eRulemaking Portal:* Regulations.gov. Follow the instructions for submitting comments.

- *Mail:* Jeffrey M. Zirger, Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE, MS H21–8, Atlanta, Georgia 30329.

*Instructions:* All submissions received must include the agency name and Docket Number. CDC will post, without change, all relevant comments to regulations.gov.

*Please note:* Submit all comments through the Federal eRulemaking portal

(regulations.gov) or by U.S. mail to the address listed above.

**FOR FURTHER INFORMATION CONTACT:** To request more information on the proposed project or to obtain a copy of the information collection plan and instruments, contact Jeffrey M. Zirger, Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE, MS H21–8, Atlanta, Georgia 30329; phone: 404–639–7570; Email: omb@cdc.gov.

**SUPPLEMENTARY INFORMATION:** Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3520), federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. In addition, the PRA also requires federal agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each new proposed collection, each proposed extension of existing collection of information, and each reinstatement of previously approved information collection before submitting the collection to the OMB for approval. To comply with this requirement, we are publishing this notice of a proposed data collection as described below.

The OMB is particularly interested in comments that will help:

1. Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
2. Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
3. Enhance the quality, utility, and clarity of the information to be collected;
4. Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submissions of responses; and
5. Assess information collection costs.

#### Proposed Project

Laboratory Response Network (LRN) (OMB Control No. 0920–0850, Exp. 4/30/2022)—Revision—National Center for Emerging and Zoonotic Infectious Diseases (NCEZID), Centers for Disease Control and Prevention (CDC).

#### Background and Brief Description

The Laboratory Response Network (LRN) was established by the Department of Health and Human Services (HHS), Centers for Disease Control and Prevention (CDC) in accordance with Presidential Decision Directive 39, which outlined national anti-terrorism policies and assigned specific missions to federal departments and agencies. The LRN's mission is to maintain an integrated national and international network of laboratories that can respond to suspected acts of biological, chemical, or radiological terrorism and other public health emergencies.

Federal, state and local public health laboratories join the LRN voluntarily. When laboratories join, they assume specific responsibilities and are required to provide information to the LRN Program Office at CDC. Each laboratory must submit and maintain complete information regarding the testing capabilities of the laboratory. Biennially, laboratories are required to review, verify and update their testing capability information. This information is needed so that the LRN Program Office can determine the ability of the Network to respond to a biological or chemical terrorism event. The sensitivity of all information associated with the LRN requires that CDC obtain personal information about all individuals accessing the LRN website. Since CDC must be able to contact all laboratory personnel during an event, each laboratory staff member who obtains access to the restricted LRN website must provide his or her contact information to the LRN Program Office.

As a requirement of membership, LRN laboratories must report all biological and chemical testing results to the LRN Program using a CDC developed software tool called the LRN Results Messenger, or through their laboratory information management system (LIMS) which CDC refers to as Data Integration. CDC migrated laboratories to a centralized cloud-based LRN Results Messenger that is accessed through CDC Secure Access Management Services (SAMS). This new LRN Data Portal Results Messenger (LDPRM) can be rapidly modified for a new or emerging threat, and the burden of maintenance is removed from the member laboratory. This information obtained from LRN laboratories is essential for surveillance of anomalies, to support response to an event that may involve multiple agencies, and to manage limited resources.

LRN laboratories are also required to participate in Challenge Panels or

Validation Studies and report their results to CDC. LRN laboratories participate in multiple Challenge Panels, Exercises and/or Validation Studies every year. These activities consist of 5–21,000 simulated samples provided by CDC. These challenges are necessary to verify the testing capability of the LRN laboratories. Because biological or chemical agents perceived to be of bioterrorism concern can occur rarely, some LRN laboratories have difficulty maintaining proficiency in certain testing methods as a result of day-to-day testing. Thus, simulated samples are distributed to ensure proficiency across LRN member laboratories. LRN laboratories also enter the results of these simulated samples into the LRN Results Messenger or through Data Integration for evaluation by CDC.

During a surge event resulting from a bioterrorism or chemical terrorism attack, or during an emerging infectious disease outbreak, LRN Laboratories must submit all testing results using LRN Results Messenger or through Data Integration. CDC uses these results to track the progression of a bioterrorism event, respond in the most efficient and effective way possible, and share this data with other federal partners

involved in the response. Data is collected via two primary avenues, the program LRN Results Messenger or through Electronic Laboratory Reporting (ELR), and results include details about the type and source of samples as well as the tests performed and the numerical and empirical results of those tests.

An LRN laboratory must provide its testing capabilities, physical and shipping addresses, United States Department of Agriculture (USDA) and Select Agent Permits, and specified responsible individuals' names, phone numbers and email addresses. After registering with the LRN website, a user must provide his/her first and last name, work phone number, alternate phone number, email address, and month and day of birth. During reporting of results, sample details, tests performed, results obtained, and conclusions of tests are required.

The LRN website has remained virtually the same and has only undergone routine maintenance since 2015 to keep it in working order. There have been many improvements to the LRN website over the course of the past three years: (1) The LRN website migrated to CDC Secure Access Management Services (SAMS) servers to

provide a more secured login and user authentication, (2) A new CDC template was implemented to support 508 compliance and responsive designs, (3) LRN user role structures were upgraded to provide more efficient administrative and user maintenance workflow, and (4) The website database and code was restructured to prepare the system for future modernization efforts.

CDC also conducted LRN–B Challenge Panels (CP) and LRN–C Proficiency Testing (PT). The purpose of CP and PT is to simulate real samples for labs that would not have regularly performed some of the LRN procedures. Having the ability to conduct LRN CPs and PTs has led to improved laboratory performance and better preparedness. In FY18 the LRN–B CP passing rate was 97%. In FY19 and FY20, the passing rate was 88% and 90%. In FY18 the LRN–C PT passing was 96%. In FY19 and FY20, the passing rate was 95% and 96%, respectively.

This data collection is authorized under the Public Health Service Act, (42 U.S.C. 241) Section 301.

CDC requests OMB approval for an estimated 422,716 annual burden hours. There is no cost to respondents other than their time to participate.

**[30Day–22–21HI]**

**Agency Forms Undergoing Paperwork Reduction Act Review**

In accordance with the Paperwork Reduction Act of 1995, the Centers for Disease Control and Prevention (CDC) has submitted the information

collection request titled Red Carpet Entry (RCE) Program Implementation Project to the Office of Management and Budget (OMB) for review and approval. CDC previously published a “Proposed Data Collection Submitted for Public Comment and Recommendations” notice on August 20, 2021 to obtain comments from the public and affected agencies. CDC received one comment related to the previous notice. This notice serves to allow an additional 30

days for public and affected agency comments.

CDC will accept all comments for this proposed information collection project. The Office of Management and Budget is particularly interested in comments that:

(a) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(b) Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(c) Enhance the quality, utility, and clarity of the information to be collected;

(d) Minimize the burden of the collection of information on those who are to respond, including, through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses; and

(e) Assess information collection costs.

To request additional information on the proposed project or to obtain a copy of the information collection plan and instruments, call (404) 639-7570. Comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to [www.reginfo.gov/public/do/PRAMain](http://www.reginfo.gov/public/do/PRAMain). Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function. Direct written comments and/or suggestions regarding the items contained in this notice to the Attention: CDC Desk Officer, Office of Management and Budget, 725 17th Street NW, Washington, DC 20503 or by fax to (202) 395-5806. Provide written comments within 30 days of notice publication.

**Proposed Project**

Red Carpet Entry Program Implementation Project—New—

National Center for HIV, Viral Hepatitis, STD, and TB Prevention (NCHHSTP), Centers for Disease Control and Prevention (CDC).

*Background and Brief Description*

This information collection involves original, implementation research on the Red Carpet Entry (RCE) program to link persons with HIV to care within 72 hours of their diagnosis or their return to care after being out of care. Originally developed and implemented in Washington, DC by Whitman Walker Health and the D.C. Department of Health’s HIV/AIDS, Hepatitis, STD, and TB Administration, RCE has been shown to successfully and rapidly link people who tested HIV positive to an HIV care provider. Evaluations of RCE found that 70% of newly diagnosed people were linked to care within 72 hours of their HIV test. It was also shown to work for linking people who had fallen out of care with an HIV provider. An adapted version of RCE has also been shown to improve health outcomes among adolescents and youths in Kenya by quickly linking to care. The school-based program increased rates of linkage to care from 56.5% to 97.3% and three-month retention in care from 66.0% to 90.0%. Based on this, the CDC identified RCE as an evidence-informed structural intervention and included it in CDC’s Compendium of Evidence-based Interventions (EBIs) and Best Practices for HIV Prevention.

Having an evidence-informed intervention like RCE that can be disseminated to the broader HIV health care community is important for several reasons: (1) Antiretroviral therapy (ART) is the best way to manage HIV and reduce transmission; (2) ART initiation is only possible when someone enters health care and then is ultimately retained in care; and (3) There are few existing evidenced-based structural interventions to support this process. This bias in the field of HIV interventions stems from a focus on individual behavior change interventions to prevent HIV infection. However, as new and effective

treatments have emerged that reduce the likelihood of HIV transmission, HIV clinics and other healthcare settings have emerged as key contexts for HIV prevention by making sure that persons with HIV (PWH) have immediate access to ART. Therefore, the field has slowly shifted to understanding how providers and health systems can be encouraged to support PWH to reduce HIV.

This study will contribute to the field by creating tools to support clinics and healthcare settings that want to implement the RCE Program to link PWH to care. A toolkit will be created and tested via implementing RCE in two clinics, and lessons from the implementation of RCE will be used to update the toolkit. The final toolkit will be disseminated via CDC’s website. Furthermore, because the study also evaluates the implementation strategies, outcomes, and context when RCE is being used, the study will be able to recommend what is needed to implement RCE with fidelity and success and incorporate these insights into the toolkit. Finally, because tracking costs are also a part of the evaluation, clinics and health systems that are examining potential RCE adoption will have material information about what is needed to put RCE into practice. An understanding of the actual costs can provide important justification for program planners.

The results of this study will help CDC frame how best to disseminate the RCE Program to the broader HIV health care community. This is important because only federal agencies like CDC have the resources and infrastructure to broadly disseminate EBIs. Broad dissemination and uptake of EBIs like RCE can help move population rates of HIV suppression which would affect population transmission rates. Linkage to care, in an era of biomedical HIV prevention, is a prevention linchpin.

CDC requests OMB approval for an estimated 125 burden hours. There are no costs to respondents other than their time to participate.

**ESTIMATED ANNUALIZED BURDEN HOURS**

**BILLING CODE 4163-18-P**

**DEPARTMENT OF HEALTH AND HUMAN SERVICES**

**Administration for Children and Families**

**Proposed Information Collection Activity; 45 CFR 303.7—Provision of Services in Intergovernmental IV-D; Federally Approved Forms (OMB #0970-0085)**

**AGENCY:** Office of Child Support Enforcement, Administration for Children and Families, HHS.

**ACTION:** Request for public comment.

**SUMMARY:** The Office of Child Support Enforcement is requesting a 3-year extension of the Provision of Services in Intergovernmental IV-D; Federally Approved Forms (OMB #0970-0085, expiration December 31, 2022). There are no changes requested to these forms.

**DATES:** *Comments due within 60 days of publication.* In compliance with the requirements of the Paperwork Reduction Act of 1995, the Administration for Children and Families is soliciting public comment on the specific aspects of the information collection described above.

**ADDRESSES:** You can obtain copies of the proposed collection of information and submit comments by emailing [infocollection@acf.hhs.gov](mailto:infocollection@acf.hhs.gov). Identify all requests by the title of the information collection.

**SUPPLEMENTARY INFORMATION:**

*Description:* Public Law 113-183, the Preventing Sex Trafficking and Strengthening Families Act, amends section 466(f) of the Social Security Act requiring all states to enact any amendments to the Uniform Interstate Family Support Act “officially adopted as of September 30, 2008, by the National Conference of Commissioners on Uniform State Laws” (referred to as UIFSA 2008). Section 311(b) of UIFSA requires states to use forms mandated by federal law. 45 CFR 303.7(a)(4) also requires child support programs to use federally approved forms in intergovernmental IV-D cases unless a country has provided alternative forms.

*Respondents:* State agencies administering a child support program under title IV-D of the Social Security Act.

**ANNUAL BURDEN ESTIMATES**

Instrument	Total number of respondents	Total number of responses per respondent	Average burden hours per response	Annual burden hours
Transmittal #1—Initial Request .....	54	16,048	0.17	147,321
Transmittal #1—Initial Request Acknowledgement .....	54	16,048	0.05	43,330

## DEPARTMENT OF HEALTH AND HUMAN SERVICES

### Administration for Children and Families

[OMB No. 0970-0545]

#### Proposed Revision to Information Collection Activity; Next Generation of Enhanced Employment Strategies Project

**AGENCY:** Office of Planning, Research, and Evaluation, Administration for Children and Families, HHS.

**ACTION:** Request for public comment.

**SUMMARY:** The Office of Planning, Research, and Evaluation (OPRE) within the Administration for Children and Families is proposing revisions to data collection activities conducted for the Next Generation of Enhanced Employment Strategies (NextGen) Project (OMB #0970-0545). The project is rigorously evaluating innovative interventions to promote employment and economic security among low-income individuals with complex challenges. The project includes an experimental impact study, descriptive study, and cost study. The project is seeking approval for two participant follow-up surveys and related materials with proposed changes to the instruments and to the tokens of appreciation for the follow-up surveys. The requested changes do not require any changes to the previously submitted and approved burden estimates.

**DATES:** *Comments due within 30 days of publication.* OMB is required to make a decision concerning the collection of information between 30 and 60 days after publication of this document in the **Federal Register**. Therefore, a comment is best assured of having its full effect if OMB receives it within 30 days of publication.

**ADDRESSES:** Copies of the proposed collection of information can be obtained and comments may be forwarded by emailing [OPREinfocollection@acf.hhs.gov](mailto:OPREinfocollection@acf.hhs.gov). Identify all requests by the title of the information collection.

#### SUPPLEMENTARY INFORMATION:

*Description:* OPRE is conducting the NextGen Project to build the evidence around effective strategies for helping low-income individuals find and sustain employment. This project will identify and test innovative employment programs designed to help people facing complex challenges secure economic independence. The project is partnering with the Social Security Administration to incorporate a

focus on employment-related early interventions for people with current or foreseeable disabilities who have limited work history and are potential applicants for Supplemental Security Income.

Prior information collection requests for the project (see [https://www.reginfo.gov/public/do/PRAViewICR?ref\\_nbr=202102-0970-003](https://www.reginfo.gov/public/do/PRAViewICR?ref_nbr=202102-0970-003)) occurred in two phases. Phase 1 instruments—the informed consent form, baseline survey, and identifying and contact information collection—were approved in April 2020. Phase 2 instruments—staff characteristics survey, program leadership survey, semi-structured program participant discussion guide, semi-structured employer discussion guide, service receipt tracking, in-depth participant interview guide, and cost workbook—were approved in December 2020. Approval for changes to the Phase 1 and some Phase 2 instruments was received in March 2021.

We now seek approval for the first and second follow-up surveys, advance letters and related materials, and changes to the proposed tokens of appreciation for the follow-up surveys.

Below are additional details regarding this clearance request.

#### First Follow-Up Survey (Instrument 3)

We propose the following revisions to the first follow-up survey:

- Minor revisions to skip patterns and the wording of some items for clarity.
- Moved all items about jobs to the beginning of the survey (Section A) to collect this information first because of its importance.
- Added items on the effect of COVID-19 including changes in jobs as a result of the pandemic (A02a); whether any physical, mental, or emotional condition that limits work is related to COVID-19 (A22a); employment challenges related to the pandemic (A23); receipt of advice on how to meet workplace requirements related to COVID-19 (B01m); and vaccination status (C10a).
- Removed some benefits from the list of benefits available at the respondent's current or last job (A16), dropped the industry and occupation items, and removed most items about employment challenges (A23) to reduce burden.
- Added questions about confidence in ability to seek employment (A25) for one program.
- Removed the distinctions between receiving services in one-on-one settings and group settings (B01 and B02) to reduce burden. Added an item about

attendance at any group support meetings (B02) for one program.

- Modified the items (B01) about receipt of services to better match the services offered by the programs in the project.
- Removed questions related to the amount of time spent in employment services and ask only about the location where respondents received the most services (B03), rather than asking about all locations, to reduce burden.
- Replaced questions about each education or training program with questions about all programs attended (B04 to B05b) and removed questions about the amount of time spent in the program because education and training are not part of any selected program. Removed questions about employer-provided training because they were not relevant to any program. Added items about participating in education or training programs (B04a and B05a) at the time of the survey and receipt of a certificate or degree (B04c and B05b). Tailored the education and training questions for one program that works with young adults (B06–B08b) to make it easier for them to respond.
- Revised the recall period for mental health service receipt to the last 6 months instead of since random assignment (B10–B10b) to better match when the program expects to affect the receipt of these services.
- Added questions about receipt of services for physical medical conditions and receipt of mental health services for respondents' children within the last 6 months for one program (B11 and B11a).
- Removed items asking about the type of rental housing and number of days spent homeless since housing is not a focus of the selected programs. Moved the remaining housing questions to an earlier location in the survey (C01, C01a, and C02).
- Removed benefits from a question about benefit receipt (C03) that we do not expect many study participants to receive to reduce burden.
- Added a series of questions about financial help received from parents, relatives, friends, or neighbors and the amount received (C04b to C04e1) for a program serving young adults and an item to ask if the program helped them in having a trusted person they can turn to for job advice (D02d).
- Modified the emergency support items (C05–C07a) to ask how many people the respondents can turn to for help, to borrow money, or for advice, and added items on social trust (C07b and C07c) to measure social support more accurately.
- Added the Healthy Families Parenting Inventory's parenting efficacy

subscale (C08) for one program that aims to improve mothers' belief in their parenting skills.

- Added items about confidence in future financial situations (C09a-C09b) for one program that aims to increase youths' belief in their ability to become self-sufficient.

- Added a question to ask if participants are covered by health insurance (C10b).

- Added the Center for Epidemiologic Studies Depression Scale Revised (CESD-R) (C22a) for use by a program that serves mothers with symptoms of depression. For this program, this more in-depth depression scale will be used instead of the shorter K-6 Distress Scale (C22).

- Added questions about whether the respondent is currently under court-ordered supervision (C38), whether any convictions were for felonies (C42), and if any of the reported incarcerations

were for violating the terms of court-ordered supervision (C44) for a program that serves adults with criminal justice system involvement.

- Removed some items asking program group study participants about their satisfaction with the program.

We currently have OMB approval to provide a \$40 gift card for follow-up survey completion. Based on new evidence, we propose to increase the first follow-up survey token of appreciation from \$40 to \$50 and to add a \$5 prepaid gift card for the first follow-up survey sent with the advance letter. We would assess the effectiveness of the prepaid gift card using an experiment. If the experiment shows that prepaid tokens of appreciation are effective at increasing response rates or decreasing the treatment-control response rate differential, we will propose using it for remaining sample members for the first follow-up survey.

**Second Follow-Up Survey (Instrument 4)**

We propose changes to the second follow-up survey to match the changes proposed for the first follow-up survey. We propose introducing a \$5 prepaid token of appreciation if the experiment for the first follow-up survey demonstrates it is effective. We do not propose changes to the previously approved \$50 postpaid gift card for the second follow-up survey.

*Respondents:* Individuals enrolled in the NextGen Project.

*Annual Burden Estimates*

The annual burden estimates for the instruments we are requesting to revise are presented below. All currently approved materials under OMB # 0970-0545 and the associated burden can be found at: [https://www.reginfo.gov/public/do/PRAViewICR?ref\\_nbr=202012-0970-003](https://www.reginfo.gov/public/do/PRAViewICR?ref_nbr=202012-0970-003).

Instrument	Total number of respondents	Annual number of respondents	Number of responses per respondent	Average burden hours per response	Annual burden hours
<b>PHASE 2</b>					
First follow-up survey—participants .....	8,000	2,667	1	0.83	2,214
Second follow-up survey—participants .....	8,000	2,667	1	0.83	2,214

*Total Annual Burden Hours, Phase 2:* 4,428.

*Authority:* Section 413 of the Social Security Act, as amended by the FY 2017 Consolidated Appropriations Act, 2017 (Pub. L. 115-31).

**DEPARTMENT OF HEALTH AND HUMAN SERVICES**

**Administration for Children and Families**

**Submission for OMB Review; Measuring Human Trafficking Prevalence in Construction: A Field Test of Multiple Estimation Methods (New Collection)**

**AGENCY:** Office of Planning, Research, and Evaluation, Administration for Children and Families, HHS.

**ACTION:** Request for public comment.

**SUMMARY:** The Administration for Children and Families (ACF) is proposing a new data collection activity for Measuring Human Trafficking Prevalence in Construction: A Field Test

of Multiple Estimation Methods. This study will examine the labor trafficking and other labor exploitation experiences among individuals who work in construction. The goal of this study is to advance knowledge of promising methods for estimating human trafficking prevalence by field-testing two methods of prevalence estimation within the construction industry in Houston, Texas.

**DATES:** *Comments due within 30 days of publication.* OMB must make a decision about the collection of information between 30 and 60 days after publication of this document in the **Federal Register**. Therefore, a comment is best assured of having its full effect if OMB receives it within 30 days of publication.

**ADDRESSES:** Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to [www.reginfo.gov/public/do/PRAMain](http://www.reginfo.gov/public/do/PRAMain). Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function. You can also obtain copies of the proposed collection of information by emailing [OPREinfocollection@acf.hhs.gov](mailto:OPREinfocollection@acf.hhs.gov).

Identify all requests by the title of the information collection.

**SUPPLEMENTARY INFORMATION:**

*Description:* The purpose of the proposed data collection activity is to estimate the prevalence of labor trafficking among construction workers in one location using two different sampling and estimation strategies. The proposed information collection activity is a one-time survey with up to 4,200 adults who worked in the construction industry in the selected geographic location in the 24 months prior to data collection. The construction worker survey will be offered in English and Spanish to workers identified through the following two sampling strategies: (1) Probability sample (*i.e.*, time location sample), and (2) a network sample. The survey instrument used for individuals recruited through the two different sampling strategies will be primarily the same and includes questions focused on the individuals' experiences with labor exploitation and trafficking; employment histories, including work after a natural disaster; social networks; and demographic data.

*Respondents:* English- and Spanish-speaking individuals who have worked in construction in Houston, Texas, in the 2 years prior to data collection will be invited to complete a survey.

ANNUAL BURDEN ESTIMATES

Instrument	Number of respondents (total over request period)	Number of responses per respondent (total over request period)	Average burden per response (in hours)	Total burden (in hours)	Total burden (in hours)	Annual burden (in hours)
Construction Worker Survey .....	4,200	1	1	0.5	2,100	1,050

*Estimated Total Annual Burden Hours: 1,050.*

*Authority:* Section 105(d)(2) of the Trafficking Victims Protection Act of 2000 (Pub. L. 106–386) [22 U.S.C. 7103].

**Mary B. Jones,**

**Food and Drug Administration**

[Docket No. FDA–2021–N–0709]

**Prescription Drug User Fee Rates for Fiscal Year 2022; Correction**

**AGENCY:** Food and Drug Administration, HHS.

**ACTION:** Notice; correction.

**SUMMARY:** The Food and Drug Administration (FDA) is correcting a notice entitled “Prescription Drug User Fee Rates for Fiscal Year 2022” that appeared in the **Federal Register** of August 16, 2021. The document announced the Fiscal Year 2022 fee rates for the Prescription Drug User Fee Act. The document published with errors. The errors did not have an impact on the previously published user fee rates but are corrected in this document for clarity.

**FOR FURTHER INFORMATION CONTACT:** Misbah Tareen, Office of Financial Management, Food and Drug Administration, 4041 Powder Mill Rd., Rm. 61077A, Beltsville, MD 20705–4304, 301–796–3997.

**SUPPLEMENTARY INFORMATION:** In the **Federal Register** of August 16, 2021 (86 FR 45732), appearing on page 45736 in FR Doc. 2021–17505, the following corrections are made:

1. In the second column, in the last sentence of the third paragraph under “D. FY 2022 Statutory Fee Revenue Adjustments for Operating Reserve”, “both user fee funds available for obligation \$126,873,636 and funds that are considered unavailable due to a lack of appropriations \$98,850,995” is corrected to read “user fee funds considered unavailable due to a lack of

appropriations \$78,850,995, additional fee funds that are available for obligation but set aside for future year refunds as a matter of prudent operations \$20,000,000, and carryover net of unavailable funds and the set-aside \$126,873,636.”

2. The fourth footnote is corrected by removing the text and replacing it with: “In recent PDUFA Annual Financial Reports, the category “unavailable for use” has been used to refer both to (1) fee funds that are considered unappropriated and (2) appropriated fee funds the Agency has maintained to provide for any refunds. FDA intends to discontinue use of the category “unavailable for use” in forthcoming reports to better reflect the difference between these line items and improve the clarity of its reporting. Although certain amounts have been maintained for future refunds as a matter of prudent operations, these amounts are considered appropriated and are available for obligation.”

3. In the second column, in the fifth paragraph under “D. FY 2022, Statutory Fee Revenue Adjustments for Operating Reserve”, sentences 4 through 7 are corrected by removing the text and replacing it with “FDA has decided to make an available operating reserve adjustment that is intended to increase the amount of available funds to approximately 8 weeks by the end of FY 2022, representing the low end of the 8- to 10-week range while mitigating the impact on fee amounts. FDA estimates the cost of operations per week is \$22,144,672. Before the operating adjustment, the estimated end of year FY 2022 available operating reserve is \$145,677,240, which equates to about 6½ weeks of available operating reserves. Adding the FY 2022 operating reserve adjustment of \$39,402,923 to this amount is expected to provide approximately 8 weeks of available operating reserve, or \$185,080,162 (including \$20,000,000 in available fee funds maintained for any future refunds), and a total carryover of operating reserves (including unavailable funds) of \$263,931,157.”

Dated: March 21, 2022.

[Docket No. FDA–2021–N–0336]

**Agency Information Collection Activities; Submission for Office of Management and Budget Review; Comment Request; Quantitative Research on a Voluntary Symbol Depicting the Nutrient Content Claim “Healthy” on Packaged Foods**

**AGENCY:** Food and Drug Administration, HHS.

**ACTION:** Notice.

**SUMMARY:** The Food and Drug Administration (FDA or we) is announcing that a proposed collection of information has been submitted to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995 (PRA).

**DATES:** Submit written comments (including recommendations) on the collection of information by April 27, 2022.

**ADDRESSES:** To ensure that comments on the information collection are received, OMB recommends that written comments be submitted to <https://www.reginfo.gov/public/do/PRAMain>. Find this particular information collection by selecting “Currently under Review—Open for Public Comments” or by using the search function. The title of this information collection is “Quantitative Research on a Voluntary Symbol Depicting the Nutrient Content Claim ‘Healthy’ on Packaged Foods.” Also include the FDA docket number found in brackets in the heading of this document.

**FOR FURTHER INFORMATION CONTACT:** Ila S. Mizrachi, Office of Operations, Food and Drug Administration, Three White

**SUPPLEMENTARY INFORMATION:** In compliance with 44 U.S.C. 3507, FDA has submitted the following proposed collection of information to OMB for review and clearance.

**Quantitative Research on a Voluntary Symbol Depicting the Nutrient Content Claim “Healthy” on Packaged Foods**

*OMB Control Number 0910–NEW*

**I. Background**

Section 403(r)(1)(A) of the Federal Food, Drug, and Cosmetic Act (FD&C Act) (21 U.S.C. 343(r)(1)(A)) permits the use of label and labeling claims that characterize the level of a nutrient in a food when the claims are made in accordance with FDA’s regulations. Such claims are referred to as “nutrient content claims.” We have issued regulations under section 403(r)(1)(A) of the FD&C Act describing “implied nutrient content claims” as those that, among other things, suggest that a food, because of its nutrient content, may help consumers maintain healthy dietary practices (21 CFR 101.65(d)(1)(i)). The rule finalizing these claims also describes implied claims, in part, as those that imply that a food, because of its nutrient content, may be useful in achieving a total diet that conforms to current dietary recommendations (“Food Labeling: Nutrient Content Claims, General Principles, Petitions, Definition of Terms,” 58 FR 2302 at 2374, January 6, 1993). We have determined that a claim that a food, because of its nutrient content, may be useful in maintaining healthy dietary practices is clearly a claim that characterizes the level of nutrients in that food. The claim is essentially saying that the level of nutrients in the food is such that the food will contribute to good health (58 FR 2302 at 2375). In 1994, we issued a definition of “healthy” as an implied nutrient content claim (59 FR 24232, May 10, 1994); the regulation is codified at 21 CFR 101.65(d)(2).

FDA seeks to improve dietary patterns in the United States to help reduce the burden of diet-related chronic diseases and advance health equity. We are committed to accomplishing this by, in part, empowering consumers with information to make more informed dietary choices. To help advance these goals, we are exploring the development of a graphic symbol to help companies communicate and consumers identify packaged food products that meet FDA’s

definition of “healthy.” The symbol would be a graphic representation of the nutrient content claim “healthy” and, like the implied nutrient content claim “healthy” itself, would be voluntary for packaged food companies. Companies could voluntarily use the symbol on food products that meet FDA’s definition of “healthy.”

In 2019 and 2020, FDA conducted a review of the literature on front-of-package (FOP) nutrition-related symbols and conducted a series of focus groups to test symbol concepts and draft FOP symbols (see Docket No. FDA–2021–N–0336 for the literature review and a table of draft FOP symbols).

As part of our efforts to promote public health, we intend to conduct two consecutive quantitative research studies—a survey (Study 1) and an experimental study (Study 2) to explore consumer responses to the draft FOP symbols that companies could voluntarily use on a food product as a graphic representation of the nutrient content claim “healthy.” If research results suggest the need, the symbols will be fine-tuned following the survey and again following the experimental study. Study 1 will use non-probability survey methods, using a web-based panel to draw a sample of 2,000 U.S. adults ages 18 and older who self-identify as primary food shoppers. The sample will be balanced to the demographics of the U.S. population. The survey instrument will focus on clarity, relevance, and appeal of a set of symbols.

Study 2 will be a controlled, randomized experiment that will use a 15-minute web-based questionnaire to collect information from 5,000 U.S. adult members of an online consumer panel. Conditions for Study 2 will be: (1) A set of draft FOP symbols, including “no-symbol” controls; (2) three types of mock food products (*i.e.*, a breakfast cereal, a frozen meal, and a canned soup); (3) a “no-information” condition where no explanation of the symbol is provided; and; (4) a Uniform Resource Locator (URL) condition, in which a URL is tested alongside the symbol. Each participant in Study 2 will be randomly assigned to a condition, which will include viewing a label image and responding to various measures of the symbol’s effectiveness. Measures of response in the experiment will include product perceptions (*e.g.*, healthfulness and contribution to a healthy diet), label perceptions (*e.g.*, believability, trustworthiness, message effects), and purchase/choice questions. The instrument will also collect information from participants about their history of purchasing or

consuming similar products; nutrition knowledge; dietary interests; motivation regarding label use; health status; and demographic characteristics.

The studies are part of our continuing effort to enable consumers to make informed dietary choices and construct healthful diets. We intend to use the results to inform our continued exploration of a symbol manufacturers could voluntarily use to represent the nutrient content claim “healthy” on the food label. We will not use the results to develop population estimates.

*Description of Respondents:*

Respondents to this collection of information include members of the general public.

In the **Federal Register** of May 7, 2021 (86 FR 24629), FDA published a 60-day notice requesting public comment on the proposed collection of information (“60-day notice”). We received 43 comments, 27 of which were PRA-related. The remaining comments were non-responsive to the four PRA topics, and so we will not address them in this document.

*A. Comments Regarding the Necessity and Practical Utility of the Information Being Collected and FDA Response*

Several comments addressed the necessity and practical utility of collecting information on a voluntary symbol depicting the nutrient content claim “healthy” on packaged foods.

(Comment 1) Some comments supported FDA’s proposed collection of information through the three proposed quantitative consumer research studies. Some comments expressly supported FDA’s end research goal of enabling consumers to make informed dietary choices and construct healthful diets. Some supported FDA’s intention to understand consumer responses to draft FOP symbols and gather data and other information to inform our thinking on a “healthy” symbol. Many comments indicated the importance of conducting this research before taking regulatory action on any symbol. Some comments supported conducting the research in conjunction with development of a proposed rule that would update the definition of “healthy” on food packages.

Other comments opposed FDA research on a “healthy” symbol. Some of these comments suggested the research is unnecessary, claiming that a single food is not “healthy” or “unhealthy,” that overall diet matters more than individual foods, or that symbols are industry marketing. A few comments suggested a “healthy” symbol could be particularly misleading to, or misinterpreted by, people who are

experiencing eating disorders. Some comments also questioned whether a “healthy” symbol would: (1) Have a positive and meaningful impact on improving health or (2) lead consumers to overconsume foods bearing the symbol.

(Response 1) We intend to conduct this research now, in conjunction with further work on updating our definition of the claim “healthy” and before taking regulatory action on any symbol. Our intended research will help us better understand how consumers might respond to and use a graphic symbol to identify packaged food products that meet our definition of “healthy.” This research will help address many points raised in the comments, such as how consumers might react to and understand a “healthy” symbol and misinterpretations they may have.

While we agree that there are some symbols that may be used exclusively for industry marketing, companies could use any FDA “healthy” symbol we develop and finalize only when the product displaying the symbol meets FDA’s regulatory definition of “healthy.” This could help consumers make more informed dietary choices and construct healthful diets. The comments claiming that a single food is not “healthy” or “unhealthy” and that overall diet matters more than individual foods are commenting on the “healthy” claim itself, which we do not intend to test in this research. Rather, we intend to test consumer reactions to symbols that could be a graphic representation of the claim. Nonetheless, we note that a “healthy” symbol, such as the ones FDA is exploring in our research, could help consumers choose food products, *as part of their overall diet*, that meet FDA’s regulatory definition of “healthy.” The research is not designed to study long-term health effects or consumer consumption patterns. We reiterate that this research is about graphical representations of the nutrient content claim “healthy”—in other words, we intend to study only the symbol, not the claim itself. Depending on the results of this data collection, we may decide to test additional symbols or revise our current symbols.

(Comment 2) Many comments expressed a preference for conducting the research after we revise our regulatory definition of “healthy,” as they wondered whether the definition of the claim could influence both the design and consumer understanding of the symbol. Some expressed concern that testing a symbol without clearly communicating what the symbol means could lead to ambiguous results. One

comment expressed concern that, by conducting testing only on the symbols in the notice, we would not consider testing any other symbols in the future. A few comments contended that FDA’s testing would be invalid if the mock products used in testing do not meet FDA’s updated “healthy” definition.

(Response 2) FDA has an existing definition for the claim “healthy,” and in the **Federal Register** of September 28, 2016, we announced our intent to exercise enforcement discretion around some criteria for the claim (see “Use of the Term ‘Healthy’ in the Labeling of Human Food Products: Guidance for Industry,” 81 FR 66527). However, as part of this data collection, we have included experimental conditions in which participants will read general information outlining the use of the claim “healthy” only for purposes of this study. This will help us better understand how consumers might respond to the symbols we are proposing to test if participants understand a “healthy” definition, even if not necessarily an updated definition. While the symbol is intended to represent the nutrient content claim “healthy,” our research on the symbol is not dependent on specific criteria for “healthy.” We are researching general consumer perceptions and impressions of the symbols themselves, not the definition that may underly those symbols, and as such, we do not need to wait until we have a final, updated regulatory definition of “healthy” before conducting this research. Moreover, the symbols being tested would not need to be modified with a changing definition of “healthy;” the symbol would remain a simple graphic representation of the “healthy” claim.

Regarding the claim that our testing would be invalid if the mock products used in testing do not meet FDA’s updated “healthy” definition, our mock products represent broad and basic food categories. They include foods such as vegetables and whole grains with limited nutrients of concern (*e.g.*, sodium or saturated fat) that would meet our current definition of “healthy” and would help consumers build a diet consistent with the *Dietary Guidelines for Americans, 2020–2025*.

#### *B. Comments Regarding the Accuracy of Our Burden Estimates, Including the Validity of the Methodology and Assumptions Used, and FDA Response*

Many comments discussed the accuracy of FDA’s estimate of the burden for this information collection, including the validity of FDA’s methodology and the assumptions used.

(Comment 3) Several comments alleged that we provided limited details about our proposed research studies and encouraged us to publish additional information on the proposed scope and methodology of our consumer research to allow for more comprehensive input from experts in the field of consumer research. One comment suggested we “pre-register” details of the proposed studies on AsPredicted.org or ClinicalTrials.gov so that stakeholders could better understand the primary outcome of the research, hypotheses, analytic plan, and power analysis used.

(Response 3) We described the research in the 60-day notice, providing information on research design, measures, sampling, and sample size. Many comments substantively addressed these issues, and so we believe there was enough information about the studies in the 60-day notice for the public—including consumer researchers—to comment on the research.

We specified in the 60-day notice that we intend to use the results to inform our continued exploration of a symbol manufacturers could voluntarily use to represent the nutrient content claim “healthy” on the food label (86 FR 24629 at 24631). The comment did not provide sufficient information regarding additional details that it believed necessary for stakeholders to better understand this primary outcome, hypotheses, analytic plan, and power analysis used, and it did not explain what additional details might be available via pre-registration that would not be available in our **Federal Register** notices. Therefore, we are unable to provide those details here, and we also decline to pre-register our studies.

(Comment 4) One comment questioned the ordering of the quantitative research, asking why the experimental studies come before the surveys. Other comments suggested we use the two surveys to test draft symbols first to narrow down options and test the “final” symbols in the experiment, or to conduct preliminary research to narrow the options for the experiment.

(Response 4) We conducted several phases of qualitative research to solicit input from consumers, allowing us to evaluate symbol prototypes and design elements to learn what resonated with consumers. Through that process we narrowed our draft symbol options. After considering public comments, we have reconsidered the order of the research, and plan to conduct one survey with a larger sample size (instead of two surveys with smaller sample sizes each) before the experimental study. In other words, we will reorder

the studies and combine the two surveys into one, which will allow us to test all symbols in a single survey. While our proposed information collection is intended to help us better understand how consumers might respond to and use a graphic symbol that indicates packaged food products meet FDA's definition of "healthy," and all the draft symbols we proposed to test would allow us to do that, we expect conducting a single survey first will help us further revise and narrow down the set of symbols.

(Comment 5) One comment suggested we use a more naturalistic study environment, such as an online store setting, instead of using images.

(Response 5) Online store settings and other naturalistic study environments have been successfully employed in some studies on food labeling effects. One advantage of employing such naturalistic study environments is that they more closely reflect participants' actual shopping experience. However, there are substantial additional costs associated with using such research settings, and results in these settings generally do not differ appreciably from results garnered through the simple random-assignment-to-condition design that we proposed. Therefore, we decline to change our study environment.

(Comment 6) One comment suggested that FDA separate different aspects of the symbols to isolate consumer perceptions of the word "healthy," the graphic itself, and the graphic accompanied by the word "FDA." One comment suggested that FDA should test each symbol with and without "FDA."

(Response 6) Separating each aspect of the symbols for our testing would increase the number of conditions exponentially, making the design impractical. We instead elected to use a full factorial design with simple random assignment to condition, to give us results on the performance of the various symbol designs. Using random assignment to condition, we may be able to eliminate some symbols without needing to test particular attributes in any one symbol. We may consider alternate study designs when we have a narrower set of symbols.

One finding of our literature review was that institutional endorsement may be related to greater confidence in the symbol. Our focus group research affirmed that participants regarded symbols with "FDA" as more trustworthy than symbols without "FDA." Therefore, for the intended research, we are testing draft symbols with "FDA." We may consider

additional research on this point depending on the results.

(Comment 7) One comment recommended using images of real food products in the experimental studies instead of using mock product images.

(Response 7) FDA does not agree with the recommendation to use images of real products in the experimental studies. Mock images remove the potential for brand biases, a source of response error that has been demonstrated to affect the way individuals answer survey questions. Mock food product labels psychologically remove the salience of branded product informational cues present in the retrieval stage of the response process (Refs. 1 and 2). Additionally, the mock product labels we designed are visually similar to labels consumers could expect to see in stores for each given product category. We confirmed this assertion in our qualitative testing by noting that participants perceived the mock product labels as ones with which they were unfamiliar, but which were plausible for the food product depicted.

(Comment 8) One comment suggested that we should assess "multi-tier symbols" in addition to the symbols we intend to test. The comment suggested that multi-tier symbols are those that use, for example, an increasing number of stars to indicate to the consumer that a choice is "good," "better," or "best." The comment argued that a multi-tiered approach could encourage consumers to make incremental improvements in their diets, enable manufacturers to reformulate products to meet the initial tier of the system, and increase the number of foods with at least some healthful benefits that could carry a symbol.

Another comment suggested that FDA consider a symbol that warns consumers about high levels of unhealthy nutrients. Another comment asserted that we should also test what it suggested were more neutral FOP labels, such as traffic lights, nutrition scoring symbols, and warning symbols, to better assist consumers in making healthy choices and motivate manufacturers to make healthier foods.

(Response 8) For the purpose of this study, we are testing only symbols that would be a graphic representation of the nutrient content claim "healthy"—a food that could bear that claim could also bear the symbol. FDA's systematic literature review suggested that a summary indicator—the type we are proposing to test—would have the greatest utility to depict the "healthy" claim to a broad array of consumers, especially those with lower education or

lower health literacy. As such, we disagree that we should test other kinds of symbols to depict the nutrient content claim "healthy." We are testing different draft symbol designs based on our literature review and the feedback we collected through our focus group research. Our current study plans are limited to testing summary symbols depicting the nutrient content claim "healthy" to get reactions to design elements and to reduce the current number of symbols under consideration. Because there are no "healthy" tiers in the nutrient content claim, we decline to test a tiered symbol.

(Comment 9) One comment encouraged us to consider testing the "healthy" symbol alongside other current voluntary FOP labels—rather than as the only symbol on a package—to determine the effect of other FOP labels on the efficacy of the "healthy" symbol.

(Response 9) Our studies are designed to test general consumer responses to the symbols presented. Testing additional variables, such as the effect of other packaging elements on the symbols, is outside the scope of this research. We may decide to test "healthy" symbols alongside other FOP symbols in later research depending on the results from this data collection.

(Comment 10) One comment recommended randomizing participants to see subgroups of symbols, claiming it would be an efficient use of resources.

(Response 10) FDA agrees with the recommendation that participants be randomly assigned; however, we disagree with the recommendation to have participants view subgroups of symbols. We plan to randomly assign participants to see a single symbol condition, including product type, information on the definition of healthy, URL/no-URL, and set of symbols. Viewing a single symbol condition precludes the effects of biases that may result from having viewed and responded to questions about one symbol affecting responses about another symbol (Ref. 1). Therefore, even if we might use fewer resources by assigning participants to see subgroups of symbols, the practice would introduce biases and confounds that could make interpreting the results very difficult.

(Comment 11) One comment recommended incorporating time limits for a choice task to better mimic real-life scenarios where consumers have only limited time to shop.

(Response 11) The current experimental study design is random assignment to condition with no "choice task." While time-constraint

studies can be useful to test certain variables, our research goal is for the participants to provide thoughtful responses, unaffected by the stress that a time limit could impose.

(Comment 12) A few comments recommended that the studies be adequately powered to enable FDA to do appropriate statistical analysis.

(Response 12) Our studies are designed to have the appropriate statistical power to conduct all necessary statistical analysis. We will test hypotheses related to between-label differences. We will impose no a priori direction of differences, if any (*i.e.*, we assume all tests are two-tailed). The target sample size (5,000 for the experimental study and 2,000 for the survey) will yield enough observations to provide adequate power to identify 4-way interactions of a medium size (Ref. 3).

(Comment 13) One comment recommended that we test the draft “healthy” symbols in the context of restaurants.

(Response 13) Our research plans include testing symbols solely on packaged foods. Testing “healthy” on a packaged food label versus in a restaurant minimizes the many confounding factors inherent in studying claims in a restaurant environment, such as the enormous variance in size and content of materials used to sell restaurant food. Keeping the studies limited to packaged food labels allows FDA to better isolate various effects of the symbols to strictly test consumer perceptions about the symbols. Additionally, as we noted in response to another comment, we have no reason to believe that adding additional test product categories would change the study outcomes given our goal of testing consumer responses to the symbols.

(Comment 14) Some comments recommended that FDA include more than three mock product types in the experimental studies because of the potential that consumer perceptions of a “healthy” symbol might be different on different products. One comment suggested including a variety of food categories in the studies, while a few other comments recommended including specific product categories, including beverages and fresh produce, so FDA could assess consumer reactions to, or preferences for placement of, a symbol on those products.

(Response 14) FDA disagrees with the recommendation to add more product types to the studies. We are proposing to test “healthy” symbols on a set of mock products that belong to large food categories, with many product types

within each category. The broad product categories for those mock products are likely to contain multiple products that currently meet FDA’s regulatory definition of “healthy.”

For our research, we chose three packaged foods that are commonly consumed and that are clearly distinct food types. The selected products will give us sufficient information on general consumer responses to the symbols to continue development of a proposed “healthy” symbol. We also note that adding any products would increase the scope and cost of the studies while providing limited new information and that the comments provided no evidence that additional test products from other food categories would impact our study outcome.

We decline to include a beverage as one of the mock products. While beverages that meet FDA’s definition of “healthy” could bear any “healthy” symbol we finalize, the same is true of any packaged food, and as we explained above, we have no reason to believe that adding additional test product categories would change the study outcomes. We decline to add fresh produce to the studies for the same reasons.

(Comment 15) A few comments recommend comparing foods with a “healthy” symbol and foods that may have healthful attributes but do not meet the regulatory definition of “healthy,” to evaluate whether use of the symbol might result in discouraging purchase of foods that have important nutrients but that do not meet the definition of “healthy.” Another comment suggested testing a variety of products (“healthier” and “less healthy”) for each food product category included in the studies.

(Response 15) The studies are not designed to test purchasing behavior, and so we decline to add mock products for that purpose. Rather, this research is designed to test general consumer responses to the symbols themselves. Additionally, a product could only bear the symbol if it qualified to bear the “healthy” claim itself—the symbol is a graphic representation of the claim—and we are not testing the claim definition or its effects here.

One of the study assumptions is that, like the nutrient content claim “healthy,” any food bearing a “healthy” symbol on its label must meet the regulatory definition of “healthy.” Therefore, to test consumer responses to the symbols, we do not need to test the ancillary effects of a “healthy” symbol on foods that do not bear the claim. Moreover, FDA intends to test “healthy” symbols on a set of mock products

whose product categories are likely to contain multiple products that currently meet FDA’s regulatory definition of “healthy”—we are making no claims about the relative healthfulness of any product. Using these mock products in our research will provide us with sufficient information to understand how consumers might respond to a “healthy” symbol on food packaging, and that information is our goal with these studies. Testing the selected products will give us sufficient information to continue development of a proposed “healthy” symbol.

The comment did not provide an explanation for its recommendation to test “healthier” and “less healthy” products for each food product category. We are not testing “healthier” and “less healthy” versions of a given product in this research effort, as the goal of the research is to gauge participants’ reactions to a symbol. Additionally, we are working on updating our definition of “healthy” and will describe our proposed updated definition in any related rulemaking. It would be inappropriate to assign relative “healthfulness” to comparator products. Products bearing the “healthy” symbol, which would be a graphic version of the nutrient content claim “healthy,” would have to meet the criteria for using the claim.

(Comment 16) One comment noted a symbol with the term “FDA” may cause confusion if that symbol is used on any products regulated by the U.S. Department of Agriculture (USDA) and urged us to consider the potential for such confusion in our research. Another suggested that we engage with the Food Safety and Inspection Service during our proposed consumer research on the “healthy” symbol to develop a symbol that could apply to all products that meet the “healthy” claim criteria.

(Response 16) We cannot comment on whether or how USDA might allow an FDA “healthy” symbol on the products it regulates that meet FDA’s definition of “healthy.” However, we intend to coordinate with our federal partners, including USDA, as appropriate, as we continue our work on a “healthy” symbol.

(Comment 17) A few comments asserted it was important to consider the symbols’ placement on packaging and noted that food packaging size, type, and appearance vary, suggesting that FDA should study how consumers may respond to a “healthy” symbol on a wider variety of packaging formats than are currently proposed for the studies. One comment suggested testing the symbol on different locations on the package and with varying prominence.

Another encouraged flexibility in specified requirements (e.g., placement, type size, color format, scannable images) surrounding the FOP symbol.

(Response 17) We anticipate that any “healthy” symbol we propose would be standardized in certain ways. However, the purpose of this research is to gauge consumer responses to the symbols we are testing, not to decide on a single symbol, its potential placement on packaging, or what aspects we would require, should a company choose to use the symbol.

(Comment 18) A few comments suggested we include questions or conduct additional research to assess the potential for consumer misunderstanding of the symbols. Some comments suggested that we investigate whether consumer perceptions of some symbols might imply messages other than “healthy” (such as “organic,” “natural,” “plant-based,” and “minimally processed”) or whether the symbols we are testing may appear similar to other existing or abandoned symbols (such as the USDA Organic Seal, Smart Choices, or any of USDA’s bioengineered food symbols). One comment claimed that a lack of legibility of the text in the symbol could cause consumer confusion. Another comment recommended that FDA avoid leaf or nature imagery in the symbol because it could imply that the product is plant-based, “natural,” or unprocessed. One comment encouraged us to examine how appealing the symbols are to consumers, and another comment described the proposed symbols as too simplistic.

(Response 18) We have selected study designs and draft symbols that we expect, when used together, will reveal how consumers will react when they see such symbols on a food label. We included questions in our studies on what the symbols lead participants to believe about the products bearing them. We also expect to hear from participants whether the symbols we are testing are perceived as too complex, too simplistic, or invoke concepts other than “healthy.”

We agree that any symbol we propose should be legible and minimize imagery that our research indicates could widely lead consumers to think the symbol means something unintended. As such, we will add an open-ended question to the experimental study asking what the symbol brings to mind to help determine if any symbols should be removed from consideration or revised on this basis. Moreover, we agree that the FDA symbol design for “healthy” should not be easily confused with other existing symbols and should be

viewed as professional and credible by consumers. We expect to get some data on these points through this round of testing and may undertake further research before we make any formal regulatory decision on a symbol.

(Comment 19) One comment suggested that FDA test other terms besides “healthy,” such as “nourishing” or “nutrient-dense.”

(Response 19) We are not testing the nutrient content claim “healthy;” rather, we are testing consumer responses to graphic representations of the claim. We similarly do not intend to test other terms.

(Comment 20) Several comments supported conducting research on the use of an accompanying URL with the “healthy” symbol; however, others stated the purpose for including a URL was unclear, and one comment expressed concern that a URL would not work as well in a brick-and-mortar retail setting. Another comment stated that future labeling could include the use of other technologies, such as a quick response (QR) code or digital watermark, to provide consumers access to all the labeling information included on the package and suggested that we incorporate digital disclosure flexibility into our labeling regulations because technology continues to evolve. Other comments suggested that consumers may not have internet access in stores or may not know how to use QR codes, while another comment suggested that researchers could develop unique QR codes for each condition and track participant use.

(Response 20) Our research efforts on the “healthy” symbol are intended to collect sufficient data for the development and finalization of a “healthy” symbol. We are studying several dimensions of a proposed symbol, including the inclusion of a URL as part of the symbol. This research will help us better understand study participants’ reactions to and understanding of those different elements.

Our preliminary research indicated that participants are interested in learning more about the symbols, and a URL can serve as a representation to participants that more information is available. The current study design proposes to test a URL alongside some of the symbols to gauge the ability of the URL to indicate that information about the symbol is available and to assess the degree to which a URL improves confidence and trust in the symbol. We are not studying participants’ actual ability to access the URL in stores or elsewhere. We are also not considering inclusion of other technologies, such as

a QR code or digital watermark, in this information collection because a URL will help us gauge whether participants want a way to access additional information about the symbol. Further, a QR code or digital watermark would not indicate government involvement in the way a URL ending “.gov” may, and we are interested in how participants will respond to a “.gov” URL.

While we agree that technology changes over time, we are only studying consumer responses to the symbols in this research. It would be premature to comment on any requirements surrounding any symbol we might propose. However, we could consider other digital elements, such as QR codes or digital watermarks, in future research depending on our future research goals.

(Comment 21) Some comments raised concerns that the use of FDA’s name as part of the “healthy” symbol. The comments said that the use of FDA’s name could create the appearance of an FDA endorsement of a given food.

(Response 21) We are testing draft symbols with “FDA.” We note that we are studying several dimensions of a proposed symbol to help us better understand study participants’ reactions to and understanding of those different elements, including any impression of an FDA endorsement.

(Comment 22) A few comments expressed uncertainty as to whether FDA research participants would come from a nationally representative sample and recommended paying particular attention to or using quota samples similar to the demographic breakdown of the U.S. population regarding sex, age, race/ethnicity, income, and education. Some comments also stated that FDA should consider oversampling from certain groups at highest risk for dietary-related disparities, asserting that it is important to ensure that any proposed healthy symbol works well among all populations. One comment noted this is especially important for lower-education groups who, the comment asserted, may be less likely to use or understand the package’s nutrition label. Some comments also requested that FDA screen participants to ensure a sample large enough to collect responses from food-allergic individuals, caregivers to food-allergic individuals, and parents.

(Response 22) We designed our studies to test consumer responses to draft symbols in a randomized controlled setting, with participants drawn from a general population. Our research collection is not intended to produce population estimates. However, we intend to select the samples in each study to be reflective of the general U.S.

population (e.g., sex, race/ethnicity). We believe our approach is reasonable because any “healthy” symbol we finalize will be available to the general U.S. population.

(Comment 23) One comment suggested that we test a Spanish language version of the symbol and consider whether including “FDA” as part of the symbol would resonate with consumers of products sold in other countries.

(Response 23) Our regulations, at 21 CFR 101.15(c), generally require that the labeling of all food offered for sale in the United States be in English, and outline requirements for manufacturers that also choose to label their products in additional languages. Because we generally require only English labeling, and manufacturers may choose whether to use or include foreign-language labeling, we are testing only an English-language version of the symbol in this set of studies.

As for products sold in other countries, the nutrient content claim “healthy,” and any related symbol we finalize, are specifically for products marketed and sold in the United States. We decline to comment on marketing and sales in, or the food labeling requirements of, other countries.

(Comment 24) One comment argued that we should not generalize the results from this study to all FOP label systems.

(Response 24) We agree that findings from this research should not be generalized to all FOP label systems.

### *C. Comments Regarding Ways To Enhance the Quality, Utility, and Clarity of the Information To Be Collected, and FDA Response*

Several comments suggested ways to enhance the quality, utility, and clarity of the information about “healthy” symbols to be collected.

(Comment 25) Some comments stated FDA should conduct thorough research regarding the development and finalization of a symbol for “healthy,” and should collect comprehensive data so that FDA’s final decision promotes health.

(Response 25) FDA agrees with the comments. Our research goal is to explore consumer responses to draft symbols that could represent the nutrient content claim “healthy.” The goal of the symbol is to help consumers make more informed dietary choices.

(Comment 26) Several comments recommended we change certain aspects of the questions we include in the experimental study. Some

comments suggested that we select specific outcome measures, such as purchase intent, sales data, ability of the symbols to attract consumer attention, long-term behavior change, consumer perceptions of the taste and cost of products bearing the “healthy” symbol, the healthfulness of the products consumers purchased, the number of “healthier” products purchased in a shopping setting, and any unintended consequences of the symbol.

One comment recommended adding covariates, such as health status, particularly for conditions that are related to nutrition, such as diabetes, weight status, and hypertension, to help us understand responses. Regarding the interpretation of measurements, one comment suggested we avoid “believability” or “trustworthiness” as indicators of which symbol can help people make more informed dietary choices, claiming that these are not strong predictors of behavior. The comment cited a study on cigarette pack warning messages that found that measures on the effects of the warning message resulted more in intended behavior change than did measures on attitude perceptions (Ref. 4).

Another comment recommended FDA provide an option for open-ended responses to gauge consumers’ perceptions of “healthy.”

(Response 26) The intended studies cover the key measurements and covariates that will help us understand consumer perceptions of the symbols. The comments did not provide, and we are not aware of, evidence that adding covariates or measurements would enhance the quality, utility, or clarity of the information we intend to collect. We will evaluate our draft symbols based on our analysis of all—not just a subset—of these measurements. We acknowledge that there are measurements we are not including in this research effort (e.g., long-term behavior changes). These studies are designed to explore consumer responses to the draft symbols, and inclusion of variables such as long-term behavior changes would be premature.

We plan to use a variety of measures to help understand the potential impact of a voluntary FOP symbol for “healthy,” and intend to use “believability” and “trustworthiness” as outcome measures because well-established scientific literature has shown that consumers’ attitudes and perceptions affect their behavior (Refs. 5 to 7). Additionally, we note that the cigarette-pack study one comment cited

qualified its findings as unsure if the same would be found in other message or product scenarios (Ref. 4). Because the published literature does not indicate that “effects perception measures” have been tested in the food label domain, we will add some questions to the experimental study to evaluate their use as outcome measures compared to “message effects measures.”

We disagree with the suggestion to query consumers on their perception of “healthy.” Our research is designed to test consumer responses to the draft symbols, not determine consumer perceptions of “healthy.”

### *D. Comment Regarding Ways To Minimize the Burden of the Collection of Information on Respondents, Including Through the Use of Automated Collection Techniques, When Appropriate, and Other Forms of Information Technology, and FDA Response*

One comment discussed minimizing the information collection burden on respondents to our proposed “healthy” symbol research.

(Comment 27) One comment supported the proposed research and noted that the use of online surveys will help alleviate participant and administrative burden while ensuring that the research reaches sufficient participants.

(Response 27) We agree with the comment for the purposes of this research.

### *E. Nonresponsive Comments to the PRA*

Some comments addressed aspects of “healthy” symbols that are outside the scope of this information collection or addressed issues other than the “healthy” symbol research. These discussed, for example, the definition of “healthy,” potential impacts of the “healthy” nutrient content claim generally, whether the symbols should be voluntary or mandatory, and whether we should develop an accompanying consumer education campaign. These are outside the scope of this information collection, and we will not address them here. Interested parties will have an opportunity to comment on any “healthy” symbol we propose and any proposed updated definition of the nutrient content claim “healthy” in response to their respective **Federal Register** notices.

FDA estimates the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN<sup>1</sup>

Activity	Number of respondents	Number of responses per respondent	Total annual responses	Average burden per response	Total hours
Study 1 (Survey) Cognitive interview screener .....	75	1	75	0.083 (5 minutes) ..	6
Study 2 (Experiment) Cognitive interview screener <sup>2</sup> ..	75	1	75	0.083 (5 minutes) ..	6
Study 1 (Survey) Cognitive interview .....	5	1	5	1 .....	5
Study 2 (Experiment) Cognitive interview .....	9	1	9	1 .....	9
Study 1 (Survey) Pretest .....	60	1	60	0.17 (10 minutes) ...	10
Study 2 (Experiment) Pretest .....	180	1	180	0.25 (15 minutes) ...	45
Study 1 (Survey) .....	2,000	1	2,000	0.17 (10 minutes) ..	340
Study 2 (Experiment) .....	5,000	1	5,000	0.25 (15 minutes) ..	1,250
Total .....					1,671

<sup>1</sup> There are no capital costs or operating and maintenance costs associated with this collection of information.

<sup>2</sup> Since Study 3 is identical to Study 2, only one set of cognitive interviews and pre-tests are needed.

## DEPARTMENT OF HEALTH AND HUMAN SERVICES

### Health Resources and Services Administration

#### Solicitation of Nominations for Organizational Representatives to the Advisory Committee on Heritable Disorders in Newborns and Children

**AGENCY:** Health Resources and Services Administration (HRSA), Department of Health and Human Services (HHS).

**ACTION:** Request for nominations.

**SUMMARY:** HRSA is seeking nominations from organizations to send representatives to be a liaison to the Advisory Committee on Heritable Disorders in Newborns and Children (ACHDNC or Committee). Selections will be based on a review of the organization's subject area of expertise, mission, relevancy, and benefit provided relative to the Committee's purpose. The organizational representatives are non-voting liaisons. The Committee provides advice, recommendations, and technical information about aspects of heritable disorders and newborn and childhood screening to the Secretary of HHS.

**DATES:** Written nominations for organizational representatives to the ACHDNC must be received on or before May 2, 2022.

**ADDRESSES:** Nomination packages must be submitted electronically as email attachments to Soohyun Kim, MPH, CPH, Acting Designated Federal Officer (DFO) at [ACHDNC@hrsa.gov](mailto:ACHDNC@hrsa.gov).

#### FOR FURTHER INFORMATION CONTACT:

Acting DFO Soohyun Kim, MPH, CPH; Maternal and Child Health Bureau, HRSA, 5600 Fishers Lane, Room 18–N–38A, Rockville, MD 20857; 301–594–4202; or [ACHDNC@hrsa.gov](mailto:ACHDNC@hrsa.gov). A copy of the Committee charter and list of current membership is available on the Committee's website: <https://www.hrsa.gov/advisory-committees/heritable-disorders/index.html>.

**SUPPLEMENTARY INFORMATION:** ACHDNC was established in 2003 to provide advice and recommendations to the Secretary on the development of newborn screening activities, technologies, policies, guidelines, and programs for effectively reducing morbidity and mortality in newborns and children having, or at risk for, heritable disorders. ACHDNC reviews and reports regularly on newborn and childhood screening practices for heritable disorders, recommends improvements in the national newborn and childhood heritable screening programs, recommends conditions for inclusion in the Recommended Uniform Screening Panel (RUSP), and fulfills requirements stated in the authorizing legislation. ACHDNC's recommendations regarding inclusion of additional conditions/inherited disorders for screening that, when adopted by the Secretary, are included in the RUSP, and constitute part of the evidence-informed comprehensive preventive health services guidelines supported by HRSA pursuant to section 2713 of the Public Health Service Act (42 U.S.C. 300gg–13). Under this provision, non-grandfathered group health plans and group and individual health insurance issuers are required to provide coverage without cost-sharing (a co-payment, co-insurance, or deductible) for preventive services for plan years (*i.e.*, in the individual market, policy years) beginning on or

after the date that is 1 year from the Secretary's adoption of the condition.

ACHDNC also provides advice and recommendations to the Secretary concerning grants, projects and technical information to develop policies and priorities for grants, including those that will enhance the ability of the state and local health agencies to provide for newborn and child screening, counseling, and health care services for newborns and children having or at risk for heritable disorders.

ACHDNC meets four times each calendar year, or at the discretion of the DFO in consultation with the Chair.

*Nominations:* The Committee may invite organizations to designate individuals to serve as non-voting liaisons. Organizations should demonstrate wide-ranging newborn screening and heritable disorders interests. In addition, the organization's work should inform the activities of the Committee. Eligible organizations must represent national public health constituencies, medical professional societies, or organizations with large, broad constituencies and broad interest or involvement in newborn screening. Organizations that represent narrow interests (e.g., interest in a single disease treatment) or smaller constituencies are not eligible. Organizational representatives attend Committee meetings to provide relevant expertise and perspectives to Committee members during their deliberations and discussions, but they do not vote and are not official members of the Committee.

Applications must contain a cover letter and statement. The cover letter should include the organization name and mission statement; contact information for the designated representative, including point of contact name, address, email, telephone number; and website of the organization. The statement should include the perspective and expertise provided by the organization and its relevance to the Committee; description of how the Committee's work affects and impacts the organization and its constituency; a list of organizational projects, programs, and products that are of relevance to the Committee's work; an affirmation of the organization's commitment to identify a representative with expertise who can attend Committee meetings in person (when applicable) and provide input to the Committee at the discretion of the Chair; an affirmation of the organization's commitment to financially support (e.g., cover travel expenses) a representative to attend any in-person Committee meetings held in

Rockville, Maryland; an affirmation of the organization's commitment to ensure active contribution to and dissemination of Committee activities and recommendations to its constituencies; affirmation the designated representative is able to serve as the liaison; and an affirmation that the organization has no conflict of interest that would preclude informing the Committee in a fair and balanced manner. If there are potential conflicts of interest, please detail the information concerning any potential conflicts of interest relative to both the organization and the proposed organizational representative (e.g., current or anticipated employment, consultancies, research grants, or contracts), as well as how the organization proposes to address the potential conflict.

Organizations are eligible to send a representative as long as the organization's subject area of expertise and mission is relevant to the Committee's purpose, objective, scope of activities and duties, and as long as the organization actively participates in Committee activities. Every 3 years, the Chair and DFO will re-assess the organization's mission, relevancy, and benefit as it relates to the Committee's purpose, objective, scope of activities and duties. Every 3 years, current organizations will be asked to reaffirm their commitment to support an organizational representative.

The selection of eligible organizations is based on a review of the organization's subject area of expertise, mission, relevancy, and benefit as it relates to the Committee's purpose.

*Authority:* Section 1111(g) of the Public Health Service Act, 42 U.S.C. 300b-10(g), Section 222 of the Public Health Service Act, 42 U.S.C. 217a, and the Federal Advisory Committee Act, 5 U.S.C. App.

## **DEPARTMENT OF HEALTH AND HUMAN SERVICES**

### **Health Resources and Services Administration**

#### **Solicitation of Nominations for Membership To Serve on the Advisory Committee on Heritable Disorders in Newborns and Children**

**AGENCY:** Health Resources and Services Administration (HRSA), Department of Health and Human Services (HHS).

**ACTION:** Request for nominations.

**SUMMARY:** HRSA is seeking nominations of qualified candidates for consideration for appointment as members of the Advisory Committee on Heritable Disorders in Newborns and Children (ACHDNC or Committee). ACHDNC provides advice, recommendations, and technical information about aspects of heritable disorders and newborn and childhood screening to the Secretary of HHS (Secretary). HRSA is seeking nominations of qualified candidates for appointment to two positions on the Committee beginning in 2023, each serving a term of up-to 4 years.

**DATES:** Written nominations for membership on the Committee must be received on or before April 11, 2022.

**ADDRESSES:** Nomination packages must be submitted electronically as email attachments to Soohyun Kim, MPH, CPH, Acting Designated Federal Officer (DFO) at [ACHDNC@hrsa.gov](mailto:ACHDNC@hrsa.gov).

**FOR FURTHER INFORMATION CONTACT:**

Acting DFO Soohyun Kim, MPH, CPH; Maternal and Child Health Bureau, HRSA, 5600 Fishers Lane, Room 18-N-38A, Rockville, MD 20857; 301-594-4202; or [ACHDNC@hrsa.gov](mailto:ACHDNC@hrsa.gov). A copy of the Committee charter and list of the current membership is available on the Committee's website at <https://www.hrsa.gov/advisory-committees/heritable-disorders/about/index.html>.

**SUPPLEMENTARY INFORMATION:** ACHDNC was established in 2003 to provide advice and recommendations to the Secretary on the development of newborn screening activities, technologies, policies, guidelines, and programs for effectively reducing morbidity and mortality in newborns and children having, or at risk for, heritable disorders. ACHDNC reviews and reports regularly on newborn and childhood screening practices for heritable disorders, recommends improvements in the national newborn and childhood heritable screening programs, recommends conditions for inclusion in the Recommended Uniform Screening Panel (RUSP), and fulfills requirements stated in the authorizing legislation. ACHDNC's recommendations regarding inclusion of additional conditions/inherited disorders for screening that, when adopted by the Secretary, are included in the RUSP, and constitute part of the evidence-informed comprehensive preventive health services guidelines supported by HRSA pursuant to section 2713 of the Public Health Service Act (42 U.S.C. 300gg-13). Under this provision, non-grandfathered group health plans and group and individual

health insurance issuers are required to provide insurance coverage without cost-sharing (a co-payment, co-insurance, or deductible) for preventive services for plan years (*i.e.*, in the individual market, policy years) beginning on or after the date that is 1 year from the Secretary's adoption of the condition.

ACHDNC also provides advice and recommendations to the Secretary concerning grants, projects and technical information to develop policies and priorities for grants, including those that will enhance the ability of the state and local health agencies to provide for newborn and child screening, counseling, and health care services for newborns and children having or at risk for heritable disorders.

ACHDNC meets four times each calendar year, or at the discretion of the Acting DFO in consultation with the Chair.

**Nominations:** HRSA is requesting nominations for voting members to serve as Special Government Employees (SGEs) on the ACHDNC to fill two positions starting in 2023. The Secretary appoints ACHDNC members with the expertise needed to fulfill the duties of the Committee. The membership requirements are set forth in Title XI § 1111(g), 42 U.S.C. 300b–10(g). Nominees sought are medical, technical, or scientific professionals with special expertise in the field of heritable disorders or in providing screening, counseling, testing, or specialty services for newborns and children with, or at risk for having, heritable disorders; individuals who have expertise in ethics (*e.g.*, bioethics) and infectious diseases and who have worked and published material in the area of newborn screening; members of the public having demonstrated expertise about or concern with heritable disorders; and/or representatives from such federal agencies, public health constituencies, and medical professional societies with such expertise. Interested applicants may self-nominate or be nominated by another individual or organization.

Individuals selected for appointment to the Committee will be invited to serve for a term of up-to 4 years. Members appointed as SGEs receive a stipend and reimbursement for per diem and travel expenses incurred for attending ACHDNC meetings and/or conducting other business on behalf of ACHDNC, as authorized by 5 U.S.C. 5703 for persons employed intermittently in government service.

The following information must be included in the package of materials submitted for each individual nominated for consideration: (1) A

statement that includes the name and affiliation of the nominee and a clear statement regarding the basis for the nomination, including the area(s) of demonstrated expertise or concern that may support eligibility of a nominee for service on the Committee, as described above; (2) confirmation the nominee is willing to serve as a member of the Committee; (3) the nominee's contact information (please include home address, work address, daytime telephone number, and an email address); and (4) a current copy of the nominee's curriculum vitae.

Nomination packages may be submitted directly by the individual being nominated or by the person/organization recommending the candidate.

HHS endeavors to ensure that the membership of ACHDNC is fairly balanced in terms of points of view represented and that individuals from a broad representation of geographic areas, gender, and ethnic and minority groups, as well as individuals with disabilities, are considered for membership. Appointments shall be made without discrimination on the basis of age, ethnicity, gender, sexual orientation, or cultural, religious, or socioeconomic status.

Individuals selected for further consideration for appointment will be required to provide detailed information regarding their financial holdings, consultancies, and research grants or contracts. Disclosure of this information is required in order for HRSA ethics officials to determine whether there is a potential conflict of interest between the SGE's public duties as a member of ACHDNC and their private interests, including an appearance of a loss of impartiality as defined by federal laws and regulations, and to identify any required remedial action needed to address the potential conflict.

**Authority:** Section 1111(g) of the Public Health Service Act, 42 U.S.C. 300b–10(g), Section 222 of the Public Health Service Act, 42 U.S.C. 217a, and the Federal Advisory Committee Act, 5 U.S.C. App.

## DEPARTMENT OF HEALTH AND HUMAN SERVICES

### Health Resources and Services Administration

#### Agency Information Collection Activities: Submission to OMB for Review and Approval; Telehealth Resource Center Performance Measurement Tool, OMB No. 0915–0361—Extension

**AGENCY:** Health Resources and Services Administration (HRSA), Department of Health and Human Services.

**ACTION:** Notice.

**SUMMARY:** In compliance with of the Paperwork Reduction Act of 1995, HRSA has submitted an Information Collection Request (ICR) to the Office of Management and Budget (OMB) for review and approval. Comments submitted during the first public review of this ICR will be provided to OMB. OMB will accept further comments from the public during the review and approval period. OMB may act on HRSA's ICR only after the 30-day comment period for this Notice has closed.

**DATES:** Comments on this ICR should be received no later than April 27, 2022.

**ADDRESSES:** Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to [www.reginfo.gov/public/do/PRAMain](http://www.reginfo.gov/public/do/PRAMain). Find this particular information collection by selecting "Currently under Review—Open for Public Comments" or by using the search function.

**FOR FURTHER INFORMATION CONTACT:** To request a copy of the clearance requests submitted to OMB for review, email Samantha Miller, the acting HRSA Information Collection Clearance Officer at [paperwork@hrsa.gov](mailto:paperwork@hrsa.gov) or call (301) 443–9094.

#### SUPPLEMENTARY INFORMATION:

*Information Collection Request Title:* Telehealth Resource Center (TRC) Performance Measurement Tool, OMB No. 0915–0361—Extension.

*Abstract:* HRSA requests an extension of their TRC Performance Measurement Tool. The TRCs deliver telehealth technical assistance. There are two types of HRSA TRC programs:

- Two National Telehealth Resource Center Programs focus on policy and technology.
- Twelve Regional Telehealth Resource Center Programs host activities and provide resources to rural and underserved areas.

The HRSA TRCs:

- Provide training and support,
- Publicize information and research findings,
- Support collaboration and partnerships,
- Promote effective partnerships, and
- Promote the use of telehealth by providing health care information and education to the public and medical specialists.

The TRCs share expertise through individual consults, training, webinars, conference presentations, and the web.

A 60-day notice published in the **Federal Register**, 87 FR 1421 (January 11, 2022). There were no public comments.

*Need and Proposed Use of the Information:* In order to evaluate existing programs, data are submitted to the Office for the Advancement of Telework (OAT) through HRSA’s Performance Improvement Management System (PIMS). The data are used to measure the effectiveness of the technical assistance. There is one data reporting period each year; during these reporting periods, data are reported for the previous 12 months of activity. Programs have approximately 6 weeks to enter their data into the PIMS system during each annual reporting period.

The instrument was developed with the following four goals in mind:

1. Improving access to needed services,

2. Reducing rural and underserved population practitioner isolation,
3. Improving health system productivity and efficiency, and
4. Improving patient outcomes.

The TRCs currently report on existing performance data elements using PIMS. The performance measures are designed to assess how the TRC program is meeting its goals to:

- Expand the availability of telehealth services in underserved communities;
- Improve the quality, efficiency, and effectiveness of telehealth services;
- Promote knowledge exchange and dissemination about efficient and effective telehealth practices and technology; and

• Establish sustainable technical assistance (TA) centers providing quality, unbiased TA for the development and expansion of effective and efficient telehealth services in underserved communities.

Additionally, the PIMS tool allows OAT to:

- Determine the value added from the TRC Cooperative Agreement;
- Justify budget requests;
- Collect uniform, consistent data which enables OAT to monitor programs;
- Provide guidance to grantees on important indicators to track over time for their own internal program management;
- Measure performance relative to the mission of OAT/HRSA as well as

individual goals and objectives of the program;

- Identify topics of interest for future special studies; and
- Identify changes in health care needs within rural and underserved communities, allowing programs to shift focus in order to meet those needs.

*Likely Respondents:* The likely respondents will be telehealth associations, telehealth providers, rural and underserved health providers, clinicians that deliver services via telehealth, TA providers, research organizations and academic medical centers.

*Burden Statement:* Burden in this context means the time expended by persons to generate, maintain, retain, disclose, or provide the information requested. This includes the time needed to review instructions; to develop, acquire, install, and utilize technology and systems for the purpose of collecting, validating and verifying information, processing and maintaining information, and disclosing and providing information; to train personnel and to be able to respond to a collection of information; to search data sources; to complete and review the collection of information; and to transmit or otherwise disclose the information. The total annual burden hours estimated for this ICR are summarized in the table below.

TOTAL ESTIMATED ANNUALIZED BURDEN—HOURS

Form name	Number of respondents	Number of responses per respondent	Total responses	Average burden per response (in hours)	Total burden hours
Telehealth Resource Center Performance Measurement Tool .....	14	42	588	0.07	41
Total .....	14	.....	588	.....	41

HRSA specifically requests comments on (1) the necessity and utility of the proposed information collection for the proper performance of the agency’s functions, (2) the accuracy of the estimated burden, (3) ways to enhance the quality, utility, and clarity of the information to be collected, and (4) the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

## DEPARTMENT OF HEALTH AND HUMAN SERVICES

### Office of Refugee Resettlement

#### Extending Refugee Cash Assistance and Refugee Medical Assistance From 8 Months to 12 Months

**AGENCY:** Office of Refugee Resettlement (ORR), Administration for Children and Families (ACF), Department of Health and Human Services (HHS).

**ACTION:** Notice of change of eligibility period.

**SUMMARY:** In accordance with ORR regulations, the Director of ORR is announcing the expansion of the Refugee Cash Assistance (RCA) and Refugee Medical Assistance (RMA) eligibility period from 8 months to 12 months of assistance for participants whose date of eligibility for ORR benefits is on or after October 1, 2021. Through the Refugee Act of 1980, Congress authorized cash and medical assistance up to 36 months, yet by fiscal year (FY) 1992, mainly due to insufficient appropriations, ORR had

reduced the RCA and RMA eligibility periods to 8 months. For 30 years, ORR has not increased the RCA or RMA eligibility period. Extending the RCA and RMA eligibility period will lead to more effective resettlement, by providing refugee and other ORR-eligible populations with additional time to become self-sufficient.

**DATES:** The changes described in this **Federal Register** notice are effective as of the date of publication.

**FOR FURTHER INFORMATION CONTACT:** Colleen Mahar-Piersma, Refugee Policy Unit, Division of Policy and Procedures, Office of the Director, Office of Refugee Resettlement, Administration for Children and Families, by phone at (202) 260–5493, and email at [refugeepolicy@acf.hhs.gov](mailto:refugeepolicy@acf.hhs.gov).

**SUPPLEMENTARY INFORMATION:** The 1980 Refugee Act (8 U.S.C. 1522(e)(1)) authorized the Director of ORR (hereinafter “the Director”) to provide RCA and RMA during the first 36 months after a refugee’s arrival in the United States or, for other ORR-eligible populations, after they became eligible for ORR benefits and services. (ORR-eligible populations, hereinafter referred to as “refugees,” are outlined within ORR Policy Letter (PL) 16–01, *Documentation Requirements for the Refugee Resettlement Program* and ORR PL 22–02, *Additional ORR-Eligible Statuses and Categories and Acceptable Documentation Requirements for Afghan Nationals.*)

ORR regulations (45 CFR 400.211(a)) authorize the Director to determine the time-eligibility period for RCA and RMA each year based on the appropriated funds available for the fiscal year. After Congress passed the Refugee Act of 1980, ORR provided refugees with RCA and RMA for the first 36 months after a refugee’s arrival. However, due to reduced appropriations, ORR had to decrease this assistance from 36 months to 18 months, then to 12 months, and finally, in FY 1992, to 8 months.

The proposed expansion of the RCA and RMA eligibility period would positively impact refugees who are not eligible for Temporary Assistance for Needy Families or Medicaid. Increasing the RCA and RMA eligibility period enables refugees to address any medical and mental health issues that would impede their ability to become self-sufficient. Additionally, an expanded eligibility period allows refugees to focus on the Congressional priorities for assistance, as outlined in the Refugee Act, of acquiring English, receiving employment training, and securing employment, with the increase in

English skills and professional development potentially facilitating employment at higher wages, a benefit not only for their families but for every community where they reside.

Refugees whose date of eligibility for ORR benefits is in FY 2022 (on or after October 1, 2021) are eligible for the expanded RCA and RMA eligibility period.

(Authority: 45 CFR 400.211)

Dated: March 22, 2022.

**Cindy Huang,**

*Director of the Office of Refugee Resettlement.*

**BILLING CODE 4120-27-P**

## **DEPARTMENT OF HEALTH AND HUMAN SERVICES**

### **Substance Abuse and Mental Health Services Administration**

#### **Agency Information Collection Activities: Submission for OMB Review; Comment Request**

Periodically, the Substance Abuse and Mental Health Services Administration (SAMHSA) will publish a summary of information collection requests under OMB review, in compliance with the Paperwork Reduction Act (44 U.S.C. Chapter 35). To request a copy of these documents, call the SAMHSA Reports Clearance Officer at (240) 276-0361.

#### **Project: Mental and Substance Use Disorders Prevalence Study (MDPS) Grant Funded by SAMHSA, Grant Number H79FG000030**

SAMHSA is requesting from the Office of Management and Budget (OMB) approval to conduct recruitment activities and clinical interviews with household respondents and non-household facilities and respondents as part of the Mental and Substance Use Disorders Prevalence Study (MDPS) pilot program. Activities conducted will include: A household rostering and mental health screening of household participants and a clinical interview of both household and non-household participants. The information gathered by the clinical interview will be used to determine prevalence estimates of schizophrenia or schizoaffective disorder; bipolar I disorder; major depressive disorder; generalized anxiety disorder; posttraumatic stress disorder (PTSD); obsessive-compulsive disorder; anorexia nervosa; and alcohol, benzodiazepine, opioid, stimulant, and cannabis use disorders among U.S. adults ages 18 to 65 years.

#### *Household Rostering*

The household rostering includes inquiries about all adults ages 18 and older residing in the household, to assess eligibility for inclusion in the study, and then selecting up to two adults for the household mental health screening. The total number of household members and numbers of adults and children are first asked, followed by the first name, age and sex of all adult household members, as well as whether any adult in the household has had a serious medical condition. The best time to be interviewed is collected as well. The computerized roster can be completed online, by phone, on paper, or in-person. The target population is adults ages 18–65 residing in U.S. households; it is estimated that 45,000 household rosters will be completed. The primary objective of the household roster is to select up to two age-eligible participants for the mental health screening interview.

#### *Household Mental Health Screening*

The household mental health screening interview utilizes the Computerized Adaptive Testing for Mental Health Disorders (CAT–MH) or the World Health Organization's Composite International Diagnostic Interview (CIDI) instruments to assess symptoms related to the mental health and substance use disorders of interest, including schizophrenia or schizoaffective disorder; bipolar I disorder; major depressive disorder; generalized anxiety disorder; posttraumatic stress disorder (PTSD); obsessive-compulsive disorder; anorexia nervosa; and alcohol, benzodiazepine, opioid, stimulant, and cannabis use. The screening instrument also includes questions on treatment, receipt of Social Security Disability Income (SSDI), military experience, and exposure to and impact of COVID–19. The computerized mental health screening can be completed online, by phone, on paper or in-person. The primary objectives of the household mental health screening interview are to assess the symptoms endorsed and determine eligibility and selection for the MDPS pilot program clinical interview.

#### *Clinical Interview*

The MDPS pilot program clinical interview includes questions that assess the mental health and substance use disorders using the NetSCID, a computerized version of the Structured Clinical Interview for DSM–V (SCID). This instrument includes questions on symptoms and their duration and

frequency for the disorders of interest. Also collected from respondents is demographic information, including sex, gender, age, education and employment status. Hospitalization and treatment history are asked as well as questions to assess exposure to COVID–19 of self or other close family members and the impact on mental health. Up to two adults per household will be selected to complete the clinical interview. Participants from the prisons, jails, homeless shelters and state psychiatric hospitals will complete the clinical interview as well. The computer-assisted personal interview (CAPI) is administered by a trained clinical interviewer, and can be conducted by video conference, such as Zoom or WebEx, phone or in person. Approximately 7,200 clinical interviews will be conducted as part of the MDPS pilot program. The primary objective of the clinical interview is to estimate the prevalence of the disorders of interest, including schizophrenia or schizoaffective disorder; bipolar I disorder; major depressive disorder; generalized anxiety disorder; posttraumatic stress disorder (PTSD); obsessive-compulsive disorder; anorexia nervosa; and alcohol, benzodiazepine, opioid, stimulant, and cannabis use, as well as unmet treatment needs.

#### *Jail Mental Health Screening*

The jail mental health screening interview utilizes the CIDI screening instruments to assess symptoms related to the primary mental health and substance use disorders of interest including schizophrenia or schizoaffective disorder; bipolar I disorder; major depressive disorder; generalized anxiety disorder; posttraumatic stress disorder (PTSD); obsessive-compulsive disorder; anorexia nervosa; and alcohol, benzodiazepine, opioid, stimulant, and cannabis use. The screening instrument also includes questions on treatment, receipt of Social Security Disability Income (SSDI), military experience, and exposure to and impact of COVID–19. The computerized mental health screening will be completed in person or by phone. The target population is a convenience sample of incarcerated 18–65-year-old adults, in up to six jails identified by the MDPS co-investigator team. Up to 208 mental health screening interviews will be conducted among incarcerated respondents. Respondents will be provided with a card that includes contact information and asked to contact the project personnel when they are released for inclusion in the household clinical interview sample. The primary objective of the jail mental

health screening interview is to determine the feasibility of conducting mental health screening interviews within a jail population, as well as whether they would have been included in the household sample during the data collection period should they not have been incarcerated.

**Facility Recruitment**

Information packets will be sent to all selected prisons, state psychiatric hospitals, homeless shelters and jails including a letter of invitation, letters of support, an overview of the project and an overview of the data collection process in the facility. Facilities will be contacted by telephone, to answer any questions and provide additional information regarding the MDPS pilot program. Once approval is obtained, a logistics manager will contact the facility to provide instructions on the rostering and selection processes, to schedule the data collection visit, and to determine the appropriate space to conduct the interviews and the number of days and hours per day for data collection. Facilities will be asked to

provide a roster (deidentified or identified) of eligible residents within one week of scheduling the data collection visit and again one-to-two weeks prior to the actual data collection visit (note: Data collection can be scheduled up to 4 months in advance). At the time of data collection, facility staff will assist with data collection activities including escorting selected inmates to and from the data collection area.

The primary objective of the MDPS pilot program is to examine methods to estimate the prevalence of specific mental illnesses, particularly adults with psychotic disorders and serious functional impairment, and treatment in both populations to answer two core research questions:

- What is the prevalence of schizophrenia/schizoaffective disorder (lifetime and past year), bipolar I disorder (past year), major depressive disorder (past year), generalized anxiety disorder (past year), posttraumatic stress disorder (past year), obsessive-compulsive disorder (past year), anorexia nervosa (past year), and

alcohol, benzodiazepine, opioid, stimulant, and cannabis use disorders (past year) among adults, ages 18–65, in the United States?

- What proportion of adults in the United States with these disorders received treatment in the past year?
  - In addition to these research questions, the MDPS pilot program will allow for procedural evaluation to:
    - Identify which set of screening instruments might be best to accurately identify mental and substance use disorders within the U.S. household population;
    - Understand the best approaches to conducting data collection within non-household settings, to gather information on mental illness and treatment;
    - Design protocols for collecting clinical interviews from proxy respondents; and
    - Establish a protocol that can be used at a larger scale to understand the prevalence and burden of specific mental disorders in both non-household and household populations across the United States.

**EXHIBIT 1—TOTAL ESTIMATED ANNUALIZED RESPONDENT BURDEN BY INSTRUMENT AND FACILITY RECRUITMENT**

Activity	Total number of respondents	Number of responses per respondent	Total number of responses	Average hours per response	Average burden hours	Average hourly wage**	Total cost
<b>Instrument:</b>							
Household Rostering .....	45,000	1	45,000	0.13	5,850	\$19.83	\$116,006

Sub-total Facility Recruitment Estimates .....					1,145.5		28,740
					45,582.5		909,932

\* Contact attempts include the time spent reviewing all follow-up letters and study materials, including the respondent website, interactions with field and telephone interviewers, the consent process including asking questions regarding rights as a participant and receiving responses, and all other exchanges during the recruitment and interviewing processes.

\*\* To compute total estimated annual cost for Interviewing, the total burden hours were multiplied by the average hourly wage for each adult participant, according to a Bureau of Labor Statistics (BLS) chart called "Median usual weekly earnings of full-time wage and salary workers by educational attainment." (Median usual weekly earnings of full-time wage and salary workers by educational attainment ([bls.gov](https://www.bls.gov))). We used the median salary for full-time employees over the age of 25 who are high school graduates with no college experience in the 2nd quarter of 2021 (\$19.83 per hour). \* For the Facility Recruitment, the total average burden assumes an average hourly rate of \$25.09 for Community and Social Service Managers, given in the Bureau of Labor Statistic's Occupational Employment Statistics, May 2020.

**DEPARTMENT OF HEALTH AND HUMAN SERVICES**

**Substance Abuse and Mental Health Services Administration**

**Agency Information Collection Activities: Submission for Office of Management and Budget (OMB) Review; Comment Request**

Periodically, the Substance Abuse and Mental Health Services Administration (SAMHSA) will publish a summary of information collection requests under OMB review, in compliance with the Paperwork Reduction Act (44 U.S.C. Chapter 35). To request a copy of these

documents, call the SAMHSA Reports Clearance Officer at (240) 276-0361.

**Project: Regulations To Implement SAMHSA’s Charitable Choice Statutory Provisions—42 CFR Parts 54 and 54a (OMB No. 0930-0242)—Extension**

Section 1955 of the Public Health Service Act (42 U.S.C. 300x-65), as amended by the Children’s Health Act of 2000 (Pub. L. 106-310) and Sections 581-584 of the Public Health Service Act (42 U.S.C. 290kk *et seq.*, as added by the Consolidated Appropriations Act (Pub. L. 106-554)), set forth various provisions which aim to ensure that religious organizations are able to compete on an equal footing for federal funds to provide substance use services. These provisions allow religious organizations to offer substance use services to individuals without impairing the religious character of the organizations or the religious freedom of the individuals who receive the services. The provisions apply to the Substance Abuse Prevention and Treatment Block Grant (SABG), to the

Projects for Assistance in Transition from Homelessness (PATH) formula grant program, and to certain Substance Abuse and Mental Health Services Administration (SAMHSA) discretionary grant programs (programs that pay for substance use treatment and prevention services, not for certain infrastructure and technical assistance activities). Every effort has been made to assure that the reporting, recordkeeping, and disclosure requirements of the proposed regulations allow maximum flexibility in implementation and impose minimum burden.

No changes are being made to the regulations or the burden hours. This information collection has been approved without changes since 2010.

Information on how states comply with the requirements of 42 CFR part 54 was approved by OMB as part of the Substance Abuse Prevention and Treatment Block Grant FY 2019-2021 annual application and reporting requirements approved under OMB control number 0930-0168.

**DEPARTMENT OF HEALTH AND HUMAN SERVICES**

**Substance Abuse and Mental Health Services Administration**

**Agency Information Collection Activities: Submission for OMB Review; Comment Request**

Periodically, the Substance Abuse and Mental Health Services Administration

(SAMHSA) will publish a summary of information collection requests under OMB review, in compliance with the Paperwork Reduction Act (44 U.S.C. chapter 35). To request a copy of these documents, call the SAMHSA Reports Clearance Officer on (240) 276-0361.

**Project: Assessment of the Communities Talk To Prevent Underage Drinking—(OMB No. 0930-0288)—Reinstatement**

The Substance Abuse and Mental Health Services Administration/Center for Substance Abuse Prevention (SAMHSA/CSAP) is requesting a reinstatement from the Office of Management and Budget (OMB) of the information collection regarding the Assessment of the *Communities Talk to Prevent Underage Drinking* initiative which is implemented by the Underage Drinking Prevention Education Initiatives (UADPEI) within CSAP. The data collection was most recently approved under OMB No. 0930-0288, Assessment of the Town Hall Meetings on Underage Drinking Prevention,

which expired on May 31, 2020. Revisions were made to the Organizer Survey; it can be completed twice, namely after a round of Communities Talk events/activities (activities) from February 2022 to April 2022, and as a follow-up one year later from February 2023 to April 2023. The Organizer Survey—6-month Follow-up and Participant Form (English and Spanish versions) were dropped.

*Changes*

Under the most recent approval, the Organizer Survey consisted of 20 items. Under this reinstatement, the Organizer Survey includes 14 items about *Communities Talk* activities and how communities might be carrying out evidence-based strategies to prevent underage drinking (UAD). The following table provides a summary of the changes that were made to the instrument.

Current question/item	Changes made
q1—Date of the Communities Talk event .....	Question deleted.
q2—Enter the location of the Communities Talk event .....	Question deleted.
q3—How long did the Communities Talk event last (e.g., 45 minutes, 1.5 hours)?	Question deleted.
q4—How would you characterize the location where the Communities Talk event was held?	New q12.
q5—What influenced your organization’s decision to host a Communities Talk event? (Mark all that apply.)	Question deleted.
q6—Did any other community-based organization (e.g., business, school) collaborate with your organization in hosting this event?	Question deleted.
q7—Were youth involved in organizing and/or hosting the Communities Talk event?	Question deleted.
q8—How was the Communities Talk event promoted? (Mark all that apply.)	Question deleted.
q9—What was the total number of attendees at the Communities Talk event? (Estimates are okay.)	New q3.
q10—In what language was the Communities Talk event conducted? (Mark all that apply.)	Question deleted.
q11—Which of the following best represents key speakers at the Communities Talk event? (Mark all that apply.)	Question deleted.
q12—Was underage drinking the only topic addressed by the Communities Talk event?	Question deleted.
q13—Which of the following alcohol-related topics were discussed at the Communities Talk event? (Mark all that apply.)	Question deleted.
q14—In your opinion, how important is underage drinking, and its consequences, to the residents of your community?	New q1.
q15—In the future, how likely is it that you or your organization will plan or collaborate with others on the following activities to prevent underage drinking in your community?	Added the following introductory sentence: ‘A community’s needs and its resources may change over time.’ (new q9)

Current question/item	Changes made
<p>q16—Thinking about you and your organization, please rate your agreement with the following statements.</p>	<p>Deleted the following statements: (a) ‘The Communities Talk event has increased my ability to share information about the importance of preventing underage drinking’; (b) ‘As a result of this Communities Talk event, I feel more motivated to continue to address underage drinking in my community’; (c) ‘As a result of this Communities Talk event, I feel more confident hosting another Communities Talk or other underage drinking prevention event in the future’; (d) ‘As a result of this Communities Talk event, I am more likely to host another underage drinking prevention event in my community’. (new q6)</p>
<p>q17—Did you use any material(s) from for the Communities Talk event? &lt;If yes&gt; What material(s) did you use?</p>	<p>In first sentence, replaced ‘Did you use’ with ‘Have you used’ and added ‘the Communities Talk website’; In first sentence, deleted ‘for the Communities Talk event’; In second sentence, replaced ‘did you use’ with ‘have you used’ and added ‘the Communities Talk website’. (new q5)</p> <p>Added a second question (new q5A) to replace ‘&lt;If yes&gt; What material(s) did you use?’ with response options. New question reads: Q5A &lt;If Q5=yes&gt; What material(s) from the Communities Talk website (<a href="http://www.stopalcoholabuse.gov/communitiestalk">www.stopalcoholabuse.gov/communitiestalk</a>) have you used?</p> <ul style="list-style-type: none"> <li>○ Quick Start Planning Guide</li> <li>○ Registration Tutorial Video</li> <li>○ Tips &amp; Tools for Hosting a Virtual Activity (e.g., virtual activity starters and ideas)</li> <li>○ Using Social Media guides</li> <li>○ Social Media Images/Graphics</li> <li>○ Customizable Resources for Communities Talk Promotion and Implementation (e.g., PowerPoint template, flyer, logo, web badge)</li> <li>○ Other (please specify).</li> </ul> <p>Explanation and question deleted.</p>
<p>SAMHSA provides periodic webinars and online training at <a href="http://www.stopalcoholabuse.gov/townhallmeetings">www.stopalcoholabuse.gov/townhallmeetings</a> for organizations hosting Communities Talk events. SAMHSA also provides technical assistance to organizations through <a href="http://www.stopalcoholabuse.gov/townhallmeetings/contact-us.aspx">www.stopalcoholabuse.gov/townhallmeetings/contact-us.aspx</a>, <a href="mailto:info@stopalcoholabuse.net">info@stopalcoholabuse.net</a>, <a href="mailto:eval@stopalcoholabuse.net">eval@stopalcoholabuse.net</a>, and by telephone at (866) 419–2514.</p>	
<p>q18—Please rate your agreement with the following statements regarding any training or technical assistance (TA) that you or your organization received.</p>	
<p>q19—Please share any other important features or reactions to the Communities Talk event.</p>	<p>Question deleted.</p>
<p>q20—Did your organization develop a report, or does it plan to, that includes underage drinking data at the community level (e.g., incidences of use; activities or actions employed to prevent and combat underage drinking)?</p> <p>&lt;If yes&gt; Would you be willing to share the report with SAMHSA?</p> <p>&lt;If yes&gt; Please send the report to the following address: <a href="mailto:eval@stopalcoholabuse.net">eval@stopalcoholabuse.net</a> [or] ICF Attn.: Communities Talk on UAD—Rená A. Agee, 530 Gaither Rd., Suite 500, Rockville, MD 20857.</p>	<p>In first sentence, replaced ‘Did your organization develop a report, or does it plan to,’ with ‘Do you have a report or something else (e.g., tables)’; In third sentence, replaced ‘<a href="mailto:eval@stopalcoholabuse.net">eval@stopalcoholabuse.net</a>’ with ‘<a href="mailto:info@stopalcoholabuse.net">info@stopalcoholabuse.net</a>’; In third sentence, replaced ‘Communities Talk on UAD—Rená A. Agee’ with ‘Communities Talk—Genevieve Martinez-Garcia’. (new q11)</p>
<p>&lt;ALL ENDING&gt; SAMHSA would like to contact you in about 6 months to follow up on any actions that were taken as a result of the Communities Talk event that was hosted in your community. Are you willing to be contacted in about 6 months to complete an online follow-up survey?</p>	<p>In first sentence, replaced ‘6 months’ with ‘1 year’; In first sentence, replaced ‘follow up on any actions that were taken as a result of the Communities Talk event that was hosted’ with ‘get an update on prevention activities taking place’; In second sentence, replaced ‘6 months’ with ‘1 year’.</p>
<p>&lt;Exit screen 1 (Yes to reconnect)&gt; Thank you again for sharing this important information about the Communities Talk: Town Hall Meetings to Prevent Underage Drinking event that was held in your community! We will contact your organization in about 6 months to follow up on any actions that were taken as a result of the Communities Talk event that was held in your community. REDIRECT TO <a href="http://www.stopalcoholabuse.gov/townhallmeetings">www.stopalcoholabuse.gov/townhallmeetings</a>.</p>	<p>In first sentence, replaced ‘the Communities Talk: Town Hall Meetings to Prevent Underage Drinking event that was held in your community’ with ‘your experience with Communities Talk and underage drinking prevention activities’; At end, replaced ‘REDIRECT TO <a href="http://www.stopalcoholabuse.gov/townhallmeetings">www.stopalcoholabuse.gov/townhallmeetings</a>’ with ‘Visit <a href="http://www.stopalcoholabuse.gov/communitiestalk/">www.stopalcoholabuse.gov/communitiestalk/</a> for the most current updates.’</p>
<p>&lt;Exit screen 2 (Yes to reconnect)&gt; Thank you again for sharing this important information about the Communities Talk: Town Hall Meetings to Prevent Underage Drinking event that was held in your community! REDIRECT TO <a href="http://www.stopalcoholabuse.gov/townhallmeetings">www.stopalcoholabuse.gov/townhallmeetings</a>.</p>	<p>In first sentence, replaced ‘the Communities Talk: Town Hall Meetings to Prevent Underage Drinking event that was held’ with ‘your experience with Communities Talk and underage drinking prevention activities’; At end, replaced ‘REDIRECT TO <a href="http://www.stopalcoholabuse.gov/townhallmeetings">www.stopalcoholabuse.gov/townhallmeetings</a>’ with ‘Visit <a href="http://www.stopalcoholabuse.gov/communitiestalk/">www.stopalcoholabuse.gov/communitiestalk/</a> for the most current updates.’</p>

Seven new questions were added pertaining to the number of *Communities Talk* activities that have ever taken place in the community (q2), preparation (tied or not tied to

*Communities Talk*) completed to help organizers carry out evidence-based strategies to prevent UAD in their community (q4), confidence to carry out tasks related to evidence-based

prevention (q7), current work to carry out evidence-based strategies (q8), perceived efficacy of *Communities Talk* to enhance UAD prevention in the community (q10), type of organization

represented by respondent (q13), and audiences targeted by respondent’s organization (q14). Some of these items (i.e., q4, q7, and q8) are modified versions of instruments validated by Chinman et al. (2008).

The revisions were necessary to better align the data gathered to the short-term and long-term outcomes of the *Communities Talk* activities for organizers, specifically:

*Short-term*

- Increase staff’s perceived threat of UAD to residents of the communities;
- Increase staff’s knowledge related to using evidence-based approaches to carry out future UAD drinking prevention activities;
- Increase staff’s perceived efficacy of *Communities Talk* to enhance UAD prevention in the community;
- Increase staff’s skills related to using evidence-based approaches to carry out future UAD prevention activities, specifically share information about UAD with others host meetings or discussion groups; create committees, task forces, advisory boards, or other action groups; build coalitions; develop strategic plans; and advocate for policies
- Increase staff’s self-efficacy related to using evidence-based approaches to carry out future UAD prevention activities; and
- Increase staff’s intention related to using evidence-based approaches to carry out future UAD prevention activities.

*Long-term*

- Increase staff’s use of evidence-based approaches to carry out future UAD prevention activities.

While completing the initial Organizer Survey, staff of Community-Based Organizations (CBO’s) and Institutions of Higher Education (IHE’s) can opt in to be contacted 1 year later. If they do so, they will receive an invitation to complete the same online questionnaire 1 year later. This will enable SAMHSA to determine how

organizers might have progressed toward the aforementioned short- and long-term outcomes. Note that the Organizer Survey (see Attachment 1) has replaced the Organizer Survey—6-month Follow-Up. This change enables SAMHSA to compare responses between the initial and follow-up time periods (e.g., and thus determine whether the same skills have increased or decreased over time).

SAMHSA/CSAP will be responsible for collecting, compiling, analyzing, and reporting on information requested through these surveys.

The Participant Survey has been discontinued in alignment with SAMHSA’s focus on organizers as the target audience of *Communities Talk* activities.

SAMHSA supports nationwide *Communities Talk* activities every other year. Collecting data on each round of *Communities Talk* and using this information to inform policy and measure impact connects with SAMHSA’s Strategic Plan FY2019–FY2023, specifically “Objective 3.2: Expand community engagement around substance use prevention, treatment, and recovery” (SAMHSA, 2018). *Communities Talk* activities are intended to work at the grassroots level to raise awareness of the public health dangers of UAD and to engage communities in evidence-based prevention. Notably, *Communities Talk* activities provide a forum for communities to discuss ways they can best prevent UAD by reducing the availability of alcohol and by creating community norms that discourage demand.

SAMHSA will use the information collected to document the implementation efforts of this nationwide initiative, determine if the federally sponsored *Communities Talk* activities lead to additional activities within the community that are aimed at preventing and reducing UAD, identify

what these activities may possibly include, and help plan for future rounds of *Communities Talk*. SAMHSA intends to post online a summary document of each round of *Communities Talk* activities and present findings at national conferences attended by CBOs and IHEs that have hosted these activities and might do so again in the future. Similarly, SAMHSA plans to share findings with the Interagency Coordinating Committee on the Prevention of Underage Drinking. Agencies within this committee encourage their grantees to participate in *Communities Talk*. Additionally, the information collected will support performance measurement for SAMHSA programs under the Government Performance Results Act (GPRA).

*Data Collection Component*

SAMHSA/CSAP will use a web-based method, such as Voxco, to collect data through the Organizer Survey. The web-based application will comply with the requirements of Section 508 of the Rehabilitation Act to permit accessibility to people with disabilities.

From February 2022 to April 2022, the Organizer Survey—Initial will be completed by an estimated 500 *Communities Talk* activity organizers and will require only one response per respondent. It will take an average of 10 minutes (0.167 hours) to review the instructions and complete the survey. Similarly, from February 2023 to April 2023, the Organizer Survey—Follow-up will be completed by an estimated 500 *Communities Talk* activity organizers and will require only one response per respondent. It will take an average of 10 minutes (0.167 hours) to review the instructions and complete the survey. This burden estimate is based on comments from three 2019 *Communities Talk* activity organizers who reviewed the survey and provided comments on how long it would take them to complete it.

ESTIMATED ANNUALIZED BURDEN TABLE

Form name	Number of respondents	Responses per respondent	Total responses	Hours per response	Total hour burden
Organizer Survey—Initial .....	500	1	500	0.167	83.50
Organizer Survey—Follow-Up .....	500	1	500	0.167	83.50
Total .....	500	.....	1,000	.....	167.00

Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to [www.reginfo.gov/public/do/PRAMain](http://www.reginfo.gov/public/do/PRAMain). Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

BILLING CODE 4162-20-P

## DEPARTMENT OF HOMELAND SECURITY

### Transportation Security Administration

[Docket No. TSA-2011-0008]

#### Request for Applicants for Appointment to the Aviation Security Advisory Committee

**AGENCY:** Transportation Security Administration, DHS.

**ACTION:** Committee management; request for applicants.

**SUMMARY:** The Transportation Security Administration (TSA) is requesting applications from individuals who are interested in being appointed to serve on the Aviation Security Advisory Committee (ASAC). All applicants must represent one of the constituencies specified below in order to be eligible for appointment. ASAC’s mission is to provide advice and recommendations to the TSA Administrator on improving aviation security matters, including developing, refining, and implementing policies, programs, rulemaking, and security directives pertaining to aviation security, while adhering to sensitive security guidelines.

**DATES:** Applications for membership must be submitted to TSA using one of the methods in the **ADDRESSES** section below on or before April 18, 2022.

**ADDRESSES:** Applications must be submitted by one of the following means:

- *Email:* [ASAC@tsa.dhs.gov](mailto:ASAC@tsa.dhs.gov).
- *Mail:* Tamika McCree Elhilali, ASAC Designated Federal Officer, Transportation Security Administration (TSA-28), 6595 Springfield Center Drive, Springfield, VA 20598-6028.

See **SUPPLEMENTARY INFORMATION** for application requirements.

**FOR FURTHER INFORMATION CONTACT:** Tamika McCree Elhilali, ASAC Designated Federal Officer, Transportation Security Administration

(TSA-28), 6595 Springfield Center Drive, Springfield, VA 20598-6028, [ASAC@tsa.dhs.gov](mailto:ASAC@tsa.dhs.gov), 571-227-2632.

**SUPPLEMENTARY INFORMATION:** ASAC is an advisory committee established pursuant to 49 U.S.C 44946. The committee is composed of individual members representing key constituencies affected by aviation security requirements. As required by statute, the ASAC is composed of individuals representing not more than 34 member organizations.

#### Balanced Membership Plans

TSA is seeking applications for the membership categories scheduled to expire in May 2022, which are marked with an asterisk in this section below. Individuals are appointed by the TSA Administrator to represent 19 key constituencies affected by aviation security requirements, as defined at 49 U.S.C. 44946(c)(1)(C). The following list provides the 19 key constituencies and identifies with an asterisk (\*) the constituencies for whom the current representative’s term is expiring:

1. Air carriers.\*
2. All-cargo air transportation.\*
3. Labor organizations representing air carrier employees.\*
4. Aircraft manufacturers.
5. Airport operators.\*
6. General aviation.\*
7. Travel industry.
8. Victims of terrorist acts against aviation.\*
9. Law enforcement and security experts.\*
10. Indirect air carriers.\*
11. Aviation security technology industry (including screening technology and biometrics).\*
12. Airport-based businesses (including minority-owned small businesses).
13. Passenger advocacy groups.\*
14. Businesses that conduct security operations at airports (Screening Partnership Program contractors).
15. Labor organizations representing transportation security officers.
16. Airport construction and maintenance contractors.
17. Labor organizations representing employees of airport construction and maintenance contractors.\*
18. Privacy organizations.\*
19. Aeronautical repair stations.\*

ASAC does not have a specific number of members allocated to any membership category and the number of members in a category may change to fit the needs of the Committee, but each organization shall be represented by one individual. Members will serve as representatives and speak on behalf of their respective constituency group, and

will not be appointed as Special Government Employees as defined in 18 U.S.C. 202(a). Membership on ASAC is personal to the appointee and a member may not send an alternate to a Committee meeting. Pursuant to 49 U.S.C 44946(c)(3), members shall not receive pay, allowances, or benefits from the Government by reason of their service on ASAC.

#### Committee Meetings

The ASAC typically convenes four times per year. Additional meetings may be held with the approval of the Designated Federal Official. While at least one meeting per year is open to the public, due to the sensitive nature of the material discussed, the other meetings are typically closed to the public. In addition, members are expected to participate on ASAC subcommittees that typically meet more frequently to deliberate and discuss specific aviation matters.

#### Committee Membership

Committee members are appointed by and serve at the pleasure of the TSA Administrator for a 2-year term or until a successor is appointed. Members who are currently serving on the Committee are eligible to reapply for membership. A new application is required.

#### Application for Advisory Committee Appointment

TSA is seeking applications for the membership categories scheduled to expire in May 2022, which are marked with an asterisk in the Balanced Membership Plans section above. Any person wishing to be considered for appointment to ASAC must provide the following:

- Complete professional resume.
- Statement of interest and reasons for application, including the membership category and how you represent a significant portion of that constituency and also provide a brief explanation of how you can contribute to one or more TSA strategic initiative, based on your prior experience with TSA, or your review of current TSA strategic documents that can be found at [www.tsa.gov/about/strategy](http://www.tsa.gov/about/strategy).
- Home and work addresses, telephone number, and email address.

Please submit your application to the Responsible TSA Official in the **ADDRESSES** section noted above by April 18, 2022.

Dated: March 23, 2022.

**Eddie D. Mayenschein,**

*Assistant Administrator, Policy, Plans, and Engagement.*

BILLING CODE 9110-05-P

**DEPARTMENT OF THE INTERIOR****Bureau of Land Management**

[LLORP00000.L10200000.DF0000  
.LXSSH1040000.222.HAG 22-0013]

**Notice of Public Meetings for the John Day-Snake Resource Advisory Council Planning Subcommittee and the John Day Snake Resource Advisory Council, Oregon**

**AGENCY:** Bureau of Land Management, Interior.

**ACTION:** Notice of public meetings.

**SUMMARY:** In accordance with the Federal Land Policy and Management Act of 1976 and the Federal Advisory Committee Act of 1972, the U.S. Department of the Interior, Bureau of Land Management's (BLM) John Day-Snake Resource Advisory Council (RAC) Planning Subcommittee and John Day-Snake RAC will meet as follows.

**DATES:** The John Day-Snake RAC Planning Subcommittee will meet virtually via the Zoom platform Wednesday, September 14, 2022, from 6 p.m. Pacific Time (PT) to 8 p.m. PT; and the John Day Snake RAC will hold an in-person meeting Thursday, October 20, 2022, from 8 a.m. to 5:30 p.m. PT, including a field tour from 1:30 p.m. until 5:30 p.m. PT to the Restoration Fuels Torrefaction Plant. The RAC will reconvene Friday, October 21, 2022, from 8 a.m. PT to 1 p.m. PT.

Virtual meetings may substitute for in-person meetings depending on public health policies in place at the Department of the Interior at the time of the meetings. A change to virtual meetings and instructions on how to access those meetings will be posted on the RAC's website (see **ADDRESSES**) at least 10 days in advance of those meetings.

A public comment period will be offered each day and the meetings and field tour are open to the public in their entirety.

**ADDRESSES:** Final agendas for each meeting and contact information regarding Zoom meeting details will be published on the RAC's web page at least 10 days in advance at <https://www.blm.gov/get-involved/resource-advisory-council/near-you/oregon-washington/john-day-rac>.

The meetings scheduled for October 20–21, 2022 will take place at the Malheur National Forest Supervisor's Office, 431 Patterson Bridge Rd., John Day, OR 97845, and travel to the Restoration Fuels Torrefaction Plant located at 60339 US–26, John Day, OR 97845.

Comments to the RAC and the subcommittee can be mailed to: BLM Prineville District; Attn. Dennis Teitzel; 3050 NE 3rd St., Prineville, OR 97754, or emailed to [dteitzel@blm.gov](mailto:dteitzel@blm.gov).

**FOR FURTHER INFORMATION CONTACT:**

Larisa Bogardus, Public Affairs Officer, 3100 H St., Baker City, OR 97814; telephone: (541) 219–6863; email: [lbogardus@blm.gov](mailto:lbogardus@blm.gov). Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services for contacting Ms. Bogardus. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

**SUPPLEMENTARY INFORMATION:** The 15-member John Day-Snake RAC was chartered and members are appointed by the Secretary of the Interior. Its diverse perspectives are represented in commodity, conservation, and general interests. It provides advice to the BLM and, as needed, to U.S. Forest Service resource managers regarding management plans and proposed resource actions on public land in the John Day-Snake area.

The Planning Subcommittee was established to gather information, conduct research, and analyze relevant issues and facts on selected topics for future consideration by the RAC. The Subcommittee's primary goal is to provide information to the RAC members that allows them to better respond to time-sensitive issues, such as responding to an environmental document within the public comment period. No decisions are made at the subcommittee level. The Subcommittee will gather information on recreation fee proposals at the September meeting for consideration by the RAC during its October meeting.

The RAC's October meeting will include presentations on a Malheur National Forest recreation fee proposal for selected developed cabins and campgrounds, and a Central Oregon Field Office fee proposal for John Day River. The afternoon field tour is to the Restoration Fuels thermal treatment facility where the RAC will learn about methods that utilize tree thinnings and low-value wood materials from stewardship projects in national forests and private-land treatments to produce fuel for energy. Participants must register to attend the field tour at least 14 days in advance using the contact contained in the **FOR FURTHER INFORMATION CONTACT** section of this

notice. Members of the public are welcome on field tours but must provide their own transportation and meals. Individuals who plan to attend and need special assistance, such as sign language interpretation and other reasonable accommodations, should contact the BLM (see **FOR FURTHER INFORMATION CONTACT**). Meetings and field tours will follow current Centers for Disease Control and Prevention COVID–19 guidance regarding social distancing and wearing of masks. Standing agenda items include management of energy and minerals, timber, rangeland and grazing, commercial and dispersed recreation, wildland fire and fuels, and wild horses and burros; review of or recommendations regarding proposed actions by Vale or Prineville BLM districts and the Wallowa-Whitman, Umatilla, Malheur, Ochoco, and Deschutes National Forests; and any other business that may reasonably come before the RAC.

The Designated Federal Officer will attend the call, take minutes, and publish these minutes on the RAC's web page (see **ADDRESSES**). All calls/meetings are open to the public in their entirety.

Before including your address, phone number, email address, or other personal identifying information in your comments, please be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee we will be able to do so.

(Authority: 43 CFR 1784.4–2)

**Dennis C. Teitzel,**  
*Prineville District Manager.*

**Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; National Historic Landmarks Nomination Form**

**AGENCY:** National Park Service, Interior.

**ACTION:** Notice of information collection; request for comment.

**SUMMARY:** In accordance with the Paperwork Reduction Act of 1995 we, the National Park Service (NPS) are proposing to renew an information collection.

**DATES:** Interested persons are invited to submit comments on or before April 27, 2022.

**ADDRESSES:** Written comments and suggestions on the information collection requirements should be submitted by the date specified above in **DATES** to <http://www.reginfo.gov/public/do/PRAMain>. Find this particular information collection by selecting “Currently under Review—Open for Public Comments” or by using the search function. Please provide a copy of your comments to the NPS Information Collection Clearance Officer (ADIR–ICCO), 12201 Sunrise Valley Drive, (MS–242) Reston, VA 20191 (mail); or [phadrea\\_ponds@nps.gov](mailto:phadrea_ponds@nps.gov) (email). Please include “1024–0276 (NHL)” in the subject line of your comments.

**FOR FURTHER INFORMATION CONTACT:** To request additional information about this ICR, contact Patty Henry by email at [patty\\_henry@nps.gov](mailto:patty_henry@nps.gov), or by telephone at 202–354–2216. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States. You may also view the ICR at <http://www.reginfo.gov/public/do/PRAMain>.

**SUPPLEMENTARY INFORMATION:** In accordance with the PRA and 5 CFR 1320.8(d)(1), we provide the general public and other Federal agencies with an opportunity to comment on new, proposed, revised, and continuing collections of information. This helps us assess the impact of our information collection requirements and minimize the public’s reporting burden. It also helps the public understand our information collection requirements and provide the requested data in the desired format.

A **Federal Register** notice with a 60-day public comment period soliciting comments on this collection of information was published on June 8, 2021 (86 FR 30469). No public comments were received.

As part of our continuing effort to reduce paperwork and respondent burdens, we are again soliciting comments from the public and other

Federal agencies on the proposed ICR that is described below. We are especially interested in public comment addressing the following:

(1) Whether or not the collection of information is necessary for the proper performance of the functions of the agency, including whether or not the information will have practical utility.

(2) The accuracy of our estimate of the burden for this collection of information, including the validity of the methodology and assumptions used.

(3) Ways to enhance the quality, utility, and clarity of the information to be collected.

(4) How might the agency minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of response.

Comments that you submit in response to this notice are a matter of public record. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

**Abstract:** Authorized by the Historic Sites Act of 1935 (54 U.S.C. 320101 *et seq.*), National Historic Landmarks Program (36 CFR part 65), and the National Historic Preservation Act of 1966 (54 U.S.C. 300101 *et seq.*) the NPS collects information on behalf of the Secretary of the Interior to evaluate properties applying for historic landmark designation. In accordance with the law and 36 CFR part 65, private citizens, businesses, and organizations; federal agencies (FPO); state and local public agencies; State Historic Preservation Officers (SHPOs); territories; and Indian tribes (THPO) may submit nominations for National Historic Landmark (NHL) designation. All interested parties must inquire by letter or email about the eligibility of properties to be considered for NHL designation. The inquiry includes the name, location, brief description, and historical summary of property. If determined eligible for consideration the respondent will use NPS Form 10–934, “National Historic Landmarks Nomination” to nominate a property.

The form is used to collect the following information related to the property:

- (1) Name and location
- (2) data related to the national significance of the property
- (3) any withholding of sensitive information
- (4) geographical data
- (5) statements and discussions about the national significance of the property
- (6) description and statement of integrity
- (7) major bibliographic references and
- (8) name, organization, address, phone number, and email of the person completing the form

*Title of Collection:* National Historic Landmarks Nomination Form.

*OMB Control Number:* 1024–0276.

*Form Number:* 10–934, “National Historic Landmark Nomination”.

*Type of Review:* Extension of a currently approved collection.

*Respondents/Affected Public:* Private individuals; federal, state, tribal and local governments; businesses; educational institutions; and nonprofit organizations.

*Total Estimated Number of Annual Respondents:* 50.

*Total Estimated Number of Annual Responses:* 50.

*Estimated Completion Time per Response:* Average time 344 hours.

*Total Estimated Number of Annual Burden Hours:* 10,360.

*Respondent’s Obligation:* Required to obtain or retain a benefit.

*Frequency of Collection:* On occasion.

*Total Estimated Annual Nonhour Burden Cost:* None.

An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

**Phadrea Ponds,**

**Agency Information Collection  
Activities; Certification of Identity and  
Consent Form**

**AGENCY:** National Park Service, Interior.

**ACTION:** Notice of information collection; request for comment.

**SUMMARY:** In accordance with the Paperwork Reduction Act of 1995, we, the National Park Service (NPS) are proposing to renew an information collection.

**DATES:** Interested persons are invited to submit comments on or before May 27, 2022.

**ADDRESSES:** Written comments and suggestions on the information collection requirements should be submitted by the date specified above in **DATES** to <http://www.reginfo.gov/public/do/PRAMain>. Find this particular information collection by selecting “Currently under Review—Open for Public Comments” or by using the search function. Please provide a copy of your comments to the NPS Information Collection Clearance Officer (ADIR-ICCO), 12201 Sunrise Valley Drive, (MS-242) Reston, VA 20191 (mail); or [phadrea\\_ponds@nps.gov](mailto:phadrea_ponds@nps.gov) (email). Please include “1024–0280” in the subject line of your comments.

**FOR FURTHER INFORMATION CONTACT:** To request additional information about this ICR, contact Abel Ramon, Information Management Branch Chief, Portfolio and Information Management by email at [abel\\_ramon@nps.gov](mailto:abel_ramon@nps.gov); or by telephone at 303–969–2139. Please reference OMB Control Number 1024–0280 in the subject line of your comments. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States. You may also view the ICR at <http://www.reginfo.gov/public/do/PRAMain>.

**SUPPLEMENTARY INFORMATION:** In accordance with the Paperwork Reduction Act of 1995, (PRA, 44 U.S.C. 3501 *et seq.*) and 5 CFR 1320.8(d)(1), all information collections require approval under the PRA. We may not conduct or sponsor and you are not required to respond to a collection of information unless it displays a currently valid OMB control number.

As part of our continuing effort to reduce paperwork and respondent burdens, we invite the public and other Federal agencies to comment on new, proposed, revised, and continuing collections of information. This helps us assess the impact of our information collection requirements and minimize the public’s reporting burden. It also

helps the public understand our information collection requirements and provide the requested data in the desired format.

We are especially interested in public comment addressing the following:

- (1) Whether or not the collection of information is necessary for the proper performance of the functions of the agency, including whether or not the information will have practical utility;
- (2) The accuracy of our estimate of the burden for this collection of information, including the validity of the methodology and assumptions used.
- (3) Ways to enhance the quality, utility, and clarity of the information to be collected; and
- (4) How might the agency minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of response.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this ICR. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

**Abstract:** The NPS maintains law enforcement incident reports in the Department of the Interior’s Incident and Management Reporting System (IMARS). In accordance with the Privacy Act (5 U.S.C. 552a(b)), the NPS cannot release copies of records maintained in IMARS without prior written request and/or consent of the individual to whom the record pertains unless authorized under appropriate routine-use exceptions.

The NPS uses Form 10–945, “Certification of Identity and Consent” to collect information necessary to verify the identity of first-party requesters and to document if and when they authorize the NPS to release their information to a third party. The form collects the following information to verify the identity of the requester: (1) Full name (2) Case Number (3) Social Security Number (4) Current Address (5) Date of Birth and (6) Place of birth.

**Title of Collection:** Certification of Identity and Consent Form.

**OMB Control Number:** 1024–0280.

**Form Number:** NPS Form 10–945.

**Type of Review:** Extension of a currently approved collection.

**Description of Respondents:**

Individuals.

**Total Estimated Number of Annual Respondents:** 2,000.

**Total Estimated Number of Annual Responses:** 2,000.

**Estimated Completion Time per Response:** 3 minutes.

**Total Estimated Number of Annual Burden Hours:** 100.

**Respondent’s Obligation:** Required to obtain or retain a benefit.

**Frequency of Collection:** On occasion.

**Total Estimated Annual Nonhour**

**Burden Cost:** None.

An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

#### Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; National Park Service President’s Park National Christmas Tree Music Program Application

**AGENCY:** National Park Service, Interior.

**ACTION:** Notice of information collection; request for comment.

**SUMMARY:** In accordance with the Paperwork Reduction Act of 1995, we, the National Park Service (NPS) are proposing to renew an information collection.

**DATES:** Interested persons are invited to submit comments on or before April 27, 2022.

**ADDRESSES:** Written comments and suggestions on the information collection requirements should be submitted by the date specified above in **DATES** to <http://www.reginfo.gov/public/do/PRAMain>. Find this particular

information collection by selecting “Currently under Review—Open for Public Comments” or by using the search function. Please provide a copy of your comments to the NPS Information Collection Clearance Officer (ADIR-ICCO), 12201 Sunrise Valley Drive, (MS-242), Reston, VA 20191 (mail); or [phadrea\\_ponds@nps.gov](mailto:phadrea_ponds@nps.gov) (email). Please include “1024-0277” in the subject line of your comments.

**FOR FURTHER INFORMATION CONTACT:** To request additional information about this ICR, contact Katie Wilmes by email at [Katie\\_Wilmes@nps.gov](mailto:Katie_Wilmes@nps.gov), or by telephone at 202-208-1631. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States. You may also view the ICR at <http://www.reginfo.gov/public/do/PRAMain>.

**SUPPLEMENTARY INFORMATION:** In accordance with the PRA and 5 CFR 1320.8(d)(1), we provide the general public and other Federal agencies with an opportunity to comment on new, proposed, revised, and continuing collections of information. This helps us assess the impact of our information collection requirements and minimize the public’s reporting burden. It also helps the public understand our information collection requirements and provide the requested data in the desired format.

A **Federal Register** notice with a 60-day public comment period soliciting comments on this collection of information was published on July 9, 2021 (86 FR 36302). No comments were received.

As part of our continuing effort to reduce paperwork and respondent burdens, we are again soliciting comments from the public and other Federal agencies on the proposed ICR that is described below. We are especially interested in public comment addressing the following:

(1) Whether or not the collection of information is necessary for the proper performance of the functions of the agency, including whether or not the information will have practical utility.

(2) The accuracy of our estimate of the burden for this collection of information, including the validity of the methodology and assumptions used.

(3) Ways to enhance the quality, utility, and clarity of the information to be collected.

(4) How might the agency minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of response.

Comments that you submit in response to this notice are a matter of public record. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

**Abstract:** The Organic Act of 1916 (54 U.S.C. 100101), authorizes the NPS to regulate the use of the park areas under its jurisdiction. Consistent with the Organic Act, as well as the Constitution’s Establishment Clause which mandates government neutrality and allows the placement of holiday secular and religious displays, the National Christmas Tree Music Program’s holiday musical entertainment may include both holiday secular and religious music. To ensure that any proposed music selection is consistent with the Establishment Clause and is presented in a prudent and objective manner as a traditional part of the culture and heritage of this annual holiday event, it must be approved in advance by the NPS.

The NPS National Christmas Tree Music Program at President’s Park is intended to provide musical entertainment for park visitors during December in celebration of the holiday season. During this time, visitors can observe the National Christmas Tree, visit assorted yuletide displays, and attend musical presentations. Each year, park officials accept applications from musical groups who wish to participate in the annual National Christmas Tree Program. The NPS uses Form 10-942, “National Christmas Tree Music Program Application” to accept applications from the public for participation in the program. Park officials use the information collected to select, plan, schedule, and contact performers for the National Christmas Tree Program.

**Title of Collection:** National Park Service President’s Park National Christmas Tree Music Program Application.

**OMB Control Number:** 1024-0277.

**Form Number:** NPS Form 10-942, “National Christmas Tree Music Program Application.”

**Type of Review:** Extension of a currently approved collection.

**Respondents/Affected Public:** Local, national, and international bands, choirs, or dance groups.

**Total Estimated Number of Annual Respondents:** 75.

**Total Estimated Number of Annual Responses:** 75.

**Estimated Completion Time per Response:** 15 minutes.

**Total Estimated Number of Annual Burden Hours:** 19.

**Respondent’s Obligation:** Required to obtain or retain a benefit.

**Frequency of Collection:** On occasion.

**Total Estimated Annual Nonhour Burden Cost:** None.

An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

**National Register of Historic Places;  
Notification of Pending Nominations  
and Related Actions**

**AGENCY:** National Park Service, Interior.

**ACTION:** Notice.

**SUMMARY:** The National Park Service is soliciting electronic comments on the significance of properties nominated before March 12, 2022, for listing or related actions in the National Register of Historic Places.

**DATES:** Comments should be submitted electronically by April 12, 2022.

**ADDRESSES:** Comments are encouraged to be submitted electronically to [National\\_Register\\_Submissions@nps.gov](mailto:National_Register_Submissions@nps.gov) with the subject line “Public Comment on <property or proposed district name, (County) State>.” If you have no access to email you may send them via U.S. Postal Service and all other carriers to the National Register of Historic Places, National Park Service,

1849 C Street NW, MS 7228,  
Washington, DC 20240.

**FOR FURTHER INFORMATION CONTACT:**  
Sherry A. Frear, Chief, National Register  
of Historic Places/National Historic  
Landmarks Program, 1849 C Street NW,  
MS 7228, Washington, DC 20240,  
*sherry\_frear@nps.gov*, 202–913–3763.

**SUPPLEMENTARY INFORMATION:** The  
properties listed in this notice are being  
considered for listing or related actions  
in the National Register of Historic  
Places. Nominations for their  
consideration were received by the  
National Park Service before March 12,  
2022. Pursuant to section 60.13 of 36  
CFR part 60, comments are being  
accepted concerning the significance of  
the nominated properties under the  
National Register criteria for evaluation.

Before including your address, phone  
number, email address, or other  
personal identifying information in your  
comment, you should be aware that  
your entire comment—including your  
personal identifying information—may  
be made publicly available at any time.  
While you can ask us in your comment  
to withhold your personal identifying  
information from public review, we  
cannot guarantee that we will be able to  
do so.

#### **DEPARTMENT OF THE INTERIOR**

##### **Bureau of Ocean Energy Management**

[Docket No. BOEM–2022–0015]

##### **Atlantic Wind Lease Sale 9 (ATLW–9) for Commercial Leasing for Wind Power on the Outer Continental Shelf (OCS) in the Carolina Long Bay Area (CLBA)—Final Sale Notice (FSN)**

**AGENCY:** Bureau of Ocean Energy  
Management, Interior.

**ACTION:** Final sale notice.

**SUMMARY:** This FSN contains  
information pertaining to the areas

available for commercial wind energy leasing on the OCS in the Carolina Long Bay Area. Specifically, this FSN details certain provisions and conditions of the leases, auction details, the lease form, criteria for evaluating competing bids, award procedures, appeal procedures, and lease execution. The Bureau of Ocean Energy Management (BOEM) will offer two leases: Lease OCS–A 0545 and Lease OCS–A 0546. The issuance of any lease resulting from this sale would not constitute an approval of project-specific plans to develop offshore wind energy. Such plans, if submitted by the lessee, would be subject to subsequent environmental, technical, and public reviews prior to a decision on whether the proposed development should be authorized.

**DATES:** BOEM will hold an online mock auction for potential bidders starting at 9:00 a.m. Eastern Daylight Time (EDT) on May 6, 2022. The monetary auction will be held online and will begin at 9:00 a.m. EDT on May 11, 2022. Additional details are provided in the section entitled “Deadlines and Milestones for Bidders.”

**FOR FURTHER INFORMATION CONTACT:** Casey Reeves, BOEM Office of Renewable Energy Programs, 45600 Woodland Road, VAM–OREP, Sterling, Virginia 20166, (703) 787–1671 or [casey.reeves@boem.gov](mailto:casey.reeves@boem.gov).

**SUPPLEMENTARY INFORMATION:**  
*Authority:* 43 U.S.C. 1337(p); 30 CFR 585.211 and 585.216.

I. **BACKGROUND:** The Outer Continental Shelf Lands Act authorizes BOEM to offer renewable energy leases for sale on the OCS competitively, unless BOEM determines there is no competitive interest. On December 13, 2012, BOEM published a *Call for Information and Nominations* (or “Call”) in the **Federal Register** (under Docket ID: BOEM–2012–0088) for a 45-day public comment period to gauge the offshore wind industry’s interest in acquiring commercial wind leases in three areas offshore North Carolina and to request comments regarding site conditions, resources and other uses within the Call areas. On February 5, 2013, BOEM reopened the comment period for the Call to allow for additional public input (Docket ID: BOEM–2012–0088); the comment period closed on March 7, 2013. BOEM then published a Proposed Sale Notice (PSN) in the **Federal Register** on November 1, 2021, which initiated a 60-day comment period ending on January 3, 2022. Any prospective bidders wishing to participate in a Carolina Long Bay lease sale were requested to submit qualification materials

postmarked no later than January 3, 2022. BOEM also hosted an auction seminar for prospective bidders on November 16, 2021, to discuss the proposed auction format. BOEM received 60 comment submissions in response to the PSN, which are available on [regulations.gov](https://www.regulations.gov) (Docket ID: BOEM–2021–0078) at: <https://www.regulations.gov/document/BOEM-2021-0078-0001>.

In response to the comments received, BOEM made several changes to the description of the Wilmington East Lease Area that was published in the PSN. The primary change is a reorientation of lease area boundaries resulting in 110,091 acres being offered for sale, which is further explained in Section IV—Areas Offered for Leasing. In addition, several lease stipulations were developed, or refined, based on feedback solicited in the PSN, including provisions to advance engagement and coordination with federally recognized Tribal Nations, ocean users, other agencies, underserved communities, and other interested stakeholders; advance flexibility in transmission planning; advance the domestic supply chain; and promote the use of project labor agreements (PLAs).

II. **LIST OF ELIGIBLE BIDDERS:** BOEM has determined that the following 16 entities are legally, technically, and financially qualified to hold a commercial wind lease in the Wilmington East Lease Area pursuant to 30 CFR 585.106 and 107 and may participate in this lease sale as bidders subject to meeting the requirements outlined in this notice:

Company name	Company No.
547 Energy LLC .....	15123
Arevia Power LLC .....	15129
Avangrid Renewables, LLC .....	15019
BP US Offshore Wind Energy LLC .....	15122
Invenergy Long Bay Offshore LLC .....	15137
Carolina Offshore Wind LLC .....	15135
Duke Energy Renewables Wind, LLC .....	15134
EDF Renewables Development, Inc. ....	15027
JERA Renewables NA, LLC .....	15131
Masdar Offshore Wind Americas LLC .....	15139
MRP Offshore Wind Farm LLC .....	15141
Orsted North America Inc. ....	15059
OW North America Ventures LLC .....	15133
RWE Offshore Wind Holdings, LLC .....	15061
Shell New Energies US LLC .....	15140
TotalEnergies Renewables USA, LLC .....	15136

a. *Affiliated Entities:* On the Bidder’s Financial Form (BFF) discussed below, eligible bidders must list any eligible bidders with whom they are affiliated. Affiliated eligible bidders are not permitted to compete against each other in the lease sale and must decide by the start of the auction which eligible bidder (if any) will participate. If two or

more affiliated bidders participate in the auction, BOEM may disqualify some or all such bidders from the auction.

BOEM considers two entities to be affiliated if they meet the definition of affiliate in 30 CFR 1206.20, as applicable, or if they are both direct, or indirect, subsidiaries of the same parent company.

III. **DEADLINES AND MILESTONES FOR BIDDERS:** This section describes the major deadlines and milestones in the auction process from publication of this FSN to execution of the lease pursuant to this sale. These are organized into various stages: The FSN Waiting Period; Conducting the Auction; and From the Auction to Lease Execution.

a. *FSN Waiting Period*  
 i. *BFF:* Each bidder must submit a BFF to BOEM to participate in the auction. BOEM must receive each BFF no later than April 11, 2022. If a bidder does not submit a BFF by this deadline, BOEM, in its sole discretion, may grant an extension to that bidder only if BOEM determines the bidder’s failure to timely submit a BFF was caused by events beyond the bidder’s control. The BFF can be downloaded at: [boem.gov/renewable-energy/state-activities/carolina-long-bay](https://www.boem.gov/renewable-energy/state-activities/carolina-long-bay). Once BOEM has processed a BFF, the bidder may log into [pay.gov](https://www.pay.gov) and submit a bid deposit. For purposes of this auction, BOEM will not consider any BFFs submitted by bidders for previous lease sales. BOEM will only accept an originally executed paper copy of the BFF. The BFF must be executed by an authorized representative listed on the bidder’s legal qualifications. Each bidder is required to sign the self-certification in the BFF, in accordance with 18 U.S.C. 1001 (Fraud and False Statements).

ii. *Bid Deposit:* Each bidder must provide a bid deposit of \$2,000,000 no later than April 25, 2022, to participate in the mock auction and the monetary auction. If a bidder would like to qualify to win two lease areas, the bidder must provide a bid deposit of \$4,000,000. BOEM will consider extensions to this deadline only if BOEM, in its sole discretion, determines that the failure to timely submit the bid deposit was caused by events beyond the bidder’s control. Further information about bid deposits can be found in the “Bid Deposit” section of this notice.

b. *Conducting the Auction*  
 i. *Mock Auction:* BOEM will hold a Mock Auction on May 6, 2022, beginning at 9:00 a.m. EDT. The Mock Auction will be held online. BOEM will contact each bidder that has timely submitted a BFF and bid deposit and provide instructions for participation.

Only bidders that have timely submitted BFFs and bid deposits may participate in the Mock Auction.

*ii. Multiple-factor Auction:* On May 11, 2022, BOEM, through its contractor, will start the auction. The first round of the auction will start at 9:00 a.m. EDT. The auction will proceed electronically according to a schedule to be distributed by the BOEM Auction Manager at the beginning of the auction, subject to revisions that will be communicated to bidders during the auction. BOEM anticipates that the auction will last 1-business day, but it may continue for as many consecutive business days, as necessary, until the auction ends in accordance with the procedures described in the “Auction Procedures” section of this notice.

*iii. Announce Provisional Winners:* BOEM will announce the provisional winners of the lease sale after the auction ends.

*c. From the Auction to Lease Execution*

*i. Refund Non-Winners:* Once the provisional winners have been announced, BOEM will return the non-winners’ bid deposits.

*ii. Department of Justice (DOJ) Review:* DOJ will have 30 days in which to conduct an antitrust review of the auction, pursuant to 43 U.S.C. 1337(c).

*iii. Delivery of the Lease:* BOEM will send three lease copies to each provisional winner, with instructions for executing the lease. The first year’s rent is due 45-calendar days after the winners receive the lease copies for execution.

*iv. Return the Lease:* Within 10-business days of receiving the lease copies, the auction winners must post financial assurance, pay any outstanding balance of their bonus bids (*i.e.*, winning monetary bid minus applicable bid deposit), and sign and return the three executed lease copies. In the event of a delay, BOEM may extend the 10 business day time period for executing and returning the lease if we determine the delay to be caused by events beyond your control, pursuant to 30 CFR 585.224(e).

*v. Execution of Lease:* Once BOEM has received the signed lease copies and verified that all other required materials have been received, BOEM will make a final determination regarding its issuance of the leases and will execute the leases, if appropriate.

**IV. AREAS OFFERED FOR LEASING:** In deciding whether to remove areas from leasing consideration, BOEM’s charge is to balance all the factors in 43 U.S.C. 1337(p)(4). No single factor or comment led to BOEM’s designation of the final two sale areas; rather, BOEM altered the areas in certain locations where: (1) Multiple factors weighed in favor of a change; (2) there was evidence supporting the application of those factors; and (3) the changes were supported by the comments. BOEM’s designation of the two lease areas offered in the FSN were informed by its coordination with BOEM’s intergovernmental task force members for multiple years, stakeholder engagement, and consideration of the 60 comments that BOEM received in response to the PSN. BOEM is offering

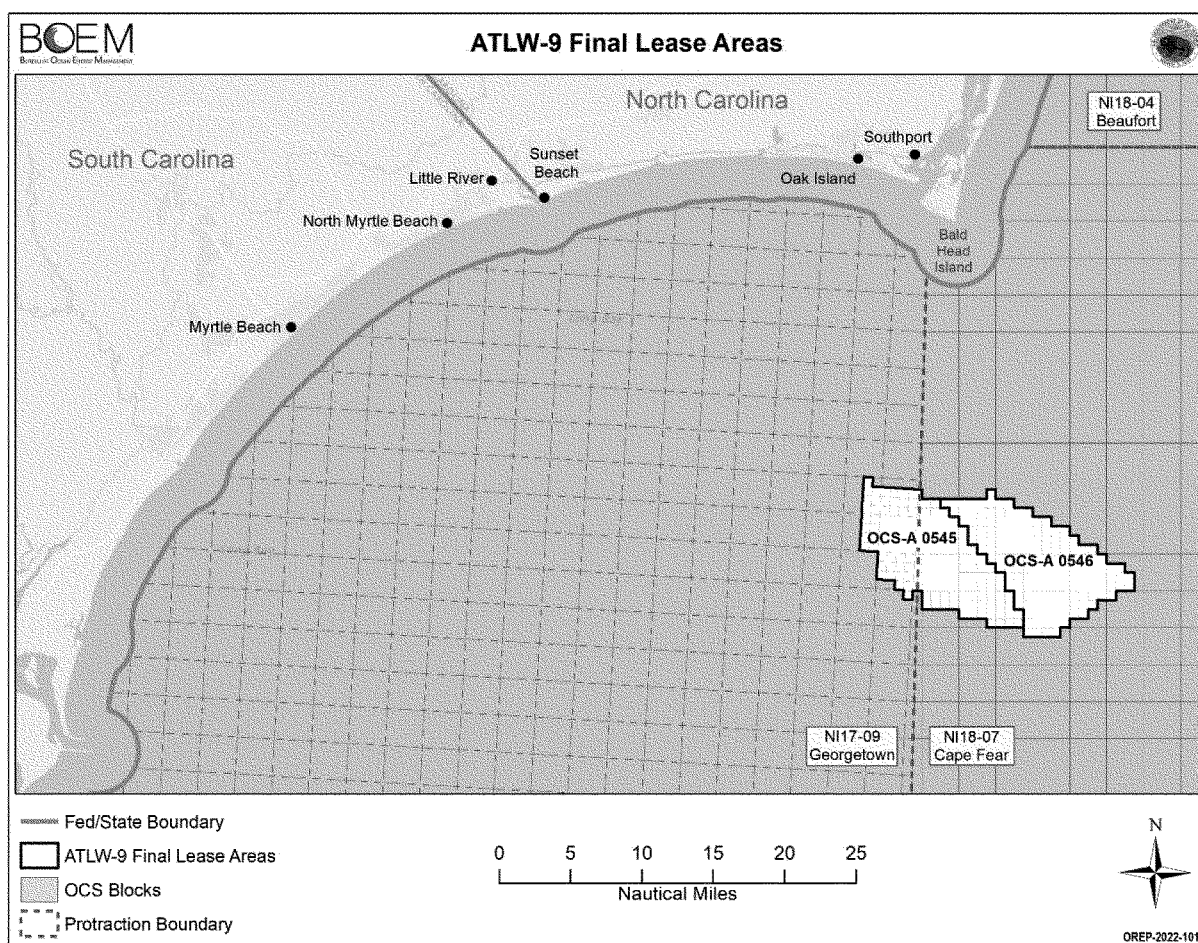

two lease areas totaling 110,091 acres for sale through this notice (Figure 1). The size of the two lease areas have been reduced by approximately 14 percent from the size of the areas proposed in the PSN to address issues and concerns expressed in the comments submitted on the PSN and through consultation with Federal agencies. Approximately 17,774 acres were removed from Leases OCS–A 0545 and OCS–A 0546 in the FSN. BOEM decided to remove from leasing consideration all lease blocks within 20 statute miles of the shoreline, thereby eliminating 13,474 acres in the northern portion of the proposed lease area. In addition, 4,300 acres were removed from the southeast portion of the proposed lease area to eliminate overlap between the lease area and the navigational fairway proposed by the U.S. Coast Guard (USCG). Following these removals, BOEM divided the remaining lease area into two nearly equal lease areas. BOEM designated the two lease areas to ensure that each has a similar acreage, distance to shore, wind resource potential, and in response to comments received on the PSN.

The area available for sale will be auctioned as two leases:

TABLE 1 TO SECTION IV—ATLW–9  
FINAL LEASE AREAS

Lease	Total acres
OCS–A 0545 .....	54,937
OCS–A 0546 .....	55,154

Figure 1 to Section IV - ATLW-9 Final Lease Areas

V. ENVIRONMENTAL REVIEW: On December 13, 2012, BOEM published a notice of intent to prepare an environmental assessment (EA) to consider potential environmental consequences of site characterization activities (e.g., biological, archeological, geological, and geophysical surveys and core samples) and site assessment activities (e.g., installation of meteorological towers or buoys) expected to be conducted after lease issuance. The EA also considered surveys along project easements associated with the potential leases and grants for subsea cable corridors. As part of the EA process, BOEM sought comments on the issues and alternatives that should inform the EA and received approximately 47 comments, which can be found at <https://www.regulations.gov> under Docket No. BOEM-2012-0090. A notice of availability of the EA was published on January 23, 2015, to initiate a 30-day public comment period (80 FR 3621) and comments received can be found at <https://www.regulations.gov> under Docket No.

BOEM-2015-0001. The EA was subsequently revised based on comments received during the comment period and public information meetings. The revised EA and the finding of no significant impact were published on September 17, 2015 and are available at: <https://www.boem.gov/sites/default/files/renewable-energy-program/State-Activities/NC/NC-EA-Camera-FONSI.pdf>. Concurrently with its preparation of the EA, BOEM conducted consultations under the Endangered Species Act (ESA), the Magnuson-Stevens Fishery Conservation and Management Act, and the Coastal Zone Management Act. BOEM prepared and executed a programmatic agreement (PA) to guide its consultations under Section 106 of the National Historic Preservation Act. The PA provides for consultations to continue through BOEM's decision-making process regarding the issuance of leases on the OCS. Also included in the PA is BOEM's phased identification and evaluation of historic properties. On August 13, 2021, BOEM announced its

intent to prepare a Supplemental EA (SEA) to the 2015 *Commercial Wind Lease Issuance and Site Assessment Activities on the Atlantic Outer Continental Shelf Offshore North Carolina—Revised Environmental Assessment*. This announcement opened a 30-day comment period that closed on September 13, 2021. The SEA evaluated current science, studies, circumstances, and other information relevant to reasonably foreseeable environmental impacts from site characterization activities and site assessment activities associated with issuing wind energy leases in the Wilmington East WEA. Some of this new information includes a recent marine cultural resources survey, changes in the status of some ESA-listed species, the listing of new endangered species, and the designation of the North Atlantic right whale critical habitat. On December 8, 2021, BOEM announced the availability of the Draft SEA. This announcement opened a 30-day comment period that closed on January 7, 2022. BOEM received 11

comments on the Draft SEA, which can be found at <http://www.regulations.gov> under Docket No. BOEM–2021–0090. The SEA was subsequently revised based on comments received during the comment period and public information meetings. The availability of the Final SEA and Finding of No Significant Impact was announced on March 21, 2022. BOEM determined that the Proposed Action would not cause any significant impacts and that implementing the Proposed Action does not constitute a major Federal action significantly affecting the quality of the human environment within the meaning of section 102(2)(c) of the National Environmental Policy Act of 1969. BOEM will conduct additional environmental reviews upon receipt of a lessee's proposed project-specific plans, such as a Site Assessment Plan (SAP) or Construction and Operations Plan (COP).

**VI. NEW AND MODIFIED LEASE STIPULATIONS:** Based on feedback provided, BOEM is adding lease stipulations that were discussed conceptually in the PSN. BOEM is also refining some stipulations identified in the PSN and previous lease packages.

**a. Reporting requirements:** In an effort to require early and regular engagement with Tribal Nations, ocean users, underserved communities, agencies and other stakeholders that may be potentially affected by activities on the OCS (collectively “Tribal Nations and parties”), BOEM is building upon an existing lease stipulation to require a semi-annual progress report. Within the progress report, Lessees will identify Tribal Nations and parties potentially affected by proposed activities and provide updates on engagement activities, impacts on or benefits to the Tribal Nations and parties due to the proposed activities, and how, if at all, a project proposal has been informed or altered to address those impacts or benefits, as well as any planned engagement activities during the next reporting period. In acknowledgment of the existing and growing consultation burden placed on many of the Tribal Nations and parties, the stipulation also requires, to the maximum extent practicable, that Lessees coordinate with one another on engagement activities. It is BOEM's intention that this requirement to coordinate engagement apply not only to meetings proposed by Lessees, but also to reasonable requests to coordinate engagement made by Tribal Nations and parties. In addition, the stipulation requires that the progress report incorporate separate lease requirements for the development of communication plans for fisheries

(Fisheries Communication Plan (FCP)), Tribal Nations (Native American Tribes Communication Plan), and agencies (Agency Communication Plan), which serve to guide engagement activities with those groups. Lastly, the progress report must also include an update on activities executed under any survey plan.

**b. Transmission Planning:** BOEM is continuing a planned approach to siting submarine electrical transmission cables on the OCS and is evaluating options, including the use of cable corridors, regional transmission systems, meshed systems, and other mechanisms. Therefore, BOEM may condition COP approval on the incorporation of such methods where appropriate. BOEM encourages those who obtain a lease(s) from this sale to engage in early coordination with adjacent lessees, states, Tribal Nations, and other ocean users to identify ways to minimize impacts from transmission. In addition, BOEM has modified the lease stipulations concerning lessee communication with Tribal Nations and parties to explicitly require the lessee to seek input and discussion surrounding transmission easements prior to proposing such easements.

**c. Birds and Bats:** As a result of BOEM's ESA consultation efforts, the U.S. Fish and Wildlife Service issued a letter on October 15, 2021, recommending the installation of automated Motus telemetry tracking stations on meteorological buoys to help address information gaps on offshore movements of birds and bats, including ESA-listed species. Therefore, BOEM is including a stipulation requiring the use of such tracking stations.

**d. Project Labor Agreements and Supply Chain:** BOEM is committed to a clean energy future, workforce development and safety, and the establishment of a durable domestic supply chain that can sustain the U.S. offshore wind energy industry. To advance this vision, BOEM has included two lease stipulations that will encourage construction efficiency for projects and contribute towards establishing a domestic supply chain:

i. The first stipulation requires lessees to make every reasonable effort to enter a project labor agreement covering the construction stage of any project proposed for the lease areas. The PLA provisions for the construction of an offshore wind project will apply to all contractors.

ii. The second stipulation requires lessees to establish a statement of goals in which the lessee will describe its plans for contributing to the creation of a robust and resilient U.S.-based

offshore wind industry supply chain. The lessee must provide regular progress updates on the achievement of those goals to BOEM, and BOEM will make those updates publicly available.

**e. Surface Structure Layout and Orientation:** In the PSN, BOEM solicited comments on proposed transit corridors. The USCG has informed BOEM that the term “transit corridor” is not defined or recognized in law, regulation, or international convention. As such, the use of the term will likely add confusion. BOEM will not use the term in this sale or future lease sales or other actions. The final lease area delineations do not include a buffer of non-leased area between the two lease boundaries. However, where each lease abuts the neighboring lease area, each lessee must endeavor to implement a layout of surface structures that facilitates activities on the lease and allows for a structure layout that contains two common lines of orientation across the adjacent leases (as described in Navigation and Vessel Inspection Circular 01–19). Where such a design cannot be agreed upon among adjacent lessees, each lessee will be required to incorporate a 1-nmi setback from the boundary of the neighboring lease where no surface structures will be permitted.

**f. Endangered Species Act Programmatic Consultation:** BOEM has completed a programmatic informal consultation with the National Marine Fisheries Service (NMFS) under section 7 of the ESA. Federal partners that were co-action agencies on the programmatic informal consultation include the Bureau of Safety and Environmental Enforcement, U.S. Army Corp of Engineers, and the U.S. Environmental Protection Agency. On June 29, 2021, NMFS issued a Letter of Concurrence under the ESA (<https://www.boem.gov/renewable-energy/final-nlaa-osw-programmatic>) that covers site characterization (high resolution geophysical (HRG) and geotechnical avian, and marine mammal surveys) and site assessment and data collection (deployment, operation, and retrieval of meteorological and oceanographic data buoys) activities associated with Atlantic OCS leases. As a result of this consultation, project design criteria (PDCs) and best management practices (BMPs) associated with the mitigation, monitoring, and reporting conditions have been developed for those data collection activities covered in the consultation. The PDCs and BMPs pertain to mitigation, monitoring, and reporting conditions for reducing noise exposure to protected species from HRG surveys, avoiding vessel interactions

with protected species, and requiring mooring design and marine debris practices to avoid entanglement of listed species. BOEM requires mitigation, monitoring, and reporting conditions for all marine mammals. As applicable, these PDCs and BMPs will be lease requirements for the lease areas and are found in the document *Project Design Criteria and Best Management Practices for Data Collection Associated with Atlantic Offshore Wind Leases* located at: <https://www.boem.gov/renewable-energy/nmfs-esa-consultations>.

**VII. POTENTIAL FUTURE RESTRICTIONS:** Prospective bidders should be aware of potential conflicts with existing uses of the OCS by the Department of Defense (DOD) and USCG, among others. BOEM coordinates with the DOD and USCG throughout our leasing process. A February 2021 letter from the DOD summarizes our most recent consultations and is available at: <https://www.boem.gov/renewable-energy/state-activities/carolina-long-bay>. Once BOEM receives a SAP or COP, we will further review the proposed project’s potential impacts on other ocean uses as part of BOEM’s environmental and project review process. This analysis could result in the identification of potential mitigation measures and/or terms and conditions as part of any potential project approval.

**VIII. LEASE TERMS AND CONDITIONS:** BOEM has included terms, conditions, and stipulations for the OCS commercial wind leases to be offered through this sale. After the leases are issued, BOEM reserves the right to require compliance with additional terms and conditions associated with approval of a SAP or COP. The leases are available on BOEM’s website at: <https://www.boem.gov/renewable-energy/state-activities/carolina-long-bay>. The leases include the following five attachments:

- Addendum “A” (Description of Leased Area and Lease Activities);
- Addendum “B” (Lease Term and Financial Schedule);
- Addendum “C” (Lease Specific Terms, Conditions, and Stipulations);
- Addendum “D” (Project Easement); and
- Addendum “E” (Rent Schedule).

Addenda “A,” “B,” and “C” provide detailed descriptions of lease terms and conditions. Addenda “D” and “E” will be completed at the time of COP

approval or approval with modifications.

The most recent version of BOEM’s renewable energy commercial lease form (BOEM–0008) is available on BOEM’s website at: <http://www.boem.gov/BOEM-OCS-Operation-Forms/>.

Pursuant to 30 CFR 585.601, a leaseholder wishing to submit a SAP must do so within 12 months of lease issuance. If the lessee intends to continue to hold the lease into its operations term, the lessee must submit a COP at least 6 months before the end of the site assessment term.

**IX. FINANCIAL TERMS AND CONDITIONS:** This section provides an overview of the annual payments required of the lessee that will be fully described in the lease, and the financial assurance requirements that will be associated with the lease.

a. *Rent:* Pursuant to 30 CFR 585.224(b) and 585.503, the first year’s rent payment of \$3 per acre is due within 45-calendar days of the date the lessee receives the lease for execution. Thereafter, annual rent payments are due on the anniversary of the effective date of the lease as defined in 30 CFR 585.237 (the “Lease Anniversary”). Once commercial operations under the lease begin, BOEM will charge rent only for the portions of the lease remaining undeveloped (*i.e.*, non-operating acreage). The rent that would be due should no portion of each lease area be authorized for commercial operations is shown below.

Lease	Total acres	Rent due (per year)
OCS–A 0545 .....	54,937	\$164,811
OCS–A 0546 .....	55,154	165,462
Total .....	110,091	330,273

If the lessee submits an application for relinquishment of a portion of its leased area within the first 45-calendar days following the date that the lease is received by the lessee for execution, and BOEM approves that application, no rent payment will be due on the relinquished portion of the lease area. Later relinquishments of any portion of the lease area will reduce the lessee’s rent payments starting in the lease year following BOEM’s approval of the relinquishment. A lease issued under

this part confers on the lessee the right to one or more project easements without further competition for the purpose of installing gathering, transmission, and distribution cables; pipelines; and appurtenances on the OCS as necessary for the full enjoyment of the lease. A lessee must apply for the project easement as part of your COP or GAP, as provided under subpart F of 30 CFR part 585. The lessee must also pay rent for any project easement associated with the lease, commencing on the date that BOEM approves the COP (or modification thereof) that describes the project easement and when the operations term begins as outlined in 30 CFR 585.500(a)(5) and 585.507(b). Annual rent for a project easement is \$5 per acre, subject to a minimum of \$450 per year.

b. *Operating Fee:* For purposes of calculating the initial annual operating fee payment pursuant to 30 CFR 585.506, BOEM applies an operating fee rate to a proxy for the wholesale market value of the electricity expected to be generated from the project during its first 12 months of operations. This initial payment will be prorated to reflect the period between the commencement of commercial operations and the Lease Anniversary. The initial annual operating fee payment is due within 45 days of the commencement of commercial operations. Thereafter, subsequent annual operating fee payments are due on or before the Lease Anniversary.

The subsequent annual operating fee payments are calculated by multiplying the operating fee rate by the imputed wholesale market value of the projected annual electric power production. For the purposes of this calculation, the imputed market value would be the product of the project’s annual nameplate capacity, the total number of hours in the year (8,760), the capacity factor, and the annual average price of electricity derived from a regional wholesale power price index. For example, the annual operating fee for a 1,028-megawatt (MW) wind facility operating at a 40 percent capacity (*i.e.*, capacity factor of 0.4) with an annual average regional wholesale power price of \$40/megawatt hour (MWh) and an operating fee rate of 0.02 will be calculated as follows:

$$\text{Annual Operating Fee} = 1,028 \text{ MW} \times 8,760 \frac{\text{hrs}}{\text{year}} \times 0.4 \times \frac{\$40}{\text{MWh}} \text{ Power Price} \times 0.02 = \$2,881,689.60$$

*i. Operating Fee Rate:* The operating fee rate is the share of imputed wholesale market value of the projected annual electric power production due to the Office of Natural Resources Revenue as an annual operating fee. For the Lease Areas, BOEM will set the fee rate at 0.02 (*i.e.*, 2 percent) for the entire life of commercial operations.

*ii. Nameplate Capacity:* Nameplate capacity is the maximum rated electric output, expressed in MW, that the turbines of the wind facility under commercial operations can produce at their rated wind speed, as designated by the turbine's manufacturer. The nameplate capacity available at the start of each year of commercial operations on the lease will be the capacity provided in the Fabrication and Installation Report (FIR). For example, if the lessee installed 100 turbines as documented in its FIR, and each is rated by the manufacturer at 12 MW, the nameplate capacity of the wind facility is 1,200 MW.

*iii. Capacity Factor:* The capacity factor relates to the amount of energy delivered to the grid during a period of time compared to the amount of energy the wind facility would have produced at full capacity during that same period of time. This factor is represented as a decimal between zero and one. There are several reasons why the amount of power delivered is less than the theoretical 100 percent of capacity. For a wind facility, the capacity factor is mostly determined by the availability of wind. Transmission line loss and downtime for maintenance or other purposes also affect the capacity factor.

The capacity factor for the year in which the commercial operation date occurs, and for the first 6 years of commercial operations on the lease, is set to 0.4 (*i.e.*, 40 percent). At the end of the sixth year, the capacity factor may be adjusted to reflect the performance over the previous five years based upon the actual metered electricity generation at the delivery point to the electrical grid. Similar adjustments to the capacity factor may be made once every five years thereafter.

*iv. Wholesale Power Price Index:* Pursuant to 30 CFR 585.506(c)(2)(i), the wholesale power price, expressed in dollars per MW-hour, is determined at the time each annual operating fee payment is due. For the leases offered in this sale, BOEM will use the index for VACAR average price per MW from the Enerfax power prices dataset within Hitachi's ABB Velocity Suite or similar. VACAR is a subregion of the Southeastern Electric Reliability Council and comprises the Carolinas and parts of Virginia. The VACAR

average price per megawatt represents prices from Duke, Progress Energy's Carolina Power and Light, Santee Cooper, South Carolina Electric and Gas, Southeastern Power Administration, and APGI Yadkin Division.

*c. Financial Assurance:* Within 10-business days after receiving the lease copies and pursuant to 30 CFR 585.515-.516, the provisional winners of the leases must provide an initial lease-specific bond or other approved means of meeting the lessor's initial financial assurance requirements, in the amount of \$100,000. The provisional winners may meet financial assurance requirements by posting a surety bond or financial assurance instrument or alternative detailed in 30 CFR 585.526-529. BOEM encourages the provisionally winning bidder to discuss the financial assurance requirement with BOEM as soon as possible after the auction has concluded.

BOEM will base the amount of all SAP, COP, and decommissioning financial assurance on cost estimates for meeting all accrued lease obligations at the respective stages of development. BOEM will determine the required amount of supplemental and decommissioning financial assurance on a case-by-case basis.

*d. Payments:* The annual lease payments and financial assurance requirements described above can be found in Addendum "B" of the leases, which BOEM has made available with this notice on its website at: <https://www.boem.gov/renewable-energy/state-activities/carolina-long-bay>.

*X. BFF:* Each bidder must fill out the BFF referenced in this FSN. BOEM has also made a copy of the form available with this notice on its website at: <https://www.boem.gov/renewable-energy/state-activities/carolina-long-bay>.

BOEM recommends that each bidder designate an email address in its BFF that the bidder will then use to create an account in *pay.gov* (if it has not already done so). Bidders who elect to qualify for the bidding credit will check the paragraph affirming their interest on their BFF and include a conceptual strategy at the time of the bid deposit. Bidders committing to the bidding credit must meet the bidding credit requirements before submission of the FDR. Bidders who do not elect to qualify may indicate by a check mark next to the paragraph declining the bidding credit. If a BFF does not indicate a selection, BOEM will assume no bidding credit is desired. BOEM will not consider BFFs submitted by bidders for previous lease sales as satisfying the

requirements of this auction. If a bidder does not submit a BFF for this sale by April 11, 2022, BOEM, in its sole discretion, may grant an extension to that bidder only if BOEM determines the bidder's failure to timely submit a BFF was caused by events beyond the bidder's control. BOEM will only accept an original, executed paper copy of the BFF. The BFF must be executed by an authorized representative listed in the qualifications package on file with BOEM as authorized to bind the company.

*XI. BID DEPOSIT:* A bid deposit is an advance cash payment submitted to BOEM to participate in the auction. After creating an account in *pay.gov* (if necessary), bidders may use the Bid Deposit Form on the *pay.gov* website to leave a deposit. Each bidder must submit a bid deposit of \$2,000,000 or \$4,000,000 to be eligible to bid for one or two lease areas, respectively, no later than April 25, 2022. Any bidder who fails to submit the bid deposit by this deadline may be disqualified from participating in the auction.

Following the auction, bid deposits will be applied against bonus bids or other obligations owed to BOEM. If the bid deposit exceeds a bidder's total financial obligation, BOEM will refund the balance of the bid deposit to the bidder. Once BOEM has announced the provisional winner(s), BOEM will refund bid deposits to the other bidders.

If BOEM offers a lease pursuant to a provisionally winning bidder and that bidder fails to timely return the signed lease form, establish financial assurance, or pay the balance of its bid, BOEM will retain the bidder's \$2,000,000 (or \$4,000,000) bid deposit. In such a circumstance, BOEM may determine which bid would have won in the absence of the bid previously determined to be the winning bid and to offer a lease pursuant to this next highest bid if it has not won one the other Lease Area.

*XII. MINIMUM BID:* The minimum bid is the lowest bid that BOEM will accept as a winning bid, and it is where BOEM will start the bidding in the auction. 30 CFR 585.221. BOEM has established a minimum bid of \$50.00 per acre for this lease sale.

*XIII. AUCTION PROCEDURES:* As authorized under 30 CFR 585.220(a)(4) and 585.221(a)(6), BOEM will use a multiple-factor auction format, with a multiple-factor bidding system for this lease sale. The bidding system for this lease sale will be a multiple-factor combination of a monetary bid and a non-monetary factor. This auction format was selected to enhance, through training, the offshore wind workforce or

stand-up the domestic supply chain for offshore wind manufacturing, assembly, or services, and is designed to lead to expeditious and orderly development of offshore wind resources on the OCS. BOEM will appoint a panel to review the non-monetary component after the BFFs and bid deposits have been received but before the auction, and the panel will verify the results of the lease sale. Following review of the strategy to support workforce training programs for the offshore wind industry, development of a U.S. domestic supply chain for the offshore wind energy industry, or both, BOEM will notify bidders if they qualify for the credit prior to the mock auction. BOEM reserves the right to change the composition of this panel at any time. The bid made by a particular bidder in

each round will represent the sum of a monetary (cash) amount and a non-monetary factor (bidding credit). The structure of this bidding credit is explained in the subsection below. BOEM will start the auction using the minimum bid price for each Lease Area and will increase those prices incrementally until no more than one active bidder per Lease Area remains in the auction.

**20 Percent Non-Monetary (Bidding) Credit for Workforce Training or Supply Chain Development**

The bidding credit allows a bidder to receive a credit of 20 percent of its cash bid in exchange for committing to make a qualifying monetary contribution (“Contribution”) to programs or initiatives, as described in the BFF Addendum and lease, that support

workforce training programs for the offshore wind industry, development of a U.S. domestic supply chain for the offshore wind energy industry, or both. To qualify for the credit, the winning bidder is required to financially contribute at least 80 percent of the bidding credit value toward a workforce training program or the development of a domestic supply chain, as described in the BFF Addendum and lease. For example, a winning bidder qualified for the bidding credit and meeting the asking price of \$31.32 million would receive a credit of \$5.22 million toward its winning bid in exchange for a \$4.176 million (80 percent of \$5.22 million) commitment to workforce training or development of the domestic supply chain. The bidding credit would be calculated as follows:

$$\text{Cash Bid} = \left\{ \frac{\$31.32 \text{ million}}{1 + 0.20} \right\} = \$26.1 \text{ million}$$

$$\text{Credit} = \$31.32 - \$26.1 = \$5.22 \text{ million}$$

$$\text{Commitment} = 0.80 * \$5.22 \text{ million} = \$4.176 \text{ million}$$

i. If a bidder qualified for the bidding credit wins both lease areas, this calculation would be applied to its bid for both lease areas.

ii. The Contribution to workforce training must result in a better trained and/or larger domestic offshore wind work force that would provide for more efficient operations via increasing the supply of fully trained personnel, pursuant to congressional policy under 43 U.S.C. 1332(6), which states that operations on the OCS should be conducted in a safe manner by well-trained personnel.

iii. The Contribution to domestic supply chain development must result in a more robust domestic supply chain by reducing the upfront capital or certification cost for manufacturing offshore wind components including the building of facilities, the purchasing of capital equipment, and the certifying of existing manufacturing facilities in the United States, which would facilitate congressional policy set forth in 43 U.S.C. 1332(3) to promote expeditious and orderly development on the OCS.

iv. Bidders interested in pursuing bidding credits can choose to commit to workforce training programs, domestic supply chain initiatives, or a combination of both. Bidders must note,

on the BFF, whether they are making the commitment to earn the bidding credit. Bidders seeking to utilize the bidding credit must submit their strategy, further described below and in the BFF Addendum, prior to the deadline for the submission of the bid deposit. Bidders are strongly encouraged to review the BFF Addendum if they are considering qualifying for the bidding credit. The strategy must describe the verifiable actions to be taken by the lessee that would allow BOEM to confirm compliance when your documentation for satisfying the bidding credit is submitted. Payment fulfilling the commitment can be deferred until submission of the facility design report (FDR) to BOEM. Lessees must provide documentation showing that the lessee has met the commitment and complied with the applicable bidding credit requirements no later than the submission to BOEM of the first Facility Design Report (FDR) for the Lease. Deferring the payment until the FDR will enable the lessee to identify programs or recipients with the greatest potential to expedite or facilitate orderly OCS renewable energy development.

v. *Contributions to workforce training must be to one of the following:* (i) Contributions in support of union

apprenticeships, labor management training partnerships, stipends for workforce training, or other technical training programs or institutions focused on providing skills necessary for the planning, design, construction, operation, maintenance, or decommissioning of offshore wind energy projects in the United States; (ii) Contributions toward maritime training necessary for the crewing of vessels to be used for the construction, servicing, and/or decommissioning of wind energy projects in the United States; (iii) Contributions toward training workers in skills or techniques necessary to manufacture or assemble offshore wind components, subcomponents or subassemblies. Examples of these skills and techniques include welding; wind energy technology; hydraulic maintenance; braking systems; mechanical systems, including blade inspection and maintenance; or computers and programmable logic control systems; (iv) Contributions toward training in any other job skills that the Lessee can demonstrate are necessary for the planning, design, construction, operation, maintenance, or decommissioning of offshore wind energy projects in the United States.

vi. *Contributions to domestic supply chain development must be one of the*

following: (i) Contributions supporting the development of a domestic supply chain for the offshore wind industry, including manufacturing of components and sub-assemblies and the expansion of related services; (ii) Contributions to domestic tier-2 and tier-3 offshore wind component suppliers and domestic tier-1 supply chain efforts, including quay-side fabrication; (iii) Contributions for technical assistance grants to help U.S. manufacturers re-tool or certify (e.g., ISO-9001) for offshore wind manufacturing; (iv) Contributions for the development of Jones Act-compliant vessels for the construction, servicing, and/or decommissioning of wind energy projects in the United States; (v) Contributions to establish a new or existing bonding support reserve or revolving fund available to all businesses providing goods and services to offshore wind energy companies, including disadvantaged businesses; (vi) Other Contributions to supply chain development efforts that the Lessee can demonstrate further the manufacture of offshore wind components or subassemblies, or the provision of offshore wind services, in the United States.

vii. *Documentation:* If a lease is awarded pursuant to a winning bid that includes the bidding credit, the lessee will be required to provide documentation showing that the lessee has met the commitment and complied with the applicable bidding credit requirements no later than the submission to BOEM of the first Facility Design Report (FDR) for the Lease. The documentation must allow BOEM to objectively verify the amount of the Contribution and the beneficiary(ies) of the Contribution. At a minimum, this documentation must include: All written agreements between the Lessee and beneficiary(ies) of the Contribution; all receipts documenting the amount, date, financial institution, and the account and owner of account to which the Contribution was made; and sworn statements by the entity that made the Contribution and the beneficiary(ies) of the Contribution, attesting: The amount and date(s) of the Contribution; that the Contribution is being (or will be) used in accordance with the bidding credit requirements in the Lease; and that all information provided is true and accurate. The documentation must describe how the funded initiative or program has advanced, or is expected to advance, U.S. offshore wind workforce training or supply chain development. The documentation must also provide qualitative and/or quantitative information that includes the estimated

number of trainees or jobs supported, or the estimated leveraged supply chain investment resulting or expected to result from the Contribution. The documentation must contain any information called for in the conceptual strategy submitted with the bid deposit. If the Lessee's implementation strategy has changed due to market needs or other factors, the Lessee must explain this change. BOEM reserves all rights to determine that the bidding credit has not been satisfied if changes to the lessee's conceptual strategy do not meet the criteria for the bidding credit described herein.

viii. *Enforcement:* The commitment for the bidding credit will be made in the BFF and will be included in a lease addendum that will bind the lessee and all future assignees of the lease. If BOEM determines that a Lessee or assignee has failed to satisfy the commitment at the FDR stage, or if a Lessee or assignee relinquishes or otherwise fails to develop the Lease by the tenth anniversary date of Lease issuance, the amount corresponding to the bidding credit awarded shall be immediately due and payable to the Office of Natural Resources Revenue with interest from the date of lease execution. The interest rate will be the underpayment interest rate identified by ONRR. BOEM may, at its sole discretion, extend the documentation deadline beyond the FDR or the 10-year timeframe.

*The Auction:* Using an online bidding system to host the auction, BOEM will start the bidding for Lease Area OCS-A 0545 and OCS-A 0546. Bidders may bid for one or both lease areas offered and could ultimately win one or both areas.

Lease area	Acres	Minimum bid
OCS-A 0545 .....	54,937	\$2,746,850
OCS-A 0546 .....	55,154	2,757,700

a. *Live Bids:* The auction will be conducted in a series of rounds. At the start of each round, BOEM will state an asking price for each Lease Area. If a bidder is willing to meet the asking price for up to two of the Lease Areas (if eligible), it will indicate its intent by submitting a bid equal to the asking price for the selected lease area(s). A bid for one or both lease areas at the sum of the full asking price is referred to as a "live bid." If the bidder has qualified for a non-monetary credit, it will meet the asking price by submitting a multiple-factor bid—that is, a live bid that consists of a monetary (cash) element and a non-monetary credit (20 percent of the cash element), the sum of

which equals the asking price. Bidders without a non-monetary credit will submit a cash bid equal to the asking price. To participate in the next round of the auction, a bidder must have submitted a live bid for at least one of the Lease Areas in each previous round, or BOEM must have carried forward a bidder's bid from a previous round.

As long as there are two or more live bids (including bids carried forward) for at least one of the Lease Areas, the auction moves to the next round. If a bid is uncontested, it is automatically carried forward to the next round. BOEM will raise the asking price for each of the Lease Areas that has received two or more live bids in the previous round. Asking price increments will be determined based on several factors, including (but not necessarily limited to) the expected time needed to conduct the auction and the number of rounds that have already occurred. BOEM reserves the right to increase or decrease bidding increments as it deems appropriate.

Each bidder is allowed to submit a live bid for up to two lease areas based on its "eligibility" at the opening of each round. A bidder's eligibility is for either two, one, or zero lease areas, and corresponds to the maximum number of lease areas that a bidder may include in a live bid during a single round of the auction. A bidder's initial eligibility is determined based on the amount of the bid deposit submitted by the bidder prior to the auction. To be eligible to offer a bid on one lease area at the start of the auction, a bidder must submit a bid deposit of \$2,000,000. To be eligible to offer a bid on two lease areas, a bidder must submit a bid deposit of \$4,000,000. A bidder's bid deposit will be used by BOEM as a down payment on any monetary obligations incurred by the bidder should it be awarded a lease.

As the auction proceeds, a bidder's eligibility is determined by the number of lease areas included in its live bid submitted in the round prior to the current round. That is, if a bidder submitted a live bid on one lease area in the previous round, that bidder may submit a bid that includes at most one lease area in the current round. If a bidder submitted a live bid that included two lease areas in the previous round, the bidder may submit a live bid that includes at most two lease areas in the current round. When a bidder chooses to submit a live bid with fewer lease areas than the maximum number it is eligible to include in its bid, the bidder's eligibility is permanently reduced. Thus, eligibility in successive rounds may stay the same or go down, but it can never go up.

If a bidder decides to stop bidding when its bid is contested, that bidder could still win the auction, if, for example, the bidder is ultimately selected as the provisional winner in the winner determination that is described in detail below, or if someone else's winning bid is disqualified at the award stage of the auction. In these circumstances, the bidder will be bound by its bid and thus obligated to pay the full bid amount. A bidder is bound to each of its bids at all times prior to the finalization of the auction results.

Between rounds, BOEM will disclose to all bidders that submitted bids: (1) The number of live bids in the previous round of the auction (*i.e.*, the level of demand at the asking price) for each Lease Area; and (2) the asking price for each Lease Area in the upcoming round of the auction.

*b. Intra-round Bids:* A bidder is only eligible to continue bidding in the auction if it has submitted a live bid (or had a bid carried forward) in the previous round. In any round after the first round, an eligible bidder may submit an "intra-round" bid. An intra-round bid is similar to an "exit bid."

An intra-round bid consists of a single offer price for exactly the same lease areas on which the bidder placed a live bid in the previous round. The single offer price must be greater than the sum of the previous round's asking prices for the same lease areas bid on in the previous round and less than the sum of the current round's asking prices for the same lease areas. A bidder may not submit an intra-round bid in the current round if its previous round bid was uncontested or if its eligibility had previously dropped to zero lease areas.

A bidder that has submitted a live bid for two leases in the previous round may choose to submit a single intra-round bid in the current round for the two lease areas. A bidder submitting an intra-round bid for two lease areas can either:

(1) Choose to also submit a live bid for either one of the two lease areas. Doing this sets the bidder's eligibility to one lease area and allows the bidder to continue to place a live bid for one lease area in the next round.

(2) Choose not to submit a live bid for either of the two lease areas. Doing this sets the bidder's eligibility to zero lease areas and precludes the possibility of this bidder submitting any bids in the next round or any further round of the auction.

A bidder that has submitted a live bid for one lease area in the previous round may choose to submit an intra-round bid in the current round (for that one lease area). Placing an intra-round bid

that includes one lease area terminates the bidder's ability to submit subsequent bids.

For example, consider the case of a bidder who has bid on both lease areas in the previous rounds, and hence is eligible to continue bidding on both lease areas in the current round. Suppose that the asking prices for OCS-A 0545 and OCS-A 0546 were \$10,000,000 and \$11,000,000 in the previous round and are now \$10,000,000 and \$12,000,000 in the current round, respectively. OCS-A 0546 received competition in the previous round, resulting in its increased price, but there was not competition for OCS-A 0545. Since the bidder placed a bid on both lease areas, with one of the lease areas having competition, the bidder may enter a single, intra-round bid for both areas that it bid on in the previous round. This single offer price must be more than \$21,000,000 and less than \$22,000,000. If the bidder wishes to continue to place bids in the auction, the bidder must also place a live bid for a single lease area in the same round. The bidder can satisfy this requirement by choosing to submit (along with its intra-round bid) a single live bid of \$10,000,000 for OCS-A 0545 or \$12,000,000 for OCS-A 0546. Alternatively, the bidder may choose not to submit any live bid, precluding the ability to place bids in future rounds.

If the bidder had only bid on one lease area in the previous round, it may be eligible to submit an intra-round bid during the current round. If its previous round's bid was for OCS-A 0546, the bidder could submit an intra-round bid for that area of more than \$11,000,000 and less than \$12,000,000, reducing its live bid eligibility to zero lease areas, and hence precluding bids in subsequent rounds. Alternatively, if the bidder's previous round's bid was on OCS-A 0545, it cannot submit an intra-round bid (or any other bid), because the previous round's bid was uncontested. In this case, since the bidder had no competition for OCS-A 0546, its sole bid of \$10,000,000 from the previous round is automatically recorded by BOEM as a submitted live bid of the same amount for that lease area in the current round.

Bidders are cautioned that dropping immediately from bidding on two lease areas to bidding on zero lease areas, without placing any live bid on one lease area, as in bidding option (2) (above), has implications for the winner determination described below. Such bidding behavior would signify that the bidder wishes only to win both lease

areas or neither lease area. As such, dropping immediately from two to zero can lead to potentially counterintuitive results in which the bidder wins nothing in the auction.

Intra-round bids are not considered to be live bids for the purpose of determining whether to conclude the auction, for determining whether to increase the asking price for a particular lease area, or for disclosing the demand for a lease area. During the auction, an intra-round bid can only be seen by BOEM, and not by other bidders.

After the bidding ends, BOEM will determine the provisionally winning bids in accordance with the process described in this section. This process consists of two stages: Stage 1 and Stage 2, which are described herein. Once the auction itself ends, nothing further is required of bidders within or between Stages 1 and 2. In practice, the two stages of the process will be implemented by the auction software, which will analyze the bids, determine the provisional winners, and calculate the applicable prices. The winner determination will be reviewed, checked and validated by the panel.

- *Stage 1*

In Stage 1, a bidder with a live bid in the final round is provisionally assured of winning the lease area(s) included in its final-round live bid, regardless of any other bids. If both lease areas receive live bids in the final round, they are awarded to bidders in Stage 1, and the rest of this determination is not necessary. Otherwise, BOEM will select the combination of final-round bids that maximizes the sum of the bid amounts of the selected bids, subject to the following constraints: (1) A bidder must win all lease areas included in its final-round live bid (if any); (2) either a bidder's live bid or intra-round bid, but not both, can be selected; and (3) the selected bids must be feasible, in that each lease area cannot be included in more than one of the selected bids. If there is a unique combination of bids that meets the maximization objective described in the previous sentence, then these are deemed to be the Qualified Bids. If two or more combinations of bids tie by producing the same maximized sum of bid amounts, the tie is broken by: First, bringing each of these combinations forward into the Stage 2 problem (below) and selecting the combination that produces the largest value in the Stage 2 problem; and second, if two or more of these combinations tie in producing the largest value, the auction system will select one of the combinations by generating pseudorandom numbers. If any of the lease areas is not assigned in

Stage 1, BOEM will proceed to Stage 2 to attempt to assign the remaining lease areas.

• *Stage 2*

In Stage 2, BOEM will consider bids from all bidding rounds to determine if the lease area(s) not awarded in Stage 1 can be awarded in Stage 2. The combination of bids selected in Stage 1 are Qualified Bids. BOEM will select the combination of bids from all bidding rounds that maximizes the sum of the bid amounts of the selected bids, subject to the following constraints: (1) A bidder must win all lease areas included in its Qualified Bid (if any); (2) either a bidder's live bid or intra-round bid from a single bidding round, but not both, can be selected; and (3) the selected bids must be feasible, in that each lease area cannot be included in more than one of the selected bids. If there is a unique combination of bids that solves the maximization problem, then these are deemed to be the provisionally-winning bids. If two or more combinations of bids tie by producing the same maximized sum of bid amounts, the auction system will select one of the combinations by generating pseudorandom numbers. The provisional winners will pay the amounts of their provisionally winning bids.

c. *Provisional Winners*: BOEM's panel will review the auction results and certify the provisional winners. A provisional winner may be disqualified if it is subsequently found to have violated auction rules or BOEM regulations, or otherwise engaged in conduct detrimental to the integrity of the competitive auction. If a bidder submits a bid that BOEM determines to be a provisionally winning bid, the bidder will be expected to sign the applicable lease documents, establish financial assurance, and submit the balance (if any) of its bonus bid (*i.e.*, winning monetary bid less the applicable non-monetary bidding credit (if appropriate) and bid deposit) within 10-business days of receiving the lease copies, pursuant to 30 CFR 585.224. BOEM reserves the right not to issue the lease to the provisionally winning bidder if that bidder does not timely sign the lease copies, does not establish all required financial assurance, does not pay the balance of its winning bid, or otherwise fails to comply with applicable regulations or the terms of the FSN. In that case, the bidder will forfeit its bid deposit.

BOEM will publish the provisionally winning bidder and bid amount. The bid results, including exit bids, will be published on BOEM's website after

review of the results and announcement of the provisional winner(s).

d. *Authorized Individuals and Bidder Authentication*: A company that is eligible to participate in the auction will identify on its BFF up to three individuals who are authorized to bid on behalf of the company, including their names, business telephone numbers, and email addresses. After BOEM has processed the bid deposits, the auction contractor will send several emails to the authorized individuals. The emails will contain user login information and instructions for accessing the bidder manual for the auction system and the auction system technical supplement (ASTS).

The auction system will require software tokens for two-factor authentication. To set up the tokens, authorized individuals must download an app onto their smartphone or tablet with a recent operating system. One of the emails sent to authorized individuals will contain instructions for installing the app and the credentials needed to activate the software token. A short telephone conversation with the auction contractor may also be needed to use the credentials. The login information, along with the tokens, will be tested during the mock auction. If an eligible bidder fails to submit a bid deposit or does not participate in the auction, BOEM will de-activate that bidder's tokens and login information.

e. *Timing of Auction*: The auction will begin at 9:00 a.m. EDT on May 11, 2022. Bidders may log in as early as 8:30 a.m. EDT on that day. BOEM recommends that bidders log in earlier than 9:00 a.m. EDT on that day to ensure that any login issues are resolved prior to the start of the auction. Once bidders have logged in, they should review the auction schedule, which lists the anticipated start times, end times, and recess times of each round in the auction. Each round is structured as follows:

- Round bidding begins;
- Bidders enter their bids;
- Round bidding ends and the recess begins;
- During the recess, previous round results and next round asking prices are posted;
- Bidders review the previous round results and prepare their next round bids; and
- Next round bidding begins.

The first round will last about 30 minutes, though subsequent rounds will be shorter. Recesses are anticipated to last approximately 10 minutes. This description of the auction schedule is tentative. Bidders should consult the auction schedule on the auction system during the auction for updated times.

Bidding will continue until about 6:00 p.m. EDT each day. BOEM anticipates that the auction will last 1- to 2-business days, but may continue for additional business days as necessary until the auction has concluded.

f. *Messaging Service*: BOEM and the auction contractors will use the auction platform messaging service to keep bidders informed on issues of interest during the auction. For example, BOEM may change the schedule at any time, including during the auction. If BOEM changes the schedule during an auction, it will use the messaging feature to notify bidders that a revision has been made and will direct bidders to the relevant page. BOEM will also use the messaging system for other updates during the auction.

Bidders may place bids at any time during the round. At the top of the bidding page, a countdown clock shows how much time remains in the round. Bidders have until the end of the round to place bids. Bidders should place bids according to the procedures described in this notice and the ASTS. Information about the round results will only be made available after the round has closed, so there is no strategic advantage to placing bids early or late in the round.

The ASTS will elaborate on the auction procedures described in this FSN. In the event of an inconsistency between the ASTS and the FSN, the FSN is controlling.

g. *Alternate Bidding Procedures*: Redundancy is the most effective way to mitigate technical and human issues during an auction. Bidders should strongly consider authorizing more than one individual to bid in the auction—and confirming during the mock auction that each individual is able to access the auction system. A 4G card or other form of wireless access is helpful in case a company's main internet connection should fail. As a last resort, an authorized individual facing technical issues may request to submit its bid by telephone. In order to be authorized to place a telephone bid, an authorized individual must call the help desk number listed in the auction manual before the end of the round. BOEM will authenticate the caller's identity, including requiring the caller to provide a code from the software token. The caller must also explain the reasons why a telephone bid must be submitted. BOEM may, in its sole discretion, permit or refuse to accept a request for the placement of a bid using this alternate telephonic bidding procedure.

h. *Prohibition on Communications Between Bidders During Auction*: During the auction, bidders are

prohibited from communicating with each other regarding their participation in the auction. Also, during the auction, bidders are prohibited from communicating to the public regarding any aspect of their participation or lack thereof in the auction, including, but not limited to, through social media, updated websites, or press releases.

#### XIV. POST-AUCTION PROCEDURES

a. *Rejection or Non-Acceptance of Bids*: BOEM reserves the right and authority to reject all bids that do not satisfy the requirements and rules of the auction, the FSN, or applicable regulations and statutes.

i. *Anti-Competitive Review*: Bidding behavior in this sale is subject to Federal antitrust laws. Accordingly, following the auction, but before the acceptance of bids and the issuance of leases, BOEM will “allow the Attorney General, in consultation with the Federal Trade Commission, 30 days to review the results of the lease sale.” 43 U.S.C. 1337(c). If a provisionally winning bidder is found to have engaged in anti-competitive behavior in connection with its participation in the competitive bidding process, BOEM may reject its provisionally winning bid. Compliance with BOEM’s auction procedures and regulations is not an absolute defense to violations of antitrust laws.

Anti-competitive behavior determinations are fact-specific. Such behavior may manifest itself in several different ways, including, but not limited to:

1. An express or tacit agreement among bidders not to bid in an auction or to bid a particular price;
2. An agreement among bidders not to bid or not to bid on one of the Lease Areas;
3. An agreement among bidders not to bid against each other; or
4. Other agreements among bidders that have the potential to affect the final auction price.

Pursuant to 43 U.S.C. 1337(c), BOEM will decline to award a lease if the Attorney General, in consultation with the Federal Trade Commission, determines that awarding the lease would be inconsistent with the antitrust laws.

For more information on whether specific communications or agreements could constitute a violation of Federal antitrust law, please see <https://www.justice.gov/atr/business-resources> or consult legal counsel.

b. *Process for Issuing the Lease*: Once all post-auction reviews have been completed to BOEM’s satisfaction, BOEM will issue three unsigned copies of the lease to each provisionally

winning bidder. Within 10-business days after receiving the lease copies, the provisionally winning bidders must:

1. Sign and return the lease copies on the bidder’s behalf;
2. File financial assurance, as required under 30 CFR 585.515–.537; and
3. Pay by electronic funds transfer (EFT) the balance (if any) of the bonus bid (winning bid less the bid deposit). BOEM requires bidders to use EFT procedures (not *pay.gov*, the website bidders used to submit bid deposits) for payment of the balance of the bonus bid, following the detailed instructions contained in the “Instructions for Making Electronic Payments” available on BOEM’s website at: <https://www.boem.gov/renewable-energy/state-activities/carolina-long-bay>.

BOEM will not execute a lease until the three requirements above have been satisfied, BOEM has accepted the provisionally winning bidder’s financial assurance pursuant to 30 CFR 585.515, and BOEM has processed the provisionally winning bidder’s payment.

BOEM may extend the 10-business day deadline for signing a lease, filing the required financial assurance, and paying the balance of the bonus bid if BOEM determines the delay was caused by events beyond the provisionally winning bidder’s control pursuant to 30 CFR 585.224(e).

If a provisionally winning bidder does not meet these requirements or otherwise fails to comply with applicable regulations or the terms of the FSN, BOEM reserves the right not to issue the lease to that bidder. In such a case, the provisionally winning bidder will forfeit its bid deposit. Also, in such a case, BOEM reserves the right to identify the next highest bid for that lease area submitted during the lease sale by a bidder who has not won one of the other Lease Areas and to offer the lease to that bidder pursuant to its bid.

Within 45-calendar days of the date that a provisionally winning bidder receives copies of the lease, it must pay the first year’s rent using the *pay.gov* and Renewable Energy Initial Rental Payment form available at: <https://www.pay.gov/public/form/start/27797604/>.

Subsequent annual rent payments must be made following the detailed instructions contained in the “Instructions for Making Electronic Payments,” available on BOEM’s website at: <https://www.boem.gov/renewable-energy/state-activities/carolina-long-bay>.

c. *Non-Procurement Debarment and Suspension Regulations*: Pursuant to regulations at 43 CFR part 42, subpart C,

an OCS renewable energy lessee must comply with the Department of the Interior’s non-procurement debarment and suspension regulations at 2 CFR parts 180 and 1400. The lessee must also communicate this requirement to persons with whom the lessee does business relating to this lease by including this requirement as a condition in their contracts and other transactions.

d. *Force Majeure*: The Program Manager of BOEM’s Office of Renewable Energy Programs has the discretion to change any auction details specified in the FSN, including the date and time, in case of a *force majeure* event that the Program Manager deems may interfere with a fair and proper lease sale process. Such events may include, but are not limited to: Natural disasters (*e.g.*, earthquakes, hurricanes, floods, blizzards), wars, riots, acts of terrorism, fire, strikes, civil disorder, pandemics or other events of a similar nature. In case of such events, BOEM will notify all qualified bidders via email, phone, or through the BOEM website at: <http://www.boem.gov/Renewable-Energy-Program/index.aspx>.

Bidders should call 703–787–1121 if they have concerns.

e. *Withdrawal of Blocks*: BOEM reserves the right to withdraw all or portions of the Lease Areas prior to executing the leases with the winning bidders.

f. *Appeals*: The appeals procedures are provided in BOEM’s regulations at 30 CFR 585.225 and 585.118(c). Pursuant to 30 CFR 585.225:

(a) If BOEM rejects your bid, BOEM will provide a written statement of the reasons and refund any money deposited with your bid, without interest.

(b) You will then be able to ask the BOEM Director for reconsideration, in writing, within 15-business days of bid rejection, under 30 CFR 585.118(c)(1). We will send you a written response either affirming or reversing the rejection.

The procedures for appealing final decisions with respect to lease sales are described in 30 CFR 585.118(c).

XV. *Protection of Privileged or Confidential Information*: BOEM will protect privileged and confidential information that you submit, as required by the Freedom of Information Act (FOIA). Exemption 4 of FOIA applies to “trade secrets and commercial or financial information that you submit that is privileged or confidential.” 5 U.S.C. 552(b)(4).

If you wish to protect the confidentiality of such information, clearly mark it “Contains Privileged or

Confidential Information” and consider submitting such information as a separate attachment. BOEM will not disclose such information, except as required by FOIA. Information that is not labeled as privileged or confidential may be regarded by BOEM as suitable for public release. Further, BOEM will not treat as confidential aggregate summaries of otherwise confidential information.

**BILLING CODE 4310-MR-P**

## INTERNATIONAL TRADE COMMISSION

[Investigation Nos. 701-TA-548 and 731-TA-1298 (Review)]

### Welded Stainless Steel Pressure Pipe From India; Scheduling of Expedited Five-Year Reviews

**AGENCY:** International Trade Commission.

**ACTION:** Notice.

**SUMMARY:** The Commission hereby gives notice of the scheduling of expedited reviews pursuant to the Tariff Act of 1930 (“the Act”) to determine whether revocation of the antidumping and countervailing duty orders on welded stainless steel pressure pipe from India would be likely to lead to continuation or recurrence of material injury within a reasonably foreseeable time.

**DATES:** January 4, 2022.

**FOR FURTHER INFORMATION CONTACT:**

Alejandro Orozco (202-205-3177), Office of Investigations, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436. Hearing-impaired persons can obtain information on this matter by contacting the Commission’s TDD terminal on 202-205-1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at 202-205-2000. General information concerning the Commission may also be obtained by accessing its internet server (<https://www.usitc.gov>). The public record for these reviews may be viewed on the Commission’s electronic docket (EDIS) at <https://edis.usitc.gov>.

**SUPPLEMENTARY INFORMATION:**

*Background.*—On January 4, 2022, the Commission determined that the domestic interested party group response to its notice of institution (86

FR 54470, October 1, 2021) of the subject five-year reviews was adequate and that the respondent interested party group response was inadequate. The Commission did not find any other circumstances that would warrant conducting full reviews.<sup>1</sup> Accordingly, the Commission determined that it would conduct expedited reviews pursuant to section 751(c)(3) of the Tariff Act of 1930 (19 U.S.C. 1675(c)(3)).

For further information concerning the conduct of these reviews and rules of general application, consult the Commission’s Rules of Practice and Procedure, part 201, subparts A and B (19 CFR part 201), and part 207, subparts A, D, E, and F (19 CFR part 207).

Please note the Secretary’s Office will accept only electronic filings at this time. Filings must be made through the Commission’s Electronic Document Information System (EDIS, <https://edis.usitc.gov>). No in-person paper-based filings or paper copies of any electronic filings will be accepted until further notice.

*Staff report.*—A staff report containing information concerning the subject matter of the reviews has been placed in the nonpublic record, and will be made available to persons on the Administrative Protective Order service list for these reviews on March 24, 2022. A public version will be issued thereafter, pursuant to section 207.62(d)(4) of the Commission’s rules.

*Written submissions.*—As provided in section 207.62(d) of the Commission’s rules, interested parties that are parties to the reviews and that have provided individually adequate responses to the notice of institution,<sup>2</sup> and any party other than an interested party to the reviews may file written comments with the Secretary on what determinations the Commission should reach in the reviews. Comments are due on or before March 31, 2022 and may not contain new factual information. Any person that is neither a party to the five-year reviews nor an interested party may submit a brief written statement (which shall not contain any new factual information) pertinent to the reviews by March 31, 2022. However, should the Department of Commerce (“Commerce”) extend the time limit for its completion

<sup>1</sup> A record of the Commissioners’ votes is available from the Office of the Secretary and at the Commission’s website.

<sup>2</sup> The Commission has found the joint response to its Notice of Institution filed on behalf of Bristol Metals, LLC, Felker Brothers Corporation, and Primus Pipe & Tube, Inc., domestic producers of welded stainless steel pressure pipe, to be individually adequate. Comments from other interested parties will not be accepted (*see* 19 CFR 207.62(d)(2)).

of the final results of its reviews, the deadline for comments (which may not contain new factual information) on Commerce’s final results is three business days after the issuance of Commerce’s results. If comments contain business proprietary information (BPI), they must conform with the requirements of sections 201.6, 207.3, and 207.7 of the Commission’s rules. The Commission’s *Handbook on Filing Procedures*, available on the Commission’s website at [https://www.usitc.gov/documents/handbook\\_on\\_filing\\_procedures.pdf](https://www.usitc.gov/documents/handbook_on_filing_procedures.pdf), elaborates upon the Commission’s procedures with respect to filings.

In accordance with sections 201.16(c) and 207.3 of the rules, each document filed by a party to the reviews must be served on all other parties to the reviews (as identified by either the public or BPI service list), and a certificate of service must be timely filed. The Secretary will not accept a document for filing without a certificate of service.

*Determination.*—The Commission has determined these reviews are extraordinarily complicated and therefore has determined to exercise its authority to extend the review period by up to 90 days pursuant to 19 U.S.C. 1675(c)(5)(B).

*Authority:* These reviews are being conducted under authority of title VII of the Tariff Act of 1930; this notice is published pursuant to section 207.62 of the Commission’s rules.

By order of the Commission.

Issued: March 22, 2022.

**Lisa Barton,**

*Secretary to the Commission.*

## DEPARTMENT OF JUSTICE

### Executive Office for Immigration Review

#### Notice of Meeting—EOIR Case & Appeals System; Immigration Court Online Resource

**AGENCY:** Executive Office for Immigration Review, Justice.

**ACTION:** Notice of meeting.

**SUMMARY:** The Executive Office for Immigration Review (“EOIR”) invites interested parties to attend the first of a series of public forums about its Access EOIR initiative. During the session, agency senior leadership will be available to listen to comments, compliments, and concerns from stakeholders regarding two of EOIR’s web-based initiatives: EOIR Courts &

Appeals System (“ECAS”), and Immigration Court Online Resource (“ICOR”).

**DATES:** The public forum will be held on Wednesday, March 30, 2022, from 2:00–3:00 p.m. EDT (ECAS session) and from 3:00–4:00 p.m. EDT (ICOR session).

**ADDRESSES:** The public forum will be held online via GoToWebinar. Please RSVP to [EngagewithEOIR@usdoj.gov](mailto:EngagewithEOIR@usdoj.gov) by 5:00 p.m. EDT on March 28, 2022, with the name(s) of the attendee(s), any relevant organization, and a valid email address.

**FOR FURTHER INFORMATION CONTACT:** Lauren Alder Reid, Assistant Director, Office of Policy, Executive Office for Immigration Review, 5107 Leesburg Pike, Falls Church, VA 22041, telephone (703) 305–0289.

### I. Background

EOIR is hosting the first of a series of public engagement sessions regarding the Access EOIR Initiative. See Executive Office for Immigration Review, *EOIR Announces “Access EOIR” Initiative: Agency Launches New Counsel and Training Programs* (Sept. 28, 2021), available at <https://www.justice.gov/eoir/pr/eoir-announces-access-eoir-initiative>. Access EOIR is intended to improve access to pertinent information and resources for respondents and practitioners appearing before the immigration courts and general information of interest to the public. Two efforts of the initiative will be the focus of the online public forum on March 30, 2022.

The first effort that will be addressed is ECAS, which is part of an overarching information technology modernization effort at EOIR. ECAS was first introduced in July 2018 to phase out paper filing and processing and to retain all records and case-related documents in electronic format. ECAS supports the full life cycle of immigration cases including: Electronic filing of court and appeals documents, processing and receiving filings, maintaining electronic Records of Proceedings (eROPs), preparing case information, conducting a hearing, and adjudicating appeals. ECAS is now fully implemented at all immigration courts and adjudication centers and at the Board of Immigration Appeals, and as of February 11, 2022, DHS and all attorneys and fully accredited representatives are required to electronically file documents in all cases eligible for electronic filing. 8 CFR 1003.2(g)(4), 1003.31(a); see also Executive Office for Immigration Review Electronic Case Access and Filing, 86 FR 70708 (Dec. 13, 2021)

(final rule implementing mandatory electronic filing in eligible cases).

The second system that will be addressed is ICOR, which is a web-based and mobile friendly tool that provides respondents, practitioners, and other interested parties with a centralized location for resources pertaining to immigration proceedings before EOIR. ICOR provides information to help respondents learn about and prepare for immigration proceedings, including a tool to access general information about the forms of relief and protection from removal. ICOR also provides information for practitioners, including information on practice before EOIR’s adjudicators. Currently, ICOR is available in English, Spanish, Chinese, Haitian Creole, Portuguese, and Punjabi.

### II. Agenda

From 2:00–3:00 p.m. EDT on March 30, 2022, members of the public are invited to provide feedback on ECAS and its recent implementation nationwide. Feedback that would be most useful to the agency would include comments—either positive or negative—related to the ECAS user experience, along with any suggestions for improvements to ECAS now that its functionalities have been fully implemented.

From 3:00–4:00 p.m. EDT on March 30, 2022, members of the public are invited to provide feedback on ICOR. The agency similarly welcomes all feedback from the public, whether positive or negative, regarding the utility and functionality of ICOR, along with any suggestions for changes or improvements to ICOR.

#### Public Participation

This meeting is open to all members of the public who RSVP to [EngagewithEOIR@usdoj.gov](mailto:EngagewithEOIR@usdoj.gov) by 5:00 p.m. EDT on March 28, 2022, with the name(s) of the attendee(s), any relevant organization, and a valid email address. EOIR will send webinar information and an agenda to those who RSVP. Attendance for this program will be limited to 500 participants.

In addition, EOIR welcomes written feedback from the public on these topics. Written submissions are due no later than 5:00 p.m. EDT on Friday, April 29, 2022.

All media inquiries should be directed to the Communications and

Legislative Affairs Division at [pao.eoir@usdoj.gov](mailto:pao.eoir@usdoj.gov).

**Lauren Alder Reid,**

*Assistant Director, Office of Policy, Executive Office for Immigration Review.*

**BILLING CODE P**

## DEPARTMENT OF LABOR

### Occupational Safety and Health Administration

[Docket No. OSHA–2011–0059]

#### Occupational Exposure to Hazardous Chemicals in Laboratories; Extension of the Office of Management and Budget’s (OMB) Approval of Information Collection (Paperwork) Requirements

**AGENCY:** Occupational Safety and Health Administration (OSHA), Labor.

**ACTION:** Request for public comments.

**SUMMARY:** OSHA solicits public comments concerning the proposal to extend the Office of Management and Budget’s (OMB) approval of the information collection requirements specified in the Occupational Exposure to Hazardous Chemicals in Laboratories.

**DATES:** Comments must be submitted (postmarked, sent, or received) by May 27, 2022.

**ADDRESSES:**

*Electronically:* You may submit comments and attachments electronically at <http://www.regulations.gov>, which is the Federal eRulemaking Portal. Follow the instructions online for submitting comments.

*Docket:* To read or download comments or other material in the docket, go to <http://www.regulations.gov>. Documents in the docket are listed in the <http://www.regulations.gov> index; however, some information (e.g., copyrighted material) is not publicly available to read or download through the website. All submissions, including copyrighted material, are available for inspection through the OSHA Docket Office. Contact the OSHA Docket Office at (202) 693–2350 (TTY (877) 889–5627) for assistance in locating docket submissions.

*Instructions:* All submissions must include the agency name and OSHA docket number (OSHA–2011–0059) for the Information Collection Request (ICR). OSHA will place all comments, including any personal information, in the public docket, which may be made available online. Therefore, OSHA

cautions interested parties about submitting personal information such as social security numbers and birthdates. For further information on submitting comments, see the “Public Participation” heading in the section of this notice titled **SUPPLEMENTARY INFORMATION**.

**FOR FURTHER INFORMATION CONTACT:**

Seleda Perryman or Theda Kenney, Directorate of Standards and Guidance, OSHA, U.S. Department of Labor; telephone (202) 693–2222.

**SUPPLEMENTARY INFORMATION:**

**I. Background**

The Department of Labor, as part of the continuing effort to reduce paperwork and respondent (*i.e.*, employer) burden, conducts a preclearance consultation program to provide the public with an opportunity to comment on proposed and continuing information collection requirements in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)). This program ensures that information is in the desired format, reporting burden (time and costs) is minimal, the collection instruments are clearly understood, and OSHA’s estimate of the information collection burden is accurate. The Occupational Safety and Health Act of 1970 (OSH Act) (29 U.S.C. 651 *et seq.*) authorizes information collection by employers as necessary or appropriate for enforcement of the OSH Act or for developing information regarding the causes and prevention of occupational injuries, illnesses, and accidents (29 U.S.C. 657). The OSH Act also requires that OSHA obtain such information with minimum burden upon employers, especially those operating small businesses, and to reduce to the maximum extent feasible unnecessary duplication of effort in obtaining information (29 U.S.C. 657).

The following sections describe who uses the information collected under each requirement, as well as how they use it. The purpose of these requirements is to reduce employees’ risk of death or serious injury by ensuring that employment has been tested and is in safe operating condition.

The Standard entitled “Occupational Exposure to Hazardous Chemicals in Laboratories” (29 CFR 1910.1450; the “Standard”) applies to laboratories that use hazardous chemicals in accord with the Standard’s definitions for “laboratory use of hazardous chemicals” and “laboratory scale.” The Standard requires these laboratories to maintain worker exposures at or below the permissible exposure limits specified

for the hazardous chemicals in 29 CFR part 1910, subpart Z. The laboratories do so by developing a written Chemical Hygiene Plan (CHP) that describes the following: Standard operating procedures for using hazardous chemicals; hazard-control techniques; equipment-reliability measures; worker information and training programs; conditions under which the employer must approve operations, procedures, and activities before implementation; and medical consultations and examinations. The CHP also designates personnel responsible for implementing the CHP and specifies the procedures to be used to provide additional protection to workers exposed to particularly hazardous chemicals.

Other information collection requirements of the Standard include: Documenting exposure monitoring results; notifying workers in writing of these results; presenting specified information and training to workers; establishing a medical surveillance program for overexposed workers; providing required information to the physician; obtaining the physician’s written opinion on using proper respiratory equipment; and establishing, maintaining, transferring, and disclosing exposure monitoring and medical records. These collection of information requirements, including the CHP, control worker overexposure to hazardous laboratory chemicals, thereby preventing serious illnesses and death among workers exposed to such chemicals.

**II. Special Issues for Comment**

OSHA has a particular interest in comments on the following issues:

- Whether the proposed information collection requirements are necessary for the proper performance of the agency’s functions to protect workers, including whether the information is useful;
- The accuracy of OSHA’s estimate of the burden (time and costs) of the information collection requirements, including the validity of the methodology and assumptions used;
- The quality, utility, and clarity of the information collected; and
- Ways to minimize the burden on employers who must comply; for example, by using automated or other technological information collection, and transmission techniques.

**III. Proposed Actions**

OSHA is requesting an adjustment increase in the existing burden hour estimate for the collection of information requirements in the Standard. The agency is requesting to

increase the current burden hour estimate from 695,105 to 832,036 hours for a total increase of 136,931 hours. The increase is due to an increase in the worker and establishment estimates for this ICR. Additionally, the capital cost estimate increased from \$79,770,481 to \$94,198,596 for a total increase of \$14,428,115. This increase is a result of an increase in the number of workers requiring medical consultations and medical examinations.

OSHA will summarize the comments submitted in response to this notice and will include this summary in the request to OMB to extend the approval of the information collection requirements.

*Type of Review:* Extension of a currently approved collection.

*Title:* Occupational Exposure to Hazardous Chemicals in Laboratories (29 CFR 1910.1450).

*OMB Control Number:* 1218–0131.

*Affected Public:* Business or other for-profits.

*Number of Respondents:* 169,188.

*Number of Responses:* 2,026,410.

*Frequency of Responses:* On occasion.

*Average Time per Response:* Varies from 3 minutes to 1 hour.

*Estimated Total Burden Hours:* 832,036.

*Estimated Cost (Operation and Maintenance):* \$94,198,596.

**IV. Public Participation—Submission of Comments on This Notice and Internet Access to Comments and Submissions**

You may submit comments in response to this document as follows:

- (1) Electronically at <http://www.regulations.gov>, which is the Federal eRulemaking Portal; (2) by facsimile (fax); or (3) by hard copy. *Please note:* While OSHA’s Docket Office is continuing to accept and process submissions by regular mail due to the COVID–19 pandemic, the Docket Office is closed to the public and not able to receive submissions to the docket by hand, express mail, messenger, and courier service. All comments, attachments, and other material must identify the agency name and the OSHA docket number for the ICR (Docket No. OSHA–2011–0059). You may supplement electronic submissions by uploading document files electronically. If you wish to mail additional materials in reference to an electronic or a facsimile submission, you must submit them to the OSHA Docket Office (see the section of this notice titled **ADDRESSES**). The additional materials must clearly identify your electronic comments by your name, date, and the docket number so that the

agency can attach them to your comments.

Due to security procedures, the use of regular mail may cause a significant delay in the receipt of comments.

Comments and submissions are posted without change at <http://www.regulations.gov>. Therefore, OSHA cautions commenters about submitting personal information such as social security numbers and dates of birth. Although all submissions are listed in the <http://www.regulations.gov> index, some information (e.g., copyrighted material) is not publicly available to read or download from this website. All submissions, including copyrighted material, are available for inspection and copying at the OSHA Docket Office. Information on using the <http://www.regulations.gov> website to submit comments and access the docket is available at the website's "User Tips" link. Contact the OSHA Docket Office at (202) 693-2350, (TTY) (877) 889-5627 for information about materials not available from the website, and for assistance in using the internet to locate docket submissions.

## V. Authority and Signature

James S. Frederick, Deputy Assistant Secretary for Occupational Safety and Health, directed the preparation of this notice. The authority for this notice is the Paperwork Reduction Act of 1995 (44 U.S.C. 3506 *et seq.*) and Secretary of Labor's Order No. 1-2012 (77 FR 3912).

Signed at Washington, DC, on March 21, 2022.

**James S. Frederick,**

*Deputy Assistant Secretary for Occupational Safety and Health.*

[FR Doc. 2022-06410 Filed 3-25-22; 8:45 am]

BILLING CODE 4510-26-P

## DEPARTMENT OF LABOR

### Occupational Safety and Health Administration

[Docket No. OSHA-2007-0043]

#### TUV SUD America, Inc.: Grant of Expansion of Recognition and Modification to the NRTL Program's List of Appropriate Test Standards

**AGENCY:** Occupational Safety and Health Administration (OSHA), Labor.

**ACTION:** Notice.

**SUMMARY:** In this notice, OSHA announces the final decision to expand the scope of recognition for TUV SUD

America, Inc. as a Nationally Recognized Testing Laboratory (NRTL). Additionally, OSHA announces the final decision to add two test standards to the NRTL Program's list of appropriate test standards.

**DATES:** The expansion of the scope of recognition becomes effective on March 28, 2022.

**FOR FURTHER INFORMATION CONTACT:** Information regarding this notice is available from the following sources:

*Press inquiries:* Contact Mr. Frank Meilinger, Director, OSHA Office of Communications, U.S. Department of Labor, telephone: (202) 693-1999; email: [meilinger.francis2@dol.gov](mailto:meilinger.francis2@dol.gov).

*General and technical information:* Contact Mr. Kevin Robinson, Director, Office of Technical Programs and Coordination Activities, Directorate of Technical Support and Emergency Management, Occupational Safety and Health Administration, U.S. Department of Labor, phone: (202) 693-2110 or email: [robinson.kevin@dol.gov](mailto:robinson.kevin@dol.gov).

**SUPPLEMENTARY INFORMATION:**

#### I. Notice of Final Decision

OSHA hereby gives notice of the expansion of the scope of recognition of TUV SUD America, Inc. (TUVAM) as a NRTL. TUVAM's expansion covers the addition of eight test standards to the NRTL scope of recognition, two of which OSHA will add to the NRTL Program's List of Appropriate Test Standards.

OSHA recognition of a NRTL signifies that the organization meets the requirements specified in 29 CFR 1910.7. Recognition is an acknowledgment that the organization can perform independent safety testing and certification of the specific products covered within the scope of recognition and is not a delegation or grant of government authority. As a result of recognition, employers may use products properly approved by the NRTL to meet OSHA standards that require testing and certification of the products.

The agency processes applications by a NRTL for initial recognition and for an expansion or renewal of this recognition, following requirements in Appendix A to 29 CFR 1910.7. This appendix requires that the agency publish two notices in the **Federal Register** in processing an application. In the first notice, OSHA announces the application and provides a preliminary finding. In the second notice, the agency provides the final decision on the

application. These notices set forth the NRTL's scope of recognition or modifications of that scope. OSHA maintains an informational web page for each NRTL, including TUVAM, which details the NRTL's scope of recognition. These pages are available from the OSHA website at <http://www.osha.gov/dts/otpc/nrtl/index.html>.

TUVAM submitted an application, dated May 26, 2021, to expand their recognition as a NRTL to include eight additional test standards (OSHA-2007-0043-0038). OSHA staff performed a detailed analysis of the application packet and reviewed other pertinent information. OSHA did not perform any on-site reviews in relation to this application.

OSHA published the preliminary notice announcing TUVAM's expansion application in the **Federal Register** on February 18, 2022 (87 FR 9387). The agency requested comments by March 7, 2022, but it received no comments in response to this notice. OSHA is now proceeding with this final notice to grant expansion of TUVAM's scope of recognition and modification to the NRTL Program's List of Appropriate Test Standards.

To obtain or review copies of all public documents pertaining to TUVAM's application, go to <http://www.regulations.gov> or contact the Docket Office, Occupational Safety and Health Administration, U.S. Department of Labor, Docket No. OSHA-2007-0043 contains all materials in the record concerning TUVAM's recognition. Please note: Due to the COVID-19 pandemic, the Docket Office is closed to the public at this time but can be contacted at (202) 693-2350 (TTY) (877) 889-5627).

#### II. Final Decision and Order

OSHA staff examined TUVAM's expansion application, its capability to meet the requirements of the test standards, and other pertinent information. Based on its review of this evidence, OSHA finds that TUVAM meets the requirements of 29 CFR 1910.7 for expansion of its recognition, subject to the limitations and conditions listed in this notice. OSHA, therefore, is proceeding with this final notice to grant TUVAM's scope of recognition. OSHA limits the expansion of TUVAM's recognition to testing and certification of products for demonstration of conformance to the test standards listed below in Table 1.

TABLE 1—LIST OF APPROPRIATE TEST STANDARDS FOR INCLUSION IN TUVAM’S NRTL SCOPE OF RECOGNITION

Test standard	Test standard title
UL 698A .....	Industrial Control Panels Related to Hazardous (Classified) Locations.
UL 1004–9 .....	Standard for Form Wound and Medium Voltage Rotating Electrical Machines.
UL 60947–1 .....	Low-voltage Switchgear and Controlgear—Part 1: General Rules.
UL 60947–4–1 .....	Standard for Low-voltage Switchgear and Controlgear—Part 4–1: Contactors and Motor-Starters—Electromechanical Contactors and Motor-Starters.
* UL 60947–4–2 .....	Low-voltage Switchgear and Controlgear—Part 4–2: Contactors and Motor-Starters—Electromechanical Contactors and Motor-Starters.
UL 60947–5–1 .....	Low-voltage Switchgear and Controlgear—Part 5–1: Control Circuit Devices and Switching Elements—Electromechanical Control Circuit Devices.
UL 60947–5–2 .....	Low-voltage Switchgear and Control Gear—Part 5–2: Control Circuit Devices and Switching Elements—Proximity Switches.
* UL 60947–5–5 .....	Standard for Low-voltage Switchgear and Controlgear—Part 5–5: Control Circuit Switches and Switching Elements—Electrical Emergency Stop Device with Mechanical Latching Function.

\* Represents the standards that OSHA is adding to the NRTL Program’s List of Appropriate Test Standards.

In this notice, OSHA also announces the final decision to add two new test standards to the NRTL Program’s List of Appropriate Test Standards. Table 2

below lists the standards that are new to the NRTL Program. OSHA has determined that these test standards are appropriate test standards and will add

them to the NRTL Program’s List of Appropriate Test Standards.

TABLE 2—STANDARDS OSHA IS ADDING TO THE NRTL PROGRAM’S LIST OF APPROPRIATE TEST STANDARDS

Test standard	Test standard title
UL 60947–4–2 .....	Low-voltage Switchgear and Controlgear—Part 4–2: Contactors and Motor-Starters—Electromechanical Contactors and Motor-Starters.
UL 60947–5–5 .....	Standard for Low-voltage Switchgear and Controlgear—Part 5–5: Control Circuit Switches and Switching Elements—Electrical Emergency Stop Device with Mechanical Latching Function.

OSHA’s recognition of any NRTL for a particular test standard is limited to equipment or materials for which OSHA standards require third-party testing and certification before using them in the workplace. Consequently, if a test standard also covers any products for which OSHA does not require such testing and certification, a NRTL’s scope of recognition does not include these products.

The American National Standards Institute (ANSI) may approve the test standards listed above as American National Standards. However, for convenience, the use of the designation of the standards-developing organization for the standard as opposed to the ANSI designation may occur. Under the NRTL Program’s policy (see OSHA Instruction CPL 01–00–004, Chapter 2, Section VIII), only standards determined to be appropriate test standards may be approved for NRTL recognition. Any NRTL recognized for a particular test standard may use either the proprietary version of the test standard or the ANSI version of that standard. Contact ANSI to determine whether a test standard is currently ANSI-approved.

**A. Conditions**

In addition to those conditions already required by 29 CFR 1910.7,

TUVAM must abide by the following conditions of the recognition:

1. TUVAM must inform OSHA as soon as possible, in writing, of any change of ownership, facilities, or key personnel, and of any major change in its operations as a NRTL, and provide details of the change(s);
2. TUVAM must meet all the terms of its recognition and comply with all OSHA policies pertaining to this recognition; and
3. TUVAM must continue to meet the requirements for recognition, including all previously published conditions on TUVAM’s scope of recognition, in all areas for which it has recognition.

Pursuant to the authority in 29 CFR 1910.7, OSHA hereby expands the scope of recognition of TUVAM, subject to the limitations and conditions specified above. OSHA also adds two standards to the NRTL Program’s List of Appropriate Test Standards.

**III. Authority and Signature**

James S. Frederick, Deputy Assistant Secretary of Labor for Occupational Safety and Health, 200 Constitution Avenue NW, Washington, DC 20210, authorized the preparation of this notice. Accordingly, the agency is issuing this notice pursuant to 29 U.S.C. 657(g)(2), Secretary of Labor’s Order No.

8–2020 (85 FR 58393, September 18, 2020) and 29 CFR 1910.7.

Signed at Washington, DC, on March 22, 2022.

**James S. Frederick,**  
*Deputy Assistant Secretary of Labor for Occupational Safety and Health.*

**BILLING CODE 4510–26–P**

**NUCLEAR REGULATORY COMMISSION**

**[Docket No. 11005323; NRC–2022–0070]**

**Diversified Scientific Services, Inc.**

**AGENCY:** Nuclear Regulatory Commission.

**ACTION:** Export license application; opportunity to provide comments, request a hearing, and petition for leave to intervene.

**SUMMARY:** The U.S. Nuclear Regulatory Commission (NRC) received and is considering issuing an export license amendment (XW008/06) requested by Diversified Scientific Services, Inc. (DSSI). On January 31, 2022, DSSI filed an application with the NRC for a license authorizing the renewal and amendment of an existing license to export low-level radioactive material to Canada. The NRC is providing notice of

the opportunity to comment, request a hearing, and petition to intervene on DSSI's application.

**DATES:** Submit comments by April 27, 2022. A request for a hearing or a petition for leave to intervene must be filed by April 27, 2022.

**ADDRESSES:** You may submit comments by any of the following methods; however, the NRC encourages electronic comment submission through the Federal rulemaking website:

- *Federal Rulemaking Website:* Go to <https://www.regulations.gov> and search for Docket ID NRC-2022-0070. Address questions about Docket IDs in *Regulations.gov* to Stacy Schumann; telephone: 301-415-0624; email: [Stacy.Schumann@nrc.gov](mailto:Stacy.Schumann@nrc.gov). For technical questions contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.

- *Email comments to:* [Hearing.Docket@nrc.gov](mailto:Hearing.Docket@nrc.gov). If you do not receive an automatic email reply confirming receipt, then contact us at 301-415-1677.

- *Fax comments to:* Secretary, U.S. Nuclear Regulatory Commission at 301-415-1101.

- *Mail comments to:* Secretary, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001, ATTN: Rulemakings and Adjudications Staff.

For additional direction on obtaining information and submitting comments, see "Obtaining Information and Submitting Comments" in the **SUPPLEMENTARY INFORMATION** section of this document.

**FOR FURTHER INFORMATION CONTACT:** Gary Langlie, Office of International Programs, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001; telephone: 301-287-9076, email: [Gary.Langlie@nrc.gov](mailto:Gary.Langlie@nrc.gov).

**SUPPLEMENTARY INFORMATION:**

**I. Obtaining Information and Submitting Comments**

*A. Obtaining Information*

Please refer to NRC-2022-0070 or Docket No. 11005323 when contacting the NRC about the availability of information for this action. You may obtain publicly available information related to this action by the following methods:

- *Federal Rulemaking Website:* Go to <https://www.regulations.gov> and search for Docket ID NRC-2022-0070.

- *NRC's Public Website:* Go to <https://www.nrc.gov> and search for XW008/06, Docket No. 11005323, or Docket ID NRC-2022-0070.

- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Documents collection at <https://www.nrc.gov/reading-rm/adams.html>. To begin the search, select "Begin Web-based ADAMS Search." For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1-800-397-4209, 301-415-4737, or by email to [PDR.Resource@nrc.gov](mailto:PDR.Resource@nrc.gov). The export license application from DSSI is available in ADAMS under Accession No. ML22046A000.

- *NRC's PDR:* You may examine and purchase copies of public documents, by appointment, at the NRC's PDR, Room P1 B35, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852. To make an appointment to visit the PDR, please send an email to [PDR.Resource@nrc.gov](mailto:PDR.Resource@nrc.gov) or call 1-800-397-4209 or 301-415-4737, between 8:00 a.m. and 4:00 p.m. (ET), Monday through Friday, except Federal holidays.

*B. Submitting Comments*

The NRC encourages electronic comment submission through the Federal rulemaking website (<https://www.regulations.gov>). Please include NRC-2022-0070 or Docket No. 11005323 in your comment submission.

The NRC cautions you not to include identifying or contact information that you do not want to be publicly disclosed in your comment submission. The NRC will post all comment submissions at <https://www.regulations.gov> as well as enter the comment submissions into ADAMS. The NRC does not routinely edit comment submissions to remove identifying or contact information.

If you are requesting or aggregating comments from other persons for submission to the NRC, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their comment submission. Your request should state that the NRC does not routinely edit comment submissions to remove such information before making the comment submissions available to the public or entering the comment into ADAMS.

**II. Discussion**

In accordance with section 110.70 paragraph (b) of title 10 of the *Code of Federal Regulations* (10 CFR), the NRC

is noticing the receipt of an export license amendment application submitted by DSSI requesting a specific license amendment to export low-level radioactive material to Canada. The amendment/renewal application requests an extension of the license for 5 years. The application requests an expiration date of March 31, 2027.

The NRC is providing notice of the receipt of the amendment application; providing the opportunity to submit written comments concerning the application; and providing the opportunity to request a hearing or petition for leave to intervene, for a period of 30 days after publication of this notice in the **Federal Register**. A hearing request or petition for leave to intervene must include the information specified in 10 CFR 110.82(b). Any request for hearing or petition for leave to intervene shall be served by the requestor or petitioner in accordance with 10 CFR 110.89(a), either by delivery, by mail, or filed with the NRC electronically in accordance with the NRC's E-Filing rule (72 FR 49139; August 28, 2007, as amended at 77 FR 46562; August 3, 2012). Detailed guidance on making electronic submissions may be found in the Guidance for Electronic Submissions to the NRC and on the NRC website at <https://www.nrc.gov/site-help/e-submittals.html>.

To comply with the procedural requirements of E-Filing, at least 10 days prior to the filing deadline, the participant should contact the Office of the Secretary by email at [Hearing.Docket@nrc.gov](mailto:Hearing.Docket@nrc.gov), or by telephone at 301-415-1677, to (1) request a digital identification (ID) certificate, which allows the participant (or its counsel or representative) to digitally sign submissions and access the E-Filing system for any proceeding in which it is participating; and (2) advise the Secretary that the participant will be submitting a petition or other adjudicatory document (even in instances in which the participant, or its counsel or representative, already holds an NRC-issued digital ID certificate). Based upon this information, the Secretary will establish an electronic docket for the hearing in this proceeding if the Secretary has not already established an electronic docket.

The information concerning this application for an export license follows.

## NRC EXPORT LICENSE APPLICATION

## Application Information

Name of Applicant .....	Diversified Scientific Services, Inc.
Date of Application .....	January 31, 2022.
Date Received .....	February 14, 2022.
Application No .....	XW008/06.
Docket No .....	11005323.
ADAMS Accession No .....	ML22046A000.

## Description of Material

Material Type .....	Radioactive material consisting of mixed material contaminated with various radionuclides in varying combinations.
Total Quantity .....	Authorization to export a total maximum quantity of waste will not exceed 420 kilograms (no change). The maximum isotopic activity returned shall not exceed 74.37 Terabecquerels per shipment (no change). Radionuclides potentially present in the waste include carbon-14, hydrogen-3, mixed fission product radionuclides and other contaminants.
End Use .....	Disposal in Canada.
Country of Destination .....	Canada.

Dated: March 23, 2022.

## NUCLEAR REGULATORY COMMISSION

[NRC-2021-0207]

### Information Collection: Nuclear Material Events Database (NMED) for the Collection of Event Report, Response, Analyses, and Follow-Up Data on Events Involving the Use of Atomic Energy Act (AEA) Radioactive Byproduct Material

**AGENCY:** Nuclear Regulatory Commission.

**ACTION:** Notice of submission to the Office of Management and Budget; request for comment.

**SUMMARY:** The U.S. Nuclear Regulatory Commission (NRC) has recently submitted a request for renewal of an existing collection of information to the Office of Management and Budget (OMB) for review. The information collection is entitled, "Nuclear Material Events Database (NMED) for the Collection of Event Report, Response, Analyses, and Follow-Up Data on Events Involving the Use of Atomic Energy Act (AEA) Radioactive Byproduct Material."

**DATES:** Submit comments by April 27, 2022. Comments received after this date will be considered if it is practical to do so, but the Commission is able to ensure consideration only for comments received on or before this date.

**ADDRESSES:** Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to <https://www.reginfo.gov/public/do/PRAMain>. Find this particular information collection by selecting "Currently under Review—Open for Public Comments" or by using the search function.

#### FOR FURTHER INFORMATION CONTACT:

David Cullison, NRC Clearance Officer, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001; telephone: 301-415-2084; email:

[Infocollects.Resource@nrc.gov](mailto:Infocollects.Resource@nrc.gov).

#### SUPPLEMENTARY INFORMATION:

##### I. Obtaining Information and Submitting Comments

###### A. Obtaining Information

Please refer to Docket ID NRC-2021-0207 when contacting the NRC about the availability of information for this action. You may obtain publicly available information related to this action by any of the following methods:

- **Federal Rulemaking Website:** Go to <https://www.regulations.gov> and search for Docket ID NRC-2021-0207.

- **NRC's Agencywide Documents Access and Management System (ADAMS):** You may obtain publicly available documents online in the ADAMS Public Documents collection at <https://www.nrc.gov/reading-rm/adams.html>. To begin the search, select "Begin Web-based ADAMS Search." For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1-800-397-4209, 301-415-4737, or by email to [PDR.Resource@nrc.gov](mailto:PDR.Resource@nrc.gov). A copy of the collection of information and related instructions may be obtained without charge by accessing ADAMS Accession

No. ML19046A439. The supporting statement is available in ADAMS under Accession No. ML22034A989.

- **NRC's PDR:** You may examine and purchase copies of public documents, by appointment, at the NRC's PDR, Room P1 B35, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852. To make an appointment to visit the PDR, please send an email to [PDR.Resource@nrc.gov](mailto:PDR.Resource@nrc.gov) or call 1-800-397-4209 or 301-415-4737, between 8:00 a.m. and 4:00 p.m. (ET), Monday through Friday, except Federal holidays.

- **NRC's Clearance Officer:** A copy of the collection of information and related instructions may be obtained without charge by contacting the NRC's Clearance Officer, David Cullison, Office of the Chief Information Officer, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001; telephone: 301-415-2084; email: [Infocollects.Resource@nrc.gov](mailto:Infocollects.Resource@nrc.gov).

###### B. Submitting Comments

Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to <https://www.reginfo.gov/public/do/PRAMain>. Find this particular information collection by selecting "Currently under Review—Open for Public Comments" or by using the search function.

The NRC cautions you not to include identifying or contact information in comment submissions that you do not want to be publicly disclosed in your comment submission. All comment submissions are posted at <https://www.regulations.gov/> and entered into ADAMS. Comment submissions are not routinely edited to remove identifying or contact information.

If you are requesting or aggregating comments from other persons for submission to the OMB, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their comment submission. Your request should state that comment submissions are not routinely edited to remove such information before making the comment submissions available to the public or entering the comment into ADAMS.

## II. Background

Under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the NRC recently submitted a request for renewal of an existing collection of information to OMB for review entitled, “Nuclear Material Events Database (NMED) for the Collection of Event Report, Response, Analyses, and Follow-Up Data on Events Involving the Use of Atomic Energy Act (AEA) Radioactive Byproduct Material.” The NRC hereby informs potential respondents that an agency may not conduct or sponsor, and that a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

The NRC published a **Federal Register** notice with a 60-day comment period on this information collection on November 19, 2021, 86 FR 64964.

1. *The title of the information collection:* “Nuclear Material Events Database (NMED) for the Collection of Event Report, Response, Analyses, and Follow-Up Data on Events Involving the Use of Atomic Energy Act (AEA) Radioactive Byproduct Material.”

2. *OMB approval number:* 3150–0178.

3. *Type of submission:* Extension.

4. *The form number, if applicable:* Not applicable.

5. *How often the collection is required or requested:* Agreement States are requested to provide copies of licensee nuclear material event reports electronically or by hard copy to the NRC within 30 days of receipt from their licensee. In addition, Agreement States are requested to report events that may pose a significant health and safety hazard to the NRC Headquarters Operations Officer within 24 hours of notification by an Agreement State licensee.

6. *Who will be required or asked to respond:* Current Agreement States and any State receiving Agreement State status in the future.

7. *The estimated number of annual responses:* 452.

8. *The estimated number of annual respondents:* 40.

9. *The estimated number of hours needed annually to comply with the information collection requirement or request:* 723 hours.

10. *Abstract:* NRC regulations require NRC licensees to report incidents and overexposures, leaking or contaminated sealed source(s), release of excessive contamination of radioactive material, lost or stolen radioactive material, equipment failures, abandoned well logging sources and medical events. Agreement State licensees are also required to report these events to their individual Agreement State regulatory authorities under compatible Agreement State regulations. The NRC is requesting that the Agreement States provide information to NRC on the initial notification, response actions, and follow-up investigations on events involving the use (including suspected theft or terrorist activities) of nuclear materials regulated pursuant to the Atomic Energy Act. The event information should be provided in a uniform electronic format, for assessment and identification of any facilities/site specific or generic safety concerns that could have the potential to impact public health and safety. The identification and review of safety concerns may result in lessons learned, and may also identify generic issues for further study which could result in proposals for changes or revisions to technical or regulatory designs, processes, standards, guidance or requirements.

Dated: March 23, 2022.

Your request should state that comment submissions are not routinely edited to remove such information before making the comment submissions available to the public or entering the comment into ADAMS.

## II. Background

Under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the NRC recently submitted a request for renewal of an existing collection of information to OMB for review entitled, NRC Form 798, "Request for a Medical Exception to the COVID-19 Vaccination Requirement." The NRC hereby informs potential respondents that an agency may not conduct or sponsor, and that a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

The NRC published a **Federal Register** notice with a 60-day comment

period on this information collection on December 28, 2021, 86 FR 73808.

1. *The title of the information collection:* NRC Form 798, "Request for a Medical Exception to the COVID-19 Vaccination Requirement."
2. *OMB approval number:* 3150-0249.
3. *Type of submission:* Extension.
4. *The form number, if applicable:* NRC Form 798.
5. *How often the collection is required or requested:* Once.
6. *Who will be required or asked to respond:* Medical providers will complete section B of the form for NRC employees seeking a medical exemption to the Federal employee vaccine mandate.
7. *The estimated number of annual responses:* 10.
8. *The estimated number of annual respondents:* 10.
9. *The estimated number of hours needed annually to comply with the information collection requirement or request:* 5.
10. *Abstract:* Executive Order (E.O.) 14043, titled, "Requiring Coronavirus Disease 2019 Vaccination for Federal Employees," requires all Federal Employees, as defined in 5 U.S.C. 2105, to be vaccinated against COVID-19, with exceptions only as required by law. Requests for "medical accommodation" or "medical exceptions" will be treated as requests for a disability accommodation and evaluated and decided under applicable Rehabilitation Act standards for reasonable accommodation absent undue hardship to the agency. An employee may also request a delay for complying with the vaccination requirement based on certain medical considerations that may not justify an exception under the Rehabilitation Act. The agency will be required to keep confidential any medical information provided, subject to the applicable Rehabilitation Act standards. Employees who receive an exception or a delay from the vaccination requirement would instead comply with alternative health and safety protocols. NRC Form 798, "Request for a Medical Exception to the COVID-19 Vaccine Requirement" will be completed by employees who seek a medical exception and by their personal medical providers.

The vaccination requirement issued pursuant to E.O. 14043, is currently the subject of a nationwide injunction. While that injunction remains in place, the NRC will not process requests for a medical exception from the COVID-19 vaccination requirement pursuant to E.O. 14043. The NRC will also not request the submission of any medical information related to a request for an

exception from the vaccination requirement pursuant to E.O. 14043 while the injunction remains in place, but the NRC may nevertheless receive information regarding a medical exception. That is because, if the NRC were to receive a request for an exception from the COVID-19 vaccination requirement pursuant to E.O. 14043 during the pendency of the injunction, the NRC will accept the request, hold it in abeyance, and notify the employee who submitted the request that implementation and enforcement of the COVID-19 vaccination requirement pursuant to E.O. 14043 is currently enjoined and that an exception therefore is not necessary so long as the injunction is in place. In other words, during the pendency of the injunction, any information collection related to requests for medical exception from the COVID-19 vaccination requirement pursuant to E.O. 14043 is not undertaken to implement or enforce the COVID-19 vaccination requirement.

[NRC-2022-0001]

### Sunshine Act Meetings

**TIME AND DATE:** Weeks of March 28, April 4, 11, 18, 25, May 2, 2022. All listed meeting times are local to the meeting location.

**PLACE:** Multiple (See Additional Information Below).

**STATUS:** Public.

#### Week of March 28, 2022

*Thursday, March 31, 2022*

9:00 a.m.—Joint Meeting of the Federal Energy Regulatory Commission (FERC) and the Nuclear Regulatory Commission (NRC) (Public Meeting) (Contact: Sergiu Basturescu: 301-415-1237)

*Additional Information:* The public is invited to attend the Commission's meeting live by webcast at the Web address—<https://video.nrc.gov/>.

#### Week of April 4, 2022—Tentative

There are no meetings scheduled for the week of April 4, 2022.

**Week of April 11, 2022—Tentative**

There are no meetings scheduled for the week of April 11, 2022.

**Week of April 18, 2022—Tentative**

Friday, April 22, 2022

2:30 p.m.—Meeting with the Navajo Tribal Community Members of the Red Water Pond Road (Public Meeting) (Contact: Wesley Held: 301-287-3591)

*Additional Information:* The meeting will be held at the Red Water Pond Road Cha'a'oh ("Shade House"), New Mexico. The GPS coordinates for the meeting location are 35.68485338436599, -108.5433161361636. From Church Rock on State Route 566, head northeast for eleven miles. After driving past mile marker eleven and Pipeline Road, the road bends to the left. Shortly after, you will soon see the Red Water Pond Road sign. Take a right hand turn off State Route 566 onto Red Water Pond Road, which is an all-dirt road. The meeting location is about a quarter mile on the right.

6:00 p.m.—Discussion of the Ten-Year Plan to Address Impacts of Uranium Contamination on the Navajo Nation and Lessons Learned from the Remediation of Former Uranium Mill Sites (Public Meeting) (Contact: Wesley Held: 301-287-3591)

*Additional Information:* The meeting will be held at the Hilton Garden Inn, 1530 W Maloney Ave, Gallup, New Mexico. The public is invited to attend the Commission's meeting live by webcast at the Web address—<https://video.nrc.gov/>.

**Week of April 25, 2022—Tentative**

There are no meetings scheduled for the week of April 25, 2022.

**Week of May 2, 2022—Tentative**

There are no meetings scheduled for the week of May 2, 2022.

**CONTACT PERSON FOR MORE INFORMATION:** For more information or to verify the status of meetings, contact Wesley Held at 301-287-3591 or via email at [Wesley.Held@nrc.gov](mailto:Wesley.Held@nrc.gov). The schedule for Commission meetings is subject to change on short notice.

The NRC Commission Meeting Schedule can be found on the internet at: <https://www.nrc.gov/public-involve/public-meetings/schedule.html>.

The NRC provides reasonable accommodation to individuals with disabilities where appropriate. If you need a reasonable accommodation to participate in these public meetings or need this meeting notice or the

transcript or other information from the public meetings in another format (e.g., braille, large print), please notify Anne Silk, NRC Disability Program Specialist, at 301-287-0745, by videophone at 240-428-3217, or by email at [Anne.Silk@nrc.gov](mailto:Anne.Silk@nrc.gov). Determinations on requests for reasonable accommodation will be made on a case-by-case basis.

Members of the public may request to receive this information electronically. If you would like to be added to the distribution, please contact the Nuclear Regulatory Commission, Office of the Secretary, Washington, DC 20555, at 301-415-1969, or by email at [Wendy.Moore@nrc.gov](mailto:Wendy.Moore@nrc.gov) or [Betty.Thweatt@nrc.gov](mailto:Betty.Thweatt@nrc.gov).

The NRC is holding the meetings under the authority of the Government in the Sunshine Act, 5 U.S.C. 552b.

Dated: March 24, 2022.

**POSTAL REGULATORY COMMISSION**

[Docket No. CP2022-2; Docket No. CP2022-18]

**New Postal Products**

**AGENCY:** Postal Regulatory Commission.

**ACTION:** Notice.

**SUMMARY:** The Commission is noticing recent Postal Service filings for the Commission's consideration concerning negotiated service agreements. This notice informs the public of the filings, invites public comment, and takes other administrative steps.

**DATES:** *Comments are due:* March 30, 2022.

**ADDRESSES:** Submit comments electronically via the Commission's Filing Online system at <http://www.prc.gov>. Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

**FOR FURTHER INFORMATION CONTACT:** David A. Trissell, General Counsel, at 202-789-6820.

**SUPPLEMENTARY INFORMATION:**

**Table of Contents**

- I. Introduction
- II. Docketed Proceeding(s)

**I. Introduction**

The Commission gives notice that the Postal Service filed request(s) for the Commission to consider matters related to negotiated service agreement(s). The request(s) may propose the addition or removal of a negotiated service agreement from the market dominant or the competitive product list, or the modification of an existing product currently appearing on the market dominant or the competitive product list.

Section II identifies the docket number(s) associated with each Postal Service request, the title of each Postal Service request, the request's acceptance date, and the authority cited by the Postal Service for each request. For each request, the Commission appoints an officer of the Commission to represent the interests of the general public in the proceeding, pursuant to 39 U.S.C. 505 (Public Representative). Section II also establishes comment deadline(s) pertaining to each request.

The public portions of the Postal Service's request(s) can be accessed via the Commission's website (<http://www.prc.gov>). Non-public portions of the Postal Service's request(s), if any, can be accessed through compliance with the requirements of 39 CFR 3011.301.<sup>1</sup>

The Commission invites comments on whether the Postal Service's request(s) in the captioned docket(s) are consistent with the policies of title 39. For request(s) that the Postal Service states concern market dominant product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3622, 39 U.S.C. 3642, 39 CFR part 3030, and 39 CFR part 3040, subpart B. For request(s) that the Postal Service states concern competitive product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3632, 39 U.S.C. 3633, 39 U.S.C. 3642, 39 CFR part 3035, and 39 CFR part 3040, subpart B. Comment deadline(s) for each request appear in section II.

**II. Docketed Proceeding(s)**

1. *Docket No(s).*: CP2022-2; *Filing Title:* USPS Notice of Amendment to Parcel Select Contract 48, Filed Under Seal; *Filing Acceptance Date:* March 22, 2022; *Filing Authority:* 39 CFR 3035.105; *Public Representative:* Jennaca D. Upperman; *Comments Due:* March 30, 2022.

2. *Docket No(s).*: CP2022-18; *Filing Title:* USPS Notice of Amendment to

<sup>1</sup> See Docket No. RM2018-3, Order Adopting Final Rules Relating to Non-Public Information, June 27, 2018, Attachment A at 19-22 (Order No. 4679).

Parcel Select & Parcel Return Service Contract 14, Filed Under Seal; *Filing Acceptance Date*: March 22, 2022; *Filing Authority*: 39 CFR 3035.105; *Public Representative*: Katalin K. Clendenin; *Comments Due*: March 30, 2022.

This Notice will be published in the **Federal Register**.

## SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-94483; File No. SR-NYSE-2021-74]

### Self-Regulatory Organizations; New York Stock Exchange LLC; Order Instituting Proceedings To Determine Whether To Approve or Disapprove a Proposed Rule Change To Amend the Provisions of NYSE Rule 7.35B

March 22, 2022.

#### I. Introduction

On December 14, 2021, New York Stock Exchange LLC (“NYSE” or “Exchange”) filed with the Securities and Exchange Commission (“Commission”) pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (“Act”) <sup>1</sup> and Rule 19b-4 thereunder,<sup>2</sup> a proposed rule change to amend NYSE Rule 7.35B relating to the cancellation of MOC, LOC, and Closing IO Orders before the Closing Auction. The proposed rule change was published for comment in the **Federal Register** on December 29, 2021.<sup>3</sup> On February 8, 2022, pursuant to Section 19(b)(2) of the Act,<sup>4</sup> the Commission extended the time period within which to approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether to approve or disapprove the proposed change.<sup>5</sup> The Commission has received no comment letters on the proposed rule change.

This order institutes proceedings under Section 19(b)(2)(B) of the Act<sup>6</sup> to determine whether to approve or disapprove the proposed rule change.

#### II. Description of the Proposal

The Exchange proposes to modify NYSE Rule 7.35B(f)(2), which sets forth rules pertaining to the cancellation of MOC, LOC, and Closing IO Orders before the Closing Auction Imbalance Freeze, and to make conforming changes to NYSE Rule 7.35B(j)(2)(B).

NYSE Rule 7.35B(f) provides that the Closing Auction will begin at the Closing Auction Imbalance Freeze Time and specifies how order entry and cancellation will be processed during the Closing Auction Imbalance Freeze.<sup>7</sup> NYSE Rule 7.35B(f)(2)(A) currently provides that, between the beginning of the Auction Imbalance Freeze and two minutes before the scheduled end of the Core Trading Hours, MOC, LOC, and Closing IO Orders<sup>8</sup> may be canceled or reduced in size only to correct a Legitimate Error.<sup>9</sup> NYSE Rule 7.35B(f)(2)(B) currently specifies that, except as provided for in NYSE Rule 7.35B(j)(2)(B),<sup>10</sup> a request to cancel, cancel and replace, or reduce in size a MOC, LOC, or Closing IO Order entered two minutes or less before the scheduled end of the Core Trading Hours will be rejected.

The Exchange proposes to modify NYSE Rule 7.35B(f)(2) to provide that any requests to cancel, cancel and replace, or reduce in size a MOC, LOC, or Closing IO Order that are entered between the beginning of the Auction Imbalance Freeze and the scheduled end of Core Trading Hours would be rejected. As proposed, requests to

<sup>7</sup> The “Auction Imbalance Freeze” is the period that begins before the scheduled time for an Auction. See NYSE Rule 7.35(a)(3). “Auction” means the process for the opening, reopening, or closing of the trading of Auction-Eligible Securities on the Exchange, and an “Auction-Eligible Security” is a security for which the Exchange is the primary listing market. See NYSE Rules 7.35(a)(1) and 7.35(a)(2). The “Closing Auction” is the Auction that closes trading at the end of the Core Trading Session, and the “Closing Auction Imbalance Freeze Time” is 10 minutes before the scheduled end of Core Trading Hours. See NYSE Rules 7.35(a)(1)(C) and 7.35(a)(8).

<sup>8</sup> A “MOC Order” or “Market-on-Close Order” is a Market Order that is to be traded only during a closing auction. See NYSE Rule 7.31(c)(2)(B). A “LOC Order” or “Limit-on-Close Order” is a Limit Order that is to be traded only during a closing auction. See NYSE Rule 7.31(c)(2)(A). A “Closing IO Order” or “Closing Imbalance Offset Order” is a Limit Order to buy (sell) in an Auction-Eligible Security that it to be traded only in a Closing Auction. See NYSE Rule 7.31(c)(2)(D).

<sup>9</sup> “Legitimate Error” means an error in any term of an order, such as price, number of shares, side of the transaction (buy or sell), or identification of the security. See NYSE Rule 7.35(a)(13).

<sup>10</sup> NYSE Rule 7.35B(j)(2)(B) currently specifies the circumstances under which the Exchange may temporarily suspend the prohibition on canceling an MOC or LOC Order in connection with the Closing Auction.

cancel, replace, and/or reduce in size a MOC, LOC, or Closing IO Order must be received prior to the beginning of the Auction Imbalance Freeze (*i.e.*, 10 minutes prior to the scheduled end of Core Trading Hours), even in the case of a Legitimate Error.

Finally, NYSE proposes to make the following conforming changes to make NYSE Rule 7.35B(j)(2)(B) consistent with the proposed changes described above: (1) Replace the reference to “two minutes before the scheduled end of Core Trading Hours” with “the beginning of the Auction Imbalance Freeze,” and (2) replace the reference to “paragraph (f)(2)(B)” with “paragraph (f)(2).” Thus, NYSE Rule 7.35B(j)(2)(B), as amended, would provide that the Exchange may temporarily suspend the prohibition on canceling an MOC or LOC Order after the beginning of the Auction Imbalance Freeze (as such prohibition would be set forth in NYSE Rule 7.35B(f)(2), as amended).

#### III. Proceedings To Determine Whether To Disapprove SR-NYSE-2021-74 and Grounds for Disapproval Under Consideration

The Commission is instituting proceedings pursuant to Section 19(b)(2)(B) of the Act to determine whether the proposal should be approved or disapproved. Institution of such proceedings is appropriate at this time in view of the legal and policy issues raised by the proposal. Institution of disapproval proceedings does not indicate that the Commission has reached any conclusions with respect to any of the issues involved. Rather, the Commission encourages interested persons to provide additional comment on the proposal.

Pursuant to Section 19(b)(2)(B) of the Act, the Commission is providing notice of the grounds for disapproval under consideration. The Commission is instituting proceedings to allow for additional analysis of the proposed rule change’s consistency with the Act<sup>11</sup> and, in particular, with Section 6(b)(5) of the Act, which requires, among other things, that the rules of a national securities exchanges be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to remove impediments to, and perfect the mechanism of a free and open market and a national market system and, in general, to protect investors and the public interest.<sup>12</sup> In addition, Section 6(b)(5) of the Act<sup>13</sup> prohibits the rules

<sup>11</sup> 15 U.S.C. 78s(b)(2)(B).

<sup>12</sup> 15 U.S.C. 78f(b)(5).

<sup>13</sup> 15 U.S.C. 78f(b)(5).

<sup>1</sup> 15 U.S.C. 78s(b)(1).

<sup>2</sup> 17 CFR 240.19b-4.

<sup>3</sup> See Securities Exchange Act Release No. 93849 (Dec. 22, 2021), 86 FR 74204 (Dec. 29, 2021) (“Notice”).

<sup>4</sup> 15 U.S.C. 78s(b)(2).

<sup>5</sup> See Securities Exchange Act Release No. 94181, (Feb. 8, 2022), 87 FR 8305 (Feb. 14, 2022).

<sup>6</sup> 15 U.S.C. 78s(b)(2)(B).

of an exchange from being designed to permit unfair discrimination between customers, issuers, brokers, or dealers. Further, Section 6(b)(8) of the Act requires that the rules of an exchange not impose any burden on competition that is not necessary or appropriate under the Act.<sup>14</sup>

The Exchange's proposal would change how cancellation of MOC, LOC, and Closing IO Orders would be handled under NYSE Rule 7.35(B)(f)(2) with respect to the NYSE Closing Auction. The Commission notes that the Exchange has separately proposed a different set of changes to its Closing Auction process and that the other proposal is currently in proceedings before the Commission.<sup>15</sup> The Commission believes that it is appropriate to institute proceedings to allow for additional analysis and input concerning the instant proposed rule change's consistency with requirements of the Act and to evaluate this proposed rule change in light of other pending proposed changes to the Closing Auction.

#### IV. Procedure: Request for Written Comments

The Commission requests that interested persons provide written submissions of their views, data, and arguments with respect to the issues identified above, as well as any other concerns they may have with the proposal. In particular, the Commission invites the written views of interested persons concerning whether the proposal is consistent with Section 6(b)(5) or any other provision of the Act, or the rules and regulation thereunder. Although there do not appear to be any issues relevant to approval or disapproval that would be facilitated by an oral presentation of views, data, and arguments, the Commission will consider, pursuant to Rule 19b-4 under the Act,<sup>16</sup> any request for an opportunity to make an oral presentation.<sup>17</sup>

Interested persons are invited to submit written data, views, and arguments regarding whether the proposal should be approved or disapproved by April 18, 2022. Any

person who wishes to file a rebuttal to any other person's submission must file that rebuttal by May 2, 2022. The Commission asks that commenters address the sufficiency of the Exchange's statements in support of the proposal which are set forth in the Notice, in addition to any other comments they may wish to submit about the proposed change. Comments may be submitted by any of the following methods:

#### Electronic Comments

- Use the Commission's internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to [rule-comments@sec.gov](mailto:rule-comments@sec.gov). Please include File Number SR-NYSE-2021-74 on the subject line.

#### Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090.

All submissions should refer to File Number SR-NYSE-2021-74. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposal that are filed with the Commission, and all written communications relating to the proposal between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filings also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly.

All submissions should refer to File Number SR-NYSE-2021-74 and should be submitted on or before April 18, 2022. Rebuttal comments should be submitted by May 2, 2022.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.<sup>18</sup>

**J. Matthew DeLesDernier,**  
Assistant Secretary.

## SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-94489; File No. SR-EMERALD-2022-11]

### Self-Regulatory Organizations; MIAX Emerald, LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Make a Formatting Change to Exchange Rule 531, Reports, Market Data Products and Services

March 22, 2022.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),<sup>1</sup> and Rule 19b-4 thereunder,<sup>2</sup> notice is hereby given that on March 11, 2022, MIAX Emerald, LLC ("MIAX Emerald" or "Exchange") filed with the Securities and Exchange Commission ("Commission") a proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

#### I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to make an administrative, immaterial change to update the subparagraph lettering in Exchange Rule 531.

The text of the proposed rule change is available on the Exchange's website at <http://www.miaxoptions.com/rule-filings/emerald> at MIAX Emerald's principal office, and at the Commission's Public Reference Room.

#### II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set

<sup>14</sup> 15 U.S.C. 78f(b)(8).

<sup>15</sup> See Securities Exchange Act Release No. 93037 (Sept. 16, 2021), 86 FR 52719 (Sept. 22, 2021) (SR-NYSE-2021-44) (Notice); Securities Exchange Act Release No. 93809 (Dec. 17, 2021), 86 FR 73060 (Dec. 23, 2021) (Order Instituting Proceedings).

<sup>16</sup> 17 CFR 240.19b-4.

<sup>17</sup> Rule 700(c)(2) of the Commission's Rules of Practice provides that "[t]he Commission, in its sole discretion, may determine whether any issues relevant to approval or disapproval would be facilitated by the opportunity for an oral presentation of views." 17 CFR 201.700(c)(2).

<sup>18</sup> 17 CFR 200.30-3(a)(57).

<sup>1</sup> 15 U.S.C. 78s(b)(1).

<sup>2</sup> 17 CFR 240.19b-4.

forth in sections A, B, and C below, of the most significant aspects of such statements.

*A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change*

1. Purpose

The Exchange proposes to make an administrative, immaterial change to update the subparagraph lettering in Exchange Rule 531 by changing subparagraph (c), High Precision Network Time Signal Service, to subparagraph (d). On November 19, 2021, the Exchange filed a proposed rule change to adopt Exchange Rule 531(c), High Precision Network Time Signal Service (“HPNTSS”), and that proposed rule change was published for comment in the **Federal Register** on December 7, 2021 (the “HPNTSS Proposal”).<sup>3</sup> On January 27, 2022, the Exchange filed a proposed rule change for immediate effectiveness to amend Exchange Rule 531(b) to provide for the new “Liquidity Taker Event Report—Complex Orders” and, within that filing, proposed to move the rule text for the then-current subparagraph (b), Market Data Products, to become new subparagraph (c) under Exchange Rule 531.<sup>4</sup> Thereafter, the Commission approved the HPNTSS Proposal on March 1, 2022,<sup>5</sup> which resulted in Exchange Rule 531 containing two separate references to paragraph (c), one for HPNTSS and a second for Market Data Products. The Exchange now proposes to update the subparagraph lettering for HPNTSS to be under paragraph (d) to Exchange Rule 531. The Exchange does not propose to make any substantive changes to the text of Exchange Rule 531.

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the Act and the rules and regulations thereunder applicable to the Exchange and, in particular, the requirements of Section 6(b) of the Act.<sup>6</sup> Specifically, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)<sup>7</sup> requirements that the rules of an exchange be designed to remove impediments to and perfect the

mechanism of a free and open market and a national market system because it proposes an administrative, immaterial change to update the subparagraph lettering in Exchange Rule 531 by changing subparagraph (c), High Precision Network Time Signal Service, to now be subparagraph (d). This change is simply intended to remove two separate references to subparagraph (c) within Exchange Rule 531, one for HPNTSS and a second for Market Data Products. The Exchange does not propose any other changes to Exchange Rule 531. The proposed rule change would prevent any potential investor confusion by providing clarity within the rule text and make the Exchange's rules easier to understand, thereby removing impediments to and perfecting the mechanism of a free and open market and a national market system.

*B. Self-Regulatory Organization's Statement on Burden on Competition*

The Exchange does not believe that the proposed rule change would result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act, as amended. The proposed rule change would not have any impact on inter-market competition or intra-market competition because it simply updates subparagraph lettering in Exchange Rule 531 without making any substantive changes. The proposed rule change is ministerial in nature and does not propose any new products or services, and thus, would not have any impact on competition.

*C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others*

Written comments were neither solicited nor received.

**III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action**

Because the foregoing proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days after the date of the filing, or such shorter time as the Commission may designate, it has become effective pursuant to 19(b)(3)(A) of the Act<sup>8</sup> and Rule 19b-4(f)(6)<sup>9</sup> thereunder.

<sup>8</sup> 15 U.S.C. 78s(b)(3)(A).

<sup>9</sup> 17 CFR 240.19b-4(f)(6). In addition, Rule 19b-4(f)(6) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change at least five business days prior to the date of filing of the proposed rule

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

**IV. Solicitation of Comments**

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

*Electronic Comments*

- Use the Commission's internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to [rule-comments@sec.gov](mailto:rule-comments@sec.gov). Please include File Number SR-EMERALD-2022-11 on the subject line.

*Paper Comments*

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090.
- All submissions should refer to File Number SR-EMERALD-2022-11. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

BILLING CODE 8011-01-P

## SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-94487; File No. SR-NYSEAMER-2022-15]

### Self-Regulatory Organizations; NYSE American LLC; Notice of Filing of Proposed Rule Change To Amend Rule 7.31E(h)(3)

March 22, 2022.

Pursuant to Section 19(b)(1)<sup>1</sup> of the Securities Exchange Act of 1934 (“Act”)<sup>2</sup> and Rule 19b-4 thereunder,<sup>3</sup> notice is hereby given that, on March 9, 2022, NYSE American LLC (“NYSE American” or the “Exchange”) filed with the Securities and Exchange Commission (“Commission”) the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

#### I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Rule 7.31E(h)(3). The proposed rule change is available on the Exchange’s website at [www.nyse.com](http://www.nyse.com), at the principal office of the Exchange, and at the Commission’s Public Reference Room.

#### II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

##### A. Self-Regulatory Organization’s Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

###### 1. Purpose

The Exchange proposes to amend Rule 7.31E(h)(3) to modify certain factors relevant to the quote instability calculation for Discretionary Pegged Orders. Specifically, the Exchange proposes to amend Rule 7.31E(h)(3)(D)(i)(D)(1)(a), which sets forth the quote stability coefficients. Under Rule 7.31E(h)(3)(D)(i)(D)(3), the Exchange may modify the quote stability coefficients at any time, subject to a filing of a proposed rule change. The Exchange proposes such changes in this rule filing.

###### Discretionary Pegged Orders

Rule 7.31E(h)(3) provides for Discretionary Pegged Orders, which are Pegged Orders<sup>4</sup> that may exercise price discretion from their working price to a discretionary price in order to trade with contra-side orders on the Exchange Book, except during periods of quote instability as defined in Rule 7.31E(h)(3)(D).

Rule 7.31E(h)(3)(D) provides that the Exchange uses a quote instability calculation to assess a security’s “quote instability factor,” or the probability of an imminent change to the current PBB to a lower price or PBO to a higher price.<sup>5</sup> When quoting activity in a security meets predefined criteria and the quote instability factor calculated is greater than the Exchange’s defined “quote instability threshold,” the

Exchange treats the quote as unstable (“quote instability” or a “crumbling quote”).

Rule 7.31E(h)(3)(D)(i) provides that the Exchange determines a quote to be unstable when, among other factors, the quote instability factor result from the quote stability calculation is greater than the quote instability threshold. To perform the quote stability calculation and determine the quote instability factor, the Exchange employs a fixed formula utilizing the quote stability coefficients and quote stability variables set forth in Rule 7.31E(h)(3)(D)(i)(D)(1)(a) and Rule 7.31E(h)(3)(D)(i)(D)(1)(b), respectively.

##### Proposed Rule Change

The Exchange proposes to update the quote stability coefficients used in the quote instability calculation, which have not been modified since Rule 7.31E(h)(3) was adopted. The proposed changes are intended to update the quote stability coefficients to be based on more current market data and activity on the Exchange, including to reflect the Exchange’s elimination of a delay mechanism that previously added latency to certain order processing (the “Delay Mechanism”).<sup>6</sup>

The Exchange reviewed NYSE American market data from randomly selected days in the fourth quarter of 2021 to analyze the effectiveness of the quote stability coefficients in predicting changes to the PBBO. Specifically, the Exchange reviewed PBBO data, on a nanosecond level, for certain intervals throughout each randomly selected day to track changes to quotes on NYSE American and away markets. The Exchange used this data to generate and test the proposed quote stability coefficients, and based on its analysis, believes that modifying the quote stability coefficients would enable the Exchange to evaluate the quality of the PBBO more effectively.

The Exchange proposes to modify the quote stability coefficients set forth in Rule 7.31E(h)(3)(D)(i)(D)(1)(a)(i) through (v) as follows:

Quote stability coefficient	Current value	Proposed value
C0 .....	-2.39515	-2.174901

<sup>4</sup> A Pegged Order is a Limit Order that does not route with a working price that is pegged to a dynamic reference price. If the designated reference price is higher (lower) than the limit price of a Pegged Order to buy (sell), the working price will be the limit price of the order. See Rule 7.31E(h).

<sup>5</sup> NYSE American Rule 1.1E(dd) defines PBB as the highest Protected Bid and PBO as the lowest Protected Offer. Rule 1.1E(dd) also provides that “PBBO” means the Best Protected Bid and the Best Protected Offer.

<sup>6</sup> The Exchange eliminated the Delay Mechanism, which added a delay of 350 microseconds of latency to specified order processing, in 2019. See Securities Exchange Act Release No. 87550 (November 15, 2019), 84 FR 64359 (November 21, 2019) (SR-NYSEAMER-2019-48) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change to Amend Exchange Rules 1.1E and 7.29E to Eliminate the Delay Mechanism and Amend Exchange Rule 7.31E and Related Exchange Rules to Re-Introduce Previously-Approved Order Types and Modifiers).

<sup>10</sup> 17 CFR 200.30-3(a)(12).

<sup>1</sup> 15 U.S.C. 78s(b)(1).

<sup>2</sup> 15 U.S.C. 78a.

<sup>3</sup> 17 CFR 240.19b-4.

Quote stability coefficient	Current value	Proposed value
C1 .....	-0.76504	-0.561555
C2 .....	0.07599	0.077739
C3 .....	0.38374	0.4860265
C4 .....	0.14466	0.1627735

The Exchange believes that its proposed modification of the quote stability coefficients, based on the market data analysis described above, would improve the accuracy of the fixed formula used to perform the quote instability calculation. Specifically, the Exchange believes that the proposed quote stability coefficients, which have been adjusted to reflect more recent activity on the Exchange (including the elimination of the Delay Mechanism), would improve the calibration of the quote instability calculation to activity on the Exchange, thereby enhancing the Exchange's ability to predict whether there is quote instability and protect Discretionary Pegged Orders from exercising discretion when the PBBO is unstable.

Because of the technology changes associated with this proposed rule change, the Exchange will announce the implementation date by Trader Update.

## 2. Statutory Basis

The proposed rule change is consistent with Section 6(b) of the Act,<sup>7</sup> in general, and furthers the objectives of Section 6(b)(5),<sup>8</sup> in particular, because it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to, and perfect the mechanism of, a free and open market and a national market system and, in general, to protect investors and the public interest.

The Exchange believes that the proposed change would promote just and equitable principles of trade, remove impediments to, and perfect the mechanism of, a free and open market and a national market system, and protect investors and the public interest because it is designed to increase the effectiveness of the quote instability calculation used to determine whether a crumbling quote exists. As discussed above, the proposed change is based on the Exchange's analysis of market data, which supports that the proposed change would improve the accuracy of the Exchange's quote instability calculation. Accordingly, the Exchange believes that the proposed change

would remove impediments to, and perfect the mechanism of, a free and open market and a national market system, as well as protect investors and the public interest, by enhancing the Exchange's protection of Discretionary Pegged Orders. Specifically, because the proposed quote stability coefficients were derived through an analysis of more recent market data and are calibrated to reflect current activity on the Exchange (including to account for the fact that the Exchange no longer operates with the Delay Mechanism), the Exchange believes that the proposed change would improve the effectiveness of the quote instability calculation in predicting periods of quote instability and thus enhance the extent to which Discretionary Pegged Orders would be protected from unfavorable executions.

### B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange believes that the proposed change would promote competition by improving the accuracy of the quote instability calculation, thereby enhancing the protection of Discretionary Pegged Orders from unfavorable executions during periods of quote instability.

### C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

## III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or such longer period up to 90 days (i) as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

- (A) By order approve or disapprove the proposed rule change, or
- (B) institute proceedings to determine whether the proposed rule change should be disapproved.

## IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule

change is consistent with the Act. Comments may be submitted by any of the following methods:

### Electronic Comments

- Use the Commission's internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to [rule-comments@sec.gov](mailto:rule-comments@sec.gov). Please include File Number SR-NYSEAMER-2022-15 on the subject line.

### Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090.

All submissions should refer to File Number SR-NYSEAMER-2022-15. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-NYSEAMER-2022-15 and should be submitted on or before April 18, 2022.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.<sup>9</sup>

**J. Matthew DeLesDernier,**  
Assistant Secretary.

## SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-94486; File No. SR-NYSEArca-2022-14]

### Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To List and Trade Shares of the Columbia Seligman Semiconductor and Technology ETF Under NYSE Arca Rule 8.601 (Active Proxy Portfolio Shares)

March 22, 2022.

Pursuant to Section 19(b)(1)<sup>1</sup> of the Securities Exchange Act of 1934 (“Act”)<sup>2</sup> and Rule 19b-4 thereunder,<sup>3</sup> notice is hereby given that, on March 14, 2022, NYSE Arca, Inc. (“NYSE Arca” or “Exchange”) filed with the Securities and Exchange Commission (“Commission”) the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

#### I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to list and trade shares of the following under NYSE Arca Rule 8.601-E: Columbia Seligman Semiconductor and Technology ETF. The proposed rule change is available on the Exchange’s website at [www.nyse.com](http://www.nyse.com), at the principal office of the Exchange, and at the Commission’s Public Reference Room.

#### II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

#### A. Self-Regulatory Organization’s Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

##### 1. Purpose

The Exchange has adopted NYSE Arca Rule 8.601-E for the purpose of permitting the listing and trading, or trading pursuant to unlisted trading privileges (“UTP”), of Active Proxy Portfolio Shares, which are securities issued by an actively managed open-end investment management company.<sup>4</sup> Commentary .01 to Rule 8.601-E requires the Exchange to file separate proposals under Section 19(b) of the Act before listing and trading any series of Active Proxy Portfolio Shares on the Exchange. Therefore, the Exchange is submitting this proposal in order to list and trade shares (“Shares”) of Active Proxy Portfolio Shares of the Columbia Seligman Semiconductor and Technology ETF (the “Fund”) under Rule 8.601-E.

##### Key Features of Active Proxy Portfolio Shares

While funds issuing Active Proxy Portfolio Shares will be actively-managed and, to that extent, will be

<sup>4</sup> See Securities Exchange Act Release No. 89185 (June 29, 2020), 85 FR 40328 (July 6, 2020) (SR-NYSEArca-2019-95). Rule 8.601-E(c)(1) provides that “[t]he term ‘Active Proxy Portfolio Share’ means a security that (a) is issued by a investment company registered under the Investment Company Act of 1940 (‘Investment Company’) organized as an open-end management investment company that invests in a portfolio of securities selected by the Investment Company’s investment adviser consistent with the Investment Company’s investment objectives and policies; (b) is issued in a specified minimum number of shares, or multiples thereof, in return for a deposit by the purchaser of the Proxy Portfolio or Custom Basket, as applicable, and/or cash with a value equal to the next determined net asset value (‘NAV’); (c) when aggregated in the same specified minimum number of Active Proxy Portfolio Shares, or multiples thereof, may be redeemed at a holder’s request in return for the Proxy Portfolio or Custom Basket, as applicable, and/or cash to the holder by the issuer with a value equal to the next determined NAV; and (d) the portfolio holdings for which are disclosed within at least 60 days following the end of every fiscal quarter.” Rule 8.601-E(c)(2) provides that “[t]he term ‘Actual Portfolio’ means the identities and quantities of the securities and other assets held by the Investment Company that shall form the basis for the Investment Company’s calculation of NAV at the end of the business day.” Rule 8.601-E(c)(3) provides that “[t]he term ‘Proxy Portfolio’ means a specified portfolio of securities, other financial instruments and/or cash designed to track closely the daily performance of the Actual Portfolio of a series of Active Proxy Portfolio Shares as provided in the exemptive relief pursuant to the Investment Company Act of 1940 applicable to such series.” Rule 8.601-E(c)(4) provides that the term ‘Custom Basket’ means a portfolio of securities that is different from the Proxy Portfolio and is otherwise consistent with the exemptive relief issued pursuant to the Investment Company Act of 1940 applicable to a series of Active Proxy Portfolio Shares.

similar to Managed Fund Shares, Active Proxy Portfolio Shares differ from Managed Fund Shares in the following important respects. First, in contrast to Managed Fund Shares, which are actively-managed funds listed and traded under NYSE Arca Rule 8.600-E<sup>5</sup> and for which a “Disclosed Portfolio” is required to be disseminated at least once daily,<sup>6</sup> the portfolio for an issue of Active Proxy Portfolio Shares will be publicly disclosed within at least 60 days following the end of every fiscal quarter in accordance with normal disclosure requirements otherwise applicable to open-end management investment companies registered under the Investment Company Act of 1940 (the “1940 Act”).<sup>7</sup> The composition of the portfolio of an issue of Active Proxy Portfolio Shares would not be available at commencement of Exchange listing

<sup>5</sup> The Commission has previously approved listing and trading on the Exchange of a number of issues of Managed Fund Shares under NYSE Arca Rule 8.600-E. See, e.g., Securities Exchange Act Release Nos. 57801 (May 8, 2008), 73 FR 27878 (May 14, 2008) (SR-NYSEArca-2008-31) (order approving Exchange listing and trading of twelve actively-managed funds of the WisdomTree Trust); 60460 (August 7, 2009), 74 FR 41468 (August 17, 2009) (SR-NYSEArca-2009-55) (order approving listing of Dent Tactical ETF); 63076 (October 12, 2010), 75 FR 63874 (October 18, 2010) (SR-NYSEArca-2010-79) (order approving Exchange listing and trading of Cambria Global Tactical ETF); 63802 (January 31, 2011), 76 FR 6503 (February 4, 2011) (SR-NYSEArca-2010-118) (order approving Exchange listing and trading of the SiM Dynamic Allocation Diversified Income ETF and SiM Dynamic Allocation Growth Income ETF). The Commission also has approved a proposed rule change relating to generic listing standards for Managed Fund Shares. See Securities Exchange Act Release No. 78397 (July 22, 2016), 81 FR 49320 (July 27, 2016) (SR-NYSEArca-2015-110) (amending NYSE Arca Equities Rule 8.600 to adopt generic listing standards for Managed Fund Shares).

<sup>6</sup> NYSE Arca Rule 8.600-E(c)(2) defines the term “Disclosed Portfolio” as the identities and quantities of the securities and other assets held by the Investment Company that will form the basis for the Investment Company’s calculation of net asset value at the end of the business day. NYSE Arca Rule 8.600-E(d)(2)(B)(i) requires that the Disclosed Portfolio will be disseminated at least once daily and will be made available to all market participants at the same time.

<sup>7</sup> A mutual fund is required to file with the Commission its complete portfolio schedules for the second and fourth fiscal quarters on Form N-CSR under the 1940 Act. Information reported on Form N-PORT for the third month of a fund’s fiscal quarter will be made publicly available 60 days after the end of a fund’s fiscal quarter. Form N-PORT requires reporting of a fund’s complete portfolio holdings on a position-by-position basis on a quarterly basis within 60 days after fiscal quarter end. Investors can obtain a series of Active Proxy Portfolio Shares’ Statement of Additional Information (“SAI”), its Shareholder Reports, its Form N-CSR, filed twice a year, and its Form N-CEN, filed annually. A series of Active Proxy Portfolio Shares’ SAI and Shareholder Reports will be available free upon request from the Investment Company, and those documents and the Form N-PORT, Form N-CSR, and Form N-CEN may be viewed on-screen or downloaded from the Commission’s website at [www.sec.gov](http://www.sec.gov).

<sup>1</sup> 15 U.S.C. 78s(b)(1).

<sup>2</sup> 15 U.S.C. 78a.

<sup>3</sup> 17 CFR 240.19b-4.

and trading. Second, in connection with the creation and redemption of Active Proxy Portfolio Shares, such creation or redemption may be exchanged for a Proxy Portfolio or Custom Basket, as applicable, and/or cash with a value equal to the next-determined NAV. A series of Active Proxy Portfolio Shares with a Proxy Portfolio will disclose the Proxy Portfolio on a daily basis, which, as described above, is designed to track closely the daily performance of the Actual Portfolio of a series of Active Proxy Portfolio Shares, instead of the actual holdings of the Investment Company, as provided by a series of Managed Fund Shares. As set forth in NYSE Arca Rule 8.601–E(d)(2)(B)(ii), for Active Proxy Portfolio Shares using a Custom Basket, each Business Day,<sup>8</sup> before the opening of trading in the Core Trading Session (as defined in NYSE Arca Rule 7.34–E (a)), the Investment Company shall make publicly available on its website the composition of any Custom Basket transacted on the previous business day, except a Custom Basket that differs from the applicable Proxy Portfolio only with respect to cash.

The Commission has previously approved<sup>9</sup> and noticed for immediate

<sup>8</sup> “Business Day” is defined to mean any day that the Exchange is open, including any day when the Fund satisfies redemption requests as required by Section 22(e) of the 1940 Act.

<sup>9</sup> See Securities Exchange Act Release Nos. 89185 (June 29, 2020), 85 FR 40328 (July 6, 2020) (SR–NYSEArca–2019–95) (Notice of Filing of Amendment No. 6 and Order Granting Accelerated Approval of a Proposed Rule Change, as Modified by Amendment No. 6, to Adopt NYSE Arca Rule 8.601–E to Permit the Listing and Trading of Active Proxy Portfolio Shares and To List and Trade Shares of the Natixis U.S. Equity Opportunities ETF Under Proposed NYSE Arca Rule 8.601–E (“Natixis Order”); 89192 (June 30, 2020), 85 FR 40699 (July 7, 2020) (SR–NYSEArca–2019–96) (Notice of Filing of Amendment No. 5 and Order Granting Accelerated Approval of a Proposed Rule Change, as Modified by Amendment No. 5, to List and Trade Two Series of Active Proxy Portfolio Shares Issued by the American Century ETF Trust under NYSE Arca Rule 8.601–E); 89191 (June 30, 2020), 85 FR 40358 (July 6, 2020) (SR–NYSEArca–2019–92) (Notice of Filing of Amendment No. 3 and Order Granting Accelerated Approval of a Proposed Rule Change, as Modified by Amendment No. 3, to List and Trade Four Series of Active Proxy Portfolio Shares Issued by T. Rowe Price Exchange-Traded Funds, Inc. under NYSE Arca Rule 8.601–E); 89438 (July 31, 2020), 85 FR 47821 (August 6, 2020) (SR–NYSEArca–2020–51) (Order Granting Approval of a Proposed Rule Change, as Modified by Amendment No. 2, to List and Trade Shares of Natixis Vaughan Nelson Select ETF and Natixis Vaughan Nelson MidCap ETF under NYSE Arca Rule 8.601–E). See also Securities Exchange Act Release Nos. 88887 (May 15, 2020), 85 FR 30990 (May 21, 2020) (SR–ChoeBZX–2019–107) (Notice of Filing of Amendment No. 5 and Order Granting Accelerated Approval of a Proposed Rule Change, as Modified by Amendment No. 5, to Adopt Rule 14.11(m), Tracking Fund Shares, and to List and Trade Shares of the Fidelity Blue Chip Value ETF, Fidelity Blue Chip Growth ETF, and Fidelity New Millennium ETF).

effectiveness<sup>10</sup> the listing and trading on the Exchange of series of Active Proxy Portfolio Shares under NYSE Arca Rule 8.601–E.

The Shares of the Fund will be issued by the Columbia ETF Trust I (the “Trust”), which is organized as a business trust under the laws of the Commonwealth of Massachusetts and registered with the Commission as an open-end management investment company.<sup>11</sup> Columbia Management Investment Advisers, LLC will be the investment adviser to the Fund (the “Adviser”). The Bank of New York Mellon will serve as the Fund’s transfer agent, custodian, and will conduct certain administrative functions. ALPS Distributors, Inc will act as the distributor (the “Distributor”) for the Fund.

Commentary .04 to NYSE Arca Rule 8.601–E provides that, if the investment adviser to the Investment Company issuing Active Proxy Portfolio Shares is registered as a broker-dealer or is affiliated with a broker-dealer, such investment adviser will erect and maintain a “fire wall” between the

<sup>10</sup> See Securities Exchange Act Release Nos. 92104 (June 3, 2021), 86 FR 30635 (June 9, 2021) (NYSEArca–2021–46) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change to List and Trade Shares of the Nuveen Santa Barbara Dividend Growth ETF, Nuveen Small Cap Select ETF, and Nuveen Winslow Large-Cap Growth ESG ETF Under NYSE Arca Rule 8.601–E (Active Proxy Portfolio Shares); 92958 (September 13, 2021), 86 FR 51933 (September 17, 2021) (NYSEArca–2021–77) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change to List and Trade Shares of the Nuveen Growth Opportunities ETF Under NYSE Arca Rule 8.601–E (Active Proxy Portfolio Shares); and 93264 (October 6, 2021), 86 FR 56989 (October 13, 2021) (SR–NYSEArca–2021–84) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change to List and Trade Shares of the Schwab Ariel ESG ETF Under NYSE Arca Rule 8.601–E (Active Proxy Portfolio Shares)).

<sup>11</sup> The Trust is registered under the 1940 Act. On December 17, 2021, the Trust filed a registration statement on Form N–1A under the 1940 Act, and on February 25, 2022, the Trust filed a Post-Effective Amendment on Form N–1A under the Securities Act of 1933, relating to the Fund (File No. 811–22736) (the “Registration Statement”). The Trust filed an application for an order under Section 6(c) of the 1940 Act for exemptions from various provisions of the 1940 Act and rules thereunder (File No. 812–15239), dated June 16, 2021 and amended the application on July 1, 2021 (the “Application”). See Investment Company Act Release No. 34345 (July 27, 2021). On August 24, 2021, the Commission issued an order (the “Exemptive Order”) under the 1940 Act granting the exemptions requested in the Application (Investment Company Act Release No. 34359, August 24, 2021). Investments made by the Fund will comply with the conditions set forth in the Application and the Exemptive Order. See e.g., note 14, *infra*. The description of the operation of the Fund herein is based, in part, on the Registration Statement, the Application and the Exemptive Order. The Exchange will not commence trading in Shares of the Fund until the Registration Statement is effective.

investment adviser and personnel of the broker-dealer or broker-dealer affiliate, as applicable, with respect to access to information concerning the composition and/or changes to such Investment Company’s Actual Portfolio, Proxy Portfolio, and/or Custom Basket, as applicable. Any person related to the investment adviser or Investment Company who makes decisions pertaining to the Investment Company’s Actual Portfolio, Proxy Portfolio, and/or Custom Basket, as applicable, or has access to non-public information regarding the Investment Company’s Actual Portfolio, Proxy Portfolio, and/or the Custom Basket, as applicable, or changes thereto must be subject to procedures reasonably designed to prevent the use and dissemination of material non-public information regarding the Actual Portfolio, Proxy Portfolio, and/or the Custom Basket, as applicable, or changes thereto. Commentary .04 is similar to Commentary .03(a)(i) and (iii) to NYSE Arca Rule 5.2–E(j)(3); however, Commentary .04, in connection with the establishment of a “fire wall” between the investment adviser and the broker-dealer, reflects the applicable open-end fund’s portfolio, not an underlying benchmark index, as is the case with index-based funds.<sup>12</sup> Commentary .04 is also similar to Commentary .06 to Rule 8.600–E related to Managed Fund Shares, except that Commentary .04 relates to establishment and maintenance of a “fire wall” between the investment adviser and personnel of the broker-dealer or broker-dealer affiliate, as applicable, applicable to an Investment Company’s Actual Portfolio, Proxy Portfolio, and/or Custom Basket,

<sup>12</sup> An investment adviser to an open-end fund is required to be registered under the Investment Advisers Act of 1940 (the “Advisers Act”). As a result, the Adviser and its related personnel will be subject to the provisions of Rule 204A–1 under the Advisers Act relating to codes of ethics. This Rule requires investment advisers to adopt a code of ethics that reflects the fiduciary nature of the relationship to clients as well as compliance with other applicable securities laws. Accordingly, procedures designed to prevent the communication and misuse of non-public information by an investment adviser must be consistent with Rule 204A–1 under the Advisers Act. In addition, Rule 206(4)–7 under the Advisers Act makes it unlawful for an investment adviser to provide investment advice to clients unless such investment adviser has (i) adopted and implemented written policies and procedures reasonably designed to prevent violations, by the investment adviser and its supervised persons, of the Advisers Act and the Commission rules adopted thereunder; (ii) implemented, at a minimum, an annual review regarding the adequacy of the policies and procedures established pursuant to subparagraph (i) above and the effectiveness of their implementation; and (iii) designated an individual (who is a supervised person) responsible for administering the policies and procedures adopted under subparagraph (i) above.

as applicable, or changes thereto, and not just to the underlying portfolio, as is the case with Managed Fund Shares.

In addition, Commentary .05 to Rule 8.601–E provides that any person or entity, including a custodian, Reporting Authority, distributor, or administrator, who has access to non-public information regarding the Investment Company’s Actual Portfolio, the Proxy Portfolio, or the Custom Basket, as applicable, or changes thereto, must be subject to procedures reasonably designed to prevent the use and dissemination of material non-public information regarding the applicable Investment Company Actual Portfolio, the Proxy Portfolio, or the Custom Basket, as applicable, or changes thereto. Moreover, if any such person or entity is registered as a broker-dealer or affiliated with a broker-dealer, such person or entity will erect and maintain a “fire wall” between the person or entity and the broker-dealer with respect to access to information concerning the composition and/or changes to such Investment Company Actual Portfolio, Proxy Portfolio, or Custom Basket, as applicable.

The Adviser is not registered as a broker-dealer but is affiliated with broker-dealers. The Adviser has implemented and will maintain a “fire wall” with respect to such broker-dealer affiliates regarding access to information concerning the composition of and/or changes to the Fund’s Actual Portfolio, Proxy Portfolio, and/or Custom Basket, as applicable.

In the event (a) the Adviser becomes registered as a broker-dealer or becomes newly affiliated with a broker-dealer, or (b) any new adviser or sub-adviser is a registered broker-dealer, or becomes affiliated with a broker-dealer, it will implement and maintain a “fire wall” with respect to its relevant personnel or its broker-dealer affiliate regarding access to information concerning the composition and/or changes to the Fund’s Actual Portfolio, Proxy Portfolio, and/or Custom Basket, as applicable, and will be subject to procedures designed to prevent the use and dissemination of material non-public information regarding the Fund’s Actual Portfolio, Proxy Portfolio, and/or Custom Basket, as applicable, or changes thereto. Any person related to the Adviser or the Fund who makes decisions pertaining to the Fund’s Actual Portfolio, the Proxy Portfolio, or Custom Basket, as applicable, or has access to non-public information regarding the Fund’s Actual Portfolio, the Proxy Portfolio, and/or the Custom Basket, as applicable, or changes thereto are subject to procedures reasonably

designed to prevent the use and dissemination of material non-public information regarding the Fund’s Actual Portfolio, the Proxy Portfolio, and/or the Custom Basket, as applicable, or changes thereto.

In addition, any person or entity, including any service provider for the Fund, who has access to non-public information regarding the Fund’s Actual Portfolio, the Proxy Portfolio, and/or the Custom Basket, as applicable, or changes thereto, will be subject to procedures reasonably designed to prevent the use and dissemination of material non-public information regarding the Fund’s Actual Portfolio, the Proxy Portfolio, and/or the Custom Basket, as applicable, or changes thereto. Moreover, if any such person or entity is registered as a broker-dealer or affiliated with a broker-dealer, such person or entity has erected and will maintain a “fire wall” between the person or entity and the broker-dealer with respect to access to information concerning the composition and/or changes to the Fund’s Actual Portfolio, Proxy Portfolio, and/or Custom Basket, as applicable.

#### Description of the Fund

According to the Registration Statement, the Adviser will identify a “Tracking Basket”<sup>13</sup> for the Fund, which is designed to closely track the daily performance of the Fund but is not the Fund’s Actual Portfolio. The Tracking Basket is comprised of (1) select recently disclosed portfolio holdings and/or select securities from the universe from which the Fund’s investments are selected (“Strategy Components”); (2) liquid ETFs that convey information about the types of instruments (that are not otherwise fully represented by Strategy Components) in which the Fund invests (“Representative ETFs”); and (3) cash and cash equivalents. Representative ETFs may constitute no more than 50% of the Tracking Basket’s assets on each Business Day at the time that the Tracking Basket is published. Representative ETFs will be selected for inclusion in the Tracking Basket such that, when aggregated with the other Tracking Basket components, the Tracking Basket corresponds to the Fund’s overall holdings exposure. The Fund will publish on its website a Tracking Basket before the commencement of trading of the Fund’s Shares on each Business Day, and the Adviser will not make intra-day changes

<sup>13</sup> The “Tracking Basket” is the Proxy Portfolio for purposes of Rule 8.601–E(c)(3).

to the Tracking Basket except to correct errors in the published Tracking Basket.

In addition, on each Business Day, before commencement of trading of the Shares, the Fund will publish on its website the “Tracking Basket Weight Overlap,” which is the percentage weight overlap between the holdings of the prior Business Day’s Tracking Basket compared to the holdings of the Fund that formed the basis for the Fund’s calculation of NAV at the end of the prior Business Day. The Tracking Basket Weight Overlap is calculated by taking the lesser weight of each asset held in common between the Fund’s Actual Portfolio and the Tracking Basket and adding the totals. The Tracking Basket Weight Overlap is intended to provide investors with an understanding of the degree to which the Tracking Basket and the Fund’s Actual Portfolio overlap and help investors evaluate the risk that the performance of the Tracking Basket may deviate from the performance of the portfolio holdings of the Fund.

Columbia Seligman Semiconductor and Technology ETF

The Fund’s holdings will conform to the permissible investments as set forth in the Application and Exemptive Order, and the holdings will be consistent with all requirements in the Application and Exemptive Order.<sup>14</sup> Any foreign common stocks held by the Fund will be traded on an exchange that is a member of the Intermarket Surveillance Group (“ISG”) or with which the Exchange has in place a comprehensive surveillance sharing agreement.

According to the Registration Statement, the Fund’s investment objective is to seek capital appreciation.

<sup>14</sup> Pursuant to the Application and Exemptive Order, the permissible investments for the Fund include only the following instruments: ETFs traded on a U.S. exchange; exchange-traded notes (“ETNs”) traded on a U.S. exchange; U.S. exchange-traded common stocks, common stocks listed on a foreign exchange that trade on such exchange contemporaneously with the Shares (“foreign common stocks”) in the Exchange’s Core Trading Session (normally, 9:30 a.m. to 4:00 p.m. Eastern Time (“E.T.”)); U.S. exchange-traded preferred stocks, U.S. exchange-traded American Depositary Receipts (“ADRs”); U.S. exchange-traded real estate investment trusts; U.S. exchange-traded commodity pools; U.S. exchange-traded metals trusts; U.S. exchange-traded currency trusts; and U.S. exchange-traded futures that trade contemporaneously with the Shares. In addition, the Fund may hold cash and cash equivalents (short-term U.S. Treasury securities, government money market funds, and repurchase agreements). Pursuant to the Application and Exemptive Order, the Fund will not hold short positions or invest in derivatives other than U.S. exchange-traded futures, will not borrow for investment purposes, and will not purchase any securities that are illiquid investments at the time of purchase.

Under normal market conditions, the Fund will invest at least 80% of its net assets in securities of semiconductor, semiconductor equipment and related technology companies (Semiconductor and Tech Companies). A company will be considered a Semiconductor and Tech Company if, at the time of Fund investment, the company is categorized by the Global Industry Classification Standard (GICS®) as within the semiconductor and semiconductor equipment industry or at least 50% of the company's revenues, sales, earnings or assets will arise from or will be dedicated to the design, development, manufacturing process, distribution or sale of semiconductors, other integrated chips (ICs) or semiconductor equipment. A Semiconductor and Tech Company may also include a company that primarily internally sources/develops (versus purchasing from third parties) its own semiconductors and other ICs for use within its technology products. The companies that the Fund invests in will generally operate in the following industries as categorized by GICS®: Semiconductors and semiconductor equipment; communication equipment; electronic equipment, instruments and components; technology hardware, storage and peripherals; and software.

#### Investment Restrictions

The Shares of the Fund will conform to the initial and continued listing criteria under Rule 8.601–E. The Fund's holdings will be limited to and consistent with permissible holdings as described in the Application and Exemptive Order and all requirements in the Application and Exemptive Order.<sup>15</sup>

The Fund's investments, including derivatives, will be consistent with its investment objectives and will not be used to enhance leverage (although certain derivatives and other investments may result in leverage). That is, the Fund's investments will not be used to seek performance that is the multiple or inverse multiple (e.g., 2X or –3X) of the Fund's primary broad-based securities benchmark index (as defined in Form N–1A).<sup>16</sup>

#### Creations and Redemptions of Shares

According to the Registration Statement, the Trust will issue and sell Shares of the Fund only in specified minimum size "Creation Units" through the Distributor on a continuous basis at

their NAV next determined after receipt of an order in proper form on any Business Day. The NAV of the Fund's Shares will be calculated each Business Day as of the close of regular trading on the Exchange, ordinarily 4:00 p.m. E.T. A Creation Unit will generally consist of at least 25,000 Shares.

According to the Registration Statement, Shares of the Fund will be purchased and redeemed in Creation Units. Creation Units are typically purchased and redeemed in-kind, but they may also be purchased and redeemed, in whole or in part, for cash in the Adviser's discretion. Accordingly, except where the purchase or redemption will include cash, purchasers will be required to purchase Creation Units by making an in-kind deposit of specified instruments ("In-Kind Creation Basket"), and shareholders redeeming their Shares will receive an in-kind transfer of specified instruments ("In-Kind Redemption Basket"). Under certain circumstances, the Fund may accept a nonconforming or "custom" In-Kind Creation Basket or honor a redemption request with a nonconforming or "custom" In-Kind Redemption Basket.

Creation Units of the Fund may be purchased and/or redeemed entirely or partially for cash in the Adviser's discretion. When full or partial cash purchases or redemptions of Creation Units are available or specified for the Fund, they will be effected in essentially the same manner as in-kind purchases or redemptions thereof. The Adviser may determine, upon receiving a purchase or redemption order from an Authorized Participant, to have the purchase or redemption, as applicable, be made entirely or in part in cash.

If there is a difference between the NAV attributable to a Creation Unit and the aggregate market value of securities in the In-Kind Creation Basket, the party conveying instruments with the lower value will also pay to the other an amount in cash equal to that difference (the "Balancing Amount").

Each Business Day, prior to the opening of trading on the Exchange, the Fund will publish through the National Securities Clearing Corporation the names and quantities of the instruments comprising the In-Kind Creation Basket as well as the estimated Balancing Amount (if any), for that day. The published In-Kind Creation Basket will apply until a new In-Kind Creation Basket is announced on the following Business Day, and there will be no intra-day changes to the In-Kind Creation Basket except to correct errors in the published In-Kind Creation Basket. The In-Kind Creation Basket will be

published each Business Day regardless of whether the Fund decides to issue or redeem Creation Units entirely or in part on a cash basis.

All orders to purchase or redeem Creation Units must be placed with the Distributor by or through an Authorized Participant. Orders to purchase or redeem Creation Units will be accepted until the "Order Cut-Off Time," generally 2:00 p.m. E.T. The date on which an order to purchase or redeem Creation Units is received and accepted is referred to as the "Order Placement Date." All Creation Unit orders must be received by the Distributor no later than the Order Cut-Off Time in order to receive the NAV determined on the Order Placement Date. When the Exchange closes earlier than normal, the Fund may require orders for Creation Units to be placed earlier in the Business Day.

#### Availability of Information

The Fund's website ([www.columbiathreadneedleus.com/investment-products/exchange-traded-funds](http://www.columbiathreadneedleus.com/investment-products/exchange-traded-funds)), which will be publicly available prior to the public offering of Shares, will include a form of the prospectus for the Fund that may be downloaded. The Fund's website will include on a daily basis, per Share of the Fund, the prior Business Day's NAV, the prior Business Day's "Closing Price" or "Bid/Ask Price,"<sup>17</sup> and a calculation of the premium/discount of such Closing Price or Bid/Ask Price against such NAV.<sup>18</sup> The Adviser has represented that the Fund's website will also provide: (1) Any other information regarding premiums/discounts as may be required for other ETFs under Rule 6c–11 under the 1940 Act, as amended, and (2) any information regarding the bid/ask spread for the Fund as may be required for other ETFs under Rule 6c–11 under the 1940 Act, as amended. The Fund's website also will disclose the information required under Rule 8.601–E(c)(3).<sup>19</sup> The website and information will be publicly available at no charge.

<sup>17</sup> The records relating to Bid/Ask Prices will be retained by the Fund or its service providers. The "Bid/Ask Price" is the midpoint of the highest bid and lowest offer based upon the National Best Bid and Offer as of the time of calculation of the Fund's NAV. The "National Best Bid and Offer" is the current national best bid and national best offer as disseminated by the Consolidated Quotation System or UTP Plan Securities Information Processor. The "Closing Price" of Shares is the official closing price of the Shares on the Exchange.

<sup>18</sup> The "premium/discount" refers to the premium or discount to the NAV at the end of a trading day and will be calculated based on the last Bid/Ask Price or the Closing Price on such trading day.

<sup>19</sup> See note 4, *supra*. Rule 8.601–E (c)(3) provides that the website for each series of Active Proxy

<sup>15</sup> *Id.*

<sup>16</sup> The Fund's broad-based securities benchmark index will be identified in a future amendment to its Registration Statement following the Fund's first full calendar year of performance.

The identity and quantity of investments in the Tracking Basket for the Fund will be publicly available on the Fund's website before the commencement of trading in Shares on each Business Day. The website will also include information relating to the Tracking Basket Weight Overlap, as discussed above.

Typical mutual fund-style annual, semi-annual and quarterly disclosures contained in the Fund's Commission filings will be provided on the Fund's website on a current basis.<sup>20</sup> Thus, the Fund will publish the portfolio contents of its Actual Portfolio on a periodic basis, and no less than 60 days after the end of every fiscal quarter.

Investors can also obtain the Fund's SAI, Shareholder Reports, Form N-CSR, N-PORT, and Form N-CEN. The prospectus, SAI, and Shareholder Reports are available free upon request, and those documents and the Form N-CSR, N-PORT, and Form N-CEN may be viewed on-screen or downloaded from the Commission's website. The Exchange also notes that pursuant to the Application, the Fund must comply with Regulation Fair Disclosure, which prohibits selective disclosure of any material non-public information.

Information regarding the market price of Shares and trading volume in Shares, will be continually available on a real-time basis throughout the day on brokers' computer screens and other electronic services. The previous day's closing price and trading volume information for the Shares will be published daily in the financial section of newspapers.

Quotation and last sale information for the Shares and U.S. exchange-traded instruments (excluding futures contracts) will be available via the Consolidated Tape Association ("CTA") high-speed line, from the exchanges on which such securities trade, or through major market data vendors or subscription services. Quotation and last sale information for futures contracts will be available from the exchanges on which they trade. Intraday price information for all exchange-traded instruments, which include all

Portfolio Shares shall disclose the information regarding the Proxy Portfolio as provided in the exemptive relief pursuant to the 1940 Act applicable to such series, including the following, to the extent applicable:

- (i) Ticker symbol;
- (ii) CUSIP or other identifier;
- (iii) Description of holding;
- (iv) Quantity of each security or other asset held; and
- (v) Percentage weighting of the holding in the portfolio.

<sup>20</sup> See note 7, *supra*.

eligible instruments except cash and cash equivalents, will be available from the exchanges on which they trade, or through major market data vendors or subscription services. Intraday price information for cash equivalents is available through major market data vendors, subscription services and/or pricing services.

#### Trading Halts

With respect to trading halts, the Exchange may consider all relevant factors in exercising its discretion to halt or suspend trading in the Shares of the Fund.<sup>21</sup> Trading in Shares of the Fund will be halted if the circuit breaker parameters in NYSE Arca Rule 7.12-E have been reached. Trading also may be halted because of market conditions or for reasons that, in the view of the Exchange, make trading in the Shares inadvisable. Trading in the Shares will be subject to NYSE Arca Rule 8.601-E(d)(2)(D), which sets forth circumstances under which Shares of the Fund will be halted.

Specifically, Rule 8.601-E(d)(2)(D) provides that the Exchange may consider all relevant factors in exercising its discretion to halt trading in a series of Active Proxy Portfolio Shares. Trading may be halted because of market conditions or for reasons that, in the view of the Exchange, make trading in the series of Active Proxy Portfolio Shares inadvisable. These may include: (a) The extent to which trading is not occurring in the securities and/or the financial instruments composing the Proxy Portfolio and/or Actual Portfolio; or (b) whether other unusual conditions or circumstances detrimental to the maintenance of a fair and orderly market are present. If the Exchange becomes aware that the NAV, Proxy Portfolio, or Actual Portfolio with respect to a series of Active Proxy Portfolio Shares is not disseminated to all market participants at the same time, the Exchange shall halt trading in such series until such time as the NAV, Proxy Portfolio, or Actual Portfolio is available to all market participants at the same time.

#### Trading Rules

The Exchange deems the Shares to be equity securities, thus rendering trading in the Shares subject to the Exchange's existing rules governing the trading of equity securities. Shares will trade on the NYSE Arca Marketplace in all trading sessions in accordance with NYSE Arca Rule 7.34-E(a). As provided in NYSE Arca Rule 7.6-E, the minimum price variation ("MPV") for quoting and

<sup>21</sup> See NYSE Arca Rule 7.12-E.

entry of orders in equity securities traded on the NYSE Arca Marketplace is \$0.01, with the exception of securities that are priced less than \$1.00 for which the MPV for order entry is \$0.0001.

The Shares will conform to the initial and continued listing criteria under NYSE Arca Rule 8.601-E. The Exchange has appropriate rules to facilitate trading in the Shares during all trading sessions.

A minimum of 100,000 Shares for the Fund will be outstanding at the commencement of trading on the Exchange. In addition, pursuant to Rule 8.601-E(d)(1)(B), the Exchange, prior to commencement of trading in the Shares, will obtain a representation from the Trust that (i) the NAV per Share of the Fund will be calculated daily, (ii) the NAV, Proxy Portfolio, and the Actual Portfolio for the Fund will be made publicly available to all market participants at the same time, and (iii) the Trust and any person acting on behalf of the Trust will comply with Regulation Fair Disclosure under the Securities Exchange Act of 1934, including with respect to any Custom Basket.

With respect to Active Proxy Portfolio Shares, all of the Exchange member obligations relating to product description and prospectus delivery requirements will continue to apply in accordance with Exchange rules and federal securities laws, and the Exchange and the Financial Industry Regulatory Authority, Inc. ("FINRA") will continue to monitor Exchange members for compliance with such requirements.

#### Surveillance

The Exchange represents that trading in the Shares will be subject to the existing trading surveillances, administered by the Exchange, as well as cross-market surveillances administered by FINRA on behalf of the Exchange, which are designed to detect violations of Exchange rules and applicable federal securities laws.<sup>22</sup> The Exchange represents that these procedures are adequate to properly monitor Exchange trading of the Shares in all trading sessions and to deter and detect violations of Exchange rules and federal securities laws applicable to trading on the Exchange.

The surveillances referred to above generally focus on detecting securities trading outside their normal patterns, which could be indicative of

<sup>22</sup> FINRA conducts cross-market surveillances on behalf of the Exchange pursuant to a regulatory services agreement. The Exchange is responsible for FINRA's performance under this regulatory services agreement.

manipulative or other violative activity. When such situations are detected, surveillance analysis follows and investigations are opened, where appropriate, to review the behavior of all relevant parties for all relevant trading violations.

The Exchange or FINRA, on behalf of the Exchange, or both, will communicate as needed regarding trading in the Shares and underlying exchange-traded instruments with other markets and other entities that are members of the ISG, and the Exchange or FINRA, on behalf of the Exchange, or both, may obtain trading information regarding trading such securities and underlying exchange-traded instruments from such markets and other entities. In addition, the Exchange may obtain information regarding trading in such securities and underlying exchange-traded instruments from markets and other entities that are members of ISG or with which the Exchange has in place a comprehensive surveillance sharing agreement.<sup>23</sup>

The Adviser will make available daily to FINRA and the Exchange the Actual Portfolio of the Fund, upon request, in order to facilitate the performance of the surveillances referred to above.

In addition, the Exchange also has a general policy prohibiting the distribution of material, non-public information by its employees.

Commentary .03 to NYSE Arca Rule 8.601-E provides that the Exchange will implement and maintain written surveillance procedures for Active Proxy Portfolio Shares. As part of these surveillance procedures, the Investment Company's investment adviser will, upon request by the Exchange or FINRA, on behalf of the Exchange, make available to the Exchange or FINRA the daily Actual Portfolio holdings of each series of Active Proxy Portfolio Shares. The Exchange believes that the ability to access the information on an as needed basis will provide it with sufficient information to perform the necessary regulatory functions associated with listing and trading series of Active Proxy Portfolio Shares on the Exchange, including the ability to monitor compliance with the initial and continued listing requirements as well as the ability to surveil for manipulation of Active Proxy Portfolio Shares.

The Exchange will utilize its existing procedures to monitor issuer compliance with the requirements of Rule 8.601-E. For example, the Exchange will continue to use intraday alerts that will notify Exchange

personnel of trading activity throughout the day that may indicate that unusual conditions or circumstances are present that could be detrimental to the maintenance of a fair and orderly market. The Exchange will require from the issuer of a series of Active Proxy Portfolio Shares, upon initial listing and periodically thereafter, a representation that it is in compliance with Rule 8.601-E. The Exchange notes that Commentary .01 to Rule 8.601-E requires an issuer of Active Proxy Portfolio Shares to notify the Exchange of any failure to comply with the continued listing requirements of Rule 8.601-E. In addition, the Exchange will require the issuer to represent that it will notify the Exchange of any failure to comply with the terms of applicable exemptive and no-action relief. As part of its surveillance procedures, the Exchange will rely on the foregoing procedures to become aware of any non-compliance with the requirements of Rule 8.601-E.

With respect to the Fund, all statements and representations made in this filing regarding (a) the description of the portfolio, (b) limitations on portfolio holdings, or (c) the applicability of Exchange listing rules specified in this rule filing shall constitute continued listing requirements for listing the Shares on the Exchange. The Exchange will obtain a representation from the Trust, prior to commencement of trading in the Shares of the Fund, that it will advise the Exchange of any failure by the Fund to comply with the continued listing requirements, and, pursuant to its obligations under Section 19(g)(1) of the Act, the Exchange will monitor for compliance with the continued listing requirements. If the Fund is not in compliance with the applicable listing requirements, the Exchange will commence delisting procedures under NYSE Arca Rule 5.5-E(m).

## 2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b) of the Act,<sup>24</sup> in general, and furthers the objectives of Section 6(b)(5) of the Act,<sup>25</sup> in particular, in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market

system, and, in general, to protect investors and the public interest.<sup>26</sup>

With respect to the proposed listing and trading of Shares of the Fund, the Exchange believes that the proposed rule change is designed to prevent fraudulent and manipulative acts and practices in that the Shares will be listed and traded on the Exchange pursuant to the initial and continued listing criteria in NYSE Arca Rule 8.601-E.

The Fund's holdings will conform to the permissible investments as set forth in the Application and Exemptive Order, and the holdings will be consistent with all requirements in the Application and Exemptive Order.<sup>27</sup>

The Exchange or FINRA, on behalf of the Exchange, or both, will communicate as needed regarding trading in the Shares and underlying exchange-traded instruments with other markets and other entities that are members of the ISG, and the Exchange or FINRA, on behalf of the Exchange, or both, may obtain trading information regarding trading in the Shares and underlying exchange-traded instruments from such markets and other entities. In addition, the Exchange may obtain information regarding trading in the Shares and underlying exchange-traded instruments from markets and other entities that are members of ISG or with which the Exchange has in place a comprehensive surveillance sharing agreement. Any foreign common stocks held by the Fund will be traded on an exchange that is a member of the ISG or with which the Exchange has in place a comprehensive surveillance sharing agreement.

The daily dissemination of the identity and quantity of Tracking Basket component investments, together with the right of Authorized Participants to create and redeem each day at the NAV, will be sufficient for market participants to value and trade Shares in a manner that will not lead to significant deviations between the Shares' Bid/Ask Price and NAV.

The Fund's investments, including derivatives, will be consistent with its investment objective and will not be used to enhance leverage (although certain derivatives and other investments may result in leverage). That is, the Fund's investments will not be used to seek performance that is the multiple or inverse multiple (*e.g.*, 2X or - 3X) of the Fund's primary broad-

<sup>23</sup> For a list of the current members of ISG, see [www.isgportal.org](http://www.isgportal.org).

<sup>24</sup> 15 U.S.C. 78f(b).

<sup>25</sup> 15 U.S.C. 78f(b)(5).

<sup>26</sup> The Exchange represents that, for initial and continued listing, the Fund will be in compliance with Rule 10A-3 under the Act, as provided by NYSE Arca Rule 5.3-E.

<sup>27</sup> See note 14, *supra*.

based securities benchmark index (as defined in Form N-1A).

The proposed rule change is designed to promote just and equitable principles of trade and to protect investors and the public interest in that the Exchange will obtain a representation from the Trust that the NAV per Share of the Fund will be calculated daily and that the NAV, Tracking Basket, and Actual Portfolio for the Fund will be made available to all market participants at the same time. Investors can obtain the Fund's SAI, shareholder reports, and its Form N-CSR, Form N-PORT, and Form N-CEN. The Fund's SAI and shareholder reports will be available free upon request from the Fund, and those documents and the Form N-CSR, Form N-PORT, and Form N-CEN may be viewed on-screen or downloaded from the Commission's website.

Commentary .03 to NYSE Arca Rule 8.601-E provides that the Exchange will implement and maintain written surveillance procedures for Active Proxy Portfolio Shares. As part of these surveillance procedures, the Investment Company's investment adviser will, upon request by the Exchange or FINRA, on behalf of the Exchange, make available to the Exchange or FINRA the daily portfolio holdings of each series of Active Proxy Portfolio Shares. The Exchange believes that the ability to access the information on an as needed basis will provide it with sufficient information to perform the necessary regulatory functions associated with listing and trading series of Active Proxy Portfolio Shares on the Exchange, including the ability to monitor compliance with the initial and continued listing requirements as well as the ability to surveil for manipulation of Active Proxy Portfolio Shares. With respect to the Fund, the Adviser will make available daily to FINRA and the Exchange the portfolio holdings of the Fund upon request in order to facilitate the performance of the surveillances referred to above.

The Exchange will utilize its existing procedures to monitor compliance with the requirements of Rule 8.601-E. For example, the Exchange will continue to use intraday alerts that will notify Exchange personnel of trading activity throughout the day that may indicate that unusual conditions or circumstances are present that could be detrimental to the maintenance of a fair and orderly market. The Exchange will require from the Trust, upon initial listing and periodically thereafter, a representation that it is in compliance with Rule 8.601-E. The Exchange notes that Commentary .01 to Rule 8.601-E requires the issuer of the Shares to

notify the Exchange of any failure to comply with the continued listing requirements of Rule 8.601-E. In addition, the Exchange will require the issuer to represent that it will notify the Exchange of any failure to comply with the terms of applicable exemptive and no-action relief. The Exchange will rely on the foregoing procedures to become aware of any non-compliance with the requirements of Rule 8.601-E.

In addition, with respect to the Fund, a large amount of information will be publicly available regarding the Fund and the Shares, thereby promoting market transparency.

Quotation and last sale information for the Shares and U.S. exchange-traded instruments (excluding futures contracts) will be available via the CTA high-speed line, from the exchanges on which such securities trade, or through major market data vendors or subscription services. Quotation and last sale information for futures contracts will be available from the exchanges on which they trade. Intraday price information for all exchange-traded instruments, which include all eligible instruments except cash and cash equivalents, will be available from the exchanges on which they trade, or through major market data vendors or subscription services. Intraday price information for cash equivalents is available through major market data vendors, subscription services and/or pricing services.

The website for the Fund will include a form of the prospectus that may be downloaded, and additional data relating to NAV and other applicable quantitative information, updated on a daily basis. Trading in Shares of the Fund will be halted if the circuit breaker parameters in NYSE Arca Rule 7.12-E have been reached or because of market conditions or for reasons that, in the view of the Exchange, make trading in the Shares inadvisable. Trading in the Shares will be subject to NYSE Arca Rule 8.601-E(d)(2)(D), which sets forth circumstances under which Shares of the Fund will be halted. In addition, as noted above, investors will have ready access to the Tracking Basket and quotation and last sale information for the Shares. The identity and quantity of investments in the Tracking Basket will be publicly available on the Fund's website before the commencement of trading in Shares on each Business Day. The Shares will conform to the initial and continued listing criteria under Rule 8.601-E.<sup>28</sup>

The Fund's holdings will conform to the permissible investments as set forth

in the Application and Exemptive Order, and the holdings will be consistent with all requirements in the Application and Exemptive Order.<sup>29</sup> Any foreign common stocks held by the Fund will be traded on an exchange that is a member of the ISG or with which the Exchange has in place a comprehensive surveillance sharing agreement.

The proposed rule change is designed to perfect the mechanism of a free and open market and, in general, to protect investors and the public interest in that it will facilitate the listing and trading of an additional type of actively-managed exchange-traded product that will enhance competition among market participants, to the benefit of investors and the marketplace. The Exchange will obtain a representation from the Adviser, prior to commencement of trading in the Shares of the Fund, that it will advise the Exchange of any failure by the Fund to comply with the continued listing requirements, and, pursuant to its obligations under Section 19(g)(1) of the Act, the Exchange will monitor for compliance with the continued listing requirements. If the Fund is not in compliance with the applicable listing requirements, the Exchange will commence delisting procedures under NYSE Arca Rule 5.5-E(m).

As noted above, the Exchange has in place surveillance procedures relating to trading in the Shares and may obtain information via ISG from other exchanges that are members of ISG or with which the Exchange has entered into a comprehensive surveillance sharing agreement. In addition, as noted above, investors will have ready access to information regarding quotation and last sale information for the Shares.

#### *B. Self-Regulatory Organization's Statement on Burden on Competition*

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange believes the proposed rule change would permit listing and trading of an additional actively-managed ETF that has characteristics different from existing actively-managed and index ETFs and would introduce additional competition among various ETF products to the benefit of investors.

<sup>28</sup> See note 4, *supra*.

<sup>29</sup> See note 14, *supra*.

*C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others*

No written comments were solicited or received with respect to the proposed rule change.

### III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A) of the Act<sup>30</sup> and Rule 19b-4(f)(6) thereunder.<sup>31</sup>

A proposed rule change filed pursuant to Rule 19b-4(f)(6) under the Act normally does not become operative for 30 days after the date of its filing. However, Rule 19b-4(f)(6)(iii)<sup>32</sup> permits the Commission to designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has requested that the Commission waive the 30-day operative delay so that the proposal may become operative immediately upon filing. The Exchange notes that the Commission has approved and noticed for immediate effectiveness proposed rule changes to permit listing and trading on the Exchange of Active Proxy Portfolio Shares similar to the Fund.<sup>33</sup> The proposed listing rule for the Fund raises no novel legal or regulatory issues. Thus, the Commission believes that waiver of the 30-day operative delay is consistent with the protection of investors and the public interest. Accordingly, the Commission hereby waives the 30-day operative delay and designates the proposed rule change operative upon filing.<sup>34</sup>

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may

temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

### IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

#### Electronic Comments

- Use the Commission's internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to [rule-comments@sec.gov](mailto:rule-comments@sec.gov). Please include File Number SR-NYSEArca-2022-14 on the subject line.

#### Paper Comments

- Send paper comments in triplicate to: Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090. All submissions should refer to File Number SR-NYSEArca-2022-14. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-NYSEArca-2022-14 and

should be submitted on or before April 18, 2022.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.<sup>35</sup>

**J. Matthew DeLesDernier,**  
Assistant Secretary.

## SECURITIES AND EXCHANGE COMMISSION

[SEC File No. 270-536, OMB Control No. 3235-0596]

### Proposed Collection; Comment Request

*Upon Written Request, Copies Available From:* Securities and Exchange Commission, Office of FOIA Services, 100 F Street NE, Washington, DC 20549-2736.

#### Extension:

Rule 204A-1

Notice is hereby given that, pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission (the "Commission") is soliciting comments on the collections of information summarized below. The Commission plans to submit these existing collections of information to the Office of Management and Budget for extension and approval.

The title for the collection of information is "Rule 204A-1 (17 CFR 275.204A-1) under the Investment Advisers Act of 1940" (15 U.S.C. 80b-1 *et seq.*). Rule 204A-1 (the "Code of Ethics Rule") requires investment advisers registered with the Commission to (i) set forth standards of conduct expected of advisory personnel (including compliance with the federal securities laws); (ii) safeguard material nonpublic information about client transactions; and (iii) require the adviser's "access persons" to report their personal securities transactions, including transactions in any mutual fund managed by the adviser. The Code of Ethics Rule requires access persons to obtain the adviser's approval before investing in an initial public offering or private placement. The Code of Ethics Rule also requires prompt reporting, to the adviser's chief compliance officer or another person designated in the code of ethics, of any violations of the code. Finally, the Code of Ethics Rule requires the adviser to provide each supervised person with a copy of the code and any amendments, and require the

<sup>35</sup> 17 CFR 200.30-3(a)(12).

<sup>30</sup> 15 U.S.C. 78s(b)(3)(A).

<sup>31</sup> 17 CFR 240.19b-4(f)(6). In addition, Rule 19b-4(f)(6)(iii) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

<sup>32</sup> 17 CFR 240.19b-4(f)(6)(iii).

<sup>33</sup> See *supra* notes 9 and 10.

<sup>34</sup> For purposes only of waiving the 30-day operative delay, the Commission has also considered the proposed rule's impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

supervised persons to acknowledge, in writing, their receipt of these copies.

The purposes of the information collection requirements are to: (i) Ensure that advisers maintain codes of ethics applicable to their supervised persons; (ii) provide advisers with information about the personal securities transactions of their access persons for purposes of monitoring such transactions; (iii) provide advisory clients with information with which to evaluate advisers' codes of ethics; and (iv) assist the Commission's examination staff in assessing the adequacy of advisers' codes of ethics and assessing personal trading activity by advisers' supervised persons.

The respondents to this information collection are investment advisers registered with the Commission. The Commission has estimated that compliance with rule 204A-1 imposes a burden of approximately 87 hours per adviser annually for an estimated total annual burden of 1,275,659 hours.

An agency may not conduct or sponsor a collection of information unless it displays a currently valid OMB control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid OMB control number.

Written comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's estimates of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted in writing within 60 days of this publication by May 27, 2022.

Please direct your written comments to David Bottom, Director/Chief Information Officer, Securities and Exchange Commission, C/O John Pezzullo, 100 F Street NE, Washington, DC 20549; or send an email to: [PRA\\_Mailbox@sec.gov](mailto:PRA_Mailbox@sec.gov).

Dated: March 23, 2022.

**J. Matthew DeLesDernier**,  
Assistant Secretary.

## SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-94484; File No. SR-CBOE-2021-071]

### Self-Regulatory Organizations; Cboe Exchange, Inc.; Notice of Filing of Amendment No. 2 and Order Granting Accelerated Approval of a Proposed Rule Change, as Modified by Amendment No. 2, To Adopt a New Trading Session That Will Operate After the Close of the Regular Trading Hours Session

March 22, 2022.

#### I. Introduction

On December 15, 2021, Cboe Exchange, Inc. ("Exchange" or "CBOE") filed with the Securities and Exchange Commission ("Commission"), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),<sup>1</sup> and

Rule 19b-4 thereunder,<sup>2</sup> a proposed rule change to adopt a new forty-five-minute trading session that will operate after the close of the Regular Trading Hours session. The proposed rule change was published for comment in the **Federal Register** on December 23, 2021.<sup>3</sup> On January 12, 2022, the Commission designated a longer period for Commission action on the proposed rule change, until March 23, 2022.<sup>4</sup> On February 14, 2022, the Exchange filed Amendment No. 1 to the proposed rule change, which replaced and superseded the proposed rule change.<sup>5</sup> On March 4, 2022, the Exchange filed Amendment No. 2 to the proposed rule change, which replaced and superseded the proposed rule change.<sup>6</sup> The Commission has received no comment letters on the proposal. The Commission is publishing this notice to solicit comments on the proposed rule change, as modified by Amendment No. 2, from interested persons and is approving the proposed rule change, as modified by Amendment No. 2, on an accelerated basis.

#### II. The Exchange's Description of the Proposed Rule Change, as Modified by Amendment No. 2

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

<sup>2</sup> 17 CFR 240.19b-4.

<sup>3</sup> See Securities Exchange Act Release No. 93819 (December 23, 2021), 86 FR 73038 ("Notice").

<sup>4</sup> See Securities Exchange Act Release No. 94082, 87 FR 5878 (January 27, 2022).

<sup>5</sup> On March 4, 2022, the Exchange withdrew Amendment No. 1 to the proposed rule change.

<sup>6</sup> In Amendment No. 2, the Exchange revised the proposal to: (i) Reflect recently adopted CBOE rules relating a modified trading schedule for U.S. domestic holidays, held order instructions, and a new domestic holiday; (ii) provide additional description of several aspects of the proposal, including the impact of the modified trading schedule for U.S. domestic holidays on the proposed Curb session and notifications relating to catastrophic error reviews; and (iii) make technical and conforming changes. The Exchange also further discussed why it is appropriate to resume trading during GTH and Curb after a trading halt and clarified the application of CBOE Rule 5.22 during Curb. Amendment No. 2 is available on the Commission's website at: <https://www.sec.gov/comments/sr-cboe-2021-071/sr-cboe2021071-20118875-271696.pdf>.

<sup>1</sup> 15 U.S.C. 78s(b)(1).

*A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change*

1. Purpose

The Exchange proposes to amend its Rules to allow trading on the Exchange during a new forty-five-minute trading session called the “Curb Trading Hours” or “Curb” session. The proposed rule change to adopt a third trading session aims to increase the overlap in time that SPX, VIX and Mini-SPX Index (“XSP”) options are open alongside the related futures contracts.<sup>7</sup>

By way of background, the Exchange currently offers two trading sessions.<sup>8</sup> Regular Trading Hours (“RTH”) and Global Trading Hours (“GTH”). Rule 5.1 currently sets forth the trading hours for the Exchange’s RTH and GTH trading sessions. Particularly, RTH for transactions in equity options (including options on individual stocks, ETFs, ETNs, and other securities) are the normal business days and hours set forth in the rules of the primary market currently trading the securities underlying the options, except for options on ETFs, ETNs, Index Portfolio Shares, Index Portfolio Receipts, and Trust Issued Receipts the Exchange designates to remain open for trading beyond 4:00 p.m.<sup>9</sup> but in no case later than 4:15 p.m.<sup>10</sup> RTH for transactions in index options are from 9:30 a.m. to 4:15 p.m., subject to certain exceptions.<sup>11</sup> The GTH session currently begins at 8:15 p.m. (previous day) and goes until 9:15 a.m. on Monday through Friday.<sup>12</sup> The Exchange’s Rules provide that the

<sup>7</sup> For example, related futures products such as Cboe Volatility Index (VX) Futures are currently available for trading on Cboe Futures Exchange, LLC (“CFE”) during an extended trading hours session from 4:00 p.m. to 5:00 p.m. Eastern Time (ET) Monday through Friday. See CFE Rule 1202, which sets forth the trading hours for VX futures (times referenced in CFE Rule 1202 are Central Standard Time (CT)). Related future contracts are also offered on the Chicago Mercantile Exchange (“CME”) during the proposed hours of Curb. See <https://www.cmegroup.com/trading-hours.html#equityIndex> and <https://www.cmegroup.com/markets/equities/sp/e-mini-sandp500.html> which reflects, among other things, that E-mini S&P 500 Futures trade between 6:00 p.m. Sunday through 5:00 p.m. Friday ET (5:00 p.m.–4:00 p.m. CT) with a daily maintenance period from 5:00 p.m.–6:00 p.m. ET (4:00 p.m.–5:00 p.m. CT).

<sup>8</sup> The term “trading session” means the hours during which the Exchange is open for trading for Regular Trading Hours or Global Trading Hours (each of which may referred to as a trading session). Unless otherwise specified in the Rules or the context otherwise indicates, all Rules apply in the same manner during each trading session. See Rule 1.1 (Definitions).

<sup>9</sup> All times referenced herein are Eastern Time.

<sup>10</sup> See Rule 5.1(b)(1).

<sup>11</sup> See Rule 5.1(b)(2).

<sup>12</sup> See Rule 5.1(c).

Exchange may designate as eligible for trading during GTH any exclusively listed index option designated for trading under Chapter 4, Section B. Currently, SPX, VIX and XSP are approved for trading during GTH.<sup>13</sup>

By way of further background, the Exchange originally adopted the GTH trading session due to global demand from investors to trade SPX and VIX options, as alternatives for hedging and other investment purposes, particularly as a complementary investment tool to VIX futures.<sup>14</sup> In response to customer demand for additional options to trade during the GTH trading session for similar purposes, the Exchange later designated XSP options to be eligible for trading during GTH.<sup>15</sup> The current GTH session allows market participants to engage in trading SPX, XSP and VIX options in conjunction with trading VIX futures on CFE during extended hours, as VIX futures are open for trading on CFE nearly 23 hours a day, 5 days a week.<sup>16</sup> The proposed rule change seeks to further maximize the overlap in time that SPX, XSP and VIX options may be open alongside the related futures contracts, as futures markets, including CFE, operate extended trading hours that overlap with the proposed Curb Trading Hours. The proposed rule change to adopt an additional trading session therefore provides market participants with expanded access to trade SPX, XSP and VIX options.

The proposed Curb session will provide an extra forty-five-minute electronic only session for trading between 4:15 p.m. and 5:00 p.m. for designated classes, which will be added Monday through Friday. Unlike the current RTH and GTH trading sessions, there will be no opening auction process that initiates the Curb trading session. Rather, RTH will seamlessly transition to the Curb trading session at 4:15 p.m., which is when RTH for index options products ends. Any unexecuted orders that are eligible to trade during the Curb trading session that remain on the Book at the end of the RTH trading session will remain on the Book and be eligible for execution during Curb. Transactions effected during the Curb session will

<sup>13</sup> If the Exchange designates a class of index options as eligible for trading during GTH, FLEX Options with the same underlying index are also deemed eligible for trading during GTH. See Rule 5.1(c). The Exchange also notes that although eligible, XSP is not currently listed for trading during GTH.

<sup>14</sup> See Securities Exchange Act Release No. 34–73017 (September 8, 2014), 79 FR 54758 (September 12, 2014) (SR–CBOE–2014–062).

<sup>15</sup> See Securities Exchange Act Release No. 34–914 [sic] (September 14, 2015), 80 FR 522 [sic] (September 18, 2015) (SR–CBOE–2015–079).

<sup>16</sup> See CFE Rule 1202(b).

have the same trade date as the immediately preceding RTH session (*i.e.*, the day on which the transactions were effected). The Curb trading session will however still be a separate trading session from RTH and GTH and while most of the Exchange Rules apply to trading during all three trading sessions, certain differences will apply as further described below.<sup>17</sup> For example, unlike the RTH session, there will be no open outcry trading on the floor during the Curb trading session and only designated index options will be available for trading (similar to GTH). As such, Chapter 4, Sections A, D, E, F and G will not apply as those cover Equity and ETP Options, Corporate Debt Securities Options, Credit Options, Government Security Options, and Interest Rate Options, respectively, which will be not available during Curb. Similarly, Chapter 5, Section G will not apply as such rules pertain to manual order handling and open-outcry trading. The Exchange also notes that all Trading Permit Holders (“TPHs”) may participate in Curb. TPHs will not need to apply or take any additional steps to participate in Curb. Additionally, because the Exchange will use the same servers and hardware during Curb as it uses for RTH and GTH, TPHs may use the same ports and connections to the Exchange for all trading sessions. The Book used during Curb will be the same Book used during RTH and GTH. The Exchange proposes to amend various rules to adopt provisions relating to the proposed Curb session and conform existing rules accordingly, as described more fully below.

Curb Session

As discussed above, Rule 5.1 (Trading Days and Hours) currently sets forth the trading hours for RTH and GTH. The Exchange proposes to adopt Rule 5.1(d),<sup>18</sup> which will set forth the trading hours and rules applicable to trading during the proposed Curb trading session. Specifically, proposed Rule 5.1(d) will provide that except under unusual conditions as may be determined by the Exchange, or the Holiday hours set forth in Rule 5.1(e), Curb Trading Hours are from 4:15 p.m.

<sup>17</sup> For example, business conduct rules in Chapter 8 and rules related to doing business with the public in Chapter 9 will apply during the Curb trading session. Additionally, a broker-dealer’s due diligence and best execution obligations apply during the Curb trading session.

<sup>18</sup> Current Rule 5.1(d) (Holidays) will be renumbered to Rule 5.1(e). In connection with the proposed numbering change, the Exchange also proposes to update a cross reference to Rule 5.1(d) in Rule 4.22 to reflect the new rule number of Rule 5.1(e). References to current Rule 5.1(d) will herein be referred to as Rule 5.1(e).

to 5:00 p.m. on Monday through Friday.<sup>19</sup> Proposed Rule 5.1(d)(1) provides that the Exchange may designate as eligible for trading during Curb Trading Hours any exclusively listed option that the Exchange has designated for trading under Chapter 4, Section B. The Exchange proposes to approve SPX, XSP and VIX for trading on the Exchange during Curb session, which are all classes that are currently approved for trading during GTH (*i.e.*, an “All Sessions Class”<sup>20</sup>).<sup>21</sup> FLEX Options with the same underlying index will also be deemed eligible for trading during the Curb session.<sup>22</sup>

Proposed Rule 5.1(d)(2) will provide that the Exchange may list for trading during the Curb trading session any series in eligible classes that it may list pursuant to Rule 4.13.<sup>23</sup> Any series in eligible classes that were open for trading during RTH are expected to be open for trading during the Curb trading session on that same trading day (subject to Rule 5.31).<sup>24</sup> The Exchange notes however that it will not list any p.m.-settled series during Curb on a series’ expiration date as such series would continue to expire prior to the start of the Curb trading session at 4:00

<sup>19</sup> For example, the Exchange may modify its business days and trading hours to not be open for business or to have shortened trading hours due to unusual circumstances or in connection with terrorism, acts of war, loss or interruption of facilities utilized by the Exchange, or a period of mourning. The Exchange notes there will also be no Curb Trading Hours where the RTH session closes early due to a holiday (*e.g.*, on Christmas Eve).

<sup>20</sup> See Proposed Rule 1.1 (All Sessions Class) which means an options class the Exchange lists for trading during all trading sessions.

<sup>21</sup> Although the Exchange is proposing to approve XSP as eligible to trade during Curb, it does not intend to initially list XSP during Curb, as it is also approved, but not currently listed, during GTH. The Exchange however anticipates listing XSP during Curb and GTH at some point in the future.

<sup>22</sup> Delta-Adjusted at Close (“DAC”) will not be available during the Curb trading session (nor are they available currently during GTH) as the adjustment calculation for DAC orders is linked to the RTH market close for the underlying securities and indexes. See Current Rule 5.6(c) (“Delta-Adjusted at Close or DAC” Definition), which provides a User may not designate a DAC order as All Sessions. See also proposed Rule 5.6(c) which will similarly provide a User may also not designate a DAC order as RTH and Curb.

<sup>23</sup> FLEX Options (that are not Cliquet-settled) with an exercise price that is a percentage of the closing value of the underlying index on the trade date will not be available during Curb (nor are they available currently during GTH), as the exercise price is linked to the RTH market close for the underlying index.

<sup>24</sup> Rule 5.31 describes the opening auction process. Although the Exchange does not intend to conduct an opening rotation under the normal course of business, an opening rotation may be utilized under certain circumstances as described further below and in such instances, the availability of a series being available for trading during Curb will be subject to Rule 5.31.

p.m. on such date.<sup>25</sup> A.M.-settled options will cease trading at the conclusion of the Curb session the business day preceding the last day of trading in the underlying securities prior to expiration.<sup>26</sup>

Proposed Rule 5.1(d)(3) will provide that the Exchange will not report a value of an index underlying an index option trading during Curb because the value of the underlying index will not be recalculated during or at the close of Curb. Pursuant to Rules 4.10(f) and (g), to list options on a broad-based index (currently, the only options that are proposed to trade during Curb), current indexes values must be widely disseminated at least once every 15 seconds. Because index reporting authorities do not currently plan to disseminate updated values during the proposed Curb Trading Hours, the Exchange proposes to address the lack of dissemination of index values during Curb under proposed Rule 5.1(d)(3), which will supersede the requirements under Rules 4.10(f) and (g). The Exchange notes authority to decide when and how frequently to calculate and disseminate index values lies solely with a reporting authority. The reporting authority for the S&P 500 Index, S&P Dow Jones Indices LLC (“S&P”), does not intend to calculate or disseminate current values of the S&P 500 Index during the proposed Curb trading session. Similarly, Cboe Global Indices, LLC (“CGI”), the reporting authority for the Cboe Volatility Index (the “VIX Index”)<sup>27</sup> does not intend to calculate or disseminate current values of the VIX Index during the proposed Curb trading session. Particularly, VIX is intended to represent the market’s expectation of S&P 500 volatility over the next 30 days. The accuracy of the calculation for VIX indicative (or spot) values depends on the quality of bid and offer quotes for constituent SPX options series. As the proposed additional Curb trading session has yet

<sup>25</sup> See Rule 5.1(b)(2)(C).

<sup>26</sup> See Rule 4.13(a)(4) and 4.13(a)(5)(C). Pursuant to Rules 4.13(a)(4) and 4.13(a)(5)(C), the last day of trading for A.M.-settled index options (such as standard SPX and VIX, respectively) shall be the business day preceding the last day of trading in the underlying securities prior to expiration. Accordingly, for example, A.M.-settled SPX options that expire on a Friday will continue to cease trading at the close of the business day on the preceding Thursday (albeit now at 5:00 p.m. instead of 4:15 p.m. since the business day as proposed ends at the conclusion of Curb). Similarly, VIX options (which are A.M.-settled) that expire on a Wednesday will normally continue to cease trading at the close of the business day on the preceding Tuesday (albeit now at 5:00 p.m. instead of 4:15 p.m. since, as noted above, the business day as proposed ends at the conclusion of Curb).

<sup>27</sup> CGI is an affiliate of the Exchange.

to be implemented, CGI cannot currently know that the SPX option quotes displayed during those hours will be sufficient to calculate accurate and meaningful VIX indicative values in the same manner it does during RTH or the GTH session.<sup>28</sup> Indeed, the Exchange expects that initially there will be overall lower levels of trading during the proposed Curb session as compared to both RTH and the GTH session (between 3:00 a.m. and 9:15 a.m.). Therefore, CGI has determined to not calculate VIX spot values during the proposed Curb Trading Hours.

Moreover, the Exchange notes that the proposed Curb Trading Hours is a significantly shorter trading session than RTH or GTH (only 45 minutes versus several hours) and the Exchange does not believe it is as meaningful or beneficial to disseminate the index for the session given the short length of the session. However, after the launch of the Curb Trading Hours, to the extent CGI as index calculator determines that SPX quotes during such session will support accurate VIX indicative values, CGI will reconsider whether to calculate and disseminate these values during Curb (and the Exchange would submit rule filings to amend the rules, as necessary). The Exchange notes that it similarly did not report a value of an index underlying an index option trading during GTH when the GTH session was first adopted.<sup>29</sup> Moreover, the Exchange recently extended the GTH session and amended its rules to provide that it will not report a value of an index underlying an index option trading during those new additional hours.<sup>30</sup> Additionally, as discussed further below, the Exchange proposes to amend Rule 9.20, to make clear that any TPH that accepts orders for customers for execution during Curb must disclose to those customers various risks related to trading during that trading session, including the risk that an updated

<sup>28</sup> The Exchange only disseminates VIX indicative values during GTH between 3:00 a.m.–9:15 a.m. The Exchange will not report a value of VIX during GTH from 8:15 p.m. (previous day) to 3:00 a.m., because the value of the underlying index will not be recalculated during this time. See Rule 5.1(c)(3).

<sup>29</sup> See Securities Exchange Act Release No. 34–73704 (November 28, 2014), 79 FR 72044 (December 4, 2014) (SR–CBOE–2014–062) (order granting accelerated approval of proposed rule change, as modified by Amendments Nos 1 and 2, to adopt Extended Trading Hours for SPX and VIX). Particularly, the Exchange proposed to adopt Rule 6.1A(k), which provided “[t]he Exchange will not report a value of an index underlying an index option trading during Extended Trading Hours, because the value of the underlying index will not be recalculated during or at the close of Extended Trading Hours.”

<sup>30</sup> See Securities Exchange Act Release No. 34–93403 (October 22, 2021), 86 FR 59824 (October 28, 2021) (SR–CBOE–2021–061).

underlying index or portfolio value or intraday indicative value may not be calculated or publicly disseminated during Curb.<sup>31</sup> Further, the closing value of the index from the immediately preceding RTH session will still be available for TPHs that trade during Curb. Proposed Rule 5.1(d)(3) (*i.e.*, the lack of dissemination of index values during Curb) will also have no impact on trading during Curb.

Proposed Rule 5.1(d)(4) provides trading during Curb Trading Hours is electronic only on the System. There will be no open outcry trading on the floor during Curb Trading Hours. If in accordance with the Rules and User's instructions an order would route to PAR, the System will return the order to the TPH during Curb Trading Hours. The Exchange notes that the provisions of proposed Rule 5.1(d) are substantively similar to the corresponding rules for GTH.

Lastly, the Exchange proposes to amend Rule 5.1(e) to address how the recently adopted Holiday hours will apply to the Curb trading session. Currently, Rule 5.1(e), provides that subject to the holiday schedule outlined in Rule 5.1(e)(1) and (2) (the "Holiday Schedule"), the Exchange is not open for business on New Year's Day, Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day, Independence Day, Juneteenth, Labor Day, Thanksgiving Day, or Christmas Day. Rule 5.1(e)(1) further outlines the trading hours schedule for domestic holidays (*i.e.*, Martin Luther King, Jr. Day, Presidents' Day, Memorial Day, Independence Day, Labor Day, and Thanksgiving Day)<sup>32</sup> and Rule 5.1(e)(2) outlines the trading hours schedule for international holidays (*i.e.*, Good Friday, Christmas Day and New Year's Day). The Exchange proposes to update subparagraphs (1) and (2) of Rule 5.1(e) to reference the Curb trading session to make clear how the holiday schedule will impact all three trading sessions (*i.e.*, RTH, GTH and Curb).

First, the Exchange proposes to amend Rule 5.1(e)(1) which currently provides that for domestic holidays, the

<sup>31</sup> The Exchange proposes to make a clarifying update to Rule 9.20 to make clear that the underlying index or portfolio value and Intraday Indicative Value "may not" be (as opposed to "will not" be) calculated or widely disseminated during GTH or Curb. The Exchange believes the proposed change will reduce potential confusion given current values of VIX are in fact widely disseminated during GTH at least once 15 seconds for a portion of the GTH session (*i.e.*, between 3:00 a.m. to 9:15 a.m.). See Rule 5.1(c)(3).

<sup>32</sup> The Exchange proposes to add a reference to the Juneteenth National Independence Day in Rule 5.1(e)(1) to make clear it is considered a domestic holiday.

trading day following the holiday consists of the following three trading sessions: (i) A GTH session from 8:15 p.m. on the calendar day preceding the holiday to 11:30 a.m. on the holiday, (ii) a GTH session from 8:15 p.m. on the holiday, or if the holiday is on a Friday, on the Sunday following the holiday, to 9:15 a.m. on the trading day, and (iii) a RTH session on the trading day. Particularly, the Exchange proposes to update Rule 5.1(e)(1) to provide that the trading day following a domestic holiday will consist of four (instead of three) trading sessions, including a Curb Trading Hours session on the trading day following a domestic holiday. Proposed Rule 5.1(e)(1) would also make clear that there will no RTH or Curb session on the day a domestic holiday is observed.<sup>33</sup>

The Exchange similarly proposes to amend Rule 5.1(e)(2) which currently provides that for international holidays, the trading day following the holiday consists of the following two trading sessions: (i) A GTH session from 8:15 p.m. on the holiday, or if the holiday is observed on a Friday, on the Sunday following the holiday, to 9:15 a.m. on the trading day and (ii) a RTH session on the trading day. The Exchange proposes to update Rule 5.1(e)(2) to provide that the trading day following an international holiday will consist of three (instead of two) trading sessions and make clear that the trading day following an international holiday includes a Curb Trading Hours session. Proposed Rule 5.1(e)(2) would also make clear that there will be no RTH or Curb session on the day an international holiday is observed nor a GTH session that immediately precedes the day an international holiday is observed.<sup>34</sup>

<sup>33</sup> The following illustrates the domestic holiday schedule using Memorial Day as an example. The holiday GTH session preceding Memorial Day will start at 8:15 p.m. on the Sunday prior to Memorial Day and end at 11:30 a.m. on Memorial Day. The market will then be closed at 11:30 a.m. on Memorial Day (Monday) (*i.e.*, there will be no RTH or Curb session on Memorial Day). The next GTH trading session will begin at 8:15 p.m. on Memorial Day and proceed as normal until 9:15 a.m. on the Tuesday following Memorial Day, which will be followed by a normal RTH session that begins at 9:30 a.m. on Tuesday, followed by a normal Curb session that begins at 4:15 p.m. on Tuesday. All trading from Sunday night through Tuesday Curb market close is considered to be part of the Tuesday trading day.

<sup>34</sup> The following illustrates the international holiday schedule using Good Friday as an example. Particularly, there will be no GTH session immediately preceding Good Friday (*i.e.*, no GTH session that starts on Thursday). Rather, the market will be closed from Curb market close on the Thursday preceding Good Friday until the GTH session that starts at 8:15 p.m. on the Sunday following Good Friday. All trading from Sunday night through Curb market close on the following Monday is for a trading day of Monday.

## Definitions

The Exchange proposes to adopt and amend various definitions under Rule 1.1 (Definitions) in connection with the proposed Curb trading session as follows:

- "All Sessions Class." An "All Sessions" class is a class that is currently eligible to trade during both GTH and RTH. The Exchange proposes to amend the definition so that such term applies to an options class the Exchange lists for trading during all three trading sessions (*i.e.*, RTH, GTH and Curb).<sup>35</sup>

- "Book and Simple Book." As noted above, the Book used during Curb will be the same Book used during RTH and GTH. The Exchange therefore proposes to amend this definition so that such terms mean the electronic book of simple orders and quotes maintained by the System, which single book will be used during all three trading sessions, including Curb.

- "Business Day and Trading Day." The Exchange proposes to reflect that a business day or trading day includes all trading sessions on that day (which includes GTH, RTH and Curb). Further, the Exchange will make clear that a business day or trading day that immediately follows a domestic holiday pursuant to Rule 5.1(e) includes the RTH session, the Curb session that immediately follows it, and the two GTH sessions that immediately precede it.

- "Curb Trading Hours and Curb." The Exchange proposes to adopt a new term and definition for the new trading session and specifically proposes to provide the terms "Curb Trading Hours" and "Curb" mean the trading session consisting of the hours outside of RTH and GTH during which transactions in options may be effected on the Exchange and are set forth in Rule 5.1. Having a separate definition for each trading session allows the Exchange Rules to reflect these differences and the separation of the trading sessions.

- "Global Trading Hours and GTH." The Exchange also proposes to update the definition to add a reference to the new Curb Trading Hours.

- "Trading Session." The Exchange lastly proposes add a reference to Curb Trading Hours in this definition to provide that trading sessions will refer to the hours during which the Exchange is open for trading for RTH, GTH or Curb.

<sup>35</sup> At this time, SPX, XSP and VIX are the only classes that will be designated as eligible for trading during Curb. Because these classes are also eligible to trade during RTH and GTH, they will be considered "All Sessions classes".

## Exchange Determinations

Generally, trading during the Curb trading session will occur in the same manner as it occurs during the RTH trading session. However, because the Curb market may have different characteristics than the RTH market (such as all electronic trading, lower trading levels, reduced liquidity, and fewer participants), the Exchange may deem it appropriate to make different determinations for trading rules for each trading session. For similar reasons as it relates to GTH, Rule 1.5(b) currently states to the extent the Rules allow the Exchange to make a determination, including on a class-by-class or series-by-series basis or a group basis, if the Exchange determines to list SPX or VIX on a group basis pursuant to Rule 4.13,<sup>36</sup> the Exchange may make a determination for GTH that differs from the determination it makes for RTH. The Exchange proposes to amend Rule 1.5(b) to similarly allow the Exchange to make a determination for Curb that differs from the determination it makes for RTH or GTH (*i.e.*, the Exchange will be allowed to make a determination on a trading session-by-trading session basis). The Exchange maintains flexibility with respect to certain rules so that it may apply different settings and parameters to address the specific characteristics of that class and its market.<sup>37</sup> The Exchange represents that

<sup>36</sup> The Exchange may list SPX or VIX on a group basis. See Rule 4.13(f). When determining whether to list a class on a group basis, the Exchange intends to generally select series with common expirations or classifications (*e.g.*, end-of-week series or end-of-month series, short-term option series, long-term option series, or series that expire on a particular expiration date) and trade them under individual listing symbols. For example, the Exchange currently lists SPX options in two groups. Particularly, the Exchange lists SPX options with A.M.-settled standard third-Friday expirations under symbol “SPX” and lists options on the S&P 500 Index with P.M.-settled standard third-Friday expirations and nonstandard expirations with all other expirations under symbol “SPXW.” If the Exchange lists SPX or VIX on a group basis, the Exchange may apply different trading parameters (including different allocation algorithms) to each group. The Exchange may also determine the eligible categories of Market-Maker participants for each group (Designated Primary Market-Makers (“DPMs”), Lead Market-Makers (“LMMs”), or Market-Makers).

<sup>37</sup> For example, Rule 5.32(a) allows the Exchange to determine electronic allocation algorithms on a class-by-class basis; Rule 5.52(e)(2) allows the Exchange to determine bid/ask differential requirements on a class-by-class basis; Rules 5.34(a)(2), 5.34(a)(4)(C), 5.34(a)(5), 5.34(b)(6), and Rules 5.34(c)(1) and (10) allow the Exchange to set certain price reasonability checks on a class-by-class basis; and Rules 5.37(a)(1), 5.38(a)(1), 5.39(a)(1), and 5.40(a)(1), allow the Exchange to activate various auctions on a class-by-class basis. Because trading during Curb will be electronic only, and because trading during Curb may be different than RTH (such as lower trading levels, reduced liquidity and fewer participants), the Exchange

will have appropriate personnel available during Curb to make any determinations that Rules provide the Exchange or Exchange personnel will make (such as trading halts, opening series, and obvious errors).

## Exchange Order Types, Order Instructions and Times-in-Force

The Exchange next proposes to amend various exchange rules relating to available order types, order instructions and times-in-force the Exchange may make available during Curb. First, the Exchange proposes to amend Rule 5.6 (Order Types, Order Instructions and Times-in-Force) to make clear that all order types, order instructions, and times-in-force the Exchange makes available in an All Sessions class for RTH electronic trading are available in that class for Curb electronic trading (just as it is for GTH electronic trading), except as otherwise specified in the Rules.<sup>38</sup> The Exchange notes that it may not permit certain order types or order instructions to be applied to orders during Curb that it does permit during RTH and/or GTH (*i.e.*, the Exchange has the discretion to not make available certain order types or Order Instructions otherwise listed under Rules 5.30(a) and (b) and proposed Rule 5.30(c)).

## Order Types

The Exchange proposes to amend Rule 5.6(b) to provide that Users may not designate a market order as RTH and Curb.<sup>39</sup> Currently, market orders are not eligible for trading during GTH and as such, any order designated as “All Sessions” cannot be designated a market order. Similar to GTH, the Exchange notes there may be reduced liquidity, higher volatility, and wider spreads during Curb. Therefore, the Exchange believes it is appropriate to not allow these orders to participate in Curb trading in order to protect customers should wide price fluctuations occur due to the potential illiquid and volatile

believes it is appropriate to extend this flexibility to each trading session.

<sup>38</sup> For example, market orders, stop, and stop-limit orders will not be eligible for trading during Curb, just as they are not eligible for trading during GTH. See Rules 5.6(b) and (c).

<sup>39</sup> The Exchange also proposes to correct an inadvertent marking error that resulted in an incorrect rule reference to Rule 6.8(c) instead of Rule 5.5(c) in the definition of “Market Order” under Rule 5.6(b). See Securities Exchange Act Release No. 34-87320 (October 16, 2019), 84 FR 56501 (October 22, 2019) (SR-CBOE-2019-033), 5.6(b) and (c). [sic]

<sup>39</sup> The Exchange also proposes to correct an inadvertent marking error that resulted in an incorrect rule reference to Rule 6.8(c) instead of Rule 5.5(c) in the definition of “Market Order” [sic] under Rule 5.6(b) [sic]. See Securities Exchange Act Release No. 34-86374 (July 15, 2019), 84 FR 34963 (July 19, 2019) (SR-CBOE-2019-033).

nature of the market or other factors that could impact market activity.

## Order Instructions

The Exchange first proposes to update the “All Sessions” order description under Rules 5.6(c) and 5.33(b)(5) to make clear that orders designated as “All Sessions” (simple and complex, respectively) are eligible to trade in all trading sessions (*i.e.*, RTH, GTH and Curb). The Exchange also proposes to update the “All Sessions” description under Rules 5.6(c) and 5.33(b)(5) to further clarify what happens to unexecuted All Sessions orders at the end of the RTH and Curb trading sessions. Currently, Rule 5.6(c) specifies that an unexecuted All Sessions order on the GTH Book<sup>40</sup> at the end of a GTH session enters the RTH Queuing Book and becomes eligible for execution during the RTH opening rotation and trading session on that same trading day (subject to a User’s instructions). The Exchange proposes to further amend Rule 5.6(c) to clarify that (i) an unexecuted All Sessions order on the Book at the end of the RTH trading session remains on the Book and becomes eligible for execution during the Curb trading session on that same trading day, subject to a User’s instructions and (ii) an unexecuted All Sessions order on the Book at the end of the Curb trading session enters the GTH Queuing Book and becomes eligible for execution during the GTH opening rotation and trading session on the next day, subject to a User’s instructions.<sup>41</sup> The Exchange proposes to also add for clarity language providing that All Sessions “Day” orders on the Book at the conclusion of the Curb session will be canceled. Similar to Rule 5.6(c), Rule 5.33(b)(5) provides that an unexecuted All Sessions complex order resting in the Complex Order Book (“COB”) at the end of a GTH trading session remains in the COB and becomes eligible for execution during the RTH COB Opening Process or trading session on that same trading day, subject to a User’s instructions. Similar to the proposed changes to Rule 5.6(c), the Exchange proposes to update the “All Sessions” description under

<sup>40</sup> Since the term “Book” refers to a single book that is used during all trading sessions, the Exchange proposes to eliminate references to “GTH” or “RTH” preceding the term Book to avoid potential confusion.

<sup>41</sup> An unexecuted RTH Only simple order would not persist into the Curb or GTH sessions at the end of the RTH trading session as such orders are not eligible to trade during either of those sessions. Similarly, an unexecuted RTH and Curb simple order would not persist into the GTH session at the end of the Curb trading session as such orders will not be eligible to trade during GTH.

Rule 5.33(b)(5) to make clear that (i) an unexecuted All Sessions complex order resting in the COB at the end of the RTH trading session remains in the COB and becomes eligible for execution during the Curb trading session on that same trading day, subject to a User's instructions and (ii) an unexecuted All Sessions complex order resting in the COB at the end of a Curb trading session remains in the COB and becomes eligible for execution during the GTH COB Opening Process or trading session on the next trading day, subject to a User's instructions.<sup>42</sup> The Exchange also proposes to add for clarity language providing that All Sessions "Day" complex orders resting in the COB at the conclusion of the Curb session will be canceled.

The Exchange also proposes to amend certain other order descriptions under Rules 5.6(c) and Rule 5.33(b)(5) (Complex Orders). Particularly, the Exchange proposes to amend the descriptions of "All-or-None or AON" under Rule 5.6(c), "Delta-Adjusted at Close or DAC" under Rules 5.6(c) and 5.33(b)(5), and "Stop (Stop-Loss)" and "Stop-Limit" under Rule 5.6(b) to provide that Users may not designate the foregoing orders as RTH and Curb. Users similarly cannot designate such orders as All Sessions (*i.e.*, they are not currently eligible for GTH). The Exchange also proposes to amend the description of "RTH Only" orders under Rules 5.6(c) and 5.33(b)(5) to clarify that such orders are those that a User designates as eligible to trade only during RTH, or that are not designated as All Sessions or RTH and Curb. Additionally, the Exchange proposes to clarify that unexecuted RTH Only orders with a Time-in-Force of GTC or GTD on the Book (or COB) at the end of an RTH trading session are not eligible for execution during the Curb trading session on the same trading day (in addition to the current reference to not being eligible for the GTH trading session on the following trading day).<sup>43</sup>

<sup>42</sup> An unexecuted RTH Only complex order on the COB would not persist into the Curb or GTH sessions at the end of the RTH trading session as such orders are also not eligible to trade during either of those sessions. Similarly, an unexecuted RTH and Curb complex order would not persist into the GTH session at the end of the Curb trading session as such orders will not be eligible to trade during GTH.

<sup>43</sup> The Exchange also proposes to make a clarifying change to the description of "RTH Only" orders under Rule 5.33(b)(5) to explicitly reference the "COB Opening Process" in order to make clear that any unexecuted RTH Only order with a Time-in-Force of GTC or GTD on the COB at the end of a RTH trading session remains on the COB and becomes eligible for execution during the RTH COB Opening Process, which is what happens today. The language is consistent with the definition of "RTH Only" for simple orders under Rule 5.6(c).

To provide investors with the flexibility to have their orders and quotes execute during (i) RTH, (ii) RTH, GTH and Curb or only (iii) RTH and Curb, the proposed rule change adds a "RTH and Curb" order to the rules. More specifically, the Exchange proposes to adopt a description of "RTH and Curb" orders under both Rule 5.6(c) and Rule 5.33(b)(5) which will describe orders that are designated to trade only during RTH and Curb trading sessions. Particularly, an RTH and Curb Order will be an order (including a bulk message) a User designates as eligible to trade only during RTH and Curb or not designated as All Sessions or RTH Only. An unexecuted RTH and Curb order with a Time-in-Force of GTC or GTD on the Book (or COB) at the end of an RTH trading session remains in the Book (or COB) and becomes eligible for execution during the Curb trading session on the same trading day (but not during the GTH trading session on the following trading day), subject to a User's instructions. An unexecuted RTH and Curb order with a Time-in-Force of GTC or GTD on the Book (or COB) at the end of a Curb trading session enters the RTH Queuing Book (or COB) and becomes eligible for execution during the RTH opening rotation (or COB Opening Process) and trading session on the following trading day (but not during the GTH trading session on the following trading day), subject to a User's instructions. Additionally, all RTH and Curb Day orders resting on the Book (or COB) at the conclusion of the Curb trading session will be canceled.

#### Times-in-Force

The Exchange proposes to update the time times-in-force description of a "Day" order or quote under Rule 5.6(c) to make clear that any order or quote so designated, if not executed, will expire at the RTH market close for RTH Only orders (as such orders are not eligible for Curb or GTH) and expire at Curb market close for all All Sessions and RTH and Curb orders (as Curb is the last trading session of a given trading day).

The Exchange lastly proposes to update the Limit-on-Close ("LOC") definition to provide that a User may not designate an LOC order as All Sessions or RTH and Curb, as the execution of LOC orders is linked to the RTH market close.

#### Availability of Orders and Quotes for Electronic Processing

The Exchange next proposes to amend Rule 5.30 (Availability of Orders and Quotes for Electronic Processing) to adopt new subparagraph (c), which will specify which order types, order

instructions and times-in-force the Exchange may choose to make available during the Curb session. Specifically, the Exchange proposes to provide the Exchange may make the following available during Curb (the Exchange notes it also currently may make all these (other than RTH and Curb) available during GTH):

- (1) *Order Types*: Limit order.
- (2) *Order Instructions*: Attributable, Book Only, All Sessions, Cancel Back, Compression/PCC, Electronic Only, Match Trade Prevention ("MTP") Modifier, Minimum Quantity, Non-Attributable, Post Only, Price Adjust, Reserve Order, and RTH and Curb.
- (3) *Times-in-Force*: Day, Fill-or-Kill ("FOK"), Good-til-Cancelled ("GTC"), Good-til-Date ("GTD"), Immediate-or-Cancel ("IOC"), At the Open ("OPG").<sup>44</sup>
- (4) *Complex Orders*: Complex orders (see Rule 5.33 for types of complex orders) with a ratio greater than or equal to one-to-three (.333) and less than or equal to three-to-one (3.00) (except for Index Combo orders).

The Exchange also proposes to amend Rule 5.70, which sets forth order types, order instructions and times-in-force available for FLEX options, to add "RTH and Curb" to the list of available order instructions.

#### Entry of Orders and Quotes

The Exchange proposes to amend Rule 5.7 (Entry of Orders and Quotes) to clarify that Users can enter orders and quotes into the system or cancel previously entered orders and quotes from 8:00 p.m. until Curb market close (instead of RTH market close). Further, the Exchange proposes to update the time under Rule 5.7(e) that Users may cancel orders and quotes with Time-in-Force of GTC or GTD that remain on the book from 4:45 p.m. to 5:15 p.m. The Exchange notes that the proposed rule change would allow Users to cancel any GTC and GTD orders until 5:15 p.m., not just orders in All Sessions classes. The Exchange believes the proposed rule change provides Users with additional flexibility to manage their orders in all classes that remain in the Book following the Curb market close. In particular, the proposed rule change will provide Users with All Sessions and RTH and Curb GTC and GTD orders with the same time period following the end of Curb to cancel orders and provide Users with RTH Only GTC and

<sup>44</sup> Orders designated as OPG for the Curb session will generally be rejected unless circumstances require an opening rotation to occur in which case, they will be accepted. As discussed more fully below, the Curb session does not normally have an opening rotation, however an opening rotation may occur if the Exchange determines to start Curb after 4:15 p.m. or after any trading halt during the Curb session.

GTD orders with additional time to cancel orders. The Exchange notes that cancelling a RTH Only GTC or GTD order at 5:15 p.m. has the same effect as cancelling that order at 4:45 p.m.—ultimately it accommodates the User's goal of cancelling an order prior to it potentially executing during the RTH Opening Process the following morning (*i.e.*, it merely provides 30 additional minutes to cancel a RTH Only GTC or GTH order).

#### Trading Halts

The Exchange next proposes to amend Rule 5.20 (Trading Halts). By way of background, Rule 5.20(a) provides that any two Floor Officials, in consultation with a designated senior executive officer of the Exchange, may halt trading in any security in the interests of a fair and orderly market and to protect investors and sets forth several different factors that may be considered in making the foregoing determination. Rule 5.20(b) provides that trading in a security that has been the subject of a halt under paragraph (a) above may be resumed (as described in Rule 5.31(g))<sup>45</sup> upon a determination by two Floor Officials, in consultation with a designated senior executive officer of the Exchange, that the interests of a fair and orderly market are best served by a resumption of trading. It also states that among the factors to be considered in making this determination are whether the conditions which led to the halt are no longer present. Rule 5.20(d) sets forth exceptions relating to trading halts and resumptions in index options. In particular, Rule 5.20(d) provides that when the hours of trading of the underlying primary securities market for an index option do not overlap or coincide with those of the Exchange, and during Global Trading Hours, Rule 5.22 (which describes market-wide trading halts due to extraordinary market volatility) and subparagraphs (a)(3) and (5) (the factors applicable to index options) and subparagraph (b) of Rule 5.20 do not apply, except for subparagraph (a)(6).<sup>46</sup> By way of further

background, Rule 5.20(a)(3) provides that in the case of an index option, the Exchange may consider: (A) The extent to which trading is not occurring in the stocks or options underlying the index; (B) the current calculation of the index derived from the current market prices of the stocks is not available; or (C) the “current index level,” which is the implied forward level based on volatility index (security) futures prices, for a volatility index is not available or the cash (spot) value for a volatility index is not available. Rule 5.20(a)(5) provides that the Exchange may consider the extent to which the opening process pursuant to Rule 5.31 has been completed or other factors regarding the status of the opening process.

Generally, in connection with Rule 5.20, the Exchange considers halting trading only in response to unusual conditions or circumstances, as it wants to interrupt trading as infrequently as possible and only if necessary, to maintain a fair and orderly market. The proposed rule change amends Rule 5.20(d) to indicate that subparagraph (a)(3) of Rule 5.20 also does not apply to Curb (just as it does not apply during GTH). In particular at least one of the primary listing markets is not open during the proposed Curb session.<sup>47</sup> Additionally, as discussed above, the index values (including the spot value for VIX) will not be calculated during Curb.<sup>48</sup> Thus, the Exchange believes it is appropriate to exclude Curb from the application of Rule 5.20(a)(3) because the factors in that provision will always be true during Curb, whereas during RTH, it would be unusual, for example, for stocks or options underlying an index to not be trading or the current calculation of the index to not be available. Exclusion of Curb from this provision will allow trading during Curb to occur despite the existence of those conditions (if the Exchange considered the existence of those conditions during Curb, trading during Curb could be halted every day). It is appropriate for the Exchange to consider any unusual conditions or

circumstances detrimental to the maintenance of a fair and orderly market during Curb, which may, for example, include whether the underlying primary securities market was halted at the close of the preceding RTH session (in which case the Exchange will evaluate whether the condition that led to the halt has been resolved or would not impact trading during Curb) or significant events that occur during Curb.

While the Exchange proposes to exclude application of Rule 5.20(a)(3) from the Curb session, the Exchange does not believe there are any distinguishing factors between Curb (or GTH) and RTH that warrants subparagraph (a)(5) (the provision that allows the Exchange to consider the extent to which the opening process has been completed) or Rule 5.20(b) (*i.e.*, the provision that allows the Exchange to resume trading) to not apply. Indeed, the Exchange sees no reason why it should not consider the extent to which the opening process has been completed or other factors regarding the status of the opening process during either GTH or Curb. Although there will be no opening process to initiate the Curb session, there may still be an opening process pursuant to Rule 5.31(g) that may occur should a trading halt be declared during Curb. As such, the Exchange believes it's appropriate to not preclude this factor from being considered during either GTH or Curb. The Exchange also sees no reason why it should not allow the resumption of a halted security during GTH or Curb if a determination is made by two Floor Officials, in consultation with a designated senior executive officer of the Exchange, that the interests of a fair and orderly market are best served by a resumption of trading, including when the conditions that led to the trading halt are no longer present. For example, during GTH, the Exchange shall automatically halt for a prescribed period of time if certain events transpire on the Chicago Mercantile Exchange (“CME”) during its Overnight Trading Hours (“OTH”) session. Specifically the Exchange will halt trading during GTH for a prescribed period of time where there is a halt of trading in related futures on CME during the CME OTH session due to the activation of a Dynamic Price Fluctuation Limit or when a related future is in a limit state on CME due to an activation of the CME OTH Price Limit.<sup>49</sup> The Exchange believes that notwithstanding its rules relating to automated halts and trading resumptions, it is appropriate to also

<sup>45</sup> Rule 5.31(g) describes the opening auction process that takes place upon the resumption of trading following a trading halt and is applicable to all trading sessions.

<sup>46</sup> The Exchange proposes to eliminate the reference to Rule 5.20(a)(6) in Rule 5.20(d). Pursuant to Rule 5.20(a)(6) the Exchange may consider whether other unusual conditions or circumstances are present, including the activation of price limits on futures exchanges or the halt of trading in related futures with respect to index options. The Exchange notes that Rule 5.20(a)(6) will continue to apply during GTH (and Curb) notwithstanding the proposed rule change. The Exchange believes the applicability of Rule 5.20(a)(6) is implied and otherwise clear and that

it is not necessary to explicitly reference this provision under subparagraph (d) of Rule 5.20.

<sup>47</sup> For example, the New York Stock Exchange, LLC (“NYSE”) does not offer trading hours during the proposed hours of the Curb session. See NYSE Rules 1.1 and 7.34. Specifically, NYSE Rule 1.1 defines “Core Trading Hours” as the hours between 9:30 a.m. through 4:00 p.m. ET and NYSE Rule 7.34 provides the Exchange has two trading sessions each day: (1) The “Early Trading Session” which begins at 7:00 a.m. and concludes at the commencement of the Core Trading Session and (2) the Core Trading Session, which as defined in NYSE Rule 1.1, begins at 9:30 a.m. and concludes at 4:00 p.m. ET.

<sup>48</sup> See proposed Rule 5.1(d)(3).

<sup>49</sup> See Cboe Options Rule 5.20(f)(1) and (2).

provide the Exchange the ability to manually resume trading at any time pursuant to Rule 5.20(b) if it believes the interests of a fair and orderly market are best served by doing so. For example, it may be in the interests of fair and orderly markets to resume trading once the conditions which led to a halt are no longer present, such as when a trading halt in related futures with respect to index options has ended, or a futures product is no longer in a limit state.

The Exchange next proposes to amend Rule 5.20(d) with respect to a reference to Rule 5.22. Under Rule 5.22 (Market-wide Trading Halts due to Extraordinary Market Volatility), the Exchange will halt trading in all classes whenever a market-wide trading halt (commonly known as a circuit breaker) is initiated in response to extraordinary market conditions. Rule 5.22(b)(1) states that the Exchange will halt trading for 15 minutes if a Level 1 or Level 2 Market Decline occurs after 9:30 a.m. and up to and including 3:25 p.m. (or 12:25 p.m. for an early scheduled close). Additionally, the Exchange will not halt trading if a Level 1 or Level 2 Market Decline occurs after 3:25 p.m. (or 12:25 p.m., if applicable). Rule 5.22(b)(2) states that the Exchange will halt trading until the next trading day if a Level 3 Market Decline occurs. As referenced under Rule 5.20(d), Rule 5.22 does not currently apply during the GTH session. Particularly, Rule 5.22(b)(1) does not apply, as the beginning of GTH occurs past the 15-minute halt window for a Level 1 or Level 2 Market Decline. The Exchange believes Rule 5.22(b)(1) should similarly not apply during Curb because the beginning of the proposed Curb session would occur past the 15-minute halt window for a Level 1 or Level 2 Market Decline. Additionally, pursuant to Rule 5.22(c)(1)(B), if a circuit breaker is initiated in all stocks due to a Level 1 or Level 2 Market Decline, the Exchange may resume trading in stock index options any time after the 15-minute halt period.<sup>50</sup> Rule 5.22(b)(2) also does not apply during GTH, as the GTH

session is considered the next trading day and Rule 5.22(b)(2) requires the Exchange to halt trading until the “next” trading day if a Level 3 Market Decline occurs at any time during the trading day. Unlike GTH however, the Curb session is considered the same trading day as the preceding RTH session, and therefore, unlike GTH, Rule 5.22(b)(2) can and should apply. Accordingly, the Exchange proposes to amend Rule 5.20(d) to make clear that the only applicable trading halt provisions that do not apply during GTH and Curb are Rules 5.22 and 5.20(a)(3), with the exception of Rule 5.22(b)(2) which will apply during Curb.

#### Opening Auction Process

As discussed above, the Exchange does not intend to adopt an opening auction process for either simple or complex orders to commence the Curb trading session as the proposed start time of Curb immediately follows the close of RTH. As such, there will be no Curb-specific queuing period or opening rotation trigger to initiate the Curb session. Instead, at 4:15 p.m., the RTH trading session will seamlessly transition directly into the Curb trading session, and any All Sessions orders resting on the Book will remain on the book and become eligible for execution during Curb subject to a User’s instructions. In connection with the proposal, the Exchange proposes to amend Rules 5.31 and 5.33 to make clear that under normal circumstances there will be no opening rotation at the start of Curb. Particularly, the Exchange proposes to amend Rule 5.31(d), which sets forth various triggers upon which the System will initiate an opening rotation for the series in a class, by adopting new subparagraph (3) to explicitly provide that the System will not initiate an opening rotation at the start of the Curb Trading Hours. The Exchange also proposes to address what happens in the event Curb does not start immediately at 4:15 p.m. As noted above, proposed Rule 5.1(d) will provide that Curb will operate from 4:15 p.m. to 5:00 p.m., except under unusual conditions as may be determined by the Exchange. If such conditions result in a determination to start Curb sometime after 4:15 p.m., the Exchange will need to initiate an opening rotation to start the Curb session as there would then be a “gap” between RTH and Curb and the transition would no longer be seamless. As such, the Exchange proposes to also add language to proposed Rule 5.31(d)(3) which would provide that should the Exchange determine to start Curb after 4:15 p.m. due to unusual conditions as may be determined by the

Exchange, the Exchange will utilize an opening rotation to initiate the session at a time to be announced by the Exchange. Proposed Rule 5.31(d)(3) would also clarify that the queuing period for any such opening rotation would begin at 4:15 p.m. The Exchange also proposes to make clear in Rule 5.31(d)(3) that the Exchange will follow the opening auction process described in Rule 5.31(g) to resume trading following the declaration of a trading halt during Curb Trading Hours.

Similarly, the Exchange proposes to amend Rule 5.33(c), which describes the COB Opening Process, to clarify that the System will not initiate the COB Opening Process at the start of Curb. More specifically, Rule 5.33(c) currently provides that the COB Opening Process occurs at the beginning of each trading session and after a trading halt. The Exchange proposes to update Rule 5.33(c) to make clear that the COB Opening Process occurs only at the beginning of RTH and GTH (instead of “each” trading session). The Exchange notes that should a trading halt be declared during Curb, the Exchange will utilize the COB Opening Process described under Rule 5.33(c) upon a resumption of trading. Similar to proposed Rule 5.31(d)(3), the Exchange proposes to adopt new Rule 5.33(c)(3) to explicitly provide that there will be no COB Opening Process at the start of the Curb Trading Hours. Proposed Rule 5.33(c)(3) will also address what happens in the event Curb does not start immediately at 4:15 p.m. That is, if such conditions result in a determination to start Curb sometime after 4:15 p.m., the Exchange will initiate the COB Opening Process at a time to be announced by the Exchange. Proposed Rule 5.33(c)(3) would also clarify that the System will accept complex orders for inclusion in the COB Opening Process beginning at 4:15 p.m. The Exchange will also make clear in proposed Rule 5.33(c)(3) that the Exchange will follow the COB Opening Process described in Rule 5.33(c) to resume trading following the declaration of a trading halt during Curb Trading Hours. The Exchange believes the proposed rule changes relating to the opening processes for simple and complex orders (or lack thereof) provides transparency as to how the Exchange will initiate the Curb session under normal circumstances, as well as in the event unusual conditions result in the Curb session starting after 4:15 p.m.

#### Market-Maker Rules

Current Rule 5.50(a) (Market-Maker Appointments) provides that a Market-Maker’s selected class appointment

<sup>50</sup> See Rule 5.22(c)(1)(B), which provides that if a circuit breaker is initiated in all stocks due to a Level 1 or Level 2 Market Decline, the Exchange will halt trading in all other stock options not specified in subparagraph (c)(1)(A) (e.g., stock index options, such as VIX, SPX and XSP) and may resume trading in such options any time after the 15-minute halt period (i.e., the Exchange will be able to resume trading after a Level 1 or Level 2 Market Decline no later than 3:40 p.m., which is 15 minutes after 3:25 p.m. (the latest time the Exchange may halt pursuant to Rule 5.22(b)(1)) and 35 minutes prior to the start of the proposed Curb session). See also Securities Exchange Act Release No. 34-61450 (September 28, 2011), 76 FR 61447 (October 4, 2011) (SR-CBOE-2011-087).

applies to classes during all trading sessions. In other words, if a Market-Maker selects an appointment in SPX options, for example, that appointment would apply during both GTH, RTH and Curb (and thus, the Market-Maker would have an appointment to make markets in SPX during GTH, RTH and Curb). As a result, the Market-Maker continuous quoting obligations set forth in Rule 5.52(d) applies to the class for an entire trading day (including all three trading sessions). Pursuant to Rule 5.52(d), a Market-Maker must enter continuous bids and offers in 60% of the series of the Market-Maker's appointed classes, excluding any adjusted series, any intra-day add-on series on the day during which such series are added for trading, any Quarterly Option series, and any series with an expiration of greater than 270 days.<sup>51</sup> The Exchange calculates this requirement by taking the total number of seconds the Market-Maker disseminates quotes in each appointed class (excluding the series noted above) and dividing that time by the eligible total number of seconds each appointed class is open for trading that day. The Exchange also notes however, that pursuant to Rule 5.52(d)(2)(E), the obligations apply only when the Market-Maker is quoting in a particular class during a given trading day and the obligations are not applicable to an appointed class if a Market-Maker is not quoting in that appointed class. Accordingly, if a Market-Maker does not wish to quote during the proposed new Curb trading session, but does quote the current RTH hours, then so long as the Market-Maker doesn't log in and quote starting at 4:15 p.m., the time between 4:15 p.m. and 5:00 p.m. (the Curb session) won't be considered when determining a Market-Maker's compliance with the quoting obligations. Accordingly, the Exchange believes the addition of the proposed Curb Trading Hours session will have a de minimis, if any, impact on a Market-Maker's continuous quoting obligations, as they may continue to choose when to actively quote and have their obligations to their appointed classes apply.<sup>52</sup> Moreover, selecting an appointment in SPX or VIX options will be optional and within the discretion of a Market-Maker. Additionally, Market-Makers have the opportunity to quote during Curb (and receive the benefits of acting as a Market-Maker with respect to transactions it effects during that time) without obtaining an additional Trading Permit or creating additional

connections to the Exchange. Given this ease of access to the Curb trading session, the Exchange believes Market-Makers may be encouraged to quote during the trading session. The Exchange believes Market-Makers will continue to have an incentive to quote during Curb given the significance of the SPX and VIX within the financial markets, the expected demand, and given that the related futures also trading during those hours (which may permit execution of certain hedging strategies). The Exchange believes continuing to extend a Market-Maker's appointment to Curb notwithstanding the proposed extension of the trading session will enhance liquidity during that trading session, which benefits all investors during those hours. Therefore, the Exchange believes the proposed rule change provides customer trading interest with a net benefit and continues to maintain a balance of Market-Maker benefits and obligations.

With respect to Lead-Market-Makers ("LMMs"), the Exchange plans to utilize the same LMM structure it uses today during GTH. More specifically, Rule 3.55 (LMMs) currently provides that the Exchange may approve one or more Market-Makers to act as LMMs in each class during GTH. Further, subparagraph (b) of Rule 5.55 (LMMs) provides that if a LMM is approved to act as an LMM during GTH, then the LMM must comply with the continuous quoting obligation and other obligations of Market-Makers set forth in Rule 5.52(d)(2) but does not have to comply with the obligations under Rule 5.55(a). Additionally, subparagraph (a)(2)(B)(iv) of Rule 5.32 (Order and Quote Book Processing, Display, Priority and Execution) provides that the DPM/LMM/PMM participation entitlement does not apply during GTH. Similar to GTH, the Exchange expects lower trading liquidity and trading levels during Curb as compared to RTH, and thus fewer opportunities for an LMM to receive a participation entitlement. As such, the Exchange does not expect that the RTH obligation/benefit structure would provide a similar incentive during Curb. More specifically, without the possibility of receiving a participation entitlement on a sufficient volume of trades, the Exchange believes there would be insufficient incentive for LMMs to undertake an obligation to quote at heightened levels, which could result in even lower levels of liquidity. The Exchange therefore proposes to amend Rules 3.55, 5.55 and 5.32 to add references to Curb such that the same LMM rules that are used during GTH

will also apply during Curb.<sup>53</sup> Accordingly, LMMs appointed in the Curb session will not be obligated to satisfy heightened continuous quoting and opening quoting standards during Curb, nor will they receive a benefit in exchange for satisfying an obligation (*i.e.*, LMMs will not receive a participation entitlement during Curb).<sup>54</sup>

The Exchange notes that to the extent the Exchange appoints a Designated Primary Market-Maker ("DPM") or Preferred Market-Maker ("PMM") to a class for the Curb trading session, the Exchange would similarly not use the obligation/benefit structure. As such, the Exchange also proposes to amend subparagraph (a)(2)(B)(iv) of Rule 5.32 (Order and Quote Book Processing, Display, Priority and Execution) to provide that the DPM/LMM/PMM participation entitlement does not apply during GTH or Curb.

#### FLEX

Subparagraph (b) of Rule 5.71 (Opening of FLEX Trading) currently sets forth the times that FLEX traders may begin submitting FLEX Orders into an electronic FLEX Auction, a FLEX AIM, or a FLEX SAM or initiate an open outcry FLEX Auction on the trading floor for the RTH and GTH sessions. The Exchange proposes to add the time FLEX traders may submit such orders during Curb, which is after 4:15 p.m. (which is the start time of the Curb trading session).

#### Catastrophic Errors

The Exchange next proposes to amend Rule 6.5 (Nullification and Adjustment of Option Transactions Including Obvious) to specify the time deadline relating to catastrophic error<sup>55</sup> notifications in subparagraph (d)(2) for Curb. First, Rule 6.5(d) provides that a party that believes that it participated in a transaction that was the result of a Catastrophic Error must notify the Exchange's Trade Desk. The Exchange

<sup>53</sup> The Exchange notes that it may appoint LMMs in both GTH and Curb, neither GTH nor Curb or only GTH or Curb. The Exchange also notes that to the extent it determines to appoint LMMs in both GTH and Curb, such LMM may, but is not required to be, the same LMM for each trading session.

<sup>54</sup> The Exchange may determine in the future to adopt via a separate rule filing an incentive program that would provide appointed LMMs a rebate if they meet certain heightened continuous quoting standards during the proposed additional hours, if the Exchange believes it is necessary to encourage LMMs to provide significant liquidity during this time.

<sup>55</sup> A catastrophic error is deemed to have occurred when the execution price of a transaction is higher or lower than the Theoretical Price for the series by an amount equal to at least the amounts set forth under Rule 6.5(d)(1).

<sup>51</sup> See Rule 5.52(d)(2).

<sup>52</sup> See Proposed Rule 5.52(d)(2)(E).

proposes to update Rule 6.5(d) to clarify that like transactions occurring during RTH,<sup>56</sup> notification relating to trades executed during Curb must be received by the Exchange's Trade Desk by 8:30 a.m. on the first trading day following the execution.<sup>57</sup> The Exchange also proposes to clarify in Rule 6.5(d)(2) the cutoff time for transactions in an expiring options series that take place on an expiration day (*i.e.*, P.M.-settled options). Currently Rule 6.5(d)(2) provides that for transactions in an expiring options series that take place on an expiration day, a party must notify the Exchange's Trade Desk within 45 minutes after the close of "trading that same day". In order to avoid confusion as to whether or not the close of trading refers to the close of the RTH session or the proposed Curb session, the Exchange proposes to clarify that such notification must be submitted by the close of the "RTH session". As discussed above, P.M.-settled options will continue to expire at 4:00 p.m. on the date of expiration. As such, the Exchange believes it's appropriate to continue to provide the same amount of time for notification as it does today.

#### Disclosure

Current Rule 9.20 currently requires TPHs to make certain disclosures to customers regarding material trading risks that exist during GTH. The Exchange proposes to similarly require that TPHs make similar disclosures to customers regarding material trading risks that also exist during Curb. Similar to GTH, the Exchange expects overall lower levels of trading during Curb compared to RTH. While trading processes during Curb will be substantially similar to trading processes during RTH (as noted above), the Exchange believes it is important for investors, particularly public customers, to be aware of any differences and risks that may result from lower trading levels and thus requires these disclosures. Accordingly, Rule 9.20 will

<sup>56</sup>For consistency in the Rulebook, the Exchange proposes to capitalize the reference to "regular trading hours" in Rule 6.5(d)(2).

<sup>57</sup>For example, notification relating to a possible catastrophic error for a transaction that occurred on a Tuesday, either during RTH or Curb, must be received by 8:30 a.m. on the following Wednesday. If a transaction occurred on the day prior to a domestic holiday, notification must still be received by 8:30 a.m. on the first trading following the day of execution (*i.e.*, must be received on the holiday). For example, notification relating to a possible catastrophic error for a transaction that occurred on the Wednesday before Thanksgiving, either during RTH or Curb, must be received by 8:30 a.m. on Thanksgiving, as the Exchange is still open for trading on Thanksgiving through 11:30 a.m. and it is considered the first trading day following the day of execution.

be amended to require the same customer disclosures during Curb as are required during GTH. Specifically, no Trading Permit Holder may accept an order from a customer for execution during Curb without disclosing to that customer that trading during Curb involves material trading risks, including the possibility of lower liquidity (including fewer Market-Makers quoting), higher volatility, changing prices, an exaggerated effect from news announcements, wider spreads, the absence of an updated underlying index or portfolio value or intraday indicative value and lack of regular trading in the securities underlying the index or portfolio and any other relevant risk. Rule 9.20 currently provides an example of these disclosures, which the Exchange proposes to amend to add references to Curb Trading Hours in addition to Global Trading Hours references. The Exchange believes that requiring TPHs to disclose these risks to non-TPH customers will facilitate informed participation in Curb.

The Exchange also intends to distribute to TPHs and make available on its website a Regulatory Circular regarding Curb that discloses, among other things, (1) that the current underlying index value may not be updated during Curb, (2) that lower liquidity during Curb may impact pricing, (3) that higher volatility during Curb may occur, (4) that wider spreads may occur during Curb, (5) the circumstances that may trigger trading halts during Curb, (6) required customer disclosures (as described above), and (7) suitability requirements. The Exchange believes that, with this disclosure, Curb Trading Hours are appropriate and beneficial to market participants that choose to participate in the session, notwithstanding the absence of a disseminated updated index value during those hours.

#### Discussion

As set forth above, the differences in the Rules between the trading process during Curb and RTH is that, similar to GTH, certain order types and instructions will not be available during Curb, values for indexes underlying index options will not be disseminated during Curb, and TPHs that accept orders from customers during Curb will be required to make certain disclosures to those customers. Additionally, as discussed, unlike either RTH or GTH, the Exchange will not use an opening auction process at the start of the Curb session. Other rules however, will apply in the same manner, but the Exchange may make different determinations

between RTH and Curb, just as the Exchange may do between RTH and GTH. The Exchange believes these differences are consistent with the differences between the characteristics of each trading session. The Exchange also notes the following:

- All TPHs may, but will not be required to, participate during Curb.<sup>58</sup> As noted above, while a Market-Maker's appointment to an All Sessions class will apply to that class whether it quotes in series in that class or not during Curb, the Exchange believes the proposed Curb trading session will have a de minimis, if any, impact on a Market-Maker's continuous quoting obligations, as they may continue to choose when to actively quote and have their obligations to their appointed classes apply. Additionally, even if a Market-Maker elects to not quote during all or part of Curb, its ability to satisfy its continuous quoting obligation will not be substantially impacted given the short length of Curb as well as the few classes that will be listed for trading during Curb.

- The Exchange will use the same connection lines, message formats, and feeds during RTH, GTH and Curb.<sup>59</sup> TPHs may use the same ports and EFIDs<sup>60</sup> for each trading session.<sup>61</sup>

- Order processing will operate in the same manner during Curb as it does during RTH or GTH. There will be no changes to the ranking, display, or allocation algorithms rules.

- There will be no changes to the processes for clearing, settlement, exercise, and expiration.<sup>62</sup>

- The Exchange will report Exchange quotation and last sale information to the Options Price Reporting Authority ("OPRA") pursuant to the Plan for Reporting of Consolidated Options Last

<sup>58</sup>Unlike GTH, Clearing TPHs do not need to be authorized by the Options Clearing Corporation ("OCC") to operate during the Curb session. As such, TPHs do not need separate letters of guarantee (*i.e.*, in addition to any letters of guarantee on file for RTH) to also operate during the Curb trading session.

<sup>59</sup>The same telecommunications lines used by TPHs during RTH and/or GTH may be used during Curb, and these lines will be connected to the same application server at the Exchange during all three trading sessions.

<sup>60</sup>The term "EFID" means an Executing Firm ID. The Exchange assigns an EFID to a TPH, which the System uses to identify the TPH and the clearing number for the execution of orders and quotes submitted to the System with that EFID.

<sup>61</sup>A TPH may elect to have separate ports or EFIDs for each trading session, but the Exchange will not require that.

<sup>62</sup>The Exchange has held discussions with the Options Clearing Corporation, which is responsible for clearance and settlement of all listed options transactions and has informed the Exchange that it will be able to clear and settle all transactions that occur on the Exchange and handle exercises of options during Curb.

Sale Reports and Quotation Information (the “OPRA Plan”) during the proposed Curb Trading Hours in the same manner it currently reports this information to OPRA during RTH and GTH today.<sup>63</sup> Therefore, all TPHs that elect to trade during the proposed Curb session will have access to quote and last sale information during that trading session. Exchange proprietary data feeds will also be disseminated during Curb using the same formats and delivery mechanisms with which the Exchange disseminates them during RTH and GTH today. Use of these proprietary data feeds during Curb will be optional (as they are today during RTH and GTH).<sup>64</sup>

- The same TPHs that are required to maintain connectivity to a backup trading facility during RTH and GTH will be required to do so during Curb.<sup>65</sup> Because the same connections and servers will be used for both trading sessions, a TPH will not be required to take any additional action to comply with this requirement, regardless of whether the TPH chooses to trade during Curb.

- The Exchange will process all clearly erroneous trade breaks during Curb in the same manner it does during RTH and GTH and will have Exchange officials available to do so.

- The Exchange will perform all necessary surveillance coverage during Curb.

- The Exchange may halt and resume trading during Curb pursuant to Rule 5.20(a) and (b), respectively, in the interests of a fair and orderly market in the same manner it may during RTH. The proposed rule change amends Rule 5.20(d) to provide that the factors set forth under Rule 5.20(a)(3) will not apply during Curb just as they do not

apply during GTH. Among the factors that may be considered in making the foregoing determinations are whether there has been an activation of price limits on futures exchanges or the halt of trading in related futures with respect to index options.<sup>66</sup> Further, the proposed rule change will amend Rule 5.20(d) such that when determining whether to halt trading during Curb or GTH, the Exchange will also be able to consider the extent to which the opening process pursuant to Rule 5.31 has been completed or other factors regarding the status of the opening process, just as it is able to do for the RTH session.

- Under Rule 5.22 (Market-wide Trading Halts due to Extraordinary Market Volatility), the Exchange will halt trading in all classes whenever a market-wide trading halt (commonly known as a circuit breaker) is initiated in response to extraordinary market conditions. Rule 5.22(b)(1) states that the Exchange will halt trading for 15 minutes if a Level 1 or Level 2 Market Decline occurs after 9:30 a.m. and up to and including 3:25 p.m. (or 12:25 p.m. for an early scheduled close). Additionally, the Exchange will not halt trading if a Level 1 or Level 2 Market Decline occurs after 3:25 p.m. (or 12:25 p.m., if applicable). Rule 5.22(b)(2) states that the Exchange will halt trading until the next trading day if a Level 3 Market Decline occurs. The Exchange notes that Rule 5.22(b)(1) will not apply during the Curb session, just as it does not apply during GTH, as the beginning of Curb occurs past the 15-minute halt window for a Level 1 or Level 2 Market Decline. Rule 5.22(b)(2) however will apply to the Curb session, as the Curb session is considered the same trading day as the RTH session. As such, if a Level 3 Market Decline occurs at any time during RTH or Curb, the Exchange will halt trading in SPX and VIX until the next trading day.

The Exchange understands that systems and other issues may arise and is committed to resolving those issues as quickly as possible, including during the new Curb trading hours. Thus, the Exchange will have appropriate staff on-site and otherwise available as necessary during Curb to handle any technical and support issues that may arise during those hours. Additionally, the Exchange will have personnel

available to address any trading issues that may arise during the additional Curb trading hours. The Exchange is also committed to fulfilling its obligations as a self-regulatory organization at all times, including during Curb, and will have appropriately trained, qualified regulatory staff in place during Curb to the extent it deems necessary to satisfy those obligations. The Exchange’s surveillance procedures will be revised as necessary to incorporate transactions that occur, and orders and quotations that are submitted, during Curb. The Exchange believes its surveillance procedures are adequate to properly monitor trading during Curb.

#### Implementation Date

The Exchange will announce the implementation date of the proposed rule change in accordance with Rule 1.5. The Exchange also notes that it first announced its proposal to adopt the proposed Curb Trading Hours session to market-participants via a Trade Desk notice back in January 2021.<sup>67</sup> Since then, the Exchange has issued numerous updated notices, FAQs and detailed technical specifications.

#### 2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the Securities Exchange Act of 1934 (the “Act”) and the rules and regulations thereunder applicable to the Exchange and, in particular, the requirements of Section 6(b) of the Act.<sup>68</sup> Specifically, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)<sup>69</sup> requirements that the rules of an exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest. Additionally, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)<sup>70</sup> requirement that the rules of an exchange not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

<sup>63</sup> The OPRA Plan provides for the collection and dissemination of last sale and quotation information on options that are trading on the participant exchanges. The OPRA Plan is a national market system plan approved by the Commission pursuant to Section 11A of the Act and Rule 608 thereunder. See Securities Exchange Act Release No. 17638 (March 18, 1981). The full text of the OPRA Plan is available at <http://www.opraplan.com>. All operating U.S. options exchanges participate in the OPRA Plan. The Exchange will report its best bid and offer and executed trades to OPRA during the proposed Curb Trading Hours in the same manner that they are reported during RTH and GTH today. The operator of OPRA has also informed the Exchange that it intends to add a modifier to the disseminated information during Curb. Specifically, OPRA will use Message Type = ‘v’ between 4:15 p.m. ET and 5:00 p.m. ET.

<sup>64</sup> Any fees related to receipt of the OPRA data feed during Curb will be included on the OPRA fee schedule. Any fees related to receipt of the Exchange’s proprietary data feeds during Curb will be included on the Exchange’s fee schedule (and will be included in a separate rule filing) or the Exchange’s market data website, as applicable.

<sup>65</sup> See Rule 5.24.

<sup>66</sup> See Rule 5.20(a)(6). As discussed above, futures markets operate an extended trading hours session that follows the regular trading hours session, with hours similar to what the Exchange is proposing. As such, should a halt of trading in related futures occur during Curb, then the Exchange may consider whether to halt during that session, just as it may do during regular GTH and RTH sessions.

<sup>67</sup> See Exchange Notice C2021012501 “Cboe Options Exchange to Extended Global Trading Hours in Q4 2021”.

<sup>68</sup> 15 U.S.C. 78f(b).

<sup>69</sup> 15 U.S.C. 78f(b)(5).

<sup>70</sup> *Id.*

In particular, the proposed rule change to adopt Curb Trading Hours will remove impediments to and perfect the mechanism of a free and open market and a national market system. Particularly, Curb is a competitive initiative designed to improve the Exchange's marketplace for the benefit of investors, and the proposed rule change will allow the Exchange to provide a competitive marketplace for market participants to trade certain products in an additional 45-minute trading session. More specifically, the adoption of the Curb trading session is designed to increase the overlap in time that SPX, XSP and VIX options are open alongside the related futures contracts. Moreover, adopting an additional trading session during which market participants can trade SPX, XSP and VIX options is designed to better help meet growing investor demand for the ability to manage risk more efficiently, react to global macroeconomic events as they are happening and adjust SPX, XSP and VIX options positions outside of RTH. The Exchange believes that the proposed rule change is reasonably designed to provide an appropriate mechanism for trading outside of RTH and GTH while providing for appropriate Exchange oversight pursuant to the Act, trade reporting, and surveillance.

The Exchange also notes that it, along with some of its affiliated options exchanges, already allow for trading outside of the hours of RTH (*i.e.*, during the GTH trading session).<sup>71</sup> Furthermore, the Commission has authorized stock exchanges to be open for trading outside of regular trading hours.<sup>72</sup> Thus, the proposed rule change to adopt a trading session in addition to, and outside of, regular trading hours is not novel or unique. Additionally, as noted above, futures exchanges also operate outside of those hours and during the proposed Curb session, including the Exchange's affiliate, CFE, which has an extended trading hours session that overlaps with Exchange proposed Curb Trading Hours.<sup>73</sup>

<sup>71</sup> See Cboe Options Rule 5.1, Cboe C2 Exchange, Inc. Rule 5.1 and Cboe EDGX Exchange, Inc. Rule 21.2.

<sup>72</sup> See *e.g.*, Cboe BZX Exchange, Inc. Rule 1.5, which provides for an After Hours Trading Session which is a trading session from 4:00 p.m.–8:00 p.m. and follows the Regular Trading Hours session which takes place between 9:30 a.m. and 4:00 p.m. See also Exchange Act Release No. 59963 (May 21, 2009), 74 FR 25787 (May 29, 2009) (SR-BATS–2009–012) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change to Amend BATS Rules to Offer an After Hours Trading Session).

<sup>73</sup> See, *e.g.*, CFE Rule 1202, which outlines the trading schedule for futures on the Cboe Volatility

Index and includes an extended trading session that operates from 4:00 p.m. to 5:00 p.m.

As described in detail above, the vast majority of the Exchange's trading rules will apply during Curb in the same manner as during the Exchange's two other trading sessions (RTH and GTH), which rules have all be previously filed with the Commission as being consistent with the goals of the Act. Rules that will apply equally during Curb Trading Hours include rules that protect public customers, impose best execution requirements on TPHs, and prohibit acts and practices that are inconsistent with just and equitable principles of trade as well as fraudulent and manipulative practices. The proposed rule change also provides opportunities for price improvement during Curb and applies the same allocation and priority rules that are available to the Exchange during RTH and GTH. The Exchange believes, therefore, that the rules that will apply during Curb will continue to promote just and equitable principles of trade and prevent fraudulent and manipulative acts.

The proposed rule change clearly identifies the ways in which trading during Curb will be different from trading during RTH and/or GTH (such as identifying order types and instructions that will not be available during Curb, clarifying that under the normal course of business there will be no opening auction process at the start of Curb, and the proposed absence of a disseminated updated index value during Curb). This ensures that investors are aware of any differences among trading sessions. The Exchange believes the differences are consistent with the expected differences in duration and timing of the trading session, liquidity, participation, and trading activity between RTH and Curb and GTH and Curb. For example, the Exchange believes it is reasonable to not adopt an opening auction process for Curb as the Curb session, unlike RTH and GTH, is proposed to start immediately following the trading session preceding it, and as such, the Exchange is able to seamlessly transition into Curb without a queuing period or opening rotation. The flexibility provided to the Exchange to make determinations for each trading session will allow the Exchange to apply settings and parameters to address the different market conditions that may be present during each trading session. Additionally, to further protect investors from any additional risks related to trading during Curb, the proposed rule change requires that

disclosures be made to customers describing these potential risks, similar to the current requirement for such disclosures related to trading during GTH. The All Sessions order and RTH Only order, along with the proposed RTH and Curb order, will continue to protect investors by permitting investors who wish only to trade during RTH from having orders or quotes execute outside of the RTH session, including during the proposed Curb trading session. The RTH and Curb Order will provide investors with additional execution flexibility by providing them with an order that may execute during either daytime trading session but not carryover (if unexecuted) in the following overnight session. Consistent with the goal of investor protection, the Exchange will not allow market orders during Curb due to the expected increased volatility and decreased liquidity during these hours, just as it does not currently allow such orders during GTH for the same reasons. The proposed rule change also only authorizes the Exchange to list for trading two classes during Curb. As the proposed rule change is a new Exchange initiative, the Exchange believes it is reasonable to trade a limited number of classes upon implementation for which demand is believed to be the highest during Curb.

Additionally, the Exchange believes that the proposed rule change will foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, as the Exchange will ensure that adequate staffing is available during Curb to provide appropriate trading support during those hours, as well as Exchange officials to make any necessary determinations under the rules during Curb (such as trading halts and trade nullification for obvious errors). The Exchange is also committed to fulfilling its obligations as a self-regulatory organization at all times, including during Curb. The Exchange's surveillance procedures will also be revised to incorporate transactions that occur and orders and quotations that are submitted during Curb Trading Hours. The Exchange believes its surveillance procedures are adequate to properly monitor trading during Curb. Clearing and settlement processes will be the same for Curb as they are for RTH or GTH transactions.

The proposed rule change further removes impediments to a free and open market and does not unfairly discriminate among market participants, as all TPHs with access to the Exchange may trade during Curb using the same

connection lines, message formats data feeds, and EFIDs they use during RTH and GTH, minimizing any preparation efforts necessary to participate during Curb. TPHs will not be required to trade during Curb.

Additionally, as discussed above, while the proposed rule change increases the total time during which a Market-Maker with an appointment has the ability to quote in a selected class, the Exchange believes this increase has a de minimis, if any, impact on Market-Makers given that a Market-Maker's compliance with its continuous quoting obligation is based on all classes in which it has an appointment in the aggregate and based only when a Market-Maker is quoting in its appointed classes. Indeed, as noted above, if a Market-Maker who quotes during the RTH and/or GTH session today does not wish to quote during the proposed Curb Trading Hours, then so long as such Market-Maker does not log into the system and quote during that session (or whatever other time it wishes to begin quoting), there will be no impact with respect to the Market-Maker's ability to satisfy its continuous quoting obligations. Selecting an appointment in SPX and/or VIX options will continue to be optional and within the discretion of a Market-Maker. Additionally, Market-Makers continue to have the opportunity to quote during Curb (and receive the benefits of acting as a Market-Maker with respect to transactions it effects during that time) without obtaining an additional Trading Permit or creating additional connections to the Exchange. The Exchange believes Market-Makers will have an incentive to quote in SPX and VIX during the proposed Curb session given the significance of these products within the financial markets, the expected demand, and given that the related futures are also trading during those hours (which may permit execution of certain hedging strategies). The Exchange believes extending a Market-Maker's appointment to the Curb session will enhance liquidity during that trading session, which benefits all investors during those hours. The Exchange believes that any slight additional burden of extending the continuous quoting obligation to the proposed Curb trading session in the eligible classes would be outweighed by the Exchange's efforts to add liquidity during the Curb trading session in All Sessions classes, the minimal preparation a Market-Maker may require to participate in the Curb trading session, and the benefits to investors that may result from that liquidity.

Therefore, the Exchange believes the proposed rule change provides customer trading interest with a net benefit and continues to maintain a balance of Market-Maker benefits and obligations.

While LMMs will only be required to meet the same obligations as Market-Makers during Curb, the Exchange believes it may be unduly burdensome to impose a heightened standard during Curb given the expected lower participation and trading volume and higher liquidity. The Exchange believes LMMs should have the flexibility to determine whether satisfying any heightened quoting standard and opening quoting standard is appropriate for its business given the then-current market conditions during Curb. Because there are no additional obligations imposed on LMMs during Curb, they receive no additional benefits (*i.e.*, no participation entitlement) during Curb. Without the possibility of receiving a participation entitlement on a sufficient volume of trades, the Exchange does not expect that the current RTH obligation/benefit structure for LMMs would provide a similar incentive during Curb and therefore does not propose to implement it during Curb, just as it has not done so for GTH for similar reasons. As noted above, should the Exchange find it necessary in the future, it will submit a separate rule filing to adopt a rebate incentive program for Curb LMMs to encourage increased quoting to add liquidity during that session. LMMs that satisfy any proposed heightened continuous quoting standard under such an incentive program would receive a rebate pursuant to the Fees Schedule. Such a program would parallel the obligation/benefit structure that exists for LMMs during RTH (that is, LMMs that meet heightened quoting obligations during RTH receive a participation entitlement, which is merely a different form of financial benefit).

The proposed rule change is also consistent with Section 11A of the Act and Regulation NMS thereunder, because it provides for the dissemination of transaction and quotation information during Curb through OPRA, pursuant to the OPRA Plan, which the Commission approved and indicated to be consistent with the Act. While Section 11A and Regulation NMS contemplate an integrated system for trading securities, they also envision competition between markets, and innovation that provides marketplace benefits to attract order flow to an exchange does not result in unfair

competition if other markets are free to compete in the same manner.<sup>74</sup>

As discussed, the Exchange, as well as other options exchanges, already offer trading sessions outside of regular trading hours.<sup>75</sup> While there are some differences among the proposed Curb Trading Hours session and the Exchange's current GTH session, such as the length and time of the session and the absence of an opening auction process, the Exchange believes the proposed Curb trading session and proposed rules are still substantially similar to the current GTH trading session its corresponding rules, thereby providing consistency across all trading sessions with similar characteristics outside of RTH.

The Exchange also believes the proposed rule change to extend the time Users have to cancel all GTC and GTD orders, and not just those participating in Curb, is reasonable. In particular, it provides Users with RTH Only GTC and GTD orders with additional time to cancel orders. Further, the Exchange notes that cancelling a RTH Only GTC or GTD order at the proposed time of 5:15 p.m. has the same effect as cancelling that order at the current cutoff time of 4:45 p.m.—ultimately it accommodates the User's goal of cancelling an order prior to it potentially executing during the RTH Opening Process the following morning (*i.e.*, it merely provides 30 additional minutes to cancel a RTH Only GTC or GTD order). As such, the Exchange believes the proposed rule change provides Users with additional flexibility to manage their orders in all classes that remain in the Book following the Curb market close, thereby removing impediments to and perfecting the mechanism of a free and open market and a national market system, and, in general, protecting investors and the public interest.

Finally, the Exchange believes the proposed changes to Rule 5.20(d) eliminate unnecessary distinctions

<sup>74</sup> See Exchange Act Release Nos. 73704 (November 28, 2014), 79 FR 72044 (December 4, 2014) (SR-CBOE-2014-062) (approval of proposed rule change for Cboe Options to extend its trading hours outside of Regular Trading Hours); and 29237 (May 24, 1991), 46 [sic] FR 24853 (May 31, 1991) (SR-NYSE-1990-052 and SR-NYSE-1990-053) (approval of proposed rule change for NYSE to extend its trading hours outside of Regular Trading Hours). The Exchange also notes that no other U.S. options exchange provides for trading SPX or VIX options outside of RTH, so there is currently no need for intermarket linkage during GTH. If another Cboe Affiliated Exchange lists any options authorized to trade during GTH outside of RTH, trading of such options on the Exchange would comply with linkage rules.

<sup>75</sup> See, *e.g.*, Cboe Options Rule 5.1, C2 Rule 5.1 and Cboe EDGX. Rule 21.2.

between RTH and GTH//Curb as it relates to trading halt exceptions for index options. Particularly, the Exchange sees no reason why it should not allow the resumption of a halted security during GTH or Curb if a determination is made by two Floor Officials, in consultation with a designated senior executive officer of the Exchange, that the interests of a fair and orderly market are best served by a resumption of trading. Similarly, the Exchange does not believe there are distinguishing factors between (i) GTH and Curb and (ii) RTH that warrants precluding the Exchange from considering the factors under Rule 5.20(a)(5) (relating to whether the opening process has been completed or the status of the opening process) in making a determination whether declaring a trading halt is appropriate. As is the case today, the Exchange is not required to take into consideration any of the factors listed under Rule 5.20(a), including subparagraph (5), when making a determination whether to halt trading. Moreover, the Exchange will continue to consider halting trading only in response to unusual conditions or circumstances, as it wants to interrupt trading as infrequently as possible and only if necessary, to maintain a fair and orderly market. Indeed, notwithstanding the proposed changes to Rule 5.20(d), the Exchange will continue to have the authority to manually halt trading during any trading session if it's determined to be in the interests of a fair and orderly market and to protect investors.

#### *B. Self-Regulatory Organization's Statement on Burden on Competition*

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange does not believe that the proposed rule change to adopt Curb Trading Hours will impose any burden on intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act, because all TPHs will be able, but not be required, to participate during Curb, and will be able to do so using the same connectivity as they use during RTH and GTH. As discussed, participation in Curb will be voluntary and within the discretion of TPHs. While the proposed rule change increases the total time during which a Market-Maker with either a SPX and/or VIX appointment may be able to quote, the Exchange believes the proposal will have a de minimis, if any, impact on a Market-Maker's continuous quoting obligations,

as they may continue to choose when to actively quote and have their obligations to their appointed classes apply. Furthermore, selecting an appointment in these options classes will be optional and within the discretion of a Market-Maker. Additionally, Market-Makers continue to have the opportunity to quote during Curb (and receive the benefits of acting as a Market-Maker with respect to transactions it effects during that time) without obtaining an additional Trading Permit or creating additional connections to the Exchange. The Exchange believes that extending the continuous quoting obligation to the Curb trading session in two classes is also outweighed by the Exchange's efforts to add liquidity during Curb in All Sessions classes, the minimal preparation a Market-Maker may require to participate in the Curb trading session, and the benefits to investors that may result from that liquidity. Therefore, the Exchange believes the proposed rule change provides customer trading interest with a net benefit and continues to maintain a balance of Market-Maker benefits and obligations.

The Exchange does not believe that the proposed rule change to adopt Curb Trading Hours will impose any burden on intermarket competition that is not necessary or appropriate in furtherance of the purposes of the Act, because the proposed rule change is a competitive initiative that will benefit the marketplace and investors. The Exchange believes the proposed rule change will enhance competition by providing a new service to investors that is not currently otherwise available for options. The Exchange further believes that the same level of competition among options exchanges will continue during RTH. Because the Exchange proposes to make only exclusively listed products available for trading during Curb, and because any All Sessions orders that do not trade during Curb will be eligible to trade during the RTH trading sessions in the same manner as all other orders during RTH, the proposed rule change will have no effect on the national best prices or trading during RTH.

#### *C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others*

The Exchange neither solicited nor received comments on the proposed rule change.

### **III. Discussion and Commission Findings**

After careful review, the Commission finds that the proposed rule change, as

modified by Amendment No. 2, is consistent with the requirements of the Act,<sup>76</sup> and the rules and regulations thereunder applicable to a national securities exchange.<sup>77</sup> In particular, the Commission finds that the proposed rule change, as modified by Amendment No. 2, is consistent with Section 6(b)(5) of the Act,<sup>78</sup> which requires, among other things, that the rules of a national securities exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.

As described above, CBOE proposes to adopt a Curb trading session Monday through Friday that will provide a forty-five minute electronic only session between 4:15 p.m. and 5:00 p.m. for SPX, VIX, and XSP options. The Exchange states that the additional trading session will increase the overlap in time that SPX, VIX, and XSP options are open alongside the related futures.<sup>79</sup> Among other things, the Exchange believes that the Curb session is designed to respond to investor demand to hedge risk, react to global macroeconomic events contemporaneously, and adjust SPX, XSP, and VIX options positions outside of RTH.<sup>80</sup> As a result, the Exchange believes that the proposal will provide market participants with expanded access to trade SPX, XSP, and VIX options.<sup>81</sup>

The Commission finds that the proposed Curb trading session and related conforming changes are consistent with the Act. As discussed above, the vast majority of CBOE's rules, with certain exceptions, will continue to apply during Curb.<sup>82</sup> For example, the Exchange represents, among other things, that the business conduct rules in Chapter 8<sup>83</sup> and rules related to

<sup>76</sup> 15 U.S.C. 78f.

<sup>77</sup> In approving this proposed rule change, the Commission has considered the proposed rule's impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

<sup>78</sup> 15 U.S.C. 78f(b)(5).

<sup>79</sup> See Amendment No. 2, *supra* note 6, at 6.

<sup>80</sup> See *id.* at 44.

<sup>81</sup> See *id.* at 6. The Exchange has represented that all TPHs may, but will not be required to, participate during Curb. *Id.* at 38.

<sup>82</sup> See *id.* at 45.

<sup>83</sup> The Commission notes that Chapter 8 of CBOE's Rules, among other things, prohibits TPHs from engaging in acts or practices inconsistent with just and equitable principles of trade or from making any willful or material misrepresentation, including a misstatement or false statement, or omission in any application, report or other communication to the Exchange, or to the OCC with

doing business with the public in Chapter 9<sup>84</sup> will continue to apply during the Curb trading session, as well as a broker-dealer's due diligence and best execution obligations.<sup>85</sup> In addition, the processes for options clearing, settlement, exercise, and expiration, as well as order processing<sup>86</sup> and clearly erroneous trade breaks, will remain the same during Curb.<sup>87</sup> Moreover, the Exchange has represented that it will perform all necessary surveillance and have qualified regulatory staff available during Curb in keeping with its obligations as a self-regulatory organization.<sup>88</sup> The Exchange also states that it has held discussions with the OCC, which has informed the Exchange that it will be able to clear and settle all transactions that occur on the Exchange and handle exercises of options during Curb.<sup>89</sup> As a result, the Commission finds that the proposed rule change is reasonably designed to help prevent fraudulent and manipulative acts and practices, and promote just and equitable principles of trade, by conditioning the increased availability for TPHs to trade during the additional Curb trading session with Exchange oversight and regulatory surveillance and reporting.

The Commission also believes that CBOE's disclosure requirement that obligates TPHs to make certain disclosures to customers regarding material trading risks that may exist during Curb is consistent with the protection of investors.<sup>90</sup> Specifically, TPHs will be required to make certain disclosures to customers including the risk of lower liquidity, higher volatility, and wider spreads during Curb, as well as make clear that the underlying index or portfolio value and intraday

indicative value may not be calculated or widely disseminated during Curb.<sup>91</sup> The Commission believes that such disclosures should help ensure that customers are reasonably informed about the specific risks associated with trading during Curb. Further, these requirements are designed to mitigate, to the extent possible, the likelihood of investor confusion regarding the significant differences between the character of the market typical of RTH and Curb sessions.

The Commission also notes that the Exchange has highlighted differences in the Rules between the trading process during Curb and the other trading sessions, such as generally not having an opening auction process and limiting the types of orders available during Curb. The Commission believes these differences are consistent with the differences between the trading sessions. For example, the Commission notes that the Curb session, unlike GTH, will begin immediately after the prior trading session, *i.e.*, RTH, and therefore, any All Sessions orders resting on the Book will become eligible for execution during Curb, subject to a User's instructions, without an opening rotation.<sup>92</sup> However, in the event that Curb does not begin at 4:15 p.m. and there is a gap in time between RTH and Curb, then similar to GTH,<sup>93</sup> proposed CBOE Rule 5.31(d)(3) would provide for an opening rotation. Also for example, similar to GTH, since trading would occur outside of RTH, trading would be electronic only and certain order types, such as market orders, would not be available during Curb.<sup>94</sup>

The Commission also believes that the Exchange's proposed changes to its trading halts rule is consistent with the Act. The proposed changes would allow

the Exchange to consider the extent to which the opening process has been completed or other factors regarding the status of the opening process in determining whether to halt trading and allow the Exchange to resume trading in a security that has been the subject of a trading halt. The Commission notes that pursuant to CBOE Rule 5.20, Trading Halts, generally any decisions to halt trading must be made by two Floor Officials, in consultation with a designated senior executive officer of the Exchange, in the interests of a fair and orderly market and to protect investors.<sup>95</sup> Similarly, trading may be resumed upon a determination by two Floor Officials, in consultation with a designated senior executive officer of the Exchange that the interests of a fair and orderly market are best served by a resumption of trading.<sup>96</sup> The proposed rule change is also consistent with Section 11A(a)(1)(C) of the Act.<sup>97</sup> Congress found in those provisions that it is in the public interest and appropriate for the protection of investors and the maintenance of fair and orderly markets to assure the availability to brokers, dealers, and investors of information with respect to quotations for and transactions in securities, and to assure the practicability of brokers executing investors' orders in the best market. The proposed rule change is designed to accomplish these objectives by ensuring that the Exchange will report its best bid and offer and executed trades to OPRA during the Curb session in the same manner that they are reported currently during RTH and GTH,<sup>98</sup> thereby providing public transparency of activity during the Curb session.

Finally, the Commission also believes that the Exchange's proposed change to CBOE Rule 5.7(e), which would allow Users to cancel all GTC or GTD orders until 5:15 p.m. is also consistent with the Act. The Commission notes that Users are currently able to cancel such orders and quotes until 4:45 p.m. The Commission believes that this proposed change should provide Users with additional flexibility to manage their GTC or GTD orders.

#### IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether Amendment No. 2 is

respect to the reporting or clearance of any Exchange transaction, or willfully or materially adjust any position at the OCC in any class of options traded on the Exchange except for the purpose of correcting a bona fide error in recording or of transferring the position to another account. See CBOE Rules 8.1 and 8.5.

<sup>84</sup> The Commission notes that Chapter 9 of CBOE's Rules, includes, among other things, rules on Suitability of Recommendations and Global Trading Hours Disclosure, which is being amended to include Curb Trading Hours. See CBOE Rules 9.3 and Proposed CBOE Rule 9.20.

<sup>85</sup> See Amendment No. 2, *supra* note 6 at 7, n.14.

<sup>86</sup> See *id.* at 39. The Exchange has also represented that there will be no changes to the ranking, display, or allocation algorithms. See *id.* Moreover, the Commission notes that the Exchange intends to utilize the same LMM structure during Curb that it uses during GTH. See *id.* at 33. In addition, Market-Maker appointments would also apply to the Curb Trading Session pursuant to CBOE Rule 5.50(a). See *id.* at 32.

<sup>87</sup> See *id.* at 41.

<sup>88</sup> See *id.* at 41–42.

<sup>89</sup> See *id.* at 39, n.59.

<sup>90</sup> See *id.* at 37.

<sup>91</sup> See proposed CBOE Rule 9.20. Pursuant to the proposed rule change, the Exchange will not report a value of an index underlying an index option trading during Curb because the value of the underlying index will not be recalculated during or at the close of Curb. See Amendment No. 2, *supra* note 6, at 10. The Exchange has represented, however, and the Commission expects that to the extent CGI as index calculator determines that SPX quotes during such session will support accurate VIX indicative values, CGI will reconsider whether to calculate and disseminate these values during Curb (and the Exchange would submit rule filings to amend the rules, as necessary). See *id.* at 11.

<sup>92</sup> See *id.* at 29–30.

<sup>93</sup> See CBOE Rule 5.31(d)(2). Pursuant to the rule, the System initiates an opening rotation for GTH at 8:15 p.m.

<sup>94</sup> According to the Exchange, there may be reduced liquidity, higher volatility and wider spreads during Curb and therefore, the Exchange believed it was appropriate for investor protection to not allow market orders to participate should wild price fluctuations occur due to the potential illiquid and volatile nature of the market or other factors that could impact market activity. See Amendment No. 2, *supra* note 6, at 18–19.

<sup>95</sup> See CBOE Rule 5.20(a).

<sup>96</sup> See CBOE Rule 5.20(b).

<sup>97</sup> 15 U.S.C. 78k–1(a)(1)(C).

<sup>98</sup> See Amendment No. 2, *supra* note 6, at 40, n.60. Further, according to the Exchange, the operator of OPRA intends to add a modifier to the disseminated information during Curb.

consistent with the Act. Comments may be submitted by any of the following methods:

#### Electronic Comments

- Use the Commission's internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to [rule-comments@sec.gov](mailto:rule-comments@sec.gov). Please include File Number SR-CBOE-2021-071 on the subject line.

#### Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090.

All submissions should refer to File Number SR-CBOE-2021-071. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-CBOE-2021-071 and should be submitted by April 18, 2022. Rebuttal comments should be submitted by May 2, 2022.

#### V. Accelerated Approval of Proposed Rule Change, as Modified by Amendment No. 2

The Commission finds good cause for approving the proposed rule change, as amended by Amendment No. 2, prior to the 30th day after the date of publication of notice in the **Federal Register**. Amendment No. 2 provided

technical and conforming changes to the rule text to reflect CBOE rules recently adopted by the Exchange.<sup>99</sup> Amendment No. 2 also provided additional detail on several aspects of the proposal, including the impact of the recently adopted modified holiday trading schedule<sup>100</sup> on Curb and notifications relating to catastrophic error reviews. The Exchange also further discussed why it may be appropriate to resume trading during GTH and Curb after a trading halt and clarified the application of CBOE Rule 5.22 during Curb. As described above, the Commission believes that Amendment No. 2 does not change the substance of the proposed rule change, but merely adds detail and clarification to several items of the proposal and makes necessary conforming changes to reflect the recently approved modified holiday trading schedule, as well as makes necessary updates to its proposed rules.<sup>101</sup> Accordingly, the Commission finds good cause for approving the proposed rule change, as amended, on an accelerated basis, pursuant to Section 19(b)(2) of the Act.<sup>102</sup>

#### VI. Conclusion

*It is therefore ordered*, pursuant to Section 19(b)(2) of the Act,<sup>103</sup> that the proposed rule change, as modified by Amendment No. 2 (SR-CBOE-2021-071) be, and hereby is, approved on an accelerated basis.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.<sup>104</sup>

#### SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-94485; File No. SR-ICEEU-2022-007]

#### Self-Regulatory Organizations; ICE Clear Europe Limited; Notice of Filing and Immediate Effectiveness of Proposed Rule Change, as Modified by Amendment No. 1, Relating to Amendments to the ICE Clear Europe Delivery Procedures

March 22, 2022.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (“Act”),<sup>1</sup> and Rule 19b-4 thereunder,<sup>2</sup> notice is hereby given that on March 8, 2022, ICE Clear Europe Limited (“ICE Clear Europe” or the “Clearing House”) filed with the Securities and Exchange Commission (“Commission”) the proposed rule changes described in Items I, II and III below, which Items have been prepared primarily by ICE Clear Europe. ICE Clear Europe filed the proposed rule change pursuant to Section 19(b)(3)(A) of the Act<sup>3</sup> and Rule 19b-4(f)(4)(ii) thereunder,<sup>4</sup> such that the proposed rule change was immediately effective upon filing with the Commission. On March 16, 2022, ICE Clear Europe filed Amendment No. 1 to the proposed rule change to make certain clarifications about the purpose of and statutory basis for the proposed rule changes.<sup>5</sup> The Commission is publishing this notice to solicit comments on the proposed rule change, as modified by Amendment No. 1 (hereafter the “proposed rule change”), from interested persons.

#### I. Clearing Agency's Statement of the Terms of Substance of the Proposed Rule Change

The principal purpose of the proposed amendments is for ICE Clear Europe to amend its Delivery Procedures (“Delivery Procedures” or “Procedures”) to amend Part CC thereof (“Part CC”) to revise certain timing-related delivery specifications applicable to Midland West Texas Intermediate American Gulf Coast Crude Oil Futures (“Midland WTI Contracts”).<sup>6</sup>

<sup>1</sup> 15 U.S.C. 78s(b)(1).

<sup>2</sup> 17 CFR 240.19b-4.

<sup>3</sup> 15 U.S.C. 78s(b)(3)(A).

<sup>4</sup> 17 CFR 240.19b-4(f)(4)(ii).

<sup>5</sup> In Amendment No. 1, ICEEU expanded the description of the expected effect of the proposed changes as well as the basis for the proposed changes under the relevant law; however, the substance of the proposal is unchanged.

<sup>6</sup> Capitalized terms used but not defined herein have the meanings specified in the Delivery Procedures or, if not defined therein, the ICE Clear Europe Clearing Rules.

## II. Clearing Agency's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, ICE Clear Europe included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. ICE Clear Europe has prepared summaries, set forth in sections (A), (B), and (C) below, of the most significant aspects of such statements.

### (A) Clearing Agency's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

#### (a) Purpose

ICE Clear Europe is proposing to amend Part CC of the Delivery Procedures to revise certain delivery specifications applicable to Midland WTI Contracts. Specifically, with respect to Exchange for Physicals (EFPs), the amendments would extend the deadline for EFPs to be reported to any time after the close of trading until 13:00 CT/19:00 LPT on the next Business Day following the Last Trading Day instead of (09:00 CT/15:00 LPT). This change would expand the availability of the reporting deadline to all EFPs, and not just those that are executed on the Last Trading Day. The Clearing House has determined that this adjustment reflects the Clearing House's current practice. Conforming timing updates would also be made to the Delivery Timetable.

The amendments would also adjust the deadline for Delivery Confirmation Forms to 14:00 CT/20:00 LPT on the Business Day following the Last Trading Day (rather than 10:00 CT/16:00 LPT).

#### (b) Statutory Basis

ICE Clear Europe believes that the proposed amendments to the Delivery Procedures are consistent with the requirements of Section 17A of the Act<sup>7</sup> and the regulations thereunder applicable to it. In particular, Section 17A(b)(3)(F) of the Act<sup>8</sup> requires, among other things, that the rules of a clearing agency be designed to promote the prompt and accurate clearance and settlement of securities transactions and, to the extent applicable, derivative agreements, contracts, and transactions, the safeguarding of securities and funds in the custody or control of the clearing agency or for which it is responsible, and the protection of investors and the

public interest. The proposed changes to the Delivery Procedures are designed to amend certain deadlines under the delivery procedures, for Midland WTI Contracts, to give Clearing Members more time to facilitate settlement and thereby permit more up-to-date information to be available at the time of reporting EFPs. The amendments would not otherwise affect the manner in which Midland WTI Contracts are cleared and settled. As a result, in ICE Clear Europe's view, the amendments would be consistent with the prompt and accurate clearance and settlement of the contracts, and the protection of investors and the public interest consistent with the requirements of Section 17A(b)(3)(F) of the Act.<sup>9</sup> (In ICE Clear Europe's view, the amendments would not affect the safeguarding of funds or securities in the custody or control of the clearing agency or for which it is responsible, within the meaning of Section 17A(b)(3)(F).<sup>10</sup>)

In addition, Rule 17Ad-22(e)(10)<sup>11</sup> provides that "[e]ach covered clearing agency shall establish, implement, maintain and enforce written policies and procedures reasonable designed to, as applicable [ . . . ] establish and maintain transparent written standards that state its obligations with respect to the delivery of physical instruments, and establish and maintain operational practices that identify, monitor and manage the risks associated with such physical deliveries." As discussed above, the amendments would amend certain deadlines under the Delivery Procedures applicable to the settlement of Midland WTI Contracts. Clearance of the Midland WTI Contracts would not otherwise be affected. The amendments thus appropriately clarify the role and responsibilities of the Clearing House and Clearing Members with respect to physical delivery. As a result, ICE Clear Europe believes the amendments are consistent with the requirements of Rule 17Ad-22(e)(10).<sup>12</sup>

### (B) Clearing Agency's Statement on Burden on Competition

ICE Clear Europe does not believe the proposed amendments would have any impact, or impose any burden, on competition not necessary or appropriate in furtherance of the purposes of the Act. The proposed amendments to the Delivery Procedures are intended to extend certain deadlines under the Delivery Procedures applicable to the delivery of Midland

WTI Contracts. ICE Clear Europe does not believe the amendments would adversely affect competition among Clearing Members, materially affect the cost of clearing, adversely affect access to clearing in the new contracts for Clearing Members or their customers, or otherwise adversely affect competition in clearing services. Accordingly, ICE Clear Europe does not believe that the amendments would impose any impact or burden on competition that is not appropriate in furtherance of the purpose of the Act.

### (C) Clearing Agency's Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

Written comments relating to the proposed amendments have not been solicited or received by ICE Clear Europe. ICE Clear Europe will notify the Commission of any comments received with respect to the proposed rule change.

## III. Date of Effectiveness of the Proposed Rule and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act<sup>13</sup> and paragraph (f) of Rule 19b-4<sup>14</sup> thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

## IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

### Electronic Comments

- Use the Commission's internet comment form (<http://www.sec.gov/rules/sro.shtml>) or
- Send an email to [rule-comments@sec.gov](mailto:rule-comments@sec.gov). Please include File Number SR-ICEEU-2022-007 on the subject line.

BILLING CODE 8011-01-P

## SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-94490; File No. SR-NYSEArca-2022-13]

### Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing of Proposed Rule Change To Amend Rule 7.31-E(h)(3)

March 22, 2022.

Pursuant to Section 19(b)(1)<sup>1</sup> of the Securities Exchange Act of 1934

(“Act”)<sup>2</sup> and Rule 19b-4 thereunder,<sup>3</sup> notice is hereby given that, on March 9, 2022, NYSE Arca, Inc. (“NYSE Arca” or the “Exchange”) filed with the Securities and Exchange Commission (“Commission”) the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

#### I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Rule 7.31-E(h)(3) with respect to Discretionary Pegged Orders. The proposed change is available on the Exchange's website at [www.nyse.com](http://www.nyse.com), at the principal office of the Exchange, and at the Commission's Public Reference Room.

#### II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

##### A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

###### 1. Purpose

The Exchange proposes to amend Rule 7.31-E(h)(3) to modify certain factors relevant to the quote instability calculation for Discretionary Pegged Orders. Specifically, the Exchange proposes to amend Rule 7.31-E(h)(3)(D)(i)(D)(1)(a), which sets forth the quote stability coefficients. Under Rule 7.31-E(h)(3)(D)(i)(D)(3), the Exchange may modify the quote stability coefficients at any time, subject to a filing of a proposed rule change. The Exchange proposes such changes in this rule filing.

###### Discretionary Pegged Orders

Rule 7.31-E(h)(3) provides for Discretionary Pegged Orders, which are

Pegged Orders<sup>4</sup> that may exercise price discretion from their working price to a discretionary price in order to trade with contra-side orders on the NYSE Arca Book, except during periods of quote instability as defined in Rule 7.31-E(h)(3)(D).

Rule 7.31-E(h)(3)(D) provides that the Exchange uses a quote instability calculation to assess a security's “quote instability factor,” or the probability of an imminent change to the current PBB to a lower price or PBO to a higher price.<sup>5</sup> When quoting activity in a security meets predefined criteria and the quote instability factor calculated is greater than the Exchange's defined “quote instability threshold,” the Exchange treats the quote as unstable (“quote instability” or a “crumbling quote”).

Rule 7.31-E(h)(3)(D)(i) provides that the Exchange determines a quote to be unstable when, among other factors, the quote instability factor result from the quote stability calculation is greater than the quote instability threshold. To perform the quote stability calculation and determine the quote instability factor, the Exchange employs a fixed formula utilizing the quote stability coefficients and quote stability variables set forth in Rule 7.31-E(h)(3)(D)(i)(D)(1)(a) and Rule 7.31-E(h)(3)(D)(i)(D)(1)(b), respectively.

###### Proposed Rule Change

The Exchange proposes to update the quote stability coefficients used in the quote instability calculation, which have not been modified since Rule 7.31-E(h)(3) was adopted.<sup>6</sup> The proposed changes are intended to update the quote stability coefficients so that they are based on current market data and better calibrated to function on an exchange without an intentional delay mechanism and with deeper liquidity

<sup>4</sup> A Pegged Order is a Limit Order that does not route with a working price that is pegged to a dynamic reference price. If the designated reference price is higher (lower) than the limit price of a Pegged Order to buy (sell), the working price will be the limit price of the order. See Rule 7.31-E(h).

<sup>5</sup> NYSE Arca Rule 1.1 defines PBB as the highest Protected Bid and PBO as the lowest Protected Offer. Rule 1.1 also provides that “PBBO” means the Best Protected Bid and the Best Protected Offer.

<sup>6</sup> The Exchange adopted Rule 7.31-E(h)(3) governing Discretionary Pegged Orders in 2016 but has not yet announced the implementation of the order type. See Securities Exchange Act Release No. 78181 (June 28, 2016), 81 FR 43297 (July 1, 2016) (SR-NYSEArca-2016-44) (Notice of Filing of Amendment No. 1, and Order Granting Accelerated Approval of a Proposed Rule Change, as Modified by Amendment No. 1, to Add a New Discretionary Pegged Order). Accordingly, the current quote stability coefficients have not been in operation on the Exchange.

<sup>15</sup> 17 CFR 200.30-3(a)(12).

<sup>1</sup> 15 U.S.C. 78s(b)(1).

<sup>2</sup> 15 U.S.C. 78a.

<sup>3</sup> 17 CFR 240.19b-4.

than other exchanges that offer similar functionality.<sup>7</sup>

The Exchange reviewed NYSE Arca market data from randomly selected days in the fourth quarter of 2021 to analyze the effectiveness of the quote stability coefficients in predicting changes to the PBBO. Specifically, the Exchange reviewed PBBO data, on a nanosecond level, for certain intervals throughout each randomly selected day to track changes to quotes on NYSE Arca and away markets. The Exchange used this data to generate and test the proposed quote stability coefficients, and based on its analysis, believes that modifying the quote stability coefficients would enable the Exchange to evaluate the quality of the PBBO more effectively.

The Exchange proposes to modify the quote stability coefficients set forth in Rule 7.31–E(h)(3)(D)(i)(D)(1)(a)(i) through (v) as follows:

Quote stability coefficient	Current value	Proposed value
C0 .....	– 2.39515	– 1.793885
C1 .....	– 0.76504	– 0.600796
C2 .....	0.07599	0.0776515
C3 .....	0.38374	0.492649
C4 .....	0.14466	0.1631485

The Exchange believes that its proposed modification of the quote stability coefficients, based on the market data analysis described above, would improve the accuracy of the fixed formula used to perform the quote instability calculation. Specifically, the Exchange believes that the proposed quote stability coefficients, which have been adjusted to reflect more recent activity on the Exchange, would improve the calibration of the quote instability calculation to activity on the Exchange, thereby improving the Exchange's ability to predict whether there is quote instability and protect Discretionary Pegged Orders from exercising discretion when the PBBO is unstable.

Because of the technology changes associated with this proposed rule

<sup>7</sup> The Exchange notes that its rules governing the Discretionary Pegged Order, including the formula for the quote instability calculation, are based on the Investors Exchange LLC ("IEX") Discretionary Peg Order ("D-Peg Order"), which functions in conjunction with IEX's speed bump. *See id.* The Exchange does not anticipate any issues in connection with the introduction of the order type, including because such orders would be processed similarly to Discretionary Pegged Orders on its affiliated exchange, NYSE American LLC ("NYSE American"). NYSE American, which also does not currently function with any intentional delay, offers a Discretionary Pegged Order as set forth in NYSE American Rule 7.31E(h)(3), which is substantially the same as NYSE Arca Rule 7.31–E(h)(3).

change, the Exchange will announce the implementation date by Trader Update.

## 2. Statutory Basis

The proposed rule change is consistent with Section 6(b) of the Act,<sup>8</sup> in general, and furthers the objectives of Section 6(b)(5),<sup>9</sup> in particular, because it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to, and perfect the mechanism of, a free and open market and a national market system and, in general, to protect investors and the public interest.

The Exchange believes that the proposed change would promote just and equitable principles of trade, remove impediments to, and perfect the mechanism of, a free and open market and a national market system, and protect investors and the public interest because it is designed to increase the effectiveness of the quote instability calculation used to determine whether a crumbling quote exists. As discussed above, the proposed change is based on the Exchange's analysis of market data, which supports that the proposed change would improve the accuracy of the Exchange's quote instability calculation. Accordingly, the Exchange believes that the proposed change would remove impediments to, and perfect the mechanism of, a free and open market and a national market system, as well as protect investors and the public interest, by enhancing the Exchange's protection of Discretionary Pegged Orders. Specifically, because the proposed quote stability coefficients were derived through an analysis of more recent market data and are calibrated to reflect current activity on the Exchange (including to adapt them to function on an exchange without an intentional delay mechanism and with deeper liquidity than other exchanges that offer similar functionality), the Exchange believes that the proposed change would improve the effectiveness of the quote instability calculation in predicting periods of quote instability and thus enhance the extent to which Discretionary Pegged Orders would be protected from unfavorable executions.

## B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not

necessary or appropriate in furtherance of the purposes of the Act. The Exchange believes that the proposed change would promote competition by improving the accuracy of the quote instability calculation, thereby enhancing the protection of Discretionary Pegged Orders from unfavorable executions during periods of quote instability.

## C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

## III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or such longer period up to 90 days (i) as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

- (A) By order approve or disapprove the proposed rule change, or
- (B) institute proceedings to determine whether the proposed rule change should be disapproved.

## IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

### Electronic Comments

- Use the Commission's internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to [rule-comments@sec.gov](mailto:rule-comments@sec.gov). Please include File Number SR–NYSEArca–2022–13 on the subject line.

### Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.
- All submissions should refer to File Number SR–NYSEArca–2022–13. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<http://www.sec.gov/rules/sro.shtml>). Copies of the

<sup>8</sup> 15 U.S.C. 78f(b).

<sup>9</sup> 15 U.S.C. 78f(b)(5).

submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-NYSEArca-2022-13 and should be submitted on or before April 18, 2022.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.<sup>10</sup>

## SECURITIES AND EXCHANGE COMMISSION

[SEC File No. 270-789, OMB Control No. 3235-0731]

### Submission for OMB Review; Comment Request; Extension for Generic ICR: Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery

*Upon Written Request Copies Available From:* U.S. Securities and Exchange Commission, Office of FOIA Services, 100 F Street NE, Washington, DC 20549-2736

Notice is hereby given that, pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission ("Commission") is soliciting comments on the collection of information summarized below. The Commission plans to submit this existing collection of information to the Office of

Management and Budget for extension and approval.

The information collection activity will garner qualitative customer and stakeholder feedback in an efficient, timely manner, in accordance with the Administration's commitment to improving service delivery. By qualitative feedback we mean information that provides useful insights on perceptions and opinions, but are not statistical surveys that yield quantitative results that can be generalized to the population of study. This feedback will provide insights into customer or stakeholder perceptions, experiences and expectations, provide an early warning of issues with service, or focus attention on areas where communication, training or changes in operations might improve delivery of products or services. These collections will allow for ongoing, collaborative and actionable communications between the SEC and its customers and stakeholders. It will also allow feedback to contribute directly to the improvement of program management.

Feedback collected under this generic clearance will provide useful information, but it will not yield data that can be generalized to the overall population. This type of generic clearance for qualitative information will not be used for quantitative information collections that are designed to yield reliably actionable results, such as monitoring trends over time or documenting program performance. Depending on the degree of influence the results are likely to have, such collections may still be eligible for submission for other generic mechanisms that are designed to yield quantitative results.

Below is the projected average annual estimates each year for the next three years:

*Expected Annual Number of activities:* [20].

*Respondents:* [20,000].

*Annual responses:* [20,000].

*Frequency of Response:* Once per request.

*Average minutes per response:* [10].

*Annual burden hours:* [3,500].

Written comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's estimates of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on

respondents, including through the use of automated collection techniques or other forms of information technology. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

The public may view the background documentation for this information collection at the following website, [www.reginfo.gov](http://www.reginfo.gov). Comments should be directed to: (i) Desk Officer for the Securities and Exchange Commission, Office of Information and Regulatory Affairs, Office of Management and Budget, Room 10102, New Executive Office Building, Washington, DC 20503, or by sending an email to: [Lindsay.M.Abate@omb.eop.gov](mailto:Lindsay.M.Abate@omb.eop.gov) and [Alex.W.Goodenough@omb.eop.gov](mailto:Alex.W.Goodenough@omb.eop.gov); and (ii) David Bottom, Director/Chief Information Officer, Securities and Exchange Commission, c/o John Pezzullo, 100 F Street NE, Washington, DC 20549 or send an email to: [PRA\\_Mailbox@sec.gov](mailto:PRA_Mailbox@sec.gov). Comments must be submitted to OMB within 30 days of this notice April 27, 2022.

Dated: March 23, 2022.

## STATE DEPARTMENT

[Public Notice 11660]

### Overseas Security Advisory Council (OSAC) Meeting Notice; Closed Meeting

The Department of State announces meetings of the U.S. State Department's Overseas Security Advisory Council on June 8, and November 15, 2022. Pursuant to Section 10(d) of the Federal Advisory Committee Act (5 U.S.C. Appendix), 5 U.S.C. 552b(c)(4), and 5 U.S.C. 552b(c)(7)(E), it has been determined that the meetings will be closed to the public. The meetings will focus on an examination of corporate security policies and procedures and will involve extensive discussion of trade secrets and proprietary commercial information that is privileged and confidential, and will discuss law enforcement investigative techniques and procedures. The agendas will include updated committee reports, global threat overviews, and other matters relating to private sector security policies and protective programs and the protection of U.S. business information overseas.

<sup>10</sup> 17 CFR 200.30-3(a)(12).

For more information, contact Rebecca Spingarn, Overseas Security Advisory Council, U.S. Department of State, Washington, DC 20522-2008, phone: 571-228-3221.

## DEPARTMENT OF STATE

[Public Notice: 11690]

### 30-Day Notice of Proposed Information Collection: Application for Immigrant Visa and Alien Registration

**ACTION:** Notice of request for public comment and submission to OMB of proposed collection of information.

**SUMMARY:** The Department of State has submitted the information collection described below to the Office of Management and Budget (OMB) for approval. In accordance with the Paperwork Reduction Act of 1995, we are requesting comments on this collection from all interested individuals and organizations. The purpose of this Notice is to allow 30 days for public comment.

**DATES:** Submit comments directly to the Office of Management and Budget (OMB) up to 30 days after date of publication in the **Federal Register**.

**ADDRESSES:** Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to [www.reginfo.gov/public/do/PRAMain](http://www.reginfo.gov/public/do/PRAMain). Find this particular information collection by selecting "Currently under 30-day Review—Open for Public Comments" or by using the search function.

**FOR FURTHER INFORMATION CONTACT:** Direct requests for additional information regarding the collection listed in this notice, including requests for copies of the proposed collection instrument and supporting documents, to Tonya Whigham at [PRA\\_BurdenComments@state.gov](mailto:PRA_BurdenComments@state.gov) or (202)-485-7586.

#### SUPPLEMENTARY INFORMATION:

- *Title of Information Collection:* Application for Immigrant Visa and Alien Registration.
- *OMB Control Number:* 1405-0185.
- *Type of Request:* Revision of a Currently Approved Collection.
- *Originating Office:* CA/VO.
- *Form Number:* DS-260, DS-230.
- *Respondents:* Immigrant Visa Applicants.

- *Estimated Number of Respondents:* 730,000.

- *Estimated Number of Responses:* 730,000.

- *Average Time per Response:* 155 minutes.

- *Total Estimated Burden Time:* 1,885,833.33 hours.

- *Frequency:* Once per respondent's application.

- *Obligation to respond:* Required to Obtain or Retain a Benefit.

We are soliciting public comments to permit the Department to:

- Evaluate whether the proposed information collection is necessary for the proper functions of the Department.
- Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used.
- Enhance the quality, utility, and clarity of the information to be collected.
- Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Please note that comments submitted in response to this Notice are public record. Before including any detailed personal information, you should be aware that your comments as submitted, including your personal information, will be available for public review.

#### Abstract of Proposed Collection

The Electronic Application for Immigrant Visa and Alien Registration (DS-260) is used to collect biographical information from individuals seeking an immigrant visa. This information collection is the Department's main immigrant visa application form and is used by most immigrant visa applicants.

The paper-based Application for Immigrant Visa and Alien Registration (DS-230) is primarily used to collect biographical information from individuals seeking for Cuban Family Reunification Parole. While this discretionary parole authority is exercised by the Department of Homeland Security, an applicant must demonstrate that he or she is eligible for an immigrant visa.

In rare circumstances, an applicant for an immigrant visa may complete the DS-230 in lieu of the online version of the application, the DS-260. Consular officers use the information collected by both versions of the form to elicit information necessary to determine an applicant's immigrant visa eligibility. Applicants must request permission to use the DS-230 from the consular

section at which they intend to apply for their immigrant visa.

#### Methodology

The DS-260 is submitted electronically over an encrypted connection to the Department via the internet. The applicant will be instructed to print a confirmation page containing a bar coded record locator, which will be scanned at the time of processing.

Applicants using the DS-230 will complete the form and submit it directly to a consular post. A consular officer will review the submitted application to determine whether the applicant is eligible for an immigrant visa. To submit the DS-230 in lieu of a DS-260 the applicant must first receive permission from the consular officer.

**Julie M. Stuft,**

*Deputy Assistant Secretary, Bureau of Consular Affairs, Department of State.*

## DEPARTMENT OF STATE

[Public Notice: 11685]

### Notice of Public Meeting: International Digital Economy and Telecommunication (IDET) Advisory Committee

**ACTION:** Announcement of a federal advisory committee meeting.

**SUMMARY:** Pursuant to the Federal Advisory Committee Act (FACA), notice is hereby given of a public meeting of the International Digital Economy and Telecommunication (IDET) Advisory Committee via videoconference on Wednesday, April 27 at 1:00 p.m.–3:00 p.m. (ET). The purpose of the meeting is to discuss the committee's next priorities.

**DATES:** April 27, 2022.

**FOR FURTHER INFORMATION CONTACT:** Please contact the Designated Federal Officer (DFO) Daniel Oates at [IDET@state.gov](mailto:IDET@state.gov) or (202) 647-5205.

#### SUPPLEMENTARY INFORMATION:

Additional information about the IDET is accessible at <https://www.state.gov/international-digital-economy-and-telecommunication-advisory-committee>.

IDET meetings are open to the public, and we encourage anyone wanting to attend this virtual meeting to contact [IDET@state.gov](mailto:IDET@state.gov) to register by COB April 17 with their name, contact information, affiliation, and any request for reasonable accommodation. Requests for reasonable accommodation made after that time will be considered but might

not be able to be accommodated. The public may have an opportunity to provide comments at this meeting at the invitation of the chair. Members of the public may also submit a brief comment (less than three pages) to the committee in writing to [IDET@state.gov](mailto:IDET@state.gov) for inclusion in the public minutes of the meeting.

### Agenda

Wednesday, April 27 at 1:00 p.m. (ET)

- Roll call
- Project Planning
- Next Steps and Other Business
- Public Comment
- Adjournment

Kevin E. Bryant,

Deputy Director, Office of Directives Management, Department of State.

BILLING CODE 4710-05-P

## OFFICE OF THE UNITED STATES TRADE REPRESENTATIVE

### Notice of Reinstatement of Certain Exclusions: China’s Acts, Policies, and Practices Related to Technology Transfer, Intellectual Property, and Innovation

**AGENCY:** Office of the United States Trade Representative (USTR).

**ACTION:** Notice.

**SUMMARY:** In prior **Federal Register** notices, the U.S. Trade Representative modified the action in the Section 301 investigation of China’s acts, policies, and practices related to technology transfer, intellectual property, and innovation by excluding certain products from additional duties. The U.S. Trade Representative subsequently extended 549 of these exclusions. Following public notice and comment, the U.S. Trade Representative has determined to reinstate certain previously extended exclusions through December 31, 2022, as specified in the Annex to this notice.

**DATES:** The reinstated product exclusions announced in this notice will apply as of October 12, 2021, and extend through December 31, 2022. U.S. Customs and Border Protection will issue instructions on entry guidance and implementation.

**FOR FURTHER INFORMATION CONTACT:** For general questions about this notice, contact Associate General Counsel Philip Butler or Assistant General Counsel Rachel Hasandras at (202) 395-5725. For specific questions on customs classification or implementation of the product exclusion identified in the Annex to this notice, contact [traderemedycbp@dhs.gov](mailto:traderemedycbp@dhs.gov).

#### SUPPLEMENTARY INFORMATION:

##### A. Background

In the course of this investigation the U.S. Trade Representative imposed additional duties on products of China in four tranches. See 83 FR 28719 (June 20, 2018); 83 FR 40823 (August 16, 2018); 83 FR 47974 (September 21, 2018), as modified by 83 FR 49153 (September 28, 2018); and 84 FR 43304 (August 20, 2019), as modified by 84 FR 69447 (December 18, 2019) and 85 FR 3741 (January 22, 2020). Each tranche is commonly known as a ‘List’, e.g., List 1, List 2, etc. The fourth tranche is contained in Lists 4A and 4B. No tariffs on List 4B currently are in effect.

For each tranche, the U.S. Trade Representative established a process by which U.S. stakeholders could request the exclusion of particular products subject to the action. The first tranche

of exclusions expired in December 2019 and the final tranche of exclusions expired in October 2020. Starting in November 2019, the U.S. Trade Representative established processes for submitting public comments on whether to extend particular exclusions. *See, e.g.*, 85 FR 6687 (February 5, 2019) and 85 FR 38482 (June 26, 2020). Pursuant to these processes, the U.S. Trade Representative determined to extend 137 exclusions covered under List 1, 59 exclusions on List 2, 266 exclusions on List 3, and 87 exclusions on List 4. With the exception of exclusions related to the COVID-19 pandemic, all of these 549 exclusions have expired. In particular, the exclusions for most of these products expired by December 31, 2020, and the remaining exclusions expired in 2021. *See* 85 FR 15849 and 85 FR 20332. USTR has separately addressed the extension of COVID-19 exclusions. *See* 86 FR 48280 (August 27, 2021), 86 FR 54011 (September 29, 2021), and 86 FR 63438 (November 16 2021).

On October 8, 2021, the U.S. Trade Representative invited the public to comment on whether to reinstate particular exclusions previously granted and extended under the four tranches (the October 8 notice). The October 8 notice set out the following factors to be considered in decisions on possible reinstatement, and invited public comment:

- Whether the particular product and/or a comparable product is

available from sources in the United States and/or in third countries.

- Any changes in the global supply chain since September 2018 with respect to the particular product or any other relevant industry developments.

- The efforts, if any, the importers or U.S. purchasers have undertaken since September 2018 to source the product from the United States or third countries.

- Domestic capacity for producing the product in the United States.

In addition, USTR considered whether or not reinstating the exclusion would impact or result in severe economic harm to the commenter or other U.S. interests, including the impact on small businesses, employment, manufacturing output, and critical supply chains in the United States, as well as the overall impact of the exclusions on the goal of obtaining the elimination of China's acts, policies, and practices covered in the Section 301 investigation.

#### **B. Determination To Reinstate Certain Exclusions**

Based on evaluation of the factors set out in the October 8 notice, and pursuant to sections 301(b), 301(c), and 307(a) of the Trade Act of 1974, as amended, the U.S. Trade Representative has determined to reinstate certain exclusions described in the October 8 notice through December 31, 2022, as set out in the Annex to this notice. The U.S. Trade Representative's determination considers public

comments submitted in response to the October 8 notice, and the advice of advisory committees, the interagency Section 301 Committee, and the White House COVID-19 Response Team.

The reinstated exclusions are available for any product that meets the description in the product exclusion. In particular, the scope of each exclusion is governed by the scope of the ten-digit Harmonized Tariff Schedule of the United States (HTSUS) subheadings and product descriptions in the Annex to this notice.

As stated in the October 8 notice, the reinstated exclusions are retroactive to October 12, 2021. In particular, the reinstated exclusions will apply to goods entered for consumption, or withdrawn from warehouse for consumption, on or after 12:01 a.m. eastern daylight time on October 12, 2021, that are not liquidated or to entries that are liquidated, but within the period for protest described in section 514 of the Tariff Act of 1930, as amended. The U.S. Trade Representative has determined to extend the reinstated exclusions through December 31, 2022, and may consider further extensions as appropriate.

U.S. Customs and Border Protection will issue instructions on entry guidance and implementation.

**Greta M. Peisch,**

*General Counsel, Office of the United States Trade Representative.*

**BILLING CODE 3290-F2-P**

**ANNEX for Reinstatement of Certain Exclusions Previously Extended**

A. Effective with respect to good entered for consumption, or withdrawn from warehouse for consumption, on or after 12:01 a.m. eastern daylight time on October 12, 2021, and before 11:59 p.m. eastern daylight time on December 31, 2022, subchapter III of chapter 99 of the Harmonized Tariff Schedule of the United States (HTSUS) is modified:

1. by inserting the following new heading 9903.88.67 in numerical sequence, with the material in the new heading inserted in the columns of the HTSUS labeled “Heading/Subheading”, “Article Description”, and “Rates of Duty 1-General”, respectively:

Heading/ Subheading	Article Description	Rates of Duty		
		1		2
		General	Special	
“9903.88.67	Effective with respect to entries on or after October 12, 2021 and through December 31, 2022, articles the product of China, as provided for in U.S. note 20(ttt) to this subchapter, each covered by an exclusion granted by the U.S. Trade Representative . . . . . .....	The duty provided in the applicable subheading”		

2. by inserting the following new U.S. note 20(ttt) to subchapter III of chapter 99 in numerical sequence:

“(ttt)(i) The U.S. Trade Representative determined to establish a process by which particular products classified in heading 9903.88.01 and provided for in U.S. notes 20(a) and 20(b) to this subchapter could be excluded from the additional duties imposed by heading 9903.88.01. See 83 Fed. Reg. 40823 (August 16, 2018) and 83 Fed. Reg. 47326 (September 18, 2018). Pursuant to the product exclusion process, the U.S. Trade Representative has determined that, as provided in heading 9903.88.67, the additional duties provided for in heading 9903.88.01 shall not apply to the following particular products, which are provided for in the enumerated statistical reporting numbers:

- 1) 8412.21.0045
- 2) 8481.10.0090
- 3) 8483.50.9040
- 4) 8525.60.1010
- 5) 8607.21.1000
- 6) 9030.90.4600
- 7) Direct acting and spring return pneumatic actuators, each rated at a maximum pressure of 10 bar and valued over \$68 but not over \$72 per unit (described in statistical reporting number 8412.39.0080)
- 8) Centrifugal pumps, submersible, other than for use with machines for making cellulosic pulp, paper or paperboard; the foregoing pumps rated not over 1.5 KW (described in statistical reporting number 8413.70.2004)

- 9) Breast pumps, whether or not with accessories or batteries (described in statistical reporting number 8413.81.0040)
- 10) Housings for water pumps of subheading 8413.30.90 (as described in subheading 8413.91.9010)
- 11) Pump casings and bodies (described in statistical reporting number 8413.91.9080 prior to January 1, 2019; described in statistical reporting number 8413.91.9095 effective January 1, 2019 through December 31, 2019; described in statistical reporting number 8413.91.9085 or 8413.91.9096 effective January 1, 2020)
- 12) Pump covers (described in statistical reporting number 8413.91.9080 prior to January 1, 2019; described in statistical reporting number 8413.91.9095 effective January 1, 2019 through December 31, 2019; described in statistical reporting number 8413.91.9085 or 8413.91.9096 effective January 1, 2020)
- 13) Pump parts, of plastics, each valued not over \$3 (described in statistical reporting number 8413.91.9080 prior to January 1, 2019; described in statistical reporting number 8413.91.9095 effective January 1, 2019 through December 31, 2019; described in statistical reporting number 8413.91.9085 or 8413.91.9096 effective January 1, 2020)
- 14) Compressors, other than screw type, used in air conditioning equipment in motor vehicles, each valued over \$88 but not over \$92 per unit (described in statistical reporting number 8414.30.8030)
- 15) Rotary compressors, each exceeding 746 W but not exceeding 2,238 W, with a cooling capacity ranging from 2.3 kW to 5.5 kW (described in statistical reporting number 8414.30.8060)
- 16) Solar water heaters incorporating glass tube heat collectors and including glass tubes and stands with tanks (described in statistical reporting number 8419.19.0040 prior to January 27, 2022; described in statistical reporting number 8419.12.0000 effective January 27, 2022)
- 17) Heat exchanger plates, cores, finned tubes, cones, shells, bonnets, flanges and baffles (described in statistical reporting number 8419.90.3000)
- 18) Thermal roll laminators, each valued not over \$450 (described in statistical reporting number 8420.10.9040)
- 19) Roller machines designed for cutting, etching or embossing paper, foil or fabric, manually powered (described in statistical reporting number 8420.10.9080)
- 20) Roller machines with dies for embossing paper, manually powered (described in statistical reporting number 8420.10.9080)
- 21) Chemically etched dies of steel, steel-rule cutting dies, movable magnetic dies, embossing folders and plastic embossing diffusers, of a kind used in manually-powered roller machines for etching or stenciling a single sheet of cardstock, paper, leather, flexible magnet, plastics, metallic foil, vellum, felt or fabric, such sheets measuring not more than 50.8 cm in width or length (described in statistical reporting number 8420.99.9000)
- 22) Cutting pads, platforms, base plates, pads, shims, trays, which function as guides for hand-operated table-top calendering machines of a width not exceeding 51 cm (described in statistical reporting number 8420.99.9000)
- 23) Filtering or purifying machinery or apparatus of a kind used for waste water treatment (described in statistical reporting number 8421.21.0000)

- 24) Hand-held ultraviolet water purifiers, powered by batteries (described in statistical reporting number 8421.21.0000)
- 25) Machinery for filtering water, submersible, powered by batteries, manually operated, such machinery designed for use in pools, basins, aquariums, spas or similar contained bodies of water (described in statistical reporting number 8421.21.0000)
- 26) Filters designed to remove sulfites from wine (described in statistical reporting number 8421.22.0000)
- 27) Air purification equipment, electrically powered, weighing less than 36 kg (described in statistical reporting number 8421.39.8015 prior to January 27, 2022; described in statistical reporting number 8421.39.0115 effective January 27, 2022)
- 28) Filter housings, covers, or couplings, the foregoing of steel and comprising parts of machinery or apparatus for filtering liquids (described in statistical reporting number 8421.99.0040 prior to January 27, 2022; described in statistical reporting number 8421.99.0140 effective January 27, 2022)
- 29) Parts of swimming pool vacuum cleaners (described in statistical reporting number 8421.99.0040 prior to January 27, 2022; described in statistical reporting number 8421.99.0140 effective January 27, 2022)
- 30) Ratchet winches designed for use with textile fabric strapping (described in statistical reporting number 8425.39.0100)
- 31) Garage door opener/closers (described in statistical reporting number 8428.90.0290 prior to January 27, 2022; described in statistical reporting number 8428.90.0390 effective January 27, 2022)
- 32) Pile drivers, diesel powered (described in statistical reporting number 8430.10.0000)
- 33) Counterweight castings of iron or steel designed for use on fork lift and other works trucks (described in statistical reporting number 8431.20.0000)
- 34) Tines, carriages, and other goods handling apparatus and parts designed for use on fork lift and other works trucks (described in statistical reporting number 8431.20.0000)
- 35) Welded frames designed to support conveyor rollers (described in statistical reporting number 8431.39.0010)
- 36) Vulcanized rubber tracks, each incorporating cords and cleats of steel, designed for use on construction equipment (described in statistical reporting number 8431.49.9095)
- 37) Animal feeding machinery (described in statistical reporting number 8436.80.0090)
- 38) Parts of animal feeding machinery (described in statistical reporting number 8436.99.0090)
- 39) Automated data processing storage units (other than magnetic disk drive units), not assembled in cabinets for placing on a table or similar place, not presented with any other unit of a system (described in statistical reporting number 8471.70.6000)
- 40) Reject doors, pin protectors, liners, front walls, grates, hammers, rotor and end disc caps, and anvil and breaker bars, of iron or steel, the foregoing parts of metal shredders (described in statistical reporting number 8479.90.9496 prior to January 27, 2022; described in statistical reporting number 8479.90.9596 effective January 27, 2022)
- 41) Ball type angle cock valve bodies, of cast iron, for oleohydraulic or pneumatic transmissions (described in statistical reporting number 8481.90.9020)
- 42) Valve bodies, of aluminum, of valves for oleohydraulic or pneumatic transmissions (described in statistical reporting number 8481.90.9020)

- 43) Angle cock handle assemblies, of iron and steel, each measuring 11.43 cm by 21.59 cm by 5.08 cm and weighing 0.748 kg (described in statistical reporting number 8481.90.9040)
- 44) Armatures designed for use in hydraulic solenoid valves (described in statistical reporting number 8481.90.9040)
- 45) C-poles, of steel, designed for use in hydraulic solenoid control valves (described in statistical reporting number 8481.90.9040)
- 46) Metering spools, of aluminum, designed for use in hydraulic solenoid control valves (described in statistical reporting number 8481.90.9040)
- 47) Pipe brackets of aluminum, each with 4 ports, the foregoing measuring 27.9 cm x 20.3 cm x 17.8 cm and weighing 11.34 kg, designed for installation into air brake control valves (described in statistical reporting number 8481.90.9040)
- 48) Poles, of steel, designed for use in hydraulic solenoid control valves (described in statistical reporting number 8481.90.9040)
- 49) Push pins, of steel, designed for use in hydraulic solenoid control valves (described in statistical reporting number 8481.90.9040)
- 50) Retainers, of steel, designed for use in hydraulic solenoid control valves (described in statistical reporting number 8481.90.9040)
- 51) Coupling covers, including center members, flanged hubs, sleeves and shoes (described in statistical reporting number 8483.90.8010)
- 52) Electric motors, AC, permanent split capacitor type, not exceeding 16 W (described in statistical reporting number 8501.10.4020)
- 53) DC electric motors, of an output of less than 18.65 W, other than brushless, measuring less than 38 mm in diameter (described in statistical reporting number 8501.10.4060)
- 54) DC motors, of an output exceeding 37.5 W but not exceeding 74.6 W, valued over \$2 but not over \$30 each (described in statistical reporting number 8501.31.2000)
- 55) DC motors, electronically commutated, three-phase, eight-pole of a kind used in HVAC systems, of an output of 750 W, valued not over \$100 each (described in statistical reporting number 8501.31.6000)
- 56) AC motors, multi-phase, of rolled steel frame construction (described in statistical reporting number 8501.51.4040)
- 57) AC motors, multi-phase, of an output of 186.5 kW or more but not exceeding 373 kW, having a cast iron frame construction (described in statistical reporting number 8501.53.8040)
- 58) AC multi-phase motors, each of an output exceeding 300 kW but not exceeding 310 kW, fitted with pulleys and brakes to raise and lower passenger elevators (described in statistical reporting number 8501.53.8040)
- 59) Regenerative speed drive controllers for controlling speed of electric motors for elevators (described in statistical reporting number 8504.40.4000)
- 60) Speed drive controllers for electric motors, each such controller measuring 100 mm or more but not over 130 mm in length, 40 mm or more but not over 125 mm in width and 24 mm or more but not over 85 mm in height (described in statistical reporting number 8504.40.4000)
- 61) Dual layer printed circuit board assemblies, each valued over \$30 but not over \$35 (described in statistical reporting number 8504.90.7500)
- 62) Structural components for industrial furnaces (described in statistical reporting number 8514.90.8000)

- 63) Aluminum electrolytic capacitors, each valued not over \$3.20 (described in statistical reporting number 8532.22.0085)
- 64) Rotary switches, rated at over 5 A, measuring not more than 5.5 cm by 5.0 cm by 3.4 cm, each with 2 to 8 spade terminals and an actuator shaft with D-shaped cross section (described in statistical reporting number 8536.50.9025)
- 65) Rotary switches, single pole, single throw (SPST), rated at over 5 A, each measuring not more than 14.6 cm by 8.9 cm by 14.1 cm (described in statistical reporting number 8536.50.9025)
- 66) Modular light switches, for a voltage not exceeding 1,000 V, presented in polyethylene terephthalate (PET) housings, designed for use with a backplate (described in statistical reporting number 8536.50.9065)
- 67) Switches designed for use in motor vehicles, driver or passenger activated (described in statistical reporting number 8536.50.9065)
- 68) Coaxial connectors, for a voltage not exceeding 1,000 V, valued over \$0.20 but not over \$0.30 each (described in statistical reporting number 8536.69.4010)
- 69) Butt splice connectors, for a voltage not exceeding 1,000 V, each valued not over \$3 (described in statistical reporting number 8536.90.4000)
- 70) Ring terminals, for a voltage not exceeding 1,000 V (described in statistical reporting number 8536.90.4000)
- 71) Twist-on wire connectors, for a voltage not exceeding 1,000 V, each valued not over \$0.03 (described in statistical reporting number 8536.90.4000)
- 72) Zinc anodes for use with machines and apparatus for electroplating, electrolysis or electrophoresis (described in statistical reporting number 8543.30.9080)
- 73) Stereoscopic microscopes, not provided with a means for photographing the image, valued not over \$500 per unit (described in statistical reporting number 9011.10.8000)
- 74) Adapter rings, tubes and extension sleeves, stands and arm assemblies, stages and gliding tables, eyeguards and focusing racks, all the foregoing designed for use with compound optical microscopes (described in statistical reporting number 9011.90.0000)
- 75) Depth-sounding apparatus, each valued not over \$50 (described in statistical reporting number 9014.80.2000)
- 76) Weather station sets, each consisting of a monitoring display and outdoor weather sensors, having a transmission range of not over 140 m and valued not over \$50 per set (described in statistical reporting number 9015.80.8080)
- 77) Bismuth germanate crystals with set dimensional and surface finish requirements and used as a detection element in Positron Emission Tomography (PET) detectors (described in statistical reporting number 9018.19.9560)
- 78) Parts and accessories of capnography monitors (described in statistical reporting number 9018.19.9560)
- 79) Electrosurgical cautery pencils with electrical connectors (described in statistical reporting number 9018.90.6000)
- 80) Combined positron emission tomography/computed tomography (PET/CT) scanners which utilize multiple PET gantries (frames) on a common base (described in statistical reporting number 9022.12.0000)
- 81) Radiation therapy systems, each encased by steel-based structural shell with gantry cover comprising three pairs of plastics-based panels (described in statistical reporting number 9022.14.0000)
- 82) X-ray tables (described in statistical reporting number 9022.90.2500)

- 83) X-ray tube housings and parts thereof (described in statistical reporting number 9022.90.4000)
- 84) Multi-leaf collimators of radiotherapy systems based on the use of X-ray (described in statistical reporting number 9022.90.6000)
- 85) Printed circuit board assemblies, of a kind designed for use in X-ray apparatus (described in statistical reporting number 9022.90.6000)
- 86) Vertical stands specially designed to support, contain or adjust the movement of X-ray digital detectors, or the X-ray tube and collimator in complete X-ray diagnostic systems (described in statistical reporting number 9022.90.6000)
- 87) Inoculator sets of plastics, each consisting of a plate with multiple wells, a display tray, and a lid; when assembled, the set measuring 105 mm or more but not exceeding 108 mm in width, 138 mm or more but not exceeding 140 mm in depth, and 6.5 mm or less in thickness (described in statistical reporting number 9027.90.5650)
- 88) Thermostats designed for air conditioning or heating systems, not designed to connect to the internet, the foregoing designed for wall mounting (described in statistical reporting number 9032.10.0030)
- 89) Battery balancers designed for regulating voltage across batteries, other than for 6, 12 or 24 volt systems (described in statistical reporting number 9032.89.4000)

(ii) The U.S. Trade Representative determined to establish a process by which particular products classified in heading 9903.88.02 and provided for in U.S. notes 20(c) and 20(d) to this subchapter could be excluded from the additional duties imposed by heading 9903.88.02. See 83 Fed. Reg. 40823 (August 16, 2018) and 83 Fed. Reg. 47326 (September 18, 2018). Pursuant to the product exclusion process, the U.S. Trade Representative has determined that, as provided in heading 9903.88.67, the additional duties provided for in heading 9903.88.02 shall not apply to the following particular products, which are provided for in the enumerated statistical reporting numbers:

- 1) Acrylic acid-2-acrylamido-2-methylpropanesulfonic acid-acrylic ester (AA/AMPS/HPA) terpolymers, presented in dry form (described in statistical reporting number 3906.90.5000)
- 2) Electrical tape of polyvinyl chloride, in rolls, measuring not more than 2 cm in width, not more than 20.2 m in length, and not more than 0.18 mm in thickness (described in statistical reporting number 3919.10.2020)
- 3) Transparent tape of plastics with an acrylic emulsion adhesive, in rolls measuring not over 4.8 cm in width, valued not over \$.25 per square meter (described in statistical reporting number 3919.10.2030)
- 4) Rolls of polyethylene film coated with a solvent acrylic adhesive (described in statistical reporting number 3919.10.2055)
- 5) Polyethylene film, 20.32 to 198.12 cm in width, and 30.5 to 2000.5 m in length, coated on one side with solvent acrylic adhesive, clear or in transparent colors, whether or not printed, in rolls (described in statistical reporting number 3919.90.5040 or 3919.90.5060)
- 6) Rolls of polyvinyl chloride, measuring 2.5 cm or more but not exceeding 5.1 cm in width and 182.9 m in length (described in statistical reporting number 3920.43.5000)
- 7) Films coated on one or both sides with polyvinylidene chloride (PVdC) or polyvinyl alcohol (PVOH), whether or not having a primer layer between the base and coating; any of the foregoing having a total thickness greater than 0.01 mm but not greater than 0.03 mm (described in statistical reporting number 3920.62.0090)

- 8) Printed film of polyvinyl chloride, laminated with foamed-polyvinyl chloride-coated polyester scrim, in rolls, of a kind used for lining shelves or drawers (described in statistical reporting number 3921.12.1100)
- 9) Sheets and strips consisting of both cross-linked polyethylene and ethylene vinyl acetate, of a width greater than 1 m but not greater than 1.5 m, and a length greater than 1.75 m but not greater than 2.6 m (described in statistical reporting number 3921.19.0000)
- 10) Gas (natural or liquid propane (LP)) engines each having a displacement of more than 2 liters but not more than 2.5 liters (described in statistical reporting number 8407.90.9010)
- 11) Dispensers of hand-cleaning or hand-sanitizing solutions, whether employing a manual pump or a proximity-detecting battery-operated pump, each article weighing not more than 3 kg (described in statistical reporting number 8424.89.9000)
- 12) Walk behind rotary tillers, electric powered, individually weighing less than 14 kg (described in statistical reporting number 8432.29.0060)
- 13) AC motors, of 18.65 W or more but not exceeding 37.5 W, each with attached actuators, crankshafts or gears (described in statistical reporting number 8501.10.6020)
- 14) Electric motors, with an output of 18.65 W or more but not exceeding 37.5 W, with attached cables, designed for use in adjusting motor vehicle seats (described in statistical reporting number 8501.10.6080)
- 15) DC electric motors, 12 V, with an output exceeding 74.6 W but not exceeding 735 W, with lead wires and electrical connector, measuring not over 75 mm outside diameter, with a housing not over 100 mm in length and a shaft not over 60 mm in length (described in statistical reporting number 8501.31.4000)
- 16) DC electric motors, 230 V, with an output not exceeding 140 W, measuring not more than 45 mm in diameter and not over 100 mm in length (described in statistical reporting number 8501.31.4000)
- 17) DC electric motors, 24 V, with an output not exceeding 515 W, measuring not over 95 mm in outside diameter, not over 155 mm in length and with a shaft not over 30 mm in length (described in statistical reporting number 8501.31.4000)
- 18) DC electric motors, with an output exceeding 74.6 W but not exceeding 735 W, containing lead wires and an electrical connector (described in statistical reporting number 8501.31.4000)
- 19) DC motors with a power output exceeding 74.6 W but not exceeding 230 W, measuring less than 105 mm in diameter and 50 mm or more but not over 100 mm in length (described in statistical reporting number 8501.31.4000)
- 20) DC motors, of an output exceeding 74.6 W but not exceeding 735 W, each valued not over \$18 (described in statistical reporting number 8501.31.4000)
- 21) Ground Fault Circuit Interrupters (GFCIs), Appliance Leakage Current Interrupters (ALCIs), Leakage Current Detection Interrupters (LCDIs), and Arc Fault Circuit Interrupters (AFCIs) (described in statistical reporting number 8536.30.8000)
- 22) Electronic AC passive infrared (PIR) motion sensing switches (described in statistical reporting number 8536.50.7000)
- 23) Position or speed sensors for motor vehicle transmission systems, each valued not over \$12 (described in statistical reporting number 8543.70.4500)
- 24) Wheel speed sensors for anti-lock motor vehicle braking systems, each valued not over \$12 (described in statistical reporting number 8543.70.4500)
- 25) Apparatus using passive infrared detection sensors designed for turning lights on and off (described in statistical reporting number 8543.70.9960 prior to January 27, 2022; described in statistical reporting number 8543.70.9860 effective January 27, 2022)

- 26) Liquid leak detectors (described in statistical reporting number 8543.70.9960 prior to January 27, 2022; described in statistical reporting number 8543.70.9860 effective January 27, 2022)
- 27) Robots, programmable, measuring not more than 40 cm high by 22 cm wide by 27 cm deep, incorporating an LCD display, camera and microphone but without "hands" (described in statistical reporting number 8543.70.9960 prior to January 27, 2022; described in statistical reporting number 8543.70.9860 effective January 27, 2022)
- 28) Monopolar conductors for a voltage exceeding 1,000 V, other than of copper and not fitted with connectors (described in statistical reporting number 8544.60.6000)
- 29) Follower block plates, designed for use with buffering/cushioning systems of freight railcars of heading 8606 (described in statistical reporting number 8607.30.1000)
- 30) Motorcycles (including mopeds), with reciprocating internal combustion piston engine of a cylinder capacity not exceeding 50 cc, valued not over \$500 each (described in statistical reporting number 8711.10.0000)
- 31) Motorcycles with electric power for propulsion, each of a power not exceeding 1,000 W (described in statistical reporting numbers 8711.60.0050 or 8711.60.0090, effective July 1, 2019; described in statistical reporting number 8711.60.0000, effective prior to July 1, 2019)
- 32) Digital clinical thermometers (described in statistical reporting number 9025.19.8040 prior to July 1, 2020; described in statistical reporting number 9025.19.8010 or 9025.19.8020 effective July 1, 2020)
- 33) Digital clinical thermometers, valued not over \$11 each (described in statistical reporting number 9025.19.8040 prior to July 1, 2020; described in statistical reporting number 9025.19.8010 or 9025.19.8020 effective July 1, 2020)
- 34) Portable, wireless enabled, electrical gas monitors (described in statistical reporting number 9027.10.2000)

(iii) The U.S. Trade Representative determined to establish a process by which particular products classified in heading 9903.88.03 and provided for in U.S. notes 20(e) and 20(f) to this subchapter could be excluded from the additional duties imposed by heading 9903.88.03, and by which particular products classified in heading 9903.88.04 and provided for in U.S. note 20(g) to this subchapter could be excluded from the additional duties imposed by heading 9903.88.04. See 83 Fed. Reg. 47974 (September 21, 2018) and 84 Fed. Reg. 29576 (June 24, 2019). Pursuant to the product exclusion process, the U.S. Trade Representative has determined that, as provided in heading 9903.88.67, the additional duties provided for in heading 9903.88.03 or in heading 9903.88.04 shall not apply to the following particular products, which are provided for in the enumerated statistical reporting numbers:

- 1) 0304.72.5000
- 2) 0304.83.1015
- 3) 0304.83.1020
- 4) 0304.83.5015
- 5) 0304.83.5020
- 6) 0304.83.5090
- 7) 3923.21.0095
- 8) 3926.20.9050
- 9) 5603.12.0090
- 10) 5603.14.9090
- 11) 5603.92.0090
- 12) 5603.93.0090
- 13) 6505.00.8015

- 14) 8424.90.9080
- 15) 8425.31.0100
- 16) 8708.50.8500
- 17) 8712.00.1510
- 18) 8712.00.1520
- 19) 8712.00.1550
- 20) Alaskan sole (yellowfin, rock or flathead), frozen in blocks, in cases with net weight of more than 4.5 kg (described in statistical reporting number 0304.83.5015)
- 21) King crab meat, frozen in blocks each weighing at least 1 kg but not more than 1.2 kg, in airtight containers (described in statistical reporting number 1605.10.2010)
- 22) Snow crab meat (*C. opilio*), frozen in blocks, in airtight containers each with net weight of not more than 1.2 kg (described in statistical reporting number 1605.10.2022)
- 23) Dungeness crab meat, frozen in blocks, in airtight containers with net weight of not more than 1.2 kg (described in statistical reporting number 1605.10.2030)
- 24) Crab meat (other than King crab, Snow crab, Dungeness or swimming crabs), frozen in blocks, in airtight containers with net weight of not more than 1.5 kg (described in statistical reporting number 1605.10.2090)
- 25) Sodium adipate (1,4-butanedicarboxylic acid, disodium salt) (IUPAC name: disodium hexanedioate) (CAS No. 7486-38-6) (described in statistical reporting number 2917.12.5000)
- 26) 1-Cyanoguanidine (Dicyandiamide) (CAS No. 461-58-5) (described in statistical reporting number 2926.20.0000)
- 27) N-(n-Butyl)thiophosphoric triamide (IUPAC name: N-Diaminophosphinothioylbutan-1-amine) (CAS No. 94317-64-3) (described in statistical reporting number 2929.90.5090)
- 28) Artificial graphite, in powder form (described in statistical reporting number 3801.10.5000)
- 29) Artificial graphite, in powder or flake form, for manufacturing into the lithium-ion anode component of batteries (described in statistical reporting number 3801.10.5000)
- 30) Natural graphite, in powder form (described in statistical reporting number 3801.90.0000)
- 31) Herbicide consisting of 1,1'-dimethyl-4,4'-bipyridinium dichloride (CAS No. 1910-42-5) (Paraquat concentrate in liquid form) up to 45 percent concentration with application adjuvants (described in statistical reporting number 3808.93.1500)
- 32) Supported nickel-based catalysts, of a kind used for methanation, desulfurization, hydrogenation, pre-reforming or reforming of organic chemicals or for protection of hydrotreating catalysts from arsine poisoning (described in statistical reporting number 3815.11.0000)
- 33) Plate-type supported catalysts (reaction accelerators) for reduction of nitrous oxides (NO<sub>x</sub>) with enhanced mercury oxidation, with oxides of base metals being the active substances, applied to a stainless steel mesh (described in statistical reporting number 3815.19.0000)
- 34) Plate-type supported catalysts (reaction accelerators) for reduction of nitrous oxides (NO<sub>x</sub>), with base metals being the active substances, applied on a titanium dioxide based ceramic material to a stainless steel mesh (described in statistical reporting number 3815.19.0000)
- 35) Supported catalysts for polymerization (described in statistical reporting number 3815.19.0000)
- 36) Supported catalysts of cuprous oxide and zinc oxide as the active ingredients for arsine removal (described in statistical reporting number 3815.19.0000)

- 37) Supported catalysts with copper carbonate or zinc carbonate as the active ingredients for low temperature desulfurization (described in statistical reporting number 3815.19.0000)
- 38) Supported catalysts with metal sulfide as the active substance for mercury removal (described in statistical reporting number 3815.19.0000)
- 39) Supported catalysts with molybdenum compounds as the active substance for hydrogenation (described in statistical reporting number 3815.19.0000)
- 40) Supported catalysts with zinc oxide absorbent as the active substance (described in statistical reporting number 3815.19.0000)
- 41) Mixtures containing N,Ndimethyldodecan-1-amine (CAS No. 112-18-5) and N,N-dimethyltetradecan-1-amine (CAS No. 112-75-4) (described in statistical reporting number 3824.99.9297 prior to January 27, 2022; described in 3824.99.9397 effective January 27, 2022)
- 42) Mixtures of hydrofluorocarbons, containing 40 to 44 percent by weight of 1,1,1,2-tetrafluoroethane (CAS No. 811-97-2), 56 to 60 percent by weight of pentafluoroethane (CAS No. 354-33-6) and up to 2 percent by weight of lubricating oil (described in statistical reporting number 3824.78.0020 prior to January 27, 2022; described in statistical reporting number 3827.62.0000 effective January 27, 2022)
- 43) Refrigerant gas R-421B, comprising mixtures containing at least 83 percent but not more than 87 percent by weight of pentafluoroethane, at least 13 percent but not more than 17 percent by weight of 1,1,2,2-tetrafluoroethane, and at least 0.5 percent but not more than 2 percent by weight of lubricant (described in statistical reporting number 3824.78.0020 prior to January 27, 2022; described in statistical reporting number 3827.62.0000 effective January 27, 2022)
- 44) Injection molded polypropylene plastic caps or lids each weighing not over 24 grams designed for dispensing wet wipes (described in statistical reporting number 3923.50.0000)
- 45) One-piece stoppers, of polypropiolactone ("PPL") or polylactic acid ("PLA") polymers, each comprising a disc-shaped top attached to a rounded, tapered plug with a protruding stirrer, measuring at least 55 mm but not more than 120.7 mm in overall length, and weighing at least 0.6 g but not more than 1.1 g each, of a kind used with lids for beverage containers (described in statistical reporting number 3923.50.0000)
- 46) Endless synchronous belts of vulcanized rubber, molded polyurethane, neoprene, or welded urethane, each of an outside circumference of 60 cm or more but not more than 77 cm and a width of 2.5 cm or more but not exceeding 4 cm, weighing 0.18 kg or more but not exceeding 0.45 kg (described in statistical reporting number 4010.35.9000)
- 47) Messenger bags of polyester, each measuring not more than 50 cm by 38 cm by 11 cm, weighing not more than 2.5 kg (described in statistical reporting number 4202.12.8130)
- 48) Backpacks with hydration system, each measuring not more than 51 cm by 28 cm by 9 cm, weighing not more than 1 kg (described in statistical reporting number 4202.92.0400)
- 49) Backpacks with outer surface of textile materials of man-made fibers, each measuring at least 35 cm but not more than 75 cm in height, at least 19 cm but not more than 34 cm in width, and at least 5 cm but not more than 26 cm in depth (described in statistical reporting number 4202.92.3120)
- 50) Duffel bags made predominantly of man-made fibers, each measuring not more than 98 cm by 52 cm by 17 cm, weighing not more than 7 kg, with wheels (described in statistical reporting number 4202.92.3131)
- 51) Duffel bags of polyester, each measuring not more than 81 cm by 39 cm by 11 cm, weighing not more than 7 kg (described in statistical reporting number 4202.92.3131)

- 52) Covers, of leather, designed for use with telecommunication devices (described in statistical reporting number 4205.00.8000)
- 53) Plates, bowls or cups of molded or pressed bamboo pulp, each weighing at least 3 g but not more than 92 g (described in statistical reporting number 4823.70.0020)
- 54) Clamshell containers, pizza pans, lids, compartmentalized and other trays of molded or pressed bamboo pulp, each weighing at least 3 g but not more than 95 g (described in statistical reporting number 4823.70.0040)
- 55) Silk fabrics, containing 85 percent or more by weight of silk or of silk waste other than noil silk, the foregoing not printed, not jacquard woven, measuring over 127 cm in width (described in statistical reporting number 5007.20.0065)
- 56) Silk fabrics, containing 85 percent or more by weight of silk or of silk waste other than noil silk, the foregoing not printed, not jacquard woven, measuring 107 cm or more but not over 127 cm in width (described in statistical reporting number 5007.20.0085)
- 57) Yarn of cashmere or camel hair, carded but not combed, not put up for retail sale (described in statistical reporting number 5108.10.8000)
- 58) Woven dyed fabrics of 100 percent textured polyester filament yarn, measuring 332.7 cm in width, weighing more than 170 g/m<sup>2</sup> (described in statistical reporting number 5407.52.2060)
- 59) Woven fabric of 100 percent textured polyester filaments, dyed, weighing more than 170 g/m<sup>2</sup>, measuring not more than 310 cm in width (described in statistical reporting number 5407.52.2060)
- 60) Woven fabric of synthetic filament yarn containing 85 percent or more by weight of textured polyester filaments, dyed, measuring 249 cm in width, weighing more than 170 g/m<sup>2</sup> (described in statistical reporting number 5407.52.2060)
- 61) Woven dupioni fabric wholly of non-textured dyed polyester filaments, weighing not more than 170 g/m<sup>2</sup>, measuring not more than 310 cm in width (described in statistical reporting number 5407.61.9930)
- 62) Woven fabric wholly of polyester, dyed, not flat, containing non-textured polyester filaments, weighing not more than 170 g/m<sup>2</sup>, measuring not over 310 cm in width (described in statistical reporting number 5407.61.9930)
- 63) Woven fabric wholly of polyester, dyed, containing non-textured polyester filaments, weighing more than 170 g/m<sup>2</sup>, measuring not over 310 cm in width (described in statistical reporting number 5407.61.9935)
- 64) Woven fabric containing by weight 47 percent of nylon and 53 percent of polyester, dyed, containing textured filaments, weighing not more than 170 g/m<sup>2</sup>, measuring greater than 274 cm in width (described in statistical reporting number 5407.72.0015)
- 65) Polyester filament tow, measuring more than 50 ktex but not more than 275 ktex (described in statistical reporting number 5501.20.0000)
- 66) Polypropylene fiber tow, measuring more than 50 ktex but not more than 275 ktex (described in statistical reporting number 5501.40.0000)
- 67) Woven dyed fabrics wholly of spun polyester, weighing more than 240 g/m<sup>2</sup> and measuring not more than 310 cm in width (described in statistical reporting number 5512.19.0090)
- 68) Non-woven fabrics of polyethylene terephthalate (PET), in sheets measuring not more than 160 cm by 250 cm, weighing more than 1,800 g/m<sup>2</sup> but not more than 3,000 g/m<sup>2</sup> (described in statistical reporting number 5603.94.9090)
- 69) Rugs of hand-knotted pile, of nylon and polypropylene, measuring at least 1.2 m<sup>2</sup> (described in statistical reporting number 5701.90.1010)
- 70) Woven dyed embroidery fabrics containing by weight 55 percent of polyester and 45 percent of nylon, weighing less than 115 g/m<sup>2</sup> and measuring 289 cm in width (described in statistical reporting number 5810.92.9080)

- 71) Long pile knit fabrics, of acrylic pile on polyester ground, valued not over \$16 per m<sup>2</sup> (described in statistical reporting number 6001.10.2000)
- 72) Knitted or crocheted fabrics of artificial staple fibers derived from bamboo (described in statistical reporting number 6003.40.6000)
- 73) Sandstone known as brown wave, of a kind used in outdoor living spaces, containing one textured side and up to four chiseled edges with a density of 2,750 kg/m<sup>3</sup> (described in statistical reporting number 6802.99.0060)
- 74) Sandstone with a flamed finish on one side and a length of 200 mm or more but not over 3,100 mm, a width of 100 mm or more but not over 1,380 mm and a thickness of 30 mm or more but not over 180 mm (described in statistical reporting number 6802.99.0060)
- 75) Grinding beads of yttria-stabilized zirconia (described in statistical reporting number 6909.11.2000)
- 76) Screen protectors of tempered safety glass, transparent, cut, and treated, with adhesive on one side, in rectangular sheets, each weighing at least 6 g but not more than 77 g, each measuring not less than 2.8 cm but not more than 28 cm in height, not less than 1.9 cm but not more than 21 cm in width, and not more than 0.1 cm in thickness (described in statistical reporting number 7007.19.0000)
- 77) Sheets of tempered safety glass, coated with silicone oxide, having a surface area of less than 2.5 m<sup>2</sup>, designed to be placed over solar cell panels for protection from external damage (described in statistical reporting number 7007.19.0000)
- 78) Rear-view mirrors of convex glass for motor vehicles, each measuring not less than 1.75 mm and not more than 2.4 mm in thickness, not less than 125 mm and not more than 210 mm in length, not less than 97 mm and not more than 180 mm in width, weighing not less than 74 g and not more than 188 g (described in statistical reporting number 7009.10.0000)
- 79) Rear-view mirrors of flat glass for motor vehicles, each measuring not less than 1.75 mm but not more than 2.4 mm in thickness, not less than 163 mm but not more than 210 mm in length, not less than 107 mm but not more than 167 mm in width and weighing not less than 80 g but not more than 188 g (described in statistical reporting number 7009.10.0000)
- 80) Tiles of non-recycled glass on a vinyl mesh backing, in a grid pattern of not less than 304 mm by 304 mm and not exceeding 305 mm by 305 mm, for mosaics or other decorative or construction purposes (described in statistical reporting number 7016.10.0000)
- 81) Equipment for scaffolding, comprising powder coated or galvanized welded tubular steel frames, braces, guard rail systems, components and accessories, the foregoing for assembly into frame and brace configurations measuring at least 10 cm but not more than 3.3 m in height and at least 4 cm but not more than 8.8 m in width, weighing not more than 91 kg, with a load capacity not more than 2,750 kg (described in statistical reporting number 7308.40.0000)
- 82) Portable outdoor cooker kits, consisting of at least a burner and stand made from steel and/or cast iron, with an adjustable pressure regulator/hose combination for connecting the burner to a source of natural gas or a portable container of liquefied propane (described in statistical reporting number 7321.11.1060)
- 83) Grills composed of steel wire, each measuring 49 cm by 47 cm (19.25 inches by 18.5 inches), weighing 0.36 kg (0.80 lbs.), designed as cooking surface of barbecue grill (described in statistical reporting number 7321.90.6090)
- 84) Cable hooks of steel, each weighing not less than 0.2 kg, measuring not less than 9 cm in length, not less than 5 cm in width and not less than 1 cm in height with spring loaded closure gate (described in statistical reporting number 7326.90.8688)

- 85) Nickel hydroxy carbonate (CAS No. 12607-70-4) (described in statistical reporting number 7501.20.0000)
- 86) Mounting boards of aluminum for guitar sound modifying ("effect") devices, each consisting of an aluminum frame with above ground slots for the placement of devices and floor level slots for the on/off foot-operated pedal switches which control the modifying devices (described in statistical reporting number 7616.99.5190)
- 87) Kitchen and table implements of iron or steel, non-electric, including but not limited to peelers, graters and whisks (described in statistical reporting number 8205.51.3030)
- 88) Automotive polishing attachments specially designed for use with a hand-held drill, each attachment including a 9.5 mm steel drive shaft, internal gear assembly, transverse hand brace and rotating disk components (described in statistical reporting number 8207.90.7585)
- 89) Bolt-on tips of carbon alloy steel of a kind used in tub or horizontal grinders (described in statistical reporting number 8207.90.7585)
- 90) Flat panel display mounting adapters of base metal (described in statistical reporting number 8302.50.0000)
- 91) Stamped and formed brackets of steel (described in statistical reporting number 8302.50.0000)
- 92) Gun safes with digital keypads, of base metal, each weighing at least 148 kg but not more than 422 kg, measuring at least 141 cm but not more than 183 cm in height, at least 55 cm but not more than 107 cm in width and at least 40 cm but not more than 71 cm in depth (described in statistical reporting number 8303.00.0000)
- 93) Parts suitable for use solely or principally with spark-ignition internal combustion piston engines of heading 8407 for marine propulsion (other than cast-iron parts, not advanced beyond cleaning, and machined only for the removal of fins, gates, sprues and risers or to permit location in finishing machinery or connecting rods) (described in statistical reporting number 8409.91.9290)
- 94) Hydraulic valve lifters of steel with rollers, suitable for use solely or principally with spark-ignition internal combustion piston engines (other than for aircraft engines, marine propulsion engines or for vehicles of subheading 8701.20, or headings 8702, 8703 or 8704), each measuring 5 cm or more but not over 13 cm in length and 2.5 cm or more but not over 3.9 cm in diameter and weighing 135 g or more but not over 410 g (described in statistical reporting number 8409.91.9990)
- 95) Solid valve lifters of steel, suitable for use solely or principally with spark-ignition internal combustion piston engines (other than for aircraft engines, marine propulsion engines or for vehicles of subheading 8701.20, or headings 8702, 8703 or 8704), each measuring 19 mm or more but not over 114 mm in length and 6 mm or more but not over 26 mm in diameter and weighing 20 g or more but not over 250 g (described in statistical reporting number 8409.91.9990)
- 96) Wind turbine hubs (described in statistical reporting number 8412.90.9081)
- 97) Cooling medium pumps for internal combustion piston engines of the motor vehicles of headings 8703 or 8704 (described in statistical reporting number 8413.30.9090)
- 98) Vacuum pumps, each composed of a cast aluminum body and an unalloyed steel cover, measuring not more than 85 mm in length, not more than 75 mm in width and not more than 96 mm in height, with a pump volume not more than 200 cc, for use in automotive braking systems (described in statistical reporting number 8414.10.0000)
- 99) Hand- or foot-operated air pumps, each weighing 400 g or more but not over 3 kg, with a maximum pressure of 1.52 MPa, imported with adapters for valves for tires and inner tubes (described in statistical reporting number 8414.20.0000)

- 100) DC blowers for use in motor vehicle climate control systems, each measuring no less than 323 mm by 122 mm by 102 mm and no more than 357 mm by 214 mm by 167 mm (described in statistical reporting number 8414.59.6540)
- 101) DC centrifugal radial blowers, each measuring not less than 345 mm by 122 mm by 102 mm and not more than 355 mm by 173 mm by 145 mm, of an output of 100 W to 285 W, and weighing at least 1.80 kg but no more than 2.72 kg (described in statistical reporting number 8414.59.6560)
- 102) Electric display cases incorporating refrigerating equipment designed for commercial use, each with a glass front to display the food or drink being stored (described in statistical reporting number 8418.50.0080)
- 103) Upright coolers incorporating refrigerating equipment, each measuring not more than 77 cm in width, not more than 78 cm in depth and not more than 200 cm in height, weighing not more than 127 kg, with one swing-type transparent glass door (described in statistical reporting number 8418.50.0080)
- 104) Compact portable shipping scales, of stainless steel, with a maximum weighing capacity of not more than 16 kg, with a digital display, weight below hook, and handles, measuring not less than 19 cm in width, not less than 21 cm in depth, not less than 3 cm in height but not more than 52 cm in width, not more than 41 cm in depth, not more than 13 cm in height (described in statistical reporting number 8423.81.0040)
- 105) Screw jacks and scissor jacks, each comprising a base, two lift arms and adjustable wheel pads, weighing at least 22 kg but not more than 42 kg, with a weight limit of not more than 342 kg (described in statistical reporting number 8425.49.0000)
- 106) Sewing machines, not of the household type, not specially designed to join footwear soles to uppers; each such machine weighing 45 kg or more but not over 140 kg, suitable for sewing leather (described in statistical reporting number 8452.29.9000)
- 107) Trackpad input units for automatic data processing (ADP) machines, each valued over \$100 (described in statistical reporting number 8471.60.9050)
- 108) Printed circuit assemblies for rendering images onto computer screens ("graphics processing modules") (described in statistical reporting number 8473.30.1180)
- 109) Printed circuit assemblies to enhance the graphics performance of automatic data processing (ADP) machines ("accelerator modules") (described in statistical reporting number 8473.30.1180)
- 110) Printed circuit assemblies, constituting unfinished logic boards (described in statistical reporting number 8473.30.1180)
- 111) Parts and accessories of machines of heading 8471, whether or not incorporating fan hubs or LEDs but not incorporating other goods of heading 8541 or 8542 (described in statistical reporting number 8473.30.5100)
- 112) Ratchet tie down straps, each consisting of straps of textiles measuring not less than 25 mm and not more than 105 mm in width and not more than 12.5 m in length, steel hooks at opposite ends of the straps and a gear and pawl mechanism for adjusting the length of the whole (described in statistical reporting number 8479.89.9499 prior to January 27, 2022; described in statistical reporting number 8479.89.9599 effective January 27, 2022)
- 113) Hand-operated valves of plastics, each comprising a bottle lid, drinking spout and flavor dispensing valve (described in statistical reporting number 8481.80.5090)
- 114) Single phase AC electric motors (other than gear motors), of an output of 56 W or more but not exceeding 69 W, each measuring no more than 9 cm in length and no more than 11.5 cm in diameter, weighing no more than 2 kg, in a housing of base metals, with a switch (described in statistical reporting number 8501.40.2040)
- 115) Electric gear motors, single phase AC, of an output of 74.6 W or more but not exceeding 228 W, each with a spring, a coupling, and a locking connector, the

- assembly measuring not more than 30 cm in length, not more than 11 cm in width, not more than 16 cm in height (described in statistical reporting number 8501.40.4020)
- 116) AC motors, single phase, each of an output exceeding 74.6 W but not exceeding 335 W, measuring not more than 13 cm in diameter and not more than 13 cm in height and with a shaft measuring not more than 39 cm in length (described in statistical reporting number 8501.40.4040)
- 117) Single-phase AC electric motors incorporating permanent split capacitors, each of an output range of 367 W or more but not exceeding 565 W, operating at not less than 115 V of alternating current (VAC) but not more than 230 VAC, capable of operating while submerged in water, each weighing at least 7 kg but not more than 11 kg, measuring not more than 10 cm in diameter and at least 22 cm but not exceeding 34 cm in length (described in statistical reporting number 8501.40.4040)
- 118) Single-phase AC electric motors, other than gear motors, whether or not incorporating permanent split capacitors, each of an output range of 746 W or more but not exceeding 1.13 kW, operating at not less than 115 V of alternating current (VAC) but not more than 250 VAC, capable of operating while submerged in water, each weighing at least 9 kg but not more than 12.5 kg, measuring not more than 10 cm in diameter and at least 25 cm but not exceeding 36 cm in length (described in statistical reporting number 8501.40.6040)
- 119) Power supplies for cable networks, that convert 120 V/60 Hz AC input to either 63 V AC or 87 V AC output, each measuring not more than 200 mm by 425 mm by 270 mm and weighing not more than 27.5 kg, containing printed circuit board assemblies, a transformer, and an oil filled capacitor (described in statistical reporting number 8504.40.8500)
- 120) Static converters of a kind used to charge telecommunication apparatus in cars or homes, valued not over \$2 each (described in statistical reporting number 8504.40.8500)
- 121) Power adapters for a weather sensor or weather station display (described in statistical reporting number 8504.40.9580)
- 122) Robotic vacuum cleaners designed for residential use, each with a self-contained electric motor of a power not exceeding 50 W and dust bag/receptacle capacity not exceeding 1 L, whether or not shipped with accessories (described in statistical reporting number 8508.11.0000)
- 123) Vacuum cleaners, bagless, upright, each with self-contained electric motor of a power not exceeding 1,500 W and having a dust receptacle capacity not exceeding 1 liter (described in statistical reporting number 8508.11.0000)
- 124) Starter motors for internal combustion gasoline engines designed for use in the lawn, automotive, watercraft, motorcycle, industrial and garden industries (described in statistical reporting number 8511.40.0000)
- 125) Projectors ("trumpets") of plastics for air horns (described in statistical reporting number 8512.90.2000)
- 126) Fan-forced portable electric heaters, each with a ceramic heating element (described in statistical reporting number 8516.29.0030)
- 127) Fan-forced, portable electric space heaters, each having a power consumption of not more than 1.5 kW and weighing more than 1.5 kg but not more than 17 kg, whether or not incorporating a humidifier or air filter (described in statistical reporting number 8516.29.0030)
- 128) Electric fireplace inserts and free-standing electric fireplace heaters, rated at 5,000 British thermal units (BTUs) (described in statistical reporting number 8516.29.0090)
- 129) Electric fireplaces, weighing not more than 55 kg (described in statistical reporting number 8516.29.0090)

- 130) Portable countertop air fryers of a kind used for domestic purposes (described in statistical reporting number 8516.60.4070)
- 131) Tubular electric heating resistors (described in statistical reporting number 8516.80.8000)
- 132) Closed-loop, digital, video security systems, each consisting of one 4-, 8- or 16-channel digital video recorder (DVR) that connects via cables to at least 2 but no more than 16 color television cameras in housings of plastics, cables and power adapters, put up for retail sale (described in statistical reporting number 8525.80.3010 prior to January 27, 2022; described in statistical reporting number 8525.83.0000 or 8525.89.3000 effective January 27, 2022)
- 133) Color video cameras for use with microscopes, each camera with C-mount lens mount, weighing not more than 87 g, measuring not more than 109 mm in length and 31 mm in diameter, presented with a cable measuring not more than 1.5 m in length (described in statistical reporting number 8525.80.3010 prior to January 27, 2022; described in statistical reporting number 8525.81.0000, 8525.82.0000, or 8525.89.3000 effective January 27, 2022)
- 134) Digital color video cameras for use with microscopes, each camera with 10 megapixel resolution, weighing not more than 175 g, measuring 63 mm by 37 mm in length, presented with USB cable, reduction lens, eyepiece adapters, software CD and calibration slide (described in statistical reporting number 8525.80.3010 prior to January 27, 2022; described in statistical reporting number 8525.81.0000, 8525.82.0000, or 8525.89.3000 effective January 27, 2022)
- 135) Digital color video cameras for use with microscopes, each camera with autofocus, C-mount lens mount, 1080p resolution, weighing not more than 450 g, measuring not more than 67 mm by 67 mm by 81 mm, presented with AC power adapter and power cable (described in statistical reporting number 8525.80.3010 prior to January 27, 2022; described in statistical reporting number 8525.81.0000, 8525.82.0000, or 8525.89.3000 effective January 27, 2022)
- 136) Printed circuit boards, each with a base wholly of plastics impregnated glass, not flexible, with 4 layers of copper (described in statistical reporting number 8534.00.0020)
- 137) Printed circuit boards, with a base of glass reinforced epoxy laminate material that is compliant with NEMA grade FR-4 fire resistance, not flexible, with 10 layers, designed for use in a flow meter, and measuring not more than 6.35 cm by 6.35 cm by 0.1575 cm (described in statistical reporting number 8534.00.0020)
- 138) Printed circuit boards, each with a base wholly of plastics impregnated glass, not flexible, with 2 layers of copper (described in statistical reporting number 8534.00.0040)
- 139) Gas ignition safety controls, measuring 3.8 to 5.3 cm in height, 6.4 to 10.1 cm in width and 13.2 to 13.9 cm in depth; weighing 160 g to 380 g each; and valued not over \$26 each; of a kind used in patio heaters, agricultural heaters or clothes dryers (described in statistical reporting number 8537.10.9170)
- 140) Digital sound processing apparatus capable of connecting to a wired or wireless network for the mixing of sound, each capable of mixing 16, 24, 32 or 64 channel, each measuring not more than 17 cm in height, not more than 60 cm in depth, and not more than 83 cm in width (described in statistical reporting number 8543.70.9100)
- 141) Insulated electric conductors for a voltage not exceeding 1,000 V, fitted with connectors of a kind used for telecommunications, each valued over \$0.35 but not over \$2 (described in statistical reporting number 8544.42.2000)
- 142) Extension cords of copper wire with polyvinyl chloride (PVC) sheaths, for a voltage not exceeding 1,000 V, each measuring at least 9 m but not longer than 16 m in length,

- with National Electrical Manufacturers Association (NEMA) type 5-15P plug on one end and NEMA type 5-15R receptacle on the other (described in statistical reporting number 8544.42.9010)
- 143) Extension cords of copper wire with polyvinyl chloride (PVC) sheaths, for a voltage not exceeding 1,000 V, each measuring at least 4 m but not longer than 16 m in length, with National Electrical Manufacturers Association (NEMA) type TT-30P plug on one end and NEMA type TT-30R receptacle on the other or NEMA type 14-50P plug on one end and NEMA type 14-50R receptacle on the other, with handles on each end in the shape of loops (described in statistical reporting number 8544.42.9090)
- 144) Insulated conductors, not of a kind used for telecommunications, for a voltage not exceeding 1,000 V, each with polyvinyl chloride (PVC) covers and connectors at each end in bundles of 3, 5 or 6 for use in connecting patients to monitoring devices (described in statistical reporting number 8544.42.9090)
- 145) Junction box assemblies, of a kind used in solar panels, incorporating three bypass diodes and two insulated cables fitted with connectors, for a voltage not more than 1,000 V (described in statistical reporting number 8544.42.9090)
- 146) Electrical insulators ("wire nuts") of plastics and steel (described in statistical reporting number 8546.90.0000)
- 147) Tire carrier attachments, roof racks, fender liners, side protective attachments, the foregoing of steel (described in statistical reporting number 8708.29.5060 prior to January 27, 2022; described in statistical reporting number 8708.29.5160 effective January 27, 2022)
- 148) Guide pins and guide bolts designed for use in brakes and servo-brakes of subheading 8708.30 (described in statistical reporting number 8708.30.5090)
- 149) Flange forgings of Society of Automotive Engineers ("SAE") 1035 carbon steel (described in statistical reporting number 8708.40.7570)
- 150) Hub forgings of Society of Automotive Engineers ("SAE") 1035 carbon steel (described in statistical reporting number 8708.40.7570)
- 151) Park gear blanks of Society of Automotive Engineers ("SAE") 1520 carbon steel (described in statistical reporting number 8708.40.7570)
- 152) Stator shafts of Stahlwerk Annahutte ZF34C grade carbon steel (described in statistical reporting number 8708.40.7570)
- 153) Front output shafts of Society of Automotive Engineers ("SAE") 1045 carbon steel suitable for use in automatic transmission systems for passenger motor vehicles (described in statistical reporting number 8708.99.6890)
- 154) Hitches receivers of steel, not suitable for towing applications, each receiver to be clamped onto the rear bumper of a recreational vehicle, such bumpers being square in section and measuring not more than 102 mm on a side (described in statistical reporting number 8708.99.8180)
- 155) Bicycles, not motorized, each having aluminum- or magnesium- alloy wheels both measuring more than 69 cm but not more than 71 cm in diameter, tires of cross-sectional diameter of 3.5 cm, aluminum frame, a polyurethane/carbon fiber cord drive belt, 3-, 7- or 12-speed rear hub and twist shifter (described in statistical reporting number 8712.00.2500)
- 156) Single-speed bicycles having both wheels exceeding 63.5 cm in diameter, weighing less than 16.3 kg without accessories and not designed for use with tires having a cross-sectional diameter exceeding 4.13 cm (described in statistical reporting number 8712.00.2500)
- 157) Bicycles, not motorized, having both wheels exceeding 63.5 cm in diameter, each having no more than three speeds and a coaster brake (described in statistical reporting number 8712.00.3500)

- 158) Bicycle frames, of carbon fiber, valued not over \$600 each (described in statistical reporting number 8714.91.3000)
- 159) Wheeled trailers suitable for towing behind an adult bicycle, each comprising a frame of aluminum with a hitch mechanism, weighing not more than 17.5 kg, with a capacity of not more than 46 kg, with those trailers designated for carrying children meeting ASTM International standard F1975 (described in statistical reporting number 8716.40.0000)
- 160) Casters, with diameter (including, where appropriate, tires) of 20 cm or more but not over 23 cm (described in statistical reporting number 8716.90.3000)
- 161) Compound binocular optical microscopes (other than stereoscopic microscopes and microscopes for photomicrography, cinemicrography or microprojection), each with magnification of 40X or more but not exceeding 1,000X, weighing not more than 3 kg (described in statistical reporting number 9011.80.0000)
- 162) Compound optical microscopes (other than stereoscopic microscopes and microscopes for photomicrography, cinemicrography or microprojection), each with magnification of 40X or more but not exceeding 400X, weighing not more than 15 kg (described in statistical reporting number 9011.80.0000)
- 163) Parts and accessories of meteorological instruments and appliances, each consisting of a wind vane made of plastics and base metal weighing no more than 25 g (described in statistical reporting number 9015.90.0190)
- 164) Parts and accessories of meteorological instruments and appliances, each consisting of an assembly comprising 3 rotating wind cups, bearings, an internal aspirating fan and one or more solar panels (described in statistical reporting number 9015.90.0190)
- 165) Parts and accessories of meteorological instruments and appliances, each consisting of an assembly made of plastic and metal comprising 3 wind cups weighing no more than 35 g (described in statistical reporting number 9015.90.0190)
- 166) Metal casings for, and metal parts of, thermometers of subheading 9025.11.40 designed for use in heating, ventilation and air conditioning ("HVAC") equipment (described in statistical reporting number 9025.90.0600)
- 167) Hand-held card counters, each consisting of a plastic case containing a circuit board, rechargeable battery and controls, weighing less than 1 kg (described in statistical reporting number 9029.10.8000)
- 168) 60-minute mechanical count-down kitchen timers (described in statistical reporting number 9106.90.8500)
- 169) Upholstered seats with wooden frames other than chairs, not of cane, osier, bamboo or similar materials, each measuring at least 144 cm but no more than 214 cm in width, at least 81 cm but no more than 89 cm in height and at least 81 cm but not more than 163 cm in depth (described in statistical reporting number 9401.61.6011)
- 170) Stackable upholstered metal chairs for religious worship settings, capable of interlocking with each other, each with attached holders and racks (described in statistical reporting number 9401.71.0031)
- 171) Unassembled upholstered chairs with metal frames, other than household chairs, with seats and backs having a shell of plastics or wood and measuring at least 48 cm but not more than 61 cm in width (described in statistical reporting number 9401.71.0031)
- 172) Hunting stands of steel or aluminum (including ladder stands, pod stands, hang-on stands and climbing stands), each of which allows one or more hunters to ascend to a height and sit while waiting for game animals to appear (described in statistical reporting number 9401.79.0035)
- 173) Unassembled non-upholstered chairs with metal frames (other than household chairs) with seats and backs having a shell of plastics or wood and measuring at least 48 cm

- but not more than 61 cm in width (described in statistical reporting number 9401.79.0050)
- 174) Parts of chairs of unfinished plywood, including bodies, legs and arms (described in statistical reporting number 9401.90.4080 prior to January 27, 2022; described in statistical reporting number 9401.91.9090 effective January 27, 2022)
- 175) Bench frames of cast aluminum, each measuring at least 42 cm but not more than 79 cm in height, and at least 52 cm but not more than 62 cm in width (described in statistical reporting number 9401.90.5081 prior to January 27, 2022; described in statistical reporting number 9401.99.9081 effective January 27, 2022)
- 176) Chair frames of metal, each with integral bookshelf, capable of being stacked (described in statistical reporting number 9401.90.5081 prior to January 27, 2022; described in statistical reporting number 9401.99.9081 effective January 27, 2022)
- 177) Foot assemblies of base metal and rubber, designed for folding chairs (described in statistical reporting number 9401.90.5081 prior to January 27, 2022; described in statistical reporting number 9401.99.9081 effective January 27, 2022)
- 178) Household furniture of metal and high-pressure laminated bamboo (other than ironing boards, furniture for infants or children or bed frames) (described in statistical reporting number 9403.20.0050)
- 179) Adjustable wire shelving units of steel, other than for household use, comprising vertical poles, foot caps or casters, clips and shelves, each when fully assembled measuring at least 35 cm or more but not more than 183 cm in width, at least 35 cm but not more than 77 cm in depth, and at least 137 cm but not more than 183 cm in height (described in statistical reporting number 9403.20.0081)
- 180) Display racks of powder coated steel, whether or not on casters, whether or not with LED lighting, each measuring at least 60 cm but not more than 125 cm in length, at least 60 cm but not more than 125 cm in width and at least 130 cm but not more than 225 cm in height, with slanted shelves with a lip at the front edge of each that measures 3 cm or more in height (described in statistical reporting number 9403.20.0080 prior to July 1, 2019; described in statistical reporting number 9403.20.0081 effective July 1, 2019)
- 181) Foldable tables with frames of steel and/or aluminum, each measuring 25 cm or more but not over 156 cm in length, 30 cm or more but not over 80 cm in width and 37 cm or more but not over 113 cm in height, with a tabletop surface of aluminum (described in statistical reporting number 9403.20.0090)
- 182) Household furniture of high-pressure laminated bamboo, other than babies' or children's furniture (described in statistical reporting number 9403.82.0015)
- 183) Baby crib liners, each composed of two pieces of multi-layer warp polyester knit mesh without any padding, one measuring no more than 29 cm by 283 cm and the other measuring no more than 29 cm by 210 cm (described in statistical reporting number 9403.90.6005 prior to January 27, 2022; described in statistical reporting number 9403.99.5005 effective January 27, 2022)
- 184) Flameless pillar candles with LED lamps powered by batteries, each measuring at least 7.6 cm but not more than 20 cm in diameter and having a wax exterior (described in statistical reporting number 9405.40.8440 prior to January 27, 2022; described in statistical reporting number 9405.42.8440 effective January 27, 2022)
- 185) Flexible strips, each having embedded light-emitting diodes electrically connected to a molded electrical end connector, each strip wound onto a reel measuring not more than 25 cm in diameter and not more than 1.5 cm in width (described in statistical reporting number 9405.40.8440 prior to January 27, 2022; described in statistical reporting number 9405.42.8440 effective January 27, 2022)

- 186) Garden, patio and table top wick burning torches for outdoor use (described in statistical reporting number 9405.50.4000)
- 187) Lamp shades of fabric over metal frame (described in statistical reporting number 9405.99.4090)

(iv) The U.S. Trade Representative determined to establish a process by which particular products classified in heading 9903.88.15 and provided for in U.S. notes 20(r) and (s) to this subchapter could be excluded from the additional duties imposed by heading 9903.88.15. See 84 Fed. Reg. 43304 (August 20, 2019), 84 Fed. Reg. 45821 (August 30, 2019), 84 Fed. Reg. 57144 (October 24, 2019) and 85 Fed. Reg. 3741 (January 22, 2020). Pursuant to the product exclusion process, the U.S. Trade Representative has determined that, as provided in heading 9903.88.67, the additional duties provided for in heading 9903.88.15 shall not apply to the following particular products, which are provided for in the following enumerated statistical reporting numbers:

- 1) 0505.10.0050
- 2) 0505.10.0055
- 3) 3401.19.0000
- 4) 3926.90.9910
- 5) 5210.11.4040
- 6) 5210.11.6020
- 7) 5504.10.0000
- 8) 6506.10.6030
- 9) Sodium alginate resins (CAS No. 9005-38-3) (described in statistical reporting number 3913.10.0000)
- 10) Shower heads of plastics, designed to be fixed, hand-held, height-adjustable or combinations thereof, and parts of such shower heads (described in statistical reporting number 3924.90.5650)
- 11) Bowls of molded plastics, with clips for retaining guide wires during surgical procedures (described in statistical reporting number 3926.90.9990 prior to July 1, 2020; described in statistical reporting number 3926.90.9985 effective July 1, 2020)
- 12) Disposable graduated medicine dispensing cups of plastics (described in statistical reporting number 3926.90.9990 prior to July 1, 2020; described in statistical reporting number 3926.90.9985 effective July 1, 2020)
- 13) Sets of three polyvinyl chloride-coated foam pads, of plastics, of a kind used to assemble flotation work vests by passing adjustable straps with buckles through slots in the pads, each set comprising two irregularly shaped front/side pads and one rectangular back pad (described in statistical reporting number 3926.90.9990 prior to July 1, 2020; described in statistical reporting number 3926.90.9985 effective July 1, 2020)
- 14) Single-use sterile drapes and covers of plastics, of a kind used to protect the sterile field in surgical operating rooms (described in statistical reporting number 3926.90.9990 prior to July 1, 2020; described in statistical reporting number 3926.90.9985 effective July 1, 2020)
- 15) Sterile decanters of polystyrene plastics, each of a kind used to transfer aseptic fluids or medication to and from sterile bags, vials or glass containers (described in statistical reporting number 3926.90.9990 prior to July 1, 2020; described in statistical reporting number 3926.90.9985 effective July 1, 2020)

- 16) Wallpaper, other than described in subheading 4814.20.00, with floral, landscape, figure or abstract designs or solid backgrounds painted by hand, whether or not with applications of metal leaf (described in statistical reporting number 4814.90.0200)
- 17) Women's knit robes in chief weight of cotton, with hook and loop tab closure (described in statistical reporting number 6108.91.0030)
- 18) Babies' gowns of cotton knitted interlock fabric, each with sleeves, neck opening and elasticized bottom opening (described in statistical reporting number 6111.20.6070)
- 19) Babies' sleep sacks of cotton interlock knitted fabric, sleeveless, each with neck opening and two-way zipper (described in statistical reporting number 6111.20.6070)
- 20) Babies' sleep sacks, knitted, of cotton, each with neck opening and two-way zipper (described in statistical reporting number 6111.20.6070)
- 21) Babies' swaddle sacks of cotton knitted interlock fabric, each with sleeves and mitten cuffs (described in statistical reporting number 6111.20.6070)
- 22) Babies' blanket sleepers of polyester knitted fleece, sleeveless, each with two-way zipper (described in statistical reporting number 6111.30.5015)
- 23) Men's and boys' cotton terry bathrobes with muslin trim, each beltless but featuring a hook-and-loop tab (described in statistical reporting number 6207.91.1000)
- 24) Girls' cotton terry bathrobes with muslin trim, each beltless but featuring a hook-and-loop tab (described in statistical reporting number 6208.91.1020)
- 25) Girls' fleece bathrobes, each beltless but featuring a hook-and-loop tab (described in statistical reporting number 6208.92.0020)
- 26) Blankets (other than electric blankets) of cotton, woven, each measuring at least 116 cm but not more than 118 cm on an edge (described in statistical reporting number 6301.30.0010)
- 27) Blankets (other than electric blankets) of cotton, other than woven, each measuring at least 116 cm but not more than 118 cm on an edge (described in statistical reporting number 6301.30.0020)
- 28) Dust covers of knitted polyester fabric, designed for bed mattresses and pillows (described in statistical reporting number 6302.10.0020)
- 29) Crib sheets of muslin cotton, fitted with elastic (described in statistical reporting number 6302.31.9020)
- 30) Protective covers of cotton for pillows, not knitted or crocheted, of cotton, not napped or printed, each with full encasement construction and zipper opening (described in statistical reporting number 6302.31.9040)
- 31) Laparotomy sponges of cotton (described in statistical reporting number 6307.90.9889 prior to July 1, 2020; described in statistical reporting number 6307.90.9891 effective July 1, 2020)
- 32) Single-use stethoscope covers (described in statistical reporting number 6307.90.9889 prior to July 1, 2020; described in statistical reporting number 6307.90.9891 effective July 1, 2020)
- 33) Athletic, recreational and sporting headgear comprising shells of polyvinyl chloride, polycarbonate plastic or acrylonitrile butadiene styrene, each with an inner liner of expanded polypropylene or expanded polystyrene, designed for use with bicycles (described in statistical reporting number 6506.10.6045)
- 34) Sewing machines of the household type, each weighing not more than 22.5 kg, having a touch screen control, a sewing light, a presser foot lifter and an automatic needle threader (described in statistical reporting number 8452.10.0090)
- 35) Tracking devices, each device measuring not more than 86 mm on a side (if rectangular) or 28 mm in diameter (if circular) and not more than 7.5 mm in thickness, not weighing more than 15 g, designed to be attached to another article and to establish

- a Bluetooth connection with another device for the purposes of providing relative location information (described in statistical reporting number 8517.62.0090)
- 36) Wireless communication apparatus that can receive audio data to be distributed to wireless speakers (described in statistical reporting number 8518.22.0000)
- 37) Liquid crystal display ("LCD") modules, not capable of receiving or processing a broadcast television signal, each with a video display diagonal measuring not more than 191 cm (described in statistical reporting number 9013.80.9000 prior to January 27, 2022, described in statistical reporting number 8524.11.9000 effective January 27, 2022)
- 38) Television liquid crystal display ("LCD") main board assemblies, each consisting of a printed circuit board containing a television tuner and audio and video components (described in statistical reporting number 8529.90.1300)
- 39) Protective Articles (described in statistical reporting number 9004.90.0000 prior to January 1, 2021; described in statistical reporting number 9004.90.0010 or 9004.90.0090 effective January 1, 2021)
- 40) Prism binoculars, other than for use with infrared light, comprising a plastic, aluminum or magnesium alloy body with a rubber jacket, with magnification ranging from at least 4X but not more than 22X and aperture ranging from at least 21 mm but not more than 56 mm (described in statistical reporting number 9005.10.0040)
- 41) Parts of child safety seats (described in statistical reporting number 9401.90.1085 prior to January 27, 2022; described in statistical reporting number 9401.91.1500 or 9401.99.1085 effective January 27, 2022)
- 42) Pillow shells of cotton, each filled with goose or duck down (described in statistical reporting number 9404.90.1000)".
3. by amending the last sentence of the first paragraph of U.S. note 20(a) to subchapter III of chapter 99 by:
- by deleting "or (14)" and by inserting "(14)" in lieu thereof; and
  - by inserting"; or (15) heading 9903.88.67 and U.S. note 20(ttt)(i) to subchapter III of chapter 99" after the phrase "U.S. note 20(sss)(i) to subchapter III of chapter 99", where it appears at the end of the sentence.
4. By amending U.S. note 20(b) to subchapter III of chapter 99 by:
- by deleting "or (14)" and by inserting "(14)" in lieu thereof; and
  - by inserting"; or (15) heading 9903.88.67 and U.S. note 20(ttt)(i) to subchapter III of chapter 99" after the phrase "U.S. note 20(sss)(i) to subchapter III of chapter 99", where it appears at the end of the sentence.
5. by amending the last sentence of the first paragraph of U.S. note 20(c) to subchapter III of chapter 99 by:
- by deleting "or (8)" and by inserting "(8)" in lieu thereof; and
  - by inserting"; or (9) heading 9903.88.67 and U.S. note 20(ttt)(ii) to subchapter III of chapter 99" after the phrase "U.S. note 20(sss)(ii) to subchapter III of chapter 99", where it appears at the end of the sentence.

6. by amending U.S. note 20(d) to subchapter III of chapter 99 by:
  - a. by deleting "or (8)" and by inserting "(8)" in lieu thereof; and
  - b. by inserting"; or (9) heading 9903.88.67 and U.S. note 20(tt)(ii) to subchapter III of chapter 99" after the phrase "U.S. note 20(sss)(ii) to subchapter III of chapter 99", where it appears at the end of the sentence.
7. by amending the last sentence of the first paragraph of U.S. note 20(e) to subchapter III of chapter 99 by:
  - a. by deleting "or (17)" and by inserting "(17)" in lieu thereof; and
  - b. by inserting"; or (18) heading 9903.88.67 and U.S. note 20(tt)(iii) to subchapter III of chapter 99" after the phrase "U.S. note 20(sss)(iii) to subchapter III of chapter 99", where it appears at the end of the sentence.
8. by amending U.S. note 20(f) to subchapter III of chapter 99 by:
  - a. by deleting "or (17)" and by inserting "(17)" in lieu thereof; and
  - b. by inserting"; or (18) heading 9903.88.67 and U.S. note 20(tt)(iii) to subchapter III of chapter 99" after the phrase "U.S. note 20(sss)(iii) to subchapter III of chapter 99", where it appears at the end of the sentence.
9. by amending U.S. note 20(g) to subchapter III of chapter 99 by:
  - a. by deleting "or (9)" and by inserting "(9)" in lieu thereof; and
  - b. by inserting "or (10) heading 9903.88.67 and U.S. note 20(tt)(iii) to subchapter III of chapter 99" after the phrase "U.S. note 20(qqq) to subchapter III of chapter 99", where it appears at the end of the first sentence.
10. by amending the last sentence of the first paragraph of U.S. note 20(r) to subchapter III of chapter 99:
  - a. by deleting "or (11)" and by inserting "(11)" in lieu thereof; and
  - b. by inserting", or (12) heading 9903.88.67 and U.S. note 20(tt)(iv) to subchapter III of chapter 99" after "U.S. note 20(sss)(iv) to sub chapter III of chapter 99".
11. by amending the article description of heading 9903.88.01:
  - a. by deleting "9903.88.62 or";
  - b. by inserting in lieu thereof "9903.88.62,"; and
  - c. by inserting "or 9903.88.67," after "9903.88.66,"
12. by amending the article description of heading 9903.88.02:
  - a. by deleting "9903.88.63 or";

- b. by inserting in lieu thereof "9903.88.63,"; and
  - c. by inserting "or 9903.88.67," after "9903.88.66,"
13. by amending the article description of heading 9903.88.03:
- a. by deleting "9903.88.64 or";
  - b. by inserting in lieu thereof "9903.88.64," and
  - c. by inserting "or 9903.88.67," after 9903.88.66,"
14. by amending the article description of heading 9903.88.04:
- a. by deleting "9903.88.64 or";
  - b. by inserting in lieu thereof "9903.88.64," and
  - c. by inserting "or 9903.88.67," after 9903.88.66,"
15. by amending the article description of heading 9903.88.15:
- a. by deleting "9903.88.65 or";
  - b. by inserting in lieu thereof "9903.88.65," and
  - c. by inserting "or 9903.88.67," after 9903.88.66,".

BILLING CODE 3290-F2-C

## DEPARTMENT OF TRANSPORTATION

### Federal Aviation Administration

#### Public Notice for a Change in Use of Aeronautical Property at Lancaster Airport in Lititz, Pennsylvania

**AGENCY:** Federal Aviation Administration (FAA), DOT.

**ACTION:** Request for public comment.

**SUMMARY:** The Federal Aviation Administration is requesting public comment on Lancaster Airport Authority's (LAA) request to change 5 acres of airport property from aeronautical use to non-aeronautical use. The parcel was purchased as part of a larger parcel with AIP grants 3-42-0049-022-2002 and 3-42-0049-023-2002. The property was purchased as part of a road relocation for the Runway 8-26 extension project and is located in an area that would be difficult for future

aeronautical development. The LAA is requesting approval to release the parcel for permanent non-aeronautical use to erect a vehicle maintenance garage facility. The parcel is identified as 3E on the Airport Layout Plan (ALP). The proposed facility is not currently noted on the ALP, however, if approved, the ALP will be updated to reflect the facility. Documents reflecting the Sponsor's request are available, by appointment only, for inspection at the Airport Manager's office and the FAA Airport District Office.

**DATES:** Comments must be received on or before March 28, 2022.

**ADDRESSES:** Documents are available for review at the:

Airport Manager's Office, Ed Foster,  
500 Airport Road, Lititz, PA 17543,  
(717) 569-1221.

And/or

FAA Airport District Office, Paul Higgins, 3905 Hartzdale Drive, Suite 508, Camp Hill, PA 17011, 717-730-2843.

Written comments on the Sponsor's request must be delivered or mailed to Paul Higgins at the above address.

**SUPPLEMENTARY INFORMATION:** Section 125 of The Wendell H. Ford Aviation Investment and Reform Act for the 21st Century (AIR-21) requires the FAA to provide an opportunity for public notice and comment prior to the "waiver" or "modification" of a sponsor's Federal obligation to use certain airport land for aeronautical purposes.

The LAA is requesting approval to release a parcel for permanent non-aeronautical use to erect a vehicle maintenance garage facility in Area 3E. Area 3E consists of 5 acres east of the Air Traffic Control Tower along the northern limit of the airport property. The corners of Area 3E are: NW: 40°7'33.066", -76°17'37.28", NE: 40°7'37.786", -76°17'27.11", SE: 40°7'33.515", -76°17'35.38", and SW: 40°7'32.35", -76°17'26.314".

The facility, once completed, will be leased to the local school district to perform bus vehicle maintenance. The established rental rate is the cost of the

project spread out over 20 years. The preliminary cost of the project is approximately \$1,135,000 along with cost escalators over the 20 year lease period. The anticipated income over the 20 year lease period is \$2,369,800.

The LAA is proposing to build an 85' X 57' single-story; slab-on-grade Maintenance Building approximately 900' north of Runway 8–26 on airport property. The Pre-Engineered Metal Building includes office space, two (2) service bays, and one (1) wash bay and will be constructed parallel to Millport Road along the northern edge of airport property. Coordinates of the building's four corners: NW: 40°7'33.48", -76°17'36.38", NE: 40°7'33.62", -76°17'35.66", SE: 40°7'32.80", -76°17'35.38", SW: 40°7'32.66", -76°17'36.10".

The facility remains the property of the LAA and will bring in necessary non-aviation income. The facility will be able to be utilized by other types of users in the event that the current tenant does not remain on the property. The tenant currently rents adjacent to where the maintenance facility will be located to store their school buses.

**Rick W. Harner,**

Manager, Harrisburg Airports District Office.

**BILLING CODE P**

## DEPARTMENT OF TRANSPORTATION

### Federal Highway Administration

#### Environmental Impact Statement; Interstate 15: Farmington to Salt Lake City, Utah

**AGENCY:** Federal Highway Administration (FHWA), Department of Transportation (USDOT).

**ACTION:** Notice of intent to prepare an environmental impact statement.

**SUMMARY:** FHWA, on behalf of the Utah Department of Transportation (UDOT), is issuing this notice to advise the public that an EIS will be prepared for proposed transportation improvements on the Interstate 15 corridor from Farmington to Salt Lake City, Utah. Persons or agencies who might be affected by the proposed project are encouraged to comment on the information in this Notice of Intent (NOI). All comments received in response to this NOI will be considered, and any information presented in this NOI, including the preliminary purpose and need, preliminary alternatives, and identified impacts, might be revised in consideration of the comments.

**DATES:** Comments must be received by May 13, 2022.

**ADDRESSES:** This NOI is available on the project website ([i15eis.udot.utah.gov](http://i15eis.udot.utah.gov)). Interested parties are invited to submit comments by any of the following methods:

**Website:** For access to the documents and instructions for submitting comments, go to the project website ([i15eis.udot.utah.gov](http://i15eis.udot.utah.gov)).

**Mailing address or for hand delivery or courier:** UDOT Environmental Services Division, 4501 South 2700 West, P.O. Box 148450, Salt Lake City, Utah 84114–8450.

**Email address:** [i15eis@utah.gov](mailto:i15eis@utah.gov).

A summary of the comments received will be included in the Draft EIS.

**FOR FURTHER INFORMATION CONTACT:**

Brandon Weston, Director of Environmental Services, UDOT Environmental Services Division, 4501 South 2700 West, P.O. Box 148450, Salt Lake City, Utah 84114–8450; telephone: (801) 965–4603; email: [brandonweston@utah.gov](mailto:brandonweston@utah.gov). Tiffany Pocock, PE, I–15 EIS Project Manager, UDOT Region One, 166 W Southwell Street, Ogden, Utah 84404–4194; telephone: (801) 965–4612 email: [tpocock@utah.gov](mailto:tpocock@utah.gov).

**SUPPLEMENTARY INFORMATION:** The environmental review, consultation, and other actions required by applicable federal environmental laws for this project are being or have been carried out by UDOT pursuant to 23 U.S.C. 327 and a Memorandum of Understanding dated January 17, 2017, extended to April 29, 2022, and executed by FHWA and UDOT. UDOT, as the assigned National Environmental Policy Act (NEPA) agency, will prepare an EIS to evaluate transportation solutions along I–15 from Farmington to Salt Lake City. The proposed project study area extends on I–15 from the Park Lane interchange (I–15 milepost 325) in Farmington to the 400 South interchange (I–15 milepost 308) in Salt Lake City. The EIS will be conducted in accordance with the requirements of NEPA, as amended (42 United States Code [U.S.C.] Section 4321, *et seq.*), 23 U.S.C. 139, Council on Environmental Quality (CEQ) regulations implementing NEPA (40 CFR parts 1500–1508), FHWA regulations implementing NEPA (23 CFR 771.101–771.139), and all applicable federal, state, and local governmental laws and regulations. This project is considered a “major project” pursuant to 23 U.S.C. 139.

#### (a) The Preliminary Purpose and Need for the Proposed Action

The preliminary purpose of this project as identified by UDOT is to

improve safety, replace aging infrastructure, provide better mobility for all travel modes, strengthen the state and local economy, and better connect communities along I–15 from Farmington to Salt Lake City. Between Farmington and Salt Lake City, I–15 has aging infrastructure and worsening operational characteristics for the current and projected 2050 travel demand which contribute to decreased safety, increased congestion, lost productivity, and longer travel times. East-west streets that access or cross I–15 are important to connect communities and support other travel modes such as biking, walking, and transit. When I–15 and its interchanges do not support travel demand, traffic is added to the local streets impacting both the regional and local transportation system, and the safe, comfortable, and efficient travel by other modes. Agencies and the public are invited to comment on the purpose and need statement. The purpose and need statement and supporting documentation, including data and public input summary, will be available in the Draft EIS. The purpose and need statement might be revised based on comments received during the comment period on this NOI.

#### (b) A Preliminary Description of the Proposed Action and Alternatives the Environmental Impact Statement Will Consider

The currently contemplated range of alternatives proposed to be considered in the EIS consists of the following: (1) Taking no action; (2) capacity improvements to I–15 such as adding general-purpose, high-occupancy, or auxiliary lanes and interchange improvements; (3) additional or modified accesses to and from I–15; (4) additional or modified road, bicycle and pedestrian crossings of I–15; (5) additional or modified multimodal connections to FrontRunner stations and regional trails; (6) Transportation System Management (TSM); (7) combinations of any of the above, and (8) other reasonable alternatives identified during the EIS process. Alternatives that do not meet the project's purpose and need or that are otherwise not reasonable will not be carried forward for detailed consideration in the EIS. The alternatives to be retained will be finalized after UDOT considers the comments received during the comment period on this NOI, and the comments will be documented in the Draft EIS. The alternatives might be revised based on UDOT's consideration of public comments. The concepts not retained

will also be documented in the Draft EIS.

### (c) Brief Summary of Expected Impacts

The EIS will evaluate the expected social, economic, and environmental effects resulting from the implementing the action alternatives and the no action alternative. The following resources are the most sensitive resources in the project area and will be evaluated closely by UDOT:

- *Wetlands and Waters of the United States*: Project alternatives could require placing fill in waters of the United States and impacts to wetlands considered to be jurisdictional. These impacts would require a permit from the U.S. Army Corps of Engineers (USACE) for the discharge of dredged or fill material into waters of the United States, including wetlands.

- *Section 4(f) Resources*: Project alternatives might use Section 4(f) parks, recreation resources, and eligible historic properties.

- *Land and Water Conservation Fund Act Section 6(f) Resources*: Project alternatives might impact several parks that received funds from the Land and Water Conservation Fund Act.

- *Environmental Justice Communities*: Project alternatives might impact communities eligible for consideration as environmental justice communities that are low-income and minority due to right-of-way requirements, increases in noise, or other environmental factors. UDOT will work closely with the community to avoid, minimize, and mitigate these impacts.

- *Property Acquisitions*: Project alternatives could require acquiring private properties and relocating the tenants or owners of the properties. UDOT will work closely with the impacted stakeholders and designers to reduce the number of acquisitions and relocations.

The EIS will evaluate the expected impacts of and benefits to the known resources listed above as well as the following resources: Land use, social and community resources, traffic, economics, pedestrian and bicyclist considerations, air quality, noise, water quality, wildlife resources, floodplains, cultural resources, hazardous material sites, and visual resources. The level of review of the identified resources for the EIS will be commensurate with the anticipated effects on each resource from the proposed project and will be governed by the statutory or regulatory requirements protecting those resources.

The analyses and evaluations conducted for the EIS will identify the potential for effects; avoidance

measures; whether the anticipated effects would be adverse; and mitigation measures for adverse effects. UDOT welcomes comments on the expected impacts to be analyzed in the Draft EIS during the NOI comment period.

Agencies, stakeholders, and the public are invited to comment on the expected impacts. The environmental impact analysis will not begin until the purpose and need, range of alternatives, and impact categories are finalized based on the public comments on this NOI. UDOT might revise the identification of impacts as a result of considering public comments. The studies to identify the impacts, as well as the analyses of impacts from the retained alternatives, will be presented in the Draft EIS.

### (d) Anticipated Permits and Other Authorizations

The project might require a permit from the U.S. Army Corps of Engineers (USACE) under Section 404 of the Clean Water Act and approvals from other agencies such as the U.S. Bureau of Reclamation (USBR) for impacts to USBR facilities in the project area and the National Park Service (NPS) for impacts to Land and Water Conservation Fund Act Section 6(f) resources in the project area. Additional state or local permits that may be required include stream alteration permits (PGP-10) from the Utah Division of Water Rights, Clean Water Act Section 401 Certification from the Utah Division of Water Quality, Clean Water Act Section 402 Utah Pollution Discharge Elimination System General Permit for Construction Activities from the Utah Division of Water Quality, floodplain development permits from local jurisdictions (cities or counties), and other construction related permits (such as Air Quality Approval Orders and Fugitive Dust Emission Control Plan from the Utah Division of Air Quality). This project is considered a "major project" pursuant to 23 U.S.C. 139, and all authorization decisions necessary for construction are anticipated to be completed not later than 90 days after the date when a Record of Decision is issued.

### (e) Scoping and Public Review

#### *Agency Coordination*

A coordination plan is being prepared to define the agency and public participation procedures for the environmental review process. The plan will establish cooperating and participating agency roles and a review schedule and will be posted on the project website ([i15eis.udot.utah.gov](http://i15eis.udot.utah.gov)).

Cooperating agencies have been preliminarily identified to include the USACE, the U.S. Environmental Protection Agency, the USBR, and the NPS.

#### *Agency and Public Review*

UDOT will initiate a scoping process in April 2022 to gather information and solicit input after this NOI is issued. During scoping, UDOT will coordinate with agencies, stakeholders, and the public and will provide an opportunity for comment on the draft purpose and need statement for the project, the range of potential alternatives, the draft alternatives screening methodology, and potentially significant environmental issues that will be evaluated in the EIS. A public scoping period will be held between April 11 and May 13, 2022. As part of the scoping process, UDOT will provide an opportunity for public and agency comments on the draft purpose and need statement and alternatives screening methodology memorandum. These documents will be available on the project website ([i15eis.udot.utah.gov](http://i15eis.udot.utah.gov)) on April 11, 2022. Final versions of these documents, along with a scoping summary report, will be available on the project website when they are completed.

Public involvement is a critical component of the project development process and will continue throughout the development of the EIS. All individuals and organizations expressing interest in the project will be able to participate in the process through various public outreach opportunities, and they can sign up to receive email announcements and notifications on the project website ([i15eis.udot.utah.gov](http://i15eis.udot.utah.gov)). These opportunities include, but are not limited to, public meetings and hearing(s), the project website, and press releases. Public notice will be given regarding the time and place of all public meetings and hearing(s). A public scoping period and 30-day public comment period is planned between April 11 and May 13, 2022. Pursuant to 40 CFR 1501.9(d), during the scoping period, all interested parties are requested to provide comments on the draft purpose and need statement, the range of potential alternatives for the project, the draft alternatives screening methodology memorandum, and resources to be considered in the EIS, and to identify any relevant information, studies, or analyses relevant to the project. Written comments or questions should be directed to UDOT representatives at the mail or email addresses provided above.

Public hearings will be held during the course of the EIS, as described below. Generally, the locations, dates, and times for each public hearing will be publicized on the project website ([i15eis.udot.utah.gov](http://i15eis.udot.utah.gov)) and in newspapers with local and regional circulation, including *The Salt Lake Tribune*, the *Deseret News*, and the *Davis Clipper*. Materials will be available at the meetings in English and Spanish, and oral and written comments will be solicited.

#### *Public Hearing on the Draft EIS*

Notice of availability of the Draft EIS for public and agency review will be published in the **Federal Register** and through other methods which will identify where interested parties can review a copy of the Draft EIS. The public hearing will be conducted by UDOT and announced a minimum of 15 days in advance. UDOT will provide information for the public hearing, including the location, date, and time for the meeting, through a variety of means including the project website ([i15eis.udot.utah.gov](http://i15eis.udot.utah.gov)) and by newspaper advertisement.

#### **(f) A Schedule for the Decision-Making Process**

After this NOI is issued, UDOT will coordinate with the participating, cooperating, and cooperating/concurring agencies to develop study documentation and the Draft EIS.

- The Draft EIS is anticipated to be issued in 2023.
- The combined Final EIS and Record of Decision is anticipated to be issued in the spring of 2024, within 24 months of the publication of this NOI.
- A Clean Water Act Section 404 permit decision from the USACE and any other federal permits, if necessary, will be obtained within 90 days after the Record of Decision is issued.

#### **(g) Request for Identification of Potential Alternatives, Information, and Analyses Relevant to the Proposed Action**

To ensure that a full range of issues related to the project are addressed and all potential issues are identified, UDOT invites comments and suggestions from all interested parties. The project team requests comments and suggestions regarding potential alternatives and impacts and the identification of any relevant information, studies, or analyses of any kind concerning impacts affecting the quality of the human environment. Any information presented in this NOI, including the preliminary purpose and need statement, preliminary range of

alternatives, and identification of impacts, might be revised after UDOT considers the comments. The purpose of this request is to bring relevant comments, information, and analyses to UDOT's attention, as early in the process as possible, to enable UDOT to make maximum use of this information in decision making. Comments may be submitted according to the instructions in the **ADDRESSES** section of this NOI.

#### **(h) Contact Information**

For more information, please visit the project website at [i15eis.udot.utah.gov](http://i15eis.udot.utah.gov). Information requests or comments can also be emailed to [i15eis@utah.gov](mailto:i15eis@utah.gov).

*UDOT*: Brandon Weston, Director of Environmental Services, UDOT Environmental Services Division, 4501 South 2700 West, P.O. Box 148450, Salt Lake City, Utah 84114-8450; telephone: (801) 965-4603; email: [brandonweston@utah.gov](mailto:brandonweston@utah.gov).

(Catalog of Federal and Domestic Assistance Program Number 20.205, Highway Research, Planning and Construction. The regulations implementing Executive Order 12372 regarding intergovernmental consultation on federal programs and activities apply to this program.)

Dated: March 21, 2022.

## **DEPARTMENT OF TRANSPORTATION**

### **National Highway Traffic Safety Administration**

[Docket No. DOT-NHTSA-2022-0017]

#### **Agency Information Collection Activities; Notice and Request for Comment; Procedures for Participating in and Receiving Information From the National Driver Register**

**AGENCY:** National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

**ACTION:** Notice and request for comments on the extension of a previously approved collection of information.

**SUMMARY:** The Department of Transportation (DOT) invites public comments about our intention to request approval from the Office of Management and Budget (OMB) for an extension of a currently approved information collection. Before a Federal agency can collect certain information from the public, it must receive approval from the Office of Management and Budget

(OMB). Under procedures established by the Paperwork Reduction Act of 1995, before seeking OMB approval, Federal agencies must solicit public comment on proposed collections of information, including extension and reinstatement of previously approved collections. This document describes a collection of information for which NHTSA intends to seek OMB approval titled "National Driver Register (NDR)."

**DATES:** Comments must be received on or before May 27, 2022.

**ADDRESSES:** You may submit comments [identified by Docket No. DOT-NHTSA-2022-0017] through one of the following methods:

- *Electronic submissions:* Go to the Federal eRulemaking Portal: <http://www.regulations.gov>. Follow the online instructions for submitting comments.

- *Fax:* 1 (202) 493-2251.

- *Mail or Hand Delivery:* Docket Management Facility, U.S. Department of Transportation, 1200 New Jersey Avenue SE, West Building, Room W12-140, Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except on Federal holidays. To be sure someone is there to help you, please call (202) 366-9322 before coming.

*Instructions:* All submissions must include the agency name and docket number for this notice. Note that all comments received will be posted without change to <http://www.regulations.gov>, including any personal information provided. Please see the Privacy Act heading below.

*Privacy Act:* Anyone is able to search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (65 FR 19477-78) or you may visit <https://www.transportation.gov/privacy>.

*Docket:* For access to the docket to read background documents or comments received, go to <http://www.regulations.gov> or the street address listed above. Follow the online instructions for accessing the dockets via internet.

**FOR FURTHER INFORMATION CONTACT:** For additional information or access to background documents, contact Miriam Chege, NHTSA, U.S. Department of Transportation, 1200 New Jersey Avenue SE, Room W55-210, NSA-200, Washington, DC 20590.

Mrs. Chege's telephone number is (202) 366-4800. Please identify the

relevant collection of information by referring to its OMB Control Number.

**SUPPLEMENTARY INFORMATION:** Under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), before an agency submits a proposed collection of information to OMB for approval, it must first publish a document in the **Federal Register** providing a 60-day comment period and otherwise consult with members of the public and affected agencies concerning each proposed collection of information. The OMB has promulgated regulations describing what must be included in such a document. Under OMB's regulation (at 5 CFR 1320.8(d)), an agency must ask for public comment on the following: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) how to enhance the quality, utility, and clarity of the information to be collected; and (d) how to minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.* permitting electronic submission of responses. In compliance with these requirements, NHTSA asks for public comments on the following proposed collection of information for which the agency is seeking approval from OMB.

*Title:* National Driver Register (NDR).

*OMB Control Number:* 2127-0001.

*Form Number(s):* This collection of information is electronically submitted to NHTSA. There are no standard forms.

*Type of Request:* Extension of a currently approved information collection.

*Type of Review Requested:* Regular.

*Requested Expiration Date of*

*Approval:* 3 years from date of approval.

### Summary of the Collection of Information

The National Driver Register Act of 1982, Title 49 U.S.C., Subtitle VI, Part A, Chapter 303 (as amended) requires the Secretary of Transportation (NHTSA by delegation) to maintain a National Driver Register (NDR) to assist the State chief driver licensing officials in the exchange of information about the motor vehicle driving records of individuals. The chief driver licensing official of a participating State must report to the NDR identification information regarding any individual

who is denied a motor vehicle operator's license for cause, whose motor vehicle operator's license is withdrawn for cause, or who is convicted of certain serious motor vehicle related offenses (specified in the Act at 49 U.S.C. 30304) or comparable offenses. (23 U.S.C. 30304(a); 23 CFR 1327, Appendix A). Participating States are required to submit an inquiry to the NDR on all applicants for driver's licenses before issuing a license to the applicant. In addition, when requested by other authorized users (*e.g.*, the Federal Aviation Administration), participating States are required to submit inquiries to the NDR and provide responses to the other authorized users of the NDR for transportation safety purposes. All 50 States and the District of Columbia participate in the NDR.

The NDR maintains the computerized database known as the Problem Driver Pointer System (PDPS) which contains information on individuals whose privilege to operate a motor vehicle has been revoked, suspended, canceled or denied or who have been convicted of serious traffic-related offenses. The records maintained at the NDR consist of identification information including name, date of birth, sex, driver license number, and reporting State which is collected on a daily basis.

States use interactive communication for their routine transactions with the NDR which allows them to submit the required information automatically at the same time the individual's information is entered into the State's system. Specifically, when an individual applies for a driver's license, an inquiry is automatically transmitted to the NDR when the driver's application is entered into the State's system. Likewise, when a State records license actions that have been taken against an individual that require reporting to the NDR, a transaction submitting the individual's identification information is automatically generated and transmitted to the NDR.

### Description of the Need for the Information and Proposed Use of the Information

The purpose of the information collection is to improve traffic and transportation safety by assisting States in keeping problem drivers off the nation's highways. The NDR was established to serve as the central repository of information on problem drivers to promote information sharing among States, eliminating the need for States to contact each of the other 50 jurisdictions, and the District of Columbia individually. The information

collected is used by State driver licensing agencies to identify problem drivers prior to issuing a driver's license and to develop and implement driver improvement programs. The following groups are also authorized to receive information upon inquiry to a State driver licensing agency for transportation safety purposes:

- a. Employers of motor vehicle operators,
- b. Employers of locomotive operators,
- c. Federal Aviation Administration regarding applications for or holders of airman's certificates,
- d. U.S. Coast Guard regarding applicants for or holders of licenses, certificates of registry, or merchant mariner's documents, and for Coast Guard crew members,
- e. National Transportation Safety Board and Federal Motor Carrier Safety Administration in connection with accident investigations,
- f. Air carriers regarding individuals seeking employment as pilots, and
- g. Individuals who have or are seeking access to national security information for purposes under E.O. 12968 or who are being investigated for Federal employment.

*Affected Public:* Participating States.

*Estimated Number of Respondents:*

The number of respondents is 51—all 50 States and the District of Columbia.

*Frequency:* On a daily basis.

*Estimated Total Annual Burden*

*Hours:* 14,004 hours.

*Estimated Total Annual Burden Cost:*

There are no annual costs.

States use routine electronic interactive communication for transactions with the NDR, which allows the States to submit the required information automatically at the same time the information is entered into the State's own system. Although States are required to report and check for a problem driver when issuing a driver's license, no burden hours are incurred for these queries for this information collection because the State's computer systems automatically transmit the information that is entered as a part of normal business practice. Therefore, the estimated hour burden is based on the States' PDPS IT infrastructure maintenance and States' participation in the optional Clean File process.

To estimate the annual maintenance and infrastructure burden to report and check for problem drivers, NDR asked a small sample of States for information about their annual burden. NDR received formatted estimates from two States which included the maintenance and infrastructure labor hours and cost used to send and maintain information to PDPS. Together, the burden from

these two States was 530 hours and the associated labor cost was \$17,400. Using these estimates, NHTSA calculates an average of 265 hours per State, with an annual labor cost of \$8,700. There are 51 respondents per year (the 50 States and the District of Columbia). Therefore, total annual burden hours for maintenance and infrastructure is estimated to be 13,515 hours (51 respondents × 265 hours). The total annual maintenance and infrastructure labor cost per year is estimated to be \$443,700 (\$8,700 × 51).

To ensure that the information contained in the NDR is accurate, States sometimes submit a “clean file” which is a confirmation of all drivers of that State who should be listed in the NDR file. NHTSA estimates that an average of 28 clean files will be submitted annually by States. States use SFTP to submit this information, and NHTSA estimates it takes an IT specialist 8 hours to prepare and run the data. NHTSA estimates the cost for IT personnel burden hours using the Bureau of Labor Statistics’ mean wage estimate for Software and Web

Developers, Programmers, and Testers (Standard Occupational Classification #15–1250, May 2020) of \$52.86.<sup>1</sup> The Bureau of Labor Statistics estimates that for State and local government workers, wages represent 61.9% of total compensation.<sup>2</sup> Therefore, the total hourly cost associated with the IT burden hours is estimated to be \$85.40 (\$52.86 ÷ 61.9%) per hour. The total annual burden hours to prepare and submit clean files is 224 hours (8 × 28). The total annual clean file labor cost per year is estimated to be \$19,130 (\$85.40 × 224).

Submission type	Annual submissions	Estimated burden per submission	Average hourly labor cost	Labor cost per submission	Total burden hours	Total labor costs
Maintenance and Infrastructure .....	51	265	N/A	\$8,700	13,515	\$443,700
Clean files .....	28	8	\$85.40	683.20	224	19,130
<b>Total .....</b>	<b>51</b>	<b>.....</b>	<b>.....</b>	<b>.....</b>	<b>14,004</b>	<b>462,830</b>

*Public Comments Invited:* You are invited to comment on any aspect of this information collection, including whether (a) the proposed collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; (b) the accuracy of the Department’s estimated burden of the proposed information collection; (c) ways to enhance the quality, utility and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including the use of automated collection techniques or other forms of information technology. The agency will summarize and/or include your comments in the request for OMB’s clearance of this information collection.

*Authority:* The Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended; 49 CFR 1.49; and DOT Order 1351.29.

**BILLING CODE 4910–59–P**

**DEPARTMENT OF THE TREASURY**

**Office of the Comptroller of the Currency**

**FEDERAL RESERVE SYSTEM**

**FEDERAL DEPOSIT INSURANCE CORPORATION**

**Proposed Agency Information Collection Activities; Comment Request**

**AGENCY:** Office of the Comptroller of the Currency (OCC), Treasury; Board of Governors of the Federal Reserve System (Board); and Federal Deposit Insurance Corporation (FDIC).

**ACTION:** Joint notice and request for comment.

**SUMMARY:** In accordance with the requirements of the Paperwork Reduction Act of 1995 (PRA), the OCC, the Board, and the FDIC (the agencies) may not conduct or sponsor, and the respondent is not required to respond to, an information collection unless it displays a currently valid Office of Management and Budget (OMB) control number. The Federal Financial Institutions Examination Council (FFIEC), of which the agencies are members, has approved the agencies’ publication for public comment of a proposal to extend for three years, without revision, the Market Risk Regulatory Report for Institutions Subject to the Market Risk Capital Rule

(FFIEC 102), which is currently an approved collection of information for each agency.

At the end of the comment period for this notice, the FFIEC and the agencies will review any comments received to determine whether to modify the proposal in response to comments. As required by the PRA, the agencies will then publish a second **Federal Register** notice for a 30-day comment period and submit the final FFIEC 102 to OMB for review and approval.

**DATES:** Comments must be submitted on or before May 27, 2022.

**ADDRESSES:** Interested parties are invited to submit written comments to any or all of the agencies. All comments, which should refer to the OMB control number(s), will be shared among the agencies.

**OCC:** Commenters are encouraged to submit comments by email, if possible. You may submit comments by any of the following methods:

- *Email:* [prainfo@occ.treas.gov](mailto:prainfo@occ.treas.gov).
- *Mail:* Chief Counsel’s Office,

Attention: Comment Processing, Office of the Comptroller of the Currency, Attention: 1557–0325, 400 7th Street SW, Suite 3E–218, Washington, DC 20219.

- *Hand Delivery/Courier:* 400 7th Street SW, Suite 3E–218, Washington, DC 20219.

**Instructions:** You must include “OCC” as the agency name and “1557–0325” in your comment. In general, the OCC will publish comments on

<sup>1</sup> May 2020 National Occupational Employment and Wage Estimates United States, Occupational Employment Statistics, Bureau of Labor Statistics, U.S. Department of Labor, <https://www.bls.gov/oes/>

[current/oes\\_nat.htm#15-0000](https://www.bls.gov/news.release/ecec.t01.htm), last accessed July 23, 2021.

<sup>2</sup> Employer Costs for Employee Compensation by ownership (Dec. 2020), available at <https://www.bls.gov/news.release/ecec.t01.htm> (accessed July 23, 2021).

[www.reginfo.gov](http://www.reginfo.gov) without change, including any business or personal information provided, such as name and address information, email addresses, or phone numbers. Comments received, including attachments and other supporting materials, are part of the public record and subject to public disclosure. Do not include any information in your comment or supporting materials that you consider confidential or inappropriate for public disclosure.

Following the close of this notice's 60-day comment period, the agencies will publish a second notice with a 30-day comment period. You may review comments and other related materials that pertain to this information collection beginning on the date of publication of the second notice for this collection by the method set forth in the next bullet.

**Viewing Comments Electronically:** Go to [www.reginfo.gov](http://www.reginfo.gov). Hover over the "Information Collection Review" drop down menu. From the "Currently under Review" drop-down menu, select "Department of Treasury" and then click "submit." This information collection can be located by searching by OMB control number "1557-0325" or "Market Risk Regulatory Report for Institutions Subject to the Market Risk Capital Rule (FFIEC 102)." Upon finding the appropriate information collection, click on the related "ICR Reference Number." On the next screen, select "View Supporting Statement and Other Documents" and then click on the link to any comment listed at the bottom of the screen.

For assistance in navigating [www.reginfo.gov](http://www.reginfo.gov), please contact the Regulatory Information Service Center at (202) 482-7340.

**Board:** You may submit comments, which should refer to "FFIEC 102," by any of the following methods:

- **Agency Website:** <https://www.federalreserve.gov>. Follow the instructions for submitting comments at: <http://www.federalreserve.gov/generalinfo/foia/ProposedRegs.cfm>.

- **Email:** [regs.comments@federalreserve.gov](mailto:regs.comments@federalreserve.gov). Include "FFIEC 102" in the subject line of the message.

- **Fax:** (202) 452-3819 or (202) 452-3102.

- **Mail:** Ann E. Misback, Secretary, Board of Governors of the Federal Reserve System, 20th Street and Constitution Avenue NW, Washington, DC 20551.

All public comments are available from the Board's website at [www.federalreserve.gov/generalinfo/foia/proposedregs.cfm](http://www.federalreserve.gov/generalinfo/foia/proposedregs.cfm) as submitted, unless modified for technical reasons.

Accordingly, your comments will not be edited to remove any identifying or contact information.

**FDIC:** You may submit comments, which should refer to "FFIEC 102," by any of the following methods:

- **Agency Website:** <https://www.fdic.gov/resources/regulations/federal-register-publications/index.html>. Follow the instructions for submitting comments on the FDIC's website.

- **Federal eRulemaking Portal:** <https://www.regulations.gov>. Follow the instructions for submitting comments.

- **Email:** [comments@FDIC.gov](mailto:comments@FDIC.gov). Include "FFIEC 102" in the subject line of the message.

- **Mail:** Manuel E. Cabeza, Counsel, Attn: Comments, Room MB-3007, Federal Deposit Insurance Corporation, 550 17th Street NW, Washington, DC 20429.

- **Hand Delivery:** Comments may be hand delivered to the guard station at the rear of the 550 17th Street NW building (located on F Street NW) on business days between 7:00 a.m. and 5:00 p.m.

**Public Inspection:** All comments received will be posted without change to <https://www.fdic.gov/resources/regulations/federal-register-publications/index.html>, including any personal information provided. Paper copies of public comments may be requested from the FDIC Public Information Center by telephone at (877) 275-3342 or (703) 562-2200.

Additionally, commenters may send a copy of their comments to the OMB desk officers for the agencies by mail to the Office of Information and Regulatory Affairs, U.S. Office of Management and Budget, New Executive Office Building, Room 10235, 725 17th Street NW, Washington, DC 20503; by fax to (202) 395-6974; or by email to [oira\\_submission@omb.eop.gov](mailto:oira_submission@omb.eop.gov).

**FOR FURTHER INFORMATION CONTACT:** For further information about the information collections discussed in this notice, please contact any of the agency staff whose names appear below. In addition, copies of the FFIEC 102 reporting forms and instructions can be obtained at the FFIEC's website ([https://www.ffiec.gov/ffiec\\_report\\_forms.htm](https://www.ffiec.gov/ffiec_report_forms.htm)).

**Board:** Nuha Elmaghrabi, Federal Reserve Board Clearance Officer, (202) 452-3884, Office of the Chief Data

Officer, Board of Governors of the Federal Reserve System, 20th and C Streets NW, Washington, DC 20551. Telecommunications Device for the Deaf (TDD) users may call (202) 263-4869.

**FDIC:** Manuel E. Cabeza, Counsel, (202) 898-3767, Legal Division, Federal Deposit Insurance Corporation, 550 17th Street NW, Washington, DC 20429.

**SUPPLEMENTARY INFORMATION:** The agencies are proposing to extend for three years, without revision, the FFIEC 102, which is currently an approved collection of information for each agency.

**Report Titles:** Market Risk Regulatory Report for Institutions Subject to the Market Risk Capital Rule.

**Form Numbers:** FFIEC 102.

**Frequency of Response:** Quarterly.

**Affected Public:** Business or other for profit.

#### OCC

**OMB Number:** 1557-0325.

**Estimated Number of Respondents:** 16 national banks and federal savings associations.

**Estimated Average Time per Response:** 12 hours per quarter.

**Estimated Total Annual Burden:** 768 hours.

#### Board

**OMB Number:** 7100-0365.

**Estimated Number of Respondents:** 42 state member banks, bank holding companies, savings and loan holding companies, and intermediate holding companies.

**Estimated Average Time per Response:** 12 hours per quarter.

**Estimated Total Annual Burden:** 2,016 hours.

#### FDIC

**OMB Number:** 3064-0199.

**Estimated Number of Respondents:** 1 insured state nonmember bank and state savings association.

**Estimated Average Time per Response:** 12 hours per quarter.

**Estimated Total Annual Burden:** 48 hours.

#### General Description of Reports

The Market Risk Regulatory Report for Institutions Subject to the Market Risk Capital Rule (FFIEC 102) is filed quarterly with the agencies and provides information for market risk institutions, defined for this purpose as those institutions that are subject to the market risk capital rule as incorporated into Subpart F of the agencies' regulatory capital rules<sup>1</sup> (market risk

<sup>1</sup> 12 CFR 3.201 (OCC); 12 CFR 217.201 (Board); and 12 CFR 324.201 (FDIC). The market risk capital

institutions). Each market risk institution is required to file the FFIEC 102 for the agencies' use in assessing the reasonableness and accuracy of the institution's calculation of its minimum capital requirements under the market risk capital rule and in evaluating the institution's capital in relation to its risks. Additionally, the market risk information collected in the FFIEC 102:

(a) Permits the agencies to monitor the market risk profile of, and evaluate the impact and competitive implications of, the market risk capital rule on individual market risk institutions and the industry as a whole; (b) provides the most current statistical data available to identify areas of market risk on which to focus for onsite and offsite examinations; (c) allows the agencies to assess and monitor the levels and components of each reporting institution's risk-based capital requirements for market risk and the adequacy of the institution's capital under the market risk capital rule; and (d) assists market risk institutions in

---

rule generally applies to any banking institution with aggregate trading assets and trading liabilities equal to (a) 10 percent or more of quarter-end total assets or (b) \$1 billion or more.

validating their implementation of the market risk framework.

*Statutory Basis and Confidential Treatment*

The quarterly FFIEC 102 information collection is mandatory for market risk institutions: 12 U.S.C. 161 (national banks), 12 U.S.C. 324 (state member banks), 12 U.S.C. 1844(c) (bank holding companies), 12 U.S.C. 1467a(b) (savings and loan holding companies), 12 U.S.C. 5365 (U.S. intermediate holding companies), 12 U.S.C. 1817 (insured state nonmember commercial and savings banks), and 12 U.S.C. 1464 (savings associations). The FFIEC 102 information collections are not given confidential treatment.

*Request for Comment*

The agencies invite comment on the following topics related to these collections of information:

(a) Whether the information collections are necessary for the proper performance of the agencies' functions, including whether the information has practical utility;

(b) The accuracy of the agencies' estimates of the burden of the information collections, including the

validity of the methodology and assumptions used;

(c) Ways to enhance the quality, utility, and clarity of the information to be collected;

(d) Ways to minimize the burden of information collections on respondents, including through the use of automated collection techniques or other forms of information technology; and

(e) Estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Comments submitted in response to this joint notice will be shared among the agencies. All comments will become a matter of public record.

40 CFR Parts 2, 59, 60, et al.

Control of Air Pollution From New Motor Vehicles: Heavy-Duty Engine and Vehicle Standards; Proposed Rule

**ENVIRONMENTAL PROTECTION AGENCY**

40 CFR Parts 2, 59, 60, 80, 85, 86, 87, 600, 1027, 1030, 1033, 1036, 1037, 1039, 1042, 1043, 1045, 1048, 1051, 1054, 1060, 1065, 1066, 1068, and 1090

[EPA-HQ-OAR-2019-0055; FRL-7165-03-OAR]

RIN 2060-AU41

**Control of Air Pollution From New Motor Vehicles: Heavy-Duty Engine and Vehicle Standards**

**AGENCY:** Environmental Protection Agency (EPA).

**ACTION:** Proposed rule.

**SUMMARY:** The Environmental Protection Agency (EPA) is proposing a rule that would reduce air pollution from highway heavy-duty vehicles and engines, including ozone, particulate matter, and greenhouse gases. This proposal would change the heavy-duty emission control program—including the standards, test procedures, useful life, warranty, and other requirements—to further reduce the air quality impacts of heavy-duty engines across a range of operating conditions and over a longer period of the operational life of heavy-duty engines. Heavy-duty vehicles and engines are important contributors to concentrations of ozone and particulate matter and their resulting threat to public health, which includes premature death, respiratory illness (including childhood asthma), cardiovascular problems, and other adverse health impacts. This proposal would reduce emissions of nitrogen oxides and other pollutants. In addition, this proposal would make targeted updates to the existing Heavy-Duty Greenhouse Gas Emissions Phase 2 program, proposing that further GHG reductions in the MY 2027 timeframe are appropriate considering lead time, costs, and other factors, including market shifts to zero-emission technologies in certain segments of the heavy-duty vehicle sector. We also propose limited amendments to the regulations that implement our air pollutant emission standards for other sectors (e.g., light-duty vehicles, marine diesel engines, locomotives, various types of nonroad engines, vehicles, and equipment).

**DATES:** *Comments:* Written comments must be received on or before May 13, 2022. Under the Paperwork Reduction Act (PRA), comments on the information collection provisions are best assured of consideration if the Office of Management and Budget

(OMB) receives a copy of your comments on or before April 27, 2022.

*Public Hearing:* EPA plans to hold a virtual public hearing on April 12, 2022. An additional session may be held on April 13, 2022. Please refer to Participation in Virtual Public Hearing in the **SUPPLEMENTARY INFORMATION** section for additional information on the public hearing.

**ADDRESSES:** You may send comments, identified by Docket ID No. EPA-HQ-OAR-2019-0055, by any of the following methods:

- *Federal eRulemaking Portal:* <https://www.regulations.gov/> (our preferred method). Follow the online instructions for submitting comments.
- *Email:* [a-and-r-Docket@epa.gov](mailto:a-and-r-Docket@epa.gov). Include Docket ID No. EPA-HQ-OAR-2019-0055 in the subject line of the message.
- *Mail:* U.S. Environmental Protection Agency, EPA Docket Center, OAR, Docket EPA-HQ-OAR-2019-0055, Mail Code 28221T, 1200 Pennsylvania Avenue NW, Washington, DC 20460.
- *Hand Delivery or Courier (by scheduled appointment only):* EPA Docket Center, WJC West Building, Room 3334, 1301 Constitution Avenue NW, Washington, DC 20004. The Docket Center's hours of operations are 8:30 a.m.–4:30 p.m., Monday–Friday (except Federal Holidays).

*Instructions:* All submissions received must include the Docket ID No. for this rulemaking. Comments received may be posted without change to <https://www.regulations.gov/>, including any personal information provided. For detailed instructions on sending comments and additional information on the rulemaking process, see the “Public Participation” heading of the **SUPPLEMENTARY INFORMATION** section of this document. Out of an abundance of caution for members of the public and our staff, the EPA Docket Center and Reading Room are open to the public by appointment only to reduce the risk of transmitting COVID-19. Our Docket Center staff also continues to provide remote customer service via email, phone, and webform. Hand deliveries and couriers may be received by scheduled appointment only. For further information on EPA Docket Center services and the current status, please visit us online at <https://www.epa.gov/dockets>.

*Public Hearing.* EPA plans to hold a virtual public hearing for this rulemaking. Please refer to *Participation in Virtual Public Hearing* in the **SUPPLEMENTARY INFORMATION** section for additional information.

**FOR FURTHER INFORMATION CONTACT:**

Brian Nelson, Assessment and Standards Division, Office of Transportation and Air Quality, Environmental Protection Agency, 2000 Traverwood Drive, Ann Arbor, MI 48105; telephone number: (734) 214-4278; email address: [nelson.brian@epa.gov](mailto:nelson.brian@epa.gov).

**SUPPLEMENTARY INFORMATION:**
**A. Public Participation**
*Written Comments*

Submit your comments, identified by Docket ID No. EPA-HQ-OAR-2019-0055, at <https://www.regulations.gov> (our preferred method), or the other methods identified in the **ADDRESSES** section. Once submitted, comments cannot be edited or removed from the docket. The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (i.e., on the web, cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit <https://www.epa.gov/dockets/commenting-epa-dockets>.

Due to public health concerns related to COVID-19, the EPA Docket Center and Reading Room are open to the public by appointment only. Our Docket Center staff also continues to provide remote customer service via email, phone, and webform. Hand deliveries or couriers will be received by scheduled appointment only. For further information and updates on EPA Docket Center services, please visit us online at <https://www.epa.gov/dockets>.

The EPA continues to carefully and continuously monitor information from the Centers for Disease Control and Prevention (CDC), local area health departments, and our Federal partners so that we can respond rapidly as conditions change regarding COVID-19.

*Participation in Virtual Public Hearing*

Please note that because of current CDC recommendations, as well as state and local orders for social distancing to

limit the spread of COVID-19, EPA cannot hold in-person public meetings at this time.

The EPA plans to hold a virtual public hearing on April 12, 2022. An additional session may be held on April 13, 2022. This hearing will be held using Zoom. In order to attend the virtual public hearing, all attendees (including those who will not be presenting verbal testimony) must register in advance. EPA will begin registering speakers for the hearing upon publication of this document in the **Federal Register**. To register, please use the registration link that will be available on the EPA rule web page once registration begins: <https://www.epa.gov/regulations-emissions-vehicles-and-engines/proposed-rule-and-related-materials-control-air-1>. A separate registration form must be submitted for each person attending the hearing.

The last day to register to speak at the hearing will be five working days before the first public hearing date. The EPA will post a general agenda for the hearing with the order of speakers at: <https://www.epa.gov/regulations-emissions-vehicles-and-engines/proposed-rule-and-related-materials-control-air-1>. This agenda will be available no later than two working days before the first public hearing date.

In order to allow everyone to be heard, EPA is limiting verbal testimony to three minutes per person. Speakers will not be able to share graphics via the virtual public hearing. Speakers will be able to request an approximate speaking time as part of the registration process, with preferences considered on a first-come, first-served basis. EPA also recommends submitting the text of oral comments as written comments to the rulemaking docket.

EPA will make every effort to follow the schedule as closely as possible on the day of the hearing; however, please plan for the hearings to run either ahead of schedule or behind schedule.

The EPA may ask clarifying questions during the oral presentations, but will not respond to the presentations at that time. Written statements and supporting information submitted during the comment period will be considered with the same weight as oral comments and supporting information presented at the public hearing.

Please note that any updates made to any aspect of the hearing will be posted online at: <https://www.epa.gov/regulations-emissions-vehicles-and-engines/proposed-rule-and-related-materials-control-air-1>. While the EPA expects the hearing to go forward as described here, please monitor our

website or contact Tuana Phillips, (202)-565-0074, [phillips.tuana@epa.gov](mailto:phillips.tuana@epa.gov) to determine if there are any updates. The EPA does not intend to publish a document in the **Federal Register** announcing updates.

If you require the services of a translator or special accommodations such as audio description, please identify these needs when you register for the hearing or by contacting Tuana Phillips at (202)-565-0074, [phillips.tuana@epa.gov](mailto:phillips.tuana@epa.gov). EPA may not be able to arrange accommodations without advance notice.

## B. General Information

### *Does this action apply to me?*

This action relates to companies that manufacture, sell, or import into the United States new heavy-duty highway engines. Additional amendments apply for gasoline refueling facilities and for manufacturers of all sizes and types of motor vehicles, stationary engines, aircraft and aircraft engines, and various types of nonroad engines, vehicles, and equipment. Regulated categories and entities include the following:

NAICS codes <sup>a</sup>	NAICS title
326199 .....	All Other Plastics Product Manufacturing.
332431 .....	Metal Can Manufacturing.
335312 .....	Motor and Generator Manufacturing.
336111 .....	Automobile Manufacturing.
336112 .....	Light Truck and Utility Vehicle Manufacturing.
336120 .....	Heavy Duty Truck Manufacturing.
336211 .....	Motor Vehicle Body Manufacturing.
336212 .....	Truck Trailer Manufacturing.
336213 .....	Motor Home Manufacturing.
336411 .....	Manufacturers of new aircraft.
336412 .....	Manufacturers of new aircraft engines.
333618 .....	Other Engine Equipment Manufacturing.
336999 .....	All Other Transportation Equipment Manufacturing.
423110 .....	Automotive and Other Motor Vehicle Merchant Wholesalers.
447110 .....	Gasoline Stations with Convenience Stores.
447190 .....	Other Gasoline Stations.
454310 .....	Fuel dealers.
811111 .....	General Automotive Repair.
811112 .....	Automotive Exhaust System Repair.
811198 .....	All Other Automotive Repair and Maintenance.

<sup>a</sup> NAICS Association. NAICS & SIC Identification Tools. Available online: <https://www.naics.com/search>.

This table is not intended to be exhaustive, but rather provides a guide for readers regarding entities likely to be regulated by this action. This table lists the types of entities that EPA is now aware could potentially be regulated by this action. Other types of entities not listed in the table could also be regulated. To determine whether your entity is regulated by this action, you should carefully examine the

applicability criteria found in Sections XII and XIII of this preamble. If you have questions regarding the applicability of this action to a particular entity, consult the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

### *What action is the agency taking?*

The Environmental Protection Agency (EPA) is proposing a rule that would reduce air pollution from highway heavy-duty vehicles and engines. This proposal would change the heavy-duty emission control program—including the standards, test procedures, regulatory useful life, emission-related warranty, and other requirements—to further reduce the air quality impacts of heavy-duty engines across a range of operating conditions and over a longer period of the operational life of heavy-duty engines. Heavy-duty vehicles and engines are important contributors to concentrations of ozone and particulate matter and their resulting threat to public health, which includes premature death, respiratory illness (including childhood asthma), cardiovascular problems, and other adverse health impacts. This proposal would reduce emissions of nitrogen oxides and other pollutants. In addition, this proposal would make targeted updates to the existing Heavy-Duty Greenhouse Gas Emissions Phase 2 program, proposing that further GHG reductions in the MY 2027 timeframe are appropriate considering lead time, costs, and other factors, including market shifts to zero-emission technologies in certain segments of the heavy-duty vehicle sector.

### *What is the agency's authority for taking this action?*

Section 202(a)(1) of the Clean Air Act requires the EPA to set emission standards for air pollutants from new motor vehicles or new motor vehicle engines, which the Administrator has found cause or contribute to air pollution that may endanger public health or welfare. See Sections I.A.4, I.F, and XIV of this preamble for more information on the agency's authority for this action.

### *What are the incremental costs and benefits of this action?*

We compare total monetized health benefits to total costs associated with the proposed Options 1 and 2 in Section IX. Our results show that annual benefits of the proposed Option 1 would be larger than the annual costs in 2045, a year when the program would be fully implemented and when most of the regulated fleet would have turned over,

with annual net benefits of \$9 and \$31 billion assuming a 3 percent discount rate, and net benefits of \$8 and \$28 billion assuming a 7 percent discount rate.<sup>1</sup> Annual benefits would also be larger than annual costs in 2045 for the proposed Option 2, although net benefits would be lower than from the proposed Option 1 (net benefits of proposed Option 2 would be \$6 and \$23 billion at a 3 percent discount rate, and net benefits of \$5 and 21 billion at a 7 percent discount rate). See Section VIII for more details on the net benefit estimates. For both the proposed Options 1 and 2, benefits also outweigh the costs when expressed in present value terms and as equalized annual values.

*Did EPA conduct a peer review before issuing this action?*

This regulatory action was supported by influential scientific information. Therefore, EPA conducted peer reviews in accordance with OMB's Final Information Quality Bulletin for Peer Review. Specifically, we conducted peer reviews on five analyses: (1) Analysis of Heavy-Duty Vehicle Sales Impacts Due to New Regulation (Sales Impacts), (2) Exhaust Emission Rates for Heavy-Duty Onroad Vehicles in MOVES\_CTI NPRM (Emission Rates), (3) Population and Activity of Onroad Vehicles in MOVES\_CTI NPRM (Population and Activity), (4) Cost teardowns of Heavy-Duty Valvetrain (Valvetrain costs), and (5) Cost teardown of Emission Aftertreatment Systems (Aftertreatment Costs). These peer reviews were all letter reviews conducted by a contractor. The peer review reports for each analysis are located in the docket for this action and at EPA's Science Inventory (<https://cfpub.epa.gov/si/>).

## Executive Summary

### A. Purpose of the Regulatory Action

The Environmental Protection Agency (EPA) is proposing a multipollutant rule to further reduce air pollution from heavy-duty engines and vehicles across the United States, including ozone and particulate matter (PM). In addition, as part of this rulemaking we are proposing

<sup>1</sup> The range of benefits and net benefits reflects a combination of assumed PM<sub>2.5</sub> and ozone mortality risk estimates and selected discount rate.

targeted updates to the existing Heavy-Duty Greenhouse Gas Emissions Phase 2 program (HD GHG Phase 2). This proposed rulemaking builds on and improves the existing emission control program for on-highway heavy-duty engines and vehicles. This proposal is pursuant to EPA's authority under the Clean Air Act to regulate air pollutants emitted from mobile sources. The proposal is also consistent with Executive Order (E.O.) 14037, which directed EPA to consider setting new oxides of nitrogen (NO<sub>x</sub>) emission standards and updating the existing GHG emissions standards for heavy-duty engines and vehicles.<sup>2,3</sup> In this proposed action, EPA is co-proposing two regulatory options for new NO<sub>x</sub> standards: Proposed Option 1 and Proposed Option 2. As discussed in Section B.1 of this Executive Summary and throughout this preamble, we request comment on the options presented, as well as the full range of options between them.

Heavy-duty (HD) engines operating across the U.S. emit NO<sub>x</sub> and other pollutants that contribute to ambient levels of ozone, PM, and NO<sub>x</sub>. These pollutants are linked to premature death, respiratory illness (including childhood asthma), cardiovascular problems, and other adverse health impacts. Data show that heavy-duty engines are important contributors to concentrations of ozone and PM<sub>2.5</sub> and their resulting threat to public health.<sup>4,5</sup>

The proposed rulemaking would change key provisions of the heavy-duty emission control program—including the standards, test procedures, regulatory useful life, emission-related warranty, and other requirements; the two regulatory options (proposed Options 1 and 2) would result in different numeric levels of the standards and lengths of useful life and warranty periods. The proposed Options 1 and 2 and the range between them provide the numeric values for these key provisions that we focus on for this proposal. Together, the key provisions in the proposal would further reduce the air quality impacts of heavy-duty engines

across a range of operating conditions and over a longer period of the operational life of heavy-duty engines (see Section I.B for an overview of the proposed program). The requirements in the proposed Option 1 and the proposed Option 2 would lower emissions of NO<sub>x</sub> and other air pollutants (PM, hydrocarbons (HC), air toxics, and carbon monoxide (CO)) beginning as early as model year (MY) 2027. The emission reductions from both the proposed Option 1 and the proposed Option 2 would increase over time as more new, cleaner vehicles enter the fleet.

We estimate that if finalized as proposed, the proposed Option 1 would reduce NO<sub>x</sub> emissions from heavy-duty vehicles in 2040 by more than 50 percent; by 2045, a year by which most of the regulated fleet would have turned over, heavy-duty NO<sub>x</sub> emissions would be more than 60 percent lower than they would have been without this action. Our estimates show proposed Option 2 would reduce heavy-duty NO<sub>x</sub> emissions in 2045 by 47 percent (see Section I.D for more information on our projected emission reductions from proposed Option 1 or 2). These emission reductions would result in air quality improvements in ozone and PM<sub>2.5</sub>; we estimate that in 2045, the proposed Option 1 would result in total annual monetized ozone- and PM<sub>2.5</sub>-related benefits of \$12 and \$33 billion at a 3 percent discount rate, and \$10 and \$30 billion at a 7 percent discount rate. In the same calendar year, proposed Option 2 would result in total annual monetized ozone- and PM<sub>2.5</sub>-related benefits of \$9 and \$26 billion at a 3 percent discount rate, and \$8 and \$23 billion at a 7 percent discount (see Section VIII for discussion on quantified and monetized health impacts). Given the analysis we present in this proposal, we currently believe that Option 1 may be a more appropriate level of stringency as it would result in a greater level of achievable emission reduction for the model years proposed, which is consistent with EPA's statutory authority under Clean Air Act section 202(a)(3). These emission reductions would result in widespread decreases in ambient concentrations of pollutants such as ozone and PM<sub>2.5</sub>. These widespread projected air quality improvements would play an important role in addressing concerns from states, local communities, and Tribal governments about the contributions of heavy-duty engines to air quality challenges they face such as meeting their obligations to attain or continue to meet National Ambient Air Quality

Standards (NAAQS), and to reduce other human health and environmental impacts of air pollution.

In addition to further reducing emissions of NO<sub>x</sub> and other ozone and PM<sub>2.5</sub> precursors, as part of this rulemaking we are proposing targeted updates to the existing Heavy-Duty Greenhouse Gas Emissions Phase 2 program (HD GHG Phase 2).<sup>6</sup> The proposed updates would apply to certain CO<sub>2</sub> standards for MYs 2027 and later trucks that are appropriate considering lead time, costs, and other factors, including market shifts to zero-emission technologies in certain segments of the heavy-duty vehicle sector. The proposed updates are intended to balance further incentivizing zero and near-zero emissions vehicle development with ensuring that the standards achieve an appropriate fleet-wide level of CO<sub>2</sub> emissions reductions.

## 1. Industry Overview

Heavy-duty highway vehicles (also referred to as "trucks" in this preamble) range from vocational vehicles that support local and regional construction, refuse collection, and delivery work to long-haul tractor-trailers that move freight cross-country. This diverse array of vehicles is categorized into weight classes based on gross vehicle weight ratings (GVWR) that span Class 2b trucks and vans greater than 8,500 lbs GVWR through Class 8 long-haul tractors and other commercial vehicles that exceed 33,000 lbs GVWR.<sup>7</sup> These vehicles are primarily powered by diesel-fueled, compression-ignition (CI) engines, although gasoline-fueled, spark-ignition (SI) engines are common in the lighter weight classes, and

<sup>6</sup> 81 FR at 73478 (October 25, 2016).

<sup>7</sup> This proposed rulemaking includes revised criteria pollutant standards for engine-certified Class 2b through 8 heavy-duty engines and vehicles; this proposal also includes revised GHG standards for Class 4 through 8 vehicles. Class 2b and 3 vehicles with GVWR between 8,500 and 14,000 pounds are primarily commercial pickup trucks and vans and are sometimes referred to as "medium-duty vehicles". The majority of Class 2b and 3 vehicles are chassis-certified vehicles, and EPA intends to include them in a future combined light-duty and medium-duty rulemaking action, consistent with E.O. 14037, Section 2a. Heavy-duty engines and vehicles are also used in nonroad applications, such as construction equipment; nonroad heavy-duty engines and vehicles are not the focus of this proposal. See Section I for more discussion on the spectrum of heavy-duty vehicles and how they relate to the proposed rule. As outlined in Section C of this Executive Summary and detailed in Section XII, this proposal also includes limited amendments to regulations that implement our air pollutant emission standards for other industry sectors, including light-duty vehicles, light-duty trucks, marine diesel engines, locomotives, and various types of nonroad engines, vehicles, and equipment.

<sup>3</sup> Oxides of nitrogen (NO<sub>x</sub>) refers to nitric oxide (NO) and nitrogen dioxide (NO<sub>2</sub>).

<sup>4</sup> Zawacki et al, 2018. Mobile source contributions to ambient ozone and particulate matter in 2025. Atmospheric Environment, Vol 188, pg 129–141. Available online: <https://doi.org/10.1016/j.atmosenv.2018.04.057>.

<sup>5</sup> Davidson et al, 2020. The recent and future health burden of the U.S. mobile sector apportioned by source. Environmental Research Letters. Available online: <https://doi.org/10.1088/1748-9326/ab83a8>.

smaller numbers of alternative fuel engines (e.g., liquified petroleum gas, compressed natural gas) are found in the heavy-duty fleet. Vehicles powered by electricity, either in the form of battery electric vehicles (BEVs) or fuel cell electric vehicles (FCEVs) are also increasingly entering the heavy-duty fleet. The operational characteristics of some commercial applications (e.g., delivery vehicles) can be similar across several vehicle weight classes, allowing a single engine, or electric power source in the case of BEVs and FCEVs, to be installed in a variety of vehicles. For instance, engine specifications needed for a Class 4 parcel delivery vehicle may be similar to the needs of a Class 5 mixed freight delivery vehicle or a Class 6 beverage truck. Performance differences needed to operate across this range of vehicles can be achieved through adjustments to chassis-based systems (e.g., transmission, cooling system) external to the engine.

## 2. The Need for Additional Emission Control of NO<sub>x</sub> and Other Pollutants From Heavy-Duty Engines

Across the U.S., NO<sub>x</sub> emissions from heavy-duty engines are important contributors to concentrations of ozone and PM<sub>2.5</sub> and their resulting health effects.<sup>8,9</sup> Heavy-duty engines will continue to be one of the largest contributors to mobile source NO<sub>x</sub> emissions nationwide in the future, representing 32 percent of the mobile source NO<sub>x</sub> emissions in calendar year 2045.<sup>10</sup> Furthermore, it is estimated that heavy-duty engines would represent 89 percent of the onroad NO<sub>x</sub> inventory in calendar year 2045.<sup>11</sup> Reducing NO<sub>x</sub> emissions is a critical part of many areas' strategies to attain and maintain the ozone and PM NAAQS; many state and local agencies anticipate challenges in attaining the NAAQS, maintaining the NAAQS in the future, and/or preventing nonattainment (see Section II). Some nonattainment areas have already been "bumped up" to higher

<sup>11</sup> Han, Jaehoon. Memorandum to the Docket EPA-HQ-OAR-2019-0055: "MOVES Modeling-Related Data Files (MOVES Code, Input Databases and Runspecs) for the Proposed Heavy-Duty 2027 Standards". February 2022.

classifications because of challenges in attaining the NAAQS.<sup>12</sup>

In addition, emissions from heavy-duty engines can significantly affect individuals living near truck freight routes. Based on a study EPA conducted of people living near truck routes, an estimated 72 million people live within 200 meters of a truck freight route (see discussion in Section II.B.7). Relative to the rest of the population, people of color and those with lower incomes are more likely to live near truck routes (see Sections II.B and VII.H for additional discussion on our analysis of environmental justice impacts of this proposal). This population includes children, and in addition, childcare facilities and schools can be in close proximity to freight routes.<sup>13</sup>

Clean Air Act section 202(a)(3)(A) requires EPA to set emission standards for NO<sub>x</sub>, PM, HC, and CO that reflect the greatest degree of emission reduction achievable through the application of technology that will be available for the model year to which such standards apply. Although heavy-duty engines have become much cleaner over the last decade, catalysts and other technologies have evolved such that harmful air pollutants can be reduced even further.

Heavy-duty emissions that affect local and regional populations are attributable to several engine operating modes and processes. Specifically, the operating modes and processes projected to contribute the most to the heavy-duty NO<sub>x</sub> emission inventory in 2045 are medium-to-high load (36 percent), low-load (28 percent), and aging (24 percent) (i.e., deterioration and mal-maintenance of the engine's emission control system) (see Section VI for more information on projected inventory contributions from each operating mode or process). These data suggest that medium- and high-load operating conditions continue to merit concern, while also showing that opportunities for significant additional emission reductions and related air quality improvements can be achieved through provisions that encourage emission control under low-load operation and throughout an engine's

<sup>12</sup> For example, in September 2019 several 2008 ozone nonattainment areas were reclassified from moderate to serious, including Dallas, Chicago, Connecticut, New York/New Jersey and Houston, and in January 2020, Denver. The 2008 NAAQS for ozone is an 8-hour standard with a level of 0.075 ppm, which the 2015 ozone NAAQS lowered to 0.070 ppm.

<sup>13</sup> Kingsley, S., Eliot, M., Carlson, L. et al. Proximity of US schools to major roadways: a nationwide assessment. *J Expo Sci Environ Epidemiol* 24, 253–259 (2014). <https://doi.org/10.1038/jes.2014.5>.

operational life. Our approach for provisions that address these aspects of the emission inventory is outlined below and described in more detail in sections that follow.

As described in Section III, the standards in proposed Options 1 and 2 would reduce emissions during a broader range of operating conditions that span nearly all in-use operation. The standards in proposed Options 1 and 2 are based on technology improvements which have become available over the 20 years since the last major rule was promulgated to address emissions of NO<sub>x</sub>, PM, HC, and CO (hereafter referred to as "criteria pollutants") and toxic pollutants from heavy-duty engines. As further detailed in Section III, available data indicate that emission levels demonstrated for certification are not achieved under the broad range of real-world operating conditions.<sup>14 15 16 17</sup> In fact, less than ten percent of the data collected during a typical test while the vehicle is operated on the road is subject to EPA's in-use, on-the-road emission standards.<sup>18</sup> These testing data further show that NO<sub>x</sub> emissions from heavy-duty diesel vehicles are high during many periods of vehicle operation that are not subject to current on-the-road emission standards. For example, "low-load" engine conditions occur when a vehicle operates in stop-and-go traffic or is idling; these low-load conditions can result in exhaust temperature decreases that then lead to the diesel engine's selective catalytic reduction (SCR)-based emission control system becoming less effective or ceasing to function. Test data collected as part of EPA's manufacturer-run in-use testing program indicate that this low-load operation could account for more than half of the NO<sub>x</sub> emissions from a

<sup>14</sup> Hamady, Fakhri, Duncan, Alan. "A Comprehensive Study of Manufacturers In-Use Testing Data Collected from Heavy-Duty Diesel Engines Using Portable Emissions Measurement System (PEMS)." 29th CRC Real World Emissions Workshop, March 10–13, 2019.

<sup>15</sup> Sandhu, Gurdas, et al. "Identifying Areas of High NO<sub>x</sub> Operation in Heavy-Duty Vehicles". 28th CRC Real-World Emissions Workshop, March 18–21, 2018.

<sup>16</sup> Sandhu, Gurdas, et al. "In-Use Emission Rates for MY 2010+ Heavy-Duty Diesel Vehicles". 27th CRC Real-World Emissions Workshop, March 26–29, 2017.

<sup>17</sup> As noted in Section C of this Executive Summary and discussed in Section III, testing engines and vehicles while they are operating over the road without a defined duty cycle is referred to as "off-cycle" testing; as detailed in Section III, we are proposing new off-cycle test procedures and standards as part of this rulemaking.

<sup>18</sup> Heavy-duty CI engines are currently subject to off-cycle standards that are not limited to specific test cycles, but we use the term "on-the-road" here for readability.

vehicle during a typical workday.<sup>19</sup> Similarly, heavy-duty SI engines also operate in conditions where their catalyst technology becomes less effective, resulting in higher levels of air pollutants; however, unlike CI engines, it is sustained medium-to-high load operation where emission levels are less certain.

As noted in this Section A.2 of the Executive Summary, deterioration and mal-maintenance of the engine's emission control system is also projected to result in NO<sub>x</sub> emissions that would represent a substantial part of the HD inventory in 2045. To address this problem, as part of our comprehensive approach, both proposed Options 1 and 2 include longer regulatory useful life and emission-related warranty requirements that would maintain emission control through more of the operational life of heavy-duty vehicles (see Section IV for more discussion on the proposed useful life and warranty requirements).

Reducing NO<sub>x</sub> emissions from heavy-duty vehicles would address health and environmental issues raised by state, local, and Tribal agencies in their comments on the Advance Notice of Proposed Rule (ANPR).<sup>20</sup> In addition to concerns about meeting the ozone and PM<sub>2.5</sub> NAAQS, they expressed concerns about environmental justice, regional haze, and damage to terrestrial and aquatic ecosystems. They mentioned the impacts of NO<sub>x</sub> emissions on numerous locations, such as the Chesapeake Bay, Narragansett Bay, Long Island Sound, Joshua Tree National Park and the surrounding Mojave Desert, the Adirondacks, and other areas. Tribes and agencies commented that NO<sub>x</sub> deposition into lakes is harmful to fish and other aquatic life forms on which they depend for subsistence livelihoods. They also commented that regional haze and increased rates of weathering caused by pollution are of particular concern and can damage culturally significant archeological sites.

### 3. The Historic Opportunity for Clean Air Provided by Zero-Emission Vehicles

We are at the early stages of a significant transition in the history of the heavy-duty on-highway sector—a shift to zero-emission vehicle (ZEV) technologies. This change is underway and presents an opportunity for

significant reductions in heavy-duty vehicle emissions. Major trucking fleets, manufacturers and U.S. states have announced plans to transition the heavy-duty fleet to zero-emissions technology, and over just the past few years we have seen the early introduction of zero-emission technology into a number of heavy-duty vehicle market segments.

Executive Order 14037 identifies three potential regulatory actions for EPA to consider: (1) This proposed rule for heavy-duty vehicles for new criteria pollutant standards and strengthening of the Model Year 2027 GHG standards; (2) a separate rulemaking to establish more stringent criteria and GHG emission standards for medium-duty vehicles for Model Year 2027 and later (in combination with light-duty vehicles); and (3) a third rulemaking to establish new GHG standards for heavy-duty vehicles for Model Year 2030 and later. This strategy will establish the EPA regulatory path for the future of the heavy-duty vehicle sector, and in each of these actions EPA will consider the critical role of ZEVs in enabling stringent emission standards.

In addition to the proposed standards and requirements for NO<sub>x</sub> and other air pollutant emissions, we are also proposing targeted revisions to the already stringent HD GHG Phase 2 rulemaking, which EPA finalized in 2016.<sup>21</sup> The HD GHG Phase 2 program includes GHG emission standards tailored to certain regulatory vehicle categories in addition to heavy-duty engines including: Combination tractors; vocational vehicles; and heavy-duty pickup trucks and vans. The HD GHG Phase 2 program includes progressively more stringent CO<sub>2</sub> emission standards for HD engines and vehicles; these standards phase in starting in MY 2021 through MY 2027. The program built upon the GHG Phase 1 program promulgated in 2011, which set the first-ever GHG emission standards for heavy-duty engines and trucks.<sup>22</sup>

When the HD GHG Phase 2 rule was promulgated in 2016, we established the Phase 2 GHG standards and advanced technology incentives on the premise that electrification of the heavy-duty market was unlikely to occur in the timeframe of the program. However, several factors have arisen since the

adoption of Phase 2 that have changed our outlook for heavy-duty electric vehicles. First, the heavy-duty market has evolved such that in 2021, there are a number of manufacturers producing fully electric heavy-duty vehicles in a number of applications. Second, the State of California has adopted an Advanced Clean Trucks program that includes a manufacturer sales requirement for zero-emission truck sales, specifically that “manufacturers who certify Class 2b–8 chassis or complete vehicles with combustion engines would be required to sell zero-emission trucks as an increasing percentage of their annual California sales from 2024 to 2035.”<sup>23</sup> Finally, other states have signed a Memorandum of Understanding establishing goals to increase the heavy-duty electric vehicle market.<sup>24</sup> We are proposing that further GHG reductions in the MY 2027 timeframe are appropriate considering lead time, costs, and other factors, including these developments to zero-emission technologies in certain segments of the heavy-duty vehicle sector. We discuss the impacts of these factors on the heavy-duty market in Section XI. As outlined in Section I.B and detailed in Section XI, we are proposing to increase the stringency of the existing MY 2027 standards for many of the vocational vehicle and tractor subcategories, specifically those where we project early introduction of ZEVs. We are also considering whether it would be appropriate in the final rule to increase the stringency of the standards even more than what we propose for MYs 2027–2029, including the potential for progressively more stringent CO<sub>2</sub> standards across these three model years. Progressively strengthening the stringency of the standards for model years 2028 and 2029 could help smooth the transition to ambitious greenhouse gas standards for the heavy-duty sector starting as soon as model year 2030. We believe there is information and data that could support higher projected penetrations of HD ZEVs in the MY 2027 to 2029 timeframe and we request comment and additional supporting information and data on higher penetration rates, which could serve as the basis for the increase in the stringency of the CO<sub>2</sub> standards for specific Phase 2 vehicle subcategories. For example, what information and data are available that

<sup>19</sup> Sandhu, Gurdas, et al. “Identifying Areas of High NO<sub>x</sub> Operation in Heavy-Duty Vehicles”. 28th CRC Real-World Emissions Workshop, March 18–21, 2018.

<sup>20</sup> The Agency published an ANPR on January 21, 2020 to present EPA's early thinking on this rulemaking and solicit feedback from stakeholders to inform this proposal (85 FR 3306).

<sup>21</sup> 81 FR 73478 (October 25, 2016). Note that the HD GHG Phase 2 program also includes coordinated fuel efficiency standards established by the U.S. Department of Transportation through the National Highway Traffic Safety Administration, and those standards were established in a joint rulemaking process with EPA.

<sup>24</sup> Fifteen states and one district sign Multi-State MOU. <https://www.nescuum.org/documents/multistate-truck-zev-governors-mou-20200714.pdf>.

would support HD ZEV penetration rates of 5 percent or 10 percent (or higher) in this timeframe, and in what HD vehicle applications and categories. We are also requesting comment on an aspect of the HD GHG Phase 2 advanced technology incentive program.

EPA has heard from a number of stakeholders urging EPA to put in place policies to rapidly advance ZEVs in this current rulemaking, and to establish standards requiring 100 percent of all new heavy-duty vehicles be zero-emission no later than 2035. The stakeholders state that accelerating ZEV technologies in the heavy-duty market is necessary to prioritize environmental justice in communities that are impacted by freight transportation and already overburdened by pollution.<sup>25</sup> One policy EPA has been asked to consider is the establishment of a ZEV sales mandate (*i.e.*, a nationwide requirement for manufacturers to produce a portion of their new vehicle fleet as ZEVs). EPA is not proposing in this action to establish a heavy-duty ZEV mandate. EPA in this action is considering how the development and deployment of ZEVs can further the goals of environmental protection and best be reflected in the establishment of EPA's standards and regulatory program for MY 2027 and later heavy-duty vehicles. As discussed earlier in this section, EPA will also be considering the important role of ZEV technologies in the upcoming light-duty and medium-duty vehicle proposal for MY 2027 and later, and in the heavy-duty vehicle proposal for MY 2030 and later. EPA requests comment under this proposal on how the Agency can best consider the potential for ZEV technologies to significantly reduce air pollution from the heavy-duty vehicle sector (including but not limited to the topic of whether and how to consider including specific sales requirements for HD ZEVs).

#### 4. Statutory Authority for This Action

As discussed in Section I, EPA is proposing revisions to emission standards and other requirements applicable to emissions of NO<sub>x</sub>, PM, HC, CO, and GHG from new heavy-duty engines and vehicles under our broad statutory authority to regulate air pollutants emitted from mobile sources, consistent with our history of using a multi-pollutant approach to regulating criteria pollutants and GHG emissions from heavy-duty engines and vehicles. Section 202(a)(1) of the Clean Air Act

(CAA) requires the EPA to “by regulation prescribe (and from time to time revise) . . . standards applicable to the emission of any air pollutant from any class or classes of new motor vehicles or new motor vehicle engines . . . , which in his judgment cause, or contribute to, air pollution which may reasonably be anticipated to endanger public health or welfare”. Standards under CAA section 202(a) take effect “after such period as the Administrator finds necessary to permit the development and application of the requisite technology, giving appropriate consideration to the cost of compliance within such period.” Thus, in establishing or revising CAA section 202(a) standards designed to reduce air pollution that endangers public health and welfare, EPA also must consider issues of technological feasibility, compliance cost, and lead time. EPA may consider other factors such as safety. There are currently heavy-duty engine and vehicle standards for emissions of NO<sub>x</sub>, PM, HC, CO, and GHGs.

Under CAA section 202(a)(3)(A), standards for emissions of NO<sub>x</sub>, PM, HC, and CO emissions from heavy-duty vehicles and engines are to “reflect the greatest degree of emission reduction achievable through the application of technology which the Administrator determines will be available for the model year to which such standards apply, giving appropriate consideration to cost, energy, and safety factors associated with the application of such technology.”<sup>26</sup> Section 202(a)(3)(C) requires that these standards apply for no less than 3 model years and apply no earlier than 4 years after promulgation.

Emission standards set under CAA section 202(a) apply to vehicles and engines “for their useful life.” CAA section 202(d) directs EPA to prescribe regulations under which the useful life of vehicles and engines shall be determined, and for heavy-duty vehicles and engines establishes minimum values of 10 years or 100,000 miles, whichever occurs first, unless EPA determines that greater values are appropriate. CAA section 207(a) further requires manufacturers to provide an emissions warranty, and EPA set the current warranty periods for heavy-duty engines in 1983.<sup>27</sup>

As outlined in this executive summary, the proposed program would reduce heavy-duty emissions through

several major provisions pursuant to the CAA authority described in this section. Sections I.F and XIV of this preamble further discuss our statutory authority for this proposal; Section I.G further describes the basis of our proposed NO<sub>x</sub>, PM, HC, CO, and GHG emission standards and other requirements. Section XIII describes how this proposal is also consistent with E.O. 14037, “Strengthening American Leadership in Clean Cars and Trucks” (August 5, 2021), which directs EPA to consider taking action to establish new NO<sub>x</sub> standards for heavy-duty engines and vehicles beginning with model year 2027.

#### B. Overview of the Regulatory Action

Our approach to further reduce air pollution from highway heavy-duty engines and vehicles through the proposed program features several key provisions. We co-propose options to address criteria pollutant emissions from heavy-duty engines. In addition, this proposal would make targeted updates to the existing Heavy-Duty Greenhouse Gas Emissions Phase 2 program, proposing that further GHG reductions in the MY 2027 timeframe are appropriate considering lead time, costs, and other factors, including market shifts to zero-emission technologies in certain segments of the heavy-duty vehicle sector. We also propose limited amendments to the regulations that implement our air pollutant emission standards for other sectors (*e.g.*, light-duty vehicles, marine diesel engines, locomotives, various types of nonroad engines, vehicles, and equipment). Our proposed provisions are briefly described in this Section I.B and summarized in Section I.C. We describe the proposed Options 1 and 2 in detail in the Sections III, IV, and XI. We discuss our analyses of estimated emission reductions, air quality improvements, costs, and monetized benefits of the proposed program in Section I.D below, and these are detailed in Sections V through X.

#### 1. Overview of Criteria Pollutant Program

The proposed provisions to reduce criteria pollutant emissions can be thought of in three broad categories: (1) Controlling emissions under a broader range of engine operating conditions, (2) maintaining emission control over a greater portion of an engine's operational life,<sup>28</sup> and (3) providing manufacturers with flexibilities to meet

<sup>25</sup> Letter to EPA Administrator Michael Regan from the Moving Forward Network. October 26, 2021.

<sup>26</sup> Section 202(a)(3)(A) and (C) apply only to regulations applicable to emissions of these four pollutants and do not apply to regulations applicable to GHGs.

<sup>27</sup> 48 FR 52170, November 16, 1983.

<sup>28</sup> As further discussed in Section IV.A, we use “operational life” to refer to when engines are in use on the road.

the proposed standards while clarifying our regulations. Specifically, provisions in the first category would include updated test procedures and revised emission standards, while those in the second category would include lengthened regulatory useful life and emission warranty periods, as well as several other updates to encourage proper maintenance and repair. These provisions would apply to heavy-duty engines used in Class 2b through 8 vehicles.<sup>29</sup> Provisions in the third category would provide opportunities to generate NO<sub>x</sub> emission credits that provide manufacturers with flexibilities to meet the proposed standards and encourage the introduction of new emission control technologies earlier than required. This category also includes our proposal to modernize our current regulatory text, including clarifications and updates for hybrid electric, battery-electric, and fuel cell electric heavy-duty vehicles.

Our discussion below focuses on the revised emission standards and useful life and warranty periods contained in two regulatory options that we are proposing: The proposed Option 1 and the proposed Option 2. Although we refer to the two regulatory options as the proposed Option 1 and the proposed Option 2, we are giving full consideration to both options, as well as the full range of options between them. Both the proposed Option 1 and the proposed Option 2 would begin in MY 2027, but the proposed Option 1 would have a second step in MY 2031. Overall, proposed Option 2 is less stringent than the MY 2031 standards in the proposed Option 1 because the proposed Option 2 has higher numeric NO<sub>x</sub> emission standards and shorter useful life periods. As discussed in Section D of this Executive Summary and Section VI, we project proposed Option 1 would result in greater emission reductions than proposed Option 2; Section I.G summarizes the basis of our proposed Options 1 and 2 with details on our feasibility analysis for each option presented in Section III. In addition to the proposed Options 1 and 2, we present an alternative (the Alternative) that we also considered. The Alternative is more stringent than either the proposed Option 1 MY 2031 standards or the proposed Option 2 because the

Alternative has shorter lead time, lower numeric NO<sub>x</sub> emission standards and longer useful life periods. We note that we currently are unable to conclude that the Alternative is feasible in the MY 2027 timeframe over the useful life periods in the Alternative in light of deterioration in the emission control technologies that we have evaluated to date, and we expect that we would need additional supporting data or other information in order to determine that the Alternative is feasible in the MY 2027 timeframe to consider adopting it in the final rule.

The proposed Option 1 and proposed Option 2 generally represent the range of regulatory options, including the standards and test procedures, regulatory useful life and emission-related warranty periods and implementation schedules that we are currently considering in this rulemaking, depending in part on any additional comments and other information we receive on the feasibility, costs, and other impacts of the proposed Options 1 and 2. We request comment on all aspects of the proposed Options 1 and 2, or other alternatives roughly within the range of options covered by the proposed Options 1 and 2, including the revised emission standards and useful life and warranty periods, one and two-step approaches, model years of implementation and other provisions described in this proposal. Based on currently available information, in order to consider adopting the Alternative in the final rule, we believe we would need additional supporting data or other information to be able to conclude that the Alternative is feasible in the MY 2027 timeframe. We request comment, including relevant data and other information, related to the feasibility of the implementation model year, numeric levels of the emission standards, and useful life and warranty periods included in the Alternative, or other alternatives outside the range of options covered by the proposed Options 1 and 2.

We will continue learning about the capability and durability of engine and aftertreatment technologies through our ongoing technology evaluations, as well as any information provided in public comments on this proposal. Section III describes our plans for expanding on the analyses developed for this proposal.

## 2. Overview of Targeted Revisions to the HD GHG Phase 2 Program

In addition to the proposed criteria pollutant program provisions, we are proposing to increase the stringency of

the existing GHG standards for MY 2027 trucks and requesting comment on updates to the advanced technology incentive program for electric vehicles. We propose updates to select MY 2027 GHG standards after consideration of the market shifts to zero-emission technologies in certain segments of the heavy-duty vehicle sector. These proposed GHG provisions are based on our evaluation of the heavy-duty EV market for the MY 2024 through 2027 timeframe. While the HD Phase 2 GHG standards were developed in 2016 based on the premise that electrification of the heavy-duty market beyond low volume demonstration projects was unlikely to occur in the timeframe of the program, our current evaluation shows that there are a number of manufacturers producing fully electric heavy-duty vehicles in several applications in 2021—and this number is expected to grow in the near term. These developments along with considerations of lead time, costs and other factors have demonstrated that further GHG reductions in the MY 2027 timeframe are appropriate. We expect school buses, transit buses, delivery trucks (such as box trucks or step vans), and short haul tractors to have the highest EV sales of all heavy-duty vehicle types between now and 2030.<sup>30</sup> We have given careful consideration to an approach that would result in targeted updates to reflect the emerging HD EV market without fundamentally changing the HD GHG Phase 2 program as a whole. Thus, we are proposing targeted updates to the HD Phase 2 GHG standards to account for the current electrification of the market by making changes to only those standards that are impacted by these four types of electric vehicles. We believe this proposal considered the feasibility of technologies, cost, lead time, emissions impact, and other relevant factors, and therefore these standards are appropriate under CAA section 202(a). We also are seeking comment on changes to the advanced technology credit program since the current level of HD GHG Phase 2 incentives for electrification may no longer be appropriate for certain segments of the HD EV market considering the projected rise in electrification. We provide an overview of this approach in this Section I.C and detail our proposal in Section XI.

<sup>30</sup> See Section XI.B for more on the growing EV market for these four vehicle types.

<sup>29</sup> EPA plans to consider new standards for chassis-certified Class 2b and 3 vehicles (GVWR between 8,500 and 14,000 pounds) as part of a future combined light-duty and medium-duty rulemaking action, consistent with E.O. 14037. We are not proposing changes to the standards or test procedures for chassis-certified heavy-duty vehicles. Instead, this proposal focuses on engine-certified products.

C. Summary of the Major Provisions in the Regulatory Action

1. Controlling Criteria Pollutant Emissions Under a Broader Range of Engine Operating Conditions

In the first broad category of provisions to reduce criteria pollutant emissions in this rulemaking, we are proposing to reduce emissions from heavy-duty engines under a range of operating conditions through revisions to our emissions standards and test procedures. These revisions would apply to both laboratory-based standards and test procedures for both heavy-duty CI and SI engines, as well as the standards and test procedures for heavy-duty CI engines on the road in the real world.<sup>31</sup>

i. Proposed Laboratory Standards and Test Procedures

For heavy-duty CI engines, we are proposing new standards for laboratory-based tests using the current duty cycles, the transient Federal Test Procedure (FTP) and the steady-state Supplemental Emission Test (SET) procedure. These existing test procedures require CI engine manufacturers to demonstrate the effectiveness of emission controls when the engine is transitioning from low-to-high loads or operating under sustained high load, but do not provide for demonstrating emission control under sustained low-load operations. We are proposing that laboratory demonstrations for heavy-duty CI

engines would also include a new low-load cycle (LLC) test procedure to demonstrate that emission controls are meeting proposed LLC standards when the engine is operating under low-load and idle conditions. The proposed addition of the LLC would help ensure lower NO<sub>x</sub> emissions in urban areas and other locations where heavy-duty vehicles operate in stop-and-go traffic or other low-load conditions.

For heavy-duty SI engines, we are proposing new standards for their laboratory demonstrations using the current FTP duty cycle, and updates to the current engine mapping procedure to ensure the engines achieve the highest torque level possible during testing. We are proposing to add the SET procedure to the heavy-duty SI laboratory demonstrations; it is currently only required for heavy-duty CI engines. Heavy-duty SI engines are increasingly used in larger heavy-duty vehicles, which makes it more likely for these engines to be used in higher-load operations covered by the SET. We are further proposing a new refueling emission standard for incomplete vehicles above 14,000 lb GVWR starting in MY 2027.<sup>32</sup> The proposed refueling standard is based on the current refueling standard that applies to complete heavy-duty gasoline-fueled vehicles. Consistent with the current evaporative emission standards that apply for these same vehicles, we are proposing that manufacturers could use an engineering analysis to demonstrate

that they meet our proposed refueling standard.

Our proposed Option 1 and proposed Option 2 NO<sub>x</sub> emission standards for all defined duty cycles for heavy-duty CI and SI engines are detailed in Table 1. As shown, the proposed Option 1 NO<sub>x</sub> standards would be implemented in two steps beginning with MY 2027 and becoming more stringent in MY 2031. The proposed Option 2 NO<sub>x</sub> emission standards would be implemented with a single step in MY 2027. As noted in Section B.1 of this Executive Summary, overall, we consider proposed Option 2 to be less stringent than the standards in the proposed Option 1 because proposed Option 2 has higher numeric NO<sub>x</sub> emission standards with similar useful life periods as the proposed Option 1 in MY 2027, and shorter length of useful life periods than the proposed Option 1 in MY 2031. In contrast, the Alternative is more stringent than proposed Option 1's MY 2031 standards (see Section III), and we currently do not have information to support the conclusion that the combination of shorter lead time, lower numeric levels of the standards and longer useful life periods in the Alternative is feasible in the MY 2027 timeframe based on the emission control technologies we have evaluated to date. See Section III for more discussion on feasibility. Consistent with our current approach for criteria pollutants, the standards in proposed Options 1 and 2, presented in Table 1, are numerically identical for SI and CI engines.<sup>33</sup>

TABLE 1—PROPOSED OPTIONS 1 AND 2 NO<sub>x</sub> EMISSION STANDARDS FOR HEAVY-DUTY CI AND SI ENGINES ON SPECIFIC DUTY CYCLES

[Milligrams/horsepower-hour (mg/hp-hr)]<sup>a</sup>

Duty cycle	Proposed Option 1				Proposed Option 2
	Model years 2027–2030	Model years 2031 and later			Model years 2027 and later
		All HD engines	Spark ignition HDE, light HDE, and medium HDE	Heavy HDE through intermediate useful life (IUL)	Heavy HDE from IUL to full useful life (FUL)
FTP (transient mid/high load conditions) .....	35	20	20	40	50
SET (steady-state conditions) .....	35	20	20	40	50
LLC (low-load conditions) .....	90	50	50	100	100

<sup>a</sup> The current FTP and SET standard for all HD engines is 0.20 g/hp-hr or 200 mg/hp-hr; we are proposing the LLC test procedure and therefore there is not a current standard for the LLC.

<sup>31</sup> Duty cycle test procedures measure emissions while the engine is operating over precisely defined duty cycles in an emissions testing laboratory and provide very repeatable emission measurements. “Off-cycle” test procedures measure emissions while the engine is not operating on a specified duty-cycle; this testing can be conducted while the engine is being driven on the road (e.g., on a package delivery route), or in an emission testing

laboratory. We may also refer to off-cycle test procedures in this preamble as “on the road” testing for simplicity. Both duty cycle and off-cycle testing are conducted pre-production (e.g., for certification) or post-production to verify that the engine meets applicable duty cycle or off-cycle emission standards throughout useful life (See Section III.A and IV.K for more discussion).

<sup>32</sup> Some vehicle manufacturers sell their engines or “incomplete vehicles” (i.e., chassis that include their engines, the frame, and a transmission) to body builders who design and assemble the final vehicle.

<sup>33</sup> See Section III for our proposed and alternative PM, HC, and CO standards.

ii. Proposed On-the-Road Standards and Test Procedures

In addition to demonstrating emission control over defined duty cycles in a laboratory, heavy-duty CI engines must be able to demonstrate emission control over an undefined duty cycle while engines are in use on the road in the real world. Both proposed Options 1 and 2 include updates to the procedure for “off-cycle” testing, such that data collected during a wider range of operating conditions would be valid, and therefore subject to emission standards.<sup>34</sup>

Similar to the current approach, emission measurements collected during off-cycle testing would be collected on a second-by-second basis. We are proposing the emissions data would be grouped into 300-second windows of operation. Each 300-second window would then be binned based on the type of operation that the engine performs during that 300-second period.

Specifically, the average power of the engine during each 300-second window would determine whether the emissions during that window are binned as idle (Bin 1), low-load (Bin 2), or medium-to-high load (Bin 3).<sup>35</sup>

Our proposed 3-bin approach would cover a wide range of operations that occur in the real world—significantly more in-use operation than today’s requirements. Bin 1 would include extended idle and other very low-load operations, where engine exhaust temperatures may drop below the optimal temperature where SCR-based aftertreatment works best. Bin 2 would include a large fraction of urban driving conditions, during which engine exhaust temperatures are generally moderate. Bin 3 would include higher-power operations, such as on-highway driving that typically results in higher exhaust temperatures and high catalyst efficiencies.<sup>36</sup> Given the different operational profiles of each of these

three bins, we are proposing a separate standard for each bin. The proposed structure follows that of our current not-to-exceed (NTE) off-cycle standards, while covering a much broader range of engine operation.

Table 2 presents our proposed Option 1 and Option 2 off-cycle standards for NO<sub>x</sub> emissions from heavy-duty CI engines. The proposed Option 2 off-cycle NO<sub>x</sub> standards are higher (less stringent) and have a shorter useful life than the proposed Option 1 standards in MY 2031. For the Alternative, our assessment of currently available data indicates that the off-cycle standard for the medium/high load bin (Bin 3) would not be feasible in the MY 2027 timeframe, and additional or different technology would be necessary to meet the Alternative off-cycle standards. See Section III for details on the off-cycle standards for other pollutants in the proposed Options 1 and 2 and the Alternative.

TABLE 2—PROPOSED OPTIONS 1 AND 2 OFF-CYCLE NO<sub>x</sub> STANDARDS FOR HEAVY-DUTY CI ENGINES

Operation bin	Proposed Option 1				Proposed Option 2
	Model years 2027–2030	Model years 2031 and later			Model years 2027 and later
		All HD engines	Light HDE, and medium HDE	Heavy HDE through IUL	
	All HD engines				
idle (g/hr) .....	10	7.5	7.5	7.5	15
low load (mg/hp-hr) .....	180	75	7.5	150	150
medium/high load (mg/hp-hr) .....	70	30	30	60	75

In addition to the proposed standards for the defined duty cycle and off-cycle test procedures, the proposed Options 1 and 2 include several other provisions for controlling emissions from specific operations in CI or SI engines. First, we are proposing to allow CI engine manufacturers to voluntarily certify to the California Air Resources Board (CARB) clean idle standards by adding to EPA regulations an idle test procedure that is based on an existing CARB procedure.<sup>37</sup> We are also proposing to require a closed crankcase ventilation system for all highway CI engines to prevent crankcase emissions from being emitted directly to the atmosphere. See Section III.B for more discussion on both the proposed idle and crankcase provisions. For heavy-duty SI, we are proposing refueling

emission standards for incomplete vehicles above 14,000 lb GVWR (see Section III.E for more discussion).

2. Maintaining Criteria Pollutant Emission Control Over a Greater Portion of an Engine’s Operational Life

Reducing emissions under a broad range of engine operating conditions is one category of our proposed program provisions. Maintaining emission control over a greater portion of an engine’s operational life is the second broad category of proposed provisions. The major elements in this category include proposals to (1) extend the regulatory useful life of heavy-duty engines, (2) provide an opportunity for manufacturers to use rapidly aged parts necessary to demonstrate emission performance over the regulatory useful

life, (3) lengthen emission warranty periods, and 4) increase the likelihood that emission controls will be maintained properly through more of the service life of heavy-duty engines. Our proposals for each of these elements is outlined below and detailed in Section IV; unless explicitly stated otherwise, proposals for each of these elements would apply under both proposed Options 1 and 2, as well as the full range of options in between them.

i. Proposed Useful Life Periods

EPA is proposing to increase the regulatory useful life mileage values for new heavy-duty engines to better reflect real-world usage, extend the emissions durability requirement for heavy-duty engines, and ensure certified emission performance is maintained throughout

<sup>34</sup> As discussed in Section III, “off-cycle” testing measures emissions while the engine is not operating on a specified duty-cycle; this testing can be conducted while the engine is being driven on the road (e.g., on a package delivery route), or in an emission testing laboratory.

<sup>35</sup> Due to the challenges of measuring engine power directly on in-use vehicles, we are proposing

to use the CO<sub>2</sub> emission rate (grams per second) as a surrogate for engine power; further, we propose to normalize CO<sub>2</sub> emission rates relative to the nominal maximum CO<sub>2</sub> rate of the engine (e.g., when an engine with a maximum CO<sub>2</sub> emission rate of 50 g/sec emits at a rate of 10 g/sec, its normalized CO<sub>2</sub> emission rate is 20 percent).

<sup>36</sup> Because the proposed approach considers time-averaged power, any of the bins could include some idle operation and any of the bins could include some high-power operation.

<sup>37</sup> 13 CCR 1956.8 (a)(6)(C)—Optional NO<sub>x</sub> idling emission standard.

more of an engine’s operational life. For proposed Option 1, Increases to useful life values for heavy-duty engines would apply in two steps, as discussed in Section IV.A. For the first step for CI engines, MY 2027 through 2030, we are proposing useful life mileage values that are approximately a midpoint between the current useful life mileages and our proposed CI engines MY 2031 and later mileages. For the second step, we are proposing useful life mileage values for MY 2031 and later CI engines that cover

a majority of the estimated operational life mileages, but less than the first out-of-frame rebuild for these engines. The proposed Option 1 first step for SI engines in MY 2027 through 2030 would better align with the current useful life mileages for GHG emission standards applicable to these engines. The proposed Option 1 second step useful life mileage for SI engines for MY 2031 and later is based on the published engine service life for heavy-duty gasoline engines in the market today.

The useful life mileages in the proposed Option 2 are shorter than those in the proposed Option 1; we are giving full consideration to the useful life periods of proposed Options 1 and 2, and the range between the useful life periods in the proposed Options. Our proposed Option 1 and Option 2 useful life periods for heavy-duty CI and SI engines are presented in Table 3. See Section IV for the useful periods of the Alternative.<sup>38</sup>

TABLE 3—PROPOSED OPTIONS 1 AND 2 USEFUL LIFE PERIODS FOR HEAVY-DUTY CI AND SI ENGINES CRITERIA POLLUTANT STANDARDS

Model year	Spark-ignition HDE		Compression-ignition					
	Miles	Years	Light HDE		Medium HDE		Heavy HDE <sup>b,c</sup>	
			Miles	Years	Miles	Years	Miles	Years
Current <sup>a</sup> .....	110,000	10	110,000	10	185,000	10	435,000	10
Proposed Option 1: 2027–2030 .....	155,000	12	190,000	12	270,000	11	600,000	11
Proposed Option 1 <sup>d</sup> : 2031 and later .....	200,000	15	270,000	15	350,000	12	800,000	12
Proposed Option 2: 2027 and later .....	150,000	10	250,000	10	325,000	10	650,000	10

<sup>a</sup>Current useful life period for Spark-ignition HDE and Light HDE for GHG emission standards is 15 years or 150,000 miles. See 40 CFR 1036.108(d).

<sup>b</sup>We are also proposing to increase the hours-based useful life criterion from the current 22,000 hours for Heavy HDE to 32,000 hours for model years 2027–2030 and 40,000 hours for model years 2031 and later.

<sup>c</sup>The Heavy HDE class includes certain SI engines (e.g., natural gas-fueled engines) intended for use in Class 8 vehicles.

<sup>d</sup>For MY 2031 and later Heavy HDE, the proposed Option 1 would include intermediate useful life periods of 435,000 miles, 10 years, or 22,000 hours, whichever comes first. See Section III for a discussion of the proposed Option 1 standards we propose to apply for the intermediate and full useful life periods.

ii. Proposed Durability Demonstration Updates

The proposed longer useful life periods outlined in Table 3 would require manufacturers to extend their durability demonstrations, which show that the engines will meet applicable emission standards throughout their regulatory useful life. EPA regulations require manufacturers to include durability demonstration data as part of an application for certification of an engine family. Manufacturers typically complete this demonstration by following regulatory procedures to calculate a deterioration factor (DF).

To address the need for accurate and efficient emission durability demonstration methods, EPA worked with manufacturers and CARB to address this concern through guidance for MY 2020 and later engines.<sup>39</sup> In Section IV.F, we propose three methods for determining DFs, consistent with the recent guidance, including a new option to bench-age the aftertreatment system to limit the burden of generating a DF over the proposed lengthened useful life

periods. We also propose to codify in the EPA regulations three DF verification options available to manufacturers in recent guidance. The proposed verification options would confirm the accuracy of the DF values submitted by manufacturers for certification. We also introduce a test program to evaluate a rapid-aging protocol for diesel catalysts that we may consider as an option for CI engine manufacturers to use in their durability demonstration.

iii. Proposed Emissions Warranty Periods

EPA’s current emission-related warranty periods range from 22 percent to 54 percent of regulatory useful life. As EPA is proposing to lengthen the useful life periods in this rulemaking, we are also proposing to lengthen the emission warranty periods and increase the fraction of useful life miles covered under warranty. These proposed revised warranty periods are expected to result in better engine maintenance and less tampering, helping to maintain the

benefits of the emission controls. In addition, longer regulatory warranty periods may lead engine manufacturers to simplify repair processes and make them more aware of system defects that would be tracked and reported to EPA over a longer period.

In Section IV.B, we provide detailed discussion and request comment on these four ways that longer emission warranty periods may enhance long-term performance of emission-related devices and systems. We also discuss other impacts of lengthening regulatory emission warranty periods and other approaches that vary coverage and may similarly ensure long-term in-use emission performance.

EPA is proposing to lengthen the emissions warranty periods for all primary intended service classes to cover a larger portion of the operational lives of new heavy-duty engines. Our proposed Option 1 warranty mileages for MY 2031 are approximately 80 percent of the proposed useful life mileages. The proposed Option 1 MY 2027 through 2030 mileages are

<sup>38</sup> As noted in this Section C of the Executive Summary, we are proposing refueling standards for HD SI engines that are certified as incomplete vehicles that are equivalent to the standards in effect for complete heavy-duty vehicles. We propose to apply the existing useful life periods for

the complete vehicle refueling standards (15 years or 150,000 miles; see 40 CFR 1037.103(f) and 86.1805–16(d) for “MDPV” and “HDV”) to the HD SI engines certified as incomplete vehicles. See preamble Section IV.A for more details.

<sup>39</sup> U.S. EPA. “Guidance on Deterioration Factor Validation Methods for Heavy-Duty Diesel Highway Engines and Nonroad Diesel Engines equipped with SCR.” CD–2020–19 (HD Highway and Nonroad). November 17, 2020.

approximately midpoints between the current and proposed Option 1 MY 2031 and later mileages. The proposed Option 2 set of emission warranty periods would match CARB’s Step 1 warranty periods that will already be in effect beginning in model year 2022 for engines sold in California.<sup>40</sup> We believe

the proposed Option 2 mileages represent an appropriate lower end of the range we are considering for the revised regulatory emission warranty periods. Our proposed Option 1 and proposed Option 2 emission warranty periods are presented in Table 4.<sup>41</sup> See Section IV.B for updates in proposed

Options 1 and 2 to our years-based warranty periods and add hours-based warranty periods for all engine classes to cover low average annual mileage applications. We also considered an alternative set of warranty periods that are presented in Section IV.B.

TABLE 4—PROPOSED OPTIONS 1 AND 2 EMISSION-RELATED WARRANTY PERIODS FOR HEAVY-DUTY CI AND SI ENGINES CRITERIA POLLUTANT STANDARDS

Model year	Spark-ignition HDE		Compression-ignition						Years
	Miles	Hours	Light HDE		Medium HDE		Heavy HDE		
			Miles	Hours	Miles	Hours	Miles	Hours	
Current .....	50,000	NA	50,000	NA	100,000	NA	100,000	NA	5
Proposed Option 1: 2027–2030 .....	110,000	6,000	150,000	7,000	220,000	11,000	450,000	22,000	7

Proposed Option 2: 2027 and later	110,000	NA	110,000	NA	150,000	NA	350,000	NA	5

iv. Proposed Provisions To Ensure Long-Term Emissions Performance

In the ANPR, we introduced several ideas for an enhanced, comprehensive strategy to increase the likelihood that emission controls will be maintained properly through more of the operational life of heavy-duty engines, including beyond their useful life periods. Our proposed updates to maintenance provisions include defining the type of maintenance manufacturers may choose to recommend to owners in maintenance instructions, updating minimum maintenance intervals for certain critical emission-related components, and outlining specific requirements for maintenance instructions provided in the owner’s manual.

We are proposing changes to the owner’s manual and emissions label requirements to ensure access to certain maintenance information and improve serviceability. We expect this additional maintenance information to improve factors that contribute to mal-maintenance, which would result in better service experiences for independent repair technicians, specialized repair technicians, owners who repair their own equipment, and possibly vehicle inspection and maintenance technicians. We also

believe that improving owner experiences with operating and maintaining heavy-duty engines can reduce the likelihood of tampering.

v. Proposed Inducement Provisions

ANPR commenters indicated that engine derates or “inducements” are a significant source of operator frustration.<sup>42</sup> EPA currently has guidance on potential options manufacturers might utilize to meet existing requirements through an inducement strategy for their SCR-based aftertreatment system.<sup>43</sup> We are proposing to codify inducement provisions after considering manufacturer designs and operator experiences with SCR-based aftertreatment systems. In Section IV.D, we present the key principles we followed in developing the proposed inducement provisions, which includes a focus on conditions that are within an operator’s control, a multi-step derate schedule, and a backup check to override false inducements. We also include a detailed set of requests for comment highlighting the wide range of adjustments we are currently considering.

vi. Proposed Onboard Diagnostics Provisions

Onboard diagnostics (OBD) refer to systems of electronic controllers and sensors required by current regulation to detect malfunctions of engines and emission controls. EPA’s existing OBD program, promulgated in 2009, allows manufacturers to demonstrate how the OBD system they have designed to comply with California OBD requirements also complies with the intent of the EPA OBD requirements.<sup>44</sup> Although EPA maintains separate OBD regulations, all manufacturers currently seek OBD approval from CARB for OBD systems in engine families applying for 50-state certification, and then use this approval to demonstrate compliance with EPA requirements.

In Section IV.C, we are proposing to update our OBD regulations both to better address newer diagnostic methods and available technologies, and to streamline provisions where possible. We propose to incorporate by reference the existing CARB OBD regulations updated in 2019 as the starting point for our updated OBD regulations.<sup>45</sup> We are proposing to exclude or revise certain CARB provisions that we believe are not appropriate for a federal program and are proposing to include additional elements to improve the usefulness of

<sup>40</sup> For SI engines, the Alternative 1 warranty mileage matches the current useful life, consistent with the approach for Light HDE Alternative 1 warranty.

<sup>41</sup> In addition to exhaust standards, we are proposing refueling standards for HD SI engines that are certified as incomplete vehicles. The onboard refueling vapor recovery systems necessary to meet the proposed refueling standards will likely build on existing evaporative emissions systems, and we propose to apply the existing warranty periods for evaporative emission control systems to

the ORVR systems (5 years or 50,000 miles). See Preamble IV.B.1.

<sup>42</sup> Engine derating is an aftertreatment design strategy that reduces engine performance to induce operators to maintain appropriate levels of high-quality diesel emission fluid (DEF) in their SCR-based aftertreatment systems. Throughout this preamble we refer to engine derates that derive from DEF-related triggers as “inducements.”

<sup>43</sup> Kopin, Amy. Memorandum to docket EPA–HQ–OAR–2019–0055. “Inducement-Related

Guidance Documents, and Workshop Presentation.” October 1, 2021.

<sup>44</sup> See 40 CFR 86.010–18(a)(5).

<sup>45</sup> CARB Final Rulemaking to Consider Technical Status and Proposed Revisions to On-Board Diagnostic System Requirements for Heavy-Engines, Passenger Cars, Light-Duty Trucks, Medium Duty Vehicles and Engines was approved and became effective on July 31, 2013. California Code of Regulations sections 1968.2 and 1971.1 available at: <https://ww3.arb.ca.gov/regact/2012/hdodb2/hdodb2.htm>.

OBD systems for users (see Section IV.C for details).

EPA is specifically proposing additional OBD elements to improve the robustness and usefulness of OBD systems. These additional elements include emission system health monitors, an expanded list of publicly available OBD parameters, additional freeze frame data parameters, and enabling certain self-testing capabilities for owners. These proposed changes would benefit the environment by helping to reduce malfunctioning emission systems in-use through access to additional data that may be useful for service technicians, state and local inspection and maintenance operations, and owners.

### 3. Other Proposed Compliance Provisions and Flexibilities

In addition to the key program provisions, we are also proposing several provisions to provide manufacturers with flexibility to meet the proposed standards and encourage the introduction of new emission control technologies earlier than required; these provisions would apply under both proposed Options 1 and 2, as well as the full range of options in between them. These provisions include our proposal to migrate and update the compliance provisions of 40 CFR part 86, subpart A, to 40 CFR part 1036; continue averaging, banking, and trading (ABT) of credits generated against our heavy-duty engine criteria pollutant standards; provide incentives for early adoption of technologies to meet the standards; allow manufacturers to generate NO<sub>x</sub> emission credits for hybrid electric, battery electric, and fuel cell electric vehicles (HEVs, BEVs, and FCEVs); and make limited amendments to regulations that implement our air pollutant emission standards for other industry sectors, including light-duty vehicles, light-duty trucks, marine diesel engines, locomotives, and various types of nonroad engines, vehicles, and equipment.

#### i. Proposed Migration From 40 CFR Part 86, Subpart A

Heavy-duty criteria pollutant regulations were originally codified into 40 CFR part 86, subpart A, in the 1980s. We believe this rulemaking provides an opportunity to clarify (and otherwise improve) the wording of our existing heavy-duty criteria pollutant regulations in plain language and migrate them to 40 CFR part 1036.<sup>46</sup> Part 1036, which

<sup>46</sup> We are proposing to migrate some provisions to parts 1065 and 1068 to apply broadly to other sectors. Additionally, some current vehicle

was created for the Phase 1 GHG program, provides a consistent, updated format for our regulations, with improved organization. In general, this migration is not intended to change the compliance program previously specified in part 86, except as specifically proposed in this rulemaking. See our summary of the proposed migration in Section III.A, and additional details in our memorandum to the docket.<sup>47</sup> The proposed provisions of part 1036 would generally apply for model years 2027 and later, unless noted, and manufacturers would continue to use part 86 in the interim.

#### ii. Proposed Opportunities for NO<sub>x</sub> Emission Credits

We are proposing targeted revisions to the current emissions ABT provisions to account for specific aspects of the broader proposed program. We are also proposing an early adoption incentive program that would recognize the environmental benefits of lower-emitting vehicles entering the fleet ahead of required compliance dates for the proposed standards. Through this optional program, manufacturers who demonstrate early compliance with the proposed MY 2027 or MY 2031 standards would apply a multiplier to emission credits generated under the proposed ABT program (see Section IV.H for details). We are also proposing to offer NO<sub>x</sub> emission credits for HEVs, BEVs and FCEVs based on the near-zero or zero-tailpipe emissions performance of these technologies, for HEVs or BEVs and FCEVs, respectively, and after consideration of ANPR comments. We are choosing not to propose emission credit multipliers for HEVs, BEVs, and FCEVs. We believe that the potential loss of emission reductions that could result from providing credit multipliers is not justified in light of the current extent of technology development and implementation. Manufacturers choosing to generate NO<sub>x</sub> emission credits from BEVs or FCEVs would need to conduct testing and meet durability requirements discussed in Section IV.

#### iii. Other Amendments

EPA has promulgated emission standards for highway and nonroad engines, vehicles, and equipment. Section XII of this proposed rule

provisions in part 1037 refer to part 86 and we are proposing to update those references in part 1037 as needed.

<sup>47</sup> Stout, Alan; Brakora, Jessica. Memorandum to docket EPA-HQ-OAR-2019-0055. "Technical Issues Related to Migrating Heavy-Duty Highway Engine Certification Requirements from 40 CFR part 86, subpart A, to 40 CFR part 1036". October 1, 2021.

describes several amendments to correct, clarify, and streamline a wide range of regulatory provisions for many of those different types of engines, vehicles, and equipment. Section XII.A includes technical amendments to compliance provisions that apply broadly across EPA's emission control programs to multiple industry sectors, including light-duty vehicles, light-duty trucks, marine diesel engines, locomotives, and various other types of nonroad engines, vehicles, and equipment. Some of those amendments are for broadly applicable testing and compliance provisions in 40 CFR parts 1065, 1066, and 1068. Other cross-sector issues involve making the same or similar changes in multiple standard-setting parts for individual industry sectors. The rest of Section XII describes proposed amendments that apply uniquely for individual industry sectors.

We are proposing amendments in two areas of note for the general compliance provisions in 40 CFR part 1068. First, we are proposing to take a comprehensive approach for making confidentiality determinations related to compliance information that companies submit to EPA. We are proposing to apply these provisions for all highway, nonroad, and stationary engine, vehicle, and equipment programs, as well as aircraft and portable fuel containers.

Second, we are proposing provisions that include clarifying text to establish what qualifies as an adjustable parameter and to identify the practically adjustable range for those adjustable parameters. The proposed adjustable-parameter amendments also include specific provisions related to electronic controls that aim to deter tampering.

### 4. Targeted Revisions to the HD GHG Phase 2 Program

As noted at the start of this Section I.B, we have developed a proposed approach to make targeted updates that take into consideration the growing HD electric vehicle market without fundamentally changing the HD GHG Phase 2 program as a whole. These developments along with considerations of lead time, costs and other factors have demonstrated that further GHG reductions in the MY 2027 timeframe are appropriate. Specifically, we propose to adjust the HD GHG Phase 2 vehicle GHG emission standards by sales-weighting the projected heavy-duty EV production levels of school buses, transit buses, commercial delivery trucks, and short-haul tractors and by lowering the applicable emission standards in MY 2027 accordingly. We project these four vehicle types will have the highest EV sales of all heavy-

duty vehicle types between now and 2030. Because these four EV vehicle types do not correspond directly with the specific subcategories for standards that we developed in HD GHG Phase 2 (subcategories differentiated by vehicle weight, use, fuel type, etc.), we use EPA certification data to determine which subcategories of standards would be impacted by EV production in MY 2027. By sales-weighting the projected production levels of the four EV vehicle types in 2027, our proposed approach adjusts 17 of the 33 MY 2027 Phase 2 vocational vehicle and tractor standards and does not change any MY 2021 or MY 2024 standards or any of the Class 2b/3 pickup truck and van standards. We request comment on the proposed approach to determine the threshold.

In addition to these proposed standard adjustments, we are requesting comment on options to update the advanced technology incentive program for electric and plug-in hybrid vehicles beginning in MY 2024. These changes may be appropriate to reflect that such levels of incentives for electrification may no longer be appropriate for certain segments of the HD EV market. We are trying to balance providing additional incentives for the continued development of zero and near-zero emission vehicles without inadvertently undermining the GHG emission reductions from the HD GHG Phase 2 program with inappropriate incentives.

*D. Projected Emission Reductions, Air Quality Improvements, Costs, and Benefits*

Our analysis of the estimated emission reductions, air quality improvements, costs, and monetized benefits of the proposed criteria pollutant program is outlined below and detailed in Sections V through X. While the discussion below generally focuses on our analysis of the proposed Option 1, we also discuss the proposed Option 2; additional information on analyses of proposed Options 1 and 2 is included in the sections that follow. As discussed in Section III, we currently lack information to show that the Alternative is feasible in the MY 2027 timeframe based on the emission control technologies that we have evaluated to date, and therefore we are not presenting an analysis of the costs or benefits of the Alternative. We expect that we would need additional data supporting the feasibility of the Alternative to further consider it in the development of the final rule.

The proposed provisions in Options 1 and 2, which are described in detail in Sections III and IV, are expected to reduce emissions from highway heavy-

duty engines in several ways. We project the proposed emission standards for heavy-duty CI engines would reduce tailpipe emissions of NO<sub>x</sub>; the combination of the proposed low-load test cycle and off-cycle test procedure for CI engines would help to ensure that the reductions in tailpipe emissions are achieved in-use, not only under high-speed, on-highway conditions, but also under low-load and idle conditions. We also project reduced tailpipe emissions of NO<sub>x</sub>, CO, PM, VOCs, associated air toxics, and methane from the proposed emission standards for heavy-duty SI engines, particularly under cold-start and high-load operating conditions. The longer emission warranty and regulatory useful life requirements for heavy-duty CI and SI engines in the proposed Options 1 and 2 would help maintain the expected emission reductions for all pollutants, including primary exhaust PM<sub>2.5</sub>, throughout the useful life of the engine. The onboard refueling vapor recovery requirements for heavy-duty SI engines in the proposed Options 1 and 2 would reduce VOCs and associated air toxics. Table 5 summarizes the projected reductions in heavy-duty emission from the proposed Options 1 and 2 in 2045 and shows the significant reductions in NO<sub>x</sub> emissions from the proposal. In general, we estimate that Option 2 would result in lower emission reductions because of the less stringent emission standards combined with shorter useful life and warranty periods than the proposed Option 1 in MY 2031. Section VI and draft Regulatory Impact Analysis (RIA) Chapter 5 provide more information on our projected emission reductions for proposed Options 1 and 2, as well as the Alternative.

TABLE 5—PROJECTED HEAVY—DUTY EMISSION REDUCTIONS IN 2045 FROM THE PROPOSED OPTIONS 1 AND 2 STANDARDS

Pollutant	Percent reduction in highway heavy-duty emissions	
	Proposed Option 1	Proposed Option 2
NO <sub>x</sub> .....	61	47
Primary PM <sub>2.5</sub> ...	26	24
VOC .....	21	20
CO .....	17	16

The proposed criteria pollutant program in proposed Options 1 and 2 would also reduce emissions of other pollutants. For instance, the proposed Option 1 would result in a 27 percent reduction in benzene and a 0.7 percent reduction in methane from highway heavy-duty engines in 2045. Leading up to 2045, emission reductions are

expected to increase over time as the fleet turns over to new, compliant engines.

Reductions in emissions of NO<sub>x</sub>, VOC, PM<sub>2.5</sub>, and CO from the proposed rule are projected to lead to decreases in ambient concentrations of ozone, PM<sub>2.5</sub>, NO<sub>2</sub>, and CO. The proposed Option 1 standards would significantly decrease ozone concentrations across the country, with a population-weighted average decrease of over 2 ppb in 2045.<sup>48</sup> Ambient PM<sub>2.5</sub>, NO<sub>2</sub> and CO concentrations are also predicted to improve in 2045 as a result of the proposed Option 1 program. The emission reductions provided by the proposed standards would be important in helping areas attain the NAAQS and prevent future nonattainment. In addition, the proposed Option 1 standards are expected to result in improvements in nitrogen deposition and visibility, but they are predicted to have relatively little impact on ambient concentrations of air toxics.

We also used our air quality data from modeling Option 1 to conduct a demographic analysis of human exposure to future air quality in scenarios with and without the proposed criteria pollutant standards in place. To compare demographic trends, we sorted 2045 baseline air quality concentrations from highest to lowest concentration and created two groups: Areas within the contiguous U.S. with the worst air quality and the rest of the country. We found that in the 2045 baseline, the number of people of color living within areas with the worst air quality is nearly double that of non-Hispanic Whites. We also found that the largest predicted improvements in both ozone and PM<sub>2.5</sub> are estimated to occur in areas with the worst baseline air quality, where larger numbers of people of color are projected to reside. More details on our air quality modeling and demographic analyses are included in Section VII and draft RIA Chapter 6.

Our estimates of reductions in heavy-duty engine emissions, and associated air quality impacts, are based on manufacturers adding emissions-reduction technologies in response to the proposed Options 1 or 2 criteria pollutant standards, along with making emission control components more durable in response to the longer regulatory useful life periods in the proposed Options 1 or 2. We also estimate costs to both truck owners and manufacturers attributable to the longer emission warranty for both the proposed Options 1 and 2. We estimate costs of

<sup>48</sup> Due to resource constraints, we only conducted air quality modeling for the proposed Option 1.

the proposed Options 1 and 2 to both manufacturers and truck owners in our program cost analysis in Section V and draft RIA Chapter 7.

Our evaluation of costs to manufacturers includes direct costs (*i.e.*, cost of materials, labor costs) and indirect manufacturing costs (*e.g.*, warranty, research and development). The direct manufacturing costs include individual technology costs for emission-related engine components and for exhaust aftertreatment systems. Importantly, our analysis of direct manufacturing costs includes the costs of the existing emission control technologies because we expect the emissions warranty and regulatory useful life provisions in the proposed Options 1 and 2 to have some impact on not only the new technology added to comply with the proposed standards, but also on any existing emission control components. The cost estimates thus reflect the portion of baseline case engine hardware and aftertreatment systems for which new costs would be incurred due to the proposed warranty and useful life provisions, even absent any changes in the level of emission standards. The indirect manufacturing costs in our analysis include warranty costs, research and development costs, profits and other indirect costs. We combine direct and indirect manufacturing costs to calculate total technology costs, which we then add to operating costs in our calculation of program costs.

As part of our evaluation of operating costs, we estimate costs truck owners incur to repair emission control system components. Our repair cost estimates are based on industry data showing the amount spent annually by truck owners on different types of repairs, and our estimate of the percentage of those repairs that are related to emission control components. Our analysis of this data shows that extending the useful life and emission warranty periods would lower emission repair costs during several years of operation for several vehicle types. More discussion on our emission repair costs estimates of the

proposed Options 1 and 2 criteria pollutant standards is included in Section V, with additional details presented in draft RIA Chapter 7.

We combined our estimates of emission repair costs with other operating costs (*i.e.*, urea/DEF, fuel consumption) and technology costs to calculate total program costs. Our analysis of proposed Option 1 shows that total costs for the criteria pollutant program relative to the baseline (or no action scenario) range from \$1.8 billion in 2027 to \$2.3 billion in 2045 (2017 dollars, undiscounted, see Table V–16). We estimate that proposed Option 2 would result in higher costs than the proposed Option 1 in 2045. We expect that the same emission control technologies would be needed to meet both the proposed Option 1 and 2 standards, which would result in the same direct technology costs in both cases. The higher projected costs of the proposed Option 2 relative to the proposed Option 1 result from our expectation that the shorter useful life and emission warranty periods of the proposed Option 2 compared to proposed Option 1 in MY 2031 and later would lead to higher emission control system repair costs for proposed Option 2 than the proposed Option 1 (*i.e.*, shorter emissions warranty periods result in higher emission repair costs in proposed Option 2) (see Section V for details). Overall, the analysis shows that the costs of proposed Option 1 are less than the costs of proposed Option 2. The present value of program costs for proposed Options 1 and 2, and additional details are presented in Section V.

Section VIII presents our analysis of the human health benefits associated with the proposed Options 1 and 2. We estimate that in 2045, the proposed Option 1 would result in total annual monetized ozone- and PM<sub>2.5</sub>-related benefits of \$12 and \$33 billion at a 3 percent discount rate, and \$10 and \$30 billion at a 7 percent discount rate.<sup>49</sup> In the same calendar year, proposed Option 2 would result in total annual monetized ozone- and PM<sub>2.5</sub>-related

benefits of \$9 and \$26 billion at a 3 percent discount rate, and \$8 and \$23 billion at a 7 percent discount. These benefits only reflect those associated with reductions in NO<sub>x</sub> emissions (a precursor to both ozone and secondarily-formed PM<sub>2.5</sub>) and directly-emitted PM<sub>2.5</sub> from highway heavy-duty engines. There are additional human health and environmental benefits associated with reductions in exposure to ambient concentrations of PM<sub>2.5</sub>, ozone, and NO<sub>2</sub> that EPA has not quantified due to data, resource, or methodological limitations. There would also be benefits associated with reductions in air toxic pollutant emissions that result from the proposed program, but we did not attempt to monetize those impacts due to methodological limitations. The estimated benefits of the proposed Options 1 and 2 would be larger if we were able to monetize all unquantified benefits at this time. More detailed information about the benefits analysis conducted for the proposal, including the present value of program benefits for Options 1 and 2, is included in Section VIII and draft RIA Chapter 8.

We compare total monetized health benefits to total costs associated with the proposed Options 1 and 2 in Section IX. Table 6 shows that annual benefits of the proposed Option 1 would be larger than the annual costs in 2045, with annual net benefits of \$9 and \$31 billion assuming a 3 percent discount rate, and net benefits of \$8 and \$28 billion assuming a 7 percent discount rate.<sup>50</sup> Annual benefits would also be larger than annual costs in 2045 for the proposed Option 2, although net benefits would be slightly lower than from the proposed Option 1 (net benefits of proposed Option 2 would be \$6 and \$23 billion at a 3 percent discount rate, and net benefits of \$5 and 21 billion at a 7 percent discount rate). For both the proposed Options 1 and 2, benefits also outweigh the costs when expressed in present value terms and as equalized annual values.

TABLE 6—2045 COSTS, BENEFITS AND NET BENEFITS OF THE PROPOSED OPTION 1 AND OPTION 2

[Billions, 2017\$]<sup>a b</sup>

	Proposed Option 1		Proposed Option 2	
	3% discount	7% discount	3% discount	7% discount
2045:				
Benefits .....	\$12–\$33	\$10–\$30	\$9.1–\$26	\$8.2–\$23
Costs .....	2.3	2.3	2.9	2.9

<sup>49</sup> 2045 is a snapshot year chosen to approximate the annual health benefits that occur in a year in which the proposed program would be fully

implemented and when most of the regulated fleet would have turned over.

<sup>50</sup> The range of benefits and net benefits reflects a combination of assumed PM<sub>2.5</sub> and ozone mortality risk estimates and selected discount rate.

TABLE 6—2045 COSTS, BENEFITS AND NET BENEFITS OF THE PROPOSED OPTION 1 AND OPTION 2—Continued  
 [Billions, 2017\$]<sup>a b</sup>

	Proposed Option 1		Proposed Option 2	
	3% discount	7% discount	3% discount	7% discount
Net Benefits .....	9.2–31	8.1–28	6.2–23	5.3–21

<sup>a</sup> All benefits estimates are rounded to two significant figures; numbers may not sum due to independent rounding. The range of benefits (and net benefits) in this table are two separate estimates and do not represent lower- and upper-bound estimates, though they do reflect a grouping of estimates that yield more and less conservative benefits totals. The costs and benefits in 2045 are presented in annual terms and are not discounted. However, all benefits in the table reflect a 3 percent and 7 percent discount rate used to account for cessation lag in the valuation of avoided premature deaths associated with long-term exposure.

<sup>b</sup> The benefits associated with the standards presented here do not include the full complement of health, environmental, and climate-related benefits that, if quantified and monetized, would increase the total monetized benefits.

Section X examines the potential impacts of the proposed standards on heavy-duty vehicles (sales, mode shift, fleet turnover) and employment in the heavy-duty industry. The proposed standards may impact vehicle sales due to both changes in purchase price and longer emission warranty mileage requirements; these effects may show up as increased purchases of more new vehicles than usual before the proposed standards come into effect, in anticipation of higher prices after the proposed standards (“pre-buy”). The proposed standards may also reduce sales after the proposed standards would be in place (“low-buy”). In this proposal, we suggest an approach to quantify potential impacts on vehicle sales due to new emission standards; we also provide an example of how the results could be applied to the final regulatory analysis for this rule in draft RIA Chapter 10.1. Our example results for proposed Option 1 suggest pre- and low-buy for Class 8 trucks may range from zero to approximately two percent increase in sales over a period of up to 8 months before the 2031 standards begin (pre-buy), and a decrease in sales from zero to approximately two percent over a period of up to 12 months after the 2031 standards begin (low-buy). We have provided the example results as information for commenters to consider and provide input to EPA on this type of approach for quantifying how emissions regulations may impact heavy-duty vehicle sales fleet turnover. Based on input we receive, we may consider using this type of analysis in the final rule to inform both the potential impacts on vehicle sales, and the related impacts on employment in the heavy-duty industry. We expect little mode shift due to the proposed standards because of the large difference in cost of moving goods via trucks versus other modes of transport (e.g., planes or barges).

Employment impacts of the proposed standards depend on the effects of the standards on sales, the share of labor in

the costs of the standards, and changes in labor intensity due to the standards. We quantify the effects of costs on employment, and we discuss the effects due to sales and labor intensity qualitatively. This partial quantification of employment impacts estimates that increased costs of vehicles and parts would, by itself and holding labor intensity constant, be expected to increase employment by 400 to 2,200 job-years in 2027, and 300 to 1,800 job-years in 2032 under proposed Option 1.<sup>51</sup> Employment would be expected to increase by 400 to 2,200 job years, and 300 to 1,500 job years in 2027 and 2032 respectively under proposed Option 2. See Section X for further detail on limitations and assumptions of this analysis.

Finally, the projected cost and GHG emission impacts of the proposed changes to the HD GHG Phase 2 program are described in Section XI.E.

*E. Summary of Specific Requests for Comments*

We are requesting comment on all aspects of this proposed rulemaking. In addition, as detailed in the sections that follow, we are specifically requesting comments from stakeholders on a variety of key topics throughout this proposed to inform the final rulemaking process. In this section we highlight topics on which we believe it would be especially beneficial to receive comments from stakeholders, or which may be of most interest to stakeholders.

Section III presents extensive information and analyses, including two options for the proposed criteria pollutant standards, to provide notice that EPA will be considering a range of numeric emission standard values and implementation dates in the final rule. We are requesting comment on the proposed Options 1 and 2, as well as the Alternative, standards for each duty cycle, as well as the one- and two-step

approaches in proposed Options 1 and 2, respectively, and the implementation dates of MYs 2027 and 2031. In addition, we are requesting input on several aspects of the proposed new LLC duty cycle for heavy-duty CI engines and applying the SET duty cycle to heavy-duty SI engines (see Section III). We are also requesting comment on several aspects of the proposed off-cycle standards for heavy-duty CI engines, including the levels of the standards in proposed Options 1 and 2 and the specific operating range covered by each bin, and whether off-cycle standards and in-use testing should also apply for SI engines. For SI engines, we request comment on our proposed refueling HC emission standard for incomplete vehicles above 14,000 lb GVWR, including requests for comment and data to inform test procedure updates we should consider to measure HC emissions from these larger fuel systems and vehicles. We are also requesting comment on whether EPA should finalize interim standards for testing used to verify that the engine meets the standards through useful life (i.e., in-use testing that occurs after the vehicle enters commerce). Typically, EPA sets the same standards for in-use testing and certification testing but, in some cases, we have provided higher in-use standards to give manufacturers time to gain experience with the new technology needed to meet the standards.<sup>52</sup> As outlined in this Executive Summary and discussed in Sections III and IV, we are proposing to significantly lower NO<sub>x</sub> emission standards and to significantly increase the regulatory useful life for heavy-duty on highway engines, which would require manufactures to develop and produce additional engine and aftertreatment technology. Due to the combination of lower (more stringent) numeric standards and longer useful periods included in our proposal, we are requesting comment on whether

<sup>51</sup> Where a job-year is, for example, one year of full-time work for one person, or one year of half-time work for two people.

<sup>52</sup> See 81 FR 23414 (April 28, 2014).

EPA should finalize in-use standards that are 40 to 100 percent higher than the proposed Option 1 standards for MY 2027 to MY 2033 engines.

In Section IV we detail our requests for comment on a number of topics related to our proposed lengthened useful life and warranty periods, as well as other compliance provisions and flexibilities. For instance, we are requesting stakeholder input on our proposed useful life and warranty periods, as well as the range of options covered by the proposed Options 1 and 2, or other alternatives outside of that range. In addition to the proposed warranty periods, we request comment on other approaches to warranty, such as graduated warranty phases, that may similarly ensure long-term in-use emission performance with a smaller impact on the purchase price. We further request comment on our proposed provisions to increase the likelihood that emission controls will be maintained properly through more of the service life of heavy-duty engines (e.g., revise inducement strategies, improve serviceability). In addition, we are interested in stakeholder input on our proposed approaches for the durability demonstration that manufacturers are required to include their application for certification (see Section IV.F for details). We are also interested in stakeholder input on our proposed requirements for manufacturers choosing to generate NO<sub>x</sub> emission credits from BEVs or FCEVs, as well as whether EPA should consider for this final rule, or other future rules, restrictions for NO<sub>x</sub> emission credits in the longer term (e.g., beyond MY 2031) (See Section IV.I for details).

Throughout Sections III and IV, we discuss areas where our proposal differs from the California Air Resources Board (CARB) Heavy-Duty Omnibus Rulemaking, and request comment on our proposal, including whether it is appropriate to harmonize the federal and CARB regulatory programs more in light of the authority and requirements of CAA section 202, and the benefits or challenges if EPA were to finalize particular aspects of its program that are or are not fully aligned with the Omnibus.

There are also several topics that we are requesting comment on that relate to the analyses that support our proposal. For instance, we are interested in stakeholder input on our approach for estimating emission reductions from lengthening useful life and warranty periods (see Section VI for details). We are also interested in comments on our estimate of repair costs for emission control system components (see Section

V for details). We request comment on the method we outline to estimate potential impacts of a proposed regulation on heavy-duty vehicle sales; we also request comment on approaches to estimate employment impacts attributable to the proposed rule (see Section X for details).

We are also interested in input from environmental justice stakeholders and underserved and overburdened communities, including children's health stakeholders, regarding the need for revised standards and how heavy-duty vehicles affect communities (see Section II); the air quality improvements we project from this proposal and how they are distributed (see Section VII); and ways the proposal could be improved to advance environmental protection for all people, including people of color, low-income communities, and those who live near highways or in heavily trafficked areas with frequent truck congestion and idling, such as ports.

In Section XI, we request comment in a number of areas related to the proposed updates to the HD GHG Phase 2 program for certain heavy-duty vehicles that are shifting to zero-emission vehicles. We are considering whether it would be appropriate in the final rule to increase the stringency of the standards even more than what we propose. Therefore, we request information on heavy-duty electric vehicle sales projections, including for what HD vehicle types, to help inform our HD electric vehicle sales projections in the MY 2024 through MY 2029 timeframe. We also are considering whether to establish more stringent standards beyond MY 2027, specifically in MY 2028 and MY 2029 using the methodology described in Section XI.C.1. We request comment on appropriate stringency and supporting data for each of those model years.

We are also interested in stakeholder input that supports changes to the advanced technology credit multiplier approach under consideration. In addition, we request comment under this proposal on how EPA can best consider the potential for ZEV technology to significantly reduce air pollution from the heavy-duty vehicle sector, including whether and how to consider including specific sales requirements for HD ZEVs.

For these and all requests for comment detailed throughout the proposal, stakeholders are encouraged to provide their rationale and any available data that supports to their perspectives.

## I. Introduction

### A. Brief Overview of the Heavy-Duty Truck Industry

Heavy-duty highway vehicles (also referred to as "trucks" in this preamble) range from commercial pickup trucks to vocational vehicles that support local and regional transportation, construction, refuse collection, and delivery work, to line-haul tractor-trailers that move freight cross-country. This diverse array of vehicles is categorized into weight classes based on gross vehicle weight ratings (GVWR). These weight classes span Class 2b pickup trucks and vans from 8,500 to 10,000 lbs GVWR through Class 8 line-haul tractors and other commercial vehicles that exceed 33,000 lbs GVWR.<sup>53 54</sup>

Heavy-duty highway vehicles are primarily powered by diesel-fueled, compression-ignition (CI) engines. However, gasoline-fueled, spark-ignition (SI) engines are common in the lighter weight classes, and smaller numbers of alternative fuel engines (e.g., liquified petroleum gas, compressed natural gas) are found in the heavy-duty fleet. Vehicles powered by electricity, either in the form of battery electric vehicles (BEVs) or fuel cell electric vehicles (FCEVs) are also increasingly entering the heavy-duty fleet. The operational characteristics of some commercial applications (e.g., delivery vehicles) can be similar across several vehicle weight classes, allowing a single engine, or electric power source in the case of BEVs and FCEVs, to be installed in a variety of vehicles. For instance, engine specifications needed for a Class 4 parcel delivery vehicle may be similar

<sup>53</sup> This proposed rulemaking includes revised criteria pollutants standards for engine-certified Class 2b through 8 heavy-duty engines and vehicles; this proposal also includes revised GHG standards for Class 4 through 8 vehicles. Class 2b and 3 vehicles with GVWR between 8,500 and 14,000 pounds are primarily commercial pickup trucks and vans and are sometimes referred to as "medium-duty vehicles". The majority of Class 2b and 3 vehicles are chassis-certified vehicles and will be included in a future combined light-duty and medium-duty rulemaking action, consistent with E.O. 14037, Section 2a. Heavy-duty engines and vehicles are also used in nonroad applications, such as construction equipment; nonroad heavy-duty engines and vehicles are not the focus of this proposal. See Section I for more discussion on the spectrum of heavy-duty vehicles and how they relate to the proposed rule. See Sections I.B and III for more discussion on the spectrum of heavy-duty vehicles and how they relate to the proposed rule.

<sup>54</sup> The focus of this proposal is on highway heavy-duty engines and vehicles. However, we are also proposing limited amendments to regulations that implement our air pollutant emission standards for other sectors, including light-duty vehicles, light-duty trucks, marine diesel engines, locomotives, and various types of nonroad engines, vehicles, and equipment (see Section XII).

to the needs of a Class 5 mixed freight delivery vehicle or a Class 6 beverage truck. Any performance differences needed to operate across this range of vehicles can be achieved through adjustments to chassis-based systems (*i.e.*, transmission, cooling system) external to the engine.

The industry that designs and manufactures these heavy-duty vehicles is composed of three primary segments: Vehicle manufacturers, engine manufacturers and other major component manufacturers, and secondary manufacturers (*i.e.*, body builders). Some vehicle manufacturers are vertically integrated, designing, developing, and testing their engines in-house for use in their vehicles, while others purchase some or all of their engines from independent engine suppliers. Today, only one major independent engine manufacturer supports the heavy-duty truck industry, though some vehicle manufacturers sell their engines or “incomplete vehicles” (*i.e.*, chassis that include their engines, the frame, and a transmission) to body builders who design and assemble the final vehicle. Each of these subindustries is often supported by common suppliers for subsystems such as transmissions, axles, engine controls, and emission controls.

In addition to the manufacturers and suppliers responsible for producing highway heavy-duty vehicles, an extended network of dealerships, repair and service facilities, and rebuilding facilities contribute to the sale, maintenance, and extended life of these vehicles and engines. Heavy-duty vehicle dealerships offer customers a place to order vehicles from a specific manufacturer and include service facilities for those vehicles and engines. Dealership service technicians are trained to perform regular maintenance and make repairs, which generally include repairs under warranty and in response to manufacturer recalls. Some trucking fleets, businesses, and large municipalities benefit from hiring their own technicians to service their vehicles in their own facilities. Many refueling centers along major trucking routes have also expanded their facilities to include roadside assistance and service stations to diagnose and repair common problems.

Heavy-duty CI engines installed in the larger weight classes of vehicles are designed to be rebuilt. Dealerships and other service facilities are generally equipped to replace common components, such as pistons and bearings that wear over time. However, large-scale (*i.e.*, “out-of-frame”) engine overhauls that replace most of the

engine components require a more sophisticated process that only a limited number of facilities provide. Some heavy-duty engine manufacturers have established their own rebuilding facilities as a separate branch of their operations and others work with independent rebuilding factories that are affiliated with multiple engine manufacturers. Rebuilding allows owners to extend the life of their engines at a lower cost than purchasing a replacement vehicle, which has made the practice common for some heavy-duty engines.

The end-users for highway heavy-duty vehicles are as diverse as the applications for which these vehicles are purchased. Smaller weight class heavy-duty vehicles are commonly purchased by delivery services, contractors, and municipalities. The middle weight class vehicles tend to be commercial vehicles for businesses and municipal work that transport people and goods locally and regionally or provide services such as utilities. Vehicles in the heaviest weight classes are generally purchased by businesses with high load demands, such as construction, towing or refuse collection, or freight delivery fleets and owner-operators with both load and speed demands for regional and long-haul goods movement. The competitive nature of the businesses and owner-operators that purchase and operate highway heavy-duty vehicles means that any time the vehicle is unable to operate due to maintenance or repair (*i.e.*, downtime) can lead to a loss in income. This need for reliability drives much of the truck and engine manufacturers’ innovation and research to meet the needs of their customers.

### *B. History of Emission Standards for Heavy-Duty Engines and Vehicles*

Emission standards for heavy-duty highway engines in the U.S. were first issued by the Department of Health, Education, and Welfare in the 1960s. These standards and the corresponding certification and testing procedures were codified at 45 CFR part 1201. In 1972, shortly after EPA was created as a federal agency and given responsibility for regulating heavy-duty engines, EPA published new standards and updated procedures while migrating the regulations to 40 CFR part 85 as part of the effort to consolidate all EPA regulations in a single location.<sup>55</sup> EPA created 40 CFR part 86 in 1976 to reorganize emission standards and certification requirements for light-duty

vehicles and heavy-duty highway engines. In 1985, EPA promulgated new standards for heavy-duty highway engines, codifying the standards in 40 CFR part 86, subpart A. Since then, EPA has promulgated several rules for highway heavy-duty engines and vehicles to set new and more stringent emission standards for criteria pollutants and precursors,<sup>56</sup> to set requirements for controlling evaporative and refueling emissions,<sup>57</sup> to establish emission control programs for greenhouse gases (GHGs), and to add or revise certification procedures.<sup>58</sup>

EPA’s criteria pollutant regulatory programs for the heavy-duty highway industry apply to engines.<sup>59</sup> Our regulations require that engine manufacturers identify the “primary intended service class” for each engine by considering the vehicles for which they design and market their engines. Heavy-duty CI engines are specified as light heavy-duty engine (Light HDE), medium heavy-duty engine (Medium HDE), or heavy heavy-duty engine (Heavy HDE) based largely on the weight class of the vehicles in which the engines are expected to be installed and the potential for rebuild. SI heavy-duty engines are generally specified as a single spark-ignition HDE service class unless they are designed or intended for use in the largest heavy-duty vehicles, and therefore considered heavy HDEs.<sup>60</sup> EPA sets emission standards and other regulatory provisions, including regulatory useful life and emissions warranty periods, that are targeted for the operational characteristics of each primary intended service class.

In the 1990s, EPA issued increasingly stringent standards for NO<sub>x</sub>, CO, HC,

<sup>56</sup> For example, oxides of nitrogen (NO<sub>x</sub>), hydrocarbons (HC), particulate matter (PM) and carbon monoxide (CO).

<sup>57</sup> See Section III.E for more discussion on controlling evaporative and refueling emissions from light- and heavy-duty vehicles.

<sup>58</sup> U.S. Environmental Protection Agency. “EPA Emission Standards for Heavy-Duty Highway Engines and Vehicles,” Available online: <https://www.epa.gov/emission-standards-reference-guide/epa-emission-standards-heavy-duty-highway-engines-and-vehicles>. (last accessed June 25, 2021).

<sup>59</sup> EPA’s regulations address heavy-duty engines and vehicles separately from light-duty vehicles. Vehicles with GVWR above 8,500 pounds (Class 2b and above) are classified in the regulations as heavy-duty. For criteria pollutants EPA’s standards generally apply to the engine rather than the vehicle for heavy-duty. However, most of the Class 2b and 3 pickup trucks and vans (vehicles with a GVWR between 8,500 and 14,000 pounds) are chassis-certified heavy-duty vehicles and covered by standards in EPA’s Tier 3 program (79 FR 23414, April 28, 2014; 80 FR 0978, February 19, 2015). As noted in Section III, there are a small number of Class 2b and 3 engines (*e.g.*, trucks with dual rear wheels that are sold with a cab and chassis only), which are the subject of this proposed rulemaking.

<sup>60</sup> See 40 CFR 1036.140(a)(3).

<sup>55</sup> See Section I.G for additional discussion on EPA’s Statutory Authority relevant to this proposal.

and PM. These exhaust standards were derived from engine-based emission control strategies and manufacturers generally certified their engines' emission performance over defined duty cycles on an engine dynamometer (*i.e.*, "engine certification"). In 1997, EPA finalized standards for heavy-duty highway diesels (62 FR 54693, October 21, 1997), effective beginning with the 2004 model year, including a combined non-methane hydrocarbon (NMHC) and NO<sub>x</sub> standard that represented a reduction of NO<sub>x</sub> emissions by 50 percent. These NO<sub>x</sub> reductions also resulted in significant reductions in secondary nitrate PM.

In early 2001, EPA finalized the 2007 Heavy-Duty Engine and Vehicle Rule (66 FR 5002, January 18, 2001) to continue addressing NO<sub>x</sub> and PM emissions from both diesel and gasoline-fueled highway heavy-duty engines. This rule established a comprehensive national program that regulated a heavy-duty engine and its fuel as a single system, with emission standards taking effect beginning with model year (MY) 2007 and fully phasing in by MY 2010 (EPA 2010 standards). Prior to 2007, emission standards were based on controlling the emissions formed during the combustion process (*i.e.*, engine-out emissions), and there was no further control of emissions between the engine and the truck's tailpipe. But with promulgation of the 2007 final rule, emission standards were, for the first time, based on the use of technologies to capture, convert, and reduce harmful engine-out emissions, resulting in tailpipe emissions that were cleaner than engine-out emissions. By and large, the industry met these new standards through the use of exhaust aftertreatment technologies, namely, diesel oxidation catalysts, particulate filters, and high-efficiency catalytic exhaust emission control devices. Consistent with previous criteria pollutant regulatory programs, the program also offered flexibility to manufacturers through the use of various emission credits averaging, banking, and trading (ABT) programs.

To ensure proper functioning of these aftertreatment technologies, which could be damaged by sulfur, EPA also reduced the allowable level of sulfur in highway diesel fuel by 97 percent by mid-2006. Together, the use of exhaust aftertreatment technologies and lower-sulfur fuel resulted in diesel-fueled trucks that emitted PM and NO<sub>x</sub> tailpipe emissions at levels 90 percent and 95 percent below emission levels from then-current highway heavy-duty engines, respectively. The PM standard for new highway heavy-duty engines

was set at 0.01 grams (10 milligrams, or 10 mg) per horsepower-hour (mg/hp-hr) by MY 2007 and the NO<sub>x</sub> and NMHC standards of 200 mg/hp-hr and 140 mg/hp-hr, respectively, were set to phase in between model years 2007 and 2010.<sup>61</sup> In finalizing that rule, EPA estimated that the emission reductions would achieve significant health and environmental impacts, and that the total monetized PM<sub>2.5</sub> and ozone-related benefits of the program would exceed \$70 billion, versus program costs of \$4 billion (1999\$).

In 2005, EPA finalized a manufacturer-run, in-use testing program that uses portable emission measurement systems to measure HC, CO, NO<sub>x</sub>, and PM emissions from the exhaust of in-use heavy-duty diesel trucks (70 FR 34594, June 14, 2005). The fully enforceable program began in 2007. This effort was a significant advancement in helping to ensure that the benefits of more stringent emission standards are realized under real-world driving conditions.

In 2009, as advanced emissions control systems were being introduced to meet the MY 2007/2010 standards, EPA promulgated a final rule to require that these advanced emissions control systems be monitored for malfunctions via an onboard diagnostic (OBD) system (74 FR 8310, February 24, 2009). The rule, which has been fully phased in, required engine manufacturers to install OBD systems that monitor the functioning of emission control components on new engines and alert the vehicle operator to any detected need for emission-related repair. It also required that manufacturers make available to the service and repair industry information necessary to perform repair and maintenance service on OBD systems and other emission related engine components. In addition, EPA published a series of documents that provided guidance to manufacturers on potential methods and measures to ensure that trucks equipped with Selective Catalytic Reduction (SCR) technology would be refilled with the specified quantity and quality of a urea-water mixture (also known as diesel exhaust fluid, or DEF) necessary for the proper functioning of this NO<sub>x</sub>-reducing technology. These guidance documents describe potential approaches that included progressive levels of alerts and warnings communicated to the driver of the truck,

<sup>61</sup> Heavy-duty engine emission standards are defined in work specific units (*i.e.*, milligrams per horsepower-hour) because the standards cover a large range of engine ratings, and thus time specific standards would not provide equal stringency across all engines.

which would allow adequate time to refill the DEF tank, but ultimately, if DEF is not added, or if it is determined to be of insufficient quality, a vehicle speed-limiting "inducement" would be triggered, requiring the DEF tank to be refilled or the system to be repaired.

Also in 2009, EPA and Department of Transportation's National Highway Traffic Safety Administration (NHTSA) began working on a joint regulatory program to reduce GHG emissions and fuel consumption from heavy-duty vehicles and engines.<sup>62</sup> By utilizing regulatory approaches recommended by the National Academy of Sciences, the first phase ("Phase 1") of the GHG and fuel efficiency program was finalized in 2011 (76 FR 57106, September 15, 2011).<sup>63</sup> The Phase 1 program, spanning implementation from MY 2014 to 2018, included separate standards for highway heavy-duty vehicles and heavy-duty engines. The program offered flexibility allowing manufacturers to attain these standards through a mix of technologies and the option to participate in an emissions credit ABT program. In the Phase 1 rulemaking EPA also revised the heavy-duty vehicle and engine regulations to make them consistent with the light-duty vehicle approach, such that all criteria pollutant and GHG standards would apply regardless of fuel type, including all-electric vehicles (EVs).

In 2016, EPA and NHTSA finalized the Heavy-Duty Phase 2 GHG and fuel efficiency program ("HD GHG Phase 2") (81 FR 73478, October 25, 2016). HD GHG Phase 2 includes technology-advancing performance-based standards for highway heavy-duty vehicles and heavy-duty engines that will phase in over the long term, with initial standards for most vehicles and engines commencing in MY 2021, increasing in stringency in MY 2024, and culminating in MY 2027 standards. HD GHG Phase 2 built upon the Phase 1 program and set standards based not only on currently available technologies, but also on technologies that were still under development or not yet widely deployed. To ensure adequate time for

<sup>62</sup> Greenhouse gas emissions from heavy-duty engines are primarily carbon dioxide (CO<sub>2</sub>), but also include methane (CH<sub>4</sub>) and nitrous oxide (N<sub>2</sub>O). Because CO<sub>2</sub> is formed from the combustion of fuel, it is directly related to fuel consumption.

<sup>63</sup> National Research Council; Transportation Research Board. The National Academies' Committee to Assess Fuel Economy Technologies for Medium- and Heavy-Duty Vehicles; "Technologies and Approaches to Reducing the Fuel Consumption of Medium- and Heavy-Duty Vehicles." 2010. Available online: <https://www.nap.edu/catalog/12845/technologies-and-approaches-to-reducing-the-fuel-consumption-of-medium-and-heavy-duty-vehicles>.

technology development, HD GHG Phase 2 provided up to 10 years lead time to allow for the development and phase-in of these control technologies. EPA recently finalized technical amendments to the HD GHG Phase 2 rulemaking (“HD Technical Amendments”) that included changes to the test procedures for heavy-duty engines and vehicles to improve accuracy and reduce testing burden.<sup>64</sup>

### C. Petitions to EPA for Additional NO<sub>x</sub> Emissions Control

In the summer of 2016 more than 20 organizations, including state and local air agencies from across the country, petitioned EPA to develop more stringent NO<sub>x</sub> emission standards for on-road heavy-duty engines.<sup>65</sup> Among the reasons stated by the petitioners for such an EPA rulemaking was the need for NO<sub>x</sub> emission reductions to reduce adverse health and welfare impacts and to help areas attain the NAAQS. EPA subsequently met with a wide range of stakeholders in listening sessions, during which certain themes were consistent across those stakeholders.<sup>66</sup> For example, it became clear that there is broad support for federal action in collaboration with the California Air Resources Board (CARB). So-called “50-state” standards would enable technology suppliers and manufacturers to efficiently produce a single set of reliable and compliant products. There was also broad acknowledgement of the value of aligning implementation of new NO<sub>x</sub> standards with existing MY 2021, 2024, and 2027 milestones for HD Phase 2 GHG and fuel efficiency standards. Stakeholders thought that such alignment would ensure that the GHG and fuel consumption reductions achieved under HD GHG Phase 2 are maintained and allow the regulated industry to implement GHG- and NO<sub>x</sub>-reducing technologies into their products at the same time.<sup>67</sup>

EPA responded to the petitions on December 20, 2016, noting that an opportunity exists to develop a new, harmonized national NO<sub>x</sub> reduction strategy for heavy-duty highway engines.<sup>68</sup> EPA emphasized the importance of scientific and technological information when determining the appropriate level and form of a future low NO<sub>x</sub> standard and highlighted the following potential components of the action:

- Lower NO<sub>x</sub> emission standards
- Improvements to test procedures and test cycles to ensure emission reductions occur in the real world, not only over the currently applicable certification test cycles
- Updated certification and in-use testing protocols
- Longer periods of mandatory emission-related component warranties
- Consideration of longer regulatory useful life, reflecting actual in-use activity
- Consideration of rebuilding
- Incentives to encourage the transition to current- and next-generation cleaner technologies as soon as possible

As outlined in the Executive Summary and detailed in the sections that follow, this proposed rulemaking considered these components.

### D. California Heavy-Duty Highway Low NO<sub>x</sub> Program Development

In this section, we present a summary of recent efforts by the state of California to establish new, lower emission standards for highway heavy-duty engines and vehicles.<sup>69</sup> For the past several decades, EPA and the California Air Resources Board (CARB) have worked together to reduce air pollutants from highway heavy-duty engines and vehicles by establishing harmonized

emission standards for new engines and vehicles. For much of this time, EPA has taken the lead in establishing emission standards through notice and comment rulemaking, after which CARB would adopt the same standards and test procedures. For example, EPA promulgated the current heavy-duty engine NO<sub>x</sub> and PM standards in a 2001 final rule, and CARB subsequently adopted the same emission standards. EPA and CARB often cooperate during the implementation of highway heavy-duty standards. Thus, for many years, the regulated industry has been able to design a single product line of engines and vehicles that can be certified to both EPA and CARB emission standards (which have been the same) and sold in all 50 states.

Given the significant ozone and PM air quality challenges in the state of California, CARB has taken several steps since the EPA 2010 standards were implemented to encourage or establish standards and requirements that go beyond EPA requirements, to further reduce NO<sub>x</sub> emissions from heavy-duty vehicles and engines in its state. CARB’s optional (voluntary) low NO<sub>x</sub> program, which started in 2013, was created to encourage heavy-duty engine manufacturers to introduce technologies that emit NO<sub>x</sub> at levels below the current EPA 2010 standards. Under this optional program, manufacturers can certify engines to one of three levels of stringency that are 50, 75, and 90 percent below the existing EPA 2010 standards with the lowest optional standard being 20 milligrams NO<sub>x</sub> per horsepower-hour (mg/hp-h).<sup>70</sup> To date, only natural gas and liquefied petroleum gas engines have been certified to these optional standards.<sup>71</sup>

In May 2016, CARB published its Mobile Source Strategy that outlined its approach to reduce in-state emissions from mobile sources and meet its air quality targets.<sup>72</sup> In November 2016, CARB held its first Public Workshop on its plans to update its heavy-duty engine and vehicle programs.<sup>73</sup> CARB’s 2016 Workshop kicked off a technology

<sup>69</sup> California has long had the unique ability among states to adopt its own separate new motor vehicle and engine standards per Section 209 of the Clean Air Act. Although CAA section 209(a) expressly preempts states from adopting and enforcing standards relating to the control of emissions from new motor vehicles or new motor vehicle engines (such as state controls for new heavy-duty engines and vehicles), CAA section 209(b) directs EPA to waive this preemption for California under certain conditions. Even with California’s ability under the CAA to establish its own emission standards, EPA and the California Air Resources Board have worked closely together over the past several decades to largely harmonize new heavy-duty vehicle and engine criteria pollutant standard programs.

<sup>73</sup> California Air Resources Board. “Heavy-Duty Low NO<sub>x</sub>: Meetings & Workshops”. Available online: <https://ww2.arb.ca.gov/our-work/programs/heavy-duty-low-nox/heavy-duty-low-nox-meetings-workshops>.

demonstration program (the CARB “Low NO<sub>x</sub> Demonstration Program”), and announced plans to update emission standards, laboratory-based and in-use test procedures, emissions warranty, durability demonstration requirements, and regulatory useful life provisions. The initiatives introduced in its 2016 Workshop have since become components of CARB’s Heavy-Duty “Omnibus” Rulemaking.<sup>74</sup>

CARB’s goal for its Low NO<sub>x</sub> Demonstration Program was to investigate the feasibility of reducing NO<sub>x</sub> emissions to levels significantly below today’s EPA 2010 standards. Southwest Research Institute (SwRI) was contracted to perform the work, which was split into three “Stages.”<sup>75</sup> In Stage 1 and 1b, SwRI demonstrated an engine technology package capable of achieving a 90 percent NO<sub>x</sub> emissions reduction on today’s regulatory test cycles to a useful life of 435,000 miles using an accelerated aging process.<sup>76</sup> In Stage 2, SwRI developed and evaluated a new low load-focused engine test cycle. In Stage 3, SwRI evaluated a new engine platform and different technology package to ensure both criteria and GHG emission performance. EPA has been closely observing CARB’s Low NO<sub>x</sub> Demonstration Program as a member of the Low NO<sub>x</sub> Advisory Group for the technology development work, which includes representatives from heavy-duty engine and aftertreatment industries, as well as from federal, state, and local governmental agencies.<sup>77</sup>

CARB has published several updates related to its Omnibus Rulemaking. In June 2018, CARB approved its “Step 1” update to California’s emission control system warranty regulations.<sup>78</sup> Starting in MY 2022, the existing 100,000-mile warranty for all diesel engines will

increase to 110,000 miles for engines certified as light heavy-duty, 150,000 miles for medium heavy-duty engines, and 350,000 miles for heavy heavy-duty engines. In November 2018, CARB approved revisions to the OBD requirements that include implementation of real emissions assessment logging (REAL) for heavy-duty engines and other vehicles.<sup>79</sup> In April 2019, CARB published a “Staff White Paper” to present its staff’s assessment of the technologies they believed were feasible for medium and heavy heavy-duty diesel engines in the 2022–2026 timeframe.<sup>80</sup>

In August 2020, the CARB governing board approved the staff proposal for the Omnibus rule and directed staff to initiate the process of finalizing the provisions.<sup>81 82</sup> The final Omnibus rule was approved by the California Office of Administrative Law in December 2021. The final rule includes updates to CARB engine standards, duty-cycle test procedures, and heavy-duty off-cycle testing program that would take effect in MY 2024, with additional updates to warranty, durability, and useful life requirements and further reductions in standards in MYs 2027 and 2031.<sup>83</sup>

As described in Sections I.F and I.G, with details in Sections III and IV, EPA is proposing new NO<sub>x</sub>, PM, HC, and CO emission standards for heavy-duty engines that reflect the greatest degree of emission reduction achievable through the application of technology that we have determined would be available for the model years to which the proposed standards would apply. In doing so we have given appropriate consideration to additional factors, namely lead time,

cost, energy, and safety (see Sections I.F and I.G for more discussion).

Throughout the rulemaking process we will continue to evaluate what standards are appropriate given the factors that we are directed to consider under CAA section 202(a)(3). As noted at the start of this Section I.D, EPA and CARB have historically worked together to establish harmonized emission standards for new heavy-duty engines and vehicles. We have received comments from different stakeholder groups who have expressed perspectives on the alignment between the EPA and CARB Omnibus standards they would like EPA to consider during the rulemaking. For instance, in response to an Advance Notice of Proposed Rulemaking (ANPR) for this rule, many stakeholders encouraged EPA to develop a national program harmonized to the greatest extent possible (see Section I.E).<sup>84</sup> Following the ANPR, various stakeholders have provided EPA with additional perspectives on the Omnibus rule and on the extent to which EPA should align with the California program. For example, organizations such as the National Association of Clean Air Agencies,<sup>85</sup> the National Tribal Air Association,<sup>86</sup> as well as multiple vehicle supplier trade associations<sup>87</sup> have written letters to EPA in support of strong federal standards that reflect both the stringency and timeline of CARB’s standards. In contrast, some engine manufacturers have raised concerns about EPA harmonizing its national program with California’s rule because of their concerns with that program’s overall stringency, costs, and focus on near-term NO<sub>x</sub> reductions over long-term CO<sub>2</sub> emission reductions. EPA has considered these harmonization comments in light of the authority and requirements of CAA sections 202 and

<sup>86</sup> Letter to EPA Administrator Andrew Wheeler from the National Tribal Air Association. Re: EPA’s Advance Notice of Proposed Rulemaking for Control of Air Pollution from New Motor Vehicles: Heavy-Duty Engine Standards Docket ID EPA-HQ-OAR-2019-0055. February 20, 2020.

<sup>87</sup> Letter to EPA Administrator Michael Regan from the Motor & Equipment Manufacturers Association, Manufacturers of Emission Controls Association, Advanced Engine Systems Institute, and Alliance for Vehicle Efficiency. Re: Completion of EPA’s Heavy-duty Low-NO<sub>x</sub> Rulemaking. June 24, 2021.

207 in developing the proposed standards, regulatory useful life periods, and emissions warranty periods and intends to continue to take into consideration potential harmonization with the CARB Omnibus program, as appropriate and consistent with CAA sections 202 and 207, during the rulemaking. As described in Sections III and IV, a notable difference between the proposed EPA program and the Omnibus rule is that the first step of the Omnibus rule takes effect in MY 2024, whereas the first step of the proposed EPA program is in MY 2027. EPA's statutory authority requires a four-year lead time for any heavy-duty engine or vehicle standard promulgated or revised under CAA section 202(a)(3) (see Section I.F). In Sections III and IV, we discuss areas where our proposal aligns with or differs from the Omnibus rule and request comment on issues related to harmonization between the federal and CARB regulatory programs, including benefits or challenges if EPA were to finalize particular aspects of its program that are not fully aligned with the Omnibus rule.<sup>88</sup>

As discussed in the draft RIA, we analyzed the emission inventory and air quality impacts for the proposed criteria pollutant standards before the Omnibus Rule was finalized. We may incorporate the Omnibus rule into our emission inventory and other analyses as appropriate for the final rulemaking (FRM).<sup>89 90</sup> We also may incorporate the CARB Advanced Clean Truck (ACT) Regulation into our final rule analyses. As further discussed in Sections IV, VI, and XI, the CARB ACT Regulation requires a minimum percentage of each manufacturer's heavy-duty vehicle sales in the state of California to be zero tailpipe emission technologies starting in MY 2024.<sup>91 92</sup>

<sup>88</sup> Draft RIA Chapter 5, Appendix 6 includes tables that present the main elements (*i.e.*, numeric level of standards, useful life, emission warranty) of CARB Omnibus requirements and EPA proposal.

<sup>89</sup> See Section VI and draft RIA Chapter 5 for more information on our emission inventory modeling for the proposal and plans to incorporate other updates in our modeling for the final rule.

<sup>90</sup> EPA has received waiver requests under CAA section 209(b) from California for the Omnibus or ACT rules; EPA is currently reviewing the waiver requests for the CA Omnibus and ACT rules and may consider including these rules in our analyses for the final rule. See Section III.B for discussion on our proposed approach to a voluntary standard based on one aspect of the Omnibus requirements.

### *E. Advance Notice of Proposed Rulemaking*

The ANPR provided background for the provisions proposed in this rulemaking to address criteria pollutant emissions from heavy-duty engines, including technologies we are evaluating, test programs we have initiated, and compliance programs under consideration, as well as requests for comments and data. The ANPR did not include discussion on the potential stringency of standards, potential costs of the standards, or a quantitative assessment of societal impacts (*e.g.*, air quality, economic, environmental health); these topics are presented in this proposal.<sup>93</sup>

EPA received over 300 comments on the ANPR from a wide range of stakeholders, including: Government organizations (state, local, and Tribal), environmental groups, trade associations, heavy-duty engine manufacturers, independent owner-operators, suppliers, individual fleets, and individual private citizens. We provide a brief overview of the perspectives included in these comments in this subsection, with more specific discussion of comments included in subsequent sections of the proposal as relevant to individual comments or groups of comments.

Comments from government organizations, including multiple state and local air agencies, emphasized that reductions in NO<sub>x</sub> emissions from heavy-duty engines are necessary for attainment and maintenance of the NAAQS. States commented that they cannot control heavy-duty engine emissions since they cross state borders and controlling emissions from other sources would be economically burdensome. Commenters stated that areas in nonattainment of the NAAQS are having difficulty attaining, and some areas currently in attainment are close to or exceeding the NAAQS. As further discussed in Section II, commenters noted environmental justice and other public health concerns, along with regional haze and ecosystem concerns. These commenters requested stringent emission controls on heavy-duty engines in as short a timeframe as possible (including early incentives) and expressed widespread interest in ensuring control over the lifetime of the

*publications/california-hdv-ev-update-jul2020* (last accessed August 11, 2021).

<sup>93</sup> The ANPR also did not include the proposed, targeted revisions to the HD GHG Phase 2 program that are included in this rulemaking (see Section I.G for a summary of these proposed provisions and Section XI for details).

engine, including addressing emissions from tampering and idling.

Several environmental groups submitted comments that were similar to several of the state and local agency comments; environmental groups supported stringent emission controls and maintaining that level of emission control for longer durations by lengthening useful life and emission warranty periods. These commenters further supported improvements to the in-use testing program for heavy-duty diesel engines, and anti-tampering measures for all heavy-duty engines.

Comments from the Truck and Engine Manufacturers Association (EMA), a trade association for heavy-duty engine and truck manufacturers emphasized broad support for a 50-state program and encouraged EPA to conduct a thorough analysis of the costs and benefits of proposed NO<sub>x</sub> emission standards. To emphasize their cost concerns, EMA provided an industry-sponsored assessment of the cost to comply with potential requirements discussed in the April 2019 CARB Staff Whitepaper.<sup>94</sup>

Several truck owners, truck operators, fleets, and dealerships also expressed general support for a national, harmonized low-NO<sub>x</sub> program. Many commenters included their experiences with expensive towing costs and downtime from emission system failures; they stated that although the reliability of emission system controls has improved since the 2010 timeframe, it remains an ongoing concern. ANPR commenters also indicated that engine derates or "inducements" are a significant source of operator frustration.<sup>95</sup> In addition, commenters urged EPA to conduct a thorough cost assessment, and noted that if the initial purchase price, or operational costs for new trucks is too high, then it may incentivize owners to keep older trucks on the road. These commenters expressed varying views on lengthening emission warranty requirements, with some urging a careful consideration of the impacts of longer warranty requirements, while others expressed

<sup>94</sup> California Air Resources Board. "California Air Resources Board Staff Current Assessment of the Technical Feasibility of Lower NO<sub>x</sub> Standards and Associated Test Procedures for 2022 and Subsequent Model Year Medium-Duty and Heavy-Duty Diesel Engines". April 18, 2019. Available online: [https://ww3.arb.ca.gov/msprog/hdlownox/white\\_paper\\_04182019a.pdf](https://ww3.arb.ca.gov/msprog/hdlownox/white_paper_04182019a.pdf).

<sup>95</sup> Engine derating is a control strategy that reduces engine performance to protect the engine or induce an operator behavior, such as maintaining appropriate levels of high-quality diesel emission fluid (DEF) in their SCR-based aftertreatment systems. Throughout this preamble we refer to engine derates that derive from aftertreatment-related triggers as "inducements".

support for longer warranty requirements.

Suppliers, supplier trade groups, and labor groups were all generally supportive of more stringent NO<sub>x</sub> emission standards. They also generally stated strong support for a 50-state, harmonized EPA-CARB program. They also emphasized the importance of providing industry with regulatory certainty. They noted that EPA must balance emission reductions with technology costs, feasibility, lead-time, and avoid market disruptions. Several suppliers and trade groups provided detailed technical information on low NO<sub>x</sub> technology. They also expressed support for longer useful life and warranty requirements but cautioned EPA to carefully design longer emissions warranty requirements and to consider a phase-in approach. Several suppliers and trade groups also supported incentives for the early introduction of low-NO<sub>x</sub> technology.

All of the ANPR comments are part of the docket for the proposal and have informed our thinking in developing the proposed provisions to address criteria pollutant emissions from heavy-duty engines.

#### F. EPA Statutory Authority for the Proposal

This section briefly summarizes the statutory authority for the proposed rule. Title II of the Clean Air Act provides for comprehensive regulation of mobile sources, authorizing EPA to regulate emissions of air pollutants from all mobile source categories. Specific Title II authorities for this proposal include: CAA sections 202, 203, 206, 207, 208, 213, 216, and 301 (42 U.S.C. 7521, 7522, 7525, 7541, 7542, 7547, 7550, and 7601). We discuss some key aspects of these sections in relation to this proposed action immediately below (see also Section XIV of this preamble), as well as in each of the relevant sections later in this proposal. Regarding the confidentiality determinations EPA is proposing to make through this notice and comment rulemaking for much of the information collected by EPA for certification and compliance under Title II, see Section XII.A. for discussion of relevant statutory authority.

Statutory authority for the proposed NO<sub>x</sub>, PM, HC, CO, and GHG emission standards in this action comes from CAA section 202(a) which states that “the Administrator shall by regulation prescribe (and from time to time revise) . . . standards applicable to the emission of any air pollutant from any class or classes of new . . . motor vehicle engines, which in his judgment

cause, or contribute to, air pollution which may reasonably be anticipated to endanger public health or welfare.” Standards under CAA section 202(a) take effect “after such period as the Administrator finds necessary to permit the development and application of the requisite technology, giving appropriate consideration to the cost of compliance within such period.” Thus, in establishing or revising CAA section 202(a) standards designed to reduce air pollution that endangers public health and welfare, EPA also must consider issues of technological feasibility, compliance cost, and lead time. EPA may consider other factors and in previous engine and vehicle standards rulemakings has considered the impacts of potential standards on the heavy-duty industry, fuel savings, oil conservation, energy security and other energy impacts, as well as other relevant considerations such as safety.

#### 1. Statutory Authority for Proposed Criteria Pollutant Program

Section 202(a)(3) further addresses EPA authority to establish standards for emissions of NO<sub>x</sub>, PM, HC, and CO from heavy-duty engines and vehicles. Section 202(a)(3)(A) requires that such standards “reflect the greatest degree of emission reduction achievable through the application of technology which the Administrator determines will be available for the model year to which such standards apply, giving appropriate consideration to cost, energy, and safety factors associated with the application of such technology.” Section 202(a)(3)(B) allows EPA to take into account air quality information in revising such standards. Section 202(a)(3)(C) provides that standards shall apply for a period of no less than three model years beginning no earlier than the model year commencing four years after promulgation. CAA section 202(a)(3)(A) is a technology-forcing provision and reflects Congress’ intent that standards be based on projections of future advances in pollution control capability, considering costs and other statutory factors.<sup>96</sup><sup>97</sup> CAA section 202(a)(3)

<sup>96</sup> See *National Petrochemical & Refiners Association v. EPA*, 287 F.3d 1130, 1136 (D.C. Cir. 2002) (explaining that EPA is authorized to adopt “technology-forcing” regulations under CAA section 202(a)(3)); *NRDC v. Thomas*, 805 F.2d 410, 428 n.30 (D.C. Cir. 1986) (explaining that such statutory language that “seek[s] to promote technological advances while also accounting for cost does not detract from their categorization as technology-forcing standards”); see also *Husqvarna AB v. EPA*, 254 F.3d 195 (D.C. Cir. 2001) (explaining that CAA sections 202 and 213 have similar language and are technology-forcing standards).

neither requires that EPA consider all the statutory factors equally nor mandates a specific method of cost-analysis; rather EPA has discretion in determining the appropriate consideration to give such factors.<sup>98</sup>

Section II, and Chapter 4 of the draft RIA, describe EPA’s analysis of information regarding heavy-duty engines’ contribution to air pollution and how that pollution adversely impacts public health and welfare. Section I.G, with more detail in Section III and Chapter 4 of the draft RIA, discusses our feasibility analysis of the standards and useful life periods for both proposed Options. Our evaluation shows that the standards and useful life periods in both steps of proposed Option 1 are feasible and would result in the greatest emission reductions achievable for the model years to which they are proposed to apply, pursuant to CAA section 202(a)(3), giving appropriate consideration to costs, lead time, and other factors. Our analysis further shows that the standards and useful life periods in proposed Option 2 are feasible in the 2027 model year, but would result in lower levels of emission reductions compared to proposed Option 1. As explained further in Section III and Chapter 3 of the draft RIA, we expect that additional data from EPA’s ongoing work to demonstrate the performance of emission control technologies, as well as information received in public comments, will allow us to refine our assessments and consideration of the feasibility of the combination of the standards and useful life periods, particularly for the largest CI engines (HHDEs), in proposed Options 1 and 2, after consideration of lead time, costs, and other factors. Therefore, we are co-proposing Options 1 and 2 standards and useful life periods, and the range of options in between them, as the options that may

<sup>97</sup> In this context, the term “technology-forcing” has a specific legal meaning and is used to distinguish standards that may require manufacturers to develop new technologies (or significantly improve existing technologies) from standards that can be met using off-the-shelf technology alone. Technology-forcing standards such as those in this proposed rule do not require manufacturers to use specific technologies.

<sup>98</sup> See, e.g., *Sierra Club v. EPA*, 325 F.3d 374, 378 (D.C. Cir. 2003) (explaining that similar technology-forcing language in CAA section 202(1)(2) “does not resolve how the Administrator should weigh all [the statutory] factors in the process of finding the ‘greatest emission reduction achievable’”); *Husqvarna AB v. EPA*, 254 F.3d 195, 200 (D.C. Cir. 2001) (explaining that under CAA section 213’s similar technology-forcing authority that “EPA did not deviate from its statutory mandate or frustrate congressional will by placing primary significance on the ‘greatest degree of emission reduction achievable’” or by considering cost and other statutory factors as important but secondary).

potentially be appropriate to finalize pursuant to CAA section 202(a)(3) once EPA has considered that additional data and other information. We considered costs and lead time in designing the proposed program options, including in our analysis of how manufacturers would adopt advanced emission control technologies to meet the proposed standards for the applicable model years. For example, the first step of proposed Option 1 allows manufacturers to minimize costs by implementing a single redesign of heavy-duty engines for MY 2027, which is when both the final step of the HD GHG Phase 2 standards and the first step of the proposed Option 1 standards would start to apply. The second step of proposed Option 1 (MY 2031) would provide manufacturers the time needed to ensure that emission control components are durable enough for the proposed second step of revised standards and longer useful life periods.<sup>99 100</sup>

As described in Section III, we are proposing new test cycles for both pre-production and post-certification testing. Manufacturers demonstrate compliance over specified duty cycle test procedures during pre-production testing, which is conducted by EPA or the manufacturer. These data and other information submitted by the manufacturer as part of their certification application are the basis on which EPA issues certificates of conformity pursuant to CAA section 206. Under CAA section 203, sales of new vehicles are prohibited unless the vehicle is covered by a certificate of conformity. Compliance with standards is required not only at certification but throughout the useful life period of the engine and vehicle, based on post-certification testing. Post-certification testing can include both specific duty cycle test procedures and off-cycle test procedures that are conducted with undefined duty cycles either on the road or in the laboratory (see Sections III.A and IV.K for more discussion on for testing at various stages in the life of an engine).

As described in Section IV, we are proposing to lengthen regulatory useful life and emission warranty periods to better reflect the mileages and time periods over which heavy-duty engines are driven today. CAA section 202(d) directs EPA to prescribe regulations under which the useful life of vehicles

and engines are determined and establishes minimum values of 10 years or 100,000 miles, whichever occurs first, unless EPA determines that a period of greater duration or mileage is appropriate. EPA may apply adjustment factors to assure compliance with requirements in use throughout useful life (CAA section 206(a)). CAA section 207(a) requires manufacturers to provide an emissions warranty, which EPA last updated in its regulations for heavy-duty engines in 1983 (see 40 CFR 86.085–2).<sup>101</sup>

## 2. Statutory Authority for Targeted Revisions to the Heavy-Duty GHG Phase 2 Program

In addition, as discussed in Section XI, EPA is proposing a limited set of revisions to MY 2027 Phase 2 GHG emissions standards under its CAA section 202(a) authority described in this section (Section I.F). We have developed an approach to propose targeted updates to HD GHG Phase 2 standards that take into consideration the growing HD electric vehicle market without fundamentally changing the HD GHG Phase 2 program as a whole. In addition, we are requesting comment on potential changes to the advanced technology incentive program for electric vehicles beginning in MY 2024.

### G. Basis of the Proposed Standards

Our approach to further reduce air pollution from highway heavy-duty engines and vehicles through the proposed program features several key provisions. The primary provisions address criteria pollutant emissions from heavy-duty engines. In addition, this proposal would make targeted updates to the existing Heavy-Duty Greenhouse Gas Emissions Phase 2 program, proposing that further GHG reductions in the MY 2027 timeframe are appropriate considering lead time, costs, and other factors, including market shifts to zero-emission technologies in certain segments of the heavy-duty vehicle sector.

#### 1. Basis of the Proposed Criteria Pollutant Standards
