FEDERAL REGISTER

Vol. 87 Tuesday

No. 90 May 10, 2022

Pages 27917–28750

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.federalregister.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.govinfo.gov*, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpocusthelp.com.*

The annual subscription price for the **Federal Register** paper edition is $860 plus postage, or $929, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 87 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

FEDERAL RETIREMENT THRIFT INVESTMENT BOARD

5 CFR Part 1601

Mutual Fund Window

AGENCY: Federal Retirement Thrift Investment Board.

ACTION: Final rule.

SUMMARY: The Federal Retirement Thrift Investment Board (FRTIB) adopts as final, without changes, a proposed rule concerning the Thrift Savings Plan (TSP)'s mutual fund window—which we will make available to TSP participants beginning in June 2022. This final rule establishes a fee designed to guarantee that the availability of the mutual fund window will not indirectly increase the share of TSP administrative expenses borne by participants who choose not to use the mutual fund window. We are also adopting policies to govern fund transfers to and from the mutual fund window, including a restriction on the amount that a participant may invest through the mutual fund window.

DATES: The effective date is June 1, 2022.

FOR FURTHER INFORMATION CONTACT: Kim Weaver, Office of External Affairs, (202) 465–5220 or Laurissa Stokes, Office of General Counsel, (202) 308–7707. For more information about when and how TSP participants can access the mutual fund window, please visit *www.tsp.gov/new-tsp-features/.*

SUPPLEMENTARY INFORMATION: The FRTIB administers the TSP, which was established by the Federal Employees' Retirement System Act of 1986 (FERSA), Public Law 99 335, 100 Stat. 514. The TSP is a tax-deferred retirement savings plan for federal civilian employees and members of the uniformed services. The TSP is similar to cash or deferred arrangements established for private-sector employees under section 401(k) of the Internal Revenue Code (26 U.S.C. 401(k)). The provisions of FERSA that govern the TSP are codified, as amended, largely at 5 U.S.C. 8351 and 8401–79.

FERSA requires the TSP to offer the following individual investment funds to TSP participants: (1) A Government Securities Investment Fund (G Fund); (2) a Fixed Income Investment Fund (F Fund); (3) a Common Stock Index Investment Fund (C Fund); (4) a Small Cap Stock Index Investment Fund (S Fund); and (5) an International Stock Index Investment Fund (I Fund). 5 U.S.C. 8438(b)(1)(A)–(E).

In addition to these five individual funds, the TSP is statutorily required to offer Lifecycle (L) Funds which are target retirement date portfolios comprised of varying proportions of the five individual funds. 5 U.S.C. 8438(c)(2). These statutorily mandated investment options are referred to as the TSP core funds. The FRTIB does not have discretionary authority to increase or change the types of core funds offered to TSP participants.

I. Background

A. What is a Mutual Fund?

A mutual fund is formed when a special type of corporation called a fund company pools money from many individuals and invests the pooled money in other things such as stocks and bonds. Mutual funds offer individuals the ability to invest in hundreds of different holdings without having to make hundreds of separate purchases themselves. A mutual fund's holdings are picked by a professional money manager—called an investment adviser—who is hired by the fund company. Investors buy shares in mutual funds. Investors (or their brokers) purchase mutual fund shares from the fund company itself (or its broker)—as opposed to purchasing them from other investors (or their brokers) on a secondary market such as the New York Stock Exchange. Each share represents an investor's part ownership in the mutual fund and the net aggregate returns of the mutual fund's investment holdings.

B. What is a Mutual Fund Window?

A mutual fund window is a type of brokerage window. A brokerage window is a retirement plan feature that allows participants to open a brokerage account to put some of their retirement savings in investments that are not curated by their retirement plan's fiduciaries.

Some retirement plans call this feature a ''self-directed brokerage option''. ''Brokerage window'' and ''self-directed brokerage option'' are just two different names for the same feature. This feature is often described as ''self-directed'' because it allows participants to forego some of the protections afforded by fiduciary oversight of investments in exchange for access to a much broader choice of investments.

However, investing through a retirement plan feature is never as ''self-directed'' as investing through a brokerage account outside of a retirement plan. For example, retirement plan participants do not pick their own brokerage firm. Usually, one of the retirement plan's service providers (for example, its plan administrator or record keeper) selects a brokerage firm that will provide brokerage accounts and an online trading platform to the retirement plan's participants via a subcontract.

In addition, certain categories of higher-risk trades that can be made in brokerage accounts outside of a retirement plan are often excluded from brokerage windows. These categories include trading on margin and buying put or call options, futures contracts, or cryptocurrency. Subject only to categorical exclusions such as these, the specific investments available through a retirement plan's brokerage window are typically determined by a cluster of agreements negotiated among the plan's service provider, a brokerage firm, and fund companies.

For the TSP's brokerage window, Congress has excluded all categories of investments except for mutual funds.[1] That is why it is called a mutual fund window. It is a type of brokerage window that is limited to mutual funds.

C. Mutual Funds Versus TSP Core Funds: What is the Difference?

Like mutual funds, the TSP core funds offer investors the ability to pool their money with other investors to purchase a share of a portfolio containing hundreds of investment holdings. The difference is that the TSP core funds are designed specifically for TSP participants. Only TSP participants

[1] *See* Thrift Savings Plan Enhancement Act of 2009, Public Law 111–31, Division B, Title I, sec. 104 (codified at 5 U.S.C. 8438(b)(5)(A)).

can invest in them, and their only goal is to maximize participants' retirement savings. Mutual funds, on the other hand, are designed for the general public. As such, many different types of mutual funds exist to satisfy a wide variety of goals.

II. Historical Context

For many years, TSP participants have voiced a desire to have more investment options. In 2009, Congress passed legislation that authorized, but did not require, the FRTIB to offer a mutual fund window to TSP participants. *Thrift Savings Plan Enhancement Act of 2009,* Public Law 111–31, Division B, Title I, sec. 104 (codified at 5 U.S.C. 8438(b)(5)(A)).

In the same year that Congress authorized the FRTIB to offer a mutual fund window, the FRTIB's Executive Director initiated discussions with the FRTIB Board members and the Employee Thrift Advisory Council (ETAC) [2] about adding a mutual fund window to the TSP. In the April 2009 FRTIB Board meeting, the four Board members in attendance deadlocked on the decision to adopt a resolution in support of the mutual fund window by a vote of two-to-two.[3]

To inform future discussions, the FRTIB assembled a cross-functional team of subject matter experts from its operations, legal, investment, finance, communications, research, and technology offices who spent the next several years studying industry practices, participant preferences, costs, and operational considerations associated with adding a mutual fund window to the TSP. Their research was presented to the FRTIB Board members and ETAC during public meetings in May 2014, November 2014, and July 2015.[4]

In July 2015, the FRTIB Board members voted unanimously in support of adding a mutual fund window to the TSP. The FRTIB Executive Director committed to including a mutual fund window in the scope of services sought the next time the FRTIB recompeted its major service provider contract(s). In August 2019, the FRTIB announced the release of a request for proposals for various recordkeeping and plan administration services, including a mutual fund window. The contract was awarded in November 2020. The FRTIB is currently undergoing a transition to its new service provider(s).

III. Proposed Rule

On January 26, 2022, the FRTIB published a proposed rule with request for public comments in the **Federal Register** (87 FR 3940, January 26, 2022). We proposed to collect an administrative fee of $55 annually from mutual fund window users to guarantee that the availability of the mutual fund window does not indirectly increase the share of TSP administrative expenses borne by participants who choose not to use the mutual fund window. The preamble of the proposed rule informed the public that TSP mutual fund users will also incur other costs such as: (1) An annual maintenance fee of $95, (2) a per trade fee of $28.75, and (3) fees and expenses imposed by the specific mutual fund(s) in which they invest. We explained that these other costs are outside the scope of the proposed rule.

We also proposed several terms and conditions that would govern fund transfers to and from the mutual fund window. For example, the proposed rule would require a minimum initial transfer of $10,000 and limit investments through the window to no more than 25% of the participant's TSP account value. In addition, the proposed rule would count transfers to and from the mutual fund window against an existing limitation on the number of interfund transfers participants are allowed to make per month.

We received feedback from 100 commenters. Their comments fell into ten broad areas of concern, and our response to each concern is provided below.

IV. Response to Public Comments

A. Account Maintenance Fee and Trading Fee

We received 44 comments from participants who believe the $95 annual maintenance fee and a $28.75 per trade fee are not competitive with prices negotiated by other retirement plans. Before addressing these comments, we want to note that the annual maintenance fee and per trade fee were negotiated using the procedures of Federal Acquisition Regulation (FAR) part 15 and were evaluated for reasonableness in accordance with FAR 15.404–1. We also note that this final rule governs only the fees determined by the Executive Director in his role of setting policy to implement specific Congressional directives. Fees negotiated through acquisition procedures are beyond the scope of this final rule.

Nevertheless, we think it is important to address the concerns raised by these commenters. The comments indicate that many TSP participants are under the impression that other retirement plans negotiate free brokerage services. We looked into what have been described as ''free'', ''no-transaction-fee'', and ''zero cost'' mutual fund trades offered to participants in other retirement plans. We found that those prices are often caveated with fine print disclaimers, such as this:

No-Transaction-Fee (NTF) mutual funds are no-load mutual funds for which [brokerage firm] does not charge a transaction fee. NTFs, as well as other funds, have other continuing fees and expenses described in the fund's prospectus. [Brokerage firm] receives remuneration from fund companies for record keeping, shareholder and other administrative services. The amount of remuneration is based in part on the amount of investments in such funds by [brokerage firm] clients.

The remuneration (*i.e.,* fees) that brokerage firms receive from fund companies are treated by the fund companies as fund expenses, which are ultimately passed on to the people who have already invested in the fund. This type of arrangement between a brokerage firm and a fund company is called revenue sharing.

Revenue sharing is not inherently pernicious. In many industries, revenue sharing is like a referral fee that a business owner might pay to compensate a person for bringing a new customer to their business. For most businesses, revenue sharing is a marketing cost borne by the business.

Fund companies are, of course, businesses also. But fund companies are structurally different from other corporations. They typically have no employees, no physical assets, and no tangible products. They are just a collection of contracts relating to pools of money (*i.e.,* funds), and they charge their costs of doing business to the people who have invested in the funds, regardless of how well the funds perform. Their unique corporate structure has led both Congress and the U.S. Supreme Court to conclude that ''the forces of arm's-length bargaining

[2] ETAC is comprised of representatives from Federal and Postal unions and management associations, as well as a representative from the Department of Defense on behalf of uniformed service members. ETAC provides advice on matters relating to TSP investment policies and plan administration.

do not work in the mutual fund industry in the same manner as they do in other sectors of the American economy.'' *Jones* v. *Harris Assocs. L.P.,* 559 U.S. 335, 338 (2010), quoting S. Rep. No. 91–184, at 5 (1969). This does not mean that there is something sinister about the mutual fund industry. It means only that the nature of the product makes the usual distinctions between price, cost, revenue, profit, and quality less clear than they are in other industries.

Fund companies are not required to provide individualized statements to investors, detailing the exact dollar amount of the fund's fees that each investor has indirectly paid. Consequently, revenue sharing between retirement plans, record keepers, brokerage firms, and fund companies can lead to confusing, opaque fee disclosures. Revenue sharing converts explicit fees (*e.g.,* account maintenance fees and transaction fees) into less transparent fees (*e.g.,* fees embedded in the fund's expense ratio). By including the fees in the fund's expense ratio, the return on an investment in that fund is reduced. Most participants in private sector plans have no idea that revenue sharing exists, much less how much it decreases the return of their investments.[5]

The FRTIB values transparency. We believe TSP participants need, and deserve, to see the dollar amount of the fees they pay for their mutual funds. Toward that end, TSP participants will pay account maintenance fees and certain transaction fees directly rather than paying them indirectly through revenue sharing. Furthermore, FRTIB has contractually required the TSP record keeper, their trading platform provider, their broker-dealer(s), and any of their other affiliates or subcontractors to rebate all revenue sharing payments, or any other type of indirect compensation, they receive in connection with participants' mutual fund window investments. The rebates will be credited to participants' mutual fund window accounts. This ensures that the dollar amounts of all fees and expenses borne by TSP participants for services provided in connection with their mutual fund window investments are explicitly disclosed.

B. Concern That Participants Might Be Confused by New Fees

One commenter expressed concern that participants might inadvertently incur fees which can, over time, cause serious damage to their retirement savings. We share this concern. Even small differences in fees can translate into large differences in returns over time. That is why we have chosen to make the fees paid to our service providers explicit at the risk of appearing less competitive than plans that compensate their service providers through revenue sharing arrangements. We intend to provide ongoing communication and education to TSP participants about the impact of fees on their retirement goals. We will also ensure that participants have convenient access to mutual fund prospectuses prior to making investment decisions.[6] In addition, participants will have access to a tool that allows them to sort mutual funds by expense ratio, starting with the lowest expense ratios first.

C. Minimum Core Balance

We received 29 comments opposed to restricting the amount that a participant may invest through the mutual fund window. Under the proposed rule, transfers to a mutual fund window account cannot cause a participant's mutual fund window account balance to exceed 25% of their total TSP balance. In effect, the proposed rule would require participants to maintain 75% of their balance in the TSP core funds.

Some commenters described the minimum core balance as ''punitive'' and suggested that it casts doubt on the FRTIB's sincerity in touting the mutual fund window as a benefit to TSP participants. Others are concerned that this restriction will impede their ability to achieve diversification among the funds in their mutual fund window account. We believe these commenters misunderstand the intended role of the mutual fund window. The mutual fund window enhances the TSP as a supplement to, rather than an alternative to, the core fund options.

Other commenters described the minimum core balance as ''paternalistic'' and asked the FRTIB to respect their autonomy when it comes to making financial decisions. We are sympathetic to these requests for more freedom of choice and autonomy. But retirement savings is a context in which autonomy is already constrained. Retirement plans (whether private or government-sponsored) are tax-incentivized programs. People who choose to participate in retirement plans benefit personally from a large tax subsidy. The law mandates some constraints on autonomy to ensure those tax subsidies are effective for their intended purpose. Some constraints arise from the fact that fiduciaries of retirement plans can be sued by participants for exposing participants' retirement savings to too much risk. Consequently, we are compelled to balance requests for more freedom of choice against the risk of damaging the trust placed in us by the vast majority participants who do not have the time it takes to research thousands of complex investment choices.

Several commenters believe that a 40% or 50% minimum core balance would be more reasonable. We understand that many private sector retirement plans offer brokerage windows with lower minimum core balance requirements, and that 50% is very common. However, it is not uncommon among the largest of private sector retirement plans to require participants to maintain 80% of their total balance in core funds.[7] Given the TSP's size, and the extraordinary amount of trust placed in us by more than 6.5 million participants, we believe it is appropriate for the FRTIB's minimum core balance to be near the higher end of the range of minimum core balances that are common in the private sector.

One commenter suggested tying the minimum core balance amount to each individual participant's years of service and gradually decreasing it in increments of 5% per year as the participant's years of service increase. For example, a participant with two years or less of service would be required to maintain a minimum core balance of 75%, a participant with 3 years of service would be required to maintain a minimum core balance of 70%, a participant with 4 years of service would be required to maintain a minimum core balance of 65%, and so on. We believe the enormous

[6] Mutual funds use a document called a prospectus to disclose information about the fund to investors. The U.S. Securities Exchange Commission requires mutual funds to include certain information about the fund's fees and expenses in the prospectus.

[7] ''Understanding Brokerage Windows in Self-Directed Retirement Plans'', Report to Honorable Martin Walsh, Secretary of the Department of Labor, Advisory Council on Employee Welfare and Pension Benefit Plans (2021), at 24, *available at https://www.dol.gov/sites/dolgov/files/EBSA/about-ebsa/about-us/erisa-advisory-council/2021-understanding-brokerage-windows-in-self-directed-retirement-plans.pdf.*

administrative complexity of this approach would outweigh any conceivable advantage it could offer.

One commenter suggested the use of messaging and warning banners instead of a minimum core balance requirement to mitigate the potential for participants to invest heavily in undiversified funds. In our experience, messaging campaigns work best when the message is a rule of thumb—simple, universal, and clear. We are concerned that any message simple enough to be effective (such as, ''Don't put all your eggs in one basket'') would be insufficiently nuanced to be accurate in the context of the mutual fund window. Since almost all mutual funds can claim to be ''diversified'' in the sense that they have many different holdings, a simple message about the importance of diversification could be misleading without a host of additional specifications—such as the difference between diversifying within an asset class and diversifying across asset classes.

One commenter asked whether a mutual fund window account balance that, due to earnings, exceeds the 25% restriction will be adjusted (*i.e.,* liquidated) to bring the account to 25% of the participant's total TSP balance. Investment earnings that cause a mutual fund window account balance to exceed 25% of a participant's total TSP balance will be permitted to remain in the mutual fund window account. However, a participant will not be permitted to transfer funds from the core funds to the mutual fund window if the participant's mutual fund window account balance (including earnings) already exceeds the 25% restriction or if the transfer would cause the participant's mutual fund window account balance (including earnings) to exceed the 25% restriction.

D. Fiduciary Oversight

One commenter suggested that mutual funds offered through the window should be ''vetted'' by fiduciaries to ensure that they are prudent investments. Another commenter suggested that the FRTIB should offer a large variety of funds to ensure that there is no appearance of ''favoritism'' toward any mutual funds or fund companies.

TSP participants will have access to approximately 300 mutual fund families. A mutual fund family includes all the separate funds offered by a single fund company. Since each family consists of multiple funds, the total number of funds available to TSP participants will be in the thousands.

We have taken measures toward ensuring that our record keeper and brokerage firm are not motivated by conflicts of interest or other misaligned incentives that could influence which funds or fund families they make available to TSP participants. Many retirement plan record keepers also own subsidiaries that are fund companies or that provide investment management services to fund companies. It is common for these record keepers to design investment menus and exercise influence on retirement plan participants in a manner that benefits their subsidiaries. We have mitigated such conflicts of interests by hiring a record keeper that is not in the business of selling mutual funds.

We intend to monitor for practices that might intentionally or unintentionally nudge participants to choose more expensive funds (or share classes) over less expensive funds (or share classes) with similar risk/return attributes. Toward that end, we have contractually guaranteed ourselves a say in the choice architecture of the digital interface through which participants choose mutual funds (*e.g.,* the order in which choices are displayed and the language used to frame the choices). We will also ensure that if a mutual fund has a share class that gives preferential treatment to institutional investors (*e.g.,* money managers, insurance companies, investment banks, commercial trusts, endowment funds, and hedge funds), those institutional share classes will be made available to TSP participants.

We will not, however, evaluate or monitor any of the mutual funds to ensure that they are prudent investments. This mirrors the practice of private sector retirement plans.[8] Fiduciary oversight of thousands of funds would place unreasonable cost and resource burdens on the FRTIB. Those cost increases could disadvantage TSP participants relative to participants of private sector retirement plans—whose fiduciaries do not evaluate or monitor investments offered through brokerage windows except in extraordinary circumstances. We are also concerned that the potential for appearing to favor some fund companies over others could raise novel issues under government ethics and contracting laws; and could run counter to the spirit of a myriad of provisions in the Federal Employees' Retirement System Act that are designed to insulate the TSP from political involvement.

We considered the less costly, less complicated alternative of implementing a screen whereby the FRTIB would adopt criteria (*e.g.,* expense ratio of 1.00% or below) and restrict the window to those mutual funds that meet the FRTIB's criteria. But we have decided against any screening criteria because we are concerned it would blur the distinction between funds that are fully endorsed by fiduciaries (*i.e,* the TSP's core funds) and funds that only meet certain minimum thresholds established by fiduciaries. Participants who only want simple choices that are fully endorsed by the FRTIB may feel overwhelmed or misled if we make it hard to distinguish between the level of fiduciary involvement in TSP core funds and the level of fiduciary involvement in the funds offered through the mutual fund window. In view of this concern, we believe that the vast majority of TSP participants will be better served by a clear, frequent, prominent, and unequivocal warning that the FRTIB does not provide fiduciary oversight of the mutual funds offered through the window.

Participants who prefer funds that are overseen by FRTIB fiduciaries should invest in the TSP core funds.

E. Other Investment Options

Several commenters suggested that, instead of mutual funds, the FRTIB should offer individual stocks, individual bonds, or exchange-traded funds through the brokerage window. By law, mutual funds are the only type of investment the FRTIB is permitted to offer through the brokerage window.[9] Mutual funds offer certain advantages over purchasing individual stocks and bonds, such as built-in professional management; and they are the most common type of investment in private sector 401(k) retirement plans. Although exchange-traded funds offer similar advantages, they are not—technically speaking—mutual funds.[10]

[8] ''Understanding Brokerage Windows in Self-Directed Retirement Plans'', Report to Honorable Martin Walsh, Secretary of the Department of Labor, Advisory Council on Employee Welfare and Pension Benefit Plans (2021), at 47, *available at https://www.dol.gov/sites/dolgov/files/EBSA/about-ebsa/about-us/erisa-advisory-council/2021-understanding-brokerage-windows-in-self-directed-retirement-plans.pdf* (''Investments accessible through a brokerage window are not routinely monitored by plan fiduciaries, and most experts conclude that, except perhaps in extraordinary circumstances, plan fiduciaries are not obligated to monitor brokerage window investments nor do their fiduciary duties apply with respect to those investments.'').

F. Objections to Offering a Mutual Fund Window

Several commenters objected to the fact that the FRTIB is offering a mutual fund window at all. Others believe that the mutual fund window should be a lower priority than other possible improvements to the TSP. The decision to offer a mutual fund window was made by a vote of the FRTIB Board members in July 2015 and, therefore, is not the subject of this regulation.

Nevertheless, we wish to assure these commenters that the FRTIB is also adding a host of other new features which are consistent with many of the priorities these commenters have articulated. We do not believe that satisfying the diverse preferences of the TSP's 6.5 million participants must be a zero-sum game. We are confident we can offer a mutual fund window for participants who want it at no cost to participants who don't, while also offering many other new features that participants with other priorities will appreciate. For information about other new features, we invite TSP participants to view *https://www.tsp.gov/new-tsp-features/.*

Some commenters suggested that, instead of offering a mutual fund window, the FRTIB should expand the number of its core funds or should select indexes that allow for more diversification within its individual core funds. The FRTIB does not have the statutory authority to expand its core fund options. Only Congress can do that, and Congress authorized a mutual fund window instead of adding more funds to the TSP's core fund menu. Congress has historically found that offering a small core menu of low-cost, passively-managed funds is most conducive to promoting the integrity of the Thrift Savings Fund.[11]

The FRTIB periodically hires professional investment consultants to evaluate the diversification of the TSP's core fund menu compared to the menus of other retirement plans and to perform benchmark studies of the TSP's individual core funds. We invite TSP participants to view these studies at *https://www.frtib.gov/ReadingRoom/.*

G. Administrative Fee

We received 6 comments relating to the $55 administrative fee. Four commenters supported the fee and two commenters objected to it.

One commenter suggested that a $25-$30 fee would be more reasonable. This commenter did not offer a rationale for why $25-$30 would be more reasonable or suggest an alternative means of deriving an appropriate fee amount. Another commenter suggested that all TSP participants should share in the cost of the mutual fund window. We believe this suggestion would conflict with an explicit Congressional directive to ''ensure that any expenses charged for use of the mutual fund window are borne solely by participants that use such window.'' 5 U.S.C. 8438 (b)(5)(B). We are, therefore, adopting the proposed rule as final without substantive change.

H. Number of Interfund Transfers

We received 22 comments objecting to an existing rule that allows only two interfund transfers per month. We proposed that the transfer from a participant's TSP account to their mutual fund window account, or vice versa, will count toward the existing monthly limit on interfund transfers. Trading within the mutual fund window will be restricted only by fees and rules that may be imposed by the mutual funds in which participants choose to invest.

None of the commenters addressed the application of the FRTIB's existing rule to transfers to and from the mutual fund window. Instead, the commenters objected, more generally, to the existing rule as it currently applies to the TSP's core funds.

We sought public comments on the existing rule long ago. We published it as a final rule in April 2008.[12] Every comment about interfund transfers provided in response to our mutual fund window proposed rule was thoroughly addressed in the preamble of the 2008 final rule. We are not revisiting the existing rule. We, therefore, believe these comments are outside the scope of the final rule that we are publishing today.

The purpose of the existing rule is to prevent a small number of TSP participants who pursue ''market timing'' active investment strategies from diluting the earnings of other TSP participants and adversely affecting the ability of TSP investment managers to replicate the performance of selected indexes as required by law. The rationales for the existing rule are equally applicable to transfers to and from the mutual fund window. We are, therefore, are adopting the proposal as final without change.

I. Minimum Initial Transfer

We received 3 comments objecting to our proposal to require a $10,000 minimum initial fund transfer to the mutual fund window. As explained in our proposed rule, the combination of the $10,000 initial fund transfer requirement and the 75% minimum core balance requirement means that an account must have at least $40,000 to be eligible to take advantage of the mutual fund window. The purpose of this requirement is to ensure that participants have some investment experience before they confront additional risks and expenses that may be associated with using the mutual fund window.

Two commenters expressed concern that the minimum initial transfer requirement would prohibit new employees from accessing the mutual fund window. One commenter pointed out that, with today's highly mobile workforce, many new TSP participants may have gained sufficient investment experience from retirement assets they have invested elsewhere. We note that new employees can roll over money into the TSP from other retirement plans to meet the $10,000 minimum initial fund transfer requirement. We believe the ability to roll other retirement investments into the TSP is sufficient to address the concern that experienced investors who are new Federal employees will not be able to access the mutual fund window.

Two commenters stated that the minimum initial fund transfer amount is higher than the industry norm. Brokerage firms often impose minimum initial fund transfer requirements for the purpose of ensuring that the cost of servicing a large number of small investments does not exceed the revenue the brokerage firm requires to offer its services. The FRTIB's minimum initial fund transfer requirement serves a very different purpose, which makes a comparison to industry norms inapposite. We are, therefore, adopting the proposed rule as final without change.

J. Miscellaneous

One commenter suggested that the proposed rule relies on outdated survey results concerning the preferences of TSP participants. We believe this commenter misunderstood the purpose for which we cited 2008 survey results in the proposed rule. We cited 2008 survey results merely to provide

[11] Federal Employees' Retirement System Act of 1986, Public Law 99–335, H.R. CONF. REP. 99–606, 1986 U.S.C.C.A.N. 1508 (''Most importantly, the three funds authorized in the legislation are passively managed funds, not subject to political manipulation. A great deal of concern was raised about the possibility of political manipulation of large pools of thrift plan money. This legislation was designed to preclude that possibility.'').

[12] *Participants' Choices of TSP Funds,* 73 FR 22049 (April 24, 2008), *available at https://www.federalregister.gov/documents/2008/04/24/E8-8957/participants-choices-of-tsp-funds.*

chronological historical context for the evolution of the legislation that authorized the FRTIB to offer a mutual fund window and the FRTIB's subsequent decision to exercise that authority. For a thorough account of all the research and deliberation behind the FRTIB's 2015 decision to offer a mutual fund window, we invite TSP participants to view the May 2014, November 2014, and July 2015 Board meeting materials at *https://www.frtib.gov/MeetingMinutes/.*

One commenter asked if a participant must set up two mutual fund window accounts if a participant wants to invest both traditional and Roth contributions. Nothing in the proposed rule or this final rule requires a participant set up two mutual fund window accounts for this purpose. A participant can transfer both traditional and Roth contributions into the same mutual fund window account.

One commenter asked, with respect to the mutual fund window, how the FRTIB would address future legislation that might restrict investing in certain foreign countries and how the FRTIB would implement such legislation. The FRTIB will comply with legislation enacted by Congress that applies to the TSP. The manner in which we would implement such legislation depends on the specific legislation.

One commenter considered the process of investing through the mutual fund window too cumbersome and suggested we make a money market sweep fund available within the TSP so participants would not have to invest in a core fund prior to transferring money to the mutual fund window. To make the TSP's recordkeeping more efficient and keep costs low for all participants, the record keeper, through a brokerage firm, will handle all operations of the mutual fund window, including the sweep fund that will receive transfers from the core funds. Having the TSP operate the sweep fund would negate the efficiency gains that come from outsourcing the operation of the mutual fund window to the record keeper and brokerage firm.

One commenter asked why participants cannot invest their employee contributions directly into the mutual fund window. Allowing direct contributions to the mutual fund window would require creating linkages between hundreds of government payroll offices and the mutual fund window, which again, would undermine the efficiency gains that come from outsourcing the operation of the mutual fund window.

Many commenters objected to the 12 p.m. eastern time cutoff for transferring amounts to and from the mutual fund window. The 12 p.m. eastern time cutoff for all TSP transactions is set forth in 5 CFR 1601.32 and was not a subject of the proposed mutual fund window regulation. Therefore, the comments are beyond the scope of this regulation. Nevertheless, we will address the concerns.

Since the TSP went to a daily valuation in 2003, we have required that transactions must be requested before 12 p.m. eastern time to post on the same day. For transactions requested at or after 12 p.m. eastern time, the transaction will post the next business day. The 12 p.m. eastern cutoff is necessary to allow the TSP to begin the investment transaction cycle which, given the size of the TSP and number of transactions it processes each day, is a multipart and complex process. Because the transfer into and out of the mutual fund window will involve the sale or purchase of TSP funds, such transfers are also subject to the 12 p.m. eastern time cutoff. Transactions within the mutual fund window (*i.e.,* purchase and sale of mutual funds) are generally subject to a 4 p.m. eastern time cutoff. Some mutual funds may have earlier purchase cutoff times prior to the 4 p.m. eastern time cutoff, which would be disclosed by fund.

V. Final Rule

For reasons explained above, the FRTIB is adopting the proposed rule as final, without any substantive changes. Although the comments received did not cause us to make changes to the proposed rule, we did carefully consider all comments received. We have appreciated the opportunity to review and respond to comments from participants who take an active interest in the TSP and wish to offer suggestions. The comment process allowed us to address any misunderstandings about the mutual fund window, to learn if there are unanticipated legal or policy impediments to the proposal, and to hear suggestions about how better to implement the mutual fund window.

Regulatory Flexibility Act

This regulation will not have a significant economic impact on a substantial number of small entities. This regulation will primarily affect Federal employees, members of the uniformed services who participate in the TSP, and beneficiary participants.

Paperwork Reduction Act

This regulation does not require additional reporting under the criteria of the Paperwork Reduction Act.

Unfunded Mandates Reform Act of 1995

Pursuant to the Unfunded Mandates Reform Act of 1995, 2 U.S.C. 602, 632, 653, and 1501–1571, the effects of this regulation on state, local, and tribal governments and the private sector have been assessed. This regulation will not compel the expenditure in any one year of $100 million or more by state, local, and tribal governments, in the aggregate, or by the private sector. Therefore, a statement under 2 U.S.C. 1532 is not required.

Submission to Congress and the General Accounting Office

Pursuant to 5 U.S.C. 810(a)(1)(A), the FRTIB submitted a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States before publication of this rule in the **Federal Register**. This rule is not a major rule as defined at 5 U.S.C. 804(2).

List of Subjects in 5 CFR Part 1601

Government employees, Pensions, Retirement.

Ravindra Deo,

Executive Director, Federal Retirement Thrift Investment Board.

For the reasons stated in the preamble, the FRTIB amends 5 CFR chapter VI as follows:

PART 1601—PARTICIPANTS' CHOICE OF TSP FUNDS

■ 1. The authority citation for part 1601 continues to read as follows:

Authority: 5 U.S.C. 8351, 8432d, 8438, 8474(b)(5) and (c)(1).

■ 2. Add subpart F to read as follows:

Subpart F—Mutual Fund Window

Sec.

1601.51 Applicability.
1601.52 Fund transfers.
1601.53 Fees.

§ 1601.51 Applicability.

This subpart applies only to the transfer of amounts between the TSP core funds and the mutual fund window; it does not apply to the investment of future deposits, which is covered in subpart B of this part, or fund reallocations or fund transfers among the TSP core funds, which is covered in subpart C of this part.

§ 1601.52 Fund transfers.

(a) *Fund transfers into mutual fund window.* A participant may elect to make one or more fund transfers to the mutual fund window from the portion

of his or her TSP balance invested in the TSP core funds, subject to the following rules:

(1) The participant must establish a mutual fund window account that is separate from his or her TSP account. A participant with more than one TSP account may establish a separate mutual fund window account for each TSP account, and the limitations and fees described in subpart will apply separately to each account;

(2) If the participant does not have an acknowledgment of risk on file as of the date of his or her initial fund transfer request to the mutual fund window, the participant must complete an acknowledgment of risk for the fund transfer to be processed;

(3) Fund transfers must be made in whole dollar increments (percentages are not permitted);

(4) The following limitations must be satisfied:

(i) A participant's initial fund transfer into his or her mutual fund window account must be at least $10,000 and may not exceed 25 percent of the participant's TSP account balance, as of the date of such transfer; and

(ii) Subsequent fund transfers into a participant's mutual fund window account may not cause the balance in the participant's mutual fund window account to exceed 25 percent of the participant's total TSP balance, as of the date of any such transfer;

(5) Each fund transfer into the mutual fund window counts toward the monthly limit set forth in § 1601.32(b);

(6) Amounts transferred to a participant's mutual fund window account will initially be invested in a sweep money market fund. Subsequently, the participant may direct the investment of the transferred amounts into any mutual fund(s) that are available through the mutual fund window;

(7) Fund transfers are subject to the fees set forth in § 1601.53; and

(8) A participant may not withdraw funds directly from his or her mutual fund window account. To make a withdrawal, the participant must elect a fund transfer back to the TSP core funds as described in paragraph (b) of this section. Upon completion of such fund transfer, the participant may make a withdrawal in accordance with 5 CFR part 1650.

(b) *Fund transfers back to TSP core funds.* A participant may elect to make a fund transfer to the TSP core funds from amounts invested in his or her mutual fund window account, subject to the following rules:

(1) Fund transfers must be made in whole dollar increments (percentages are not permitted);

(2) Amounts to be transferred from a participant's mutual fund window account to the TSP core funds must first be transferred to the sweep money market fund. Subsequently, the participant may direct the investment of the transferred amounts into the TSP core funds;

(3) Each fund transfer back to the TSP core funds from the mutual fund window account counts toward the monthly limit set forth in § 1601.32(b); except, however, that a participant may always elect a fund transfer from the mutual fund window account to the G Fund; and

(4) Fund transfers are subject to the fees set forth in § 1601.53.

(c) *Forced transfers.* The TSP record keeper will force a transfer from the participant's mutual fund window account to the TSP core funds in the following situations, and subject to the following rules:

(1) A forced transfer may occur if the balance invested in the TSP core funds is insufficient to cover:

(i) Amounts necessary to comply with a court order, legal process, or levy described in 5 CFR part 1653;

(ii) A beneficiary asset transfer;

(iii) A required minimum distribution;

(iv) An automatic cash out distribution; or

(v) Any other payment or transfer that the Board is required by law to make from the participant's TSP account balance;

(2) The amount of the forced transfer shall be equal to the amount of the insufficiency described in paragraph (c)(1) of this section, plus $1,000; except, however, that if the participant's mutual fund window account balance is less than $25,000, the entire mutual fund window account balance shall be transferred to the TSP core funds;

(3) Forced transfers shall be liquidated from the participant's mutual fund window account first from amounts held in the sweep money market fund; and then from amounts invested in mutual funds, beginning with the position with the highest balance;

(4) Forced transfers from a participant's mutual fund window account to the TSP core funds shall be invested according to the participant's existing contribution allocation; and

(5) The participant shall be responsible for any fees incurred as a result of the forced transfer.

§ 1601.53 Fees.

(a) The Board will allocate a portion of the TSP's administrative expenses to mutual fund users by charging an administrative fee of $55.00 annually. The amount of this fee will be redetermined once every three years by multiplying the average mutual fund window account balance by the TSP administrative expense ratio, as of the date of redetermination.

(b) The fee described in paragraph (a) of this section is in addition to any mutual fund window account maintenance fees, trading fees, and fees and expenses associated with the specific mutual fund(s) in which the participant chooses to invest.

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2022–0084; Project Identifier MCAI–2020–01312–A; Amendment 39–22012; AD 2022–08–09]

RIN 2120–AA64

Airworthiness Directives; Pilatus Aircraft Ltd. Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for all Pilatus Aircraft Ltd. (Pilatus) Model PC–24 airplanes. This AD was prompted by a failure of the dual ethernet communication channel on a dual-channel data concentration and processing unit, which triggered the opening of electronic circuit breakers that caused several unintended system activations. This AD requires installing a software (SW) upgrade to the utility management system (UMS), as specified in a European Union Aviation Safety Agency (EASA) AD, which is incorporated by reference. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective June 14, 2022.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of June 14, 2022.

ADDRESSES: For EASA material incorporated by reference in this final rule, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; phone: +49 221 8999 000; email: *ADs@easa.europa.eu;* website: *www.easa.europa.eu.* You may find the EASA material on the EASA website at *https://ad.easa.europa.eu.* For service information identified in this final rule, contact Pilatus Aircraft Ltd., CH–6371, Stans, Switzerland; phone: +41848247365; email: *techsupport.ch@pilatus-aircraft.com;* website: *http://www.pilatus-aircraft.com/.* You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 901 Locust, Kansas City, MO 64106. For information on the availability of this material at the FAA, call (817) 222–5110. Service information that is approved for IBR is also available at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2022–0084.

Examining the AD Docket

You may examine the AD docket at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2022–0084; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the EASA AD, any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT: Doug Rudolph, Aviation Safety Engineer, General Aviation & Rotorcraft Section, International Validation Branch, FAA, 901 Locust, Room 301, Kansas City, MO 64106; phone: (816) 329–4059; email: *doug.rudolph@faa.gov*.

SUPPLEMENTARY INFORMATION:

Background

EASA, which is the Technical Agent for the Member States of the European Union, has issued EASA AD 2020–0200, dated September 21, 2020 (EASA AD 2020–0200), to correct an unsafe condition on Pilatus Model PC–24 airplanes, all serial numbers. EASA AD 2020–0200 was prompted by a report that, during climb, a Model PC–24 airplane experienced a dual ethernet communication channel failure on a dual-channel data concentration and processing unit. The failure triggered the opening of electronic circuit breakers, which led to degradation of environmental control system functionalities, the deployment of all passenger oxygen masks, and the autopilot entering into emergency descent mode. According to EASA, various crew alerting system messages were displayed and the functionality of other systems (such as flaps, fuel indication, and the ice protection system) was significantly degraded.

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to all Pilatus Model PC–24 airplanes. The NPRM published in the **Federal Register** on February 3, 2022 (87 FR 6087). The NPRM was prompted by the failure of the dual ethernet communication channel on a dual-channel data concentration and processing unit identified in EASA AD 2020–0200. The NPRM proposed to require installing a SW upgrade to the UMS, as specified in EASA AD 2020–0200.

The FAA is issuing this AD to prevent failure of the dual ethernet communication channel on a dual-channel data concentration and processing unit. The unsafe condition, if not addressed, could result in increased pilot workload and reduced control of the airplane.

Discussion of Final Airworthiness Directive

Comments

The FAA received no comments on the NPRM or on the determination of the costs.

Conclusion

These airplanes have been approved by EASA and are approved for operation in the United States. Pursuant to the FAA's bilateral agreement with the European Union, EASA notified the FAA about the unsafe condition described in the EASA AD. The FAA reviewed the relevant data and determined that air safety requires adopting this AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on these products. This AD is adopted as proposed in the NPRM.

Related Service Information Under 1 CFR Part 51

The FAA reviewed EASA AD 2020–0200, which specifies upgrading the UMS SW and prohibits installing an earlier version of the SW. This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Other Related Service Information

The FAA reviewed Pilatus PC–24 Service Bulletin No. 42–010, dated January 21, 2020. This service information contains procedures for upgrading the UMS SW to Build 7.3.

Differences Between This AD and the EASA AD

Where EASA AD 2020–0200 requires compliance after its effective date, this AD requires using the effective date of this AD. Where EASA AD 2020–0200 prohibits the installation of an affected part ''from the effective date'' of EASA AD 2020–0200, this AD requires using ''as of the effective date of this AD.'' Although the service information referenced in EASA AD 2020–0200 specifies reporting information to the manufacturer, this AD does not include that requirement.

Costs of Compliance

The FAA estimates that this AD affects 42 airplanes of U.S. registry.

The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS

Action	Labor Cost	Parts cost	Cost per airplane	Cost on U.S. operators
Install SW upgrade to UMS	8 work-hours × $85 per hour = $680	$5,000	$5,680	$238,560

The FAA has included all known costs in its cost estimate. According to the manufacturer, however, some of the costs of this AD may be covered under warranty, thereby reducing the cost impact on affected operators.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue

rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

2022–08–09 Pilatus Aircraft Ltd.: Amendment 39–22012; Docket No. FAA–2022–0084; Project Identifier MCAI–2020–01312–A.

(a) Effective Date

This airworthiness directive (AD) is effective June 14, 2022.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Pilatus Aircraft Ltd. Model PC–24 airplanes, all serial numbers, certificated in any category.

(d) Subject

Joint Aircraft Service Component (JASC) Code: 2200, Auto Flight System; 2400, Electrical Power System; 3140, Central Computers (EICAS); 3500, Oxygen System; and 4500, Central Maint, Computer.

(e) Unsafe Condition

This AD was prompted by a failure of the dual ethernet communication channel on a dual-channel data concentration and processing unit, which triggered the opening of electronic circuit breakers that caused several unintended system activations. The FAA is issuing this AD to prevent failure of the dual ethernet communication channel on a dual-channel data concentration and processing unit. The unsafe condition, if not addressed, could result in increased pilot workload and reduced control of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

(1) For Group 1 airplanes as defined under the ''Definitions'' section in European Union Aviation Safety Agency AD 2020–0200, dated September 21, 2020 (EASA AD 2020–0200): Install the build 7.3 standard software upgrade to the utility management system software in accordance with paragraph 1 and the ''Ref. Publications'' section of EASA AD 2020–0200, except you are required to comply within 30 days after the effective date of this AD. After updating the software, do not install on that airplane utility management system software that is earlier than version 7.3.

(2) For Group 2 airplanes as defined under the ''Definitions'' section in EASA AD 2020–0200: As of the effective date of this AD, do not install utility management system software that is earlier than version 7.3 on any airplane.

(h) Alternative Methods of Compliance (AMOCs)

(1) The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the International Validation Branch, send it to the attention of the person identified in paragraph (i) of this AD and email to: *9-AVS-AIR-730-AMOC@faa.gov.*

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(i) Related Information

For more information about this AD, contact Doug Rudolph, Aviation Safety Engineer, General Aviation & Rotorcraft Section, International Validation Branch, FAA, 901 Locust, Room 301, Kansas City, MO 64106; phone: (816) 329–4059; email: *doug.rudolph@faa.gov.*

(j) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) European Union Aviation Safety Agency (EASA) AD 2020–0200, dated September 21, 2020.

(ii) [Reserved]

(3) For EASA material identified in this AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; phone: +49 221 8999 000; email: *ADs@easa.europa.eu;* website: *www.easa.europa.eu.* You may find the EASA material on the EASA website at *https://ad.easa.europa.eu.*

(4) You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 901 Locust, Kansas City, MO 64106. For information on the availability of this material at the FAA, call (817) 222–5110. This material may be found in the AD docket at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2022–0084.

(5) You may view this service information that is incorporated by reference at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, email: *fr.inspection@nara.gov,* or go to: *http://www.archives.gov/federal-register/cfr/ibr-locations.html.*

Issued on May 3, 2022.

Lance T. Gant,

Director, Compliance & Airworthiness Division, Aircraft Certification Service.

RIN 2120–AA66

Amendment of Class E Airspace; Weatherford, OK

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action amends the Class E airspace at Weatherford, OK. This action as the result of an airspace review caused by the decommissioning of the Weatherford non-directional beacon (NDB). The geographic coordinates of the airport are also being updated to coincide with the FAA's aeronautical database.

DATES: Effective 0901 UTC, July 14, 2022. The Director of the Federal Register approves this incorporation by reference action under 1 CFR 51, subject to the annual revision of FAA Order JO 7400.11 and publication of conforming amendments.

ADDRESSES: FAA Order JO 7400.11F, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at *https://www.faa.gov/air_traffic/publications/.* For further information, you can contact the Airspace Policy Group, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267–8783.

FOR FURTHER INFORMATION CONTACT: Rebecca Shelby, Federal Aviation Administration, Operations Support Group, Central Service Center, 10101 Hillwood Parkway, Fort Worth, TX 76177; telephone (817) 222–5857.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it amends the Class E airspace extending upward from 700 feet above the surface at Thomas P. Stafford Airport, Weatherford, OK, to support instrument flight rule operations at this airport.

History

The FAA published a notice of proposed rulemaking in the **Federal Register** (87 FR 8992; February 17, 2022) for Docket No. FAA–2022–0043 to amend the Class E airspace at Weatherford, OK. Interested parties were invited to participate in this rulemaking effort by submitting written comments on the proposal to the FAA. No comments were received. Class E airspace designations are published in paragraph 6005 of FAA Order JO 7400.11F, dated August 10, 2021, and effective September 15, 2021, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designations listed in this document will be published subsequently in FAA Order JO 7400.11.

Availability and Summary of Documents for Incorporation by Reference

This document amends FAA Order JO 7400.11F, Airspace Designations and Reporting Points, dated August 10, 2021, and effective September 15, 2021. FAA Order JO 7400.11F is publicly available as listed in the **ADDRESSES** section of this document. FAA Order JO 7400.11F lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Rule

This amendment to 14 CFR part 71 amends the Class E airspace extending upward from 700 feet above the surface to within a 6.5-mile (reduced from a 7.1-mile) radius at Thomas P. Stafford Airport, Weatherford, OK, by removing the Weatherford NDB and updates the geographic coordinates of the airport to coincide with the FAA's aeronautical database, removing the city associated with the airport in the header of the airspace legal description to comply with changes to FAA Order JO 7400.2N, Procedures for Handling Airspace Matters. This action is necessary due to an airspace review caused by the decommissioning of the Weatherford NDB which provided navigation information for the instrument procedures this airport.

FAA Order JO 7400.11, Airspace Designations and Reporting Points, is published yearly and effective on September 15.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current, is non-controversial and unlikely to result in adverse or negative comments. It, therefore: (1) Is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that only affects air traffic procedures and air navigation, it is certified that this rule, when promulgated, does not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

The FAA has determined that this action qualifies for categorical exclusion under the National Environmental Policy Act in accordance with FAA Order 1050.1F, ''Environmental Impacts: Policies and Procedures,'' paragraph 5–6.5.a. This airspace action is not expected to cause any potentially significant environmental impacts, and no extraordinary circumstances exist that warrant preparation of an environmental assessment.

Lists of Subjects in 14 CFR 71

Airspace, Incorporation by reference, Navigation (air).

Adoption of the Amendment

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of FAA Order JO 7400.11F, Airspace Designations and Reporting Points, dated August 10, 2021, and effective September 15, 2021, is amended as follows:

Paragraph 6005 Class E Airspace Areas Extending Upward From 700 Feet or More Above the Surface of the Earth.

* * * * *

ASW OK E5 Weatherford, OK [Amended]

Thomas P. Stafford Airport, OK
(Lat. 35°32′45″ N, long. 98°40′07″ W)

That airspace extending upward from 700 feet above the surface within a 6.5-mile radius of Thomas P. Stafford Airport.

Issued in Fort Worth, Texas, on May 2, 2022.

Martin A. Skinner,

Manager, Operations Support Group, ATO Central Service Center.

Establishment of Class E Airspace; Jaffrey, NH

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action establishes Class E airspace extending upward from 700 feet above the surface for Jaffrey/Silver Ranch Airport, Jaffrey, NH, to accommodate area navigation (RNAV) global positioning system (GPS) standard instrument approach procedures (SIAPs) serving this airport. Controlled airspace is necessary for the safety and management of instrument flight rules (IFR) operations in the area.

DATES: Effective 0901 UTC, July 14, 2022. The Director of the Federal Register approves this incorporation by reference action under 1 CFR part 51, subject to the annual revision of FAA Order JO 7400.11 and publication of conforming amendments.

ADDRESSES: FAA Order JO 7400.11F, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at *https://www.faa.gov/air_traffic/publications/.* For further information, you can contact the Airspace Policy Group, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; Telephone: (202) 267–8783.

FOR FURTHER INFORMATION, CONTACT: John Fornito, Operations Support Group, Eastern Service Center, Federal Aviation Administration, 1701 Columbia Avenue, College Park, GA 30337; Telephone (404) 305–6364.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106, describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it establishes Class E airspace for Jaffrey/Silver Ranch Airport, Jaffrey, NH, to support IFR operations in the area.

History

The FAA published a notice of proposed rulemaking in the **Federal Register** (87 FR 12408, March 4, 2022) for Docket No. FAA–2022–0123 to establish Class E airspace extending upward from 700 feet above the surface for Jaffrey/Silver Ranch Airport, Jaffrey, NH.

Interested parties were invited to participate in this rulemaking effort by submitting written comments on the proposal to the FAA. No comments were received.

Class E airspace designations are published in Paragraph 6005 of FAA Order JO 7400.11F, dated August 10, 2021, and effective September 15, 2021, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designations listed in this document will be published subsequently in FAA Order JO 7400.11.

Availability and Summary of Documents for Incorporation by Reference

This document amends FAA Order JO 7400.11F, Airspace Designations and Reporting Points, dated August 10, 2021, and effective September 15, 2021. FAA Order JO 7400.11F is publicly available as listed in the **ADDRESSES** section of this document. FAA Order JO 7400.11F lists Class A, B, C, D, and E airspace areas, air traffic routes, and reporting points.

The Rule

The FAA is amending 14 CFR part 71 by establishing Class E airspace extending upward from 700 feet above the surface within a 7.1-mile radius of Jaffrey/Silver Ranch Airport, Jaffrey, NH, providing the controlled airspace required to support RNAV (GPS) standard instrument approach procedures for IFR operations at this airport.

Class E airspace designations are published in Paragraph 6005 of FAA Order JO 7400.11F, dated August 10, 2021, and effective September 15, 2021, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designations listed in this document will be published subsequently in the FAA Order JO 7400.11.

FAA Order JO 7400.11, Airspace Designations and Reporting Points, is published yearly and effective on September 15.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore: (1) Is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is minimal. Since this is a routine matter that only affects air traffic procedures an air navigation, it is certified that this rule, when promulgated, does not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

The FAA has determined that this action qualifies for categorical exclusion under the National Environmental Policy Act in accordance with FAA Order 1050.1F, ''Environmental Impacts: Policies and Procedures,'' paragraph 5–6.5a. This airspace action is not expected to cause any potentially significant environmental impacts, and no extraordinary circumstances exist that warrant preparation of an environmental assessment.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 91

[Docket No. FAA–2022–0619]

Statement of Policy on Performance Requirements for Operators of Aircraft That Are Equipped With Automatic Dependent Surveillance-Broadcast (ADS–B) Out

AGENCY: Federal Aviation Administration (FAA), Department of Transportation (DOT).

ACTION: Policy statement.

SUMMARY: This action announces revisions to the FAA's policy on performance requirements for aircraft with Automatic Dependent Surveillance-Broadcast (ADS–B) Out equipment using the Selective Availability (SA)-Aware receivers in ADS–B rule airspace. The FAA will no longer expect aircraft with this equipment to perform a preflight availability prediction before operating in ADS–B rule airspace.

DATES: The policy described herein is effective May 10, 2022.

FOR FURTHER INFORMATION CONTACT: For technical information concerning this action, contact James Marks, Flight Technologies and Procedures Division, Aviation Safety, at (202) 267–8790.

SUPPLEMENTARY INFORMATION:

Authority for This Action

The FAA's authority to issue rules on aviation safety is found in Title 49 of the United States Code (49 U.S.C.). Subtitle I, Section 106, describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority.

The ADS–B Out equipage and performance requirements in §§ 91.225 (Automatic Dependent Surveillance-Broadcast (ADS–B) Out equipment and use) and 91.227 (Automatic Dependent Surveillance-Broadcast (ADS–B) Out equipment performance requirements) of title 14 of the Code of Federal Regulations (14 CFR) were promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103 (Sovereignty and Use of Airspace) and in Subpart III, Section 44701 (General Requirements). Under Section 40103, the FAA is charged with prescribing regulations on the flight of aircraft (including regulations on safe altitudes) for navigating, protecting, and identifying aircraft and the efficient use of the navigable airspace. Under section 44701, the FAA is charged with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce.

In § 91.227, the FAA set forth the ADS–B Out equipment performance requirements including accuracy and integrity performance standards. This policy statement is within the scope of the FAA's authority and informs operators equipped with Selective Availability (SA)-Aware receivers about a change to the FAA policy requiring they perform preflight availability predictions to ensure their avionics broadcast elements required by § 91.227 as part of their § 91.103 (Preflight Action) obligations.

I. Background

In 2010, the FAA issued a final rule prescribing equipage requirements and performance standards for ADS–B Out avionics on aircraft operating in certain airspace after January 1, 2020.[1] ADS–B Out is an advanced surveillance technology that combines an aircraft's position source, other aircraft avionics, and a ground receiver infrastructure to create an accurate and shared surveillance picture between aircraft and air traffic control (ATC). ADS–B Out provides air traffic controllers with real-time position information that is, in most cases, more accurate than the information available with current radar-based systems. With more accurate information, ATC will be able to position and separate aircraft with improved precision and timing so that efficiency and capacity will increase beyond current levels to meet the predicted demand for ATC services while maintaining or improving safety.

[1] Final Rule, Automatic Dependent Surveillance-Broadcast (ADS–B) Out Performance Requirements to Support Air Traffic Control (ATC), 75 FR 30160 (May 28, 2010).

ADS–B Position Sources

Aircraft with ADS–B Out equipment continually broadcast information, such as identification, position, altitude, and velocity, through an onboard transmitter, which can be received by ADS–B ground stations (or satellite receivers) and by other aircraft appropriately equipped to receive this information. The ADS–B Out rule specifies the aircraft's ADS–B Out equipment performance requirements for each flight in rule airspace rather than requiring any particular type of position source. All currently approved position sources rely on a Global Positioning System (GPS) receiver.[2] The quality of each type of receiver can be described by its ''rule performance'' availability, which means the GPS receiver's ability to achieve the performance requirements of § 91.227(c)(1)(i) and (iii) for navigation accuracy category for position (NACp) and navigation integrity category (NIC). Technical Standard Order (TSO)-C166b and TSO–C154c contain the avionics standards for outputting NACp and NIC.

FAA ADS–B Service Availability Prediction Tool (SAPT)

The ADS–B Service Availability Prediction Tool (SAPT) is a preflight resource developed by the FAA, that predicts the ability of standard GPS receivers to meet the requirements of § 91.227(c)(1)(i) and (iii) along a given route of flight. This prediction is based on the ability of the aircraft's position source (*e.g.,* GPS receiver) to meet ADS–B performance requirements based on the type of GPS receiver (FAA TSOs C129, C129a, C145c/C146c, and C196) and the predicted status of the GPS constellation. The SAPT also evaluates if backup surveillance is available where position source performance is predicted to fall below requirements.[3] The ADS–B SAPT is primarily intended for pilots, dispatchers, and commercial operators to verify their predicted position source performance before flight and ensure compliance with the ADS–B Out rule.[4]

Exemption No. 12555

In April 2015, Airlines for America (A4A) petitioned the FAA, on behalf of

[2] GPS is a specific type of Global Navigation Satellite System (GNSS).

[3] FAA plans to begin divesture of some radar infrastructure as part of the transition to a satellite-based navigation and surveillance system. During the period from 2020 to 2025, FAA's planned radar divestures will focus primarily on eliminating redundant/overlapping radars.

[4] For more information on the SAPT, the FAA has developed the ADS–B SAPT/Receiver Autonomous Integrity Monitoring (RAIM) User Guide, which is available at: *https://sapt.faa.gov/adsb-start.php.*

A4A member airlines, for an exemption from the Navigation Accuracy Category for Position (NACp) and Navigation Integrity Category (NIC) requirements of the rule. A key premise of the exemption was an understanding that certain position sources were more likely than others to not perform at the required level established by the ADS–B Out rule. In August 2015, the Administrator issued Exemption No. 12555,[5] a time-limited grant of exemption from § 91.227(c)(1)(i) and (iii) for the period from January 1, 2020, through December 31, 2024. Exemption 12555 permits operation of aircraft equipped with TSO–C129 (SA-On) and TSO–C196 (SA-Aware) in ADS–B Out rule airspace during periods when the GPS position provided to the installed ADS–B Out equipment does not achieve the required accuracy or integrity performance, provided certain conditions and limitations are met. Additionally, Exemption 12555 does not require aircraft equipped with SA-Aware GPS receivers to use a preflight availability prediction tool.

2019 Policy Statement

On July 3, 2019, the FAA published a **Federal Register** document with its policy on performance requirements for operators equipped with ADS–B Out, including those equipped with a SA-Aware position source.[6] The FAA found that Wide Area Augmentation System (WAAS)[7] was the only GPS position source that consistently provided the equivalent availability to radar at 99.9 percent availability.[8] The FAA also believed that SA-Aware receivers could meet a similar 99.9 percent availability as long as there was no significant reduction in the GPS satellite constellation. Given since the data at the time of publication of the 2019 policy was limited, the FAA determined that aircraft equipped with GPS position sources such as Selective Ability-On (SA-On or SA-Aware were more likely to experience performance outages that limited their access to the airspace defined in the ADS–B rule.

The 2019 policy statement reiterated § 91.103's requirement that pilots become familiar with all available information concerning a flight. The FAA explained that given the previously identified limitations of SA-On and SA-Aware receivers, the use of a preflight prediction tool is a reliable way of satisfying due diligence requirements under § 91.103. Therefore, these operators were required to confirm that a planned route of flight would comply with the ADS–B performance requirements in § 91.227(c)(1)(i) and (iii). Operators could use any reliable preflight prediction tool, with the SAPT providing a comprehensive and reliable preflight prediction for operators. The policy statement explained that for operators who had been notified by the FAA of consistent and repeated ADS–B Out performance issues, conducting an operation in accordance with the policy without first redressing the identified non-performance issue would be considered a continuation of the non-compliance with the performance requirements. Also, if an operator failed to conduct a preflight availability prediction for the operator's intended operation and subsequently encountered degradation of GPS performance that resulted in the aircraft falling below the performance requirements of § 91.227(c)(1)(i) and (iii), that operator would be deemed to have violated the ADS–B rule—even if the operator's flight were to be rerouted due to unforeseen circumstances.

Performance Based Operations Aviation Rulemaking Committee (PARC) Exemption 12555 Action Team

In August 2020, the FAA tasked the PARC to form an action team comprised of industry stakeholders and FAA subject matter experts to report on the following:

1. Identify barriers and appropriate mitigations to air carrier Exemption 12555 equipage plans that lead to full compliance with § 91.227; and
2. Describe status of applicable equipment availability relative to achievement of operator equipage plans toward end state of Exemption 12555 on December 31, 2024.

The PARC provided a forum for the U.S. aviation community to discuss, prioritize, and resolve issues, provide direction for U.S. flight operations criteria and produce U.S. consensus positions for global harmonization on performance-based airspace operations. The PARC action team requested that the FAA provide a report on ADS–B Out equipped aircraft with approved position sources and their ability to meet the equivalent operational availability of radar (99.9% or greater availability requirement). In addition to the 4 years of data used to support the 2019 policy document, an additional 3 years of position source performance data was given to the PARC action team to analyze.

FAA analysis and prior modeling in support of the ADS–B Aviation Rulemaking Committee indicated that the critical ADS–B quality parameter was the NIC parameter defined in § 91.227(c)(1)(iii). FAA data indicated a historical operational availability with regard to required NIC rule performance for the following ADS–B position source types:

—SA-On GPS receivers achieved between 98–99% operational availability;
—SA-Aware GPS receivers achieved 99.9%, or greater, operational availability; and
—Satellite-Based-Augmentation System (SBAS) receivers achieved 99.9%, or greater, operational availability

In consideration of these findings, the PARC Exemption 12555 action team recommended removing the requirement for aircraft equipped with SA-Aware GPS receivers to use a preflight availability prediction tool (*e.g.,* the Service Availability Prediction Tool (SAPT)).

The FAA agrees that the demonstrated performance of SA-Aware GPS receivers has been equivalent to, or better than, a single radar since the FAA began monitoring ADS–B performance in 2015. Years of additional data and assurances that the GPS constellation will remain at current levels have given the FAA confidence that SA-Aware GPS receivers will consistently provide the availability required by the ADS–B regulation. The FAA accepts any residual risk associated with SA-Aware GPS receiver performance falling below the regulatory requirement. As such, the FAA is adopting the subject PARC Exemption 12555 action team recommendation and is revising preflight policy issued in 2019 for aircraft equipped with SA-Aware GPS receivers in this document.

II. Discussion of the Policy

Preflight Availability Prediction Policy

Given the demonstrated performance of SA-Aware (TSO–C196) GPS receivers over a seven-year monitoring period and the expectation that the GPS constellation will provide coverage at current levels for the foreseeable future, the FAA now finds that such GPS receivers consistently provide an equivalent availability to that of a single radar at 99.9 percent operational availability. Aircraft equipped with SA-Aware GPS receivers during periods of GPS constellation degradation that negatively impact the ability of ADS–B

[5] Regulatory Docket Number FAA–2015–0971 (FAA Exemption No. 12555) at *https://www.regulations.gov/docket/FAA-2015-0971.*

[6] Statement of Policy on Performance Requirements for Operators of Aircraft That are Equipped with ADS–B Out, 84 FR 31713 (July 3, 2019).

[7] WAAS is a regional a space-based augmentation system (SBAS) operated by the FAA.

[8] FAA also determined that certain GPS tightly integrated with inertial navigation systems would also provide 99.9 percent availability.

Out equipment to meet performance requirements associated with the rule will be deemed compliant with the ADS–B Out rule requirements. Therefore, the operators of aircraft equipped with position sources that meet the performance requirements of TSO–C196 (SA-Aware) is not required to perform a preflight availability prediction to fulfill their § 91.103 due diligence obligation. For aircraft equipped with GPS receivers that do not meet the performance requirements of TSO–196 or TSO–C145/146, the operator must run a preflight prediction.

Due to the reduced performance of SA-On receivers relative to ADS–B rule requirements, operators of aircraft with these receivers are expected to use a preflight availability prediction tool to predict the ability of an aircraft position source to meet the performance requirements of § 91.227(c)(1)(i) and (iii) along a given route of flight. For non-exemption holders with SA-On receivers and exemption holders after expiration of Exemption 12555, a preflight availability prediction tool should be used to comply with § 91.103 due diligence requirements for a planned route of flight in ADS–B rule airspace. If the predicted SA-On receiver performance does not support compliance with § 91.227 for the proposed flight, the FAA expects operators to adjust the flight plan (*e.g.,* departure time, route) as needed to avoid any areas or time periods predicted with degraded GPS performance. Holders of Exemption 12555 are expected to follow the conditions of that exemption until it expires on December 31, 2024.

After an operator receives a satisfactory preflight availability prediction for an intended operation, there may be certain conditions that warrant a subsequent prediction. For example, a change in departure time or a change in the satellite constellation as indicated by a Notice to Air Missions (NOTAM) may have an effect on the predicted GPS performance for the intended operation. If an operator becomes aware of a change that could result in degraded GPS performance prior to receiving an initial ATC clearance for the intended route of flight, the operator should—consistent with preflight action required by § 91.103—conduct a subsequent preflight availability prediction for the planned flight to ensure that GPS performance is still predicted to comply with the performance requirements of § 91.227(c)(1)(i) and (iii).

The duty under § 91.103 to conduct a subsequent preflight availability prediction for an intended route of flight will cease once an operator receives an ATC route clearance for the intended operation. More specifically, if an operator receives a satisfactory preflight availability prediction and an ATC route clearance for the intended operation, the FAA will consider the operator as having exercised its due diligence in ensuring the intended operation complies with the performance requirements in § 91.227. Therefore, upon receiving a satisfactory preflight availability prediction and an ATC clearance for an intended route of flight, the operator will be deemed to have complied with the preflight availability prediction requirement and the performance requirements of § 91.227(c)(1)(i) and (iii).

The FAA recognizes that there are circumstances outside the operator's control that may result in unanticipated changes to an operator's planned route of flight, which may cause temporary degraded GPS performance and technical noncompliance with § 91.227(c)(1)(i) and (iii). For example, ATC will continue to exercise its responsibility for the safe and efficient movement of air traffic, including changes to the routing of traffic to achieve those objectives. In addition, a planned route of flight may be changed due to environmental conditions, such as a thunderstorm, or an operator may experience unexpected GPS degradations during flight. After an ATC route clearance is obtained for the flight, the FAA does not expect an operator to conduct a subsequent preflight availability prediction to accommodate rerouting caused by ATC or environmental conditions.

The FAA notes that the policy described above applies only to those operators who have exercised due diligence required in § 91.103 by performing a preflight availability prediction. For example, if an operator fails to conduct a required preflight availability prediction for the operator's intended operation and subsequently encounters technical non-compliance with the performance requirements of § 91.227(c)(1)(i) and (iii), that operator will be deemed to have violated the ADS–B rule even if the operator's flight were rerouted due to unforeseen circumstances.

When an operator performs a preflight availability prediction using the FAA's SAPT tool, the SAPT retains a record of each transaction enabling the FAA to confirm that an operator took preflight action. The FAA recommends that operators using an alternate tool retain documentation that verifies the completion of the satisfactory preflight availability prediction for each intended route of flight. The FAA recommends that the prediction should be done not more than 24 hours prior to the planned departure. Predictions using SAPT to determine the availability of backup surveillance per Exemption 12555 should be done within the 3 hours prior to a planned departure.

GPS Interference

There may be times when the GPS position source cannot meet the required technical performance due to planned GPS interference. In the event of a scheduled interference outage of GPS, the FAA will issue a NOTAM that identifies the airspace and time periods that may be affected by the interference. The affected area will frequently encompass a large radius of ADS–B Out rule airspace. The FAA finds that requiring operators to avoid the affected area would cause significant disruption to air traffic in that vicinity. Furthermore, there is no guarantee that these operators would experience actual interference and a degradation in GPS performance in the area. For these reasons, the FAA has determined that it would be impractical and not in the public interest to require operators to avoid the affected area based on the chance that an otherwise compliant flight could experience GPS interference.

Accordingly, operators should proceed with their intended operation if the only anticipated ADS–B noncompliance would be due to the planned GPS interference. Under this policy, an operator who is required to perform a preflight availability prediction for the intended route of flight is still required to obtain a satisfactory preflight availability prediction. When a NOTAM identifies the airspace and time periods that may be affected by GPS interference, an operator will not be required to alter his or her route of flight to avoid the area based solely on that NOTAM. As explained in the preamble to the final rule, if an aircraft's avionics meet the performance requirements but unexpected GPS degradations during flight inhibit the position source from providing adequate accuracy and integrity, ATC will be alerted via the aircraft's broadcasted data and services will be provided to that aircraft using the backup strategy. If an operator encounters actual GPS interference during their flight that results in a degradation of ADS–B Out performance, the policy described above will apply provided the operator has taken the appropriate preflight actions.

SAPT Outages

As noted, certain operators are required to use a preflight availability prediction tool prior to a planned flight. Some operators will use the FAA SAPT for this purpose. The FAA intends that SAPT will be continuously available to operators. However, because unexpected circumstances could lead to a SAPT outage, the inability to access the tool could have an adverse impact on operators with SA-On receivers. As previously noted in Advisory Circular (AC) 90–114, *ADS–B Operations,* ATC will issue a NOTAM announcing when the SAPT is not available.

The FAA understands that a SAPT outage prevents those operators who hold relief under Exemption No. 12555 from confirming the availability of back-up surveillance as required under the exemption's conditions and limitations.[9] It also reduces the ability of non-exemption holders without their own preflight availability prediction tool to determine that a particular operation will meet the performance requirements prior to conducting an operation. The unavailability of the SAPT for brief periods would result in operators having to choose between conducting flights that might result in non-compliance or not conducting an operation that might have complied with ADS–B Out rule performance. The FAA does not intend to inhibit operators from conducting otherwise permissible operations when the SAPT is unavailable. As such, when there is a SAPT outage, the policy described above will apply to operators who rely on the SAPT if their operation falls below the performance requirements.

III. Summary

Unless otherwise authorized by ATC, all aircraft operating in the airspace identified in § 91.225 must comply with the ADS–B Out performance requirements in § 91.227. Under the FAA's revised policy, aircraft equipped with SA-Aware GPS receivers described in this document are not required to perform a preflight service availability prediction, including those aircraft not covered by Exemption 12555. Aircraft equipped with SA-On receivers should continue performing preflight availability predictions and can use the guidance contained in AC 90–114, *ADS–B Operations,* when conducting preflight actions for operations planned within airspace described in § 91.225. Holders of Exemption 12555 must continue to meet the conditions and limitations associated with the exemption. Holders of Exemption 12555 should revise applicable equipage plans to reflect any changes affected by policy contained in this document and submit revised plans to the FAA per conditions specified by the exemption.

As described in this document, there are circumstances outside of an operator's control that may result in a temporary degradation of GPS performance and an apparent violation of § 91.227. An operator may exercise due diligence in performing a preflight availability prediction for its intended route of flight but experience rerouting by ATC after obtaining an initial ATC route clearance, which may cause an unanticipated degradation of performance. Additionally, an operator may encounter actual GPS interference on its intended path of flight, which would affect the ability of an aircraft to meet the performance requirements of § 91.227. Lastly, an operator may not be able to complete a preflight availability prediction for its intended route of flight due to the FAA's SAPT being out of service. As previously explained, the FAA recognizes that these situations are outside of the operator's control. Therefore, the FAA will not take legal enforcement action for apparent noncompliance with § 91.227 due to the circumstances discussed in this document to the extent such an application would impose a standard of conduct wholly outside the operator's control.

IV. Effective Date

Policy in this document is effective immediately and supersedes policy contained in FRN Docket No. FAA–2019–0539. Additional information on the policy described in this document will be contained in the next revision of AC 90–114, *ADS–B Operations.*

Issued in Washington, DC, on May 4, 2022.

Gregory E. Schwab,

Acting Chief of Staff, Air Traffic Organization.

[FR Doc. 2022–09936 Filed 5–9–22; 8:45 am]

BILLING CODE 4910–13–P

[9] The FAA anticipates that any outage would be of short duration and any potential risk would be minimal because, concurrent with the outage, GPS performance would have to fall below rule values on the route of flight and radar coverage would have to be unavailable at the same time and location.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 73

[Docket No. FDA–2018–C–1007]

Listing of Color Additives Exempt From Certification; Antarctic Krill Meal

AGENCY: Food and Drug Administration, Department of Health and Human Services (HHS).

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA or we) is amending the color additive regulations to provide for the safe use of Antarctic krill meal, composed of the ground and dried tissue of *Euphausia superba,* with or without the lipid fraction, for use in the feed of salmonid fish, to enhance the color of their flesh. We are taking this action in response to a color additive petition (CAP) submitted by Aker BioMarine Antarctic AS (Aker BioMarine or petitioner).

DATES: This rule is effective June 10, 2022. Submit either electronic or written objections and requests for a hearing on the final rule by June 9, 2022. See section XI for further information on the filing of objections.

ADDRESSES: You may submit objections and requests for a hearing as follows. Please note that late, untimely filed objections will not be considered. The *https://www.regulations.gov* electronic filing system will accept comments until 11:59 p.m. Eastern Time at the end of June 9, 2022. Objections received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are postmarked or the delivery service acceptance receipt is on or before that date.

Electronic Submissions

Submit electronic objections in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Objections submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your objection will be made public, you are solely responsible for ensuring that your objection does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact

information, or other information that identifies you in the body of your objection, that information will be posted on *https://www.regulations.gov.*

• If you want to submit an objection with confidential information that you do not wish to be made available to the public, submit the objection as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

• *Mail/Hand delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

• For written/paper objections submitted to the Dockets Management Staff, FDA will post your objection, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2018–C–1007 for ''Listing of Color Additives Exempt From Certification; Antarctic Krill Meal.'' Received objections, those filed in a timely manner (see **ADDRESSES**), will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

• Confidential Submissions—To submit an objection with confidential information that you do not wish to be made publicly available, submit your objections only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' We will review this copy, including the claimed confidential information, in our consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

FOR FURTHER INFORMATION CONTACT: Stephen DiFranco, Office of Food Additive Safety (HFS–255), Center for Food Safety and Applied Nutrition, Food and Drug Administration, 5001 Campus Dr., College Park, MD 20740–3835, 240–402–2710; or Alexandra Jurewitz, Office of Regulations and Policy (HFS–024), Center for Food Safety and Applied Nutrition, Food and Drug Administration, 5001 Campus Dr., College Park, MD 20740, 240–402–2378.

SUPPLEMENTARY INFORMATION:

I. Introduction

In a notification published in the **Federal Register** of April 9, 2018 (83 FR 15089), we announced that we filed a color additive petition (CAP 5C0303) submitted by Aker BioMarine Antarctic AS (Aker BioMarine), c/o Intertek Scientific & Regulatory Consultancy, Rm. 1036, Bldg. A8 Cody Technology Park, Ively Rd., Farnborough, Hampshire, GU14 0LX, United Kingdom. The petition proposed to amend the color additive regulations in part 73 (21 CFR part 73), *Listing of Color Additives Exempt from Certification,* to provide for the safe use of Antarctic krill meal, composed of the ground and dried tissue of *Euphausia superba,* with or without removal of the lipid fraction, for use in the feed of salmonid fish, to enhance the color of their flesh. Aker BioMarine proposed use levels not to exceed 4 percent (weight/weight or w/w) in feed for freshwater salmonids and 12 percent (w/w) in feed for marine salmonids. Antarctic krill meal is primarily intended for use as a nutrient source, partially replacing other meals (especially fish meal) used in the diet of salmonids. Antarctic krill meal is a natural source of astaxanthin, and it has been established that astaxanthin can impart color to the edible tissues of the salmonids.

Antarctic krill meal is not intended to be the sole source of pigmentation in salmonid feed, and other permitted color additives—including other permitted sources of astaxanthin—may be added to achieve the desired level of coloration in the fish flesh. In the **Federal Register** of April 13, 1995 (60 FR 18736), we published a final rule that listed astaxanthin in § 73.35 (21 CFR 73.35) for use in the feed of salmonid fish. In that final rule, we concluded that 80 milligrams (mg) of astaxanthin per kilogram (kg) of finished feed may be safely used to enhance pigmentation of the flesh of salmonid fish, and we limited the astaxanthin content of the finished feed to not more than 80 mg/kg in § 73.35(c)(2). In the **Federal Register** of July 6, 2000 (65 FR 41581 and 65 FR 41584), we published final rules that listed haematococcus algae meal in 21 CFR 73.185 and phaffia yeast in 21 CFR 73.355 as additional sources of astaxanthin permitted for use in the feed of salmonid fish, provided that the quantity of astaxanthin in finished feed from either color additive—when used alone or in combination with other astaxanthin color additive sources listed in part 73—results in no more than 80 mg/kg of astaxanthin in the finished feed. In the **Federal Register** of November 5, 2009 (74 FR 57248), and November 16, 2009 (74 FR 58845), we published final rules that listed astaxanthin dimethyldisuccinate (21 CFR 73.37) and paracoccus pigment (21 CFR 73.352), respectively, as color additive astaxanthin sources permitted in salmonid fish feed with the limitation that they impart no more than 80 mg/kg of astaxanthin when used alone or in combination with other astaxanthin sources listed in part 73 as a condition of use.

Consistent with these regulations, the petitioner proposed that the quantity of astaxanthin in the finished feed contributed by Antarctic krill meal when used under the intended conditions of use, alone or in combination with other permitted sources of astaxanthin, should not exceed 80 mg/kg astaxanthin in the finished feed.

This final rule covers only the intended use of Antarctic krill meal as a color additive in the feed of salmonid fish, as the target animal. Under 21 CFR 70.42, we apply a ''safe-for-use'' principle when evaluating a color additive petition. This approach ensures that each listed color additive will be safe for its intended use or uses in or on food, drugs, or cosmetics. In reviewing this color additive petition for the proposed intended use of Antarctic krill

meal in the feed of salmonid fish, we evaluated the safety of the petitioned use of the additive in the diet of both the target animal and humans. A discussion of this evaluation can be found in sections III and IV of this document. Approvals for other potential uses, such as in non-target animal food, were not the subject of this petition and therefore are not discussed below. However, such approvals may be subject to the provisions of section 409(b) or 721(b) of the Federal Food, Drug, and Cosmetic Act (FD&C Act) (21 U.S.C. 348(b) or 21 U.S.C. 379e(b)) and 21 CFR 570.30 or 71.1.

II. Background

Antarctic krill meal is a brownish-orange powder composed of the cooked, dried, and ground tissue of *Euphausia superba.* To obtain the color additive, Antarctic krill are harvested from Antarctic waters and processed by cooking, drying, and milling to yield whole Antarctic krill meal. The manufacture of defatted Antarctic krill meal includes an additional step of lipid extraction with ethanol. Residual ethanol in the krill biomass is removed by evaporation, yielding defatted Antarctic krill meal. The petition requests approval of the whole Antarctic krill meal and the defatted form of Antarctic krill meal for use as a color additive in salmonid feed.

The primary coloring component in Antarctic krill meal is astaxanthin. Astaxanthin is an oxygenated carotenoid (xanthophyll) with the chemical name 3,3′-dihydroxy-β, β-carotene-4,4′-dione and may consist of cis, trans, and optical isomers. Astaxanthin is found as the mono- and di-astaxanthin esters and as free astaxanthin. Astaxanthin is present at levels of 80 to 170 mg/kg in the whole Antarctic krill meal and 10 to 90 mg/kg in the defatted Antarctic krill meal, calculated as free astaxanthin (Ref. 1).

Ethoxyquin, an additive approved for use in animal feed, may be added as a stabilizer to whole Antarctic krill meal. Under § 573.380 (21 CFR 573.380), ethoxyquin may be safely used in fish feeds as a chemical preservative to retard the oxidation of xanthophylls at a level not to exceed 150 parts per million (150 ppm) in the treated article. The petition proposes the optional addition of ethoxyquin into whole Antarctic krill meal at levels up to 250 mg/kg (250 ppm). When the whole krill meal is formulated with other fish feed ingredients up to a maximum level of 12 percent by weight in feed for marine salmonids and 4 percent by weight in feed for freshwater salmonids to produce a finished feed, the concentration of ethoxyquin from the whole krill meal in the finished feed would be no more than 30 ppm and 10 ppm, respectively.

III. Safety Evaluation

Under section 721(b)(4) of the FD&C Act, a color additive may not be listed for a proposed use unless the data and information available to FDA establish that the color additive is safe for that use. Our color additive regulations at 21 CFR 70.3(i) define ''safe'' to mean that there is convincing evidence establishing with reasonable certainty that no harm will result from the intended use of the color additive. As part of our safety evaluation to establish with reasonable certainty that a color additive is not harmful under its intended conditions of use, we consider the additive's manufacturing and stability; the projected human dietary exposure to the additive and any impurities resulting from the petitioned use of the additive; the additive's toxicological data; and other relevant information (such as published literature) available to us.

Because consumers are not directly exposed to Antarctic krill meal, FDA focused its review on the safety of the substances present in Antarctic krill meal that are deposited in the consumable portions of the fish. We considered the safety of astaxanthin, which is already approved for use in the feed of salmonid fish, as well as the safety of other components found in Antarctic krill meal at levels higher than that in other fish meals, for which Antarctic krill meal is intended to serve as a replacement in salmonid feed. Target animal safety was also evaluated for the salmonids consuming the Antarctic krill meal. Our review was based on the petitioned use in salmonid feed and on human consumption of the consumable portions of these salmonids.

IV. Safety of Petitioned Use of the Color Additive

A. Exposure Estimate

Astaxanthin is found in wild salmonids and is the principal pigment that imparts the pink or red coloring characteristic of the flesh of these fish. As referenced above, astaxanthin is currently approved for use as a color additive in the feed of salmonid fish at levels not to exceed 80 mg/kg of the finished feed. Antarctic krill meal is not intended to be the sole source of pigmentation in salmonid feed, and other permitted sources of astaxanthin may be added in order to achieve the desired level of coloration in the fish flesh. The quantity of astaxanthin in the finished feed contributed by Antarctic krill meal when used under the intended conditions of use, alone or in combination with other permitted sources of astaxanthin, is not to exceed 80 mg/kg astaxanthin. Therefore, the exposure to astaxanthin from the petitioned use of Antarctic krill meal is substitutional for the currently approved uses of astaxanthin, and there would be no increase in human exposure to astaxanthin from this use (Ref. 2).

Additionally, we considered the exposure to astaxanthin from the consumption of wild salmon and the exposure to astaxanthin from the consumption of farm-raised salmonid fish that have been fed approved color additive sources of these carotenoids to be comparable. We conclude that the petitioned use of Antarctic krill meal will not increase the exposure to astaxanthin (Ref. 3).

The petition notes that Antarctic krill meal contains higher levels of fluoride than are present in the fish meal it is intended to partially replace. The petitioner indicated that salmonids that consume a relatively high dietary concentration of fluoride from the petitioned use of Antarctic krill meal may exhibit elevated levels of fluoride in the kidney and bones, but no significant accumulation in the edible tissues (muscle meat and skin) is anticipated. The petitioner indicated that canned salmon may contain bones from the fish that could be consumed by humans. Therefore, we considered fluoride exposure to humans from the consumption of canned salmon (Ref. 2).

B. Toxicological Considerations

To support the safety of the petitioned use of the subject color additive, including astaxanthin, the petitioner noted that synthetically produced and naturally derived astaxanthin has been previously approved for safe use as a color additive in salmonid feed. The petitioner noted that the astaxanthin in Antarctic krill meal occurs in the same optical isomer distribution as is found in wild salmon and in the naturally occurring astaxanthin coloring additives currently permitted for use in salmonid feed. In previous safety evaluations of other sources of astaxanthin, FDA concluded that the esterified forms of astaxanthin that are present in Antarctic krill meal present no additional safety concerns as compared to free astaxanthin because they are converted to the free form during digestion in the fish (Refs. 4 and 5).

The petitioner noted that Antarctic krill meal contains a higher level of

fluoride than is typically present in the fish meal it is intended to partially replace. The petitioner indicated that salmonids that consume an increased dietary concentration of fluoride from the petitioned use of Antarctic krill meal may exhibit elevated levels of fluoride in the kidney and bones. However, no significant accumulation of fluoride in the edible tissues (muscle meat and skin) is anticipated. FDA considered a possible increase in human fluoride exposure due to the consumption of fish fed a diet containing Antarctic krill meal. We concluded that we have no safety concerns regarding the level of fluoride when humans are consuming the flesh of salmonids fed feed containing Antarctic krill meal or when humans are consuming canned salmon made from these fish (Ref. 4).

Regarding the target animal safety of the Antarctic krill meal, the petitioner included data and literature references addressing nutrition, astaxanthin content, and fluoride content of Antarctic krill meal when fed to salmonids. These studies did not reveal any toxicity to the target fish species (Ref. 3).

Based on the substitutional exposure to astaxanthin, the safety of astaxanthin to humans and the target fish species, and our consideration of the fluoride content of the additive, we conclude there is a reasonable certainty of no harm to humans or to the target fish species from the proposed use of Antarctic krill meal.

V. Labeling Requirements

In accordance with § 70.25 (21 CFR 70.25), all color additives must be labeled with sufficient information to assure their safe use and to allow a determination of compliance with any limitations imposed by FDA in other applicable regulations. Therefore, the labeling of the color additive, Antarctic krill meal, and any mixture prepared therefrom, is subject to the requirements of § 70.25.

Under § 70.25(a)(4), an expiration date for a color additive must be stated on its label if stability data require it. The petitioner determined the stability of astaxanthin as a color additive in the product to be approximately 12 months. Although the effect of imparting color may be attenuated after 12 months, the degradation of the astaxanthin-based coloring components does not form any new substances of toxicological concern. FDA finds that because of the potential impact on the stability of astaxanthin in Antarctic krill meal after 12 months, an expiration date must be stated on the label of sealed and open containers, in accordance with § 70.25(a)(4).

In addition to the requirements for labeling the color additive or color additive mixture, the ingredient list on fish feed, to which Antarctic krill meal is added, must identify the presence of the color additive under § 501.4 (21 CFR 501.4). The new regulation, § 73.32(d)(2) (21 CFR 73.32(d)(2)), references § 501.4 to ensure that the presence of Antarctic krill meal as a color additive in the fish feed will be declared on the ingredient label.

The presence of the color additive must be declared on the label of any food. This is to include a declaration on the label of salmonid fish fed feed containing added Antarctic krill meal and on the label of food containing such salmonid fish as an ingredient. Our regulations, at § 101.22(b) (21 CFR 101.22(b)), require a food that bears or contains artificial coloring, such as salmon artificially colored with Antarctic krill meal, to bear labeling even though such food is not in package form. Section 101.22(c) requires that label statements of artificial coloring be likely to be read by the ordinary person under customary conditions of purchase and use of such food. Furthermore, § 101.22(k)(2) requires, in the statement of ingredients for a food to which any coloring has been added, and for which the coloring is not subject to certification, a declaration that makes it clear that a color additive has been used in the food. In addition, the presence of a color additive in a food received in a bulk container that is held at a retail establishment must be declared on the labeling of the bulk container or on a counter card or other similar device under § 101.100(a)(2) (21 CFR 101.100(a)(2)). The ingredient label would alert the consumer that the fish is artificially colored. Without such ingredient labeling, food comprising salmonid fish fed feed with added Antarctic krill meal would be deemed to be misbranded under section 403(k) of the FD&C Act (21 U.S.C. 343(k)), which states that a food shall be deemed to be misbranded if it bears or contains any artificial flavoring, artificial coloring, or chemical preservative, unless it bears labeling stating that fact.

Therefore, in accordance with §§ 101.22(b), (c), and (k)(2) and 101.100(a)(2), labeling on any salmonid fish fed feed with added Antarctic krill meal is required to declare the presence of the color additive or color additive mixture. The new regulation, at § 73.32(d)(3), references §§ 101.22(b), (c), and (k)(2) and 101.100(a)(2) to ensure that, at the retail level, the presence of Antarctic krill meal as a color additive in the fish will be declared, and that the labeling of the bulk fish container, including a list of ingredients, will be displayed on the container or on a counter card with similar information.

VI. Conclusion

Based on the data and information in the petition and other available relevant information, we conclude that the petitioned use of Antarctic krill meal, for use as a color additive is safe to the target fish species and to humans who consume this fish, at levels not to exceed 4 percent (w/w) in feed for freshwater salmonids and 12 percent (w/w) in feed for marine salmonids. We further conclude that this color additive will achieve its intended technical effect and is suitable for the petitioned use. Therefore, we are amending the color additive regulations in part 73 to provide for the safe use of this color additive as set forth in this document. In addition, based on the factors in 21 CFR 71.20(b), we conclude that batch certification of Antarctic krill meal is not necessary to protect the public health.

VII. Public Disclosure

In accordance with § 71.15 (21 CFR 71.15), the petition and the documents that we considered and relied upon in reaching our decision to approve the petition will be made available for public disclosure (see **FOR FURTHER INFORMATION CONTACT**). As provided in § 71.15, we will delete from the documents any materials that are not available for public disclosure.

VIII. Analysis of Environmental Impact

We have carefully considered the potential environmental effects of this action. FDA has concluded that the action will not have a significant impact on the human environment and that an environmental impact statement is not required (Ref. 6). FDA's finding of no significant impact and the evidence supporting that finding, contained in an environmental assessment, may be seen in the Dockets Management Staff (see **ADDRESSES**) between 9 a.m. and 4 p.m., Monday through Friday.

IX. Paperwork Reduction Act of 1995

This final rule contains no collection of information. Therefore, clearance by the Office of Management and Budget under the Paperwork Reduction Act of 1995 is not required.

X. Section 301(ll) of the FD&C Act

Our review of this petition was limited to section 721 of the FD&C Act. This final rule is not a statement

regarding compliance with other sections of the FD&C Act. For example, section 301(ll) of the FD&C Act (21 U.S.C. 331(ll)) prohibits the introduction or delivery for introduction into interstate commerce of any food that contains a drug approved under section 505 of the FD&C Act (21 U.S.C. 355), a biological product licensed under section 351 of the Public Health Service Act (42 U.S.C. 262), or a drug or biological product for which substantial clinical investigations have been instituted and their existence has been made public, unless one of the exemptions in section 301(ll)(1) to (4) of the FD&C Act applies. In our review of this petition, we did not consider whether section 301(ll) of the FD&C Act or any of its exemptions apply to food containing this color additive. Accordingly, this final rule should not be construed to be a statement that a food containing this color additive, if introduced or delivered for introduction into interstate commerce, would not violate section 301(ll) of the FD&C Act. Furthermore, this language is included in all color additive final rules that pertain to food and therefore should not be construed to be a statement of the likelihood that section 301(ll) of the FD&C Act applies.

XI. Objections

This rule is effective as shown in the **DATES** section, except as to any provisions that may be stayed by the filing of proper objections. If you will be adversely affected by one or more provisions of this regulation, you may file with the Dockets Management Staff (see **ADDRESSES**) either electronic or written objections. You must separately number each objection, and within each numbered objection you must specify with particularity the provision(s) to which you object, and the grounds for your objection. Within each numbered objection, you must specifically state whether you are requesting a hearing on the particular provision that you specify in that numbered objection. If you do not request a hearing for any particular objection, you waive the right to a hearing on that objection. If you request a hearing, your objection must include a detailed description and analysis of the specific factual information you intend to present in support of the objection in the event that a hearing is held. If you do not include such a description and analysis for any particular objection, you waive the right to a hearing on the objection.

Any objections received in response to the regulation may be seen in the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, and will be posted to the docket at *https://www.regulations.gov.* We will publish notice of the objections that we have received or lack thereof in the **Federal Register**.

XII. References

The following references are on display at the Dockets Management Staff (see **ADDRESSES**) and are available for viewing by interested persons between 9 a.m. and 4 p.m., Monday through Friday; they are also available electronically at *https://www.regulations.gov.*

List of Subjects in 21 CFR Part 73

Color additives, Cosmetics, Drugs, Foods, Medical devices.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under the authority delegated to the Commissioner of the Food and Drugs, 21 CFR part 73 is amended as follows:

PART 73—LISTING OF COLOR ADDITIVES EXEMPT FROM CERTIFICATION

■ 1. The authority citation for part 73 continues to read as follows:

Authority: 21 U.S.C. 321, 341, 342, 343, 348, 351, 352, 355, 361, 362, 371, 379e.

■ 2. Add § 73.32 to read as follows:

§ 73.32 Antarctic krill meal.

(a) *Identity.* (1) The color additive Antarctic krill meal consists of the cooked, dried, and ground biomass of whole *Euphausia superba* (Antarctic krill), with or without removal of the lipid fraction. The lipid fraction may be fully or partially extracted with ethanol, followed by removal of residual ethanol, to produce defatted Antarctic krill meal. Whole Antarctic krill meal, produced when the lipid fraction is not removed, may contain ethoxyquin as a preservative.

(2) Color additive mixtures for fish feed use made with Antarctic krill meal may contain only those diluents that are suitable and are listed in this subpart as safe for use in color additive mixtures for coloring foods.

(b) *Specifications.* Antarctic krill meal must conform to the following specifications and must be free from impurities, other than those named, to the extent that such other impurities may be avoided by good manufacturing practice:

(1) Physical state, solid.

(2) Ethoxyquin, not more than 250 milligrams per kilogram (mg/kg) (250 parts per million (ppm)) in whole Antarctic krill meal.

(3) Lead, not more than 2 mg/kg (2 ppm).

(4) Arsenic, not more than 5 mg/kg (5 ppm).

(5) Mercury, not more than 1 mg/kg (1 ppm).

(6) Cadmium, not more than 2 mg/kg (2 ppm).

(7) Fluoride, not more than 2,500 mg/kg (2,500 ppm).

(8) Astaxanthin, not more than 170 mg/kg (170 ppm) in whole Antarctic krill meal; not more than 90 mg/kg (90 ppm) in defatted Antarctic krill meal.

(c) *Uses and restrictions.* Antarctic krill meal may be safely used in salmonid feed in accordance with the following prescribed conditions:

(1) The color additive is used to enhance the pink to orange-red color of the flesh of salmonid fish;

(2) The color additive may be used at levels not to exceed 4 percent by weight in freshwater salmonid feed and 12 percent by weight in marine salmonid feed;

(3) The quantity of the color additive incorporated in the feed is such that the finished feed meets the tolerance limitation for ethoxyquin in animal feed prescribed in § 573.380 of this chapter; and

(4) The quantity of astaxanthin in the finished feed, from Antarctic krill meal when used alone or in combination with other astaxanthin color additive sources listed in this part, must not exceed 80 mg/kg astaxanthin (72 grams per ton) in the finished feed.

(d) *Labeling requirements.* (1) The labeling of the color additive and any

premixes prepared therefrom must bear expiration dates for the sealed and open container (established through generally accepted stability testing methods), other information required by § 70.25 of this chapter, a statement of the concentration of ethoxyquin contained therein (whole Antarctic krill meal only), and adequate directions to prepare a final product complying with the limitations prescribed in paragraph (c) of this section.

(2) The presence of the color additive in finished fish feed prepared according to paragraph (c) of this section must be declared in accordance with § 501.4 of this chapter.

(3) The presence of the color additive in salmonid fish that have been fed feeds containing Antarctic krill meal must be declared in accordance with §§ 101.22(b), (c), and (k)(2) and 101.100(a)(2) of this chapter.

(e) *Exemption from certification.* Certification of this color additive is not necessary for the protection of the public health, and therefore batches thereof are exempt from the certification requirements of section 721(c) of the Federal Food, Drug, and Cosmetic Act.

Dated: May 5, 2022.

Lauren K. Roth,

Associate Commissioner for Policy.

[FR Doc. 2022–10025 Filed 5–9–22; 8:45 am]

BILLING CODE 4164–01–P

DEPARTMENT OF JUSTICE

Office of the Attorney General

28 CFR Part 50

[Docket No. OAG 177; AG Order No. 5384–2022]

RIN 1105–AB62

Guidelines and Limitations for Settlement Agreements Involving Payments to Non-Governmental Third Parties

AGENCY: Department of Justice.

ACTION: Interim final rule; request for comments.

SUMMARY: This interim final rule (''rule'') revokes regulations of the Department of Justice (''Department'') that codified a prohibition, subject to limited exceptions, on the inclusion of provisions in settlement agreements directing or providing for a payment or loan, in cash or in kind, to any non-governmental person or entity that is not a party to the dispute. For further information on how the Department intends to approach such settlements going forward, interested parties should consult an Attorney General Memorandum that the Department is issuing on its website in conjunction with this rule. Comments are requested both as to this rule and as to that Memorandum.

DATES:

Effective date: This rule is effective May 10, 2022.

Applicability date: May 5, 2022.

Comments: Comments are due on or before July 11, 2022.

ADDRESSES: To ensure proper handling of comments, please reference Docket No. OAG 177 on all electronic and written correspondence. The Department encourages the electronic submission of all comments through *https://www.regulations.gov* using the electronic comment form provided on that site. For ease of reference, an electronic copy of this document is also available at that website. It is not necessary to submit paper comments that duplicate the electronic submission, as comments submitted to *https://www.regulations.gov* will be posted for public review and are part of the official docket record. However, should you wish to submit written comments through regular or express mail, they should be sent to Robert Hinchman, Senior Counsel, Office of Legal Policy, U.S. Department of Justice, Room 4252 RFK Building, 950 Pennsylvania Avenue NW, Washington, DC 20530. Comments received by mail will be considered timely if they are postmarked on or before July 11, 2022. The electronic Federal eRulemaking portal will accept comments until Midnight Eastern Time at the end of that day.

FOR FURTHER INFORMATION CONTACT: Robert Hinchman, Senior Counsel, Office of Legal Policy, U.S. Department of Justice, telephone (202) 514–8059 (not a toll-free number).

SUPPLEMENTARY INFORMATION:

I. Posting of Public Comments

Please note that all comments received are considered part of the public record and made available for public inspection online at *https://www.regulations.gov.* Information made available for public inspection includes personal identifying information (such as your name, address, etc.) voluntarily submitted by the commenter.

You are not required to submit personal identifying information in order to comment on this rule. Nevertheless, if you want to submit personal identifying information (such as your name, address, etc.) as part of your comment, but do not want it to be posted online, you must include the phrase ''PERSONAL IDENTIFYING INFORMATION'' in the first paragraph of your comment. You must also locate all the personal identifying information that you do not want posted online in the first paragraph of your comment and identify what information you want the agency to redact. Personal identifying information identified and located as set forth above will be placed in the agency's public docket file, but not posted online.

If you want to submit confidential business information as part of your comment but do not want it to be posted online, you must include the phrase ''CONFIDENTIAL BUSINESS INFORMATION'' in the first paragraph of your comment. You must also prominently identify the confidential business information to be redacted within the comment. If a comment has so much confidential business information that it cannot be effectively redacted, the agency may choose not to post that comment (or to post that comment only partially) on *https://www.regulations.gov.* Confidential business information identified and located as set forth above will not be placed in the public docket file, nor will it be posted online.

If you want to inspect the agency's public docket file in person by appointment, please see the **FOR FURTHER INFORMATION CONTACT** section.

II. Discussion

A. Overview

This rule revokes the Department's regulations at 28 CFR 50.28. Going forward, the Department's approach to settlement agreements that direct or provide for a payment or a loan, in cash or in kind, to a non-governmental person or entity that is not a party to the dispute will be governed by a new Attorney General Memorandum being issued on the Department's website concurrently with this rule.

B. Background

For decades prior to 2017, Department components had entered into settlement agreements that involved payments to certain third parties as a means of addressing harms arising from violations of Federal law, particularly in the environmental context but in other contexts as well. In 2017, the Attorney General issued a memorandum prohibiting Department attorneys from ''enter[ing] into any agreement on behalf of the United States in settlement of federal claims or charges, including agreements settling civil litigation, accepting plea agreements, or deferring or declining prosecution in a criminal

matter, that directs or provides for a payment or loan to any non-governmental person or entity that is not a party to the dispute,'' subject only to certain specified exceptions. Memorandum from the Attorney General, ''Prohibition on Settlement Payments to Third Parties'' at 1 (June 5, 2017) (the ''2017 Memorandum''). Provisions reflecting the 2017 Memorandum were added to the Justice Manual (*https://www.justice.gov/jm/justice-manual*) at sections 1–17.000, 5–11.105, 9–16.325.

In December 2020, the Department amended its regulations to add a new 28 CFR 50.28, reflecting the prohibition set forth in the 2017 Memorandum ''with certain changes . . . to clarify the scope of the exceptions.'' 85 FR 81409. The Department specified that the prohibition ''applies to all civil and criminal cases litigated under the direction of the Attorney General and includes civil settlement agreements, cy pres agreements or provisions, plea agreements, non-prosecution agreements, and deferred prosecution agreements.'' 85 FR 81410.

C. Revocation of 28 CFR 50.28

After having considered the views of the Department's components and their experience with the regulations at 28 CFR 50.28, the Attorney General has concluded that the regulations at 28 CFR 50.28 are more restrictive and less tailored than necessary and should therefore be revoked.

When used appropriately, agreements providing for payments to third parties are lawful and allow the United States to more fully accomplish the primary goals of civil and criminal enforcement: Compensating victims, remedying harm, and punishing and deterring unlawful conduct.

For example, the harms caused by violations of Federal environmental statutes, including harms to communities affected by environmental crime, can be difficult to redress directly in particular cases. In such circumstances, the Environment and Natural Resources Division has previously relied upon supplemental environmental projects to help achieve an enforcement action's goals. Such projects further the aims of Federal environmental laws the Justice Department is responsible for enforcing by remedying the harms to the communities most directly impacted by violations of those laws. For this reason, they are particularly powerful tools for advancing environmental justice.

In revoking 28 CFR 50.28, the Department is not departing from the principle that the goals of settlements include compensating victims, redressing harms, and punishing and deterring unlawful conduct. 85 FR 81409. But policies in service of this principle have traditionally been addressed through memoranda from Department leadership rather than through regulations. The Department is therefore revoking 28 CFR 50.28 in its entirety, and the Attorney General is concurrently issuing a new Memorandum setting forth the Department's policy going forward. That Memorandum also directs that the current provisions of the Justice Manual at sections 1–17.000, 5–11.105, and 9–16.325 be revised to conform to the new policy.

Regulatory Certifications

A. Administrative Procedure Act

This rule relates to a matter of agency management or personnel and is a rule of agency organization, procedure, or practice. As such, this rule is exempt from the usual requirements of prior notice and comment and a 30-day delay in effective date. *See* 5 U.S.C. 553(a)(2), (b), and (d). The rule is effective upon signature. In its discretion, the Department is seeking post-promulgation public comment on this rulemaking.

B. Regulatory Flexibility Act

An analysis under the Regulatory Flexibility Act was not required for this rule because the Department was not required to publish a general notice of proposed rulemaking for this matter. *See* 5 U.S.C. 601(2), 604(a).

C. Executive Orders 12866 and 13563—Regulatory Review

This rule has been drafted and reviewed in accordance with section 1(b) of Executive Order 12866, ''Regulatory Planning and Review,'' and section 1(b) of Executive Order 13563, ''Improving Regulation and Regulatory Review.''

This rule is ''limited to agency organization, management, or personnel matters'' and thus is not a ''rule'' for purposes of review by the Office of Management and Budget under section 3(d)(3) of Executive Order 12866. Accordingly, this rule has not been reviewed by the Office of Management and Budget.

D. Executive Order 12988—Civil Justice Reform

This regulation meets the applicable standards set forth in sections 3(a) and 3(b)(2) of Executive Order 12988, ''Civil Justice Reform.''

E. Executive Order 13132—Federalism

This rule will not have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. It is a rule of internal agency practice and procedure. Therefore, in accordance with Executive Order 13132, ''Federalism,'' the Department has determined that this rule does not have sufficient federalism implications to warrant the preparation of a federalism summary impact statement.

F. Unfunded Mandates Reform Act of 1995

This rule will not result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of $100 million or more (adjusted annually for inflation) in any one year, and it will not significantly or uniquely affect small governments. Therefore, no actions are necessary under the provisions of the Unfunded Mandates Reform Act of 1995, 2 U.S.C. 1501 *et seq.*

G. Congressional Review Act

This rule is not a major rule as defined by the Congressional Review Act, 5 U.S.C. 804. This action pertains to agency management, personnel, and organization and does not substantially affect the rights or obligations of non-agency parties. Accordingly, it is not a ''rule'' as that term is used in the Congressional Review Act, 5 U.S.C. 804(3)(B), (C), and the reporting requirements of 5 U.S.C. 801 do not apply.

H. Paperwork Reduction Act of 1995

This final rule does not impose any new reporting or recordkeeping requirements under the Paperwork Reduction Act of 1995, 44 U.S.C. 3501–3521.

List of Subjects in 28 CFR Part 50

Administrative practice and procedure.

Accordingly, for the reasons set forth in the preamble, and by virtue of the authority vested in me as Attorney General, including 5 U.S.C. 301 and 28 U.S.C. 509, 510, part 50 of title 28 of the Code of Federal Regulations is amended as follows:

PART 50—STATEMENTS OF POLICY

■ 1. The authority citation for part 50 continues to read as follows:

Authority: 5 U.S.C. 301; 18 U.S.C. 1162; 28 U.S.C. 509, 510, 516, and 519; 42 U.S.C.

1921 *et seq.,* 1973c; and Pub. L. 107–273, 116 Stat. 1758, 1824.

§ 50.28 [Removed and Reserved]

■ 2. Section 50.28 is removed and reserved.

Dated: May 5, 2022.

Merrick B. Garland,

Attorney General.

AGENCY: Office of Surface Mining Reclamation and Enforcement, Interior.

ACTION: Final rule; approval of amendment, and removal of a required amendment.

SUMMARY: We, the Office of Surface Mining Reclamation and Enforcement (OSMRE), are approving, subject to certain limitations discussed below, an amendment to the Kentucky regulatory program (Kentucky program) under the Surface Mining Control and Reclamation Act of 1977 (SMCRA or the Act). The regulatory provisions we are approving establish new bond requirements for providing sufficient financial assurances for the long-term treatment of unanticipated pollutional discharges at permitted sites. Consequently, we are removing a required amendment that we imposed in 2018 regarding financial assurance for the long-term treatment of discharges. We are also approving revisions to other various bond requirements.

DATES: Effective June 9, 2022.

FOR FURTHER INFORMATION CONTACT: Mr. Michael Castle, Field Office Director, Lexington Field Office, Office of Surface Mining Reclamation and Enforcement, Telephone: (859) 260–3900, Email: *mcastle@osmre.gov.*

SUPPLEMENTARY INFORMATION:

I. Background on the Kentucky Program
II. Submission of the Amendment
III. OSMRE's Findings
IV. Summary and Disposition of Comments
IV. OSMRE's Decision
V. Statutory and Executive Order Reviews

I. Background on the Kentucky Program

Subject to OSMRE's oversight, section 503(a) of the Act permits a State to assume primacy for the regulation of surface coal mining and reclamation operations on non-Federal and non-Indian lands within its borders by demonstrating that its program includes, among other things, State laws and regulations that govern surface coal mining and reclamation operations in accordance with the Act and consistent with the Federal regulations. *See* 30 U.S.C. 1253(a)(1) and (7). Based on these criteria, the Secretary of the Interior conditionally approved the Kentucky program effective May 18, 1982. You can find background information on the program, including the Secretary's findings, the disposition of comments, and conditions of approval in the May 18, 1982, **Federal Register** (47 FR 21434). You can also find later actions concerning Kentucky's program and program amendments at 30 CFR 917.11, 917.12, 917.13, 917.15, 917.16, and 917.17. The regulatory authority in Kentucky is Kentucky's Energy and Environment Cabinet (herein referred to as the Cabinet).

II. Submission of the Amendment

By letter dated November 25, 2019 (Administrative Record No. KY 2003), the Cabinet submitted an amendment to its program under SMCRA (30 U.S.C. 1201 *et seq.*). The amendment revises chapter 10:015 of title 405 of the Kentucky Administrative Regulations (KAR), *General bonding provisions.* The regulatory provisions at Section 8(7), *Bond Rate of Additional Areas,* establish new requirements for the calculation of additional bond amounts necessary for the long-term treatment of unanticipated pollutional discharges (hereafter referred to as ''discharges''). Other bond requirements of a non-substantive nature were also included. *See* 405 KAR 10, *Bond and Insurance Requirements,* subchapter 10:015. The submission is intended to address disapprovals we made in a 2018 decision regarding the Cabinet's proposed regulations for the long-term treatment of discharges in a final rule designated KY–256–FOR (KY–256), *see* January 29, 2018, **Federal Register** (83 FR 3948), and the resultant action we required under the authority of 30 CFR 732.17(e) and (f). The required action is codified in the Kentucky program at 30 CFR 917.16(p), *Required regulatory program amendments.* The full text of the program submission is available at *https://www.regulations.gov.*

A. Background of Kentucky Program Amendment KY–256—In May 2012, in accord with 30 CFR 733.12(b), we notified the Cabinet that we had reason to believe it was not implementing, administering, enforcing, and maintaining the reclamation bond provisions of its approved program in a manner that assured ''completion of the [applicable] reclamation plan,'' as required by section 509(a) of SMCRA, 30 U.S.C. 1259(a), *Performance bonds.* The Cabinet responded to this section 733 notice with three submissions: One in September 2012, another in July 2013, and a third in December 2013. The first submission was announced in the **Federal Register** on February 20, 2013 (78 FR 11796). Subsequently, all three submissions were combined (and public comment solicited) in a single **Federal Register** document, 80 FR 15953 (March 26, 2015), in which the proposed rule was designated State program amendment KY–256. As the document explained, KY–256–FOR was intended to address the deficiencies identified in the section 733 notice.

B. Partial Approval of KY–256—We approved most of the provisions of KY–256–FOR in a final rule published in the **Federal Register** on January 29, 2018 (83 FR 3948). One of the provisions not approved, and now under consideration in revised form, was subsection 8(7) of 405 KAR 10:015, which consisted of three subsections (8(7)(a), –(b), and –(c)). If approved, subsection 8(7)(a) would have provided that, for permitted sites requiring long-term treatment of discharges, the Cabinet must calculate an additional bond amount based on the estimated annual treatment cost provided by the permittee and multiplied by twenty years. Focusing on this twenty-year multiplier, we disapproved the provision in our January 2018 final rule because the Cabinet had not demonstrated how this provision would assure that adequate bonding would be calculated for the long-term treatment of discharges. In doing so, we reaffirmed that abatement of unanticipated water pollution is an element of reclamation and noted that a permittee's treatment obligation may extend in perpetuity. As a result, we found the provision less stringent than section 509 of SMCRA, 30 U.S.C. 1259, and less effective than the Federal regulations at 30 CFR part 800 and, on that basis, declined to approve it. We also declined to approve subsection 8(7)(b), which would have operated in conjunction with subsection 8(7)(a) by subjecting the estimate of annual treatment cost specified in subsection

(a) to verification and acceptance by the Cabinet.

Lastly, we declined to approve subsection 8(7)(c), which would have allowed permittees to submit to the Cabinet for approval a remediation plan that demonstrates that substandard discharge will be abated through land reclamation techniques, prior to phase II bond release, in lieu of the bond calculation in subsection 8(7)(a). As the final rule explained, *see* 83 FR 3948, 3955, this provision would have effectively created an exception to the requirement of SMCRA section 509 that a permittee post bond that is fully adequate to cover complete reclamation, including water treatment, and therefore could not be approved. In addition to declining to approve the three components of subsection 8(7), we also required the Cabinet to take certain regulatory action pursuant to our authority in 30 CFR 732.17(e) and (f), as more fully discussed below.

C. Litigation—Before taking this regulatory action, the Cabinet and the Kentucky Coal Association (KCA) filed separate—but similar—lawsuits against the Secretary of the Interior and the Deputy Director of OSMRE in the U.S. District Court for the Eastern District of Kentucky (case nos. 3:18–cv–19, 3:18–cv–20), challenging the partial approval of KY–256. Prior to the government's deadline to file its initial response to the lawsuits, the parties commenced settlement negotiations. The parties agreed to jointly seek a stay of proceedings in each case so that they could explore the possibility of resolving the lawsuits through rulemaking rather than litigation. Motions seeking stays were filed in each case in June and July 2018. In July 2018, the judges in the two cases granted the motions and stayed proceedings for 90 days. Through a series of similar motions and orders, the stays have been extended to the present day and remain in effect.

D. Required Amendment—The Cabinet's amendment submission is intended to satisfy the regulatory action required, as codified at 30 CFR 917.16(p), by addressing the issues identified in the final rule for KY–256, and is further intended to help resolve the pending litigation. In particular, the regulatory action we required was for the Cabinet to either: (1) Notify us how the Cabinet will require operators to address financial assurances for the long-term treatment of discharges, potentially in perpetuity, under its currently approved program, given that we did not approve new regulatory provisions in subsection 8(7) of 405 KAR 10:015; or (2) submit an amendment to its approved program that requires operators to provide sufficient financial assurances for the treatment of discharges for as long as such discharges continue to exist. In response to the required regulatory action, the Cabinet in 2018 initially elected the first option, notifying us, first verbally and then in writing on March 27, 2018, that its program already provides adequate financial assurance. Following the filing of litigation on March 31, 2018, and the subsequent agreement of the parties to pursue settlement, the Cabinet then elected the second option, submitting provisions intended to provide financial assurance for the treatment of discharges when long-term treatment is required. We describe our findings on the proposed rule, KY–261, in section III, below.

E. Additional Revisions—In addition to responding to the required amendment, the Cabinet has proposed certain non-substantive revisions at 405 KAR 10:015. These revisions include reference changes and editorial edits but do not change the administrative regulations substantively; instead, these changes clarify content or conform the regulation to drafting requirements and conventions. The non-substantive changes are found in 405 KAR 10:015, sections 1(2), 2(5), 2(5)(c)(3)(d), 2(5)(c)(3)(e), 2(6), 2(6)(b), 2(6)(c), 2(7), 2(7)(c), 4, 4(1)(b), 4(2)(a), 4(2)(f), 5(1), 5(2), 6(1), 6(1)(a), 6(1)(c), 6(3), 7(3), 8, 8(5), 9(4), 10(2), 11(1), 11(2), 11(3), 11(5), and 12(1)(g). Because the changes in these sections are non-substantive, we make no findings on them.

F. Public Notice—We announced receipt of the proposed amendment in the February 25, 2020, **Federal Register** (85 FR 10634) (Administrative Record No. KY–2003–3). In the same document, we opened the public comment period and provided an opportunity for a public hearing or meeting on the adequacy of the amendment. We did not hold a public hearing or meeting because one was not requested. The public comment period ended on March 26, 2020. Public comments received are addressed in section IV of this notice.

G. Demonstration—During our review of the amendments, we requested that the Cabinet demonstrate that proposed subsection 8(7)(a) would provide sufficient financial assurances for long-term treatment sites. By letter dated August 28, 2020 (Administrative Record No. 2003–5), the Cabinet provided a demonstration of the model to be used to calculate the additional bond amounts. This demonstration included a narrative describing how the model works and three example scenarios that calculated the additional bond amounts, which are based on the total annualized capital costs and annual treatment costs multiplied by a factor of 25. The calculation is intended to result in the amount of an additional bond necessary for the regulatory authority to complete reclamation, including treatment of discharges, in the event of a forfeiture. As part of our review, we met with Cabinet representatives on January 19, 2021. During the meeting, the Cabinet provided clarifications on the adequacy of the inputs to the model and how the model processed this information. Cabinet representatives then provided a demonstration, supplemented by a narrative of the model's calculation process, that adequately addressed our questions and comments.

III. OSMRE's Findings

The Cabinet seeks to add administrative regulations at 405 KAR 10:015, subsections 8(7)(a) and (b), to address the requirement for sufficient financial assurances for the treatment of discharges, as identified in the final rule for KY–256. The following are the findings we made concerning the amendment under SMCRA and the Federal regulations at 30 CFR 732.15, *Criteria for approval or disapproval of state programs,* and 30 CFR 732.17, *State program amendments,* as described below.

A. 405 KAR 10:015 8(7)(a): The Cabinet proposes to add subsection 8(7)(a) to its approved program. As mentioned, a provision at this section was proposed earlier but disapproved in KY–256. The proposed provision states that, for any permit identified as requiring long-term treatment of a discharge, the Cabinet must calculate the amount of an additional bond or other financial assurance instrument based on the estimated annual treatment cost, provided by the permittee and verified by the Cabinet, multiplied by a factor of 25, plus any capital costs of the treatment system.

OSMRE Finding: In KY–256, the Cabinet had proposed a new regulation at subsection 8(7)(a), which provided that, for any permit that had been identified as producing long-term treatment drainage, the Cabinet would calculate the amount of an additional bond based on the estimated annual treatment cost, as provided by the permittee and verified by the Cabinet, multiplied by twenty years. We disapproved the provision because the Cabinet had not demonstrated that a twenty-year multiplier would result in an adequate bond. We stated that both SMCRA and the Federal regulations require operators to post bonds that are sufficient in amount to assure

completion of reclamation if that reclamation were to be completed by the regulatory authority. This includes abatement of any discharges. Therefore, absent such a demonstration, we found subsection 8(7)(a) less stringent than section 509 of SMCRA and less effective than the Federal regulations at 30 CFR part 800, *Bond and Insurance Requirements for Surface Coal Mining and Reclamation Operations Under Regulatory Programs,* and we did not approve it.

The proposed regulation modified the KY–256 version of 8(7)(a) in three important ways. First, when calculating the bond amount, the Cabinet would now be required to account for capital costs, something the earlier version in KY–256 did not do. Second, the bond calculation basis (annual treatment cost) would be subject to a factor of 25, not the twenty-year multiplier previously proposed. Third, the Cabinet changed the reference in the earlier version from ''additional bond'' to ''additional bond or other financial assurance instrument,'' though the change was not explained in the Cabinet's November 2019 submission.

There is no comparable Federal regulation that prescribes how financial assurance requirements for the long-term treatment of discharges should be determined. Absent such regulation, we reviewed the model provided by the Cabinet to understand how the additional bond or other financial assurance instrument is to be calculated under subsection 8(7)(a). Taken together, the provisions of the proposed regulation, the Cabinet's demonstration on the workings of its bond calculation model, and general bond provisions of the Kentucky program form the basis of our findings in determining whether the proposed provisions meet the requirements of section 509 of SMCRA and 30 CFR part 800.

Using this bond calculation model for long-term treatment costs, the Cabinet determines the amount of bond necessary to assure completion of reclamation if the work had to be performed by the regulatory authority following forfeiture. The language of subsection 8(7)(a), as proposed, leaves the verification and acceptance of the long-term treatment cost determination to the regulatory authority. We agree with this approach and, based on the Cabinet's demonstration of its use of its bond calculation model, find this method of determining the amount of bond necessary for long-term treatment of discharges no less stringent than section 509 of SMCRA and no less effective than the Federal regulations at 30 CFR part 800.

We are satisfied that any changed circumstances affecting the Cabinet's initial assumptions can be appropriately addressed through future bond adjustments, as authorized in section 10 of 405 KAR 10:015. Importantly, bond adequacy must be reassessed every two years under subsection 6(3) of 405 KAR 10:015. This approach to bond calculation is consistent with the Federal regulations at 30 CFR 800.14, *Determination of bond amount,* and 800.15, *Adjustment of amount.* Neither of these provisions spell out the precise parameters for calculation of the original bond amount or for periodic adjustments of the bond amount. Rather, those decisions are to be made by the regulatory authority. We expect that long-term treatment bonds will be reviewed biannually under subsection 6(3) of 405 KAR 10:015 and adjusted, using this bond calculation model for long-term treatment costs, as appropriate under section 10.

Finally, we are also satisfied that the Cabinet's bond calculation model for long-term treatment costs demonstrates an adequate bond amount. Recognizing the difficulty of determining an adequate bond amount covering treatment which may last in perpetuity, and that there is no specific Federal requirement or guidance on determining an adequate amount of a bond covering treatment in perpetuity, the Cabinet chose to use a surrogate of seventy-five years. We consider the Cabinet's use of the seventy-five-year surrogate acceptable considering that the nature and extent of long-term discharges can change over time, that section 10 of 405 KAR 10:015 authorizes the Cabinet to adjust bond amounts, and that section 6(3) of the same subchapter requires biannual assessments of bond adequacy.

Given these considerations, we conclude that subsection 8(7)(a)'s calculation provisions meet the requirements of section 509 of SMCRA, including the requirement in section 509(a) that the amount of the bond ''be sufficient to assure the completion of the reclamation plan if the work had to be performed by the regulatory authority in the event of forfeiture,'' and that subsection 8(7)(a) is no less stringent than section 509 of SMCRA and no less effective than the regulations at 30 CFR part 800. Because the Cabinet did not provide any explanation or justification in its submission for expanding the scope to include other financial assurance instruments beyond those already approved in section 3, we are approving the regulation but only to the extent that the phrase ''additional bond or other financial assurance instrument'' in subsection 8(7)(a) refers to the relevant performance bonds already authorized in section 3 of 405 KAR 10:015. We maintain oversight of the regulatory program and the bonding system under the approved Kentucky program. Should we become aware that the State's bonding program is insufficient, we have the authority to require the State to take appropriate action. We also note our amenability to considering, in the future, a proposed amendment seeking approval of the use of ''other financial assurance instruments,'' one that explains what they are and justifies Kentucky's legal authority to use such instruments.

B. 405 KAR 10:015 8(7)(b): The Cabinet proposes to add subsection 8(7)(b) to its approved program. A provision at this section was previously proposed but disapproved in KY–256. The proposed provision provides that the long-term treatment cost estimate is subject to verification and acceptance by the Cabinet and that the Cabinet will use its own estimate for annual treatment costs if it cannot verify the accuracy of the permittee's estimate.

OSMRE Finding: Except for the added clarification in subsection 8(7)(b) that the cost estimate called for in subsection 8(7)(a) is a ''long-term treatment'' cost estimate, the Cabinet had proposed this same language under KY–256. We did not approve this provision previously because it referenced the bond calculation in 8(7)(a) that we were not approving. Because we are approving the provisions of new subsection 8(7)(a), this reference is no longer a concern. We therefore find that subsection 8(7)(b) is no less stringent than section 509 of SMCRA and no less effective than the Federal regulations at 30 CFR part 800, including 30 CFR 800.14(a)(1), which requires that the amount of bond required be determined by the regulatory authority. On this basis, it is approved.

C. 405 KAR 10:015 8(7)(c): The Cabinet's submission includes the deletion of subsection 8(7)(c), which was proposed in KY–256 and would have provided that, in lieu of posting the additional bond amount, the permittee would submit a satisfactory reclamation and remediation plan for any area producing a discharge. As originally proposed, the reclamation plan would have to demonstrate that a pollutional discharge can be permanently abated by land reclamation techniques prior to phase II bond release.

OSMRE Finding: We did not approve the new regulation proposed in KY–256 because we found the allowance of a remediation plan that is based on land reclamation in lieu of posting adequate

bond unacceptable. As we stated, neither SMCRA nor its implementing regulations provide any exceptions to the requirement to post a bond that assures completion of reclamation, including water treatment. For this reason, we found the provision to be less stringent than section 509 of SMCRA and less effective than the Federal regulations at 30 CFR part 800. Because we never approved the provision, we are not making a finding on this deletion.

IV. Summary and Disposition of Comments

Public Comments

In the February 25, 2020, **Federal Register** document announcing our receipt of this amendment, we asked for public comments (85 FR 10634). The comment period closed on March 26, 2020. No requests for public meetings or hearings were received. By letter dated March 26, 2020, we received comments from the KCA, which represents the producers of the majority of coal mined in Kentucky and over one hundred additional businesses and organizations that depend upon or support the Kentucky coal mining industry (Administrative Record No. KY–2003–4).

In its comments, KCA supported approval of the regulations proposed by the Cabinet, noting that it has actively participated in the Kentucky rulemaking process and has been involved in the noted litigation concerning partial approval of KY–256. The KCA stated that the proposed revisions are as stringent as the requirements of SMCRA and satisfy the criteria for approval under 30 CFR 732.15 and should be approved without delay. The KCA mentioned its understanding that the Cabinet has or can provide significant evidence demonstrating that the bonding calculation methodology contained in the revised subsection 8(7) will ensure adequate bonding. The KCA emphasized that its member companies require regulatory certainty and clarity and urged approval without delay.

OSMRE Response: Because the comments are in support of the approval of the amendment, a position with which OSMRE agrees, we make no response.

Federal Agency Comments

On December 16, 2019, in accord with 30 CFR 732.17(h)(11)(i) and section 503(b) of SMCRA, we requested comments on the amendment from various Federal agencies with an actual or potential interest in the Kentucky program (Administrative Record No. 2003–1). No Federal agency comments were received.

Environmental Protection Agency (EPA) Concurrence and Comments

Under 30 CFR 732.17(h)(11)(ii), we are required to obtain written concurrence from EPA for those provisions of the program amendment that relate to air or water quality standards issued under the authority of the Clean Water Act (33 U.S.C. 1251 *et seq.*) or the Clean Air Act (42 U.S.C. 7401 *et seq.*). None of the revisions that the Cabinet proposes to make in this amendment pertain to or affect air or water quality standards. Therefore, we did not ask EPA to concur on the amendment. However, on December 16, 2019, under 30 CFR 732.17(h)(11)(i), we requested comments from the EPA (Administrative Record No. 2003–1). The EPA did not provide any comments.

State Historical Preservation Officer (SHPO) and the Advisory Council on Historic Preservation (ACHP)

Under 30 CFR 732.17(h)(4), we are required to request comments from the SHPO and ACHP on amendments that may have an effect on historic properties. On December 16, 2019, we requested comments from the Kentucky Heritage Council on this amendment (Administrative Record No. 2003–1). We did not receive any comments.

V. OSMRE's Decision

Based on the above findings, we are approving KY–261 as submitted by the Cabinet on November 25, 2019. We are approving the amendment subject to our understanding regarding the meaning of ''other financial assurance instrument,'' and removing the required amendment at 30 CFR 917.16(p).

To implement this decision, we are amending the Federal regulations, at 30 CFR part 917, which codify decisions concerning the Kentucky program. In accordance with the Administrative Procedure Act (5 U.S.C. 500 *et seq.*), this rule will take effect 30 days after the date of publication. Section 503(a) of SMCRA requires that the State's program demonstrate that the State has the capability of carrying out the provisions of the Act and meeting its purposes. SMCRA requires consistency of State and Federal standards, which this amendment achieves. For these reasons, we conclude that KY–261 satisfies the required action identified in our January 2018 final rule on KY–256. It provides a mechanism for calculating an additional bond amount at the time when the regulatory agency determines that long-term treatment is required.

VI. Statutory and Executive Order Reviews

Executive Order 12630—Governmental Actions and Interference With Constitutionality Protected Property Rights

This rule would not effect a taking of private property or otherwise have taking implications that would result in property being taken for Government use without just compensation under the law. Therefore, a takings implication assessment is not required. This determination is based on an analysis of the relevant Federal regulations.

Executive Order 12866—Regulatory Planning and Review and 13563—Improving Regulation and Regulatory Review

Executive Order 12866 provides that the Office of Information and Regulatory Affairs in the Office of Management and Budget (OMB) will review all significant rules. Pursuant to OMB guidance, dated October 12, 1993, the approval of State program amendments is exempted from OMB review under Executive Order 12866. Executive Order 13563, which reaffirms and supplements Executive Order 12866, retains this exemption.

Executive Order 12988—Civil Justice Reform

The Department of the Interior has reviewed this rule as required by section 3(a) of Executive Order 12988. The Department has determined that this **Federal Register** document meets the criteria of section 3 of Executive Order 12988, which is intended to ensure that the agency review its legislation and proposed regulations to eliminate drafting errors and ambiguity; that the agency write its legislation and regulations to minimize litigation; and that the agency's legislation and regulations provide a clear legal standard for affected conduct rather than a general standard, and promote simplification and burden reduction. Because section 3 focuses on the quality of Federal legislation and regulations, the Department limited its review under this Executive order to the quality of this **Federal Register** document and to changes to the Federal regulations. The review under this Executive order did not extend to the language of the State regulatory program or to the program amendment that the Cabinet drafted.

Executive Order 13132—Federalism

This rule has potential federalism implications as defined under section 1(a) of Executive Order 13132. Executive Order 13132 directs agencies to ''grant the States the maximum

administrative discretion possible'' with respect to Federal statutes and regulations administered by the States. Kentucky, through its approved regulatory program, implements and administers SMCRA and its implementing regulations at the State level. This rule approves an amendment to the Kentucky program submitted and drafted by the State and, thus, is consistent with the direction to provide maximum administrative discretion to States.

Executive Order 13175—Consultation and Coordination With Indian Tribal Government

The Department of the Interior strives to strengthen its government-to-government relationship with Tribes through a commitment to consultation with Tribes and recognition of their right to self-governance and tribal sovereignty. We have evaluated this rule under the Department's consultation policy and under the criteria in Executive Order 13175 and have determined that it has no substantial direct effects on federally recognized Tribes or on the distribution of power and responsibilities between the Federal Government and Tribes. Therefore, consultation under the Department's tribal consultation policy is not required. The basis for this determination is that our decision on the Kentucky program does not include Tribal lands or affect regulation of activities on Tribal lands. Tribal lands are regulated independently under the applicable approved Federal program.

Executive Order 13211—Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use

Executive Order 13211 requires agencies to prepare a Statement of Energy Effects for a rulemaking that is (1) considered significant under Executive Order 12866, and (2) likely to have a significant adverse effect on the supply, distribution, or use of energy. Because this rule is exempt from review under Executive Order 12866 and is not a significant energy action under the definition in Executive Order 13211, a Statement of Energy Effects is not required.

Executive Order 13045—Protection of Children From Environmental Health Risks and Safety Risks

This rule is not subject to Executive Order 13045 because this is not an economically significant regulatory action as defined by Executive Order 12866; and this action does not address environmental health or safety risks disproportionately affecting children.

National Environmental Policy Act

Consistent with sections 501(a) and 702(d) of SMCRA (30 U.S.C. 1251(a) and 1292(d), respectively) and the U.S. Department of the Interior Departmental Manual, part 516, section 13.5(A), State program amendments are not major Federal actions within the meaning of section 102(2)(C) of the National Environmental Policy Act (42 U.S.C. 4332(2)(C).

National Technology Transfer and Advancement Act

Section 12(d) of the National Technology Transfer and Advancement Act (NTTAA) (15 U.S.C. 3701 *et seq.*) directs OSMRE to use voluntary consensus standards in its regulatory activities unless to do so would be inconsistent with applicable law or otherwise impractical. (OMB Circular A–119 at p. 14) This action is not subject to the requirements of section 12(d) of the NTTAA because application of those requirements would be inconsistent with SMCRA.

Paperwork Reduction Act

This rule does not include requests and requirements of an individual, partnership, or corporation to obtain information and report it to a Federal agency. As this rule does not contain information collection requirements, a submission to the Office of Management and Budget under the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*) is not required.

Regulatory Flexibility Act

This rule will not have a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). The State submittal, which is the subject of this rule, is based upon the Federal regulations setting minimum bond requirements for surface coal mining and reclamation operations under regulatory programs, for which an economic analysis was prepared and certification made that such regulations would not have a significant economic effect upon a substantial number of small entities. In making the determination as to whether this rule would have a significant economic impact, the Department relied upon the data and assumptions for the corresponding Federal regulations.

Small Business Regulatory Enforcement Fairness Act

This rule is not a major rule under 5 U.S.C. 804(2), the Small Business Regulatory Enforcement Fairness Act. This rule: (a) Does not have an annual effect on the economy of $100 million; (b) will not cause a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions; and (c) does not have significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of U.S.-based enterprises to compete with foreign-based enterprises. This determination is based on an analysis of the corresponding Federal regulations, which were determined not to constitute a major rule.

Unfunded Mandates Reform Act

This rule will not impose an unfunded mandate on State, local, or Tribal governments or the private sector of more than $100 million per year. The rule does not have a significant or unique effect on State, local, or Tribal governments or the private sector. This determination is based an analysis of the Federal regulations setting minimum bond requirements for surface coal mining and reclamation operations under regulatory programs, which were determined not to impose an unfunded mandate. Therefore, a statement containing the information required by the Unfunded Mandates Reform Act (2 U.S.C. 1531 *et seq.*) is not required.

List of Subjects in 30 CFR Part 917

Intergovernmental relations, Surface mining, Underground mining.

Thomas D. Shope,

Regional Director, North Atlantic-Appalachian Region.

For the reasons set out in the preamble, 30 CFR part 917 is amended as set forth below:

PART 917—KENTUCKY

■ 1. The authority citation for part 917 continues to read as follows:

Authority: 30 U.S.C. 1201 *et seq.*

■ 2. Section 917.15 is amended in the table in paragraph (a) by adding an entry for ''November 25, 2019'' in chronological order by ''Date of Final Publication'' to read as follows:

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 100

[Docket No. USCG–2022–0271]

Special Local Regulations; Annual Les Cheneaux Islands Antique Wooden Boat Show; Hessel, MI

AGENCY: Coast Guard, Department of Homeland Security (DHS).

ACTION: Notification of enforcement of regulation.

SUMMARY: The Coast Guard will enforce the Annual Les Cheneaux Islands Antique Wooden Boat Show special local regulation on Marquette Bay, Hessel, MI, to protect the safety of life and property on navigable waters prior to, during, and immediately after this event. During the enforcement period, entry into, transiting, or anchoring within the regulated area is prohibited unless authorized by the Captain of the Port Sault Sainte Marie or a designated representative.

DATES: The regulations in 33 CFR 100.922 will be enforced from 6 a.m. through 8 p.m. on August 13, 2022.

FOR FURTHER INFORMATION CONTACT: If you have questions about this notification of enforcement, call or email LT Deaven Palenzuela, Chief of Waterways Management Division, U.S. Coast Guard; telephone 906–635–3223, email *ssmprevention@uscg.mil.*

SUPPLEMENTARY INFORMATION: The Coast Guard will enforce the special local regulations in 33 CFR 100.922 for the Annual Les Cheneaux Islands Antique Wooden Boat Show in Hessel, MI, from 6 a.m. through 8 p.m. on August 13, 2022. This action is being taken to protect the safety of life and property on navigable waters prior to, during, and immediately after the event. Our special local regulations for the annual Les Cheneaux Islands Antique Wooden Boat Show § 100.922, specifies the location of the regulated area which encompasses portions of Marquette Bay, Hessel, MI. During the enforcement period, all vessels while in the regulated area will operate at a no wake speed and follow the directions of the on-scene patrol commander. The Coast Guard may be assisted by other Federal, State, or local law enforcement agencies in enforcing this regulation.

In addition to this notification of enforcement in the **Federal Register**, the Coast Guard plans to provide notification of this enforcement period via the Local Notice to Mariners and/or marine information broadcasts.

Dated: May 3, 2022.

A.R. Jones,

Captain, U.S. Coast Guard, Captain of the Port Sault Sainte Marie.

[Docket No. USCG–0270]

Safety Zones; Annual Events in the Captain of the Port Buffalo Zone—Cleveland National Air Show

AGENCY: Coast Guard, Department of Homeland Security (DHS).

ACTION: Notification of enforcement of regulation.

SUMMARY: The Coast Guard will enforce a safety zone for the Cleveland National Airshow from September 1 through September 5, 2022, to provide for the safety of life and property on navigable waters during this event. Our regulation for annual events in the Captain of the Port Buffalo Zone identifies the regulated area for this event in Cleveland, OH. During the enforcement period, no person or vessel may enter the safety zone without the permission of the Captain of the Port Buffalo.

DATES: The regulations in 33 CFR 165.939 will be enforced for the Cleveland National Airshow safety zone listed in item (d)(2) in the Table to § 165.939 from 9 a.m. through 6 p.m., each day from September 1, 2022, through September 5, 2022.

FOR FURTHER INFORMATION CONTACT: If you have questions about this notification of enforcement, call or email LT Jared Stevens, Waterways Management Division, Marine Safety Unit Cleveland, U.S. Coast Guard; telephone 216–937–0124, email *D09-SMB-MSUCLEVELAND-WWM@uscg.mil.*

SUPPLEMENTARY INFORMATION: The Coast Guard will enforce the safety zone listed in 33 CFR 165.939 for the Cleveland National Airshow daily from 9 a.m. through 6 p.m. on September 1 through September 5, 2022. This action is being taken to provide for the safety of life on navigable waterways during this multi-day event. Our regulation for annual events in the Captain of the Port Buffalo Zone identifies the regulated area for the Cleveland National Airshow which encompasses all U.S. waters of Lake Erie and Cleveland Harbor (near Burke Lakefront Airport) from 41°30′20″ N and 081°42′20″ W to 41°30′50″ N and 081°42′49″ W, to 41°32′09″ N and 081°39′49″ W, to 41°31′53″ N and 081°39′24″ W.

Pursuant to 33 CFR 165.23, entry into, transiting, or anchoring within the safety zone during the enforcement period is prohibited unless authorized by the Captain of the Port Buffalo or their designated representative. Those seeking permission to enter the safety zone may request permission from the Captain of Port Buffalo via VHF Channel 16. Vessels and persons granted permission to enter the safety zone shall obey the directions of the Captain of the Port Buffalo or his designated representative. While within a safety zone, all vessels shall operate at the minimum speed necessary to maintain a safe course.

In addition to this notification of enforcement in the **Federal Register**, the Coast Guard plans to provide

notification of this enforcement period via the Local Notice to Mariners and marine information broadcasts.

Dated: April 11, 2022.

L.M. Littlejohn,

Captain, U.S. Coast Guard, Captain of the Port Buffalo.

Coast Guard

33 CFR Part 165

[Docket No. USCG–2022–0263]

Safety Zones; Recurring Safety Zones in Captain of the Port Sault Sainte Marie Zone for Events Beginning in June 2022

AGENCY: Coast Guard, Department of Homeland Security (DHS).

ACTION: Notification of enforcement of regulation.

SUMMARY: The Coast Guard will enforce established safety zones for maritime events to provide for the safety of life on navigable waterways. Our regulation for safety zones within the Captain of the Port Sault Sainte Marie Zone identifies the regulated area for these safety zones. During the enforcement periods, vessels must stay out of the established safety zone and may only enter with permission from the designated representative of the Captain of the Port Sault Sainte Marie.

DATES: The regulations in 33 CFR 165.918 will be enforced for the safety zones identified in Table 1 of the **SUPPLEMENTARY INFORMATION** section below for the dates and times specified.

FOR FURTHER INFORMATION CONTACT: If you have questions about this publication, call or email Waterways Management division, LT Deaven Palenzuela, Coast Guard Sector Sault Sainte Marie, U.S. Coast Guard; telephone 906–635–3223, email *ssmprevention@uscg.mil.*

SUPPLEMENTARY INFORMATION: The Coast Guard will enforce the safety zones in 33 CFR 165.918 as per the time, dates, and locations in Table 1.

TABLE 1

[Datum NAD 1983]

Event	Location	Event date
(2) Jordan Valley Freedom Festival Fireworks, East Jordan, MI.	All U.S. navigable waters of Lake Charlevoix, near the City of East Jordan, within the arc of a circle with an approximate 1200-foot radius from the fireworks launch site in position 45°09′18″ N, 085°07′48″ W.	June 25, 2022, from 10 p.m. to 10:30 p.m.
(3) Grand Marais Splash In; Grand Marais, MI.	All U.S. navigable waters within the southern portion of West Bay bound within the following coordinates: 46°40′22.08″ N, 085°59′0.12″ W, 46°40′22.08″ N, 85°58′22.08″ W, and 46°40′14.64″ N, 85°58′19.56″ W, with the West Bay shoreline forming the South and West boundaries of the zone.	June 18, 2022, from 2 p.m. to 4 p.m.

This action is being taken to provide for the safety of life on navigable waterways during the fireworks displays. The regulations for safety zones within the Captain of the Port Sault Sainte Marie Zone, § 165.918, apply for these fireworks displays.

This notification of enforcement is issued under authority of 33 CFR 165.918 and 5 U.S.C. 552 (a). In addition to this notification of enforcement in the **Federal Register**, the Coast Guard will provide the maritime community with advance notification of this enforcement period via Broadcast Notice to Mariners or Local Notice to Mariners. If the Captain of the Port Sault Sainte Marie determines that the safety zone need not be enforced for the full duration stated in this notification he or she may use a Broadcast Notice to Mariners to grant general permission to enter the respective safety zone.

Dated: May 3, 2022.

A.R. Jones,

Captain, U.S. Coast Guard, Captain of the Port Sault Sainte Marie.

[Docket No. USCG–2022–0244]

Safety Zones; Recurring Events in Captain of the Port Duluth—LaPointe Fireworks

AGENCY: Coast Guard, Department of Homeland Security (DHS).

ACTION: Notification of enforcement of regulation.

SUMMARY: The Coast Guard will enforce the safety zone for the LaPointe Fireworks in the waters of Lake Superior in LaPointe, WI, on July 4, 2022. This action is necessary to protect participants and spectators during the LaPointe Fireworks. During the enforcement period, entry into, transiting, or anchoring within the safety zone is prohibited unless authorized by the Captain of the Port Duluth or designated on-scene representative.

DATES: The regulations in 33 CFR 165.943 will be enforced for the LaPointe Fireworks safety zone listed in item 6 in the table to § 165.943 from 9 p.m. through 11 p.m. on July 4, 2022.

FOR FURTHER INFORMATION CONTACT: If you have questions on this notification of enforcement, call or email LTJG Joe McGinnis, MSU Duluth, Waterways Management Branch, U.S. Coast Guard; telephone 218–725–3823, email *DuluthWWM@uscg.mil.*

SUPPLEMENTARY INFORMATION: The Coast Guard will enforce the safety zone for the annual LaPointe Fireworks in item

6 in the table to 33 CFR 165.943 from 9 p.m. through 11 p.m. on July 4, 2022. This action is being taken to provide for the safety of life on navigable waterways during this event. Our regulation for marine events within the Ninth Coast Guard District, § 165.943, specifies the location of the safety zone for the LaPointe Fireworks, which encompasses all waters of Lake Superior in LaPointe, WI, within the arc of a circle with a 350-foot radius from the fireworks launch site with its center in position 46°46′40″ N, 090°47′22″ W. During the enforcement periods, as reflected in § 165.943(c), if you are the operator of a vessel in the safety zone, you must comply with directions from the Captain of the Port Duluth, or her on-scene representative.

Entry into, transiting, or anchoring within the safety zone is prohibited unless authorized by the Captain of the Port Duluth or their designated on-scene representative. The Captain of the Port's designated on-scene representative may be contacted via VHF Channel 16. In addition to this notification of enforcement in the **Federal Register**, the Coast Guard plans to provide notification of this enforcement period via a Broadcast Notice to Mariners.

Dated: April 26, 2022.

F.M. Smith,

Commander, U.S. Coast Guard, Captain of the Port Duluth.

RIN 1625–AA00

Safety Zone; Celebrate Our Stars and Stripes Fireworks, Raritan Bay, Perth Amboy, NJ

AGENCY: Coast Guard, Department of Homeland Security (DHS).

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone for navigable waters of Raritan Bay near Perth Amboy, NJ, for a fireworks display. This temporary safety zone is necessary to protect spectators and vessel from the hazards associated with the fireworks display. This rule is intended to restrict all vessels from a portion of Raritan Bay during the fireworks unless authorized by the Captain of the Port (COTP) New York or a designated representative.

DATES: This rule is effective from 9 p.m. on July 2, 2022, until 10 p.m. on July 3, 2022. This rule will be enforced either on July 2, 2022, from 9 p.m. to 10 p.m. or on July 3, 2022, from 9 p.m. to 10 p.m.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to *https://www.regulations.gov,* type USCG–2022–0281 in the search box and click ''Search.'' Next, in the Document Type column, select ''Supporting & Related Material.''

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email MST1 Gutierrez, Lizette, U.S. Coast Guard; telephone (718) 354–4154, email *D01-SMB-SecNY-Waterways@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
COTP Captain of the Port
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background Information and Regulatory History

The Coast Guard is issuing this temporary rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' Under 5 U.S.C. 553(b)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because the event sponsor was late in submitting the marine event application. This late submission did not give the Coast Guard enough time to publish an NPRM followed by a final rule before the effective date thus making it impracticable to publish an NPRM. The event sponsor advised that the event is in correlation with a festival bringing together Perth Amboy and South Amboy, NJ, to honor Independence Day. Any change to the date of the event would cause economic hardship on the event sponsor, negatively impacting other activities being held in conjunction with the event.

The location of the event is centrally located between both Perth Amboy and South Amboy which is more advantageous for the event spectators and sponsors. In addition it has less of an impact on vessel traffic within Raritan Bay because the location is out of the major shipping lanes.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 46 U.S.C. 70034 (previously 33 U.S.C. 1231). The COTP New York has determined this temporary safety zone is necessary to ensure the safety of spectators and vessels from the hazards associated with the fireworks display.

IV. Discussion of the Rule

This rule establishes a temporary safety zone on the waters of Raritan Bay near Perth Amboy, NJ, for a fireworks event on July 2, 2022. If the event is unable to happen on July 2, 2022, due to inclement weather, the fireworks event will instead occur on July 3, 2022. All persons and vessels shall comply with the instruction of the COTP New York or a designated representative during the enforcement of the temporary safety zone. Entering into, transiting through, or anchoring within the temporary safety zone is prohibited unless authorized by the COTP New York or a designated representative.

Based on the inherent hazards associated with fireworks, the COTP New York has determined that fireworks launches in close proximity to water crafts pose a significant risk to public safety and property. The combination of increased number of recreational vessels, congested waterways, darkness punctuated by bright flashes of light, and debris, especially burning debris falling on passing or spectator vessels, has the potential to result in serious injuries or fatalities. This temporary safety zone will restrict vessels from a portion of Raritan Bay around the location of the fireworks launch platform before, during and immediately after the fireworks display.

The Coast Guard determined that this regulated area will not have significant impact on vessel traffic due to its temporary nature and limited size and the fact that vessels are allowed to transit the navigable waters outside of the regulated area.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and

Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This rule has not been designated a ''significant regulatory action,'' under Executive Order 12866. Accordingly, this rule has not been reviewed by the Office of Management and Budget (OMB).

The Coast Guard's implementation of this temporary safety zone will be of short duration and is designed to minimize the impact to vessel traffic on the navigable waters. This temporary safety zone will only be enforced for approximately 60 minutes. Due to the location, vessels will be able to transit around the safety zone in a safe manner.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section V.A above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves establishment of a temporary safety zone lasting only 1 hour that will prohibit entry within a 300-yard radius of the fireworks barges located in approximate position 40°29′28″ N, 074°15′45″ W. It is categorically excluded from further review under paragraph L60(a) of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREA

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 00170.1, Revision No. 01.2.

■ 2. Add § 165.T01–0281 to read as follows:

§ 165.T01–0281 Safety Zone; Raritan Bay, Perth Amboy, NJ.

(a) *Location.* The following area is a safety zone: All navigable waters of Raritan Bay within a 300-yard radius of the fireworks barge located in approximate position 40°29′28″ N, 074°15′45″ W, in the vicinity of Perth Amboy, NJ, approximately 1,110 yards southeast of Ferry Point, Perth Amboy, NJ.

(b) *Definitions.* As used in this section, *designated representative* means a Coast Guard Patrol Commander, including a Coast Guard coxswain, petty officer, or other officer

operating a Coast Guard vessel and a Federal, State, and local officer designated by or assisting the Captain of the Port New York (COTP) in the enforcement of the safety zone.

(c) *Regulations.* (1) Under the general safety zone regulations in subpart C of this part, you may not enter the safety zone described in paragraph (a) of this section unless authorized by the COTP or the COTP's designated representative.

(2) To seek permission to enter, contact the COTP or the COTP's representative via VHF channel 16 or 718–354–4154 (Sector New York command center). Those in the safety zone must comply with all lawful orders or directions given to them by the COTP or the COTP's designated representative.

(3) All persons and vessels shall comply with the instructions of the COTP or a designated representative. Upon being hailed by a U.S. Coast Guard vessel by siren, radio, flashlight or other means, the operator of the vessel shall proceed as directed. Failure to comply with a lawful direction may result in expulsion from the area, citation for failure to comply, or both.

(4) Spectators or other vessels shall not anchor, block, loiter, or impede the transit of the event participants or official patrol vessels in the regulated areas during the effective dates and times unless authorized by COTP or designated representative.

(5) The COTP or designated representative may delay or terminate any marine event in this subpart at any time if it is deemed necessary to ensure the safety of life or property.

(d) *Enforcement period.* This section will be subject to enforcement on either July 2, 2022, from 9 p.m. to 10 p.m. or on July 3, 2022, from 9 p.m. through 10 p.m.

Dated: May 4, 2022.

Z.E. Merchant,

Captain, U.S. Coast Guard, Captain of the Port, New York.

33 CFR Part 165

[Docket Number USCG–2022–0184]

RIN 1625–AA00

Safety Zone; Graduate Boat Parade, Sturgeon Bay, WI

AGENCY: Coast Guard, Department of Homeland Security (DHS).

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone for certain waters of Sturgeon Bay, WI. This action is necessary to provide for the safety of life on these navigable waters during the boat parade for the Graduates of Sturgeon Bay High School on May 28, 2022. This rulemaking will restrict usage by persons and vessels within the safety zone. At no time during the effective period may non-parade vessels transit the waters of Sturgeon Bay between the Highway 42 Bridge and Michigan Street Bridge. These restrictions will apply to all vessels during the effective period unless authorized by the Captain of the Port Lake Michigan or a designated representative.

DATES: This rule is effective from 11:00 a.m. through 2:00 p.m. on May 28, 2022.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to *https://www.regulations.gov,* type USCG–2022–0184 in the search box and click ''Search.'' Next, in the Document Type column, select ''Supporting & Related Material.''

FOR FURTHER INFORMATION CONTACT: If you have questions about this rulemaking, call or email Chief Petty Officer Jeromy Sherrill, Sector Lake Michigan Waterways Management Division, U.S. Coast Guard; telephone 414–747–7148, email *Jeromy.N.Sherrill@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background Information and Regulatory History

On March 9, 2022, the principal of Sturgeon Bay High School notified the Coast Guard that it will be conducting a boat parade for graduates of the Class of 2022 on May 28, 2022, from 11:00 a.m. through 2:00 p.m. The boat parade will begin at Madelyn Marine, NW of Highway 42 bridge, proceed NW to the Michigan Street Bridge, cross the channel towards the Maritime Museum, then proceed SE, crossing back across the channel and ending at Madelyn Marine. The Captain of the Port Sector Lake Michigan (COTP) has determined that potential hazards associated with the boat parade would be a safety concern for anyone within the safety zone that is not participating in the boat parade.

In response, on March 22, 2022, the Coast Guard published a notice of proposed rulemaking (NPRM) titled ''Safety Zone; Graduate Boat Parade, Sturgeon Bay, WI'' (87 FR 16129). There we stated why we issued the NPRM, and invited comments on our proposed regulatory action related to this fireworks display. During the comment period that ended April 6, 2022, we received 0 comments.

III. Legal Authority and Need for Rule

The Captain of the Port Sector Lake Michigan (COTP) has determined that potential hazards associated with the boat parade would be a safety concern for anyone within the safety zone that is not participating in the boat parade. The purpose of this rule is to ensure safety of vessels and the navigable waters in the safety zone before, during, and after the scheduled event.

IV. Discussion of Comments, Changes, and the Rule

As noted above, we received no comments on our NPRM published March 22, 2022. There are no changes in the regulatory text of this rule from the proposed rule in the NPRM.

This rule establishes a safety zone from 11:00 a.m. through 2:00 p.m. on May 28, 2022. The safety zone would cover all navigable waters of Sturgeon Bay between the Highway 42 Bridge and Michigan Street Bridge. The duration of the zone is intended to ensure the safety of vessels and these navigable waters before, during, and after the boat parade event. No vessels or person would be permitted to enter the safety zone without obtaining permission from the COTP or a designated representative. The regulatory text appears at the end of this document.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This rule has not been designated a ''significant regulatory action,'' under Executive Order 12866. Accordingly, this rule has not been reviewed by the

Office of Management and Budget (OMB).

This regulatory action determination is based on the characteristics of the safety zone. The safety zone created by this rule will relatively small and is designed to minimize its impact on navigable waters. This rule will prohibit entry into certain navigable waters of Sturgeon Bay, WI, and it is not anticipated to exceed 3 hours in duration. Thus, restrictions on vessel movement within that particular area are expected to be minimal. Moreover, under certain conditions vessels may still transit through the safety zone when permitted by the COTP Lake Michigan.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard received 00 comments from the Small Business Administration on this rulemaking. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section V.A above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves a safety zone lasting 3 hours that would prohibit entry within a relatively small portion of Sturgeon Bay. It is categorically excluded from further review under paragraph L60(a) of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 00170.1, Revision No. 01.2.

■ 2. Add § 165.T09–0184 to read as follows:

§ 165.T09–0184 Safety Zone; Graduate Boat Parade, Sturgeon Bay, WI.

(a) *Location.* All navigable waters of Sturgeon Bay between the Highway 42 Bridge and Michigan Street Bridge.

(b) *Enforcement period.* The safety zone described in paragraph (a) of this section is effective on May 28, 2022, from 11:00 a.m. through 2:00 p.m.

(c) *Regulations.* (1) In accordance with the general regulations in § 165.23, entry into, transiting, or anchoring within this safety zone is prohibited unless authorized by the Captain of the Port Lake Michigan (COTP) or a designated representative.

(2) This safety zone is closed to all vessel traffic, except as may be permitted by the COTP or a designated representative.

(3) The ''designated representative'' of the COTP is any Coast Guard commissioned, warrant, or petty officer

who has been designated by the COTP to act on his or her behalf.

(4) Persons and vessel operators desiring to enter or operate within the safety zone during the boat parade must contact the COTP or an on-scene representative to obtain permission to do so. The COTP or an on-scene representative may be contacted via VHF Channel 16. Vessel operators given permission to enter or operate in the safety zone must comply with all directions given to them by the COTP or an on-scene representative.

Dated: April 22, 2022.

D.P. Montoro,

Captain, U.S. Coast Guard, Captain of the Port Lake Michigan.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R09–OAR–2021–0452; FRL–8834–02–R9]

Air Quality State Implementation Plans; Approvals and Promulgations: California; Opacity Testing of Heavy-Duty Diesel Vehicles

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is taking final action to approve a revision to the California State Implementation Plan (SIP) concerning particulate matter (PM) emissions from heavy-duty (HD) diesel vehicles. We are approving state rules that regulate PM emission sources under the Clean Air Act (CAA or the Act).

DATES: This rule is effective on June 9, 2022.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA–R09–OAR–2021–0452. All documents in the docket are listed on the *https://www.regulations.gov* website. Although listed in the index, some information is not publicly available, *e.g.,* Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available through *https://www.regulations.gov,* or please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section for additional availability information. If you need assistance in a language other than English or if you are a person with disabilities who needs a reasonable accommodation at no cost to you, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section.

FOR FURTHER INFORMATION CONTACT: Jeffrey Buss, EPA Region IX, 75 Hawthorne St., San Francisco, CA 94105. By phone: (415) 947–4152 or by email at *buss.jeffrey@epa.gov.*

SUPPLEMENTARY INFORMATION: Throughout this document, ''we,'' ''us'' and ''our'' refer to the EPA.

Table of Contents

I. Proposed Action
II. Public Comments and EPA Responses
III. EPA Action
IV. Incorporation by Reference
V. Statutory and Executive Order Reviews

I. Proposed Action

On November 5, 2021 (86 FR 61100), the EPA proposed to approve the following rules into the California SIP.

Agency	Rule No.	Rule title	Amended	Submitted
CARB	Title 13, Division 3, Chapter 3.5.	Heavy-Duty Diesel Smoke Emission Testing and Heavy-Duty Vehicle Emission Control System Inspections.	07/01/2019	02/13/2020
CARB	Title 13, Division 3, Chapter 3.6.	Periodic Smoke Inspections of Heavy-Duty Diesel-Powered Vehicles ...	07/01/2019	02/13/2020

We proposed to approve these rules because we determined that they comply with the relevant CAA requirements. Our proposed action contains more information on the rules and our evaluation.

II. Public Comments and EPA Responses

The EPA's proposed action provided a 30-day public comment period. During this period, we received nine comments from members of the public. These comments were generally supportive of the action and none raised any concerns with our proposed rule.

III. EPA Action

Nine comments were submitted, and none change our assessment of the rules as described in our proposed action. Therefore, as authorized in section 110(k)(3) of the Act, the EPA is fully approving these rules into the California SIP.

IV. Incorporation by Reference

In this rule, the EPA is finalizing regulatory text that includes incorporation by reference. In accordance with requirements of 1 CFR 51.5, the EPA is finalizing the incorporation by reference of the California rules described in the amendments to 40 CFR part 52 set forth below. Therefore, these materials have been approved by the EPA for inclusion in the SIP, have been incorporated by reference by the EPA into that plan, are fully federally enforceable under sections 110 and 113 of the CAA as of the effective date of the final rulemaking of the EPA's approval, and will be incorporated by reference in the next update to the SIP compilation.[1] The EPA has made, and will continue to make, these documents available through *www.regulations.gov* and at the EPA Region IX Office (please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section of this preamble for more information).

[1] 62 FR 27968 (May 22, 1997).

V. Statutory and Executive Order Reviews

Under the Clean Air Act, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, the EPA's role is to approve state choices, provided that they meet the criteria of the Clean Air Act. Accordingly, this action merely approves state law as meeting federal requirements and does not impose additional requirements beyond those

imposed by state law. For that reason, this action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act; and
- Does not provide the EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where the EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications and will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

The Congressional Review Act, 5 U.S.C. 801 *et seq.,* as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. The EPA will submit a report containing this action and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by July 11, 2022. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Particulate matter.

Dated: April 29, 2022.

Martha Guzman Aceves,

Regional Administrator, Region IX.

Part 52, Chapter I, Title 40 of the Code of Federal Regulations is amended as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

■ 1. The authority citation for Part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart F—California

■ 2. In § 52.220a, in paragraph (c), table 1 is amended by:

■ a. Adding a heading for ''Title 13 (Motor Vehicles), Division 3 (Air Resources Board), Chapter 3.5. (Heavy-Duty Diesel Smoke Emission Testing, and Heavy-Duty Vehicle Emission Control System Inspections)'' after the entry for ''2147(b)(3)''; and adding entries for ''2180'', ''2180.1'', ''2181'', ''2182'', ''2183'', ''2184'', ''2185'', ''2186'', ''2187'', ''2188'' and ''2189'' under the newly added heading;

■ b. Adding a heading for ''Title 13 (Motor Vehicles), Division 3 (Air Resources Board), Chapter 3.6. (Periodic Smoke Inspections of Heavy-Duty Diesel-Powered Vehicles)'' after the newly added entry for ''2189''; and adding entries for ''2190'', ''2191'', ''2192'', ''2193'', and ''2194'' under the newly added heading.

The additions read as follows:

§ 52.220a Identification of plan-in part.

TABLE 1—EPA-APPROVED STATUTES AND STATE REGULATIONS [1]

State citation	Title/subject	State effective date	EPA approval date	Additional explanation
*	*	*	*	*
Title 13 (Motor Vehicles), Division 3 (Air Resources Board), Chapter 3.5. (Heavy-Duty Diesel Smoke Emission Testing, and Heavy-Duty Vehicle Emission Control System Inspections)			
2180	Applicability	July 1, 2019	May 10, 2022, [INSERT **Federal Register** CITATION].	Unless otherwise noted, this chapter applies to all diesel-powered and gasoline-powered heavy-duty vehicles operating in California.
2180.1	Definitions	July 1, 2019	May 10, 2022, [INSERT **Federal Register** CITATION].	Definitions for applicable vehicles, opacity standards, inspections, penalties and appeals.

TABLE 1—EPA-APPROVED STATUTES AND STATE REGULATIONS [1]—Continued

State citation	Title/subject	State effective date	EPA approval date	Additional explanation
2181	Responsibilities of the Driver and Inspector During the Inspection Procedure.	July 1, 2019	May 10, 2022, [INSERT **Federal Register** CITATION].	Sets forth the responsibilities of the vehicle inspector and driver during an inspection.
2182	Heavy-Duty Diesel Vehicle Smoke Opacity Standards and Test Procedures; Excessive Smoke.	July 1, 2019	May 10, 2022, [INSERT **Federal Register** CITATION].	Sets forth opacity standards and testing procedures.
2183	Inspection of the Emission Control System on a Heavy-Duty Vehicle.	July 1, 2019	May 10, 2022, [INSERT **Federal Register** CITATION].	Describes the inspection procedures inspector use to determine whether the emission control components on diesel vehicles have been tampered, inadequately maintained or defective.
2184	Refusal to Submit to Inspection Procedure.	July 1, 2019	May 10, 2022, [INSERT **Federal Register** CITATION].	Describes the consequences of a refusal to submit to a vehicle inspection.
2185	Civil Penalty Schedule	July 1, 2019	May 10, 2022, [INSERT **Federal Register** CITATION].	Sets for the civil penalties for failing a vehicle inspection.
2186	Demonstration of Correction and Post-Repair Test or Inspection.	July 1, 2019	May 10, 2022, [INSERT **Federal Register** CITATION].	Sets for the requirements for a vehicle owner to demonstrate correction and post-inspection repair to pass an inspection.
2187	Vehicles Removed from Service.	July 1, 2019	May 10, 2022, [INSERT **Federal Register** CITATION].	Sets for the conditions upon which a vehicle failing inspection can be removed from, and return to, service.
2188	Contesting a Citation	July 1, 2019	May 10, 2022, [INSERT **Federal Register** CITATION].	Describes how a vehicle owner may contest a citation for failing and inspection.
2189	Severability of Provisions	July 1, 2019	May 10, 2022, [INSERT **Federal Register** CITATION].	Provides that in the event any portion of the chapter is held to be invalid, unenforceable or unconstitutional, the remaining portions shall remain in effect.
Title 13 (Motor Vehicles), Division 3 (Air Resources Board), Chapter 3.6. (Periodic Smoke Inspections of Heavy-Duty Diesel-Powered Vehicles)				
2190	Vehicles Subject to the Periodic Smoke Inspection Requirements.	July 1, 2019	May 10, 2022, [INSERT **Federal Register** CITATION].	Defines the heavy-duty diesel-powered vehicles operating in California that are subject to periodic smoke inspection, as well as listing those that are exempt.
2191	Definitions	July 1, 2019	May 10, 2022, [INSERT **Federal Register** CITATION].	Defines diesel vehicle fleets subject to the regulation and applicable testing procedures.
2192	Vehicle Inspection Responsibilities.	July 1, 2019	May 10, 2022, [INSERT **Federal Register** CITATION].	Sets forth the responsibilities of diesel vehicle fleet owners to comply with the requirements of the periodic smoke inspection program.
2193	Smoke Opacity Standards, Inspection Intervals, and Test Procedures.	July 1, 2019	May 10, 2022, [INSERT **Federal Register** CITATION].	Sets forth opacity testing standards, inspection intervals, test procedures and alternate test procedures.
2194	Record Keeping Requirements.	July 1, 2019	May 10, 2022, [INSERT **Federal Register** CITATION].	Requires vehicle owners to maintain records of test or alternate test results and provide them to the California Air Resources Board upon request.

* * * * * * *

[1] Table 1 lists EPA-approved California statutes and regulations incorporated by reference in the applicable SIP. Table 2 of paragraph (c) lists approved California test procedures, test methods and specifications that are cited in certain regulations listed in Table 1. Approved California statutes that are nonregulatory or quasi-regulatory are listed in paragraph (e).

[FR Doc. 2022–09727 Filed 5–9–22; 8:45 am]

BILLING CODE 6560–50–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 648

[Docket No. 220502–0109; RTID 0648–XB884]

Fisheries of the Northeastern United States; Atlantic Mackerel, Squid, and Butterfish Fisheries; Final 2022 Specifications

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Final rule.

SUMMARY: NMFS is finalizing specifications for fishing year 2022 for the chub mackerel, butterfish, longfin squid, and *Illex* squid fisheries. This action is necessary to reaffirm previously approved projected allowable harvest levels that will prevent overfishing and allow harvesting of optimum yield for all the species of the Mackerel, Squid, and Butterfish Fishery Management Plan. These specifications are intended to promote the sustainable utilization and conservation of the mackerel, squid, and butterfish resources.

DATES: Effective May 10, 2022.

FOR FURTHER INFORMATION CONTACT: Aly Pitts, Fishery Management Specialist, (978) 281–9352.

SUPPLEMENTARY INFORMATION: The regulations implementing the Mackerel, Squid, and Butterfish Fishery Management Plan (FMP) require the Mid-Atlantic Fishery Management Council's Mackerel, Squid, and Butterfish Monitoring Committee to develop specification recommendations for each species based upon the acceptable biological catch (ABC) advice of the Council's Scientific and Statistical Committee (SSC).

On July 22, 2021 (86 FR 38586), we published a final rule in the **Federal Register** setting new 2021 and projected specifications for fishing year 2022 butterfish and *Illex* squid, while maintaining the current longfin squid, Atlantic mackerel, and chub mackerel specifications for 2021 and projected for 2022–2023. The proposed rule for that action included additional background on specifications and the details of how the Council derived its recommended specifications for Atlantic mackerel, chub mackerel, *Illex* squid, longfin squid, and butterfish. Those details are not repeated here; for additional information, please refer to the proposed rule for that action. This action will reaffirm the 2022 specifications for chub mackerel, *Illex* squid, longfin squid, and butterfish (Table 1, 2, 3, 4, 5, and 6). The Atlantic mackerel specifications for 2022 were set by a separate action, effective on January 7, 2022 (87 FR 1700), and are not modified by this action.

Classification

The NMFS Assistant Administrator has determined that this final rule is consistent with the Mackerel, Squid, and Butterfish Fishery Management Plan, the Magnuson-Stevens Fishery Conservation and Management Act, and other applicable law.

This rule is exempt from review under Executive Order 12866 because this action contains no implementing regulations.

Pursuant to 5 U.S.C. 553(b)(B), we find good cause to waive prior public notice and opportunity for public comment on the catch limit and allocation adjustments, because allowing time for notice and comment would be unnecessary and contrary to the public interest. The proposed rule for the 2021–2023 specifications provided the public with the opportunity to comment on the

specifications, including the projected 2022 through 2023 specifications (86 FR 28323, May 26, 2021). The 2022 specifications presented here were previously approved through the 2021–2023 specifications and this final rule is intended to officially reaffirm these specifications. Further, this final rule contains no changes from the projected 2022 specifications that were included in both the May 26, 2021, proposed rule and the July 22, 2021, final rule. The butterfish specifications were decreased by 72 percent in 2021 from 2020, but this rule increases the allowable catch by 53 percent. Implementing these specifications will reduce the likelihood of an unnecessary closure of the butterfish fishery and will avoid confusion. The public and industry participants expect this action. Through both the proposed rule and final rules for the 2021–2023 specifications, we alerted the public that we would conduct a review of the latest available data in each of the interim years of the multi-year specifications and may make changes if warranted. Thus, the proposed and final rules that contained the projected 2021–2023 specifications provided a full opportunity for the public to comment on the substance and process of this action. Based on these considerations, we further find, pursuant to 5 U.S.C. 553 (d)(3), good cause to waive the 30-day delayed effectiveness period for the reasons stated above.

The Chief Counsel for Regulation, Department of Commerce, previously certified to the Chief Counsel for Advocacy of the Small Business Administration (SBA) that the 2022 chub mackerel, *Illex* squid, longfin quid, and butterfish specifications would not have a significant economic impact on a substantial number of small entities. Implementing the 2022 specifications will not change the conclusions drawn in that previous certification to the SBA. Because advance notice and the opportunity for public comment are not required for this action under the Administrative Procedure Act, or any other law, the analytical requirements of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.,* do not apply to this rule. Therefore, no new regulatory flexibility analysis is required and none has been prepared.

This action does not contain a collection of information requirement for the purposes of the Paperwork Reduction Act.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: May 2, 2022.

Samuel D. Rauch, III

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

Proposed Rules

Federal Register
Vol. 87, No. 90
Tuesday, May 10, 2022

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2022–0510; Project Identifier MCAI–2022–00158–R]

RIN 2120–AA64

Airworthiness Directives; Airbus Helicopters Deutschland GmbH (AHD) Helicopters

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to adopt a new airworthiness directive (AD) for certain Airbus Helicopters Deutschland GmbH (AHD) Model EC135P1, EC135P2, EC135P2+, EC135P3, EC135T1, EC135T2, EC135T2+, and EC135T3 helicopters. This proposed AD was prompted by reports of the air conditioning system (ACS) malfunctioning. This proposed AD would require deactivating the ACS and prohibit installing the affected parts, as specified in a European Union Aviation Safety Agency (EASA) AD, which is proposed for incorporation by reference (IBR). The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this proposed AD by June 24, 2022.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *https://www.regulations.gov.* Follow the instructions for submitting comments.
- *Fax:* (202) 493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For EASA material that is proposed for IBR in this NPRM, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu;* internet *www.easa.europa.eu.* You may find the EASA material on the EASA website at *https://ad.easa.europa.eu.* For Airbus Helicopters service information identified in this NPRM, contact Airbus Helicopters, 2701 North Forum Drive, Grand Prairie, TX 75052; telephone (972) 641–0000 or (800) 232–0323; fax (972) 641–3775; or at *https://www.airbus.com/helicopters/services/technical-support.html.* You may view this material at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy., Room 6N–321, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call (817) 222–5110. The EASA material is also available at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2022–0510.

Examining the AD Docket

You may examine the AD docket at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2022–0510; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, the EASA AD, any comments received, and other information. The street address for Docket Operations is listed above.

FOR FURTHER INFORMATION CONTACT: Stephanie Sunderbruch, Aerospace Engineer, Safety Risk Management Section, Systems Policy Branch, Policy & Innovation Division, FAA, 10101 Hillwood Pkwy., Fort Worth, TX 76177; telephone (817) 222–4659; email *Stephanie.L.Sunderbruch@faa.gov.*

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under **ADDRESSES**. Include ''Docket No. FAA–2022–0510; Project Identifier MCAI–2022–00158–R'' at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to *https://www.regulations.gov,* including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this NPRM.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as ''PROPIN.'' The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to Stephanie Sunderbruch, Aerospace Engineer, Safety Risk Management Section, Systems Policy Branch, Policy & Innovation Division, FAA, 10101 Hillwood Pkwy., Fort Worth, TX 76177; telephone (817) 222–4659; email *Stephanie.L.Sunderbruch@faa.gov.* Any commentary that the FAA receives that is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background

EASA, which is the Technical Agent for the Member States of the European Union, has issued EASA AD 2022–0023, dated February 3, 2022 (EASA AD 2022–0023), to correct an unsafe condition for Airbus Helicopters Deutschland GmbH (AHD) (formerly Eurocopter Deutschland GmbH, Eurocopter España S.A.) Model EC135P1, EC135P2, EC135P2+, EC135P3, EC135T1, EC135T2,

EC135T2+, EC135T3, EC635T2+, EC635P2+, EC635P3, EC635T1, and EC635T3 helicopters, all variants, serial numbers (S/N) from 0008 to 0869 inclusive, except S/N 0831 and S/N 0864.

This proposed AD was prompted by reports of the ACS malfunctioning; investigation into the malfunction has identified that certain ACS soft start units are the root cause. The FAA is proposing this AD to address malfunctioning ACSs. The unsafe condition, if not addressed, could result in an overvoltage of the ACS, resulting in overheating of the surrounding area, failure of the helicopter electrical system connected to the ACS, and a subsequent loss of electrical power which could result in increased pilot workload and reduced helicopter control. See EASA AD 2022–0023 for additional background information.

Related Service Information Under 1 CFR Part 51

EASA AD 2022–0023 requires deactivating the ACS soft start unit part number (P/N) ES59185–2 on helicopters with a compressor/condenser pallet P/N 135–0553–1 or P/N 135–0566–2 installed. EASA AD 2022–0023 also prohibits installing soft start unit P/N ES59185–2 or a compressor/condenser pallet P/N 135–0553–1 or P/N 135–0566–2 on any helicopter.

This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Other Related Service Information

The FAA reviewed Airbus Helicopters Alert Service Bulletin ASB EC135–21A–024, Revision 0, dated February 2, 2022. This service information specifies procedures for deactivating the soft part unit of the compressor/condenser pallet and specifies that compressor/condenser pallet P/N 135–0553–1 or 135–0566–2 with soft start unit P/N ES59185–2 installed must not be installed on any helicopter.

FAA's Determination

These helicopters have been approved by EASA and are approved for operation in the United States. Pursuant to the FAA's bilateral agreement with the European Union, EASA has notified the FAA about the unsafe condition described in its AD. The FAA is proposing this AD after evaluating all known relevant information and determining that the unsafe condition described previously is likely to exist or develop on other helicopters of the same type designs.

Proposed AD Requirements in This NPRM

This proposed AD would require accomplishing the actions specified in EASA AD 2022–0023, described previously, as incorporated by reference, except for any differences identified as exceptions in the regulatory text of this proposed AD and except as discussed under ''Differences Between this Proposed AD and the EASA AD.''

Explanation of Required Compliance Information

In the FAA's ongoing efforts to improve the efficiency of the AD process, the FAA developed a process to use some civil aviation authority (CAA) ADs as the primary source of information for compliance with requirements for corresponding FAA ADs. The FAA has been coordinating this process with manufacturers and CAAs. As a result, the FAA proposes to incorporate EASA AD 2022–0023 by reference in the FAA final rule. This proposed AD would, therefore, require compliance with EASA AD 2022–0023 in its entirety through that incorporation, except for any differences identified as exceptions in the regulatory text of this proposed AD. Using common terms that are the same as the heading of a particular section in EASA AD 2022–0023 does not mean that operators need comply only with that section. For example, where the AD requirement refers to ''all required actions and compliance times,'' compliance with this AD requirement is not limited to the section titled ''Required Action(s) and Compliance Time(s)'' in EASA AD 2022–0023. Service information referenced in EASA AD 2022–0023 for compliance will be available at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2022–0510 after the FAA final rule is published.

Differences Between This Proposed AD and the EASA AD

EASA 2022–0023 applies to Model EC635P2+, EC635P3, EC635T1, EC635T2+, and EC635T3 helicopters, whereas this proposed AD would not because these models are not FAA type-certificated and are not included on the U.S. type certificate data sheet except where the U.S. type certificate data sheet explains that the Model EC635T2+ helicopter having serial number 0858 was converted from Model EC635T2+ to Model EC135T2+.

Interim Action

The FAA considers this proposed AD would be an interim action. The design approval holder is currently developing a modification that will address the unsafe condition identified in this AD. Once this modification is developed, approved, and available, the FAA might consider additional rulemaking.

Costs of Compliance

The FAA estimates that this AD, if adopted as proposed, would affect 341 helicopters of U.S. Registry. Labor rates are estimated at $85 per work-hour. Based on these numbers, the FAA estimates the following costs to comply with this proposed AD.

Deactivating the ACS would take about 1 work-hour, for an estimated cost of $85 per helicopter and up to $28,985 for the U.S. fleet.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Would not affect intrastate aviation in Alaska, and

(3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

Airbus Helicopters Deutschland GmbH (AHD): Docket No. FAA–2022–0510; Project Identifier MCAI–2022–00158–R.

(a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) by June 24, 2022.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Airbus Helicopters Deutschland GmbH (AHD) Model EC135P1, EC135P2, EC135P2+, EC135P3, EC135T1, EC135T2, EC135T2+, and EC135T3 helicopters, serial numbers (S/N) from 0008 to 0869 inclusive, except S/N 0831 and S/N 0864, certificated in any category.

(d) Subject

Joint Aircraft Service Component (JASC) Code 2100, Air Conditioning System.

(e) Unsafe Condition

This AD was prompted by reports of the air conditioning system (ACS) malfunctioning. The FAA is issuing this AD to prevent possible overheating of the ACS. The unsafe condition, if not addressed, could result in an overvoltage of the ACS, resulting in overheating of the surrounding area, failure of the helicopter electrical system connected to the ACS, and a subsequent loss of electrical power which could result in increased pilot workload and reduced helicopter control.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraphs (h) and (i) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, European Union Aviation Safety Agency (EASA) AD 2022–0023, dated February 3, 2022 (EASA AD 2022–0023).

(h) Exceptions to EASA AD 2022–0023

(1) Where EASA AD 2022–0023 requires compliance in terms of flight hours, this AD requires using hours time-in-service.

(2) Where EASA AD 2022–0023 refers to its effective date, this AD requires using the effective date of this AD.

(3) This AD does not mandate compliance with the ''Remarks'' section of EASA AD 2022–0023.

(i) No Reporting Requirement

Although the service information referenced in EASA AD 2022–0023 specifies to submit certain information to the manufacturer, this AD does not include that requirement.

(j) Alternative Methods of Compliance (AMOCs)

(1) The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the International Validation Branch, send it to the attention of the person identified in paragraph (k)(2) of this AD. Information may be emailed to: *9-AVS-AIR-730-AMOC@faa.gov.*

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(k) Related Information

(1) For EASA AD 2022–0023, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu;* internet *www.easa.europa.eu*. You may find the EASA material on the EASA website at *https://ad.easa.europa.eu.* You may view this material at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy., Room 6N–321, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call (817) 222–5110. This material may be found in the AD docket at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2022–0510.

(2) For more information about this AD, contact Stephanie Sunderbruch, Aerospace Engineer, Safety Risk Management Section, Systems Policy Branch, Policy & Innovation Division, FAA, 10101 Hillwood Pkwy., Fort Worth, TX 76177; telephone (817) 222–4659; email *Stephanie.L.Sunderbruch@faa.gov.*

Issued on April 30, 2022.

Gaetano A. Sciortino,

Deputy Director for Strategic Initiatives, Compliance & Airworthiness Division, Aircraft Certification Service.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Docket No. FAA–2022–0475; Airspace Docket No. 21–AEA–16]

RIN 2120–AA66

Proposed Establishment of Area Navigation (RNAV) Routes; Northeast United States

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This action proposes to establish six low altitude United States Area Navigation (RNAV) routes (T-routes) in support of the VHF Omnidirectional Range (VOR) Minimum Operational Network (MON) Program. The purpose is to enhance the efficiency of the National Airspace System (NAS) by transitioning from a ground-based to a satellite-based navigation system.

DATES: Comments must be received on or before June 24, 2022.

ADDRESSES: Send comments on this proposal to the U.S. Department of Transportation, Docket Operations, 1200 New Jersey Avenue SE, West Building Ground Floor, Room W12–140, Washington, DC 20590; telephone: (800) 647–5527, or (202) 366–9826. You must identify FAA Docket No. FAA–2022–0475; Airspace Docket No. 21–AEA–16 at the beginning of your comments. You may also submit comments through the internet at *https://www.regulations.gov.* FAA Order JO 7400.11F, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at *https://www.faa.gov/air_traffic/publications/.* For further information, you can contact the Rules and Regulations Group, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267–8783.

FOR FURTHER INFORMATION CONTACT: Paul Gallant, Rules and Regulations Group, Office of Policy, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267–8783.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the

agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of the airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it would expand the availability of RNAV in the northeast United States and improve the efficient flow of air traffic within the NAS by lessening the dependency on ground-based navigation.

Comments Invited

Interested parties are invited to participate in this proposed rulemaking by submitting such written data, views, or arguments as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal.

Communications should identify both docket numbers (FAA Docket No. FAA–2022–0475; Airspace Docket No. 21–AEA–16) and be submitted in triplicate to the Docket Management Facility (see **ADDRESSES** section for address and phone number). You may also submit comments through the internet at *https://www.regulations.gov.*

Commenters wishing the FAA to acknowledge receipt of their comments on this action must submit with those comments a self-addressed, stamped postcard on which the following statement is made: ''Comments to FAA Docket No. FAA–2022–0475; Airspace Docket No. 21–AEA–16.'' The postcard will be date/time stamped and returned to the commenter.

All communications received on or before the specified comment closing date will be considered before taking action on the proposed rule. The proposal contained in this action may be changed in light of comments received. All comments submitted will be available for examination in the public docket both before and after the comment closing date. A report summarizing each substantive public contact with FAA personnel concerned with this rulemaking will be filed in the docket.

Availability of NPRMs

An electronic copy of this document may be downloaded through the internet at *https://www.regulations.gov.* Recently published rulemaking documents can also be accessed through the FAA's web page at *https://www.faa.gov/air_traffic/publications/airspace_amendments/.* You may review the public docket containing the proposal, any comments received and any final disposition in person in the Dockets Office (see **ADDRESSES** section for address and phone number) between 9:00 a.m. and 5:00 p.m., Monday through Friday, except Federal holidays. An informal docket may also be examined during normal business hours at the office of the Eastern Service Center, Federal Aviation Administration, Room 210, 1701 Columbia Ave., College Park, GA, 30337.

Availability and Summary of Documents for Incorporation by Reference

This document proposes to amend FAA Order JO 7400.11F, Airspace Designations and Reporting Points, dated August 10, 2021, and effective September 15, 2021. FAA Order JO 7400.11F is publicly available as listed in the **ADDRESSES** section of this document. FAA Order JO 7400.11F lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Proposal

The FAA is proposing an amendment to 14 CFR part 71 to establish six low altitude RNAV T-routes, designated T–416, T–428, T–430, T–434, T–436, and T–438, in the northeast United States to support the VOR MON Program.

T–416: T–416 would extend between the Smyrna, DE, (ENO) VHF Omnidirectional Range/Tactical Air Navigational System (VORTAC), and the PREPI, OA, Fix (OA means ''Offshore Atlantic''). The route would overlie VOR Federal airway V–312 between the ALBEK, NJ, Fix, and the PREPI Fix. At PREPI, T–416 would connect with the oceanic route structure.

T–428: T–428 would extend between the Selinsgrove, PA, (SEG) VOR/Distance Measuring Equipment (VOR/DME), and the NECCK, NJ, Waypoint (WP). The route would overlie VOR Federal airway V–6 from Selinsgrove to the Solberg, NJ, (SBJ) VOR/DME. T–428 would also overlie VOR Federal airway V–232 from Solberg to the TYKES, NJ, Fix, then to the NECCK, NJ, WP, that will replace the Colts Neck, NJ, (COL) VOR/DME.

T–430: T–430 would extend between the Philipsburg, PA, VORTAC (PSB), and the Solberg, NJ, (SBJ) VOR/DME. The route would overlie VOR Federal airway V–30 between Philipsburg and Solberg.

T–434: T–434 would extend between the SCAAM, PA, WP, and the NECCK, NJ, WP. The SCAAM WP would replace the Keating, PA, (ETG) VORTAC. The HYATT, PA, WP would replace the Milton, PA, (MIP) VORTAC. The NECCK, NJ, WP, would replace the Colts Neck, NJ, (COL) VOR/DME. T–434 would overlie VOR Federal airway V–232 from the SCAAM WP to the NECCK WP.

T–436: T–436 would extend between the Robbinsville, NJ, (RBV) VORTAC, and the Martha's Vineyard, MA, (MVY) VOR/DME. It would overlie VOR Federal airway V–249 from Robbinsville to the Sparta, NJ, (SAX) VORTAC. T–436 would overlie VOR Federal airway V–623 from Sparta to the BIZEX, NY, WP. The BIZEX WP will replace the Carmel, NY, (CMK) VOR/DME. Additionally, T–436 would overlie VOR Federal airway V–188 from the BIZEX WP to the Groton, CT, (GON) VOR/DME; and, it would overlie VOR Federal airway V–374 from Groton to Martha's Vineyard.

T–438: T–438 would extend between the RASHE, PA, Fix and the PREPI, OA, Fix. It would overlie VOR Federal airway V–276 between RASHE and PREPI.

United States RNAV T-routes are published in paragraph 6011 of FAA Order JO 7400.11F, dated August 10, 2021, and effective September 15, 2021, which is incorporated by reference in 14 CFR 71.1. The RNAV routes listed in this document would be subsequently published in FAA Order JO 7400.11.

FAA Order JO 7400.11, Airspace Designations and Reporting Points, is published yearly and effective on September 15.

Regulatory Notices and Analyses

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore: (1) Is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under Department of Transportation (DOT) Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this proposed rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

This proposal will be subject to an environmental analysis in accordance with FAA Order 1050.1F, ''Environmental Impacts: Policies and Procedures'' prior to any FAA final regulatory action.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

In consideration of the foregoing, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for part 14 CFR 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of FAA Order JO 7400.11F, Airspace Designations and Reporting Points, dated August 10, 2021, and effective September 15, 2021, is amended as follows:

Paragraph 6011 United States Area Navigation Routes.

BILLING CODE 4910–13–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket Number USCG–2022–0284]

RIN 1625–AA00

Safety Zone; Ohio River, Miles 90.3 to 91.8 Wheeling, WV

AGENCY: Coast Guard, Homeland Security (DHS).

ACTION: Notice of proposed rulemaking.

SUMMARY: The Coast Guard is proposing to establish a temporary safety zone for all navigable waters of the Ohio River from Mile 90.3 to Mile 91.8 from 6 p.m. to 8 p.m. The safety zone is needed to protect personnel, vessels, and the marine environment from potential hazards created by a floating lantern festival. Entry of vessels or persons into this zone is prohibited unless specifically authorized by Captain of the Port Marine Safety Unit Pittsburgh. We invite your comments on this proposed rulemaking.

DATES: Comments and related material must be received by the Coast Guard on or before June 9, 2022.

ADDRESSES: You may submit comments identified by docket number USCG–2022–0284 using the Federal Decision Making Portal at *https://www.regulations.gov.* See the ''Public Participation and Request for Comments'' portion of the **SUPPLEMENTARY INFORMATION** section for further instructions on submitting comments.

FOR FURTHER INFORMATION CONTACT: If you have questions on this rulemaking, call or email MSTC Kevin Schneider, Marine Safety Unit Pittsburgh, U.S. Coast Guard, at telephone 412–221–0807, email *Kevin.L.Schneider@uscg.mil.*

I. Table of Abbreviations

CFR Code of Federal Regulations
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background, Purpose, and Legal Basis

On March 30, 2022, the Alzheimer's Association West Viginia Chapter notified the Coast Guard that it will be releasing biodegradable water lanterns onto the Ohio Rivert at Heritage Port 1 Water Street Wheeling, WV, 26003 from 6 p.m. to 8 p.m. on August 22, 2022. Participants can purchase the water lanterns in honor of someone they know who is currently battling Alzheimer's or some form of dementia, write the person's name, a message, or whatever they'd like on the lantern, and place the lantern on the river in that person's honor.

The purpose of this rulemaking is to ensure the protection of personnel, vessels, and the marine environment in the navigable waters within the safety zone while the floating. The Coast Guard is proposing this rulemaking under authority in 46 U.S.C. 70034 (previously 33 U.S.C. 1231).

III. Discussion of Proposed Rule

The Captain of the Port Marine Safety Unit Pittsburgh (COTP) is proposing to establish a safety zone from 6 p.m. to 8 p.m. on August 22, 2022. The safety zone would cover all navigable waters on the Ohio River from Mile 90.3 to Mile 91.8. The duration of the safety zone is intended to protect personnel, vessels, and the marine environment from potential hazards created by a floating lantern festival.

No vessel or person would be permitted to enter the safety zone without obtaining permission from the COTP or a designated representative. The regulatory text we are proposing appears at the end of this document.

IV. Regulatory Analyses

We developed this proposed rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This NPRM has not been designated a ''significant regulatory action,'' under Executive Order 12866. Accordingly, the NPRM has not been reviewed by the Office of Management and Budget (OMB).

This regulatory action determination is based on size, location, and duration of the temporary safety zone. This safety zone impacts only a one-and-a-half-mile stretch of the Ohio River for a short amount of time of two hours on one evening. Vessel traffic will be informed about the safety zone through local notices to mariners. Moreover, the Coast Guard will issue Local Notice to Mariners, Marine Safety Information Bulletins, and Broadcast Notice to Mariners via VHF–FM marine channel 16 about the zone and the rule allows vessels to seek permission from the COTP to transit the zone.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this proposed rule would not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the temporary safety zone may be small entities, for the reasons stated in section IV.A above, this rule will not have a significant economic impact on any vessel owner or operator.

If you think that your business, organization, or governmental jurisdiction qualifies as a small entity and that this proposed rule would have a significant economic impact on it, please submit a comment (see **ADDRESSES**) explaining why you think it qualifies and how and to what degree this rule would economically affect it.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this proposed rule. If the proposed rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section. The Coast Guard will not retaliate against small entities that question or complain about this proposed rule or any policy or action of the Coast Guard.

C. Collection of Information

This proposed rule would not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132 (Federalism), if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this proposed rule under that order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this proposed rule does not have tribal implications under Executive Order 13175 (Consultation and Coordination with Indian Tribal Governments) because it would not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. If you believe this proposed rule has implications for federalism or Indian tribes, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this proposed rule would not result in such an expenditure, we do discuss the potential effects of this proposed rule elsewhere in this preamble.

F. Environment

We have analyzed this proposed rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have made a preliminary determination that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This proposed rule involves This rulemaking involves a safety zone lasting two hours that will prohibit entry on the Ohio River from mile 90.3 to mile 91.8, during the floating lantern festival. Normally such actions are categorically excluded from further review under paragraph L60 of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A preliminary Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble. We seek any comments or information that may lead to the discovery of a significant environmental impact from this proposed rule.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places, or vessels.

V. Public Participation and Request for Comments

We view public participation as essential to effective rulemaking, and will consider all comments and material received during the comment period. Your comment can help shape the outcome of this rulemaking. If you submit a comment, please include the docket number for this rulemaking, indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation.

Submitting comments. We encourage you to submit comments through the Federal Decision Making Portal at *https://www.regulations.gov.* To do so, go to *https://www.regulations.gov,* type USCG–2022–0284 in the search box and click ''Search.'' Next, look for this document in the Search Results column, and click on it. Then click on the Comment option. If you cannot submit your material by using *https://www.regulations.gov,* call or email the person in the **FOR FURTHER INFORMATION CONTACT** section of this proposed rule for alternate instructions.

Viewing material in docket. To view documents mentioned in this proposed rule as being available in the docket, find the docket as described in the previous paragraph, and then select ''Supporting & Related Material'' in the Document Type column. Public comments will also be placed in our online docket and can be viewed by following instructions on the *https://www.regulations.gov* Frequently Asked Questions web page. We review all comments received, but we will only post comments that address the topic of the proposed rule. We may choose not to post off-topic, inappropriate, or duplicate comments that we receive.

Personal information. We accept anonymous comments. Comments we post to *https://www.regulations.gov* will include any personal information you have provided. For more about privacy and submissions to the docket in response to this document, see DHS's eRulemaking System of Records notice (85 FR 14226, March 11, 2020).

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard is proposing to amend 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 00170.1, Revision No. 01.2.

■ 2. Add § 165.T08–0284 to read as follows:

§ 165.T08–0284 Safety Zone; Ohio River, Miles 90.3–91.8, Wheeling, WV.

(a) *Location.* The following area is a temporary safety zone: All navigable waters of the Ohio River from Mile 90.3 to Mile 91.8.

(b) *Definitions.* As used in this section, *designated representative* means a Coast Guard Patrol Commander, including a Coast Guard coxswain, petty officer, or other officer operating a Coast Guard vessel and a Federal, State, and local officer designated by or assisting the Captain of the Port Pittsburgh (COTP) in the enforcement of the safety zone.

(c) *Regulations.* (1) In accordance with the general regulations in § 165.23, entry of persons and vessels into the zone in paragraph (a) of this section is prohibited unless authorized by the COTP or a designated representative.

(2) Persons or vessels requiring entry into or passage through the zone must request permission from the COTP or a designated representative. The COTP's representative may be contacted at 412–670–4288.

(d) *Enforcement period.* This section is effective from 6 p.m. through 8 p.m. on August 22, 2022.

Dated: May 5, 2022.

Eric J. Velez,

Commander, U.S. Coast Guard, Captain of the Port Marine Safety Unit Pittsburgh.

BILLING CODE 9110–04–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

42 CFR Part 88

[Docket No. CDC–2022–0052; NIOSH–347]

RIN 0920–AA82

World Trade Center (WTC) Health Program; Addition of Uterine Cancer to the List of WTC-Related Health Conditions

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice of proposed rulemaking.

SUMMARY: Title I of the James Zadroga 9/11 Health and Compensation Act of 2010 amended the Public Health Service Act (PHS Act) to establish the World Trade Center (WTC) Health Program. The WTC Health Program (Program), which is administered by the Director of the National Institute for Occupational Safety and Health (NIOSH), within CDC, provides medical monitoring and treatment to eligible responders to the September 11, 2001, terrorist attacks in New York City, at the Pentagon, and in Shanksville, Pennsylvania, and to eligible survivors of the New York City attacks. In accordance with the WTC Health Program's regulations, which establish procedures for adding a new condition to the list of health conditions covered by the Program, this proposed rule would add malignant neoplasms of corpus uteri and uterus, part unspecified (uterine cancer) to the List of WTC-Related Health Conditions (List).

DATES: Comments must be received by June 24, 2022.

ADDRESSES: You may submit comments identified by Docket No. CDC–2022–0052 and NIOSH–347 by either of the following methods:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments.
- *Mail:* NIOSH Docket Office, Robert A. Taft Laboratories, MS C–34, 1090 Tusculum Avenue, Cincinnati, Ohio 45226–1998.

Instructions: All written submissions received in response to this document must include the agency name and docket number (CDC–2022–0052; NIOSH–347) for this action. All relevant comments, including any personal information provided, will be posted without change to *https://www.regulations.gov.* Do not submit comments by email. CDC does not accept comments by email.

FOR FURTHER INFORMATION CONTACT: Rachel Weiss, Program Analyst, National Institute for Occupational Safety and Health, 1090 Tusculum Avenue, MS: C–46, Cincinnati, OH 45226; telephone (855) 818–1629 (this is a toll-free number); email *NIOSHregs@cdc.gov.*

I. Executive Summary

A. Purpose of Regulatory Action

With this rulemaking, the Administrator of the WTC Health Program (Administrator) and the Secretary of HHS propose the addition of uterine cancer [1] to the List. The Administrator received requests from WTC responders and survivors as well as a September 2020 letter from five of the WTC Health Program Clinical Centers of Excellence (CCEs) asking the Administrator to add ''uterine cancer'' to the List. The Administrator subsequently directed the WTC Health Program's Science Team to review the available scientific evidence for adding uterine cancer to the List under existing Program policy and procedures. A white paper issued by the Program's Science Team in September 2021 (White Paper) found that the available scientific evidence provided sufficient support to add uterine cancer to the List but only for Program members who have a certified WTC-related estrogen-secreting tumor. The Administrator asked the WTC Health Program Scientific/Technical Advisory Committee (STAC) for a recommendation on whether a reasonable basis exists for adding uterine cancer to the List. Between September and November 2021, the STAC reviewed the White Paper and other available scientific information, considered public comment, and deliberated on whether there is a reasonable basis to recommend the addition of uterine cancer to the List. Ultimately, the STAC recommended that uterine cancer be added to the List and provided the Administrator its recommendation and rationale. Upon review, the Administrator decided that the STAC provided a reasonable basis for its recommendation to add uterine cancer to the List. Based on the STAC's recommendation and the scientific literature, including the White Paper, the Administrator has determined that the available information provides a sufficient evidentiary basis to propose the addition of uterine cancer to the List.

B. Summary of Major Provisions

This rule proposes the addition of malignant neoplasms of corpus uteri and uterus, part unspecified (uterine cancer) to the List of WTC-Related Health Conditions in 42 CFR 88.15(d).

C. Costs and Benefits

The addition of uterine cancer to the List through this rulemaking is estimated to cost the WTC Health Program from $1,718,691 to $2,199,808 annually, between 2022 and 2025. All of the costs to the WTC Health Program are transfers.[2] Benefits to current and future

[1] For the purposes of this action, the WTC Health Program defines the term ''uterine cancer'' as ICD–10 code C54, including the following specific malignant neoplasms: Isthmus uteri (C54.0), endometrium (C54.1), myometrium (C54.2), fundus uteri (C54.3), overlapping sites of corpus uteri (C54.8), and corpus uteri, unspecified (C54.9); and ICD–10 code C55, including only a single sub-category, malignant neoplasm of uterus, part unspecified.

[2] Due to the implementation of the Affordable Care Act in 2014, and as required under the authorizing statute for the WTC Health Program, all current and future Program members are assumed to have or have access to medical insurance

Continued

WTC Health Program members are expected to include improved access to care and better treatment outcomes than members would have in the absence of Program coverage.

II. Public Participation

Interested persons or organizations are invited to participate in this rulemaking by submitting written views, opinions, recommendations, and data. Comments received, including attachments and other supporting materials, are part of the public record and subject to public disclosure. Comments are invited on any topic related to this proposed rule. Do not include any information in your comment or supporting materials that you consider confidential or inappropriate for public disclosure.

Comments submitted electronically or by mail should be titled ''Docket No. CDC–2022–0052; NIOSH–347'' and should identify the author(s) and contact information in case clarification is needed. Written comments can be submitted to the address provided in the **ADDRESSES** section, above. All communications received on or before the closing date for comments will be fully considered by the Administrator.

Upon publication of this notice of proposed rulemaking, the Administrator has requested an independent peer review from three subject-matter experts of the scientific and technical evidence that comprises the basis of this action.[3] The peer reviews will be posted, without attribution, in the rulemaking docket 30 days after the publication of this proposed rulemaking.

To provide interested parties adequate time to review the proposed rule, supporting scientific literature, and peer reviews, and to submit written comments to the docket, the Administrator has determined that good cause exists to extend the 30-day comment period required by the Program's authorizing statute[4] to 45 days.

III. Background

In this action, the Administrator and the Secretary of HHS propose to amend 42 CFR 88.15 to add malignant neoplasms of corpus uteri and uterus, part unspecified (uterine cancer)[5] to the List.

A. WTC Health Program Statutory Authority

Title I of the James Zadroga 9/11 Health and Compensation Act of 2010 (Pub. L. 111–347, as amended by Pub. L. 114–113 and Pub. L. 116–59), added Title XXXIII to the PHS Act[6] establishing the WTC Health Program within HHS. The WTC Health Program provides medical monitoring and treatment benefits to eligible firefighters and related personnel, law enforcement officers, and rescue, recovery, and cleanup workers who responded to the September 11, 2001, terrorist attacks in New York City, at the Pentagon, and in Shanksville, Pennsylvania (responders), and to eligible persons who were present in the dust or dust cloud on September 11, 2001 or who worked, resided, or attended school, childcare, or adult daycare in the New York City disaster area (survivors).

All references to the Administrator in this document mean the Director of NIOSH, within CDC, or his or her designee. Section 3312(a)(6) of the PHS Act requires the Administrator to conduct rulemaking to propose the addition of a health condition to the List codified in 42 CFR 88.15.

B. Methods Used by the Administrator To Determine Whether To Add Cancers to the List of WTC-Related Health Conditions

In accordance with the Program's authorizing statute as well as regulations in 42 CFR part 88, the Administrator may decide to propose the addition of a health condition to the List in response to a petition from an interested party[7] or at his or her own discretion.[8] Under 42 CFR 88.16, the Administrator has established a process by which health conditions may be considered for addition to the List in § 88.15. Pursuant to sec. 3312(a)(6)(D) of the PHS Act, whenever the Administrator determines that a condition should be proposed for addition to the List, the Administrator is required to publish a notice of proposed rulemaking and allow interested parties to comment on the proposed rule.

The Program also developed the *Policy and Procedures for Adding Types of Cancer to the List of WTC-Related Health Conditions* (*Policy and Procedures*) to describe the evaluation of evidence of a causal association between 9/11 exposures and a type of cancer. Pursuant to these procedures, a type of cancer may be proposed for addition to the List if the available evidence meets at least one of the following four methods:[9]

Method 1. Epidemiologic Studies of September 11, 2001-Exposed Populations.

The peer-reviewed, published epidemiologic studies of 9/11-exposed populations are assessed by applying the following criteria extrapolated from the Bradford Hill criteria,[10] as appropriate:

a. Strength of the association between a 9/11 exposure and a type of cancer (including the precision of the risk estimate);[11]

b. Consistency of the findings across multiple studies. If only a single published epidemiologic study is available for assessment, the consistency of findings cannot be evaluated, and more emphasis will be placed on evaluating the strength of the association and the precision of the risk estimate;

c. Biological gradient, or dose-response relationships between 9/11 exposures and the type of cancer; and

d. Plausibility and coherence with known facts about the biology of the type of cancer.

Method 2. Established Causal Associations.

A type of cancer may be added to the List if there is well-established scientific support published in multiple peer-reviewed epidemiologic studies for a causal association between a condition already on the List and that cancer.

Method 3. Review of Evaluations of Carcinogenicity in Humans.

A type of cancer may be added to the List under Method 3 only if both of the following criteria are satisfied:

3A. *Published Exposure Assessment Information.* A 9/11 agent[12] included in

coverage other than through the WTC Health Program; therefore, all projected treatment costs to be paid by the WTC Health Program are considered transfers.

[3] *See* Public Health Service Act, sec. 3312(a)(6)(F).

[4] *See* Public Health Service Act, sec. 3312(a)(6)(D)(ii).

[5] *See supra* note 1.

[6] Title XXXIII of the PHS Act is codified at 42 U.S.C. 300mm to 300mm–61. Those portions of the Zadroga Act found in Titles II and III of Public Law 111–347 do not pertain to the WTC Health Program and are codified elsewhere.

[7] PHS Act, sec. 3312(a)(6)(B); 42 CFR 88.16(a).

[8] PHS Act, sec. 3312(a)(6)(A); 42 CFR 88.16(b).

[9] John Howard, Administrator of the WTC Health Program, *Policy and Procedures for Adding Types of Cancer Conditions to the List of WTC-Related Health Conditions,* revised Nov. 18, 2021, *https://www.cdc.gov/wtc/pdfs/policies/WTCHP_PP_Addn_Cancer_11182021-508.pdf.*

[10] *See* Hill AB [1965], *The Environment and Disease: Association or Causation?* Proc R Soc Med 58:295–300.

[11] Precision of the risk estimate describes the uncertainty inherent in estimating the strength of association (the effect size) between exposure and health effect from observational data. It is often expressed as a confidence interval illustrating a range of values that contains the true effect size. A narrow confidence interval indicates a more precise measure of the effect size and a wider interval indicates greater uncertainty.

[12] Chemical, physical, biological, or other hazards reported in a published, peer-reviewed exposure assessment study of responders, recovery workers, or survivors who were present in the New York City disaster area, or at the Pentagon site, or the

the Inventory of 9/11 Agents [13] is identified; and

3B. *Evaluation of Carcinogenicity in Humans from Scientific Studies.* NTP [the National Toxicology Program] has determined that the 9/11 agent is *known to be a human carcinogen* or is *reasonably anticipated to be a human carcinogen,* and the IARC [the World Health Organization's International Agency for Research on Cancer] has determined that there is *sufficient* or *limited* evidence in humans that the 9/11 agent causes the type of cancer.

Method 4. Review of Information by the WTC Health Program Scientific/Technical Advisory Committee (STAC).

A type of cancer may be added to the List if the STAC recommends the addition and provides a reasonable basis for the recommendation.[14] To assist the Administrator in understanding whether the STAC's recommendation has a reasonable basis, the STAC must describe in detail the basis for its recommendation and, if applicable, any evidentiary sources it has used to support its recommendation.

C. History and Scope of Rulemaking

In September 2012, the Administrator published a final rule adding most types of cancer to the List,[15] codified at 42 CFR 88.15(d). The 2012 rulemaking added malignant neoplasm of the ovary (ovarian cancer) to the List pursuant to Method 3, described above; rare cancers were also added to the List pursuant to Method 4. In a follow-up rulemaking conducted in February 2014,[16] the Program clarified the definition of ''rare cancers'' to include any type of cancer that occurs in less than 15 cases per 100,000 persons.[17] As a result of this rulemaking other—but not all—types of malignant neoplasms of female genital organs,[18] including cervix uteri (invasive cervical cancer) and uterine sarcomas, were found to meet the revised definition of rare cancers.[19] Uterine cancer [20] was not added to the List because the scientific evidence available at the time of the 2012 and 2014 rulemakings did not provide sufficient support for its inclusion; nor did it meet the definition of rare cancer.

Since 2012, the WTC Health Program has received eight submissions requesting the addition of endometrial or uterine cancer to the List. Only one of these submissions, Petition 023, received in 2019 and requesting the addition of ''endometrial cancer,'' [21] was determined to be a valid petition.[22] In response, the Program conducted a literature search and identified and evaluated seven published, peer-reviewed, epidemiologic studies about uterine cancer, including endometrial cancer, in the 9/11-exposed population. Ultimately, in 2019, the Administrator determined that the evidence was insufficient to support adding uterine cancer, including endometrial cancer, to the List.[23]

On September 11, 2020, the Administrator received a submission from five of the Program's CCEs, requesting the addition of uterine cancer to the List. Although the Program determined that the submission was not a valid petition, the Administrator thought that it raised important questions about the potential association between endocrine disrupting chemicals (EDCs) and hormone-related tumors such as endometrial cancer. The CCEs noted that the WTC Health Program's scientific literature evaluation conducted for Petition 023 did not include consideration of the relationship between EDCs and uterine cancer, despite some EDCs being included in the *Inventory of 9/11 Agents.*[24] The CCEs argued that research that has emerged since 2012 suggests EDCs may have a role in the development of estrogen-related diseases such as endometrial cancer. Moreover, the CCEs noted the low numbers of female [25] WTC responders in the occupational studies of the health effects of 9/11 exposure and expressed concern that this may lead to gaps in the research.

The Administrator determined that a more thorough evaluation of the scientific information regarding uterine cancer available since 2012 was needed and asked the WTC Health Program Science Team (Science Team) to conduct a review of the available scientific evidence to determine whether it might now support adding uterine cancer to the List. The Science Team conducted a literature review and issued a White Paper (discussed below) documenting its findings in September 2021. The White Paper describes the

---

Shanksville, Pennsylvania site, as those locations are defined in 42 CFR 88.1, as well as those hazards not identified in a published, peer-reviewed exposure assessment study, but which are reasonably assumed to have been present at any of the three sites. WTC Health Program, *Development of the Inventory of 9/11 Agents,* published Jul. 17, 2018, *https://wwwn.cdc.gov/ResearchGateway/Content/pdfs/Development_of_the_Inventory_of_9-11_Agents_20180717.pdf.*

[13] The *Inventory of 9/11 Agents* is composed of those agents identified in Tables 1–4 of the document, *Development of the Inventory of 9/11 Agents. Id.*

[14] The STAC may base its recommendation and reasonable basis on criteria other than those outlined in Methods 1–3.

[18] Although the List does not identify health condition medical diagnostic codes, the Program uses ICD–10 codes internally to track certified conditions. Malignant neoplasms of female genital organs comprise ICD–10 codes C51–C58 and include malignant neoplasms of the female genital organs: Vulva (C51), vagina (C52), cervix uteri (C53), corpus uteri (C54), uterus, part unspecified (C55), ovary (C56), other and unspecified female genital organs (C57), and placenta (C58). Uterine sarcomas are included in ICD–10 C55. ICD–10 codes C54 and C55 are not currently considered WTC-related health conditions. World Health Organization (WHO) [1997], *International Classification of Diseases, Tenth Edition.*

[19] *See supra* note 17.

[20] *See supra* note 1.

[21] The endometrium is the layer of tissue that lines the uterus. National Cancer Institute, *Dictionary of Cancer Terms, https://www.cancer.gov/publications/dictionaries/cancer-terms/def/endometrium. Endometrial cancer accounts for nearly 90 percent of uterine cancer cases. See also* American Society of Clinical Oncology [2021], *Uterine Cancer: Statistics, https://www.cancer.net/cancer-types/uterine-cancer/statistics.*

[22] Interested parties may petition the Administrator to add health conditions to the List. To be considered a valid petition, a submission must meet the criteria established in 42 CFR 88.16(a)(1) and further described in the *Policy and Procedures for Handling Submissions and Petitions to Add a Health Condition to the List of WTC-Related Health Conditions, https://www.cdc.gov/wtc/pdfs/policies/WTCHPPPPetitionHandlingProcedures14May2014-508.pdf.*

[23] WTC Health Program **Federal Register** document, *Petition 023-Uterine Cancer, Including Endometrial Cancer; Finding of Insufficient Evidence,* 84 FR 49954 (Sept. 24, 2019).

[24] *Inventory of 9/11 Agents* means those 9/11 agents identified as being present at a 9/11 site and included in Tables 1–4 of the WTC Health Program publication, *Development of the Inventory of 9/11 Agents,* Jul. 17, 2018, *https://wwwn.cdc.gov/ResearchGateway/Content/pdfs/Development_of_the_Inventory_of_9-11_Agents_20180717.pdf.* EDCs in the *Inventory of 9/11 Agents* include persistent organic pollutants and other industrial substances such as cadmium, dioxins, perfluoroalkyl and poly fluoroalkyl substances (PFAS), phthalates, polybrominated diphenyl ethers (PBDE), and polychlorinated biphenyls (PCB). None of these 9/11 agents have been found by NTP or IARC to be known to cause or reasonably anticipated to cause uterine cancer.

[25] Although this rulemaking refers to uterine cancer in females, the WTC Health Program recognizes that some individuals who identify as male may also be at risk for uterine cancer.

Science Team's conclusion that insufficient evidence exists to support a decision to add uterine cancer to the List under Methods 1 or 3 of the *Policy and Procedures* described above; evidence considered under Method 2 supports adding uterine cancer to the List, but only for those Program members who have a certified WTC-related estrogen-secreting tumor.

Pursuant to Method 4 of the *Policy and Procedures,* the Administrator exercised his discretion to request a recommendation from the STAC [26] regarding whether the available evidence provides a reasonable basis exists for adding uterine cancer to the List. The Administrator convened the STAC on September 28–29, 2021, and gave the Committee the following charge:

> As you are aware, the WTC Health Program currently covers all major types of cancer, except for uterine cancer. I welcome the Committee's evaluation and recommendation on whether there is a reasonable scientific basis to support adding uterine cancer to the List of WTC-Related Health Conditions.[27]

At the September 2021 meeting, the Science Team presented the White Paper describing the available scientific evidence for an association between uterine cancer and 9/11 exposures. The STAC heard public comment and deliberated on the evidence presented in the White Paper. The Committee ultimately decided to create a workgroup to ''write a report describing the committee's conclusion, scientific rationale, and supporting evidence for adding uterine cancer as a WTC-related health condition.'' [28] At a follow-up meeting on November 18, 2021, the workgroup presented their draft report to the Committee. Following deliberation, the 12 STAC members present [29] voted unanimously to approve the report and recommend that the Administrator add uterine cancer to the List. Both the White Paper and the STAC recommendation are discussed below.

D. Review of Evidence Supporting the Proposed Addition of Uterine Cancer to the List

1. WTC Health Program Science Team Review

As discussed above, the Administrator asked the Science Team to assess the scientific evidence currently available to determine whether a basis exists under the *Policy and Procedures* for proposing the addition of uterine cancer to the List. The Science Team reported its findings in the White Paper entitled, *Scientific Considerations for Potential Addition of Uterine Cancer to the List of Covered Conditions by the World Trade Center Health Program (Revised): Preliminary Assessment for the World Trade Center Health Program Scientific/Technical Advisory Committee.*[30] The White Paper describes the scope of the Science Team's query as well as the literature search and inclusion criteria, and summarizes the studies identified that describe the available evidence on causal relationships between 9/11 exposures and uterine cancer.

Pursuant to Method 1, the Science Team conducted a literature search in April 2021. As described in the White Paper, the Science Team identified and summarized nine studies: Six which were previously evaluated in the Petition 023 **Federal Register** document,[31] one that recapitulated the results of two of those previously evaluated studies, and two additional studies published since the Petition 023 literature search and evaluation were conducted. Ultimately, five studies were found to be relevant for further evaluation, including some of the earlier studies which have been recently updated by their authors.[32] With regard to Method 1, the Science Team concluded:

> Five relevant peer-reviewed, published, epidemiologic studies were identified and reviewed. The studies do not provide consistent evidence of elevated uterine cancer incidence or mortality among WTC responders and survivors. The studies also do not report a dose-response relationship between 9/11 exposures and uterine cancer and the study designs may be susceptible to selection bias. As a result, collectively, these studies do not demonstrate a potential to provide a basis for a decision on whether to add uterine cancer to the List.[33]

Pursuant to Method 2, the Science Team explored whether a causal association exists between uterine cancer and a health condition already on the List. The Science Team found that uterine cancer may be medically associated with estrogen-secreting tumors, which are considered rare cancers in the Program. Studies reviewed by the Science Team demonstrate support for a causal association between granulosa cell tumors of the ovary (the most common type of estrogen-secreting tumor) and uterine cancer.[34] With regard to Method 2, the Science Team concluded:

> A thorough review of the scientific literature found that estrogen-secreting tumors are associated with endometrial cancer, but that these estrogen-secreting tumors are rare. Because estrogen-secreting tumors fall under the category of ''rare cancers'' in the List, uterine cancer [may be considered a medically associated condition and thus] . . . added to the List only for members who have a certified estrogen-secreting tumor.[35]

Pursuant to Method 3, the Science Team considered the evaluations of carcinogenicity published by NTP and IARC of those EDCs that are 9/11 agents identified in the *Inventory of 9/11 Agents.* With regard to Method 3, the Science Team concluded:

> Four EDCs listed in the Inventory of 9/11 Agents are considered carcinogenic to humans by NTP or IARC: (1) 2,3,7,8-tetrachlorodibenzodioxin (TCDD); (2) 2,3,4,7,8-pentachlorodibenzofuran; (3) polychlorinated biphenyls (PCB); and (4) cadmium. None of these agents is considered to have sufficient or even limited evidence of uterine carcinogenicity [based on IARC's *Monographs*]. Further review of epidemiologic studies published after . . . [IARC's *Monographs*] did not identify additional evidence of carcinogenicity to the uterus.[36]

In addition, since Method 4 allows a cancer to be proposed for addition to the List if the STAC provides a reasonable basis, the Science Team presented

[26] *See* PHS Act, sec. 3312(a)(6)(A).

[36] *Id.* at 7.

supplementary evidence that was reviewed but found not to be applicable to Methods 1, 2, or 3 for the STAC's consideration. First, the Science Team described the commonalities between the mechanisms of development for uterine cancer and other types of cancer, including ''estrogen, an abnormal mismatch repair (MMR) system, genetic abnormalities, and aberrant methylation of DNA and microRNA.'' [37] Next, the Science Team presented evidence from studies in non-9/11-exposed populations that demonstrate associations between uterine cancer and the 9/11 agents TCDD, PCBs, cadmium, and asbestos (known EDCs). Additionally, the Science Team noted that most studies of EDC exposure are conducted among occupational cohorts, including few or no women. Finally, the Science Team presented evidence that some EDCs in the *Inventory of 9/11 Agents,* including 2,3,7,8-tetrachlorodibenzodioxin and PCBs, are considered by NTP and IARC to be known or probable human carcinogens associated with types of cancer other than uterine cancer (*e.g.,* melanoma, breast cancer, lymphoma, and leukemia), supporting the inference that some EDC 9/11 agents may also be linked to uterine cancer.

2. WTC Health Program Scientific/Technical Advisory Committee Review

After being presented with the White Paper at the September 28–29, 2021, STAC meeting, the Committee created a workgroup to ''write a report describing the committee's conclusion, scientific rationale, and supporting evidence for adding uterine cancer as a WTC-related health condition.'' [38] Following the deliberation of the full committee at the November 18, 2021, meeting, the STAC voted to recommend that uterine cancer be added to the List. The Chair of the STAC sent a letter with the Committee's formal recommendation and rationale to the Administrator, which he received on November 29, 2021.[39]

The STAC recommendation is grounded in evidence and principles first developed by the STAC in its 2012 recommendation to the Administrator concerning the addition of cancers to the List.[40] The 2021 STAC recommendation quotes the 2012 STAC recommendation, which described those principles as including an understanding that ''exposures resulting from the collapse of the World Trade Center were unlike any other exposures in intensity and variety in history. . . . Compounding the uniqueness of the exposures is the absence of any data on air contaminant levels or the composition of the dust and fumes in the first four days after the attack, and the presence of multiple and complex exposures.'' [41] Further, the STAC found in 2012 that ''both responder populations and area residents and workers had potential for significant exposures to toxic and carcinogenic components of WTC dust and smoke.'' [42]

The STAC also revisited the arguments presented in the 2012 STAC recommendation for the addition of all cancer types, adding that:

> . . . we believe that the arguments for adding all cancers can apply to the question of whether to include all types of uterine cancer. Other than uterine cancer, all cancer types now are covered as WTC-related conditions. Mechanisms for carcinogenesis resulting from endogenous and exogenous exposures are similar for most cancer types. It is therefore highly implausible that uterine cancer would be the *only* cancer not related to WTC exposures.[43]

In fact, in reviewing the literature, the STAC found that uterine cancer ''shares many of the same genetic mechanisms with cancers already included in [the] List of WTC-Related Health Conditions.'' [44] Because exposure to endogenous and exogenous estrogen is strongly associated with both endometrial [45] and breast cancer, the STAC found exposure to EDCs in WTC dust to be ''particularly relevant.'' Noting that the 2012 STAC recommendation did not review evidence supporting an association between EDCs and cancer types, the November 2021 recommendation summarized the STAC's understanding of exposures to EDCs and their possible association with uterine cancer.[46]

The STAC acknowledged that ''[s]tudying the potential health effects of exposure to EDCs is inherently challenging and much remains unknown despite decade[s] of research,'' and quoted a recent review which described EDCs' multiple mechanisms of action, acting ''simultaneously at the level of the receptor, hormone synthesis, and hormone degradation.'' [47]

The STAC noted that the *Inventory of 9/11 Agents* includes certain 9/11 agents which are recognized as EDCs. Specifically, the STAC noted that elevated levels of polychlorinated dibenzo-para-dioxins and polychlorinated dibenzofurans (PCDD/F) were found on window surfaces from locations in lower Manhattan and Brooklyn six weeks after September 11, 2001. Other EDCs were found in WTC dust and smoke samples and in runoff samples from Rector Street on September 14 and 20, 2001. Two biomonitoring studies demonstrated significantly elevated levels of EDCs in 9/11-exposed cohorts: A study of perfluorochemicals in plasma from WTC responders working near Ground Zero between September 11 and December 23, 2001 found levels of perfluorooctanoic acid (PFOA) and perfluorohexanesulfonate (PFHxS) twice as high as in the U.S. general population; and a study comparing 9/11-exposed adolescents to non-9/11-exposed adolescents found that PCDD/F levels were statistically significantly higher among the 9/11-exposed cohort.[48] The STAC found that PBDEs, high levels of which were found in WTC dust, in particular have been shown to ''interfere with estrogen- . . . mediated processes'' and that ''some toxicologic studies provide indirect evidence'' for an association between PBDE exposures and uterine cancer.[49]

The STAC found that EDC exposure-related imbalances in sex steroid hormones are a ''plausible mechanism'' for the development of uterine cancer among WTC responders and survivors. Hormone-related cancers thought to be caused by EDC exposure include thyroid cancer, breast cancer, testicular and prostate cancers, and all female reproductive organ cancers, all of which are included on the List with the exception of uterine cancer.

[45] In footnote 1 of its recommendation, the STAC clarifies that ''endometrial'' and ''uterine'' cancer are used synonymously and that most of the literature reviewed by the STAC relates specifically to endometrial cancer. The STAC recommendations pertain to all types of uterine cancer, including endometrial cancer.

[46] *See supra* note 39, at Attachment 1.

[47] *Id.* at 8.

[48] *See* full discussion of the STAC's review of the scientific literature and findings in Attachment 1, sec. 2 of the STAC recommendation, *supra* note 39.

[49] *Id.* at 10.

The STAC also commented on the likely inability of existing and future epidemiologic studies in the 9/11-exposed responder population—the most studied 9/11-exposure cohort—to accurately capture uterine cancer incidence because of the small number of female responders. Moreover, the STAC noted that studies of carcinogens reviewed by IARC and other authoritative bodies typically represent industrial cohorts, which often include few or no females, making finding an association between a 9/11 agent and uterine cancer highly unlikely and thus potentially foreclosing Method 3 as a basis for adding uterine cancer to the List.

Finally, the STAC considered public comment as well as the strong support of the WTC Health Program CCEs for the addition of uterine cancer to the List, noting that many Program members and advocates feel the exclusion of uterine cancer from the List is ''illogical and unfair and may cause tangible harm.'' The STAC cited a recent study [50] supporting the argument that WTC responders and survivors diagnosed with uterine cancer will experience better cancer survival if uterine cancer is covered by the Program due to treatment coverage and high-quality care.

After reviewing the available evidence and hearing comment from both the public and the WTC Health Program's CCEs, the STAC concluded that:

> In view of the strong rationale for adding all types of uterine cancer to the list of WTC-related cancers and the potential benefits to affected WTC responders, WTC survivors, and providers caring for these patients, we recommend that all types of uterine cancer be added to the list of WTC-related cancers and urge the Administrator to make all feasible efforts to do so as quickly as policies and procedures allow.[51]

E. Administrator's Decision Regarding Uterine Cancer

After reviewing the available body of scientific evidence describing the causal relationship between 9/11 exposures and uterine cancer, including certain 9/11 agents which are known EDCs, as well as evaluating the STAC's comprehensive rationale and recommendation, the Administrator concludes that the totality of available information provides a sufficient evidentiary basis to propose adding uterine cancer [52] to the List.

In accordance with the Program's *Policy and Procedures,* the Administrator evaluated the available information under the four methods developed for determining whether to add a type of cancer to the List. First, he assessed whether there was sufficient evidence in peer-reviewed, published, epidemiologic studies of 9/11-exposed populations to support adding uterine cancer to the List under Method 1. The Administrator concurs with the Science Team's evaluation of the literature pursuant to Method 1 and finds that the available literature does not provide sufficient support for the addition of uterine cancer to the List under Method 1.

Next, he looked at Method 2 which permits an addition to the List if multiple peer-reviewed epidemiologic studies establish a causal association between a condition already on the List and that cancer. The Administrator agrees with the Science Team's finding that there is evidence of a causal association between estrogen-secreting tumors, which are considered rare cancers in the Program, and uterine cancer. Thus, the Administrator finds that uterine cancer may be proposed for addition to the List pursuant to Method 2, but such an addition would be limited to only those Program members who have a certified WTC-related estrogen-secreting tumor.

The Administrator also examined NTP and IARC evaluations of carcinogenicity under Method 3, which permits an addition to the List if NTP has determined that a specific 9/11 agent is known to be a human carcinogen or is reasonably anticipated to be a human carcinogen, and IARC has determined that there is sufficient or limited evidence in humans that the 9/11 agent causes the type of cancer. The Administrator reviewed the NTP and IARC evaluations of those EDCs that are on the *Inventory on 9/11 Agents* (*i.e.,* TCDD, 2,3,4,7,8-pentachlorodibenzofuran, PCB, and cadmium) and concurs with the Science Team's finding that there is insufficient support for the addition of uterine cancer pursuant to Method 3.

Finally, the Administrator reviewed the recommendation of the STAC to determine if uterine cancer could be added to the List pursuant to Method 4, which permits an addition where the STAC recommends such an addition and provides a reasonable basis for the recommendation. The Administrator finds that the STAC's recommendation provides a reasonable basis for the addition of uterine cancer under Method 4 and this recommendation is further supported by the supplemental information presented by the Science Team in the White Paper.

Specifically, the Administrator agrees with the STAC's finding that mechanisms of initiation and progression of uterine cancer are similar to those for several other cancers on the List.[53] In particular, the evidence showing similar gene mutations and abnormal mismatch repair proteins among many cancers, including uterine cancer, strongly supports shared etiology and pathogenesis between uterine cancer and other cancer types on the List. For example, gene mutations found in low-grade, endometrioid endometrial cancer (which accounts for 80 percent of all endometrial cancers) include those in *PTEN* (phosphatase and tensin homolog deleted on chromosome 10), *CTNNB1* (β-catenin), and *K–RAS. PTEN* inactivation is similarly found in malignant melanoma, brain tumors, and ovarian, thyroid, breast, and prostate cancers, while *CTNNB1* and *K–RAS* mutations are found in a variety of human cancers. High-grade endometrial cancers are associated with mutations in oncogene *ERBB2* (HER–2/neu) and tumor suppressor gene *TP53. ERBB2* gene mutations are also found in breast and ovarian cancers; likewise, *TP53* is frequently mutated in a variety of human cancers, including high-grade serous ovarian and basal-like breast cancers.[54] Finally, studies have shown that several microRNAs (miRNAs), including miR–152 which plays a role as a tumor suppressor, can be epigenetically silenced by hyper-methylation of their respective DNA locus in endometrial cancer.[55] Aberrant methylation of miR–152 has also been reported for other cancers, including acute lymphoblastic leukemia, gastrointestinal cancer, and cholangiocarcinoma. Recent pan-cancer molecular studies [56] have found shared

[56] Pan-cancer molecular studies examine the similarities and differences among the genomic and cellular alterations found across diverse tumor types. Weinstein JN, Collisson EA, Mills GB, Mills Shaw KR, Ozenberger BA, Ellrott K, Shmulevich I, Sander C, Stuart JM [2013]. *The Cancer Genome*

molecular features among invasive breast carcinoma and several gynecologic tumors, such as high-grade serous ovarian cystadenocarcinoma, uterine corpus endometrial carcinoma, cervical squamous cell carcinoma and endocervical adenocarcinoma, and uterine carcinosarcoma.[57] The Administrator agrees with the STAC's finding that the shared etiology and pathogenesis described in the scientific literature suggest it would be unlikely that uterine cancer would be the only cancer type not related to 9/11 exposures.

The Administrator also finds that an association between exposure to EDCs in WTC dust and uterine cancer risk is plausible. EDCs can mimic endogenous hormones and interfere with endogenous hormone homeostasis, which may lead to a variety of adverse health outcomes, including cancer (*e.g.,* estrogen imbalances are a key risk factor for uterine cancer). There is extensive evidence from human studies of an etiologic role of estrogens in cancer. However, finding a causal association between an EDC 9/11 agent and uterine cancer is highly unlikely given the potentially long latency between exposure and disease. Moreover, the low number of women included in epidemiologic studies examining EDC carcinogenic risks in occupational cohorts increases the difficulty in finding conclusive evidence of a causal association with uterine cancer. Given the growing body of scientific evidence suggesting that exposure to EDCs may be a risk factor for female reproductive organ cancers (*e.g.,* breast, ovarian, and endometrial cancers), it is reasonable to assume that exposure to EDCs in WTC dust may contribute to uterine cancer risk.

Finally, the Administrator recognizes that the disproportionally low representation of women in the most studied cohorts of exposed responders makes it epidemiologically unlikely that a definitive association between 9/11 exposures and the occurrence of uterine cancer will be identified during the lifetime of even the most highly exposed Program members.

The Administrator has determined that the available scientific evidence and rationale provided by the STAC in its recommendation, supported by the supplemental information presented by the Science Team in the White Paper, offers a plausible rationale for an association between uterine cancer and EDCs in the *Inventory of 9/11 Agents.* Moreover, the cohorts relevant to understanding uterine cancer in the 9/11-exposed population are too small to allow a definitive decision about whether uterine cancer is causally associated with 9/11 exposure. For these reasons, the Administrator finds that a reasonable basis has been provided by the STAC under Method 4 and, accordingly, proposes to add uterine cancer to the List of WTC-Related Health Conditions.

IV. Summary of Proposed Rule

For the reasons discussed above, the Administrator proposes to amend 42 CFR 88.15 by adding a new paragraph (d)(15) to include malignant neoplasms of corpus uteri and uterus, part unspecified [58] on the List of WTC-Related Health Conditions. The existing paragraph (d)(15)—malignant neoplasm of the ovary—and the remainder of the cancer types identified in existing paragraphs (d)(16) through (24)—rare cancers—are renumbered paragraphs (d)(16) through (25), accordingly. Adding uterine cancer to the List would allow the WTC Health Program to offer treatment services to members whose uterine cancers are certified as WTC-related.

V. Required Regulatory Analyses

A. Executive Order 12866 (Regulatory Planning and Review) and Executive Order 13563 (Improving Regulation and Regulatory Review)

Executive Orders (E.O.) 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility.

This proposed rule has been determined not to be a significant regulatory action under sec. 3(f) of E.O. 12866, and therefore has not been reviewed by the Office of Management and Budget (OMB). The addition of uterine cancer proposed by this rulemaking is estimated to cost the WTC Health Program between $1,718,691 and $2,199,808 per annum for 2022–2025.[59] All costs to the WTC Health Program will be transfers due to the implementation of provisions of the Patient Protection and Affordable Care Act (Pub. L. 111–148) in 2014 and as required under the authorizing statute for the WTC Health Program.[60] The rule would not interfere with state, local, or tribal governments in the exercise of their governmental functions.

Population Estimates

The WTC Health Program has, as of September 30, 2021, enrolled approximately 82,000 WTC responders and approximately 32,000 survivors, or approximately 114,000 individuals in total. Of that total population, approximately 60,000 individuals were participants in previous WTC medical programs and were enrolled as ''Legacy'' members in the WTC Health Program established by Title XXXIII of the PHS Act. For the purpose of calculating a baseline estimate of cancer prevalence only, the Administrator assumed that a steady rate of enrollment would continue, based on the trend in enrollees through September 2021.

According to WTC Health Program data, 12 percent of the current responder members (approximately 10,000 individuals) and 50 percent of survivor members (approximately 16,000 individuals) are female.[61] The Administrator acknowledges that some uterine cancer cases in this population may not have been caused by 9/11 exposures. The certification of individual cancer diagnoses will be conducted on a case-by-case basis, as required by the Zadroga Act. For the purpose of this economic analysis, however, the Administrator assumes that all diagnosed uterine cancers will be certified for treatment by the WTC Health Program. Finally, because there are no existing data on cancer rates related to 9/11 exposures at either the Pentagon or in Shanksville, Pennsylvania, the Administrator has

Atlas Pan-Cancer analysis project, Nature Genetics. 45 (10): 1113–1120.

[57] Berger AC *et al.* [2018], A *Comprehensive Pan-Cancer Molecular Study of Gynecologic and Breast Cancers,* Cancer Cell 33(4):690–705.

[58] *See supra* note 1.

[59] As discussed in this section, NIOSH estimated lower and upper bound estimates to reflect the uncertainty in the Agency's ability to predict the expected number of cancer cases in three years after this rulemaking. The low bound reflects the general U.S. population cancer rate and uses undiscounted costs for 2022 and costs for 2023–2025 discounted at the 7% discount rate. The upper bound reflects the U.S. population cancer rate + 21%, based on a study by Li *et al.* [2021], *infra* note 69, and uses undiscounted rates for 2022 and costs for 2023–2025 discounted at the 3% discount rate. Although, if added to the List, uterine cancer would be considered a covered condition for the duration of the WTC Health Program (currently authorized through FY 2090), the dates 2022–2025 were chosen in order to provide a snapshot of uterine cancer costs in the coming years.

[60] Because sec. 3331(c)(3) of the PHS Act requires WTC Health Program members to maintain minimum essential insurance coverage all treatment costs to be paid by the WTC Health Program are considered transfers.

[61] *See supra* note 25.

used only data from studies of individuals who were responders or survivors in the New York City disaster area.

Cost of Uterine Cancer Treatment

The Administrator estimated the treatment costs associated with covering uterine cancer in this rulemaking. The costs of treatment are divided into three treatment phases: The first year of treatment following diagnosis; the intervening years or continuing treatment after the first year; and treatment during the last year of life. The first-year costs of cancer treatment are higher due to the initial need for aggressive medical care (*e.g.,* radiation or chemotherapy) and surgical care. The costs during the last year of life are often dominated by increased hospitalization costs.[62] Therefore, three different treatment phase costs were used to provide a best estimate of treatment costs in conjunction with expected incidence and long-term survival rates for uterine cancer. Average treatment costs for uterine cancer are in Table A, below.

TABLE A—AVERAGE COSTS OF TREATMENT FOR UTERINE CANCER, 2021$

Stage of treatment:	
Initial (first 12 months after diagnosis)	$39,638
Continuing (annual)	2,066
Last year of life (last 12 months of life)	118,058

These cost figures were based on a study of cancer patients from the Surveillance, Epidemiology, and End Results (SEER) program maintained by the National Cancer Institute and using Medicare files.[63] The average costs of treatment described above are given in 2021 prices adjusted using the Medical Consumer Price Index for all urban consumers.[64]

Incident Cases of Cancer

The Administrator estimated the expected number of cases of cancer that would be observed in a cohort of responders and survivors followed for cancer incidence after September 11, 2001, using U.S. population cancer rates. Demographic characteristics of the cohort were assigned since the actual data are not available for individuals in the responder and survivor populations who have not yet enrolled in the WTC Health Program. Sex and age (at the time of exposure) distributions for responders and survivors were assumed to be the same as current members in the WTC Health Program. Because uterine cancer occurs only in females,[65] all calculations only consider female WTC Health Program members.

The Administrator assumed race and ethnic origin distributions for responders and survivors, respectively, according to distributions in the WTC Health Registry cohort: [66] 57 percent non-Hispanic white, 15 percent non-Hispanic black, 21 percent Hispanic, and 8 percent other race/ethnicity for responders; 50 percent non-Hispanic white, 17 percent non-Hispanic black, 15 percent Hispanic, and 18 percent other race/ethnicity for survivors. Registry follow-up for cancer morbidity for each person began on January 1, 2002, or age 15 years, whichever was later. Age 15 was considered because the cancer incidence rate file did not include rates for persons less than 15 years of age. Follow-up ended on December 31, 2016, or the estimated last year of life, whichever was earlier. The estimated last year of life was used since not all persons would be expected to remain alive at the end of 2016. The estimated last year of life was based on U.S. gender, race, age, and year-specific death rates from CDC WONDER.[67] A life-table analysis program, LTAS.NET, was used to estimate the expected number of incident cancers for uterine cancer.[68] The Administrator calculated cancer incidence rates using data through 2018 from the SEER Program and estimated rates for 2002–2025.[69] The Program applied the resulting gender, race, age, and year-specific cancer incidence rates to the estimated person-years at risk to estimate the expected number of cancer cases for uterine cancer starting from year 2002, the first full year following the September 11, 2001, terrorist attacks, to 2025.

Prevalence of Cancer

To determine the potential number of persons in the responder and survivor populations with cancer, the Administrator used the number of incident uterine cancer cases described above for each year starting with 2002 and estimated the prevalence of uterine cancer using survival rate statistics for each incident cancer group through 2025.[70] Using the incident cases and survival rate statistics, the Administrator estimated the prevalence (number of persons living with cancer) of cases during the 23-year period (2002–2025) since September 11, 2001. For the purposes of illustrating an upper bound incidence rate and prevalence estimate, the Administrator assumed that the rate of cancer in the WTC Health Program exceeds the general U.S. population rate by 21 percent due to 9/11 exposures. The peer-reviewed literature supports the use of a 21 percent excess risk of cancer in the 9/11-exposed population over the U.S. population cancer rate; a 2021 study by Li *et al.*[71] reported an adjusted hazard ratio of 1.21 (95 percent CI: 1.12, 1.31) for all cancer sites and used a within-cohort comparison less affected by healthy worker selection bias. The resulting Table B summarizes those results for each year from 2022 through 2025, the number of new cases occurring in that year (incidence), the number of persons surviving up to 23 years beyond their first diagnosis (prevalence), and the number of individuals who might be expected to die from their cancer in that year.[72]

TABLE B—ESTIMATED INCIDENCE AND PREVALENCE OF UTERINE CANCER
[2022–2025]

	2022	2023	2024	2025
Responders (based on ~10,000 female members)				
New cases	6.69	6.92	7.14	7.27
Live cases from previous years	29.46	30.78	32.09	33.33
Deaths	5.09	5.37	5.61	5.90
Total cases	36.15	37.70	39.23	40.60
Survivors (based on ~16,000 female members)				
New cases	10.91	10.91	10.91	10.91
Live cases from previous years	53.70	54.72	55.49	56.17
Deaths	9.60	9.90	10.17	10.31
Total cases	64.61	65.63	66.40	67.08
Total (based on ~26,000 female WTC responder and survivor members)				
New cases	17.6	17.83	18.05	18.18
Live cases from previous years	83.16	85.50	87.58	89.50
Deaths	14.69	15.27	15.78	16.21
Total cases	100.76	103.33	105.63	107.68

Cost Computation

To compute the costs for uterine cancer, the Administrator assumes that the individuals diagnosed with uterine cancer will be certified by the WTC Health Program for treatment and monitoring services. The treatment costs for the first year of treatment (Table A, year adjusted) were applied to the predicted newly incident (Year 1) cases for each year. Likewise, the costs of treatment for the last year of life were applied in each year to the number of people predicted to die from their cancer in that year. The costs of continuing treatment from Table A were applied to the number of prevalent cases who had survived their cancers beyond their year of diagnosis, for each year of survival (Year 2–23).

The estimated treatment costs for responders and survivors were re-computed under the following two assumptions: (1) The rate of cancer in the WTC Health Program is equal to the rate of cancer observed in the general U.S. population; and (2) the rate of cancer in the WTC Health Program exceeds the general U.S. population rate by 21 percent, as discussed above. Costs for future years are discounted at both 7 percent and 3 percent to reflect net present value.[73]

The sum of the annual costs in the table for the years 2022 through 2025 represents the estimated treatment costs to the WTC Health Program for coverage of uterine cancer for the 12 percent of approximately 82,000 WTC responders who are female and the 50 percent of approximately 32,000 WTC survivors who are female.

Summary of Costs

Because HHS lacks data to account for recoupment from workers' compensation insurance or primary payment by either private health insurance or Medicare/Medicaid payments, the estimates offered here are reflective of estimated WTC Health Program costs only and assume the Program is the primary payer. This analysis offers an assumption about the number of individuals who might enroll in the WTC Health Program and estimates the impact of both a low rate of cancer (U.S. population average rate) and an increased rate (21 percent greater than the U.S. population average) on the number of cases and the resulting estimated treatment costs to the WTC Health Program. This analysis does not include administrative costs associated with certifying additional WTC-related uterine cancers that might result from this action.

Since the implementation of provisions of the Affordable Care Act on January 1, 2014, all members and future members are assumed to have or have access to medical insurance coverage other than through the WTC Health Program.[74] Therefore, all treatment costs to be paid by the WTC Health Program from 2022 through 2025 are considered transfers.

TABLE C—MEDICAL TREATMENT COST FOR UTERINE CANCER CASES DURING 2022–2025, 2021$

	2022 costs, undiscounted, 2021$		2023–2025 costs,* 7% discount rate	2023–2025 costs, 3% discount rate
	Cancer rate		Cancer rate	
	U.S. average	U.S. average + 21%	U.S. average	U.S. average + 21%
Responders	$749,741	$907,187	$2,145,844	$2,801,474

[73] *See* OMB Circular A–94, *Guidelines and Discount Rates for Benefit-Cost Analysis of Federal Programs. https://www.whitehouse.gov/sites/whitehouse.gov/files/omb/circulars/A94/a094.pdf.*

[74] Sec. 3331(c)(3) of the PHS Act requires WTC Health Program members to maintain minimum essential insurance coverage.

TABLE C—MEDICAL TREATMENT COST FOR UTERINE CANCER CASES DURING 2022–2025, 2021$—Continued

Survivors	1,067,098	1,291,189	2,912,084	3,799,381
Total	1,816,839	2,198,376	5,057,928	6,600,855

* Since this table summarizes the lowest and highest cost estimates for treatment of uterine cancer, values representing 2023–2025 costs at the 7% discount rate and at the increased cancer rate and 2023–2025 costs at the 3% discount rate and at the U.S. population average rate were not included.

The Administrator found the cost estimate range by adding the low 2023–2025 estimate in Table C (7 percent discount rate, U.S. cancer rate average) and the low estimate for 2022 (U.S. cancer rate average) and dividing the sum by four to find the annual low-cost estimate (*i.e.,* $1,718,691). The same calculation was done for the annual high-cost estimates, adding the higher numbers in Table C (3 percent discount rate, U.S. cancer rate average +21 percent) to the high estimate for 2022 (U.S. cancer rate average +21 percent) and dividing the sum by four (*i.e.,* $2,199,808).

Examination of Benefits (Health Impact)

This section qualitatively describes the potential benefits of this rulemaking to add uterine cancer to the List of WTC-Related Health Conditions in terms of the expected improvements in the health and health-related quality of life of potential uterine cancer patients treated through the WTC Health Program, compared to not conducting the rulemaking.

The Administrator does not have information on the health of the population that may have experienced 9/11 exposures and is not currently enrolled in the WTC Health Program. In addition, the Administrator has only limited information about health insurance and healthcare services for uterine cancers potentially caused by 9/11 exposures and suffered by any population of responders and survivors, including responders and survivors currently enrolled in the WTC Health Program and responders and survivors not enrolled in the Program. For the purposes of this analysis, the Administrator assumes that all unenrolled responders and survivors are now covered by health insurance due to access provided by the Affordable Care Act and may be receiving treatment outside the WTC Health Program.

Although the Administrator cannot quantify the benefits associated with the WTC Health Program, members with uterine cancer are expected to experience better treatment outcomes as Program members than non-members. A recent study found that ''WTC-exposed responder cancer patients enrolled in the MMTP [WTC Medical Monitoring and Treatment Program, a predecessor to the WTC Health Program] had higher survival rates compared with those not enrolled in the MMTP.'' [75] Moreover, under other insurance plans, patients would have deductibles and copays, which impact access to care and, particularly, its timeliness.[76] WTC Health Program members have first-dollar coverage and hence are likely to seek care sooner, when indicated, resulting in improved treatment outcomes.

Finally, during public meetings, Program members have expressed that the lack of social and clinical support, and lack of recognition that their diagnosed uterine cancer is a WTC-related health condition, have had a significant negative impact on their morale and quality of life.

Limitations

The analysis presented here was limited by the dearth of verifiable data on the uterine cancer status of responders and survivors who have yet to apply for enrollment in the WTC Health Program. Because of the limited data, the Administrator was not able to estimate benefits in terms of averted healthcare costs; nor was the Administrator able to estimate administrative costs, or indirect costs, such as averted absenteeism, short- and long-term disability, and productivity losses averted due to premature mortality.

B. Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA), 5 U.S.C. 601 *et seq.,* requires each agency to consider the potential impact of its regulations on small entities, including small businesses, small governmental units, and small not-for-profit organizations. The Administrator certifies that this proposed rule has ''no significant economic impact upon a substantial number of small entities'' within the meaning of the RFA.

C. Paperwork Reduction Act

The Paperwork Reduction Act (PRA), 44 U.S.C. 3501 *et seq.,* requires an agency to invite public comment on, and to obtain OMB approval of, any regulation that requires 10 or more people to report information to the agency or to keep certain records. The Administrator has determined that this rulemaking does not contain any new information collection requirements or recordkeeping requirements; thus, the PRA does not apply to this rulemaking. Data collection and recordkeeping requirements for the WTC Health Program are approved by OMB under ''World Trade Center Health Program Enrollment, Appeals & Reimbursement'' (OMB Control No. 0920–0891, exp. December 31, 2021, currently under OMB review).

D. Small Business Regulatory Enforcement Fairness Act

As required by Congress under the Small Business Regulatory Enforcement Fairness Act of 1996, 5 U.S.C. 801 *et seq.,* HHS will report the promulgation of this rule to Congress prior to its effective date.

E. Unfunded Mandates Reform Act of 1995

Title II of the Unfunded Mandates Reform Act of 1995, 2 U.S.C. 1531 *et seq.,* directs agencies to assess the effects of Federal regulatory actions on state, local, and tribal governments, and the private sector ''other than to the extent that such regulations incorporate requirements specifically set forth in law.'' For purposes of the Unfunded Mandates Reform Act, this proposed rule does not include any Federal mandate that may result in increased annual expenditures in excess of $100 million in 1995 dollars by state, local, or tribal governments in the aggregate, or by the private sector.

F. Executive Order 12988 (Civil Justice)

This proposed rule has been drafted and reviewed in accordance with Executive Order 12988, ''Civil Justice Reform,'' and will not unduly burden the Federal court system. This rule has

[75] Goldfarb DG, Zeig-Owens R, Kristjansson D, Li J, Brackbill RM, Farfel MR, Cone JE, Kahn AR, Qiao B, Schymura MJ, Webber MP, Dasaro CR, Lucchini RG, Todd AC, Prezant DJ, Hall CB, Boffetta P [2021], *Cancer Survival among World Trade Center Rescue and Recovery Workers: A Collaborative Cohort Study,* Am J Ind Med 64(10):815–826.

[76] Wharam JF, Galbraith AA, Kleinman KP, Soumerai SB, Ross-Degnan D, Landon BE [2008], *Cancer Screening before and after Switching to a High-Deductible Health Plan,* Ann Intern Med 148(9):647–655.

been reviewed carefully to eliminate drafting errors and ambiguities.

G. Executive Order 13132 (Federalism)

The Administrator has reviewed this proposed rule in accordance with Executive Order 13132 regarding federalism and has determined that it does not have ''Federalism implications.'' The rule does not ''have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government.''

H. Executive Order 13045 (Protection of Children From Environmental Health Risks and Safety Risks)

In accordance with Executive Order 13045, the Administrator has evaluated the environmental health and safety effects of this proposed rule on children. The Administrator has determined that the rule would have no environmental health and safety effect on children.

I. Executive Order 13211 (Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use)

In accordance with Executive Order 13211, the Administrator has evaluated the effects of this proposed rule on energy supply, distribution, or use, and has determined that the rule will not have a significant adverse effect.

J. Plain Writing Act of 2010

Under Public Law 111–274 (October 13, 2010), Executive Departments and Agencies are required to use plain language in documents that explain to the public how to comply with a requirement the Federal Government administers or enforces. The Administrator has attempted to use plain language in promulgating the proposed rule consistent with the Federal Plain Writing Act guidelines and requests public comment on this effort.

List of Subjects in 42 CFR Part 88

Aerodigestive disorders, Appeal procedures, Cancer, Healthcare, Mental health conditions, Musculoskeletal disorders, Respiratory and pulmonary diseases.

For the reasons discussed in the preamble, the Administrator and HHS Secretary propose to amend 42 CFR part 88 as follows:

PART 88—WORLD TRADE CENTER HEALTH PROGRAM

■ 1. The authority citation for part 88 is revised to read as follows:

Authority: 42 U.S.C. 300mm to 300mm–61.

■ 2. Amend § 88.15 as follows:
■ a. Redesignate paragraphs (d)(15) through (24) as paragraphs (d)(16) through (25).
■ b. Add new paragraph (d)(15).
■ c. In newly redesignated paragraph (d)(24), remove ''*Childhood cancers:*'' and add ''Childhood cancers:'' in its place.
■ d. In newly redesignated paragraph (d)(25), remove ''*Rare cancers:*'' and add ''Rare cancers:'' in its place.

The addition reads as follows:

§ 88.15 List of WTC-Related Health Conditions.

* * * * *

(d) * * *

(15) Malignant neoplasms of corpus uteri and uterus, part unspecified.

* * * * *

John J. Howard,

Administrator, World Trade Center Health Program and Director, National Institute for Occupational Safety and Health, Centers for Disease Control and Prevention, Department of Health and Human Services.

Xavier Becerra,

Secretary, Department of Health and Human Services.

[FR Doc. 2022–09708 Filed 5–9–22; 8:45 am]

BILLING CODE 4163–18–P

FEDERAL MARITIME COMMISSION

46 CFR Part 520

[Docket No. 21–03]

RIN 3072–AC86

Carrier Automated Tariffs

AGENCY: Federal Maritime Commission.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Federal Maritime Commission (Commission) is seeking public comment on proposed modifications to its rules governing Carrier Automated Tariffs through this notice of proposed rulemaking (NPRM). The proposed rule would remove the option for ocean common carriers to charge a fee to access their tariff; allow non-vessel operating common carriers (NVOCCs) to cross reference certain aspects of other carriers' terms in their tariffs; clarify the ability for NVOCCs to reflect increases in certain charges passed-through by other entities without notice; update the definition of co-loading to apply only to less than container loads; require that documentation be annotated with the names of all NVOCCs involved in a shipping transaction; and make other miscellaneous updates and clarifications to the regulation.

DATES: Submit comments on or before June 9, 2022.

ADDRESSES: You may submit comments by email to *secretary@fmc.gov.* For comments, include in the subject line: ''Docket No. 21–03, Comments on Carrier Automated Tariffs Rulemaking.'' Comments should be attached to the email as a Microsoft Word or text-searchable PDF document.

Instructions: For detailed instructions on submitting comments, including requesting confidential treatment of comments, and additional information on the rulemaking process, see the Public Participation heading of the Supplementary Information section of this document. Note that all comments received will be posted without change to the Commission's website unless the commenter has requested confidential treatment.

Docket: For access to the docket to read background documents or comments received, go to the Commission's Electronic Reading Room at: *https://www2.fmc.gov/readingroom/proceeding/21-03/.*

FOR FURTHER INFORMATION CONTACT: William Cody, Secretary; Phone: (202) 523–5725; Email: *secretary@fmc.gov.*

SUPPLEMENTARY INFORMATION:

I. Discussion

On April 8, 2021, the Commission issued an Advance Notice of Proposed Rulemaking (ANPRM) seeking information on how common carriers interpret and apply certain Commission regulations in 46 CFR part 520.[1] In response to the ANPRM, the Commission received three sets of comments from interested parties: The National Customs Brokers and Forwarders Association of America, Inc (NCBFAA); New York New Jersey Foreign Freight Forwarders & Brokers Association, Inc. (NYNJFFF&BA); and the Association of Food Industries, Inc. (AFI). NCBFAA and NYNJFFF&BA are trade associations whose members include non-vessel operating common carriers (NVOCCs), and AFI is a trade association for the U.S. food import industry. These comments are addressed later in this proposed rule.

A. Tariff Access Fees

Before the passage of the Ocean Shipping Reform Act of 1998 (OSRA), which became effective May 1, 1999, vessel operating common carrier (VOCC) and conference tariffs were filed

[1] Advance notice of proposed rulemaking—Carrier Automated Tariffs, 86 FR 18240 (April 8, 2021).

with the Commission through the Commission's Automated Tariff Filing and Information system. OSRA eliminated the requirement that tariffs be filed with the Commission, and instead, directed carriers and conferences to publish tariffs in carrier automated tariff systems.

The statute at 46 U.S.C. 40501(c) states that ''[a] reasonable fee may be charged for'' access to tariffs.[2] The statute and the implementing regulations do not, however, state what is considered ''reasonable'' in the context of tariff access.[3] In response to complaints from potential tariff users that certain tariff access fees and minimum subscription requirements were excessive, the Commission subsequently issued guidance to stakeholders through a Circular Letter which advised that tariff access fees should recover only costs and expenses incurred by carriers in making their tariffs accessible to the public.[4] More recent experience indicates that, contrary to the Shipping Act and to the guidance provided in the Circular Letter, some tariff access fees may be so high as to effectively prevent tariff users from reviewing certain carrier tariffs. Comments received by the Commission in response to its ANPRM asserted that some carriers charge tariff access fees that ''appear to be exorbitant and thus tend to discourage the public access to VOCC rates[.]'' [5]

A competitive and efficient ocean transportation system is dependent on transparency and availability of price information to the shipping public. It is the belief of the Commission that any unnecessary roadblocks to that transparency, including cost barriers to tariff access, are contrary to that goal. The Commission has learned that a limited number of carriers are charging unreasonably high fees that prevent public access to tariffs. The Commission's implementing regulations were written at a time when dialup internet via public switched telephone networks was the norm and information was not as easily posted or located as is the case now.[6] Intervening technological developments and efficiencies have made it nearly essential for businesses to operate a free, publicly accessible website. Seven of the top ten carriers that serve the U.S. make their tariffs available on their websites at no cost. With the ubiquity of websites among carriers, the decreases in the cost of providing information online, the efficiency of providing public access through a website, and the prevalence of free and open access to tariffs among the largest carriers, the Commission believes that free public access to tariffs is reasonable.

While the Commission does not wish to place an undue burden on common carriers to make their tariffs available to the public, the Commission proposes to require carriers and conferences to provide free access to tariffs by removing the option to assess a fee for tariff access currently found at 46 CFR 520.9(e)(3). The Commission welcomes comments on what specific costs the carriers would incur in order to provide free access to tariffs and comments from carriers who do not charge access on their rationale for that decision.

B. Cross Referencing Tariffs

In contrast to the current regulations in part 520, the Commission has granted broad flexibility to NVOCCs with regard to increases in charges passed through by VOCCs in 46 CFR part 531—Negotiated Service Arrangements (NSAs), and 46 CFR part 532—NVOCC Negotiated Rate Arrangements (NRAs). These regulations allow an increase in a VOCC charge to be passed through, without markup of the charges, by an NVOCC to its shipper if the shipper agrees to this arrangement, provided the underlying charge is listed in an NRA or NSA, or included in the NVOCC's rules tariff.

The Commission is persuaded that it is beneficial to address the pass through of charges by the NVOCC to the shipper in its rules governing carrier automated tariffs to align the regulations more closely in part 520 with those regulations in part 531 (NSAs) and part 532 (NRAs) by allowing NVOCCs to cross reference an existing VOCC tariff in their NVOCC tariff. The Commission notes that, beyond the flexibility this regulation will grant to NVOCCs in their performance of transportation service, it also will clarify for shippers where certain charges originate, and will track when and how those charges may increase.

Any increases in VOCC-originated surcharges and assessorials must be published in the VOCC tariff 30 days prior to taking effect. Although VOCCs are required to file 30-day notice of increases, NVOCCs commented in response to the ANPRM that, particularly in the current environment of high demand for vessel capacity, the number of new charges and frequent increases to existing charges make it impracticable for NVOCCs to provide same-day notice of those charges in their own tariffs. Therefore, NVOCCs may be unable to recover increases in VOCC surcharges and assessorials assessed to the NVOCC. Furthermore, NVOCC customers may have difficulty keeping up with new charges and increases in existing charges as they are imposed by various parties in the ocean shipping supply chain.

To facilitate the transparency and application of VOCC-originated charges which are passed through from the NVOCC to its shipper, the Commission proposes to add a new § 520.7(a)(3)(iv) to allow an NVOCC to cross reference a VOCC's tariff for certain specified surcharges and assessorials. The Commission notes that it is not the intent of this regulation to waive the application of § 520.8(a)(1) to any charge or increase in charge being published in a carrier tariff. This cross referencing of another tariff is to be used only for those charges which are being passed through to the shipper at cost. The Commission believes that this proposed rule will allow for greater transparency in the sourcing of various fees and assessorials in the ocean shipping market, which will in turn foster a more competitive marketplace.

The Commission proposes to add § 520.7(a)(3)(iv) to the regulations to allow NVOCCs to cross reference a VOCC's tariff for certain specified surcharges and assessorials.

C. Charges Passed Through by VOCCs

NVOCCs are periodically assessed increases in charges by a VOCC that are ''passed through'' after being imposed on the VOCC by an outside entity, such as canal tolls, taxes, or other third-party levies over which the VOCC has no control. In recognition of the fact that the entity collecting these types of charges is not necessarily subject to an obligation to provide 30-day notice of increases to the carrier, current regulations allow increases in these types of existing charges to take effect upon publication in the VOCC's tariff. Commission regulations stipulate at 46 CFR 520.8(b)(4) that this exemption only applies when the collecting agency has not given advance notice of the change to the common carrier.

Currently, Commission regulations do not explicitly allow NVOCCs to pass through increases in these charges outside of the control of a common carrier, thereby preventing them from passing through to their customer an increase in a charge imposed by an outside entity and then subsequently passed through by a VOCC without the

[3] 46 CFR 520.9(e)(3).

[4] Circular Letter No. 00–2, *Charges for Access to Tariffs and Tariff Systems* (October 6, 2000) at *https://www.fmc.gov/about-the-fmc/circulars/*.

[5] Docket No. 21–03, Comments of the National Customs Brokers and Forwarders Association of America, Inc., June 4, 2021, at 2.

[6] 46 CFR 520.9(a).

required 30-day notice. For this reason, an NVOCC may not be able to recover an increase in these types of charges if it is does not publish the increase in its own tariff sufficiently in advance of any such charge becoming effective in the tariff of the VOCC.

The Commission is persuaded that it is beneficial to address the pass through of charges by the NVOCC to its shipper in its rules governing carrier automated tariffs to more closely align the regulations with the flexibilities afforded VOCCs. The Commission notes that, beyond the flexibility this regulation will grant NVOCCs in their performance of transportation service, it will also clarify for shippers the types of increases in charges that can be posted in an NVOCC's tariff without a 30-day waiting period.

The Commission proposes to add a new § 520.7(h) which would explicitly state that NVOCCs can pass through charges not under the control of an ocean carrier in the same manner as VOCCs.

The Commission interprets the passing through of a charge to mean it is assessed with no markup to the charge imposed on the common carrier by the underlying collecting agency. The proposed regulations which reference charges that may be passed through explicitly prohibit marking up these charges. However, current regulations at 46 CFR 520.8(b)(4) do not address the mark up of the charges listed. Therefore, the Commission proposes to revise regulations at 46 CFR 520.8(b)(4) to specify that these charges may not be marked up above cost to be considered a pass-through cost.

The Commission believes that clarity facilitates consistency in the application of regulations, which in turn provides a measure of assurance to the shipper that certain practices will be carried out uniformly among common carriers. The nature of pass-through charges, such that a shipper may not know the amount of a particular charge in advance, can deny full transparency to the shipper prior to being invoiced for such a charge. More recently, as expressed by all commenters, there is an increased number and variety of additional fees, and frequent changes to those fees, which has escalated the chances that a shipper is unaware of the final cost of transportation when tendering cargo for shipment. To address these inconsistencies, the Commission offers the following guidance as to the intended application of the proposed regulations at 46 CFR 520.7(a)(3)(iv) and (h), and the existing regulations at 520.8(b)(4).

1. General Rate Increases

Some NVOCC commenters expressed concern that General Rate Increases (GRIs), when originating from an underlying VOCC, can appear similar to surcharges. Historically, the Commission has classified GRIs as a component of the base ocean freight assessed by the common carrier and are therefore not surcharges and not subject to any exemption under 46 CFR 520.8(b)(4). The Commission declines to categorize GRIs as surcharges because they apply to the base freight rate for carriage, not a separate fee for ancillary costs associated with that transportation. Thus, in this proposed rule, GRIs will continue to be classified as a component of the base ocean freight assessed by the common carrier and will not be considered exempted from the regulations at § 520.8(a).

2. Fees Connected to Pass-Through Charges

Some of the comments reference ''administrative fees'' in connection with the pass through of charges from the NVOCC to its shipper. Current regulations, at 46 CFR 520.8(b)(4) and proposed regulations at 520.7(a)(3)(iv) would relieve the common carrier from the requirement to provide a shipper with advance notice of an increase in a charge, under the condition that the common carrier itself was not advised of the increase in advance. This exemption is not intended to allow a markup of the charge above what the third party has billed to the NVOCC, which includes not allowing administrative or other named fees assessed by the NVOCC that apply only to charges passed through by that NVOCC, whether through a cross-referenced tariff or by name.

3. Demurrage and Detention

The Commission notes that comments included references to demurrage and detention charges levied by an underlying VOCC. Although demurrage and detention practices are not within the scope of this rulemaking, the Commission has issued guidance on how it assesses the reasonableness of demurrage and detention practices.[7] Also, it has issued an Advance Notice of Proposed Rulemaking to seek comment on whether the Commission should require common carriers and marine terminal operators to include certain minimum information on or with demurrage and detention billings.[8] The Commission is interested in receiving comments on whether it should require common carriers and marine terminal operators to adhere to certain practices regarding the timing of demurrage and detention billings. These changes were recommended by the Fact Finding Officer in Commission Fact Finding 29: International Ocean Transportation Supply Chain Engagement. The Commission welcomes additional comments on demurrage and detention practices in the docket for the Advance Notice of Proposed Rulemaking.[9]

4. Application of Exemption at 46 CFR 520.8(b)(4) to NVOCCs

The current regulations at 46 CFR 520.8(b)(4) have exempted VOCCs from notifying shippers in advance of changes in charges for terminal services, canal tolls, additional charges, or other provisions which are not under the control of the common carriers or conferences when it acts as a collection agent for such charges, and it received no notice for such changes. This exemption from the waiting period set forth at § 520.8(a)(1) has been applied to VOCCs, but its application to NVOCC tariffs has been unclear. The Commission interprets the § 520.8(b)(4) exemption to apply to NVOCCs as well, provided that the underlying charge originates with an entity that is not subject to the requirements of § 520.8(a)(1), and that the change was made without notification from the owner of the originating tariff.

D. Definition of Co-Loading

The Commission considered but declined to limit the definition of co-loading to less-than-container load (LCL) (as opposed to full container load (FCL)) cargo in its 1984 rulemaking because ''coloading FCLs was less prevalent and less likely than coloading LCL cargo.'' [10] Although the definition of co-loading and its practices was revisited by the Commission in 1993 and 1994, these docketed items were discontinued without further action.[11]

[7] Interpretive Rule on Demurrage and Detention Under the Shipping Act, 85 FR 29638 (May 18, 2020).

[8] Doc. No. 22–04: Demurrage and Detention Billing Requirements Advance Notice of Proposed Rulemaking, 87 FR 8506 (February 15, 2022); *https://www2.fmc.gov/readingroom/proceeding/22-04/.*

[9] *Id.*

[10] Docket No. 84–27, Publishing and Filing Tariffs by Common Carriers in the Foreign Commerce of the United States—Co-Loading Practices by NVOCCs, 49 FR 29980, 29982 (July 25, 1984).

[11] *https://www2.fmc.gov/readingroom/docs/93-22/93-22_003716807.pdf/* and *https://www2.fmc.gov/readingroom/docs/94-26/94-26_003718346.pdf/.* (Nov. 1, 2004).

OSRA also continued the co-loading definition without substantive change.[12]

In order to align regulations with current industry practices, the Commission proposes to amend the definition of co-loading to state specifically that co-loading applies to LCL cargo. The Commission proposes to add the term ''less than container loads of'' to the existing co-loading definition at § 520.2.

E. Documentation for Co-Loading and Other NVOCC Arrangements

Shipments involving multiple NVOCCs encompass a wide and complex range of interactions between parties in the supply chain. The various arrangements made among NVOCCs can provide efficiencies and result in lower transportation costs to the beneficial cargo owner (BCO). On the other hand, co-loading practices have the potential to reduce transparency in the shipping process and can lead to NVOCCs controlling cargo without the knowledge of the BCO.

The current definition of co-loading at 46 CFR 520.2 is ''the combining of cargo by two or more NVOCCs for tendering to an ocean common carrier under the name of one or more of the NVOCCs.'' As discussed above, this definition applies to the physical combining of LCL shipments in a single shipping container. Regulations at 46 CFR 520.11(c)(2) require that the applicable bill of lading for co-loaded cargo be annotated with the identity of any other NVOCC to which the shipment has been tendered for co-loading. Since the promulgation of co-loading regulations, practices have evolved among NVOCCs that include the tender for transport of FCL shipments by one NVOCC to another NVOCC without the knowledge or consent of the BCO. This practice is often referred to in the industry as co-loading, despite not conforming to the definition set forth by the Commission.

The Commission proposes to add a regulation at 46 CFR 520.11(d) to require that the documentation accompanying FCL shipments is annotated with the name of all NVOCCs associated with the cargo. This annotation requirement ensures that, for either co-loaded cargo or full container loads, the BCO has the information required to contact any NVOCC which may have control of its cargo. This information is critical to the BCO, particularly in cases of failure to perform by the NVOCC with which the BCO contracted to transport its cargo.

F. Other Proposed Changes to Part 520

1. Clarifying Revisions

The Commission proposes to revise several provisions within part 520 to clarify when the regulations are expressing a requirement or obligation. For example, the Commission proposes to replace the term ''shall'' with the term ''must'' to clearly indicate that certain acts are required and to identify regulatory obligations. In addition, the Commission proposes similar revisions by either deleting the word ''shall'' or other clarifying edits. Similarly, the Commission also proposes replacing certain usages of the term ''may'' with the term ''must'' to identify requirements or obligations.

2. § 520.2 Definitions

The proposed rule would: Add clarifying language to the definition of ''bulk cargo'' to explain that bulk ''containerized cargo tendered by the shipper'' is subject to mark and count and is, therefore, subject to the requirements of this part; amend the definition of combination rate to spell out the abbreviation for Tariff Rate Item; amend the definition of harmonized system to remove an outdated reference to the U.S. Customs Service; amend the definition of publisher to mean a person rather than an organization, and specify that a publisher is authorized to act by a common carrier; amend the definition of retrieval to remove outdated references to dial-up telecommunications and a network link; amend the definition of rules to clarify that a common carrier or a conference of common carriers govern the application of tariff matters; amend the definition of shipper to specify that ocean transportation refers to the transportation of cargo, and to specify that the person to whom delivery is to be made may be a consignee; amend the definition of shippers' association to make a grammatical change; and amend the definition of through transportation to remove wording which does not affect the meaning of the definition. The Commission also proposes to add definitions for destination scope and inland division. Finally, the Commission proposes to remove as unnecessary the definitions of joint rates, commodity description number, local rates, points of rest, and shippers' association.

3. § 520.3 Publication Responsibilities

Pursuant to § 520.3(d), the Commission requires that all common carriers publish a tariff in an automated tariff system and provide the location of that tariff to the Commission prior to the commencement of common carrier service. However, some NVOCCs will publish a tariff upon initially being licensed, but later allow the tariff to lapse and fall out of compliance. The Commission believes adding notice in § 520.3 of the consequences which already exist pursuant to 46 CFR 515.1 and 515.14 for failure to maintain a tariff could improve tariff compliance. The Commission therefore proposes to add a provision to § 520.3 that specifies the failure to maintain a tariff will result in the revocation of an NVOCC's license or suspension of a foreign-based NVOCC's registration. In addition, the Commission proposes to change the term used for the person a common carrier may use to meet their publication requirements from ''agent'' to ''publisher''; include the common carrier's email address in the list of items provided to the Commission prior to commencement of common carrier service pursuant to a published tariff; and define the time period allowed for the common carrier to provide changes to its Form FMC–1 to the Commission to within 30 calendar days.

4. § 520.4 Tariff Contents

The Commission proposes to revise § 520.4(a)(3) to clarify that the ocean transportation intermediary that may receive compensation paid by a carrier or conference is an ocean freight forwarder as defined by section 3(17)(A) of the Shipping Act. In addition, the Commission proposes to: Use plain language to reword the regulation at § 520.4(a)(4) requiring that a tariff state each charge separately; revise § 520.4(a)(5) to state that sample copies of bills of lading must be legible; and revise § 520.4(a)(8) to state that commodity tariffs must contain a retrievable commodity index.

The Commission also proposes to delete § 520.4(e)(1) which describes voluntary coding for commodity descriptions. To streamline the rule and remove a non-mandatory regulation, the Commission proposes to delete paragraph (e)(1). Tariff publishers are still not required to use any numeric code to identify commodities and the Commission still encourages the use of the Harmonized Tariff Schedule of the United States for both the commodity coding and associated terminology (definitions). In addition, the regulations still address the use of numeric codes to identify commodities.

5. § 520.5 Standard Tariff Terminology

The Commission proposes to update the source for geographic names listed in tariffs because they are currently out of date and inaccurate.

[12] Docket No. 98–29, Final Rule and Interim Final Rule: Carrier Automated Tariff Systems, 64 FR 11225 (Mar. 8, 1999).

6. § 520.6 Retrieval of Information

The Commission proposes to revise the search capability requirement for the retrieval of tariff information to specify that a search for a commodity description must result in a commodity or retrievable commodity index list.

7. § 520.7 Tariff Limitations

The Commission proposes to revise for clarity the date on which a new conference member's participation in the conference tariff becomes effective and specify that the minimum time allowed to file an overage claim with a common carrier applies to claims filed by a shipper. The Commission also proposes to remove the regulation stipulating the methods to be used to compute the weight of green salted hides, in light of requirements mandated by the International Maritime Organization. In addition, the Commission proposes to add paragraph (h) to § 520.7 that states that NVOCCs may pass through certain charges received from ocean common carriers that are not under the control of the common carrier or conferences. The Commission clarifies that the charges must be clearly listed in the NVOCC's tariffs and not marked up above cost.

8. § 520.8 Effective Dates

The Commission proposes to change ''destination grouping'' to ''destination scope'' in § 520.8(b)(3), consistent with other references to ''destination scope'' in 46 CFR part 520.

9. § 520.9 Access to Tariffs

The Commission proposes to update the regulations under this section to remove references to obsolete technologies.

10. § 520.10 Integrity of Tariffs

The Commission proposes to revise the requirement to maintain historical tariff data in § 520.10(a) to define the time period that data must be made available to the Commission to within 45 days of a request. The Commission believes 45 days is a reasonable period of time for a carrier or a conference to respond to a request for archived data. The Commission also proposes grammatical corrections to the requirement that carriers provide tariff access to the Commission.

11. § 520.11 Non-Vessel-Operating Common Carriers

The Commission proposes to remove the current regulation that an NVOCC must note in its tariff that it does not tender cargo for co-loading. This regulation is considered to be an unnecessary burden on an NVOCC that does not co-load. The Commission also proposes to remove the current regulation that an NVOCC may not offer special co-loading rates for the exclusive use of other NVOCCs. This regulation is outdated in light of 46 CFR part 531—Negotiated Service Arrangements, and 46 CFR part 532—NVOCC Negotiated Rate Arrangements which allow an NVOCC to negotiate rates for the exclusive use of another NVOCC.

12. § 520.12 Time/Volume Rates

The Commission proposes to clarify the requirements applicable to time/volume rates. The Commission also proposes revisions that clarify that common carriers or conferences may cancel time/volume rates when no shipper accepts these rates within thirty (30) days after the rates are published.

13. § 520.13 Exemptions and Exceptions

The Commission proposes to make change to update the governing rules of this part, and the requirements for Department of Defense cargo. The Commission also proposes to remove references to a business no longer in existence.

14. § 520.14 Special Permission

The Commission proposes to add a regulation which specifies the documents required when requesting confidential treatment of an application for special permission and update the process for submission and payment of applications for special permission.

II. Public Participation

How do I prepare and submit comments?

Your comments must be written and in English. To ensure that your comments are correctly filed in the docket, please include the docket number of this document in your comments.

You may submit your comments via email to the email address listed above under **ADDRESSES**. Please include the docket number associated with this notice and the subject matter in the subject line of the email. Comments should be attached to the email as a Microsoft Word or text-searchable PDF document.

How do I submit confidential business information?

The Commission will provide confidential treatment for identified confidential information to the extent allowed by law. If your comments contain confidential information, you must submit the following by email to the address listed above under **ADDRESSES**:

1. A transmittal letter requesting confidential treatment that identifies the specific information in the comments for which protection is sought and demonstrates that the information is a trade secret or other confidential research, development, or commercial information.

2. A confidential copy of your comments, consisting of the complete filing with a cover page marked ''Confidential-Restricted,'' and the confidential material clearly marked on each page.

3. A public version of your comments with the confidential information excluded. The public version must state ''Public Version—confidential materials excluded'' on the cover page and on each affected page and must clearly indicate any information withheld.

Will the Commission consider late comments?

The Commission will consider all comments received before the close of business on the comment closing date indicated above under **DATES**. To the extent possible, we will also consider comments received after that date.

How can I read comments submitted by other people?

You may read the comments received by the Commission at the Commission's Electronic Reading Room at the addresses listed above under **ADDRESSES**.

III. Rulemaking Analyses and Notices

Regulatory Flexibility Act

The Regulatory Flexibility Act, 5 U.S.C. 601–612, provides that whenever an agency is required to publish a notice of proposed rulemaking under the Administrative Procedure Act (APA), 5 U.S.C. 553, the agency must prepare and make available for public comment an initial regulatory flexibility analysis (IRFA) describing the impact of the proposed rule on small entities, unless the head of the agency certifies that the rulemaking will not have a significant economic impact on a substantial number of small entities. 5 U.S.C. 603, 605.

The proposed rule would require all common carriers to provide free tariff access, which the Commission believes will provide a benefit by ensuring there are minimal constraints to inhibit the shipping public from obtaining pricing information for ocean transportation. As referenced earlier, advancements in technology have significantly eased the burden on common carriers to make

their tariffs available to the public, and many carriers are already providing their tariffs to the public free of charge. The rule also provides flexibility for NVOCCs to pass through to their customers charges assessed by other entities, which allows the NVOCC to recover payments made on behalf of its shipper. In addition, the rule provides a documentation annotation requirement for shipments arranged by two or more NVOCCs. This requirement provides information to the beneficial cargo owner which allows for a more expedient determination of cargo status and location and places no additional burden on the NVOCC.

Because the costs to comply with this rule are minimal and few small entities are currently non-compliant, the proposed rule would not have a significant economic impact on a substantial number of small entities. For these reasons, the Chairman of the Federal Maritime Commission certifies that if this rule is promulgated, it would not have a significant economic impact on a substantial number of small entities.

Congressional Review Act

The rule is not a ''major rule'' as defined by the Congressional Review Act, codified at 5 U.S.C. 801 *et seq*. The rule will not result in: (1) An annual effect on the economy of $100,000,000 or more; (2) a major increase in costs or prices; or (3) significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of United States-based companies to compete with foreign based companies. 5 U.S.C. 804(2).

National Environmental Policy Act

The National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321–4347) requires Federal agencies to consider the environmental impacts of proposed major Federal actions significantly affecting the quality of the human environment, as well as the impacts of alternatives to the proposed action. When a Federal agency prepares an environmental assessment, the Council on Environmental Quality (CEQ) NEPA implementing regulations (40 CFR parts 1500 through 1508) require it to ''include brief discussions of the need for the proposal, of alternatives [. . .], of the environmental impacts of the proposed action and alternatives, and a listing of agencies and persons consulted.'' 40 CFR 1508.9(b). This section serves as the Commission's Draft Environmental Assessment (Draft EA) for the proposed changes to 46 CFR part 520.

Upon completion of an environmental assessment, it was determined that the proposed rule will not constitute a major Federal action significantly affecting the quality of the human environment within the meaning of the National Environmental Policy Act of 1969, 42 U.S.C. 4321 *et seq.,* and that preparation of an environmental impact statement is not required. This Finding of No Significant Impact (''FONSI'') will become final within 10 days of publication of this notice in the **Federal Register** unless a petition for review is filed by any of the methods described in the **ADDRESSES** section of the document. The FONSI and environmental assessment are available for inspection at the Commission's Electronic Reading Room at: *https://www2.fmc.gov/readingroom/proceeding/21-03/.*

This document sets forth the purpose of and need for this action. The purpose of this rulemaking is to update current regulations to reflect changes in industry practices. The rulemaking also proposes to remove the cost burden to the public associated with access to Carrier Automated Tariffs. Lastly, the rulemaking makes updates and clarifications to current regulations, which are largely technical.

Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3521) (PRA) requires an agency to seek and receive approval from the Office of Management and Budget (OMB) before collecting information from the public.[13] The agency must submit collections of information in proposed rules to OMB in conjunction with the publication of the notice of proposed rulemaking.[14]

The information collection requirements associated with the carrier automated tariffs requirements in part 520 are currently authorized under OMB Control Number 3072–0064. In compliance with the PRA, the Commission has submitted the proposed revised information collection to the Office of Management and Budget and is requesting comment on the proposed revision.

With the proposed addition of a new 46 CFR 520.7(a)(3)(iv), there will be a shift in burden when NVOCCs can potentially direct shippers to existing VOCC tariffs for certain specific surcharges as opposed to listing those surcharges individually. However, the Commission believes that this shift in burden will not increase or decrease the overall industry burden. Although under the proposed rule shippers may be required to review a VOCC tariff alongside an NVOCC tariff, the NVOCC will no longer need to maintain a tariff precisely matching the terms of the chosen VOCC. It will not have a significant impact on members of the shipping public.

In its proposed addition of a new 46 CFR 520.11(d), the Commission is proposing an information collection burden for those NVOCCs issuing bills of lading on FCL shipments where they would place the cargo in the control of a different NVOCC. This requirement of placing this information in the document is *de minimis,* and the Commission believes that current industry best practices already in place mean that this change would not impact NVOCCs.

Title: 46 CFR part 520—Carrier Automated Tariff Systems and Related Form FMC–1.

OMB Control Number: 3072–0064.

Abstract: 46 U.S.C. 40502 and 46 CFR part 520 requires common carriers and conferences of common carriers to publish tariffs to be made available to the public in automated tariff systems.

Current Action: The proposed rule would clarify, modernize and update the current regulations.

Type of Request: Revision of a previously approved collection.

Needs and Uses: The Commission requires tariffs to be made available to ensure compliance with the Shipping Act of 1984.

Frequency: The frequency of publishing and maintaining data in tariffs is determined by the common carrier and its customers. It is the common carrier's responsibility to ensure that the rates and terms applicable to a shipment are published prior to the receipt of cargo for that shipment.

Type of Respondents: Common carriers or their duly appointed agents are required make tariffs available to the public for inspection.

Number of Annual Respondents: The Commission does not anticipate that the proposed revisions would affect the number of respondents. The Commission anticipates an annual respondent universe of 6,331 common carriers.

Estimated Time per Response: The Commission does not anticipate that the proposed revisions would affect the estimated time per response, which would continue to range from .0167 to 2 person-hours for tariff content requirements, notification and filing requirements, and reporting and recordkeeping requirements contained in the regulations, and 0.5 person-hours for completing Form FMC–81.

[13] 44 U.S.C. 3507.

[14] 5 CFR 1320.11.

Total Annual Burden: The Commission does not anticipate that the proposed revisions would affect the number of tariffs made publicly available or the burden associated with each tariff and, therefore, would not affect the total annual burden The Commission estimates the total person-hour burden at 2,509 person-hours.

Comments are invited on:

- Whether the collection of information is necessary for the proper performance of the functions of the Commission, including whether the information will have practical utility;
- Whether the Commission's estimate for the burden of the information collection is accurate;
- Ways to enhance the quality, utility, and clarity of the information to be collected;
- Ways to minimize the burden of the collection of information on respondents, including the use of automated collection techniques or other forms of information technology.

Please submit any comments, identified by the docket number in the heading of this document, by the methods described in the **ADDRESSES** section of this document.

Executive Order 12988 (Civil Justice Reform)

This proposed rule meets the applicable standards in E.O. 12988 titled, ''Civil Justice Reform,'' to minimize litigation, eliminate ambiguity, and reduce burden. Section 3(b) of E.O. 12988 requires agencies to make every reasonable effort to ensure that each new regulation: (1) Clearly specifies the preemptive effect; (2) clearly specifies the effect on existing Federal law or regulation; (3) provides a clear legal standard for affected conduct, while promoting simplification and burden reduction; (4) clearly specifies the retroactive effect, if any; (5) adequately defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General. This document is consistent with that requirement.

Regulation Identifier Number

The Commission assigns a regulation identifier number (RIN) to each regulatory action listed in the Unified Agenda of Federal Regulatory and Deregulatory Actions (Unified Agenda). The Regulatory Information Service Center publishes the Unified Agenda in April and October of each year. You may use the RIN contained in the heading at the beginning of this document to find this action in the Unified Agenda, available at *https://www.reginfo.gov/public/do/eAgendaMain.*

List of Subjects in 46 CFR Part 520

Freight, Maritime carriers, Intermodal transportation, Report and recordkeeping requirements.

For the reasons set forth in the preamble, the Federal Maritime Commission proposes to amend 46 CFR part 520 as follows:

PART 520—CARRIER AUTOMATED TARIFFS

■ 1. The authority citation for part 520 continues to read as follows:

Authority: 5 U.S.C. 553; 46 U.S.C. 305, 40101–40102, 40501–40503, 40701–40706, 41101–41109.

■ 2. Amend § 520.2 by:
■ a. Removing the word ''shall'' from the introductory text paragraph;
■ b. Revising the definitions of ''Bulk cargo'', ''Co-loading'', ''Combination rate'', ''Commodity description'', ''Controlled carrier'', ''Harmonized system'', ''Location group'', ''Publisher'', ''Retrieval'', ''Rules'', ''Shipper'', ''Tariff number'', ''Tariff rate item(''TRI'')'' and ''Through transportation'';
■ c. Adding in alphabetical order the definitions of ''destination scope'', ''inland division'' and ''Through date'';
■ d. Removing definitions of ''cCommodity description number'', ''Joint rates'', ''Local rates'', ''Point of rest'', ''Shippers' association''; ''Thru date''.

The revisions and additions read as follows:

§ 520.2 Definitions.

The following definitions apply to this part:

* * * * *

Bulk cargo means cargo that is loaded and carried in bulk without mark or count in a loose unpackaged form, having homogeneous characteristics. Bulk containerized cargo tendered by the shipper is subject to mark and count and is, therefore, subject to the requirements of this part.

Co-loading means the combining of less than container loads of cargo by two or more NVOCCs for tendering to an ocean common carrier under the name of one or more of the NVOCCs.

Combination rate means a rate for a shipment moving under intermodal transportation which is computed by the addition of a Tariff Rate Item (''TRI'') and an inland rate applicable from/to inland points not covered by the TRI.

* * * * *

Commodity description means a comprehensive description of a commodity listed in a tariff, including a brief definition of the commodity, that may be identified by a specific number.

* * * * *

Controlled carrier means an ocean common carrier that is, or whose operating assets are, directly or indirectly owned or controlled by a government; ownership or control by a government will be deemed to exist with respect to any common carrier if:

* * * * *

Destination scope means a location group defining the geographic range of cargo destinations covered by a tariff.

* * * * *

Harmonized System means the Harmonized Tariff Schedule of the United States, published by the U.S. International Trade Commission, and Schedule B, administered by the U.S. Census Bureau.

Inland division means the amount paid by a common carrier to an inland carrier for the inland portion of through transportation offered to the public by the common carrier.

* * * * *

Location group means a logical collection of geographic points, ports, states/provinces, countries, or combinations thereof, which is primarily used to identify, by location group name, a group that represents tariff origin and/or destination scope and TRI origin and/or destination.

* * * * *

Publisher means a person authorized by a common carrier to publish or amend tariff information.

* * * * *

Retrieval means the process by which a person accesses a tariff and interacts with the carrier's or publisher's system on a transaction-by-transaction basis to retrieve published tariff matter.

* * * * *

Rules means the stated terms and conditions set by *a common carrier or a conference of common carriers* which govern the application of tariff rates, charges and other matters.

* * * * *

Shipper means:

(1) A cargo owner;

(2) The person for whose account the ocean transportation of cargo is provided;

(3) The person to whom delivery is to be made

(4) A shipper's association meaning a group of shippers that consolidates or distributes freight on a nonprofit basis for the members of the group to obtain carload, truckload, or other volume rates or service contracts; or

(5) An NVOCC that accepts responsibility for payment of all charges applicable under the tariff or service contract.

* * * * *

Tariff number means a unique 3-digit number assigned by the publisher to distinguish it from other tariffs. Tariffs must be identified by the 6-digit organization number plus the user-assigned tariff number (*e.g.,* 999999–001) or a Standard Carrier Alpha Code (''SCAC'') plus the user-assigned tariff number.

Tariff rate item (''TRI'') means a single freight rate, in effect on and after a specific date or for a specific time period, for the transportation of a stated cargo quantity, which moves from origin to destination under a single specified set of transportation conditions, such as container size or temperature.

* * * * *

Through date means the date after which an amendment to a tariff element is designated by the publisher to be unavailable for use and the previously effective tariff element automatically goes back into effect.

* * * * *

Through transportation means continuous transportation between origin and destination, for which a through rate is assessed and which is offered or performed by one or more carriers, at least one of which is a common carrier, between a United States *port or point* and a foreign *port or point.*

* * * * *

■ 3. Revise § 520.3 to read as follows:

§ 520.3 Publication responsibilities.

(a) *General.* Unless otherwise exempted or excepted by § 520.13, all common carriers and conferences must keep open for public inspection, in automated tariff systems, tariffs showing all rates, charges, classifications, rules, and practices between all points or ports on their own routes and on any through transportation route that has been established.

(b) *Conferences.* Conferences must publish, in their automated tariff systems, rates offered pursuant to independent action by their members and may publish any open rates offered by their members. Alternatively, open rates may be published in individual tariffs of conference members.

(c) *Publishers.* Common carriers or conferences can use publishers to meet their publication requirements under this part.

(d) *Notification.* (i) Prior to the commencement of common carrier service pursuant to a published tariff, each common carrier and conference must electronically submit to BTA, Form FMC–1 via the Commission's website at *www.fmc.gov.* (ii) The common carrier and conference must include on Form FMC–1 its organization name, organization number, home office address, name, email address and telephone number of firm's representative, the location of its tariffs, and the publisher, if any, used to maintain its tariffs. (iii) Any changes to the above information must be transmitted to BTA within 30 calendar days. (iv) The Commission will provide a unique organization number to new entities operating as common carriers or conferences in the U.S. foreign commerce.

(e) *Location of tariffs.* The Commission will publish on its website, *www.fmc.gov,* a list of the locations of all common carrier and conference tariffs.

(f) *NVOCC failure to update tariff.* Failure to maintain a tariff will result in revocation of an NVOCC's license or suspension of a foreign-based NVOCC's registration.

■ 4. Amend § 520.4 by:

■ a. Removing in introductory paragraph (a), paragraphs (b) through (d), and (h) the word ''shall'' and adding in its place the word ''must'';

■ b. Revising paragraphs (a)(3) through (5), (8), (f)(5), (g), and (i);

■ c. Removing paragraph (e)(1);

■ d. Redesignating paragraphs (e)(2) and (3) as paragraphs (e)(1) and (2) respectively;

■ e. Replacing the word ''shall'' in newly redesignated paragraphs (e)(1), (e)(2)(ii), and (iii) with the word ''must''; and

■ f. Revising newly redesignated paragraph (e)(2)(i).

The revisions read as follows:

§ 520.4 Tariff contents.

(a) * * *

(3) State the level of compensation, if any, to be paid by a carrier or conference to an ocean freight forwarder, as defined by section 3(17)(A) of the Act (46 U.S.C. 40102(19));

(4) State separately each terminal or other charge, privilege, or facility under the control of the carrier or conference and any rules that in any way change, affect, or determine any part or the total of the rates or charges;

(5) Include sample copies of any bill of lading showing legible terms and conditions, contract of affreightment and/or other document evidencing the transportation agreement;

* * * * *

(8) For commodity tariffs, also contain a retrievable commodity index, commodity descriptions and tariff rate items.

* * * * *

(e) * * *

(2) *Commodity index.* (i) Common carriers or their publishers must have at least one similar index entry which will logically represent the commodity within the alphabetical index for each commodity description it creates under this section. Common carriers or their publishers must create multiple entries in the index for articles with equally valid common use names, such as, ''Sodium Chloride,'' ''Salt, common,'' etc.

* * * * *

(f) * * *

(5) Origin and destination scopes or location groups;

* * * * *

(g) *Location groups.* In the primary tariff, or in a governing tariff, a publisher may define and create groups of cities, states, provinces, and countries (*e.g.,* location groups) or groups of ports (*e.g.,* port groups), which can be used in the construction of TRIs and other tariff objects, in lieu of specifying particular place names in each tariff item, or creating multiple tariff items which are identical in all ways except for place names.

* * * * *

(i) *Shipper requests.* Conference tariffs must contain clear and complete instructions, in accordance with the agreement's provisions, stating where and by what method shippers can file requests and complaints and how they can engage in consultation pursuant to section 5(b)(6)–(7) of the Act (46 U.S.C. 40303(b)(6)–(7)), together with a sample rate request form or a description of the information necessary for processing the request or complaint.

* * * * *

■ 5. Amend § 520.5 by

■ a. Removing in paragraph (a) the word ''may'' in the third sentence and adding it its place the word ''can''; and

■ b. Revising paragraph (b) to read as follows:

§ 520.5 Standard tariff terminology.

* * * * *

(b) *Geographic names.* Tariffs should employ locations (points) that are provided by the National Geospatial-Intelligence Agency or the Geographic Names Information System developed by the U.S. Geological Survey. Ports published or approved for publication in the World Port Index (Pub. 150) should also be used in tariffs. Tariff publishers can use geographic names

that are currently in use and have not yet been included in these publications.

■ 6. Amend § 520.6 by:

■ a. Removing in paragraphs (a), (c), and (d) the word ''shall'' and adding in its place the word ''must''; and

■ b. Revising paragraphs (b), (e), and (f) to read as follows:

§ 520.6 Retrieval of information.

* * * * *

(b) *Search capability.* Publisher must provide the capability to search for tariff matter by non-case sensitive text search. Text search matches for commodity descriptions must result in a commodity or retrievable commodity index list.

* * * * *

(e) *Basic ocean freight.* The minimum rate display for tariffs must consist of the basic ocean freight rate and a list of all assessorial charges that apply for the retriever-entered shipment parameters. The tariff must indicate when other rules or charges apply to a shipment under certain circumstances.

(f) *Displays.* All displays of individual tariff matter must include the publication date, effective date, amendment code (use codes in Appendix A of this part) and object name or number. When applicable, a through date or expiration date must also be displayed. Use of ''S'' as an amendment code must be accompanied by a Commission issued special permission number.

■ 7. Amend § 520.7 by:

■ a. Removing in paragraphs (a), (b), and (c) the word ''shall'' and adding in its place the word ''must'';

■ b. Removing in paragraphs (a)(3)(ii) and (iii) the word ''may'' and adding in its place the word ''can'';

■ c. Adding a new paragraph (a)(3)(iv);

■ d. Removing paragraph (e).

■ e. Redesignating paragraphs (f) through (h) as paragraphs (e) through (g);

■ f. Revising newly redesignated paragraphs (e) and (f); and

■ g. Adding a new paragraph (h).

The additions and revisions read as follows:

§ 520.7 Tariff limitations.

(a) * * *

(3) * * *

(iv) An NVOCC may cross-reference an ocean common carrier tariff for the purpose of charging its shipper the ocean common carrier's surcharges and assessorial charges, provided the named charges are clearly listed in the NVOCC's tariff, and not marked up above cost.

* * * * *

(e) *Conference situations.* (1) New members of a conference must cancel any independent tariffs applicable to the trades served by the conference, within ninety (90) days of membership in the conference. Individual conference members can publish their own separate open rate tariffs. A new member's participation in the conference tariff is effective on the date notice of membership is published in the conference tariff, unless a later effective date is specified.

* * * * *

(f) *Overcharge claims.* (1) A tariff must not limit the filing of overcharge claims by a shipper with a common carrier to a period of less than three (3) years from the accrual of the cause of action.

(2) The acceptance of any overcharge claim cannot be conditioned upon the payment of a fee or charge.

(3) A tariff must not require that overcharge claims based on alleged errors in weight, measurement, or description of cargo be filed before the cargo has left the custody of the common carrier.

* * * * *

(h) *Charges assessed by ocean common carriers to non-vessel operating common carriers.* NVOCCs may pass through charges received from ocean common carriers for terminal services, canal tolls, additional charges, or other provisions which are not under the control of the common carrier or conferences, and for which the ocean common carrier merely acts as a collection agent. The charges must be clearly listed in the NVOCC's tariffs, and not marked up above cost.

■ 8. Amend § 520.8 by:

■ a. Revising paragraph (b)(3) and (4); and

■ b. Removing in paragraph (c) the wording ''shall be'' and adding in its place the word ''are''.

The revisions read as follows:

§ 520.8 Effective dates.

* * * * *

(b) * * *

(3) The addition of a port or point to a previously existing origin or destination scope; or

(4) Changes in charges which are not under the control of the common carrier or conference (including terminal services, canal tolls, additional charges, or other provisions), for which the carrier or conference merely act as a collection agent for such charges, and the agency making such changes does so without notifying the tariff owner. The carrier must not mark up these charges above cost.

* * * * *

■ 9. Revise § 520.9 to read as follows:

§ 520.9 Access to tariffs.

(a) *Methods to access.* Carriers and conferences must provide access to their published tariffs, via the internet.

(b) *Internet connection.* (1) The internet connection requires that systems provide a uniform resource locator (''URL'') internet address (*e.g., https://www.tariffsrus.com* or *https://1.2.3.4*). (2) Carriers or conferences must ensure that their internet service providers provide static internet addresses.

(c) *Tariff availability.* (1) Tariffs must be made available to any person without time, quantity, or other limitations.

(2) Carriers and conferences must provide free access to their tariff publication system.

(3) Tariff publication systems must provide user instructions for access to tariff information.

(d) *Federal agencies.* Carriers and conferences must not assess any access charges against the Commission or any other Federal agency.

(e) *User identifications.* Carriers and conferences must provide the Commission with the requisite documentation and the number of user identifications and passwords required to facilitate the Commission's access to their systems, if those systems require such identifications and passwords.

■ 10. Amend § 520.10 by revising paragraphs (a), (b), and (d) to read as follows:

§ 520.10 Integrity of tariffs.

(a) *Historical data.* Carriers and conferences must keep the data that appeared in their tariff publication systems for a period of five (5) years from the date such information is superseded, canceled or withdrawn, and must provide on-line access to such data for two (2) years. After two (2) years, such data must be retained on-line or in other electronic form, and must be made available to any person or the Commission upon request within 45 days, unless otherwise agreed. Carriers and conferences may charge a reasonable fee for the provision of historical data, not to exceed the fees for obtaining such data on-line. Carriers and conferences must not charge a fee to the Commission or any other Federal agency.

(b) *Access date capability.* Each tariff must provide the capability for a retriever to enter an access date, *i.e.,* a specific date for the retrieval of tariff data, so that only data in effect on that date would be directly retrievable. This capability would also align any rate adjustments and assessorial charges that were effective on the access date for rate calculations and designation of

applicable surcharges. The access date also applies to the alignment of tariff objects for any governing tariffs.

* * * * *

(d) *Access to systems.* Carriers and conferences must provide the Commission reasonable access to their automated systems and records for the Commission's review.

■ 11. Amend § 520.11 by:

■ a. Removing in the introductory text in paragraphs (a) and (c) the word ''shall'' and adding in its place the word ''must'';

■ b. Revising paragraphs (a)(5) and (b);

■ c. Removing paragraph (c)(1)(i);

■ d. Redesignating paragraphs (c)(1)(ii) and (iii) as (c)(1)(i) and (ii), respectively;

■ e. Removing in newly redesignated paragraph (c)(1)(i) the word ''shall'' and adding in its place the word ''must'';

■ f. Revising newly redesignated paragraph (c)(1)(ii);

■ g. Removing paragraphs (c)(2) and (3); and

■ h. Adding paragraph (d).

The revisions and addition read as follows:

§ 520.11 Non-vessel-operating common carriers.

(a) * * *

(5) The number of its bond, insurance policy, or guaranty; and

* * * * *

(b) *Agent for service.* Every NVOCC not in the United States must state the name and address of the person in the United States designated under part 515 of this chapter as its legal agent for service of process, including subpoenas. The NVOCC must also state that in any instance in which the designated legal agent cannot be served because of death, disability, or unavailability, the Commission's Secretary will be deemed to be its legal agent for service of process.

(c)(1) * * *

(ii) If two NVOCCs enter into a co-loading arrangement which results in a shipper-to-carrier relationship, the tendering NVOCC must describe its co-loading practices and specify its responsibility to pay any charges for the transportation of the cargo. A shipper-to-carrier relationship is presumed to exist where the receiving NVOCC issues a bill of lading to the tendering NVOCC for carriage of the co-loaded cargo.

(d) *Annotation.* An NVOCC which tenders cargo to another NVOCC must annotate each applicable bill of lading with the identity of any other NVOCC to which the shipment has been tendered. Such annotation must be shown on the face of the bill of lading in a clear and legible manner.

■ 12. Amend § 520.12 by:

■ a. Revising paragraphs (a), (c), and (e); and

■ b. Removing in paragraphs (b)(2) and (d) the word ''shall'' and adding in its place the word ''must''.

The revisions read as follows:

§ 520.12 Time/Volume rates.

(a) *General.* Common carriers or conferences must publish in their tariffs, rates that are conditioned upon the receipt of a specified aggregate volume of cargo or aggregate freight revenue over a specified period of time.

* * * * *

(c) *Accepted rates.* Once a time/volume rate is accepted by one shipper, it will remain in effect for the time specified, without amendment. If no shipper gives notice within 30 days of publication, a common carrier or conference may cancel the time/volume rate.

* * * * *

(e) *Liquidated damages.* Time/volume rates must not impose or attempt to impose liquidated damages on any shipper that moves cargo under the rate. Carriers and agreements must rerate cargo moved at the applicable tariff rate, if a shipper fails to meet the requirements of the time/volume offer.

■ 13. Amend § 520.13 by:

■ a. Revising paragraphs (a), (b)(2), (c)(4), (d)(2)(ii)(A), and (d)(2)(ii)(B)(1); and

■ b. Removing paragraph (d)(2)(iii).

The revisions read as follows:

§ 520.13 Exemptions and exceptions.

(a) *General.* Exemptions from the requirements of this part are governed by section 16 of the Act (46 U.S.C. 40103) and the Commission's Rules of Practice and Procedure, § 502.92, of this chapter.

(b) * * *

(2) *Controlled carriers in foreign commerce.* A controlled common carrier is exempt from the provisions of this part exclusively applicable to controlled carriers when:

* * * * *

(c) * * *

(4) *Department of Defense cargo.* Transportation of U.S. Department of Defense cargo moving in foreign commerce under terms and conditions negotiated and approved by the Surface Deployment and Distribution Command and published in a universal service contract. An exact copy of the universal service contract, including any amendments thereto, must be provided to the Commission in electronic format upon request.

* * * * *

(d) * * *

(2) * * *

(ii) *British Columbia and Puget Sound Ports; rail cars*—(A) *Through rates.* Transportation by water of cargo moving in rail cars between British Columbia, Canada and United States ports on Puget Sound, and between British Columbia, Canada and ports or points in Alaska, if the cargo does not originate in or is not destined to foreign countries other than Canada, and if:

* * * * *

(B)(*1*) This exemption does not apply to cargo originating in or destined to foreign countries other than Canada; and

* * * * *

■ 14. Amend § 520.14 by:

■ a. Revising paragraphs (b), (c)(1) through (3), and (d); and

■ b. Adding paragraph (c)(3)(iv).

The revisions and addition read as follows:

§ 520.14 Special permission

* * * * *

(b) *Clerical errors.* Typographical and/or clerical errors constitute good cause for the exercise of special permission authority. Every special permission application must plainly specify the error and present clear evidence of its existence. The special permission application must also include a full statement of the attending circumstances. The special permission application must be submitted with reasonable promptness after publishing the defective tariff material.

(c) *Application.* (1) Applications for special permission to establish rate increases or decreases on less than statutory notice or for waiver of the provisions of this part must be made by the common carrier, conference, or agent for publishing. Every such application must be submitted to the Bureau of Trade Analysis and be accompanied by a filing fee of $313.

(2) Applications for special permission must be made by letter, submitted via mail or email, followed promptly by electronic payment of the filing fee.

(3) Applications for special permission must contain the following information:

* * * * *

(iv) A statement that identifies any part(s) of the application for which confidential treatment is sought and a justification for such confidential treatment. In such cases, the applicant must provide both a confidential version and a public version of the application.

(d) *Implementation.* The authority granted by the Commission must be

used in its entirety, including the prompt publishing of the material for which permission was requested. Applicants must use the special case number assigned by the Commission with the symbol ''S.''

By the Commission.

William Cody,

Secretary.

BILLING CODE 6730–02–P

DEPARTMENT OF TRANSPORTATION

Federal Motor Carrier Safety Administration

49 CFR Part 350

[Docket No. FMCSA–2022–0079]

State Inspection Programs for Passenger-Carrier Vehicles

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), Department of Transportation (DOT).

ACTION: Request for comment on withdrawn advance notice of proposed rulemaking.

SUMMARY: On November 15, 2021, the Infrastructure Investment and Jobs Act (IIJA) was enacted, directing FMCSA to solicit additional comment on the Agency's April 27, 2016 advance notice of proposed rulemaking (ANPRM) concerning the potential establishment of requirements for States to implement annual inspection programs for commercial motor vehicles (CMVs) designed or used to transport passengers (passenger-carrying CMVs).

DATES: Comments must be received on or before June 9, 2022.

ADDRESSES: You may submit comments identified by Docket Number FMCSA–2022–0079 using any of the following methods:

- *Federal eRulemaking Portal:* Go to *https://www.regulations.gov/docket/FMCSA-2022-0079/document.* Follow the online instructions for submitting comments.
- *Mail:* Dockets Operations, U.S. Department of Transportation, 1200 New Jersey Avenue SE, West Building, Ground Floor, Room W12–140, Washington, DC 20590–0001.
- *Hand Delivery or Courier:* Dockets Operations, U.S. Department of Transportation, 1200 New Jersey Avenue SE, West Building, Ground Floor, Room W12–140, Washington, DC 20590–0001, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. To be sure someone is there to help you, please call (202) 366–9317 or (202) 366–9826 before visiting Dockets Operations.
- *Fax:* (202) 493–2251.

To avoid duplication, please use only one of these four methods. See the ''Public Participation and Request for Comments'' portion of the **SUPPLEMENTARY INFORMATION** section for instructions on submitting comments.

FOR FURTHER INFORMATION CONTACT: Ms. Loretta Bitner, Chief, Passenger Carrier Safety Division, Office of Safety, FMCSA, 1200 New Jersey Avenue SE, Washington, DC 20590–0001, (202) 385–2428, *Loretta.Bitner@dot.gov.* If you have questions on viewing or submitting material to the docket, call Dockets Operations at (202) 366–9826.

SUPPLEMENTARY INFORMATION:

I. Public Participation and Request for Comments

A. Submitting Comments

If you submit a comment, please include the docket number for this request for comment (FMCSA–2022–0079), indicate the specific section of this document to which your comment applies, and provide a reason for each suggestion or recommendation. You may submit your comments and material online or by fax, mail, or hand delivery, but please use only one of these means. FMCSA recommends that you include your name and a mailing address, an email address, or a phone number in the body of your document so FMCSA recommends that you include your name and a mailing address, an email address, or a phone number in the body of your document so FMCSA can contact you if there are questions regarding your submission.

To submit your comment online, go to *https://www.regulations.gov/docket/FMCSA-2022-0079/document,* click on this request for comment, click ''Comment,'' and type your comment into the text box on the following screen.

If you submit your comments by mail or hand delivery, submit them in an unbound format, no larger than 8½ by 11 inches, suitable for copying and electronic filing. If you submit comments by mail and would like to know that they reached the facility, please enclose a stamped, self-addressed postcard or envelope.

FMCSA will consider all comments and material received during the comment period.

Confidential Business Information (CBI)

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to the request for comment, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission that constitutes CBI as ''PROPIN'' to indicate it contains proprietary information. FMCSA will treat such marked submissions as confidential under the Freedom of Information Act, and they will not be placed in the public docket. Submissions containing CBI should be sent to Mr. Brian Dahlin, Chief, Regulatory Analysis Division, Office of Policy, FMCSA, 1200 New Jersey Avenue SE, Washington, DC 20590–0001. Any comments FMCSA receives not specifically designated as CBI will be placed in the public docket.

B. Viewing Comments and Documents

To view any documents mentioned as being available in the docket, go to *https://www.regulations.gov/docket/FMCSA-2022-0079/document* and choose the document to review. To view comments, click this request for comment, then click ''Browse Comments.'' If you do not have access to the internet, you may view the docket online by visiting Dockets Operations in Room W12–140 on the ground floor of the DOT West Building, 1200 New Jersey Avenue SE, Washington, DC 20590–0001, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. To be sure someone is there to help you, please call (202) 366–9317 or (202) 366–9826 before visiting Dockets Operations.

C. Privacy

DOT solicits comments from the public to better inform its regulatory process, in accordance with 5 U.S.C. 553(c). DOT posts these comments, without edit, including any personal information the commenter provides, to *www.regulations.gov,* as described in the system of records notice (DOT/ALL 14—Federal Docket Management System), which can be reviewed at *www.transportation.gov/privacy.*

II. Background

On April 27, 2016, in accordance with section 32710 of the Moving Ahead for Progress in the 21st Century Act (Pub. L. 112–141, 126 Stat. 405, 815), FMCSA published in the **Federal Register**, an ANPRM titled ''State Inspection Programs for Passenger-Carrier Vehicles'' (Docket No. FMCSA–2014–0470, 81 FR 24769). The ANPRM

announced that FMCSA was considering a requirement that States establish a program for annual inspections of passenger-carrying CMVs. FMCSA requested information from all interested parties that would enable the Agency to assess the risks associated with improperly maintained or improperly inspected passenger-carrying CMVs. The ANPRM also sought public comments concerning the effectiveness of the current FMCSA annual inspection standards, and data on the potential costs and benefits of a Federal requirement for each State to implement a mandatory inspection program. FMCSA inquired about how the Agency might incentivize States to adopt such programs.

The comment period closed on June 27, 2016, and 22 comments were received, with a plurality (10 of 22) of commenters expressing general opposition to the mandatory State inspection requirement discussed in the ANPRM. After reviewing all the public comments, FMCSA determined there was not enough data and information available to support moving forward with a rulemaking action. As a result, on May 1, 2017, the Agency withdrew the ANPRM.[1] (82 FR 20311)

On November 15, 2021, the IIJA was enacted, Public Law 117–58, 135 Stat. 429 (H.R. 3684, Nov. 15, 2021). Section 23008(a) directed the Agency, within 1 year after the date of enactment, to solicit additional comments on the ANPRM to determine if data and information exist to support moving forward with a rulemaking.

III. Request for Public Comment

As discussed above, FMCSA will use information gathered through this request for comment to further consider the issues associated with State inspections of passenger-carrying CMVs. Questions from the 2016 ANPRM are reprinted here to guide commenters in their responses.[2] The Agency encourages interested parties to provide information about the impact that such a rulemaking would have on State agencies that would be compelled to establish inspection programs, motor carriers' safety performance, operating costs, business practices, and any other aspects of transportation services provided by interstate passenger carriers.

FMCSA requests data on and responses to the following issues and questions. The Agency also encourages commenters to describe any applicable regulatory inspection process under which they operate.

Existing State Mandatory Vehicle Inspection Programs for Passenger-Carrying CMVs

1. Does your State or the States in which you register your passenger-carrying CMV conduct mandatory inspections of such vehicles? Please indicate the State(s) in which your passenger-carrying CMVs are registered.

2. What vehicle types are included in the mandatory passenger-carrying CMV inspection program (*e.g.,* motorcoaches, school buses, mini-buses, 9- to 15-passenger vans, etc.) and which are not included?

3. If your State has a mandatory program, briefly describe your inspection procedures and indicate which vehicle components are inspected.

4. How many total inspections are performed by your State annually for each of the following types of vehicles?

a. Motorcoaches
b. School buses
c. Mini-buses
d. 9- to 15-passenger vans
e. Other

5. What is the estimated time required to complete each vehicle inspection?

6. What procedures are used to record the vehicle inspection?

7. If a vehicle does not pass an inspection, who addresses the issues? If it is done by someone other than the inspecting entity, is there a second inspection after the issues are addressed? On average, how many follow up inspections does it take to pass a vehicle?

8. Are mandatory vehicle inspections performed by State employees, by third-party inspectors authorized by the State, or by passenger carrier employees through a State-authorized self-inspection program?

9. If vehicle inspections are conducted by a State-authorized third party or by passenger-carrier employees authorized by the State, are there differences in safety outcomes between those conducted by State employees and those conducted by third-party inspectors or through a passenger carrier's State-authorized self-inspection facilities?

10. Are there any specific benefits or concerns related to using third-party inspectors or by others?

11. If inspections are conducted by third-party inspectors or by passenger carrier-employed mechanics or technicians, what oversight is or should be required?

12. Should self-inspection or third-party inspections be options for compliance with a mandatory State inspection?

13. How does/would the cost of inspections differ between those conducted by State employees or by third-party inspectors?

14. What might be other preferable options?

Measuring Effectiveness of Inspection Programs

15. Does your State have information on violations discovered during inspections that are attributable to maintenance issues that should have been found during a required vehicle inspection?

16. Has your State considered implementing a mandatory passenger-carrying CMV inspection program, but declined to do so? If so, what are your State's reasons for not implementing a program?

17. If your State imposes mandatory inspection of passenger-carrying CMVs, how is the effectiveness of that program measured?

18. What are the most common vehicle defects discovered during these mandatory vehicle inspections? What safety conclusions do you draw from the results of these inspections?

19. Has your State or organization collected data related to crashes, injuries, or fatalities attributable to improperly maintained or inspected passenger-carrying CMVs? If so, please provide summary information or links to detailed data associated with these areas.

20. Has the occurrence of passenger-carrying CMV-involved crashes, injuries, or fatalities before and after the implementation of a mandatory inspection requirement been evaluated? If so, please provide summary information or links to detailed data associated with these areas.

21. After a State inspection requirement was instituted, what changes were observed over time in the number of safety violations discovered during inspections, if any.

22. Do programs that inspect only a sample of vehicles have significantly different outcomes than those where all vehicles are inspected, please provide examples of how they differ?

Inspection Facilities and Locations

23. Where does your State conduct mandatory passenger-carrying CMV

[1] The ANPRM and the ANPRM withdrawal are available in the docket for this request for comments.

[2] The questions reprinted here are identical to those in the ANPRM with the exception of two locations where the term ''bus'' is replaced with the more accurate term ''passenger-carrying CMV'' and removal of question 40, which the Agency now deems irrelevant.

inspections (*e.g.,* State owned/leased facility, third party facility, carrier's place of business, or other type of facility)?

24. Where should mandatory passenger-carrying CMV inspections be performed?

25. If mandatory passenger-carrying CMV inspections are conducted at the carrier's place of business, what accommodations must be made to ensure appropriate access (*e.g.,* pits, lifts, etc.) to conduct full inspections of motorcoaches and other large passenger vehicles?

26. How does facility location or accessibility for mandatory inspections impact inspections or compliance?

27. What delays may the State experience in completing mandatory inspections (*e.g.* lack of sufficient number of inspection facilities)?

Costs

28. What is the cost per mandatory vehicle inspection to the carrier?

29. Do inspection fees differ based on the type of vehicle being inspected?

30. Do vehicle inspection fees differ based on location of the inspections?

31. How much does it cost the State to establish and run inspection programs on an annual basis?

32. If a vehicle does not pass an inspection, is there an additional cost for the second inspection?

33. If fees are collected by the State, does the State dedicate the revenue to the administration of the program?

Uniformity of Mandatory Vehicle Inspection Programs

34. What qualifications should be applicable to individuals authorized to perform mandatory passenger-carrying CMV inspections?

35. Should minimum training elements be required for passenger-carrying CMV inspections? If so, how much training should be required and who should administer the training?

36. What should be the minimum vehicle components inspected under a mandatory passenger-carrying vehicle CMV inspection program?

37. How does the existence of different vehicle inspection requirements among the States affect carrier business practices?

38. How might business practices change under a uniform mandatory passenger-carrying vehicle CMV inspection program?

Current Federal Standards

39. How effective are existing Federal standards for the inspection of passenger-carrying CMVs in (1) mitigating the risks associated with improperly maintained vehicles and (2) ensuring the safe and proper operating condition of the vehicles?

Federal Authority

41. How should FMCSA incentivize the States to establish mandatory passenger-carrying CMV inspection programs?

Robin Hutcheson,

Deputy Administrator.

Notices

Federal Register
Vol. 87, No. 90
Tuesday, May 10, 2022

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Submission for OMB Review; Comment Request

May 4, 2022.

The Department of Agriculture has submitted the following information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13. Comments are requested regarding; whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; the accuracy of the agency's estimate of burden including the validity of the methodology and assumptions used; ways to enhance the quality, utility and clarity of the information to be collected; and ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Comments regarding this information collection received by June 9, 2022 will be considered. Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

An agency may not conduct or sponsor a collection of information unless the collection of information displays a currently valid OMB control number and the agency informs potential persons who are to respond to the collection of information that such persons are not required to respond to the collection of information unless it displays a currently valid OMB control number.

Food and Nutrition Service

Title: Food Security Status and Well-Being of Nutrition Assistance Program (NAP) Participants in Puerto Rico.

OMB Control Number: 0584–NEW.

Summary of Collection: Following Hurricane Maria, Congress appropriated additional disaster relief funds provided by section 309 of Public Law 115–72 that were distributed through the Nutrition Assistance Program (NAP) to program participants in Puerto Rico. Under H.R. 2157, section 105, funds were appropriated for the Secretary of Agriculture to conduct an independent study, including a survey of NAP participants, to examine the food security, health status, and well-being of NAP participants and low-income residents in Puerto Rico.

Need and Use of the Information: FNS is conducting this study to establish baseline estimates of household food security status in Puerto Rico. FNS has identified five objectives for this study:

Produce descriptive statistics on key sociodemographic and economic variables, including household food security, in a representative sample of Puerto Rico households.

Produce descriptive statistics on key sociodemographic and economic variables, including household food insecurity, in multiple representative subsamples in Puerto Rico stratified according to the following classifications: NAP participants and low-income nonparticipants, adults aged 60 and older, disability status, employment status, and educational level.

Produce descriptive statistics for each subsample in Puerto Rico on key social, geospatial, and other policy-relevant elements of health and well-being associated with household food security.

Characterize the social context of food insecurity through in-depth interviews with individuals within the NAP participant and low-income nonparticipant subgroups. Each interview will ask the individual to consider the household or family, community and Federal food assistance, and disaster relief contexts.

Develop a detailed concept/problem map of the systemic factors that shape the implementation of the NAP program, particularly as a disaster relief tool. The concept mapping process will include data collection from key informants with knowledge of one or more of the stages of the Puerto Rican food and nutrition system: Production, processing, distribution, acquisition, preparation, consumption, digestion, transport, and metabolism.

Description of Respondents: Individuals/Households, State, Local, or Tribal government, Businesses or other for-Profits/Not-for-Profit Institutions.

Number of Respondents: 12,504.

Frequency of Responses: On Occasion.

Total Burden Hours: 4,994.

Ruth Brown,

Departmental Information Collection Clearance Officer.

BILLING CODE 3410–30–P

DEPARTMENT OF AGRICULTURE

Rural Utilities Service

[Docket No. RUS–21–ELECTRIC–0017]

Notice of Request for Extension of a Currently Approved Information Collection

AGENCY: Rural Utilities Service, USDA.

ACTION: Notice; comment requested.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, this notice announces the intention of the above-named agency to request Office of Management and Budget's (OMB) approval for an extension of a currently approved information collection in support of RUS Extensions of Payments of Principal and Interest.

DATES: Comments on this notice must be received by July 11, 2022.

FOR FURTHER INFORMATION CONTACT: Susan Woolard, Management Analyst, Rural Development Innovation Center—Regulations Management Division, USDA, 1400 Independence Avenue SW, South Building, Washington, DC 20250–1522. Telephone: (202) 720–9631. Email *susan.woolard@usda.gov.*

SUPPLEMENTARY INFORMATION: The Office of Management and Budget's (OMB) regulation (5 CFR part 1320) implementing provisions of the Paperwork Reduction Act of 1995 (Pub. L. 104–13) requires that interested members of the public and affected agencies have an opportunity to

comment on information collection and recordkeeping activities (see 5 CFR 1320.8(d)). This notice identifies an existing information collection that the Agency is submitting to OMB for extension.

Comments

Comments are invited on: (a) Whether this collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility; (b) The accuracy of the Agency's estimate of the burden of the collection of information including the validity of the methodology and assumptions used; (c) Ways to enhance the quality, utility, and clarity of the information to be collected; and (d) Ways to minimize the burden of the collection of information on those who respond, including through the use of appropriate automated, electronic, mechanical or other technological collection techniques, or other forms of information technology.

Comments may be sent by the Federal eRulemaking Portal: Go to *http://www.regulations.gov* and, in the lower ''Search Regulations and Federal Actions'' box, select ''RUS'' from the agency drop-down menu, then click on ''Submit.'' In the Docket ID column, select RUS–21–ELECTRIC–0017 to submit or view public comments and to view supporting and related materials available electronically. Information on using *Regulations.gov*, including instructions for accessing documents, submitting comments, and viewing the docket after the close of the comment period, is available through the site's ''User Tips'' link.

Title: 7 CFR part 1721, Extensions of Payments of Principal and Interest.

OMB Control Number: 0572–0123.

Type of Request: Extension of a currently approved collection.

Abstract: The Agency allows borrowers of loans made by RUS, under certain circumstances, to request extensions for the payment of principal and interest. The information collected under this package provides the information necessary for the Agency to make determinations of eligibility under section 12(a) of the Rural Electrification Act and section 236 of the Disaster Relief Act of 1970 (Pub. L. 91–606).

Estimate of Burden: Public reporting burden for this collection of information is estimated to average 7.625 hours per response.

Respondents: Businesses, not-for-profit institutions and others.

Estimated Number of Respondents: 3.

Total Annual Responses: 8.

Estimated Number of Responses per Respondent: 2.67.

Estimated Total Annual Burden on Respondents: 61 hours.

Copies of this information collection can be obtained from Susan Woolard, Management Analyst, Innovation Center—Regulations Management Division, at (202) 720–9631. Email: *susan.woolard@usda.gov.*

All responses to this notice will be summarized and included in the request for OMB approval. All comments will also become a matter of public record.

Christopher A. Mclean,

Acting Administrator, Rural Utilities Service.

COMMISSION ON CIVIL RIGHTS

Notice of Public Meeting of the Tennessee Advisory Committee

AGENCY: Commission on Civil Rights.

ACTION: Announcement of meeting.

SUMMARY: Notice is hereby given, pursuant to the provisions of the rules and regulations of the U.S. Commission on Civil Rights (Commission), and the Federal Advisory Committee Act (FACA) that a meeting of the Tennessee Advisory Committee to the Commission will hold a virtual debrief via Webex at 12:00 p.m. (CST) on Wednesday, June 8, 2022, web briefing on Voting and Civil Rights in Tennessee.

DATES: The meeting will be held on: Wednesday, June 8, 2022, 12:00 p.m. CST.

ADDRESSES:

Join from the meeting link: https://civilrights.webex.com/civilrights/j.php?MTID=m5be8c98e3252540f148315fc5dd26b4a

800–360–9505 USA Toll Free; Access Code: 2764 031 5006 #

FOR FURTHER INFORMATION CONTACT: Victoria Moreno at *vmoreno@usccr.gov* or by phone at 434–515–0204.

SUPPLEMENTARY INFORMATION: This meeting is available to the public through the WebEx link above. If joining only via phone, callers can expect to incur charges for calls they initiate over wireless lines, and the Commission will not refund any incurred charges. Individuals who are deaf, deafblind and hard of hearing may also follow the proceedings by first calling the Federal Relay Service at 1–800–877–8339 and providing the Service with the call-in number found through registering at the web link provided above for the meeting.

Members of the public are entitled to make comments during the open period at the end of the meeting. Members of the public may also submit written comments; the comments must be received in the Regional Programs Unit within 30 days following the respective meeting. Written comments may be emailed to Victoria Moreno at *vmoreno@usccr.gov.* All written comments received will be available to the public.

Persons who desire additional information may contact the Regional

Programs Unit at (202) 809–9618. Records and documents discussed during the meeting will be available for public viewing as they become available at the *www.facadatabase.gov.* Persons interested in the work of this advisory committee are advised to go to the Commission's website, *www.usccr.gov,* or to contact the Regional Programs Unit at the above phone number or email address.

Agenda

Wednesday, June 8, 2022; 12:00 p.m. (CST)

1. Welcome & Roll Call
2. Panel Debrief
3. Public Comment
4. Next Steps
5. Adjourn

Dated: May 4, 2022.

David Mussatt,

Supervisory Chief, Regional Programs Unit.

COMMISSION ON CIVIL RIGHTS

Notice of Public Meetings of the Virginia Advisory Committee to the U.S. Commission on Civil Rights

AGENCY: U.S. Commission on Civil Rights.

ACTION: Announcement of meeting.

SUMMARY: Notice is hereby given, pursuant to the provisions of the rules and regulations of the U.S. Commission on Civil Rights (Commission) and the Federal Advisory Committee Act, that the Virginia Advisory Committee (Committee) will hold a web meeting via WebEx on Tuesday, May 17, 2022, at 3:00 p.m. Eastern Time. The purpose of the meeting is to hear testimony from the Virginia Attorney General on police oversight and accountability in the state.

DATES: The meeting will be held on: Tuesday, May 17, 2022, at 3:00 p.m. Eastern Time.

ADDRESSES:

Online Registration: https://tinyurl.com/y8mva76e

Join by Phone: 1–800–360–9505 USA Toll Free; Access code: 2763 389 1656

FOR FURTHER INFORMATION CONTACT: Melissa Wojnaroski, DFO, at *mwojnaroski@usccr.gov* or 1–202–618–4158.

SUPPLEMENTARY INFORMATION: Members of the public may listen to this discussion through the above call-in number (audio only) or online registration link (audio/visual). An open comment period will be provided to allow members of the public to make a statement as time allows. Callers can expect to incur regular charges for calls they initiate over wireless lines, according to their wireless plan. The Commission will not refund any incurred charges. Callers will incur no charge for calls they initiate over land-line connections to the toll-free telephone number. Individual who is deaf, deafblind, and hard of hearing may also follow the proceedings by first calling the Federal Relay Service at 1–800–877–8339 and providing the Service with the conference call number and conference ID number.

Members of the public are entitled to submit written comments; the comments must be received in the regional office within 30 days following the meeting. Written comments may be emailed to Melissa Wojnaroski at *mwojnaroski@usccr.gov.*

Records generated from this meeting may be inspected and reproduced at the Regional Programs Unit Office, as they become available, both before and after the meeting. Records of the meeting will be available via *www.facadatabase.gov* under the Commission on Civil Rights, Virginia Advisory Committee link. Persons interested in the work of this Committee are directed to the Commission's website, *http://www.usccr.gov,* or may contact the Regional Programs Unit at the above email or street address.

Agenda

I. Welcome & Roll Call

II. Testimony on Police Oversight and Accountability: Attorney General of Virginia

III. Committee Q&A

IV. Public Comments

V. Adjournment

Exceptional Circumstance: Pursuant to 41 CFR 102–3.150, the notice for this meeting is given fewer than 15 calendar days prior to the meeting because of the exceptional circumstances of the speaking availability of the Attorney General.

Dated: May 4, 2022.

DEPARTMENT OF COMMERCE

Bureau of Industry and Security

RIN 0694–XC089

Request for Public Comments on Supply Chain Issues To Support the U.S.-EU Trade and Technology Council Secure Supply Chains Working Group

AGENCY: Bureau of Industry and Security, U.S. Department of Commerce.

ACTION: Extension of comment period.

SUMMARY: On April 6, 2022, the Bureau of Industry and Security (BIS) published the notice *Request for Public Comments on Supply Chain Issues To Support the U.S.-EU Trade and Technology Council Secure Supply Chains Working Group.* Today's notice extends the deadline for written comments to June 23, 2022. This extension is being made to allow for commenters to take into account any developments or announcements that may occur as a result of the United States-EU TTC second leaders' meeting scheduled for May 15–16, 2022 in France.

DATES: The comment period for the notice published April 6, 2022 at 87 FR 19854, is extended until June 23, 2022.

ADDRESSES: *Submissions:* You may submit comments, identified by docket number BIS–2021–0046 or RIN 0694–XC089, through the *Federal eRulemaking Portal: https://www.regulations.gov.* To submit comments via *https://www.regulations.gov,* enter the docket number BIS–2021–0046 on the home page and click ''Search.'' The site will provide a search results page listing all documents associated with this docket. Find a reference to this notice and click the button entitled ''Comment.'' For further information on using *https://www.regulations.gov,* please consult the resources provided on the website by clicking on ''FAQ.'' For further information regarding required comment formatting, please see the Solicited Written Comments and Requirements for Written Comments sections in the April 6 notice.

FOR FURTHER INFORMATION CONTACT: Kevin Coyne, U.S.-EU Trade and Technology Council Secure Supply Chains Working Group, Bureau of Industry and Security, at 202–482–4933, *ttc_secure_supply_chains@doc.gov.*

SUPPLEMENTARY INFORMATION:

Background

On April 6, 2022, the Bureau of Industry and Security (BIS) published the notice *Request for Public Comments on Supply Chain Issues To Support the U.S.-EU Trade and Technology Council Secure Supply Chains Working Group.* (87 FR 19854). The April 6 notice specified that BIS requests public comments regarding how to advance supply chain resilience and security in key sectors: Semiconductors; solar photovoltaics; [1] critical minerals and materials including rare earth magnets,[2] lithium-ion batteries,[3] and material inputs to semiconductors; [4] and pharmaceuticals [5] to inform the work of the United States-European Union (EU) Trade and Technology Council (TTC) Secure Supply Chains Working Group. The Working Group is tasked with increasing transparency of supply and demand, mapping respective existing sectoral capabilities, exchanging information on policy measures and research and development priorities, and cooperating on strategies to promote supply chain resilience, security and diversification.

Extension of Comment Period Deadline

The April 6 notice included a comment period deadline of May 23, 2022. The Department of Commerce has determined at this time that it is warranted to extend the comment period by one month to allow for commenters to take into account any developments or announcements that may occur as a result of the United States-EU TTC second leaders' meeting scheduled for May 15–16, 2022 in France. Today's notice specifies that comments may be submitted at any time but must be received by June 23, 2022, to be considered.

Solicited Written Comments

BIS welcomes public comments on how best to achieve the four primary tasks of the Secure Supply Chains Working Group described above. While BIS invites input from all interested parties, it is particularly interested in obtaining information from foreign and domestic entities that actively participate in semiconductors, solar photovoltaics, critical minerals and materials, and pharmaceuticals supply chains. Interested parties are invited to submit written comments, data, analyses, or information pertinent to this request to BIS no later than June 23, 2022. See the April 6 notice for additional details on the U.S.-EU TTC and the request for public comments.

Matthew S. Borman,

Deputy Assistant Secretary for Export Administration.

[FR Doc. 2022–10033 Filed 5–9–22; 8:45 am]

BILLING CODE 3510–33–P

[1] Solar photovoltaics include materials and production tools for the manufacturing of solar components.

[2] Critical minerals include neodymium and dysprosium.

[3] Critical minerals include lithium, cobalt, class 1 nickel, manganese, and graphite.

[4] Critical minerals include gallium and germanium.

[5] Drug and Biologic Essential Medicines, Medical Countermeasures, and Critical Inputs.

DEPARTMENT OF COMMERCE

International Trade Administration

[Application No. 03–4A008]

Export Trade Certificate of Review

ACTION: Notice of application for an amended Export Trade Certificate of Review for California Pistachio Export Council, LLC, application no. 03–4A008.

SUMMARY: The Secretary of Commerce, through the Office of Trade and Economic Analysis (OTEA) of the International Trade Administration, has received an application for an amended Export Trade Certificate of Review (Certificate). This notice summarizes the proposed application and seeks public comments on whether the Certificate should be issued.

FOR FURTHER INFORMATION CONTACT: Joseph Flynn, Director, OTEA, International Trade Administration, (202) 482–5131 (this is not a toll-free number) or email at *etca@trade.gov.*

SUPPLEMENTARY INFORMATION: Title III of the Export Trading Company Act of 1982 (15 U.S.C. 4001–21) (the Act) authorizes the Secretary of Commerce to issue Export Trade Certificates of Review. An Export Trade Certificate of Review protects the holder and the members identified in the Certificate from State and Federal government antitrust actions and from private treble damage antitrust actions for the export conduct specified in the Certificate and carried out in compliance with its terms and conditions. The regulations implementing Title III are found at 15 CFR part 325. OTEA is issuing this notice pursuant to 15 CFR 325.6(a), which requires the Secretary of Commerce to publish a summary of the application in the **Federal Register**, identifying the applicant and each member and summarizing the proposed export conduct.

Request for Public Comments

Interested parties may submit written comments relevant to the determination whether a Certificate should be issued. If the comments include any privileged or confidential business information, it must be clearly marked and a nonconfidential version of the comments (identified as such) should be included. Any comments not marked as privileged or confidential business information will be deemed to be nonconfidential.

Written comments should be sent to *ETCA@trade.gov.* An original and two (2) copies should also be submitted no later than 20 days after the date of this notice to: Office of Trade and Economic Analysis, International Trade Administration, U.S. Department of Commerce, Room 21028, Washington, DC 20230.

Information submitted by any person is exempt from disclosure under the Freedom of Information Act (5 U.S.C. 552). However, nonconfidential versions of the comments will be made available to the applicant if necessary for determining whether or not to issue the Certificate. Comments should refer to this application as ''Export Trade Certificate of Review, application number 03–4A008.'' A summary of the application follows.

Summary of the Application

Applicant: California Pistachio Export Council, LLC, 512 C St. NE, Washington, DC 20002.

Contact: Robert Schramm, Principal at Schramm, Williams & Associates, Inc.

Application No.: 03–4A008.

Date Deemed Submitted: April 27, 2022.

Proposed Amendment:

1. California Pistachio Export Council, LLC seeks to amend its Certificate as follows: Add the following entity as a Member of the Certificate within the meaning of section 325.2(l) of the Regulations (15 CFR 325.2(l)):

a. Meridian Nut Growers, LLC

2. The following entities have been removed as Members of the Certificate:

a. Arizona Nut Company, LLC
b. ARO Pistachios, Inc.
c. Horizon Growers Cooperative, Inc.
d. Nichols Pistachio

The proposed amendment would result in the following Members under the Certificate:

1. Keenan Farms, Inc.
2. Meridian Nut Growers, LLC
3. Monarch Nut Company
4. Primex Farms, LLC
5. Setton Pistachio of Terra Bella, Inc.
6. Zymex Industries, Inc.

Dated: May 4, 2022.

Joseph Flynn,

Director, Office of Trade and Economic Analysis, International Trade Administration, U.S. Department of Commerce.

Welded Line Pipe From the Republic of Turkey: Rescission of the Antidumping Duty Administrative Review; 2019–2020

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Commerce) is rescinding this administrative review with respect to Cimtas Boru Imalatlari ve Ticaret, Ltd. Sti. (Cimtas). The period of review (POR) is December 1, 2019, through November 30, 2020.

DATES: Applicable May 10, 2022.

FOR FURTHER INFORMATION CONTACT: Alice Maldonado, AD/CVD Operations, Office II, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–4682.

SUPPLEMENTARY INFORMATION:

Background

On January 4, 2022, Commerce published its preliminary intent to rescind this administrative review with respect to Cimtas in the **Federal Register**.[1] Although we invited parties to comment on the *Preliminary Results,*[2] no interested party submitted comments. Accordingly, no decision memorandum accompanies this **Federal Register** notice.

Scope of the Order

The products covered by the order are circular welded carbon and alloy steel (other than stainless steel) pipe of a kind used for oil or gas pipelines (welded line pipe), not more than 24 inches in nominal outside diameter, regardless of wall thickness, length, surface finish, end finish, or stenciling. Welded line pipe is normally produced to the American Petroleum Institute (API) specification 5L, but can be produced to comparable foreign specifications, to proprietary grades, or can be non-graded material. All pipe meeting the physical description set forth above, including multiple-stenciled pipe with an API or comparable foreign specification line pipe stencil is covered by the scope of this order.

The welded line pipe that is subject to the order is currently classifiable in the Harmonized Tariff Schedule of the United States (HTSUS) under subheadings 7305.11.1030, 7305.11.5000, 7305.12.1030, 7305.12.5000, 7305.19.1030, 7305.19.5000, 7306.19.1010, 7306.19.1050, 7306.19.5110, and 7306.19.5150. The subject merchandise may also enter in HTSUS 7305.11.1060 and 7305.12.1060. While the HTSUS subheadings are provided for convenience and customs purposes, the written description of the scope of the order is dispositive.

Rescission of Administrative Review

In the *Preliminary Results,* Commerce determined that the sole respondent in this administrative review, Cimtas, had no reviewable shipments, sales, or entries of subject merchandise during the POR.[3] Also, we stated that Cimtas' 2018–2019 POR entries will remain suspended until the completion of this review and will be liquidated based on the final results for Cimtas in this review. We received no comments from interested parties with respect to this record information or the preliminary rescission of the administrative review for Cimtas. Therefore, we are rescinding this administrative review with respect to Cimtas.[4]

Assessment

Commerce will instruct U.S. Customs and Border Protection (CBP) to assess antidumping duties on and liquidate any of Cimtas' suspended entries from this POR and the 2018–2019 POR at the cash deposit rate in effect at the time of entry.

Commerce intends to issue assessment instructions to CBP no earlier than 35 days after the date of publication of the final results of this review in the **Federal Register**. If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a

In the *Preliminary Results,* we also rescinded this review with respect to 18 companies. *Id.* at 3.

[2] *Id.,* 87 FR at 219.

[3] *See Preliminary Results* PDM at 3–5.

[4] *See* 19 CFR 351.213(d)(3).

statutory injunction has expired (*i.e.,* within 90 days of publication).

Cash Deposit Requirements

As Commerce has proceeded to a final rescission of this administrative review, no cash deposit rates will change. Accordingly, the current cash deposit requirements shall remain in effect until further notice.

Notification to Importers

This notice serves as a final reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in Commerce's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of double antidumping duties.

Administrative Protective Order

This notice serves as the only reminder to parties subject to administrative protective order (APO) of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3), which continues to govern business proprietary information in this segment of the proceeding. Timely written notification of return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and the terms of an APO is a sanctionable violation.

Notification to Interested Parties

This notice is issued and published in accordance with sections 751(a)(1) and 777(i) of the Tariff Act of 1930, as amended, and 19 CFR 351.213(d)(4).

Dated: May 4, 2022.

Lisa W. Wang,

Assistant Secretary for Enforcement and Compliance.

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Notice of Performance Evaluation of the Waquoit Bay National Estuarine Research Reserve and Public Meeting; Request for Comments

AGENCY: Office for Coastal Management, National Ocean Service (NOS), National Oceanic and Atmospheric Administration (NOAA), Department of Commerce (DOC).

ACTION: Notice of public meeting and opportunity to comment.

SUMMARY: The National Oceanic and Atmospheric Administration (NOAA), Office for Coastal Management, will hold a public meeting to solicit comments on the performance evaluation of the Waquoit Bay National Estuarine Research Reserve. NOAA also will provide an opportunity for written comments on the performance evaluation.

DATES: Comments due: July 1, 2022. A public meeting will be held on Thursday, June 23, 2022, at 6 p.m. at Waquoit Bay National Estuarine Research Reserve Visitor Center, 131 Waquoit Hwy. (Rt. 28), Waquoit (E Falmouth), MA 02536.

ADDRESSES: You may submit written comments by emailing Ralph Cantral, Evaluator, NOAA Office for Coastal Management, at *Ralph.Cantral@noaa.gov.*

Timely comments received by the Office for Coastal Management are considered part of the public record and may be publicly accessible. Any personal information (*e.g.,* name, address) submitted voluntarily by the sender in the body of the email and any attachments to the email may also be publicly accessible. NOAA will accept anonymous comments.

You may also provide public comments during the public meeting, which is being held on Thursday, June 23, 2022, at 6 p.m. at Waquoit Bay National Estuarine Research Reserve Visitor Center, 131 Waquoit Hwy. (Rt. 28), Waquoit (E Falmouth), MA 02536.

Copies of the previous reserve evaluation findings, reserve management plan, and reserve site profile may be viewed and downloaded on the internet at *https://coast.noaa.gov/czm/evaluations.* A copy of the evaluation notification letter and most recent progress report may be obtained upon request by contacting Ralph Cantral at *ralph.cantral@noaa.gov.*

FOR FURTHER INFORMATION CONTACT: Ralph Cantral, *Ralph.Cantral@noaa.gov,* (843) 474–1357.

SUPPLEMENTARY INFORMATION: Section 312 of the Coastal Zone Management Act (CZMA) requires NOAA to conduct periodic evaluations of federally-approved national estuarine research reserves. The evaluation process includes holding one or more public meetings, consideration of written public comments, and consultations with interested federal, state, and local agencies and members of the public. During the evaluation, NOAA will consider the extent to which the Commonwealth of Massachusetts has met the national objectives, adhered to the management plan approved by the Secretary of Commerce, and adhered to the terms of financial assistance under the CZMA. When the evaluation is completed, NOAA's Office for Coastal Management will place a notice in the **Federal Register** announcing the availability of the final evaluation findings.

Keelin Kuipers,

Deputy Director, Office for Coastal Management National Ocean Service, National Oceanic and Atmospheric Administration.

National Oceanic and Atmospheric Administration

[RTID 0648–XC011]

Marine Mammals; File No. 21585

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; receipt of application for permit amendment.

SUMMARY: Notice is hereby given that Oregon State University, Marine Mammal Institute, 2030 Southeast Marine Science Drive, Newport, OR 97365 (Responsible Party: Lisa Ballance, Ph.D.) has applied for an amendment to Scientific Research Permit No. 21585–01.

DATES: Written, telefaxed, or email comments must be received on or before June 9, 2022.

ADDRESSES: The application and related documents are available for review by selecting ''Records Open for Public Comment'' from the ''Features'' box on the Applications and Permits for Protected Species (APPS) home page, *https://apps.nmfs.noaa.gov,* and then selecting File No. 21585 from the list of available applications. These documents are also available upon written request via email to *NMFS.Pr1Comments@noaa.gov.*

Written comments on this application should be submitted via email to *NMFS.Pr1Comments@noaa.gov.* Please include File No. 21585 in the subject line of the email comment.

Those individuals requesting a public hearing should submit a written request

via email to *NMFS.Pr1Comments@noaa.gov.* The request should set forth the specific reasons why a hearing on this application would be appropriate.

FOR FURTHER INFORMATION CONTACT: Shasta McClenahan, Ph.D., or Amy Hapeman, (301)427–8401.

SUPPLEMENTARY INFORMATION: The subject amendment to Permit No. 21585–02 is requested under the authority of the Marine Mammal Protection Act of 1972, as amended (16 U.S.C. 1361 *et seq.*), the regulations governing the taking and importing of marine mammals (50 CFR part 216), the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*), and the regulations governing the taking, importing, and exporting of endangered and threatened species (50 CFR parts 222–226), and the Fur Seal Act of 1966, as amended (16 U.S.C. 1151 *et seq.*).

Permit No. 21585, issued on December 20, 2018 (84 FR 4441; February 15, 2019), authorizes the Permit Holder to conduct research on 67 species of marine mammals including the following endangered or threatened species, stocks, or distinct population segment (DPS)of cetaceans: Beluga (*Delphinapterus leucas;* Cook Inlet DPS), blue (*Balaenoptera musculus*), bowhead (*Balaena mysticetes*), false killer (*Pseudorca crassidens;* Main Hawaiian Islands Insular DPS), fin (*Balaenoptera physalus*), gray (*Eschrichtius robustus;* Western North Pacific DPS), humpback (*Megaptera novaeangliae;* Arabian Sea, Cape Verde Islands/Northwest Africa, Central America, Mexico, and Western North Pacific DPSs), killer (*Orcinus orca;* Southern Resident DPS), North Pacific right (*Eubalaena japonica*), sei (*Balaenoptera. borealis*), Southern right (*E. australis*), and sperm (*Physeter macrocephalus*) whales. Authorized research may occur during vessel and manned aerial surveys including observation, photography, passive acoustic recording, echosounders for prey mapping, and collection of sloughed skin. The permit also authorizes biopsy sampling and deep-implant tagging of some species. The Permit Holder requests to increase the annual number of takes for the currently permitted vessel surveys and biopsy sampling to assess the distribution and abundance of cetaceans in the Northern California Current in California and Oregon. In addition, the Permit Holder is requesting to add biopsy sampling as a procedure for 26 species currently authorized only for Level B harassment during surveys. See the take table for specific take number changes requested by species. No changes to the currently permitted objectives, methods, or number of deep-implant tagging take numbers are proposed. The permit expires on December 31, 2023.

In compliance with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*), an initial determination has been made that the activity proposed is categorically excluded from the requirement to prepare an environmental assessment or environmental impact statement.

Concurrent with the publication of this notice in the **Federal Register**, NMFS is forwarding copies of this application to the Marine Mammal Commission and its Committee of Scientific Advisors.

Dated: May 4, 2022.

Julia M. Harrison,

Chief, Permits and Conservation Division, Office of Protected Resources, National Marine Fisheries Service.

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[RTID 0648–XB134]

Taking and Importing Marine Mammals; Taking Marine Mammals Incidental to the Port Everglades Harbor Deepening and Widening Project, Florida

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; receipt of application for letter of authorization; request for comments and information.

SUMMARY: NMFS has received a request from the U.S. Army Corps of Engineers (USACE), Jacksonville District, for authorization to take, by Level B harassment only, small numbers of marine mammals incidental to the Port Everglades Harbor Deepening and Widening Project (Project), in Broward County, Florida, for a period of five years from August 2024 through August 2029. Pursuant to regulations implementing the Marine Mammal Protection Act (MMPA), NMFS is announcing receipt of USACE's request for the development and implementation of regulations governing the incidental taking of marine mammals. NMFS invites the public to provide information, suggestions, and comments on USACE's application and request.

DATES: Comments and information must be received no later than June 9, 2022.

ADDRESSES: Comments on the application should be addressed to Jolie Harrison, Chief, Permits and Conservation Division, Office of Protected Resources, National Marine Fisheries Service. Physical comments should be sent to 1315 East-West Highway, Silver Spring, MD 20910 and electronic comments should be sent to *ITP.Harlacher@noaa.gov.*

Instructions: NMFS is not responsible for comments sent by any other method, to any other address or individual, or received after the end of the comment period. Comments received electronically, including all attachments, must not exceed a 25-megabyte file size. Attachments to electronic comments will be accepted in Microsoft Word or Excel or Adobe PDF file formats only. All comments received are a part of the public record and will generally be posted online at *https://www.fisheries.noaa.gov/national/marine-mammal-protection/incidental-take-authorizations-construction-activities* without change. All personal identifying information (*e.g.,* name, address) voluntarily submitted by the commenter may be publicly accessible. Do not submit confidential business information or otherwise sensitive or protected information.

FOR FURTHER INFORMATION CONTACT: Jenna Harlacher, Office of Protected Resources, NMFS, (301) 427–8401. An electronic copy of USACE's application may be obtained online at: *https://www.fisheries.noaa.gov/national/marine-mammal-protection/incidental-take-authorizations-construction-activities.* In case of problems accessing these documents, please call the contact listed above.

SUPPLEMENTARY INFORMATION:

Background

Sections 101(a)(5)(A) and (D) of the MMPA (16 U.S.C. 1361 *et seq.*) direct the Secretary of Commerce (as delegated to NMFS) to allow, upon request, the incidental, but not intentional, taking of small numbers of marine mammals by U.S. citizens who engage in a specified activity (other than commercial fishing) within a specified geographical region if certain findings are made and either regulations are issued or, if the taking is limited to harassment, a notice of a proposed authorization is provided to the public for review.

An incidental take authorization shall be granted if NMFS finds that the taking will have a negligible impact on the species or stock(s), will not have an

immitigable adverse impact on the availability of the species or stock(s) for subsistence uses (where relevant), and if the permissible methods of taking and requirements pertaining to the mitigation, monitoring and reporting of such takings are set forth.

NMFS has defined ''negligible impact'' in 50 CFR 216.103 as an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival.

The MMPA states that the term ''take'' means to harass, hunt, capture, kill or attempt to harass, hunt, capture, or kill any marine mammal.

Except with respect to certain activities not pertinent here, the MMPA defines ''harassment'' as: Any act of pursuit, torment, or annoyance, which (i) has the potential to injure a marine mammal or marine mammal stock in the wild (Level A harassment); or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering (Level B harassment).

Summary of Request

On September 3, 2020, NMFS received an application from the USACE requesting authorization for take of marine mammals incidental to confined blasting associated with the Port Everglades Harbor Deepening and Widening Project, Broward County, Florida. We provided comments on the application and the USACE submitted a revised version on April 3, 2021. We deemed the application adequate and complete on April 29, 2021. The requested regulations under which we would issue the requested LOA would be valid for five years, August 2024 and August 2029. The USACE plans to conduct confined underwater blasting to deepen and widen the Port Everglades harbor and entrance channel. Blasting may incidentally expose marine mammals to elevated levels of noise, thereby resulting in incidental take, by Level B harassment only. Therefore, the USACE requests authorization to incidentally take marine mammals.

Specified Activities

The purpose of the proposed project is to provide for increased navigational safety, efficiency, and improved economic conditions for ships calling at Port Everglades. The existing federal channel project depth of 42 feet at Port Everglades does not provide an adequate, safe depth for large tankers and container ships currently visiting the harbor. Furthermore, the next generation of container ships and oil tankers requires significantly more channel depth to operate efficiently and a wider and deeper entrance channel will greatly improve the safety of navigation. To achieve the proposed deepening and widening of Port Everglades, pretreatment of rock areas may be required using confined underwater blasting where dredging or other rock removal methods are unsuccessful due to the hardness and massiveness of the rock. The USACE anticipates a maximum of 280 confined, stemmed blasts would occur over the life of the LOA, if issued, at a rate of one blast per day. Blasting operations may take place six days a week with a maximum of one blast occurring per day. Confined underwater blasting operations will be prohibited between November 15 and March 15 in order to avoid take of the West Indian Manatee (*Trichecus manatus*). Blasting would occur in six designated areas: The outer entrance channel, inner entrance channel, main turning basin, widener, south access channel, and turning notch. The USACE's application contains mitigation and monitoring measures designed to reduce impacts to marine mammals. The application also contains proposed marine mammal and acoustic monitoring and reporting plans.

Information Solicited

Interested persons may submit information, suggestions, and comments concerning USACE's request (see **ADDRESSES**). NMFS will consider all information, suggestions, and comments related to the request during the development of proposed regulations governing the incidental taking of marine mammals by USACE, if appropriate.

Dated: May 4, 2022.

Kim Damon-Randall,

Director, Office of Protected Resources, National Marine Fisheries Service.

[FR Doc. 2022–09934 Filed 5–9–22; 8:45 am]

BILLING CODE 3510–22–P

DEPARTMENT OF DEFENSE

Department of the Army, Corps of Engineers

Notice of Intent To Prepare an Environmental Impact Statement for the NEXT Renewable Fuels Oregon Project, Columbia County, Oregon

AGENCY: Department of the Army, U.S. Army Corps of Engineers, DoD.

ACTION: Notice of intent.

SUMMARY: The U.S. Army Corps of Engineers, Portland District (Corps), has received an application for a Department of the Army (DA) permit (Corps number NWP–2020–383) from NEXT Renewable Fuels Oregon, LLC to construct a facility to produce renewable fuels. The Corps, as the lead agency under the National Environmental Policy Act (NEPA), has determined the proposed project may significantly affect the quality of the human environment and will prepare an environmental impact statement (EIS). The Corps' action will be to issue, issue with modifications, or deny a DA permit for the proposed project. The EIS will assess the potential social, economic, and environmental impacts of the proposed project.

ADDRESSES: Written comments regarding the proposed EIS scope should be submitted to: U.S. Army Corps of Engineers, Portland District, Attn: Ms. Kate Mott, P.O. Box 2946, Portland, Oregon 97208–2946. Individuals who would like to provide comments electronically should submit comments by email to: *nexteis@usace.army.mil*.

FOR FURTHER INFORMATION CONTACT: For information about this project or to be included on the mailing list for future updates and meeting announcements, contact Ms. Kate Mott at the Corps by telephone at (503) 808–4041, by email at *nexteis@usace.army.mil,* or by mail at the mailing address provided above.

SUPPLEMENTARY INFORMATION: The Corps intends to prepare an EIS for the proposed NEXT Renewable Fuels Oregon project. The proposed project requires authorization from the Corps under Section 404 of the Clean Water Act (33 U.S.C. 1344) for the discharge of dredged or fill material into waters of the United States. As part of the DA permit application process, the Corps issued a public notice on November 5, 2021. The purpose of the public notice was to initiate an early public scoping process to solicit comments and information from the public to identify relevant issues and concerns associated with the proposed project. All comments received to date, including those provided for review during the public notice comment period, will be considered by the Corps during preparation of the EIS.

1. *Proposed Action.* The project requiring an EIS involves the construction of the proposed NEXT Renewable Fuels Oregon facility. The purpose of the project is to produce renewable fuels for markets on the west

coast of the United States to meet the demand for fuels that are mandated by the Renewable Fuel Standard Program or other state mandates that require low-carbon fuels. The project would permanently fill 117.64 acres of wetlands and 1.79 acres of other waterways (ditches and slough) to construct a renewable fuels facility and ancillary components. The project would temporarily fill 32.03 acres of wetlands and 0.02 acres of waterways for project construction and a staging area.

The proposed project facility would be capable of producing 50,000 barrels per day of renewable diesel and other renewable fuel products. The production process would produce renewable fuels from a range of feedstocks such as various vegetable oils, used cooking oil, animal tallow, and inedible corn oil. The proposed facility and ancillary components constructed in wetlands/waterways would include: Main access road; natural gas pipeline; rail spur, ladder tracks, and rail spur access road; four new pipelines to connect with pipelines to an existing wharf; ten large product and feedstock tanks (125,000 to 225,000 barrels each); eleven smaller feedstock and process tanks (10,000 to 50,000 barrels each); pre-treatment plant; hydrogen facility; Ecofining™ units; storm and process water system; office/administration buildings/laboratory; and site landscaping and fencing.

The facility would be constructed by grading and filling the site. The overall final grade would be approximately 3 ft. above the existing grade. Fill material would consist of soil and aggregate imported from a local source. Facility components would be supported with pile foundations by installing approximately 15,200, 16-inch steel piles that are 90 ft. long (each) driven by a vibratory hammer. Facility components would also be supported with ground improvement foundations by wet soil mixing known as the Deep Mixing Method to construct concrete piles. Typical construction methods would be utilized for the stripping, grading, road construction, installation of underground utilities, stormwater, and processed water systems.

The project would rely on transportation by water, railroad and road to receive materials used in production (feedstock oils, tallows, bleaching earth) and to ship renewable fuels produced from the facility. The project would require unloading up to 118 barges per year (approximately 10 per month) to receive feedstock materials and require loading up to 58 ocean going vessels per year (approximately 5 per month) to transport renewable diesel produced from the facility to market. The project would require loading and unloading up to 208 trains per year (approximately 17 per month) to receive materials used in production (feedstock and bleaching earth) and to transport renewable diesel produced from the facility to market. The project would also require loading up to 720 trucks per year (approximately 60 per month) to transport renewable diesel produced from the facility to market.

The project includes a proposed compensatory mitigation site. The compensatory mitigation would enhance 471.08 acres of wetlands that are currently used for agriculture and silviculture.

2. *Location.* The project site is located at the Port Westward Industrial Park near Clatskanie, Columbia County, Oregon. The site is in Section 22, Township 8 North, Range 4 West at Latitude and Longitude: 46.167233°, −123.16195°.

3. *Alternatives.* The EIS will address an array of alternatives. Alternatives may include, but are not limited to, no action, alternative sites, and alternative facility designs. Mitigation measures could include, but are not limited to, avoidance and minimization, enhancement, restoration or establishment of wetlands.

4. *Scoping Process.* The scoping period will continue for 30 days from the date of this Notice of Intent. During the scoping period, the Corps invites federal, state, and local agencies, Native American Tribes, other interested parties, and the general public to participate in the scoping process. The purpose of the scoping process is to provide information to the public, serve as a mechanism to solicit agency and public input on alternatives, identify significant issues to be analyzed in the EIS, and ensure full and open participation in scoping for the draft EIS. Scoping comments may be submitted by conventional mail or email. All comments must include the Corps number NWP–2020–383. In order to be accepted, email comments must originate from the author's email account. All comments received will become part of the administrative record and are subject to public release under the Freedom of Information Act including any personally identifiable information such as names, phone numbers, and addresses. Additional information on the project and scoping process are available on the Corps' website listed below.

5. *Scoping Meetings.* The Corps will conduct virtual public scoping meetings during the 30-day scoping period in which agencies, organizations, and members of the general public are invited to present comments or suggestions with regard to the range of actions, alternatives, and potential impacts to be considered in the EIS. The specific dates and times of the meetings will be published in press releases, special public notices and on the Corps' project website (*https://www.nwp.usace.army.mil/Missions/Regulatory/*). At the Corps' website under Regulatory Pages, select Environmental Impact Statements.

5. *Availability of the Draft EIS.* The draft EIS is estimated to be available for public review and comment in early 2023. At that time, a 45-day public review period will be provided for public review and comment on the draft EIS.

ADDRESSES: To access and review all the documents related to the information collection listed in this notice, please use *http://www.regulations.gov* by searching the Docket ID number ED–2022–SCC–0028. Comments submitted in response to this notice should be submitted electronically through the Federal eRulemaking Portal at *http://www.regulations.gov* by selecting the Docket ID number or via postal mail, commercial delivery, or hand delivery. If the *regulations.gov* site is not available to the public for any reason, ED will temporarily accept comments at *ICDocketMgr@ed.gov.* Please include the

docket ID number and the title of the information collection request when requesting documents or submitting comments. *Please note that comments submitted by fax or email and those submitted after the comment period will not be accepted.* Written requests for information or comments submitted by postal mail or delivery should be addressed to the Director of the Strategic Collections and Clearance Governance and Strategy Division, U.S. Department of Education, 400 Maryland Ave. SW, LBJ, Room 6W201, Washington, DC 20202–8240.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Carrie Clarady, 202–245–6347.

SUPPLEMENTARY INFORMATION: The Department of Education (ED), in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand the Department's information collection requirements and provide the requested data in the desired format. ED is soliciting comments on the proposed information collection request (ICR) that is described below. The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: NCES System Clearance for Cognitive, Pilot, and Field Test Studies 2022–2025.

OMB Control Number: 1850–0803.

Type of Review: An extension of a currently approved information collection.

Respondents/Affected Public: Individuals and Households.

Total Estimated Number of Annual Responses: 600,000.

Total Estimated Number of Annual Burden Hours: 240,000.

Abstract: This is a request for a 3-year renewal of the generic clearance to allow the National Center for Education Statistics (NCES) to continue to develop, test, and improve its survey and assessment instruments and methodologies. The procedures utilized to this effect include but are not limited to experiments with levels of incentives for various types of survey operations, focus groups, cognitive laboratory activities, pilot testing, exploratory interviews, experiments with questionnaire design, and usability testing of electronic data collection instruments.

Dated: May 5, 2022.

Stephanie Valentine,

PRA Coordinator, Strategic Collections and Clearance, Governance and Strategy Division, Office of Chief Data Officer, Office of Planning, Evaluation and Policy Development.

BILLING CODE 4000–01–P

DEPARTMENT OF EDUCATION

[Docket No. ED–2022–SCC–0029]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; Transition and Postsecondary Programs for Students With Intellectual Disabilities (TPSID) Evaluation Protocol

AGENCY: Office of Postsecondary Education (OPE), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, ED is proposing a revision of a currently approved collection.

DATES: Interested persons are invited to submit comments on or before June 9, 2022.

ADDRESSES: Written comments and recommendations for proposed information collection requests should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this information collection request by selecting ''Department of Education'' under ''Currently Under Review,'' then check ''Only Show ICR for Public Comment'' checkbox. Comments may also be sent to *ICDocketmgr@ed.gov.*

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Shedita Alston, 202–453–7090.

SUPPLEMENTARY INFORMATION: The Department of Education (ED), in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand the Department's information collection requirements and provide the requested data in the desired format. ED is soliciting comments on the proposed information collection request (ICR) that is described below. The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: Transition and Postsecondary Programs for Students with Intellectual Disabilities (TPSID) Evaluation Protocol.

OMB Control Number: 1840–0825.

Type of Review: A revision of a currently approved collection.

Respondents/Affected Public: Private Sector.

Total Estimated Number of Annual Responses: 40.

Total Estimated Number of Annual Burden Hours: 792.

Abstract: In October 2020, the Institute for Community Inclusion (ICI), UMass Boston received a five-year cooperative agreement from the Office of Postsecondary Education to serve as the National Coordinating Center (NCC) for colleges and universities implementing inclusive higher education programs for students with intellectual disabilities, including 22 newly-funded model demonstration projects aimed at creating inclusive comprehensive transition and postsecondary programs for students with intellectual disabilities known as Transition and Postsecondary Programs for Students with Intellectual Disabilities (TPSIDs).

To reduce respondent burden, the NCC has streamlined and simplified the

previously approved evaluation system for the TPSID programs. The NCC will enhance the collection and analyses of longitudinal follow-up data from the new 22 TPSID model programs via an already developed and previously OMB approved evaluation system for the TPSID programs. The revised data collection system is part of an evaluation effort. The system will collect program data at the institutions from TPSID program staff via an online, secure data management system.

Dated: May 5, 2022.

Kun Mullan,

PRA Coordinator, Strategic Collections and Clearance, Governance and Strategy Division, Office of Chief Data Officer, Office of Planning, Evaluation and Policy Development.

BILLING CODE 4000–01–P

DEPARTMENT OF EDUCATION

Applications for New Awards; Native American-Serving Nontribal Institutions Program

AGENCY: Office of Postsecondary Education, Department of Education.

ACTION: Notice.

SUMMARY: The Department of Education (Department) is issuing a notice inviting applications for new awards for fiscal year (FY) 2022 for the Native American-Serving Nontribal Institutions (NASNTI) Program, Assistance Listing Number 84.031X. This notice relates to the approved information collection under OMB control number 1840–0816.

DATES:

Applications Available: May 10, 2022.

Deadline for Transmittal of Applications: July 11, 2022.

Deadline for Intergovernmental Review: September 7, 2022.

ADDRESSES: For the addresses for obtaining and submitting an application, please refer to our Common Instructions for Applicants to Department of Education Discretionary Grant Programs, published in the **Federal Register** on December 27, 2021 (86 FR 73264) and available at *www.federalregister.gov/d/2021-27979.* Please note that these Common Instructions supersede the version published on February 13, 2019, and, in part, describe the transition from the requirement to register in *SAM.gov* a Data Universal Numbering System (DUNS) number to the implementation of the Unique Entity Identifier (UEI). More information on the phase-out of DUNS numbers is available at *https://www2.ed.gov/about/offices/list/ofo/docs/unique-entity-identifier-transition-fact-sheet.pdf.*

FOR FURTHER INFORMATION CONTACT: Don Crews, U.S. Department of Education, 400 Maryland Avenue SW, Room 2B110, Washington, DC 20202–4260. Telephone: (202) 453–7920. Email: *Don.Crews@ed.gov.*

If you are deaf, hard of hearing, or have a speech disability and wish to access telecommunications relay services, please dial 7–1–1.

SUPPLEMENTARY INFORMATION:

Full Text of Announcement

I. Funding Opportunity Description

Purpose of Program: The NASNTI Program provides grants to eligible institutions of higher education (IHEs) to enable them to improve and expand their capacity to serve Native Americans and low-income individuals. Institutions may use the grants to plan, develop, undertake, and carry out activities to improve and expand their capacity to serve Native American and low-income students.

Background: Students' sense of belonging impacts postsecondary retention.[1] Creating that sense of belonging begins with ensuring the institution's ability to serve students well. Research shows that implementing intrusive advising practices[2] and other proactive strategies to directly support underserved students can lead to successful outcomes. Such proactive practices may be increasingly important as institutions reengage postsecondary students following enrollment decreases due to COVID–19.

Proactive practices alone may not be sufficient to retain students who suffer from financial hardship, however. Data have shown that higher education opportunity and outcomes are highly inequitable across family income groups.[3] Therefore, implementing or expanding supports that provide students with financial literacy, paid internship placement, and other services that help to alleviate financial stressors further support student retention.

Through this grant program, the Department encourages Native American-serving nontribal institutions to develop, create, or enhance programs that foster students' sense of belonging and to implement services that will help students complete their degree programs. Through the competitive preference priorities for this grant competition, the Department invites applicants to submit proposals to provide high-quality learning, improve student engagement, and reduce the cost of obtaining a college degree for Native American and low-income students. Although the most effective strategy to reduce the cost of attending college may vary across IHEs, we encourage applicants to consider strategies that reduce a student's need to incur debt to earn a degree, for example, by reducing the time to degree completion.

Priorities: This notice contains two competitive preference priorities. The priorities are from the Secretary's Supplemental Priorities and Definitions for Discretionary Grants Programs, published in the **Federal Register** on December 10, 2021 (86 FR 70612) (Supplemental Priorities).

Competitive Preference Priorities: For FY 2022 and any subsequent year in which we make awards from the list of unfunded applications from this competition, these priorities are competitive preference priorities. Under 34 CFR 75.105(c)(2)(i) we award up to an additional 5 points to an application for each priority, depending on how well the application meets the priorities. Applicants may respond to one or both priorities, for a total of up to 10 additional points.

These priorities are:

Competitive Preference Priority 1: Meeting Student Social, Emotional, and Academic Needs (up to 5 points).

Projects that are designed to improve students' social, emotional, academic, and career development, with a focus on underserved students (as defined in this notice), by creating a positive, inclusive, and identity-safe climate at IHEs through one or more of the following activities:

(a) Fostering a sense of belonging and inclusion for underserved students.

(b) Implementing evidence-based practices for advancing student success for underserved students.

(c) Providing evidence-based professional development opportunities designed to build asset-based mindsets for faculty and staff on campus and that are inclusive with regard to race, ethnicity, culture, language, and disability status.

Competitive Preference Priority 2: Increasing Postsecondary Education Access, Affordability, Completion, and Post-Enrollment Success (up to 5 points).

Projects that are designed to increase postsecondary access, affordability, completion, and success for underserved students by addressing one or more of the following priority areas:

(a) Increasing postsecondary education access and reducing the cost of college by creating clearer pathways for students between institutions and making transfer of course credits more seamless and transparent.

(b) Increasing the number and proportion of underserved students who enroll in and complete postsecondary education programs, which may include strategies related to college preparation, awareness, application, selection, advising, counseling, and enrollment.

(c) Reducing the net price or debt-to-earnings ratio for underserved students who enroll in or complete college, other postsecondary education, or career and technical education programs.

(d) Supporting the development and implementation of student success programs that integrate multiple comprehensive and evidence-based services or initiatives, such as academic advising, structured/guided pathways, career services, credit-bearing academic undergraduate courses focused on career, and programs to meet basic needs, such as housing, childcare and transportation, student financial aid, and access to technological devices.

Note: Applicants must include in the one-page abstract submitted with the application a statement indicating that they are addressing one or both competitive preference priorities. If the applicant has addressed one or both competitive preference priorities, this information also must be listed on the NASNTI Program Profile form in the application booklet.

Definitions: The definitions below are from 34 CFR 77.1, 20 U.S.C. 1059f, and the Supplemental Priorities.

Demonstrates a rationale means a key project component included in the project's logic model is informed by research or evaluation findings that suggest the project component is likely to improve relevant outcomes.

Department means the U.S. Department of Education.

Fiscal Year means the Federal fiscal year—a period beginning on October 1 and ending on the following September 30.

Grantee means the legal entity to which a grant is awarded and that is accountable to the Federal Government for the use of the funds provided. The grantee is the entire legal entity even if only a particular component of the entity is designated in the grant award notice (GAN). For example, a GAN may name as the grantee one school or campus of a university. In this case, the granting agency usually intends, or actually intends, that the named component assume primary or sole responsibility for administering the grant-assisted project or program. Nevertheless, the naming of a component of a legal entity as the grantee in a grant award document shall not be construed as relieving the whole legal entity from accountability to the Federal Government for the use of the funds provided. (This definition is not intended to affect the eligibility provision of grant programs in which eligibility is limited to organizations that may be only components of a legal entity.) The term ''grantee'' does not include any secondary recipients, such as subgrantees and contractors, that may receive funds from a grantee pursuant to a subgrant or contract.

Logic model (also referred to as a theory of action) means a framework that identifies key project components of the proposed project (*i.e.,* the active ''ingredients'' that are hypothesized to be critical to achieving the relevant outcomes) and describes the theoretical and operational relationships among the key project components and relevant outcomes.

Note: In developing logic models, applicants may want to use resources such as the Regional Educational Laboratory Program's (REL Pacific) Education Logic Model Application, available at *https://ies.ed.gov/ncee/edlabs/regions/pacific/elm.asp.* Other sources include: *https://ies.ed.gov/ncee/edlabs/regions/pacific/pdf/REL_2014025.pdf, https://ies.ed.gov/ncee/edlabs/regions/pacific/pdf/REL_2014007.pdf,* and *https://ies.ed.gov/ncee/edlabs/regions/northeast/pdf/REL_2015057.pdf.*

Native American means an individual who is of a tribe, people, or culture that is indigenous to the United States.

Project component means an activity, strategy, intervention, process, product, practice, or policy included in a project. Evidence may pertain to an individual project component or to a combination of project components (*e.g.,* training teachers on instructional practices for English learners and follow-on coaching for these teachers).

Relevant outcome means the student outcome(s) or other outcome(s) the key project component is designed to improve, consistent with the specific goals of the program.

Underserved student means a student in postsecondary education or career and technical education, and adult learners, as appropriate, in one or both of the following subgroups:

(a) A student who is living in poverty.

(b) A student who is a member of a federally recognized Indian Tribe.[4]

Program Authority: 20 U.S.C. 1059f (title III, part A of the Higher Education Act of 1965, as amended (HEA)).

Note: In 2008, the HEA was amended by the Higher Education Opportunity Act of 2008 (HEOA), Public Law 110–315. Please note that the regulations in 34 CFR part 607 have not been updated to reflect these statutory changes.

Note: Projects will be awarded and must be operated in a manner consistent with the nondiscrimination requirements contained in the Federal civil rights laws.

Applicable Regulations: (a) The Education Department General Administrative Regulations in 34 CFR parts 75, 77, 79, 82, 84, 86, 97, 98, and 99. (b) The Office of Management and Budget Guidelines to Agencies on Governmentwide Debarment and Suspension (Nonprocurement) in 2 CFR part 180, as adopted and amended as regulations of the Department in 2 CFR part 3485. (c) The Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards in 2 CFR part 200, as adopted and amended as regulations of the Department in 2 CFR part 3474. (d) The regulations for this program in 34 CFR part 607. (e) The Supplemental Priorities.

II. Award Information

Type of Award: Discretionary grants. Five-year Individual Development Grants and Cooperative Arrangement Development Grants will be awarded in FY 2022.

Note: A cooperative arrangement is an arrangement to carry out allowable grant activities between an institution eligible to receive a grant under this part and another eligible or ineligible IHE, under which the resources of the cooperating institutions are combined and shared to better achieve the purposes of this part and avoid costly duplication of effort.

Estimated Available Funds: $3,200,000.

Contingent upon the availability of funds and the quality of applications, we may make additional awards in subsequent years from the list of

[4] The NASNTI Program serves Native American and low-income students. For the subgroup of ''underserved students'' described in paragraph (b) of this definition, for the purpose of this program, we refer to those students who are Native American, as defined in 20 U.S.C. 1059f.

unfunded applications from this competition.

Individual Development Grants:

Estimated Range of Awards: $250,000–$350,000 per year.

Estimated Average Size of Awards: $300,000 per year.

Maximum Award: We will not make an award exceeding $350,000 for a single budget period of 12 months.

Estimated Number of Awards: 6.

Cooperative Arrangement Development Grants:

Estimated Range of Awards: $400,000–$550,000 per year.

Estimated Average Size of Awards: $475,000 per year.

Maximum Award: We will not make an award exceeding $550,000 for a single budget period of 12 months.

Estimated Number of Awards: 2.

Note: The Department is not bound by any estimates in this notice.

Project Period: Up to 60 months.

III. Eligibility Information

1. *Eligible Applicants:* This program is authorized by title III, part A, of the HEA. At the time of submission of their applications, applicants must certify their total undergraduate headcount enrollment and that not less than 10 percent of the IHE's enrollment is Native American. An official for the applicant must execute and submit an assurance form, which is included in the application materials for this competition.

To qualify as an eligible institution under the NASNTI Program, an institution must—

(i) Be accredited or preaccredited by a nationally recognized accrediting agency or association that the Secretary has determined to be a reliable authority as to the quality of education or training offered;

(ii) Be legally authorized by the State in which it is located to be a junior or community college or to provide an educational program for which it awards a bachelor's degree;

(iii) Be designated as an ''eligible institution,'' by demonstrating that it: (1) Has an enrollment of needy students as described in 34 CFR 607.3; and (2) has low average education and general expenditures per full-time equivalent (FTE) undergraduate student as described in 34 CFR 607.4.

Note: The notice announcing the FY 2022 process for designation of eligible institutions, and inviting applications for waiver of eligibility requirements, was published in the **Federal Register** on December 16, 2021 (86 FR 71470). The Department reopened the process for applications in a notice published in the **Federal Register** on February 7, 2022 (87 FR 6855). Only institutions that the Department determines are eligible, or which are granted a waiver under the process described in that notice, may apply for a grant in this program.

An eligible IHE that submits applications for an Individual Development Grant and a Cooperative Arrangement Development Grant in this competition may be awarded both in the same fiscal year. A grantee with an Individual Development Grant or a Cooperative Arrangement Development Grant may be a partner in one or more Cooperative Arrangement Development Grants. The lead institution in a Cooperative Arrangement Development Grant must be an eligible institution. Partners are not required to be eligible institutions. Tribally Controlled Colleges and Universities, as authorized by title III of the HEA, may participate in more than one Cooperative Arrangement Development Grant as a partner.

Relationship Between the Title III, Part A Programs and the Developing Hispanic-Serving Institutions (DHSI) Program

A grantee under the DHSI program, which is authorized under title V of the HEA, may not receive a grant under any HEA, title III, part A program. The title III, part A programs are: Strengthening Institutions Program; the Tribally Controlled Colleges and Universities Program; the Alaska Native and Native Hawaiian-Serving Institutions Program; the Asian American and Native American Pacific Islander-Serving Institutions Program; and the NASNTI Program. Furthermore, a current DHSI program grantee may not give up its HSI grant to receive a grant under any title III, part A program as described in 34 CFR 607.2(g)(1).

An eligible HSI that is not a current grantee under the DHSI program may apply for a FY 2022 grant under all title III, part A programs for which it is eligible, as well as receive consideration for a grant under the DHSI program. However, a successful applicant may receive only one grant as described in 34 CFR 607.2(g)(1).

2. a. *Cost Sharing or Matching:* This competition does not require cost sharing or matching unless the grantee uses a portion of its grant for establishing or improving an endowment fund. If a grantee uses a portion of its grant for endowment fund purposes, it must match those grant funds with non-Federal funds (20 U.S.C. 1057(d)(1)–(2)).

b. *Supplement-Not-Supplant:* This program involves supplement-not-supplant funding requirements. Grant funds must be used so that they supplement and, to the extent practical, increase the funds that would otherwise be available for the activities to be carried out under the grant and in no case supplant those funds (34 CFR 607.30(b)).

c. *Indirect Cost Rate Information:* A grantee may not use an indirect cost rate to determine allowable cost under its grant (34 CFR 607.30(c)).

d. *Administrative Cost Limitation:* This program does not include any program-specific limitation on administrative expenses. All administrative expenses must be reasonable and necessary and conform to Cost Principles described in 2 CFR part 200 subpart E of the Uniform Guidance.

3. *Subgrantees:* A grantee under this competition may not award subgrants to entities to directly carry out project activities described in its application.

IV. Application and Submission Information

1. *Application Submission Instructions:* Applicants are required to follow the Common Instructions for Applicants to Department of Education Discretionary Grant Programs, published in the **Federal Register** on December 27, 2021 (86 FR 73264) and available at *www.federalregister.gov/d/2021-27979,* which contain requirements and information on how to submit an application. Please note that these Common Instructions supersede the version published on February 13, 2019, and, in part, describe the transition from the requirement to register in *SAM.gov* a DUNS number to the implementation of the UEI. More information on the phase-out of DUNS numbers is available at *https://www2.ed.gov/about/offices/list/ofo/docs/unique-entity-identifier-transition-fact-sheet.pdf.*

2. *Intergovernmental Review:* This program is subject to Executive Order 12372 and the regulations in 34 CFR part 79. Information about Intergovernmental Review of Federal Programs under Executive Order 12372 is in the application package for this program.

3. *Funding Restrictions:* We specify unallowable costs in 34 CFR 607.10(c). We reference additional regulations outlining funding restrictions in the *Applicable Regulations* section of this notice.

4. *Recommended Page Limit:* The application narrative is where you, the applicant, address the selection criteria that reviewers use to evaluate your application. We recommend that you (1)

limit the application narrative to no more than 55 pages for Individual Development Grants and no more than 75 pages for Cooperative Arrangement Development Grants and (2) use the standards below. If you are addressing one or both competitive preference priorities, we recommend that you limit your response to no more than an additional 10 pages total, four additional pages for Competitive Preference Priority 1 and six additional pages for Competitive Preference Priority 2. Please include a separate heading when responding to one or both competitive preference priorities.

- A ''page'' is 8.5″ x 11″, on one side only, with 1″ margins at the top, bottom, and both sides.
- Double space (no more than three lines per vertical inch) all text in the application narrative, including titles, headings, footnotes, quotations, references, and captions as well as all text in charts, tables, figures, and graphs.
- Use a font that is either 12 point or larger, and no smaller than 10 pitch (characters per inch).
- Use one of the following fonts: Times New Roman, Courier, Courier New, or Arial.

The recommended page limit does not apply to the cover sheet; the budget section, including the narrative budget justification; the assurances and certifications; or the one-page abstract and the bibliography. However, the recommended page limit does apply to all of the application narrative.

Note: The Budget Information-Non-Construction Programs Form (ED 524) Sections A–C are not the same as the narrative response to the Budget section of the selection criteria.

V. Application Review Information

1. *Selection Criteria:* The following selection criteria for this competition are from 34 CFR 75.210. Applicants should address each of the following selection criteria separately for each proposed activity. The selection criteria are worth a total of 100 points; the maximum score for each criterion is noted in parentheses.

(a) *Need for project.* (Up to 15 points) The Secretary considers the need for the proposed project. In determining the need for the proposed project, the Secretary considers:

(1) The magnitude of the need for the services to be provided or the activities to be carried out by the proposed project. (5 points)

(2) The extent to which the proposed project will focus on serving or otherwise addressing the needs of disadvantaged individuals. (5 points)

(3) The extent to which specific gaps or weaknesses in services, infrastructure, or opportunities have been identified and will be addressed by the proposed project, including the nature and magnitude of those gaps or weaknesses. (5 points)

(b) *Quality of the project design.* (Up to 25 points) The Secretary considers the quality of the design of the proposed project. In determining the quality of the design of the proposed project, the Secretary considers:

(1) The extent to which the goals, objectives, and outcomes to be achieved by the proposed project are clearly specified and measurable. (10 points)

(2) The extent to which the design of the proposed project is appropriate to, and will successfully address, the needs of the target population or other identified needs. (5 points)

(3) The extent to which the proposed project demonstrates a rationale (as defined in this notice). (10 points)

(c) *Quality of project services.* (Up to 10 points) The Secretary considers the quality of the services to be provided by the proposed project.

(1) In determining the quality of the services to be provided by the proposed project, the Secretary considers the quality and sufficiency of strategies for ensuring equal access and treatment for eligible project participants who are members of groups that have traditionally been underrepresented based on race, color, national origin, gender, age, or disability. (4 points)

(2) In addition, the Secretary considers:

(i) The extent to which the services to be provided by the proposed project are appropriate to the needs of the intended recipients or beneficiaries of those services. (4 points)

(ii) The extent to which the services to be provided by the proposed project reflect up-to-date knowledge from research and effective practice. (2 points)

(d) *Quality of project personnel.* (Up to 20 points) The Secretary considers the quality of the personnel who will carry out the proposed project.

(1) In determining the quality of project personnel, the Secretary considers the extent to which the applicant encourages applications for employment from persons who are members of groups that have traditionally been underrepresented based on race, color, national origin, gender, age, or disability. (9 points)

(2) In addition, the Secretary considers:

(i) The qualifications, including relevant training and experience, of the project director or principal investigator. (3 points)

(ii) The qualifications, including relevant training and experience, of key project personnel. (8 points)

(e) *Adequacy of resources.* (Up to 5 points) The Secretary considers the adequacy of resources for the proposed project. In determining the adequacy of resources for the proposed project, the Secretary considers:

(1) The extent to which the budget is adequate to support the proposed project. (3 points)

(2) The extent to which the costs are reasonable in relation to the objectives, design, and potential significance of the proposed project. (2 points)

(f) *Quality of the management plan.* (Up to 15 points) The Secretary considers the quality of the management plan for the proposed project. In determining the quality of the management plan for the proposed project, the Secretary considers:

(1) The adequacy of the management plan to achieve the objectives of the proposed project on time and within budget, including clearly defined responsibilities, timelines, and milestones for accomplishing project tasks. (8 points)

(2) The adequacy of procedures for ensuring feedback and continuous improvement in the operation of the proposed project. (2 points)

(3) The adequacy of mechanisms for ensuring high-quality products and services from the proposed project. (5 points)

(g) *Quality of the project evaluation.* (Up to 10 points) The Secretary considers the quality of the evaluation to be conducted of the proposed project. In determining the quality of the evaluation, the Secretary considers:

(1) The extent to which the methods of evaluation are thorough, feasible, and appropriate to the goals, objectives, and outcomes of the proposed project. (5 points)

(2) The extent to which the methods of evaluation include the use of objective performance measures that are clearly related to the intended outcomes of the project and will produce quantitative and qualitative data to the extent possible. (5 points)

2. *Review and Selection Process:* We remind potential applicants that in reviewing applications in any discretionary grant competition, the Secretary may consider, under 34 CFR 75.217(d)(3), the past performance of the applicant in carrying out a previous award, such as the applicant's use of funds, achievement of project objectives, and compliance with grant conditions. The Secretary may also

consider whether the applicant failed to submit a timely performance report or submitted a report of unacceptable quality.

In addition, in making a competitive grant award, the Secretary requires various assurances, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

A panel of three non-Federal reviewers will review and score each application in accordance with the selection criteria. A rank order funding slate will be made from this review. Awards will be made in rank order according to the average score received from the peer review and from the competitive preference priority, if addressed by the applicant.

In tie-breaking situations for development grants, under 34 CFR 607.23(b), we award one additional point to an application from an IHE that has an endowment fund of which the current market value, per FTE enrolled student, is less than the average current market value of the endowment funds, per FTE enrolled student, at comparable type institutions that offer similar instruction. We award one additional point to an application from an IHE that has expenditures for library materials per FTE enrolled student that are less than the average expenditure for library materials per FTE enrolled student at similar type institutions. We also add one additional point to an application from an IHE that proposes to carry out one or more of the following activities:

(1) Faculty development.

(2) Funds and administrative management.

(3) Development and improvement of academic programs.

(4) Acquisition of equipment for use in strengthening

management and academic programs.

(5) Joint use of facilities.

(6) Student services.

For the purpose of these funding considerations, we use 2019–2020 data.

If a tie remains after applying the tie-breaker mechanism above, priority will be given to applicants that have the lowest endowment values per FTE enrolled student.

3. *Risk Assessment and Specific Conditions:* Consistent with 2 CFR 200.206, before awarding grants under this program the Department conducts a review of the risks posed by applicants. Under 2 CFR 200.208, the Secretary may impose specific conditions and, under 2 CFR 3474.10, in appropriate circumstances, high-risk conditions on a grant if the applicant or grantee is not financially stable; has a history of unsatisfactory performance; has a financial or other management system that does not meet the standards in 2 CFR part 200, subpart D; has not fulfilled the conditions of a prior grant; or is otherwise not responsible.

4. *Integrity and Performance System:* If you are selected under this competition to receive an award that over the course of the project period may exceed the simplified acquisition threshold (currently $250,000), under 2 CFR 200.206(a)(2) we must make a judgment about your integrity, business ethics, and record of performance under Federal awards—that is, the risk posed by you as an applicant—before we make an award. In doing so, we must consider any information about you that is in the integrity and performance system (currently referred to as the Federal Awardee Performance and Integrity Information System (FAPIIS)), accessible through the System for Award Management. You may review and comment on any information about yourself that a Federal agency previously entered and that is currently in FAPIIS.

Please note that, if the total value of your currently active grants, cooperative agreements, and procurement contracts from the Federal Government exceeds $10,000,000, the reporting requirements in 2 CFR part 200, Appendix XII, require you to report certain integrity information to FAPIIS semiannually. Please review the requirements in 2 CFR part 200, Appendix XII, if this grant plus all the other Federal funds you receive exceed $10,000,000.

5. *In General:* In accordance with the Office of Management and Budget's guidance located at 2 CFR part 200, all applicable Federal laws, and relevant Executive guidance, the Department will review and consider applications for funding pursuant to this notice inviting applications in accordance with—

(a) Selecting recipients most likely to be successful in delivering results based on the program objectives through an objective process of evaluating Federal award applications (2 CFR 200.205);

(b) Prohibiting the purchase of certain telecommunication and video surveillance services or equipment in alignment with section 889 of the National Defense Authorization Act of 2019 (Pub. L. 115–232) (2 CFR 200.216);

(c) Providing a preference, to the extent permitted by law, to maximize use of goods, products, and materials produced in the United States (2 CFR 200.322); and

(d) Terminating agreements in whole or in part to the greatest extent authorized by law if an award no longer effectuates the program goals or agency priorities (2 CFR 200.340).

VI. Award Administration Information

1. *Award Notices:* If your application is successful, we notify your U.S. Representative and U.S. Senators and send you a Grant Award Notification (GAN); or we may send you an email containing a link to access an electronic version of your GAN. We may notify you informally, also.

If your application is not evaluated or not selected for funding, we notify you.

2. *Administrative and National Policy Requirements:* We identify administrative and national policy requirements in the application package and reference these and other requirements in the *Applicable Regulations* section of this notice.

We reference the regulations outlining the terms and conditions of an award in the *Applicable Regulations* section of this notice and include these and other specific conditions in the GAN. The GAN also incorporates your approved application as part of your binding commitments under the grant.

3. *Open Licensing Requirements:* Unless an exception applies, if you are awarded a grant under this competition, you will be required to openly license to the public grant deliverables created in whole, or in part, with Department grant funds. When the deliverable consists of modifications to pre-existing works, the license extends only to those modifications that can be separately identified and only to the extent that open licensing is permitted under the terms of any licenses or other legal restrictions on the use of pre-existing works. Additionally, a grantee or subgrantee that is awarded competitive grant funds must have a plan to disseminate these public grant deliverables. This dissemination plan can be developed and submitted after your application has been reviewed and selected for funding. For additional information on the open licensing requirements please refer to 2 CFR 3474.20.

4. *Reporting:* (a) If you apply for a grant under this competition, you must ensure that you have in place the necessary processes and systems to comply with the reporting requirements in 2 CFR part 170 should you receive funding under the competition. This does not apply if you have an exception under 2 CFR 170.110(b).

(b) At the end of your project period, you must submit a final performance report, including financial information, as directed by the Secretary. If you receive a multiyear award, you must

submit an annual performance report that provides the most current performance and financial expenditure information as directed by the Secretary under 34 CFR 75.118. The Secretary may also require more frequent performance reports under 34 CFR 75.720(c). For specific requirements on reporting, please go to *www.ed.gov/fund/grant/apply/appforms/appforms.html.*

5. *Performance Measures:* The Secretary has established the following key performance measures for assessing the effectiveness of NASNTI:

(a) The percentage of first-time, full-time degree-seeking undergraduate students at 4-year NASNTIs who were in their first year of postsecondary enrollment in the previous year and are enrolled in the current year at the same NASNTI;

(b) The percentage of first-time, full-time degree-seeking undergraduate students at 2-year NASNTIs who were in their first year of postsecondary enrollment in the previous year and are enrolled in the current year at the same NASNTI;

(c) The percentage of first-time, full-time degree-seeking undergraduate students enrolled at 4-year NASNTIs who graduate within 6 years of enrollment; and

(d) The percentage of first-time, full-time degree-seeking undergraduate students enrolled at 2-year NASNTIs who graduate within 3 years of enrollment.

6. *Continuation Awards:* In making a continuation award under 34 CFR 75.253, the Secretary considers, among other things: Whether a grantee has made substantial progress in achieving the goals and objectives of the project; whether the grantee has expended funds in a manner that is consistent with its approved application and budget; and, if the Secretary has established performance measurement requirements, whether the grantee has made substantial progress in achieving the performance targets in the grantee's approved application.

In making a continuation award, the Secretary also considers whether the grantee is operating in compliance with the assurances in its approved application, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

VII. Other Information

Accessible Format: On request to the program contact person listed under **FOR FURTHER INFORMATION CONTACT**, individuals with disabilities can obtain this document and a copy of the application package in an accessible format. The Department will provide the requestor with an accessible format that may include Rich Text Format (RTF) or text format (txt), a thumb drive, an MP3 file, braille, large print, audiotape, or compact disc, or other accessible format.

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register**. You may access the official edition of the **Federal Register** and the Code of Federal Regulations at *www.govinfo.gov.* At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Portable Document Format (PDF). To use PDF you must have Adobe Acrobat Reader, which is available free at the site.

You may also access documents of the Department published in the **Federal Register** by using the article search feature at *www.federalregister.gov.* Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

Michelle Asha Cooper,

Acting Assistant Secretary for the Office of Postsecondary Education.

BILLING CODE 4000–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Combined Notice of Filings #1

Take notice that the Commission received the following exempt wholesale generator filings:

Docket Numbers: EG22–109–000.

Applicants: Cutlass Solar LLC.

Description: Cutlass Solar LLC submits Notice of Self-Certification of Exempt Wholesale Generator Status.

Filed Date: 5/3/22.

Accession Number: 20220503–5209.

Comment Date: 5 p.m. ET 5/24/22.

Take notice that the Commission received the following Complaints and Compliance filings in EL Dockets:

Docket Numbers: ER20–681–006; EL22–28–000.

Applicants: Tri-State Generation and Transmission Association, Inc., Tri-State Generation and Transmission Association, Inc.

Description: Response to March 25, 2022 Deficiency Letter of Tri-State Generation and Transmission Association, Inc.

Filed Date: 4/29/22.

Accession Number: 20220429–5715.

Comment Date: 5 p.m. ET 5/20/22.

Docket Numbers: EL22–55–000.

Applicants: Southern California Edison Company.

Description: Petition for Declaratory Order of [Southern California Edison Company].

Filed Date: 4/28/22.

Accession Number: 20220428–5520.

Comment Date: 5 p.m. ET 5/30/22.

Take notice that the Commission received the following electric rate filings:

Docket Numbers: ER10–2474–026; ER10–2475–027; ER10–2605–016; ER10–2611–024; ER10–2984–056; ER10–3246–020; ER11–2044–038; ER11–3876–027; ER12–162–032; ER12–1626–013; ER13–520–012; ER13–521–012; ER13–1266–038; ER13–1267–012; ER13–1268–012; ER13–1269–012; ER13–1270–012; ER13–1271–012; ER13–1272–012; ER13–1273–012; ER13–1441–012; ER13–1442–012; ER15–2211–035; ER16–438–008; ER16–1258–006; ER18–1419–005; ER21–2280–002.

Applicants: Independence Wind Energy LLC, Walnut Ridge Wind, LLC, Grande Prairie Wind, LLC, Marshall Wind Energy LLC, MidAmerican Energy Services, LLC, Solar Star California XX, LLC, Solar Star California XIX, LLC, Vulcan/BN Geothermal Power Company, Salton Sea Power L.L.C., Salton Sea Power Generation Company, Fish Lake Power LLC, Elmore Company, Del Ranch Company, CE Leathers Company, CalEnergy, LLC, Pinyon Pines Wind II, LLC, Pinyon Pines Wind I, LLC, Topaz Solar Farms LLC, Bishop Hill Energy II LLC, Cordova Energy Company LLC, MidAmerican Energy Company, PacifiCorp, Merrill Lynch Commodities, Inc., Saranac Power Partners, L.P., Yuma Cogeneration Associates, Nevada Power Company, Sierra Pacific Power Company.

Description: Notice of Non-Material Change in Status of Sierra Pacific Power Company, et al.

Filed Date: 5/2/22.

Accession Number: 20220502–5397.

Comment Date: 5 p.m. ET 5/23/22.

Docket Numbers: ER11–47–015; ER12–1540–013; ER12–1541–013; ER12–1542–013; ER12–1544–013; ER14–594–017; ER14–867–003; ER14–868–004; ER16–323–012; ER17–1930–007; ER17–1931–007; ER17–1932–007; ER19–606–005; ER19–1941–003; ER20–649–003; ER21–136–004.

Applicants: Flat Ridge 3 Wind Energy, LLC, AEP Energy Partners, Inc., Flat Ridge 2 Wind Energy LLC, AEP Generation Resources Inc.,

Southwestern Electric Power Company, AEP Texas Inc., Public Service Company of Oklahoma, Ohio Valley Electric Corporation, AEP Retail Energy Partners, LLC, AEP Energy, Inc., Ohio Power Company, Wheeling Power Company, Kingsport Power Company, Kentucky Power Company, Indiana Michigan Power Company, Appalachian Power Company.

Description: Notice of Change in Status of Appalachian Power Company, et al.

Filed Date: 4/29/22.

Accession Number: 20220429–5711.

Comment Date: 5 p.m. ET 5/20/22.

Applicants: Lightstone Marketing LLC, Waterford Power, LLC, Lawrenceburg Power, LLC, Gavin Power, LLC, Darby Power, LLC.

Description: Notice of Non-Material Change in Status of Darby Power, LLC, et. al.

Filed Date: 5/2/22.

Accession Number: 20220502–5398.

Comment Date: 5 p.m. ET 5/23/22.

Docket Numbers: ER17–1742–005; ER13–2490–009; ER17–311–005; ER19–53–002; ER19–2595–004; ER19–2670–004; ER19–2671–004; ER19–2672–004; ER20–1073–003; ER20–2455–001; ER20–2510–003; ER20–2512–003; ER20–2515–003; ER20–2595–001; ER20–2663–003; ER21–2406–002; ER21–2407–002; ER21–2408–002; ER21–2409–002; ER21–2638–002; ER22–734–001.

Applicants: SR Arlington, LLC, SR Perry, LLC, SR Snipesville II, LLC, SR Lumpkin, LLC, SR Georgia Portfolio II Lessee, LLC, Lancaster Solar LLC, SR Snipesville, LLC, SR Rattlesnake, LLC, SR Georgia Portfolio I MT, LLC, SR Baxley, LLC, Odom Solar LLC, SR Platte, LLC, SR Terrell, LLC, SR Arlington II MT, LLC, SR Arlington II, LLC, SR Meridian III, LLC, SR Hazlehurst III, LLC, SR Millington, LLC, SR South Loving LLC, Simon Solar, LLC, Hattiesburg Farm, LLC.

Description: Notice of Change in Status of Hattiesburg Farm, LLC, et al.

Filed Date: 4/29/22.

Accession Number: 20220429–5712.

Comment Date: 5 p.m. ET 5/20/22.

Docket Numbers: ER20–1830–001.

Applicants: Duquesne Light Company, PJM Interconnection, L.L.C.

Description: Compliance filing: Duquesne Light Company submits tariff filing per 35: Duquesne Order 864 Supplemental Compliance Filing in ER20–1830 to be effective 1/27/2020.

Filed Date: 5/4/22.

Accession Number: 20220504–5135.

Comment Date: 5 p.m. ET 5/25/22.

Docket Numbers: ER22–1429–001.

Applicants: Appalachian Power Company.

Description: Tariff Amendment: RE 34—AEP East Transmission Agreement—Errata to be effective 12/31/9998.

Filed Date: 5/3/22.

Accession Number: 20220503–5193.

Comment Date: 5 p.m. ET 5/24/22.

Docket Numbers: ER22–1787–000.

Applicants: Tri-State Generation and Transmission Association, Inc.

Description: § 205(d) Rate Filing: Initial Filing of Rate Schedule FERC No. 342 and Request for Expedited Action to be effective 5/31/2022.

Filed Date: 5/3/22.

Accession Number: 20220503–5087.

Comment Date: 5 p.m. ET 5/24/22.

Docket Numbers: ER22–1790–000.

Applicants: PJM Interconnection, L.L.C.

Description: § 205(d) Rate Filing: Original NSA, Service Agreement No. 6450; Queue No. AD2–116 to be effective 4/5/2022.

Filed Date: 5/4/22.

Accession Number: 20220504–5031.

Comment Date: 5 p.m. ET 5/25/22.

Docket Numbers: ER22–1791–000.

Applicants: PJM Interconnection, L.L.C.

Description: § 205(d) Rate Filing: Original NSA, SA No. 6433; Queue No. AE2–060 to be effective 4/7/2022.

Filed Date: 5/4/22.

Accession Number: 20220504–5050.

Comment Date: 5 p.m. ET 5/25/22.

Docket Numbers: ER22–1792–000.

Applicants: Southwest Power Pool, Inc.

Description: § 205(d) Rate Filing: Revisions to Modify Transmission Owner Selection Criteria and Scoring Process to be effective 7/4/2022.

Filed Date: 5/4/22.

Accession Number: 20220504–5052.

Comment Date: 5 p.m. ET 5/25/22.

Docket Numbers: ER22–1793–000.

Applicants: Alabama Power Company, Georgia Power Company, Mississippi Power Company.

Description: § 205(d) Rate Filing: Alabama Power Company submits tariff filing per 35.13(a)(2)(iii: PowerSouth NITSA Amendment (Add Union Grove DP) to be effective 4/4/2022.

Filed Date: 5/4/22.

Accession Number: 20220504–5093.

Comment Date: 5 p.m. ET 5/25/22.

Docket Numbers: ER22–1794–000.

Applicants: Green USA, LLC.

Description: Baseline eTariff Filing: Application of Green USA for Market-Based Rate Authorization to be effective 5/6/2022.

Filed Date: 5/4/22.

Accession Number: 20220504–5104.

Comment Date: 5 p.m. ET 5/25/22.

Docket Numbers: ER22–1795–000.

Applicants: Duke Energy Florida, LLC.

Description: § 205(d) Rate Filing: DEF–FPL Settlement RS No. 362 to be effective 7/4/2022.

Filed Date: 5/4/22.

Accession Number: 20220504–5123.

Comment Date: 5 p.m. ET 5/25/22.

Docket Numbers: ER22–1796–000.

Applicants: Commonwealth Edison Company, PJM Interconnection, L.L.C.

Description: § 205(d) Rate Filing: Commonwealth Edison Company submits tariff filing per 35.13(a)(2)(iii: Commonwealth Edison revisions to OATT, Attachment H–13 to be effective 4/29/2022.

Filed Date: 5/4/22.

Accession Number: 20220504–5130.

Comment Date: 5 p.m. ET 5/25/22.

Take notice that the Commission received the following electric securities filings:

Docket Numbers: ES22–46–000.

Applicants: Southern Indiana Gas & Electric Company, Inc.

Description: Application Under Section 204 of the Federal Power Act for Authorization to Issue Securities of Southern Indiana Gas and Electric Company.

Filed Date: 5/4/22.

Accession Number: 20220504–5131.

Comment Date: 5 p.m. ET 5/25/22.

The filings are accessible in the Commission's eLibrary system (*https://elibrary.ferc.gov/idmws/search/fercgensearch.asp*) by querying the docket number.

Any person desiring to intervene or protest in any of the above proceedings must file in accordance with Rules 211 and 214 of the Commission's Regulations (18 CFR 385.211 and 385.214) on or before 5:00 p.m. Eastern time on the specified comment date. Protests may be considered, but intervention is necessary to become a party to the proceeding.

eFiling is encouraged. More detailed information relating to filing requirements, interventions, protests, service, and qualifying facilities filings can be found at: *http://www.ferc.gov/docs-filing/efiling/filing-req.pdf.* For other information, call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Dated: May 4, 2022.

Debbie-Anne A. Reese,

Deputy Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 10615–058]

Tower Kleber Limited Partnership; Notice of Application Tendered for Filing With the Commission and Soliciting Additional Study Requests and Establishing Procedural Schedule for Relicensing and a Deadline for Submission of Final Amendments

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection.

a. *Type of Application:* New Major License.

b. *Project No.:* 10615–058.

c. *Date filed:* April 28, 2022.

d. *Applicant:* Tower Kleber Limited Partnership.

e. *Name of Project:* Tower and Kleber Hydroelectric Project.

f. *Location:* On the Upper Black River in the Forest and Waverly Townships of Cheboygan County, Michigan. The project does not occupy any federal lands.

g. *Filed Pursuant to:* Federal Power Act 16 U.S.C. 791(a)–825(r).

h. *Applicant Contact:* Nelson Turcotte, Tower Kleber Limited Partnership, 764 Lexington Crescent Road, Thunder Bay, Ontario, Canada P7B 7B8; (807) 633–3362.

i. *FERC Contact:* Lee Emery (202) 502–8379, or email at *lee.emery@ferc.gov.*

j. *Cooperating agencies:* Federal, state, local, and tribal agencies with jurisdiction and/or special expertise with respect to environmental issues that wish to cooperate in the preparation of the environmental document should follow the instructions for filing such requests described in item l below. Cooperating agencies should note the Commission's policy that agencies that cooperate in the preparation of the environmental document cannot also intervene. *See* 94 FERC ¶ 61,076 (2001).

k. Pursuant to section 4.32(b)(7) of 18 CFR of the Commission's regulations, if any resource agency, Indian Tribe, or person believes that an additional scientific study should be conducted in order to form an adequate factual basis for a complete analysis of the application on its merit, the resource agency, Indian Tribe, or person must file a request for a study with the Commission not later than 60 days from the date of filing of the application, and serve a copy of the request on the applicant.

l. Deadline for filing additional study requests and requests for cooperating agency status: June 27, 2022.

The Commission strongly encourages electronic filing. Please file additional study requests and requests for cooperating agency status using the Commission's eFiling system at *http://www.ferc.gov/docs-filing/efiling.asp.* For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov,* (866) 208–3676 (toll free), or (202) 502–8659 (TTY). In lieu of electronic filing, you may submit a paper copy. Submissions sent via the U.S. Postal Service must be addressed to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426. Submissions sent via any other carrier must be addressed to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852. The first page of any filing should include docket number P–10615–058.

m. The application is not ready for environmental analysis at this time.

n. The Tower and Kleber Hydroelectric Project consists of two developments. The Tower Development includes the following existing facilities: (1) An 83-acre reservoir with a gross storage capacity of 440 acre feet at a normal maximum water surface elevation of 722.1 feet National Geodetic Vertical Datum of 1929 (NGVD29); (2) a spillway with a Tainter gate; (3) a spillway with a vertical lift gate; (4) an uncontrolled spillway; (5) a concrete gravity non-overflow dam; (6) an earthen embankment with a concrete core wall; (7) a powerhouse with an integral concrete intake; (8) two 280-kilowatt (kW) turbine/generator units; (9) a 2.4-kilovolt (kV) transmission line; (10) a 2.4-kV to 12.5-kV step up transformer; and (11) appurtenant facilities. The Kleber Development includes the following existing facilities: (1) A 267-acre reservoir with a gross storage capacity of 3,000 acre feet at a normal maximum water surface elevation of 701.1 feet NGVD29; (2) an earthen embankment; (3) a spillway with a Tainter gate; (4) an emergency spillway, (5) an integral concrete intake; (6) two penstocks; (7) a powerhouse; (8) two 600-kW turbine/generator units; (9) a 2.4-kV transmission line; (10) a 2.4-kV to 12.5-kV step up transformer; and (11) appurtenant facilities. Both developments are operated in a run-of-river mode. The project has a total rated capacity of 1.760 megawatts.

o. A copy of the application may be viewed on the Commission's website at *http://www.ferc.gov* using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. At this time, the Commission has suspended access to the Commission's Public Reference Room, due to the proclamation declaring a National Emergency concerning the Novel Coronavirus Disease (COVID–19), issued by the President on March 13, 2020. For assistance, contact FERC Online Support.

You may also register online at *http://www.ferc.gov/docs-filing/esubscription.asp* to be notified via email of new filings and issuances related to this or other pending projects. For assistance, contact FERC Online Support.

p. Procedural schedule and final amendments: The application will be processed according to the following preliminary schedule. Revisions to the schedule will be made as appropriate.

Issue Deficiency Letter (if necessary)—July 2022

Request Additional Information (if necessary)—July 2022

Issue Scoping Document 1 for comments—November 2022
Issue Scoping Document 2—(if necessary) January 2023
Issue Notice of Ready for Environmental Analysis—February 2023

Final amendments to the application must be filed with the Commission no later than 30 days from the issuance date of the notice of ready for environmental analysis.

Dated: May 4, 2022.

Kimberly D. Bose,

Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP22–354–000]

Texas Gas Transmission, LLC.; Notice of Request Under Blanket Authorization and Establishing Intervention and Protest Deadline

Take notice that on April 29, 2022, Texas Gas Transmission, LLC (Texas Gas), 9 Greenway Plaza, Suite 2800, Houston, Texas 77046 filed in the above referenced docket, a prior notice pursuant to sections 157.205 and 157.208 of the Federal Energy Regulatory Commission's regulations under the Natural Gas Act, requesting authorization to replace, in the existing right-of-way a total of approximately 2.95 miles of existing parallel pipelines, Bastrop Eunice, 36–1, BAE 30–1, and BAE 26–1. In addition, the installation of a new 36-inch mainline block valve on the existing BAE 36–1 and minor work at six existing valve/metering facilities along the BAE system all located in Evangeline Parish, Louisiana (Pine Prairie Pipeline Replacement Project or Project).

Texas Gas proposes to replace the pipelines due to population increase and to maintain pipeline safety standards under the DOT design and integrity requirements. Texas proposes to replace the pipelines under authorities granted by its blanket certificate issued in Docket No. CP82–407–000.[1] Texas says that the replacements is necessary to ensure compliance with pipeline safety regulation and to keep communities near the facilities safe. The proposed replacement will have no impact on Texas existing customers or affect its existing storage operations. The estimated potential replacement cost for the Project is approximately $19,100,000, all as more fully set forth in the request which is on file with the Commission and open to public inspection.

In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (*http://ferc.gov*) using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. At this time, the Commission has suspended access to the Commission's Public Reference Room, due to the proclamation declaring a National Emergency concerning the Novel Coronavirus Disease (COVID–19), issued by the President on March 13, 2020. For assistance, contact the Federal Energy Regulatory Commission at *FERCOnlineSupport@ferc.gov* or call toll-free, (886) 208–3676 or TYY, (202) 502–8659.

Any questions concerning this application should be directed to Michael E. McMahon, Senior Vice President and General Counsel, Texas Gas Transmission, LLC (Texas Gas), 9 Greenway Plaza, Suite 2800, Houston, Texas 77046; by phone: (713) 479–3480; or email: *Mike.McMahon@bwpipelines.com*.

Pursuant to Section 157.9 of the Commission's Rules of Practice and Procedure,[2] within 90 days of this Notice the Commission staff will either: Complete its environmental review and place it into the Commission's public record (eLibrary) for this proceeding; or issue a Notice of Schedule for Environmental Review. If a Notice of Schedule for Environmental Review is issued, it will indicate, among other milestones, the anticipated date for the Commission staff's issuance of the final environmental impact statement (FEIS) or environmental assessment (EA) for this proposal. The filing of an EA in the Commission's public record for this proceeding or the issuance of a Notice of Schedule for Environmental Review will serve to notify federal and state agencies of the timing for the completion of all necessary reviews, and the subsequent need to complete all federal authorizations within 90 days of the date of issuance of the Commission staff's FEIS or EA.

Public Participation

There are three ways to become involved in the Commission's review of this project: You can file a protest to the project, you can file a motion to intervene in the proceeding, and you can file comments on the project. There is no fee or cost for filing protests, motions to intervene, or comments. The deadline for filing protests, motions to intervene, and comments is 5:00 p.m. Eastern Time on July 5, 2022. How to file protests, motions to intervene, and comments is explained below.

Protests

Pursuant to section 157.205 of the Commission's regulations under the NGA,[3] any person [4] or the Commission's staff may file a protest to the request. If no protest is filed within the time allowed or if a protest is filed and then withdrawn within 30 days after the allowed time for filing a protest, the proposed activity shall be deemed to be authorized effective the day after the time allowed for protest. If a protest is filed and not withdrawn within 30 days after the time allowed for filing a protest, the instant request for authorization will be considered by the Commission.

Protests must comply with the requirements specified in section 157.205(e) of the Commission's regulations,[5] and must be submitted by the protest deadline, which is July 5, 2022. A protest may also serve as a motion to intervene so long as the protestor states it also seeks to be an intervenor.

Interventions

Any person has the option to file a motion to intervene in this proceeding. Only intervenors have the right to request rehearing of Commission orders issued in this proceeding and to subsequently challenge the Commission's orders in the U.S. Circuit Courts of Appeal.

To intervene, you must submit a motion to intervene to the Commission in accordance with Rule 214 of the Commission's Rules of Practice and Procedure [6] and the regulations under the NGA [7] by the intervention deadline for the project, which is July 5, 2022. As described further in Rule 214, your motion to intervene must state, to the extent known, your position regarding

[1] *Texas Gas Transmission Corp.,* 20 FERC ¶ 62,417 (1982).

[2] 18 CFR (Code of Federal Regulations) § 157.9.

[3] 18 CFR 157.205.

[4] Persons include individuals, organizations, businesses, municipalities, and other entities. 18 CFR 385.102(d).

[5] 18 CFR 157.205(e).

[6] 18 CFR 385.214.

[7] 18 CFR 157.10.

the proceeding, as well as your interest in the proceeding. For an individual, this could include your status as a landowner, ratepayer, resident of an impacted community, or recreationist. You do not need to have property directly impacted by the project in order to intervene. For more information about motions to intervene, refer to the FERC website at *https://www.ferc.gov/resources/guides/how-to/intervene.asp.*

All timely, unopposed motions to intervene are automatically granted by operation of Rule 214(c)(1). Motions to intervene that are filed after the intervention deadline are untimely and may be denied. Any late-filed motion to intervene must show good cause for being late and must explain why the time limitation should be waived and provide justification by reference to factors set forth in Rule 214(d) of the Commission's Rules and Regulations. A person obtaining party status will be placed on the service list maintained by the Secretary of the Commission and will receive copies (paper or electronic) of all documents filed by the applicant and by all other parties.

Comments

Any person wishing to comment on the project may do so. The Commission considers all comments received about the project in determining the appropriate action to be taken. To ensure that your comments are timely and properly recorded, please submit your comments on or before July 5, 2022. The filing of a comment alone will not serve to make the filer a party to the proceeding. To become a party, you must intervene in the proceeding.

How To File Protests, Interventions, and Comments

There are two ways to submit protests, motions to intervene, and comments. In both instances, please reference the Project docket number CP22–354–000 in your submission.

(1) You may file your protest, motion to intervene, and comments by using the Commission's eFiling feature, which is located on the Commission's website (*www.ferc.gov*) under the link to Documents and Filings. New eFiling users must first create an account by clicking on ''eRegister.'' You will be asked to select the type of filing you are making; first select General'' and then select ''Protest'', ''Intervention'', or ''Comment on a Filing''; or [8]

(2) You can file a paper copy of your submission by mailing it to the address below. Your submission must reference the Project docket number CP22–354–000.

To mail via USPS, use the following address: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426.

To mail via any other courier, use the following address: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852.

The Commission encourages electronic filing of submissions (option 1 above) and has eFiling staff available to assist you at (202) 502–8258 or *FercOnlineSupport@ferc.gov.*

Protests and motions to intervene must be served on the applicant either by mail or email (with a link to the document) at: Michael E. McMahon, Senior Vice President and General Counsel, Texas Gas Transmission, LLC (Texas Gas), 9 Greenway Plaza, Suite 2800, Houston, Texas 77046; by phone: (713) 479–3480; or email: *Mike.McMahon@bwpipelines.com* . Any subsequent submissions by an intervenor must be served on the applicant and all other parties to the proceeding. Contact information for parties can be downloaded from the service list at the eService link on FERC Online.

Tracking the Proceeding

Throughout the proceeding, additional information about the project will be available from the Commission's Office of External Affairs, at (866) 208–FERC, or on the FERC website at *www.ferc.gov* using the ''eLibrary'' link as described above. The eLibrary link also provides access to the texts of all formal documents issued by the Commission, such as orders, notices, and rulemakings.

In addition, the Commission offers a free service called eSubscription which allows you to keep track of all formal issuances and submittals in specific dockets. This can reduce the amount of time you spend researching proceedings by automatically providing you with notification of these filings, document summaries, and direct links to the documents. For more information and to register, go to *www.ferc.gov/docs-filing/esubscription.asp.*

[8] Additionally, you may file your comments electronically by using the eComment feature, which is located on the Commission's website at *www.ferc.gov* under the link to Documents and Filings. Using eComment is an easy method for interested persons to submit brief, text-only comments on a project.

Dated: May 4, 2022.

Kimberly D. Bose,

Secretary.

[FR Doc. 2022–09998 Filed 5–9–22; 8:45 am]

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket Nos. RD22–1–000 and IC22–7–000]

Commission Information Collection Activities (FERC–725K); Comment Request; Extension

AGENCY: Federal Energy Regulatory Commission.

ACTION: Notice of information collection and request for comments.

SUMMARY: In compliance with the requirements of the Paperwork Reduction Act of 1995, the Federal Energy Regulatory Commission (Commission or FERC) is soliciting public comments on the requested renewal and revision of FERC–725K (Mandatory Reliability Standard for the SERC Region), which will be submitted to the Office of Management and Budget (OMB) for review.

The Commission published a 60-day notice in the **Federal Register** on March 4, 2022 (87 FR 12440), and received no comments on the 60-day notice.

DATES: Comments on the collection of information are due June 9, 2022.

ADDRESSES: Send written comments on FERC 725K to OMB through *www.reginfo.gov/public/do/PRAMain,* Attention: Federal Energy Regulatory Commission Desk Officer. Please identify the OMB Control Number 1902–0260 (Mandatory Reliability Standard for the SERC Region) in the subject line. Your comments should be sent within 30 days of publication of this notice in the **Federal Register**.

Please submit copies of your comments (identified by Docket No. IC22–7–000 and the form) to the Commission as noted below. Electronic filing through *http://www.ferc.gov,* is preferred.

- *Electronic Filing:* Documents must be filed in acceptable native applications and print-to-PDF, but not in scanned or picture format.
- For those unable to file electronically, comments may be filed by USPS mail or by hand (including courier) delivery.

○ *Mail via U.S. Postal Service only, addressed to:* Federal Energy Regulatory Commission, Secretary of the Commission, 888 First Street NE, Washington, DC 20426.

○ *Hand (including courier) delivery to:* Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, MD 20852.

Please reference the specific collection number(s) and/or title(s) in your comments.

Instructions: OMB submissions must be formatted and filed in accordance with submission guidelines at: *www.reginfo.gov/public/do/PRAMain.* Using the search function under the ''Currently Under Review field,'' select Federal Energy Regulatory Commission; click ''submit'' and select ''comment'' to the right of the subject collection. FERC submissions must be formatted and filed in accordance with submission guidelines at: *http://www.ferc.gov.* For user assistance contact FERC Online Support by email at *ferconlinesupport@ferc.gov,* or by phone at (866) 208–3676 (toll-free).

Docket: Users interested in receiving automatic notification of activity in this docket or in viewing/downloading comments and issuances in this docket may do so at *http://www.ferc.gov.*

FOR FURTHER INFORMATION CONTACT: Ellen Brown may be reached by email at *DataClearance@FERC.gov* and telephone at (202) 502–8663.

SUPPLEMENTARY INFORMATION: [1]

Title: FERC–725K, Mandatory Reliability Standard for the SERC Region.

OMB Control No.: 1902–0260.

Type of Request: Request for comment on the revised information collection requirements resulting from Docket No. RD22–1–000 [2] and the three-year extension of FERC–725K.

Abstract: Section 215 of the Federal Power Act (FPA) [3] requires a Commission-certified Electric Reliability Organization (ERO) to develop mandatory and enforceable Reliability Standards, which are subject to Commission review and approval. Once approved, the Reliability Standards may be enforced by NERC, subject to Commission oversight, or by the Commission independently.

Reliability Standards that NERC proposes to the Commission may include Reliability Standards that are proposed by a Regional Entity to be effective in that region. In Order No. 672, the Commission noted that:

> As a general matter, we will accept the following two types of regional differences, provided they are otherwise just, reasonable, not unduly discriminatory or preferential and in the public interest, as required under the statute: (1) A regional difference that is more stringent than the continent-wide Reliability Standard, including a regional difference that addresses matters that the continent-wide Reliability Standard does not; and (2) a regional Reliability Standard that is necessitated by a physical difference in the Bulk-Power System.

When NERC reviews a regional Reliability Standard that would be applicable on an interconnection-wide basis and that has been proposed by a Regional Entity organized on an interconnection-wide basis, NERC must rebuttably presume that the regional Reliability Standard is just, reasonable, not unduly discriminatory or preferential, and in the public interest.[4] In turn, the Commission must give ''due weight'' to the technical expertise of NERC and of a Regional Entity organized on an interconnection-wide basis.[5] As stated in the NERC Petition, in 2008, SERC commenced work on Reliability Standard PRC–006–SERC–01. NERC also began work on revising PRC–006–0 at a continent-wide level. The SERC standard has been developed to be consistent with the NERC UFLS standard. PRC–006–SERC–02 was developed due to periodic review of the standard and PRC–006–1 clearly defines the roles and responsibilities of parties to whom the standard applies.

On February 18, 2022 FERC issued the Delegated Letter Order in Docket No. RD22–1–000 approving the NERC petition's request (Joint Petition of the North American Electric Reliability Corporation and SERC Reliability Corporation for Approval of Proposed Regional Reliability Standard PRC–006–SERC–03), which modifies the information collection of FERC–725K. The collection follows the NERC Petition request in Docket No. RD22–1–000 which proposes to update the reliability standard for the SERC region from PRC–006–SERC–02 to PRC–006–SERC–03. As stated in the NERC Petition submitted on December 14, 2021, the updated reliability standard provides additional flexibility for planning coordinators to adjust island boundaries to perform more accurate studies; address the transition of the Florida Reliability Coordinating Council (FRCC) registered entities to SERC following the dissolution of the FRCC on July 1, 2019; and to clarify technical requirements within the UFLS settings that are unique to the Florida peninsula. When FRCC was dissolved and the registered entities located in the Florida peninsula would eventually became subject to SERC's regional Reliability Standard PRC–006–SERC–02.

The PRC–006–1 standard identifies the Planning Coordinator (PC) as the entity responsible for developing underfrequency load shedding (UFLS) schemes within their PC area. The regional standard (PRC–006–SERC–03) adds specificity not contained in the NERC standard for a UFLS scheme in the SERC Region. The added specificity that PRC–006–SERC–03 provides effectively mitigates the consequences of an underfrequency event.

The purpose of regional Reliability Standard PRC–006–SERC–03 is to establish consistent and coordinated requirements for the design, implementation, and analysis of automatic UFLS programs among all SERC applicable entities. The regional Reliability Standard PRC–006–SERC–03 incorporates revisions to: (i) Provide more flexibility for Planning Coordinators to adjust island boundaries in order to perform more accurate and complete studies; (ii) address the transition of Florida Reliability Coordinating Council (''FRCC'') registered entities to SERC following the dissolution of FRCC as a regional entity on July 1, 2019; [6] (iii) clarify a technical term used in the regional Reliability Standard; and (iv) align requirement language with the current continent-wide NERC Reliability Standard, PRC–006–5.

Currently effective regional Reliability Standard PRC–006–SERC–02 was approved by the Commission on October 16, 2017 [7] and became effective for registered entities in the SERC region on January 1, 2018. Following the addition of FRCC's registered entities to SERC in 2019, SERC initiated a project to review PRC–006–SERC–02. SERC's Dynamics Working Group identified the need to revise the regional Reliability Standard to account for UFLS settings that are unique to the Florida peninsula. As part of this project, SERC also

[1] Due to expiration dates in 2019 for many of the Commission's financial forms, the renewal work for several of the forms was in process or pending at OMB during the 2019 Forms Refresh rulemaking effort in Docket No. RM19–12–000. The simultaneous OMB processes required the assignment of alternate temporary information collection numbers (*e.g.,* 60A) at the NOPR and/or final rule stages. Accordingly, FERC Form No. 60A represents the additional burden associated with the final rule in RM19–12–000. *Revisions to the Filing Process for Comm'n Forms,* Order No. 859, 167 FERC ¶ 61,241 (2019).

[2] Delegated Letter Order approving Joint Petition requesting to update the regional Reliability Standard PRC–006–SERC–03 under RD22–1 (dated 12/14/2021) filed by the North American Electric Reliability Corporation (*https://elibrary.ferc.gov/eLibrary/filelist?accession_num=20220218-3010*).

[3] 16 U.S.C. 824*o*.

[4] 16 U.S.C. 824o(d)(3).

[5] *Id.* § 824o(d)(2).

[6] Letter Order Approving the Joint Petition Requesting Certain Approvals in connection with the Dissolution of FRCC, 167 FERC ¶ 61,095, (2019).

[7] North American Electric Reliability Corporation (NERC), Docket No. RD17–9–000 (Oct. 16, 2017) (delegated letter order).

identified other opportunities to enhance the regional standard. SERC proposed to modify its UFLS Standard, PRC–006–SERC–02. Requirements R1 and R7 of the currently effective standard are removed in the updated regional Reliability PRC–006–SERC–03, but the numbering for the remaining Requirements is unchanged in the interest of administrative convenience.[8]

SERC proposed to remove Requirement R1, which says:

Each Planning Coordinator shall include its SERC subregion as an identified island in the criteria (required by the NERC PRC standard on UFLS) for selecting portions of the BPS that may form islands.[9]

SERC proposed the retirement of Requirement R7, which sets specific data requirements for Planning Coordinators (PCs) to provide SERC. SERC no longer plans to maintain a database of this information; therefore, it proposed to retire R7, that removes the requirement for SERC to maintain a UFLS database. SERC notes that this requirement is no longer needed because the continent-wide UFLS standard requires PCs to maintain a UFLS database.

Type of Respondents: Entities registered with the North American Electric Reliability Corporation within the SERC region.

Estimate of Annual Burden:[10] Our estimate below regarding the number of respondents is based on the NERC compliance registry as of January 7, 2022. According to the NERC compliance registry, there are 28 planning coordinators (PC) and 175 generator owners (GO) within the SERC Region. The individual burden estimates are based on the time needed for planning coordinators and generator operators to meet the requirements of both the regional SERC requirement and the national reliability requirements. The estimates include the costs to document and store data, run studies, assess UFLS design, and analyze results from design, development, and updating of the UFLS programs to be compliant with the SERC and NERC standards. Additionally, generator owners must provide a detailed set of data and documentation to SERC within 30 days of a request to facilitate post event analysis of frequency disturbances. These burden estimates are consistent with estimates for similar tasks in other Commission-approved Reliability Standards.

There are two burden tables below, the first showing the reduction in burden following RD22–1–000, and the second showing the estimated burden of the collection. The Commission estimates the annual reporting burden and cost for the Reliability Standard PRC–006–SERC–3 as:

FERC–725K—MODIFICATIONS DUE TO DLO IN DOCKET NO. RD22–1

[Reduction in burden]

Reliability standard and associated requirement	Number of respondents	Annual number of responses per respondent	Total number of responses	Average burden & cost per response	Total annual burden & total annual cost	Cost per respondent ($)
	(1)	(2)	(1) * (2) =(3)	(4)	(3) * (4) = (5)	(5) ÷ (1)
PRC–006–SERC–3						
PCs: Provide Documentation and Data to SERC.	28	1	.....	16 hrs.; $1,392	448 hrs.; $38,976	$1,392
Total Reduction due to RD22–1	.....	.....	.....	.....	448 hrs.; $38,976	.....

FERC–725K—MANDATORY RELIABILITY STANDARD FOR THE SERC REGION

[Renewal]

	Number of respondents[11]	Annual number of responses per respondent	Total number of responses	Average burden & cost per response[12]	Total annual burden hours & total annual cost	Cost per respondent ($)
	(1)	(2)	(1) * (2) = (3)	(4)	(3) * (4) = (5)	(5) ÷ (1)
PCs: Design and Document Automatic UFLS Program.	28	1	28	8 hrs.; $696.00	224 hrs.; $19,488.00	$696.00
GOs: Provide Documentation and Data to SERC.	175	1	175	16 hrs.; $1,392.00	2800 hrs.; $243,600.00 ...	1,392.00
GOs: Record Retention	175	1	175	4 hrs.; $348.00	700 hrs.; $60,900	348.00
Total	.....	.....	.....	.....	3,724 hrs. $323,988[13]	.....

[11] Between previous information collection there is an increase in the number of PCs and GOs which largely reflect entities from the former FRCC and SPP regions now applicable PRC–006–SERC–03.

[12] The estimated hourly cost (salary plus benefits) provided in this section is based on the salary figures and benefits of the average 2021 FERC FTE costs ($180,703 per year, or $87.00 per hour), which we estimate is comparable for salary plus benefits costs of a utilities staff.

[13] The total hours reflect the total hours required for the collection following the reduction in burden from RD22–1–000.

Comments: Comments are invited on: (1) Whether the collection of information is necessary for the proper performance of the functions of the Commission, including whether the information will have practical utility; (2) the accuracy of the agency's estimate of the burden and cost of the collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information collection; and (4) ways to minimize the burden of the collection of information on those who are to respond, including the use

[8] NERC petition identified on page 8.

[9] NERC petition identified on page 9.

[10] ''Burden'' is defined as the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. For further explanation of what is included in the information collection burden, reference 5 Code of Federal Regulations 1320.3.

of automated collection techniques or other forms of information technology.

Dated: May 4, 2022.

Kimberly D. Bose,

Secretary.

BILLING CODE 6717–01–P

ENVIRONMENTAL PROTECTION AGENCY

[FRL –9817–01–OA]

Public Meeting of the Science Advisory Board Drinking Water Committee (DWC) Augmented for the Contaminant Candidate List 5 Review

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) Science Advisory Board (SAB) Staff Office announces one public meeting of the Science Advisory Board Drinking Water Committee (DWC) Augmented for the Contaminant Candidate List 5 (CCL 5) Review. The purpose of the meeting is for the Committee to discuss their draft report reviewing EPA's *Draft Fifth Drinking Water Contaminant Candidate List (CCL 5)* (86 FR 37948) and three associated support documents: *Technical Support Document for the Draft Fifth Contaminant Candidate List (CCL 5)—Contaminant Information Sheets; Technical Support Document for the Draft Fifth Contaminant Candidate List (CCL 5)—Chemical Contaminants;* and *Technical Support Document for the Draft Fifth Contaminant Candidate List (CCL 5)—Microbial Contaminants.*

DATES: The public meeting for the Science Advisory Board DWC Augmented for the CCL 5 Review to review its draft document will be held on June 6, 2022, from 12:30 p.m.—5:00 p.m. (Eastern Time).

ADDRESSES: The meeting will be conducted virtually. Please refer to the SAB website at *https://sab.epa.gov* for information on how to attend the meeting.

FOR FURTHER INFORMATION CONTACT: Any member of the public who wants further information concerning this notice may contact Carolyn Kilgore, Designated Federal Officer (DFO), via telephone (202) 564–0230, or email at *Kilgore.Carolyn@epa.gov.* General information about the SAB, as well as any updates concerning the meetings announced in this notice can be found on the SAB website at *https://sab.epa.gov.*

SUPPLEMENTARY INFORMATION:

Background: The SAB was established pursuant to the Environmental Research, Development, and Demonstration Authorization Act (ERDDAA), codified at 42 U.S.C. 4365, to provide independent scientific and technical advice to the EPA Administrator on the scientific and technical basis for agency positions and regulations. The SAB is a Federal Advisory Committee chartered under the Federal Advisory Committee Act (FACA), 5 U.S.C., App. 2. The SAB will comply with the provisions of FACA and all appropriate SAB Staff Office procedural policies. Pursuant to FACA and EPA policy, notice is hereby given that the Science Advisory Board DWC Augmented for the CCL 5 5 Review will hold a public meeting to discuss their draft report reviewing EPA's Draft Fifth Drinking Water Contaminant Candidate List and associated support documents.

Availability of Meeting Materials: All meeting materials, including the agenda will be available on the SAB web page at *https://sab.epa.gov.*

Procedures for Providing Public Input: Public comment for consideration by EPA's federal advisory committees and panels has a different purpose from public comment provided to EPA program offices. Therefore, the process for submitting comments to a federal advisory committee is different from the process used to submit comments to an EPA program office. Federal advisory committees and panels, including scientific advisory committees, provide independent advice to the EPA. Members of the public can submit relevant comments pertaining to the committee's charge or meeting materials. Input from the public to the SAB will have the most impact if it provides specific scientific or technical information or analysis for the SAB to consider or if it relates to the clarity or accuracy of the technical information. Members of the public wishing to provide comment should follow the instruction below to submit comments.

Oral Statements: In general, individuals or groups requesting an oral presentation at a meeting conducted by telephone will be limited to three minutes. Each person making an oral statement should consider providing written comments as well as their oral statement so that the points presented orally can be expanded upon in writing. Persons interested in providing oral statements should contact the DFO, in writing (preferably via email) at the contact information noted above by May 31, 2022, to be placed on the list of registered speakers.

Written Statements: Written statements will be accepted throughout the advisory process; however, for timely consideration by SAB members, statements should be submitted to the DFO by May 24, 2022, for consideration at the June 6, 2022, meeting. Written statements should be supplied to the DFO at the contact information above via email. Submitters are requested to provide a signed and unsigned version of each document because the SAB Staff Office does not publish documents with signatures on its websites. Members of the public should be aware that their personal contact information, if included in any written comments, may be posted to the SAB website. Copyrighted material will not be posted without explicit permission of the copyright holder.

Accessibility: For information on access or services for individuals with disabilities, please contact the DFO, at the contact information noted above, preferably at least ten days prior to the meeting, to give the EPA as much time as possible to process your request.

Thomas H. Brennan,

Director, Science Advisory Board Staff Office.

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OPP–2009–0879; FRL–9801–01–OCSPP]

Environmental Modeling Public Meeting; Notice of Virtual Public Meeting

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA will hold a virtual Environmental Modeling Public Meeting (EMPM) on Tuesday, June 23, 2022, with participation by phone and webcast only. The EMPM provides a public forum for EPA and its stakeholders to discuss current issues related to modeling pesticide fate, transport, exposure, and ecotoxicity for pesticide risk assessments in a regulatory context. This Notice announces the meeting and provides information on its theme which is a focus on the Endangered Species Act and practical solutions to avoid, minimize or offset potential effects to Federally Listed endangered and threatened species and designated critical habitats from pesticides.

DATES: *Meeting:* This virtual meeting will be held on June 23, 2022, from 9:00 a.m. to approximately 4:30 p.m. EDT.

Requests to participate: Requests to attend the meeting must be submitted on or before June 16, 2022. Requests to present with an accompanying abstract must be submitted on or before May 26, 2022.

ADDRESSES: This is a virtual meeting. To register to attend and/or to present at this virtual meeting, please send an email to *OPP_EMPM@epa.gov.* You must register *via* email to receive the webcast meeting link and audio teleconference information for participation. Registrants will be added to the ''empmlist'' LYRIS list server (*https://lists.epa.gov/read/all_forums/*). Meeting updates and participation information will be distributed through ''empmlist''.

FOR FURTHER INFORMATION CONTACT: The 2022 EMPM Co-chairs, William Gardner, telephone number: (202) 566–1642 and Patricia Engel, telephone number: (202) 566–1690; email address: *OPP_EMPM@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

You may be potentially affected by this action if you are a pesticide registrant, a potential pesticide registrant, or a user of a pesticide under the Toxic Substances Control Act (TSCA), the Federal Food, Drug, and Cosmetic Act (FFDCA), or the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA). Since other entities may also be interested, the Agency has not attempted to describe all the specific entities that may be affected by this action. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

- Agriculture, Forestry, Fishing and Hunting NAICS code 11.
- Utilities NAICS code 22.
- Professional, Scientific and Technical NAICS code 54.

B. How can I get copies of this document and other related information?

The docket for this action, identified by docket identification (ID) number EPA–HQ–OPP–2009–0879, is available at *http://www.regulations.gov.* It contains materials for all previous EMPMs. EPA will similarly include materials for this EMPM after the meeting.

Please note that due to the public health emergency, the Environmental Protection Agency Docket Center (EPA/DC) and Public Reading Room are now available in-person, *by appointment only,* at the Office of Pesticide Programs Regulatory Public Docket (OPP Docket) in the Environmental Protection Agency Docket Center (EPA/DC), West William Jefferson Clinton Bldg., Rm. 3334, 1301 Constitution Ave. NW, Washington, DC 20460–0001. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744. Please review the visitor instructions and additional information about the docket available at *http://www.epa.gov/dockets* and *https://www.epa.gov/dockets/epa-docket-center-and-reading-room-open-public-appointment-only.* Our EPA/DC staff will also continue to provide customer service via email, phone, and webform.

II. Background

The purpose of the EMPM is for presentation and discussion of current issues related to modeling pesticide fate, transport, and exposure for risk assessment in a regulatory context.

III. Theme for the Meeting

The 2022 EMPM will provide a forum for presentations on the incorporation of analyses into environmental exposure and ecological risk assessments, meant to comply with the Endangered Species Act, with a focus on practical solutions to avoid, minimize or offset potential effects to Federally Listed endangered and threatened species and designated critical habitats. Potential topics: Approaches to avoid and minimize effects to listed species that inhabit pesticide use sites, label mitigations to avoid jeopardy and adverse modifications to listed species and their critical habitat; evaluation of mitigation effectiveness; and chemical specific case studies. EPA may also provide updates on ongoing topics.

(Authority: 7 U.S.C. 136 *et seq.*)

Dated: April 29, 2022.

Jan Matuszko,

Acting Director, Environmental Fate and Effects Division, Office of Pesticide Programs.

[FR Doc. 2022–09947 Filed 5–9–22; 8:45 am]

BILLING CODE 6560–50–P

FEDERAL COMMUNICATIONS COMMISSION

[OMB 3060–1159; FR ID 85775]

Information Collection Being Reviewed by the Federal Communications Commission

AGENCY: Federal Communications Commission.

ACTION: Notice and request for comments.

SUMMARY: As part of its continuing effort to reduce paperwork burdens, and as required by the Paperwork Reduction Act of 1995 (PRA), the Federal Communications Commission (FCC or Commission) invites the general public and other Federal agencies to take this opportunity to comment on the following information collection. Comments are requested concerning: Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; the accuracy of the Commission's burden estimate; ways to enhance the quality, utility, and clarity of the information collected; ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and ways to further reduce the information collection burden on small business concerns with fewer than 25 employees. The FCC may not conduct or sponsor a collection of information unless it displays a currently valid Office of Management and Budget (OMB) control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid OMB control number.

DATES: Written PRA comments should be submitted on or before July 11, 2022. If you anticipate that you will be submitting comments but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below as soon as possible.

ADDRESSES: Direct all PRA comments to Cathy Williams, FCC, via email to *PRA@fcc.gov* and to *Cathy.Williams@fcc.gov.*

FOR FURTHER INFORMATION CONTACT: For additional information about the information collection, contact Cathy Williams at (202) 418–2918.

SUPPLEMENTARY INFORMATION:

OMB Control No.: 3060–1159.

Title: Part 25—Satellite Communications; and Part 27—

Miscellaneous Wireless Communication Services: 2.3 GHz Band.

Form No.: N/A.

Type of Review: Extension of a currently approved collection.

Respondents: Business or other for profit entities.

Number of Respondents and Responses: 155 respondents and 5,761 responses.

Estimated Time per Response: 0.5–40 hours.

Frequency of Response: Recordkeeping requirement, Third Party Disclosure, and On occasion and Quarterly reporting requirements.

Obligation to Respond: Required to obtain or retain benefits. The statutory authority for this information collection is 47 U.S.C. 154, 301, 302(a), 303, 309, 332, 336, and 337 unless otherwise noted.

Total Annual Burden: 24,065 hours.

Annual Cost Burden: $370,250.

Needs and Uses: The information filed by Wireless Communications Service (WCS) licensees in support of their construction notifications will be used to determine whether licensees have complied with the Commission's performance benchmarks. Further, the information collected by licensees in support of their coordination obligations will help avoid harmful interference to Satellite Digital Audio Radio Service (SDARS), Aeronautical Mobile Telemetry (AMT) and Deep Space Network (DSN) operations in other spectrum bands.

Federal Communications Commission.

Marlene Dortch,

Secretary.

[FR Doc. 2022–09941 Filed 5–9–22; 8:45 am]

BILLING CODE 6712–01–P

FEDERAL COMMUNICATIONS COMMISSION

[OMB 3060–0975; FR ID 85420]

Information Collection Being Submitted for Review and Approval to Office of Management and Budget

AGENCY: Federal Communications Commission.

ACTION: Notice and request for comments.

SUMMARY: As part of its continuing effort to reduce paperwork burdens, as required by the Paperwork Reduction Act (PRA) of 1995, the Federal Communications Commission (FCC or the Commission) invites the general public and other Federal Agencies to take this opportunity to comment on the following information collection. Pursuant to the Small Business Paperwork Relief Act of 2002, the FCC seeks specific comment on how it can further reduce the information collection burden for small business concerns with fewer than 25 employees.

DATES: Written comments and recommendations for the proposed information collection should be submitted on or before June 9, 2022.

ADDRESSES: Comments should be sent to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function. Your comment must be submitted into *www.reginfo.gov* per the above instructions for it to be considered. In addition to submitting in *www.reginfo.gov* also send a copy of your comment on the proposed information collection to Cathy Williams, FCC, via email to *PRA@fcc.gov* and to *Cathy.Williams@fcc.gov.* Include in the comments the OMB control number as shown in the **SUPPLEMENTARY INFORMATION** below.

FOR FURTHER INFORMATION CONTACT: For additional information or copies of the information collection, contact Cathy Williams at (202) 418–2918. To view a copy of this information collection request (ICR) submitted to OMB: (1) Go to the web page *http://www.reginfo.gov/public/do/PRAMain,* (2) look for the section of the web page called ''Currently Under Review,'' (3) click on the downward-pointing arrow in the ''Select Agency'' box below the ''Currently Under Review'' heading, (4) select ''Federal Communications Commission'' from the list of agencies presented in the ''Select Agency'' box, (5) click the ''Submit'' button to the right of the ''Select Agency'' box, (6) when the list of FCC ICRs currently under review appears, look for the Title of this ICR and then click on the ICR Reference Number. A copy of the FCC submission to OMB will be displayed.

SUPPLEMENTARY INFORMATION: The Commission may not conduct or sponsor a collection of information unless it displays a currently valid Office of Management and Budget (OMB) control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid OMB control number.

As part of its continuing effort to reduce paperwork burdens, as required by the Paperwork Reduction Act (PRA) of 1995 (44 U.S.C. 3501–3520), the FCC invited the general public and other Federal Agencies to take this opportunity to comment on the following information collection. Comments are requested concerning: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's burden estimates; (c) ways to enhance the quality, utility, and clarity of the information collected; and (d) ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology. Pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107–198, see 44 U.S.C. 3506(c)(4), the FCC seeks specific comment on how it might ''further reduce the information collection burden for small business concerns with fewer than 25 employees.''

OMB Control Number: 3060–0975.

Title: Sections 68.105 and 1.4000, Promotion of Competitive Networks in Local Telecommunications Markets Multiple Tenant Environments (MTEs).

Form Number: Not applicable.

Type of Review: Extension of a currently approved collection.

Respondents: Business or other for-profit entities, not-for-profit institutions, and State, local, or Tribal governments.

Number of Respondents and Responses: 5,022 respondents; 217,658 responses.

Estimated Time per Response: 0.5 hour–10 hours.

Frequency of Response: On occasion reporting requirement and third-party disclosure requirement.

Obligation To Respond: Required to obtain or retain benefits. Statutory authority for this information collection is contained in 47 U.S.C. 151 and the Telecommunications Act of 1996, Public Law 104–104.

Total Annual Burden: 144,217 hours.

Total Annual Cost: No cost.

Needs and Uses: This information facilitates efficient interaction between premises owners and local exchange carriers (LECs) regarding the placement of the demarcation point, which marks the end of wiring under control of the LEC and the beginning of wiring under the control of the premises owner or subscriber. The demarcation point is a critical point of interconnection where competitive LECs can gain access to the inside wiring of the building to provide service to customers in the building. This collection also helps ensure that fixed wireless antennas covered by the OTARD rule comply with the Commission's limits on radiofrequency exposure and provides the Commission with information on the state of the

market. In short, this collection helps foster competition in local telecommunications markets by ensuring that competing telecommunications providers can provide services to customers in multiple tenant environments.

Federal Communications Commission.

Marlene Dortch,

Secretary, Office of the Secretary.

BILLING CODE 6712–01–P

FEDERAL RESERVE SYSTEM

Agency Information Collection Activities: Announcement of Board Approval Under Delegated Authority and Submission to OMB

AGENCY: Board of Governors of the Federal Reserve System.

SUMMARY: The Board of Governors of the Federal Reserve System (Board) is adopting a proposal to extend for three years, without revision, the Report of Institution-to-Aggregate Granular Data on Assets and Liabilities on an Immediate Counterparty Basis (FR 2510; OMB No. 7100–0376).

FOR FURTHER INFORMATION CONTACT: Federal Reserve Board Clearance Officer—Nuha Elmaghrabi—Office of the Chief Data Officer, Board of Governors of the Federal Reserve System, Washington, DC 20551, (202) 452–3829.

Office of Management and Budget (OMB) Desk Officer for the Federal Reserve Board, Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Room 10235, 725 17th Street NW, Washington, DC 20503, or by fax to (202) 395–6974.

SUPPLEMENTARY INFORMATION: On June 15, 1984, OMB delegated to the Board authority under the Paperwork Reduction Act (PRA) to approve and assign OMB control numbers to collections of information conducted or sponsored by the Board. Board-approved collections of information are incorporated into the official OMB inventory of currently approved collections of information. The OMB inventory, as well as copies of the PRA Submission, supporting statements, and approved collection of information instrument(s) are available at *https://www.reginfo.gov/public/do/PRAMain.* These documents are also available on the Federal Reserve Board's public website at *https://www.federalreserve.gov/apps/reportforms/review.aspx* or may be requested from the agency clearance officer, whose name appears above.

Final Approval Under OMB Delegated Authority of the Extension for Three Years, Without Revision, of the Following Information Collection

Report title: Report of Institution-to-Aggregate Granular Data on Assets and Liabilities on an Immediate Counterparty Basis.

Agency form number: FR 2510.

OMB control number: 7100–0376.

Frequency: Quarterly.

Respondents: Any bank holding company (BHC) that is organized under the laws of the United States or any U.S. state and that is identified as a global systemically important bank (G–SIB) holding company under the Board's Regulation Q.

Estimated number of respondents: 8.

Estimated average hours per response: 568.

Estimated annual burden hours: 18,176.

General description of report: The FR 2510 collects granular exposure data on the assets, liabilities, and off-balance sheet holdings of G–SIBs, providing breakdowns by country, instrument, currency, maturity, sector, and other factors, and also collects country exposure data on an immediate counterparty basis and detailed information on firms' derivatives exposures. The information collected by the FR 2510 supports the Board's supervision of U.S. G–SIBs by allowing for a more complete balance sheet analysis of these firms and allows the Board to more closely monitor the systemic impacts of such firms' activities and investments.

Legal authorization and confidentiality: The FR 2510 is authorized by section 5 of the Bank Holding Company Act (BHC Act). Section 5 of the BHC Act authorizes the Board to require a bank holding company and any subsidiary of such company to submit reports under oath to keep the Board informed as to its financial condition, systems for monitoring and controlling financial and operating risks, and transactions with depository institution subsidiaries of the bank holding company.[1] The FR 2510 is mandatory for U.S. G–SIBs.

The information collected in the FR 2510 is collected as part of the Board's supervisory process and is therefore considered confidential pursuant to exemption 8 of the Freedom of Information Act (FOIA), which protects information contained in ''examination, operating, or condition reports'' obtained in the bank supervisory process. In addition, individual respondents may request that information be kept confidential pursuant to exemption 4 of the FOIA, which protects nonpublic commercial or financial information, which is both customarily and actually treated as private by the respondent. Determinations of confidentiality based on exemption 4 of the FOIA would be made on a case-by-case basis.

Current actions: On October 18, 2021, the Board published a notice in the **Federal Register** (86 FR 57672) requesting public comment for 60 days on the extension, without revision, of the Report of Institution-to-Aggregate Granular Data on Assets and Liabilities on an Immediate Counterparty Basis. The comment period for this notice expired on December 17, 2021. The Board received one comment.

Detailed Discussion of Public Comments

First, the commenter identified certain reporting differences between the Country Exposure Report (FFIEC 009; OMB No. 7100–0035) and the FR 2510 and argued that reporting of similar items between the two reports should be more aligned in order to minimize reporting burden. Specifically, the commenter highlighted the difference in remaining maturity on debt securities held for trading between the FFIEC 009 and the FR 2510. On the FFIEC 009, only a single bucket containing maturities of one year or less is required, whereas the FR 2510 requires four maturity buckets across the entire term structure. While the Board acknowledges the additional burden in reporting all maturity buckets in the FR 2510, this was part of the original design of the report and was meant to ''provide significantly more detail regarding the balance sheet and derivatives exposures of U.S. G–SIBs.'' [2] This original design was part of an internationally agreed upon process to facilitate the aggregation and analysis of consistent and comparable data from G–SIBs globally. In addition, the FR 2510 collects a more fulsome set of remaining maturity information to better understand the credit market and liquidity profiles of U.S. G–SIBs, which may have systemic implications at the individual institution level or the aggregate level. The FFIEC 009, on the other hand, collects overall country risk exposures for banks of all sizes and such detail is not needed for smaller institutions.

[1] 12 U.S.C. 1844(c)(1)(A).

[2] 83 FR 42680 (August 27, 2018).

The commenter also noted that the FR 2510 instructions allow respondents to use either the final contractual maturity or the next repricing date, where applicable, for reporting the remaining maturity of debt securities. In contrast, the FFIEC 009 instructions do not offer firms this option and require the use of final contractual maturity. The Board recognizes that on the FR 2510, firms are allowed to report next repricing date; however, firms are not required to do so. FR 2510 respondents are free to report remaining maturity of debt securities data on the same basis as the FFIEC 009. Also, the option to use final contractual maturity or next repricing date is comparable to how remaining maturity of debt securities is reported on the Consolidated Financial Statements for Holding Companies (FR Y–9C; OMB No. 7100–0128), specifically on the Securities Schedule HC–B, line items M2 and M2(a)–M2(c).

Additionally, the commenter identified an inconsistency between the FR 2510 and the FFIEC 009 with respect to the sector utilized for the reporting of central bank exposures. On the FR 2510, claims on central banks are reported in the ''Unallocated'' sector, which is designated for positions for which the sector of the counterparty is unknown or the sector information does not need to be reported. However, the reporting instructions to the FFIEC 009 require respondents to include central banks in the ''Public'' sector, which includes government departments and agencies. While the Board acknowledges that this difference can cause issues with comparability and can be burdensome for the reporting institutions, this distinction was intentional, as to avoid lumping claims on central banks together with claims banks have on governments such as sovereign bond and municipal security holdings.

Second, the commenter highlighted a concern with the inconsistency of reporting debt securities on the FR 2510 and the FR Y–9C. The FR 2510 requires debt securities to be broken out into the following three categories: Asset-backed securities (ABS), Other secured debt securities, and unsecured debt securities. This segmentation is not the same as found on the FR Y–9C, which requires respondents to break down debt securities into the following six groupings: U.S. Treasury securities, U.S. government agency and sponsored agency obligations, Securities issued by states and political subdivisions in the U.S., Mortgage-back securities (MBS), Asset-backed securities and structured financial products, and Other debt securities. The commenter pointed out that this discrepancy requires firms to look through and track features of securities that are not captured on other reports in great detail, creating significant burden. The commenter requested that the FR 2510 be modified to adopt the debt securities classification from the FR Y–9C. While the Board acknowledges the burden entailed in having two different classifications for the same debt securities, the internationally-agreed template for G–SIBs includes a different and less detailed breakdown than that which U.S. regulators have specified in various regulatory reports including the FR Y–9C, which is aggregated around several classes of securities that are idiosyncratic to and proportionately more important in U.S. debt markets.

Finally, the commenter raised several process issues regarding rounding differences between the data reported on the FR 2510 and the FFIEC 009, synchronizing proposed future changes to these reports, and providing adequate lead time for any proposed revisions to the FR 2510.[3] With respect to the rounding differences, the Federal Reserve regularly reviews and updates operational controls associated with Reporting Central outside of the clearance process and will review this recommendation accordingly. To the degree that there are future proposed changes to the FR 2510 or the FFIEC 009, which apply to both reports, the Board will strive to make these changes on similar timelines and provide adequate lead time for such changes. The Board does not plan at this time to propose changes to the FR 2510 that are consistent with the current FFIEC 009 proposal.[4] Those proposed changes to the FFIEC 009 are not applicable to the FR 2510.

The Board believes that the differences in reporting between the FR 2510, the FFIEC 009, and the FR Y–9C are warranted for the reasons described above. Therefore, the Board will not adopt any revisions to the FR 2510 as part of the extension of this collection.

Board of Governors of the Federal Reserve System, May 4, 2022.

Michele Taylor Fennell,

Deputy Associate Secretary of the Board.

[FR Doc. 2022–09979 Filed 5–9–22; 8:45 am]

BILLING CODE 6210–01–P

[3] Specifically, the commenter asked for a delayed effective date of any changes made to the FR 2510. This comment is not applicable to the current extension of the FR 2510, as no revisions were proposed or are being adopted.

[4] See 87 FR 3170 (January 20, 2022).

FEDERAL RESERVE SYSTEM

Change in Bank Control Notices; Acquisitions of Shares of a Bank or Bank Holding Company

The notificants listed below have applied under the Change in Bank Control Act (Act) (12 U.S.C. 1817(j)) and § 225.41 of the Board's Regulation Y (12 CFR 225.41) to acquire shares of a bank or bank holding company. The factors that are considered in acting on the applications are set forth in paragraph 7 of the Act (12 U.S.C. 1817(j)(7)).

The public portions of the applications listed below, as well as other related filings required by the Board, if any, are available for immediate inspection at the Federal Reserve Bank(s) indicated below and at the offices of the Board of Governors. This information may also be obtained on an expedited basis, upon request, by contacting the appropriate Federal Reserve Bank and from the Board's Freedom of Information Office at *https://www.federalreserve.gov/foia/request.htm.* Interested persons may express their views in writing on the standards enumerated in paragraph 7 of the Act.

Comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors, Ann E. Misback, Secretary of the Board, 20th Street and Constitution Avenue NW, Washington, DC 20551–0001, not later than May 25, 2022.

A. Federal Reserve Bank of Chicago (Colette A. Fried, Assistant Vice President) 230 South LaSalle Street, Chicago, Illinois 60690–1414:

1. *Suresh Alla, individually, and as general partner of Thornwood Holdings LP, both of Bettendorf, Iowa;* to join the Alla Family Control Group, a group acting in concert, to acquire voting shares of AmBank Holdings, Inc., and thereby indirectly acquire voting shares of American Bank and Trust N.A., both of Davenport, Iowa.

Board of Governors of the Federal Reserve System, May 5, 2022.

Michele Taylor Fennell,

Deputy Associate Secretary of the Board.

BILLING CODE 6210–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Advisory Board on Radiation and Worker Health (ABRWH), National Institute for Occupational Safety and Health (NIOSH); Meeting

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice of meeting.

SUMMARY: In accordance with the Federal Advisory Committee Act, the CDC announces the following meeting of the Advisory Board on Radiation and Worker Health (ABRWH). This meeting is open to the public, but without a public comment period. The public is welcome to submit written comments in advance of the meeting, to the contact person below. Written comments received in advance of the meeting will be included in the official record of the meeting. The public is also welcome to listen to the meeting by joining the teleconference (information below). The audio conference line has 150 ports for callers.

DATES: The meeting will be held on June 15, 2022, from 11:00 a.m. to 1:00 p.m., EDT. Written comments must be received on or before June 8, 2022.

ADDRESSES: You may submit comments by mail to:

Sherri Diana, National Institute for Occupational Safety and Health (NIOSH), CDC, 1090 Tusculum Avenue, Mailstop C–34, Cincinnati, Ohio 45226.

Meeting Information: Audio Conference Call via FTS Conferencing. The USA toll-free dial-in number is 1–866–659–0537; the passcode is 9933701.

FOR FURTHER INFORMATION CONTACT: Rashaun Roberts, Ph.D., Designated Federal Officer, NIOSH, CDC, 1090 Tusculum Avenue, Mailstop C–24, Cincinnati, Ohio 45226, Telephone (513) 533–6800; Email: *ocas@cdc.gov.*

SUPPLEMENTARY INFORMATION:

Background: The Advisory Board was established under the Energy Employees Occupational Illness Compensation Program Act of 2000 to advise the President on a variety of policy and technical functions required to implement and effectively manage the new compensation program. Key functions of the Advisory Board include providing advice on the development of probability of causation guidelines, which have been promulgated by the Department of Health and Human Services (HHS) as a final rule; advice on methods of dose reconstruction, which have also been promulgated by HHS as a final rule; advice on the scientific validity and quality of dose estimation and reconstruction efforts being performed for purposes of the compensation program; and advice on petitions to add classes of workers to the Special Exposure Cohort (SEC). In December 2000, the President delegated responsibility for funding, staffing, and operating the Advisory Board to HHS, which subsequently delegated this authority to the CDC. NIOSH implements this responsibility for CDC.

The Advisory Board's charter was issued on August 3, 2001, was renewed at appropriate intervals, was rechartered on March 22, 2022, and will terminate on March 22, 2024.

Purpose: This Advisory Board is charged with (a) providing advice to the Secretary, HHS, on the development of guidelines under Executive Order 13179; (b) providing advice to the Secretary, HHS, on the scientific validity and quality of dose reconstruction efforts performed for this program; and (c) upon request by the Secretary, HHS, advising the Secretary on whether there is a class of employees at any Department of Energy facility who were exposed to radiation but for whom it is not feasible to estimate their radiation dose, and on whether there is reasonable likelihood that such radiation doses may have endangered the health of members of this class.

Matters to be Considered: The agenda will include discussions on the following: Work Group and Subcommittee Reports; Update on the Status of SEC Petitions; and plans for the August 2022 Advisory Board Meeting. Agenda items are subject to change as priorities dictate.

For additional information, please contact Toll Free 1–800–232–4636.

The Director, Strategic Business Initiatives Unit, Office of the Chief Operating Officer, Centers for Disease Control and Prevention, has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and Prevention and the Agency for Toxic Substances and Disease Registry.

Kalwant Smagh,

Director, Strategic Business Initiatives Unit, Office of the Chief Operating Officer, Centers for Disease Control and Prevention.

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

[Docket No. CDC–2022–0065]

Advisory Committee on Immunization Practices (ACIP)

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice of meeting and request for comment.

SUMMARY: In accordance with the Federal Advisory Committee Act, the Centers for Disease Control and Prevention (CDC) announces the following meeting of the Advisory Committee on Immunization Practices (ACIP). This meeting is open to the public. Time will be available for public comment.

DATES: The meeting will be held on May 19, 2022, from 11:00 a.m. to 4:00 p.m., EDT (times subject to change). The meeting will be webcast live via the World Wide Web. Written comments must be received on or before May 19, 2022.

ADDRESSES: You may submit comments identified by Docket No. CDC–2022–0065 by either of the following methods:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments.
- *Mail:* Centers for Disease Control and Prevention, 1600 Clifton Road NE, Mailstop H24–8, Atlanta, Georgia 30329–4027, Attn: May 19, 2022, ACIP Meeting.

Instructions: All submissions received must include the Agency name and Docket Number. All relevant comments received in conformance with the *https://www.regulations.gov* suitability policy will be posted without change to *https://www.regulations.gov,* including any personal information provided. For access to the docket to read background documents or comments received, go to *https://www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT: Stephanie Thomas, ACIP Committee Management Specialist, Centers for Disease Control and Prevention, National Center for Immunization and Respiratory Diseases, 1600 Clifton Road NE, Mailstop H24–8, Atlanta, Georgia 30329–4027, Telephone: (404) 639–8367; Email: *ACIP@cdc.gov.*

SUPPLEMENTARY INFORMATION: In accordance with 41 CFR 102–3.150(b), less than 15 calendar days' notice is being given for this meeting due to the exceptional circumstances of the

COVID–19 pandemic and rapidly evolving COVID–19 vaccine development and regulatory processes. The Secretary of Health and Human Services has determined that COVID–19 is a Public Health Emergency. A notice of this ACIP meeting has also been posted on CDC's ACIP website at: *http://www.cdc.gov/vaccines/acip/index.html.* In addition, CDC has sent notice of this ACIP meeting by email to those who subscribe to receive email updates about ACIP.

Purpose: The committee is charged with advising the Director, CDC, on the use of immunizing agents. In addition, under 42 U.S.C. 1396s, the committee is mandated to establish and periodically review and, as appropriate, revise the list of vaccines for administration to vaccine-eligible children through the Vaccines for Children program, along with schedules regarding dosing interval, dosage, and contraindications to administration of vaccines. Further, under provisions of the Affordable Care Act, section 2713 of the Public Health Service Act, immunization recommendations of the ACIP that have been approved by the CDC Director and appear on CDC immunization schedules must be covered by applicable health plans.

Matters to be Considered: The agenda will include discussions on the use of COVID–19 vaccines. A recommendation vote(s) is scheduled. Agenda items are subject to change as priorities dictate. For more information on the meeting agenda, visit *https://www.cdc.gov/vaccines/acip/meetings/meetings-info.html.* The meeting will be webcast live via the World Wide Web; for more information on ACIP, visit the ACIP website: *https://www.cdc.gov/vaccines/acip/index.html.*

Public Participation

Interested persons or organizations are invited to participate by submitting written views, recommendations, and data. Please note that comments received, including attachments and other supporting materials, are part of the public record and are subject to public disclosure. Comments will be posted on *https://www.regulations.gov.* Therefore, do not include any information in your comment or supporting materials that you consider confidential or inappropriate for public disclosure. If you include your name, contact information, or other information that identifies you in the body of your comments, that information will be on public display. CDC will review all submissions and may choose to redact, or withhold, submissions containing private or proprietary information such as Social Security numbers, medical information, inappropriate language, or duplicate/near duplicate examples of a mass-mail campaign. CDC will carefully consider all comments submitted into the docket.

Written Public Comment: The docket will be opened to receive written comments on May 10, 2022. Written comments must be received on or before May 19, 2022.

Oral Public Comment: This meeting will include time for members of the public to make an oral comment. Oral public comment will occur before any scheduled votes, including all votes relevant to the ACIP's Affordable Care Act and Vaccines for Children program roles. Priority will be given to individuals who submit a request to make an oral public comment before the meeting according to the procedures below.

Procedure for Oral Public Comment: All persons interested in making an oral public comment at the May 19, 2022, ACIP meeting must submit a request at *https://www.cdc.gov/vaccines/acip/meetings/index.html* no later than 11:59 p.m., EDT, May 17, 2022, according to the instructions provided.

If the number of persons requesting to speak is greater than can be reasonably accommodated during the scheduled time, CDC will conduct a lottery to determine the speakers for the scheduled public comment session. CDC staff will notify individuals regarding their request to speak by email on May 18, 2022. To accommodate the significant interest in participation in the oral public comment session of ACIP meetings, each speaker will be limited to 3 minutes, and each speaker may speak only once per meeting.

The Director, Strategic Business Initiatives Unit, Office of the Chief Operating Officer, Centers for Disease Control and Prevention, has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and Prevention and the Agency for Toxic Substances and Disease Registry.

Kalwant Smagh,

Director, Strategic Business Initiatives Unit, Office of the Chief Operating Officer, Centers for Disease Control and Prevention.

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Advisory Council for the Elimination of Tuberculosis

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice of meeting.

SUMMARY: In accordance with the Federal Advisory Committee Act, the CDC announces the following meeting of the Advisory Council for the Elimination of Tuberculosis (ACET). This meeting is open to the public and limited to 1,000 audio and web conference lines. Members of the public are welcome to listen to the meeting by accessing the telephone number and web access provided in the addresses section below. Time will be available for public comment (registration required to provide oral comment).

DATES: The meeting will be held on June 21, 2022, from 10:00 a.m. to 4:30 p.m., EDT, and June 22, 2022, from 10:00 a.m. to 12:05 p.m., EDT. Written comments must be received on or before June 7, 2022. Registration to make oral comments must be submitted by June 16, 2022.

ADDRESSES: The telephone access number is 1–669–254–5252, Webinar ID: 160 137 0413, and the Passcode is 37403108. The web conference access is *https://cdc.zoomgov.com/j/1601370413?pwd=T0pucU1yNENQVUlRNUNVUVBKbHh2UT09,* and the Passcode is ^Sm35?s2. The number of available audio and web conference lines is 1,000.

FOR FURTHER INFORMATION CONTACT: Marah Condit, MS, Committee Management Lead, National Center for HIV, Viral Hepatitis, STD, and TB Prevention, CDC, 1600 Clifton Road NE, Mailstop US8–6, Atlanta, GA 30329–4027, Telephone:(404)639–3423; Email: *nchhstppolicy@cdc.gov.*

SUPPLEMENTARY INFORMATION:

Purpose: The Council advises and makes recommendations to the Secretary of Health and Human Services, the Assistant Secretary for Health, and the Director, CDC, regarding the elimination of tuberculosis. Specifically, the Council makes recommendations regarding policies, strategies, objectives, and priorities; addresses the development and application of new technologies; and reviews the extent to which progress has been made toward eliminating tuberculosis.

Matters to be Considered: The agenda will include discussions on (1) NIH-funded clinical trials; (2) domestic pediatric tuberculosis; (3) immigration and tuberculosis; and (4) considerations for bringing new tuberculosis drugs to market. Agenda items are subject to change as priorities dictate.

Public Participation

Written Public Comment: Members of the public are welcome to submit written comments in advance of the meeting. Written comments must be submitted by emailing *nchhstppolicy@cdc.gov* with subject line ''June ACET Public Comment Registration'' by June 7, 2022.

Oral Public Comment: Individuals who would like to make an oral comment during the public comment period must register by emailing *nchhst ppolicy@cdc.gov* with subject line ''June ACET Public Comment Registration'' by June 16, 2022. The public comment period is on June 22, 2022, at 11:55 a.m., EDT.

The Director, Strategic Business Initiatives Unit, Office of the Chief Operating Officer, Centers for Disease Control and Prevention, has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and Prevention and the Agency for Toxic Substances and Disease Registry.

Kalwant Smagh,

Director, Strategic Business Initiatives Unit, Office of the Chief Operating Officer, Centers for Disease Control and Prevention.

Centers for Disease Control and Prevention

[Docket No. CDC–2022–0062]

Advisory Committee on Immunization Practices (ACIP)

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice of meeting and request for comment.

SUMMARY: In accordance with the Federal Advisory Committee Act, the Centers for Disease Control and Prevention (CDC) announces the following meeting of the Advisory Committee on Immunization Practices (ACIP). This meeting is open to the public. Time will be available for public comment.

DATES: The meeting will be held on June 22, 2022, from 10:00 a.m. to 5:00 p.m., EDT, and June 23, 2022, from 10:00 a.m. to 2:00 p.m., EDT (times subject to change). The meeting will be webcast live via the World Wide Web. Written comments must be received on or before June 23, 2022.

ADDRESSES: You may submit comments identified by Docket No. CDC–2022–0062 by either of the following methods:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments.
- *Mail:* Centers for Disease Control and Prevention, 1600 Clifton Road NE, Mailstop H24–8, Atlanta, Georgia 30329–4027, Attn: ACIP Meeting.

Instructions: All submissions received must include the Agency name and Docket Number. All relevant comments received in conformance with the *https://www.regulations.gov* suitability policy will be posted without change to *https://www.regulations.gov,* including any personal information provided. For access to the docket to read background documents or comments received, go to *https://www.regulations.gov.* Do not submit comments by email; CDC does not accept comments by email. Written public comments submitted by 72 hours prior to the ACIP meeting will be provided to ACIP members before the meeting.

FOR FURTHER INFORMATION CONTACT: Stephanie Thomas, ACIP Committee Management Specialist, Centers for Disease Control and Prevention, National Center for Immunization and Respiratory Diseases, 1600 Clifton Road NE, Mailstop H24–8, Atlanta, Georgia 30329–4027, Telephone: (404) 639–8367; Email: *ACIP@cdc.gov.*

SUPPLEMENTARY INFORMATION:

Purpose: The committee is charged with advising the Director, CDC, on the use of immunizing agents. In addition, under 42 U.S.C. 1396s, the committee is mandated to establish and periodically review and, as appropriate, revise the list of vaccines for administration to vaccine-eligible children through the Vaccines for Children (VFC) program, along with schedules regarding dosing interval, dosage, and contraindications to administration of vaccines. Further, under provisions of the Affordable Care Act, section 2713 of the Public Health Service Act, immunization recommendations of the ACIP that have been approved by the CDC Director and appear on CDC immunization schedules must be covered by applicable health plans.

Matters to be considered: The agenda will include discussions on influenza vaccines; pneumococcal vaccine; human papillomavirus vaccine; measles, mumps, rubella (MMR) vaccine; respiratory syncytial virus vaccine; rotavirus vaccine; and Chikungunya vaccine. Recommendation votes on influenza vaccines, pneumococcal vaccine, and MMR vaccine are scheduled. No VFC votes are scheduled. Agenda items are subject to change as priorities dictate. For more information on the meeting agenda, visit *https://www.cdc.gov/vaccines/acip/meetings/index.html.* The meeting will be webcast live via the World Wide Web; for more information on ACIP, visit the ACIP website: *https://www.cdc.gov/vaccines/acip/index.html.*

Public Participation

Interested persons or organizations are invited to participate by submitting written views, recommendations, and data. Please note that comments received, including attachments and other supporting materials, are part of the public record and are subject to public disclosure. Comments will be posted on *https://www.regulations.gov.* Therefore, do not include any information in your comment or supporting materials that you consider confidential or inappropriate for public disclosure. If you include your name, contact information, or other information that identifies you in the body of your comments, that information will be on public display. CDC will review all submissions and may choose to redact, or withhold, submissions containing private or proprietary information such as Social Security numbers, medical information, inappropriate language, or duplicate/near duplicate examples of a mass-mail campaign. CDC will carefully consider all comments submitted into the docket.

Written Public Comment: The docket will be opened to receive written comments on May 10, 2022. Written comments must be received on or before June 23, 2022.

Oral Public Comment: This meeting will include time for members of the public to make an oral comment. Oral public comment will occur before any scheduled votes, including all votes relevant to the ACIP's Affordable Care Act and Vaccines for Children program roles. Priority will be given to individuals who submit a request to make an oral public comment before the meeting according to the procedures below.

Procedure for Oral Public Comment: All persons interested in making an oral public comment at the June 22–23,

2022, ACIP meeting must submit a request at *https://www.cdc.gov/vaccines/acip/meetings/index.html* no later than 11:59 p.m., EDT, June 13, 2022, according to the instructions provided.

If the number of persons requesting to speak is greater than can be reasonably accommodated during the scheduled time, CDC will conduct a lottery to determine the speakers for the scheduled public comment session. CDC staff will notify individuals regarding their request to speak by email by June 15, 2022. To accommodate the significant interest in participation in the oral public comment session of ACIP meetings, each speaker will be limited to 3 minutes, and each speaker may speak only once per meeting.

The Director, Strategic Business Initiatives Unit, Office of the Chief Operating Officer, Centers for Disease Control and Prevention, has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and Prevention and the Agency for Toxic Substances and Disease Registry.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Disease, Disability, and Injury Prevention and Control Special Emphasis Panel (SEP)—SIP22–005, Building Resilience Against Climate Effects (BRACE): Enhancing Practical Guidance To Support Climate and Health Adaptation Planning; Amended Notice of Closed Meeting

Notice is hereby given of a change in the meeting of the Disease, Disability, and Injury Prevention and Control Special Emphasis Panel (SEP)—SIP22–005, Building Resilience Against Climate Effects (BRACE): Enhancing Practical Guidance to Support Climate and Health Adaptation Planning; May 4, 2022, 11 a.m.–6 p.m., EDT, in the original FRN.

The meeting was published in the **Federal Register** on March 1, 2022, Volume 87, Number 40, page 11444.

The meeting is being amended to change the meeting date and time and should read as follows:

Name of Committee: Disease, Disability, and Injury Prevention and Control Special Emphasis Panel (SEP)— SIP22–005, Building Resilience Against Climate Effects (BRACE): Enhancing Practical Guidance to Support Climate and Health Adaptation Planning.

Date: May 19, 2022.

Time: 3 p.m.–6 p.m., EDT.

Place: Teleconference.

Agenda: To review and evaluate grant applications.

The meeting is closed to the public.

SUPPLEMENTARY INFORMATION: In accordance with 41 CFR 102–3.150(b), less than 15 calendar days' notice is being given for this amended closed meeting due to an unforeseen medical emergency and exceptional circumstances that led to an anomaly of programmatic matters and the necessity to resolve issues, reschedule, and convene as soon as possible.

FOR FURTHER INFORMATION CONTACT: Jaya Raman, Ph.D., Scientific Review Officer, CDC, 4770 Buford Highway, Mailstop F80, Atlanta, Georgia 30341, Telephone: (770) 488–6511, *kva5@cdc.gov.*

The Director, Strategic Business Initiatives Unit, Office of the Chief Operating Officer, Centers for Disease Control and Prevention, has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and Prevention and the Agency for Toxic Substances and Disease Registry.

Kalwant Smagh,

Director, Strategic Business Initiatives Unit, Office of the Chief Operating Officer, Centers for Disease Control and Prevention.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[Document Identifiers CMS–10286 & CMS–10630]

Agency Information Collection Activities: Submission for OMB Review; Comment Request

AGENCY: Centers for Medicare & Medicaid Services, Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: The Centers for Medicare & Medicaid Services (CMS) is announcing an opportunity for the public to comment on CMS' intention to collect information from the public. Under the Paperwork Reduction Act of 1995 (PRA), federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, and to allow a second opportunity for public comment on the notice. Interested persons are invited to send comments regarding the burden estimate or any other aspect of this collection of information, including the necessity and utility of the proposed information collection for the proper performance of the agency's functions, the accuracy of the estimated burden, ways to enhance the quality, utility, and clarity of the information to be collected, and the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

DATES: Comments on the collection(s) of information must be received by the OMB desk officer by *June 9, 2022.*

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

To obtain copies of a supporting statement and any related forms for the proposed collection(s) summarized in this notice, you may make your request using one of following:

1. Access CMS' website address at: *https://www.cms.gov/Regulations-and-Guidance/Legislation/PaperworkReductionActof1995/PRA-Listing.html.*

FOR FURTHER INFORMATION CONTACT: William Parham at (410) 786–4669.

SUPPLEMENTARY INFORMATION: Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3520), federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. The term ''collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires federal agencies to publish a 30-day notice in the **Federal Register** concerning each proposed collection of information,

including each proposed extension or reinstatement of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, CMS is publishing this notice that summarizes the following proposed collection(s) of information for public comment:

1. *Type of Information Collection Request:* Extension of a currently approved collection; *Title of Information Collection:* Notice of Research Exception under the Genetic Information Nondiscrimination Act; *Use:* Under the Genetic Information Nondiscrimination Act of 2008 (GINA), a plan or issuer may request (but not require) a genetic test in connection with certain research activities so long as such activities comply with specific requirements, including: (i) The research complies with 45 CFR part 46 or equivalent federal regulations and applicable State or local law or regulations for the protection of human subjects in research; (ii) the request for the participant or beneficiary (or in the case of a minor child, the legal guardian of such beneficiary) is made in writing and clearly indicates that compliance with the request is voluntary and that non-compliance will have no effect on eligibility for benefits or premium or contribution amounts; and (iii) no genetic information collected or acquired will be used for underwriting purposes. The Secretary of Labor or the Secretary of Health and Human Services is required to be notified if a group health plan or health insurance issuer intends to claim the research exception permitted under Title I of GINA. Nonfederal governmental group health plans and issuers solely in the individual health insurance market or Medigap market will be required to file with the Centers for Medicare & Medicaid Services (CMS). The Notice of Research Exception under the Genetic Information Nondiscrimination Act is a model notice that can be completed by group health plans and health insurance issuers and filed with either the Department of Labor or CMS to comply with the notification requirement. *Form Number:* CMS–10286, OMB control number: 0938–1077; *Frequency:* On Occasion; *Affected Public:* Private Sector; State, Local or Tribal governments; *Number of Respondents:* 2; *Total Annual Responses:* 2; *Total Annual Hours:* 1. (For policy questions regarding this collection contact Usree Bandyopadhyay at 410–786–6650)

2. *Type of Information Collection Request:* Revision of a currently approved collection; *Title of Information Collection:* The PACE Organization (PO) Monitoring and Audit Process in 42 CFR part 460; *Use:* Sections 1894(e)(4) and 1934(e)(4) of the Act and the implementing regulations at 42 CFR 460.190 and 460.192 state that CMS, in conjunction with the State Administering Agency (SAA), must oversee a PACE organization's continued compliance with the requirements for a PACE organization.

The data collected with the data request tools included in this package allow CMS to conduct a comprehensive review of PACE organizations' compliance in accordance with specific federal regulatory requirements. The information gathered during this audit will be used by the Medicare Parts C and D Oversight and Enforcement Group (MOEG) within the Center for Medicare (CM), as well as the SAA, to assess POs' compliance with PACE program requirements. If outliers or other data anomalies are detected, other offices within CMS will work in collaboration with MOEG for follow-up and resolution. Additionally, POs will receive the audit results, and will be required to implement corrective action to correct any identified deficiencies. *Form Number:* CMS–10630 (OMB control number: 0938–1327); *Frequency:* Annually; *Affected Public:* Private Sector, State, Local, or Tribal Governments and Business or other for-profit institutions; *Number of Respondents:* 40; *Total Annual Responses:* 40; *Total Annual Hours:* 31,200. (For policy questions regarding this collection contact Kathleen Flannery at 410–786–6722.)

Dated: May 5, 2022.

William N. Parham, III,

Director, Paperwork Reduction Staff, Office of Strategic Operations and Regulatory Affairs.

BILLING CODE 4120–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2021–P–0939]

Determination That GLUCOTROL (Glipizide) Tablets, 2.5 Milligrams, Were Not Withdrawn From Sale for Reasons of Safety or Effectiveness

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA, Agency, or we) has determined that GLUCOTROL (glipizide) tablets, 2.5 milligrams (mg), were not withdrawn from sale for reasons of safety or effectiveness. This determination will allow FDA to approve abbreviated new drug applications (ANDAs) for glipizide tablets, 2.5 mg, if all other legal and regulatory requirements are met.

FOR FURTHER INFORMATION CONTACT: Dan Ritterbeck, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 51, Rm. 6219, Silver Spring, MD 20993–0002, 301–796–4673, *Daniel.Ritterbeck@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: Section 505(j) of the Federal Food, Drug, and Cosmetic Act (FD&C Act) (21 U.S.C. 355(j)) allows the submission of an ANDA to market a generic version of a previously approved drug product. To obtain approval, the ANDA applicant must show, among other things, that the generic drug product: (1) Has the same active ingredient(s), dosage form, route of administration, strength, conditions of use, and (with certain exceptions) labeling as the listed drug, which is a version of the drug that was previously approved, and (2) is bioequivalent to the listed drug. ANDA applicants do not have to repeat the extensive clinical testing otherwise necessary to gain approval of a new drug application (NDA).

Section 505(j)(7) of the FD&C Act requires FDA to publish a list of all approved drugs. FDA publishes this list as part of the ''Approved Drug Products With Therapeutic Equivalence Evaluations,'' which is known generally as the ''Orange Book.'' Under FDA regulations, drugs are removed from the list if the Agency withdraws or suspends approval of the drug's NDA or ANDA for reasons of safety or effectiveness or if FDA determines that the listed drug was withdrawn from sale for reasons of safety or effectiveness (21 CFR 314.162).

A person may petition the Agency to determine, or the Agency may determine on its own initiative, whether a listed drug was withdrawn from sale for reasons of safety or effectiveness. This determination may be made at any time after the drug has been withdrawn from sale, but must be made prior to approving an ANDA that refers to the listed drug (§ 314.161 (21 CFR 314.161)). FDA may not approve an ANDA that does not refer to a listed drug.

GLUCOTROL (glipizide) tablets, 2.5 mg, are the subject of NDA 017783, held by Pfizer Inc., and initially approved on May 8, 1984. GLUCOTROL is indicated as an adjunct to diet and exercise to improve glycemic control in adults with type 2 diabetes mellitus.

GLUCOTROL (glipizide) tablets, 2.5 mg, are currently listed in the ''Discontinued Drug Product List'' section of the Orange Book.

Hyman, Phelps & McNamara, P.C., submitted a citizen petition dated August 24, 2021 (Docket No. FDA–2021–P–0939), under 21 CFR 10.30, requesting that the Agency determine whether GLUCOTROL (glipizide) tablets, 2.5 mg, were withdrawn from sale for reasons of safety or effectiveness.

After considering the citizen petition and reviewing Agency records and based on the information we have at this time, FDA has determined under § 314.161 that GLUCOTROL (glipizide) tablets, 2.5 mg, were not withdrawn for reasons of safety or effectiveness. The petitioner has identified no data or other information suggesting that GLUCOTROL (glipizide) tablets, 2.5 mg, were withdrawn for reasons of safety or effectiveness. We have carefully reviewed our files for records concerning the withdrawal of GLUCOTROL (glipizide) tablets, 2.5 mg, from sale. We have also independently evaluated relevant literature and data for possible postmarketing adverse events. We have found no information that would indicate that this drug product was withdrawn from sale for reasons of safety or effectiveness.

Accordingly, the Agency will continue to list GLUCOTROL (glipizide) tablets, 2.5 mg, in the ''Discontinued Drug Product List'' section of the Orange Book. The ''Discontinued Drug Product List'' delineates, among other items, drug products that have been discontinued from marketing for reasons other than safety or effectiveness. ANDAs that refer to GLUCOTROL (glipizide) tablets, 2.5 mg, may be approved by the Agency as long as they meet all other legal and regulatory requirements for the approval of ANDAs. If FDA determines that labeling for this drug product should be revised to meet current standards, the Agency will advise ANDA applicants to submit such labeling.

Dated: May 4, 2022.

Lauren K. Roth,

Associate Commissioner for Policy.

[Docket No. FDA–2022–D–0168]

Benefit-Risk Considerations for Product Quality Assessments; Draft Guidance for Industry; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the availability of a draft guidance for industry entitled ''Benefit-Risk Considerations for Product Quality Assessments.'' This guidance describes the benefit-risk principles applied by FDA when conducting product quality-related assessments of chemistry, manufacturing, and controls (CMC) information submitted for FDA assessment as part of original new drug applications (NDAs), original biologics license applications (BLAs), or supplements to such applications, in addition to other information (*e.g.,* inspectional findings) available to FDA during its assessment. This guidance discusses how FDA assesses risks, sources of uncertainty, and possible mitigation strategies for a product quality-related issue and how those considerations inform FDA's understanding of the potential effect on a product. This guidance also discusses how unresolved product quality issues may be addressed in the context of regulatory decision making. The guidance notes that product quality assessments are also done for abbreviated new drug applications (ANDAs), and it discusses how, in certain rare circumstances, unresolved product quality issues may be addressed when there is an urgent clinical need for

an ANDA (*e.g.,* a public health emergency or a pervasive drug shortage).

DATES: Submit either electronic or written comments on the draft guidance by July 11, 2022 to ensure that the Agency considers your comment on this draft guidance before it begins work on the final version of the guidance.

ADDRESSES: You may submit comments on any guidance at any time as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2022–D–0168 for ''Benefit-Risk Considerations for Product Quality Assessments.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

You may submit comments on any guidance at any time (see 21 CFR 10.115(g)(5)).

Submit written requests for single copies of the draft guidance to the Division of Drug Information, Center for Drug Evaluation and Research, Food and Drug Administration, 10001 New Hampshire Ave., Hillandale Building, 4th Floor, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your requests. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the draft guidance document.

FOR FURTHER INFORMATION CONTACT: Natalia Comella, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 75, Rm. 6648, Silver Spring, MD 20993–0002, 301–796–6226.

SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a draft guidance for industry entitled ''Benefit-Risk Considerations for Product Quality Assessments.'' This guidance describes the benefit-risk principles applied by FDA when conducting product quality-related assessments of CMC information submitted for FDA assessment as part of original NDAs under section 505 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 355), original BLAs under section 351 of the Public Health Service Act (42 U.S.C. 262), or supplements to such applications, in addition to other information (*e.g.,* inspectional findings) available to FDA during its assessment. This guidance discusses how FDA assesses risks, sources of uncertainty, and possible mitigation strategies for a product quality-related issue and how those considerations inform FDA's understanding of the potential effect on a product. The outcome of the product quality assessment results in a determination as to whether an applicant has developed a drug product, manufacturing process, and control strategy that will consistently result in a product of acceptable quality when manufactured at the facilities named in the application.

When a regulatory decision regarding the approval of an NDA or BLA is made, FDA considers the overall benefit(s) and risks identified for the product. This can include any residual risk related to unresolved product quality issues if they directly affect the assessment. This guidance also discusses how unresolved product quality issues may be addressed in the context of regulatory decision making. The guidance notes that product quality assessments are also done for ANDAs, and it discusses how, in certain rare circumstances, unresolved product quality issues may be addressed when there is an urgent clinical need for an ANDA (*e.g.,* a public health emergency or a pervasive drug shortage).

This draft guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The draft guidance, when finalized, will represent the current thinking of FDA on ''Benefit-Risk Considerations for Product Quality Assessments.'' It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if

it satisfies the requirements of the applicable statutes and regulations.

II. Paperwork Reduction Act of 1995

While this guidance contains no collection of information, it does refer to previously approved FDA collections of information. Therefore, clearance by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3521) is not required for this guidance. The previously approved collections of information are subject to review by OMB under the PRA. The collections of information in 21 CFR part 312 have been approved under OMB control number 0910–0014; the collections of information in 21 CFR part 314 have been approved under OMB control number 0910–0001; and the collections of information in 21 CFR parts 601 and 610 have been approved under OMB control number 0910–0338.

III. Electronic Access

Persons with access to the internet may obtain the draft guidance at *https://www.fda.gov/drugs/guidance-compliance-regulatory-information/guidances-drugs, https://www.fda.gov/regulatory-information/search-fda-guidance-documents*, or *https://www.regulations.gov.*

Dated: May 5, 2022.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2022–D–0173]

Practices To Prevent Unsafe Contamination of Animal Feed From Drug Carryover; Draft Guidance for Industry; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA, Agency, or we) is announcing the availability of a draft guidance for industry #272 entitled ''Practices to Prevent Unsafe Contamination of Animal Feed from Drug Carryover.'' We are issuing this draft guidance to describe practices that medicated feed manufacturers can use to prevent unsafe contamination from drug carryover into a non-medicated animal feed or an animal feed containing a different approved new animal drug. Unsafe contamination of animal feed from drug carryover can pose a risk to human and animal health. When finalized, this guidance will replace Compliance Policy Guides (CPGs) Sec. 680.500 and 680.600.

DATES: Submit either electronic or written comments on the draft guidance by August 8, 2022 to ensure that the Agency considers your comment on this draft guidance before it begins work on the final version of the guidance.

ADDRESSES: You may submit comments on any guidance at any time as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2022–D–0173 for ''Practices to Prevent Unsafe Contamination of Animal Feed from Drug Carryover.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

You may submit comments on any guidance at any time (see 21 CFR 10.115(g)(5)).

Submit written requests for single copies of the guidance to the Policy and Regulations Staff (HFV–6), Center for Veterinary Medicine, Food and Drug Administration, 7500 Standish Pl., Rockville, MD 20855. Send one self-addressed adhesive label to assist that office in processing your requests. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the draft guidance document.

FOR FURTHER INFORMATION CONTACT: Kevin Klommhaus, Center for

Veterinary Medicine (HFV–236), Food and Drug Administration, 7519 Standish Pl., Rockville, MD 20855, 515–318–8075.

SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a draft guidance for industry #272 entitled ''Practices to Prevent Unsafe Contamination of Animal Feed from Drug Carryover.'' This draft guidance contains much of the information found in the CPGs Sec. 680.500 ''Unsafe Contamination of Animal Feed from Drug Carryover'' and 680.600 ''Sequencing as a Means to Prevent Unsafe Drug Contamination in the Production, Storage, and Distribution of Feeds'' but includes updates and additional information. We intend to withdraw the CPGs after this guidance is finalized. Drug carryover generally occurs when a drug used in the manufacture of a batch of medicated feed, for which the drug is approved, gets inadvertently included in a subsequent batch of: (1) A non-medicated feed, (2) a different medicated feed for which the drug is not approved (*e.g.,* medicated feed for another species), or (3) a medicated feed that contains the same drug that can result in a higher drug level than is stated on the labeling. This carryover can occur for multiple reasons, including the use of the same equipment to manufacture both medicated and non-medicated feed, inadequate cleanout practices for manufacturing and distribution equipment between sequential batches, or human error.

We understand that an absolute avoidance of all batch-to-batch drug carryover may not be possible. However, measures can be implemented to avoid unsafe contamination of animal feed from drug carryover. In this draft guidance, unsafe contamination of an animal feed refers to a degree of contamination, by a drug approved for a medicated feed use, that poses an unacceptable risk to human or animal health. Human health may be at risk if humans consume a product derived from animals that have consumed animal feed contaminated from drug carryover and there is drug residue in the edible tissues of that animal (*e.g.,* milk, meat, or eggs). Unsafe contamination from drug carryover in animal feed can impact animal health when an animal consumes the contaminated feed, *e.g.,* horses consuming feed contaminated with the drug monensin. Horses are sensitive to ionophore drugs like monensin, and ingestion can result in severe illness or death.

Our regulation ''Current Good Manufacturing Practice for Medicated Feeds,'' 21 CFR part 225, contains requirements for equipment cleanout procedures to avoid unsafe contamination of feeds with drugs (see 21 CFR 225.65 and 225.165). In this guidance, we provide information on some ways to comply with these requirements to help prevent unsafe contamination of animal feed from drug carryover.

This level 1 draft guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The draft guidance, when finalized, will represent the current thinking of FDA on some practices that can be used in feed mills manufacturing medicated feed to prevent unsafe contamination of animal feed from drug carryover. It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations.

II. Paperwork Reduction Act of 1995

FDA tentatively concludes that this draft guidance contains no collection of information. Therefore, clearance by the Office of Management and Budget under the Paperwork Reduction Act of 1995 is not required.

III. Electronic Access

Persons with access to the internet may obtain the draft guidance at *https://www.fda.gov/AnimalVeterinary/GuidanceComplianceEnforcement/GuidanceforIndustry/default.htm, https://www.fda.gov/regulatory-information/search-fda-guidance-documents,* or *https://www.regulations.gov.*

BILLING CODE 4140–01–P

DEPARTMENT OF HOMELAND SECURITY

U.S. Customs & Border Protection

Document Imaging System (DIS) Pilot for Used Self-Propelled Vehicles Export Document Submission

AGENCY: U.S. Customs and Border Protection, DHS.

ACTION: General notice.

SUMMARY: This document announces that U.S. Customs and Border Protection (CBP) plans to conduct a pilot to promote paperless processing of export documentation for used self-propelled vehicles (USPVs). Generally, USPVs include any vehicle that can be driven on land but not rail. The CBP regulations require a person attempting to export a USPV to present original vehicle ownership documentation to CBP at the port of exportation. In an effort to expedite and modernize the document submission and review process, CBP will be operating a voluntary pilot in which participants will submit the required vehicle ownership documentation to CBP electronically via the Document Imaging System (DIS). This voluntary pilot will evaluate the feasibility of using the DIS for the purpose of obtaining and reviewing vehicle ownership documentation for USPVs. This notice includes a description of the pilot, the eligibility requirements for participation, and invites public comment on any aspect of the pilot.

DATES: This voluntary pilot will begin no earlier than June 9, 2022 and will run for approximately two years. The pilot will apply to the export of all USPVs regardless of the mode of transportation. Implementation of the pilot for each mode of transportation and/or port participation will be staggered and will be announced to the public through the Cargo Systems Messaging Service (CSMS).[1] The CSMS message will include the start date for accepting ownership documentation via the DIS. Comments concerning this notice and all aspects of the announced pilot may be submitted at any time during the pilot period.

ADDRESSES: Interested parties should contact their local CBP vehicle export processing office and express their interest and intent to participate in the DIS pilot. Written comments concerning the program, policy, and technical issues may be submitted at *UsedVehicleDISTEST@cbp.dhs.gov.*

[1] Archived public CSMS messages can be accessed at: *https://www.cbp.gov/trade/automated/cargo-systems-messaging-service.*

FOR FURTHER INFORMATION CONTACT: Stephan Keating, Cargo and Conveyance Security (CCS), Office of Field Operations (OFO), U.S. Customs and Border Protection, at 202–344–2847 or via email at *Stephan.D.Keating@cbp.dhs.gov* and David Garcia, Cargo and Conveyance Security (CCS), OFO, CBP at *David.USCS.Garcia@cbp.dhs.gov* and 202–344–3277.

SUPPLEMENTARY INFORMATION:

I. Background and Purpose of the Pilot

A. Current Requirements for Export of Used Self-Propelled Vehicles

In 1984, Congress enacted the Motor Vehicle Theft Enforcement Act, Public Law 98–547, 98 Stat. 2754 codified at 19 U.S.C. 1627a (1984 Act), which makes it unlawful to import or export, or attempt to import or export, any stolen self-propelled vehicle, vessel, or aircraft. Pursuant to the 1984 Act, the Department of Homeland Security is authorized to promulgate regulations for the export of used self-propelled vehicles. The 1984 Act allows CBP to share relevant information with such Federal, State, local, and foreign law enforcement or governmental authorities, and with such organizations engaged in theft prevention activities, as may be designated by the Secretary.

In 1992, Congress imposed additional requirements on the export of used vehicles, with the enactment of the Anti Car Theft Act, Public Law 102–519, 106 Stat. 3400, codified at 19 U.S.C. 1646b—1646c (1992 Act). The 1992 Act requires all persons or entities exporting used automobiles, by air or vessel, including automobiles exported for personal use, to provide CBP with certain information including the Vehicle Identification Number (VIN) and proof of ownership of the vehicle at least 72 hours prior to exportation. The 1992 Act authorizes the Commissioner of CBP to establish risk-based targeting criteria for automobiles being exported, and to check the VIN of targeted automobiles against the information in the National Crime Information Center (NCIC) to determine whether the vehicle has been reported stolen. *See* 19 U.S.C. 1646c.

The implementing regulations for the above statutes are set forth in part 192 of title 19 of the Code of Federal Regulations (19 CFR part 192). Among other things, part 192 includes regulations pertaining to procedures for the lawful exportation of USPVs. In general, a self-propelled vehicle is any vehicle that can be driven on land but not on rail. Specifically, 19 CFR 192.1 defines *self-propelled vehicle* as any automobile, truck, tractor, bus, motorcycle, motor home, self-propelled

agricultural machinery, self-propelled construction equipment, self-propelled special use equipment, and any other self-propelled vehicle used or designed for running on land but not on rail. Section 192.1 defines *used* as any self-propelled vehicle the equitable or legal title to which has been transferred by a manufacturer, distributor, or dealer to an ultimate purchaser. Finally, section 192.1 defines *export* as the transportation of merchandise out of the U.S. for the purpose of being entered into the commerce of a foreign country.

19 CFR 192.2 requires that in the case of a vehicle being exported by vessel or aircraft, both the required documentation describing the vehicle and the vehicle must be presented to CBP at least 72 hours prior to export, and in the case of a vehicle being exported at a land border crossing (by rail, highway, or under its own power), the required documentation must be submitted at least 72 hours prior to export, and the vehicle must be presented at the time of export. The required documentation includes the VIN or, if the vehicle does not have a VIN, the product information number (PIN). Section 192.2(b) specifies the type of documents that must be submitted in different circumstances. Exportation of a vehicle is permitted only upon compliance with these requirements unless, as per section 192.2(a), the vehicle was entered into the United States under an in-bond procedure, or under a carnet or Temporary Importation Bond (TIB). Such vehicles are exempt from these requirements.

B. Authorization for the Pilot

The test described in this notice is authorized pursuant to 19 CFR 101.9(a), which grants the Commissioner of CBP the authority to impose requirements different from those specified in CBP regulations for purposes of conducting a test program or procedure designed to evaluate the effectiveness of new technology or operational procedures regarding the processing of passengers, vessels, or merchandise.

C. Purpose of Pilot

CBP is implementing this voluntary Document Imaging System (DIS) pilot in order to expedite and modernize the document submission and review process for the export of used self-propelled vehicles.

During Fiscal Years 2018–2020, there was an annual average of 1.4 million, used self-propelled vehicles exported from the United States. Under the current regulatory export procedures, the person who is attempting to export a used self-propelled vehicle must present to CBP both the vehicle and specified paper documents. This paper process is a drain on limited CBP staffing resources at ports with significant traffic because it requires CBP to devote numerous hours to review vehicle export paperwork.

The pilot will allow CBP to test the mechanisms through which the required documentation may be submitted electronically, as a preliminary step towards moving to a more automated and efficient export reporting system for export of used self-propelled vehicles. Having the required documentation available electronically will enable CBP to institute better risk-based targeting of exports. This will be accomplished by making electronic document and information submission the primary means for meeting export reporting requirements and reserving field inspection of vehicles and examination of original ownership documentation only for cases where targeting and risk assessment have identified a need for additional scrutiny. The receipt of the electronic ownership documentation will also improve CBP's ability to target and identify high-risk vehicle exports pre-departure while facilitating the process for legitimate exportation through a more streamlined and efficient port procedure. Considering the high volume of vehicle exports, it is expected that the electronic submission of the required documentation will have a significant impact on the speed and efficiency of vehicle export processing. The pilot will allow CBP to assess the effectiveness of these procedures and will allow the agency to test the functionality of the systems required for electronic submission. The results of the pilot will help CBP determine whether to eventually require through rulemaking the electronic submission of vehicle ownership documentation using the DIS.

II. Description of Pilot

In this voluntary pilot, participants will submit the required ownership documentation as set forth in 19 CFR part 192 through the DIS in ACE, using either the Electronic Data Interchange (EDI) via an Approved Broker Interface (ABI), or via email (at *docs@cbp.dhs.gov*). Participants will be required to submit the documentation in accordance with existing regulatory timeframes depending on the mode of export.[2] Participation in the pilot will not alter the requirements for presentation of the vehicle to CBP. *See* 19 CFR 192.2(c), (d).

Under the pilot, the electronically submitted documents will be linked to the Electronic Export Information (EEI)[3] filing in the Automated Export System (AES) via the Internal Transaction Number (ITN) generated at the time of the EEI submission. Participants will be required to transmit a valid ITN number to CBP with the DIS submission. Participants will have to submit EEI prior to submitting the vehicle documents to DIS. CBP will request original documentation and conduct a physical examination of the vehicle when necessitated by the results of targeting and risk assessment.

The sections below describe the pilot, including specific instructions on how to participate in the pilot (section D), in more detail.

A. Procedures for the Export of Used Self-Propelled Vehicles Under the Pilot

As discussed in section I.A., 19 CFR 192.2 requires a person attempting to export a used self-propelled vehicle to present the vehicle and certain required documents at the port of exportation. The documentary requirements vary by type of vehicle,[4] and the timeframes for presenting the documents and vehicle vary by manner of export.[5] The DIS pilot changes only the *manner* in which the required documents are submitted to CBP. For pilot participants, CBP will waive the requirement in 19 CFR 192.2 to present original physical copies of the documents and require the documents to be submitted electronically using the DIS (EDI or email) instead. However, CBP will retain the right to request original documents on an as-needed basis. All other requirements of 19 CFR part 192, including the requirement to present the vehicle, will remain unchanged.[6]

[2] For export by ocean or air, participants must submit the documents at least 72 hours prior to export, but only after the vehicle is delivered to the port in preparation for departure from the United States; for export by land or rail, participants must submit documentation 72 hours prior to arriving at the border for departure from the United States. 19 CFR 192.2(c).

[3] The Electronic Export Information (EEI) is required pursuant to the Census Foreign Trade Regulations (FTR). 15 CFR part 30, subpart E. 19 CFR part 192 also sets forth CBP's requirements pertaining to the Automated Export System (AES), implemented by FTR. The AES is the electronic system of record for collecting EEI from persons exporting goods from the United States to foreign countries. The EEI for all used self-propelled vehicles must be filed via AES regardless of value or country of destination 72 hours prior to export. 15 CFR 30.2(a)(1)(iv)(H), (b)(5).

[4] For example, U.S. titled vehicles, vehicles with title that evidences third-party ownership/claims, foreign titled vehicles, etc. *See* 19 CFR 192.2(b).

[5] *See* 19 CFR 192.2(c).

[6] The pilot does not change the specific documents required for any particular type of vehicle, nor does it change the timeframes by which the documentation must be submitted. The pilot

Continued

Pilot participants agree to provide via electronic means, and in accordance with timeframes that apply by mode of transportation, the documentation required under 19 CFR 192.2. Pilot participants agree to submit the documentation required for the export of used self-propelled vehicles via the DIS, using either the EDI via an approved ABI or by submitting the documents in PDF format to the email address *docs@cbp.dhs.gov.* Participants will receive an automated response in the format in which the required documents were submitted, EDI or email, confirming that the document submission was received.[7] The participants will be able to use the automated response together with the AES-generated ITN to show that they complied with CBP's reporting requirements. The documentation submitted via the DIS will be used by CBP to review and process vehicles pending export to ensure compliance with U.S. laws and regulations. CBP reserves the right to request original (paper) documentation at any time. Consequently, pilot participants must continue to have access to the documentation in its original form for the entire time from submission to clearance by CBP, in the same manner as required by 19 CFR part 192.

For vehicles to be transported by ocean or air, the required documents must be submitted at least 72 hours prior to export, and only after the vehicle is delivered to the port in preparation for departure from the United States. For vehicles to be transported by land or rail, the documents must be submitted 72 hours prior to the vehicle's arriving at the border for departure from the United States. These are the same timeframes that apply under the current regulations, and CBP anticipates that these timeframes will provide adequate time for CBP to perform proper risk assessment, while minimizing disruption to the flow of goods. Consistent with current standard operational procedures, the inspections could potentially take place at any time prior to departure from the United States.

Pilot participants agree to adhere to established operational security protocols that correspond to their local CBP vehicle export processing office. Pilot participants also agree to participate in any teleconferences or meetings called by CBP, to ensure that any challenges, or operational or technical issues regarding the pilot are properly communicated and addressed.

Participation in the pilot does not alter participants' obligations to comply with any other applicable statutory or regulatory requirements. Participants will continue to be subject to applicable penalties for non-compliance. In addition, submission of documentation using the DIS under the pilot does not exempt the participant from any CBP or other U.S. Government agency program requirements or any statutory sanctions in the event that a violation of U.S. export control laws occurs or prohibited articles are discovered with a vehicle presented for export from the United States.

B. Duration and Scope of Pilot

Participants must be individually approved by CBP in order to participate in the pilot, and the pilot may be limited to a single or small number of ports until any operational, training, or technical issues on the trade or government side are established and/or resolved. The start date for the pilot will be no earlier than June 9, 2022. Implementation of the pilot for each mode of transportation and/or participating port will be staggered and will be announced to the public through the CSMS. The CSMS message will include the start date for accepting ownership documentation via the DIS. The pilot will run for approximately two years from the start date.

C. Eligibility Requirements

Eligibility is limited to parties who are responsible for submitting the documentation required by 19 CFR 192.2 as part of the export transaction and who have access to the ITN for the AES commodity filing. In addition, participants must agree to submit the required documentation via the DIS, as described above.

D. Application Process and Acceptance

Parties interested in participating in this pilot should, as a preliminary matter, submit a request to receive *Export* updates via the CSMS. Requests may be made at *https://www.cbp.gov/trade/automated/cargo-systems-messaging-service.* The CSMS will be used to provide pilot participants with technical and operational updates and guidance throughout the pilot, and may be used to announce technical, non-substantive changes to the pilot. CBP will utilize the CSMS to announce the implementation of the pilot for each mode of transportation and/or participating port. Only once the pilot has been extended to their mode of transportation and participating port, will an interested party be able to participate in the pilot.

Once the pilot has been implemented for their mode of transportation and port, interested parties should then contact their local CBP vehicle export processing office and express their interest and intent to participate in the DIS pilot. Detailed instructions for participation in the pilot can be found in the DIS Instructional Guide for the Exportation of Used Self-Propelled Vehicles located on the CBP website, at *https://www.cbp.gov/trade/basic-import-export/export-docs/motor-vehicle.* There is no specific application for participation in the pilot. However, interested participants must communicate their interest and intent to the relevant port before taking any other action. The port will further direct potential pilot participants. Prospective participants will be asked to submit the first submission of ownership documents and contact their local CBP vehicle processing office to verify that their first transmission of ownership documents is successful, prior to being granted participation in the pilot. Once this review and verification is complete, participants will be permitted to participate fully in the pilot.

Participation in the pilot is open to all eligible parties that have been approved to participate, subject to the discretion of the Port Director at the port from which parties intend to export the USPVs.

E. Technical Specifications

Ownership documents must be submitted via the DIS, either using the EDI via an approved ABI or via email at *docs@cbp.dhs.gov,* in a PDF format up to 10MB. Detailed instructions for participation in the pilot can be found in a document named DIS Instructional Guide for the Exportation of Used Self-Propelled Vehicles located on the CBP website, at *https://www.cbp.gov/trade/basic-import-export/export-docs/motor-vehicle.*

F. Costs to Pilot Participants

Participants are responsible for all costs incurred as a result of their participation in the pilot.

---

also does not change the requirement to present the vehicle to CBP, as set forth in 19 CFR 192.2(c) and (d). 19 CFR part 192 exempts certain categories of vehicles from the EEI filing requirement of the Census Foreign Trade Regulations (15 CFR part 30, subpart E). The EEI filing requirements remain unchanged under this pilot.

[7] This is different from the current process whereby CBP ports of export stamp the original documentation provided by the exporter and the exporter then uses the stamped documentation as evidence that CBP cleared the vehicle prior to departure from the United States.

G. Benefits to Pilot Participants

While the benefits to individual pilot participants may vary, advantages to joining in the pilot include:

- Reducing the costs associated with paper processing;
- Expediting review and release of USPVs by CBP;
- Providing input into CBP's efforts to establish, test and refine the interface between government and industry communication systems in order to enable paper-free processing of USPV export requirements;
- Facilitating corporate preparedness for possible future mandatory implementation of electronic submission of documentation using the DIS; and
- Facilitating the efficient processing of legitimate USPV exports across all modes of transportation.

H. Evaluation of the Pilot

While the pilot is ongoing, CBP will evaluate the effectiveness of using the DIS and will determine if any extensions or modifications are needed. Technical modifications will be announced using the CSMS. Any substantive changes to the pilot, including extensions, will be announced in the **Federal Register**.

The results of the pilot will help CBP analyze and evaluate the effectiveness of using the DIS or some other method to collect export documentation for USPVs. When sufficient analysis and evaluation have been conducted, CBP will decide whether to require electronic submission of ownership documentation using the DIS or some other method. Any changes to the regulations will be done through rulemaking.

I. Confidentiality

All data submitted and entered into ACE is subject to the Trade Secrets Act (18 U.S.C. 1905) and is considered confidential, except to the extent as otherwise provided by law. However, participation in this or any ACE pilot is not confidential and upon a written Freedom of Information Act (FOIA) request, the name(s) of an approved participant(s) will be disclosed by CBP in accordance with 5 U.S.C. 552.

III. Privacy

CBP will ensure that all Privacy Act requirements and applicable policies are adhered to during the implementation of this pilot.

IV. Paperwork Reduction Act

The Paperwork Reduction Act (PRA) of 1995 (44 U.S.C. 3507(a)) requires that CBP consider the impact of paperwork and other information collection burdens imposed on the public. An agency may not conduct, and a person is not required to respond to, a collection of information unless the collection of information displays a valid control number assigned by OMB. The collection of information regarding Exportation of Self-Propelled Vehicles was previously reviewed and approved by OMB in accordance with the requirements of the Paperwork Reduction Act of 1995 (44 U.S.C. 3507) under OMB Control Number 1651–0054. No new information is being collected under this pilot. Therefore, no new information collection or update to the existing information collection is required at this time.

V. Misconduct Under the Pilot

A pilot participant may be subject to civil and criminal penalties, administrative sanctions, liquidated damages, or discontinuance from participation in the pilot for any of the following:

(1) Failure to comply with the rules, procedures, or terms and conditions of this pilot;

(2) Failure to exercise reasonable care in the execution of participant obligations; or

(3) Failure to abide by the applicable laws and regulations that have not been waived.

An intentional violation of an obligation under the pilot will result in the immediate removal of the participant from the pilot, and the violator may be subject to penalties or seizure of the vehicle(s). Continuous technical violations will also result in the participant's being removed from the pilot. Additionally, CBP has the right to suspend or remove a pilot participant based on a determination that an unacceptable compliance risk exists, or where public health interests or safety so require.

If CBP finds that there is a basis to suspend or remove a participant from the pilot, the pilot participant will be provided a written notice informing the participant of immediate suspension or removal from the program. The pilot participant will be offered the opportunity to appeal the decision in writing. Any appeal must be addressed to the Outbound Enforcement and Policy Branch Chief and submitted via email to *cbpvehicleexports@cbp.dhs.gov* within 15 business days of notification of suspension or removal from the program. The appeal must address the facts or conduct charges contained in the notice and state how the participant has or will achieve compliance. CBP will notify the participant within 30 business days of receipt of an appeal whether the appeal is granted. The participant will not be permitted to participate in the pilot while an appeal is pending and may not become active in the pilot again until CBP approves the participant's reinstatement. If no timely appeal is received, the notice becomes the final decision of the Agency as of the date that the appeal period expires.

Pete Flores,

Executive Assistant Commissioner, Office of Field Operations, U.S. Customs and Border Protection.

[FR Doc. 2022–09966 Filed 5–9–22; 8:45 am]

BILLING CODE 9111–14–P

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Docket ID FEMA–2022–0002; Internal Agency Docket No. FEMA–B–2232]

Changes in Flood Hazard Determinations

AGENCY: Federal Emergency Management Agency, Department of Homeland Security.

ACTION: Notice.

SUMMARY: This notice lists communities where the addition or modification of Base Flood Elevations (BFEs), base flood depths, Special Flood Hazard Area (SFHA) boundaries or zone designations, or the regulatory floodway (hereinafter referred to as flood hazard determinations), as shown on the Flood Insurance Rate Maps (FIRMs), and where applicable, in the supporting Flood Insurance Study (FIS) reports, prepared by the Federal Emergency Management Agency (FEMA) for each community, is appropriate because of new scientific or technical data. The FIRM, and where applicable, portions of the FIS report, have been revised to reflect these flood hazard determinations through issuance of a Letter of Map Revision (LOMR), in accordance with Federal Regulations. The currently effective community number is shown in the table below and must be used for all new policies and renewals.

DATES: These flood hazard determinations will be finalized on the dates listed in the table below and revise the FIRM panels and FIS report in effect prior to this determination for the listed communities.

From the date of the second publication of notification of these

changes in a newspaper of local circulation, any person has 90 days in which to request through the community that the Deputy Associate Administrator for Insurance and Mitigation reconsider the changes. The flood hazard determination information may be changed during the 90-day period.

ADDRESSES: The affected communities are listed in the table below. Revised flood hazard information for each community is available for inspection at both the online location and the respective community map repository address listed in the table below. Additionally, the current effective FIRM and FIS report for each community are accessible online through the FEMA Map Service Center at *https://msc.fema.gov* for comparison.

Submit comments and/or appeals to the Chief Executive Officer of the community as listed in the table below.

FOR FURTHER INFORMATION CONTACT: Rick Sacbibit, Chief, Engineering Services Branch, Federal Insurance and Mitigation Administration, FEMA, 400 C Street SW, Washington, DC 20472, (202) 646–7659, or (email) *patrick.sacbibit@fema.dhs.gov;* or visit the FEMA Mapping and Insurance eXchange (FMIX) online at *https://www.floodmaps.fema.gov/fhm/fmx_main.html.*

SUPPLEMENTARY INFORMATION: The specific flood hazard determinations are not described for each community in this notice. However, the online location and local community map repository address where the flood hazard determination information is available for inspection is provided.

Any request for reconsideration of flood hazard determinations must be submitted to the Chief Executive Officer of the community as listed in the table below.

The modifications are made pursuant to section 201 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4105, and are in accordance with the National Flood Insurance Act of 1968, 42 U.S.C. 4001 *et seq.,* and with 44 CFR part 65.

The FIRM and FIS report are the basis of the floodplain management measures that the community is required either to adopt or to show evidence of having in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP).

These flood hazard determinations, together with the floodplain management criteria required by 44 CFR 60.3, are the minimum that are required. They should not be construed to mean that the community must change any existing ordinances that are more stringent in their floodplain management requirements. The community may at any time enact stricter requirements of its own or pursuant to policies established by other Federal, State, or regional entities. The flood hazard determinations are in accordance with 44 CFR 65.4.

The affected communities are listed in the following table. Flood hazard determination information for each community is available for inspection at both the online location and the respective community map repository address listed in the table below. Additionally, the current effective FIRM and FIS report for each community are accessible online through the FEMA Map Service Center at *https://msc.fema.gov* for comparison.

(Catalog of Federal Domestic Assistance No. 97.022, ''Flood Insurance.'')

Michael M. Grimm,

Assistant Administrator for Risk Management, Department of Homeland Security, Federal Emergency Management Agency.

BILLING CODE 9110–12–P

DEPARTMENT OF HOMELAND SECURITY

Transportation Security Administration

[Docket No. TSA–2006–26514]

Extension of Agency Information Collection Activity Under OMB Review: Rail Transportation Security

AGENCY: Transportation Security Administration, DHS.

ACTION: 30-Day notice.

SUMMARY: This notice announces that the Transportation Security Administration (TSA) has forwarded the Information Collection Request (ICR), Office of Management and Budget (OMB) control number 1652–0051, abstracted below to OMB for review and approval of an extension of the currently approved collection under the Paperwork Reduction Act (PRA). The ICR describes the nature of the information collection and its expected burden. The collection involves the submission of contact information of security coordinators (SCs) and alternate SCs from certain freight rail and passenger rail entities; reporting of significant security concerns; documenting the transfer of custody and control of certain hazardous materials rail cars; and providing location and shipping information for certain hazardous materials rail cars.

DATES: Send your comments by June 9, 2022. A comment to OMB is most effective if OMB receives it within 30 days of publication.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under Review—Open for Public Comments'' and by using the find function.

FOR FURTHER INFORMATION CONTACT: Christina A. Walsh, TSA PRA Officer, Information Technology (IT), TSA–11, Transportation Security Administration, 6595 Springfield Center Drive, Springfield, VA 20598–6011; telephone (571) 227–2062; email *TSAPRA@tsa.dhs.gov.*

SUPPLEMENTARY INFORMATION: TSA published a **Federal Register** notice, with a 60-day comment period soliciting comments, of the following collection of information on December 23, 2021, 86 FR 72990.

Comments Invited

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The ICR documentation will be available at *http://www.reginfo.gov* upon its submission to OMB. Therefore, in preparation for OMB review and approval of the following information collection, TSA is soliciting comments to—

(1) Evaluate whether the proposed information requirement is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agency's estimate of the burden;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including using appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Information Collection Requirement

Title: Rail Transportation Security.

Type of Request: Extension of a currently approved collection.

OMB Control Number: 1652–0051.

Forms(s): NA.

Affected Public: Freight rail, passenger rail, and shippers/receivers of certain hazardous materials.

Abstract: TSA requires freight railroad carriers and certain facilities handling specified categories and quantities of hazardous materials be able to report location and shipping information to TSA upon request. *See* 49 CFR 1580.203. These regulated carriers and facilities must also implement chain of custody and control requirements to ensure a positive and secure exchange of the specified categories and quantities of hazardous materials listed in 49 CFR 1580.205, and make the reports available to TSA upon request. TSA further collects information from regulated parties on Security Coordinators and significant security concerns telephonically and electronically reporting.[1]

Number of Respondents: 1,760.

Estimated Annual Burden Hours: An estimated 112,600 hours annually.[2]

Dated: May 5, 2022.

Christina A. Walsh,

TSA Paperwork Reduction Act Officer, Information Technology.

U.S. Citizenship and Immigration Services

[CIS No. 2712–22; DHS Docket No. USCIS–2014–004]

RIN 1615–ZB79

Extension and Redesignation of South Sudan for Temporary Protected Status—Correction

AGENCY: U.S. Citizenship and Immigration Services (USCIS), Department of Homeland Security (DHS).

ACTION: Notice; correction.

SUMMARY: U.S. Citizenship and Immigration Services (USCIS), a component of the Department of Homeland Security (DHS), is making a correction to the notice titled ''Extension and Redesignation of South Sudan for Temporary Protected Status'' that published in the **Federal Register** on March 3, 2022, at 87 FR 12190. USCIS is correcting a typographical error in the ''General Employment-Related Information for TPS Applicants and Their Employers'' section of the notice to correct the date from September 17, 2021 to May 2, 2022 as the eligibility date that should be showing on South Sudan TPS-based Employment Authorization Documents (EADs) in order to receive an automatic 180-day EAD extension through November 1, 2022.

FOR FURTHER INFORMATION CONTACT:

• You may contact Rená Cutlip-Mason, Chief, Humanitarian Affairs Division, Office of Policy and Strategy, U.S. Citizenship and Immigration Services, U.S. Department of Homeland Security, by mail at 5900 Capital Gateway Drive, Camp Springs, MD 20746, or by phone at 800–375–5283.

• For further information on TPS, including guidance on the registration and re-registration process and additional information on eligibility, please visit the USCIS TPS web page at *http://www.uscis.gov/tps.* You can find specific information about this extension of South Sudan's TPS designation by selecting ''South Sudan'' from the menu on the left side of the TPS web page.

• If you have additional questions about TPS, please visit *uscis.gov/tools.* Our online virtual assistant, Emma, can answer many of your questions and point you to additional information on our website. If you are unable to find your answers there, you may also call our USCIS Contact Center at 800–375–5283 (TTY 800–767–1833).

• Applicants seeking information about the status of their individual cases may check Case Status Online, available on the USCIS website at *uscis.gov*, or visit the USCIS Contact Center at *uscis.gov/contactcenter.*

• Further information will also be available at local USCIS offices upon publication of this Notice.

SUPPLEMENTARY INFORMATION: On March 3, 2022, DHS published a notice in the **Federal Register** at 87 FR 12190. USCIS is making a correction to that published notice. The correction is as follows:

On page 12198, under the question ''Am I eligible to receive an automatic 180-day extension of my current EAD through November 1, 2022, using this **Federal Register** notice?'' USCIS is revising the second sentence to correct the referenced expiration date on the face of the card for TPS EADs issued under the prior TPS South Sudan extension. This date should reflect May 2, 2022, not September 17, 2021.

Applicable to automatic extension periods of current EADs for this population, DHS published a Temporary Final Rule on May 4, 2022 that temporarily increased the automatic 180-day extension under 8 CFR 274a.13(d) to up to 540 days for those TPS beneficiaries that file to renew their existing EAD.[1] Accordingly, for TPS beneficiaries who are covered under the South Sudan TPS Notice and file to renew their EAD with a May 2, 2022 expiration date on the face of the card during the filing period described under the South Sudan TPS Notice, the Temporary Final Rule permits an automatic extension of their EAD for up

[1] The requirements of this section also apply to certain over-the-road bus owner/operators and owner/operators of bus-only public transportation systems. The collection of information associated with bus operations is covered by OMB Control No. 1652–0066; Security Training Program for Surface Transportation Employees.

[2] Since the publication of the 60-day notice, TSA has updated the annual burden hours from 112,764 to 112,600 hours.

[1] *See* ''Temporary Increase of the Automatic Extension Period of Employment Authorization and Documentation for Certain Renewal Applicants'' (May 4, 2022, 87 FR 26614).

to 540 days after the expiration date on the face of the EAD.

Correction

In FR 2022–04573, on page 12198 in the **Federal Register** of March 3, 2022, in the second column, USCIS is correcting the second sentence as follows:

Regardless of your country of birth, provided that you currently have a South Sudan TPS-based EAD with an expiration date of May 2, 2022, on the face of the card, bearing the notation A–12 or C–19 under Category, this notice automatically extends your EAD through November 1, 2022.[2]

Samantha Deshommes,

Chief, Regulatory Coordination Division, Office of Policy and Strategy, U.S. Citizenship and Immigration Services, U.S. Department of Homeland Security.

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[FWS–R1–ES–2022–N009; FXES11130100000C4–223–FF01E00000]

Endangered and Threatened Wildlife and Plants; Initiation of 5-Year Status Reviews for 167 Species in Oregon, Washington, Idaho, Montana, California, Hawaii, Guam, and the Northern Mariana Islands

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of initiation of reviews; request for information.

SUMMARY: We, the U.S. Fish and Wildlife Service, are initiating 5-year status reviews for 167 species in Oregon, Washington, Idaho, Montana, California, Hawaii, Guam, and the Northern Mariana Islands under the Endangered Species Act of 1973. Two of these species also occur outside of U.S. jurisdiction in Canada and the South Pacific. A 5-year status review is based on the best scientific and commercial data available at the time of the review; therefore, we are requesting submission of any new information on these species that has become available since the last reviews.

DATES: To ensure consideration in our reviews, we are requesting submission of new information no later than July 11, 2022. However, we will continue to accept new information about any species at any time.

ADDRESSES: *Submitting Information on Species:*

- *Marbled murrelet:*
  - ➢ *U.S. mail:* State Supervisor, Attention: 5-Year Review, U.S. Fish and Wildlife Service, Washington Fish and Wildlife Office, 510 Desmond Dr. Southeast, Suite 102, Lacey, WA 98503; or
  - ➢ *Email: WFWO_LR@fws.gov.*
- *Howell's spectacular thelypody:*
  - ➢ *U.S. mail:* State Supervisor, Attention: 5-Year Review, U.S. Fish and Wildlife Service, Oregon Fish and Wildlife Office, 2600 SE 98th Ave., Suite 100, Portland, OR 97266; or
  - ➢ *Email: fw1ofwo@fws.gov.*
- *Snake River physa snail and Bruneau hot springsnail:*
  - ➢ *U.S. mail:* State Supervisor, Attention: 5-Year Review, U.S. Fish and Wildlife Service, Idaho Fish and Wildlife Office, 1387 S Vinnell Way, Suite 368, Boise, ID 83709; or
  - ➢ *Email: ifwo@fws.gov.*
- *Any of the 163 species occurring in Hawaii, Guam, and/or the Commonwealth of the Northern Mariana Islands:*
  - ➢ *U.S. mail:* Field Supervisor, Attention: 5-Year Review, U.S. Fish and Wildlife Service, Pacific Islands Fish and Wildlife Office, 300 Ala Moana Blvd., Room 3–122, Honolulu, HI 96850; or
  - ➢ *Email: pifwo_admin@fws.gov.*

FOR FURTHER INFORMATION CONTACT: For general information, please contact Grant Canterbury at 503–231–6151. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

For information about the specific species, contact the following people:

- *Marbled murrelet:* Tom McDowell, Washington Fish and Wildlife Office, 360–753–9440.
- *Howell's spectacular thelypody:* Jennifer Siani, Oregon Fish and Wildlife Office, 503–231–6179.
- *Snake River physa snail and Bruneau hot springsnail:* Kathleen Hendricks, Idaho Fish and Wildlife Office, 208–378–5243.
- *Any of the 163 species occurring in Hawaii, Guam, and/or the Commonwealth of the Northern Mariana Islands:* Megan Laut, Pacific Islands Fish and Wildlife Office, 808–792–9400.

SUPPLEMENTARY INFORMATION:

Why do we conduct 5-year status reviews?

Under the Endangered Species Act of 1973, as amended (Act; 16 U.S.C. 1531, *et seq.*), we maintain lists of endangered and threatened wildlife and plant species (referred to as the List) in the Code of Federal Regulations (CFR) at 50 CFR 17.11 (for wildlife) and 17.12 (for plants). Section 4(c)(2) of the Act requires us to review each listed species' status at least once every 5 years. For additional information about 5-year status reviews, refer to our factsheet at *https://www.fws.gov/endangered/what-we-do/recovery-overview.html.*

What information do we consider in our review?

A 5-year status review considers all new information available at the time of the review. In conducting these reviews, we consider the best scientific and commercial data that have become available since the listing determination or most recent status reviews, such as:

A. Species biology, including but not limited to population trends, distribution, abundance, demographics, and genetics;

B. Habitat conditions, including but not limited to amount, distribution, and suitability;

C. Conservation measures that have been implemented that benefit the species;

D. Threat status and trends in relation to the five listing factors (as defined in section 4(a)(1) of the Act); and

E. Other new information, data, or corrections, including but not limited to taxonomic or nomenclatural changes, identification of erroneous information contained in the List, and improved analytical methods.

Any new information will be considered during the 5-year status review and will also be useful in evaluating the ongoing recovery programs for these species.

Which species are under review?

This notice announces our active review of 167 species, including 4 birds, 1 reptile, 50 snails, 9 insects, and 103 plants, as listed in the table below.

[2] Again, for applicants who filed a request to renew their existing EAD and their EAD has a facial expiration of May 2, 2022, the May 4th Temporary Final Rule automatically extends that EAD for up to 540 days through October 24, 2023.

Common name	Scientific name	Status	Known range of species occurrence	Final listing rule and publication date
ANIMALS				
Birds:				
Marbled murrelet [CA, OR, WA distinct population segment (DPS)].	*Brachyramphus marmoratus*	Threatened	California, Oregon, Washington	57 FR 45337, 10/1/1992.
Hawaiian goose (Nēnē)	*Branta sandvicensis*	Threatened	Hawaii	32 FR 4001, 3/11/1967; 84 FR 69918, 12/19/2019.
Oahu ‘elepaio	*Chasiempis ibidis*	Endangered	Hawaii	65 FR 20760, 4/18/2000.
Oahu creeper	*Paroreomyza maculata*	Endangered	Hawaii	35 FR 16047, 10/13/1970.
Reptiles:				
Slevin’s skink (gualik halumtanu, gholuuf).	*Emoia slevini*	Endangered	Guam, Commonwealth of the Northern Mariana Islands.	80 FR 59423, 10/1/2015.
Snails:				
Oahu tree snails	*Achatinella* spp. (includes all 41 species in genus)*.	Endangered	Hawaii	46 FR 3178, 1/13/1981.
Newcomb’s tree snail	*Newcombia cumingi*	Threatened	Hawaii	78 FR 32013, 5/28/2013.
Humped tree snail (akaleha’, denden).	*Partula gibba*	Endangered	Guam, Commonwealth of the Northern Mariana Islands.	80 FR 59423, 10/1/2015.
Langford’s tree snail (akaleha’, denden).	*Partula langfordi*	Endangered	Commonwealth of the Northern Mariana Islands.	80 FR 59423, 10/1/2015.
Guam tree snail (akaleha’, denden)	*Partula radiolata*	Endangered	Guam	80 FR 59423, 10/1/2015.
Lanai tree snail	*Partulina semicarinata*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
Lanai tree snail	*Partulina variabilis*	Endangered	Hawaii	78 FR 32013, 5/28/2013.
Snake River physa snail	*Physa natricina*	Endangered	Idaho	57 FR 59244, 12/14/1992.
Bruneau hot springsnail	*Pyrgulopsis bruneauensis*	Endangered	Idaho	58 FR 5938, 1/25/1993.
Fragile tree snail	*Samoana fragilis*	Endangered	Guam, Commonwealth of the Northern Mariana Islands.	80 FR 59423, 10/1/2015.
Insects:				
Hawaiian picture-wing fly	*Drosophila aglaia*	Endangered	Hawaii	71 FR 26835, 5/9/2006.
Hawaiian picture-wing fly	*Drosophila hemipeza*	Endangered	Hawaii	71 FR 26835, 5/9/2006.
Hawaiian picture-wing fly	*Drosophila montgomeryi*	Endangered	Hawaii	71 FR 26835, 5/9/2006.
Hawaiian picture-wing fly	*Drosophila obatai*	Endangered	Hawaii	71 FR 26835, 5/9/2006.
Hawaiian picture-wing fly	*Drosophila substenoptera*	Endangered	Hawaii	71 FR 26835, 5/9/2006.
Hawaiian picture-wing fly	*Drosophila tarphytrichia*	Endangered	Hawaii	71 FR 26835, 5/9/2006.
Rota blue damselfly (dulalas Luta, dulalas Luuta).	*Ischnura luta*	Endangered	Commonwealth of the Northern Mariana Islands.	80 FR 59423, 10/1/2015.
Blackburn’s sphinx moth	*Manduca blackburni*	Endangered	Hawaii	65 FR 4770, 2/1/2000.
Mariana wandering butterfly (ababbang, libweibwogh).	*Vagrans egistina*	Endangered	Commonwealth of the Northern Mariana Islands.	80 FR 59423, 10/1/2015.
PLANTS				
Flowering Plants:				
No common name	*Abutilon sandwicense*	Endangered	Hawaii	56 FR 55770, 10/29/1991.
Round-leaved chaff-flower	*Achyranthes splendens* var. *rotundata*	Endangered	Hawaii	51 FR 10518, 3/26/1986.
Ko ‘oko ‘olau	*Bidens amplectens*	Endangered	Hawaii	77 FR 57647, 9/18/2012.
Siboyas halumtanu, siboyan halom tano.	*Bulbophyllum guamense*	Threatened	Guam, Commonwealth of the Northern Mariana Islands.	80 FR 59423, 10/1/2015.
Ewa Plains ‘akoko	*Chamaesyce [=Euphorbia] skottsbergii* var. *skottsbergii.*	Endangered	Hawaii	47 FR 36846, 8/24/1982.
Haha	*Cyanea acuminata*	Endangered	Hawaii	61 FR 53089, 10/10/1996.
Haha	*Cyanea calycina*	Endangered	Hawaii	77 FR 57647, 9/18/2012.
Haha	*Cyanea crispa*	Endangered	Hawaii	59 FR 14482, 3/28/1994.
Haha	*Cyanea grimesiana* ssp. *obatae*	Endangered	Hawaii	59 FR 32932, 6/27/1994.
Haha	*Cyanea humboldtiana*	Endangered	Hawaii	61 FR 53089, 10/10/1996.
Haha	*Cyanea koolauensis*	Endangered	Hawaii	61 FR 53089, 10/10/1996.
Haha	*Cyanea lanceolata*	Endangered	Hawaii	77 FR 57647, 9/18/2012.
Haha	*Cyanea longiflora*	Endangered	Hawaii	61 FR 53089, 10/10/1996.
Haha	*Cyanea pinnatifida*	Endangered	Hawaii	56 FR 55770, 10/29/1991.
Haha	*Cyanea purpurellifolia*	Endangered	Hawaii	77 FR 57647, 9/18/2012.
Haha	*Cyanea st.-johnii*	Endangered	Hawaii	61 FR 53089, 10/10/1996.
No common name	*Cyanea superba*	Endangered	Hawaii	56 FR 46235, 9/11/1991.
Haha	*Cyanea truncata*	Endangered	Hawaii	59 FR 14482, 3/28/1994.
Fadang, faadang	*Cycas micronesica*	Threatened	Guam, Commonwealth of the Northern Mariana Islands, Federated States of Micronesia, Independent Republic of Palau.	80 FR 59424, 10/1/2015.
Pu‘uka‘a	*Cyperus trachysanthos*	Endangered	Hawaii	61 FR 53108, 10/10/1996.
Ha’iwale	*Cyrtandra crenata*	Endangered	Hawaii	59 FR 14482, 3/28/1994.
Ha‘iwale	*Cyrtandra dentata*	Endangered	Hawaii	61 FR 53089, 10/10/1996.
Ha‘iwale	*Cyrtandra gracilis*	Endangered	Hawaii	77 FR 57647, 9/18/2012.
Ha‘iwale	*Cyrtandra kaulantha*	Endangered	Hawaii	77 FR 57647, 9/18/2012.
Ha‘iwale	*Cyrtandra polyantha*	Endangered	Hawaii	59 FR 14482, 3/28/1994.
Ha‘iwale	*Cyrtandra sessilis*	Endangered	Hawaii	77 FR 57647, 9/18/2012.
Ha‘iwale	*Cyrtandra subumbellata*	Endangered	Hawaii	61 FR 53089, 10/10/1996.
Ha‘iwale	*Cyrtandra viridiflora*	Endangered	Hawaii	61 FR 53089, 10/10/1996.
Ha‘iwale	*Cyrtandra waiolani*	Endangered	Hawaii	77 FR 57647, 9/18/2012.
Oha	*Delissea subcordata*	Endangered	Hawaii	61 FR 53089, 10/10/1996.
No common name	*Delissea undulata*	Endangered	Hawaii	61 FR 53124, 10/10/1996.
No common name	*Dendrobium guamense*	Threatened	Guam, Commonwealth of the Northern Mariana Islands.	80 FR 59424, 10/1/2015.
Na‘ena‘e	*Dubautia herbstobatae*	Endangered	Hawaii	56 FR 55770, 10/29/1991.

Common name	Scientific name	Status	Known range of species occurrence	Final listing rule and publication date
Fosberg's love grass	*Eragrostis fosbergii*	Endangered	Hawaii	61 FR 53089, 10/10/1996.
No common name	*Eugenia bryanii*	Endangered	Guam	80 FR 59424, 10/1/2015.
Nioi	*Eugenia koolauensis*	Endangered	Hawaii	59 FR 14482, 3/28/1994.
ʻAkoko	*Euphorbia celastroides* var. *kaenana*	Endangered	Hawaii	56 FR 55770, 10/29/1991.
ʻAkoko	*Euphorbia deppeana*	Endangered	Hawaii	59 FR 14482, 3/28/1994.
ʻAkoko	*Euphorbia herbstii*	Endangered	Hawaii	61 FR 53089, 10/10/1996.
ʻAkoko	*Euphorbia kuwaleana*	Endangered	Hawaii	56 FR 55770, 10/29/1991.
ʻAkoko	*Euphorbia rockii*	Endangered	Hawaii	61 FR 53089, 10/10/1996.
Nanu	*Gardenia mannii*	Endangered	Hawaii	61 FR 53089, 10/10/1996.
No common name	*Gouania vitifolia*	Endangered	Hawaii	59 FR 32932, 6/27/1994.
Pau dedu, pao doodu	*Hedyotis megalantha*	Endangered	Guam	80 FR 59424, 10/1/2015.
Ufa halumtanu, ufa halom tano	*Heritiera longipetiolata*	Endangered	Guam, Commonwealth of the Northern Mariana Islands.	80 FR 59424, 10/1/2015.
No common name	*Hesperomannia arbuscula*	Endangered	Hawaii	56 FR 55770, 10/29/1991.
No common name	*Kadua degeneri*	Endangered	Hawaii	56 FR 55770, 10/29/1991.
No common name	*Kadua parvula*	Endangered	Hawaii	56 FR 55770, 10/29/1991.
Kohe malama malama o Kanaloa	*Kanaloa kahoolawensis*	Endangered	Hawaii	64 FR 48307, 9/3/1999.
Hulumoa	*Korthalsella degeneri*	Endangered	Hawaii	77 FR 57647, 9/18/2012.
Kamakahala	*Labordia cyrtandrae*	Endangered	Hawaii	61 FR 53089, 10/10/1996.
ʻAnaunau	*Lepidium arbuscula*	Endangered	Hawaii	61 FR 53089, 10/10/1996.
ʻAnaunau	*Lepidium orbiculare*	Endangered	Hawaii	81 FR 67786, 9/30/2016.
Nehe	*Lipochaeta lobata* var. *leptophylla*	Endangered	Hawaii	56 FR 55770, 10/29/1991.
No common name	*Lobelia koolauensis*	Endangered	Hawaii	61 FR 53089, 10/10/1996.
No common name	*Lobelia monostachya*	Endangered	Hawaii	61 FR 53089, 10/10/1996.
No common name	*Lobelia oahuensis*	Endangered	Hawaii	59 FR 14482, 3/28/1994.
Nehe	*Melanthera tenuifolia*	Endangered	Hawaii	56 FR 55770, 10/29/1991.
Alani	*Melicope christophersenii*	Endangered	Hawaii	77 FR 57647, 9/18/2012.
Alani	*Melicope hiiakae*	Endangered	Hawaii	77 FR 57647, 9/18/2012.
Alani	*Melicope lydgatei*	Endangered	Hawaii	59 FR 14482, 3/28/1994.
Alani	*Melicope makahae*	Endangered	Hawaii	77 FR 57647, 9/18/2012.
Alani	*Melicope saint-johnii*	Endangered	Hawaii	61 FR 53089, 10/10/1996.
Kolea	*Myrsine juddii*	Endangered	Hawaii	61 FR 53089, 10/10/1996.
No common name	*Neraudia angulata*	Endangered	Hawaii	56 FR 55770, 10/29/1991.
Kulu ī	*Nototrichium humile*	Endangered	Hawaii	56 FR 55770, 10/29/1991.
No common name	*Phyllanthus saffordii*	Endangered	Guam	80 FR 59424, 10/1/2015.
No common name	*Phyllostegia hirsuta*	Endangered	Hawaii	61 FR 53089, 10/10/1996.
No common name	*Phyllostegia kaalaensis*	Endangered	Hawaii	61 FR 53089, 10/10/1996.
No common name	*Phyllostegia mollis*	Endangered	Hawaii	56 FR 55770, 10/29/1991.
No common name	*Platydesma cornuta* var. *cornuta*	Endangered	Hawaii	77 FR 57647, 9/18/2012.
No common name	*Platydesma cornuta* var. *decurrens*	Endangered	Hawaii	77 FR 57647, 9/18/2012.
Hala pepe	*Pleomele forbesii*	Endangered	Hawaii	77 FR 57647, 9/18/2012.
Ohe ʻohe	*Polyscias gymnocarpa*	Endangered	Hawaii	59 FR 14482, 3/28/1994.
No common name	*Polyscias lydgatei*	Endangered	Hawaii	77 FR 57647, 9/18/2012.
Loulu	*Pritchardia kaalae*	Endangered	Hawaii	61 FR 53089, 10/10/1996.
Kopiko	*Psychotria hexandra* ssp. *oahuensis*	Endangered	Hawaii	77 FR 57647, 9/18/2012.
Aplokating palaoan	*Psychotria malaspinae*	Endangered	Guam	80 FR 59424 10/1/2015.
Kaulu	*Pteralyxia macrocarpa*	Endangered	Hawaii	77 FR 57647, 9/18/2012.
No common name	*Sanicula mariversa*	Endangered	Hawaii	56 FR 55770, 10/29/1991.
Diamond Head schiedea	*Schiedea adamantis*	Endangered	Hawaii	49 FR 6099, 2/17/1984.
No common name	*Schiedea kaalae*	Endangered	Hawaii	56 FR 55770, 10/29/1991.
Maʻoliʻoli	*Schiedea kealiae*	Endangered	Hawaii	61 FR 53089, 10/10/1996.
No common name	*Schiedea nuttallii*	Endangered	Hawaii	61 FR 53108, 10/10/1996.
No common name	*Schiedea obovata*	Endangered	Hawaii	56 FR 55770, 10/29/1991.
No common name	*Schiedea trinervis*	Endangered	Hawaii	56 FR 55770, 10/29/1991.
No common name	*Silene perlmanii*	Endangered	Hawaii	56 FR 55770, 10/29/1991.
Biringenas halumtanu, Birengenas halom tano.	*Solanum guamense*	Endangered	Guam, Commonwealth of the Northern Mariana Islands.	80 FR 59424, 10/1/2015.
No common name	*Stenogyne kanehoana*	Endangered	Hawaii	57 FR 20592, 5/13/1992.
No common name	*Tabernaemontana rotensis*	Threatened	Guam, Commonwealth of the Northern Mariana Islands.	80 FR 59424, 10/1/2015.
No common name	*Tetramolopium filiforme*	Endangered	Hawaii	56 FR 55770, 10/29/1991.
No common name	*Tetramolopium lepidotum* ssp. *lepidotum*	Endangered	Hawaii	56 FR 55770, 10/29/1991.
Howell's spectacular thelypody	*Thelypodium howellii* ssp. *spectabilis*	Threatened	Oregon	64 FR 28403, 5/26/1999.
No common name	*Tinospora homosepala*	Endangered	Guam	80 FR 59424, 10/1/2015.
No common name	*Trematolobelia singularis*	Endangered	Hawaii	61 FR 53089, 10/10/1996.
No common name	*Tuberolabium guamense*	Threatened	Guam, Commonwealth of the Northern Mariana Islands.	80 FR 59424, 10/1/2015.
Opuhe	*Urera kaalae*	Endangered	Hawaii	56 FR 55770, 10/29/1991.
Pamakani	*Viola chamissoniana* ssp. *chamissoniana.*	Endangered	Hawaii	56 FR 55770, 10/29/1991.
No common name	*Viola oahuensis*	Endangered	Hawaii	61 FR 53089, 10/10/1996.
Aʻe	*Zanthoxylum oahuense*	Endangered	Hawaii	77 FR 57647, 9/18/2012.
Ferns and Allies:				
No common name	*Asplenium dielfalcatum*	Endangered	Hawaii	56 FR 55770, 10/29/1991.
No common name	*Asplenium unisorum*	Endangered	Hawaii	59 FR 32932, 6/27/1994.
No common name	*Doryopteris takeuchii*	Endangered	Hawaii	77 FR 57647, 9/18/2012.

* Species within the listed genus *Achatinella* include *A. abbreviata, A. apexfulva, A. bellula, A. buddii, A. bulimoides, A. byronii, A. caesia, A. casta, A. cestus, A. concavospira, A. curta, A. decipiens, A. decora, A. dimorpha, A. elegans, A. fulgens, A. fuscobasis, A. juddii, A. juncea, A. lehuiensis, A. leucorrhaphe, A. lila, A. livida, A. lorata, A. mustelina, A. papyracea, A. phaeozona, A. pulcherrima, A. pupukanioe, A. rosea, A. sowerbyana, A. spaldingi, A. stewartii, A. swiftii, A. taeniolata, A. thaanumi, A. turgida, A. valida, A. viridans, A. vittata,* and *A. vulpina.*

Request for New Information

To ensure that a 5-year status review is complete and based on the best available scientific and commercial information, we request new information from all sources. See What Information Do We Consider in Our Review? for specific criteria. If you submit information, please support it with documentation such as maps, references, methods used to gather and analyze the data, and/or copies of any pertinent publications, reports, or letters by knowledgeable sources.

If you wish to provide information for any species listed in the table, please submit your comments and materials to the appropriate contact in **ADDRESSES**.

Public Availability of Comments

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Completed and Active Reviews

A table including hyperlinks to the most recently completed 5-year status review for each listed species, as well as notices of 5-year status reviews that are currently in progress, is available at *https://ecos.fws.gov/ecp/report/species-five-year-review.*

Authority

This document is published under the authority of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*).

Nanette Seto,

Acting Regional Director, U.S. Fish and Wildlife Service.

BILLING CODE 4333–15–P

DEPARTMENT OF THE INTERIOR

National Park Service

[NPS–WASO–NRNHL–DTS#–33859; PPWOCRADI0, PCU00RP14.R50000]

National Register of Historic Places; Notification of Pending Nominations and Related Actions

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: The National Park Service is soliciting electronic comments on the significance of properties nominated before April 30, 2022, for listing or related actions in the National Register of Historic Places.

DATES: Comments should be submitted electronically by May 25, 2022.

ADDRESSES: Comments are encouraged to be submitted electronically to *National_Register_Submissions@nps.gov* with the subject line ''Public Comment on <property or proposed district name, (County) State>.'' If you have no access to email you may send them via U.S. Postal Service and all other carriers to the National Register of Historic Places, National Park Service, 1849 C Street NW, MS 7228, Washington, DC 20240.

FOR FURTHER INFORMATION CONTACT: Sherry A. Frear, Chief, National Register of Historic Places/National Historic Landmarks Program, 1849 C Street NW, MS 7228, Washington, DC 20240, *sherry_frear@nps.gov,* 202–913–3763.

SUPPLEMENTARY INFORMATION: The properties listed in this notice are being considered for listing or related actions in the National Register of Historic Places. Nominations for their consideration were received by the National Park Service before April 30, 2022. Pursuant to Section 60.13 of 36 CFR part 60, comments are being accepted concerning the significance of the nominated properties under the National Register criteria for evaluation.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Nominations submitted by State or Tribal Historic Preservation Officers:

ARIZONA

Maricopa County

Sutton Place, Osborn Rd. and 26th St., Phoenix, SG100007785

ARKANSAS

Pulaski County

Calvary Cemetery, Historic Section, SW corner of Charles Bussey Ave. (20th St.) and Woodrow St., Little Rock, SG100007766

MINNESOTA

Ramsey County

Amhoist Tower, 345 Saint Peter St., 59 4th St. West, Saint Paul, SG100007789

Rock County

Manfred, Frederick and Maryanna, House, 1341 141st St. (141st St. and US 75), Luverne, SG100007790

Economic Impact of Section 232 and 301 Tariffs on U.S. Industries

ACTION: Notice of investigation and scheduling of a public hearing.

SUMMARY: As directed by an explanatory statement related that accompanied the Consolidated Appropriations Act, 2022, enacted on March 15, 2022, the U.S. International Trade Commission (Commission) instituted Investigation No. 332–591, *Economic Impact of Section 232 and 301 Tariffs on U.S. Industries.* In the explanatory statement, the House and Senate Committees on Appropriations (Committees) directed that the Commission conduct a retrospective investigation and provide a report on the impacts in the U.S. industries most affected by the Section 232 and 301 tariffs that were active as of March 15, 2022.

DATES:

July 6, 2022: Deadline for filing requests to appear at the public hearing.

July 8, 2022: Deadline for filing prehearing briefs and statements.

July 14, 2022: Deadline for filing electronic copies of oral hearing statements.

July 21, 2022: Public hearing.

August 12, 2022: Deadline for filing posthearing briefs and statements.

August 24, 2022: Deadline for filing all other written submissions.

March 15, 2023: Transmittal of Commission report to Committees.

ADDRESSES: All Commission offices are in the U.S. International Trade Commission Building, 500 E Street SW, Washington, DC. Due to the COVID–19 pandemic, the Commission's building is currently closed to the public. Once the building reopens, persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at 202–205–2000.

FOR FURTHER INFORMATION CONTACT: Project Leader Peter Herman (*Peter.Herman@usitc.gov* or 202–205–3186) or Deputy Project Leader Kelsi Van Veen (*Kelsi.VanVeen@usitc.gov* or 202–205–3086) for information specific to this investigation. For information on the legal aspects of this investigation, contact William Gearhart of the Commission's Office of the General Counsel (*William.Gearhart@usitc.gov* or 202–205–3091). The media should contact Jennifer Andberg, Office of External Relations (*Jennifer.Andberg@usitc.gov* or 202–205–1819).

The public record for this investigation may be viewed on the Commission's electronic docket (EDIS) at *https://edis.usitc.gov.* General information concerning the Commission may also be obtained by accessing its website (*https://www.usitc.gov*). Hearing-impaired individuals may obtain information on this matter by contacting the Commission's TDD terminal at 202–205–1810.

SUPPLEMENTARY INFORMATION: As requested by the Committees, the Commission will include in its report detailed information on U.S. trade, production, and prices in the industries directly and most affected by active tariffs under section 232 of the Trade Expansion Act of 1962 (19 U.S.C. 1862) and section 301 of the Trade Act of 1974 (19 U.S.C. 2232). The Commission has instituted the investigation under section 332(g) of the Tariff Act of 1930 (19 U.S.C. 1332(g)) to facilitate the receipt of public comments and for the purpose of including the Commission's report in an existing series of reports.

The tariffs covered in the report will be the additional tariffs on U.S. imports imposed under section 232 of the Trade Expansion Act of 1962 (19 U.S.C. 1862) and imposed under section 301 of the Trade Act of 1974 (19 U.S.C. 2411 *et seq.*) that were in effect as of March 15, 2022—as reflected in the 2022 Harmonized Tariff Schedule of the United States, Revision 2, USITC Pub. 5293. Additional information on the section 232 actions can be found under HTS numbers 9903.80.01 through 9903.81.80 and 9903.85.01 through 9903.85.44. Additional information on the section 301 actions can be found under HTS numbers 9903.88.01, 9903.88.02, 9903.88.03, 9903.88.04, and 9903.88.15.

The Committees requested that the Commission transmit its report no later than 12 months following the enactment of the Consolidated Appropriations Act. The Commission's report will be made available to the public.

Public hearing: A public hearing in connection with this investigation will be held beginning at 9:30 a.m. Eastern Time on Thursday July 21, 2022. Information about the place and form of the hearing, including about how to participate in and/or view the hearing, will be posted on the Commission's website at (*https://usitc.gov/research_and_analysis/what_we_are_working_on.htm*). Once on that web page, scroll down to Investigation No. 332–591, *Economic Impact of Section 232 and 301 Tariffs on U.S. Industries,* and click on the link to ''Hearing Instructions.'' Interested parties should check the Commission's website periodically for updates.

Requests to appear at the public hearing should be filed with the Secretary to the Commission no later than 5:15 p.m., Wednesday, July 6, 2022, in accordance with the requirements in the ''Written Submissions'' section below. All prehearing briefs and statements should be filed not later than 5:15 p.m., Friday, July 8, 2022. To facilitate the hearing, including the preparation of an accurate written transcript of the hearing, oral testimony to be presented at the hearing must be submitted to the Commission electronically no later than noon on Thursday, July 14, 2022. All post-hearing briefs and statements should be filed no later than 5:15 p.m., Friday, August 12, 2022. Post-hearing briefs and statements should address matters raised at the hearing. For a description of the different types of written briefs and statements, see the ''Definitions'' section below.

In the event that, as of the close of business on July 6, 2022, no witnesses are scheduled to appear at the hearing, the hearing will be canceled. Any person interested in attending the hearing as an observer or nonparticipant should check the Commission website two paragraphs above for information concerning whether the hearing will be held.

Written submissions: In lieu of or in addition to participating in the hearing, interested parties are invited to file written submissions concerning this investigation. All written submissions should be addressed to the Secretary and should be received not later than

5:15 p.m., Wednesday, August 24, 2022. All written submissions must conform to the provisions of section 201.8 of the Commission's Rules of Practice and Procedure (19 CFR 201.8), as temporarily amended by 85 FR 15798 (March 19, 2020). Under that rule waiver, the Office of the Secretary will accept only electronic filings at this time. Filings must be made through the Commission's Electronic Document Information System (EDIS, *https://edis.usitc.gov*). No in-person paper-based filings or paper copies of any electronic filings will be accepted until further notice. Persons with questions regarding electronic filing should contact the Office of the Secretary, Docket Services Division (202–205–1802), or consult the Commission's Handbook on Filing Procedures.

Definitions of types of documents that may be filed; requirements: In addition to requests to appear at the hearing, this notice provides for the possible filing of four types of documents: prehearing briefs, oral hearing statements, post-hearing briefs, and other written submissions.

(1) Prehearing briefs refers to written materials relevant to the investigation and submitted in advance of the hearing, and includes written views on matters that are the subject of the investigation, supporting materials, and any other written materials that you consider will help the Commission in understanding your views. You should file a prehearing brief particularly if you plan to testify at the hearing on behalf of an industry group, company, or other organization, and wish to provide detailed views or information that will support or supplement your testimony.

(2) *Oral hearing statements (testimony)* refers to the actual oral statement that you intend to present at the public hearing. Do not include any confidential business information in that statement. If you plan to testify, you must file a copy of your oral statement by the date specified in this notice. This statement will allow Commissioners to understand your position in advance of the hearing and will also assist the court reporter in preparing an accurate transcript of the hearing (*e.g.,* names spelled correctly).

(3) *Post-hearing briefs* refers to submissions filed after the hearing by persons who appeared at the hearing. Such briefs: (a) Should be limited to matters that arose during the hearing, (b) should respond to any Commissioner and staff questions addressed to you at the hearing, (c) should clarify, amplify, or correct any statements you made at the hearing, and (d) may, at your option, address or rebut statements made by other participants in the hearing.

(4) *Other written submissions* refers to any other written submissions that interested persons wish to make, regardless of whether they appeared at the hearing, and may include new information or updates of information previously provided.

In accordance with the provisions of section 201.8 of the Commission's Rules of Practice and Procedure (19 CFR 201.8) the document must identify on its cover (1) the investigation number and title and the type of document filed (*i.e.,* prehearing brief, oral statement of (name), posthearing brief, or written submission), (2) the name and signature of the person filing it, (3) the name of the organization that the submission is filed on behalf of, and (4) whether it contains confidential business information (CBI). If it contains CBI, it must comply with the marking and other requirements set out below in this notice relating to CBI. Submitters of written documents (other than oral hearing statements) are encouraged to include a short summary of their position or interest at the beginning of the document, and a table of contents when the document addresses multiple issues.

Confidential business information: Any submissions that contain confidential business information must also conform to the requirements of section 201.6 of the Commission's Rules of Practice and Procedure (19 CFR 201.6). Section 201.6 of the rules requires that the cover of the document and the individual pages be clearly marked as to whether they are the ''confidential'' or ''non-confidential'' version, and that the confidential business information is clearly identified by means of brackets. All written submissions, except for confidential business information, will be made available for inspection by interested parties.

As requested by the Committees, the Commission will not include any confidential business information in its report. However, all information, including confidential business information, submitted in this investigation may be disclosed to and used: (i) By the Commission, its employees and Offices, and contract personnel (a) for developing or maintaining the records of this or a related proceeding, or (b) in internal investigations, audits, reviews, and evaluations relating to the programs, personnel, and operations of the Commission including under 5 U.S.C. Appendix 3; or (ii) by U.S. government employees and contract personnel for cybersecurity purposes. The Commission will not otherwise disclose any confidential business information in a way that would reveal the operations of the firm supplying the information.

Summaries of written submissions: Persons wishing to have a summary of their position included in the report should include a summary with their written submission on or before August 24, 2022, and should mark the summary as having been provided for that purpose. The summary should be clearly marked as ''summary for inclusion in the report'' at the top of the page. The summary may not exceed 500 words and should not include any confidential business information. The summary will be published as provided if it meets these requirements and is germane to the subject matter of the investigation. The Commission will list the name of the organization furnishing the summary and will include a link to the Commission's Electronic Document Information System (EDIS) where the written submission can be found.

By order of the Commission.

Issued: May 5, 2022.

William Bishop,

Supervisory Hearings and Information Officer.

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–1258]

Certain Smart Thermostat Systems, Smart HVAC Systems, Smart HVAC Control Systems, and Components Thereof; Notice of Request for Submissions on the Public Interest

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that on April 4, 2022, the presiding administrative law judge (''ALJ'') issued a Final Initial Determination on Violation of Section 337. The ALJ also issued a Recommended Determination on remedy and bonding should a violation be found in the above-captioned investigation. The Commission is soliciting submissions on public interest issues raised by the recommended relief should the Commission find a violation. This notice is soliciting comments from the public only.

FOR FURTHER INFORMATION CONTACT: Houda Morad, Esq., Office of the General Counsel, U.S. International

Trade Commission, 500 E Street SW, Washington, DC 20436, telephone (202) 708–4716. Copies of non-confidential documents filed in connection with this investigation may be viewed on the Commission's electronic docket (EDIS) at *https://edis.usitc.gov.* For help accessing EDIS, please email *EDIS3Help@usitc.gov.* General information concerning the Commission may also be obtained by accessing its internet server at *https://www.usitc.gov.* Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: Section 337 of the Tariff Act of 1930 provides that, if the Commission finds a violation, it shall exclude the articles concerned from the United States:

unless, after considering the effect of such exclusion upon the public health and welfare, competitive conditions in the United States economy, the production of like or directly competitive articles in the United States, and United States consumers, it finds that such articles should not be excluded from entry.

19 U.S.C. 1337(d)(1). A similar provision applies to cease and desist orders. 19 U.S.C. 1337(f)(1).

The Commission is soliciting submissions on public interest issues raised by the recommended relief should the Commission find a violation, specifically: A limited exclusion order directed to certain smart thermostat systems, smart HVAC systems, smart HVAC control systems, and components thereof imported, sold for importation, and/or sold after importation by respondents: Ecobee, Ltd., ecobee Inc., and Google LLC (collectively, ''Respondents''). Parties are to file public interest submissions pursuant to 19 CFR 210.50(a)(4).

The Commission is interested in further development of the record on the public interest in this investigation. Accordingly, members of the public are invited to file submissions of no more than five (5) pages, inclusive of attachments, concerning the public interest in light of the ALJ's Recommended Determination on Remedy and Bonding issued in this investigation on April 4, 2022. Comments should address whether issuance of the recommended remedial orders in this investigation, should the Commission find a violation, would affect the public health and welfare in the United States, competitive conditions in the United States economy, the production of like or directly competitive articles in the United States, or United States consumers.

In particular, the Commission is interested in comments that:

(i) Explain how the articles potentially subject to the recommended remedial orders are used in the United States;

(ii) identify any public health, safety, or welfare concerns in the United States relating to the recommended orders;

(iii) identify like or directly competitive articles that complainant, complainant's licensees, or third parties make in the United States which could replace the subject articles if they were to be excluded;

(iv) indicate whether complainant, complainant's licensees, and/or third-party suppliers have the capacity to replace the volume of articles potentially subject to the recommended orders within a commercially reasonable time; and

(v) explain how the recommended orders would impact consumers in the United States.

Written submissions must be filed no later than by close of business on May 20, 2022.

Persons filing written submissions must file the original document electronically on or before the deadlines stated above. The Commission's paper filing requirements in 19 CFR 210.4(f) are currently waived. 85 FR 15798 (March 19, 2020). Submissions should refer to the investigation number (''Inv. No. 337–TA–1258'') in a prominent place on the cover page and/or the first page. (*See Handbook for Electronic Filing Procedures, https://www.usitc.gov/documents/handbook_on_filing_procedures.pdf.*). Persons with questions regarding filing should contact the Secretary (202–205–2000).

Any person desiring to submit a document to the Commission in confidence must request confidential treatment by marking each document with a header indicating that the document contains confidential information. This marking will be deemed to satisfy the request procedure set forth in Rules 201.6(b) and 210.5(e)(2) (19 CFR 201.6(b) & 210.5(e)(2)). Documents for which confidential treatment by the Commission is properly sought will be treated accordingly. A redacted non-confidential version of the document must also be filed simultaneously with any confidential filing. All information, including confidential business information and documents for which confidential treatment is properly sought, submitted to the Commission for purposes of this investigation may be disclosed to and used: (i) By the Commission, its employees and Offices, and contract personnel (a) for developing or maintaining the records of this or a related proceeding, or (b) in internal investigations, audits, reviews, and evaluations relating to the programs, personnel, and operations of the Commission including under 5 U.S.C. Appendix 3; or (ii) by U.S. government employees and contract personnel, solely for cybersecurity purposes. All contract personnel will sign appropriate nondisclosure agreements. All nonconfidential written submissions will be available for public inspection on EDIS.

This action is taken under the authority of section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and in Part 210 of the Commission's Rules of Practice and Procedure (19 CFR part 210).

By order of the Commission.

Issued: May 5, 2022.

William Bishop,

Supervisory Hearings and Information Officer.

DEPARTMENT OF JUSTICE

Foreign Claims Settlement Commission

[F.C.S.C. Meeting and Hearing Notice No. 03–22]

Sunshine Act Meeting

The Foreign Claims Settlement Commission, pursuant to its regulations (45 CFR part 503.25) and the Government in the Sunshine Act (5 U.S.C. 552b), hereby gives notice in regard to the scheduling of open meetings as follows:

TIME AND DATE: Wednesday, May 18, 2022, at 2:00 p.m. EST.

PLACE: This meeting will be held by teleconference. There will be no physical meeting place.

STATUS: Open. Members of the public who wish to observe the meeting via teleconference should contact Patricia M. Hall, Foreign Claims Settlement Commission, Tele: (202) 616–6975, two business days in advance of the meeting. Individuals will be given call-in information upon notice of attendance to the Commission.

MATTERS TO BE CONSIDERED: 2:00 p.m.—Issuance of Proposed Decisions under the Guam World War II Loyalty Recognition Act, Title XVII, Public Law 114–328.

CONTACT PERSON FOR MORE INFORMATION: Requests for information, advance

notices of intention to observe an open meeting, and requests for teleconference dial-in information may be directed to: Patricia M. Hall, Foreign Claims Settlement Commission, 441 G St. NW, Room 6234, Washington, DC 20579. Telephone: (202) 616–6975.

Jeremy R. LaFrancois,

Chief Administrative Counsel.

NATIONAL SCIENCE FOUNDATION

Advisory Committee for Computer and Information Science and Engineering; Notice of Meeting

In accordance with the Federal Advisory Committee Act (Pub., L. 92–463, as amended), the National Science Foundation (NSF) announces the following meeting:

Name and Committee Code: Advisory Committee for Computer and Information Science and Engineering (#1115).

Date and Time: May 16, 2022–11:00 a.m.–5:00 p.m. (Eastern); May 17, 2022–11:00 a.m.–4:30 p.m. (Eastern)

Place: NSF, 2415 Eisenhower Avenue, Alexandria, VA 22314 (Virtual).

Virtual meeting attendance only; to attend the virtual meeting, please send your request for the virtual meeting link to the following email: *cmessam@nsf.gov.*

Type of Meeting: Open.

Contact Persons: KaJuana Mayberry, National Science Foundation, 2415 Eisenhower Avenue, Alexandria, VA 22314; Telephone: 703–292–8900; email: *kmayberry@nsf.gov*

Purpose of Meeting: To provide advice, recommendations and counsel on major goals and policies pertaining to Computer and Information Science and Engineering programs and activities.

Agenda

- NSF and CISE update
- NASEM report on responsible computing research
- NSF activities towards geography of innovation

Reason for Late Notice: Due to the unforeseen scheduling complications and the necessity to proceed with CISE updates and the NASEM reports to the committee.

Dated: May 5, 2022.

Crystal Robinson,

Committee Management Officer.

BILLING CODE 7555–01–P

NUCLEAR REGULATORY COMMISSION

[Docket Nos. 50–295, 50–304, 72–1037, 50–320, 50–409, 72–046, 50–305, 72–64, 030–39013, 11005620, and 11005897; NRC–2021–0232 and NRC–2022–0092]

In the Matter of Energy*Solutions,* LLC; Zion Nuclear Power Station, Units 1 and 2; Three Mile Island Nuclear Station, Unit 2; La Crosse Boiling Water Reactor; Kewaunee Power Station; Energy*Solutions,* LLC Radioactive Materials License; Energy*Solutions,* LLC Export Licenses

AGENCY: Nuclear Regulatory Commission.

ACTION: Indirect transfer of licenses; order.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is issuing an order to Energy*Solutions,* LLC (Energy*Solutions*) approving the indirect transfer of control of Facility Operating License Nos. DPR–39 and DPR–48 for Zion Nuclear Power Station, Units 1 and 2, respectively, and the general license for the Zion independent spent fuel storage installation (ISFSI); Possession Only License No. DPR–73 for Three Mile Island Nuclear Station, Unit 2; Possession Only License No. DPR–45 for La Crosse Boiling Water Reactor and the general license for the La Crosse ISFSI; Renewed Facility Operating License No. DPR–43 for Kewaunee Power Station and the general license for the Kewaunee ISFSI; Radioactive Materials License No. 39–35044–01; Export License XW010/04; and Export License XW018/01, to the extent that these licenses may be held by Energy*Solutions* or its wholly-owned subsidiaries at the time of the consummation of the indirect transfer. The indirect transfer of control of these licenses would result from the consummation of a stock purchase agreement dated November 16, 2021, involving the current principal shareholders of the corporate parent company of Energy*Solutions* and other investors.

DATES: The order was issued on May 3, 2022, and is effective for 1 year.

ADDRESSES: Please refer to Docket ID NRC–2021–0232 and NRC–2022–0092 when contacting the NRC about the availability of information regarding this document. You may obtain publicly available information related to this document by using any of the following methods:

- *Federal Rulemaking Website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2021–0232 and NRC–2022–0092. Address questions about Docket IDs in *Regulations.gov* to Stacy Schumann; telephone: 301–287–0624; email: *Stacy.Schumann@nrc.gov.* For technical questions, contact the individual listed in the ''For Further Information Contact'' section of this document.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to *PDR.Resource@nrc.gov.* The indirect license transfer order and the NRC staff safety evaluation supporting the order are available in ADAMS under Package Accession No. ML22076A008.
- *NRC's PDR:* You may examine and purchase copies of public documents, by appointment, at the NRC's PDR, Room P1 B35, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852. To make an appointment to visit the PDR, please send an email to *PDR.Resource@nrc.gov* or call 1–800–397–4209 or 301–415–4737, between 8:00 a.m. and 4:00 p.m. (ET), Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Jack D. Parrott, Office of Nuclear Material Safety and Safeguards, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–3178; email: *Jack.Parrott@nrc.gov.*

SUPPLEMENTARY INFORMATION: The text of the order is attached.

Dated: May 4, 2022.

For the Nuclear Regulatory Commission.

Jack D. Parrott,

Senior Project Manager, Reactor Decommissioning Branch, Division of Decommissioning, Uranium Recovery, and Waste Programs, Office of Nuclear Material Safety and Safeguards.

Attachment—Order Approving Indirect Transfer of Licenses

United States of America Nuclear Regulatory Commission

In the Matter of ENERGYSOLUTIONS, LLC Zion Nuclear Power Station, Units 1 and 2, and the Associated Independent Spent Fuel Storage Installation; Three Mile Island Nuclear Station, Unit 2; La Crosse Boiling Water Reactor, and the Associated Independent Spent Fuel Storage Installation; Kewaunee Power Station, and the Associated Independent Spent Fuel Storage Installation; Radioactive Materials License; and Export Licenses EA–22–024

Docket Nos. 50–295, 50–304, 72–1037, 50–320, 50–409, 72–046, 50–305, 72–64, 030–39013, 11005620, and 11005897

License Nos. DPR–39, DPR–48, DPR–73, DPR–45, DPR–43, 39–35044–01, W010/04, and XW018/01

Order Approving Indirect Transfer of Licenses

I.

This order pertains to the following licenses held, or potentially held during the effectiveness of this order, by Energy*Solutions,* LLC (Energy*Solutions,* the Applicant) or its wholly-owned subsidiaries (collectively, the Licenses):

- Facility Operating License Nos. DPR–39 and DPR–48 for Zion Nuclear Power Station (ZNPS), Units 1 and 2, respectively, and the general license for the ZNPS independent spent fuel storage installation (ISFSI) located in Zion, Illinois. The ZNPS licenses are currently held by the Applicant's licensed subsidiary, Zion*Solutions,* LLC, a wholly-owned special purpose subsidiary under the Applicant, for the purpose of decommissioning the site. However, there is a pending U.S. Nuclear Regulatory Commission (NRC, the Commission) order approving the transfer of the ZNPS licenses from Zion*Solutions,* LLC to Exelon Generation Company, LLC (Agencywide Documents Access and Management System (ADAMS) Accession No. ML21229A027).
- Possession Only License No. DPR–73 for Three Mile Island Nuclear Station, Unit 2 (TMI–2) located near Middletown, Pennsylvania. The TMI–2 facility and site are owned and operated by the Applicant's licensed subsidiary, TMI–2 Solutions, LLC, a wholly-owned special purpose subsidiary under the Applicant, for the purpose of decommissioning the site.
- Possession Only License No. DPR–45 for La Crosse Boiling Water Reactor (LACBWR), located on the east bank of the Mississippi River in Vernon County, Wisconsin, and the general license for the LACBWR ISFSI. The LACBWR licenses are currently held by LaCrosse*Solutions,* LLC, a wholly-owned special purpose subsidiary under the Applicant, for the purpose of decommissioning the site. However, there is a pending NRC order approving the transfer of the LACBWR licenses from LaCrosse*Solutions,* LLC to Dairyland Power Cooperative (ADAMS Accession No. ML21228A107).
- Renewed Facility Operating License No. DPR–43 for Kewaunee Power Station (KPS), located in the Town of Carlton along the coast of Lake Michigan in Kewaunee County, Wisconsin, and the general license for the KPS ISFSI. The KPS licenses are currently indirectly held by Dominion Nuclear Projects, Inc.; however, there is a pending NRC order approving the transfer of the KPS licenses from Dominion Nuclear Projects, Inc. to Energy*Solutions* (ADAMS Accession No. ML22014A387).
- Radioactive Materials License No. 39–35044–01 for use at temporary job sites to support a variety of possible work scope activities at those sites.
- Export License XW010/04 for return of radioactive waste to Canada.
- Export License XW018/01 for return of radioactive waste to Germany.

II.

By application dated December 7, 2021, as supplemented by letters dated March 30, 2022, and April 18, 2022 (ADAMS Accession Nos. ML21344A114, ML22091A275, and ML22110A030, respectively), the Applicant, on behalf of itself and its wholly-owned subsidiaries, requested that the NRC consent to the indirect transfer of control of the Licenses, to the extent that the Licenses may be held by the Applicant or its wholly owned subsidiaries at the time of the indirect transfer, pursuant to Section 184 of the Atomic Energy Act of 1954, as amended (the Act), and Title 10 of the *Code of Federal Regulations* (10 CFR) Sections 30.34(b), 50.80, 72.50, and 110.50(d).

Specifically, the Applicant requested that the NRC consent to the indirect transfer of control of the Licenses to support a proposed stock purchase transaction involving the current principal shareholders of the corporate parent company of the Applicant and other investors. The Applicant is a wholly-owned subsidiary of Energy*Solutions* Finance Holdings, LLC, which is a privately held company whose shares are directly owned by Energy*Solutions,* Inc., which in turn is a privately held company whose shares are directly owned by Rockwell Holdco, Inc. (Rockwell).

Rockwell is approximately 58 percent owned primarily by a number of affiliated passive investment funds controlled by Energy Capital Partners GP II, LP (collectively, the ECP II Partnerships). The ECP II Partnerships are each controlled by Energy Capital Partners GP II, LP as general partner. The general partner in turn is controlled by Energy Capital Partners II, LLC. Collectively, these entities are referred to as ''ECP.'' Rockwell is also approximately 40 percent owned by passive investment funds controlled by TriArtisan ES Partners, LLC. TriArtisan ES Partners, LLC is in turn controlled by TriArtisan ES MM LLC, which is in turn managed by TriArtisan Capital Advisors LLC. Collectively, these entities are referred to as the ''TriArtisan Entities.''

The indirect transfer arises from a Stock Purchase Agreement (SPA) dated November 16, 2021. Pursuant to the SPA, a passive investment fund established by the TriArtisan Entities, known as TriArtisan ES Partners II LP, will acquire most of the existing majority shareholder interest held by ECP, as well as most of the current TriArtisan Entities' shares. As a result, TriArtisan ES Partners II LP and the TriArtisan Entities (collectively, TriArtisan) would own a majority shareholder interest of approximately 88 percent and would have governance control over Rockwell.

On January 21, 2022, the NRC published a notice of consideration of approval of the application in the **Federal Register** (87 FR 3372). The supplemental letter dated March 30, 2022, provided additional information that expanded the scope of the application as originally noticed and, therefore, the NRC published a notice of consideration of approval of the application, as supplemented, in the **Federal Register** on April 8, 2022 (87 FR 20889). The supplemental letter dated April 18, 2022, provided additional information that clarified the application and did not expand the scope of the application as noticed. The notices provided an opportunity to comment, request a hearing, and petition for leave to intervene on the application. One request for a hearing on the application was filed by Eric Epstein, on behalf of himself, on February 10, 2022 (ADAMS Accession No. ML22041A773). This hearing request is pending before the Commission. The NRC received no comment submissions on the license transfer application.

In accordance with 10 CFR 50.80, no license for a production or utilization facility, or any right thereunder, shall be transferred, either voluntarily or involuntarily, directly or indirectly, through transfer of control of the license to any person, unless the Commission gives its consent in writing. In accordance with 10 CFR 72.50, no license or any part included in a license for an ISFSI shall be transferred, either voluntarily or involuntarily, directly or indirectly, through transfer of control of the license to any person, unless the Commission gives its consent in writing. In accordance with 10 CFR 30.34, no license issued or granted pursuant to 10 CFR part 30 nor any right under a license shall be transferred, either voluntarily or involuntarily, directly or indirectly, through transfer of control of any license to any person, unless the Commission shall, after securing full information, find that the transfer is in accordance with the provision of the Act and shall give its consent in writing. In accordance with 10 CFR 110.50, a specific license may be transferred to another person only with the approval of the Commission.

Upon review of the information in the application, as supplemented, and other information before the NRC, and relying upon the representations and agreements contained in the application, the NRC staff has determined that Energy*Solutions* is qualified to hold the Licenses, to the extent described in the application, and that transfer of the Licenses is otherwise consistent with applicable provisions of law, regulations, and orders issued by the Commission pursuant thereto, subject to the conditions set forth below. The NRC staff has also determined that: (1) There is reasonable assurance that the health and safety of the public will not be endangered by operation in the proposed manner, (2) there is reasonable assurance that such activities will be conducted in compliance with the Commission's regulations, and (3) the transfer will not be inimical to the common defense and security or to the health and safety of the public. The findings set forth above are supported by an NRC staff safety evaluation dated May 3, 2022.

III.

Accordingly, pursuant to Sections 161b, 161i, and 184 of the Act, 42 U.S.C. 2201(b), 2201(i), and 2234; and 10 CFR 30.34(b), 50.80, 72.50, and 110.50(d), *it is hereby ordered* that the application regarding the proposed indirect license transfer is approved, subject to the following conditions:

(1) The NRC staff's approval of the license transfer is subject to the Commission's authority to rescind, modify, or condition the approved transfer based on the outcome of any post-effectiveness hearing on the license transfer application.

(2) If Energy*Solutions* does not indirectly hold Facility Operating License Nos. DPR–39 and DPR–48 for ZNPS, Units 1 and 2, respectively, and the general license for the ZNPS ISFSI, at the time of the closing of the proposed indirect license transfer, then the ZNPS licenses shall not be transferred as part of the indirect license transfer.

(3) If Energy*Solutions* does not indirectly hold Possession Only License No. DPR–45 for LACBWR, and the general license for the LACBWR ISFSI, at the time of the closing of the proposed indirect license transfer, then the LACBWR licenses shall not be transferred as part of the indirect license transfer.

(4) If Energy*Solutions* does not indirectly hold Renewed Facility Operating License No. DPR–43 for KPS, and the general license for the KPS ISFSI, at the time of the closing of the proposed indirect license transfer, then the KPS licenses shall not be transferred as part of the indirect license transfer.

Should the proposed indirect license transfer not be completed within one year of the date of this order, this order shall become null and void, provided, however, that upon written application and for good cause shown, such date may be extended by order. The conditions of this order may be amended upon application by the Applicant and approval by the NRC.

This order is effective upon issuance.

For further details with respect to this order, see the application dated December 7, 2021, as supplemented by letters dated March 30, 2022, and April 18, 2022, and the associated NRC staff safety evaluation dated May 3, 2022. Publicly available documents created or received at the NRC are accessible electronically through ADAMS in the NRC Library at *https://www.nrc.gov/reading-rm/adams.html.* Persons who do not have access to ADAMS or who encounter problems accessing the documents located in ADAMS, should contact the NRC Public Document Room reference staff by telephone at 1–800–397–4209, or 301–415–4737, or by email to *pdr.resource@nrc.gov.*

Dated: May 3, 2022.

BILLING CODE 7590–01–P

OFFICE OF PERSONNEL MANAGEMENT

[OMB Control No. 3206–0278]

Submission for Review: Renewal of An Existing Information Collection, USA Staffing's, Onboarding Features

AGENCY: U.S. Office of Personnel Management.

ACTION: 60-Day notice and request for comments.

SUMMARY: The Office of Personnel Management (OPM) offers the general public and other Federal agencies the opportunity to comment on a revised information collection request (ICR) 3206–0278, USA Staffing, Onboarding).

DATES: Comments are encouraged and will be accepted until July 11, 2022. This process is conducted in accordance with 5 CFR 1320.1.

ADDRESSES: Interested persons are invited to submit written comments on the proposed information collection by one of the following means:

Federal Rulemaking Portal: http://www.regulations.gov All submissions received must include the agency name and docket number for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

Email *bridget.dongarra@opm.gov.* Please put ''USA Staffing, Onboarding'' in the subject line of the email.

FOR FURTHER INFORMATION CONTACT: A copy of this information collection request, with applicable supporting documentation, may be obtained by contacting the USA Staffing, Office of Personnel Management, 1900 E Street NW, Washington, DC 20415, Attention: Bridget Dongarra, or via electronic mail to *bridget.dongarra@opm.gov.*

SUPPLEMENTARY INFORMATION: As required by the Paperwork Reduction Act of 1995, (Pub. L. 104–13, 44 U.S.C. chapter 35) as amended by the Clinger-Cohen Act (Pub. L. 104–106), OPM is soliciting comments for this collection. USA Staffing is OPM's talent acquisition solution. Federal agencies use USA Staffing to onboard candidates for Federal positions while complying with appropriate rules and procedures. Federal agencies purchase the services of USA Staffing through an Interagency Agreement (IAA) under the provisions of the Revolving Fund, 5 U.S.C. 1304 (e)(1), which permits OPM to perform human resources management services for Federal agencies on a cost-recovery basis.

USA Staffing's public facing web page for new hires provides a single interface to submit data and forms required during the Federal onboarding process. New Hires are individuals selected for Federal employment but who have not yet entered on duty and authenticate at USA Staffing using their *USAJOBS.gov* accounts. USA Staffing captures the essential information Federal agencies require to onboard applicants for Federal jobs under the authority of sections 1104, 1302, 3301–3320, 3361, 3393, and 3394 of Title 5 United States Code. This information includes questions related to selectee background, biographic, contact, employee benefits enrollment, employment history, and payroll information. Responses to these questions address required suitability and background investigation requirements, and also facilitate timely and efficient entry on duty. This revision proposes to renew a currently approved collection. Therefore, we invite comments that:

1. Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

2. Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

3. Enhance the quality, utility, and clarity of the information to be collected; and

4. Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submissions of responses.

BILLING CODE 6325–XX–P

POSTAL REGULATORY COMMISSION

[Docket Nos. MC2022–55 and CP2022–60]

New Postal Products

AGENCY: Postal Regulatory Commission.

ACTION: Notice.

SUMMARY: The Commission is noticing a recent Postal Service filing for the Commission's consideration concerning a negotiated service agreement. This notice informs the public of the filing, invites public comment, and takes other administrative steps.

DATES: *Comments are due:* May 12, 2022.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at *http://www.prc.gov.* Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT: David A. Trissell, General Counsel, at 202–789–6820.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction
II. Docketed Proceeding(s)

I. Introduction

The Commission gives notice that the Postal Service filed request(s) for the Commission to consider matters related to negotiated service agreement(s). The request(s) may propose the addition or removal of a negotiated service agreement from the market dominant or the competitive product list, or the modification of an existing product currently appearing on the market dominant or the competitive product list.

Section II identifies the docket number(s) associated with each Postal Service request, the title of each Postal Service request, the request's acceptance date, and the authority cited by the Postal Service for each request. For each request, the Commission appoints an officer of the Commission to represent the interests of the general public in the proceeding, pursuant to 39 U.S.C. 505 (Public Representative). Section II also establishes comment deadline(s) pertaining to each request.

The public portions of the Postal Service's request(s) can be accessed via the Commission's website (*http://www.prc.gov*). Non-public portions of the Postal Service's request(s), if any, can be accessed through compliance with the requirements of 39 CFR 3011.301.[1]

The Commission invites comments on whether the Postal Service's request(s) in the captioned docket(s) are consistent with the policies of title 39. For request(s) that the Postal Service states concern market dominant product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3622, 39 U.S.C. 3642, 39 CFR part 3030, and 39 CFR part 3040, subpart B. For request(s) that the Postal Service states concern competitive product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3632, 39 U.S.C. 3633, 39 U.S.C. 3642, 39 CFR part 3035, and 39 CFR part 3040, subpart B. Comment deadline(s) for each request appear in section II.

II. Docketed Proceeding(s)

1. *Docket No(s).:* MC2022–55 and CP2022–60; *Filing Title:* USPS Request to Add Priority Mail Contract 739 to Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* May 4, 2022; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3040.130 through 3040.135, and 39 CFR 3035.105; *Public Representative:* Kenneth R. Moeller; *Comments Due:* May 12, 2022.

This Notice will be published in the **Federal Register**.

Erica A. Barker,

Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–94842; File No. SR–NYSENAT–2022–06]

Self-Regulatory Organizations; NYSE National, Inc.; Notice of Filing of Proposed Rule Change To Modify Rule 7.31 To Add Subparagraph (f)(4) Regarding Directed Orders

May 4, 2022.

Pursuant to Section 19(b)(1) [1] of the Securities Exchange Act of 1934 (the ''Act'') [2] and Rule 19b–4 thereunder,[3] notice is hereby given that, on April 20, 2022, NYSE National, Inc. (''NYSE National'' or the ''Exchange'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

[1] 15 U.S.C. 78s(b)(1).

[2] 15 U.S.C. 78a.

[3] 17 CFR 240.19b–4.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to modify Rule 7.31 to add subparagraph (f)(4) regarding Directed Orders and make other conforming changes. The proposed rule change is available on the Exchange's website at *www.nyse.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to modify Rule 7.31 (Orders and Modifiers) to add new subparagraph (f)(4) to provide for Directed Orders and to make other conforming changes to its Rules in connection with the addition of this new order type on the Exchange. The Directed Order, as further defined below, would be an order sent to the Exchange to be routed directly to an alternative trading system (''ATS'') specified by an ETP Holder.

The Exchange proposes to add Rule 7.31(f)(4), which would define a Directed Order as a Limit Order with instructions to route on arrival at its limit price to a specified ATS with which the Exchange maintains an electronic linkage. Proposed Rule 7.31(f)(4) would also provide that Directed Orders would be available for all securities eligible to trade on the Exchange and would not be assigned a working time or interact with interest on the Exchange Book. The Exchange also proposes to provide in Rule 7.31(f)(4) that the ATS to which a Directed Order is routed would be responsible for validating whether the order is eligible to be accepted, and if such ATS

determines to reject the order, the order would be cancelled.

Proposed Rule 7.31(f)(4)(A) would provide that a Directed Order must be designated for the Exchange's Core Trading Session, as defined in Rule 7.34(a)(2).[4]

Proposed Rule 7.31(f)(4)(A) would further provide that a Directed Order must be designated with a Time in Force modifier of IOC[5] or Day[6] and would be routed to the specified ATS with such modifier. The Exchange proposes that a Directed Order designated IOC would be traded in whole or in part on the ATS to which it is routed after receipt of the order, and any untraded quantity would be cancelled. The Exchange proposes that a Directed Order designated Day would expire at the end of the Core Trading Session on the day it is entered. Proposed Rule 7.31(f)(1)(A) would also provide that a Directed Order may not be designated with any other modifiers defined in Rule 7.31.

Proposed Rule 7.31(f)(4)(B) would provide that, during a trading halt or pause, an incoming Directed Order would be rejected.

Proposed Rule 7.31(f)(4)(C) would provide that a request to cancel a Directed Order designated Day would be routed to the ATS to which the order was routed.

The Exchange also proposes a conforming change to Rule 7.19 (Pre-Trade Risk Controls). The Exchange proposes to modify Rule 7.19(a)(5), which sets forth the definition of Gross Credit Risk Limit and currently provides that unexecuted orders in the Exchange Book, orders routed on arrival pursuant to Rule 7.37(a)(1), and executed orders are included for purposes of calculating the Gross Credit Risk Limit. The Exchange proposes to modify Rule 7.19(a)(5) to specify that orders routed on arrival pursuant to Rule 7.31(f)(4) would also be included for purposes of the Gross Credit Risk Limit calculation.

The Exchange believes that the proposed rule change would facilitate additional trading opportunities by offering ETP Holders the ability to designate orders submitted to the Exchange to be routed to an ATS of their choosing for execution. The Exchange believes the proposed change would encourage ETP Holders to utilize the Exchange as a venue for order entry and further believes that the proposed change could create efficiencies for ETP Holders by enabling them to send orders that they wish to route to an alternate destination through the Exchange, thereby enabling them to leverage order entry protocols and specifications already configured for their interactions with the Exchange. The Exchange notes that the Directed Order, as proposed, would operate similarly to the Primary Only Order already offered by the Exchange, which is an order that is routed directly to the primary listing market on arrival, without being assigned a working time or interacting with interest on the Exchange Book.[7] The Exchange also believes that the Directed Order would offer ETP Holders functionality akin to order types and routing options that currently exist on other equities exchanges.[8]

Because of the technology changes associated with this proposed rule change, the Exchange will announce the implementation date by Trader Update.[9] Subject to effectiveness of this proposed rule change, the Exchange anticipates that the proposed change will be implemented in the second quarter of 2022.

2. Statutory Basis

The proposed rule change is consistent with Section 6(b) of the Securities Exchange Act of 1934,[10] in general, and furthers the objectives of Section 6(b)(5),[11] in particular, because it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to, and perfect the mechanism of, a free and open market and a national market system and, in general, to protect investors and the public interest.

The Exchange believes that the proposed rule change is designed to remove impediments to and perfect the mechanism of a free and open market and promote just and equitable principles of trade because the Directed Order would offer ETP Holders access to additional trading opportunities by permitting them to designate orders submitted to the Exchange to be routed directly to a specified ATS for execution. The Exchange further believes that the proposed change would remove impediments to and perfect the mechanism of a free and open market by offering ETP Holders the option to send orders that they wish to route to an alternate destination for execution through the Exchange, which would create efficiencies to the extent

[4] Because the Exchange proposes that Directed Orders may only be designated for the Core Trading Session, the Exchange also proposes conforming changes to Rule 7.34 (Trading Sessions). Specifically, the Exchange proposes to modify Rule 7.34(c)(1)(E) to provide that Directed Orders designated for the Early Trading Session would be rejected and Rule 7.34(c)(3)(C) to provide that Directed Orders designated for the Late Trading Session would be rejected.

[5] *See* Rule 7.31(b)(2), which provides that a Limit Order may be designated with an Immediate-or-Cancel (''IOC'') modifier.

[6] *See* Rule 7.31(b)(1), which provides that orders may be designated with a Day modifier, and that an order to buy or sell designated Day, if not traded, will expire at the end of the designated session on the day on which it was entered.

[7] *See* Rule 7.31(f)(1). NYSE National also offers variations of the Primary Only Order, including the Primary Only Until 9:45 Order, which is a Limit or Inside Limit Order that, on arrival and until 9:45 a.m. Eastern Time, routes to the primary listing market, and the Primary Only Until 3:55 Order, which is a Limit or Inside Limit Order entered on the Exchange until 3:55 p.m. Eastern Time, after which time the order is cancelled on the Exchange and routed to the primary listing market. *See* Rules 7.31(f)(2) and (f)(3). The Exchange's affiliated exchanges NYSE American LLC (''NYSE American''), NYSE Arca, Inc. (''NYSE Arca''), and NYSE Chicago, Inc. (''NYSE Chicago'') (collectively, the ''Affiliated Exchanges'') also offer the Primary Only Order and variations thereof. *See* NYSE American Rules 7.31E(f)(1)–(f)(3); NYSE Arca Rules 7.31–E(f)(1)—(f)(3); NYSE Chicago Rules 7.31(f)(1)—(f)(3).

[8] *See, e.g.,* Nasdaq Stock Market LLC (''Nasdaq''), Equity 4, Equity Trading Rules, Rule 4758(a)(ix) (defining the Nasdaq Directed Order as an order designed to use a routing strategy under which the order is directed to an automated trading center other than Nasdaq, as directed by the entering party, without checking the Nasdaq Book); Cboe EDGX Exchange, Inc. (''EDGX'') Rules 11.8(c)(7) (defining the Routing/Directed ISO order type as an ISO that bypasses the EDGX system and is immediately routed by EDGX to a specified away trading center for execution) and 11.11(g)(2) (providing for the DRT routing option, in which an order is routed to an alternative trading system as instructed); Cboe EDGA Exchange, Inc. (''EDGA'') Rules 11.8(c)(7) (defining the Routing/Directed ISO order type as an ISO that bypasses the EDGA system and is immediately routed by EDGA to a specified away trading center for execution) and 11.11(g)(2) (providing for the DRT routing option, in which an order is routed to an alternative trading system as instructed); Cboe BZX Exchange, Inc. (''BZX'') Rules 11.13(b)(3)(D) (providing for the DRT routing option, in which an order is routed to an alternative trading system as instructed) and 11.13(b)(3)(F) (defining the Directed ISO routing option, under which an ISO order would bypass the BZX system and be sent to a specified away trading center); Cboe BYX Exchange, Inc. (''BYX'') Rules 11.13(b)(3)(D) (providing for the DRT routing option, in which an order is routed to an alternative trading system as instructed) and 11.13(b)(3)(F) (defining the Directed ISO routing option, under which an ISO order would bypass the BYX system and be sent to a specified away trading center). The Exchange also believes that the Directed Order would provide functionality similar to the C–LNK routing strategy formerly offered by EDGA, in which C–LNK orders bypassed EDGA's local book and routed directly to a specified Single Dealer Platform destination. *See* Securities Exchange Act Release No. 82904 (March 20, 2018), 83 FR 12995 (March 26, 2018) (SR-CboeEDGA–2018–004) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Expand an Offering Known a Cboe Connect To Provide Connectivity to Single-Dealer Platforms Connected to the Exchange's Network and To Propose a Per Share Executed Fee for Such Service).

[9] The Exchange will also provide information regarding the ATS(s) to which a Directed Order may be designated to route by Trader Update.

[10] 15 U.S.C. 78f(b).

[11] 15 U.S.C. 78f(b)(5).

ETP Holders are able to leverage existing protocols and specifications. Finally, the Exchange notes that the proposed functionality is not novel, as both the Exchange and other exchanges offer their members functionality whereby an exchange routes orders on behalf of a member to a specified trading center without such order interacting with the exchange's book.[12]

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange believes that the proposed rules governing Directed Orders would promote competition because they would provide for an order type on the Exchange that would facilitate additional trading opportunities for market participants. The Exchange further believes that the proposed rules would allow it to offer its ETP Holders functionality similar to order types and routing options that exist on other equities exchanges, thereby enabling the Exchange to compete with such exchanges.[13]

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or *up to 90 days* (i) as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve or disapprove the proposed rule change, or

(B) institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–NYSENAT–2022–06 on the subject line.

Paper Comments

- Send paper comments in triplicate to: Secretary, Securities and Exchange Commission, 100 F Street, NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–NYSENAT–2022–06. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–NYSENAT–2022–06 and should be submitted on or before May 31, 2022.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[14]

J. Matthew DeLesDernier,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–94844; File No. SR–NYSEArca–2021–90]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing of Amendment No. 1 to, and Designation of a Longer Period for Commission Action on Proceedings To Determine Whether To Approve or Disapprove, a Proposed Rule Change To List and Trade Shares of Grayscale Bitcoin Trust (BTC) Under NYSE Arca Rule 8.201–E

May 4, 2022.

On October 19, 2021, NYSE Arca, Inc. (''NYSE Arca'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission''), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'')[1] and Rule 19b–4 thereunder,[2] a proposed rule change to list and trade shares of Grayscale Bitcoin Trust (BTC) under NYSE Arca Rule 8.201–E (Commodity-Based Trust Shares). The proposed rule change was published for comment in the **Federal Register** on November 8, 2021.[3] On December 15, 2021, pursuant to Section 19(b)(2) of the Act,[4] the Commission designated a longer period within which to approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether to disapprove the proposed rule change.[5] On February 4, 2022, the Commission instituted proceedings under Section 19(b)(2)(B) of the Act[6] to determine whether to approve or disapprove the proposed rule change.[7]

On April 21, 2022, the Exchange filed Amendment No. 1 to the proposed rule change, which supersedes the original filing in its entirety, and is described in Items I and II below, which Items have been prepared by the Exchange.[8] The Commission is publishing this notice to solicit comments on the proposed rule change, as modified by Amendment No.

[8] In Amendment No. 1, the Exchange, among other things, provided updates to: (1) Certain statistical data, (2) information on the Index Price (as defined herein), and (3) information on the creation and redemption of Shares (as defined herein).

1, from interested persons, and is designating a longer period within which to approve or disapprove the proposed rule change, as modified by Amendment No. 1.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to list and trade shares of the following under NYSE Arca Rule 8.201–E: Grayscale Bitcoin Trust (BTC) (the ''Trust'').[9] This Amendment No. 1 to SR–NYSEArca–2021–90 replaces SR–NYSEArca–2021–90 as originally filed and supersedes such filing in its entirety. The proposed change is available on the Exchange's website at *www.nyse.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

Under NYSE Arca Rule 8.201–E, the Exchange may propose to list and/or trade pursuant to unlisted trading privileges ''Commodity-Based Trust Shares.'' [10] The Exchange proposes to list and trade shares (''Shares'') [11] of the Trust pursuant to NYSE Arca Rule 8.201–E.[12]

The sponsor of the Trust is Grayscale Investments, LLC (''Sponsor''), a Delaware limited liability company. The Sponsor is a wholly-owned subsidiary of Digital Currency Group, Inc. (''Digital Currency Group''). The trustee for the Trust is Delaware Trust Company (''Trustee''). The custodian for the Trust is Coinbase Custody Trust Company, LLC (''Custodian'').[13] The administrator of the Trust is BNY Mellon Asset Servicing, a division of The Bank of New York Mellon (the ''Administrator''). The distribution and marketing agent for the Trust is Genesis (the ''Marketing Agent''). The index provider for the Trust is CoinDesk Indices, Inc., formerly known as TradeBlock, Inc. (the ''Index Provider'').

The Trust is a Delaware statutory trust, organized on September 13, 2013, that operates pursuant to a trust agreement between the Sponsor and the Trustee (''Trust Agreement''). The Trust has no fixed termination date.

Operation of the Trust

According to the Annual Report, the Trust's assets consist solely of Bitcoins, Incidental Rights,[14] IR Virtual

[9] The Trust was previously named Bitcoin Investment Trust, whose name was changed pursuant to a Certificate of Amendment to the Certificate of Trust of Bitcoin Investment Trust filed with the Delaware Secretary of State on January 11, 2019.

[10] Commodity-Based Trust Shares are securities issued by a trust that represent investors' discrete identifiable and undivided beneficial ownership interest in the commodities deposited into the Trust.

[11] The Shares are expected to be listed under the ticker symbol ''BTC.''

[12] On March 22, 2016, the Trust confidentially filed its draft registration statement on Form 10 under the Securities Act of 1933 (15 U.S.C. 77a) (the ''Securities Act'' or ''33 Act'') (File No. 377–01289) (the ''Draft Registration Statement on Form S–1''). On May 31, 2016, the Trust confidentially filed Amendment No. 1 to the Draft Registration Statement on Form S–1. On July 29, 2016, the Trust confidentially filed Amendment No. 2 to the Draft Registration Statement on Form S–1. On November 2, 2016, the Trust confidentially filed Amendment No. 3 to the Draft Registration Statement on Form S–1. The Jumpstart Our Business Startups Act (the ''JOBS Act''), enacted on April 5, 2012, added Section 6(e) to the Securities Act. Section 6(e) of the Securities Act provides that an ''emerging growth company'' may confidentially submit to the Commission a draft registration statement for confidential, non-public review by the Commission staff prior to public filing, provided that the initial confidential submission and all amendments thereto shall be publicly filed not later than 21 days before the date on which the issuer conducts a road show, as such term is defined in Securities Act Rule 433(h)(4). An emerging growth company is defined in Section 2(a)(19) of the Securities Act as an issuer with less than $1,000,000,000 total annual gross revenues during its most recently completed fiscal year. The Trust meets the definition of an emerging growth company and consequently submitted its Draft Registration Statement on Form S–1 to the Commission on a confidential basis.

On January 20, 2017, the Trust filed its registration statement on Form S–1 under the Securities Act (File No. 333–215627) (the ''Registration Statement on Form S–1''). On March 24, 2017, the Trust filed Amendment No. 1 to the Registration Statement on Form S–1. On May 4, 2017, the Trust filed Amendment No. 2 to the Registration Statement on Form S–1. On October 25, 2017, the Trust requested the withdrawal of the Registration Statement on Form S–1.

On October 3, 2018, the Trust confidentially filed its draft registration statement on Form 10 under the Securities Act (File No. 377–02297) (the ''Draft Registration Statement on Form 10''). On December 6, 2018, the Trust confidentially filed Amendment No. 1 to the Draft Registration Statement on Form 10. On February 25, 2019, the Trust confidentially filed Amendment No. 2 to the Draft Registration Statement on Form 10. On April 15, 2019, the Trust confidentially filed Amendment No. 3 to the Draft Registration Statement on Form 10. On September 9, 2019, the Trust confidentially filed Amendment No. 4 to the Draft Registration Statement on Form 10. As noted above, the Trust meets the definition of an emerging growth company under the JOBS Act and consequently submitted its Draft Registration Statement on Form 10 to the Commission on a confidential basis.

On November 19, 2019, the Trust filed its registration statement on Form 10 under the Securities Act (File No. 000–56121) (the ''Registration Statement on Form 10''). On December 31, 2019, the Trust filed Amendment No. 1 to the Registration Statement on Form 10. On January 21, 2020, the Registration Statement on Form 10 was automatically deemed effective.

On March 20, 2020, the Trust filed its annual report on Form 10–K under the Securities Act (File No. 000–56121). On May 8, 2020, August 7, 2020 and November 6, 2020, the Trust filed its quarterly reports on Form 10–Q under the Securities Act (File No. 000–56121). On March 5, 2021 and February 25, 2022, the Trust filed its annual report on Form 10–K under the Securities Act (File No. 000–56121) (the ''Annual Report''). On May 7, 2021, August 6, 2021 and November 5, 2021, the Trust filed its quarterly reports on Form 10–Q under the Securities Act (File No. 000–56121) (the ''Quarterly Reports''). The descriptions of the Trust, the Shares, and Bitcoin contained herein are based, in part, on the Annual Report and Quarterly Reports.

On January 17, 2019, the Trust submitted to the Commission an amended Form D as a business trust. Shares of the Trust have been quoted on OTC Market's OTCQX Best Marketplace under the symbol ''GBTC'' since March 26, 2015. On February 22, 2019 and March 20, 2020, the Trust published annual reports for GBTC for the periods ended December 31, 2018 and December 31, 2019, respectively. On May 14, 2019, August 8, 2019, November 14, 2019, May 8, 2020, August 7, 2020 and November 6, 2020, the Trust published quarterly reports for GBTC for the periods ended March 31, 2019, June 30, 2019, September 30, 2019, March 31, 2020, June 30, 2020 and September 30, 2020 respectively. Reports published before January 11, 2020, the date on which the Trust's Shares became registered pursuant to Section 12(g) of the Act, can be found on OTC Market's website (*http://www.otcmarkets.com/stock/GBTC/disclosure*), and reports published on or after January 11, 2020 can be found on OTC Market's website (*http://www.otcmarkets.com/stock/GBTC/disclosure*) and the Commission's website (*https://www.sec.gov/cgi-bin/browse-edgar?CIK=gbtc&owner=exclude&action=getcompany*). The Shares will be of the same class and will have the same rights as shares of GBTC. Effective October 28, 2014, the Trust suspended its redemption program for shares of GBTC, in which shareholders were permitted to request the redemption of their shares through Genesis Global Trading, Inc. (formerly known as SecondMarket, Inc.), an affiliate of the Sponsor and the Trust (''Genesis''). According to the Sponsor, freely tradeable shares of GBTC will remain freely tradeable Shares on the date of the listing of the Shares that are unregistered under the Securities Act. Restricted shares of GBTC will remain subject to private placement restrictions and the holders of such restricted shares will continue to hold those Shares subject to those restrictions until they become freely tradable Shares.

[13] According to the Annual Report, Digital Currency Group owns a minority interest in Coinbase, Inc., which is the parent company of the Custodian, representing less than 1.0% of its equity.

[14] ''Incidental Rights'' are rights to acquire, or otherwise establish dominion and control over, any virtual currency or other asset or right, which rights are incident to the Trust's ownership of Bitcoins and arise without any action of the Trust, or of the Sponsor or Trustee on behalf of the Trust.

Currency,[15] proceeds from the sale of Bitcoins, Incidental Rights, and IR Virtual Currency pending use of such cash for payment of Additional Trust Expenses [16] or distribution to shareholders, and any rights of the Trust pursuant to any agreements, other than the Trust Agreement, to which the Trust is a party. Each Share represents a proportional interest, based on the total number of Shares outstanding, in each of the Trust's assets as determined by reference to the Index Price,[17] less the Trust's expenses and other liabilities (which include accrued but unpaid fees and expenses). The Sponsor expects that the market price of the Shares will fluctuate over time in response to the market prices of Bitcoin. In addition, because the Shares reflect the estimated accrued but unpaid expenses of the Trust, the number of Bitcoins represented by a Share will gradually decrease over time as the Trust's Bitcoins are used to pay the Trust's expenses. The Trust does not expect to take any Incidental Rights or IR Virtual Currency it may hold into account for purposes of determining the Trust's ''Digital Asset Holdings'' (as described below) or the Digital Asset Holdings per Share.

The activities of the Trust are limited to (i) issuing ''Baskets'' (as defined below) in exchange for Bitcoins transferred to the Trust as consideration in connection with the creations, (ii) transferring or selling Bitcoins, Incidental Rights, and IR Virtual Currency as necessary to cover the ''Sponsor's Fee'' and/or certain Trust expenses, (iii) transferring Bitcoins in exchange for Baskets surrendered for redemption (subject to obtaining regulatory approval from the SEC and approval of the Sponsor), (iv) causing the Sponsor to sell Bitcoins, Incidental Rights, and IR Virtual Currency on the termination of the Trust, (v) making distributions of Incidental Rights and/or IR Virtual Currency or cash from the sale thereof, and (vi) engaging in all administrative and security procedures necessary to accomplish such activities in accordance with the provisions of the Trust Agreement, the Custodian Agreement, the Index License Agreement and the Participant Agreements.

In addition, the Trust may engage in any lawful activity necessary or desirable in order to facilitate shareholders' access to Incidental Rights or IR Virtual Currency, provided that such activities do not conflict with the terms of the Trust Agreement. The Trust will not be actively managed. It will not engage in any activities designed to obtain a profit from, or to ameliorate losses caused by, changes in the market prices of Bitcoins.

Investment Objective

According to the Annual Report, and as further described below, the Trust's investment objective is for the value of the Shares (based on Bitcoin per Share) to reflect the value of the Bitcoins held by the Trust, as determined by reference to the Index Price, less the Trust's expenses and other liabilities. While an investment in the Shares is not a direct investment in Bitcoin, the Shares are designed to provide investors with a cost-effective and convenient way to gain investment exposure to Bitcoin. A substantial direct investment in Bitcoin may require expensive and sometimes complicated arrangements in connection with the acquisition, security and safekeeping of the Bitcoin and may involve the payment of substantial fees to acquire such Bitcoin from third-party facilitators through cash payments of U.S. dollars. Because the value of the Shares is correlated with the value of Bitcoin held by the Trust, it is important to understand the investment attributes of, and the market for, Bitcoin.

Bitcoin and the Bitcoin Network

According to the Annual Report, Bitcoin is a digital asset that is created and transmitted through the operations of the peer-to-peer ''Bitcoin Network,'' a decentralized network of computers that operates on cryptographic protocols. No single entity owns or operates the Bitcoin Network, the infrastructure of which is collectively maintained by a decentralized user base. The Bitcoin Network allows people to exchange tokens of value, called Bitcoin, which are recorded on a public transaction ledger known as a Blockchain. Bitcoin can be used to pay for goods and services, or it can be converted to fiat currencies, such as the U.S. dollar, at rates determined on ''Digital Asset Markets'' [18] that trade Bitcoin or in individual end-user-to-end-user transactions under a barter system.

The Bitcoin Network is decentralized and does not require governmental authorities or financial institution intermediaries to create, transmit, or determine the value of Bitcoin. Rather, Bitcoin is created and allocated by the Bitcoin Network protocol through a ''mining'' process. The value of Bitcoin is determined by the supply of and demand for Bitcoin on the Digital Asset Markets or in private end-user-to-end-user transactions.

New Bitcoin are created and rewarded to the miners of a block in the Blockchain for verifying transactions. The Blockchain is effectively a decentralized database that includes all blocks that have been solved by miners, and it is updated to include new blocks as they are solved. Each Bitcoin transaction is broadcast to the Bitcoin Network and, when included in a block, recorded in the Blockchain. As each new block records outstanding Bitcoin transactions, and outstanding transactions are settled and validated through such recording, the Blockchain represents a complete, transparent and unbroken history of all transactions of the Bitcoin Network.

Summary of a Bitcoin Transaction

Prior to engaging in Bitcoin transactions directly on the Bitcoin Network, a user generally must first install on its computer or mobile device a Bitcoin Network software program that will allow the user to generate a private and public key pair associated with a Bitcoin address, commonly referred to as a ''wallet.'' The Bitcoin Network software program and the Bitcoin address also enable the user to connect to the Bitcoin Network and transfer

[15] ''IR Virtual Currency'' is any virtual currency tokens, or other asset or right, acquired by the Trust through the exercise (subject to the applicable provisions of the Trust Agreement) of any Incidental Right.

[16] ''Additional Trust Expenses'' are any expenses incurred by the Trust in addition to the Sponsor's Fee that are not Sponsor-paid Expenses, including, but not limited to, (i) taxes and governmental charges, (ii) expenses and costs of any extraordinary services performed by the Sponsor (or any other service provider) on behalf of the Trust to protect the Trust or the interests of shareholders (including in connection with any Incidental Rights and any IR Virtual Currency), (iii) any indemnification of the Custodian or other agents, service providers or counterparties of the Trust, (iv) the fees and expenses related to the listing, quotation or trading of the Shares on any Secondary Market (including legal, marketing and audit fees and expenses) to the extent exceeding $600,000 in any given fiscal year and (v) extraordinary legal fees and expenses, including any legal fees and expenses incurred in connection with litigation, regulatory enforcement or investigation matters.

[17] The ''Index Price'' means the U.S. dollar value of a Bitcoin derived from the Digital Asset Exchanges that are reflected in the Index, calculated at 4:00 p.m., New York time, on each business day. For purposes of the Trust Agreement, the term Bitcoin Index Price has the same meaning as the Index Price as defined herein.

[18] A ''Digital Asset Market'' is a ''Brokered Market,'' ''Dealer Market,'' ''Principal-to-Principal Market'' or ''Exchange Market,'' as each such term is defined in the Financial Accounting Standards Board Accounting Standards Codification Master Glossary. The ''Digital Asset Exchange Market'' is the global exchange market for the trading of Bitcoins, which consists of transactions on electronic Digital Asset Exchanges. A ''Digital Asset Exchange'' is an electronic marketplace where exchange participants may trade, buy and sell Bitcoins based on bid-ask trading. The largest Digital Asset Exchanges are online and typically trade on a 24-hour basis, publishing transaction price and volume data.

Bitcoin to, and receive Bitcoin from, other users.

Each Bitcoin Network address, or wallet, is associated with a unique ''public key'' and ''private key'' pair. To receive Bitcoin, the Bitcoin recipient must provide its public key to the party initiating the transfer. This activity is analogous to a recipient for a transaction in U.S. dollars providing a routing address in wire instructions to the payor so that cash may be wired to the recipient's account. The payor approves the transfer to the address provided by the recipient by ''signing'' a transaction that consists of the recipient's public key with the private key of the address from where the payor is transferring the Bitcoin. The recipient, however, does not make public or provide to the sender its related private key.

Neither the recipient nor the sender reveal their private keys in a transaction, because the private key authorizes transfer of the funds in that address to other users. Therefore, if a user loses his private key, the user may permanently lose access to the Bitcoin contained in the associated address. Likewise, Bitcoin is irretrievably lost if the private key associated with them is deleted and no backup has been made. When sending Bitcoin, a user's Bitcoin Network software program must validate the transaction with the associated private key. In addition, since every computation on the Bitcoin Network requires processing power, there is a transaction fee involved with the transfer that is paid by the payor. The resulting digitally validated transaction is sent by the user's Bitcoin Network software program to the Bitcoin Network miners to allow transaction confirmation.

Bitcoin Network miners record and confirm transactions when they mine and add blocks of information to the Blockchain. When a miner mines a block, it creates that block, which includes data relating to (i) the satisfaction of the consensus mechanism to mine the block, (ii) a reference to the prior block in the Blockchain to which the new block is being added and (iii) transactions that have submitted to the Bitcoin Network but have not yet been added to the Blockchain. The miner becomes aware of outstanding, unrecorded transactions through the data packet transmission and distribution discussed above.

Upon the addition of a block included in the Blockchain, the Bitcoin Network software program of both the spending party and the receiving party will show confirmation of the transaction on the Blockchain and reflect an adjustment to the Bitcoin balance in each party's Bitcoin Network public key, completing the Bitcoin transaction. Once a transaction is confirmed on the Blockchain, it is irreversible.

Some Bitcoin transactions are conducted ''off-blockchain'' and are therefore not recorded in the Blockchain. Some ''off-blockchain transactions'' involve the transfer of control over, or ownership of, a specific digital wallet holding Bitcoin or the reallocation of ownership of certain Bitcoin in a pooled-ownership digital wallet, such as a digital wallet owned by a Digital Asset Exchange. In contrast to on-blockchain transactions, which are publicly recorded on the Blockchain, information and data regarding off-blockchain transactions are generally not publicly available. Therefore, off-blockchain transactions are not truly Bitcoin transactions in that they do not involve the transfer of transaction data on the Bitcoin Network and do not reflect a movement of Bitcoin between addresses recorded in the Blockchain. For these reasons, off-blockchain transactions are subject to risks, as any such transfer of Bitcoin ownership is not protected by the protocol behind the Bitcoin Network or recorded in, and validated through, the blockchain mechanism.

Custody of the Trust's Bitcoins

Digital assets and digital asset transactions are recorded and validated on blockchains, the public transaction ledgers of a digital asset network. Each digital asset blockchain serves as a record of ownership for all of the units of such digital asset, even in the case of certain privacy-focused digital assets, where the transactions themselves are not publicly viewable. All digital assets recorded on a blockchain are associated with a public blockchain address, also referred to as a digital wallet. Digital assets held at a particular public blockchain address may be accessed and transferred using a corresponding private key.

Key Generation

Public addresses and their corresponding private keys are generated by the Custodian in secret key generation ceremonies at secure locations inside faraday cages, which are enclosures used to block electromagnetic fields and mitigate attacks. The Custodian uses quantum random number generators to generate the public and private key pairs.

Once generated, private keys are encrypted, separated into ''shards,'' and then further encrypted. After the key generation ceremony, all materials used to generate private keys, including computers, are destroyed. All key generation ceremonies are performed offline. No party other than the Custodian has access to the private key shards of the Trust.

Key Storage

Private key shards are distributed geographically in secure vaults around the world, including in the United States. The locations of the secure vaults may change regularly and are kept confidential by the Custodian for security purposes.

The Digital Asset Account [19] uses offline storage, or ''cold storage'', mechanisms to secure the Trust's private keys. The term cold storage refers to a safeguarding method by which the private keys corresponding to digital assets are disconnected and/or deleted entirely from the internet. Cold storage of private keys may involve keeping such keys on a non-networked (or ''airgapped'') computer or electronic device or storing the private keys on a storage device (for example, a USB thumb drive) or printed medium (for example, papyrus, paper, or a metallic object). A digital wallet may receive deposits of digital assets but may not send digital assets without use of the digital assets' corresponding private keys. In order to send digital assets from a digital wallet in which the private keys are kept in cold storage, either the private keys must be retrieved from cold storage and entered into an online, or ''hot,'' digital asset software program to sign the transaction, or the unsigned transaction must be transferred to the cold server in which the private keys are held for signature by the private keys and then transferred back to the online digital asset software program. At that point, the user of the digital wallet can transfer its digital assets.

Security Procedures

The Custodian is the custodian of the Trust's private keys in accordance with the terms and provisions of the Custodian Agreement. Transfers from the Digital Asset Account require certain security procedures, including, but not limited to, multiple encrypted private key shards, usernames, passwords and 2-step verification. Multiple private key shards held by the Custodian must be combined to reconstitute the private key to sign any transaction in order to transfer the Trust's assets. Private key shards are distributed geographically in secure

[19] The Digital Asset Account is a segregated custody account controlled and secured by the Custodian to store private keys, which allows for the transfer of ownership or control of the Trust's Bitcoins on the Trust's behalf.

vaults around the world, including in the United States.

As a result, if any one secure vault is ever compromised, this event will have no impact on the ability of the Trust to access its assets, other than a possible delay in operations, while one or more of the other secure vaults is used instead. These security procedures are intended to remove single points of failure in the protection of the Trust's assets.

Transfers of Bitcoins to the Digital Asset Account will be available to the Trust once processed on the Blockchain.

Subject to obtaining regulatory approval to operate a redemption program and authorization of the Sponsor, the process of accessing and withdrawing Bitcoin from the Trust to redeem a Basket by an Authorized Participant will follow the same general procedure as transferring Bitcoins to the Trust to create a Basket by an Authorized Participant, only in reverse.

Digital Asset Holdings

According to the Annual Report, the Trust's assets consist solely of Bitcoins, Incidental Rights, IR Virtual Currency, proceeds from the sale of Bitcoins, Incidental Rights, and IR Virtual Currency pending use of such cash for payment of Additional Trust Expenses or distribution to the shareholders, and any rights of the Trust pursuant to any agreements, other than the Trust Agreement, to which the Trust is a party. Each Share represents a proportional interest, based on the total number of Shares outstanding, in each of the Trust's assets as determined in the case of Bitcoin by reference to the Index Price, less the Trust's expenses and other liabilities (which include accrued but unpaid fees and expenses). The Sponsor expects that the market price of the Shares will fluctuate over time in response to the market prices of Bitcoin. In addition, because the Shares reflect the estimated accrued but unpaid expenses of the Trust, the number of Bitcoin represented by a Share will gradually decrease over time as the Trust's Bitcoin is used to pay the Trust's expenses. The Trust does not expect to take any Incidental Rights or IR Virtual Currency it may hold into account for purposes of determining the Trust's Digital Asset Holdings or the Digital Asset Holdings per Share.

The Sponsor will evaluate the Bitcoin held by the Trust and determine the Digital Asset Holdings of the Trust in accordance with the relevant provisions of the Trust Documents. The following is a description of the material terms of the Trust Documents as they relate to valuation of the Trust's Bitcoin and the Digital Asset Holdings calculations.

On each business day at 4:00 p.m., New York time, or as soon thereafter as practicable (the ''Evaluation Time''), the Sponsor will evaluate the Bitcoin held by the Trust and calculate and publish the Digital Asset Holdings of the Trust. To calculate the Digital Asset Holdings, the Sponsor will:

1. Determine the Index Price as of such business day.

2. Multiply the Index Price by the Trust's aggregate number of Bitcoins owned by the Trust as of 4:00 p.m., E.T. on the immediately preceding day, less the aggregate number of Bitcoins payable as the accrued and unpaid Sponsor's Fee as of 4:00 p.m., E.T. on the immediately preceding day.

3. Add the U.S. dollar value of Bitcoins, calculated using the Index Price, receivable under pending creation orders, if any, determined by multiplying the number of the Baskets represented by such creation orders by the Basket Amount and then multiplying such product by the Index Price.[20]

4. Subtract the U.S. dollar amount of accrued and unpaid Additional Trust Expenses, if any.

5. Subtract the U.S. dollar value of the Bitcoins, calculated using the Index Price, to be distributed under pending redemption orders, if any, determined by multiplying the number of Baskets to be redeemed represented by such redemption orders by the Basket Amount and then multiplying such product by the Index Price (the amount derived from steps 1 through 5 above, the ''Digital Asset Holdings Fee Basis Amount'').

6. Subtract the U.S. dollar amount of the Sponsor's Fee that accrues for such business day, as calculated based on the Digital Asset Holdings Fee Basis Amount for such business day.

In the event that the Sponsor determines that the primary methodology used to determine the Index Price is not an appropriate basis for valuation of the Trust's Bitcoins, the Sponsor will utilize the cascading set of rules as described in ''Trust Valuation of Bitcoin'' below. In addition, in the event that the Trust holds any Incidental Rights and/or IR Virtual Currency, the Sponsor may, at its discretion, include the value of such Incidental Rights and/or IR Virtual Currency in the determination of the Digital Asset Holdings, provided that the Sponsor has determined in good faith a method for assigning an objective value to such Incidental Rights and/or IR Virtual Currency. At this time, the Trust does not expect to take any Incidental Rights or IR Virtual Currency it may hold into account for the purposes of determining the Digital Asset Holdings or the Digital Asset Holdings per Share.

Limits on Bitcoin Supply

The supply of new Bitcoin is mathematically controlled so that the number of Bitcoin grows at a limited rate pursuant to a pre-set schedule. The number of Bitcoin awarded for solving a new block is automatically halved after every 210,000 blocks are added to the Blockchain. Currently, the fixed reward for solving a new block is 6.25 Bitcoin per block and this is expected to decrease by half to become 3.125 Bitcoin after the next 210,000 blocks have entered the Bitcoin Network, which is expected to be mid-2024. This deliberately controlled rate of Bitcoin creation means that the number of Bitcoin in existence will increase at a controlled rate until the number of Bitcoin in existence reaches the pre-determined 21 million Bitcoin. As of December 31, 2021, approximately 18.9 million Bitcoins were outstanding and the date when the 21 million Bitcoin limitation will be reached is estimated to be the year 2140.

Bitcoin Value

Digital Asset Exchange Valuation

According to the Annual Report, the value of Bitcoin is determined by the value that various market participants place on Bitcoin through their transactions. The most common means of determining the value of a Bitcoin is by surveying one or more Digital Asset Exchanges where Bitcoin is traded publicly (*e.g.,* Coinbase Pro, Bitstamp, Kraken, and LMAX Digital). Additionally, there are over-the-counter dealers or market makers that transact in Bitcoin.

Digital Asset Exchange Public Market Data

On each online Digital Asset Exchange, Bitcoin is traded with publicly disclosed valuations for each executed trade, measured by one or more fiat currencies such as the U.S. dollar or Euro. Over-the-counter dealers or market makers do not typically disclose their trade data.

As of December 31, 2021, the Digital Asset Exchanges included in the Index are Coinbase Pro, Bitstamp, Kraken and LMAX Digital. As further described below, each of these Digital Asset Exchanges are in compliance with applicable U.S. federal and state

[20] ''Baskets'' and ''Basket Amount'' have the meanings set forth in ''Creation of Shares'' below.

licensing requirements and practices regarding AML and KYC regulations.

Coinbase Pro: A U.S.-based exchange registered as a money services business (''MSB'') with FinCen and licensed as a virtual currency business under the NYDFS BitLicense as well as money transmitter in various U.S. states.

Bitstamp: A U.K.-based exchange registered as an MSB with FinCen and licensed as a virtual currency business under the NYDFS BitLicense as well as money transmitter in various U.S. states.

Kraken: A U.S.-based exchange registered as an MSB with FinCen and licensed as money transmitter in various U.S. states. Kraken does not hold a BitLicense.

LMAX Digital: A U.K.-based exchange registered as a broker with FCA. LMAX Digital does not hold a BitLicense.

Currently, there are several Digital Asset Exchanges operating worldwide, and online Digital Asset Exchanges represent a substantial percentage of Bitcoin buying and selling activity and provide the most data with respect to prevailing valuations of Bitcoins. These exchanges include established exchanges such as exchanges included in the Index, which provide a number of options for buying and selling Bitcoins. The below table reflects the trading volume in Bitcoins and market share of the BTC–U.S. dollar trading pair of each of the Digital Asset Exchanges included in the Index as of December 31, 2021 using data reported by the Index Provider from May 1, 2015 to December 31, 2021:

Digital Asset Exchanges included in the Index as of December 31, 2021 [21]	Volume (BTC)	Market share [22] (%)
Coinbase Pro	32,019,298	20.76
Bitstamp	22,030,291	14.28
Kraken	11,009,299	7.14
LMAX Digital	6,329,133	4.10
Total BTC–U.S. dollar trading pair	71,388,021	46.28

The domicile, regulation, and legal compliance of the Digital Asset Exchanges included in the Index varies. Information regarding each Digital Asset Exchange may be found, where available, on the websites for such Digital Asset Exchanges, among other places.

The Index and the Index Price

The Index is a U.S. dollar-denominated composite reference rate for the price of Bitcoin. The Index is designed to (i) mitigate the effects of fraud, manipulation and other anomalous trading activity from impacting the Bitcoin reference rate, (ii) provide a real-time, volume-weighted fair value of Bitcoin and (iii) appropriately handle and adjust for non-market related events.

The Index Price is determined by the Index Provider through a process in which trade data is cleansed and compiled in such a manner as to algorithmically reduce the impact of anomalistic or manipulative trading. This is accomplished by adjusting the weight of each data input based on price deviation relative to the observable set, as well as recent and long-term trading volume at each venue relative to the observable set.

Constituent Exchange Selection

According to the Annual Report, the Digital Asset Exchanges that are included in the Index are selected by the Index Provider utilizing a methodology that is guided by the International Organization of Securities Commissions (''IOSCO'') principles for financial benchmarks. For an exchange to become a Digital Asset Exchange included in the Index (a ''Constituent Exchange''), it must satisfy the criteria listed below (the ''Inclusion Criteria''):

- Compliance with applicable U.S. federal and state licensing requirements and practices regarding anti-money laundering (''AML'') and know-your-customer (''KYC'') regulations;
- Publicly known ownership;
- No restrictions on deposits and/or withdrawals of Bitcoin;
- No restrictions on deposits and/or withdrawals of U.S. dollars;
- Reliably displays new trade prices and volumes on a real-time basis through APIs;
- Programmatic trading [23] of the Bitcoin/U.S. dollar spot price;
- Liquid market in the Bitcoin/U.S. dollar spot price;
- Trading volume must represent a minimum of total Bitcoin/U.S. dollar trading volumes (5% for U.S. exchanges and 10% non-U.S. exchanges); and
- Discretion of the Index Provider's analysts [24]

A Digital Asset Exchange is removed from the Index when it no longer satisfies the Inclusion Criteria. The Index Provider does not currently include data from over-the-counter markets or derivatives platforms among the Constituent Exchanges. According to the Annual Report, over-the-counter data is not currently included because of the potential for trades to include a significant premium or discount paid for larger liquidity, which creates an uneven comparison relative to more active markets. There is also a higher potential for over-the-counter transactions to not be arms-length, and thus not be representative of a true market price. Bitcoin derivative markets are also not currently included as the markets remain relatively thin. The Index Provider will consider IOSCO principles for financial benchmarks and the management of trading venues of Bitcoin derivatives when considering inclusion of over-the-counter or derivative platform data in the future.

The Index Provider and the Sponsor have entered into an index license agreement, dated as of February 1, 2022 (the ''Index License Agreement''), governing the Sponsor's use of the Index

[21] On January 19, 2020, the Index Provider removed Bittrex due to a lack of trading volume and added LMAX Digital based on the exchange meeting the liquidity thresholds for inclusion in the Index. On April 6, 2020, the Index Provider removed itBit due to a lack of trading volume and did not add any constituents as part of its scheduled quarterly review.

[22] Market share is calculated using trading volume data (in Bitcoins) provided by the Index Provider for certain Digital Asset Exchanges, including Coinbase Pro, Bitstamp, Kraken, and LMAX Digital, as well as certain other large U.S.-dollar denominated Digital Asset Exchanges that are not currently included in the Index, including Binance. US (data included from April 1, 2020), Bitfinex, Bitflyer (data included from December 24, 2018), Bittrex (data included from July 31, 2018), ErisX (data included from October 1, 2020), Gemini, itBit, LakeBTC (data included from May 1, 2015 to June 1, 2018 and from January 27, 2019), HitBTC (data included from April 1, 2019 to March 31, 2020) and OKCoin.

[23] Exchanges with programmatic trading offer traders an application programming interface that permits trading by sending programmed commands to the exchange.

[24] This includes additional due diligence conducted by the Index Provider's analysts.

Price.[25] Pursuant to the terms of the Index License Agreement, the Index Provider may adjust the calculation methodology for the Index Price without notice to, or consent of, the Trust or its shareholders. The Index Provider may decide to change the calculation methodology to maintain the integrity of the Index Price calculation should it identify or become aware of previously unknown variables or issues with the existing methodology that it believes could materially impact its performance and/or reliability. The Index Provider has sole discretion over the determination of Index Price and may change the methodologies for determining the Index Price from time to time. Shareholders will be notified of any material changes to the calculation methodology or the Index Price in the Trust's current reports and will be notified of all other changes that the Sponsor considers significant in the Trust's periodic reports. The Trust will determine the materiality of any changes to the Index Price on a case-by-case basis, in consultation with external counsel.

The Index Provider may change the trading venues that are used to calculate the Index or otherwise change the way in which the Index is calculated at any time. For example, the Index Provider has scheduled quarterly reviews in which it may add or remove Constituent Exchanges that satisfy or fail the Inclusion Criteria. The Index Provider does not have any obligation to consider the interests of the Sponsor, the Trust, the shareholders, or anyone else in connection with such changes. The Index Provider is not required to publicize or explain the changes or to alert the Sponsor to such changes. Although the Index methodology is designed to operate without any manual intervention, rare events would justify manual intervention. Intervention of this kind would be in response to non-market-related events, such as the halting of deposits or withdrawals of funds on a Digital Asset Exchange, the unannounced closure of operations on a Digital Asset Exchange, insolvency or the compromise of user funds. In the event that such an intervention is necessary, the Index Provider would issue a public announcement through its website, API and other established communication channels with its clients.

[25] Upon entering into the Index License Agreement, the Sponsor and the Index Provider terminated the license agreement between the parties dated as of February 28, 2019.

Determination of the Index Price

The Index applies an algorithm to the price of Bitcoin on the Constituent Exchanges calculated on a per second basis over a 24-hour period. The Index's algorithm is expected to reflect a four-pronged methodology to calculate the Index Price from the Constituent Exchanges:

- *Volume Weighting:* Constituent Exchanges with greater liquidity receive a higher weighting in the Index Price, increasing the ability to execute against (*i.e.,* replicate) the Index in the underlying spot markets.
- *Price-Variance Weighting:* The Index Price reflects data points that are discretely weighted in proportion to their variance from the rest of the other Constituent Exchanges. As the price at a particular exchange diverges from the prices at the rest of the Constituent Exchanges, its weight in the Index Price consequently decreases.
- *Inactivity Adjustment:* The Index Price algorithm penalizes stale activity from any given Constituent Exchange. When a Constituent Exchange does not have recent trading data, its weighting in the Index Price is gradually reduced until it is de-weighted entirely. Similarly, once trading activity at a Constituent Exchange resumes, the corresponding weighting for that Constituent Exchange is gradually increased until it reaches the appropriate level.
- *Manipulation Resistance:* In order to mitigate the effects of wash trading and order book spoofing, the Index Price only includes executed trades in its calculation. Additionally, the Index Price only includes Constituent Exchanges that charge trading fees to its users in order to attach a real, quantifiable cost to any manipulation attempts.

The Index Provider formally re-evaluates the weighting algorithm quarterly, but maintains discretion to change the way in which an Index Price is calculated based on its periodic review or in extreme circumstances. The Index is designed to limit exposure to trading or price distortion of any individual Digital Asset Exchange that experiences periods of unusual activity or limited liquidity by discounting, in real-time, anomalous price movements at individual Digital Asset Exchanges.

The Sponsor believes the Index Provider's selection process for Constituent Exchanges as well as the methodology of the Index Price's algorithm provides a more accurate picture of Bitcoin price movements than a simple average of Digital Asset Exchange spot prices, and that the weighting of Bitcoin prices on the Constituent Exchanges limits the inclusion of data that is influenced by temporary price dislocations that may result from technical problems, limited liquidity or fraudulent activity elsewhere in the Bitcoin spot market. By referencing multiple trading venues and weighting them based on trade activity, the Sponsor believes that the impact of any potential fraud, manipulation or anomalous trading activity occurring on any single venue is reduced.

If the Index Price becomes unavailable, or if the Sponsor determines in good faith that such Index Price does not reflect an accurate price for Bitcoin, then the Sponsor will, on a best efforts basis, contact the Index Provider to obtain the Index Price directly from the Index Provider. If after such contact such Index Price remains unavailable or the Sponsor continues to believe in good faith that such Index Price does not reflect an accurate price for the relevant digital asset, then the Sponsor will employ a cascading set of rules to determine the Index Price, as described below in ''Determination of the Index Price When Index Prices are Unavailable.''

The Trust values its Bitcoin for operational purposes by reference to the Index Price. The Index Price is the value of a Bitcoin as represented by the Index, calculated at 4:00 p.m., New York time, on each business day. The Index Provider develops, calculates and publishes the Index on a continuous basis using the price at the Digital Asset Benchmark Exchanges, as selected by the Index Provider.

Illustrative Example

For the purposes of illustration, outlined below are examples of how the attributes that impact weighting and adjustments in the aforementioned methodology may be utilized to generate the Index Price for a digital asset. For example, the Constituent Exchanges for the Index Price of the digital asset are Coinbase Pro, Kraken, LMAX Digital and Bitstamp.

The Index Price algorithm, as described above, accounts for manipulation at the outset by only including data from executed trades on Constituent Exchanges that charge trading fees. Then, the below-listed elements may impact the weighting of the Constituent Exchanges on the Index price as follows:

- *Volume Weighting:* Each Constituent Exchange will be weighted to appropriately reflect the trading volume share of the Constituent Exchange relative to all the Constituent Exchanges during this same period. For

example, an average hourly weighting of 52.17%, 11.88%, 24.46% and 11.49% for Coinbase Pro, Kraken, LMAX Digital and Bitstamp, respectively, would represent each Constituent Exchange's share of trading volume during the same period.

• *Inactivity Adjustment:* Assume that a Constituent Exchange's trading engine represented a 14% influence on the trading price of the digital asset and then went offline for approximately two hours. The index algorithm automatically recognizes inactivity and de-weights that Constituent Exchange's influence in the Index Price—for example, from 14% to 0%—until trading activity resumes. At which point it would re-weight the Constituent Exchange activity to a weight lower than its original weighting—for example, to 12%.

• *Price-Variance Weighting:* Assume that for a one-hour period, the digital asset's execution prices on one Constituent Exchange were trading more than 7% higher than the average execution prices on another Constituent Exchange. The algorithm will automatically detect the anomaly and reduce that specific Constituent Exchange's weighting to 0% for that one-hour period, ensuring a reliable spot reference unaffected by the localized event.

Determination of the Index Price When Index Price is Unavailable

The Sponsor will use the following cascading set of rules to calculate the Index Price.[26] For the avoidance of doubt, the Sponsor will employ the below rules sequentially and in the order as presented below, should one or more specific rule(s) fail.

1. Index Price = The price set by the Index as of 4:00 p.m., New York time, on the valuation date. If the Index becomes unavailable, or if the Sponsor determines in good faith that the Index does not reflect an accurate price, then the Sponsor will, on a best efforts basis, contact the Index Provider to obtain the Index Price directly from the Index Provider. If after such contact the Index remains unavailable or the Sponsor continues to believe in good faith that the Index does not reflect an accurate price, then the Sponsor will employ the next rule to determine the Index Price. There are no predefined criteria to make a good faith assessment and it will be made by the Sponsor in its sole discretion.

2. Index Price = The price set by Coin Metrics Real-Time Rate (the ''Secondary Index'') as of 4:00 p.m., New York time, on the valuation date (the ''Secondary Index Price''). The Secondary Index Price is a real-time reference rate price, calculated using trade data from constituent markets selected by Coin Metrics (the ''Secondary Index Provider''). The Secondary Index Price is calculated by applying weighted-median techniques to such trade data where half the weight is derived from the trading volume on each constituent market and half is derived from inverse price variance, where a constituent market with high price variance as a result of outliers or market anomalies compared to other constituent markets is assigned a smaller weight. If the Secondary Index becomes unavailable, or if the Sponsor determines in good faith that the Secondary Index does not reflect an accurate price, then the Sponsor will, on a best efforts basis, contact the Secondary Index Provider to obtain the Secondary Index Price directly from the Secondary Index Provider. If after such contact the Secondary Index remains unavailable or the Sponsor continues to believe in good faith that the Secondary Index does not reflect an accurate price, then the Sponsor will employ the next rule to determine the Index Price. There are no predefined criteria to make a good faith assessment and it will be made by the Sponsor in its sole discretion.

3. Index Price = The price set by the Trust's principal market (the ''Tertiary Pricing Option'') as of 4:00 p.m., New York time, on the valuation date. The Tertiary Pricing Option is a spot price derived from the principal market's public data feed that is believed to be consistently publishing pricing information as of 4:00 p.m., New York time, and is provided to the Sponsor via an application programming interface. If the Tertiary Pricing Option becomes unavailable, or if the Sponsor determines in good faith that the Tertiary Pricing Option does not reflect an accurate price, then the Sponsor will, on a best efforts basis, contact the Tertiary Pricing Provider to obtain the Tertiary Pricing Option directly from the Tertiary Pricing Provider. If after such contact the Tertiary Pricing Option remains unavailable after such contact or the Sponsor continues to believe in good faith that the Tertiary Pricing Option does not reflect an accurate price, then the Sponsor will employ the next rule to determine the Index Price. There are no predefined criteria to make a good faith assessment and it will be made by the Sponsor in its sole discretion.

4. Index Price = The Sponsor will use its best judgment to determine a good faith estimate of the Index Price. There are no predefined criteria to make a good faith assessment and it will be made by the Sponsor in its sole discretion.

In the event of a fork, the Index Provider may calculate the Index Price based on a virtual currency that the Sponsor does not believe to be the appropriate asset that is held by the Trust.[27] In this event, the Sponsor has full discretion to use a different index provider or calculate the Index Price itself using its best judgment.

The Structure and Operation of the Trust Protects Investors and Satisfies Commission Requirements for Bitcoin-Based Exchange Traded Products

The Commission has expressed legitimate concerns about the underlying Digital Asset Market due to the potential for fraud and manipulation and has clearly outlined the reasons why prior Bitcoin-based ETP proposals have been unable to satisfy these concerns in orders disapproving the proposed listing and trading of the Winklevoss Bitcoin Trust, Bitwise Bitcoin ETF Trust, United States Bitcoin and Treasury Investment Trust, and

[26] The Sponsor updated these rules on January 11, 2022.

[27] According to the Annual Report, when a modification is introduced and a substantial majority of users and miners consent to the modification, the change is implemented and the network remains uninterrupted. However, if less than a substantial majority of users and miners consent to the proposed modification, and the modification is not compatible with the software prior to its modification, the consequence would be what is known as a ''hard fork'' of the Bitcoin Network, with one group running the pre-modified software and the other running the modified software. The effect of such a fork would be the existence of two versions of Bitcoin running in parallel, yet lacking interchangeability. For example, in August 2017, Bitcoin ''forked'' into Bitcoin and a new digital asset, Bitcoin Cash, as a result of a several-year dispute over how to increase the rate of transactions that the Bitcoin Network can process. In the event of a hard fork of the Bitcoin Network, the Sponsor will, if permitted by the terms of the Trust Agreement, use its discretion to determine, in good faith, which peer-to-peer network, among a group of incompatible forks of the Bitcoin Network, is generally accepted as the Bitcoin Network and should therefore be considered the appropriate network for the Trust's purposes. The Sponsor will base its determination on a variety of then relevant factors, including, but not limited to, the Sponsor's beliefs regarding expectations of the core developers of Bitcoin, users, services, businesses, miners, and other constituencies, as well as the actual continued acceptance of, mining power on, and community engagement with, the Bitcoin Network. There is no guarantee that the Sponsor will choose the digital asset that is ultimately the most valuable fork, and the Sponsor's decision may adversely affect the value of the Shares as a result. The Sponsor may also disagree with shareholders, security vendors, and the Index Provider on what is generally accepted as Bitcoin and should therefore be considered ''Bitcoin'' for the Trust's purposes, which may also adversely affect the value of the Shares as a result.

various Bitcoin-based trust issued receipts.[28]

In these disapproval orders, the Commission outlined that a proposal relating to a Bitcoin-based ETP could satisfy its concerns regarding potential for fraud and manipulation by demonstrating:

(1) *Inherent Resistance to Fraud and Manipulation:* That the underlying commodity market is inherently resistant to fraud and manipulation;

(2) *Other Means to Prevent Fraud and Manipulation:* That there are other means to prevent fraudulent and manipulative acts and practices that are sufficient; or

(3) *Surveillance Sharing:* That the listing exchange has entered into a surveillance sharing agreement with a regulated market of significant size relating to the underlying or reference assets.

As described below, the Sponsor believes the structure and operation of the Trust are designed to prevent fraudulent and manipulative acts and practices, to protect investors and the public interest, and to respond to the specific concerns that the Commission has identified with respect to potential fraud and manipulation in the context of a Bitcoin-based ETP.

How the Trust Meets Standards in the Winklevoss Order, Bitwise Order and Wilshire Phoenix Order

1. Resistance to or Prevention of Fraud and Manipulation

In the Bitwise Order, the Commission disagreed with the proposition that Bitcoin's fungibility, transportability and exchange tradability combine to provide unique protections against, and allow Bitcoin to be uniquely resistant to, attempts at price manipulation. The Commission reached its conclusion based on concessions by Bitwise that 95% of the reported trading in Bitcoin is ''fake'' or non-economic, effectively admitting that the properties of Bitcoin do not make it inherently resistant to manipulation. Bitwise's concessions were further compounded by evidence of potential and actual fraud and manipulation in the historical trading of Bitcoin on certain marketplaces such as (1) ''wash'' trading, (2) trading based on material, non-public information, including the dissemination of false and misleading information, (3) manipulative activity involving Tether, and (4) fraud and manipulation.[29]

The Sponsor acknowledges the possibility that fraud and manipulation may exist and that Bitcoin trading *on any given exchange* may be no more uniquely resistant to fraud and manipulation than other commodity markets.[30] However, the Sponsor believes that the fundamental features of Bitcoin's fungibility, transportability and exchange tradability offer novel protections beyond those that exist in traditional commodity markets or equity markets when combined with other means, as discussed further below.

2. Other Means To Prevent Fraud and Manipulation

The Commission has recognized that a listing exchange could demonstrate that other means to prevent fraudulent and manipulative acts and practices are sufficient to justify dispensing with the requisite surveillance-sharing agreement.[31] In evaluating the effectiveness of this type of resistance, the Commission does not apply a ''cannot be manipulated'' standard. Instead, the Commission requires that such resistance to fraud and manipulation be novel and beyond those protections that exist in traditional commodity markets or equity markets for which the Commission has long required surveillance-sharing agreements in the context of listing derivative securities products.[32]

The Sponsor believes the Index represents a novel means to prevent fraud and manipulation from impacting a reference price for Bitcoin and that it offers protections beyond those that exist in traditional commodity markets or equity markets. Specifically, Bitcoin is novel and exists outside traditional commodity markets. It therefore stands to reason that the methods in which it trades will be novel and that the market for Bitcoin will have different attributes than traditional commodity markets. Bitcoin was only introduced within the past decade, twenty years after the first U.S. ETFs were offered [33] and 150 years after the first futures were offered.[34] In contrast to older commodities such as gold, silver, platinum, palladium or copper, which the Commission has noted all had at least one significant, regulated market for trading futures on the underlying commodity at the time commodity trust ETPs were approved for listing and trading, the first trading in Bitcoin took place entirely in an open, transparent and online setting where other commodities cannot trade.

The Trust has priced its Shares consistently for more than six years based on the Index. The Sponsor believes the Trust's use of the Index specifically addresses the Commission's concerns in that the Index serves as an alternative means to prevent fraud and manipulation. Specifically, the Index can (i) mitigate the effects of fraud, manipulation and other anomalous trading activity on the Bitcoin reference rate, (ii) provide a real-time, volume-weighted fair value of Bitcoin and (iii) appropriately handle and adjust for non-market related events.

As described in more detail below, the Sponsor believes that the Index

[34] CFTC, ''History of the CFTC,'' *https://www.cftc.gov/About/HistoryoftheCFTC/history_precftc.html.*

accomplishes those objectives in the following ways:

1. The Index tracks the Digital Asset Exchange Market Price through trading activity at ''U.S.-Compliant Exchanges'';[35]

2. The Index mitigates the impact of instances of fraud, manipulation and other anomalous trading activity in real-time through systematic adjustments;

3. The Index is constructed and maintained by an expert third-party index provider, allowing for prudent handling of non-market-related events; and

4. The Index mitigates the impact of instances of fraud, manipulation and other anomalous trading activity concentrated on any one specific exchange through a cross-exchange composite index rate.

1. The Index tracks the Digital Asset Exchange Market Price through trading activity at ''U.S.-Compliant Exchanges''.

To reduce the risk of fraud, manipulation, and other anomalous trading activity from impacting the Index, only U.S.-Compliant Exchanges are eligible to be included in the Index.

The Index maintains a minimum number of three exchanges and a maximum number of five exchanges to track the Digital Asset Exchange Market while offering replicability for traders and market makers.[36]

U.S.-Compliant Exchanges possess safeguards that protect against fraud and manipulation. For example, U.S.-Compliant Exchanges regulated by the New York State Department of Financial Services (''NYDFS'') under the BitLicense program have regulatory requirements to implement measures designed to effectively detect, prevent, and respond to fraud, attempted fraud, market manipulation, and similar wrongdoing, and to monitor, control, investigate and report back to the NYDFS regarding any wrongdoing.[37] These exchanges also have the following obligations:[38]

- Submission of audited financial statements including income statements, statement of assets/liabilities, insurance, and banking;
- Compliance with capitalization requirements set at NYDFS's discretion;
- Prohibitions against the sale or encumbrance to protect full reserves of custodian assets;
- Fingerprints and photographs of employees with access to customer funds;
- Retention of a qualified Chief Information Security Officer and annual penetration testing/audits;
- Documented business continuity and disaster recovery plan, independently tested annually; and
- Participation in an independent exam by NYDFS.

Other U.S.-Compliant Exchanges have voluntarily implemented measures to protect against common forms of market manipulation.[39]

Furthermore, all U.S.-Compliant Exchanges are considered Money Services Businesses (''MSBs'') that are subject to federal and state reporting requirements of the U.S Department of Treasury's FinCEN division that provide additional safeguards. For example, unscrupulous traders may be less likely to engage in fraudulent or manipulative acts and practices on exchanges that (1) report suspicious activity to FinCEN as money services businesses, (2) report to state regulators as money transmitters, and/or (3) require customer identification through KYC procedures. U.S.-Compliant Exchanges are required to:[40]

- Identify people with ownership stakes or controlling roles in the MSB;
- Establish a formal Anti-Money Laundering (AML) policy in place with documentation, training, independent review, and a named compliance officer;
- Implement strict customer identification and verification policies and procedures;
- File Suspicious Activity Reports (SARs) for suspicious customer transactions;
- File Currency Transaction Reports (CTRs) for cash-in or cash-out transactions greater than $10,000; and
- Maintain a five-year record of currency exchanges greater than $1,000 and money transfers greater than $3,000.

Lastly, because of Bitcoin's classification as a commodity, the CFTC has authority to police fraud and manipulation on U.S.-Compliant Exchanges.

The Sponsor acknowledges that there are substantial differences between FinCEN and New York state regulations and the Commission's regulation of the national securities exchanges.[41] The Sponsor does not believe the inclusion of U.S.-Compliant Exchanges is in and of itself sufficient to prove that the Index is an alternative means to prevent fraud and manipulation such that surveillance sharing agreements are not required, but does believe that the inclusion of only U.S.-Compliant Exchanges in the Index is one significant way in which the Index is protected from the potential impacts of fraud and manipulation.

2. The Index mitigates the impact of instances of fraud, manipulation and other anomalous trading activity in real-time through systematic adjustments.

The Index is calculated once every second according to a systematic methodology that relies on observed trading activity on the Constituent Exchanges. While the precise methodology underlying the Index is currently proprietary, the key elements of the Index are outlined below:

- *Volume Weighting:* Constituent Exchanges with greater liquidity receive a higher weighting in the Index, increasing the ability to execute against (*i.e.,* replicate) the Index in the underlying spot markets.
- *Price-Variance Weighting:* The Index reflects data points that are discretely weighted in proportion to their variance from the rest of the Constituent Exchanges. As the price at a Constituent Exchange diverges from the prices at the rest of the Constituent Exchanges, its weight in the Index consequently decreases.
- *Inactivity Adjustment:* The Index algorithm penalizes stale activity from any given Constituent Exchange. When a Constituent Exchange does not have recent trading data, its weighting in the

[35] ''U.S.-Compliant Exchanges'' are exchanges in the Digital Asset Exchange Market that are compliant with applicable U.S. federal and state licensing requirements and practices regarding AML and KYC regulations. All Constituent Exchanges are U.S.-Compliant Exchanges. ''Non-U.S.-Compliant Exchanges'' are all other exchanges in the Digital Asset Exchange Market. As of December 31, 2021, the U.S.-Compliant Exchanges that the Index Provider considered for inclusion in the Index were Bitstamp, Coinbase Pro, Kraken and LMAX Digital. From these U.S.-Compliant Exchanges, the Index Provider then applies additional Inclusion Criteria to determine the Constituent Exchange. As of December 31, 2021, the Constituent Exchanges were Bitstamp, Coinbase Pro, Kraken, and LMAX Digital.

[36] According to the Sponsor, the more exchanges included in the Index, the more ability there is for traders and market makers to trade against the Index by arbitraging price differences. For example, in the event of variances between Bitcoin prices on Constituent Exchanges and non-Constituent Exchanges, arbitrage trading opportunities would exist. These discrepancies generally consolidate over time, as price differences across exchanges are realized and capitalized upon by traders and market makers.

[39] As of the date of filing, two of the four Constituent Exchanges, Bitstamp and Coinbase Pro, are regulated by NYDFS.

[40] *See* BSA Requirements for MSBs, FinCEN website: *https://www.fincen.gov/bsarequirements-msbs.*

[41] *See* Bitwise Order, 84 FR at 55392; Wilshire Phoenix Order, 85 FR at 12603.

Index is gradually reduced, until it is de-weighted entirely. Similarly, once trading activity at the Constituent Exchange resumes, the corresponding weighting for that Constituent Exchange is gradually increased until it reaches the appropriate level.

• *Manipulation Resistance:* In order to mitigate the effects of wash trading and order book spoofing, the Index only includes executed trades in its calculation. Additionally, the Index only includes Constituent Exchanges that charge trading fees to its users in order to attach a real, quantifiable cost to any manipulation attempts.

The Index Provider reviews and periodically updates the exchanges included in the Index by utilizing a methodology that is guided by the IOSCO principles for financial benchmarks.

3. The Index is constructed and maintained by an expert third-party index provider, allowing for prudent handling of non-market-related events.

The Index Provider reviews and periodically updates which exchanges are included in the Index by utilizing a methodology that is guided by the IOSCO principles for financial benchmarks.

For an exchange to become a Constituent Exchange, it must satisfy the following Inclusion Criteria:

• Compliance with any applicable U.S. federal and state licensing requirements and practices regarding AML and KYC regulations (*i.e.,* the Constituent Exchange must be a U.S.-Compliant Exchange);

• Publicly known ownership entity;

• No restrictions on deposits and/or withdrawals of Bitcoin;

• No restrictions on deposits and/or withdrawals of USD;

• Reliably publish trade prices and volumes on a real-time basis through APIs;

• Charges trading fees to its users in order to attach a real, quantifiable cost to any manipulation attempts;

• Offer programmatic trading of the Bitcoin/USD spot price;

• Liquid market in the Bitcoin/USD pair;

• Trading volume that represents a minimum of total Bitcoin/USD trading volumes (5% for U.S. exchanges and 10% non-U.S. exchanges); and

• Discretion of the Index Provider's analysts.

Although the Index methodology is designed to operate without any human interference, rare events would justify manual intervention. Manual intervention would only be in response to ''non-market-related events'' (*e.g.,* halting of deposits or withdrawals of funds, unannounced closure of exchange operations, insolvency, compromise of user funds, etc.). In the event that such an intervention is necessary, the Index Provider would issue a public announcement through its website, API and other established communication channels with its clients.[42]

4. The Index mitigates the impact of instances of fraud, manipulation and other anomalous trading activity concentrated on any one specific exchange through a cross-exchange composite index rate.

The Index is based on the price and volume data of multiple U.S.-Compliant Exchanges that satisfy the Index Provider's Inclusion Criteria. By referencing multiple trading venues and weighting them based on trade activity, the impact of any potential fraud, manipulation, or anomalous trading activity occurring on any single venue is reduced. Specifically, the effects of fraud, manipulation, or anomalous trading activity occurring on any single venue are de-weighted and consequently diluted by non-anomalous trading activity from other Constituent Exchanges.

Although the Index is designed to accurately capture the market price of Bitcoin, third parties may be able to purchase and sell Bitcoin on public or private markets included or not included among the Constituent Exchanges, and such transactions may take place at prices materially higher or lower than the Index Price. For example, based on data provided by the Index Provider, on any given day during the year ended December 31, 2021, the maximum differential between the 4:00 p.m., New York time spot price of any single Digital Asset Exchange included in the Index and the Index Price was 0.64% and the average of the maximum differentials of the 4:00 p.m., New York time spot price of each Digital Asset Exchange included in the Index and the Index Price was 0.32%. During this same period, the average differential between the 4:00 p.m., New York time spot prices of all the Digital Asset Exchanges included in the Index and the Index Price was 0.0003%.[43]

Since November 1, 2014, the Trust has consistently priced its Shares at 4:00 p.m., E.T. based on the Index Price.[44] While that pricing would be known to the market, the Sponsor believes that, even if efforts to manipulate the price of Bitcoin at 4:00 p.m., E.T. were successful on any exchange, such activity would have had a negligible effect on the pricing of the Trust, due to the controls embedded in the structure of the Index.

Accordingly, the Sponsor believes that the Index has proven its ability to (i) mitigate the effects of fraud, manipulation and other anomalous trading activity on the Bitcoin reference rate, (ii) provide a real-time, volume-weighted fair value of Bitcoin and (iii) appropriately handle and adjust for non-market related events. For these reasons, the Sponsor believes that the Index represents an effective alternative means to prevent fraud and manipulation and the Trust's reliance on the Index addresses the Commission's concerns with respect to potential fraud and manipulation.

3. A Significant, Regulated and Surveilled Market Exists and Is Closely Connected With Spot Market for Bitcoin

In the Winklevoss Order, Bitwise Order and Wilshire Phoenix Order, the Commission described both the need for and the definition of a surveilled market of significant size for commodity-trust ETPs like the Trust to date.[45] Specifically, the Commission explained that:

> for the commodity-trust ETPs approved to date for listing and trading, there has been in every case at least one significant, regulated market for trading futures on the underlying commodity—whether gold, silver, platinum, palladium, or copper—and the ETP listing exchange has entered into surveillance-sharing agreements with, or held Intermarket Surveillance Group membership in common with, that market.[46]

[42] To the extent any such intervention has a material impact on the Trust, the Sponsor will also issue a public announcement.

[43] All Digital Asset Exchanges that were included in the Index throughout the period were considered in this analysis.

[44] Prior to February 1, 2022, the Trust valued its Bitcoins for operational purposes by reference to the volume-weighted average Index Price (the ''Old Index Price''). The Old Index Price was calculated by applying a weighting algorithm to the price and trading volume data for the immediately preceding 24-hour period as of 4:00 p.m., New York time, derived from the Constituent Exchanges reflected in the Index on such trade date, and overlaying an averaging mechanism to the price produced. Thus, whereas the Old Index Price reflected the price of a Bitcoin at 4:00 p.m., New York time, calculated by taking the average of each price of a Bitcoin produced by the Index over the preceding 24-hour period, the Index Price now is the price of a Bitcoin at 4:00 p.m., New York time, calculated based on the price and trading volume data of the Digital Asset Exchanges included in the Index over the preceding 24-hour period. The Index Price differs from the Old Index Price only in that it does not use an additional averaging mechanism; the Index Price otherwise uses the same methodology as the Old Index Price, and there has been no change to the Index used to determine the Index Price or the criteria used to select the Constituent Exchanges.

[45] *See* Winklevoss Order, 83 FR at 37593–94; Bitwise Order, 84 FR at 55383, 55410; Wilshire Phoenix Order, 85 FR at 12609.

[46] *See* Winklevoss Order, 83 FR at 37594.

Further, the Commission stated that its interpretation of the term ''market of significant size'' depends on the interrelationship between the market with which the listing exchange has a surveillance-sharing agreement and the proposed ETP.[47] Accordingly, the terms ''significant market'' and ''market of significant size'' could mean:

> a market (or group of markets) as to which (a) there is a reasonable likelihood that a person attempting to manipulate the ETP would also have to trade on that market to successfully manipulate the ETP, so that a surveillance-sharing agreement would assist in detecting and deterring misconduct, and (b) it is unlikely that trading in the ETP would be the predominant influence on prices in that market.[48]

In the context of Bitcoin-based ETPs specifically, the Commission has stated that establishing a lead-lag relationship between the Bitcoin futures market and the spot market is central to understanding whether it is reasonably likely that a would-be manipulator of the ETP would need to trade on the Bitcoin futures market to successfully manipulate prices on those spot platforms that feed into the proposed ETP's pricing mechanism such that a surveillance-sharing agreement would assist the ETP listing market in detecting and deterring misconduct.[49] In particular, if the spot market leads the futures market, this would indicate that it would not be necessary to trade on the futures market to manipulate the proposed ETP, even if arbitrage worked efficiently, because the futures price would move to meet the spot price.

The Sponsor has conducted a lead/lag analysis of per minute data comparing the Bitcoin futures market, as represented by the CME futures market, to the Bitcoin spot market, as represented by the Index. Based on this analysis, the Sponsor has concluded that there does not appear to be a significant lead/lag relationship between the two instruments for the period of November 1, 2019 to August 31, 2021. However, the Sponsor notes that other studies prior to and since such date have found that the CME futures market does lead the Bitcoin spot market.[50]

Although there have been mixed findings regarding the lead/lag relationship between the CME futures and Bitcoin spot markets, the Sponsor believes that the CME futures market represents a large, surveilled and regulated market. For example, from November 1, 2019 to August 31, 2021, the CME futures market trading volume was over $432 billion, compared to $624 billion in trading volume across the Constituent Exchanges included in the Index. With over 69% of the Index trading volume, the CME futures market represents significant coverage of U.S.-Compliant Exchanges in the Bitcoin market. In addition, the CME futures market trading volume from November 1, 2019 to August 31, 2021 was approximately 50% of the trading volume of the U.S. dollar-denominated Bitcoin spot markets referenced in the Bitwise Order.[51]

Given the significant size of the CME futures markets, the Sponsor believes there is a reasonable likelihood that a person attempting to manipulate the ETP would also have to trade on that market to successfully manipulate the ETP, since arbitrage between the derivative and spot markets would tend to counter an attempt to manipulate the spot market alone. As a result, the Exchange's ability to obtain information regarding trading in the Shares and futures from markets and other entities that are members of the Intermarket Trading Group (''ISG''), including the CME, would assist the Exchange in detecting and deterring misconduct.

The Sponsor also believes it is unlikely that the ETP would become the predominant influence on prices in the market.

While future inflows to the proposed Trust cannot be predicted, to provide comparable data, the Sponsor examined the change in market capitalization of Bitcoin with net inflows into the Trust, which currently trades on OTC Markets and is largest and most liquid Bitcoin investment product in the world.[52] From November 1, 2019 to August 31, 2021, the market capitalization of Bitcoin grew from $166 billion to $888 billion, a $721 billion increase. Over the same period, the Trust experienced $6.6 billion of inflows. The cumulative inflow into the Trust over the stated time period was only 0.9% of the aggregate growth of Bitcoin's market capitalization.

Additionally, the Trust experienced approximately $98.5 billion of trading volume from November 1, 2019 to August 31, 2021, only 23% of the CME futures market and 16% of the Index over the same period.

* * * * *

In summary, the Sponsor believes that the foregoing responds to the Commission's articulated concerns with respect to potential fraud and manipulation in Bitcoin-based ETPs. Specifically, the Sponsor believes that, although Bitcoin is not itself inherently resistant to fraud and manipulation, the Index represents an effective means to prevent fraudulent and manipulative acts and practices. As discussed above, the Trust has used the Index to price the Shares for more than six years, and the Index has proven its ability to (i) mitigate the effects of fraud, manipulation and other anomalous trading activity on the Bitcoin reference rate, (ii) provide a real-time, volume-weighted fair value of bitcoin and (iii) appropriately handle and adjusts for non-market related events. The Sponsor also believes that the CME futures market is a significant, surveilled and regulated market that is closely connected with the spot market for Bitcoin and may fulfill the requirements for surveillance sharing given the Exchange's ability to obtain information from markets and other entities that are members of the ISG to assist in detecting and deterring misconduct.

The Approval of Bitcoin-Based ETFs Registered Under the Investment Company Act of 1940 and Bitcoin Based ETPs Registered Under the Securities Act of 1933 and Securities Exchange Act 1934

In an August 3, 2021 speech at the Aspen Security Forum, the Chair stated that he looked forward to the Commission's review of Bitcoin-based

[51] These Bitcoin spot markets include Binance, Coinbase Pro, Bitfinex, Kraken, Bitstamp, BitFlyer, Poloniex, Bittrex and itBit.

[52] To further illustrate the size and liquidity of the Trust, as of October 31, 2020, compared with global commodity ETPs, the Trust would rank fourth in assets under management and seventh in notional trading volume from November 1, 2019 to October 31, 2020.

ETF proposals registered under the Investment Company Act of 1940 (the ''40 Act''), ''particularly if those are limited to [the] CME-traded Bitcoin futures,'' noting the ''significant investor protection'' offered by the '40 Act.[53] In this same speech, the Chair specifically identified the Trust in the context of existing investment vehicles that provide exposure to Bitcoin, noting that the Trust, which is a Bitcoin-based ETP proposal that would be registered under the '33 Act and '34 Act, rather than the '40 Act, is ''the largest among them having been around for eight years and worth more than $20 billion.'' [54] Since that speech, the first Bitcoin-based ETFs registered under the '40 Act were approved for trading,[55] subsequent Bitcoin-based ETPs that would be registered under the '33 Act and '34 Act were disapproved [56] and a subsequent Bitcoin-based ETP that will be registered under the '33 Act and '34 Act was approved for trading.[57]

As described above, the Commission has outlined the reasons why prior Bitcoin-based ETF and ETP proposals registered under both the '40 Act and '33 Act and '34 Act, respectively, have been unable to satisfy its concerns about pricing in the underlying Digital Asset Market due to the potential for fraud and manipulation and described how such concerns could be addressed. It has been the Sponsor's understanding that none of the stated requirements have indicated a preference for Bitcoin-based ETF and ETP proposals registered under the '40 Act versus the '33 Act and '34 Act, respectively. Nor does the Sponsor believe that such requirements can be addressed by gaining exposure to Bitcoin through Bitcoin futures in an ETF registered under the '40 Act rather than physical Bitcoin in an ETP registered under the '33 Act because both products would be reliant on Bitcoin's underlying price in the spot markets.

For instance, Bitcoin-based ETFs registered under the '40 Act that hold Bitcoin futures are priced by referencing the CME CF Bitcoin Reference Rate (''BRR''), which itself references the Digital Asset Markets: Bitstamp, Coinbase, Gemini, itBit, and Kraken. Similarly, Bitcoin-based ETPs that would be registered under the '33 Act and '34 Act, like the Trust, would be priced by referencing Digital Asset Markets included in the BRR, such as through the Index. As a result, the Sponsor believes that any potential fraud or manipulation in the underlying Digital Asset Market would impact both types of ETP proposals. Thus, in light of the Commission's recent approval of a futures-based ETP registered under the '33 Act and '34 Act,[58] which suggests that the Commission believes that both Bitcoin-based ETFs registered under the '40 Act and Bitcoin-based ETPs registered under the '33 Act and '34 Act could meet the requirements of the Exchange Act, the Sponsor believes that the Commission should take the same view towards both types of proposals and that differences between the '40 Act on the one hand, and the '33 Act and '34 Act on the other, should not form the basis for denial of proposed Bitcoin-based ETPs registered under the '33 Act and '34 Act, like the Trust.

Creation of Shares

According to the Annual Report, the Trust will issue Shares to Authorized Participants from time to time, but only in one or more Baskets (with a Basket being a block of 100 Shares). The Trust will not issue fractions of a Basket. The creation of Baskets will be made only in exchange for the delivery to the Trust, or the distribution by the Trust, of the number of whole and fractional Bitcoins represented by each Basket being created, which is determined by dividing (x) the number of Bitcoins owned by the Trust at 4:00 p.m., E.T., on the trade date of a creation order, after deducting the number of Bitcoins representing the U.S. dollar value of accrued but unpaid fees and expenses of the Trust (converted using the Index Price at such time, and carried to the eighth decimal place), by (y) the number of Shares outstanding at such time (with the quotient so obtained calculated to one one-hundred-millionth of one Bitcoin (*i.e.,* carried to the eighth decimal place)), and multiplying such quotient by 100 (the ''Basket Amount''). All questions as to the calculation of the Basket Amount will be conclusively determined by the Sponsor and will be final and binding on all persons interested in the Trust. The Basket Amount multiplied by the number of Baskets being created is the ''Total Basket Amount.'' The number of Bitcoins represented by a Share will gradually decrease over time as the Trust's Bitcoins are used to pay the Trust's expenses. As of December 31, 2021, each Share represented approximately 0.0009 of one Bitcoin.

Authorized Participants are the only persons that may place orders to create Baskets. Each Authorized Participant must (i) be a registered broker-dealer, (ii) enter into an agreement with the Sponsor and the Liquidity Provider (as defined below), if applicable, that provides the procedures for the creation and redemption of Baskets and for the delivery of Bitcoins required for Creation Baskets and Redemption Baskets (each, a ''Participant Agreement'') and (iii) in the case of creation or redemption in-kind, own a Bitcoin wallet address that is known to the Custodian as belonging to the Authorized Participant. An Authorized Participant may act for its own account or as agent for broker-dealers, custodians and other securities market participants that wish to create or redeem Baskets. Shareholders who are not Authorized Participants will only be able to redeem their Shares through an Authorized Participant.

Although the creation of Baskets requires the delivery to the Trust of the Total Basket Amount, an Authorized Participant may deposit cash with the Administrator, which will facilitate the purchase or sale of Bitcoins on behalf of the Authorized Participant through one or more eligible companies (each, a ''Liquidity Provider'') that have entered into a Participant Agreement with the Sponsor, the Administrator, the Marketing Agent and the relevant Authorized Participant.

The Participant Agreement provides the procedures for the creation of Baskets and for the delivery of the whole and fractional Bitcoins required for such creations. The Participant Agreement and the related procedures attached thereto may be amended by the Sponsor and the relevant Authorized Participant. Under the Participant Agreement, the Sponsor has agreed to indemnify each Authorized Participant against certain liabilities, including liabilities under the Securities Act.

[58] *See id.*

Authorized Participants do not pay a transaction fee to the Trust in connection with the creation of Baskets, but there may be transaction fees associated with the validation of the transfer of Bitcoins by the Bitcoin Network. Authorized Participants who deposit Bitcoins with the Trust in exchange for Baskets will receive no fees, commissions or other form of compensation or inducement of any kind from either the Sponsor or the Trust, and no such person has any obligation or responsibility to the Sponsor or the Trust to effect any sale or resale of Shares.

Creation Procedures

On any business day, an Authorized Participant may place an order with the Administrator to create one or more Baskets. Orders for creations may be placed either ''in-kind'' or ''in-cash.'' Orders for creation in-kind must be placed with the Administrator no later than 3:59:59 p.m., New York time, and no later than 4:59:59 p.m., New York time, for creations in-cash (in each case, the ''Order Cutoff Time'').

In-kind creations will take place as follows, where ''T'' is the trade date and each day in the sequence must be a business day:

T	T+1
• The Authorized Participant places a creation order with the Administrator. • The Marketing Agent accepts (or rejects) the creation order, which is communicated to the Authorized Participant by the Administrator. • The Total Basket Amount is determined as soon as practicable after 4:00 p.m., New York time.	• The Authorized Participant transfers the Total Basket Amount to the Custodian no later than 4:00 p.m., New York time. • Once the Total Basket Amount is received by the Custodian, the Administrator directs the Transfer Agent to credit the number of Baskets created to the Authorized Participant's DTC account.

In-cash creations will take place as follows, where ''T'' is the trade date and each day in the sequence must be a business day:

T–1	T	T+1
• The Authorized Participant places a creation order with the Administrator. • The Marketing Agent accepts (or rejects) the creation order, which is communicated to the Authorized Participant by the Administrator. • The Authorized Participant sends 110% of the U.S. dollar value of the number of baskets ordered pursuant to such creation order, as calculated using the Index Price as of the order date (the ''Cash Collateral Amount'') to the Administrator.	• The Sponsor notifies the Liquidity Provider of the creation order and the Liquidity Provider may begin purchasing Bitcoin to deliver the Total Basket Amount. • The Total Basket Amount is determined as soon as practicable after 4:00 p.m., New York time.	• The Liquidity Provider delivers the Total Basket Amount to the Custodian no later than 4:00 p.m., New York time. • Once the Total Basket Amount is received by the Custodian, the Administrator directs the Transfer Agent to credit the number of Baskets created to the Authorized Participant's DTC account. • The Administrator sends the Liquidity Provider cash equal to the U.S. dollar value of the Total Basket Amount, as determined on the trade date, plus the Variable Fee, and returns the remaining amount of the Cash Collateral Amount (if any) to the Authorized Participant.

Redemption of Shares

The Trust may redeem Shares from time to time but only in Baskets. A Basket equals a block of 100 Shares. The number of outstanding Shares is expected to decrease from time to time as a result of the redemption of Baskets. The redemption of Baskets requires the distribution by the Trust of the number of Bitcoins represented by the Baskets being redeemed. The redemption of a Basket will be made only in exchange for the distribution by the Trust of the number of whole and fractional Bitcoins represented by each Basket being redeemed, the number of which is determined by dividing (x) the number of Bitcoins owned by the Trust at 4:00 p.m., New York time, on the relevant trade date of a redemption order, after deducting the number of Bitcoins representing the U.S. dollar value of accrued but unpaid fees and expenses of the Trust (converted using the Index Price at such time, and carried to the eighth decimal place) by (y) the number of Shares outstanding at such time (with the quotient so obtained calculated to one one-hundred-millionth of one Bitcoin (*i.e.,* carried to the eighth decimal place)), and multiplying such quotient by 100.

Authorized Participants are the only persons that may place orders to redeem Baskets. Shareholders who are not Authorized Participants will be able to redeem their Shares only through an Authorized Participant.

Each Participant Agreement provides the procedures for the redemption of Baskets and for the delivery of the whole and fractional Bitcoins required for such redemption. The Participant Agreement and the related procedures attached thereto may be amended by the

Sponsor and the relevant Authorized Participant.

Authorized Participants do not pay a transaction fee to the Trust in connection with the redemption of Baskets, but there may be transaction fees associated with the validation of the transfer of Bitcoins by the Bitcoin Network.

Redemption Procedures

The Trust will also redeem Shares on a continuous basis but only in Baskets of 100 Shares. The procedures by which an Authorized Participant can redeem one or more Baskets mirror the procedures for the creation of Baskets. On any business day, an Authorized Participant may place an order with the Administrator to redeem one or more Baskets. Redemption orders must be placed with the Administrator no later than the Order Cutoff Time.

In-kind redemptions will take place as follows, where ''T'' is the trade date and each day in the sequence must be a business day:

T	T+2
• The Authorized Participant places a redemption order with the Administrator. • The Marketing Agent accepts (or rejects) the redemption order, which is communicated to the Authorized Participant by the Administrator. • The Total Basket Amount is determined as soon as practicable after 4:00 p.m., New York time.	• The Authorized Participant delivers Baskets from its DTC account to the Transfer Agent no later than 4:00 p.m., New York time. • Once the Baskets are received by the Transfer Agent, the Custodian transfers the Total Basket Amount to the Authorized Participant and the Transfer Agent cancels the Shares.

In-cash redemptions will take place as follows, where ''T'' is the trade date and each day in the sequence must be a business day:

T–1	T	T+2
• The Authorized Participant places a redemption order with the Administrator. • The Marketing Agent accepts (or rejects) the redemption order, which is communicated to the Authorized Participant by the Administrator.	• The Sponsor notifies the Liquidity Provider of the redemption order and the Liquidity Provider may begin selling Bitcoin to deliver the Total Basket Amount. • The Total Basket Amount is determined as soon as practicable after 4:00 p.m., New York time.	• The Authorized Participant delivers Baskets to be redeemed to the Transfer Agent no later than 4:00 p.m., New York time. • The Liquidity Provider deposits with the Administrator cash equal to the U.S. dollar value of the Total Basket Amount, as determined on the trade date. • Once the Baskets are received by the Transfer Agent and the Administrator sends the above-mentioned cash equal to the U.S. dollar value of the Total Basket Amount less the Transaction Fee, the Variable Fee and all other charges and fees payable in connection with the redemption order to the Authorized Participant, the Transfer Agent cancels the Shares. • The Custodian sends the Liquidity Provider the number of Bitcoins equal to the Total Basket Amount and the Administrator sends the Variable Fee to the Liquidity Provider.

Suspension of Orders

The creation or redemption of Shares may be suspended generally, or refused with respect to particular requested creations or redemptions, during any period when the transfer books of the Transfer Agent are closed or if circumstances outside the control of the Sponsor or its delegates make it for all practical purposes not feasible to process creation orders or redemption orders. The Administrator may reject an order or, after accepting an order, may cancel such order by rejecting the Total Basket Amount if: (i) Such order is not presented in proper form as described in the Participant Agreement, (ii) the transfer of the Total Basket Amount comes from an account other than a Bitcoin wallet address that is known to the Custodian as belonging to the Authorized Participant or (iii) the fulfillment of the order, in the opinion of counsel, might be unlawful, among other reasons. None of the Sponsor or its delegates will be liable for the suspension, rejection or acceptance of any creation order or redemption order.

In particular, upon the Trust's receipt of any Incidental Rights and/or IR Virtual Currency in connection with a fork, airdrop or similar event, the Sponsor may suspend redemptions until it is able to cause the Trust to sell or distribute such Incidental Rights and/or IR Virtual Currency.

Availability of Information

The Trust's website (*https://grayscale.com/products/grayscale-bitcoin-trust/*) will include quantitative information on a per Share basis updated on a daily basis, including, (i) the current Digital Asset Holdings per Share daily and the prior business day's Digital Asset Holdings and the reported closing price; (ii) the mid-point of the bid-ask price [59] in relation to the Digital Asset Holdings as of the time the Digital Asset Holdings is calculated (''Bid-Ask Price'') and a calculation of the

[59] The bid-ask price of the Trust is determined using the highest bid and lowest offer on the Consolidated Tape as of the time of calculation of the closing day Digital Asset Holdings.

premium or discount of such price against such Digital Asset Holdings; and (iii) data in chart format displaying the frequency distribution of discounts and premiums of the daily Bid-Ask Price against the Digital Asset Holdings, within appropriate ranges, for each of the four previous calendar quarters (or for the life of the Trust, if shorter). In addition, on each business day the Trust's website will provide pricing information for the Shares.

The Trust's website, as well as one or more major market data vendors, will provide an intra-day indicative value (''IIV'') per Share updated every 15 seconds, as calculated by the Exchange or a third party financial data provider during the Exchange's Core Trading Session (9:30 a.m. to 4:00 p.m., E.T.).[60] The IIV will be calculated using the same methodology as the Digital Asset Holdings of the Trust (as described above), specifically by using the prior day's closing Digital Asset Holdings per Share as a base and updating that value during the NYSE Arca Core Trading Session to reflect changes in the value of the Trust's Digital Asset Holdings during the trading day.

The IIV disseminated during the NYSE Arca Core Trading Session should not be viewed as an actual real-time update of the Digital Asset Holdings, which will be calculated only once at the end of each trading day. The IIV will be widely disseminated on a per Share basis every 15 seconds during the NYSE Arca Core Trading Session by one or more major market data vendors. In addition, the IIV will be available through on-line information services.

The Digital Asset Holdings for the Trust will be calculated by the Sponsor once a day and will be disseminated daily to all market participants at the same time. To the extent that the Sponsor has utilized the cascading set of rules described in ''Index Price'' above, the Trust's website will note the valuation methodology used and the price per Bitcoin resulting from such calculation. Quotation and last-sale information regarding the Shares will be disseminated through the facilities of the Consolidated Tape Association (''CTA'').

Quotation and last sale information for Bitcoin will be widely disseminated through a variety of major market data vendors, including Bloomberg and Reuters. In addition, the complete real-time price (and volume) data for Bitcoin is available by subscription from Reuters and Bloomberg. The spot price of Bitcoin is available on a 24-hour basis from major market data vendors, including Bloomberg and Reuters. Information relating to trading, including price and volume information, in Bitcoin will be available from major market data vendors and from the exchanges on which Bitcoin are traded. The normal trading hours for Digital Asset Exchanges are 24-hours per day, 365-days per year.

The Sponsor will publish the Index Price, the Trust's Digital Asset Holdings, and the Digital Asset Holdings per Share on the Trust's website as soon as practicable after its determination. If the Digital Asset Holdings and Digital Asset Holdings per Share have been calculated using a price per Bitcoin other than the Index Price for such Evaluation Time, the publication on the Trust's website will note the valuation methodology used and the price per Bitcoin resulting from such calculation.

The Trust will provide website disclosure of its Digital Asset Holdings daily. The website disclosure of the Trust's Digital Asset Holdings will occur at the same time as the disclosure by the Sponsor of the Digital Asset Holdings to Authorized Participants so that all market participants are provided such portfolio information at the same time. Therefore, the same portfolio information will be provided on the public website as well as in electronic files provided to Authorized Participants. Accordingly, each investor will have access to the current Digital Asset Holdings of the Trust through the Trust's website, as well as from one or more major market data vendors.

The value of the Index, as well as additional information regarding the Index, may be found at *https://tradeblock.com/markets/index/xbx.*

Trading Rules

The Exchange deems the Shares to be equity securities, thus rendering trading in the Shares subject to the Exchange's existing rules governing the trading of equity securities. Shares will trade on the NYSE Arca Marketplace from 4:00 a.m. to 8:00 p.m., E.T. in accordance with NYSE Arca Rule 7.34–E (Early, Core, and Late Trading Sessions). The Exchange has appropriate rules to facilitate transactions in the Shares during all trading sessions. As provided in NYSE Arca Rule 7.6–E, the minimum price variation (''MPV'') for quoting and entry of orders in equity securities traded on the NYSE Arca Marketplace is $0.01, with the exception of securities that are priced less than $1.00, for which the MPV for order entry is $0.0001.

The Shares will conform to the initial and continued listing criteria under NYSE Arca Rule 8.201–E. The trading of the Shares will be subject to NYSE Arca Rule 8.201–E(g), which sets forth certain restrictions on Equity Trading Permit (''ETP'') Holders acting as registered Market Makers in Commodity-Based Trust Shares to facilitate surveillance. The Exchange represents that, for initial and continued listing, the Trust will be in compliance with Rule 10A–3[61] under the Act, as provided by NYSE Arca Rule 5.3–E. A minimum of 100,000 Shares of the Trust will be outstanding at the commencement of trading on the Exchange.

Trading Halts

With respect to trading halts, the Exchange may consider all relevant factors in exercising its discretion to halt or suspend trading in the Shares of the Trust.[62] Trading in Shares of the Trust will be halted if the circuit breaker parameters in NYSE Arca Rule 7.12–E have been reached. Trading also may be halted because of market conditions or for reasons that, in the view of the Exchange, make trading in the Shares inadvisable.

The Exchange may halt trading during the day in which an interruption to the dissemination of the IIV or the value of the Index occurs. If the interruption to the dissemination of the IIV or the value of the Index persists past the trading day in which it occurred, the Exchange will halt trading no later than the beginning of the trading day following the interruption. In addition, if the Exchange becomes aware that the Digital Asset Holdings per Share is not disseminated to all market participants at the same time, it will halt trading in the Shares until such time as the Digital Asset Holdings per Share is available to all market participants.

Surveillance

The Exchange represents that trading in the Shares of the Trust will be subject to the existing trading surveillances administered by the Exchange, as well as cross-market surveillances administered by FINRA on behalf of the Exchange, which are designed to detect violations of Exchange rules and applicable federal securities laws.[63] The Exchange represents that these procedures are adequate to properly monitor Exchange trading of the Shares

[60] The IIV on a per Share basis disseminated during the Core Trading Session should not be viewed as a real-time update of the Digital Asset Holdings, which is calculated once a day.

[61] 17 CFR 240.10A–3.

[62] *See* NYSE Arca Rule 7.12–E.

[63] FINRA conducts cross-market surveillances on behalf of the Exchange pursuant to a regulatory services agreement. The Exchange is responsible for FINRA's performance under this regulatory services agreement.

in all trading sessions and to deter and detect violations of Exchange rules and federal securities laws applicable to trading on the Exchange.

The surveillances referred to above generally focus on detecting securities trading outside their normal patterns, which could be indicative of manipulative or other violative activity. When such situations are detected, surveillance analysis follows and investigations are opened, where appropriate, to review the behavior of all relevant parties for all relevant trading violations.

The Exchange or FINRA, on behalf of the Exchange, or both, will communicate as needed regarding trading in the Shares with other markets and other entities that are members of the ISG, and the Exchange or FINRA, on behalf of the Exchange, or both, may obtain trading information regarding trading in the Shares from such markets and other entities. In addition, the Exchange may obtain information regarding trading in the Shares from markets and other entities that are members of ISG or with which the Exchange has in place a comprehensive surveillance sharing agreement (''CSSA'').[64] The Exchange is also able to obtain information regarding trading in the Shares in connection with such ETP Holders' proprietary or customer trades which they effect through ETP Holders on any relevant market.

In addition, the Exchange also has a general policy prohibiting the distribution of material, non-public information by its employees.

All statements and representations made in this filing regarding (a) the description of the portfolios of the Trust, (b) limitations on portfolio holdings or reference assets, or (c) the applicability of Exchange listing rules specified in this rule filing shall constitute continued listing requirements for listing the Shares on the Exchange.

The Sponsor has represented to the Exchange that it will advise the Exchange of any failure by the Trust to comply with the continued listing requirements, and, pursuant to its obligations under Section 19(g)(1) of the Act, the Exchange will monitor for compliance with the continued listing requirements. If the Trust is not in compliance with the applicable listing requirements, the Exchange will commence delisting procedures under NYSE Arca Rule 5.5–E(m).

[64] For a list of the current members of ISG, *see www.isgportal.org.* The Exchange notes that not all components of the Trust may trade on markets that are members of ISG or with which the Exchange has in place a CSSA.

Information Bulletin

Prior to the commencement of trading, the Exchange will inform its ETP Holders in an ''Information Bulletin'' of the special characteristics and risks associated with trading the Shares. Specifically, the Information Bulletin will discuss the following: (1) The procedures for creations of Shares in Baskets; (2) NYSE Arca Rule 9.2–E(a), which imposes a duty of due diligence on its ETP Holders to learn the essential facts relating to every customer prior to trading the Shares; (3) information regarding how the value of the Index and the IIV are disseminated; (4) the possibility that trading spreads and the resulting premium or discount on the Shares may widen during the Opening and Late Trading Sessions, when an updated IIV will not be calculated or publicly disseminated; and (5) trading information. The Exchange notes that investors purchasing Shares directly from the Trust will receive a prospectus.

In addition, the Information Bulletin will reference that the Trust is subject to various fees and expenses as described in the Annual Report. The Information Bulletin will disclose that information about the Shares of the Trust is publicly available on the Trust's website.

The Information Bulletin will also discuss any relief, if granted, by the Commission or the staff from any rules under the Act.

2. Statutory Basis

The basis under the Act for this proposed rule change is the requirement under Section 6(b)(5)[65] that an exchange have rules that are designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to remove impediments to, and perfect the mechanism of a free and open market and, in general, to protect investors and the public interest.

The Exchange believes that the proposed rule change is designed to prevent fraudulent and manipulative acts and practices in that the Shares will be listed and traded on the Exchange pursuant to the initial and continued listing criteria in NYSE Arca Rule 8.201–E. The Exchange has in place surveillance procedures that are adequate to properly monitor trading in the Shares in all trading sessions and to deter and detect violations of Exchange rules and applicable federal securities laws. The Exchange or FINRA, on behalf of the Exchange, or both, will communicate as needed regarding trading in the Shares with other markets that are members of the ISG, and the Exchange or FINRA, on behalf of the Exchange, or both, may obtain trading information regarding trading in the Shares from such markets. In addition, the Exchange may obtain information regarding trading in the Shares from markets that are members of ISG or with which the Exchange has in place a CSSA. Also, pursuant to NYSE Arca Rule 8.201–E(g), the Exchange is able to obtain information regarding trading in the Shares and the underlying Bitcoin or any Bitcoin derivative through ETP Holders acting as registered Market Makers, in connection with such ETP Holders' proprietary or customer trades through ETP Holders which they effect on any relevant market.

The proposed rule change is also designed to prevent fraudulent and manipulative acts and practices because, although the Digital Asset Exchange Market is not inherently resistant to fraud and manipulation, the Index serves as a means sufficient to mitigate the impact of instances of fraud and manipulation on a reference price for Bitcoin. Specifically, the Index provides a better benchmark for the price of Bitcoin than the Digital Asset Exchange Market Price because it (1) tracks the Digital Asset Exchange Market Price through trading activity at U.S.-Compliant Exchanges; (2) mitigates the impact of instances of fraud, manipulation and other anomalous trading activity in real-time through systematic adjustments; (3) is constructed and maintained by an expert third-party index provider, allowing for prudent handling of non-market-related events; and (4) mitigates the impact of instances of fraud, manipulation and other anomalous trading activity concentrated on any one specific exchange through a cross-exchange composite index rate. The Trust has used the Index to price the Shares for more than six years, and the Index has proven its ability to (i) mitigate the effects of fraud, manipulation and other anomalous trading activity from impacting the Bitcoin reference rate, (ii) provide a real-time, volume-weighted fair value of bitcoin and (iii) appropriately handle and adjusts for non-market related events, such that efforts to manipulate the price of Bitcoin would have had a negligible effect on the pricing of the Trust, due to the controls embedded in the structure of the Index. In addition, certain of the Index's Constituent Exchanges also have or have begun to implement market surveillance infrastructure to further detect, prevent,

[65] 15 U.S.C. 78f(b)(5).

and respond to fraud, attempted fraud, and similar wrongdoing, including market manipulation. The proposed rule change is also designed to prevent fraudulent and manipulative acts and practices based on the existence of the CME futures market as a large, surveilled and regulated market that is closely connected with the spot market for Bitcoin and through which the Exchange could obtain information to assist in detecting and deterring potential fraud or manipulation.

The proposed rule change is designed to promote just and equitable principles of trade and to protect investors and the public interest in that there is a considerable amount of Bitcoin price and market information available on public websites and through professional and subscription services. Investors may obtain, on a 24-hour basis, Bitcoin pricing information based on the spot price for Bitcoin from various financial information service providers. The closing price and settlement prices of Bitcoin are readily available from the Digital Asset Exchanges and other publicly available websites. In addition, such prices are published in public sources, or on-line information services such as Bloomberg and Reuters. The Digital Asset Holdings per Share will be calculated daily and made available to all market participants at the same time. The Trust will provide website disclosure of its Digital Asset Holdings daily. One or more major market data vendors will disseminate for the Trust on a daily basis information with respect to the most recent Digital Asset Holdings per Share and Shares outstanding. In addition, if the Exchange becomes aware that the Digital Asset Holdings per Share is not disseminated to all market participants at the same time, it will halt trading in the Shares until such time as the Digital Asset Holdings is available to all market participants. Quotation and last-sale information regarding the Shares will be disseminated through the facilities of the CTA. The IIV will be widely disseminated on a per Share basis every 15 seconds during the NYSE Arca Core Trading Session (normally 9:30 a.m., E.T., to 4:00 p.m., E.T.) by one or more major market data vendors. In addition, the IIV will be available on the Trust's website through on-line information services. The Exchange represents that the Exchange may halt trading during the day in which an interruption to the dissemination of the IIV or the value of the Index occurs. If the interruption to the dissemination of the IIV or the value of the Index persists past the trading day in which it occurred, the Exchange will halt trading no later than the beginning of the trading day following the interruption.

The proposed rule change is designed to perfect the mechanism of a free and open market and, in general, to protect investors and the public interest in that it will facilitate the listing and trading of an additional type of exchange-traded product that will enhance competition among market participants, to the benefit of investors and the marketplace. As noted above, the Exchange has in place surveillance procedures relating to trading in the Shares and may obtain information via ISG from other exchanges that are members of ISG or with which the Exchange has entered into a CSSA. In addition, as noted above, investors will have ready access to information regarding the Trust's Digital Asset Holdings, IIV, and quotation and last sale information for the Shares.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange notes that the proposed rule change will facilitate the listing and trading of an additional type of exchange-traded product, and the first such product based on Bitcoin, which will enhance competition among market participants, to the benefit of investors and the marketplace.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Notice of Designation of a Longer Period for Commission Action on Proceedings To Determine Whether To Approve or Disapprove a Proposed Rule Change, as Modified by Amendment No. 1

Section 19(b)(2) of the Act[66] provides that, after initiating proceedings, the Commission shall issue an order approving or disapproving the proposed rule change not later than 180 days after the date of publication of notice of filing of the proposed rule change. The Commission may extend the period for issuing an order approving or disapproving the proposed rule change, however, by not more than 60 days if the Commission determines that a longer period is appropriate and publishes the reasons for such determination. The proposed rule change was published for comment in the **Federal Register** on November 8, 2021.[67] The 180th day after publication of the proposed rule change is May 7, 2022. The Commission is extending the time period for approving or disapproving the proposed rule change for an additional 60 days.

The Commission finds that it is appropriate to designate a longer period within which to issue an order approving or disapproving the proposed rule change so that it has sufficient time to consider the proposed rule change, as modified by Amendment No. 1, and the issues raised in the comments that have been submitted in connection therewith. Accordingly, the Commission, pursuant to Section 19(b)(2) of the Act,[68] designates July 6, 2022, as the date by which the Commission shall either approve or disapprove the proposed rule change, as modified by Amendment No. 1 (File No. SR–NYSEArca–2021–90).

IV. Solicitation of Comments on Amendment No. 1 to the Proposed Rule Change

Interested persons are invited to submit written data, views, and arguments concerning whether the proposed rule change, as modified by Amendment No. 1, is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File No. SR–NYSEArca–2021–90 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File No. SR–NYSEArca–2021–90. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements

[66] 15 U.S.C. 78s(b)(2).

[67] *See supra* note 3.

[68] 15 U.S.C. 78s(b)(2).

with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File No. SR–NYSEArca–2021–90 and should be submitted on or before May 31, 2022.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[69]

J. Matthew DeLesDernier,

Assistant Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–94848; File No. SR–CBOE–2022–022]

Self-Regulatory Organizations; Cboe Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Update Its Fees Schedule in Connection With the Launch of the Curb Trading Hours Session

May 4, 2022.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the ''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on April 25, 2022, Cboe Exchange, Inc. (the ''Exchange'' or ''Cboe Options'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Cboe Exchange, Inc. (the ''Exchange'' or ''Cboe Options'') proposes to update its Fees Schedule in connection with the launch of the Curb Trading Hours Session. The text of the proposed rule change is provided in Exhibit 5.

The text of the proposed rule change is also available on the Exchange's website (*http://www.cboe.com/AboutCBOE/CBOELegalRegulatoryHome.aspx*), at the Exchange's Office of the Secretary, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend its Fees Schedule in connection with its plans to launch the Curb Trading Hours (''Curb'') session, effective April 25, 2022.

By way of background, the Exchange currently offers two trading sessions, the Regular Trading Hours session (''RTH'')[3] and the Global Trading Hours session (''GTH'').[4] Beginning Monday, April 25, 2022, the Exchange will operate an additional trading session following RTH called the ''Curb Trading Hours'' or ''Curb'' session. The Curb session will provide an extra forty-five-minute electronic only session for trading between 4:15 p.m. and 5:00 p.m. ET for designated classes, which will be added Monday through Friday. Currently, only SPX (including SPXW) and VIX options will be available for trading on the Exchange during the Curb session. FLEX Options with the same underlying index will also be deemed eligible for trading during the Curb session. Transactions effected during the Curb session will have the same trade date as the immediately preceding RTH session (*i.e.,* the day on which the transactions were effected), whereas transactions effected during a GTH session have a different trade date than the immediately preceding RTH session (*i.e.,* the trading day following the RTH session that immediately preceded it).

In connection with the launch of the Curb session, the Exchange proposes to update its Fees Schedule to reflect and incorporate references to the Curb session and make clear which fees, surcharges and programs also apply during Curb. Specifically, the fees (including surcharges)[5] and programs[6] applicable during RTH for SPX, SPXW and VIX will apply in the same manner during Curb. To make clear that such fees, surcharges and programs also apply during Curb, the Exchange proposes to adopt and append Footnote 42 to all applicable fees, surcharges and programs.[7] Footnote 42 would also make clear that Curb is a separate trading session from RTH and GTH for VIX, SPX and SPW and commences at 3:15PM CST and terminates at 4:00PM CST,[8] and is conducted on an all-electronic trading model with no open outcry capability.

The Exchange also proposes to update the notes sections of certain tables in the Fees Schedule to incorporate references to the Curb session. First, the Exchange

[69] 17 CFR 200.30–3(a)(12) and (57).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] RTH for transactions in equity options (including options on individual stocks, ETFs, ETNs, and other securities) are the normal business days and hours set forth in the rules of the primary market currently trading the securities underlying the options, except for options on ETFs, ETNs, Index Portfolio Shares, Index Portfolio Receipts, and Trust Issued Receipts the Exchange designates to remain open for trading beyond 4:00 p.m. Eastern Time (ET) but in no case later than 4:15 p.m. ET. RTH for transactions in index options are from 9:30 a.m. to 4:15 p.m. ET, subject to certain exceptions.

[4] The GTH session currently begins at 8:15 p.m. (previous day) and goes until 9:15 a.m. ET on Monday through Friday.

[5] *See* Cboe Options Fees Schedule, Rate Table—Underlying Symbol List A (including all surcharges), Electronic Trading Permit Fees, Trade Processing Services fee and Regulatory Fees.

[6] *See* Cboe Options Fees Schedule, SPX/SPXW and SPESG Liquidity Provider Sliding Scale, Cboe Options Clearing Trading Permit Holder Proprietary Products Sliding Scale, Cboe Options Clearing Trading Permit Holder VIX Sliding Scale, Select Customer Options Reduction (''SCORe'') Program, Customer Large Trade Discount, Large Trade Discount, Trading Permit Holder Transaction Fee Policies and Rebate Programs, and Frequent Trader Program.

[7] Only applicable RTH fees, surcharges and programs will apply during Curb. For example, since Curb will operate as an all-electronic trading session, no floor related fees such as floor brokerage fees will apply during Curb.

[8] The Exchange notes that although its rulebook references time in Eastern Time, its Fees Schedule uses Central Standard Time (''CST'').

proposes to make clear in the tables of the Clearing Trading Permit Holder Proprietary Products Sliding Scale and Clearing Trading Permit Holder VIX Sliding Scale that volume in Curb, in addition to GTH and RTH, will all be aggregated for purposes of calculating the volume thresholds. The Exchange also proposes to add a reference to the Curb session in the Frequent Trader Program making clear that Customers can obtain unique Frequent Trader IDs which can be appended by executing agents to orders submitted to the Exchange during Curb, in addition to RTH and GTH. The Exchange lastly proposes to update the notes section of the Electronic Trading Permit Fees table to make clear that Market-Maker Electronic Access Permits, Electronic Access Permits, and Clearing TPH Permits all entitle the holder to access the Exchange in the respective capacity during Curb, in addition to RTH and GTH.

The Exchange also proposes to make clarifying updates to the Fees Schedule as it relates to fees assessed during GTH. First, the Exchange proposes to update Footnote 37 of the Fees Schedule, which currently provides that GTH is a separate trading session from RTH for VIX, SPX and SPW and also that GTH commences at 7:15 p.m. CST and terminates at 8:15AM CST and is conducted on an all-electronic trading model with no open outcry capability. Specifically, the Exchange proposes to update Footnote 37 to clarify that GTH is a separate trading session from both RTH and Curb trading sessions. The Exchange also proposes to modify the way Footnote 37 is appended to various fees, surcharges and programs. Currently anywhere that Footnote 37 is appended, the Exchange also states ''(Also applies to GTH)'' immediately preceding the appended Footnote 37 reference. The Exchange proposes to eliminate this language in order to streamline the Fees Schedule and make it easier to read. The Exchange does not believe this language is necessary or needed to understand when a fee, surcharge or program applies during GTH since the Exchange will still maintain all appended references to Footnote 37 itself. However, to alleviate any potential confusion, the Exchange also proposes to add the language ''[a]pplies during Global Trading Hours (''GTH'')'' to the Footnote 37 Description.

The Exchange next proposes to append Footnote 37 to the SPX/SPXW and SPESG Liquidity Provider Sliding Scale, SCORe Program, and Frequent Trader Program tables as it was inadvertently not added to the headers of those tables previously, notwithstanding its application during GTH as well as RTH. Lastly, the Exchange proposes to update the header relating to AIM Agency/Primary and AIM Contra fees included in the Rate Table—Underlying Symbol List A. Particularly, the header currently provides that such fees apply to ''VIX Only'' and in ''SPX (incl[uding] SPXW in GTH Only''. The Exchange notes that previously AIM was only activated for SPX and SPXW during GTH (and not RTH). The Exchange notes however, that currently SPX and SPXW are currently eligible to participate in AIM during either session, and will also be eligible to participate in AIM during Curb. As such, the Exchange proposes to eliminate this reference and provide instead that the rates (which currently are the same as non-AIM rates) apply to VIX and SPX (including SPXW), as well as append Footnotes 37 and 42 to clarify the applicability to each trading session.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the objectives of Section 6 of the Act,[9] in general, and furthers the objectives of Section 6(b)(4),[10] in particular, as it is designed to provide for the equitable allocation of reasonable dues, fees and other charges among its Members and issuers and other persons using its facilities. The Exchange also believes that the proposed rule change is consistent with the objectives of Section 6(b)(5) [11] requirements that the rules of an exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest, and, particularly, is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

First, the Exchange believes that the proposed rule change is reasonable, equitable and not unfairly discriminatory because all applicable fees, surcharges and programs that apply to SPX, SPWX and VIX during RTH will also apply during Curb, which although is a separate trading session from RTH, merely provides an additional 45 minutes of trading in these products during which transactions effected will have the same trade date as the immediately preceding RTH session. The Exchange believes proposed Footnote 42 will add clarity and transparency to the Fees Schedule by providing details around the Curb session as well as making clear that the fees, surcharges, and programs listed in the Fees Schedule apply to Curb just as they apply to RTH. The proposed updates related to Footnote 37 are also meant to streamline the Fees Schedule, make it easier to read and alleviate potential confusion as to the applicability of certain fees and programs.

The Exchange believes that the proposed rule change is equitable and not unfairly discriminatory because current fees, surcharges and programs currently applicable during RTH for SPX, SPXW and VIX will apply in the same manner during Curb. Also, the fee amounts for each separate type of market participant will continue to be assessed equally for each product to all such market participants (*i.e.* all Broker-Dealer orders will be assessed the same amount, all Joint Back-Office orders will be assessed the same amount, etc.). The Exchange lastly notes that the newly adopted Curb session will apply equally to all market participants, in that, all market participants may choose to trade during Curb.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange believes the proposed amendments to its Fee Schedule will not impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange does not believe that the proposed rule change will impose any burden on intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act because the proposed changes apply uniformly to all market participants that choose to participate in the new Curb session. As discussed, all fees, surcharges and programs applicable during RTH will also apply in the same manner during the Curb session.

The Exchange does not believe that the proposed rule change will impose any burden on intermarket competition that is not necessary or appropriate in furtherance of the purposes of the Act because the proposed rule changes apply only to products exclusively listed on the Exchange. Additionally, the Exchange notes it operates in a highly competitive market. In addition to Cboe Options, TPHs have numerous alternative venues that they may

[9] 15 U.S.C. 78f.

[10] 15 U.S.C. 78f(b)(4).

[11] 15 U.S.C. 78f.(b)(5).

participate on and direct their order flow, including 15 other options exchanges, as well as off-exchange venues, where competitive products are available for trading. Based on publicly available information, no single options exchange has more than 16% of the market share of executed volume of options trades.[12] Therefore, no exchange possesses significant pricing power in the execution of option order flow. Moreover, the Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. Specifically, in Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues and, also, recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [13] The fact that this market is competitive has also long been recognized by the courts. In NetCoalition v. Securities and Exchange Commission, the D.C. Circuit stated as follows: ''[n]o one disputes that competition for order flow is 'fierce.' . . . As the SEC explained, '[i]n the U.S. national market system, buyers and sellers of securities, and the broker-dealers that act as their order-routing agents, have a wide range of choices of where to route orders for execution'; [and] 'no exchange can afford to take its market share percentages for granted' because 'no exchange possesses a monopoly, regulatory or otherwise, in the execution of order flow from broker dealers'. . ..''.[14] Accordingly, the Exchange does not believe its proposed changes to the incentive programs impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange has not solicited, and does not intend to solicit, comments on this proposed rule change. The Exchange has not received any written comments from members or other interested parties.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act [15] and paragraph (f) of Rule 19b–4 [16] thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission will institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–CBOE–2022–022 on the subject line.

Paper Comments

- Send paper comments in triplicate to: Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–CBOE–2022–022. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–CBOE–2022–022 and should be submitted on or before May 31, 2022.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[17]

J. Matthew DeLesDernier,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[SEC File No. 270–247, OMB Control No. 3235–0259]

Submission for OMB Review; Comment Request

Upon Written Request, Copies Available From: Securities and Exchange Commission, Office of FOIA Services, 100 F Street NE, Washington, DC 20549–2736

Extension:
Rule 19h–1

Notice is hereby given that pursuant to the Paperwork Reduction Act of 1995 (''PRA'') (44 U.S.C. 3501 *et seq.*) the Securities and Exchange Commission (''Commission'') has submitted to the Office of Management and Budget (''OMB'') a request for approval of extension of the previously approved collection of information provided for in Rule 19h–1 (17 CFR 240.19h–1), under the Securities Exchange Act of 1934 (15 U.S.C. 78a *et seq.*).

Rule 19h–1 prescribes the form and content of notices and applications by self-regulatory organizations (''SROs'') regarding proposed admissions to, or continuances in, membership, participation or association with a member of any person subject to a statutory disqualification.

The Commission uses the information provided in the submissions filed pursuant to Rule 19h–1 to review decisions by SROs to permit the entry into or continuance in the securities business of persons who have committed serious misconduct. The filings submitted pursuant to the Rule also permit inclusion of an application to the Commission for consent to associate with a member of an SRO notwithstanding a Commission order barring such association.

The Commission reviews filings made pursuant to the Rule to ascertain whether it is in the public interest to permit the employment in the securities business of persons subject to statutory disqualification. The filings contain information that is essential to the staff's review and ultimate determination on whether an association or employment is in the public interest and consistent with investor protection.

It is estimated that approximately 20 respondents will make submissions pursuant to this Rule annually. With respect to submissions for Rule 19h–1(a) notices, and based upon past submissions, the staff estimates that respondents will make a total of 11 submissions per year. The staff estimates that the average number of hours necessary to complete a submission pursuant to Rule 19h–1(a) notices is 80 hours (for a total annual burden for all respondents in the amount of 17,600 hours). With respect to submissions for Rule 19h–1(a)(4) notifications, and based upon past submissions, the staff estimates that respondents will make a total of 9 submissions per year. The staff estimates that the average number of hours necessary to complete a submission pursuant to Rule 19h–1(a)(4) notifications is 80 hours (for a total annual burden for all respondents in the amount of 14,400 hours). With respect to submissions for Rule 19h–1(b), and based upon past submissions, the staff estimates that respondents will make a total of 28 submissions per year. The staff estimates that the average number of hours necessary to complete a submission pursuant to Rule 19h–1(b) is 13 hours (for a total annual burden for all respondents in the amount of 7,280 hours). With respect to submissions for Rule 19h–1(d), and based upon past submissions, the staff estimates that respondents will make a total of 5 submissions per year. The staff estimates that the average number of hours necessary to complete a submission pursuant to Rule 19h–1(d) is 80 hours (for a total annual burden for all respondents in the amount of 8,000 hours). The aggregate annual burden for all respondents is thus approximately 47,280 hours (17,600 +14,400 + 7,280 + 8,000).

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information under the PRA unless it displays a currently valid OMB control number.

The public may view background documentation for this information collection at the following website: *www.reginfo.gov.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function. Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to (i) *www.reginfo.gov/public/do/PRAMain* and (ii) David Bottom, Director/Chief Information Officer, Securities and Exchange Commission, c/o John Pezzullo, 100 F Street NE, Washington, DC 20549, or by sending an email to: *PRA_Mailbox@sec.gov.*

Dated: May 4, 2022.

J. Matthew DeLesDernier,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–94847; File No. SR–MEMX–2022–10]

Self-Regulatory Organizations; MEMX LLC; Notice of Filing of a Proposed Rule Change To Adopt Rules To Govern the Trading of Options on the Exchange for a New Facility Called MEMX Options

May 4, 2022.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b-4 thereunder,[2] notice is hereby given that on April 21, 2022, MEMX LLC (''MEMX'' or the ''Exchange'') filed with the Securities and Exchange Commission (''SEC'' or ''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange is filing with the Commission a proposed rule change to adopt rules to govern the trading of options on the Exchange. The text of the proposed rule change is provided in Exhibit 5.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

Purpose

The Exchange is proposing to adopt a series of rules in connection with MEMX Options, which will be a facility of the Exchange. MEMX Options will operate an electronic trading system developed to trade options (the ''System'') leveraging the Exchange's existing robust and resilient technology platform that it uses to operate its cash equities market today. The fundamental premise of the proposal is that the Exchange will operate its options market much as it operates its cash equities market today and in a manner similar to that of other options exchanges, with a simplified suite of conventional order types and functionality that is designed to provide for an efficient, robust, and transparent order matching process. Much of the proposed functionality for MEMX Options is substantially similar to that offered by other options exchanges, primarily Cboe BZX Exchange, Inc. (''BZX''). Thus, the Exchange proposes to adopt rules applicable to MEMX Options that are substantively identical or substantially similar to the approved rules of BZX applicable to the BZX options market (''BZX Options''), with certain proposed changes or omissions that are described below.

The System will provide for the electronic display and execution of orders in price/time priority without regard to the status of the entities that are entering orders. All Exchange Members will be eligible to participate in MEMX Options provided that the Exchange specifically authorizes them to trade in the System. The System will

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

provide a routing service for orders when trading interest is not present on MEMX Options and will comply with all applicable securities laws and regulations and the obligations of the Options Order Protection and Locked/Crossed Market Plan.

MEMX Options Members

Pursuant to the proposed rules in Chapter 17 (Participation on MEMX Options), the Exchange will authorize any Exchange Member who meets certain enumerated qualification requirements (any such Member, an ''Options Member'') and any Options Member's Sponsored Participants to obtain access to, and transact business on, MEMX Options.

There will be two types of Options Members—Options Order Entry Firms (''OEFs'') and Options Market Makers. OEFs will be those Options Members representing Customer Orders as agent on MEMX Options or trading as principal on MEMX Options. Options Market Makers will be those Options Members registered with the Exchange as Options Market Makers pursuant to proposed Rule 22.2. To become an Options Market Maker, an Options Member will be required to register by filing a written application. The Exchange will not place any limit on the number of entities that may become Options Market Makers, the number of appointments an Options Market Maker may have, or the number of Options Market Makers that may have appointments in a class unless the Exchange determines to impose any such limit based on system constraints, capacity restrictions, or other factors relevant to protecting the integrity of the System. The Exchange will not impose any such limitations until it has submitted objective standards for imposing the limits to the Commission for its review and approval.

Options Market Makers will be required to electronically engage in a course of dealing reasonably calculated to contribute to the maintenance of fair and orderly markets. Among other things, an Options Market Maker would generally have to satisfy the following responsibilities and duties during trading: (1) On a daily basis maintain a two-sided market on a continuous basis in at least 60% of the cumulative number of seconds, or such higher percentage as the Exchange may announce in advance, for which that Options Market Maker's appointed classes are open for trading, excluding any adjusted series, any intraday add-on series on the day during which such series are added for trading, any Quarterly Option Series, and any series with an expiration of greater than 270 days; [3] (2) enter a size of at least one contract for its best bid and its best offer; and (3) maintain minimum net capital in accordance with Commission and Exchange rules. Substantial or continued failure by an Options Market Maker to meet any of its obligations and duties will subject the Options Market Maker to disciplinary action, suspension, or revocation of the Options Market Maker's registration as such or its appointment in one or more of its appointed options classes.

Options Market Makers receive certain benefits for carrying out their duties. For example, a lender may extend credit to a broker-dealer without regard to the restrictions in Regulation T of the Board of Governors of the Federal Reserve System if the credit is to be used to finance the broker-dealer's activities as a specialist or market maker on a national securities exchange. Thus, an Options Market Maker has a corresponding obligation to hold itself out as willing to buy and sell options for its own account on a regular or continuous basis to justify this favorable treatment.

Every Options Member shall at all times maintain membership in another registered options exchange that is not registered solely under Section 6(g) of the Exchange Act [4] or in FINRA. OEF's that transact business with Public Customers must at all times be members of FINRA. Pursuant to proposed Rule 17.2(g), every Options Member will be required to have at least one registered Options Principal who satisfies the criteria of that rule, including the satisfaction of a proper qualification examination. An OEF may only transact business with Public Customers if such Options Member also is an Options Member of another registered national securities exchange or association with which the Exchange has entered into an agreement under Rule 17d-2 under the Exchange Act [5] pursuant to which such other exchange or association shall be the designated options examining authority for the OEF.

The proposed rules relating to qualification and participation on MEMX Options as an Options Member (including as an OEF and an Options Market Maker) are substantively identical to the relevant rules of BZX Options.[6]

As provided in proposed Rule 16.2, existing Exchange Rules applicable to the MEMX equities market contained in Chapters 1 through 15 of the Exchange Rules will apply to Options Members unless a specific Exchange Rule applicable to the MEMX Options market (proposed Chapters 16 through 29 of the Exchange Rules) governs or unless the context otherwise requires. Options Members can therefore provide sponsored access to the MEMX Options Exchange to a non-Member (*i.e.,* a Sponsored Participant) pursuant to Rule 11.3 of the Exchange Rules.

Definitions

The Exchange proposes to define a series of terms under proposed Rule 16.1 (Definitions), which are to be used in proposed Chapters 16 to 29 relating to the trading of options contracts on the Exchange. Each of the terms defined in proposed Rule 16.1 is either identical or substantially similar to definitions included in BZX Rule 16.1.

The definitions under proposed Rule 16.1 are as follows:

• *ABBO.* The term ''ABBO'' means the best bid(s) or offer(s) disseminated by other Eligible Exchanges (as defined in proposed Rule 27.1) and calculated by the Exchange based on market information the Exchange receives from OPRA.

• *Aggregate Exercise Price.* The term ''aggregate exercise price'' means the exercise price of an options contract multiplied by the number of units of the underlying security covered by the options contract.

• *American-Style Option.* The term ''American-style option'' means an options contract that, subject to the provisions of proposed Rule 23.1 (relating to the cutoff time for exercise instructions) and to the Rules of the Clearing Corporation, may be exercised at any time from its commencement time until its expiration.

• *Associated Person and Person Associated with an Options Member.* The terms ''associated person'' and ''person associated with an Options Member'' mean any partner, officer, director, or branch manager of an Options Member (or any person occupying a similar status or performing similar functions), any person directly or indirectly controlling, controlled by, or under common control with an Options Member or any employee of an Options Member.

[3] The Exchange notes that it also proposes to adopt provisions that exclude from the calculation of continuous quoting those times that an Options Market Maker is experiencing a technical failure or limitation, during a trading halt, suspension or pause in the underlying security, or when the underlying security is in a limit up-limit down state.

[4] 15 U.S.C. 78f(g).

[5] 17 CFR 240.17d–2.

[6] *See* BZX Rules, Chapters XVII and XXII.

• *Bid.* The term ''bid'' means a limit order to buy one or more options contracts.

• *Board.* The term ''Board'' means the Board of Directors of MEMX LLC.

• *Call.* The term ''call'' means an options contract under which the holder of the option has the right, in accordance with the terms of the option, to purchase from the Clearing Corporation the number of shares of the underlying security covered by the options contract.

• *Capacity.* The term ''Capacity'' means the capacity in which a User submits an order, which the User specifies by applying the corresponding code to the order according to the specifications for MEMX Options.

• *Class of Options.* The terms ''class'' or ''class of options'' mean all options contracts with the same unit of trading covering the same underlying security or index.

• *Clearing Corporation and OCC.* The terms ''Clearing Corporation'' and ''OCC'' mean The Options Clearing Corporation.

• *Clearing Member.* The term ''Clearing Member'' means an Options Member that is self-clearing or an Options Member that clears MEMX Options Transactions for other Members of MEMX Options.

• *Closing Purchase Transaction.* The term ''closing purchase transaction'' means a MEMX Options Transaction that reduces or eliminates a short position in an options contract.

• *Closing Writing Transaction.* The term ''closing writing transaction'' means a MEMX Options Transaction that reduces or eliminates a long position in an options contract.

• *Covered Short Position.* The term ''covered short position'' means (i) an options position where the obligation of the writer of a call option is secured by a ''specific deposit'' or an ''escrow deposit'' meeting the conditions of Rules 610(f) or 610(g), respectively, of the Rules of the Clearing Corporation, or the writer holds in the same account as the short position, on a share-for-share basis, a long position either in the underlying security or in an options contract of the same class of options where the exercise price of the options contract in such long position is equal to or less than the exercise price of the options contract in such short position; and (ii) an options position where the writer of a put option holds in the same account as the short position, on a share-for-share basis, a long position in an options contract of the same class of options where the exercise price of the options contract in such long position is equal to or greater than the exercise price of the options contract in such short position.

• *Customer.* The term ''Customer'' means a Public Customer or a broker-dealer.

• *Customer Order.* The term ''Customer Order'' means an agency order for the account of a Customer.

• *Discretion.* The term ''discretion'' means the authority of a broker or dealer to determine for a Customer the type of option, the class or series of options, the number of contracts, or whether options are to be bought or sold.

• *European-Style Option.* The term ''European-style option'' means an options contract that, subject to the provisions of proposed Rule 23.1 (relating to the cutoff time for exercise instructions) and to the Rules of the Clearing Corporation, can be exercised only on its expiration date.

• *Exchange Act.* The term ''Exchange Act'' means the Securities Exchange Act of 1934, as amended, or Rules thereunder.

• *Exercise Price.* The term ''exercise price'' means the specified price per unit at which the underlying security may be purchased or sold upon the exercise of an options contract.

• *He, Him, and His.* The terms ''he,'' ''him'' and ''his'' are deemed to refer to persons of female as well as male gender, and to include organizations, as well as individuals, when the context so requires.

• *Index Option.* The term ''index option'' means an options contract that is an option on a broad-based, narrow-based or micro narrow-based index of equity securities prices.

• *Individual Equity Option.* The term ''individual equity option'' means an options contract which is an option on an equity security.

• *Long Position.* The term ''long position'' means a person's interest as the holder of one or more options contracts.

• *MEMX Exchange and Exchange.* The terms ''MEMX Exchange'' and ''Exchange'' mean MEMX LLC.

• *MEMX Exchange Rules and Exchange Rules.* The terms ''MEMX Exchange Rules'' and ''Exchange Rules'' mean the rules of the Exchange, including those for equities and options.

• *MEMX Options.* The term ''MEMX Options'' means the MEMX LLC Options Market, an options trading facility of the Exchange under Section 3(a)(2) of the Exchange Act.

• *MEMX Options Book.* The term ''MEMX Options Book'' means the electronic book of options orders maintained by the Trading System.

• *MEMX Options Transaction.* The term ''MEMX Options Transaction'' means a transaction involving an options contract that is effected on or through MEMX Options or its facilities or systems.

• *NBB, NBO, and NBBO.* The term ''NBB'' means the national best bid, the term ''NBO'' means the national best offer, and the term ''NBBO'' means the national best bid or offer as calculated by MEMX Options based on market information received by MEMX Options from OPRA.

• *Offer.* The term ''offer'' means a limit order to sell one or more options contracts.

• *OPRA.* The term ''OPRA'' means the Options Price Reporting Authority.

• *Opening Purchase Transaction.* The term ''opening purchase transaction'' means a MEMX Options Transaction that creates or increases a long position in an options contract.

• *Opening Writing Transaction.* The term ''opening writing transaction'' means a MEMX Options Transaction that creates or increases a short position in an options contract.

• *Options Contracts.* The term ''options contract'' means a put or a call issued, or subject to issuance by the Clearing Corporation pursuant to the Rules of the Clearing Corporation.

• *Options Market Close and Market Close.* The terms ''options market close'' and ''market close'' mean the time the Exchange specifies for the end of a trading session on the Exchange on that trading day.

• *Options Market-Maker and Market-Maker.* The terms ''Options Market-Maker'' and ''Market-Maker'' mean an Options Member registered with the Exchange for the purpose of making markets in options contracts traded on the Exchange and that is vested with the rights and responsibilities specified in proposed Chapter 22.

• *Options Market Open and Market Open.* The terms ''options market open'' and ''market open'' mean the time the Exchange specifies for the beginning of a trading session on the Exchange on that trading day.

• *Options Member.* The term ''Options Member'' means a firm, or organization that is registered with the Exchange pursuant to proposed Chapter 17 for purposes of participating in options trading on MEMX Options as an ''Options Order Entry Firm'' or ''Options Market-Maker.''

• *Options Member Agreement.* The term ''Options Member Agreement'' means the agreement to be executed by Options Members to qualify to participate on MEMX Options.

• *Options Order Entry Firm, Order Entry Firm, and OEF.* The terms ''Options Order Entry Firm'' and ''Order

Entry Firm'' or ''OEF'' mean those Options Members representing as agent Customer Orders on MEMX Options and those non-Market-Maker Members conducting proprietary trading.

• *Options Principal.* The term ''Options Principal'' means a person engaged in the management and supervision of the Options Member's business pertaining to options contracts that has responsibility for the overall oversight of the Options Member's options related activities on the Exchange.

• *Order.* The term ''order'' means a firm commitment to buy or sell options contracts as defined in proposed Rule 21.1(c).

• *Outstanding.* The term ''outstanding'' means an options contract which has been issued by the Clearing Corporation and has neither been the subject of a closing writing transaction nor has reached its expiration date.

• *Primary Market.* The term ''primary market'' means, in the case of securities listed on Nasdaq Stock Market, LLC (''Nasdaq''), the market that is identified as the listing market pursuant to Section X(d) of the approved national market system plan governing the trading of Nasdaq-listed securities, and, in the case of securities listed on another national securities exchange, the market that is identified as the listing market pursuant to Section XI of the Consolidated Tape Association Plan.

• *Priority Customer and Priority Customer Order.* The term ''Priority Customer'' means any person or entity that is not: (A) A broker or dealer in securities; or (B) a Professional. The term ''Priority Customer Order'' means an order for the account of a Priority Customer.

• *Professional.* The term ''Professional'' means any person or entity that (A) is not a broker or dealer in securities; and (B) places more than 390 orders in listed options per day on average during a calendar month for its own beneficial account(s). All Professional orders shall be appropriately marked by Options Members.

• *Protected Quotation.* The term ''Protected Quotation'' has the meaning provided in proposed Rule 27.1.[7]

• *Public Customer.* The term ''Public Customer'' means a person that is not a broker or dealer in securities.

• *Put.* The term ''put'' means an options contract under which the holder of the option has the right, in accordance with the terms and provisions of the option and the Rules of the OCC, to sell to the Clearing Corporation the number of units of the underlying security covered by the options contract, at a price per unit equal to the exercise price, upon the timely exercise of such option.

• *Quarterly Options Series.* The term ''Quarterly Options Series'' means a series in an options class that is approved for listing and trading on the Exchange in which the series is opened for trading on any business day and expires at the close of business on the last business day of a calendar quarter.

• *Quote and Quotation.* The terms ''quote'' and ''quotation'' mean a bid or offer entered by a Market-Maker as a firm order that updates the Market-Maker's previous bid or offer, if any.

• *Responsible Person.* The term ''Responsible Person'' means a U.S.-based officer, director, or management-level employee of an Options Member, who is registered with the Exchange as an Options Principal, responsible for the direct supervision and control of associated persons of that Options Member.

• *Rules of MEMX Options.* The term ''Rules of MEMX Options'' mean the rules contained in proposed Chapters 16 to 29 of the MEMX LLC Exchange Rules governing the trading of options on the Exchange.

• *Rules of the Clearing Corporation and Rules of the OCC.* The terms ''Rules of the Clearing Corporation'' and ''Rules of the OCC'' mean the Certificate of Incorporation, the By-Laws and the Rules of the Clearing Corporation, and all written interpretations thereof, as may be in effect from time to time.

• *SEC and Commission.* The terms ''SEC'' and ''Commission'' mean the United States Securities and Exchange Commission.

• *Series of Options.* The terms ''series'' or ''series of options'' mean all options contracts of the same class that are the same type of options and have the same exercise price and expiration date.

• *Short Position.* The term ''short position'' means a person's interest as the writer of one or more options contracts.

• *Short Term Option Series.* The term ''Short Term Option Series'' means a series in an option class that is approved for listing and trading on the Exchange in which the series is opened for trading on any Monday, Tuesday, Wednesday, Thursday or Friday that is a business day and that expires on the Monday, Wednesday or Friday of the next business week, or, in the case of a series that is listed on a Friday and expires on a Monday, is listed one business week and one business day prior to that expiration. If a Tuesday, Wednesday, Thursday or Friday is not a business day, the series may be opened (or shall expire) on the first business day immediately prior to that Tuesday, Wednesday, Thursday or Friday, respectively. For a series listed pursuant to this section for Monday expiration, if a Monday is not a business day, the series shall expire on the first business day immediately following that Monday.

• *SRO.* The term ''SRO'' means a self-regulatory organization as defined in Section 3(a)(26) of the Exchange Act.

• *Trading System and System.* The terms ''Trading System'' and ''System'' mean the automated trading system used by MEMX Options for the trading of options contracts.

• *Type of Option*. The term ''type of option'' means the classification of an options contract as either a put or a call.

• *Uncovered.* The term ''uncovered'' means a short position in an options contract that is not covered.

• *Underlying Security.* The term ''underlying security'' means the security that the Clearing Corporation shall be obligated to sell (in the case of a call option) or purchase (in the case of a put option) upon the valid exercise of an options contract.

• *User.* The term ''User'' means any Options Member or Sponsored Participant who is authorized to obtain access to the System pursuant to Rule 11.3 (Access).

Execution System

The Exchange's options System will leverage the Exchange's current state-of-the-art technology, including its customer connectivity, messaging protocols, quotation and execution engine, order router, data feeds, and network infrastructure. This approach minimizes the technical effort required for existing Exchange Members to begin trading options on MEMX Options. As a result, MEMX Options will closely resemble the Exchange's equities market, as well as other options markets, such as BZX Options, that offer true price/time priority across all participants rather than differentiating between participant/trading interest.

Like the Exchange's system for equities, as well as the BZX Options market, all trading interest entered into the System will be automatically executable. Orders entered into the System will be displayed anonymously. Thus, the System will offer anonymous

[7] As defined in proposed Rule 27.1, the term ''Protected Quotation'' refers to a Protected Bid or Protected Offer, and the terms ''Protected Bid'' and ''Protected Offer'' refer to a Bid or Offer in an options series, respectively, that: (A) Is disseminated pursuant to the OPRA Plan; and (B) is the highest priced Bid or lowest priced Offer, respectively, displayed by an Eligible Exchange.

trading, however, options trades are not currently anonymous through settlement. Accordingly, as set forth in proposed Rule 21.10, aggregated and individual transaction reports produced by the System will indicate the details of a User's transactions, including the contra party's executing firm ID (''EFID''), capacity, and clearing firm account number.[8] The Exchange will become an exchange member of the Options Clearing Corporation (''OCC''). The System will be linked to OCC for the Exchange to transmit locked-in trades for clearance and settlement.

Hours of Operation. As stated in proposed Rule 21.2, the MEMX Options System will begin accepting orders after 9:30 a.m. Eastern Time pursuant to the market opening procedures described in proposed Rule 21.7. Orders and bids and offers shall be open and available until 4:00 p.m. Eastern Time except for option contracts on Fund Shares, as defined in proposed Rule 19.3(i), option contracts on exchange-traded notes including Index-Linked Securities, as defined in proposed Rule 19.3(l), and option contracts on broad-based indexes, as defined in proposed Rule 29.1(j), which may close as of 4:15 p.m. Eastern Time. The proposed hours of operation on MEMX Options are the same as on BZX Options, except that BZX Options begins accepting orders at 7:30 a.m. Eastern Time that are then processed in the BZX Options opening process beginning at 9:30 a.m. Eastern Time.

Units of Trading. As stated in proposed Rule 21.3, the unit of trading in each series of options traded on MEMX Options will be the unit of trading established for that series by the OCC pursuant to the rules of the OCC and the agreements of the Exchange with the OCC. The proposed determination of the unit of trading for a series of options traded on MEMX Options is the same as on BZX Options pursuant to BZX Rule 21.3.

Minimum Quotation and Trading Increments. As stated in proposed Rule 21.5(a), the Exchange is proposing to apply the following quotation increments: (1) If the options series is trading at less than $3.00, five (5) cents; (2) if the options series is trading at $3.00 or higher, ten (10) cents; and (3) if the options series is trading pursuant to the Penny Interval Program one (1) cent if the options series is trading at less than $3.00, five (5) cents if the options series is trading at $3.00 or higher, unless for QQQQ, SPY, or IWM where the minimum quoting increment will be one (1) cent for all series. In addition, as stated in proposed Rule 21.5(b), the Exchange is proposing that the minimum trading increment for options contracts traded on MEMX Options will be one (1) cent for all series. Such proposed minimum quotation and trading increments are the same as on BZX Options pursuant to BZX Rules 21.5(a) and (b).

Penny Interval Program. As set forth in proposed Rule 21.5(d), the Exchange is proposing to adopt a Penny Interval Program that is substantially similar to the penny programs of other exchanges, including BZX Options pursuant to BZX Rule 21.5(d), which includes minimum quoting requirements for option classes listed under the Penny Interval Program. However, eligibility for inclusion in the Penny Interval Program will be limited to those classes already operating under penny programs of other options exchanges at the time MEMX Options is launched. The list of option classes included in the Penny Interval Program will be announced by the Exchange via circular distributed to Options Members and published by the Exchange on its website.

Order Types and Handling Instructions. The System will make available to Users two Order Types (as defined in proposed Rule 21.1(d))—Limit Orders and Market Orders—as well as various other instructions and modifiers that can be appended to such orders. The characteristics and functionality of each Order Type is substantially similar to what is currently approved for use in the Exchange's equities trading facility or on other options exchanges, including BZX Options, except where described below. MEMX Options will support bulk messages for Options Market Makers as specified in the description of each Order Type or other instruction. Proposed Rule 21.1(d) includes the following details with respect to Limit Orders and Market Orders:

- *Limit Order.* Limit Orders are orders (including bulk messages) to buy or sell an option at a specified price or better. A Limit Order is marketable when, for a Limit Order to buy, at the time it is entered into the System, the order is priced at the current inside offer or higher, or for a Limit Order to sell, at the time it is entered into the System, the order is priced at the current inside bid or lower.
- *Market Order.* Market Orders are orders to buy or sell at the best price available at the time of execution. Market Orders to buy or sell an option traded on MEMX Options will be rejected if they are received when the underlying security is subject to a ''Limit State'' or ''Straddle State'' as defined in the Plan to Address Extraordinary Market Volatility Pursuant to Rule 608 of Regulation NMS under the Act (the ''Limit Up-Limit Down Plan''). Bulk messages may not be Market Orders.

The System will also make available to Users several additional instructions that can be designated on an order (''Handling Instructions''). A Handling Instruction applied to a bulk message applies to each bid and offer within that bulk message. The Handling Instructions available on MEMX Options are described in proposed Rule 21.1(e) and will include the following:

- *Book Only.* Book Only is an instruction that an order is to be ranked and executed on the Exchange pursuant to proposed Rule 21.8 (Order Display and Book Processing) or cancelled, as appropriate, without routing away to another options exchange. Users may designate bulk messages as Book Only as set forth in proposed Rule 21.1(l).
- *Post Only.* Post Only is an instruction that an order is to be ranked and executed on the Exchange pursuant to proposed Rule 21.8 (Order Display and Book Processing) or cancelled, as appropriate, without routing away to another options exchange except that the order will not remove liquidity from the MEMX Options Book. The Exchange notes that, unlike a Post Only Order on BZX Options, an order with a Post Only instruction on MEMX Options will not remove liquidity even if the value of price improvement associated with such execution equals or exceeds the sum of fees charged for such execution and the value of any rebate that would be provided if the order posted to the MEMX Options Book and subsequently provided liquidity.[9] A Market Order cannot be designated as Post Only.[10] Users may designate bulk messages as

[8] The Exchange shall also reveal a User's identity: (i) When a registered clearing agency ceases to act for a participant, or the User's clearing firm, and the registered clearing agency determines not to guarantee the settlement of the User's trades; and (ii) for regulatory purposes or to comply with an order of an arbitrator or court. *See* proposed Rule 21.10. The Exchange notes that proposed Rule 21.10 is identical to BZX Rule 21.10.

[9] The Exchange notes that other options exchanges offer functionality equivalent to the Post Only instruction that does not remove liquidity based on potential price improvement. *See, e.g.,* NYSE Arca Rule 6.62–O.(t) and NYSE Arca Rule 6.62P–O(e)(2), each of which defines an ALO Order, which is an order that does not remove liquidity from the NYSE Arca order book without any exception for removing liquidity when price improvement could be obtained.

[10] The Exchange notes that the comparable description of Post Only Orders on BZX Options in BZX Rule 21.1(d)(8) does not specify that Market Orders cannot be designated as Post Only, however, the Exchange believes the proposed functionality is the same.

Post Only as set forth in proposed Rule 21.1(l).

• *Intermarket Sweep Order (''ISO'').* ISOs are orders that shall have the meaning provided in proposed Rule 27.1, which relates to intermarket trading. Such orders may be executed at one or multiple price levels in the System without regard to Protected Quotations at other options exchanges (*i.e.,* may trade through such quotations). The Exchange relies on the marking of an order as an ISO order when handling such order, and thus, it is the entering Options Member's responsibility, not the Exchange's responsibility, to comply with the requirements relating to ISOs. ISOs are not eligible for routing pursuant to proposed Rule 21.9. A Market Order cannot be designated as an Intermarket Sweep Order.[11] Users may not designate bulk messages as ISOs.

The Exchange notes that, in contrast to BZX Options, it has proposed characterizing Book Only, Post Only, and ISO as Handling Instructions rather than Order Types, as each of these instructions represents an additional modifier that can be appended to a Market Order or Limit Order rather than a unique Order Type. The Exchange does not believe that this characterization changes anything with respect to the proposed operation of the Exchange but rather is a more accurate characterization of the proposed functionality. The Exchange notes that each of the proposed Order Types and Handling Instructions available on MEMX Options is substantially similar to the same order type available on BZX Options, except where described above or as relates to the display-price sliding process offered by BZX Options, which the Exchange is not proposing to adopt. The Exchange also notes that BZX Options offers additional order types, such as reserve orders, minimum quantity orders, price-improving orders, stop orders, and stop limit orders, none of which the Exchange proposes to adopt.

Time-in-Force Designations. Users entering orders into the System may designate such orders to remain in force and available for display and/or potential execution for varying periods of time. Unless cancelled earlier, once these time periods expire, the order (or the unexecuted portion thereof) is returned to the entering party. A Time-in-Force applied to a bulk message applies to each bid and offer within that bulk message. Unless otherwise specified in the Exchange Rules or the context indicates otherwise, the Exchange determines which of the following Times-in-Force are available on a class or system basis. The Time-in-Force designations available on MEMX Options are described in proposed Rule 21.1(f) and will include the following:

• *Immediate Or Cancel (''IOC'').* IOC means, for an order so designated, an order that is to be executed in whole or in part as soon as such order is received. The portion not so executed immediately on the Exchange or another options exchange is cancelled and is not posted to the MEMX Options Book. IOC orders that are not designated as Book Only and that cannot be executed in accordance with proposed Rule 21.8 on the System when reaching the Exchange will be eligible for routing away pursuant to proposed Rule 21.9. Users may designate bulk messages as IOC.

• *Day.* Day means, for an order so designated, an order to buy or sell which, if not executed expires at market close. Users may designate bulk messages as Day.

The Exchange notes that each of the proposed Time-in-Force designations available on MEMX Options is identical to the same Time-in-Force designation available on BZX Options, except that BZX Options rules describe Time-in-Force designations as applicable only to limit orders on BZX Options, whereas the Exchange has proposed allowing such designations to be placed on both Limit Orders and Market Orders. The Exchange also notes that BZX Options offers additional Times-in-Force, such as good til cancelled, fill-or-kill, at the open, limit-on-close, and market-on-close, none of which the Exchange proposes to adopt.

Member Match Trade Prevention Modifiers. As with its equities market, the Exchange will allow Users to use certain Match Trade Prevention (''MTP'') modifiers, which are described in proposed Rule 21.1(g). Any incoming order designated with an MTP modifier will be prevented from executing against a resting opposite side order also designated with an MTP modifier and originating from the same EFID, Exchange Member identifier, trading group identifier, or Exchange Sponsored Participant identifier. The Exchange will offer the following MTP modifiers: MTP Cancel Newest, described in proposed Rule 21.1(g)(1); MTP Cancel Oldest, described in proposed Rule 21.1(g)(2); and MTP Cancel Both, described in proposed Rule 21.1(g)(3). The Exchange notes that each of the proposed MTP modifiers available on MEMX Options is identical to the same MTP modifier available on BZX Options. The Exchange also notes that BZX Options offers additional MTP modifiers, such as MTP Decrement and Cancel and MTP Cancel Smallest, neither of which the Exchange proposes to adopt.

Re-Pricing Mechanism. Like other options exchanges, the Exchange proposes to offer a re-pricing mechanism to Users to comply with the order protection and trade through restrictions of the Options Order Protection and Locked/Crossed Market Plan. This re-pricing mechanism, described in proposed Rule 21.1(i), is referred to by the Exchange as Price Adjust and is identical to the Price Adjust mechanism offered by BZX Options pursuant to BZX Rule 21.1(i), with the exception of the handling of an order with a Post Only instruction subject to the Price Adjust process. Whereas BZX Options applies the Price Adjust process when a Post Only Order locks or crosses a Protected Quotation displayed on BZX Options and re-prices such Post Only Order pursuant to BZX Rule 21.1(i)(4), the Exchange is not proposing to adopt this clause and instead would cancel a Post Only Order that locks or crosses a Protected Quotation displayed on MEMX Options. As noted above, the Exchange is not proposing to offer a re-pricing mechanism equivalent to the display-price sliding process offered by BZX Options.

EFIDs. As proposed in Rule 21.1(j), the term ''EFIDs'' means Executing Firm IDs and shall refer to what the System uses to identify the User and the clearing number for the execution of orders and quotes submitted to the System with that EFID. A User may obtain one or more EFIDs from the Exchange (in a form and manner determined by the Exchange). The Exchange assigns an EFID to its Users. Each EFID corresponds to a single User and a single clearing number of a Clearing Member with the Clearing Corporation. A User may obtain multiple EFIDs, which may be for the same or different clearing numbers. A User is able (in a form and manner determined by the Exchange) to designate which of its EFIDs may be used for each of its ports. If a User submits an order or quote through a port with an EFID not enabled for that port, the System cancels or rejects the order or quote. The Exchange notes that its proposed Rule 21.1(j) is identical to BZX Rule 21.1(k) other than the use of the term ''User'' instead of ''Member.''

Ports and Bulk Messages. Proposed Rule 21.1(k) defines two types of ports:

[11] The Exchange notes that the comparable description of ISOs on BZX Options in BZX Rule 21.1(d)(9) does not specify that Market Orders cannot be designated as ISOs, however, the Exchange believes the proposed functionality is the same.

(1) A ''physical port,'' which provides a physical connection to the System and may provide access to multiple logical ports; and (2) a ''logical port'' or ''application session,'' which provides Users with the ability within the System to accomplish a specific function through a connection, such as order entry, data receipt, or access to information. The Exchange notes that each of the proposed types of ports available on MEMX Options is identical to the same types of ports on BZX Options, though instead of application session BZX Options also refers to logical ports as logical sessions. The Exchange also notes that BZX Options offers specific ports used for bulk messages whereas the Exchange proposes to offer bulk message functionality through the same logical ports as Users submit other messages to the Exchange. Other than this distinction, the Exchange proposes to adopt the same bulk message functionality as is offered by BZX Options. The term ''bulk message'' is proposed to mean a bid or offer included in a single electronic message a User submits with a Market Maker Capacity to the Exchange in which the User may enter, modify, or cancel up to an Exchange-specified number of bids and offers (which number the Exchange will announce via Exchange notice or publicly available technical specifications). The System handles a bulk message in the same manner as it handles an order or quote, unless the Exchange Rules specify otherwise.[12] Users may submit bulk messages through a logical port, subject to the following: bulk messages must contain a Time-in-Force of Day or IOC; a Market Maker with an appointment in a class must designate a bulk message for that class as Post Only or Book Only, and a non-appointed Market Maker must designate a bulk message for that class as Post Only; the System cancels or rejects a Post Only bulk message bid (offer) with a price that locks or crosses the Exchange best offer (bid) or ABO (ABB); the System executes a Book Only bulk message bid (offer) that locks or crosses the ABO (ABB) against offers (bids) resting in the Book at prices the same as or better than the ABO (ABB) and then cancels the unexecuted portion of that bid (offer).

Cancel Back. The term ''Cancel Back'' is proposed to mean an instruction a User designates on an order (including bulk messages) to not be subject to the Price Adjust process pursuant to proposed Rule 21.1(i). The System cancels or rejects an order with a Cancel Back instruction (immediately at the time the System receives the order or upon return to the System after being routed away) if displaying the order on the Book would create a violation of proposed Rule 27.3, or if the order cannot otherwise be executed or displayed in the Book at its limit price. The System executes a Book Only—Cancel Back order against resting orders. The proposed definition of Cancel Back in proposed Rule 21.1(m) is substantively identical to a Cancel Back Order defined in BZX Rule 21.1(m), except as relates to the display-price sliding process offered by BZX Options, which the Exchange is not proposing to adopt, and the fact that the Exchange has not proposed to execute an order with a Post Only instruction to the extent there is price improvement associated with such execution (including if such order also has a Cancel Back instruction).[13]

Market Opening Procedures. As stated in proposed Rule 21.7, the System shall open options, other than index options, for trading based on the first transaction after 9:30 a.m. Eastern Time in the securities underlying the options as reported on the first print disseminated pursuant to an effective national market system plan. With respect to index options, the System shall open for trading after a time period (which the Exchange determines for all classes) following the System's observation after 9:30 a.m. Eastern Time of the first disseminated index value for the index underlying an index option. Because the Exchange does not propose to adopt an opening cross or similar opening process, the opening trade that occurs on the Exchange will be a trade in the ordinary course of dealings on the Exchange. Accordingly, the System will ensure that the opening trade in an options series will not trade through a Protected Quotation at another options exchange, consistent with the general standard regarding trade throughs articulated in proposed Rule 21.6(e). The proposed market opening procedures for options other than index options are identical to the market opening procedures for such options that were initially adopted by BZX Options.[14] The proposed market opening procedures for index options are substantially similar to the market opening procedures for index options on BZX Options under current BZX Rule 21.7(d)(2) with respect to when the System opens. However, once the BZX Options system observes that an index value has been disseminated for the applicable index BZX Options then commences an opening rotation (*i.e.,* an opening process to match liquidity at a price determined by the BZX Options system) while the Exchange does not currently propose to adopt an opening process. Additionally, the Exchange proposes that it may delay the commencement of trading in any class of options in the interests of a fair and orderly market. As stated in proposed Rule 21.6(c), orders received prior to the opening of the System will be cancelled. The Exchange believes that it is appropriate to commence operations on MEMX Options with simplified procedures for when the System is open for trading because for a successful opening process to function, an exchange needs a critical mass of liquidity from market participants in order to price and execute opening transactions. In turn, as a new options exchange, MEMX Options does not know the amount of pre-opening interest it will have, and it will have to gain market share in order to accumulate such interest. MEMX Options will re-evaluate its opening procedures over time and may propose to add an opening process through a rule filing submitted to the Commission in the future.

Order Display/Matching System. The System will be based upon functionality currently approved for use in the Exchange's equities trading system. Specifically, the System will allow Users to enter Market Orders and priced Limit Orders to buy and sell MEMX Options-listed options. All orders (including bulk messages) will be designated for display (price and size) on an anonymous basis by the Exchange.

Routing. The MEMX Options Exchange will support orders that are designated to be routed to the National Best Bid and Offer (''NBBO'') as well as orders that will execute only within MEMX Options. Orders that are designated to execute at the NBBO will

[12] The Exchange notes that BZX Options maintains the definition of bulk message in BZX Rule 16.1 whereas MEMX Options has proposed to include this language in proposed Rule 21.1(l), where bulk messages are further described. Despite this distinction, as noted above, the functionality is the same other than the fact the Exchange does not propose to require a separate bulk port to submit bulk messages.

[13] *See supra* note 9 and accompanying text.

[14] *See* Securities Exchange Act Release No. 61419 (January 26, 2010), 75 FR 5157 (February 1, 2010) (SR–BATS–2009–031) (Notice of Filing of Amendment No. 1 and Order Granting Accelerated Approval of a Proposed Rule Change, as Modified by Amendment No. 1 Thereto, To Establish Rules Governing the Trading of Options on the BATS Options Exchange).

be routed to other options markets to be executed when the Exchange is not at the NBBO consistent with the Options Order Protection and Locked/Crossed Market Plan. Subject to the exceptions contained in proposed Rule 27.2(b), the System will ensure that an order will not be executed at a price that trades through another options exchange. An order that is designated by an Options Member as routable will be routed in compliance with applicable trade-through restrictions. Any order entered with a price that would lock or cross a Protected Quotation that is not eligible for either routing or the price adjust process as defined in proposed Rule 21.1(i) will be cancelled. Bulk messages are not eligible for routing.

The proposed routing functionality for MEMX Options is designed to operate much like the routing functionality for the Exchange's equities market, in that the Exchange offers a simple routing service to facilitate compliance with applicable regulations and does not currently offer other complex routing strategies. The Exchange notes that the proposed rules relating to the routing of orders on MEMX Options to away options markets are similar to the approved rules of BZX Options, except that the Exchange proposes to cancel any unexecuted portion of a Market Order after the System has routed to and received response from an away options market, whereas BZX Options offers additional handling instructions that may be chosen with respect to the unexecuted portion of an order after the System has routed to and received response from an away options market, and BZX Options offers various additional routing options, such as routing to a specific destination or at specified price levels.[15]

MEMX Options shall route orders in options via MEMX Execution Services LLC (''MEMX Execution Services''), which serves as the Outbound Router of the Exchange, as defined in Rule 2.11. The function of the Outbound Router will be to route orders in options listed and open for trading on MEMX Options to other options exchanges pursuant to the proposed rules of MEMX Options solely on behalf of MEMX Options. The Outbound Router is subject to regulation as a facility of the Exchange, including the requirement to file proposed rule changes under Section 19 of the Act. Use of MEMX Execution Services or Routing Services (as defined below) to route orders to other market centers is optional. In the event the Exchange is not able to provide order routing services through its affiliated broker-dealer, the Exchange will route orders to other options exchanges in conjunction with one or more routing brokers that are not affiliated with the Exchange (''Routing Services''). Parties that do not desire to use MEMX Execution Services or other Routing Services provided by the Exchange must designate orders as not available for routing.

In connection with the proposed rules regarding routing to away options exchanges, proposed Rule 21.9(f) provides that MEMX Execution Services has, pursuant to Rule 15c3–5 under the Act,[16] implemented certain tests designed to mitigate the financial and regulatory risks associated with providing the Exchange's Users with access to such away options exchanges. Pursuant to the policies and procedures developed by MEMX Execution Services to comply with Rule 15c3–5, if an order or series of orders are deemed to be erroneous or duplicative, would cause the entering User's credit exposure to exceed a preset credit threshold, or are non-compliant with applicable pre-trade regulatory requirements (as defined in Rule 15c3–5), MEMX Execution Services will reject such orders prior to routing and/or seek to cancel any orders that have been routed. This is consistent with the routing implementation of other options exchanges, and the Exchange notes that proposed Rule 21.9(f) is substantively identical to BZX Rule 21.9(f).

Order Priority. The System, like the Exchange's equities facility, shall execute trading interest within the System in price/time priority, meaning it will execute all trading interest at the best price level within the System before executing trading interest at the next best price. Trading interest will be executed with the order clearly established as the first entered into the System at each price level having priority up to the number of contracts specified in the order. Any order entered with a price that would lock or cross a Protected Quotation that is not eligible for either routing or the price adjust process as defined in proposed Rule 21.1(i) will be cancelled. The Exchange notes that the proposed price/time order priority and book processing is substantially similar to that on BZX Options.

Data Feed. The System will include a proprietary data feed which will display without attribution to Users' orders on both the bid and offer side of the market for price levels then within MEMX Options using the minimum price variation applicable to that security.

Risk Controls. The Exchange also proposes to offer to all Users of MEMX Options the ability to establish certain risk control parameters and limits that are intended to assist Users in managing their market risk. The proposed risk controls are set forth in proposed Rules 21.16 and 21.17 and are based, in part, on those of BZX Options, with certain additions and differences described below. The proposed risk controls are designed to offer Users protection from entering orders outside of certain size and price parameters, as well as certain standard or Exchange-established parameters based on order type and market conditions.

The Exchange proposes to offer a Risk Monitor Mechanism described in proposed Rule 21.16 that features passive risk counter functionality, which is similar to the risk monitor mechanism functionality offered by other options exchanges, including BZX Options, as well as active risk counter functionality. Under the proposed Risk Monitor Mechanism, Users may configure risk limits for various parameters, including number of contracts executed (''volume''), notional value of executions (''notional''), number of executions (''count''), number of contracts executed as a percentage of number of contracts outstanding within an Exchange-designated time period or during the trading day (''percentage''), and the number of times the limits on any of the foregoing parameters are reached (''risk trips''). The System will track each of the parameters within an underlying for an EFID (''underlying limit''), across all underlyings for an EFID (''EFID limit''), across all underlyings for a group of EFIDs (''EFID Group'') (''EFID Group limit''), and/or across a customized group of orders designated by the User (''Custom Group Limit''), over a User-established time period (''interval'') and on an absolute basis for a trading day (''absolute limits'').

When the System determines that a specified parameter has reached the User-defined risk limit, depending on the User's instructions and the applicable limit that has been reached, the Risk Monitor Mechanism either: (1) Cancels or rejects such User's orders or quotes in all series of the applicable underlying(s) and cancels or rejects any additional orders or quotes from the User in the applicable underlying(s) until the counting program resets; or (2) suspends all of a User's resting orders or quotes in all series of the applicable underlying(s) and cancels or rejects any additional orders or quotes from the User in the applicable underlying(s) until the Exchange is instructed to

[15] *See* BZX Rule 21.9.

[16] 17 CFR 240.15c3–5.

reinstate such bids and offers. A User may also engage the Risk Monitor Mechanism to cancel resting bids and offers, as well as subsequent orders as set forth in proposed Rule 22.10 (''mass cancellation'') or to suspend all resting bids and offers until the Exchange is instructed to reinstate such bids and offers (''mass suspension'').

The proposed Risk Monitor Mechanism functionality described above is substantially similar to the risk monitor mechanism offered on BZX Options, except that BZX Options does not permit Users to designate a Custom Group Limit to track risk parameters across a customized group of orders, nor does BZX Options permit Users to choose to suspend, rather than cancel or reject, resting orders when a risk limit has been reached or to engage the Risk Monitor Mechanism for mass suspension as an alternative to mass cancellation. The Exchange believes that these proposed additions to the Risk Monitor Mechanism functionality that is currently available on BZX Options would provide Users with greater optionality when managing their risk on MEMX Options.

The proposed Risk Monitor Mechanism functionality described above is similar to the Risk Monitor Mechanism functionality offered by other options exchanges, including BZX Options, in that it provides for the System to track specified risk parameters across designated underlyings and/or order groups until the counting program is reset by the User (such functionality, the ''passive risk counter''). In addition to the Risk Monitor Mechanism's passive risk counter functionality, which is similar to the Risk Monitor Mechanism functionality offered by BZX Options in BZX Rule 21.16, the Exchange also proposes to enable a User to optionally manage their risk limits actively using the Exchange's proposed active risk counter functionality within the Risk Monitor Mechanism. As proposed, for a User using the active risk counter, the System will increment the active risk counter associated with a defined parameter when such parameter increments, and the System will decrement the active risk counter upon positive confirmation from the User via an electronic instruction that the User has acknowledged a change in the active risk counter. A User would also be able to specify the value by which each parameter increments and decrements in the active risk counter. The proposed active risk counter therefore enables a User to interact with the Risk Monitor Mechanism dynamically such that the User may actively acknowledge executions and decrement the counting program by a specified amount as such executions occur (or at any time), rather than waiting until a risk limit is reached or the User otherwise sends a specific instruction to the Exchange to completely reset the counting program.

The following examples illustrate the proposed behavior of the passive risk counter and the active risk counter within the Risk Monitor Mechanism. In each case, assume a User configures a risk limit of 10,000 contracts executed with respect to options contracts on underlying security ABC for a single EFID.

Passive Risk Counter:

- The System executes User's order to purchase 5,000 call options on ABC (''Transaction 1''). The System's counting program would increment to a total of 5,000 executed options contracts on ABC for the User.
- The System then executes User's order to purchase 3,000 call options on ABC (''Transaction 2''). The System's counting program would increment an additional 3,000 executed options contracts for Transaction 2 to a total of 8,000 executed options contracts on ABC for the User.
- The System then executes User's order to purchase 3,000 call options on ABC (''Transaction 3''). The System's counting program would increment an additional 3,000 executed options contracts for Transaction 3 to a total of 11,000 executed options contracts on ABC for the User. As Transaction 3 results in executions in excess of the User's risk limit with respect to the number of options contracts executed, the Risk Monitor Mechanism is triggered, and the System will cancel, reject or suspend, as applicable in accordance with the User's instructions, the User's orders and quotes in all series of options contracts on ABC for the User.
- The User then submits an electronic instruction to the System to reset the counting program, and the counting program is decremented to zero. The System will now accept new orders or quotes from the User in a series of options contracts on ABC.

Active Risk Counter:

- The System executes a transaction to purchase 5,000 call options on ABC (''Transaction 1''). The System's counting program would increment to a total of 5,000 executed options contracts on ABC for the User.
- The User then submits an electronic instruction to the System acknowledging a change in the active risk counter due to Transaction 1. Upon the System's receipt of such instruction, the counting program decrements the active risk counter by 5,000 options contracts for Transaction 1 to a total of zero with respect to the number of executed options contracts on ABC for the User.
- The System then executes two separate transactions to purchase 3,000 call options on ABC per transaction (''Transaction 2'' and ''Transaction 3'' respectively), and the User does not acknowledge a change in the active risk counter due to either of these executions. The System's counting program would increment 3,000 executed options contracts at the time of execution for each of Transaction 2 and Transaction 3, for a total of 6,000 executed options contracts on ABC for the User.
- The User then submits an electronic instruction to the System acknowledging a change in the active risk counter due Transaction 3, but not Transaction 2. Upon the System's receipt of such instruction, the counting program would decrement the active risk counter by the 3,000 executed options contracts for Transaction 3 to a total of 3,000 executed options contracts on ABC for the User.
- The User then executes a transaction to purchase 10,000 call options on ABC (''Transaction 4''). The System's counting program would increment an additional 10,000 executed options contracts for Transaction 4 to a total of 13,000 options contracts on ABC for the User. As Transaction 4 results in executions in excess of the User's risk limit with respect to the number of options contracts executed, the Risk Monitor Mechanism is triggered, and the System will cancel, reject or suspend, as applicable in accordance with the User's instructions, the User's orders and quotes in all series of options contracts on ABC for the User.
- The User then submits an electronic instruction to the System acknowledging a change in the active risk counter due to Transaction 4. Upon the System's receipt of such instruction, the counting program would decrement the active risk counter by the 10,000 executed options contracts for Transaction 4 to a total of 3,000 executed options contracts on ABC for the User. The System will now accept new orders or quotes from the User in a series of options contracts on ABC.

In addition to the Risk Monitor Mechanism functionality described above, the Exchange also proposes to offer additional price protection mechanisms and risk controls that relate to certain standard or Exchange-established parameters based on order type and market conditions, which are

described in proposed Rule 21.17. These additional price protection mechanisms and risk controls are substantially similar to those offered on BZX Options pursuant to BZX Rule 21.17, with slight modifications to align with the Exchange's proposed market opening procedures and available order types and instructions on MEMX Options, except that the Exchange is proposing a simplified version of the drill-through price protection mechanism described in proposed Rule 21.17(d). Whereas the drill-through price protection mechanism offered on BZX Options pursuant to BZX Rule 21.17(d) executes an incoming order to a determined ''Drill-Through Price'' and then displays the remainder of the order on BZX Options at that price for a brief period of time, the Exchange has proposed to simply cancel the remainder of an incoming order after executing the order to the Drill-Through Price.

One Second Exposure Period. Proposed Rule 22.11 would require Options Members to expose their customers' orders on the Exchange for at least one second under certain circumstances. During this one second exposure period, other Options Members will be able to enter orders to trade against the exposed order. In adopting a one second order exposure period, the Exchange is proposing a requirement that is consistent with the rules of other options exchanges.[17] Thus, the exposure period will allow Options Members that are members of other options exchanges to comply with proposed Rule 22.11 without programming separate time parameters into their systems for order entry or compliance purposes. The Exchange believes that market participants are sufficiently automated that a one second exposure period allows an adequate time for market participants to electronically respond to an order. Also, it is possible that market participants might wait until the end of the exposure period, no matter how long, before responding. Thus, the Exchange believes that any longer than one second would not further the protection of investors or market participants, but rather, would potentially increase market risk to investors and other market participants by creating a longer period of time for the exposed order to be subject to market risk.

Options Order Protection and Locked/Crossed Market Plan Rules

The Exchange will participate in the Options Order Protection and Locked/Crossed Market Plan (the ''Plan''), and therefore will be required to comply with the obligations of Participants under the Plan. The Exchange proposes to adopt rules relating to the Plan that are substantially similar to the rules in place on all of the options exchanges that are Participants to the Plan. The Plan essentially applies the Regulation NMS price-protection provisions to the options markets. Similar to Regulation NMS, the Plan requires the Plan Participants to adopt rules ''reasonably designed to prevent Trade-Throughs'', while exempting ISOs from that prohibition. The Plan's definition of an ISO is essentially the same as under Regulation NMS. The remaining exceptions to the trade-through prohibition, discussed more specifically below, either track those under Regulation NMS or correspond to unique aspects of the options market, or both.

The proposed rules in Chapter 27 (Options Order Protection and Locked and Crossed Markets Rules) conform to the requirements of the Plan. Proposed Rule 27.1 sets forth the defined terms for use under the Plan. Proposed Rule 27.2 prohibits trade-throughs and exempts ISOs from that prohibition. Proposed Rule 27.2 also contains additional exceptions to the trade-through prohibition that track the exceptions under Regulation NMS or correspond to unique aspects of the options market, or both.

Proposed Rule 27.3 sets forth the general prohibition against locking/crossing other eligible exchanges as well as certain enumerated exceptions that permit locked markets in limited circumstances; such exceptions have been approved by the Commission for inclusion in the rules of other options exchanges. Specifically, the exceptions to the general prohibition on locking and crossing occur when: (1) The locking or crossing quotation was displayed at a time when the Exchange was experiencing a failure, material delay, or malfunction of its systems or equipment; (2) the locking or crossing quotation was displayed at a time when there is a Crossed Market; or (3) the Options Member simultaneously routed an ISO to execute against the full displayed size of any locked or crossed Protected Bid or Protected Offer.

The Exchange notes that the proposed rules in Chapter 27 (Options Order Protection and Locked and Crossed Markets Rules) are substantively identical to the rules of BZX Options.[18]

Securities Traded on MEMX Options

General Listing Standards. The Exchange proposes to adopt listing standards for options traded on MEMX Options as described in Chapter 19 (Securities Traded on MEMX Options), as well as for index options as described in Chapter 29 (Index Rules), which are substantively identical to the approved rules of BZX Options.[19] The Exchange will join the Options Listings Procedures Plan and will list and trade options already listed on other options exchanges. The Exchange will gradually phase-in its trading of options, beginning with a selection of actively traded options. At least initially, the Exchange does not plan to develop new options products or listing standards.

Conduct and Operational Rules for Options Members

The Exchange proposes to adopt rules for MEMX Options that are substantively identical to the rules of BZX Options regarding: Exercises and deliveries as described in Chapter 23 (Exercises and Deliveries); records, reports and audits as described in Chapter 24 (Records, Reports and Audits); minor rule violations as described in Chapter 25 (Discipline and Summary Suspensions); doing business with the public as described in Chapter 26 (Doing Business With the Public); and margin as described in Chapter 28 (Margin Requirements).[20]

National Market System

MEMX Options will operate as a full and equal participant in the national market system for options trading established under Section 11A of the Exchange Act,[21] just as its equities market participates today. MEMX Options will become a member of the Options Price Reporting Authority (''OPRA''), the Options Linkage Authority (''OLA''), the Options Regulatory Surveillance Authority (''ORSA''), and the Options Listing Procedures Plan (''OLPP''). The Exchange expects to participate in those plans on the same terms currently applicable to current members of those

[17] *See, e.g.,* BZX Rule 22.12; CBOE Rule 5.9; MIAX Options Rule 520(b); BOX Rule IM–7140–3.

[18] *See* BZX Rules, Chapter XXVII.

[19] *See* BZX Rules, Chapters XIX and XXIX. The Exchange notes that it is initially proposing to adopt rules applicable to listing and trading of index options but has not proposed inclusion of references to any specific index options products or indices at this time and therefore has included a placeholder with the rule text ''(Reserved.)'' where such references would otherwise be. To the extent the Exchange does propose to list and trade certain index products in the future, the Exchange will file a proposed rule change with the Commission with respect to such products.

[20] *See* BZX Rules, Chapters XXIII, XXIV, XXV, XXVI and XXVIII.

[21] 15 U.S.C. 78k–1.

plans. The Exchange has contacted the leadership of each options-related national market system plan to begin the membership process.

Regulation

The Exchange will leverage many of the structures it established to operate a national securities exchange in compliance with Section 6 of the Exchange Act.[22] As described in more detail below, there will be three elements of that regulation: (1) The Exchange will join the existing options industry agreements pursuant to Section 17(d) of the Exchange Act,[23] as it did with respect to equities; (2) the Exchange's Regulatory Services Agreement with FINRA will govern many aspects of the regulation and discipline of Members that participate in options trading, just as it does for equities regulation; and (3) the Exchange will perform options listing regulation, as well as authorize Options Members to trade on MEMX Options, and conduct surveillance of options trading as it does today for equities. Section 17(d) of the Exchange Act and the related Exchange Act rules permit SROs to allocate certain regulatory responsibilities to avoid duplicative oversight and regulation. Under Exchange Act Rule 17d–1,[24] the SEC designates one SRO to be the Designated Examining Authority, or DEA, for each broker-dealer that is a member of more than one SRO. The DEA is responsible for the financial aspects of that broker-dealer's regulatory oversight. Because MEMX Options Members also must be members of at least one other SRO, the Exchange would generally not be designated as the DEA for any of its members.

Exchange Act Rule 17d–2 [25] permits SROs to file with the Commission plans under which the SROs allocate among each other the responsibility to receive regulatory reports from, and examine and enforce compliance with specified provisions of the Exchange Act and rules thereunder and SRO rules by, firms that are members of more than one SRO (''common members''). If such a plan is declared effective by the Commission, an SRO that is a party to the plan is relieved of regulatory responsibility as to any common member for whom responsibility is allocated under the plan to another SRO.

All of the options exchanges, FINRA, and NYSE have entered into the Options Sales Practices Agreement, a Rule 17d–2 agreement. Under this Agreement, the examining SROs will examine firms that are common members of the Exchange and the particular examining SRO for compliance with certain provisions of the Exchange Act, certain of the rules and regulations adopted thereunder, certain examining SRO rules, and certain proposed MEMX Options rules. In addition, the proposed MEMX Options rules contemplate participation in this Agreement by requiring that any Options Member also be a member of at least one of the examining SROs.

For those regulatory responsibilities that fall outside the scope of any Rule 17d–2 agreements, the Exchange will retain full regulatory responsibility under the Exchange Act. However, the Exchange has entered into a Regulatory Services Agreement with FINRA, pursuant to which FINRA personnel operate as agents for the Exchange in performing certain of these functions. As is the case with the Exchange's equities market, the Exchange will supervise FINRA and continue to bear ultimate regulatory responsibility for the MEMX Options Exchange.

Consistent with the Exchange's existing regulatory structure, the Exchange's Chief Regulatory Officer shall have general supervision of the regulatory operations of MEMX Options, including responsibility for overseeing the surveillance, examination, and enforcement functions and for administering all regulatory services agreements applicable to MEMX Options. Similarly, the Exchange's existing Regulatory Oversight Committee will be responsible for overseeing the adequacy and effectiveness of Exchange's regulatory and self-regulatory organization responsibilities, including those applicable to MEMX Options.

Finally, as it does with equities, the Exchange will perform automated surveillance of trading on MEMX Options for the purpose of maintaining a fair and orderly market at all times. As it does with its equities trading, the Exchange will monitor MEMX Options to identify unusual trading patterns and determine whether particular trading activity requires further regulatory investigation by FINRA.

In addition, the Exchange will oversee the process for determining and implementing trade halts, identifying and responding to unusual market conditions, and administering the Exchange's process for identifying and remediating ''obvious errors'' by and among its Options Members. The proposed rules in Chapter 20 (Regulation of Trading on MEMX Options) regarding halts, unusual market conditions, extraordinary market volatility, obvious errors, and audit trail are substantively identical to the approved rules of BZX Options, with the exception that Exchange does not propose to include rules permitting certain off-floor transfers of options traded on MEMX Options.[26]

Minor Rule Violation Plan

The Exchange's disciplinary rules, including Exchange Rules applicable to ''minor rule violations,'' are set forth in Chapter 8 of the Exchange's current Rules. Such disciplinary rules will apply to Options Members and their associated persons.

The Commission approved the Exchange's Minor Rule Violation Plan (''MRVP'') in 2020.[27] The Exchange's MRVP specifies those uncontested minor rule violations with sanctions not exceeding $2,500 that would not be subject to the provisions of Rule 19d–1(c)(1) under the Act [28] requiring that an SRO promptly file notice with the Commission of any final disciplinary action taken with respect to any person or organization.[29] The Exchange's MRVP includes the policies and procedures included in Exchange Rule 8.15 (Imposition of Fines for Minor Violation(s) of Rules) and in Exchange Rule 8.15, Interpretations and Policy .01.

The Exchange proposes to amend its MRVP and Exchange Rule 8.15, Interpretation and Policy .01 to include proposed Rule 25.3 (Penalty for Minor Rule Violations).[30] The rules included in proposed Rule 25.3 as appropriate for disposition under the Exchange's MRVP are: (a) Position limit and exercise limit violations; (b) violations regarding the

[22] 15 U.S.C. 78f.

[23] 15 U.S.C. 78q(d).

[24] 17 CFR 240.17d–1.

[25] 17 CFR 240.17d–2.

[26] *See* BZX Rules, Chapter XX.

[27] *See* Release No. 34–89836 (September 11, 2020), 85 FR 58081 (September 17, 2020) (Order Declaring Effective a Minor Rule Violation Plan) (''MRVP Order'').

[28] 17 CFR 240.19d–1(c)(1).

[29] The Commission adopted amendments to paragraph (c) of Rule 19d–1 to allow SROs to submit for Commission approval plans for the abbreviated reporting of minor disciplinary infractions. *See* Release No. 34–21013 (June 1, 1984), 49 FR 23828 (June 8, 1984). Any disciplinary action taken by an SRO against any person for violation of a rule of the SRO which has been designated as a minor rule violation pursuant to such a plan filed with and declared effective by the Commission will not be considered ''final'' for purposes of Section 19(d)(1) of the Act if the sanction imposed consists of a fine not exceeding $2,500 and the sanctioned person has not sought an adjudication, including a hearing, or otherwise exhausted his administrative remedies.

[30] In its proposal to adopt the MRVP, the Exchange requested that, going forward, to the extent that there are any changes to the rules applicable to the Exchange's MRVP, the Exchange requests that the Commission deem such changes to be modifications to the Exchange's MRVP.

failure to accurately report position and account information; (c) Market Maker quoting obligations; (d) violations regarding expiring exercise declarations; (e) violations relating to the failure to respond to the Exchange's requests for the submission of trade data; and (f) violations relating to noncompliance with the Consolidated Audit Trail Compliance Rule requirements. The rules included in proposed Rule 25.3 are the same as the rules included in the MRVPs of other options exchanges.[31]

Upon implementation of this proposal, the Exchange will include the enumerated options trading rule violations in the Exchange's standard quarterly report of actions taken on minor rule violations under the MRVP. The quarterly report includes: The Exchange's internal file number for the case, the name of the individual and/or organization, the nature of the violation, the specific rule provision violated, the fine imposed, the number of times the rule violation has occurred, and the date of disposition. The Exchange's MRVP, as proposed to be amended, is consistent with Sections 6(b)(1), 6(b)(5) and 6(b)(6) of the Act, which require, in part, that an exchange have the capacity to enforce compliance with, and provide appropriate discipline for, violations of the rules of the Commission and of the exchange.[32] In addition, because amended Rule 8.15 will offer procedural rights to a person sanctioned for a violation listed in proposed Rule 25.3, the Exchange will provide a fair procedure for the disciplining of members and associated persons, consistent with Section 6(b)(7) of the Act.[33]

This proposal to include the rules listed in proposed Rule 25.3 in the Exchange's MRVP is consistent with the public interest, the protection of investors, or otherwise in furtherance of the purposes of the Act, as required by Rule 19d–1(c)(2) under the Act,[34] because it should strengthen the Exchange's ability to carry out its oversight and enforcement responsibilities as an SRO in cases where full disciplinary proceedings are unsuitable in view of the minor nature of the particular violation. In requesting the proposed change to the MRVP, the Exchange in no way minimizes the importance of compliance with Exchange Rules and all other rules subject to the imposition of fines under the MRVP. However, the MRVP provides a reasonable means of addressing rule violations that do not rise to the level of requiring formal disciplinary proceedings, while providing greater flexibility in handling certain violations. The Exchange will continue to conduct surveillance with due diligence and make a determination based on its findings, on a case-by-case basis, whether a fine of more or less than the recommended amount is appropriate for a violation under the MRVP or whether a violation requires a formal disciplinary action.

Amendments to Existing Exchange Rules

In addition to the rules of MEMX Options proposed above, the Exchange proposes to amend certain of its existing Exchange Rules that currently apply to the Exchange's equities market in order to reflect the Exchange's proposed operation of MEMX Options.

First, the Exchange proposes to amend paragraph (d) of Interpretations and Policies .01 to Rule 2.5 (Restrictions), which generally requires each Member to register at least two Principals with the Exchange subject to certain exceptions described therein, to provide that such paragraph (d) shall not apply to a Member that solely conducts business on the Exchange as an Options Member, however, Options Members must comply with the registration requirements set forth in proposed Rule 17.2(g). The Exchange notes that proposed Rule 17.2(g), which provides that every Options Member shall have at least one Options Principal and sets forth the Exchange's Options Principal registration requirements, is identical to BZX Rule 17.2(g). In connection with this proposed change, the Exchange also proposes to amend paragraph (i) of Interpretations and Policies .01 to Rule 2.5 to include Options Principal as a registration category and to set forth the Exchange's qualification requirements for an Options Principal, which are the same as those for an Options Principal on BZX Options.

The Exchange also proposes to delete the word ''equities'' in the first sentence of Rule 2.7 (Revocation of Membership or Association with a Member), which currently provides that Members or associated persons of Members may effect approved equities securities transactions on the Exchange's trading facilities only so long as they possess all the qualifications set forth in the Exchange Rules. Thus, such proposed change is intended to make this statement no longer limited to equities securities transactions, as options transactions may also be effected on the Exchange pursuant to this proposal.

Lastly, the Exchange proposes to amend Interpretations and Policies .01 Rule 8.15 (Imposition of Fines for Minor Violation(s) of Rules), which contains the list of Exchange Rule violations and recommended fine schedule pursuant to Rule 8.15, to include a new paragraph (i) referencing proposed Rule 25.3 for the recommended fines for minor rule violations of the Exchange Rules appliable [sic] to MEMX Options, which the Exchange notes are the same as those of BZX Options.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b) of the Act[35] in general, and furthers the objectives of Section 6(b)(5) of the Act[36] in particular, in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest; and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

As described above, the fundamental premise of the proposal is that the Exchange will operate its options market much as it operates its cash equities market today and in a manner similar to that of other options exchanges, with a simplified suite of order types and deterministic functionality leveraging the Exchange's existing robust and resilient technology platform. The Exchange believes MEMX Options will benefit individual investors, options trading firms, and the options market generally by providing an additional competitive dynamic to the options landscape, thereby promoting further initiative and innovation among market centers and market participants. The entry of an innovative, cost competitive market such as MEMX Options will promote competition, spurring existing exchanges to improve their own executions systems and reduce trading costs.

The Exchange proposes to offer a simplified suite of conventional order types and order type modifiers and other instructions that are designed to provide for an efficient, robust, and transparent order matching process. The

[31] *See, e.g.,* BZX Rules, Chapter XXV.

[32] 15 U.S.C. 78f(b)(1), 78f(b)(5) and 78f(b)(6).

[33] 15 U.S.C. 78f(b)(7).

[34] 17 CFR 240.19d–1(c)(2).

[35] 15 U.S.C. 78f(b).

[36] 15 U.S.C. 78f(b)(5).

basis for a majority of the proposed rules of MEMX Options are the approved rules of other options exchanges, primarily BZX Options, which have already been found consistent with the Exchange Act. Therefore, the Exchange does not believe that any of the proposed order types and order type functionality raise any new or novel issues that have not been previously considered by the Commission.

In few instances where the Exchange proposes functionality that differs from that of other options exchanges, it has done so to simplify and/or to improve upon an existing process. For instance, the Exchange believes the proposed operation of the Exchange's Risk Monitor Mechanism described in Rule 21.16, including the proposed functionality in addition to that provided under BZX Rule 21.16, removes impediments to and perfects the mechanism of a free and open market and a national market system by offering Users additional ways to establish and monitor risk parameters consistent with their overall approach to risk management. Specifically, the following additional proposed features with respect to its Risk Monitor Mechanism would provide Users with greater optionality when managing their risk on MEMX Options: (i) The ability to designate a Custom Group Limit to track risk parameters across a customized group of orders, (ii) the ability to suspend, rather than cancel or reject, resting orders when a risk limit has been reached, (iii) the ability to engage the Risk Monitor Mechanism for mass suspension as an alternative to mass cancellation, and (iv) the ability to utilize the proposed active risk counter to actively acknowledge executions, rather than waiting until a risk limit is reached or the counting program is completely reset. Additionally, the Exchange believes proposed Rule 21.17, which contains standard and Exchange-determined risk controls based on order type and market conditions that are the same as other options exchanges, as well as a simplified version of the drill-through price protection mechanism, removes impediments to and perfects the mechanism of a free and open market and a national market system by imposing risk controls that are designed to prevent orders from executing at prices inconsistent with the current market.

The Exchange further believes that the functionality that it proposes to offer is consistent with Section 6(b)(5) of the Act because the System is designed to be efficient and its operation transparent, thereby facilitating transactions in securities, removing impediments to and perfecting the mechanisms of a free and open national market system. As described above, the Exchange's proposed rules, including the proposed Order Types and Handling Instructions, opening procedures, routing services, and order matching process are designed to provide a simplified suite of conventional features and to comply with all applicable regulatory requirements, including the obligations of the Options Order Protection and Locked/Crossed Market Plan.

The Exchange believes that the proposed rules of MEMX Options, as well as the proposed method of monitoring for compliance with and enforcing such rules is also consistent with the Exchange Act, particularly Sections 6(b)(1), 6(b)(5) and 6(b)(6) of the Exchange Act, which require, in part, that an exchange have the capacity to enforce compliance with, and provide appropriate discipline for, violations of the rules of the Commission and of the exchange. The Exchange has proposed to adopt rules necessary to regulate Options Members that are nearly identical to the approved rules of other options exchanges, as described above. The Exchange proposes to regulate activity on MEMX Options in the same way it regulates activity on its equities market, specifically through various Exchange specific functions, an RSA with FINRA, as well as participation in industry plans, including plans pursuant to Rule 17d–2 under the Exchange Act.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange operates in an intensely competitive global marketplace for transaction services. Relying on its array of services and benefits, the Exchange competes for the privilege of providing market services to broker-dealers. The Exchange's ability to compete in this environment is based in large part on the quality of its trading systems, the overall quality of its market and its attractiveness to the largest number of investors, as measured by speed, likelihood and cost of executions, as well as spreads, fairness, and transparency.

Consolidation amongst U.S. options exchanges has led to concentration of ownership by certain exchange groups, thereby diminishing the competitive landscape among options exchanges. This proposal will enhance competition by allowing the Exchange to leverage its existing robust technology platform to provide a resilient, deterministic, and transparent execution platform for options. The proposed rule change will insert an additional competitive dynamic to the options landscape by allowing the Exchange to compete with existing options exchanges and will promote further initiative and innovation among market centers and market participants.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 90 days of the date of publication of this notice in the **Federal Register**, the Commission shall: (a) By order approve or disapprove such proposed rule change, or (b) institute proceedings to determine whether the proposed rule change should be disapproved.[37]

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include File Number SR–MEMX–2022–10 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–MEMX–2022–10. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/*

[37] In its filing, MEMX consented to an extension of time for Commission action to ninety (90) days after the date of publication of the proposal.

rules/sro.shtml). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street, NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal offices of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–MEMX–2022–10, and should be submitted on or before May 31, 2022.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[38]

J. Matthew DeLesDernier,

Assistant Secretary.

[FR Doc. 2022–09958 Filed 5–9–22; 8:45 am]

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[SEC File No. 270–497, OMB Control No. 3235–0555]

Proposed Collection; Comment Request

Upon Written Request, Copies Available From: Securities and Exchange Commission, Office of FOIA Services, 100 F Street NE, Washington, DC 20549–2736

Extension:
Rule 6h–1

Notice is hereby given that, pursuant to the Paperwork Reduction Act of 1995 (''PRA'') (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission (''Commission'') is soliciting comments on the existing collection of information provided for in Rule 6h–1 (17 CFR 240.6h–1) under the Securities Exchange Act of 1934 (''Act'') (15 U.S.C. 78a *et seq.*). The Commission plans to submit this existing collection of information to the Office of Management and Budget (''OMB'') for extension and approval.

Section 6(h) of the Act (15 U.S.C. 78f(h)) requires national securities exchanges and national securities associations that trade security futures products to establish listing standards that, among other things, require that: (i) Trading in such products not be readily susceptible to price manipulation; and (ii) the market on which the security futures product trades has in place procedures to coordinate trading halts with the listing market for the security or securities underlying the security futures product. Rule 6h–1 implements these statutory requirements and requires that (1) the final settlement price for each cash-settled security futures product fairly reflect the opening price of the underlying security or securities, and (2) the exchanges and associations trading security futures products halt trading in any security futures product for as long as trading in the underlying security for trading of a security futures product based on a single security, or trading in 50% or more of the underlying securities for trading of a security futures product based on a narrow-based security index, is halted on the listing market.

It is estimated that approximately 1 respondent will incur an average burden of 10 hours per year to comply with this rule, for a total burden of 10 hours. At an average internal cost per hour of approximately $428, the resultant total internal cost of compliance for the respondents is $4,280 per year (1 respondent × 10 hours/respondent × $428/hour).

Written comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's estimates of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted by July 11, 2022.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information under the PRA unless it displays a currently valid OMB control number.

Please direct your written comments to: David Bottom, Director/Chief Information Officer, Securities and Exchange Commission, c/o John Pezzullo, 100 F Street NE, Washington, DC 20549, or send an email to: *PRA_Mailbox@sec.gov.*

Dated: May 4, 2022.

J. Matthew DeLesDernier,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–94851; File No. SR–PEARL–2022–15]

Self-Regulatory Organizations; MIAX PEARL, LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Adopt Exchange Rule 532, Order Price Protection Mechanisms and Risk Controls

May 4, 2022.

Pursuant to the provisions of Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'')[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on April 21, 2022 MIAX PEARL, LLC (''MIAX Pearl'' or the ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') a proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to adopt new Exchange Rule 532, Order Price Protection Mechanisms and Risk Controls, and a new Max Put Price Protection feature in new proposed Rule 532.

The text of the proposed rule change is available on the Exchange's website at *http://www.miaxoptions.com/rule-filings/pearl* at MIAX PEARL's principal office, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for

[38] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to adopt new Exchange Rule 532, Order Price Protection Mechanisms and Risk Controls. The Exchange proposes to adopt a new Managed Protection Override feature, and a new Max Put Price Protection feature in new proposed Rule 532.

Proposal

Max Put Price Protection (''MPPP'')

The Exchange proposes to adopt a new price protection for put [3] options by establishing a maximum price at which a put option may trade.[4] To determine the maximum price the Exchange will add a pre-set value of $0.10 to the strike price of the put option. Buy orders from an Electronic Exchange Member (''EEM'') [5] that are priced through the maximum trading price limit will trade up to, and including, the maximum trading price limit, and will then be placed on the Book [6] and managed to the appropriate trading price limit as described in Rule 515(d)(2), or cancelled if the Managed Protection Override (''MPO'') (as described below) is enabled. Sell orders from an EEM that are priced higher than the maximum trading price limit will be rejected.

Buy orders from a Market Maker (''MM'') [7] that are priced through the maximum trading price limit will trade up to, and including, the maximum trading price limit, then will be placed on the Book and managed to the appropriate trading price limit as described in Rule 515(d)(2). Sell orders from a Market Maker that are priced higher than the maximum trading price limit will be displayed.

Example Max Put Price Protection for a Buy Market Order

An order to buy 10 XYZ Jan 5 Put @ market [8] is received from an EEM.

The current market is:

PBBO [9] 0.50 (10) × 5.50 (10)

The price protection is:

Put Price Variance (PPV) = $0.10
Max Put Price Protection = (Strike + PPV) = $5.10

The Max Put Price Protection establishes the maximum trading price limit at which an order can trade. Because the buy order is priced through the Max Put Price Protection of $5.10, the order is subject to management pursuant to 515(d)(2) and is posted to the Book at $5.10.

PBBO 5.10 (10) × 5.50 (10)

Example Max Put Price Protection for a Sell Limit Order

An order to sell 10 XYZ Jan 5 Put @ $5.25 is received from an EEM.

The current market is:

PBBO 0.50 (10) × 5.50 (10)

The price protection is:

Put Price Variance (PPV) = $0.10
Put Option = XYZ Jan 5 Put
Max Put Price Protection = (Strike + PPV) = $5.10

Because the sell order is priced higher than the Max Put Price Protection of $5.10, the order is rejected.

For the purposes of the Max Put Price Protection, the Exchange treats an order to sell a put option priced above the maximum trading price limit received from Electronic Exchange Members differently than a similar order received from a Market Maker. Members that are Market Makers have a heightened obligation on the Exchange and are obligated to maintain a two-sided market in those option series in which the Market Maker is registered to trade.[10] Further, Market Makers are required to submit continuous bids and offers for the options series in their appointed classes for a certain percentage of time in each trading session.[11] As such, the Exchange treats Market Maker orders differently than EEM orders, and will not reject an order to sell a put option from a Market Maker that is priced higher than the maximum trading price limit.

Managed Protection Override (''MPO'')

The Exchange proposes to adopt a new Managed Protection Override feature which will work in conjunction with the Max Put Price Protection. Members must contact the Exchange's Help Desk [12] to enable the Managed Protection Override feature. When the Max Put Price Protection is triggered, and if the Managed Protection Override feature has been enabled, the order subject to the Max Put Price Protection will be cancelled. The Managed Protection Override is currently only available for the Max Put Price Protection proposed herein.

The Exchange believes that offering Members the option to have their orders either managed by the Exchange or cancelled when the Max Put Price Protection is triggered gives Members greater flexibility and control over their orders while retaining the risk protection functionality. If the Managed Protection Override is enabled the Exchange will return the unexecuted order to the Member for further analysis and evaluation. If the Managed Protection Override is not enabled the Exchange will manage the unexecuted order on behalf of the Member.

2. Statutory Basis

The Exchange believes that its proposed rule change is consistent with Section 6(b) of the Act [13] in general, and furthers the objectives of Section 6(b)(5) of the Act [14] in particular, in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in, securities, to remove impediments to and perfect the

[3] The term ''put'' means an option contract under which the holder of the option has the right, in accordance to the terms and provisions of the option, to sell to the Clearing Corporation the number of units of the underlying security covered by the option contract. *See* Exchange Rule 100.

[4] The Exchange notes its affiliate Exchange, the MIAX Options Exchange, recently adopted this protection. *See* Securities Exchange Act Release No. 94353 (March 3, 2022), 87 FR 13339 (March 9, 2022) (SR–MIAX–2021–58).

[5] The term ''Electronic Exchange Member'' or ''EEM'' means the holder of a Trading Permit who is a Member representing as agent Public Customer Orders or Non-Customer Orders on the Exchange and those non-Market Maker Members conducting proprietary trading. Electronic Exchange Members are deemed ''members'' under the Exchange Act. *See* Exchange Rule 100.

[6] The term ''Book'' means the electronic book of buy and sell orders and quotes maintained by the System. *See* Exchange Rule 100.

[7] The term ''Market Maker'' or ''MM'' means a Member registered with the Exchange for the purposes of making markets in option contracts traded on the Exchange and that is vested with the rights and responsibilities specified in Chapter VI or the MIAX Pearl Rulebook. *See* Exchange Rule 100.

[8] A market order is an order to buy or sell a stated number of option contracts at the best price available at the time of execution. A Market Maker may not submit a market order. *See* Exchange Rule 516(b).

[9] The term ''PBBO'' means the best bid or offer on MIAX Pearl. *See* Exchange Rule 100.

[10] *See* Exchange Rule 604(a)(1).

[11] *See* Exchange Rule 605.

[12] The term ''Help Desk'' means the Exchange's control room consisting of Exchange staff authorized to make certain trading determinations on behalf of the Exchange. The Help Desk shall report to and be supervised by a senior executive officer of the Exchange. *See* Exchange Rule 100.

[13] 15 U.S.C. 78f(b).

[14] 15 U.S.C. 78f(b)(5).

mechanisms of a free and open market and a national market system and, in general, to protect investors and the public interest.

Max Put Price Protection

The Exchange believes that the Max Put Price Protection feature promotes just and equitable principles of trade, removes impediments to and perfects the mechanism of a free and open market and a national market system and, in general, protects investors and the public interest by providing a risk protection mechanism to prevent trades from occurring at potentially unwanted or erroneous prices. The Exchange believes that the Max Put Price Protection feature promotes a fair and orderly market by mitigating the potential risks associated with orders trading at potentially erroneous prices.

The Exchange believes that its proposal to accept and display a Market Maker order to sell a put that is priced higher than the maximum trading price limit promotes a free and open market and national market system as Market Makers on the Exchange have heightened obligations on the Exchange that Electronic Exchange Members do not, that requires Market Makers to submit continuous bids and offers in the series to which they are appointed in order to enhance the depth, liquidity, and competitiveness of the market.[15]

Managed Protection Override

The Exchange believes that the Managed Protection Override feature promotes just and equitable principles of trade, removes impediments to and perfects the mechanism of a free and open market and a national market system and, in general, protects investors and the public interest by providing a mechanism by which Members may determine the way their orders are handled when a risk protection is triggered. The Exchange believes that it has an effective way to manage orders on the Exchange so that they do not execute at potentially erroneous prices, however the Exchange believes that giving Members the option to have their orders cancelled if a risk protection is triggered protects investors and the public interest. When the Exchange cancels an order, a Member can make a decision on what to do with that order based on the then current market conditions and may choose to re-submit the order at the same or different limit price. Specifically, the Exchange believes the proposed change will remove impediments to and perfect the mechanism of a free and open market by providing market participants with the option to either manage their own orders or have the Exchange manage their orders when a price protection is triggered which will promote fair and orderly markets, increase overall market confidence, and promote the protection of investors.

The Exchange believes that offering Members the option to have orders either managed by the Exchange or cancelled when the Max Put Price risk protection is triggered gives Members greater flexibility and control over their orders to buy puts while retaining the risk protection functionality. If the Managed Protection Override is enabled the Exchange will return the unexecuted order to the Member for further analysis and evaluation. If the Managed Protection Override is not enabled the Exchange will manage the unexecuted order on behalf of the Member.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

Specifically, the Exchange does not believe that the proposed changes will impose any burden on intra-market competition as the rules of the Exchange apply equally to all MIAX Pearl Members. The Max Put Price Protection is applicable to all MIAX Pearl Members that submit an order to buy a put option. Additionally, any MIAX Pearl Member may elect to enable the Managed Protection Override functionality to allow the Exchange to cancel their order when the Max Put Price Protection risk protection is triggered.

The Exchange does not believe that its proposal to provide dissimilar treatment for sell put orders priced above the maximum trading price limit submitted by EEMs and MMs will impose any burden on intra-market competition as Market Makers have heightened obligations on the Exchange and are required to submit continuous bids and offers in the series to which they are appointed.

In addition, the Exchange does not believe the proposal will impose any burden on inter-market competition as the proposal is intended to protect investors by providing additional price protection functionality. The Exchange's proposal may promote inter-market competition as the Exchange's proposal adds additional price protection features and functionality that may attract additional order flow to the Exchange, thereby promoting inter-market competition.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days after the date of the filing, or such shorter time as the Commission may designate, it has become effective pursuant to 19(b)(3)(A) of the Act[16] and Rule 19b–4(f)(6)[17] thereunder.

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include File Number SR–PEARL–2022–15 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–PEARL–2022–15. This file number should be included on the

[15] *See supra* notes 10 and 11.

[16] 15 U.S.C. 78s(b)(3)(A).

[17] 17 CFR 240.19b–4(f)(6). In addition, Rule 19b–4(f)(6) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–PEARL–2022–15, and should be submitted on or before May 31, 2022.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[18]

J. Matthew DeLesDernier,

Assistant Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Investment Company Act Release No. 34578; File No. 812–15333]

Voya Russia Fund, a Series of Voya Mutual Funds, and Voya Investments, LLC; Notice of Application and Temporary Order

May 4, 2022.

AGENCY: Securities and Exchange Commission (''Commission'').

ACTION: Notice of application and a temporary order under Section 22(e)(3) of the Investment Company Act of 1940 (the ''Act'').

SUMMARY OF APPLICATION: Applicants request a temporary order to permit Voya Russia Fund (the ''Fund''), a series of Voya Mutual Funds (the ''Trust''), to suspend the right of redemption of its outstanding redeemable securities and postpone the date of payment of redemption proceeds with respect to redemption orders received but not yet paid.

APPLICANTS: The Trust, on behalf of the Fund, and Voya Investments, LLC, the Fund's investment adviser (''Adviser'' and together with the Trust, the ''Applicants'').

FILING DATE: The application was filed on May 4, 2022.

HEARING OR NOTIFICATION OF HEARING: Interested persons may request a hearing by emailing to the Commission's Secretary at *Secretarys-Office@sec.gov* and serving Applicants with a copy of the request by email, if an email address is listed for the relevant Applicant below, or personally or by mail, if a physical address is listed for the relevant Applicant below. Hearing requests should be received by the Commission by 5:30 p.m. on May 31, 2022, and should be accompanied by proof of service on Applicants, in the form of an affidavit or, for lawyers, a certificate of service. Pursuant to rule 0–5 under the Act, hearing requests should state the nature of the writer's interest, any facts bearing upon the desirability of a hearing on the matter, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by writing to the Commission's Secretary at *Secretarys-Office@sec.gov*.

ADDRESSES: The Commission: *Secretarys-Office@sec.gov.* Applicants: Timothy W. Diggins, Esq. and Elizabeth J. Reza, Esq., Ropes & Gray LLP, Prudential Tower, 800 Boylston Street, Boston, MA 02199–3600, with copies to Huey P. Falgout, Jr., Esq., Voya Investments, LLC, 7337 East Doubletree Ranch Road, Suite 100, Scottsdale, Arizona 85258.

FOR FURTHER INFORMATION CONTACT: Christopher D. Carlson, Senior Counsel, Kaitlin Bottock, Branch Chief, or Nadya Roytblat, Assistant Chief Counsel, at (202) 551–6825 (Division of Investment Management, Chief Counsel's Office).

SUPPLEMENTARY INFORMATION: For Applicants' representations, legal analysis, and conditions, please refer to Applicants' application, dated May 4, 2022, which may be obtained via the Commission's website by searching for the file number at the top of this document, or for an Applicant using the Company name search field, on the SEC's EDGAR system. The SEC's EDGAR system may be searched at *https://www.sec.gov/edgar/searchedgar/legacy/companysearch.html.* You may also call the SEC's Public Reference Room at (202) 551–8090.

Background

1. The Trust is registered under the Act as an open-end series management investment company. Adviser is the investment adviser to the Fund, a series of the Trust. Adviser is registered as an investment adviser under the Investment Advisers Act of 1940.

2. Applicants state that the request for relief arises from the effect of geopolitical affairs on transactions in the Russian equity markets and on the relevant markets for Russian equity securities generally, and on related clearance and payment systems. As a result of these geopolitical affairs, virtually all of the Fund's direct and indirect holdings of Russian equity securities have become illiquid and are fair valued at zero ($0.00).

3. If the order requested in the Application is granted, the Fund will distribute in liquidation all of its liquid assets to shareholders, less a reserve in an amount estimated to meet the costs of the liquidation and the continued limited operation of the Fund through its final termination. Following that distribution, the Fund will have no assets of value (other than the amount so held in reserve), and the Fund's positions in Russian securities will not be transferable by the Fund. If some or all of those Russian securities were at some point before the Fund's final termination determined to have a non-zero value, it is possible that they would continue to not be transferable at that time.

4. Applicants believe the requested relief will permit the Fund to liquidate its holdings in the manner described above without the risk that it might be required to meet redemption requests submitted potentially out of the reserve or otherwise when the Fund would have no or few assets to meet the redemption requests. In addition, applicants state that suspension of redemptions prior to the initial distribution in liquidation will ensure that shareholders submitting such redemption requests will participate in the liquidation and also will be entitled to share both in the May 2022 liquidating distribution and any subsequent liquidating distribution.

Relief Requested

1. Applicants request an order pursuant to Section 22(e) of the Act to suspend the right of redemption with respect to shares of the Fund effective

[18] 17 CFR 200.30–3(a)(12).

May 4, 2022, and postpone the date of payment of redemption proceeds with respect to redemption orders received on or after April 27, 2022 but not yet paid as of May 4, 2022, for more than seven days after the tender of securities to the Fund, until the Fund completes the liquidation of its portfolio and distributes all its assets to the shareholders, or until the Commission rescinds the order granted herein. Applicants believe that the relief requested is appropriate for the protection of shareholders of the Fund.

Applicants' Legal Analysis

1. Section 22(e)(1) of the Act provides that a registered investment company may not suspend the right of redemption or postpone the date of payment or satisfaction upon redemption of any redeemable security in accordance with its terms for more than seven days after the tender of such security to the company or its designated agent except for any period during which the New York Stock Exchange (''NYSE'') is closed other than customary week-end and holiday closings, or during which trading on the NYSE is restricted.

2. Section 22(e)(3) of the Act provides that redemptions may be suspended by a registered investment company for such other periods as the Commission may by order permit for the protection of security holders of the registered investment company.

3. Applicants submit that granting the requested relief would be for the protection of the shareholders of the Fund, as provided in Section 22(e)(3) of the Act. Applicants assert that, in requesting an order by the Commission, the Applicants' goal is to ensure that the Fund's shareholders will be treated appropriately in view of the otherwise detrimental effect on the Fund of the illiquidity of the Fund's investments and the ongoing uncertainty surrounding the relevant markets for the Russian equity securities held by the Fund. The requested relief is intended to permit an orderly liquidation of the Fund's portfolio and ensure that all of the Fund's shareholders are protected in the process.

Applicants' Conditions

Applicants agree that any order of the Commission granting the requested relief will be subject to the following conditions:

1. The Board, including a majority of the independent Trustees, will adopt or has adopted the Plan of Liquidation for the orderly liquidation of Fund assets and distribution of appropriate payments to Fund shareholders.

2. Pending liquidating distributions, the Fund will invest proceeds of cash dispositions of portfolio securities solely in U.S. government securities, money market funds that are registered under the 1940 Act and comply with the requirements of Rule 2a–7 under that Act, cash equivalents, securities eligible for purchase by a registered money market fund meeting the requirements of Rule 2a–7 under the 1940 Act with legal maturities not in excess of 90 days and, if determined to be necessary to protect the value of a portfolio position in a rights offering or other dilutive transaction, additional securities of the affected issuer.

3. The Fund's assets will be distributed to the Fund's shareholders solely in accordance with the Plan of Liquidation.

4. The Fund and the Adviser will make and keep true, accurate and current all appropriate records, including but not limited to those surrounding the events leading to the requested relief, the Plan of Liquidation, the sale of Fund portfolio securities, the distribution of Fund assets, and communications with shareholders (including any complaints from shareholders and responses thereto).

5. The Fund and the Adviser will promptly make available to Commission staff all files, books, records and personnel, as requested, relating to the Fund.

6. The Fund and the Adviser will provide periodic reporting to Commission staff regarding their activities carried out pursuant to the Plan of Liquidation.

7. The Adviser, its affiliates, and its and their associated persons will not receive any fee for managing the Fund.

8. The Fund will be in liquidation and will not be engaged and does not propose to engage in any business activities other than those necessary for the protection of its assets, the protection of shareholders and the winding-up of its affairs, as contemplated by the Plan of Liquidation.

9. The Fund and the Adviser will appropriately convey accurate and timely information to shareholders of the Fund, before or promptly following the effective date of the liquidation, with regard to the status of the Fund and its liquidation (including posting such information on the Fund's website), and will thereafter from time to time do so to reflect material developments relating to the Fund or its status, including, without limitation, information concerning the dates and amounts of distributions, and press releases and periodic reports, and will maintain a toll-free number to respond to shareholder inquiries.

10. The Fund and the Adviser shall consult with Commission staff prior to making any material amendments to the Plan of Liquidation.

Commission Finding

Based on the representations and conditions in the application, the Commission permits the temporary suspension of the right of redemption for the protection of the Fund's security holders. Under the circumstances described in the application, which require immediate action to protect the Fund's security holders, the Commission concludes that it is not practicable to give notice or an opportunity to request a hearing before issuing the order.

Accordingly, in the matter of Voya Russia Fund, a series of Voya Mutual Funds, and Voya Investments, LLC (File No. 812–15333),

It is ordered, pursuant to Section 22(e)(3) of the Act, that the requested relief from Section 22(e) of the Act is granted with respect to the Fund until it has liquidated, or until the Commission rescinds the order granted herein. This order shall be in effect as of May 4, 2022, with suspension of redemption rights as requested by the Applicants to be effective as of May 4, 2022 and the postponement of payment of redemption proceeds to apply to redemption orders received on or after April 27, 2022 but not yet paid as of May 4, 2022.

By the Commission.

J. Matthew DeLesDernier,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–94843; File No. SR–NYSEArca–2022–25]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing of Proposed Rule Change To Modify Rule 7.31–E To Add Subparagraph (f)(4) Regarding Directed Orders

May 4, 2022.

Pursuant to Section 19(b)(1) [1] of the Securities Exchange Act of 1934 (the ''Act'') [2] and Rule 19b–4 thereunder,[3] notice is hereby given that, on April 20, 2022, NYSE Arca, Inc. (''NYSE Arca'' or the ''Exchange'') filed with the

[1] 15 U.S.C. 78s(b)(1).

[2] 15 U.S.C. 78a.

[3] 17 CFR 240.19b–4.

Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to modify Rule 7.31–E to add subparagraph (f)(4) regarding Directed Orders and make other conforming changes. The proposed change is available on the Exchange's website at *www.nyse.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to modify Rule 7.31–E (Orders and Modifiers) to add new subparagraph (f)(4) to provide for Directed Orders and to make other conforming changes to its Rules in connection with the addition of this new order type on the Exchange. The Directed Order, as further defined below, would be an order sent to the Exchange to be routed directly to an alternative trading system (''ATS'') specified by an ETP Holder.

The Exchange proposes to add Rule 7.31–E(f)(4), which would define a Directed Order as a Limit Order with instructions to route on arrival at its limit price to a specified ATS with which the Exchange maintains an electronic linkage. Proposed Rule 7.31–E(f)(4) would further provide that Directed Orders would be available for all securities eligible to trade on the Exchange. Proposed Rule 7.31–E(f)(4) would also provide that a Directed Order would not be assigned a working time or interact with interest on the NYSE Arca Book. The Exchange also proposes to provide in Rule 7.31–E(f)(4) that the ATS to which a Directed Order is routed would be responsible for validating whether the order is eligible to be accepted, and if such ATS determines to reject the order, the order would be cancelled.

Proposed Rule 7.31–E(f)(4)(A) would provide that a Directed Order must be designated for the Exchange's Core Trading Session, as defined in Rule 7.34–E(a)(2).[4]

Proposed Rule 7.31–E(f)(4)(A) would further provide that a Directed Order must be designated with a Time in Force modifier of IOC[5] or Day[6] and would be routed to the specified ATS with such modifier. The Exchange proposes that a Directed Order designated IOC would be traded in whole or in part on the ATS to which it is routed after receipt of the order, and any untraded quantity would be cancelled. The Exchange proposes that a Directed Order designated Day would expire at the end of the Core Trading Session on the day it is entered. Proposed Rule 7.31–E(f)(1)(A) would also provide that a Directed Order may not be designated with any other modifiers defined in Rule 7.31–E.

Proposed Rule 7.31–E(f)(4)(B) would provide that a Directed Order in a security that is having its initial listing on the Exchange would be rejected if received before the IPO Auction concludes.

Proposed Rule 7.31–E(f)(4)(C) would provide that, during a trading halt or pause, an incoming Directed Order would be rejected.

Proposed Rule 7.31–E(f)(4)(D) would provide that a request to cancel a Directed Order designated Day would be routed to the ATS to which the order was routed.

The Exchange also proposes a conforming change to Rule 7.19–E (Pre-Trade Risk Controls). The Exchange proposes to modify Rule 7.19–E(a)(5), which sets forth the definition of Gross Credit Risk Limit and currently provides that unexecuted orders in the NYSE Arca Book, orders routed on arrival pursuant to Rule 7.37–E(a)(1), and executed orders are included for purposes of calculating the Gross Credit Risk Limit. The Exchange proposes to modify Rule 7.19–E(a)(5) to specify that orders routed on arrival pursuant to Rule 7.31–E(f)(4) would also be included for purposes of the Gross Credit Risk Limit calculation.

The Exchange believes that the proposed rule change would facilitate additional trading opportunities by offering ETP Holders the ability to designate orders submitted to the Exchange to be routed to an ATS of their choosing for execution. The Exchange believes the proposed change would encourage ETP Holders to utilize the Exchange as a venue for order entry and further believes that the proposed change could create efficiencies for ETP Holders by enabling them to send orders that they wish to route to an alternate destination through the Exchange, thereby enabling them to leverage order entry protocols and specifications already configured for their interactions with the Exchange. The Exchange notes that the Directed Order, as proposed, would operate similarly to the Primary Only Order already offered by the Exchange, which is an order that is routed directly to the primary listing market on arrival, without being assigned a working time or interacting with interest on the NYSE Arca Book.[7] The Exchange also believes that the Directed Order would offer ETP Holders functionality akin to order types and routing options that currently exist on other equities exchanges.[8]

[4] Because the Exchange proposes that Directed Orders may only be designated for the Core Trading Session, the Exchange also proposes conforming changes to Rule 7.34–E (Trading Sessions). Specifically, the Exchange proposes to modify Rule 7.34–E(c)(1)(E) to provide that Directed Orders designated for the Early Trading Session would be rejected and Rule 7.34–E(c)(3)(C) to provide that Directed Orders designated for the Late Trading Session would be rejected.

[5] *See* Rule 7.31–E(b)(2), which provides that a Limit Order may be designated with an Immediate-or-Cancel (''IOC'') modifier.

[6] *See* Rule 7.31–E(b)(1), which provides that orders may be designated with a Day modifier, and that an order to buy or sell designated Day, if not traded, will expire at the end of the designated session on the day on which it was entered.

[7] *See* Rule 7.31–E(f)(1). NYSE Arca also offers variations of the Primary Only Order, including the Primary Only Until 9:45 Order, which is a Limit or Inside Limit Order that, on arrival and until 9:45 a.m. Eastern Time, routes to the primary listing market, and the Primary Only Until 3:55 Order, which is a Limit or Inside Limit Order entered on the Exchange until 3:55 p.m. Eastern Time, after which time the order is cancelled on the Exchange and routed to the primary listing market. *See* Rules 7.31–E(f)(2) and (f)(3). The Exchange's affiliated exchanges NYSE American LLC (''NYSE American''), NYSE Chicago, Inc. (''NYSE Chicago''), and NYSE National, Inc. (''NYSE National'') (collectively, the ''Affiliated Exchanges'') also offer the Primary Only Order and variations thereof. *See* NYSE American Rules 7.31E(f)(1)–(f)(3); NYSE Chicago Rules 7.31(f)(1)–(f)(3); NYSE National Rules 7.31(f)(1)–(f)(3).

[8] *See, e.g.,* Nasdaq Stock Market LLC (''Nasdaq''), Equity 4, Equity Trading Rules, Rule 4758(a)(ix) (defining the Nasdaq Directed Order as an order designed to use a routing strategy under which the order is directed to an automated trading center other than Nasdaq, as directed by the entering party, without checking the Nasdaq Book); Cboe EDGX Exchange, Inc. (''EDGX'') Rules 11.8(c)(7)

Because of the technology changes associated with this proposed rule change, the Exchange will announce the implementation date by Trader Update.[9] Subject to effectiveness of this proposed rule change, the Exchange anticipates that the proposed change will be implemented in the second quarter of 2022.

2. Statutory Basis

The proposed rule change is consistent with Section 6(b) of the Securities Exchange Act of 1934,[10] in general, and furthers the objectives of Section 6(b)(5),[11] in particular, because it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to, and perfect the mechanism of, a free and open market and a national market system and, in general, to protect investors and the public interest.

The Exchange believes that the proposed rule change is designed to remove impediments to and perfect the mechanism of a free and open market and promote just and equitable principles of trade because the Directed Order would offer ETP Holders access to additional trading opportunities by permitting them to designate orders submitted to the Exchange to be routed directly to a specified ATS for execution. The Exchange further believes that the proposed change would remove impediments to and perfect the mechanism of a free and open market by offering ETP Holders the option to send orders that they wish to route to an alternate destination for execution through the Exchange, which would create efficiencies to the extent ETP Holders are able to leverage existing protocols and specifications. Finally, the Exchange notes that the proposed functionality is not novel, as both the Exchange and other exchanges offer their members functionality whereby an exchange routes orders on behalf of a member to a specified trading center without such order interacting with the exchange's book.[12]

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange believes that the proposed rules governing Directed Orders would promote competition because they would provide for an order type on the Exchange that would facilitate additional trading opportunities for market participants. The Exchange further believes that the proposed rules would allow it to offer ETP Holders functionality similar to order types and routing options that exist on other equities exchanges, thereby enabling the Exchange to compete with such exchanges.[13]

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or up to 90 days (i) as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve or disapprove the proposed rule change, or

(B) institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include File Number SR–NYSEARCA–2022–25 on the subject line.

Paper Comments

- Send paper comments in triplicate to: Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number SR–NYSEARCA–2022–25. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All

(defining the Routing/Directed ISO order type as an ISO that bypasses the EDGX system and is immediately routed by EDGX to a specified away trading center for execution) and 11.11(g)(2) (providing for the DRT routing option, in which an order is routed to an alternative trading system as instructed); Cboe EDGA Exchange, Inc. (''EDGA'') Rules 11.8(c)(7) (defining the Routing/Directed ISO order type as an ISO that bypasses the EDGA system and is immediately routed by EDGA to a specified away trading center for execution) and 11.11(g)(2) (providing for the DRT routing option, in which an order is routed to an alternative trading system as instructed); Cboe BZX Exchange, Inc. (''BZX'') Rules 11.13(b)(3)(D) (providing for the DRT routing option, in which an order is routed to an alternative trading system as instructed) and 11.13(b)(3)(F) (defining the Directed ISO routing option, under which an ISO order would bypass the BZX system and be sent to a specified away trading center); Cboe BYX Exchange, Inc. (''BYX'') Rules 11.13(b)(3)(D) (providing for the DRT routing option, in which an order is routed to an alternative trading system as instructed) and 11.13(b)(3)(F) (defining the Directed ISO routing option, under which an ISO order would bypass the BYX system and be sent to a specified away trading center). The Exchange also believes that the Directed Order would provide functionality similar to the C–LNK routing strategy formerly offered by EDGA, in which C–LNK orders bypassed EDGA's local book and routed directly to a specified Single Dealer Platform destination. *See* Securities Exchange Act Release No. 82904 (March 20, 2018), 83 FR 12995 (March 26, 2018) (SR–CboeEDGA–2018–004) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Expand an Offering Known a Cboe Connect To Provide Connectivity to Single-Dealer Platforms Connected to the Exchange's Network and To Propose a Per Share Executed Fee for Such Service).

[9] The Exchange will also provide information regarding the ATS(s) to which a Directed Order may be designated to route by Trader Update.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–94850; File No. SR–MSRB–2022–02]

Self-Regulatory Organizations; Municipal Securities Rulemaking Board; Notice of Filing of a Proposed Rule Change Consisting of Amendments to MSRB Rule G–19 Regarding Regulation Best Interest for Certain Municipal Securities Activities of Bank Dealers and MSRB Rule G–48 Regarding Quantitative Suitability for Institutional Sophisticated Municipal Market Professionals

May 4, 2022.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'' or ''Exchange Act'')[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on April 29, 2022, the Municipal Securities Rulemaking Board (''MSRB or ''Board'') filed with the Securities and Exchange Commission (''SEC'' or ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the MSRB. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The MSRB filed with the Commission a proposed rule change consisting of amendments to: (i) MSRB Rule G–19, on suitability of recommendations and transactions, and (ii) MSRB Rule G–48, on transactions with sophisticated municipal market professionals (''SMMPs'')[3] (collectively, the ''proposed rule change''). The proposed rule change would align MSRB Rule G–19 to the Commission's Rule 15*l*–1 under the Exchange Act (''Regulation Best Interest'')[4] for certain municipal securities activities of bank dealers[5] (the ''Best Interest Amendments''). In addition, the proposed rule change would amend MSRB Rule G–48 to modify the quantitative suitability obligation of brokers, dealers, and municipal securities dealers (collectively, ''dealers'' and, individually, each a ''dealer'') by eliminating the quantitative suitability obligation for recommendations in circumstances where a dealer does not have actual control or de facto control over the account of an Institutional SMMP (the ''Institutional SMMP Amendment'').[6]

Subject to Commission approval, the respective compliance dates for the amendments to MSRB rules included in the proposed rule change will be announced in a regulatory notice published by the MSRB on its website within 30 days of the publication of the Commission's approval order in the **Federal Register**. Such compliance date for the Best Interest Amendments will be no earlier than one year from the MSRB's publication of the regulatory notice announcing it.[7] Such compliance date for the Institutional SMMP Amendment will be no earlier than 30 days from the MSRB's publication of the regulatory notice announcing it.

The text of the proposed rule change is available on the MSRB's website at *www.msrb.org/Rules-and-Interpretations/SEC-Filings/2022-Filings.aspx,* at the MSRB's principal office, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the MSRB included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The MSRB has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The proposed rule change consists of the Best Interest Amendments to MSRB Rule G–19 and the proposed Institutional SMMP Amendment to MSRB Rule G–48 for the respective purposes further described below.

Background and Purpose of the Best Interest Amendments

The proposed Best Interest Amendments would amend MSRB Rule G–19 to extend the obligations of Regulation Best Interest to Bank Dealers when making recommendations to retail customers of municipal securities transactions or investment strategies involving municipal securities (collectively, ''retail municipal recommendations'' and, individually, each a ''retail municipal recommendation''). The Best Interest Amendments are intended to improve investor protection in the municipal securities market by ensuring that retail customers are afforded investor protections under Regulation Best Interest, regardless of whether a retail municipal recommendation received by a retail customer is made by a Broker-Dealer or a Bank Dealer.[8]

---

[14] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] Under MSRB Rule D–15, on the term sophisticated municipal market professional, ''[t]he term 'sophisticated municipal market professional' or 'SMMP' is generally defined by three essential requirements: the nature of the customer; a determination of sophistication by the broker, dealer or municipal securities dealer [ ]; and an affirmation by the customer; as specified [therein].'' *See* MSRB Rule D–15. *See also* related discussion under *Background and Purpose of the Institutional SMMP Amendment—Background on MSRB Rule D–15 and SMMP Affirmation Requirements* near note 37 *infra.*

[4] 17 CFR 240.15*l*–1; *see also* Exchange Act Release No. 86031 (June 5, 2019), 84 FR 33318 (July 12, 2019) (File No. S7–07–18) (''Regulation Best Interest Adopting Release'').

[5] Consistent with MSRB Rule D–8, on the term bank dealer, the term ''bank dealer'' as used herein means ''a municipal securities dealer which is a bank or a separately identifiable department or division of a bank as defined in rule G–1 of the Board.'' Such references in this proposed rule shall be collectively to ''Bank Dealers'' or individually to a ''Bank Dealer.'' *See also* MSRB Rule D–11, on the term associated persons (indicating that the term bank dealer as used in MSRB rules shall generally refer to the associated persons of a bank dealer unless the context otherwise requires or a rule of the Board otherwise specifically provides).

[6] The term ''Institutional SMMP'' is used here as defined below under the discussion *Background and Purpose of the Institutional SMMP Amendment.* The Institutional SMMP definition used herein would not encompass any natural person customers who qualify as ''retail customers'' under the definitions of Regulation Best Interest, such as certain natural persons with significant total assets, who might otherwise meet the status requirements of an SMMP. *See* note 20 *infra* and related discussion under *Background and Purpose of the Institutional SMMP Amendment.*

[7] This one-year minimum timeframe is roughly equivalent to the timeframe provided by the Commission when it adopted Regulation Best Interest. *See* Regulation Best Interest Adopting Release, 84 FR at 33318, 33400 (setting an effective date of September 10, 2019 and a compliance date of June 30, 2020).

[8] The term ''Broker-Dealer'' is used here as defined below under the following discussion *Background on the Commission's Regulation Best Interest.*

Background on the Commission's Regulation Best Interest

On June 5, 2019, the SEC adopted Regulation Best Interest, which established a new standard of conduct for broker-dealers, and the natural persons who are associated persons of such broker-dealers (collectively, ''Broker-Dealers'' and, individually, each a ''Broker-Dealer''), when making a recommendation to a retail customer of any securities transaction or investment strategy involving securities.[9] As defined in Regulation Best Interest, the term ''retail customer'' generally refers to any natural person, or the legal representative of such person, who receives and uses a recommendation from a Broker-Dealer primarily for personal, family, or household purposes.[10] Regulation Best Interest enhanced the Broker-Dealer standard of conduct beyond existing suitability obligations, such as those required by MSRB Rule G–19, on suitability, for such retail customers and aligned the applicable standard of conduct with the reasonable expectations of retail customers.[11] In this regard, Regulation Best Interest imposes the following ''general obligation'' on Broker-Dealers, stating a broker, dealer, or a natural person who is an associated person of a broker or dealer, when making a recommendation of any securities transaction or investment strategy involving securities (including account recommendations) to a retail customer, shall act in the best interest of the retail customer at the time the recommendation is made, without placing the financial or other interest of the broker, dealer, or natural person who is an associated person of a broker or dealer making the recommendation ahead of the interest of the retail customer.[12]

Discussion of Regulation Best Interest's Current Applicability to Bank Dealers

By its terms, Regulation Best Interest does not apply to retail municipal recommendations made by Bank Dealers, because Bank Dealers in exempted securities have an exception from Broker-Dealer status under the Act and Regulation Best Interest applies only to Broker-Dealers. As a result, Bank Dealers presently are not required to comply with Regulation Best Interest and, therefore, retail investors may not benefit from its enhanced standard of conduct when receiving recommendations from Bank Dealers.[13]

Application of Regulation Best Interest to Bank Dealers

The proposed Best Interest Amendments would amend MSRB Rule G–19 to require a Bank Dealer to comply with Regulation Best Interest to the same extent as if it were a Broker-Dealer when making a retail municipal recommendation. Consequently, a Bank Dealer would have to act in the best interest of the retail customer at the time a retail municipal recommendation is made, without placing the financial or other interests of the Bank Dealer ahead of the interest of the retail customer. Correspondingly, the Bank Dealer would have to comply with the Commission's component obligations of Regulation Best Interest to the same extent as if it were a Broker-Dealer, including Regulation Best Interest's Disclosure Obligation,[14] Care Obligation,[15] Conflict-of-Interest Obligation,[16] and Compliance Obligation.[17] Under the proposed Best Interest Amendments, the component obligations of Regulation Best Interest would apply to those municipal securities activities associated with a retail municipal recommendation within the overall context of a Bank Dealer business model. The MSRB believes that any SEC guidance with respect to the understanding and application of Regulation Best Interest would be equally applicable to Bank Dealers.

Application of the Disclosure Obligation to Bank Dealers

Consistent with Regulation Best Interest's Disclosure Obligation, the proposed Best Interest Amendments would require a Bank Dealer, prior to or at the time of the retail municipal recommendation, to provide to its retail customer, in writing, full and fair disclosure of: (a) All material facts relating to the scope and terms of the relationship with the retail customer, including: (i) That the Bank Dealer is acting as a municipal securities dealer with respect to the retail municipal recommendation; (ii) The material fees and costs that apply to the retail customer's transactions, holdings, and accounts; and (iii) The type and scope of services provided to the retail customer, including any material limitations on the securities or investment strategies involving securities that may be recommended to the retail customer; [18] and (b) All material facts relating to conflicts of interest that are associated with the retail municipal recommendation.

[9] *See, generally,* Regulation Best Interest Adopting Release (citation at note 4 *supra*). In response, on May 1, 2020, the MSRB filed a proposed rule change with the Commission to harmonize Regulation Best Interest with certain MSRB rules applicable to related municipal securities activities of Broker-Dealers. *See* Exchange Act Release No. 88828 (May 6, 2020), 85 FR 28082, File No. SR–MSRB–2020–02 (hereinafter, the ''Broker-Dealer Harmonization Filing''), available at *https://msrb.org/-/media/Files/SEC-Filings/2020/MSRB-2020-02-Notice.ashx*?. The Commission approved these proposed amendments on June 25, 2020. *See* Exchange Act Release No. 89154 (June 25, 2020), 85 FR 39613 (July 1, 2020), File No. SR–MSRB–2020–02, available at *https://msrb.org/-/media/Files/SEC-Filings/2020/MSRB-2020-02-Federal-Register.ashx*?.

[10] 17 CFR 240.15*l*–1(b)(1) (''Retail customer means a natural person, or the legal representative of such natural person, who (i) [r]eceives a recommendation of any securities transaction or investment strategy involving securities from a broker, dealer, or a natural person who is an associated person of a broker or dealer; and (ii) [u]ses the recommendation primarily for personal, family, or household purposes.'') For discussion of what it means for a retail customer to ''use'' a recommendation, *see* the SEC staff's *Frequently Asked Questions on Regulation Best Interest,* available at *https://www.sec.gov/tm/faq-regulation-best-interest.*

[11] Regulation Best Interest Adopting Release, 84 FR at 33319.

[12] 17 CFR 240.15*l*–1(a)(1). Regulation Best Interest provides that this general obligation is satisfied only if a Broker-Dealer complies with four component obligations: (i) An obligation to make certain prescribed disclosures, before or at the time of the recommendation, about the recommendation and the relationship between the retail customer and the Broker-Dealer (the ''Disclosure Obligation'') (*see* 17 CFR 240.15*l*–1(a)(2)(i)); (ii) an obligation to exercise reasonable diligence, care, and skill in making a recommendation (the ''Care Obligation'') (*see* 17 CFR 240.15*l*–1(a)(2)(ii)); (iii) an obligation to establish, maintain, and enforce written policies and procedures reasonably designed to address conflicts of interest (the ''Conflict-of-Interest Obligation'') (*see* 17 CFR 240.15*l*–1(a)(2)(iii)); and (iv) an obligation to establish, maintain, and enforce written policies and procedures reasonably designed to achieve compliance with Regulation Best Interest (the ''Compliance Obligation'') (*see* 17 CFR 240.15*l*–1(a)(2)(iv)).

[13] *See* Broker-Dealer Harmonization Filing, 85 FR at 28083, n. 5 (discussing how Bank Dealers are not subject to Regulation Best Interest by the terms of the SEC's rules and indicating the Board's intent to issue a request for comment regarding extending the requirements of Regulation Best Interest to Bank Dealers). Notably, all Bank Dealer recommendations, including retail municipal recommendations, are presently subject to the longstanding suitability obligations provided by MSRB rules, including MSRB Rule G–19 and, when applicable, MSRB Rule G–48.

[14] 17 CFR 240.15*l*–1(a)(2)(i).

[15] 17 CFR 240.15*l*–1(a)(2)(ii).

[16] 17 CFR 240.15*l*–1(a)(2)(iii).

[17] 17 CFR 240.15*l*–1(a)(2)(iv).

[18] For example, if the applicable legal charter of a Bank Dealer only permits a Bank Dealer to conduct municipal securities activities or, in fact, a Bank Dealer's business model is limited to municipal securities activities, then the Bank Dealer generally would be required to accurately disclose the fact that it only engages in transactions involving municipal securities and, therefore, will only make recommendations to a retail customer regarding transactions involving municipal securities. *See* also note 19 *infra* (discussing the Compliance Obligation pursuant to the Best Interest Amendments for Bank Dealers who do not engage in any retail municipal recommendations).

Application of the Care Obligation to Bank Dealers

Consistent with Regulation Best Interest's Care Obligation, the proposed Best Interest Amendments would require a Bank Dealer to exercise reasonable diligence, care, and skill to: (a) Understand the potential risks, rewards, and costs associated with any retail municipal recommendation, and have a reasonable basis to believe that a retail municipal recommendation could be in the best interest of at least some retail customers; (b) Have a reasonable basis to believe that the retail municipal recommendation is in the best interest of a particular retail customer, based on that retail customer's investment profile and the potential risks, rewards, and costs associated with the recommendation, and does not place the financial or other interest of the Bank Dealer ahead of the interest of the retail customer; (c) Have a reasonable basis to believe that a series of retail municipal recommendations, even if in the retail customer's best interest when viewed in isolation, is not excessive and is in the retail customer's best interest when taken together in light of the retail customer's investment profile and does not place the financial or other interest of the Bank Dealer ahead of the interest of the retail customer.

Application of the Conflict-of-Interest Obligation to Bank Dealers

Consistent with Regulation Best Interest's Conflict-of-Interest Obligation, the proposed Best Interest Amendments would require a Bank Dealer to establish, maintain, and enforce written policies and procedures reasonably designed to: (a) Identify and at a minimum disclose, in accordance with its Disclosure Obligation, or eliminate, all conflicts of interest associated with such retail municipal recommendations; (b) Identify and mitigate any conflicts of interest associated with such retail municipal recommendations that create an incentive for a natural person who is an associated person of the Bank Dealer to place the interests of the Bank Dealer or such associated person ahead of the interest of the retail customer; (c)(i) Identify and disclose any material limitations placed on the securities or investment strategies involving securities that may be recommended to a retail customer and any conflicts of interest associated with such limitations, in accordance with its Disclosure Obligation, and (ii) Prevent such limitations and associated conflicts of interest from causing the Bank Dealer to make retail municipal recommendations that place the interest of the Bank Dealer ahead of the interest of the retail customer; and (d) Identify and eliminate any sales contests, sales quotas, bonuses, and non-cash compensation that are based on the sales of specific municipal securities or specific types of municipal securities within a limited period of time.

Application of the Compliance Obligation to Bank Dealers

Consistent with Regulation Best Interest's Compliance Obligation, the proposed Best Interest Amendments would require a Bank Dealer to establish, maintain, and enforce written policies and procedures reasonably designed to achieve compliance with Regulation Best Interest.[19]

Purpose and Intent of the Best Interest Amendments

The MSRB is proposing the Best Interest Amendments to MSRB Rule G–19 for purposes of enhancing the standard of investor protection in the municipal securities market and enhancing fairness and efficiency in the municipal securities market by promoting regulatory parity among Bank Dealers and Broker-Dealers. Specific to enhancing the standard of investor protection, the MSRB believes that all retail customers receiving a retail municipal recommendation should benefit from the enhanced investor protections afforded by Regulation Best Interest, regardless of whether such a retail customer is a customer of a Broker-Dealer or a Bank Dealer. Currently, retail customers of Bank Dealers are not afforded the protections of Regulation Best Interest when receiving a retail municipal recommendation from a Bank Dealer. The proposed Best Interest Amendments would require a Bank Dealer to comply with the enhanced standard of conduct required by Regulation Best Interest and, thereby, improve overall investor protection in the municipal securities market.

Specific to promoting regulatory parity, the MSRB believes that the proposed Best Interest Amendments would establish a uniform regulatory standard in the municipal securities market by requiring the same standard of conduct for Bank Dealers and Broker-Dealers when making retail municipal recommendations. This uniform standard would enhance the fairness and efficiency of the municipal securities market by ensuring Bank Dealers have regulatory obligations and burdens when engaging in retail municipal recommendations that are equivalent to the regulatory obligations and burdens of Broker-Dealers when engaging in the same municipal securities activities. This uniformity would better ensure that Bank Dealers do not have a competitive advantage in the municipal securities market by operation of a less burdensome regulatory standard of conduct and, thereby, mitigate the potential for regulatory arbitrage.

Background and Purpose of the Institutional SMMP Amendment

The proposed Institutional SMMP Amendment would amend MSRB Rule G–48 to modify the current obligation to perform a quantitative suitability analysis for recommendations where the dealer does not have actual control or de facto control over the account of an SMMP who is not a retail customer under Regulation Best Interest (collectively, ''Institutional SMMPs'' and, individually, each an ''Institutional SMMP'').[20]

Similar to the reduced customer-specific suitability obligations currently afforded to Institutional SMMPs under MSRB Rule G–48(c), the MSRB believes that dealers transacting with Institutional SMMPs should have similarly reduced quantitative-suitability obligations in instances where the dealer does not have actual control or de facto control over the account of an Institutional SMMP. This modification would effectively revert the quantitative suitability standard for Institutional SMMPs back to the longstanding standard that was in place under MSRB rules prior to June 30, 2020.[21] The proposed Institutional

[19] If a Bank Dealer's business model is such that it and its associated persons are not permitted to make any retail municipal recommendations, then a Bank Dealer may opt not to establish policies and procedures outlining the affirmative regulatory obligations pursuant to the Disclosure Obligation, Care Obligation, and Conflict of Interest Obligation. However, it would be prudent for a Bank Dealer to have policies and procedures that make clear that, prior to permitting the making of any such retail municipal recommendations, the Bank Dealer would need to establish policies and procedures reasonably designed to ensure compliance with the Best Interest Amendments to MSRB Rule G–19.

[20] *See supra* note 10 for the applicable definition of ''retail customer'' and related citation. Any customer meeting such definition of retail customer pursuant to Regulation Best Interest would not be considered an Institutional SMMP for the purposes of the proposed Institutional SMMP Amendment and its modification to MSRB Rule G–48. For purposes of MSRB rules, such a customer meeting the definition of a ''retail customer'' would receive the protections afforded by Regulation Best Interest.

[21] *See* Broker-Dealer Harmonization Filing, 85 FR at 28082, n. 4. The MSRB notes that it has had a long held prohibition against ''churning,'' and the MSRB formally ''recast'' this prohibition as quantitative suitability through an amendment to MSRB Rule G–19 approved by the SEC in 2014. *See* Exchange Act Release No. 71665 (Mar. 7, 2014), 79

SMMP Amendment is intended to improve the efficiency of the municipal securities market without eroding investor protection by aligning the compliance burden associated with certain recommendations made by dealers to the reasonable expectations and capabilities of Institutional SMMPs—who by their nature are more sophisticated, non-natural-person customers and must affirmatively indicate their capacity to (i) exercise independent judgment and (ii) access material information.[22]

Background on MSRB Rule G–19's Quantitative Suitability Requirements

MSRB Rule G–19 sets the MSRB's baseline investor protection standards regarding the suitability of recommendations made by dealers to their customers of purchases, sales, or exchanges of municipal securities that are not subject to Regulation Best Interest. Among other requirements, Supplementary Material .05 of MSRB Rule G–19 enumerates three components of a dealer's suitability analysis when recommending a transaction or investment strategy involving a municipal security or municipal securities to a non-retail customer (*i.e.,* a recommendation that is not subject to Regulation Best Interest).[23] As further defined in the text of the rule, MSRB Rule G–19 provides that a dealer's suitability obligation is composed of (i) reasonable-basis suitability, (ii) customer-specific suitability, and (iii) quantitative suitability. Most relevant to the proposed Institutional SMMP Amendment of this proposed rule change, quantitative suitability requires a dealer to have a reasonable basis for believing that a series of recommended transactions, even if suitable when viewed in isolation, are not excessive and unsuitable for the customer when taken together in light of the customer's investment profile, as delineated in MSRB Rule G–19.[24] No single test defines excessive activity, but factors such as the turnover rate, the cost-equity ratio, and the use of in-and-out trading in a customer's account may provide a basis for a finding that a dealer has violated the quantitative suitability obligation.[25]

Pursuant to the amendments effectuated by the Broker-Dealer Harmonization Filing, discussed above and effective as of June 30, 2020, the quantitative suitability obligation of MSRB Rule G–19 no longer incorporates an element of control in relation to a customer's account.[26]As a result, dealers are currently obligated to conduct a quantitative suitability analysis under MSRB Rule G–19 when making recommendations to Institutional SMMPs, even in instances where the dealer does not have actual control or de facto control over the account. The obligation applies notwithstanding the fact that Institutional SMMPs self-identify under MSRB Rule G–48 and MSRB Rule D–15 as having the willingness and requisite investment sophistication to, for example, independently evaluate the recommendations of a dealer and the quality of a dealer's execution, as further discussed below.[27]

Background on MSRB Rule G–48 and Modified Regulatory Obligations

MSRB Rule G–48 provides for modified dealer regulatory obligations under MSRB rules when dealing with certain customers that meet the definition of a Sophisticated Municipal Market Participant [28] (*i.e.,* an SMMP). More specifically, when transacting with an SMMP customer, Rule G–48 modifies aspects of a dealer's baseline regulatory obligations in terms of: (i) Time of trade disclosures,[29] (ii) transaction pricing,[30] (iii) bona fide quotations,[31] (iv) best execution,[32] and (vi) suitability.[33] The modified regulatory obligations afforded to SMMPs under MSRB rules are intended to account for the distinct capabilities of certain sophisticated, non-retail customers and the varied types of dealer-customer relationships occurring in the municipal securities market.[34]

Most relevant to the proposed Institutional SMMP Amendment, Rule G–48(c) currently modifies the suitability requirements of MSRB Rule G–19 by eliminating the requirement for dealers to conduct a customer-specific suitability analysis for recommendations made to an Institutional SMMP.[35] The operative provision of MSRB Rule G–48 provides that, ''[w]hen making a recommendation subject to Rule G–19 and not Regulation Best Interest, Rule 15l–1 under the Act, a broker, dealer, or municipal securities dealer shall not have any obligation under Rule G–19 to perform a customer-specific suitability analysis.'' [36] This

FR 2432 (Mar. 13, 2014), File No. SR–MSRB–2013–07 (discussing the then-existing MSRB prohibition on churning and a proposed rule change to recast this prohibition using the phrase ''quantitative suitability''), available at *http://www.msrb.org/~/media/Files/SEC-Filings/2013/MSRB-2013-07-Fed-Reg-Approval.ashx?la=en&hash=AEDA0B5509630E25473E9F6F3A3F9C34.*

[25] *Id.*

[26] In other words, as of June 30, 2020, if the obligations of MSRB Rule G–19 attach to a dealer's recommendation, then the investor protections regarding quantitative suitability apply regardless of whether the dealer making the recommendation exercises any actual control or de facto control over the customer's account. The Broker-Dealer Harmonization Filing amended this language of Supplementary Material .05(c) to eliminate such control requirements, effectively extending the requirements of quantitative suitability to any customer account. *See* Broker-Dealer Harmonization Filing, 85 FR at 28084. June 30, 2020 was the compliance date for the amendments enacted by the Broker-Dealer Harmonization Filing. *See* Broker-Dealer Harmonization Filing, 85 FR at 28082, n. 4. Pursuant to the Broker-Dealer Harmonization Filing, the MSRB also notes that this quantitative suitability obligation applies uniformly to any dealer (*i.e.,* the same regulatory obligations apply to both Broker-Dealers and Bank Dealers).

[27] *See* MSRB Rule D–15(c) (requiring Institutional SMMPs to ''affirmatively indicate,'' among other things, that it is exercising independent judgment in evaluating (A) the recommendations of the dealer and (B) the quality of execution of the customer's transactions by the dealer).

[28] *See* discussion under *Background and Purpose of the Institutional SMMP Amendment—Background on MSRB Rule D–15 and SMMP Affirmation Requirements* near note 37 *infra* (discussing the definition of Sophisticated Municipal Market Participant under MSRB Rule D–15).

[29] MSRB Rule G–48(a) (''The broker, dealer, or municipal securities dealer shall not have any obligation under Rule G–47 to ensure disclosure of material information that is reasonably accessible to the market.'')

[30] MSRB Rule G–48(b).

[31] MSRB Rule G–48(d) (''The broker, dealer, or municipal securities dealer disseminating an SMMP's 'quotation' as defined in Rule G–13, which is labeled as such, shall apply the same standards regarding quotations described in Rule G–13(b) as if such quotations were made by another broker, dealer, or municipal securities dealer.'')

[32] MSRB Rule G–48(e) (''The broker, dealer, or municipal securities dealer shall not have any obligation under Rule G–18 to use reasonable diligence to ascertain the best market for the subject security and buy or sell in that market so that the resultant price to the SMMP is as favorable as possible under prevailing market conditions.'')

[33] MSRB Rule G–48(c).

[34] *See, e.g.,* Exchange Act Release No. 67064 (May 25, 2012), 77 FR 32704 (June 1, 2012), File No. SR–MSRB–2012–05 (May 25, 2012) (approving an MSRB proposed rule change to relax certain qualifications for a dealer to afford a customer SMMP status in light of market developments regarding the increased availability of municipal securities market information and the desire of certain institutional customers to access alternative trading systems).

[35] *Id.* The amendments to MSRB Rule G–48 enacted by the Broker-Dealer Harmonization Filing carved out recommendations to customers that are subject to Regulation Best Interest from the rule's modified standards. *See* Broker-Dealer Harmonization Filing, 85 FR at 28084–85.

[36] MSRB Rule G–48(c).

relaxed customer-specific suitability obligation is generally aligned with the ''independent judgment'' affirmations a customer seeking SMMP status makes under MSRB Rule D–15. The proposed Institutional SMMP Amendment would likewise relax the quantitative suitability obligation for similar reasons, as further described in the following sections.[37]

Background on MSRB Rule D–15 and SMMP Affirmation Requirements

MSRB Rule G–48 incorporates the definition of SMMP under MSRB Rule D–15 for purposes of defining which customers do (or do not) qualify as an SMMP for purposes of Rule G–48 and, therefore, MSRB Rule D–15 establishes the scope of potential customers who might qualify for MSRB Rule G–48's modified obligations. The SMMP definition of MSRB Rule D–15 enumerates three definitional components, which separately address: (i) The minimum qualifying traits and characteristics of an SMMP customer; [38] (ii) that a dealer must develop a reasonable basis for determining whether a customer has the requisite level of expertise and sophistication to be deemed an SMMP customer (the ''SMMP Reasonable Basis Determination''); [39] and (iii) what affirmations a customer must communicate to the dealer regarding its own investment judgment and access to information in order to be appropriately deemed an SMMP customer (the ''SMMP Customer Affirmations'').[40] In terms of the SMMP Customer Affirmations, MSRB Rule D–15(c) provides that the customer must affirmatively indicate to the dealer that (i) it is exercising independent judgment in evaluating the recommendations of the dealer; the quality of execution of the customer's transactions by the dealer; and the transaction price for non-recommended secondary market agency transactions as to which the dealer's services have been explicitly limited to providing anonymity, communication, order matching and/or clearance functions and the dealer does not exercise discretion as to how or when the transactions are executed; [41] and (ii) it has timely access to material information that is available publicly through established industry sources as defined in MSRB Rule G–47(b)(i) and MSRB Rule G–47(b)(ii) (*i.e.,* ''material information'' from ''established industry sources,'' such as EMMA website information and rating agency reports).[42]

Thus, an institutional customer who self-identifies as an SMMP has freely affirmed to a dealer its willingness to be treated as a sophisticated customer with the capacity and resources to exercise its own independent judgment. In this way, the SMMP Customer Affirmations are designed to ensure that any customer treated as an SMMP has affirmatively and knowingly provided the grounds on which a dealer may afford such SMMP customer lesser protections under certain MSRB rules. As an additional investor protection safeguard beyond the requirement for SMMP Customer Affirmations, the SMMP Reasonable Basis Determination also requires a dealer to have a reasonable basis to believe that an SMMP customer is capable of evaluating investment risks and market value independently, both in general and with regard to particular transactions and investment strategies in municipal securities.[43] In this way, the SMMP Reasonable Basis Determination further ensures that an Institutional SMMP does in fact possess a more sophisticated understanding of the municipal securities market. Importantly, the proposed Institutional SMMP Amendment would not alter the SMMP Customer Affirmations, the SMMP Reasonable Basis Determination, nor any of the other definitional elements of MSRB Rule D–15.

Purpose and Intent of the Institutional SMMP Amendment to MSRB Rule G–48

The proposed Institutional SMMP Amendment would amend MSRB Rule G–48 to modify the quantitative suitability obligations of dealers when effecting transactions for their Institutional SMMPs. The proposed Institutional SMMP Amendment would require a dealer to conduct a quantitative suitability analysis only in situations where the dealer has actual control or de facto control over an Institutional SMMP's account.[44] As stated above, the proposed amendments to MSRB Rule G–48 would narrowly reinstate the scope of suitability protections afforded to Institutional SMMPs in effect prior to the amendments effectuated by the Broker-Dealer Harmonization Filing and so should be a familiar regulatory concept to dealers and Institutional SMMPs alike.[45] More importantly, because each Institutional SMMP must self-identify as an SMMP by making the SMMP Customer Affirmations, as well as must fulfill the requirements associated with a dealer's SMMP Reasonable Basis Determination, the MSRB believes that the proposed Institutional SMMP Amendment will ease a regulatory burden on dealers that effectively replicates the sort of analysis an Institutional SMMP is willing and capable of performing itself. As a result, the proposed Institutional SMMP Amendment would align the compliance burden associated with certain recommendations made by dealers to the reasonable expectations and capabilities of Institutional SMMPs.

While the investor protection benefits associated with requiring dealers to perform a potentially duplicative suitability analysis can be appropriate

[37] *See* Exchange Act Release No. 71665 (Mar. 7, 2014), 79 FR 14321 (Mar. 13, 2014), File No. SR–MSRB–2013–07 (Sept. 17, 2013) (codifying the relaxed customer-specific suitability obligation for recommendations made to SMMPs in MSRB Rule G–48 and the actual control or de facto control requirement, thereafter eliminated in 2020 as described herein, for the applicability of quantitative suitability to recommendations made to customers in MSRB Rule G–19).

[38] MSRB Rule D–15(a). A customer is only eligible to be treated as an SMMP if the customer is: (i) A bank, savings and loan association, insurance company, or registered investment company, (ii) a registered investment advisor, or (iii) a person or entity with total assets of at least $50 million.

[39] MSRB Rule D–15(b). A customer is only eligible to be treated as an SMMP if the dealer has developed a reasonable basis to believe that the customer is capable of evaluating investment risks and market value independently, both in general and with regard to particular transactions and investment strategies in municipal securities. In addition, Supplementary Material .01 of MSRB Rule D–15 states that, as part of the reasonable-basis analysis, the dealer should consider the amount and type of municipal securities owned or under management by the customer.

[40] MSRB Rule D–15(c).

[41] *See* MSRB Rule D–15(c)(1) (''The customer must affirmatively indicate that it: (1) is exercising independent judgment in evaluating: (A) the recommendations of the dealer; (B) the quality of execution of the customer's transactions by the dealer; and (C) the transaction price for non-recommended secondary market agency transactions as to which (i) the dealer's services have been explicitly limited to providing anonymity, communication, order matching and/or clearance functions and (ii) the dealer does not exercise discretion as to how or when the transactions are executed . . .'').

[42] *See* MSRB Rule D–15(c)(2) (''The customer must affirmatively indicate that it . . . (2) has timely access to material information that is available publicly through established industry sources as defined in Rule G–47(b)(i) and (ii).'')

[43] *See* MSRB Rule D–15(b) and Rule D–15 Supplementary Material .01.

[44] Where a dealer exercises actual control or de facto control over an Institutional SMMP's account, the dealer would still be required to perform a quantitative suitability analysis in accordance with Supplementary Material .05 of MSRB Rule G–19. Relatedly, if an Institutional SMMP limitedly provides its customer affirmation on a trade-by-trade basis, then the dealer would be required to comply with all aspects of MSRB Rule G–19, including both the quantitative suitability requirement and the customer-specific suitability requirement, for those recommendations for which the Institutional SMMP did not provide the applicable customer affirmation. *See* Supplementary Material .02 of MSRB Rule D–15 (discussing trade-by-trade affirmations).

[45] *See supra* note 21 and related discussion.

in other circumstances,[46] the MSRB believes that the compliance burden associated with performing a quantitative suitability analysis on recommendations made to Institutional SMMPs outweighs the potential marginal investor protection benefits. In this way, the proposed Institutional SMMP Amendment would promote efficiency in the municipal securities market by eliminating a regulatory burden on dealers that generally provides a duplicative or unneeded analyses in supplement of an Institutional SMMPs' own independent and informed judgment, and, consequently, the proposed Institutional SMMP Amendment would allow dealers to redirect the resources associated with this regulatory burden to other more productive market activities.

2. Statutory Basis

The MSRB believes that the proposed rule change is consistent with Section 15B(b)(2) of the Act,[47] which provides that the Board shall propose and adopt rules to effect the purposes of this title with respect to transactions in municipal securities effected by brokers, dealers, and municipal securities dealers and advice provided to or on behalf of municipal entities or obligated persons by brokers, dealers, municipal securities dealers, and municipal advisors with respect to municipal financial products, the issuance of municipal securities, and solicitations of municipal entities or obligated persons undertaken by brokers, dealers, municipal securities dealers, and municipal advisors.[48]

Section 15B(b)(2)(C) of the Act[49] provides that the MSRB's rules shall be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in municipal securities and municipal financial products, to remove impediments to and perfect the mechanism of a free and open market in municipal securities and municipal financial products, and, in general, to protect investors, municipal entities, obligated persons, and the public interest.[50] The MSRB believes the proposed rule change is consistent with Section 15B(b)(2)(C) of the Act[51] for the following reasons.

Statutory Basis for the Best Interest Amendments

The proposed Best Interest Amendments are consistent with Section 15B(b)(2)(C) of the Act[52] because the amendments would: Foster cooperation and coordination with regulators; prevent fraudulent and manipulative acts and practices; protect investors; remove impediments to and perfect the mechanism of a free and open market in municipal securities; and promote capital formation in the municipal securities market.

Fostering Cooperation and Coordination With Regulators

The proposed Best Interest Amendments would foster cooperation and coordination with regulators by more tightly aligning the suitability obligations of MSRB Rule G–19 with the suitability obligations of Regulation Best Interest. By providing a uniform standard for all types of dealers, this alignment of the regulatory scheme applicable to retail municipal recommendations will foster greater cooperation and coordination among the MSRB and the SEC, as well as greater cooperation and coordination among the authorities that examine Broker-Dealers and Bank Dealers for compliance with MSRB rules.

Protecting Investors and Preventing Fraudulent and Manipulative Act and Practices

The proposed Best Interest Amendments would protect investors and prevent fraudulent and manipulative acts and practices by extending the enhanced standards of conduct required by Regulation Best Interest to the retail municipal recommendations of Bank Dealers. As noted by the Commission in the adopting release for Regulation Best Interest, Regulation Best Interest enhances the broker-dealer standard of conduct beyond existing suitability obligations, and aligns the standard of conduct with retail customers' reasonable expectations by requiring broker-dealers, among other things, to: Act in the best interest of the retail customer at the time the recommendation is made, without placing the financial or other interest of the broker-dealer ahead of the interests of the retail customer; and address conflicts of interest by establishing, maintaining, and enforcing policies and procedures reasonably designed to identify and fully and fairly disclose material facts about conflicts of interest, and in instances where we have determined that disclosure is insufficient to reasonably address the conflict, to mitigate or, in certain instances, eliminate the conflict.[53]

In addition, the Commission stated the enhancements contained in Regulation Best Interest are designed to improve investor protection by enhancing the quality of broker-dealer recommendations to retail customers and reducing the potential harm to retail customers that may be caused by conflicts of interest.[54] For the same reasons, the MSRB believes that extending Regulation Best Interest to the retail municipal recommendations of Bank Dealers would prevent potential fraudulent and manipulative acts and practices and promote the protection of the retail customers of Bank Dealers.

Removing Impediments and Perfecting the Mechanisms of a Free and Open Market

The proposed Best Interest Amendments would remove impediments to and perfect the mechanism of a free and open market in municipal securities by applying a uniform regulatory standard for retail municipal recommendations that would promote parity regarding the regulatory obligations of Broker-Dealers and Bank Dealers and, thereby, reduce potential confusion among market participants as to which standard of conduct applies.

Promoting Capital Formation

The proposed Best Interest Amendments would not have a deleterious effect on capital formation in the municipal securities market and would have the potential to improve capital formation for the following reasons. Similar to the Commission's reasoning in its adoption of Regulation Best Interest,[55] the enhanced obligations

[46] For example, the MSRB believes that the obligation to perform quantitative suitability analyses under MSRB rules remains appropriate, regardless of the potential for such duplication, in circumstances of recommendations made to retail customers; non-retail, institutional customers who fail to meet the characteristics of an SMMP; and/or non-retail customers who have declined to make the affirmations necessary to be appropriately deemed an SMMP.

If retail customers are more

Continued

of Regulation Best Interest may increase the efficiency of retail municipal recommendations and increase the attractiveness of Bank Dealer services for those retail customers who do not invest with a Bank Dealer because recommendations made by bank dealers are not currently subject to the additional standards of investor protection afforded by Regulation Best Interest. Additionally, by adopting a uniform regulatory standard for retail municipal recommendations across all dealers (*i.e.,* across Bank Dealers and Broker-Dealers), the overall attractiveness of the municipal securities activities of dealers may improve. Consequently, if more retail customers are more willing to participate in municipal securities activities, then the proposed Best Interest Amendments would promote capital formation in the municipal securities market.

Statutory Basis for the Institutional SMMP Amendment

The proposed Institutional SMMP Amendment is consistent with Section 15B(b)(2)(C)[56] of the Act because the amendment would facilitate transactions in municipal securities and remove impediments to and perfect the mechanism of a free and open market in municipal securities, while not compromising investor protection.

The proposed Institutional SMMP Amendment would facilitate transactions in municipal securities and remove impediments to and perfect the mechanism of a free and open market in municipal securities by reducing a compliance burden on dealers. The modification of a dealer's suitability obligations to eliminate the current requirement to perform a quantitative suitability analysis for recommendations in circumstances where the dealer does not have actual control or de facto control over an Institutional SMMP's account will eliminate what could potentially be duplicative analyses undertaken by dealers on behalf of Institutional SMMPs—analyses which Institutional SMMPs have already affirmed their capacity and expertise to conduct for themselves, and which the Institutional SMMPs presumably have taken upon themselves to perform. In this regard, the proposed Institutional SMMP Amendment will remove an impediment to the mechanisms of a free and open market in municipal securities and promote greater efficiency. By eliminating this regulatory burden, the proposed Institutional SMMP Amendment would allow dealers to redirect the resources associated with this regulatory burden to other more productive market activities. As a separate, but related benefit, the MSRB believes that the Institutional SMMP Amendment would allow dealers to more efficiently serve those Institutional SMMPs who may be seeking relatively greater transaction activity and/or are more comfortable taking on the risks associated with more frequent transaction activity.

The MSRB believes that the proposed Institutional SMMP Amendment to MSRB Rule G–48 will not compromise investor protections. The MSRB believes that allowing dealers to make recommendations to their Institutional SMMP customers without the burden of performing a quantitative suitability analysis is consistent with the SMMP Customer Affirmations and dealers' SMMP Reasonable Basis Determination. More specifically, the SMMP Customer Affirmations ensure that an Institutional SMMP itself believes that it has the requisite knowledge and judgment to be afforded SMMP status; and, as an additional safeguard to investor protection, the SMMP Reasonable Basis Determination separately ensures that the dealer also has a reasonable basis to conclude that an Institutional SMMP has the knowledge and sophistication to be treated as a SMMP based on supplemental factors beyond just the SMMP Customer Affirmations. If either definitional prong is not met, a dealer is not permitted to afford an institutional customer the status of a SMMP. Therefore, the MSRB believes that the proposed Institutional SMMP Amendment is generally consistent with an Institutional SMMP's more sophisticated understanding of (i) the commercial nature of its relationship with a dealer and (ii) the lesser regulatory standards of conduct governing the SMMP-dealer relationship.

In addition, the proposed Institutional SMMP Amendment would incorporate the concepts of actual control or de facto control. Reinstating these control elements would help address potential scenarios in which the ability of an Institutional SMMP to exercise independent judgment is undermined or circumvented, such as when a dealer may not have formal discretionary authority over an Institutional SMMP's account, but nevertheless exercises de facto control over the account to, for example, engage in churning activity in clear contravention of an Institutional SMMP's investment interests.[57] The MSRB believes that incorporating the actual control or de facto control elements maintains baseline investor protections for Institutional SMMPs in such scenarios of greater dealer impropriety or intentional wrongdoing.

The MSRB also notes that new institutional customers, who otherwise would qualify as SMMPs but desire the additional investor protections afforded by quantitative suitability under MSRB Rule G–19, can decline to provide the required affirmations under MSRB Rule D–15.[58] Similarly, existing Institutional SMMPs could withdraw their SMMP status and obtain the suitability protections afforded by MSRB Rule G–19. This ability to self-identify as an Institutional SMMP will ensure that those institutional customers who desire additional investor protection can secure them under MSRB rules, and thus, require the dealers to undertake a quantitative suitability analysis.

Accordingly, the MSRB believes that the proposed Institutional SMMP Amendment would maintain essential safeguards for investor protection and, overall, not compromise investor protections inconsistent with Section 15B(b)(2)(C)[59] of the Act.

B. Self-Regulatory Organization's Statement on Burden on Competition

Section 15B(b)(2)(C) of the Act[60] requires that MSRB rules not be designed to impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Exchange Act. The MSRB considered the economic impact associated with the proposed rule change, including a comparison to reasonable alternative regulatory approaches, relative to the baseline.[61] The MSRB believes the proposed rule changes would relieve a burden on competition and do not impose any

willing to participate in the securities markets through broker-dealers, Regulation Best Interest would have a positive effect on capital formation.'')

burden on competition not necessary or appropriate in furtherance of the purposes of the Exchange Act.

Necessity of Rule Change

Best Interest Amendments

As previously mentioned, the retail municipal recommendations made by Bank Dealers currently are outside the scope of Regulation Best Interest,[62] and the municipal securities activities of Bank Dealers continue to be subject to the existing investor protection obligations of MSRB rules, including MSRB Rule G–19. The proposed Best Interest Amendments to MSRB Rule G–19 would require each Bank Dealer to comply with the requirements of Regulation Best Interest to the same extent as a Broker-Dealer must. The proposed Best Interest Amendments are necessary because they would increase investor protection in the municipal securities market by creating regulatory uniformity in the market between the municipal securities activities of Bank Dealers and those of Broker-Dealers, each of whom may provide retail municipal recommendations. Similar to the Broker-Dealer Harmonization Filing for Broker-Dealers in 2020, the MSRB believes another benefit of the proposed Best Interest Amendments is that the amendments would reduce agency costs and information asymmetry between Bank Dealers and retail customers.[63]

The MSRB addresses reasonable alternatives where applicable when considering the costs, benefits, and impact of a proposed amendment. The MSRB believes the only reasonable alternative for evaluation is the option of leaving in place the current regulatory state in which a Bank Dealer's retail municipal recommendations are not subject to the requirements of Regulation Best Interest, while a Broker-Dealer's retail municipal recommendations are subject to the full requirements of Regulation Best Interest, even though the activities of both groups of dealers are similar. As shown below, the MSRB believes that maintaining the status quo would preserve a regulatory imbalance and therefore competitive imbalance in this regard between Bank Dealers and Broker-Dealers engaged in the same activity, as well as deprive certain retail customers of the investor protections afforded by Regulation Best Interest. In this way, maintaining the status quo would maintain a discrepancy in the investor protections afforded to the retail customers receiving retail municipal recommendations from Bank Dealers as compared to the investor protections afforded to retail customers receiving retail municipal recommendations from Broker-Dealers and, thereby, maintain a competitive imbalance in terms of the compliance burdens of Bank Dealers versus Broker-Dealers.

Institutional SMMP Amendment

The purpose of amending MSRB Rule G–48 is to reinstate the requirement that a dealer have actual control or de facto control with respect to Institutional SMMP accounts to trigger a dealer's quantitative suitability obligation. A prior rule provision, applying the quantitative suitability obligation only when a dealer had actual control or de facto control over the account, was removed as part of the Broker-Dealer Harmonization Filing; and, as a result, dealers currently have an obligation to conduct a quantitative suitability analysis for transactions with Institutional SMMP customers whether or not the dealer has actual control or de facto control over the Institutional SMMP's account. The proposed Institutional SMMP Amendment to MSRB Rule G–48 will clarify that the quantitative suitability requirement of MSRB Rule G–19 is only applicable to natural person SMMPs but not to Institutional SMMPs. Since the proposed Institutional SMMP Amendment reinstates a previous requirement in the MSRB's suitability rule, the MSRB considered the alternative of placing the reinstated requirement in MSRB Rule G–19 for all institutional entities but decided that MSRB Rule G–48 is a more appropriate place to incorporate the reinstated standard, as Institutional SMMPs are by their nature sophisticated entities that have freely affirmed and self-identified their capacity to independently evaluate dealers' recommendations.

Benefits, Costs and Effect on Competition

Best Interest Amendments

The proposed Best Interest Amendments to MSRB Rule G–19 would help create a uniform standard of investor protection for retail municipal recommendations. The proposed Best Interest Amendments to MSRB Rule G–19 would obligate a Bank Dealer to comply with Regulation Best Interest to the same extent as a Broker-Dealer making retail municipal recommendations. In this regard, the MSRB believes the effects of the proposed Best Interest Amendments would be similar and comparable to the effects resulting from when Broker-Dealers were first required to comply with Regulation Best Interest, though at a much smaller scale concerning only retail municipal recommendations.[64] Therefore, the MSRB believes that the SEC's estimates of the burdens on competition and benefits of applying Regulation Best Interest to Broker-Dealers is a reasonable reference point for analyzing burdens on competition and benefits of applying Regulation Best Interest to Bank Dealers' retail municipal recommendations. The MSRB therefore built upon the findings of the SEC's multiyear in-depth analysis for its analysis of the proposed Best Interest Amendments.

Notably, in the Regulation Best Interest Adopting Release, the SEC emphasized that it is ''difficult to quantify such benefits and costs with meaningful precision'' for Broker-Dealers and, particularly over long time periods, the quantification may be insufficiently precise and inherently speculative,[65] mainly due to the following factors, among others, (i) a lack of data on the extent to which Broker-Dealers with different business practices engage in disclosure and conflict mitigation activities to comply with existing requirements, and therefore how costly it would be to comply with the proposed requirements; [66] (ii) Regulation Best Interest provides Broker-Dealers flexibility in how to comply with the obligations and, as a result, there could be multiple ways in which Broker-Dealers will satisfy their obligations; [67] and (iii) Regulation Best Interest may affect Broker-Dealers differently depending on their business model (*e.g.,* full-service Broker-Dealer, Broker-Dealer that uses independent contractors,

[62] Regulation Best Interest applies to ''a broker, dealer or a natural person who is an associated person of a broker or dealer,'' which does not apply Bank Dealers. *See* 17 CFR 240.15*l*–1(a)(1).

[63] The SEC describes this reduction in agency cost, in the Regulation Best Interest Adopting Release, as ''the difference between the net benefit to the retail customer from accepting a less than efficient recommendation about a securities transaction or investment strategy, where the associated person or Broker-Dealer puts its interests ahead of the interests of the retail customer, and the net benefit the retail customer might expect from a similar securities transaction or investment strategy that is efficient for him or her.'' *See* Regulation Best Interest Adopting Release, 84 FR at 33403.

[64] *See* Regulation Best Interest Adopting Release, 84 FR at 33403.

[65] *Id.* The MSRB is not aware of any post-implementation study or other analysis that provides data on the costs and benefits of adopting Regulation Best Interest.

[66] *See* Regulation Best Interest Adopting Release, 84 FR at 33434.

[67] *Id.*

insurance-affiliated Broker-Dealer) and size.[68]

The SEC further cautioned that the associated costs for each individual Broker-Dealer firm could not be anticipated because of the wide variation in size and scope of business practices across firms as well as the many unknown factors associated with the principles-based nature of the Regulation Best Interest.[69] The MSRB believes the same difficulties and complexities experienced by the SEC in attempting to analyze the economic effects of applying Regulation Best Interest to Broker-Dealers also applies to the MSRB's attempt to provide a meaningful quantitative estimate of the impact of the proposed Best Interest Amendments on Bank Dealers.[70]

While acknowledging these challenges, the MSRB attempted to determine the scope of activity that would be subject to the proposed Best Interest Amendments, which is summarized in *Table 1* below. The summary table provides an estimate of the number of Bank Dealers likely to be affected by the proposed Best Interest Amendments. The Bank Dealers were included in that table based on their market share of retail-sized dealer-to-customer trades in calendar year 2020 (*i.e.,* dealer-to-customer trades with a par value of $100,000 or less).[71] Among the over 1,200 dealers registered with the MSRB, only 21 firms are registered as Bank Dealers. Those 21 Bank Dealers conducted only 1.6% of all retail-sized dealer-to-customer trades in municipal securities in 2020.[72] Even among the 21 Bank Dealers, nearly all of this activity was concentrated in a small number of firms, with the top seven most-active Bank Dealers conducting the vast majority of all retail-sized customer trades in 2020 (about 99.5%). The remaining number of registered Bank Dealers were significantly less active in executing retail-sized trades with customers during that same period, with six Bank Dealers not executing any retail-sized customer trades over the course of the entire year and the remaining eight Bank Dealers altogether averaging a little over one retail-sized customer trade per day.

TABLE 1—MARKET SHARE OF MUNICIPAL SECURITIES RETAIL-SIZED CUSTOMER TRADES BY DEALERS JANUARY 2020–DECEMBER 2020

Type of dealers	Number of retail-sized customer trades	Market share of retail-sized customer trades (%)
Non-Bank Dealers	3,865,880	98.4
Top Seven Bank Dealers	61,140	1.6
All Fourteen Other Bank Dealers	325	0.0

Source: MSRB analysis with data obtained from the MSRB's Real-Time Transaction Reporting System (RTRS) and the MSRB's registration database.

In developing these numbers, the MSRB believes they are likely overly inclusive of potential retail activity, because there is a high probability the numbers capture more trades than would be subject to the requirements of the proposed Best Interest Amendments. Nevertheless, the MSRB believes the numbers are a reasonable estimate for the purpose of this economic analysis and are conservative to the extent that they are more likely to over-estimate the potential burden on Bank Dealers than underestimate it. In terms of the limitations of this data, dealer-to-customer trades with a par value of $100,000 or less are not always conducted with investors who would meet the definition of a retail customer under Regulation Best Interest, as representatives acting on behalf of non-retail customers potentially execute trades with a par value of $100,000 or less (*i.e.,* small institutional trades). Conversely, retail investors may execute trades above $100,000 par value (*i.e.,* large retail trades); however, the MSRB believes large retail trades occur less frequently and, thus, do not fully offset the more frequent occurrences of sub-$100,000 par value non-retail trades.[73]

Additionally, the MSRB acknowledges that the number of trades is not a reasonable proxy for the number of retail municipal recommendations. That is, the fact that a Bank Dealer executes a trade with an investor who meets the definition of a retail customer under Regulation Best Interest does not necessarily mean that the Bank Dealer has made a ''recommendation'' to such retail customer for purposes of Regulation Best Interest. The Bank Dealer may have, for example, executed a non-recommended trade at the customer's request. Hence, the MSRB believes that some unknown number of these retail-sized trades would not be subject to the proposed Best Interest Amendments (*i.e.,* the trades would not be subject to Regulation Best Interest).

Benefits

The MSRB believes extending the requirements of Regulation Best Interest to Bank Dealers would reduce or eliminate a regulatory imbalance between Bank Dealers, on the one hand,

[68] *Id.*

[69] *Id.*

[70] The MSRB sought public comment to solicit data to use in a quantitative analysis relating to the proposed changes in its Request for Comments. While commenters did provide some specifics on the scope of Bank Dealers' activities that would be subject to the proposed Best Interest Amendments, the MSRB did not receive any quantitative estimate of the impact of the proposed Best Interest Amendments on Bank Dealers. In addition, the MSRB is not aware of any post-implementation study that provides data on the costs and benefits of adopting Regulation Best Interest.

[71] The MSRB does not have access to reliable data to determine the precise number of Bank Dealers who provide (or may provide) recommendations to investors who meet the definition of a retail customer. To develop a reasonable proxy, the MSRB analyzed market data to determine the number of retail-sized trades (par value at $100,000 or less in this case). In the absence of more specific data about a trade, total par size of $100,000 or less is commonly used in the municipal securities market as an indicator of a retail activity. Data were obtained from the MSRB's Real-Time Transaction Reporting System (RTRS) and the MSRB's registration database.

[72] These figures are provided by an MSRB analysis with data obtained from MSRB's Real-Time Transaction Reporting System (RTRS) combined with existing registration data.

[73] For example, one commenter, the Capital Markets Group of Commerce Bank (''CMG'') based in Kansas City, MO, stated that ''For CMG, retail customers comprise approximately 9% of CMG's total open account customer base. Further, only a portion of these retail accounts actually executed transactions in the last 12 months, comprising approximately 3% of CMG's total customers. . . .'' *See* letter from Erik Swanson, Managing Director, and Joseph Reece, Chief Compliance Officer, Capital Markets Group of Commerce Bank (''Commerce Bank''), not dated (the ''Commerce Bank Letter'') in response to MSRB Notice 2021–06 (March 4, 2021).

and Broker-Dealers, on the other, as the terms of Regulation Best Interest do not currently apply to Bank Dealers. The proposed Best Interest Amendments would both close a regulatory gap and also mitigate certain market risks and inefficiencies associated with a potentially lower compliance standard.[74] Therefore, the proposed Best Interest Amendments would protect retail customers seeking investment recommendations and transacting in municipal securities, regardless of whether they are customers of a Broker-Dealer or a Bank Dealer. The MSRB believes retail customers receiving retail municipal recommendations should benefit from a uniform standard of enhanced investor protections, which would not be dependent upon the type of dealer entity making the retail municipal recommendation.

As to the overall merit of the proposed new requirements, they are intended to reduce Bank-Dealer retail customer agency costs by lessening conflicts of interest that currently exist between Bank Dealers and retail customers and reduce information asymmetries limiting the ability of retail customers to assess the efficiency of recommendations from Bank Dealers.[75]

Costs

If the proposed Best Interest Amendments were enacted, the MSRB believes Bank Dealers would experience initial costs associated with establishing the revised policies and procedures to comply with the requirements of Regulation Best Interest, as well as the costs of ongoing compliance. The initial setup costs likely would be proportionately higher for smaller and less active Bank Dealers with fewer retail municipal recommendations than for the larger and more active Bank Dealers with more retail municipal recommendations, while the ongoing costs would likely be proportionate with each Bank Dealer's retail business activities. Additionally, Bank Dealers with an affiliated Broker-Dealer that is subject to Regulation Best Interest likely would not experience as much initial set-up costs as other Bank Dealers because they can leverage established policies and procedures from their Broker-Dealers affiliates presumably in compliance with Regulation Best Interest.

The MSRB believes the average per-firm total costs (initial and ongoing) would be substantially lower for a Bank Dealer providing retail municipal recommendations that are *only* related to municipal securities, as compared to the overall costs associated with a Broker-Dealer providing recommendations to retail customers of securities transactions or investment strategies involving securities related to many different types of securities. On average, there are many more retail-sized trades in other types of securities—for example, equities, corporate bonds, treasury and agency securities, options, convertible bonds, mutual funds, and exchange-traded funds—than in municipal securities alone.[76] A Broker-Dealer subject to Regulation Best Interest incurs compliance costs any time it provides a recommendation to its retail customers on any security, while a Bank Dealer would only incur cost when it provides a retail municipal recommendation. As a result, the MSRB believes the average per-Bank Dealer total costs would not approach the per-Broker-Dealer level, as estimated by the SEC in relation to Regulation Best Interest. *Table 2* provides an illustration of potential costs to be expected for a Bank Dealer with an average number of retail-sized trades in municipal securities as a result of the proposed rule change. Using the SEC's estimates of initial cost and ongoing cost for 2,766 Broker-Dealers, the MSRB estimated the portion of the costs attributable to municipal securities only for a Broker-Dealer with an average number of retail-sized trades in municipal securities, with the assumption that the same Broker-Dealer would incur only 35% of the initial cost and one percent of the ongoing cost if the Broker-Dealer only provided recommendations on municipal securities to retail customers.[77] The MSRB then applied the cost estimates to an average Bank Dealer.

TABLE 2—ESTIMATED INITIAL SETUP AND ONGOING COMPLIANCE COSTS FOR AN AVERAGE BANK DEALER

	Initial cost	Ongoing cost	Number of retail-sized customer trades
SEC Estimate			
Average Broker-Dealer (Non-Bank Dealer)	$2,153,290	$855,897	
Average Broker-Dealer Trading Municipal Bonds Only	753,651	8,559	5,523
Apply SEC Estimate to Average Bank Dealer Trading Municipal Bonds	753,651	4,590	2,962

Source: MSRB analysis with data obtained from the MSRB's Real-Time Transaction Reporting System (RTRS), MSRB's registration data and SEC's estimates of costs and benefits of applying Regulation Best Interest to Broker-Dealers.[78]

[74] As one potential example, where a Bank Dealer and a Broker-Dealer are both subsidiary entities of a common parent holding company, the MSRB is concerned that the parent holding company may attempt to take advantage of any regulatory imbalance by utilizing a regulatory arbitraging strategy to move retail customer accounts to the subsidiary with the lowest compliance standard, and, thus, Broker-Dealers may relocate retail customers accounts to affiliated Bank Dealers to avoid compliance with Regulation Best Interest.

[75] For a detailed discussion of the economic theory behind agency costs, please refer to the Regulation Best Interest Adopting Release, 84 FR at 33400–41.

[76] Based on the MSRB's estimate, there were approximately five million retail-sized customer trades in municipal securities in 2018, compared to 6.8 million retail-sized customer trades in corporate bonds, 132.5 million retail-sized customer trades in treasury securities and 4.4 billion retail-sized customer trades in equities, which include exchange-traded funds.

[77] The MSRB's analysis focuses on four securities that have substantial retail customer trades: Municipal securities, corporate bonds, treasury securities and equities, which include exchange-traded funds. To be conservative, all other securities, such as stock options, federal agency securities, mortgage-backed securities, asset-backed securities, mutual funds, etc., are assumed to have no retail trades. For the initial cost, the MSRB assumes a cost saving of 65% when establishing policies and procedures for one security only, municipal bonds, as opposed to for four securities, accounting for some fixed costs when working on a single security product. For the ongoing cost, the MSRB estimated the number of retail-sized customer trades for municipal securities that are likely based on a Broker-Dealer's recommendation relative to comparable retail-sized customer trades for corporate bonds, treasury securities and equities (including exchange-traded funds), and derived that the proportion for municipal securities would be less than one percent of the total. Conservatively, one percent is used for estimating the ongoing costs related to municipal securities. Data were obtained from the MSRB's Real-Time Transaction Reporting System (RTRS), MSRB's registration database, and SEC's estimates of costs and benefits of applying Regulation Best Interest to Broker-Dealers.

[78] *See* Regulation Best Interest Adopting Release, 84 FR at 33318.

Effect on Competition, Efficiency, and Capital Formation [79]

The MSRB believes that, if the proposed Best Interest Amendments were adopted, there is a possibility some Bank Dealers that rarely execute retail-sized customer trades, assuming those trades represent retail municipal recommendations, may choose to forgo retail business entirely to avoid the costs of compliance with proposed Best Interest Amendments and Regulation Best Interest, or more narrowly, stop providing retail municipal recommendations to limit the costs of compliance. Therefore, some Bank Dealers may be impacted by the proposed Regulation Best Interest Amendments by deciding to forego retail municipal recommendations or retail customer business altogether, though the broader impact on competition in the municipal securities market is expected to be minor given these Bank Dealers' relatively minor presence in executing retail-sized trades for municipal securities currently; accordingly, even if those Bank Dealers choose to relinquish their retail business, there should not be any significant reduction in the supply of services to retail investors. On the other hand, the MSRB does not expect a significant alteration to the competitive landscape from retail investors' perspective if the proposed Best Interest Amendments were adopted, as retail investors rarely use Bank Dealers for retail trading. Moreover, for those retail investors who do choose Bank Dealers to conduct retail activities, their activities are concentrated in a small number of Bank Dealers who are less likely to withdraw from the retail business as a result of the burdens created by the proposed Best Interest Amendments.

The MSRB believes requiring Bank Dealers to comply with the requirements of Regulation Best Interest, when making retail municipal recommendations, would improve market efficiency by imposing the same requirements on Bank Dealers when making such recommendations as on Broker-Dealers under Regulation Best Interest. The harmonization of MSRB rule requirements for Bank Dealers with SEC requirements for Broker-Dealers would create consistency for firms who have both Broker-Dealer and Bank Dealer subsidiaries, and, thus, would increase efficiency in terms of firms' compliance burdens. It also may encourage competition for retail customers among Bank Dealers (and between Bank Dealers and Broker-Dealers in some instances) to the extent that the disclosure of fees and conflicts of interest would increase transparency and facilitate more comparability across Bank Dealers and Broker-Dealers among retail investors, and, therefore, would further inform customers' decisions of whether to utilize a Bank Dealer versus a Broker-Dealer for transactions in municipal securities. In addition, the MSRB believes investors should benefit from receiving the same type of information from Bank Dealers and Broker-Dealers in relation to an investment recommendation. Therefore, as stated above, because of the creation of consistent regulatory requirements across Bank Dealers and Broker-Dealers for their retail municipal recommendations and the greater competition fostered by this consistency among firms serving retail customers, the MSRB believes that the proposed Best Interest Amendments would facilitate capital formation.

Institutional SMMP Amendment

The MSRB proposal to amend MSRB Rule G–48 would reinstate a previously existing actual control or de facto control standard for Institutional SMMP accounts for purposes of dealers' quantitative suitability obligations.

Benefits

The proposed Institutional SMMP Amendment to MSRB Rule G–48 would reduce the compliance burden for all dealers, including Bank Dealers and Broker-Dealers, by eliminating the requirements to undertake a quantitative suitability analysis for Institutional SMMPs when a dealer does not have actual control or de facto control over the customer's accounts. The requirement is not necessary because of the sophistication and differing needs of Institutional SMMPs who have knowingly declined to have such requirements apply to them, as described herein.

Costs

The MSRB believes the proposed Institutional SMMP Amendment to MSRB Rule G–48 to modify the quantitative suitability obligation of a dealer in the limited circumstances provided under the proposed Institutional SMMP Amendment would have minimal costs associated, particularly since the intent was to reinstate an exemption from quantitative suitability previously enacted for all recommendations through MSRB Rule G–19. One potential one-time cost would be for all dealers, including Bank Dealers and Broker-Dealers, to update their policies and procedures. Because of the recent existence of the same actual control or de facto control standard that would be reestablished by the proposed Institutional SMMP Amendment, the MSRB believes this one-time change should be familiar to firms and the cost of compliance implementation will be reduced in this regard. Moreover, to the degree that dealers are likely to reintroduce the same standards in their policies and procedures as previously existed, the cost of implementation would be minimized.

In addition, one impetus of the Broker-Dealer Harmonization Filing was to harmonize the rule with Regulation Best Interest and FINRA Rule 2111 and to reduce inconsistency on suitability requirements between FINRA's rules and MSRB's rules. By amending MSRB Rule G–48 to provide a narrow exemption from the application of quantitative suitability, this rule would not be fully harmonized with FINRA Rule 2111, and, thus, would establish two standards for accounts across the corporate and municipal securities markets. The MSRB believes that this lack of harmonization is justified in this instance for all the reasons stated herein,[80] including the fact that Institutional SMMPs are by their nature sophisticated entities that have affirmed and self-identified their capacity to independently evaluate dealers' recommendations of municipal securities transactions.

Effect on Competition, Efficiency, and Capital Formation

The MSRB believes the proposed Institutional SMMP Amendment to MSRB Rule G–48 would improve the operational efficiency of the municipal securities market by reintroducing the element of actual control or de facto control with respect to Institutional SMMP accounts that would trigger a dealer's quantitative suitability obligation, as dealers would have one fewer compliance burden. The MSRB does not expect that the proposed Institutional SMMP Amendment to MSRB Rule G–48 would harm competition in the municipal securities market, because the proposed Institutional SMMP Amendment would be applicable to all dealers and,

[79] Capital formation is defined by the SEC on their website ''What we do,'' available at *https://www.sec.gov/about/what-we-do#section2*. It refers to companies and entrepreneurs accessing America's capital markets to help them create jobs, develop innovations and technology, and provide financial opportunities for those who invest in them. *Id.*

[80] *See* related discussion *supra* under *Purpose and Intent of the Institutional SMMP Amendment to MSRB Rule G–48.*

therefore, any of the benefits and burdens created by the proposed Institutional SMMP Amendments would be evenly applied to all such firms transacting with Institutional SMMP customers and, thereby, avoid discriminatory impacts among dealer firms.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

On March 4, 2021, the Board published a request for comment seeking public feedback on requiring Bank Dealers to comply with Regulation Best Interest when making a retail municipal recommendation (the ''Request for Comments'').[81] The Board received five comments letters in response to the Request for Comments.[82] Each of these will be addressed below. The comment letters addressing the proposed Best Interest Amendments will be discussed separately from the one comment letter addressing the proposed Institutional SMMP Amendment.

Discussion of Comments Related to the Best Interest Amendments

The MSRB received four comment letters addressing the proposed Best Interest Amendments in response to its Request for Comments. Comments submitted by SIFMA and the Securities Association were supportive of the proposed Best Interest Amendments, while the comments submitted by the Bankers Association and Commerce Bank expressed concerns about the proposed Best Interest Amendments, generally, in terms of the consequences of the potential compliance burden in relation to Bank Dealers' limited retail customer activity, as further discussed below.

Support for a Uniform Regulatory Standard

SIFMA cited the goal of achieving regulatory parity among regulated entities as the reason for being in favor of the proposed rule change.[83] Specifically, the SIFMA Bank Dealer Letter stated that ''SIFMA supports the proposed amendment to extend Regulation Best Interest to bank dealers, as defined in the notice'' and that ''we believe that regulatory parity among regulated entities, which this amendment achieves, is a worthwhile goal.'' [84] The Securities Association cited a reduction in regulatory confusion and establishing Regulation Best Interest as the standard for Broker-Dealers and Bank Dealers as the reasons for being in favor of the proposed rule change.[85] The Securities Association stated that adopting Regulation Best Interest for bank dealers will ''reduce regulatory confusion for municipal dealers and further establish [Regulation Best Interest] as the national standard for broker-dealers and bank dealers.'' [86] Further, the Securities Association stated that ''[it] appreciates the work by the MSRB in the Proposal to align their rules with the SEC and Financial Industry Regulatory Authority's (FINRA) when possible so that broker-dealers are not subjected to multiple standards.'' [87] As discussed above, the Board agrees with the commenters that the proposed Best Interest Amendments would benefit the municipal securities market through more uniform regulatory standards.

Concerns Regarding Bank Dealer's Compliance Burden and Effects on Competition

Among other topics in the Request for Comments, the Board sought public input on the potential burdens associated with the proposed Best Interest Amendments and, in particular, if requiring Bank Dealers to comply with Regulation Best Interest would disincentivize Bank Dealers from engaging in certain municipal securities activities with retail customers.[88] Commerce Bank and the Bankers Association offered comments. The Bankers Association commented that, while its members have long supported the notion that financial professionals offering investment advice to retail customers should be subject to a best interest standard, the Bankers Association urged the Board to consider the compliance costs imposed by such a rule on Bank Dealers in relation to their limited amount of retail customer activity.[89] The Bankers Association continued, stating that, ultimately, Bank Dealers in municipal securities do not have a significant retail customer base to warrant a new regulatory compliance regime in this manner.[90]

Echoing this concern regarding the potential compliance burden of the proposed Best Interest Amendments, Commerce Bank responded that they would assess the additional compliance costs that come with compliance with Regulation Best Interest and consider the elimination of providing recommendations for securities or strategies to retail customers.[91] Commerce Bank also expressed concern that the compliance burden of the proposed Best Interest Amendments may cause it to eliminate or become uncompetitive in relation to certain underwriting activities, particularly for services provided to issuers utilizing retail order periods.[92]

While the Board believes that commenters' concerns regarding the potential compliance burden for Bank Dealers associated with the proposed Best Interest Amendments are valid, the Board also believes that the potential investor protection benefits associated with the proposed Best Interest Amendments outweigh these potential compliance burdens for Bank Dealers. The Bankers Association Letter and the Commerce Bank Letter articulated concerns regarding the potential compliance burden associated with the proposed Best Interest Amendments,[93] but these commenters did not specifically address why Bank Dealers face compliance burdens that are materially different from those faced by

[81] MSRB Notice 2021–06 (March 4, 2021).

[82] Letter from Justin M. Underwood, Executive Director, American Bankers Association (''Bankers Association''), dated June 2, 2021 (the ''Bankers Association Letter''); Letter from Christopher A. Iacovella, Chief Executive Officer, American Securities Association (''Securities Association''), dated May 27, 2021 (the ''Securities Association Letter''); the Commerce Bank Letter; Letter from Leslie M. Norwood, Managing Director and Associate General Counsel, Securities Industry and Financial Markets Association (''SIFMA''), dated June 2, 2021 (the ''SIFMA Bank Dealer Letter''); and Letter from Leslie M. Norwood, Managing Director and Associate General Counsel, SIFMA, dated June 2, 2021 (the ''SIFMA SMMP Letter'').

[87] *Id.* at 2.

[88] Request for Comments at 7.

[89] Bankers Association Letter at 2

[90] *Id.*

[91] Commerce Bank Letter at 2.

[92] Commerce Bank Letter at 3 (''Assuming the amendments are approved as adopted and bank dealers begin to move away from providing services to retail customers, bank dealers that underwrite municipal bonds would need controls in place to ensure underwriting or related commitments are appropriate for any retail order periods required by an issuer. The potential impact may be a smaller number of underwriting firms available or willing to work with smaller issuers and public entities in the market, limiting the number of competitors available for either competitive or negotiated deals.'') In addition to the reasons discussed below, the MSRB observes that analogous concerns regarding such dampening effects of Regulation Best Interest's requirements on the competition for underwriting activities equally apply to Broker-Dealers. Yet, the Commission ultimately found that Regulation Best Interest would not have a deleterious effect on capital formation. *See, generally,* Regulation Best Interest Adopting Release, 84 FR at 33461 *et seq.*

[93] *See, respectively,* Bankers Association Letter at 2 and Commerce Bank Letter at 2 (noting that retail accounts account for approximately 9% of their total open accounts and only a portion of these accounts transacted in the previous twelve months).

Broker-Dealers, who are already required to adhere to the enhanced suitability standards required by Regulation Best Interest. Consequently, the MSRB is unaware of any material distinctions between the municipal securities activities of Bank Dealers and Broker-Dealers that would persuade the MSRB to propose a non-uniform regulatory scheme of lesser investor protections for the retail municipal recommendations of Bank Dealers.

Moreover, in developing the proposed Best Interest Amendments, the MSRB observed that Regulation Best Interest did not adopt de minimis thresholds or other standards to exclude smaller regulated entities with lesser amounts of retail customer activity from Regulation Best Interest's baseline compliance burdens.[94] Relatedly, the Commission concluded that the final version of its Regulation Best Interest appropriately balanced the concerns of various commenters from larger and smaller entities.[95] Similar to the Commission's determination, the MSRB believes that the proposed Best Interest Amendments are written to balance the interests of commenters, including the various types and sizes of dealer entities, to best achieve the important goals of enhancing retail investor protection and decision making, while preserving, to the extent possible, retail investor access (in terms of choice and cost) to differing types of municipal security investment services and municipal security products.

Relatedly, the MSRB observes that the Commission determined that Regulation Best Interest would not have a deleterious effect on capital formation.[96] More specifically, the Commission concluded that (i) the possibility that Regulation Best Interest may increase the efficiency of the recommendations provided by the associated persons of the broker-dealer may enhance the attractiveness of broker-dealer services for those investors who currently do not invest through broker-dealers,[97] and (ii) if retail customers are more willing to participate in the securities markets through broker-dealers, Regulation Best Interest would have a positive effect on capital formation.[98]

For similar reasons, the MSRB believes that the proposed Best Interest Amendments would not hinder capital formation in the municipal securities market, as suggested by the Commerce Bank Letter, such as in instances where there is less underwriter competition for small municipal issuers or municipal issuers who seek to utilize retail order periods. To the degree that retail municipal recommendations are subject to a uniform regulatory standard across Bank Dealers and Broker-Dealers, the MSRB believes that the proposed Best Interest Amendments may increase the efficiency of retail municipal recommendations and enhance the attractiveness of dealer's municipal security services. This uniform regulatory standard could draw more retail customers to the primary offering of municipal securities with retail order periods and, in this respect, incrementally reduce issuer borrowing costs.

Discussion of Comments Related to the Institutional SMMP Amendment

The Board did not seek separate comment on the proposed Institutional SMMP Amendment but did receive the SIFMA SMMP Letter as part of the Request for Comments, which was generally supportive of the proposed Institutional SMMP Amendment. SIFMA stated in the SMMP Letter that its members ''feel strongly that the Quantitative Suitability Requirement in Rule G–19 should be clarified, and interpreted as applicable only to natural person SMMPs, but not to institutional SMMPs. Extending the Quantitative Suitability Requirement to all SMMPs would be unduly costly and burdensome.'' [99] As discussed above, the Board agrees with the commenter that requiring a dealer to undertake a quantitative suitability analysis, when an institutional customer has already affirmatively opted out of receiving such an analysis, is an unnecessarily burdensome requirement to place on dealer's recommendations to Institutional SMMPs.

SIFMA cited the MSRB's ''history of treating SMMPs differently from non-SMMPs, based on a reasoned recognition of the differences between these two investor classes and the relative protections that should be afforded to both.'' [100] The Board agrees that in limited circumstances it is appropriate for certain investor classes to be afforded different protections under MSRB rules, as different classes can have differing levels of sophistication, differing risk tolerances, and differing investment goals. As noted above, the SMMP concept and the modified regulatory obligations afforded to SMMPs under MSRB rules are intended to account for the distinct capabilities of certain self-identifying, sophisticated, non-retail customers, as well as the varied types of dealer-customer relationships occurring in the municipal securities markets. Thus, the MSRB believes it is appropriate to afford Institutional SMMPS more finely tailored protections, and that the proposed Institutional SMMP Amendment would not erode the overall protections afforded to Institutional SMMPs.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period of up to 90 days (i) as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve or disapprove such proposed rule change, or

(B) institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include File Number SR–MSRB–2022–02 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549.

All submissions should refer to File Number SR–MSRB–2022–02. This file

DEPARTMENT OF STATE

[Public Notice 11725]

U.S. Advisory Commission on Public Diplomacy Notice of Meeting

The U.S. Advisory Commission on Public Diplomacy (ACPD) will hold a virtual public meeting on Wednesday, June 1, 2022, from 12:00 p.m. until 1:15 p.m., to preview the April 2022 special report, *Exploring U.S. Public Diplomacy's Domestic Dimensions: Purviews, Publics, and Policies, https://www.state.gov/exploring-u-s-public-diplomacys-domestic-dimensions-purviews-publics-and-policies-2022/.* The meeting will feature a panel of city diplomacy professionals who will discuss the relationship between city diplomacy and domestic public diplomacy.

This meeting is open to the public, including the media and members and staff of governmental and non-governmental organizations. To obtain the web conference link and password, please register here: *https://www.eventbrite.com/e/domestic-public-diplomacy-city-diplomacy-perspectives-tickets-328956657217.* To request reasonable accommodation, please email ACPD Program Assistant Kristy Zamary at *ZamaryKK@state.gov.* Please send any request for reasonable accommodation no later than May 20, 2022. Requests received after that date will be considered but might not be possible to fulfill. Attendees should plan to enter the web conference waiting room by 11:50 a.m. to allow for a prompt start.

Since 1948, the ACPD has been charged with appraising activities intended to understand, inform, and influence foreign publics and to increase the understanding of, and support for, these same activities. The ACPD conducts research that provides honest assessments of public diplomacy efforts, and disseminates findings through reports, white papers, and other publications. It also holds public symposiums that generate informed discussions on public diplomacy issues and events. The Commission reports to the President, Secretary of State, and Congress and is supported by the Office of the Under Secretary of State for Public Diplomacy and Public Affairs.

For more information on the U.S. Advisory Commission on Public Diplomacy, please visit *https://www.state.gov/bureaus-offices/under-secretary-for-public-diplomacy-and-public-affairs/united-states-advisory-commission-on-public-diplomacy/,* or contact Executive Director Vivian S. Walker at *WalkerVS@state.gov* or Senior Advisor Deneyse Kirkpatrick at *kirkpatrickda2@state.gov.*

BILLING CODE 4710–45–P

SURFACE TRANSPORTATION BOARD

[Docket No. AB 391 (Sub–No. 11X)]

Red River Valley & Western Railroad Company—Abandonment Exemption—Cass County, N.D.

Red River Valley & Western Railroad Company (RRVW) has filed a verified notice of exemption under 49 CFR part 1152 subpart F—*Exemption Abandonments* to abandon an approximately 2.29-mile rail line extending from milepost 9.36 to milepost 11.65 (at Horace, N.D.) in Cass County, N.D. (the Line). The Line traverses U.S. Postal Service Zip Code 58047.

RRVW has certified that: (1) No local traffic has moved over the Line for at least two years; (2) there is no overhead traffic on the Line that has been, or would need to be, rerouted as a result of the proposed abandonment; (3) no formal complaint filed by a user of rail service on the Line (or by state or local government on behalf of such user) regarding cessation of service over the Line either is pending with the Surface Transportation Board (Board) or has been decided in favor of a complainant within the two-year period; and (4) the requirements at 49 CFR 1105.7(b) and 1105.8(c) (notice of environmental and historic reports), 49 CFR 1105.12 (newspaper publication), and 49 CFR 1152.50(d)(1) (notice to government agencies) have been met.

As a condition to this exemption, any employee adversely affected by the abandonment shall be protected under *Oregon Short Line Railroad—Abandonment Portion Goshen Branch Between Firth & Ammon, in Bingham & Bonneville Counties, Idaho,* 360 I.C.C. 91 (1979). To address whether this condition adequately protects affected employees, a petition for partial revocation under 49 U.S.C. 10502(d) must be filed.

Provided no formal expression of intent to file an offer of financial assistance (OFA) has been received,[1] this exemption will be effective on June 9, 2022, unless stayed pending reconsideration. Petitions to stay that do not involve environmental issues,[2] formal expressions of intent to file an OFA under 49 CFR 1152.27(c)(2), and interim trail use/rail banking requests under 49 CFR 1152.29 must be filed by

[101] 17 CFR 200.30–3(a)(12).

[1] Persons interested in submitting an OFA must first file a formal expression of intent to file an offer, indicating the type of financial assistance they wish to provide (*i.e.,* subsidy or purchase) and demonstrating that they are preliminarily financially responsible. *See* 49 CFR 1152.27(c)(2)(i).

[2] The Board will grant a stay if an informed decision on environmental issues (whether raised by a party or by the Board's Office of Environmental Analysis (OEA) in its independent investigation) cannot be made before the exemption's effective date. *See Exemption of Out-of-Serv. Rail Lines,* 5 I.C.C.2d 377 (1989). Any request for a stay should be filed as soon as possible so that the Board may take appropriate action before the exemption's effective date.

May 20, 2022.[3] Petitions to reopen or requests for public use conditions under 49 CFR 1152.28 must be filed by May 31, 2022.

All pleadings, referring to Docket No. AB 391 (Sub-No. 11X), must be filed with the Surface Transportation Board either via e-filing on the Board's website or in writing addressed to 395 E Street SW, Washington, DC 20423–0001. In addition, a copy of each pleading must be served on RRVW's representative, William A. Mullins, Baker & Miller PLLC, 2401 Pennsylvania Avenue NW, Suite 300, Washington, DC 20037.

If the verified notice contains false or misleading information, the exemption is void ab initio.

RRVW has filed a combined environmental and historic report that addresses the potential effects, if any, of the abandonment on the environment and historic resources. OEA will issue a Draft Environmental Assessment (Draft EA) by May 13, 2022. The Draft EA will be available to interested persons on the Board's website, by writing to OEA, or by calling OEA at (202) 245–0294. Assistance for the hearing impaired is available through the Federal Relay Service at (800) 877–8339. Comments on environmental or historic preservation matters must be filed within 15 days after the Draft EA becomes available to the public.

Environmental, historic preservation, public use, or trail use/rail banking conditions will be imposed, where appropriate, in a subsequent decision.

Pursuant to the provisions of 49 CFR 1152.29(e)(2), RRVW shall file a notice of consummation with the Board to signify that it has exercised the authority granted and fully abandoned the Line. If consummation has not been effected by RRVW's filing of a notice of consummation by May 10, 2023, and there are no legal or regulatory barriers to consummation, the authority to abandon will automatically expire.

Board decisions and notices are available at *www.stb.gov.*

Decided: May 4, 2022.

By the Board, Valerie O. Quinn, Acting Director, Office of Proceedings.

Regena Smith-Bernard,

Clearance Clerk.

BILLING CODE 4915–01–P

[3] Filing fees for OFAs and trail use requests can be found at 49 CFR 1002.2(f)(25) and (27), respectively.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

[Docket No. FRA–2022–0620]

Agency Information Collection Activities: Requests for Comments; Clearance of a Renewed Approval of Information Collection: Pilot Certification and Qualification Requirements for Air Carrier Operations

AGENCY: Federal Aviation Administration (FAA), Transportation (DOT).

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, FAA invites public comments about our intention to request the Office of Management and Budget (OMB) approval to renew an information collection. The collection involves FAA review of Airline Transport Pilot (ATP) Certification Training Program (CTP) submittals to determine that the program complies with the applicable requirements. It also involves FAA review of an institution of higher education's application for the authority to certify its graduates meet the minimum regulatory requirements.

DATES: Written comments should be submitted by July 11, 2022.

ADDRESSES: Please send written comments:

By Electronic Docket: www.regulations.gov (Enter docket number into search field).

By mail: Sandra Ray, Federal Aviation Administration, Voluntary Programs and Rulemaking Section AFS–260, 1187 Thorn Run Road, Suite 200, Coraopolis, PA 15108.

By fax: 412–239–3063.

FOR FURTHER INFORMATION CONTACT: Sandra L. Ray by email at: *Sandra.ray@faa.gov*; phone: 412–329–3088.

SUPPLEMENTARY INFORMATION:

Public Comments Invited: You are asked to comment on any aspect of this information collection, including (a) Whether the proposed collection of information is necessary for FAA's performance; (b) the accuracy of the estimated burden; (c) ways for FAA to enhance the quality, utility and clarity of the information collection; and (d) ways that the burden could be minimized without reducing the quality of the collected information. The agency will summarize and/or include your comments in the request for OMB's clearance of this information collection.

OMB Control Number: 2120–0755.

Title: Pilot Certification and Qualification Requirements for Air Carrier Operations.

Form Numbers: None.

Type of Review: Renewal of an information collection.

Background: FAA aviation safety inspectors review the Airline Transport Pilot (ATP) Certification Training Program (CTP) submittals to determine that the program complies with the applicable requirements of 14 CFR 61.156. The programs that comply with the minimum requirements receive approval to begin offering the course to applicants for an ATP certificate with a multiengine class rating or an ATP certificate obtained concurrently with an airplane type rating. FAA aviation inspectors also review an institution of higher education's application for the authority to certify its graduates meet the minimum requirements of 14 CFR 61.160. The institutions of higher education that receive a letter of authorization for their degree program(s) are authorized to place a certifying statement on a graduates' transcript indicating he or she is eligible for a restricted privileges ATP certificate.

Respondents: Varies per requirement.

Frequency: Varies per requirement.

Estimated Average Burden per Response: Varies per requirement.

Estimated Total Annual Burden: 1,301 Hours.

Issued in Washington, DC, on May 5, 2022.

Sandra L. Ray,

Aviation Safety Inspector, AFS–260.

[FR Doc. 2022–10004 Filed 5–9–22; 8:45 am]

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

[Docket No. FRA–2010–0054]

Alaska Railroad Corporation's Request To Field Test Its Positive Train Control System

AGENCY: Federal Railroad Administration (FRA), Department of Transportation (DOT).

ACTION: Notice of availability and request for comments.

SUMMARY: This document provides the public with notice that, on April 25, 2022, the Alaska Railroad Corporation (ARRC) submitted a request to field test new functionality to improve the safety critical nature of existing functions, such as mandatory directive conveyance and confirmation, and conditional authorities, and a safety server that is being added in ARRC's PTC Office

Segment to provide safety oversight of these new functions with the intent of improving the safety and efficiency of rail operations. FRA is publishing this notice and inviting public comment on the railroad's field test request.

DATES: FRA will consider comments received by July 11, 2022. FRA may consider comments received after that date to the extent practicable and without delaying implementation of valuable or necessary modifications to a PTC system.

ADDRESSES:

Comments: Comments may be submitted by going to *https://www.regulations.gov* and following the online instructions for submitting comments.

Instructions: All submissions must include the agency name and the applicable docket number. The relevant PTC docket number for this host railroad is Docket No. FRA–2010–0054. For convenience, all active PTC dockets are hyperlinked on FRA's website at *https://railroads.dot.gov/train-control/ptc/ptc-annual-and-quarterly-reports.* All comments received will be posted without change to *https://www.regulations.gov;* this includes any personal information.

FOR FURTHER INFORMATION CONTACT: Gabe Neal, Staff Director, Signal, Train Control, and Crossings Division, telephone: 816–516–7168, email: *Gabe.Neal@dot.gov.*

SUPPLEMENTARY INFORMATION: On December 11, 2020, FRA certified ARRC's Interoperable Electronic Train Management System (I–ETMS) PTC system under Title 49 Code of Federal Regulations (CFR) Section 236.1015 and Title 49 United States Code (U.S.C.) 20157(h). Pursuant to 49 CFR 236.1035, a railroad must obtain FRA's approval before field testing an uncertified PTC system, or a product of an uncertified PTC system, or any regression testing of a certified PTC system on the general rail system. *See* 49 CFR 236.1035(a).

Interested parties are invited to comment on ARRC's field test request by submitting written comments or data. During FRA's review of this railroad's field test request, FRA will consider any comments or data submitted within the timeline specified in this notice and to the extent practicable, without delaying implementation of valuable or necessary modifications to a PTC system. Under 49 CFR 236.1035, FRA maintains the authority to approve, approve with conditions, or deny a railroad's field test request at FRA's sole discretion.

Privacy Act Notice

In accordance with 49 CFR 211.3, FRA solicits comments from the public to better inform its decisions. DOT posts these comments, without edit, including any personal information the commenter provides, to *https://www.regulations.gov,* as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at *https://www.transportation.gov/privacy.* See *https://www.regulations.gov/privacy-notice* for the privacy notice of *regulations.gov.* To facilitate comment tracking, we encourage commenters to provide their name, or the name of their organization; however, submission of names is completely optional. If you wish to provide comments containing proprietary or confidential information, please contact FRA for alternate submission instructions.

Issued in Washington, DC.

Carolyn R. Hayward-Williams,

Director, Office of Railroad Systems and Technology.

[FR Doc. 2022–09943 Filed 5–9–22; 8:45 am]

BILLING CODE 4910–06–P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA–2022–0044]

Agency Information Collection Activities; Notice and Request for Comment; Field Study of Heavy Vehicle Crash Avoidance Systems

ACTION: Notice and request for public comment on an extension of a currently approved information collection.

SUMMARY: The National Highway Traffic Safety Administration (NHTSA) invites public comments about our intention to request approval from the Office of Management and Budget (OMB) for an extension of a currently approved information collection. Before a federal agency may collect certain information from the public, it must receive approval from OMB. Under procedures established by the Paperwork Reduction Act of 1995, before seeking OMB approval, Federal agencies must solicit public comment on proposed collections of information, including extensions and reinstatements of previously approved collections. This document describes a collection of information for which NHTSA intends to seek OMB extension approval, titled ''Heavy Vehicle Crash Avoidance Systems'' and identified by OMB Control Number 2127–0741, which is currently approved through August 31, 2022. This project has been delayed due to COVID–19 shutdowns and precautions. The extension is necessary to continue the current data collection to completion. This extension request updates the burden hours to reflect the numbers of respondents that are needed to complete the study, updates to time estimates for responses, and mean hourly rates. Additionally, this notice provides clarification on the burden hours and the costs to the public.

DATES: Comments must be submitted on or before July 11, 2022.

ADDRESSES: You may submit comments using any of the following methods:

- *Electronic submissions:* Go to *http://www.regulations.gov.* Follow the online instructions for submitting comments.
- *Fax:* (202) 493–2251.
- *Mail:* Docket Management, U.S. Department of Transportation, 1200 New Jersey Ave. SE, West Building, Room W12–140, Washington, DC 20590.
- *Hand Delivery:* 1200 New Jersey Avenue SE, West Building Ground Floor, Room W12–140, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. Telephone (202) 366–9322.

Instructions: Each submission must include the Agency name and Docket number identified at the beginning of this document. Note that all comments received will be posted without change to *http://www.regulation.gov,* including any personal information provided. Please see the Privacy heading below.

Privacy Act: Anyone is able to search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, *etc.*). You may review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (65 FR 19477–78) or you may visit *http://www.dot.gov/privacy.html.*

Docket: For access to the docket to read background documents or comments received, go to *http://www.regulations.gov,* or the street address listed above. Follow the online instructions for accessing the dockets via the internet.

FOR FURTHER INFORMATION CONTACT: Jenny Zhang, Office of Vehicle Safety Research, National Highway Traffic Safety Administration, U.S. Department of Transportation, 1200 New Jersey Avenue SE, Washington, DC 20590, Telephone: 202–366–3973; email address *jenny.zhang@dot.gov.* Please identify the relevant collection of

information by referring to its OMB Control Number.

SUPPLEMENTARY INFORMATION: Under the Paperwork Reduction Act of 1995, before an agency submits a proposed collection of information to OMB for approval, it must first publish a document in the **Federal Register** providing a 60-day comment period and otherwise consult with members of the public and affected agencies concerning each proposed collection of information. OMB has promulgated regulations describing what must be included in such a document. Under OMB's regulation (at 5 CFR 1320.8(d)), an agency must ask for public comment on the following: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) how to enhance the quality, utility, and clarity of the information to be collected; (d) how to minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses. In compliance with these requirements, NHTSA asks for public comments on the extension of the following collection of information for which the agency is seeking approval from OMB.

Title: Field Study of Heavy Vehicle Crash Avoidance Systems.

Type of Request: Extension of a currently approved information collection.

OMB Control Number: 2127–0741.

Form Number: None.

Type of Review Requested: Regular.

Requested Expiration Date of Approval: Three years from date of approval.

Summary of the Collection of Information: The National Highway Traffic Safety Administration (NHTSA) is gathering information regarding drivers' naturalistic driving experiences and opinions about crash avoidance systems (CAS) consisting of Lane Departure Warning, Forward Collision Warning, Impact Alert, and Automatic Emergency Braking for heavy vehicles.

CAS technology has been advancing rapidly since the conclusion of the previous study, with products for heavy commercial vehicles becoming commercially available. These systems present opportunities for improving driver awareness and behavior, improving drivers' responses to potential collisions, and mitigating or preventing collisions when drivers do not respond. The newest generation of CAS technology includes several new features, such as multiple sensors, improvements to radar algorithms, and new features such as full braking in response to static objects or pedestrians. However, it is unknown if this newest generation of products has been able to reduce the prevalence of false or nuisance alerts observed in the previous study, if there are any issues with new types of alerts that have been added since previous studies, or whether driver have negative perceptions of the technology due to these issues. As these technologies become more popular with fleets, it is important to understand their real-world performance and any unintended consequences that may arise from them.

Data collection began in August 2021 after COVID delays and a shortage of chips necessary for use in the data acquisition system necessary for the naturalistic driving portion of the study. As of December 31, 2021, one respondent has completed the study, three are in the field study portion, and one has completed the informed consent document and pre-field study surveys but still needs to go through the installation portion of stage one and stages two to three of the study. Information in this extension requests refers to the respondents and burden associated with completing the study.

Description of the Need for the Information and Proposed Use of the Information: The collection of information consists of: An informed consent for participation, a demographic questionnaire, an initial CAS technology questionnaire, and a post-study CAS technology questionnaire.

The information to be collected will be used as follows:

- *Informed Consent* is collected from respondents who agree to participate in the study; the informed consent has been approved by an Institutional Review Board.
- *Demographic questionnaire* is used to obtain demographic information so that potential analysis may account for participants from various groups (*e.g.,* age, self-identified gender, driving experience, and experience with CAS technology).
- *Initial CAS technology questionnaire* is used to get information about drivers' beliefs and attitudes towards the CAS technology installed on the commercial vehicle they use for their job prior to data collection. This questionnaire assesses perceived usability of the systems in terms of acceptance and satisfaction, as well as willingness to have this technology in their vehicle.
- *Final CAS technology questionnaire* is used to get information about drivers' beliefs and attitudes towards the CAS technology installed on the commercial vehicle they use for their job at the end of data collection. These questionnaires will also be used to assess perceived distraction potential of the systems in terms of acceptance and satisfaction, as well as willingness to have this technology in their vehicle. Each driver will complete a post-study questionnaire once, after the completion of his or her data collection. The post-study survey will gauge how drivers' attitudes and preferences may have changed over the course of participation.
- Each participating driver will have a data acquisition system (DAS) installed in their vehicle for approximately three months while they perform their normal work duties. This system will collect video of the driver and forward roadway, telemetry and vehicle network data related to driving, and activations of the vehicle's CAS.

Respondents: Respondents for this study are drawn from a convenience sample from trucking fleets across the United States. Drivers are recruited from fleets that have signed agreements with the research team and have trucks that are outfitted with CAS technologies. Recruitment will attempt to balance the number of vehicles using particular brands of CAS technology but will be subject to fleet availability and scheduling constraints. Requirements of drivers involved in the study do not extend beyond employment requirements for each fleet.

Estimated Number of Respondents: 170 remaining respondents for initial phases of the study; anticipating some drop-out, the end-goal number of remaining respondents is 149.

Estimated Number of Responses: 170 for the consent form (one per respondent); 170 for the Demographic Questionnaire (one per respondent); 170 for the Initial CAS Questionnaire (one per respondent); 149 for the Final CAS Questionnaire (one per respondent) that completes the study.

Estimated Total Annual Burden: 123.6 hours total.

Estimated Frequency: The Informed Consent Form, Demographic Questionnaire, and Initial CAS Technology Questionnaire are completed once at the start of participation and data collection. The

Final CAS Technology Questionnaire is completed once at the completion of participation, approximately three months later.

TABLE 1—BURDEN CALCULATIONS AND ESTIMATED OPPORTUNITY COST

Instrument	Number of respondents	Estimated time for completion	Total estimated burden hours †	Hourly wage	Estimated total opportunity cost
Stage One:					
Informed Consent Form	170	20	57 hours	$23.42	$1,334.94
Demographic Questionnaire	170	5	15 hours	23.42	351.30
Initial CAS Technology Questionnaire	170	25	71 hours	23.42	1,662.82
Stage Two:					
Naturalistic Driving Study	171	N/A	N/A	N/A	N/A
Stage Three:					
Final CAS Technology Questionnaire	149	25	63 hours	23.42	1,475.46
Total Burden Remaining			206 hours		4,824.52
Months Remaining			20		
Annual Burden Remaining			123.6 hours		2,894.71

The above table reflects the annual burden hours to be 123.6 to complete data collection. While the table reflects opportunity costs, this is not a burden incurred by the public for this information collection. The annual burden cost to respondents is zero.

The previous notice estimated total burden hours for this study to be 193.5 total. The total number of burden hours to complete data collection is now 206 based on updates to the time for the Informed Consent and the Demographic Questionnaire. Opportunity costs have been updated to reflect current average hourly wages; however, this is not a burden to respondents for the information collection.

Due to COVID–19 shutdowns and precautions, data collection efforts were suspended. NHTSA anticipates additional time beyond the August 31, 2022, expiration date of the currently approved collection to complete this effort. The federal government began this study at $2,581,075 in contract expenses and has added expenses due to the time delays and resulting changes in technology. The total cost expected at this time is $2,954,970 with an annualized cost to the federal government over the expected study time-to-completion of $402,950.

Public Comments Invited: You are asked to comment on any aspect of this information collection, including (a) Whether the proposed collection of information is necessary for the Department's performance; (b) the accuracy of the estimated burden; (c) ways for the Department to enhance the quality, utility, and clarity of the information collection; and (d) ways that the burden could be minimized without reducing the quality of the collected information. The agency will summarize and/or include your comments in the request for OMB's clearance of this information collection.

Authority: The Paperwork Reduction Act of 1995, 44. U.S.C. Chapter 35, as amended; 5 CFR part 1320; and 49 CFR 1.95.

Issued in Washington DC.

Cem Hatipoglu,

Associate Administrator for Vehicle Safety Research.

BILLING CODE 4910–59–P

DEPARTMENT OF TRANSPORTATION

Office of the Secretary

[Docket ID Number: DOT–OST–2010–0054]

Notice of Submission of Proposed Information Collection to OMB Agency Request for Reinstatement of Previously Approved Collections: Nondiscrimination on the Basis of Disability in Air Travel: Reporting Requirements for Disability-Related Complaints

AGENCY: Office of the Secretary (OST), Department of Transportation (Department or DOT).

ACTION: Notice and request for comments.

SUMMARY: In accordance with the *Paperwork Reduction Act of 1995* (44 U.S.C. Chapter 35, as amended), this notice announces the DOT's intention to reinstate an Office of Management and Budget (OMB) Control Number 2105–0551, ''Reporting Requirements for Disability-Related Complaints.'' The information collection is related to a requirement in the Code of Federal Regulations (CFR) for carriers to report annually to the Department the number of disability-related complaints they receive.

DATES: Interested persons are invited to submit comments regarding this proposal. Written comments should be submitted by July 11, 2022.

ADDRESSES: You may file comments identified by the docket number DOT–OST–2010–0054 by any of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov* and follow the online instructions for submitting comments. (You may access comments received for this notice at *http://www.regulations.gov* by searching docket DOT–OST–2010–0054.)
- *Mail:* Docket Management Facility, U.S. Department of Transportation, 1200 New Jersey Ave. SE, West Building Ground Floor Room W12–140, Washington, DC 20590–0001;
- *Hand delivery:* West Building Ground Floor, Room W12–140, 1200 New Jersey Ave. SE, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The telephone number is 202–366–9329.

Instructions: You must include the agency name and docket number DOT–OST–2010–0054 at the beginning of your comment. All comments received will be posted without change to *https://www.regulations.gov,* including any personal information provided.

Privacy Act: Anyone is able to search the electronic form of all comments received in any of DOT's dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review DOT's complete Privacy Act Statement in the **Federal Register**

published on April 11, 2000 (65 FR 19477–78).

FOR FURTHER INFORMATION CONTACT: John Wood, Office of Aviation Consumer Protection, U.S. Department of Transportation, 1200 New Jersey Avenue SE, Washington, DC 20590, Telephone Number (202) 366–9342 (voice), (202) 366–7152 (fax), *john.wood@dot.gov* (email). Arrangements to receive this document in an alternative format may be made by contacting the above-named individual.

SUPPLEMENTARY INFORMATION:

OMB Control Number: 2105–0551.

Title: Reporting Requirements for Disability-Related Complaints.

Type of Request: Reinstatement of information collections.

Background: The Department requires U.S. and foreign air carriers operating to, from and within the United States that conduct passenger-carrying service with at least one large aircraft to record complaints that they receive alleging inadequate accessibility or discrimination on the basis of disability. The carriers must also categorize these complaints according to the type of disability and nature of complaint, prepare a summary report annually of the complaints received during the preceding calendar year, submit the report to the Department's Office of Aviation Consumer Protection, and retain copies of correspondence and records of action taken on the reported complaints for three years. Carriers are also required to submit their annual report via the World Wide Web except if the carrier can demonstrate an undue burden by doing so and receives permission from the Department to submit it in an alternative manners. The first required report covered disability-related complaints received by carriers during calendar year 2004, was due to the Department on January 31, 2005. Carriers have since submitted subsequent reports by the last Monday in January for the prior calendar year.

DOT is publishing this notice to announce its intent to seek reinstatement of the previously approved information collections described above under OMB Control Number 2105–0551. OMB authorization of the information collections expired on April 30, 2022.

The Paperwork Reduction Act of 1995 (PRA) and its implementing regulations, 5 CFR part 1320, require Federal agencies to issue two notices seeking public comment on information collection activities before OMB may approve paperwork packages. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless it is approved by the OMB under the PRA and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to monetary penalty for failing to comply with a collection of information if the collection of information does not display a valid OMB Control Number. See 5 CFR 1320.5(a) and 1320.6.

For each of these information collections, the title, a description of the respondents, and an estimate of the annual recordkeeping and periodic reporting burden are set forth below.[1]

(1) Requirement to record and categorize complaints received.

Respondents: U.S. air carriers and foreign air carriers operating to and from the United States that conduct passenger-carrying service with at least one large aircraft.

Number of Respondents: 176 (the average of the total number of respondents that reported for Calendar Years (CYs) 2018, 2019, and 2021).

Estimated Annual Burden on Respondents: 0–2,431 hours (145,905 minutes) a year for each respondent (estimated time to record and categorize each complaint (15 minutes) multiplied by the lowest number of complaints and the average of the highest number of complaints received during CYs 2018, 2019, and 2021 (0–9,727)).

Estimated Total Annual Burden: 7,854 hours (471,255 minutes) for all respondents (time to record and categorize each complaint (15 minutes) multiplied by the average total number of complaints received during CYs 2018, 2019, and 2021 (31,417) for all respondents).

Frequency: 0–9,727 complaints (The range of the lowest number of complaints and an average of the highest number of complaints received by any respondent during CYs 2018, 2019, and 2021).

(2) Requirement to prepare and submit annual report.

Respondents: U.S. air carriers and foreign air carriers operating to and from the United States that conduct passenger-carrying service with at least one large aircraft.

Number of Respondents: 176 (the average of the total number of respondents that reported for CYs 2018, 2019, and 2021).

Estimated Annual Burden on Respondents: 30 minutes a year per each respondent.

Estimated Total Annual Burden: 88 hours (5,280 minutes) for all respondents (estimate annual burden [30 minutes] multiplied by the total number of respondents (176)).

Frequency: 1 report to DOT per year for each respondent.

(3) Requirement to retain correspondences and records of action taken on all disability-related complaints.

Respondents: U.S. air carriers and foreign air carriers operating to and from the United States that conduct passenger-carrying service with at least one large aircraft.

Number of Respondents: 176 (the average of the total number of respondents that reported for CYs 2018, 2019, and 2021).

Estimated Annual Burden on Respondents: 0–811 hours (0–48,635 minutes) for each respondent (the estimated time it will take for each respondent to retain or save the correspondences and records of action taken on disability-related complaints (5 minutes) multiplied by the lowest number of complaints and the average of the highest number of complaints received per respondent during CYs 2018, 2019, and 2021 (0–9,727)).

Estimated Total Annual Burden: 2,618 hours (157,085 minutes) for all respondents (time to retain or save the correspondences and records of action taken on disability-related complaints (5 minutes) multiplied by the average total number of complaints received during CYs 2018, 2019, and 2021 (31,417) for all respondents.

Frequency: 0–9,727 complaints per year for each respondent (The range of the lowest number of complaints and an average of the highest number of complaints received by any respondent during CYs 2018, 2019, and 2021).

Comments Invited

We invite comments on: (a) Whether the collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; (b) the accuracy of the Department's estimate of the burden of the proposed information collection; (c) ways to enhance the quality, utility and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents.

All responses to this notice will be summarized and included in the request for OMB approval. All comments will

[1] DOT did not use calendar year 2020 data for its estimates because airline operations were not representative of a typical year due to the unprecedented impact of COVID–19 on air transportation that year.

also become a matter of public record on the docket.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. chapter 35, as amended; and 59 CFR 1.48.

Issued in Washington, DC, on May 4, 2022.

Blane Abaineh Workie,

Assistant General Counsel, Office of Aviation Consumer Protection.

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Internal Revenue Service, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on continuing information collections, as required by the Paperwork Reduction Act of 1995. The IRS is soliciting comments concerning disclosure of returns and return information to designee of taxpayer.

DATES: Written comments should be received on or before July 11, 2022 to be assured of consideration.

ADDRESSES: Direct all written comments to Andres Garcia, Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224, or by email to *omb.unit@irs.gov.* Include OMB control number 1545–1816 or Disclosure of Returns and Return Information to Designee of Taxpayer, in the subject line of the message.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the form should be directed to Kerry Dennis at (202) 317–5751, or at Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington DC 20224, or through the internet, at *Kerry.L.Dennis@irs.gov.*

SUPPLEMENTARY INFORMATION:

Title: Disclosure of Returns and Return Information to Designee of Taxpayer.

OMB Number: 1545–1816.

Regulation Project Number: TD 9054, as amended by TD 9618.

Abstract: Under section 6103(a), returns and return information are confidential unless disclosure is otherwise authorized by the Code. Section 6103(c), as amended in 1996 by section 1207 of the Taxpayer Bill of Rights II, Public Law 104–168 (110 Stat. 1452), authorizes the IRS to disclose returns and return information to such person or persons as the taxpayer may designate in a request for or consent to disclosure, or to any other person at the taxpayer's request to the extent necessary to comply with a request for information or assistance made by the taxpayer to such other person. Disclosure is permitted subject to such requirements and conditions as may be prescribed by regulations. With the amendment in 1996, Congress eliminated the longstanding requirement that disclosures to designees of the taxpayer must be pursuant to the written request or consent of the taxpayer.

Current Actions: There are no changes to the regulation that would affect burden. However, the agency is updating the estimated number of responses based on recent collection data.

Type of Review: Extension of a currently approved collection.

Affected Public: Individuals or households, business or other not-for-profit institutions, farms, and Federal, state, local or tribal governments.

Estimated Number of Respondents: 9,000.

Estimated Time per Respondent: 12 minutes.

Estimated Total Annual Burden Hours: 1,800 hours.

The following paragraph applies to all the collections of information covered by this notice.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained if their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: May 3, 2022.

Kerry L. Dennis,

Tax Analyst.

BILLING CODE 4830–01–P

DEPARTMENT OF THE TREASURY

Agency Information Collection Activities; Emergency Submission for OMB Review; Comment Request; Capital Projects Fund Compliance Reporting

AGENCY: Departmental Offices, U.S. Department of the Treasury.

ACTION: Notice.

SUMMARY: The Department of the Treasury has submitted the following information collection request to the Office of Management and Budget (OMB) for review and clearance utilizing emergency review procedures in accordance with the Paperwork Reduction Act of 1995. Emergency review and approval of this collection has been requested from OMB by April 30, 2022. The public is invited to submit comments on this request.

DATES: Written comments must be received on or before May 25, 2022.

ADDRESSES: Send comments regarding the burden estimate, or any other aspect of the information collection, including suggestions for reducing the burden, by the following method:

- *Federal E-rulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments. Refer to Docket Number TREAS–DO–2022–0011 and the specific Office of Management and Budget (OMB) control number 1505–NEW.

FOR FURTHER INFORMATION CONTACT: For questions related to this program, please contact Jeremy Turret by emailing *Jeremy.Turret@treasury.gov,* or calling 202–622–4256. Additionally, you can view the information collection requests at *www.reginfo.gov.*

SUPPLEMENTARY INFORMATION:

Title: Coronavirus Capital Projects Fund.

OMB Control Number: 1505–XXXX.

Type of Review: New Collection.

Description: Section 604 of the Social Security Act (the ''Act''), as added by section 9901 of the American Rescue Plan Act of 2021, Public Law 117–2 (Mar. 11, 2021) established the Coronavirus Capital Projects Fund (''CPF''). The CPF provides $10 billion in funding for the U.S. Department of the Treasury (''Treasury'') to make payments according to a statutory formula to States (defined to include each of the 50 states, the District of Columbia, and Puerto Rico), seven territories and freely associated states (the United States Virgin Islands, Guam, American Samoa, the Commonwealth of the Northern Mariana Islands, the Republic of the Marshall Islands, the Federated States of Micronesia, and the Republic of Palau), and Tribal governments [1] to carry out critical capital projects directly enabling work, education, and health monitoring, including remote options, in response to the public health emergency with respect to the Coronavirus Disease (COVID–19).

The current information collection will be used to solicit information related to quarterly project and expenditure reports and annual performance reports. Both information collections are described generally in the Compliance and Reporting Guidance. The Compliance and Reporting Guidance provides recipients with information needed to fulfill their reporting requirements and compliance obligations. Treasury will also prepare an IT portal user guide with specific instructions on entering data into the reporting web-based portal.

The initial Project and Expenditure Report must be submitted by States, territories, and freely associated states on July 31, 2022,[2] with subsequent reports being due quarterly for the duration of the period of performance. The Project and Expenditure Report contains a set of standardized questions to ascertain the recipient's use of funds received as of the date of reporting, as well as the status of individual projects. Treasury will make the data submitted by recipients publicly available.

The first interim Performance Report must be submitted by States, territories, and freely associated states on January 31, 2023, with subsequent reports being due annually on July 31 for the duration of the period of performance. The Performance Report will contain detailed performance data corresponding to the ''Programs'' specified previously in a recipient's Grant Plan. This will include information on efforts to improve equity and engage communities. The Performance Report is largely freely written text, and while there are certain data and topics that recipients must cover in the Performance Report, it is mostly free-form written content. Recipients are required to publish the Performance Report on their website and provide the reports to Treasury. Treasury will make the Performance Reports and associated data submitted by recipients publicly available.

Forms: Compliance and Reporting Guidance for States, Territories, and Freely Associated States

Affected Public: State, Territorial, and Freely Associated State Governments.

Estimated Number of Respondents: 59.

Frequency of Response: 4 times per year for Progress and Expenditure reports; 1 time per year for Performance Reports.

Estimated Total Number of Annual Responses: 295.

Estimated Time per Response: 62 hours for Project and Expenditure Reports. 80 hours for Performance Reports.

Estimated Total Annual Burden Hours: 19,352.

Request for Comments: Comments submitted in response to this notice will be summarized and included in the request for Office of Management and Budget approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services required to provide information.

(Authority: 44 U.S.C. 3501 *et seq.*)

Molly Stasko,

Treasury PRA Clearance Officer.

[FR Doc. 2022–09953 Filed 5–9–22; 8:45 am]

BILLING CODE 4810–AK–P

[1] An eligible Tribal government is the recognized governing body of any Indian or Alaska Native tribe, band, nation, pueblo, village, community, component band, or component reservation, individually identified (including parenthetically) in the list published most recently as of the date of enactment of this Act pursuant to section 104 of the Federally Recognized Indian Tribe List Act of 1994 (25 U.S.C. 5131). The State of Hawaii, for exclusive use of the Department of Hawaiian Home Lands and the Native Hawaiian Education Programs to assist Native Hawaiians, is also eligible to apply for funding under this funding category.

[2] State, territory, and freely associated state recipients that have not received any payments by June 15, 2022, will be exempted from the report due on July 31, 2022.

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900–0894]

Agency Information Collection Activity Under OMB Review: Program of Comprehensive Assistance for Family Caregivers (PCAFC) Decision Appeal Forms

AGENCY: Veterans Health Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (PRA) of 1995, this notice announces that the Veterans Health Administration, Department of Veterans Affairs, will submit the collection of information abstracted below to the Office of Management and Budget (OMB) for review and comment. The PRA submission describes the nature of the information collection and its expected cost and burden and it includes the actual data collection instrument.

DATES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function. Refer to ''OMB Control No. 2900–0894.

FOR FURTHER INFORMATION CONTACT: Maribel Aponte, Office of Enterprise and Integration, Data Governance Analytics (008), 1717 H Street NW, Washington, DC 20006, (202) 266–4688 or email *maribel.aponte@va.gov.* Please refer to ''OMB Control No. 2900–0894'' in any correspondence.

SUPPLEMENTARY INFORMATION:

Authority: 44 U.S.C. 3501–3521.

Title: Program of Comprehensive Assistance for Family Caregivers (PCAFC) Decision Appeal Forms, VA Forms 10–306 and 10–307.

OMB Control Number: 2900–0894.

Type of Review: Extension of a currently approved collection.

Abstract: The Caregivers and Veterans Omnibus Health Services Act of 2010 (Pub. L. 111–163) established 38 U.S.C. 1720G, which directed the Department

of Veterans Affairs (VA) to establish a Program of Comprehensive Assistance for Family Caregivers (PCAFC) and a Program of General Caregiver Support Services (PGCSS). Both programs are managed by VA's Caregiver Support Program (CSP) Office. On June 06, 2018, the President signed into law the John S. McCain III, Daniel K. Akaka, and Samuel R. Johnson VA Maintaining Internal Systems and Strengthening Integrated Outside Networks Act of 2018 or the VA MISSION Act 2018 (Pub. L. 115–182). The VA MISSION Act of 2018 fundamentally transformed elements of the Department of Veterans Affairs' (VA) healthcare system to include expanding the PCAFC to Family Caregivers of eligible Veterans of all eras in a phased approach, established new benefits for Primary Family Caregivers of eligible Veterans, and made other changes affecting program eligibility and VA's evaluation of PCAFC applications. The statutory authority for PCAFC and PGCSS is codified at 38 U.S.C. 1720G. VA's regulations implementing PCAFC and PGCSS are in 38 CFR part 71.

Since program inception, Veterans and caregivers who disagree with a PCAFC decision were afforded the right to appeal through the Veterans Health Administration (VHA) Clinical Appeals Process. A recent Court ruling has changed the appeal and review options now available to individuals who have received a PCAFC decision and disagree with that decision. On April 19, 2021, in the case of *Jeremy Beaudette & Maya Beaudette* v. *Denis McDonough, Secretary of Veterans Affairs,* the U.S. Court of Appeals for Veterans Claims ruled in favor of petitioners seeking review by the Board of Veterans' Appeals (BVA or Board) of decisions under the PCAFC. The Court also certified, as a class, claimants who received an adverse benefits decision under PCAFC, exhausted the administrative review process within VHA (the VHA Clinical Appeals Process), and have not been afforded the right to appeal to the Board. As a result of the Court's ruling, BVA review is now available to individuals who have received a decision under the PCAFC since the program began in May 2011. Consequently, VA has expanded options available to Veterans and caregivers who seek review of or to appeal a PCAFC decision.

The options now include a separate appeals process (legacy) that must be used to appeal to the Board regarding PCAFC decisions issued before February 19, 2019. This legacy process is implemented through use of VA Forms 10–306 and 10–307.

VA Form 10–306, Request for Information—Because individuals now have additional options for appealing and seeking review of previous PCAFC decisions, dating back to May 2011, this form allows Veterans and caregivers to request information about past PCAFC decisions to determine whether they wish to pursue an appeal to the Board or request review.

VA Form 10–307, Notice of Disagreement—This form was developed because VA Form 21–0958, which previously was used to initiate an appeal to the Board of benefits decisions dated before February 19, 2019, is no longer an approved information collection. VA Form 10–307, Notice of Disagreement, is now used for legacy appeals of PCAFC decisions and is specific to individuals who wish to appeal a PCAFC decision that was issued prior to February 19, 2019.

An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. The **Federal Register** Notice with a 60-day comment period soliciting comments on this collection of information was published at: 87 FR 42 on March 3, 2022, pages 12223 and 12224.

Affected Public: Individuals or Households.

Estimated Annual Burden: 88,270 total hours.

a. 10–306—45,500 hours.

b. 10–307—42,770 hours.

Estimated Average Burden per Respondent: 45 total minutes.

a. 10–306—15 minutes.

b. 10–307—30 minutes.

Frequency of Response: Once annually.

Estimated Number of Respondents: 267,540 total.

a. 10–306—182,000.

b. 10–307—85,540.

By direction of the Secretary.

Maribel Aponte,

VA PRA Clearance Officer, Office of Enterprise and Integration, Data Governance Analytics, Department of Veterans Affairs.

BILLING CODE 8320–01–P

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900–0682]

Agency Information Collection Activity Under OMB Review: Advertising, Sales, Enrollment Materials, and Candidate Handbooks

AGENCY: Veterans Benefits Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (PRA) of 1995, this notice announces that the Veterans Benefits Administration (VBA), Department of Veterans Affairs, will submit the collection of information abstracted below to the Office of Management and Budget (OMB) for review and comment. The PRA submission describes the nature of the information collection and its expected cost and burden and it includes the actual data collection instrument.

DATES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function. Refer to ''OMB Control No. 2900–0682.

FOR FURTHER INFORMATION CONTACT: Maribel Aponte, Office of Enterprise and Integration, Data Governance Analytics (008), 1717 H Street NW, Washington, DC 20006, (202) 266–4688 or email *maribel.aponte@va.gov.* Please refer to ''OMB Control No. 2900–0682'' in any correspondence.

SUPPLEMENTARY INFORMATION:

Authority: 38 CFR 21.4252(h).

Title: Advertising, Sales, Enrollment Materials, and Candidate Handbooks.

OMB Control Number: 2900–0682.

Type of Review: Revision of a currently approved collection.

Abstract: The statute prohibits approval of the enrollment of a Veteran in a course if the educational institution uses advertising, sales, or enrollment practices that are erroneous, deceptive, or misleading either by actual statement, omission, or intimation. The advertising, sales and enrollment materials are reviewed to determine if the institution is in compliance with guidelines for approval.

An agency may not conduct or sponsor, and a person is not required to respond to a collection of information

unless it displays a currently valid OMB control number. The **Federal Register** Notice with a 60-day comment period soliciting comments on this collection of information was published at 87 FR 30 on February 14, 2022, page 8341.

Affected Public: Individuals or Households.

Estimated Annual Burden: 5,525 hours.

Estimated Average Burden per Respondent: 15 minutes.

Frequency of Response: Annually.

Estimated Number of Respondents: 5,525.

By direction of the Secretary.

Maribel Aponte,

VA PRA Clearance Officer, Office of Enterprise and Integration, Data Governance Analytics, Department of Veterans Affairs.

BILLING CODE 8320–01–P

FEDERAL REGISTER

Vol. 87 Tuesday,
No. 90 May 10, 2022

Part II

Department of Health and Human Services

Centers for Medicare & Medicaid Services

42 CFR Parts 412, 413, 482, et al.
Medicare Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and Proposed Policy Changes and Fiscal Year 2023 Rates; Quality Programs and Medicare Promoting Interoperability Program Requirements for Eligible Hospitals and Critical Access Hospitals; Costs Incurred for Qualified and Non-Qualified Deferred Compensation Plans; and Changes to Hospital and Critical Access Hospital Conditions of Participation; Proposed Rule

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

42 CFR Parts 412, 413, 482, 485, and 495

[CMS–1771–P]

RIN 0938–AU84

Medicare Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and Proposed Policy Changes and Fiscal Year 2023 Rates; Quality Programs and Medicare Promoting Interoperability Program Requirements for Eligible Hospitals and Critical Access Hospitals; Costs Incurred for Qualified and Non-Qualified Deferred Compensation Plans; and Changes to Hospital and Critical Access Hospital Conditions of Participation

AGENCY: Centers for Medicare & Medicaid Services (CMS), Department of Health and Human Services (HHS).

ACTION: Proposed rule.

SUMMARY: This proposed rule would: Revise the Medicare hospital inpatient prospective payment systems (IPPS) for operating and capital-related costs of acute care hospitals; make changes relating to Medicare graduate medical education (GME) for teaching hospitals; update the payment policies and the annual payment rates for the Medicare prospective payment system (PPS) for inpatient hospital services provided by long-term care hospitals (LTCHs). In additon it would establish new requirements and revise existing requirements for eligible hospitals and critical access hospitals (CAHs) participating in the Medicare Promoting Interoperability Program; provide estimated and newly established performance standards for the Hospital Value-Based Purchasing (VBP) Program; and propose updated policies for the Hospital Readmissions Reduction Program, Hospital Inpatient Quality Reporting (IQR) Program, Hospital VBP Program, Hospital-Acquired Condition (HAC) Reduction Program, PPS-Exempt Cancer Hospital Reporting (PCHQR) Program, and the Long-Term Care Hospital Quality Reporting Program (LTCH QRP). It would also revise the hospital and critical access hospital (CAH) conditions of participation (CoPs) for infection prevention and control and antibiotic stewardship programs; and codify and clarify policies related to the costs incurred for qualified and non-qualified deferred compensation plans. Lastly, this proposed rule would provide updates on the Rural Community Hospital Demonstration Program and the Frontier Community Health Integration Project.

DATES: To be assured consideration, comments must be received at one of the addresses provided in the **ADDRESSES** section, no later than 5 p.m. EDT on June 17, 2022.

ADDRESSES: In commenting, please refer to file code CMS–1771–P. Because of staff and resource limitations, we cannot accept comments by facsimile (FAX) transmission.

Comments, including mass comment submissions, must be submitted in one of the following three ways (please choose only one of the ways listed):

1. Electronically. You may (and we encourage you to) submit electronic comments on this regulation to *https://www.regulations.gov.* Follow the instructions under the ''submit a comment'' tab.

2. By regular mail. You may mail written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1771–P, P.O. Box 8013, Baltimore, MD 21244–1850.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. By express or overnight mail. You may send written comments via express or overnight mail to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1771–P, Mail Stop C4–26–05, 7500 Security Boulevard, Baltimore, MD 21244–1850.

For information on viewing public comments, we refer readers to the beginning of the **SUPPLEMENTARY INFORMATION** section.

- C. Response to Comments

Addendum—Schedule of Standardized Amounts, Update Factors, and Rate-of-

Increase Percentages Effective With Cost Reporting Periods Beginning on or After October 1, 2022 and Payment Rates for LTCHs Effective for Discharges Occurring on or After October 1, 2022

I. Executive Summary and Background

A. Executive Summary

1. Purpose and Legal Authority

This FY 2023 IPPS/LTCH PPS proposed rule would make payment and policy changes under the Medicare inpatient prospective payment systems (IPPS) for operating and capital-related costs of acute care hospitals as well as for certain hospitals and hospital units excluded from the IPPS. In addition, it would make payment and policy changes for inpatient hospital services provided by long-term care hospitals (LTCHs) under the long-term care hospital prospective payment system (LTCH PPS). This proposed rule also would make policy changes to programs associated with Medicare IPPS hospitals, IPPS-excluded hospitals, and LTCHs. In this FY 2023 proposed rule, we are proposing to implement a permanent policy to cap wage index decreases as well as continuing policies to address wage index disparities impacting low wage index hospitals. We also are proposing to make changes relating to Medicare graduate medical education (GME) for teaching hospitals and new technology add-on payments.

We are proposing to establish new requirements and revise existing requirements for eligible hospitals and CAHs participating in the Medicare Promoting Interoperability Program.

We are proposing updated policies for the Hospital Readmissions Reduction Program, Hospital Inpatient Quality Reporting (IQR) Program, Hospital Value-Based Purchasing (VBP) Program, Hospital-Acquired Condition (HAC) Reduction Program, Long Term Care Hospital Quality Reporting Program (LTCH QRP), and the PPS-Exempt Cancer Hospital Reporting (PCHQR) Program. We are also requesting feedback across programs on health impacts due to climate change and on overarching principles in measuring healthcare quality disparities in hospital quality programs and value-based purchasing programs. We are also seeking feedback on advancing the Trusted Exchange Framework and Common Agreement (TEFCA). Additionally, due to the impact of the COVID–19 PHE on measure data used in our value-based purchasing programs, we are proposing to suppress several measures in the Hospital VBP Program and HAC Reduction Program. In addition to these measure suppressions for the Hospital VBP Program, we are proposing to implement a special scoring methodology for FY 2023 that results in each hospital receiving a value-based incentive payment amount that matches their 2 percent reduction to the base operating DRG payment amount. Similarly, we are also proposing to suppress all six measures in the HAC Reduction Program for the FY 2023 program year. If finalized as proposed, for the FY 2023 program year, hospitals participating in the HAC Reduction Program will not be given a measure score, a Total HAC score, nor will hospitals receive a payment penalty. We are also providing estimated and newly established performance standards for the Hospital VBP Program. For the Hospital Readmissions Reduction Program, we are proposing to resume the use of the one affected measure under the proposed measure suppression policy for the FY 2024 applicable period following suppression of this measure for the FY 2023 applicable period, and incorporating measure updates to the six condition/procedure measures addressed by the Hospital Readmission Reduction Program to account for patient history of COVID–19.

Under various statutory authorities, we either discuss continued program implementation or propose to make changes to the Medicare IPPS, the LTCH PPS, other related payment methodologies and programs for FY 2023 and subsequent fiscal years, and other policies and provisions included in this rule. These statutory authorities include, but are not limited to, the following:

- Section 1886(d) of the Social Security Act (the Act), which sets forth a system of payment for the operating costs of acute care hospital inpatient stays under Medicare Part A (Hospital Insurance) based on prospectively set rates. Section 1886(g) of the Act requires that, instead of paying for capital-related costs of inpatient hospital services on a reasonable cost basis, the Secretary use a prospective payment system (PPS).
- Section 1886(d)(1)(B) of the Act, which specifies that certain hospitals and hospital units are excluded from the IPPS. These hospitals and units are: Rehabilitation hospitals and units; LTCHs; psychiatric hospitals and units; children's hospitals; cancer hospitals; extended neoplastic disease care hospitals, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa). Religious nonmedical health care institutions (RNHCIs) are also excluded from the IPPS.
- Sections 123(a) and (c) of the BBRA (Pub. L. (Pub. L.) 106–113) and section 307(b)(1) of the BIPA (Pub. L. 106–554) (as codified under section 1886(m)(1) of the Act), which provide for the development and implementation of a prospective payment system for payment for inpatient hospital services of LTCHs described in section 1886(d)(1)(B)(iv) of the Act.
- Sections 1814(l), 1820, and 1834(g) of the Act, which specify that payments are made to critical access hospitals (CAHs) (that is, rural hospitals or facilities that meet certain statutory requirements) for inpatient and outpatient services and that these payments are generally based on 101 percent of reasonable cost.
- Section 1886(a)(4) of the Act, which specifies that costs of approved educational activities are excluded from the operating costs of inpatient hospital services. Hospitals with approved graduate medical education (GME) programs are paid for the direct costs of GME in accordance with section 1886(h) of the Act.
- Section 1886(b)(3)(B)(viii) of the Act, which requires the Secretary to reduce the applicable percentage increase that would otherwise apply to the standardized amount applicable to a subsection (d) hospital for discharges occurring in a fiscal year if the hospital does not submit data on measures in a form and manner, and at a time, specified by the Secretary.
- Section 1866(k) of the Act, which provides for the establishment of a quality reporting program for hospitals described in section 1886(d)(1)(B)(v) of the Act, referred to as ''PPS-exempt cancer hospitals.''
- Section 1886(o) of the Act, which requires the Secretary to establish a Hospital Value-Based Purchasing (VBP) Program, under which value-based incentive payments are made in a fiscal year to hospitals meeting performance standards established for a performance period for such fiscal year.
- Section 1886(p) of the Act, which establishes a Hospital-Acquired Condition (HAC) Reduction Program, under which payments to applicable hospitals are adjusted to provide an incentive to reduce hospital-acquired conditions.
- Section 1886(q) of the Act, as amended by section 15002 of the 21st Century Cures Act, which establishes the Hospital Readmissions Reduction Program. Under the program, payments for discharges from an applicable hospital as defined under section 1886(d) of the Act will be reduced to

account for certain excess readmissions. section 15002 of the 21st Century Cures Act directs the Secretary to compare hospitals with respect to the number of their Medicare-Medicaid dual-eligible beneficiaries (dual-eligibles) in determining the extent of excess readmissions.

- Section 1886(r) of the Act, as added by section 3133 of the Affordable Care Act, which provides for a reduction to disproportionate share hospital (DSH) payments under section 1886(d)(5)(F) of the Act and for a new uncompensated care payment to eligible hospitals. Specifically, section 1886(r) of the Act requires that, for fiscal year 2014 and each subsequent fiscal year, subsection (d) hospitals that would otherwise receive a DSH payment made under section 1886(d)(5)(F) of the Act will receive two separate payments: (1) 25 percent of the amount they previously would have received under section 1886(d)(5)(F) of the Act for DSH (''the empirically justified amount''), and (2) an additional payment for the DSH hospital's proportion of uncompensated care, determined as the product of three factors. These three factors are: (1) 75 percent of the payments that would otherwise be made under section 1886(d)(5)(F) of the Act; (2) 1 minus the percent change in the percent of individuals who are uninsured; and (3) a hospital's uncompensated care amount relative to the uncompensated care amount of all DSH hospitals expressed as a percentage.
- Section 1886(m)(5) of the Act, which requires the Secretary to reduce by two percentage points the annual update to the standard Federal rate for discharges for a long-term care hospital (LTCH) during the rate year for LTCHs that do not submit data in the form, manner, and at a time, specified by the Secretary.
- Section 1886(m)(6) of the Act, as added by section 1206(a)(1) of the Pathway for Sustainable Growth Rate (SGR) Reform Act of 2013 (Pub. L. 113–67) and amended by section 51005(a) of the Bipartisan Budget Act of 2018 (Pub. L. 115–123), which provided for the establishment of site neutral payment rate criteria under the LTCH PPS, with implementation beginning in FY 2016. Section 51005(b) of the Bipartisan Budget Act of 2018 amended section 1886(m)(6)(B) by adding new clause (iv), which specifies that the IPPS comparable amount defined in clause (ii)(I) shall be reduced by 4.6 percent for FYs 2018 through 2026.
- Section 1899B of the Act, as added by section 2(a) of the Improving Medicare Post-Acute Care Transformation Act of 2014 (IMPACT Act) (Pub. L. 113–185), which provides for the establishment of standardized data reporting for certain post-acute care providers, including LTCHs.
- Section 1861(e) of the Act provides the specific statutory authority for the hospital CoPs; section 1820(e) of the Act provides similar authority for CAHs. The hospital provision at section 1861(e)(9) of the Act authorizes the Secretary to issue any regulations he or she deems necessary to protect the health and safety of patients receiving services in those facilities; the CAH provision at section 1820(e)(3) of the Act authorizes the Secretary to issue such other criteria as he or she may require.

2. Summary of the Major Provisions

The following is a summary of the major provisions in this proposed rule. In general, these major provisions are being proposed as part of the annual update to the payment policies and payment rates, consistent with the applicable statutory provisions. A general summary of the proposed changes in this proposed rule is presented in section I.D. of the preamble of this proposed rule.

a. Proposed MS–DRG Documentation and Coding Adjustment

Section 631 of the American Taxpayer Relief Act of 2012 (ATRA, Pub. L. 112–240) amended section 7(b)(1)(B) of Public Law 110–90 to require the Secretary to make a recoupment adjustment to the standardized amount of Medicare payments to acute care hospitals to account for changes in MS–DRG documentation and coding that do not reflect real changes in case-mix, totaling $11 billion over a 4-year period of FYs 2014, 2015, 2016, and 2017. The FY 2014 through FY 2017 adjustments represented the amount of the increase in aggregate payments as a result of not completing the prospective adjustment authorized under section 7(b)(1)(A) of Pub. L. 110–90 until FY 2013. Prior to the ATRA, this amount could not have been recovered under Pub. L. 110–90. Section 414 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10) replaced the single positive adjustment we intended to make in FY 2018 with a 0.5 percent positive adjustment to the standardized amount of Medicare payments to acute care hospitals for FYs 2018 through 2023. (The FY 2018 adjustment was subsequently adjusted to 0.4588 percent by section 15005 of the 21st Century Cures Act.) Therefore, for FY 2023, we are proposing to make an adjustment of + 0.5 percent to the standardized amount.

b. Proposed Use of FY 2021 Data and Proposed Methodology Modifications for the FY 2023 IPPS and LTCH PPS Ratesetting

For the IPPS and LTCH PPS ratesetting, our longstanding goal is always to use the best available data overall. In section I.F. of the preamble of this proposed rule, we discuss our proposal to return to our historical practice of using the most recent data available for purposes of FY 2023 ratesetting, including the FY 2021 MedPAR claims and FY 2020 cost report data, with certain proposed modifications to our usual ratesetting methodologies to account for the anticipated decline in COVID–19 hospitalizations of Medicare beneficiaries at IPPS hospitals and LTCHs as compared to FY 2021. As discussed in greater detail in section I.F of the preamble of this proposed rule, we believe that it is reasonable to assume that some Medicare beneficiaries will continue to be hospitalized with COVID–19 at IPPS hospitals and LTCHs in FY 2023. Given this expectation, we believe it is appropriate to use FY 2021 data, as the most recent available data during the period of the COVID–19 PHE, for purposes of the FY 2023 IPPS and LTCH PPS ratesetting. However, as also discussed in greater detail in section I.F. of the preamble of this proposed rule, we believe it is reasonable to assume based on the information available at this time that there will be fewer COVID–19 hospitalizations in FY 2023 than in FY 2021. Therefore, we are proposing to use the FY 2021 data for purposes of the FY 2023 IPPS and LTCH PPS ratesetting but with modifications to our usual ratesetting methodologies to account for the anticipated decline in COVID–19 hospitalizations of Medicare beneficiaries at IPPS hospitals and LTCHs as compared to FY 2021. As discussed in section I.O. of Appendix A of this proposed rule, we are also requesting comments on, as an alternative to our proposed approach, the use of the FY 2021 data for purposes of FY 2023 ratesetting without the proposed modifications to our usual methodologies for the calculation of the FY 2023 MS–DRG and MS–LTC–DRG relative weights or the usual methodologies used to determine the FY 2023 outlier fixed-loss amount for IPPS cases and LTCH PPS standard Federal payment rate cases.

c. Proposed Continuation of the Low Wage Index Hospital Policy

To help mitigate wage index disparities between high wage and low

wage hospitals, in the FY 2020 IPPS/LTCH PPS rule (84 FR 42326 through 42332), we adopted a policy to increase the wage index values for certain hospitals with low wage index values (the low wage index hospital policy). This policy was adopted in a budget neutral manner through an adjustment applied to the standardized amounts for all hospitals. We also indicated our intention that this policy would be effective for at least 4 years, beginning in FY 2020, in order to allow employee compensation increases implemented by these hospitals sufficient time to be reflected in the wage index calculation. We are proposing for the low wage index hospital policy to continue for FY 2023, and are also proposing to apply this policy in a budget neutral manner by applying an adjustment to the standardized amounts.

d. Proposed Permanent Cap on Wage Index Decreases

Consistent with section 1886(d)(3)(E) of the Act, we adjust the IPPS standardized amounts for area differences in hospital wage levels by a factor (established by the Secretary) reflecting the relative hospital wage level in the geographic area of the hospital compared to the national average hospital wage level and update the wage index annually based on a survey of wages and wage-related costs of short-term, acute care hospitals. As described in section III.N. of the preamble of this proposed rule, we have further considered the comments we received during the FY 2022 rulemaking recommending a permanent 5 percent cap policy to prevent large year-to-year variations in wage index values as a means to reduce overall volatility for hospitals. Under the authority at sections 1886(d)(3)(E) and 1886(d)(5)(I)(i) of the Act, for FY 2023 and subsequent years, we are proposing to apply a 5-percent cap on any decrease to a hospital's wage index from its wage index in the prior FY, regardless of the circumstances causing the decline. That is, we are proposing that a hospital's wage index for FY 2023 would not be less than 95 percent of its final wage index for FY 2022, and that for subsequent years, a hospital's wage index would not be less than 95 percent of its final wage index for the prior FY. We are also proposing to apply this proposed wage index cap policy in a budget neutral manner through a national adjustment to the standardized amount under our authority in sections 1886(d)(3)(E) and 1886(d)(5)(I)(i) of the Act.

e. Proposed DSH Payment Adjustment and Additional Payment for Uncompensated Care

Under section 1886(r) of the Act, which was added by section 3133 of the Affordable Care Act, starting in FY 2014, Medicare disproportionate share hospitals (DSHs) receive 25 percent of the amount they previously would have received under the statutory formula for Medicare DSH payments in section 1886(d)(5)(F) of the Act. The remaining amount, equal to 75 percent of the amount that otherwise would have been paid as Medicare DSH payments, is paid as additional payments after the amount is reduced for changes in the percentage of individuals that are uninsured. Each Medicare DSH will receive an additional payment based on its share of the total amount of uncompensated care for all Medicare DSHs for a given time period.

In this proposed rule, we are proposing to update our estimates of the three factors used to determine uncompensated care payments for FY 2023. We are also proposing to continue to use uninsured estimates produced by CMS' Office of the Actuary (OACT) as part of the development of the National Health Expenditure Accounts (NHEA) in conjunction with more recently available data in the calculation of Factor 2. For FY 2023, we are proposing to use the two most recent years of audited data on uncompensated care costs from Worksheet S–10 of the FY 2018 cost reports and the FY 2019 cost reports to calculate Factor 3 in the uncompensated care payment methodology for all eligible hospitals. In addition, for FY 2024 and subsequent fiscal years, we are proposing to use a three-year average of the data on uncompensated care costs from Worksheet S–10 for the three most recent fiscal years for which audited data are available. Beginning in FY 2023, we are proposing to discontinue the use of low-income insured days as a proxy for uncompensated care to determine Factor 3 for Indian Health Service (IHS) and Tribal hospitals and hospitals located in Puerto Rico. In addition, we are proposing certain methodological changes for calculating Factor 3 for FY 2023 and subsequent fiscal years.

We recognize that our proposal to discontinue the use of the low-income insured days proxy to calculate uncompensated care payments for Indian Health Service (IHS) and Tribal hospitals and hospitals located in Puerto Rico could result in a significant financial disruption for these hospitals. Accordingly, we are proposing to use our exceptions and adjustments authority under section 1886(d)(5)(I) to establish a new supplemental payment for IHS and Tribal hospitals and hospitals located in Puerto Rico, beginning in FY 2023.

Additionally, we are proposing to revise our regulation governing the calculation of the Medicaid fraction of the DSH calculation. Under this proposal, we would revise our regulation to explicitly reflect our interpretation of the language ''regarded as'' ''eligible for medical assistance under a State plan approved under title XIX'' in section 1886(d)(5)(F)(vi) of the Act to mean patients who receive health insurance authorized by a section 1115 demonstration or patients who pay for all or substantially all of the cost of such health insurance with premium assistance authorized by a section 1115 demonstration, where state expenditures to provide the health insurance or premium assistance may be matched with funds from Title XIX. Moreover, of the groups we ''regard as'' Medicaid eligible, we propose to include in the Medicaid fraction only the days of those patients who obtain health insurance directly or with premium assistance that provides essential health benefits (EHB) as set forth in 42 CFR part 440, subpart C, for an Alternative Benefit Plan (ABP), and for patients obtaining premium assistance, only the days of those patients for which the premium assistance is equal to or greater than 90 percent of the cost of the health insurance, provided the patient is not also entitled to Medicare Part A.

f. Proposed Changes to GME Payments Based on *Milton S. Hershey Medical Center, et al.* v. *Becerra* Litigation

On May 17, 2021, the U.S. District Court for the District of Columbia ruled against CMS's method of calculating direct GME payments to teaching hospitals when those hospitals' weighted full-time equivalent (FTE) counts exceed their direct GME FTE cap. In *Milton S. Hershey Medical Center, et al.* v. *Becerra,* the court ordered CMS to recalculate reimbursement owed, holding that CMS's regulation impermissibly modified the statutory weighting factors. The plaintiffs in these consolidated cases alleged that as far back as 2005, the proportional reduction that CMS applied to the weighted FTE count when the weighted FTE count exceeded the FTE cap conflicted with the Medicare statute, and it was an arbitrary and capricious exercise of agency discretion under the Administrative Procedure Act. The court held that the

proportional reduction methodology impermissibly modified the weighting factors statutorily assigned to residents and fellows. The court granted the motion for summary judgment to plaintiffs' motions, denied defendant's, and remanded to the Agency so that it could recalculate plaintiffs' reimbursement payments consistent with the court's opinion.

After reviewing the statutory language regarding the direct GME FTE cap and the court's opinion, we have decided to propose a modified policy to be applied prospectively for all teaching hospitals, as well as retroactively to the providers and cost years in Hershey and certain other providers as described in greater detail in section V.F.2. of the preamble of this proposed rule. The proposed modified policy would address situations for applying the FTE cap when a hospital's weighted FTE count is greater than its FTE cap, but would not reduce the weighting factor of residents that are beyond their initial residency period to an amount less than 0.5. Specifically, effective for cost reporting periods beginning on or after October 1, 2022, we are proposing that the hospital's unweighted number of FTE residents exceeds the FTE cap, and the number of weighted FTE residents also exceeds that FTE cap, the respective primary care and obstetrics and gynecology weighted FTE counts and other weighted FTE counts are adjusted to make the total weighted FTE count equal the FTE cap. If the number of weighted FTE residents does not exceed that FTE cap, then the allowable weighted FTE count for direct GME payment is the actual weighted FTE count.

g. Reduction of Hospital Payments for Excess Readmissions

We are proposing to make changes to policies for the Hospital Readmissions Reduction Program, which was established under section 1886(q) of the Act, as amended by section 15002 of the 21st Century Cures Act. The Hospital Readmissions Reduction Program requires a reduction to a hospital's base operating DRG payment to account for excess readmissions of selected applicable conditions. For FY 2017 and subsequent years, the reduction is based on a hospital's risk-adjusted readmission rate during a 3-year period for acute myocardial infarction (AMI), heart failure (HF), pneumonia, chronic obstructive pulmonary disease (COPD), elective primary total hip arthroplasty/total knee arthroplasty (THA/TKA), and coronary artery bypass graft (CABG) surgery. In this FY 2023 IPPS/LTCH PPS proposed rule, we are discussing the following policies: (1) Proposal to resume use of the Hospital 30-Day, All-Cause, Risk-Standardized Readmission Rate (RSRR) following Pneumonia Hospitalization measure (NQF #0506) for the FY 2024 program year; (2) modification of the Hospital 30-Day, All-Cause, Risk-Standardized Readmission Rate (RSRR) following Pneumonia Hospitalization measure (NQF #0506) to exclude COVID–19 diagnosed patients from the measure denominator, beginning with the Hospital Specific Reports (HSRs) for the FY 2023 program year; and (3) modification of all six condition/procedure specific measures to include a covariate adjustment for patient history of COVID–19 within one year prior to the index admission beginning with the FY 2023 program year. We are also seeking comment on updating the to incorporate provider performance for socially at-risk populations.

h. Hospital Value-Based Purchasing (VBP) Program

Section 1886(o) of the Act requires the Secretary to establish a Hospital VBP Program under which value-based incentive payments are made in a fiscal year to hospitals based on their performance on measures established for a performance period for such fiscal year. In this proposed rule, we are proposing to: (1) Suppress the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) and five Hospital Acquired Infection (HAI) measures, for the FY 2023 Program year; and (2) update the baseline periods for certain measures for the FY 2025 program year. We are also proposing to revise the scoring and payment methodology for the FY 2023 program year such that hospitals will not receive Total Performance Scores (TPSs). Instead, we are proposing to award each hospital a payment incentive multiplier that results in a value-based incentive payment that is equal to the amount withheld for the fiscal year (2 percent). We note that we are also announcing technical updates to the measures in the Clinical Outcomes Domain.

i. Hospital-Acquired Condition (HAC) Reduction Program

We are proposing changes to the HAC Reduction program, which was established under Section 1886(p) of the Act, to provide an incentive to hospitals to reduce the incidence of hospital-acquired conditions. We refer readers to the FY 2022 IPPS/LTCH PPS final rule for further details on our measure suppression policy (86 FR 45301 through 45304). In this FY 2023 IPPS/LTCH PPS proposed rule, we are proposing to: (1) Suppress the CMS PSI 90 measure and the five CDC NHSN HAI measures from the calculation of measure scores and the Total HAC Score, thereby not penalizing any hospital under the HAC Reduction Program FY 2023 program year; (2) publicly and confidentially report CDC NHSN HAI measure results but not calculate or report measure results for the CMS PSI 90 measure for the HAC Reduction Program FY 2023 program year; (3) suppress CY 2021 CDC NHSN HAI measures data from the FY 2024 HAC Reduction Program Year; (4) update the measure specification to the minimum volume threshold for the CMS PSI 90 measure beginning with the FY 2023 program year; (5) update the measure specifications to risk-adjust for COVID–19 diagnosis in the CMS PSI 90 measure beginning with the FY 2024 HAC Reduction Program Year; (6) request information from stakeholders on the potential adoption of two digital National Healthcare Safety Network (NHSN) measures: The NHSN Healthcare-associated *Clostridioides difficile* Infection Outcome measure and NHSN Hospital-Onset Bacteremia & Fungemia Outcome measure; (7) request information on overarching principles for measuring healthcare quality disparities across CMS Quality Programs; (8) update the NHSN CDC HAI data submission requirements for newly opened hospitals beginning in the FY 2024 HAC Reduction Program Year; and (9) clarify the removal of the no mapped location policy beginning with the FY 2023 program year.

j. Hospital Inpatient Quality Reporting (IQR) Program

Under section 1886(b)(3)(B)(viii) of the Act, subsection (d) hospitals are required to report data on measures selected by the Secretary for a fiscal year in order to receive the full annual percentage increase.

In this FY 2023 IPPS/LTCH PPS proposed rule, we are proposing several changes to the Hospital IQR Program. We are proposing the adoption of 10 new measures: (1) Hospital Commitment to Health Equity beginning with the CY 2023 reporting period/FY 2025 payment determination; (2) Screening for Social Drivers of Health beginning with voluntary reporting for the CY 2023 reporting period and mandatory reporting beginning with the CY 2024 reporting period/FY 2026 payment determination; (3) Screen Positive Rate for Social Drivers of Health beginning with voluntary reporting for the CY 2023 reporting period and mandatory reporting beginning with the CY 2024 reporting

period/FY 2026 payment determination; (4) Cesarean Birth electronic clinical quality measure (eCQM) with inclusion in the measure set beginning with the CY 2023 reporting period/FY 2025 payment determination, and mandatory reporting beginning with the CY 2024 reporting period/FY 2026 payment determination; (5) Severe Obstetric Complications eCQM with inclusion in the measure set beginning with the CY 2023 reporting period/FY 2025 payment determination, and mandatory reporting beginning with the CY 2024 reporting period/FY 2026 payment determination; (6) Hospital-Harm—Opioid-Related Adverse Events eCQM (NQF #3501e) beginning with the CY 2024 reporting period/FY 2026 payment determination; (7) Global Malnutrition Composite Score eCQM (NQF #3592e) beginning with the CY 2024 reporting period/FY 2026 payment determination; (8) Hospital-Level, Risk Standardized Patient-Reported Outcomes Performance Measure Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) (NQF #3559) beginning with two voluntary periods, followed by mandatory reporting for the reporting period which runs from July 1, 2025 through June 30, 2026, impacting the FY 2028 payment determination; (9) Medicare Spending Per Beneficiary (MSPB) Hospital (NQF #2158) beginning with the FY 2024 payment determination; and (10) Hospital-Level Risk-Standardized Complication Rate (RSCR) Following Elective Primary THA/TKA (NQF #1550) beginning with the FY 2024 payment determination. We are proposing refinements to two current measures beginning with the FY 2024 payment determination: (1) Hospital-Level, Risk-Standardized Payment Associated with an Episode-of-Care for Primary Elective THA/TKA; and (2) Excess Days in Acute Care (EDAC) After Hospitalization for Acute Myocardial Infarction (AMI) (NQF #2881). We are also requesting comment on the potential future development and inclusion of two National Healthcare Safety Network (NHSN) measures: (1) Healthcare-Associated *Clostridioides difficile* Infection Outcome; and (2) Hospital-Onset Bacteremia & Fungemia Outcome.

We are proposing changes to current policies related to eCQMs and hybrid measures: (1) A proposal to modify the eCQM reporting and submission requirements to increase the number of eCQMs to be reported beginning with the CY 2024 reporting period/FY 2026 payment determination; (2) a proposal to remove the zero denominator declarations and case threshold exemption policies for hybrid measures beginning with the FY 2026 payment determination; (3) a proposal for the data submission and reporting requirements for patient-reported outcome-based performance measures (PRO–PMs) beginning with the FY 2026 payment determination; and (4) a proposal to modify the eCQM validation policy to increase the requirement from 75 percent to 100 percent of requested medical records, beginning with the FY 2025 payment determination.

With respect to public reporting, we are proposing to establish a hospital designation related to maternity care to be publicly-reported on a public-facing website beginning in Fall 2023, and are also seeking comments on other potential associated activities regarding this designation. Additionally, we are seeking comments on ongoing ways we can advance digital quality measurement and use of Fast Healthcare Interoperability Resources (FHIR).

k. PPS-Exempt Cancer Hospital Quality Reporting Program

Section 1866(k)(1) of the Act requires, for purposes of FY 2014 and each subsequent fiscal year, that a hospital described in section 1886(d)(1)(B)(v) of the Act (a PPS-exempt cancer hospital, or a PCH) submit data in accordance with section 1866(k)(2) of the Act with respect to such fiscal year. There is no financial impact to PCH Medicare payment if a PCH does not participate.

In this FY 2023 IPPS/LTCH PPS proposed rule, we are proposing to adopt a patient safety exception into the measure removal policy. We are also proposing to begin public display of the 30-Day Unplanned Readmissions for Cancer Patients measure (NQF #3188) (PCH–36), the Proportion of Patients Who Died from Cancer Receiving Chemotherapy in the Last 14 Days of Life measure (NQF #0210) (PCH–32), the Proportion of Patients Who Died from Cancer Not Admitted to Hospice measure (NQF #0215) (PCH–34), the Proportion of Patients Who Died from Cancer Admitted to the ICU in the Last 30 Days of Life measure (NQF #0213) (PCH–33), and the Proportion of Patients Who Died from Cancer Admitted to Hospice for Less Than Three Days measure (NQF #0216) (PCH–35). In addition, along with the Hospital IQR and HAC Reduction Programs, we are requesting comment on the potential adoption of two digital National Healthcare Safety Network (NHSN) measures: The NHSN Healthcare-associated *Clostridioides difficile* Infection Outcome measure and NHSN Hospital-Onset Bacteremia and Fungemia Outcome measure.

l. Medicare Promoting Interoperability Program

For CY 2023, we are proposing several changes to the Medicare Promoting Interoperability Program. Specifically, we are proposing: (1) To require and modify the Electronic Prescribing Objective's Query of Prescription Drug Monitoring Program (PDMP) measure while maintaining the associated points at 10 points beginning with the EHR reporting period in CY 2023; (2) to expand the Query of PDMP measure to include Schedule II, III, and IV drugs beginning with the CY 2023 EHR reporting period; (3) to add a new Health Information Exchange (HIE) Objective option, the Enabling Exchange under the Trusted Exchange Framework and Common Agreement (TEFCA) measure (requiring a yes/no response), as an optional alternative to fulfill the objective, beginning with the CY 2023 EHR reporting period; (4) to modify the Public Health and Clinical Data Exchange Objective by adding an Antibiotic Use and Antibiotic Resistance (AUR) measure in addition to the current four required measures (Syndromic Surveillance Reporting, Immunization Registry Reporting, Electronic Case Reporting, and Electronic Reportable Laboratory Result Reporting beginning in the CY 2023 EHR reporting period; (5) to consolidate the current options from three to two levels of active engagement for the Public Health and Clinical Data Exchange Objective and to require the reporting of active engagement for the measures under the objective beginning with the CY 2023 EHR reporting period; (6) to modify the scoring methodology for the Medicare Promoting Interoperability Program beginning in CY 2023; (7) to institute public reporting of certain Medicare Promoting Interoperability Program data beginning with the CY 2023 EHR reporting period; (8) to remove regulation text for the objectives and measures in the Medicare Promoting Interoperability Program from paragraph (e) under 42 CFR 495.24 and add new paragraph (f) beginning in CY 2023; and (9) to adopt two new eCQMs in the Medicare Promoting Interoperability Program's eCQM measure set beginning with the CY 2023 reporting period, two new eCQMs in the Medicare Promoting Interoperability Program's eCQM measure set beginning with the CY 2024 reporting period, and modify the eCQM data reporting and submission requirements to increase the number of eCQMs required to be reported and the total number of eCQMs

to be reported beginning with the CY 2024 reporting period, which is in alignment with the eCQM updates proposed for the Hospital IQR Program.

m. Condition of Participation (CoP) Requirements for Hospitals and CAHs To Report Data Elements To Address Any Future Pandemics and Epidemics as Determined by the Secretary

In this proposed rule, we would revise the hospital and CAH infection prevention and control CoP requirements to continue COVID–19 reporting requirements commencing either upon the conclusion of the current COVID–19 PHE declaration or the effective date of this proposed rule, whichever is later, and lasting until April 30, 2024 (unless the Secretary determines an earlier end date). We also propose additional requirements to address future PHEs related to epidemics and pandemics. Specifically, when the Secretary has declared a PHE, we propose to require hospitals and CAHs to report specific data elements to the CDC's National Health Safety Network (NHSN), or other CDC-supported surveillance systems, as determined by the Secretary. The proposed requirements of this section would apply to local, state, and national PHEs as declared by the Secretary. Additionally, we are proposing that the hospital (or CAH) provide the information specified on a daily basis, unless the Secretary specifies a lesser frequency contingent upon the state of the PHE and ongoing risks.

n. Comment Solicitation on IPPS and Outpatient Prospective Payment System (OPPS) Payment Adjustments for Wholly Domestically Made National Institute for Occupational Safety and Health (NIOSH)-Approved Surgical N95 Respirators

As discussed in section X.C. of the preamble of this proposed rule, the Biden-Harris Administration has made it a priority to ensure America is prepared to continue to respond to COVID–19, and to combat future pandemics. A significant action to improve hospital preparedness and readiness for future threats might be to provide payment adjustments to hospitals to recognize the additional resource costs they incur to acquire NIOSH-approved surgical N95 respirators that are wholly domestically made. These surgical respirators, which faced severe shortage at the onset of the COVID–19 pandemic, are essential for the protection of beneficiaries and hospital personnel that interface with patients. The Department of Health and Human Services (HHS) recognizes that procurement of surgical N95 respirators that are wholly domestically made, while critical to pandemic preparedness and protecting health care workers and patients, can result in additional resource costs for hospitals.

We are interested in feedback and comments on the appropriateness of payment adjustments that would account for these additional resource costs. We believe such a payment adjustment could help achieve a strategic policy goal, namely, sustaining a level of supply resilience for surgical N95 respirators that is critical to protect the health and safety of personnel and patients in a public health emergency. We are considering such payment adjustments to apply to 2023 and potentially subsequent years. We realize there may be different ways a payment adjustment to recognize the additional resource costs hospitals incur when purchasing wholly domestically made NIOSH-approved surgical N95 respirators could be implemented and seek comment on two potential frameworks and alternative approaches.

3. Summary of Costs and Benefits

The following table provides a summary of the costs, savings, and benefits associated with the major provisions described in section I.A.3. of the preamble of this proposed rule.

BILLING CODE 4120–01–P

Provision Description	Description of Costs, Transfers, Savings, and Benefits
Proposed Adjustment for MS-DRG Documentation and Coding Changes	Section 414 of the MACRA replaced the single positive adjustment we intended to make in FY 2018 once the recoupment required by section 631 of the ATRA was complete with a 0.5 percentage point positive adjustment to the standardized amount of Medicare payments to acute care hospitals for FYs 2018 through 2023. (The FY 2018 adjustment was subsequently adjusted to 0.4588 percentage point by section 15005 of the 21st Century Cures Act.) For FY 2023, we are proposing to make an adjustment of +0.5 percentage point to the standardized amount consistent with the MACRA.
Proposed Medicare DSH Payment Adjustment and Additional Payment for Uncompensated Care and Proposed Supplemental Payment	For FY 2023, we are proposing to update our estimates of the three factors used to determine uncompensated care payments. We are proposing to continue to use uninsured estimates produced by OACT as part of the development of the NHEA in conjunction with more recently available data in the calculation of Factor 2. For FY 2023, we are proposing to use the two most recent years of audited data on uncompensated care costs from Worksheet S–10 of the FY 2018 cost reports and the FY 2019 cost reports to calculate Factor 3 in the uncompensated care payment methodology for all eligible hospitals. In addition, for FY 2024 and subsequent fiscal years, we are proposing to use a three-year average of the data on uncompensated care costs from Worksheet S-10 for the three most recent fiscal years for which audited data are available. Beginning in FY 2023, we are proposing to discontinue the use of low-income insured days as a proxy for uncompensated care to determine Factor 3 for Indian Health Service (IHS) and Tribal hospitals and hospitals located in Puerto Rico. In addition, we are proposing certain methodological changes for calculating Factor 3 for FY 2023 and subsequent fiscal years. We project that the amount available to distribute as payments for uncompensated care for FY 2023 will decrease by approximately $654 million, as compared to our estimate of the uncompensated care payments that will be distributed in FY 2022. The uncompensated care payments have redistributive effects, based on a hospital's uncompensated care amount relative to the uncompensated care amount for all hospitals that are projected to be eligible to receive Medicare DSH payments, and the calculated payment amount is not directly tied to a hospital's number of discharges. Because we recognize that our proposal to discontinue the use of the low-income insured days proxy to calculate uncompensated care payments for Indian Health Service (IHS) and Tribal hospitals and hospitals located in Puerto Rico could result in a significant financial disruption for these hospitals, we are proposing to use our exceptions and adjustments authority under section 1886(d)(5)(I) of the Act to establish a new supplemental payment for IHS and Tribal hospitals and hospitals located in Puerto Rico, beginning in FY 2023. This proposal is not budget neutral and we estimate the impact of this proposed change for FY 2023 would increase Medicare spending by approximately $92 million. Additionally, we are proposing to revise our regulation governing the calculation of the Medicaid fraction of the DSH calculation. Under this proposal, we would revise our regulations to explicitly reflect our interpretation of the language "regarded as" "eligible for medical assistance under a State plan approved under title XIX" in section 1886(d)(5)(F)(vi) of the Act to mean patients who receive health insurance authorized by a section 1115 demonstration itself or patients who pay for all or substantially all of the cost of such health insurance with premium assistance authorized by a section 1115 demonstration, where state expenditures to provide the health insurance or premium assistance may be matched with funds from Title XIX. Moreover, of the groups we "regard" as Medicaid eligible, we propose to include in the Medicaid fraction only the days of those patients who obtain health insurance directly or with premium assistance that provides essential health benefits (EHB) as set forth in 42 CFR part 440, subpart C, for an Alternative Benefit Plan (ABP), and for patients obtaining

Provision Description	Description of Costs, Transfers, Savings, and Benefits
	premium assistance, only the days of those patients for which the premium assistance is equal to or greater than 90 percent of the cost of the health insurance, provided the patient is not also entitled to Medicare Part A. To the extent that this proposal has an impact on expenditures, that impact is not estimable because we do not have information on the number of section 1115 days by hospital which could be included in the Medicaid fraction absent the proposed revision to the regulation, which would be required to make an estimate.
Proposed Changes to GME Payments Based on *Milton S. Hershey Medical Center, et al. v. Becerra* Litigation	After reviewing the statutory language regarding the direct GME FTE cap and the court's opinion in *Milton S. Hershey Medical Center, et al. v. Becerra*, we are proposing a modified policy to be applied prospectively for all teaching hospitals, Specifically, effective for cost reporting periods beginning on or after October 1, 2022, we are proposing that the hospital's unweighted number of FTE residents exceeds the FTE cap, and the number of weighted FTE residents also exceeds that FTE cap, the respective primary care and obstetrics and gynecology weighted FTE counts and other weighted FTE counts are adjusted to make the total weighted FTE count equal the FTE cap. If the number of weighted FTE residents does not exceed that FTE cap, then the allowable weighted FTE count for direct GME payment is the actual weighted FTE count. We estimate the impact of this proposed change for FY 2023 to be approximately $170 million.
Update to the IPPS Payment Rates and Other Payment Policies	As discussed in Appendix A of this proposed rule, acute care hospitals are estimated to experience a decrease of approximately $ 0.3 billion in FY 2023, primarily driven by: (1) a combined $0.7 billion increase in FY 2023 operating payments, including uncompensated care payments and proposed supplemental payments for eligible IHS/Tribal hospitals and Puerto Rico hospitals, and (2) a combined decrease of $ 1.1 billion resulting from estimated changes in new technology add-on payments, the proposed change to the GME weighting methodology, the expiration of the temporary changes to the low-volume hospital payment adjustment, and capital payments, as modeled for this proposed rule.
Update to the LTCH PPS Payment Rates and Other Payment Policies	As discussed in Appendix A of this proposed rule, based on the best available data for the 339 LTCHs in our database, we estimate that the proposed changes to the payment rates and factors that we present in the preamble of and Addendum to this proposed rule, which reflect the proposed update to the LTCH PPS standard Federal payment rate for FY 2023, would result in an estimated increase in payments in FY 2023 of approximately $25 million.
Proposed Changes to the Hospital Readmissions Reduction Program	For the FY 2021 program year and subsequent years, DRG reductions in payments are based on a hospital's risk-adjusted readmission rate during a multi -year period for acute myocardial infarction (AMI), heart failure (HF), pneumonia, chronic obstructive pulmonary disease (COPD), elective primary total hip arthroplasty/total knee arthroplasty (THA/TKA), and coronary artery bypass graft (CABG) surgery. Overall, in this proposed rule, we estimate that 2,364 hospitals would have their base operating DRG payments reduced by their determined proxy FY 2023 hospital-specific readmission adjustment1. As a result, we estimate that the Hospital Readmissions Reduction Program would save approximately $400 million in FY 2023.
Value-Based Incentive Payments under the Hospital VBP Program	We estimate that there would be no net financial impact to the Hospital VBP Program for the FY 2023 program year in the aggregate because, by law, the amount available for value-based incentive payments under the program in a given year must be equal to the total amount of base operating MS-DRG payment amount reductions for that year, as estimated by the Secretary. The estimated amount of base operating MS-DRG payment amount reductions for the FY 2023 program year and, therefore, the estimated amount available for value-based incentive payments for FY 2023 discharges is approximately $1.7 billion.
Proposed Changes to the HAC Reduction Program	For the FY 2023 program year, we are proposing to suppress all six measures in the HAC Reduction Program, only calculate measure results for the NHSN CDC HAI measures, and not calculate measure scores or Total HAC Scores for any hospital. Accordingly, for the FY 2023 HAC Reduction Program, no hospital would receive a payment reduction. As a result, for the FY 2023 program year, we anticipate reductions to the Medicare trust fund that is otherwise estimated at approximately $350 million.
Proposed Changes to the Hospital IQR Program	Across 3,150 IPPS hospitals, we estimate that our proposed changes for the Hospital IQR Program in this proposed rule would result in a total information collection burden increase of 746,300 hours associated with our proposed policies and updated burden estimates and a total cost increase of approximately $23,437,906 across a 4-year period from the CY 2023 reporting period/FY 2025 payment determination through the CY 2026 reporting period/FY 2028 payment determination.

Provision Description	Description of Costs, Transfers, Savings, and Benefits
Proposed Changes to the Medicare Promoting Interoperability Program	Across 4,500 eligible hospitals and CAHs, we estimate that our proposed changes for the Medicare Promoting Interoperability Program in this proposed rule would result in a total information collection burden increase of 5,513 hours associated with our proposed policies and updated burden estimates and a total cost increase of approximately $233,730 across a 2-year period from the CY 2023 EHR reporting period through the CY 2024 EHR reporting period.
Condition of Participation (CoP) Requirements for Hospitals and CAHs To Report Data Elements to Address Any Future Pandemics and Epidemics as Determined by the Secretary	As detailed in section XII.B.10. of the preamble of this proposed rule (Collection of Information requirements), we estimate that our proposed changes to the CoPs, which would require hospitals and CAHs to comply with these reporting provisions, would result in a lower bound estimated burden increase of 483,600 hours based on weekly reporting (52 weeks per year) and a upper bound estimated burden increase of 6,789,000 hours (365 days per year)based on daily reporting of the required information by approximately 6,200 hospitals and CAHs and at an average response time of 1.5 hours for weekly reporting and 3 hours for daily reporting, for a registered nurse with an average hourly salary of $79. This would result in an estimated total of $38,204,400 for weekly reporting (or approximately $6,162 per facility) and $536,331,000 for daily reporting (or approximately $86,505 per facility) annually for all hospitals and CAHs.

[1]For the purpose of modeling the estimated FY 2023 payment adjustment factors that account for the suppression of the pneumonia readmission measure for this proposed rule, we used the data from the FY 2022 Hospital Readmissions Reduction Program for the five non-suppressed measures (that is, AMI, HF, COPD, THA/TKA, and CABG).

BILLING CODE 4120–01–C

B. Background Summary

1. Acute Care Hospital Inpatient Prospective Payment System (IPPS)

Section 1886(d) of the Act sets forth a system of payment for the operating costs of acute care hospital inpatient stays under Medicare Part A (Hospital Insurance) based on prospectively set rates. Section 1886(g) of the Act requires the Secretary to use a prospective payment system (PPS) to pay for the capital-related costs of inpatient hospital services for these ''subsection (d) hospitals.'' Under these PPSs, Medicare payment for hospital inpatient operating and capital-related costs is made at predetermined, specific rates for each hospital discharge. Discharges are classified according to a list of diagnosis-related groups (DRGs).

The base payment rate is comprised of a standardized amount that is divided into a labor-related share and a nonlabor-related share. The labor-related share is adjusted by the wage index applicable to the area where the hospital is located. If the hospital is located in Alaska or Hawaii, the nonlabor-related share is adjusted by a cost-of-living adjustment factor. This base payment rate is multiplied by the DRG relative weight.

If the hospital treats a high percentage of certain low-income patients, it receives a percentage add-on payment applied to the DRG-adjusted base payment rate. This add-on payment, known as the disproportionate share hospital (DSH) adjustment, provides for a percentage increase in Medicare payments to hospitals that qualify under either of two statutory formulas designed to identify hospitals that serve a disproportionate share of low-income patients. For qualifying hospitals, the amount of this adjustment varies based on the outcome of the statutory calculations. The Affordable Care Act revised the Medicare DSH payment methodology and provides for a new additional Medicare payment beginning on October 1, 2013, that considers the amount of uncompensated care furnished by the hospital relative to all other qualifying hospitals.

If the hospital is training residents in an approved residency program(s), it receives a percentage add-on payment for each case paid under the IPPS, known as the indirect medical education (IME) adjustment. This percentage varies, depending on the ratio of residents to beds.

Additional payments may be made for cases that involve new technologies or medical services that have been approved for special add-on payments. In general, to qualify, a new technology or medical service must demonstrate that it is a substantial clinical improvement over technologies or services otherwise available, and that, absent an add-on payment, it would be inadequately paid under the regular DRG payment. In addition, certain transformative new devices and certain antimicrobial products may qualify under an alternative inpatient new technology add-on payment pathway by demonstrating that, absent an add-on payment, they would be inadequately paid under the regular DRG payment.

The costs incurred by the hospital for a case are evaluated to determine whether the hospital is eligible for an additional payment as an outlier case. This additional payment is designed to protect the hospital from large financial losses due to unusually expensive cases. Any eligible outlier payment is added to the DRG-adjusted base payment rate, plus any DSH, IME, and new technology or medical service add-on adjustments and, as we are proposing beginning in FY 2023 for IHS and Tribal hospitals and hospitals located in Puerto Rico, the proposed new supplemental payment.

Although payments to most hospitals under the IPPS are made on the basis of the standardized amounts, some categories of hospitals are paid in whole or in part based on their hospital-specific rate, which is determined from their costs in a base year. For example, sole community hospitals (SCHs) receive the higher of a hospital-specific rate based on their costs in a base year (the highest of FY 1982, FY 1987, FY 1996, or FY 2006) or the IPPS Federal rate based on the standardized amount. SCHs are the sole source of care in their areas. Specifically, section 1886(d)(5)(D)(iii) of the Act defines an SCH as a hospital that is located more than 35 road miles from another hospital or that, by reason of factors such as an isolated location, weather conditions, travel conditions, or absence of other like hospitals (as determined by the Secretary), is the sole source of hospital inpatient services reasonably available to Medicare beneficiaries. In addition, certain rural hospitals previously designated by the Secretary as essential access community hospitals are considered SCHs.

Under current law, the Medicare-dependent, small rural hospital (MDH) program is effective through FY 2022. For discharges occurring on or after October 1, 2007, but before October 1, 2022, an MDH receives the higher of the Federal rate or the Federal rate plus 75 percent of the amount by which the Federal rate is exceeded by the highest of its FY 1982, FY 1987, or FY 2002 hospital-specific rate. MDHs are a major source of care for Medicare beneficiaries in their areas. Section 1886(d)(5)(G)(iv) of the Act defines an MDH as a hospital that is located in a rural area (or, as amended by the Bipartisan Budget Act of 2018, a hospital located in a State with no rural area that meets certain statutory criteria), has not more than 100 beds, is not an SCH, and has a high percentage of Medicare discharges (not less than 60 percent of its inpatient days or discharges in its cost reporting year beginning in FY 1987 or in two of its three most recently settled Medicare cost reporting years). As section 50205 of the Bipartisan Budget Act extended the MDH program through FY 2022 only, for FY 2023, beginning on October 1, 2022, the MDH program will no longer be in effect absent a change in law. Because the MDH program is not authorized by statute beyond September 30, 2022, beginning October 1, 2022, all hospitals that previously qualified for MDH status under section 1886(d)(5)(G) of the Act will no longer have MDH status and will be paid based on the IPPS Federal rate.

Section 1886(g) of the Act requires the Secretary to pay for the capital-related costs of inpatient hospital services in accordance with a prospective payment system established by the Secretary. The basic methodology for determining capital prospective payments is set forth in our regulations at 42 CFR 412.308 and 412.312. Under the capital IPPS, payments are adjusted by the same DRG for the case as they are under the operating IPPS. Capital IPPS payments are also adjusted for IME and DSH, similar to the adjustments made under the operating IPPS. In addition, hospitals may receive outlier payments for those cases that have unusually high costs.

The existing regulations governing payments to hospitals under the IPPS are located in 42 CFR part 412, subparts A through M.

2. Hospitals and Hospital Units Excluded From the IPPS

Under section 1886(d)(1)(B) of the Act, as amended, certain hospitals and hospital units are excluded from the IPPS. These hospitals and units are: Inpatient rehabilitation facility (IRF) hospitals and units; long-term care hospitals (LTCHs); psychiatric hospitals and units; children's hospitals; cancer hospitals; extended neoplastic disease care hospitals, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa). Religious nonmedical health care

institutions (RNHCIs) are also excluded from the IPPS. Various sections of the Balanced Budget Act of 1997 (BBA) (Pub. L. 105–33), the Medicare, Medicaid and SCHIP [State Children's Health Insurance Program] Balanced Budget Refinement Act of 1999 (BBRA, Pub. L. 106–113), and the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA, Pub. L. 106–554) provide for the implementation of PPSs for IRF hospitals and units, LTCHs, and psychiatric hospitals and units (referred to as inpatient psychiatric facilities (IPFs)). (We note that the annual updates to the LTCH PPS are included along with the IPPS annual update in this document. Updates to the IRF PPS and IPF PPS are issued as separate documents.) Children's hospitals, cancer hospitals, hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa), and RNHCIs continue to be paid solely under a reasonable cost-based system, subject to a rate-of-increase ceiling on inpatient operating costs. Similarly, extended neoplastic disease care hospitals are paid on a reasonable cost basis, subject to a rate-of-increase ceiling on inpatient operating costs.

The existing regulations governing payments to excluded hospitals and hospital units are located in 42 CFR parts 412 and 413.

3. Long-Term Care Hospital Prospective Payment System (LTCH PPS)

The Medicare prospective payment system (PPS) for LTCHs applies to hospitals described in section 1886(d)(1)(B)(iv) of the Act, effective for cost reporting periods beginning on or after October 1, 2002. The LTCH PPS was established under the authority of sections 123 of the BBRA and section 307(b) of the BIPA (as codified under section 1886(m)(1) of the Act). Section 1206(a) of the Pathway for SGR Reform Act of 2013 (Pub. L. 113–67) established the site neutral payment rate under the LTCH PPS, which made the LTCH PPS a dual rate payment system beginning in FY 2016. Under this statute, effective for LTCH's cost reporting periods beginning in FY 2016 cost reporting period, LTCHs are generally paid for discharges at the site neutral payment rate unless the discharge meets the patient criteria for payment at the LTCH PPS standard Federal payment rate. The existing regulations governing payment under the LTCH PPS are located in 42 CFR part 412, subpart O. Beginning October 1, 2009, we issue the annual updates to the LTCH PPS in the same documents that update the IPPS.

4. Critical Access Hospitals (CAHs)

Under sections 1814(l), 1820, and 1834(g) of the Act, payments made to critical access hospitals (CAHs) (that is, rural hospitals or facilities that meet certain statutory requirements) for inpatient and outpatient services are generally based on 101 percent of reasonable cost. Reasonable cost is determined under the provisions of section 1861(v) of the Act and existing regulations under 42 CFR part 413.

5. Payments for Graduate Medical Education (GME)

Under section 1886(a)(4) of the Act, costs of approved educational activities are excluded from the operating costs of inpatient hospital services. Hospitals with approved graduate medical education (GME) programs are paid for the direct costs of GME in accordance with section 1886(h) of the Act. The amount of payment for direct GME costs for a cost reporting period is based on the hospital's number of residents in that period and the hospital's costs per resident in a base year. The existing regulations governing payments to the various types of hospitals are located in 42 CFR part 413.

C. Summary of Provisions of Recent Legislation That Would Be Implemented in This Proposed Rule

1. The Medicare Access and CHIP Reauthorization Act of 2015 (Pub. L. 114–10)

Section 414 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA, Pub. L. 114–10) specifies a 0.5 percent positive adjustment to the standardized amount of Medicare payments to acute care hospitals for FYs 2018 through 2023. These adjustments follow the recoupment adjustment to the standardized amounts under section 1886(d) of the Act based upon the Secretary's estimates for discharges occurring from FYs 2014 through 2017 to fully offset $11 billion, in accordance with section 631 of the ATRA. The FY 2018 adjustment was subsequently adjusted to 0.4588 percent by section 15005 of the 21st Century Cures Act.

D. Summary of the Provisions of This Proposed Rule

In this proposed rule, we set forth proposed payment and policy changes to the Medicare IPPS for FY 2023 operating costs and capital-related costs of acute care hospitals and certain hospitals and hospital units that are excluded from IPPS. In addition, we set forth proposed changes to the payment rates, factors, and other payment and policy-related changes to programs associated with payment rate policies under the LTCH PPS for FY 2023.

The following is a general summary of the changes that we are proposing to make in this proposed rule.

1. Proposed Changes to MS–DRG Classifications and Recalibrations of Relative Weights

In section II. of the preamble of this proposed rule, we include the following:

- Proposed changes to MS–DRG classifications based on our yearly review for FY 2023.
- Proposed adjustment to the standardized amounts under section 1886(d) of the Act for FY 2023 in accordance with the amendments made to section 7(b)(1)(B) of Public Law 110–90 by section 414 of the MACRA.
- Proposed recalibration of the MS–DRG relative weights, including a proposed 10 percent cap on decreases in an MS–DRG relative weight from one fiscal year to the next.
- A discussion of the proposed FY 2023 status of new technologies approved for add-on payments for FY 2022, a presentation of our evaluation and analysis of the FY 2023 applicants for add-on payments for high-cost new medical services and technologies (including public input, as directed by Pub. L. 108–173, obtained in a town hall meeting) for applications not submitted under an alternative pathway, and a discussion of the proposed status of FY 2023 new technology applicants under the alternative pathways for certain medical devices and certain antimicrobial products.
- A proposal to use National Drug Codes (NDCs) to identify cases involving use of therapeutic agents approved for new technology add-on payments.
- A proposal to publicly post online future applications for new technology add-on payments. Specifically, beginning with the FY 2024 application cycle, we are proposing to post online the completed application forms and certain related materials and updated application information submitted subsequent to the initial application submission for new technology add-on payments, with the exception of certain cost and volume information and certain additional materials (as discussed more fully in section II.F.9. of this proposed rule), no later than the issuance of the proposed rule.

2. Proposed Changes to the Hospital Wage Index for Acute Care Hospitals

In section III. of the preamble of this proposed rule we are proposing to make revisions to the wage index for acute care hospitals and the annual update of the wage data. Specific issues addressed include, but were not limited to, the following:

- The proposed FY 2023 wage index update using wage data from cost reporting periods beginning in FY 2019.
- Calculation, analysis, and implementation of the proposed occupational mix adjustment to the wage index for acute care hospitals for FY 2023 based on the 2019 Occupational Mix Survey.
- Proposed application of the rural, imputed and frontier State floors, and continuation of the low wage index hospital policy.
- Proposed revisions to the wage index for acute care hospitals, based on hospital redesignations and reclassifications under sections 1886(d)(8)(B), (d)(8)(E), and (d)(10) of the Act.
- Proposed adjustment to the wage index for acute care hospitals for FY 2023 based on commuting patterns of hospital employees who reside in a county and work in a different area with a higher wage index.
- Proposed permanent cap on annual wage index decreases.
- Proposed labor-related share for the proposed FY 2023 wage index.

3. Other Decisions and Proposed Changes to the IPPS for Operating Costs

In section V. of the preamble of this proposed rule, we discuss proposed changes or clarifications of a number of the provisions of the regulations in 42 CFR parts 412 and 413, including the following:

- Proposed inpatient hospital update for FY 2023.
- Proposed updated national and regional case-mix values and discharges for purposes of determining RRC status.
- Proposed payment adjustment for low-volume hospitals for FY 2023 and subsequent years.
- The statutorily required IME adjustment factor for FY 2023.
- Proposed changes to the methodologies for determining Medicare DSH payments and the additional payments for uncompensated care.
- Proposed new supplemental payment for IHS/Tribal and Puerto Rico hospitals.
- Proposed revisions to the regulations regarding the counting of days associated with section 1115 demonstrations in the Medicaid fraction.
- Discussion of statutory expiration of the MDH program at the end of FY 2022.
- Proposed requirements for payment adjustments under the Hospital Readmissions Reduction Program for FY 2023.
- The provision of estimated and newly established performance standards for the calculation of value-based incentive payments, as well as a proposal to suppress multiple measures and provide net-neutral payment adjustments under the Hospital Value-Based Purchasing Program.
- Proposed requirements for payment adjustments to hospitals under the HAC Reduction Program for FY 2023.
- Discussion of and proposed changes relating to the implementation of the Rural Community Hospital Demonstration Program in FY 2023.
- Proposed GME payment change in response to *Milton S. Hershey Medical Center et al* v. *Becerra* litigation.
- Proposed nursing and allied health education program Medicare Advantage (MA) add-on rates and direct GME MA percent reductions for CYs 2020 and 2021.
- Proposal to allow Medicare GME affiliation agreements within certain rural track full-time equivalent limitations.
- Proposed payment adjustment for certain clinical trial and expanded access use immunotherapy cases.

4. Proposed FY 2023 Policy Governing the IPPS for Capital-Related Costs

In section VI. of the preamble to this proposed rule, we discuss the proposed payment policy requirements for capital-related costs and capital payments to hospitals for FY 2023.

5. Proposed Changes to the Payment Rates for Certain Excluded Hospitals: Rate-of-Increase Percentages

In section VII. of the preamble of this proposed rule, we discuss—

- Proposed changes to payments to certain excluded hospitals for FY 2023.
- Proposed continued implementation of the Frontier Community Health Integration Project (FCHIP) Demonstration.

6. Proposed Changes to the LTCH PPS

In section VIII. of the preamble of this proposed rule, we set forth proposed changes to the LTCH PPS Federal payment rates, factors, and other payment rate policies under the LTCH PPS for FY 2023.

7. Proposed Changes Relating to Quality Data Reporting for Specific Providers and Suppliers

In section IX. of the preamble of this proposed rule, we address the following:

- Proposed requirements for the Hospital Inpatient Quality Reporting (IQR) Program.
- Proposed changes to the requirements for the quality reporting program for PPS-exempt cancer hospitals (PCHQR Program).
- For the Long Term Care Hospital Quality Reporting Program (LTCH QRP), we are requesting information on CMS' overarching principles for measuring healthcare disparities across CMS Quality Programs, including the LTCH QRP. We are also requesting information on the potential adoption of one future National Healthcare Safety Network (NHSN) digital quality measure (dQM) for the LTCH QRP, as well as quality measure concepts under consideration for future years.
- Proposed changes to requirements pertaining to eligible hospitals and CAHs participating in the Medicare Promoting Interoperability Program.

8. Other Proposals and Comment Solicitations Included in This Proposed Rule

Section X. of the preamble to this proposed rule includes the following:

- Proposals to codify policies related to the costs incurred for qualified and non-qualified deferred compensation plans.
- Proposed changes pertaining to the CoPs at 42 CFR part 482 for hospitals, and at 42 CFR part 485, subpart F, for CAHs.
- Solicitation of comments on the appropriateness of payment adjustments that would account for the additional resource costs for hospitals for the procurement of wholly domestically made NIOSH-approved surgical N95 respirators.

9. Other Provisions of This Proposed Rule

Section XI. of the preamble to this proposed rule includes our discussion of the MedPAC Recommendations.

Section XII. of the preamble to this proposed rule includes the following:

- A descriptive listing of the public use files associated with the proposed rule.
- The collection of information requirements for entities based on our proposals.
- Information regarding our responses to public comments.

10. Determining Prospective Payment Operating and Capital Rates and Rate-of-Increase Limits for Acute Care Hospitals

In sections II. and III. of the Addendum to this proposed rule, we set forth proposed changes to the amounts and factors for determining the proposed FY 2023 prospective payment rates for operating costs and capital-related costs for acute care hospitals. We proposed to establish the threshold amounts for outlier cases. In addition, in section IV. of the Addendum to this proposed rule, we address the proposed update factors for determining the rate-of-increase limits for cost reporting periods beginning in FY 2023 for certain hospitals excluded from the IPPS.

11. Determining Prospective Payment Rates for LTCHs

In section V. of the Addendum to the proposed rule, we set forth proposed changes to the amounts and factors for determining the proposed FY 2023 LTCH PPS standard Federal payment rate and other factors used to determine LTCH PPS payments under both the LTCH PPS standard Federal payment rate and the site neutral payment rate in FY 2023. We are proposing to establish the adjustments for the wage index, labor-related share, the cost-of-living adjustment, and high-cost outliers, including the applicable fixed-loss amounts and the LTCH cost-to-charge ratios (CCRs) for both payment rates.

12. Impact Analysis

In Appendix A of the proposed rule, we set forth an analysis of the impact the proposed changes would have on affected acute care hospitals, CAHs, LTCHs and other entities.

13. Recommendation of Update Factors for Operating Cost Rates of Payment for Hospital Inpatient Services

In Appendix B of the proposed rule, as required by sections 1886(e)(4) and (e)(5) of the Act, we provide our recommendations of the appropriate percentage changes for FY 2023 for the following:

- A single average standardized amount for all areas for hospital inpatient services paid under the IPPS for operating costs of acute care hospitals (and hospital-specific rates applicable to SCHs and MDHs).
- Target rate-of-increase limits to the allowable operating costs of hospital inpatient services furnished by certain hospitals excluded from the IPPS.
- The LTCH PPS standard Federal payment rate and the site neutral payment rate for hospital inpatient services provided for LTCH PPS discharges.

14. Discussion of Medicare Payment Advisory Commission Recommendations

Under section 1805(b) of the Act, MedPAC is required to submit a report to Congress, no later than March 15 of each year, in which MedPAC reviews and makes recommendations on Medicare payment policies. MedPAC's March 2022 recommendations concerning hospital inpatient payment policies address the update factor for hospital inpatient operating costs and capital-related costs for hospitals under the IPPS. We address these recommendations in Appendix B of this proposed rule. For further information relating specifically to the MedPAC March 2022 report or to obtain a copy of the report, contact MedPAC at (202) 220–3700 or visit MedPAC's website at *https://www.medpac.gov.*

E. Advancing Health Information Exchange

The Department of Health and Human Services (HHS) has a number of initiatives designed to encourage and support the adoption of interoperable health information technology and to promote nationwide health information exchange to improve health care and patient access to their digital health information.

To further interoperability in post-acute care settings, CMS and the Office of the National Coordinator for Health Information Technology (ONC) participate in the Post-Acute Care Interoperability Workgroup (PACIO) to facilitate collaboration with industry stakeholders to develop Health Level Seven International® (HL7) Fast Healthcare Interoperability Resources® (FHIR) standards. These standards could support the exchange and reuse of patient assessment data derived from the post-acute care (PAC) setting assessment tools, such as Minimum Data Set (MDS), Inpatient Rehabilitation Facility-Patient Assessment Instrument (IRF–PAI), Long Term Care Hospital (LTCH) Continuity Assessment Record and Evaluation (CARE) Data Set (LCDS), Outcome and Assessment Information Set (OASIS), and other sources.[1] [2] The PACIO Project has focused on HL7 FHIR implementation guides for functional status, cognitive status and new use cases on advance directives, re-assessment timepoints, and Speech, Language, Swallowing Cognitive communications and Hearing (SPLASCH).[3] We encourage PAC provider and health internet technology (IT) vendor participation as the efforts advance. The CMS Data Element Library (DEL) continues to be updated and serves as a resource for PAC assessment data elements and their associated mappings to health IT standards, such as Logical Observation Identifiers Names and Codes (LOINC) and Systematized Nomenclature of Medicine Clinical Terms (SNOMED).[4] The DEL furthers CMS' goal of data standardization and interoperability. Standards in the DEL can be referenced on the CMS website (*https://del.cms.gov/DELWeb/pubHome*) and in the ONC Interoperability Standards Advisory (ISA). The 2022 ISA is available at *https://www.healthit.gov/isa/sites/isa/files/inline-files/2022-ISA-Reference-Edition.pdf.*

The 21st Century Cures Act (Cures Act) (Pub. L. 114–255, enacted December 13, 2016) required HHS and ONC to take steps further interoperability for providers in settings across the care continuum.[5] Specifically, section 4003(b) of the Cures Act required ONC to take steps to advance interoperability through the development of a trusted exchange framework and common agreement aimed at establishing a universal floor of interoperability across the country. On January 18, 2022, ONC announced a significant milestone by releasing the Trusted Exchange Framework [6] and Common Agreement Version 1.[7] The Trusted Exchange Frameworkis a set of non-binding principles for health information exchange, and the Common Agreement is a contract that advances those principles. The Common Agreement and the incorporated by reference Qualified Health Information Network Technical Framework Version 1 establish the technical infrastructure model and governing approach for different health information networks and their users to securely share clinical

information with each other, all under commonly agreed to terms. The technical and policy architecture of how exchange occurs under the Trusted Exchange Framework and the Common Agreement follows a network-of-networks structure, which allows for connections at different levels and is inclusive of many different types of entities at those different levels, such as health information networks, healthcare practices, hospitals, public health agencies, and Individual Access Services (IAS) Providers.[8] For more information, we refer readers to *https://www.healthit.gov/topic/interoperability/trusted-exchange-framework-and-common-agreement.*

We invite providers to learn more about these important developments and how they are likely to affect hospitals.

F. Proposed Use of FY 2021 Data and Proposed Methodology Modifications for the FY 2023 IPPS and LTCH PPS Ratesetting

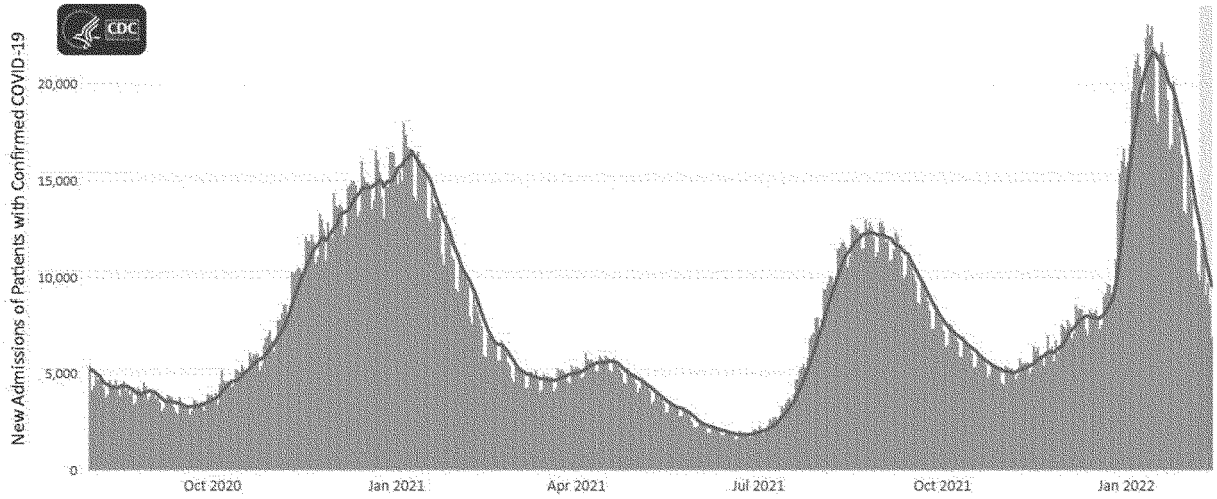
We primarily use two data sources in the IPPS and LTCH PPS ratesetting: Claims data and cost report data. The claims data source is the MedPAR file, which includes fully coded diagnostic and procedure data for all Medicare inpatient hospital bills for discharges in a fiscal year. The cost report data source is the Medicare hospital cost report data files from the most recent quarterly Healthcare Cost Report Information System (HCRIS) release. Our goal is always to use the best available data overall for ratesetting. Ordinarily, the best available MedPAR data is the most recent MedPAR file that contains claims from discharges for the fiscal year that is 2 years prior to the fiscal year that is the subject of the rulemaking. Ordinarily, the best available cost report data is based on the cost reports beginning 3 fiscal years prior to the fiscal year that is the subject of the rulemaking. However, in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44789 through 44793), we finalized our proposal to use FY 2019 data for the FY 2022 ratesetting for circumstances where the FY 2020 data (the most recently available data at the time of rulemaking) was significantly impacted by the COVID–19 PHE.

As we discussed in the FY 2022 IPPS/LTCH PPS final rule, the FY 2020 MedPAR claims file and the FY 2019 HCRIS dataset both contained data that was significantly impacted by the COVID–19 PHE, primarily in that the utilization of services at IPPS hospitals and LTCHs was generally markedly different for certain types of services in FY 2020 than would have been expected in the absence of the PHE. However, the most recent vaccination and hospitalization data from the CDC at the time of development of that rule supported our belief at the time that the risk of COVID–19 in FY 2022 would be significantly lower than the risk of COVID–19 in FY 2020 and there would be fewer COVID–19 hospitalizations for Medicare beneficiaries in FY 2022 than there were in FY 2020. Therefore, we finalized our proposal to use FY 2019 data for the FY 2022 ratesetting for circumstances where the FY 2020 data was significantly impacted by the COVID–19 PHE, based on the belief that FY 2019 data from before the COVID–19 PHE would be a better overall approximation of the FY 2022 inpatient experience at both IPPS hospitals and LTCHs. For example, we used the FY 2019 MedPAR claims data for purposes where we ordinarily would have used the FY 2020 MedPAR claims data. We also used cost report data from the FY 2018 HCRIS file for purposes where we ordinarily would have used the FY 2019 HCRIS file (since the FY 2019 cost report data from HCRIS contained many cost reports ending in FY 2020 based on each hospital's cost reporting period).

Similar to our analysis of the FY 2020 MedPAR claims file and the FY 2019 HCRIS dataset for the FY 2022 IPPS/LTCH PPS rulemaking, the FY 2021 MedPAR claims file and the FY 2020 HCRIS dataset also both contain data that was significantly impacted by the virus that causes COVID–19, primarily in that the utilization of services at IPPS hospitals and LTCHs was again generally markedly different for certain types of services in FY 2021 than would have been expected in the absence of the virus that causes COVID–19. Specifically, the share of admissions at IPPS hospitals and LTCHs for MS–DRGs and MS–LTC–DRGs associated with the treatment of COVID–19 continued to remain significantly higher than levels prior to the COVID–19 PHE. For example, in FY 2019, the share of IPPS cases and LTCH PPS standard Federal payment rate cases grouped to MS–DRG and MS–LTC–DRG 177 (Respiratory infections and inflammations with MCC) was approximately 1 percent and 2 percent, respectively. In comparison, in FY 2021, the share of IPPS cases and LTCH PPS standard Federal payment rate cases grouped to MS–DRG 177 was approximately 6 percent and 8 percent, respectively. However, as we discuss further in this section, in light of the expected continued impact on hospitalizations of the virus that causes COVID–19, we believe it is appropriate to use the FY 2021 data reflecting this impact for this FY 2023 IPPS/LTCH PPS rulemaking, with some proposed modifications to our usual ratesetting methodologies to account for the anticipated decline in COVID–19 hospitalizations of Medicare beneficiaries at IPPS hospitals and LTCHs as compared to FY 2021.

The CDC graph below illustrates new inpatient hospital admissions of patients with confirmed COVID–19 from August 1, 2020 through February 15, 2022. (*https://www.cdc.gov/coronavirus/2019-ncov/covid-data/covidview/02182022/images/hospitalizations_02182022.jpg?_=35767,* accessed February 22, 2022)

[8] The Common Agreement defines Individual Access Services (IAS) as ''with respect to the Exchange Purposes definition, the services provided utilizing the Connectivity Services, to the extent consistent with Applicable Law, to an Individual with whom the QHIN, Participant, or Subparticipant has a Direct Relationship to satisfy that Individual's ability to access, inspect, or obtain a copy of that Individual's Required Information that is then maintained by or for any QHIN, Participant, or Subparticipant.'' The Common Agreement defines ''IAS Provider'' as: ''Each QHIN, Participant, and Subparticipant that offers Individual Access Services.'' *See* Common Agreement for Nationwide Health Information Interoperability Version 1, at 7 (Jan. 2022), *https://www.healthit.gov/sites/default/files/page/2022-01/Common_Agreement_for_Nationwide_Health_Information_Interoperability_Version_1.pdf.*



The low point of the graph (late June 2021) approximately coincides with the time of the development of the FY 2022 IPPS/LTCH PPS final rule and generally supports, in conjunction with the other factors discussed in that rulemaking (including the most recent vaccination data from the CDC), our assumption in the final rule that the FY 2022 time period would be more similar to the time period prior to the PHE. However, as can be seen in the graph, the virus that causes COVID–19 has continued to significantly impact hospitalizations for the time period subsequent to the development of the FY 2022 IPPS/LTCH PPS final rule. As the CDC has noted, the most recent increase in hospitalizations has been primarily associated with the Omicron variant of the virus.[9] The CDC has stated that new variants will continue to emerge. Viruses constantly change through mutation and sometimes these mutations result in a new variant of the virus. The CDC and other public health organizations monitor all variants of the virus that causes COVID–19 in the United States and globally. Scientists monitor all variants but may classify certain ones as variants being monitored, variants of interest, variants of concern and variants of high consequence. Some variants spread more easily and quickly than other variants, which may lead to more cases of COVID–19. Even if a variant causes less severe disease in general, an increase in the overall number of cases could cause an increase in hospitalizations. (see *https://www.cdc.gov/coronavirus/2019-ncov/variants/about-variants.html,* accessed February 25, 2022)

[9] *https://www.cdc.gov/coronavirus/2019-ncov/variants/omicron-variant.html.*

Given the effects of the virus that causes COVID–19 in the Medicare FY 2020 data, the Medicare FY 2021 data, and the CDC hospitalization data, coupled with the expectation for future variants, we believe that it is reasonable to assume that some Medicare beneficiaries will continue to be hospitalized with COVID–19 at IPPS hospitals and LTCHs in FY 2023. Accordingly, we believe it is appropriate to use FY 2021 data, specifically the FY 2021 MedPAR claims file and the FY 2020 HCRIS dataset (which contains data from many cost reports ending in FY 2021 based on each hospital's cost reporting period) as the most recent available data during the period of the COVID–19 PHE, for purposes of the FY 2023 IPPS and LTCH PPS ratesetting. However, we also believe it is reasonable to assume based on the information available at this time that there will be fewer COVID–19 hospitalizations in FY 2023 than in FY 2021 given the more recent trends in the CDC hospitalization data since the Omicron variant peak in January, 2022. Accordingly, because we anticipate Medicare inpatient hospitalizations for COVID–19 will continue in FY 2023 but at a lower level, we are proposing to use FY 2021 data for purposes of the FY 2023 IPPS and LTCH PPS ratesetting but with modifications to our usual ratesetting methodologies to account for the anticipated decline in COVID–19 hospitalizations of Medicare beneficiaries at IPPS hospitals and LTCHs as compared to FY 2021.

First, we are proposing to modify the calculation of the FY 2023 MS–DRG and MS–LTC–DRG relative weights. We observed that COVID–19 cases were impacting the relative weights as calculated using the FY 2021 MedPAR data for a few COVID–19-related MS–DRGs and MS–LTC–DRGs. As an example, for MS–DRG and MS–LTC–DRG 870 (Septicemia or Severe Sepsis with MV >96 hours), the MS–DRG and MS–LTC–DRG relative weights calculated using the FY 2021 MedPAR data are approximately 9 and 3 percent higher, respectively, compared to their relative weights if calculated excluding COVID–19 cases. Because this MS–DRG contains a mix of COVID–19 cases and non-COVID–19 cases with different average costs, the relative weight for this MS–DRG is dependent on that mix of cases. As noted previously, we believe it is reasonable to assume that there will be fewer COVID–19 hospitalizations among Medicare beneficiaries in FY 2023 than there were in FY 2021; however it is not possible to know precisely how COVID–19 hospitalizations in FY 2023 will compare to FY 2021. We believe that averaging the relative weights as calculated with and without the COVID–19 cases reflected in the FY 2021 MedPAR data would reflect a reasonable estimation of the case mix for FY 2023 based on the information available at this time, and more accurately estimate the relative resource use for the cases treated in FY 2023. Therefore, we are proposing to calculate the relative weights for FY 2023 by first calculating two sets of weights, one including and one excluding COVID–19 claims, and then averaging the two sets of relative weights to determine the proposed FY 2023 relative weight values. We believe this proposed modification to our relative weight setting methodology would appropriately reduce, but not remove entirely, the effect of COVID–19 cases on the relative weight calculations, consistent with our expectation that Medicare inpatient hospitalizations for COVID–19 will continue in FY 2023 at a lower level as compared to FY 2021,

and provide a more accurate estimate of relative resource use for FY 2023 than if we were to calculate the proposed relative weights using all applicable cases in the FY 2021 data. The proposal for modifying the methodology for determining the FY 2023 IPPS MS–DRG relative weights is discussed in greater detail in section II.E. of the preamble of this proposed rule. The proposal for modifying the methodology for determining the FY 2023 LTCH PPS MS–LTC–DRG relative weights is discussed in greater detail in section VIII.B. of the preamble of this proposed rule.

We also are proposing to modify our methodologies for determining the FY 2023 outlier fixed-loss amount for IPPS cases and LTCH PPS standard Federal payment rate cases. The methodologies for determining both of these outlier fixed-loss amounts include calculating and applying a charge inflation factor to increase charges from the claim year to the rulemaking year, as well as calculating and applying CCR adjustment factors to adjust CCRs used to make payments in the current year to the rulemaking year. The charge inflation factors calculated using the two most recently available years of MedPAR claims data (FY 2020 and FY 2021) that would ordinarily be used for this FY 2023 proposed rule to inflate the charges on the FY 2021 MedPAR claims were abnormally high as compared to recent historical levels prior to the PHE (for example, for the IPPS, approximately 10 percent based on the FY 2020 and FY 2021 MedPAR claims data as compared to approximately 6 percent based on the FY 2018 and FY 2019 MedPAR claims data). Furthermore, the IPPS operating and capital CCR adjustment factors calculated based on the percentage changes in the CCRs from the December 2020 update of the PSF to the December 2021 update of the PSF that would ordinarily be used for this FY 2023 proposed rule to adjust the CCRs from the December 2021 update of the PSF were also abnormally high as compared to recent historical levels prior to the PHE (for example, for the IPPS operating CCR adjustment factor, a factor of approximately 1.03 based on the December 2020 and December 2021 updates to the PSF as compared to a factor of approximately 0.97 based on the March 2019 and March 2020 updates to the PSF). We believe these abnormally high charge inflation and CCR adjustment factors as compared to historical levels were partially due to the high number of COVID–19 cases with higher charges that were treated in IPPS hospitals and LTCHs in FY 2021. As we previously stated, we believe there will be fewer COVID–19 cases in FY 2023 than in FY 2021. Therefore, we do not believe it is reasonable to assume charges and CCRs will continue to increase at these abnormally high rates. Consequently, when determining the FY 2023 outlier fixed-loss amounts for IPPS cases and LTCH PPS standard Federal payment rate cases, we are proposing to inflate the charges on the FY 2021 MedPAR claims using charge inflation factors computed by comparing the average covered charge per case in the March 2019 MedPAR file of FY 2018 to the average covered charge per case in the March 2020 MedPAR file of FY 2019, which is the last 1-year period prior to the COVID–19 PHE. We also are proposing to adjust the CCRs from the December 2021 update of the PSF by comparing the percentage change in the national average case-weighted CCR from the March 2019 update of the PSF to the national average case-weighted CCR from the March 2020 update of the PSF, which is the last 1-year period prior to the COVID–19 PHE. We believe using the charge inflation factors and CCR adjustment factors derived from data prior to the COVID–19 PHE would provide a more reasonable approximation of the increase in costs that will occur from FY 2021 to FY 2023 because we do not believe the charge inflation that has occurred during the PHE will continue as the number of higher cost COVID–19 cases declines. The proposal for modifying the methodology for determining the FY 2023 outlier fixed-loss amounts for IPPS cases is discussed in greater detail in section II.A.4. of the addendum to this proposed rule. The proposal for modifying the methodology for determining the FY 2023 outlier fixed-loss amounts for LTCH PPS standard Federal payment rate cases is discussed in greater detail in section V.D.3. of the addendum to this proposed rule.

As discussed in section I.O. of Appendix A of this proposed rule, we are also requesting comments on, as an alternative to our proposed approach, the use of the FY 2021 data for purposes of FY 2023 ratesetting without these proposed modifications to our usual methodologies for the calculation of the FY 2023 MS–DRG and MS–LTC–DRG relative weights or the usual methodologies used to determine the FY 2023 outlier fixed-loss amount for IPPS cases and LTCH PPS standard Federal payment rate cases. We note that the FY 2023 outlier fixed-loss amount would be significantly higher under this alternative approach. In order to illustrate the effect of our proposed modifications on the relative weights and fixed loss amount, we are making available supplemental information, including the relative weights and fixed loss amount calculated without the proposed modifications to our usual methodologies, as described in section I.O. of Appendix A of this proposed rule. We refer the reader to section I.O. of Appendix A of this proposed rule for a discussion of the files that we are making available with regard to our alternative approach.

II. Proposed Changes to Medicare Severity Diagnosis-Related Group (MS–DRG) Classifications and Relative Weights

A. Background

Section 1886(d) of the Act specifies that the Secretary shall establish a classification system (referred to as diagnosis-related groups (DRGs)) for inpatient discharges and adjust payments under the IPPS based on appropriate weighting factors assigned to each DRG. Therefore, under the IPPS, Medicare pays for inpatient hospital services on a rate per discharge basis that varies according to the DRG to which a beneficiary's stay is assigned. The formula used to calculate payment for a specific case multiplies an individual hospital's payment rate per case by the weight of the DRG to which the case is assigned. Each DRG weight represents the average resources required to care for cases in that particular DRG, relative to the average resources used to treat cases in all DRGs.

Section 1886(d)(4)(C) of the Act requires that the Secretary adjust the DRG classifications and relative weights at least annually to account for changes in resource consumption. These adjustments are made to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources.

B. Adoption of the MS–DRGs and MS–DRG Reclassifications

For information on the adoption of the MS–DRGs in FY 2008, we refer readers to the FY 2008 IPPS final rule with comment period (72 FR 47140 through 47189).

For general information about the MS–DRG system, including yearly reviews and changes to the MS–DRGs, we refer readers to the previous discussions in the FY 2010 IPPS/RY 2010 LTCH PPS final rule (74 FR 43764 through 43766) and the FYs 2011 through 2022 IPPS/LTCH PPS final rules (75 FR 50053 through 50055; 76

FR 51485 through 51487; 77 FR 53273; 78 FR 50512; 79 FR 49871; 80 FR 49342; 81 FR 56787 through 56872; 82 FR 38010 through 38085, 83 FR 41158 through 41258, 84 FR 42058 through 42165, 85 FR 58445 through 58596, 86 FR 44795 through 44961, respectively).

C. Proposed FY 2023 MS–DRG Documentation and Coding Adjustment

1. Background on the Prospective MS–DRG Documentation and Coding Adjustments for FY 2008 and FY 2009 Authorized by Public Law 110–90 and the Recoupment or Repayment Adjustment Authorized by Section 631 of the American Taxpayer Relief Act of 2012 (ATRA)

In the FY 2008 IPPS final rule with comment period (72 FR 47140 through 47189), we adopted the MS–DRG patient classification system for the IPPS, effective October 1, 2007, to better recognize severity of illness in Medicare payment rates for acute care hospitals. The adoption of the MS–DRG system resulted in the expansion of the number of DRGs from 538 in FY 2007 to 745 in FY 2008. By increasing the number of MS–DRGs and more fully taking into account patient severity of illness in Medicare payment rates for acute care hospitals, MS–DRGs encourage hospitals to improve their documentation and coding of patient diagnoses.

In the FY 2008 IPPS final rule with comment period (72 FR 47175 through 47186), we indicated that the adoption of the MS–DRGs had the potential to lead to increases in aggregate payments without a corresponding increase in actual patient severity of illness due to the incentives for additional documentation and coding. In that final rule with comment period, we exercised our authority under section 1886(d)(3)(A)(vi) of the Act, which authorizes us to maintain budget neutrality by adjusting the national standardized amount, to eliminate the estimated effect of changes in coding or classification that do not reflect real changes in case-mix. Our actuaries estimated that maintaining budget neutrality required an adjustment of –4.8 percentage points to the national standardized amount. We provided for phasing in this –4.8 percentage point adjustment over 3 years. Specifically, we established prospective documentation and coding adjustments of –1.2 percentage points for FY 2008, –1.8 percentage points for FY 2009, and –1.8 percentage points for FY 2010.

On September 29, 2007, Congress enacted the TMA [Transitional Medical Assistance], Abstinence Education, and QI [Qualifying Individuals] Programs Extension Act of 2007 (Pub. L. 110–90). Section 7(a) of Public Law 110–90 reduced the documentation and coding adjustment made as a result of the MS–DRG system that we adopted in the FY 2008 IPPS final rule with comment period to –0.6 percentage point for FY 2008 and –0.9 percentage point for FY 2009.

As discussed in prior year rulemakings, and most recently in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56780 through 56782), we implemented a series of adjustments required under sections 7(b)(1)(A) and 7(b)(1)(B) of Public Law 110–90, based on a retrospective review of FY 2008 and FY 2009 claims data. We completed these adjustments in FY 2013 but indicated in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53274 through 53275) that delaying full implementation of the adjustment required under section 7(b)(1)(A) of Public Law 110–90 until FY 2013 resulted in payments in FY 2010 through FY 2012 being overstated, and that these overpayments could not be recovered under Public Law 110–90.

In addition, as discussed in prior rulemakings and most recently in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38008 through 38009), section 631 of the American Taxpayer Relief Act of 2012 (ATRA) amended section 7(b)(1)(B) of Public Law 110–90 to require the Secretary to make a recoupment adjustment or adjustments totaling $11 billion by FY 2017. This adjustment represented the amount of the increase in aggregate payments as a result of not completing the prospective adjustment authorized under section 7(b)(1)(A) of Public Law 110–90 until FY 2013.

2. Adjustments Made for FYs 2018, 2019, 2020, 2021, and 2022 as Required Under Section 414 of Public Law 114–10 (MACRA) and Section 15005 of Public Law 114–255

As stated in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56785), once the recoupment required under section 631 of the ATRA was complete, we had anticipated making a single positive adjustment in FY 2018 to offset the reductions required to recoup the $11 billion under section 631 of the ATRA. However, section 414 of the MACRA (which was enacted on April 16, 2015) replaced the single positive adjustment we intended to make in FY 2018 with a 0.5 percentage point positive adjustment for each of FYs 2018 through 2023. In the FY 2017 rulemaking, we indicated that we would address the adjustments for FY 2018 and later fiscal years in future rulemaking. Section 15005 of the 21st Century Cures Act (Pub. L. 114–255), which was enacted on December 13, 2016, amended section 7(b)(1)(B) of the TMA, as amended by section 631 of the ATRA and section 414 of the MACRA, to reduce the adjustment for FY 2018 from a 0.5 percentage point positive adjustment to a 0.4588 percentage point positive adjustment. As we discussed in the FY 2018 rulemaking, we believe the directive under section 15005 of Public Law 114–255 is clear. Therefore, in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38009) for FY 2018, we implemented the required +0.4588 percentage point adjustment to the standardized amount. In the FY 2019 IPPS/LTCH PPS final rule (83 FR 41157), the FY 2020 IPPS/LTCH PPS final rule (84 FR 42057), FY 2021 IPPS/LTCH PPS final rule (85 FR 58444 and 58445), and the FY 2022 IPPS/LTCH PPS final rule (86 FR 44794 and 44795), consistent with the requirements of section 414 of the MACRA, we implemented 0.5 percentage point positive adjustments to the standardized amount for FY 2019, FY 2020, FY 2021, and FY 2022, respectively. We indicated the FY 2018, FY 2019, FY 2020, FY 2021, and FY 2022 adjustments were permanent adjustments to payment rates. We also stated that we plan to propose a future adjustment required under section 414 of the MACRA for FY 2023 in future rulemaking.

3. Proposed Adjustment for FY 2023

Consistent with the requirements of section 414 of the MACRA, we are proposing to implement a 0.5 percentage point positive adjustment to the standardized amount for FY 2023. This would constitute a permanent adjustment to payment rates. This proposed 0.5 percentage point positive adjustment is the final adjustment prescribed by section 414 of the MACRA. Along with the 0.4588 percentage point positive adjustment for FY 2018, and the 0.5 percentage point positive adjustments for FY 2019, FY 2020, FY 2021, and FY 2022, this final proposed adjustment will result in combined positive adjustment of 2.9588 percentage points (or the sum of the adjustments for FYs 2018 through 2023) to the standardized amount.

D. Proposed Changes to Specific MS–DRG Classifications

1. Discussion of Changes to Coding System and Basis for Proposed FY 2023 MS–DRG Updates

a. Conversion of MS–DRGs to the International Classification of Diseases, 10th Revision (ICD–10)

As of October 1, 2015, providers use the International Classification of Diseases, 10th Revision (ICD–10) coding system to report diagnoses and procedures for Medicare hospital inpatient services under the MS–DRG system instead of the ICD–9–CM coding system, which was used through September 30, 2015. The ICD–10 coding system includes the International Classification of Diseases, 10th Revision, Clinical Modification (ICD–10–CM) for diagnosis coding and the International Classification of Diseases, 10th Revision, Procedure Coding System (ICD–10–PCS) for inpatient hospital procedure coding, as well as the ICD–10–CM and ICD–10–PCS Official Guidelines for Coding and Reporting. For a detailed discussion of the conversion of the MS–DRGs to ICD–10, we refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 56787 through 56789).

b. Basis for Proposed FY 2023 MS–DRG Updates

Given the need for more time to carefully evaluate requests and propose updates, as discussed in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38010), we changed the deadline to request updates to the MS–DRGs to November 1 of each year, which provided an additional five weeks for the data analysis and review process. In the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32472), we stated that with the continued increase in the number and complexity of the requested changes to the MS–DRG classifications since the adoption of ICD–10 MS–DRGs, and to consider as many requests as possible, more time is needed to carefully evaluate the requested changes, analyze claims data, and consider any proposed updates. We further stated we were changing the deadline to request changes to the MS–DRGs to October 20 of each year to allow for additional time for the review and consideration of any proposed updates. However, in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58445), due to the unique circumstances for the FY 2021 IPPS/LTCH PPS final rule for which we waived the delayed effective date, we maintained the deadline of November 1, 2020 for FY 2022 MS–DRG classification change requests. We also noted that we expected to reconsider a change in the deadline beginning with comments and suggestions submitted for FY 2023. In the FY 2022 IPPS/LTCH PPS proposed rule, we stated that while we continue to believe that a change in the deadline from November 1 to October 20 would provide hospitals sufficient time to assess potential impacts and inform future MS–DRG recommendations, we were maintaining the deadline of November 1 for FY 2023 MS–DRG classification change requests. As discussed in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44795), we received public comments expressing support for a future change to the deadline for requesting updates to the MS–DRG classifications from November 1 to October 20, and we noted in response that we may consider any changes to the deadline or frequency for submissions of requests for MS–DRG classification changes for future fiscal years. Beginning with FY 2024 MS–DRG classification change requests, we are changing the deadline to request changes to the MS–DRGs to October 20th of each year to allow for additional time for the review and consideration of any proposed updates. As previously discussed, we continue to believe such a change would allow hospitals sufficient time to assess potential impacts and inform future MS–DRG recommendations, while also providing CMS the additional time needed for evaluation of the requested changes, analysis of claims data, and consideration of any proposed updates.

We are also changing the process for submitting requested updates to the MS–DRG classifications, beginning with the FY 2024 MS–DRG classification change requests. CMS is in the process of implementing a new electronic application intake system, Medicare Electronic Application Request Information System™ (MEARIS™), that will be available for users to begin gaining familiarity with a new approach and process to submit new technology add-on payment applications, requests for ICD–10–PCS procedure codes, and other requests. To simplify and streamline the process for submission of standardized applications and requests that inform payment policy under the IPPS, we will also be using this new system for submission of MS–DRG classification change requests. We believe that submission of MS–DRG reclassification requests through MEARIS™ will not only help CMS to track such requests, but it will also create efficiencies for requestors when compared to the previous submission process.

Accordingly, beginning with the FY 2024 MS–DRG classification change requests, CMS will only accept such requests submitted via MEARIS™, and will no longer consider any such requests that are sent via email. We anticipate that, beginning April 5, 2022, MEARIS™ will be available for users to begin gaining familiarity with this new approach for submitting MS–DRG classification change requests. MEARIS™, including the mechanism for submitting MS–DRG classification change requests, can be accessed at *https://mearis.cms.gov.* We encourage users to register and begin using this system to provide feedback on their experience with this initial version. We note that within MEARIS™, we have built in several resources to support users, including a ''Resources'' section (available at *https://mearis.cms.gov/public/resources*) and technical support available under ''Useful Links'' at the bottom of the MEARIS™ site. Questions regarding the MEARIS™ system can be submitted to CMS using the form available under ''Contact'' at *https://mearis.cms.gov/public/resources?app=msdrg.*

We also note that, as discussed in section II.D.17. of the preamble of this proposed rule, effective January 5, 2022, MEARIS™ was made available for users to begin gaining familiarity with a new approach and process to submit ICD–10–PCS procedure code requests.

As noted previously, interested parties had to submit MS–DRG classification change requests for FY 2023 by November 1, 2021. As we have discussed in prior rulemaking, we may not be able to fully consider all of the requests that we receive for the upcoming fiscal year. We have found that, with the implementation of ICD–10, some types of requested changes to the MS–DRG classifications require more extensive research to identify and analyze all of the data that are relevant to evaluating the potential change. We note in the discussion that follows those topics for which further research and analysis are required, and which we will continue to consider in connection with future rulemaking. Interested parties should submit any comments and suggestions for FY 2024 by October 20, 2022 via the new electronic intake system, Medicare Electronic Application Request Information System™ (MEARIS™) at *https://mearis.cms.gov/public/home.*

As we did for the FY 2022 IPPS/LTCH PPS proposed rule, for this FY 2023 IPPS/LTCH PPS proposed rule we are providing a test version of the ICD–10

MS–DRG GROUPER Software, Version 40, so that the public can better analyze and understand the impact of the proposals included in this proposed rule. We note that this test software reflects the proposed GROUPER logic for FY 2023. Therefore, it includes the new diagnosis and procedure codes that are effective for FY 2023 as reflected in Table 6A.—New Diagnosis Codes—FY 2023 and Table 6B.—New Procedure Codes—FY 2023 associated with this proposed rule and does not include the diagnosis codes that are invalid beginning in FY 2023 as reflected in Table 6C.—Invalid Diagnosis Codes—FY 2023 associated with this proposed rule. We note that at the time of the development of this proposed rule there were no procedure codes designated as invalid for FY 2023, and therefore, there is no Table 6D—Invalid Procedure Codes—FY 2023 associated with this proposed rule. These tables are not published in the Addendum to this proposed rule, but are available via the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html* as described in section VI. of the Addendum to this proposed rule. Because the diagnosis codes no longer valid for FY 2023 are not reflected in the test software, we are making available a supplemental file in Table 6P.1a that includes the mapped Version 40 FY 2023 ICD–10–CM codes and the deleted Version 39.1 FY 2022 ICD–10–CM codes that should be used for testing purposes with users' available claims data. Therefore, users will have access to the test software allowing them to build case examples that reflect the proposals included in this proposed rule. In addition, users will be able to view the draft version of the ICD–10 MS–DRG Definitions Manual, Version 40.

The test version of the ICD–10 MS–DRG GROUPER Software, Version 40, the draft version of the ICD–10 MS–DRG Definitions Manual, Version 40, and the supplemental mapping files in Table 6P.1a of the FY 2022 and FY 2023 ICD–10–CM diagnosis codes are available at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.*

Following are the changes that we are proposing to the MS–DRGs for FY 2023. We are inviting public comments on each of the MS–DRG classification proposed changes, as well as our proposals to maintain certain existing MS–DRG classifications discussed in this proposed rule. In some cases, we are proposing changes to the MS–DRG classifications based on our analysis of claims data and consultation with our clinical advisors. In other cases, we are proposing to maintain the existing MS–DRG classifications based on our analysis of claims data and consultation with our clinical advisors. As discussed in section I.F. of the preamble of this proposed rule, we are proposing to use the FY 2021 MedPAR data for purposes of this FY 2023 IPPS rulemaking, with certain proposed modifications to the relative weight and outlier methodologies. For this FY 2023 IPPS/LTCH PPS proposed rule, our MS–DRG analysis was based on ICD–10 claims data from the September 2021 update of the FY 2021 MedPAR file, which contains hospital bills received from October 1, 2020 through September 30, 2021, for discharges occurring through September 30, 2021. In our discussion of the proposed MS–DRG reclassification changes, we refer to these claims data as the ''September 2021 update of the FY 2021 MedPAR file.''

As explained in previous rulemaking (76 FR 51487), in deciding whether to propose to make further modifications to the MS–DRGs for particular circumstances brought to our attention, we consider whether the resource consumption and clinical characteristics of the patients with a given set of conditions are significantly different than the remaining patients represented in the MS–DRG. We evaluate patient care costs using average costs and lengths of stay and rely on the judgment of our clinical advisors to determine whether patients are clinically distinct or similar to other patients represented in the MS–DRG. In evaluating resource costs, we consider both the absolute and percentage differences in average costs between the cases we select for review and the remainder of cases in the MS–DRG. We also consider variation in costs within these groups; that is, whether observed average differences are consistent across patients or attributable to cases that are extreme in terms of costs or length of stay, or both. Further, we consider the number of patients who will have a given set of characteristics and generally prefer not to create a new MS–DRG unless it would include a substantial number of cases.

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58448), we finalized our proposal to expand our existing criteria to create a new complication or comorbidity (CC) or major complication or comorbidity (MCC) subgroup within a base MS–DRG. Specifically, we finalized the expansion of the criteria to include the NonCC subgroup for a three-way severity level split. We stated our belief that applying these criteria to the NonCC subgroup would better reflect resource stratification as well as promote stability in the relative weights by avoiding low volume counts for the NonCC level MS–DRGs. We noted that in our analysis of MS–DRG classification requests for FY 2021 that were received by November 1, 2019, as well as any additional analyses that were conducted in connection with those requests, we applied these criteria to each of the MCC, CC, and NonCC subgroups. We also noted that the application of the NonCC subgroup criteria going forward may result in modifications to certain MS–DRGs that are currently split into three severity levels and result in MS–DRGs that are split into two severity levels. We stated that any proposed modifications to the MS–DRGs would be addressed in future rulemaking consistent with our annual process and reflected in Table 5—Proposed List of Medicare Severity Diagnosis Related Groups (MS–DRGs), Relative Weighting Factors, and Geometric and Arithmetic Mean Length of Stay for the applicable fiscal year.

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 44798), we finalized a delay in applying this technical criterion to existing MS–DRGs until FY 2023 or future rulemaking, in light of the PHE. Commenters recommended that a complete analysis of the MS–DRG changes to be proposed for future rulemaking in connection with the expanded three-way severity split criteria be conducted and made available to enable the public an opportunity to review and consider the redistribution of cases, the impact to the relative weights, payment rates, and hospital case mix to allow meaningful comment prior to implementation.

In our analysis of the MS–DRG classification requests for FY 2023 that we received by November 1, 2021, as well as any additional analyses that were conducted in connection with those requests, we applied these criteria to each of the MCC, CC, and NonCC subgroups, as described in the following table.

Criteria Number	Three-Way Split 123 (MCC vs CC vs NonCC)	Two-Way Split 1_23 MCC vs (CC+NonCC)	Two-Way Split 12_3 (MCC+CC) vs NonCC
1. At least 500 cases in the MCC/CC/NonCC group	500+ cases for MCC group; and 500+ cases for CC group; and 500+ cases for NonCC group	500+ cases for MCC group; and 500+ cases for (CC+NonCC) group	500+ cases for (MCC+CC) group; and 500+ cases for NonCC group
2. At least 5% of the patients are in the MCC/CC/NonCC group	5%+ cases for MCC group; and 5%+ cases for CC group; and 5%+ cases for NonCC group	5%+ cases for MCC group; and 5%+ cases for (CC+NonCC) group	5%+ cases for (MCC+CC) group; and 5%+ cases for NonCC group
3. There is at least a 20% difference in average cost between subgroups	20%+ difference in average cost between MCC group and CC group; and 20%+ difference in average cost between CC group and NonCC group	20%+ difference in average cost between MCC group and (CC+NonCC) group	20%+ difference in average cost between (MCC+ CC) group and NonCC group
4. There is at least a $2,000 difference in average cost between subgroups	$2,000+ difference in average cost between MCC group and CC group; and $2,000+ difference in average cost between CC group and NonCC group	$2,000+ difference in average cost between MCC group and (CC+ NonCC) group	$2,000+ difference in average cost between (MCC+ CC) group and NonCC group
5. The R2 of the split groups is greater than or equal to 3	R2 > 3.0 for the three way split within the base MS-DRG	R2 > 3.0 for the two way 1_23 split within the base MS-DRG	R2 > 3.0 for the two way 12_3 split within the base MS-DRG

In general, once the decision has been made to propose to make further modifications to the MS–DRGs as described previously, such as creating a new base MS–DRG, or in our evaluation of a specific MS–DRG classification request to split (or subdivide) an existing base MS–DRG into severity levels, all five criteria must be met for the base MS–DRG to be split (or subdivided) by a CC subgroup. We note that in our analysis of requests to create a new MS–DRG, we typically evaluate the most recent year of MedPAR claims data available. For example, we stated earlier that for this FY 2023 IPPS/LTCH PPS proposed rule, our MS–DRG analysis was based on ICD–10 claims data from the September 2021 update of the FY 2021 MedPAR file. However, in our evaluation of requests to split an existing base MS–DRG into severity levels, as noted in prior rulemaking (80 FR 49368), we typically analyze the most recent 2 years of data. This analysis includes 2 years of MedPAR claims data to compare the data results from 1 year to the next to avoid making determinations about whether additional severity levels are warranted based on an isolated year's data fluctuation and also, to validate that the established severity levels within a base MS–DRG are supported. The first step in our process of evaluating if the creation of a new CC subgroup within a base MS–DRG is warranted is to determine if all the criteria are satisfied for a three-way split. If the criteria fail, the next step is to determine if the criteria are satisfied for a two-way split. If the criteria for both of the two-way splits fail, then a split (or CC subgroup) would generally not be warranted for that base MS–DRG. If the three-way split fails on any one of the five criteria and all five criteria for both two-way splits (1_23 and 12_3) are met, we would apply the two-way split with the highest R2 value. We note that if the request to split (or subdivide) an existing base MS–DRG into severity levels specifies the request is for either one of the two-way splits (1_23 or 12_3), in response to the specific request, we will evaluate the criteria for both of the two-way splits, however we do not also evaluate the criteria for a three-way split.

For this FY 2023 IPPS/LTCH PPS proposed rule, using the September 2021 update of the FY 2021 MedPAR file, we also analyzed how applying the NonCC subgroup criteria to all MS–DRGs currently split into three severity levels would affect the MS–DRG structure beginning in FY 2023. Findings from our analysis indicated that approximately 41 MS–DRGs would be subject to change based on the three-way severity level split criterion finalized in FY 2021. Specifically, we found that applying the NonCC subgroup criteria to all MS–DRGs currently split into three severity levels would result in the deletion of 123 MS–DRGs (41 MS–DRGs × 3 severity levels = 123) and the creation of 75 new MS–DRGs. These updates would also involve a redistribution of cases, which would impact the relative weights, and, thus, the payment rates proposed for particular types of cases. We refer the reader to Table 6P.1b for the list of the 123 MS–DRGs that would be subject to deletion and the list of the 75 new MS–DRGs that would be proposed for creation for FY 2023 under this policy if the NonCC subgroup criteria were applied.

In light of the ongoing public health emergency (PHE), we continue to have concerns about the impact of implementing this volume of MS–DRG changes at this time, and believe it may be appropriate to continue to delay application of the NonCC subgroup criteria to existing MS–DRGs to maintain more stability in the current MS–DRG structure and until such time additional analyses can be performed to assess impacts, as discussed in response to comments in the FY 2022 IPPS/LTCH PPS final rule. Therefore, we are proposing not to apply the NonCC subgroup criteria to existing MS–DRGs with a three-way severity level split for FY 2023, and to instead maintain the current structure of the 41 MS–DRGs that currently have a three-way severity level split (total of 123 MS–DRGs) that would otherwise be subject to these criteria. We intend to address the application of the NonCC subgroup criteria to existing MS–DRGs with a three-way severity level split in future rulemaking.

2. Pre-MDC: MS–DRG 018 Chimeric Antigen Receptor (CAR) T-Cell and Other Immunotherapies

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 44798 through 44806), we finalized our proposal to assign procedure codes describing CAR T-cell, non-CAR T-cell, and other immunotherapies to Pre-MDC MS–DRG

018 and to revise the title for Pre-MDC MS–DRG 018 to ''Chimeric Antigen Receptor (CAR) T-cell and Other Immunotherapies'' to reflect this assignment. In that discussion, we noted that a few commenters recommended we continue to work with stakeholders on ways to improve the predictability and stability of hospital payments for these complex, novel cell therapies and that we should continue to monitor and assess the appropriateness of therapies assigned to MS–DRG 018, if they continue to be aligned on resource use, and whether additional refinements or MS–DRGs may be warranted in the future.

We also noted that the process of code creation and proposed assignment to the most appropriate MS–DRG exists independently, regardless of whether there is an associated application for a new technology add-on payment for a product or technology submitted for consideration in a given fiscal year. Specifically, requests for a new code(s) or updates to existing codes are addressed through the ICD–10 Coordination and Maintenance Committee meetings, held annually in the spring and fall, where code proposals are presented and the public is provided the opportunity to comment. All codes finalized from the fall meeting are subsequently proposed for assignment under the ICD–10 MS–DRGs through rulemaking. We refer the reader to section II.D.17 of the preamble of this proposed rule for additional information regarding the ICD–10 Coordination and Maintenance Committee meeting process.

There were no requests or proposals for new procedure codes to describe the administration of a CAR T-cell or another type of gene or cellular therapy discussed at the September 14–15, 2021 ICD–10 Coordination and Maintenance Committee meeting. For the March 8–9, 2022 ICD–10 Coordination and Maintenance Committee meeting, there were topics included on the agenda and in the related meeting materials that included proposals for new procedure codes to describe the administration of a CAR T-cell or another type of gene or cellular therapy product. The agenda and related meeting materials for these specific topics are available via the internet on the CMS website at *https://www.cms.gov/Medicare/Coding/ICD10/C-and-M-Meeting-Materials.*

As stated in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44805) and noted previously, the process of code creation and proposed assignment to the most appropriate MS–DRG exists independently, regardless of whether there is an associated application for a new technology add-on payment for a product or technology submitted for consideration in a given fiscal year. We also clarified that the assignment of a procedure code to a MS–DRG is not dependent upon a product's Food and Drug Administration (FDA) approval. Similarly, the creation of a code to describe a technology that is utilized in the performance of a procedure or service does not require FDA approval of the technology.

Because the diagnosis and procedure code proposals that are presented at the March meeting for an October 1 implementation (upcoming FY) are not finalized in time to include in Table 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes in association with the proposed rule, as noted in prior rulemaking, we use our established process to examine the MS–DRG assignment for the predecessor codes to determine the most appropriate MS–DRG assignment. Specifically, we review the predecessor code and MS–DRG assignment most closely associated with the new procedure code, and in the absence of claims data, we consider other factors that may be relevant to the MS–DRG assignment, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis or treatment of the condition. We have noted in prior rulemaking that this process does not automatically result in the new procedure code being assigned to the same MS–DRG or to have the same designation (O.R. versus Non-O.R.) as the predecessor code.

In response to commenters' recommendation that we continue to assess the appropriateness of the therapies assigned to Pre-MDC MS–DRG 018, we are providing the results of our data analysis using the September 2021 update of the FY 2021 MedPAR file for cases reporting the administration of a CAR T-cell or other immunotherapy in Pre-MDC MS–DRG 018 and the number of cases reporting a secondary diagnosis of Z00.6 (Encounter for examination for normal comparison and control in clinical research program). We note that if a procedure code that is assigned to the logic for Pre-MDC MS–DRG 018 is not listed it is because there were no cases found. We also note there were no cases reporting diagnosis code Z00.6 as a principal diagnosis. Our findings are shown in the following table.

MS-DRG	ICD-10-PCS Code	Number of Cases	Average Length of Stay	Average Costs	Secondary Diagnosis Z00.6
018	All cases	558	16.5	$194,717	185
	XW033C7 - Introduction of autologous engineered chimeric antigen receptor t-cell immunotherapy into peripheral vein, percutaneous approach, new technology group 7	50	13.2	$212,265	16
	XW033M7 - Introduction of brexucabtagene autoleucel immunotherapy into peripheral vein, percutaneous approach, new technology group 7	11	14.1	$157,950	4
	XW033N7 - Introduction of lisocabtagene maraleucel immunotherapy into peripheral vein, percutaneous approach, new technology group 7	4	11.3	$310,561	1
	XW043C7 - Introduction of autologous engineered chimeric antigen receptor t-cell immunotherapy into central vein, percutaneous approach, new technology group 7	435	16.7	$186,038	152
	XW043M7 - Introduction of brexucabtagene autoleucel immunotherapy into central vein, percutaneous approach, new technology group 7	43	20.3	$264,932	7
	XW043N7 -Introduction of lisocabtagene maraleucel immunotherapy into central vein, percutaneous approach, new technology group 7	15	14.2	$182,700	5

The data show that there is a wide range in the volume of cases (4 cases versus 435 cases), average length of stay (11.3 days versus 20.3 days), and average costs ($157,950 versus $310,561) reporting the administration of CAR T-cell therapies in MS–DRG 018. This is to be expected since these therapies continue to evolve and the ICD–10–PCS coding to identify and describe these therapies also continues to be refined through the ICD–10 Coordination and Maintenance Committee meeting process. As additional claims data becomes available for these therapies, we will continue to evaluate to determine if further modifications to Pre-MDC MS–DRG 018 are warranted.

In response to our statement in the FY 2022 IPPS/LTCH PPS final rule that we plan to continue engaging with stakeholders on additional options for consideration in this field of cellular and gene therapies, we received additional feedback and suggestions, including recommendations for Town Hall meetings/listening sessions to discuss the interconnectedness of these issues; exploration of what was described as a different set and kind of MS–DRGs that would reward providers for controlling patient care costs, without consideration of product costs outside of their control; and evaluation of the creation and assignment of multiple MS–DRGs for cell and gene therapy cases: One to cover patient care costs, the other to cover product costs across therapeutic product categories.

We appreciate this additional feedback and will continue to consider these issues and suggestions in connection with future rulemaking. We also intend to continue engaging with stakeholders by sharing updates from our analysis of claims data as we examine and explore potential refinements for these therapies under the IPPS.

a. Laser Interstitial Thermal Therapy (LITT)

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 44812 through 44814), we finalized the reassignment of 31 ICD–10–PCS procedure codes describing laser interstitial thermal therapy (LITT) of various body parts to more clinically appropriate MS–DRGs, as shown in Table 6P.2b associated with the FY 2022 IPPS/LTCH PPS final rule and available via the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS,* including the reassignment of procedure codes D0Y0KZZ (Laser interstitial thermal therapy of brain) and D0Y1KZZ (Laser interstitial thermal therapy of brain stem), which were reassigned from MS–DRG 023 (Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis with MCC or Chemotherapy Implant or Epilepsy with Neurostimulator), MS–DRG 024 (Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis without MCC), and MS–DRGs 025, 026, and 027 (Craniotomy and Endovascular Intracranial Procedures with MCC, with CC, and without CC/MCC, respectively) to MS–DRGs 040, 041, and 042 (Peripheral, Cranial Nerve and Other Nervous System Procedures with MCC, with CC and without CC/MCC, respectively).

We also finalized the redesignation of these two LITT procedures (codes D0Y0KZZ and D0Y1KZZ) and the reassignment from extensive O.R. procedures in MS–DRGs 981, 982 and 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) to non-extensive O.R procedures in MS–DRGs 987, 989, and 989 (Non-Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) (86 FR 44889).

For FY 2023, we received two requests from the manufacturers of the LITT technology (Medtronic and Monteris® Medical) to reverse the MS–DRG reassignment for the ICD–10 procedure codes that identify LITT of the brain and brain stem (codes D0Y0KZZ and D0Y1KZZ) from the MS–DRGs for peripheral, cranial nerve and other nervous system procedures (MS–DRGs 040, 041, and 042) back to the MS–DRGs for craniotomy and endovascular procedures (MS–DRGs 023, 024, 025, 026, and 027). The first

requestor acknowledged that the technique utilized in the performance of LITT procedures for the brain and brain stem are minimally invasive and do not involve a craniotomy however, the requestor also stated the procedures assigned to MS–DRGs 025, 026, and 027 are not exclusive to craniotomies. The requestor further stated that these LITT procedures involve a twist drill or burr hole and are similar to other non-craniotomy procedures in MS–DRGs 025, 026, and 027 including radioactive elements and neurostimulator leads that involve inserting these devices into the brain.

In its review of the other procedures assigned to MS–DRGs 040, 041, and 042, the requestor stated that there are distinct clinical differences between the invasiveness of LITT that involves instrumentation being placed deeply within the brain tissue and the non-invasiveness of stereotactic radiosurgery that does not involve entering the brain with instrumentation. The requestor also indicated LITT utilizes a different modality via direct thermal ablation compared to stereotactic radiosurgery that utilizes externally-generated ionizing radiation.

The requestor performed its own data analysis for LITT procedures of the brain and brain stem using MedPAR data from FY 2019 through FY 2022 impact files. According to the requestor, its findings demonstrate that the costs of the cases reporting LITT of the brain or brain stem are better aligned with MS–DRGs 025, 026, and 027 compared to MS–DRGs 040, 041, and 042.

The second requestor similarly discussed the steps and resources involved in the performance of LITT procedures for the brain and brain stem, provided its detailed analysis on the indications for LITT (brain tumors and epileptic foci), compared LITT to other procedures in MS–DRGs 025, 026, and 027 and stated that the majority of the procedures currently assigned to MS–DRGs 040, 041, 042 are not performed for the treatment of brain cancer or epilepsy. The requestor stated that the LITT procedure is on the inpatient only list and is only performed on Medicare beneficiaries in the inpatient hospital setting. The requestor provided the top 10 principal diagnoses associated with LITT of brain cases it found based on its analysis, and identified the diagnoses for which there were less than 10 cases with an asterisk, as reflected in the following table.

ICD-10-CM Code	Description	Cases
C79.31	Secondary malignant neoplasm of brain	39
G40.219	Localization-related (focal) (partial) symptomatic epilepsy and epileptic syndromes with complex partial seizures, intractable, without status epilepticus	17
C71.9	Malignant neoplasm of brain, unspecified	13
C71.1	Malignant neoplasm of frontal lobe	*
C71.2	Malignant neoplasm of temporal lobe	*
G40.419	Other generalized epilepsy and epileptic syndromes, intractable, without status epilepticus	*
I67.89	Other cerebrovascular disease	*
G40.919	Epilepsy, unspecified, intractable, without status epilepticus	*
G40.804	Other epilepsy, intractable, without status epilepticus	*
C71.3	Malignant neoplasm of parietal lobe	*

The requestor asserted that the statement in the FY 2022 IPPS/LTCH PPS final rule that the technique to perform the LITT procedure on brain and brain stem structures is considered minimally invasive and does not involve a craniotomy, and that therefore, continued assignment to the craniotomy MS–DRGs is not clinically appropriate, mischaracterizes both the LITT procedures and universe of services assigned to MS–DRGs 023 through 027. The requestor acknowledged that the craniotomy procedures listed in the logic for MS–DRGs 023 through 027 include open procedures but stated the logic also lists less invasive procedures including percutaneous and percutaneous endoscopic procedures. The requestor asserted that open procedures are a minority of the ICD–10–PCS codes assigned to these MS–DRGs.

In addition, the requestor stated that LITT and craniotomy are in fact very clinically similar; in that both procedures are intended to remove and destroy the targeted tumor and lesion with a different surgical tool used (scalpel versus heated ablation probe). According to the requestor, brain LITT procedures involve insertion of laser probes into the brain which requires opening both the skull and dura, similar to a craniotomy. The requestor also stated that craniotomy and LITT share several procedural characteristics and provided the following list.

- Require an operating room;
- Performed under general anesthesia;
- Require creation of burr holes and invasive skull fixation;
- Require a sterile field, incision, opening of the skull and dura;
- Cause tissue to be immediately destroyed or excised;
- Carry a risk of immediate intracranial bleeding;
- Require closure of the scalp wound;
- Risk intracranial infection; and
- Require a hospital stay of one or more nights.

In contrast, the requestor stated that procedures assigned to MS–DRGs 040, 041, and 042 are primarily nerve procedures or excision or detachment procedures performed on parts of the body other than the head, including the upper and lower extremities. According to the requestor, none of the procedures in MS–DRGs 040, 041, and 042 require drilling into the patient's skull, a step which is integral to LITT. The requestor provided the following top 10 principal

diagnoses associated with cases it found in MS–DRGs 040, 041, and 042 during its analysis and stated that most of the procedures assigned to MS–DRGs 040, 041, and 042 are not typically performed in the treatment of brain cancer or epilepsy.

ICD-10-CM Code	Description	Cases
I63.9	Cerebral infarction, unspecified	1,928
I63.40	Cerebral infarction due to embolism of unspecified cerebral artery	610
I63.89	Other cerebral infarction	489
G45.9	Transient cerebral ischemic attack, unspecified	456
I63.412	Cerebral infarction due to embolism of left middle cerebral artery	378
E11.610	Type 2 diabetes mellitus with diabetic neuropathic arthropathy	371
I63.411	Cerebral infarction due to embolism of right middle cerebral artery	341
I63.512	Cerebral infarction due to unspecified occlusion or stenosis of left middle cerebral artery	335
C79.31	Secondary malignant neoplasm of brain	326
I63.81	Other cerebral infarction due to occlusion or stenosis of small artery	271

However, the requestor stated an exception is stereotactic radiosurgery (SRS) procedures performed on the brain and brain stem that are assigned to MS–DRGs 040, 041, and 042 and are used to treat brain cancer. According to the requestor, craniotomy, LITT and SRS are all image-guided procedures used to treat a variety of brain disorders including tumors and epilepsy, although it stated that is where any similarity between LITT and SRS ends and where the procedural similarities between craniotomy and LITT begin.

The requestor stated SRS is a non-invasive procedure that gradually destroys or inactivates tissues in or around the brain and is typically performed on an outpatient basis while inpatient SRS treatment is rare. According to the requestor, SRS does not require an operating room, is rarely done under general anesthesia (children and highly claustrophobic individuals being an exception), and does not require (but can use) rigid skull fixation. In addition, the requestor stated that because it is non-invasive, there is no need for a sterile field, incision, opening/closing of the skull, opening/closing of the dura, suturing/stapling the wound, and produces essentially no risk of immediate intracranial bleeding or delayed infection. According to the requestor, LITT is much more invasive than SRS using a head frame and involves and requires the same surgical skill and hospital resources as craniotomies.

Following the submission of the two FY 2023 MS–DRG classification change requests for LITT, these same two requestors (the manufacturers of the LITT technology) submitted a joint code proposal requesting an overall change to how LITT is classified within the ICD–10–PCS classification and for consideration as an agenda topic to be discussed at the March 8–9, 2022 ICD–10 Coordination and Maintenance Committee meeting. The proposal was presented and discussed at the March 8–9, 2022 ICD–10 Coordination and Maintenance Committee meeting. We refer the reader to the CMS website at *https://www.cms.gov/Medicare/Coding/ICD10/C-and-M-Meeting-Materials* for additional detailed information regarding the request, including a recording of the discussion and the related meeting materials. Public comments in response to the code proposal were due by April 8, 2022.

Because the diagnosis and procedure code proposals that are presented at the March ICD–10–CM Coordination and Maintenance Committee meeting for an October 1 implementation (upcoming FY) are not finalized in time to include in Table 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes in association with the proposed rule, as we have noted in prior rulemaking and discuss further in this section, we use our established process to examine the MS–DRG assignment for the predecessor codes to determine the most appropriate MS–DRG assignment. Specifically, we review the predecessor code and MS–DRG assignment most closely associated with the new procedure code, and in the absence of claims data, we consider other factors that may be relevant to the MS–DRG assignment, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis and/or treatment of the condition. We have noted in prior rulemaking that this process does not automatically result in the new procedure code being assigned to the same MS–DRG or to have the same designation (O.R. versus Non-O.R.) as the predecessor code. Under this established process, the MS–DRG assignment for the upcoming fiscal year for any new diagnosis or procedure codes finalized after the March meeting would be reflected in Table 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes associated with the final rule for that fiscal year. However, in light of the unique circumstances relating to these procedures, for which there is a pending proposal to reclassify LITT within ICD–10–PCS and for new procedure codes discussed at the March meeting, as well as an MS–DRG reclassification request to reassign the existing codes describing these procedures, we address in this section first, the code proposal discussed at the March meeting and the possible MS–DRG assignments for any new codes that may be approved, and then secondly, the requested reassignment of the existing codes, in the event the new codes are not approved.

To summarize, as discussed at the March meeting, the code proposal is to reclassify LITT procedures from the Radiation Therapy section of ICD–10–PCS (Section D) to the Medical and Surgical section of ICD–10–PCS. Specifically, the proposal is to reclassify LITT procedures to the root operation Destruction. In ICD–10–PCS, the root operation Destruction is defined as physical eradication of all or a portion

of a body part by the direct use of energy, force, or a destructive agent. According to the requestors, LITT is misclassified to section D—Radiation Therapy in ICD–10–PCS possibly because of terminology that was used for predicate devices, whose indications included the phrase ''interstitial irradiation or thermal therapy'' in describing LITT's method of action. The requestors stated LITT is thermal therapy, destroying soft tissue using heat generated by a laser probe at the target site and that the LITT procedure does not use ionizing radiation, which is what the term ''radiation'' commonly refers to in the general medical sense. The requestors also stated that by itself, radiation is a broad term and provided an example that the spectrum of electromagnetic radiation technically encompasses low energy non-ionizing radio waves, microwaves, and infrared to high energy ionizing X-rays and gamma rays while ionizing radiation creates ions in the cells it passes through by removing electrons, a process which kills or alters the cells over time.

The requestors further stated that only certain medical uses of radiation are classified to section D—Radiation Therapy. For instance, section D—Radiation Therapy categorizes treatments using ionizing radiation, including beam radiation, brachytherapy, and stereotactic radiosurgery. All of these deliver concentrated ionizing radiation to eradicate abnormal cells, most commonly neoplasms. Other treatments classified to section D—Radiation Therapy, such as hyperthermia, are used as adjuncts to ionizing radiation. The requestors asserted that while LITT eradicates abnormal cells, it does so with heat, not ionizing radiation and rather than a radiation therapy procedure, LITT is a surgical procedure. According to the requestors, LITT would be more appropriately classified as an ablation procedure with the root operation Destruction.

The original request for a new code(s) to describe the LITT technology was initially discussed at the September 24–25, 2008 ICD–9–CM Coordination and Maintenance Committee meeting. At that time, the requestor sought an April 1, 2009 implementation date. Public comments opposed an April 1, 2009 implementation date, therefore, effective October 1, 2009 (FY 2010), ICD–9–CM procedure codes were created to identify procedures performed utilizing the LITT technology. The following table lists the ICD–9–CM procedure codes describing LITT and their respective MDC and MS–DRG assignments under the ICD–9 based MS–DRGs. We refer the reader to the ICD–9 and ICD–10 MS–DRG Definitions Manual Files V33 (available via the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Acute-Inpatient-Files-for-Download-Items/FY2016-Final-Rule-Correction-Notice-Files* (in the Downloads section) for complete documentation of the GROUPER logic for ICD–9.

ICD-9-CM Procedure Code	Description	MDC	MS-DRG
17.61	Laser interstitial thermal therapy [LITT] of lesion or tissue of brain under guidance	MDC 01	023-027
17.62	Laser interstitial thermal therapy [LITT] of lesion or tissue of head or neck under guidance	MDC 10	625-627
		MDC 17	820-822
		MDC 17	826-828
17.63	Laser interstitial thermal therapy [LITT] of lesion or tissue of liver under guidance	MDC 06	356-358
		MDC 07	405-407
17.69	Laser interstitial thermal therapy [LITT] of lesion or tissue of other and unspecified site under guidance	MDC 04	163-165
		MDC 09	584-585
		MDC 12	715-718
		MDC 17	820-822
		MDC 17	826-828

The requestors maintain that although LITT was used to treat a variety of anatomic sites when it was first introduced, its current primary use is intracranial, specifically to treat brain tumors and epileptic foci. However, the requestors stated it is also used to treat radiation necrosis, an inflammatory response from prior treatment with ionizing radiation.

Currently, in the U.S. there are only two LITT systems in use, Visualase™ MRI-Guided Laser Ablation (Medtronic) and the Neuroblate® System (Monteris® Medical). The requestors also stated that over the last six years, the Indications for Use (IFU) for one of the two U.S. approved LITT technologies (Neuroblate®) has been updated to reflect the system's current use in the brain and to align with the intended neurosurgical patient population. The requestor indicated applications in the spine are also anticipated in the future within the central nervous system.

As previously noted, the deadline for receipt of public comments for the proposed reclassification of LITT procedures that was presented at the March 8–9, 2022 ICD–10 Coordination and Maintenance Committee meeting along with the corresponding proposal for new procedure codes was April 8, 2022, and the final code decisions on these proposals are not yet available for inclusion in Table 6B.—New Procedure Codes associated with this FY 2023 IPPS/LTCH PPS proposed rule. However, as discussed in prior rulemaking (86 FR 44805), codes that are finalized after the March meeting are reviewed and subject to our established process of initially reviewing the predecessor codes MS–DRG assignment and designation, while considering

other relevant factors (for example, severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis and/or treatment of the condition) as previously described. The codes that are finalized after the March meeting are specifically identified with a footnote in Tables 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes that are made publicly available in association with the final rule via the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS.* The public may provide feedback on these finalized assignments, which is then taken into consideration for the following fiscal year.

Accordingly, as previously discussed, the MS–DRG assignment for any new procedure codes describing LITT, if finalized following the March meeting, would be reflected in Table 6B.—New Procedure Codes associated with the final rule for FY 2023. However, in light of the unique circumstances with respect to these procedures, for which there is both a proposal for reclassifying LITT from the Radiation Therapy section of the procedure code classification to the Medical/Surgical section with new ICD–10–PCS procedure code(s) and a separate MS–DRG reclassification request on the existing procedure codes, we are providing the opportunity for public comment on possible MS–DRG assignments for the requested new procedure codes describing LITT that may apply based on the application of our established process and analysis, in the event the new codes are finalized for FY 2023. We note that while we discuss the potential MS–DRG assignments for new procedure codes describing LITT, stakeholders may use current coding information to consider the potential MS–DRG assignments for any other procedure codes that may be finalized after the March meeting and submit public comments for consideration. Specifically, in the ICD–10 Coordination and Maintenance Committee meeting materials (available via the internet on the CMS website at *https://www.cms.gov/Medicare/Coding/ICD10/C-and-M-Meeting-Materials*), for each procedure code proposal we provide the current coding that is applicable within the classification and that should be reported in the absence of a more unique code, or until such time a new code is created and becomes effective. The procedure code(s) listed in current coding are generally, but not always, the same code(s) that are considered as the predecessor code(s) for purposes of MS–DRG assignment. As previously noted, our process for determining the MS–DRG assignment for a new procedure code does not automatically result in the new procedure code being assigned to the same MS–DRG or having the same designation (O.R. versus Non-O.R.) as the predecessor code. However, this current coding information can be used in conjunction with the GROUPER logic, as set forth in the ICD–10 MS–DRG Definitions Manual and publicly available via the internet on our CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software* to review the MS–DRG assignment of the current code(s) and examine the potential MS–DRG assignment of the proposed code(s), to assist in formulating any public comments for submission to CMS for consideration.

We note that, unlike the typical code request for a new or revised procedure code that involves a new technology or a new approach to performing an existing procedure, the circumstances for this particular request are distinct in that the code request would reclassify LITT within the ICD–10–PCS classification from section D—Radiation Therapy to the root operation Destruction in the Medical and Surgical section of ICD–10–PCS. Therefore, in light of the unique considerations with respect to the requested reclassification of the LITT procedures in connection with the pending code proposal, we believe it is appropriate to utilize the assignments and designations of the procedure codes describing Destruction of the respective anatomic body site as predecessor codes rather than the current codes describing LITT from the Radiation Therapy section of ICD–10–PCS in considering potential MS–DRG assignment for the requested new LITT procedure codes.

As previously discussed, under our established process for determining the MS–DRG assignment for newly approved procedure codes, we examine the MS–DRG assignment for the predecessor codes to determine the most appropriate MS–DRG assignment for the new codes. Specifically, we review the predecessor code and MS–DRG assignment most closely associated with the new procedure code, and in the absence of claims data, we consider other factors that may be relevant to the MS–DRG assignment, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis and/or treatment of the condition. As we have noted in prior rulemaking, this process does not automatically result in the new procedure code being assigned to the same MS–DRG or to have the same designation (O.R. versus Non-O.R.) as the predecessor code.

Applying this established review process to the proposed codes for the LITT procedures, we believe that, based on the predecessor codes, and as previously noted, the potential assignments and designations would align with the assignments and designations of the procedure codes describing Destruction of the respective anatomic body site. For example, as discussed earlier in this section of this proposed rule, the code request involved reclassifying LITT procedures from section D—Radiation Therapy to the root operation Destruction in the Medical and Surgical section of ICD–10–PCS. The root operation Destruction is appropriate to identify and report procedures, such as ablation, that are performed on various body parts. The code request also involved creating what is referred to as a qualifier value, to uniquely describe LITT as the modality. The qualifier value is the seventh character or digit, in a valid ICD–10–PCS procedure code.

The following ICD–10–PCS table illustrates an example of the proposed procedure codes for LITT of the brain and brain stem, and cervical, thoracic, and lumbar spinal cord body parts, including the qualifier value that was presented and discussed at the March 8–9, 2022 ICD–10 Coordination and Maintenance Committee meeting.

Section	**0** Medical and Surgical
Body System	**0** Central Nervous System and Cranial Nerves
Operation	**5** Destruction: Physical eradication of all or a portion of a body part by the direct use of energy, force, or a destructive agent

Body Part	Approach	Device	Qualifier
0 Brain **W** Cervical Spinal Cord **X** Thoracic Spinal Cord **Y** Lumbar Spinal Cord	**0** Open **3** Percutaneous **4** Percutaneous Endoscopic	**Z** No Device	**ADD 3** Laser Interstitial Thermal Therapy **Z** No Qualifier

We note that the code proposal presented only provided the body part value 0 Brain, for reporting any LITT procedures performed on the brain, as well as, the brain stem, consistent with the current available body part option in Table 005, Destruction of Central Nervous System and Cranial Nerves, where the predecessor code is located. The predecessor code(s) and associated MS–DRG assignments for the proposed new procedure code(s) describing LITT of the brain and spinal cord under MDC 01 are identified as follows.

ICD-10-PCS Code	Description	MS-DRG
00500ZZ	Destruction of brain, open approach	023-027
00503ZZ	Destruction of brain, percutaneous approach	
00504ZZ	Destruction of brain, percutaneous endoscopic approach	
005W0ZZ	Destruction of cervical spinal cord, open approach	028-030
005W3ZZ	Destruction of cervical spinal cord, percutaneous approach	
005W4ZZ	Destruction of cervical spinal cord, percutaneous endoscopic approach	
005X0ZZ	Destruction of thoracic spinal cord, open approach	
005X3ZZ	Destruction of thoracic spinal cord, percutaneous approach	
005X4ZZ	Destruction of thoracic spinal cord, percutaneous endoscopic approach	
005Y0ZZ	Destruction of lumbar spinal cord, open approach	
005Y3ZZ	Destruction of lumbar spinal cord, percutaneous approach	
005Y4ZZ	Destruction of lumbar spinal cord, percutaneous endoscopic approach	

As shown in the table, the procedure codes describing destruction of brain with an open, percutaneous or percutaneous endoscopic approach are assigned to MS–DRGs 023 through 027 (craniotomy and endovascular procedures) and the procedure codes describing destruction of cervical, thoracic or lumbar spinal cord with an open, percutaneous or percutaneous endoscopic approach are assigned to MS–DRG 028 (Spinal Procedures with MCC), MS–DRG 029 (Spinal Procedures with CC or Spinal Neurostimulators), and MS–DRG 030 (Spinal Procedures without CC/MCC).

We refer the reader to Table 6P.2a associated with this proposed rule (and available via the internet at *https://www.cms.gov/medicare/medicare-fee-for-service-payment/acuteinpatientpps*) to review the potential MDCs, MS–DRGs, and O.R. versus Non-O.R. designations identified based on this analysis of the proposed new procedure codes describing LITT as presented and discussed at the meeting. We note that Table 6P.2a also includes the predecessor codes that we utilized to inform this analysis. If finalized, the new procedure codes would be included in the FY 2023 code update files that are made available in late May/early June via the internet on the CMS website at *https://www.cms.gov/medicare/coding/icd10.* Additionally, if finalized, the new procedure codes describing LITT would be displayed in Table 6B.—New Procedure Codes, and the existing codes describing LITT would be deleted and reflected in Table 6D.—Invalid Procedure Codes, in association with the FY 2023 IPPS/LTCH PPS final rule. We refer the reader to section II.D.14. for further information regarding the files.

As previously discussed, we also received requests to reassign the existing ICD–10 procedure codes that identify LITT of the brain and brain stem (codes D0Y0KZZ and D0Y1KZZ). In the event there is not support for the proposed reclassification of LITT procedures and the corresponding new procedure codes as presented at the March 8–9, 2022 ICD–10 Coordination and Maintenance Committee meeting, we are also providing the results of our analysis of these existing codes and our proposed MS–DRG assignments for FY 2023, if those existing codes are retained.

We examined claims data from the September 2021 update of the FY 2021 MedPAR file for MS–DRGs 023, 024, 025, 026, and 027, in addition to MS–DRGs 040, 041, and 042 for cases reporting LITT of the brain (code D0Y0KZZ) or brain stem (code D0Y1KZZ). We note that if a procedure code is not listed it is because there were no cases found reporting that procedure code. Our findings are shown in the following tables.

MS-DRG	ICD-10-PCS Code	Number of Cases	Average Length of Stay	Average Costs
23	All Cases	11,599	10.1	$45,134
	D0Y0KZZ	1	15	$60,994
	All other cases	11,598	10.1	$45,133
24	All Cases	4,391	5.2	$31,759
25	All Cases	19,586	9	$35,956
	D0Y0KZZ	77	5.6	$27,148
	All other cases	19,509	9	$35,991
26	All Cases	6,956	5.1	$24,566
	D0Y0KZZ	25	2.6	$24,741
	All other cases	6,931	5.1	$24,565
27	All Cases	7,323	2.4	$20,498
	D0Y0KZZ	20	2.1	$34,874
	All other cases	7,303	2.4	$20,459

MS-DRG	ICD-10-PCS Code	Number of Cases	Average Length of Stay	Average Costs
40	All Cases	3,547	9.9	$30,212
	D0Y0KZZ	14	8.1	$40,458
	All other cases	3,533	9.9	$30,171
41	All Cases	4,958	5	$19,090
	D0Y0KZZ	16	3.4	$23,278
	D0Y1KZZ	1	1	$10,222
	All other cases	4,942	5	$19,076
42	All Cases	1,667	2.9	$15,451
	D0Y0KZZ	24	1.7	$22,426
	D0Y1KZZ	1	2	$32,668
	All other cases	1,642	2.9	$15,325

As shown, we found a total of 123 cases reporting LITT of the brain across MS–DRGs 023, 025, 026, and 027. There were no cases found in MS–DRG 024. The cases reporting LITT of the brain grouped to these MS–DRGs because another O.R. procedure that is assigned to the respective MS–DRG was also reported. We refer the reader to Table 6P.2b for the list of the other O.R. procedures we identified that were also reported with LITT of the brain.

For MS–DRGs 040, 041, and 042, we found a total of 54 cases reporting LITT of the brain and 2 cases reporting LITT of the brain stem. While the average costs of the cases reporting LITT of the brain were higher compared to all the cases in their respective MS–DRGs, the average length of stay was shorter. For example, the data demonstrates a shorter average length of stay (8.1 days versus 9.9 days) and higher average costs ($40,458 versus $30,212) for the 14 cases reporting LITT of brain in MS–DRG 040 compared to all the cases in MS–DRG 040. There were no cases found to report LITT of brain stem in MS–DRG 040. For MS–DRG 041, we found 16 cases reporting LITT of brain with an average length of stay of 3.4 days and average costs of $23,278 and 1 case reporting LITT of brain stem with an average length of stay of 1 day and average costs of $10,222. The average length of stay for all the cases in MS–DRG 041 is 5 days with average costs of $19,090. The data demonstrates a shorter average length of stay (3.4 days and 1 day, respectively, versus 5 days) for the 16 cases reporting LITT of brain and the 1 case reporting LITT of brain stem. The data also demonstrates higher average costs ($23,278 versus $19,090) for the 16 cases reporting LITT of brain, and lower average costs for the 1 case reporting LITT of brain stem ($10,222 versus $19,090), as compared to the average costs of all cases in MS–DRG 041. For MS–DRG 042, we found 24 cases reporting LITT of brain with an average length of stay of 1.7 days and average costs of $22,426 and 1 case reporting LITT of brain stem with an average length of stay of 2 days and average costs of $32,668. The average length of stay for all the cases in MS–DRG 042 is 2.9 days with average costs of $15,451. The data demonstrates a shorter average length of stay (1.7 days

and 2 days, respectively, versus 2.9 days) for the 24 cases reporting LITT of brain and the 1 case reporting LITT of brain stem. The data also demonstrate higher average costs ($22,426 and $32,668, respectively versus $15,451) for the 24 cases reporting LITT of brain and the 1 case reporting LITT of brain stem, compared to all the cases in MS–DRG 042.

Based on the findings from our analysis, we considered whether other factors, such as the reporting of secondary MCC and CC diagnoses, may have contributed to the higher average costs for these cases. Specifically, we conducted additional analyses of the claims data from the September 2021 update of the FY 2021 MedPAR file to determine what secondary MCC diagnoses were also reported for the 14 cases reporting LITT of brain in MS–DRG 040 and what secondary CC diagnoses were reported for the 17 cases (16 for LITT of brain and 1 for LITT of brain stem) in MS–DRG 041. Our findings are shown in the following tables.

Secondary MCC Diagnoses Reported with LITT of Brain in MS-DRG 040				
ICD-10-CM Code as Secondary Diagnosis	**Description**	**Frequency of Diagnosis**	**Average Length of Stay**	**Average Costs**
D61.810	Antineoplastic chemotherapy induced pancytopenia	1	9	$59,102
G93.5	Compression of brain	6	12.2	$56,313
G93.6	Cerebral edema	11	9.3	$43,788
I61.1	Nontraumatic intracerebral hemorrhage in hemisphere, cortical	1	48	$80,745
J69.0	Pneumonitis due to inhalation of food and vomit	2	28	$60,889
J96.01	Acute respiratory failure with hypoxia	3	17	$41,486

Secondary CC Diagnoses Reported with LITT of Brain and Brain Stem in MS-DRG 041				
ICD-10-CM Code as Secondary Diagnosis	**Description**	**Frequency of Diagnosis**	**Average Length of Stay**	**Average Costs**
C34.91	Malignant neoplasm of unspecified part of right bronchus or lung	1	1	$9,755
C79.51	Secondary malignant neoplasm of bone	1	29	$22,347
D61.818	Other pancytopenia	1	1	$29,883
D62	Acute posthemorrhagic anemia	1	2	$9,101
E22.2	Syndrome of inappropriate secretion of antidiuretic hormone	1	2	$17,940
E44.0	Moderate protein-calorie malnutrition	1	1	$29,883
F33.0	Major depressive disorder, recurrent, mild	1	8	$57,999
F33.1	Major depressive disorder, recurrent, moderate	1	1	$20,461
F84.0	Autistic disorder	1	1	$12,450
G40.89	Other seizures	1	1	$12,109
G40.919	Epilepsy, unspecified, intractable, without status epilepticus	1	1	$34,287
G81.91	Hemiplegia, unspecified affecting right dominant side	1	2	$17,940
G81.94	Hemiplegia, unspecified affecting left nondominant side	1	8	$57,999
G96.01	Cranial cerebrospinal fluid leak, spontaneous	1	1	$25,514
H47.10	Unspecified papilledema	1	29	$22,347
I16.1	Hypertensive emergency	1	1	$30,372
I42.8	Other cardiomyopathies	1	1	$55,389
I48.21	Permanent atrial fibrillation	1	1	$29,883
I50.22	Chronic systolic (congestive) heart failure	1	1	$55,389
I50.32	Chronic diastolic (congestive) heart failure	1	1	$29,883
I69.354	Hemiplegia and hemiparesis following cerebral infarction affecting left non-dominant side	1	1	$12,109
N39.0	Urinary tract infection, site not specified	2	15.5	$16,866
Q01.9	Encephalocele, unspecified	1	2	$9,101
Q04.8	Other specified congenital malformations of brain	2	1	$13,925
R47.01	Aphasia	3	3.3	$28,841
Z68.42	Body mass index [BMI] 45.0-49.9, adult	1	1	$10,222
Z94.0	Kidney transplant status	1	1	$25,514

We note that we did not find any other O.R. procedures reported on the claims in addition to the procedures for LITT of brain or brain stem for MS–DRGs 040, 041 and 042.

The data shows that at least one of the listed secondary MCC diagnoses was reported with each claim for LITT of brain identified in MS–DRG 040 and the average length of stay for these cases ranged from 9 days to 48 days and the average costs of these cases ranged from $41,486 to $80,745. We note that this data reflects the frequency with which each of the listed diagnoses was reported on a claim with LITT of brain. Therefore, multiple MCCs from this list of diagnoses may have been reported on a single claim. In addition, while the logic for case assignment to MS–DRG 040 requires at least one secondary MCC diagnosis, we conducted additional detailed analyses for MS–DRG 040, as shown in Table 6P.2f, to determine whether there were also secondary CC diagnoses reported in conjunction with one or more of the listed MCC diagnoses that may be contributing to the higher average costs for cases reporting LITT of brain in MS–DRG 040 in comparison to all the cases in MS–DRG 040. We found that 6 of the 14 cases reporting at least one or more secondary MCC diagnosis also reported one or more secondary CC diagnosis, which would appear to support that the severity of illness for these patients, as identified by the secondary MCC and CC diagnoses, may be more directly related to the higher average costs for these patients than the LITT procedure itself.

Similarly, the data for MS–DRG 041 show the frequency with which each of the listed secondary CC diagnoses was reported with LITT of brain or brain stem. Results from the analysis for the 17 cases (16 for LITT of brain and 1 for LITT of brain stem) show the average length of stay for these cases ranged from 1 day to 29 days and the average costs ranged from $9,101 to $57,999. These data analysis findings for MS–DRG 041 also appear to support our belief that the severity of illness for these patients, as identified by the listed secondary CC diagnoses, may be more directly related to the higher average costs for these patients than the LITT procedure itself.

As stated previously, we did not find any other O.R. procedures reported on the claims in addition to the procedures for LITT of brain or brain stem for MS–DRGs 040, 041 and 042. Since the logic for case assignment to MS–DRG 042 is not based on the reporting requirement of any CC or MCC diagnoses, we conducted a detailed analysis of the claims data to determine what other factors may be contributing to the higher average costs and shorter average length of stay for these cases in comparison to all the cases in MS–DRG 042. We refer the reader to Table 6P.2g associated with this proposed rule for the findings from our analysis. As shown in the data, the majority of the cases (15 of 25) had a principal diagnosis of epilepsy, 8 cases had a principal diagnosis related to malignant neoplasm of the brain or brain structures, 1 case had a principal diagnosis of hemangioma of intracranial structures and 1 case had a principal diagnosis of unspecified convulsions. The data also demonstrate that 16 of the 25 cases reported in MS–DRG 042 include patients who were under the age of 65, with ages ranging from 32 years old to 64 years old. We note that patients diagnosed with epilepsy are eligible for coverage since it is a condition that qualifies under certain criteria. It is not entirely clear if the age of these patients had any impact on the average length of stay since the average length of stay of the 24 cases reporting LITT of brain was 1.7 days and the 1 case reporting LITT of brain stem was 2 days.

As stated previously, the logic for case assignment to MS–DRG 042 is not dependent on the reporting of any CC or MCC diagnoses, however, based on the diagnoses reflected in the claims data for MS–DRG 042, it is possible that conditions such as obesity and chronic conditions requiring the long-term use of certain therapeutic agents may be contributing factors to the consumption of resources, separately from the LITT procedure. We found 17 of the 25 cases reporting LITT of brain or brain stem to also report one or both of these conditions.

We also reviewed the number of cases of LITT of the brain or brain stem procedures reported in the data since the transition to ICD–10. Specifically, we examined the claims data for cases reporting LITT of brain or brain stem as a standalone procedure or with another procedure in the FY 2016 through FY 2021 MedPAR data files across all MS–DRGs. The findings from our analysis are shown in table 6P.2e associated with this proposed rule.

The data demonstrates that since the implementation of ICD–10, a shift in the reporting of LITT of brain and brain stem procedures has occurred. For example, the FY 2016, FY 2017 and FY 2018 MedPAR data reflect that the number of cases for which LITT of brain or brain stem procedures were reported as a standalone procedure is higher in comparison to the number of cases reported with another procedure. Conversely, the FY 2019, FY 2020, and FY 2021 MedPAR data reflect that the number of cases for which LITT of brain or brain stem procedures were reported as a standalone procedure is lower in comparison to the number of cases reported with another procedure. The data also reflect that the average length of stay is shorter and the average costs are lower for cases reporting LITT of brain or brain stem as a standalone procedure in comparison to the average length of stay and average costs for cases reported with another procedure across the FY 2016 through FY 2021 MedPAR data files. Lastly, the data demonstrate that overall, the number of cases for which LITT of brain or brain stem procedures was performed had remained fairly stable at over 100 cases with increases in the FY 2017, FY 2020 and FY 2021 MedPAR data files of 156, 154 and 185 cases, respectively.

We also analyzed claims data from the September 2021 update of the FY 2021 MedPAR file for cases reporting LITT of other anatomic sites across all MS–DRGs. Although the requestors indicated that LITT is primarily performed on intracranial lesions, as shown in Table 6P.2c associated with this proposed rule, we identified a small number of cases reporting LITT of the lung, rectum, liver, breast, and prostate, for a total of 29 cases where LITT was performed on other body parts/anatomic sites.

For example, we found a total of 5 cases reporting LITT of lung across 5 different MS–DRGs. Of these 5 cases, 2 cases had a longer average length of stay and higher average costs in comparison to all the cases in their respective MS–DRG. Specifically, for MS–DRG 163 (Major Chest Procedures with MCC), we found 1 case reporting LITT of lung with an average length of stay of 17 days and average costs of $41,467. The average length of stay for all cases in MS–DRG 163 is 10.7 days with average costs of $38,367. The data demonstrates a difference of 6.3 days (17 − 10.7=6.3) for the average length of stay and a difference of $3,100 in average costs ($41,467 − $38,367=$3,100) for the 1 case reporting LITT of lung in MS–DRG 163 compared to all the cases in MS–DRG 163. For MS–DRG 167 (Other Respiratory System O.R. Procedures with CC), we found 1 case reporting LITT of lung with an average length of stay of 7 days and average costs of $22,975. The average length of stay for all cases in MS–DRG 167 is 4.6 days with average costs of $15,397. The data demonstrates a difference of 2.4 days (7 − 4.6=2.4) for the average length of stay and a difference of $7,578 in average costs ($22,975 − $15,397=$7,578) for the 1

case reporting LITT of lung in MS–DRG 167 compared to all the cases in MS–DRG 167. The data for the remaining 3 cases reporting LITT of lung demonstrated a shorter average length of stay and lower average costs in comparison to all the cases in their respective MS–DRGs.

We found 1 case reporting LITT of rectum in MS–DRG 357 (Other Digestive System O.R. Procedures with CC) with a shorter average length of stay (4 days versus 5.6 days) and lower average costs ($3,069 versus $18,065) as compared to all the cases in MS–DRG 357. We also found 1 case reporting LITT of liver in MS–DRG 405 (Pancreas Liver and Shunt Procedures with MCC) with a longer average length of stay (20 days versus 12.3 days) and higher average costs ($49,0695 versus $43,771) as compared to all the cases in MS–DRG 405.We also found 1 case reporting LITT of right breast in MS–DRG 580 (Other Skin Subcutaneous Tissue and Breast Procedures with CC) with a longer average length of stay (19 days versus 5.4 days) and higher average costs ($32,064 versus $13,767) as compared to all the cases in MS–DRG 580.

Lastly, we found 21 cases reporting LITT of prostate across 14 MS–DRGs. Of those 21 cases, 6 cases had a longer average length of stay or higher average costs, or both, in comparison to the average length of stay and average costs of all the cases in their respective MS–DRG. For example, in MS–DRG 650 (Kidney Transplant with Hemodialysis with MCC) we found 1 case reporting LITT of prostate with an average length of stay of 36 days and average costs of $67,238. The average length of stay for all cases in MS–DRG 650 is 8.1 days with average costs of $38,139. The data demonstrates a difference of 27.9 days (36 − 8.1=27.9) for the average length of stay and a difference of $29,099 in average costs ($67,238 − $38,139= $29,099) for the 1 case reporting LITT of prostate in MS–DRG 650 compared to all the cases in MS–DRG 650. We also found 1 case reporting LITT of prostate in MS–DRG 659 (Kidney and Ureter Procedures for Non-Neoplasm with MCC) with an average length of stay of 26 days. The average length of stay for all cases in MS–DRG 659 is 7.8 days, demonstrating a difference of 18.2 days (26 − 7.8=18.2). We found 1 case reporting LITT of prostate in MS–DRG 712 (Testes Procedures without CC/MCC) with average costs of $15,669. The average costs for all cases in MS–DRG 712 is $10,482, demonstrating a difference of $5,187 ($15,669 − $10,482=$5,187). We found 1 case reporting LITT of prostate in MS–DRG 987 with an average length of stay of 23 days and average costs of $35,465. The average length of stay for all cases in MS–DRG 987 is 10.9 days with average costs of $26,657. The data demonstrates a difference of 12.1 days (23 − 10.9=12.1) for the average length of stay and a difference of $8,808 in average costs ($35,465 − $26,657= $8,808) for the 1 case reporting LITT of prostate in MS–DRG 987 compared to all the cases in MS–DRG 987. Lastly, we found 2 cases reporting LITT of prostate in MS–DRG 988 (Non-Extensive O.R. Procedures Unrelated to Principal Diagnosis with CC) with average costs of $17,126. The average costs for all cases in MS–DRG 988 is $13,670, demonstrating a difference of $3,456 ($17,126 − $13,670= $3,456) for the 2 cases reporting LITT of prostate in MS–DRG 988.

We refer the reader to Table 6P.2c for the detailed findings from our analysis. We note that if the procedure code describing LITT of a specific anatomic site is not listed it is because there were no cases found.

We note that for the 10 cases previously described, for which LITT of a different anatomic site from the brain or brain stem was reported and had a longer average length of stay or higher average costs, or both, in comparison to the average length of stay and average costs of all the cases in their respective MS–DRG, that with the exception of MS–DRG 712, all the other MS–DRGs include a ''with MCC'' or ''with CC'' designation, or were reported in a surgical MS–DRG. We believe that these other factors may have contributed to the longer average length of stay and higher average costs for these cases, therefore we conducted additional analyses of the claims data to determine what diagnoses or procedures were also reported. We refer the reader to Table 6P.2d associated with this proposed rule for the findings from our detailed analysis of these 10 cases.

As shown in Table 6P.2d, the data demonstrate that a number of MCC and/or CC secondary diagnoses were reported for each of the 10 cases and that the surgical procedures that were reported in addition to the LITT procedure seem to have contributed to the longer average length of stay and higher average costs for those cases when compared to the average length of stay and average costs for all the cases in their respective MS–DRG. For example, in case number 1 there are 2 diagnoses that are designated as MCC conditions and 5 diagnoses that that are designated as CC conditions with procedure codes describing a kidney transplant, hemodialysis, and insertion of a ureteral stent that were reported along with LITT of prostate. For case number 3 there are 4 diagnoses that are designated as MCC conditions and 6 diagnoses that are designated as CC conditions with procedure codes describing bronchoscopic treatment of a bronchial tumor with and without stents, as well as the use of mechanical ventilation. Overall, the data appear to indicate that the performance of the LITT procedure was not the underlying reason for, or main driver of, the increase in resource utilization for those cases.

As noted, the requestors indicated that LITT is primarily being performed on intracranial lesions. However, as summarized, we identified a limited number of cases reporting LITT procedures for other anatomic sites. We are interested in comments regarding the use of and experience with LITT for these other anatomic sites.

Based on our analysis of the FY 2021 MedPAR claims data for cases reporting LITT of brain or brain stem (codes D0Y0KZZ and D0Y1KZZ) in MS–DRGs 040, 041, and 042, we agree with the requestors that the average costs of these cases are higher as compared to the average costs of all cases assigned to MS–DRGs 040, 041, and 042. For the reasons summarized, we also believe that other factors, including the reporting of secondary MCC and CC diagnoses, may be contributing to the higher average costs for these cases. As discussed in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44813), we examined procedure codes D0Y0KZZ and D0Y1KZZ describing LITT of brain and brain stem, respectively, and stated that the technique to perform the LITT procedure on these structures is considered minimally invasive and does not involve a craniotomy, therefore, continued assignment to the craniotomy MS–DRGs is not clinically appropriate. Our clinical advisors continue to maintain that LITT is a minimally invasive procedure, requiring only a tiny incision for purposes of a burr hole and that patients are often only kept overnight (as reflected in the detailed claims data). However, we also recognize that craniotomy and LITT share common procedural characteristics including use of an operating room, carry risk of immediate intracranial bleeding or infection, and cause tissue to be immediately destroyed or excised. While the data do not demonstrate that the LITT procedure is the underlying reason for the higher average costs and consumption of resources for the small number of cases reporting LITT of brain (54 cases) or brain stem (2 cases) that we found in MS–DRGs 040, 041, and 042,

the data do demonstrate that the patients receiving this treatment therapy have brain tumors or epilepsy combined with multiple comorbidities or chronic conditions necessitating long-term use of medications, or both, and we note the indications for LITT (brain tumors and epileptic foci) are better aligned with MS–DRGs 025, 026, and 027 as compared to MS–DRGs 040, 041, and 042.

As we discuss further in this section, we intend to more fully evaluate the logic for the procedures specifically involving a craniotomy, as well as the overall structure of MS–DRGs 023 through 027, and we believe that reassignment of cases reporting LITT of brain or brain stem to MS–DRGs 025, 026, and 027 would be an appropriate first step in connection with these efforts. For example, while we recognize the distinctions between open craniotomy procedures and minimally invasive percutaneous intracranial procedures, we also recognize that the current logic for MS–DRGs 025 through 027 also includes other endovascular intracranial procedures performed using percutaneous or percutaneous endoscopic approaches, and we believe that further review of the clinical coherence of the procedures assigned to these MS–DRGs may be warranted. Our clinical advisors note that while the typical patient treated with LITT usually has a single small scalp incision through which a hole approximately the diameter of a straw is drilled, with no extensive surgical exposure, that LITT can still be employed for another subset of more complex patients, including patients with primary brain malignancies and those with larger metastatic lesions or multiple lesions. For this subset of more complex patients, a longer post-operative stay with direct medical supervision may be necessary. As such, we believe reassigning these procedures to MS–DRGs 025 through 027 for FY 2023 would be appropriate as we consider restructuring MS–DRGs 023 through 027, including how to better align the clinical indications with the performance of specific intracranial procedures. Accordingly, for these reasons, in the event there is not support for the proposed reclassification of LITT procedures and the corresponding new procedure codes as presented at the March 8–9, 2022 ICD–10 Coordination and Maintenance Committee meeting, we are proposing to reassign the existing procedure codes describing LITT of the brain or brain stem from MS–DRGs 040, 041, and 042 to MS–DRGs 025, 026, and 027 for FY 2023. We are also proposing to maintain the MS–DRG assignments for the existing procedure codes describing LITT of other anatomic sites as finalized and displayed in Table 6P.2b in association with the FY 2022 IPPS/LTCH PPS final rule, for FY 2023. We note that we did not receive any comments or requests to reconsider those finalized MS–DRG assignments for FY 2023.

As noted, in connection with our analysis of cases reporting LITT procedures performed on the brain or brain stem in MDC 01, we have started to examine the logic for case assignment to MS–DRGs 023 through 027 to determine where further refinements could potentially be made to better account for differences in the technical complexity and resource utilization among the procedures that are currently assigned to those MS–DRGs. Specifically, we are in the process of evaluating procedures that are performed using an open craniotomy (where it is necessary to surgically remove a portion of the skull) versus a percutaneous burr hole (where a hole approximately the size of a pencil is drilled) to obtain access to the brain in the performance of a procedure. We are also reviewing the indications for these procedures, for example, malignant neoplasms versus epilepsy to consider if there may be merit in considering restructuring the current MS–DRGs to better recognize the clinical distinctions of these patient populations in the MS–DRGs. We believe it is worthwhile to also compare the claims data for epilepsy patients who are treated with a neurostimulator implant versus a LITT procedure, as well as the claims data for patients with a diagnosis of epilepsy or malignant neoplasms who undergo a LITT procedure. Our analysis also includes reviewing the claims data with regard to the cases that reflect a procedure that is generally performed with another O.R. procedure versus a standalone procedure.

As we continue this analysis of the claims data with respect to MS–DRGs 023 through 027, we are also seeking public comments and feedback on other factors that should be considered in the potential restructuring of these MS–DRGs. As previously described, we are examining procedures by their approach (open versus percutaneous), clinical indications, and procedures that involve the insertion or implantation of a device. We recognize the logic for MS–DRGs 023 through 027 has grown more complex over the years and believe there is opportunity for further refinement. We refer the reader to the ICD–10 MS–DRG Definitions Manual, version 39.1, which is available via the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software* for complete documentation of the GROUPER logic for MS–DRGs 023 through 027. Feedback and other suggestions may be submitted by October 20, 2022 and directed to the new electronic intake system, Medicare Electronic Application Request Information System™ (MEARIS™), discussed in section II.D.1.b of the preamble of this proposed rule at *https://mearis.cms.gov/public/home.*

b. Vagus Nerve Stimulation

We received a request to review the MS–DRG assignment for cases that identify patients who receive an implantable vagus nerve stimulation system for heart failure. The vagus nerve, also called the X cranial nerve or the 10th cranial nerve, is the longest and most complex of the cranial nerves. There is one vagus nerve on each side of the body that runs from the brain through the face and thorax to the abdomen. According to the requestor, cranial nerve stimulation (CNS), which includes vagus nerve stimulation, is a well-established therapy for various indications including epilepsy, treatment resistant depression (TRD) and obstructive sleep apnea (OSA), and is now being investigated and studied for use in patients with heart failure.

According to the requestor, heart failure, or the heart's inability to pump an adequate supply of blood and oxygen to support the other organs of the body, is an autonomic nervous system dysfunction. The brain controls the function of the heart through the sympathetic branch and the parasympathetic branches of the autonomic nervous system. In heart failure, there is an imbalance in the autonomic nervous system. The vagus nerve stimulation system for heart failure is comprised of an implantable pulse generator, an electrical lead, and a programming computer system. The pulse generator, which is usually implanted just under the skin of the pectoral region, sends the energy to the vagus nerve through the lead. The lead is a flexible insulated wire that is guided under the skin from the chest up to the neck and is implanted onto the vagus nerve and transmits tiny electrical impulses from the generator to the nerve. These electrical impulses to the vagus nerve are intended to activate the parasympathetic branch of the autonomic nervous system to restore balance.

The requestor stated that cases reporting a procedure code describing the insertion of a neurostimulator lead onto the vagus nerve and a procedure code describing the insertion of a stimulator generator with a principal diagnosis code describing epilepsy, TRD or OSA are assigned to surgical MS–DRGs 040, 041 and 042 (Peripheral Cranial Nerve and Other Nervous System Procedures with MCC, with CC or Peripheral Neurostimulator, and without CC/MCC, respectively) in MDC 01 (Diseases and Disorders of the Nervous System). However, when the same codes describing the insertion of a neurostimulator lead onto the vagus nerve and the insertion of a stimulator generator are reported with a principal diagnosis of heart failure, the cases instead are assigned to surgical MS–DRGs 252, 253 and 254 (Other Vascular Procedures with MCC, with CC, without MCC respectively) in MDC 05 (Diseases and Disorders of the Circulatory System).

The requestor stated that the treatment of autonomic nervous system dysfunction is the underlying therapeutic objective of cranial nerve stimulation for heart failure, and therefore the diagnosis of heart failure is more clinically coherent with other diagnoses in MDC 01. As a result, the requestor, who is developing the VITARIA® System, an active implantable neuromodulation system that uses vagus nerve stimulation to deliver autonomic regulation therapy (ART) for an indicated use that includes patients who have moderate to severe heart failure, submitted a request to reassign cases reporting a procedure code describing the insertion of a neurostimulator lead onto the vagus nerve and a procedure code describing the insertion of a stimulator generator with a principal diagnosis code describing heart failure, from MS–DRGs 252, 253 and 254 in MDC 05 to MS–DRGs 040, 041 and 042 in MDC 01. This requestor also submitted an application for new technology add-on payment for FY 2023. We refer readers to section II.F.6. of the preamble of this proposed rule for a discussion regarding the application for new technology add-on payments for the VITARIA® System for FY 2023.

According to the requestor, the following ICD–10–PCS procedure code pair identifies the insertion of a vagus nerve stimulation system for heart failure:

ICD-10-PCS Code	Description
00HE0MZ with 0JH60BZ	Insertion of neurostimulator lead into cranial nerve, open approach
	Insertion of single array stimulator generator into chest subcutaneous tissue and fascia, open approach

The requestor performed its own analysis of Medicare claims from 2020 and stated that it found that patients enrolled in their pivotal clinical trials had an average length of stay of 6.38 days. According to the requestor this finding indicates a resource coherence more similar to cases assigned to MS–DRGs 040, 041 and 042, whose average lengths of stay ranges from 2 to 8 days, when compared to the average lengths of stay of 1 to 3 days for cases assigned to MS–DRGs 252 and 253. The requestor stated their own analysis of 2019 and 2020 Medicare claims data also showed that fewer than 11 cases with procedure codes describing the implantation of a vagus nerve stimulation system map to MS–DRGs 252, 253 and 254 annually but it is expected that Medicare patients will receive vagus nerve stimulation system for heart failure on an inpatient basis. Because of the shared clinical and resource similarity of the procedure to implant the VITARIA® system to other CNS procedures, regardless of indication, the requestor stated that CNS procedures for the treatment of heart failure should also be assigned to MS–DRGs 040, 041 and 042. The requestor also noted that the title of MS–DRGs 252, 253 and 254 is ''Other Vascular Procedures with MCC, with CC, without MCC respectively''. Since no vascular access is involved in the procedure to implant vagus nerve stimulation systems, the requestor stated MS–DRGs 252, 253 and 254 are not appropriate mappings for these procedures.

The ICD–10–CM diagnosis codes that describe heart failure are found in the following table. These diagnosis codes are all currently assigned to MDC 05.

BILLING CODE 4120–01–P

ICD-10-CM Code	Description
I09.81	Rheumatic heart failure
I11.0	Hypertensive heart disease with heart failure
I13.0	Hypertensive heart and chronic kidney disease with heart failure and stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease
I13.2	Hypertensive heart and chronic kidney disease with heart failure and with stage 5 chronic kidney disease, or end stage renal disease
I50.1	Left ventricular failure, unspecified
I50.20	Unspecified systolic (congestive) heart failure
I50.21	Acute systolic (congestive) heart failure
I50.22	Chronic systolic (congestive) heart failure
I50.23	Acute on chronic systolic (congestive) heart failure
I50.30	Unspecified diastolic (congestive) heart failure
I50.31	Acute diastolic (congestive) heart failure
I50.32	Chronic diastolic (congestive) heart failure
I50.33	Acute on chronic diastolic (congestive) heart failure
I50.40	Unspecified combined systolic (congestive) and diastolic (congestive) heart failure
I50.41	Acute combined systolic (congestive) and diastolic (congestive) heart failure
I50.42	Chronic combined systolic (congestive) and diastolic (congestive) heart failure
I50.43	Acute on chronic combined systolic (congestive) and diastolic (congestive) heart failure
I50.810	Right heart failure, unspecified
I50.811	Acute right heart failure
I50.812	Chronic right heart failure
I50.813	Acute on chronic right heart failure
I50.814	Right heart failure due to left heart failure
I50.82	Biventricular heart failure
I50.83	High output heart failure
I50.84	End stage heart failure
I50.89	Other heart failure
I50.9	Heart failure, unspecified
I97.130	Postprocedural heart failure following cardiac surgery
I97.131	Postprocedural heart failure following other surgery

The ICD–10–PCS codes that identify the insertion of a neurostimulator lead onto the vagus nerve are listed in the following table.

ICD-10-PCS Code	Description
00HE0MZ	Insertion of neurostimulator lead into cranial nerve, open approach
00HE3MZ	Insertion of neurostimulator lead into cranial nerve, percutaneous approach
00HE4MZ	Insertion of neurostimulator lead into cranial nerve, percutaneous endoscopic approach

ICD-10-PCS Code	Description
0JH60BZ	Insertion of single array stimulator generator into chest subcutaneous tissue and fascia, open approach
0JH60CZ	Insertion of single array rechargeable stimulator generator into chest subcutaneous tissue and fascia, open approach
0JH60DZ	Insertion of multiple array stimulator generator into chest subcutaneous tissue and fascia, open approach
0JH60EZ	Insertion of multiple array rechargeable stimulator generator into chest subcutaneous tissue and fascia, open approach
0JH60MZ	Insertion of stimulator generator into chest subcutaneous tissue and fascia, open approach
0JH63BZ	Insertion of single array stimulator generator into chest subcutaneous tissue and fascia, percutaneous approach
0JH63CZ	Insertion of single array rechargeable stimulator generator into chest subcutaneous tissue and fascia, percutaneous approach
0JH63DZ	Insertion of multiple array stimulator generator into chest subcutaneous tissue and fascia, percutaneous approach
0JH63EZ	Insertion of multiple array rechargeable stimulator generator into chest subcutaneous tissue and fascia, percutaneous approach
0JH63MZ	Insertion of stimulator generator into chest subcutaneous tissue and fascia, percutaneous approach
0JH70BZ	Insertion of single array stimulator generator into back subcutaneous tissue and fascia, open approach
0JH70CZ	Insertion of single array rechargeable stimulator generator into back subcutaneous tissue and fascia, open approach

The ICD–10–PCS codes that identify the insertion of a stimulator generator are listed in the following table.

ICD-10-PCS Code	Description
0JH70DZ	Insertion of multiple array stimulator generator into back subcutaneous tissue and fascia, open approach
0JH70EZ	Insertion of multiple array rechargeable stimulator generator into back subcutaneous tissue and fascia, open approach
0JH70MZ	Insertion of stimulator generator into back subcutaneous tissue and fascia, open approach
0JH73BZ	Insertion of single array stimulator generator into back subcutaneous tissue and fascia, percutaneous approach
0JH73CZ	Insertion of single array rechargeable stimulator generator into back subcutaneous tissue and fascia, percutaneous approach
0JH73DZ	Insertion of multiple array stimulator generator into back subcutaneous tissue and fascia, percutaneous approach
0JH73EZ	Insertion of multiple array rechargeable stimulator generator into back subcutaneous tissue and fascia, percutaneous approach
0JH73MZ	Insertion of stimulator generator into back subcutaneous tissue and fascia, percutaneous approach
0JH80BZ	Insertion of single array stimulator generator into abdomen subcutaneous tissue and fascia, open approach
0JH80CZ	Insertion of single array rechargeable stimulator generator into abdomen subcutaneous tissue and fascia, open approach
0JH80DZ	Insertion of multiple array stimulator generator into abdomen subcutaneous tissue and fascia, open approach
0JH80EZ	Insertion of multiple array rechargeable stimulator generator into abdomen subcutaneous tissue and fascia, open approach
0JH80MZ	Insertion of stimulator generator into abdomen subcutaneous tissue and fascia, open approach
0JH83BZ	Insertion of single array stimulator generator into abdomen subcutaneous tissue and fascia, percutaneous approach
0JH83CZ	Insertion of single array rechargeable stimulator generator into abdomen subcutaneous tissue and fascia, percutaneous approach
0JH83DZ	Insertion of multiple array stimulator generator into abdomen subcutaneous tissue and fascia, percutaneous approach
0JH83EZ	Insertion of multiple array rechargeable stimulator generator into abdomen subcutaneous tissue and fascia, percutaneous approach
0JH83MZ	Insertion of stimulator generator into abdomen subcutaneous tissue and fascia, percutaneous approach
0JH60BZ	Insertion of single array stimulator generator into chest subcutaneous tissue and fascia, open approach
0JH60CZ	Insertion of single array rechargeable stimulator generator into chest subcutaneous tissue and fascia, open approach
0JH60DZ	Insertion of multiple array stimulator generator into chest subcutaneous tissue and fascia, open approach
0JH60EZ	Insertion of multiple array rechargeable stimulator generator into chest subcutaneous tissue and fascia, open approach
0JH60MZ	Insertion of stimulator generator into chest subcutaneous tissue and fascia, open approach
0JH63BZ	Insertion of single array stimulator generator into chest subcutaneous tissue and fascia, percutaneous approach

ICD-10-PCS Code	Description
0JH63CZ	Insertion of single array rechargeable stimulator generator into chest subcutaneous tissue and fascia, percutaneous approach
0JH63DZ	Insertion of multiple array stimulator generator into chest subcutaneous tissue and fascia, percutaneous approach
0JH63EZ	Insertion of multiple array rechargeable stimulator generator into chest subcutaneous tissue and fascia, percutaneous approach
0JH63MZ	Insertion of stimulator generator into chest subcutaneous tissue and fascia, percutaneous approach
0JH70BZ	Insertion of single array stimulator generator into back subcutaneous tissue and fascia, open approach
0JH70CZ	Insertion of single array rechargeable stimulator generator into back subcutaneous tissue and fascia, open approach
0JH70DZ	Insertion of multiple array stimulator generator into back subcutaneous tissue and fascia, open approach
0JH70EZ	Insertion of multiple array rechargeable stimulator generator into back subcutaneous tissue and fascia, open approach
0JH70MZ	Insertion of stimulator generator into back subcutaneous tissue and fascia, open approach
0JH73BZ	Insertion of single array stimulator generator into back subcutaneous tissue and fascia, percutaneous approach
0JH73CZ	Insertion of single array rechargeable stimulator generator into back subcutaneous tissue and fascia, percutaneous approach
0JH73DZ	Insertion of multiple array stimulator generator into back subcutaneous tissue and fascia, percutaneous approach
0JH73EZ	Insertion of multiple array rechargeable stimulator generator into back subcutaneous tissue and fascia, percutaneous approach
0JH73MZ	Insertion of stimulator generator into back subcutaneous tissue and fascia, percutaneous approach
0JH80BZ	Insertion of single array stimulator generator into abdomen subcutaneous tissue and fascia, open approach
0JH80CZ	Insertion of single array rechargeable stimulator generator into abdomen subcutaneous tissue and fascia, open approach
0JH80DZ	Insertion of multiple array stimulator generator into abdomen subcutaneous tissue and fascia, open approach
0JH80EZ	Insertion of multiple array rechargeable stimulator generator into abdomen subcutaneous tissue and fascia, open approach
0JH80MZ	Insertion of stimulator generator into abdomen subcutaneous tissue and fascia, open approach
0JH83BZ	Insertion of single array stimulator generator into abdomen subcutaneous tissue and fascia, percutaneous approach
0JH83CZ	Insertion of single array rechargeable stimulator generator into abdomen subcutaneous tissue and fascia, percutaneous approach
0JH83DZ	Insertion of multiple array stimulator generator into abdomen subcutaneous tissue and fascia, percutaneous approach
0JH83EZ	Insertion of multiple array rechargeable stimulator generator into abdomen subcutaneous tissue and fascia, percutaneous approach
0JH83MZ	Insertion of stimulator generator into abdomen subcutaneous tissue and fascia, percutaneous approach

BILLING CODE 4120–01–C

Our analysis of this grouping issue confirmed that, when a procedure code describing the insertion of a neurostimulator lead onto the vagus

nerve and a procedure code describing the insertion of a stimulator generator are reported with a principal diagnosis code describing heart failure, these cases group to surgical MS–DRGs 252, 253 and 254 (Other Vascular Procedures with MCC, with CC, without MCC respectively).

We note that cases involving the use of a peripheral neurostimulator and a diagnosis from MDC 01 are assigned to MS–DRG 041 only. The GROUPER logic for MS–DRGs 040, 041, and 042 is reflected in the logic table:

MCC	CC	Peripheral Neurostimulator Combinations	MS-DRG
Yes	n/a	n/a	040 (Peripheral Cranial Nerve and Other Nervous System Procedures with MCC)
No	Yes	n/a	041 (Peripheral Cranial Nerve and Other Nervous System Procedures with CC or Peripheral Neurostimulator)
No	No	Yes	041 (Peripheral Cranial Nerve and Other Nervous System Procedures with CC or Peripheral Neurostimulator)
No	No	No	042 (Peripheral Cranial Nerve and Other Nervous System Procedures without CC/MCC)

We refer the reader to the ICD–10 MS–DRG Version 39.1 Definitions Manual (which is available via the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*) for complete documentation of the GROUPER logic for the listed MS–DRGs.

We examined claims data from the September 2021 update of the FY 2021 MedPAR file for MS–DRGs 252, 253 and 254 to identify the subset of cases within MS–DRGs 252, 253 and 254 reporting a procedure code describing the insertion of a neurostimulator lead onto the vagus nerve and a procedure code describing the insertion of a stimulator generator with a principal diagnosis of heart failure. We found zero cases in MS–DRGs 252, 253 and 254 reporting a procedure code describing the insertion of a neurostimulator lead onto the vagus nerve and a procedure code describing the insertion of a stimulator generator with a principal diagnosis of heart failure. In an attempt to further examine this issue, we then examined claims data from the September 2021 update of the FY 2021 MedPAR file for MS–DRGs 252, 253 and 254 to identify the subset of cases within MS–DRGs 252, 253 and 254 reporting a procedure code describing the insertion of a neurostimulator lead onto the vagus nerve and a procedure code describing the insertion of a stimulator generator with a secondary diagnosis of heart failure and similarly found zero cases.

The results of the claims analysis demonstrate that there is not sufficient claims data in the MedPAR file on which to assess the resource use of cases reporting a procedure code describing the insertion of a neurostimulator lead onto the vagus nerve and a procedure code describing the insertion of a stimulator generator with a principal or secondary diagnosis of heart failure as compared to other cases assigned to MS–DRGs 252, 253, and 254.

In reviewing the requestor's concerns regarding clinical coherence, our clinical advisors acknowledge that heart failure is a complex syndrome involving autonomic nervous system dysfunction, however our clinical advisors disagree with assigning the diagnosis codes describing heart failure to MDC 01 (Diseases and Disorders of the Nervous System). Our clinical advisors note the concept of clinical coherence requires that the patient characteristics included in the definition of each MS–DRG relate to a common organ system or etiology. As the listed diagnosis codes describe heart failure, these diagnosis codes are appropriately assigned to MDC 05 (Diseases and Disorders of the Circulatory System). Our clinical advisors also state it would not be appropriate to move these diagnoses into MDC 01 because it could inadvertently cause cases reporting these same MDC 05 diagnoses with a circulatory system procedure to be assigned to an unrelated MS–DRG because whenever there is a surgical procedure reported on the claim that is unrelated to the MDC to which the case was assigned based on the principal diagnosis, it results in a MS–DRG assignment to a surgical class referred to as ''unrelated operating room procedures''.

To further examine the impact of moving the diagnoses describing heart failure into MDC 01, we analyzed claims data for cases reporting a circulatory system O.R. procedure and a principal diagnosis of heart failure. Our findings are reflected in the following table.

BILLING CODE 4120–01–P

Cases Reporting Circulatory System O.R. Procedures with a Principal Diagnosis of Heart Failure				
MS-DRG	**Description**	**Number of Cases**	**Average Length of Stay**	**Average Costs**
215	Other Heart Assist System Implant	375	12.9	$89,802
216	Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization with MCC	554	17.7	$90,282
217	Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization with CC	9	9.2	$59,655
218	Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization without CC/MCC	2	6	$36,309
219	Cardiac Valve and Other Major Cardiothoracic Procedures without Cardiac Catheterization with MCC	147	16.8	$85,238
220	Cardiac Valve and Other Major Cardiothoracic Procedures without Cardiac Catheterization with CC	7	8.4	$62,843
222	Cardiac Defibrillator Implant with Cardiac Catheterization with AMI HF or Shock with MCC	923	11.6	$61,254
223	Cardiac Defibrillator Implant with Cardiac Catheterization with AMI HF or Shock without MCC	80	6.3	$40,806
224	Cardiac Defibrillator Implant with Cardiac Catheterization without AMI HF or Shock with MCC	1	6	$41,102
226	Cardiac Defibrillator Implant without Cardiac Catheterization with MCC	1,602	8.1	$51,116
227	Cardiac Defibrillator Implant without Cardiac Catheterization without MCC	219	3.5	$40,176
228	Other Cardiothoracic Procedures with MCC	345	11.4	$43,864
229	Other Cardiothoracic Procedures without MCC	9	5.6	$28,662
231	Coronary Bypass with PTCA with MCC	13	17.2	$91,948
233	Coronary Bypass with Cardiac Catheterization or Open Ablation with MCC	482	17.3	$75,283
234	Coronary Bypass with Cardiac Catheterization or Open Ablation without MCC	4	19.8	$77,000
235	Coronary Bypass without Cardiac Catheterization with MCC	70	15	$61,655
236	Coronary Bypass without Cardiac Catheterization without MCC	6	5	$41,809
239	Amputation for Circulatory System Disorders Except Upper Limb and Toe with MCC	196	17.6	$43,110
240	Amputation for Circulatory System Disorders Except Upper Limb and Toe with CC	2	5	$10,803
242	Permanent Cardiac Pacemaker Implant with MCC	1,993	8.7	$33,121
243	Permanent Cardiac Pacemaker Implant with CC	105	5.2	$23,927
244	Permanent Cardiac Pacemaker Implant without CC/MCC	5	3.4	$21,763
245	AICD Generator Procedures	196	7.6	$42,062
246	Percutaneous Cardiovascular Procedures with Drug-Eluting Stent with MCC or 4+ Arteries or Stents	4,529	7.4	$27,962
247	Percutaneous Cardiovascular Procedures with Drug-Eluting Stent without MCC	174	4.7	$19,268
248	Percutaneous Cardiovascular Procedures with Non-Drug-Eluting Stent with MCC or 4+ Arteries or Stents	92	7.3	$26,922
249	Percutaneous Cardiovascular Procedures with Non-Drug-Eluting Stent without MCC	7	5.1	$19,763
250	Percutaneous Cardiovascular Procedures without Coronary Artery Stent with MCC	288	7	$25,284
251	Percutaneous Cardiovascular Procedures without Coronary Artery Stent without MCC	8	3.4	$14,789
252	Other Vascular Procedures with MCC	1,603	10.4	$32,014
253	Other Vascular Procedures with CC	29	4.6	$21,692
254	Other Vascular Procedures without CC/MCC	2	1	$10,169

Cases Reporting Circulatory System O.R. Procedures with a Principal Diagnosis of Heart Failure				
MS-DRG	Description	Number of Cases	Average Length of Stay	Average Costs
255	Upper Limb and Toe Amputation for Circulatory System Disorders with MCC	105	10.7	$24,075
256	Upper Limb and Toe Amputation for Circulatory System Disorders with CC	2	8	$14,155
258	Cardiac Pacemaker Device Replacement with MCC	267	6.8	$22,749
259	Cardiac Pacemaker Device Replacement without MCC	28	4.3	$21,145
260	Cardiac Pacemaker Revision Except Device Replacement with MCC	279	8.4	$28,176
261	Cardiac Pacemaker Revision Except Device Replacement with CC	20	4.3	$17,726
262	Cardiac Pacemaker Revision Except Device Replacement without CC/MCC	3	2.7	$18,186
263	Vein Ligation and Stripping	9	35.7	$50,529
264	Other Circulatory System O.R. Procedures	2,422	10.7	$28,866
265	AICD Lead Procedures	83	10	$38,286
266	Endovascular Cardiac Valve Replacement and Supplement Procedures with MCC	666	13.9	$76,663
267	Endovascular Cardiac Valve Replacement and Supplement Procedures without MCC	36	3.8	$44,643
268	Aortic and Heart Assist Procedures Except Pulsation Balloon with MCC	46	16.7	$62,285
269	Aortic and Heart Assist Procedures Except Pulsation Balloon without MCC	1	1	$14,357
270	Other Major Cardiovascular Procedures with MCC	1,026	13.8	$48,958
271	Other Major Cardiovascular Procedures with CC	22	8.7	$26,730
272	Other Major Cardiovascular Procedures without CC/MCC	2	1.5	$8,289
273	Percutaneous and Other Intracardiac Procedures with MCC	1,064	8.8	$33,132
274	Percutaneous and Other Intracardiac Procedures without MCC	41	6.2	$26,180
	Total Cases	**20,199**	**9.9**	**$40,428**

BILLING CODE 4120–01–C

As shown in the table, if we were to move diagnosis codes describing heart failure to MDC 01, 20,199 cases would be assigned to the surgical class referred to as ''unrelated operating room procedures'' as an unintended consequence because the surgical procedure reported on the claim would be considered unrelated to the MDC to which the case was assigned based on the principal diagnosis.

In response to the requestor's concerns regarding the title of MS–DRGs 252, 253 and 254, we note that, as stated in the ICD–10 MS–DRG Definitions Manual, ''In each MDC there is usually a medical and a surgical class referred to as ''other medical diseases'' and ''other surgical procedures,'' respectively. The ''other'' medical and surgical classes are not as precisely defined from a clinical perspective. The other classes would include diagnoses or procedures which were infrequently encountered or not well defined clinically. For example, the ''other'' medical class for the Respiratory System MDC would contain the diagnoses ''other somatoform disorders'' and ''congenital malformation of the respiratory system,'' while the ''other'' surgical class for the female reproductive MDC would contain the surgical procedures ''excision of liver'' (liver biopsy in ICD–9–CM) and ''inspection of peritoneal cavity'' (exploratory laparotomy in ICD–9–CM). The ''other'' surgical category contains surgical procedures which, while infrequent, could still reasonably be expected to be performed for a patient in the particular MDC. There are, however, also patients who receive surgical procedures which are completely unrelated to the MDC to which the patient was assigned. An example of such a patient would be a patient with a principal diagnosis of pneumonia whose only surgical procedure is a destruction of prostate (transurethral prostatectomy in ICD–9–CM). Such patients are assigned to a surgical class referred to as ''unrelated operating room procedures.'' '' We further note that MS–DRGs 252, 253, and 254 (Other Vascular Procedures with MCC, with CC, and without CC/MCC, respectively) are examples of the ''other'' surgical class, therefore it is expected that there will be procedures not as precisely clinically aligned within the definition (logic) of these MS–DRGs.

Considering that there is no data in the FY 2021 MedPAR file to support a reassignment of these cases based on resource consumption, the analysis of clinical coherence as discussed previously, and the impact that moving the diagnoses describing heart failure into MDC 01 from MDC 05 would have on heart failure cases, we do not believe a reassignment of these cases is appropriate at this time. We can

continue to evaluate the clinical coherence and resource consumption costs that impact this subset of cases and their current MS–DRG assignment as data become available for future rulemaking.

In summary for the reasons stated previously, we are not proposing to reassign cases reporting a procedure code describing the insertion of a neurostimulator lead onto the vagus nerve and a procedure code describing the insertion of a stimulator generator with a principal diagnosis of heart failure from MS–DRG 252, 253 and 254 to MS–DRGs 040, 041 and 042.

As we examined the GROUPER logic that would determine an assignment of a case to MS–DRGs 252, 253 and 254, we noted the logic for MS–DRGs 252, 253 and 254 includes ICD–10–PCS procedure codes that describe the insertion of the stimulator generator. We refer the reader to the ICD–10 MS–DRG Version 39.1 Definitions Manual (which is available via the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*) for complete documentation of the GROUPER logic for the listed MS–DRGs. During our review of the stimulator generator insertion procedures assigned to these MS–DRGs, we identified the following 24 procedure codes that describe the insertion of a stimulator generator, differentiated by device type (for example single array or multiple array), that do not exist in the logic for MS–DRGs 252, 253 and 254.

BILLING CODE 4120–01–P

ICD-10-PCS Code	Description
0JH60BZ	Insertion of single array stimulator generator into chest subcutaneous tissue and fascia, open approach
0JH60CZ	Insertion of single array rechargeable stimulator generator into chest subcutaneous tissue and fascia, open approach
0JH60DZ	Insertion of multiple array stimulator generator into chest subcutaneous tissue and fascia, open approach
0JH60EZ	Insertion of multiple array rechargeable stimulator generator into chest subcutaneous tissue and fascia, open approach
0JH63BZ	Insertion of single array stimulator generator into chest subcutaneous tissue and fascia, percutaneous approach
0JH63CZ	Insertion of single array rechargeable stimulator generator into chest subcutaneous tissue and fascia, percutaneous approach
0JH63DZ	Insertion of multiple array stimulator generator into chest subcutaneous tissue and fascia, percutaneous approach
0JH63EZ	Insertion of multiple array rechargeable stimulator generator into chest subcutaneous tissue and fascia, percutaneous approach
0JH70BZ	Insertion of single array stimulator generator into back subcutaneous tissue and fascia, open approach
0JH70CZ	Insertion of single array rechargeable stimulator generator into back subcutaneous tissue and fascia, open approach
0JH70DZ	Insertion of multiple array stimulator generator into back subcutaneous tissue and fascia, open approach
0JH70EZ	Insertion of multiple array rechargeable stimulator generator into back subcutaneous tissue and fascia, open approach
0JH73BZ	Insertion of single array stimulator generator into back subcutaneous tissue and fascia, percutaneous approach
0JH73CZ	Insertion of single array rechargeable stimulator generator into back subcutaneous tissue and fascia, percutaneous approach
0JH73DZ	Insertion of multiple array stimulator generator into back subcutaneous tissue and fascia, percutaneous approach
0JH73EZ	Insertion of multiple array rechargeable stimulator generator into back subcutaneous tissue and fascia, percutaneous approach
0JH80BZ	Insertion of single array stimulator generator into abdomen subcutaneous tissue and fascia, open approach
0JH80CZ	Insertion of single array rechargeable stimulator generator into abdomen subcutaneous tissue and fascia, open approach

ICD-10-PCS Code	Description
0JH80DZ	Insertion of multiple array stimulator generator into abdomen subcutaneous tissue and fascia, open approach
0JH80EZ	Insertion of multiple array rechargeable stimulator generator into abdomen subcutaneous tissue and fascia, open approach
0JH83BZ	Insertion of single array stimulator generator into abdomen subcutaneous tissue and fascia, percutaneous approach
0JH83CZ	Insertion of single array rechargeable stimulator generator into abdomen subcutaneous tissue and fascia, percutaneous approach
0JH83DZ	Insertion of multiple array stimulator generator into abdomen subcutaneous tissue and fascia, percutaneous approach
0JH83EZ	Insertion of multiple array rechargeable stimulator generator into abdomen subcutaneous tissue and fascia, percutaneous approach

BILLING CODE 4120–01–C

For clinical consistency with the other procedure codes describing the insertion of the stimulator generator currently assigned to these MS–DRGs, we are proposing to add the 24 ICD–10–PCS codes listed previously to MS–DRGs 252, 253 and 254, (Other Vascular Procedures with MCC, with CC, and without CC/MCC, respectively) in MDC 05 (Diseases and Disorders of the Circulatory System) effective October 1, 2022 for FY 2023.

Also, as we examined the GROUPER logic that would determine an assignment of a case to MS–DRG 041, we note the logic for case assignment to MS–DRG 041 as displayed in the ICD–10 MS–DRG Version 39.1 Definitions Manual, available via the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.html* contains code combinations or ''clusters'' representing the insertion of a neurostimulator lead and the insertion of a stimulator generator that are captured under a list referred to as ''Peripheral Neurostimulators.'' During our review of the procedure code clusters in this list, we noted that ICD–10–PCS procedure code clusters describing the insertion of a neurostimulator lead and the insertion of the stimulator generator differentiated by device type (for example single array or multiple array), approach and anatomical site placement are captured. However, procedure code clusters describing the insertion of stimulator generator, that is not differentiated by device type, and a neurostimulator lead were inadvertently excluded. We refer the reader to Table 6P.3a (which is available via the internet on the CMS website at *https://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*) for the list of the 108 ICD–10–PCS code clusters that were inadvertently excluded and do not exist in the logic for MS–DRG 041.

For clinical consistency, our clinical advisors supported the addition of the 108 procedure code clusters to the GROUPER logic list referred to as ''Peripheral Neurostimulators'' for MS–DRG 041 that describe the insertion of stimulator generator, not differentiated by device type, and a neurostimulator lead. Therefore, we are proposing to add the 108 ICD–10–PCS code clusters listed in Table 6P.3a that describe the insertion of a stimulator generator, that is not differentiated by device type, and a neurostimulator lead to MS–DRG 041, effective October 1, 2022 for FY 2023.

4. MDC 02 (Diseases and Disorders of the Eye): Retinal Artery Occlusion

We received a request to reassign cases reporting diagnosis codes describing central retinal artery occlusion, and the closely allied condition branch retinal artery occlusion, from MS–DRG 123 (Neurological Eye Disorders) in MDC 02 (Diseases and Disorders of the Eye) to MS–DRGs 061, 062, and 063 (Ischemic Stroke Precerebral Occlusion or Transient Ischemia with Thrombolytic Agent with MCC, with CC, and without CC/MCC, respectively) in MDC 01 (Diseases and Disorders of the Nervous System).

Retinal artery occlusion refers to blockage of the retinal artery that carries oxygen to the nerve cells in the retina at the back of the eye, often by an embolus or thrombus. A blockage in the main artery in the retina is called central retinal artery occlusion (CRAO). A blockage in a smaller artery is called branch retinal artery occlusion (BRAO). According to the requestor, in the current mapping to MS–DRG 123, diagnoses of CRAO and BRAO are being captured inappropriately as eye disorders in MDC 02. Instead, the requestor stated that CRAO and BRAO are forms of acute ischemic stroke which occur when a vessel supplying blood to the brain is obstructed.

The requestor stated the retina is a core component of the central nervous system and there is growing recognition that damage to it is a vascular neurological problem and not an ophthalmological one. Patients with CRAO or BRAO are typically very sick, have an underlying condition, and are at imminent risk for further events including heart attack or brain stroke. A diagnosis of CRAO or BRAO requires an urgent, structured and multidisciplinary team-based examination to evaluate and treat other diagnoses that may be present such as high blood pressure, dyslipidemia, diabetes mellitus, obesity, obstructive sleep apnea and smoking to ameliorate the risks of a subsequent, potentially lethal, cardiovascular event.

The requestor further stated new evidence outlines treatment of patients with CRAO with acute stroke protocols, specifically with intravenous thrombolysis (IV tPA) or hyperbaric oxygen therapy (HBOT), to improve outcomes. According to the requestor, BRAO is less commonly treated with IV tPA than CRAO but also requires an urgent and thorough diagnostic workup as with any other form of stroke. The requestor stated the current assignment of these conditions to MS–DRG 123 does not properly recognize disease complexity and allocation of resources for care for these cases. The requestor stated that patients with CRAO or BRAO more closely resemble patients currently mapped to MS–DRGs 061, 062, and 063 in terms of in resource intensity and criticality and that in instances where HBOT is the chosen treatment modality, any revised MS–DRG mapping should include the ICD–10–PCS codes for HBOT.

The ICD–10–CM codes that describe CRAO and BRAO are found in the following table.

BILLING CODE 4120–01–P

ICD-10-CM Code	Description
H34.10	Central retinal artery occlusion, unspecified eye
H34.11	Central retinal artery occlusion, right eye
H34.12	Central retinal artery occlusion, left eye
H34.13	Central retinal artery occlusion, bilateral
H34.231	Retinal artery branch occlusion, right eye
H34.232	Retinal artery branch occlusion, left eye
H34.233	Retinal artery branch occlusion, bilateral
H34.239	Retinal artery branch occlusion, unspecified eye

Thrombolytic therapy is identified with the following ICD–10–PCS procedure codes.

ICD-10-PCS Code	Description
3E03017	Introduction of other thrombolytic into peripheral vein, open approach
3E03317	Introduction of other thrombolytic into peripheral vein, percutaneous approach
3E04017	Introduction of other thrombolytic into central vein, open approach
3E04317	Introduction of other thrombolytic into central vein, percutaneous approach
3E05017	Introduction of other thrombolytic into peripheral artery, open approach
3E05317	Introduction of other thrombolytic into peripheral artery, percutaneous approach
3E06017	Introduction of other thrombolytic into central artery, open approach
3E06317	Introduction of other thrombolytic into central artery, percutaneous approach

The requestor identified three ICD–10–PCS codes that they stated describe HBOT.

ICD-10-PCS Code	Description
5A05121	Extracorporeal hyperbaric oxygenation, intermittent
6A150ZZ	Decompression, circulatory, single
6A151ZZ	Decompression, circulatory, multiple

During our review of this issue, we included the three procedure codes as identified by the requestor as describing HBOT, as well as the similar procedure code 5A05221 (Extracorporeal hyperbaric oxygenation, continuous) that also describes HBOT, differing only in duration.

Our analysis of this grouping issue confirmed that, when a procedure code describing the administration of a thrombolytic agent or a procedure code describing HBOT is reported with principal diagnosis code describing CRAO or BRAO, these cases group to medical MS–DRG 123. To begin our analysis, we examined claims data from the September 2021 update of the FY 2021 MedPAR file for MS–DRG 123 to (1) identify cases reporting a principal diagnosis code describing CRAO or BRAO without a procedure code describing the administration of a thrombolytic agent or a procedure code describing HBOT; (2) identify cases reporting diagnosis codes describing CRAO or BRAO with a procedure code describing HBOT; and (3) identify cases reporting diagnosis codes describing CRAO or BRAO with a procedure code describing the administration of a thrombolytic agent. Our findings are shown in the following table:

MS-DRG		Number of Cases	Average Length of Stay	Average Costs
123	All cases	2,642	2.5	$6,457
	Cases reporting a principal diagnosis of CRAO or BRAO without a procedure code describing the administration of a thrombolytic agent or a procedure code describing HBOT	774	2.2	$5,482
	Cases reporting a procedure code describing HBOT with a principal diagnosis of CRAO or BRAO	9	2	$6,491
	Cases reporting a procedure code describing the administration of a thrombolytic agent with a principal diagnosis of CRAO or BRAO	47	2.3	$14,335
	All other cases	1,812	2.6	$6,669

BILLING CODE 4120–01–C

As shown in the table, we identified a total of 2,642 cases within MS–DRG 123 with an average length of stay of 2.5 days and average costs of $6,457. Of these 2,642 cases, there are 774 cases that reported a principal diagnosis code describing CRAO or BRAO without a procedure code describing the administration of a thrombolytic agent or a procedure code describing HBOT with an average length of stay of 2.2 days and average costs of $5,482. There are nine cases that reported a principal diagnosis code describing CRAO or BRAO with a procedure code describing HBOT with an average length of stay of 2 days and average costs of $6,491. There are 47 cases that reported a principal diagnosis code describing CRAO or BRAO with a procedure code describing the administration of a thrombolytic agent with an average length of stay of 2.3 days and average costs of $14,335.

The data analysis shows that the 774 cases in MS–DRG 123 reporting a principal diagnosis code describing CRAO or BRAO without a procedure code describing the administration of a thrombolytic agent or a procedure code describing HBOT have average costs lower than the average costs in the FY 2021 MedPAR file for MS–DRG 123 ($5,482 compared to $6,457), and the average length of stay is shorter (2.2 days compared to 2.5 days). For the nine cases in MS–DRG 123 reporting a principal diagnosis code describing CRAO or BRAO with a procedure code describing HBOT, the average length of stay is shorter (2 days compared to 2.5 days) and the average costs ($6,491 compared to $6,457) are slightly higher than the average length of stay and average costs compared to all cases in that MS–DRG. For the 47 cases in MS–DRG 123 reporting a principal diagnosis code describing CRAO or BRAO with a procedure code describing the administration of a thrombolytic agent, the average length of stay is slightly shorter (2.3 days compared to 2.5 days) and the average costs are higher ($14,335 compared to $6,457) than the average length of stay and average costs compared to all cases in that MS–DRG.

We also examined claims data from the September 2021 update of the FY 2021 MedPAR file for MS–DRGs 061, 062, and 063. Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
061	4,531	6.6	$23,720
062	7,955	3.7	$15,733
063	1,548	2.5	$13,023

Because MS–DRG 123 is a base DRG and there is a three-way split within MS–DRGs 061, 062, and 063, we also analyzed the 47 cases reporting a principal diagnosis code describing CRAO or BRAO with a procedure code describing the administration of a thrombolytic agent and the nine cases reporting a principal diagnosis code describing CRAO or BRAO with a procedure code describing HBOT for the presence or absence of a secondary diagnosis designated as a complication or comorbidity (CC) or a major complication or comorbidity (MCC).

MS-DRG		Number of Cases	Average Length of Stay	Average Costs
123	Cases reporting procedures describing the administration of a thrombolytic agent with a principal diagnosis of CRAO or BRAO with MCC	9	3.2	$20,220
	Cases reporting a procedure code describing HBOT with a principal diagnosis of CRAO or BRAO with MCC	1	3	$10,768
	Cases reporting procedures describing the administration of a thrombolytic agent with a principal diagnosis of CRAO or BRAO with CC	19	2.3	$13,145
	Cases reporting a procedure code describing HBOT with a principal diagnosis of CRAO or BRAO with CC	3	2	$6,107
	Cases reporting procedures describing the administration of a thrombolytic agent with a principal diagnosis of CRAO or BRAO without CC/MCC	19	1.8	$12,737
	Cases reporting a procedure code describing HBOT with a principal diagnosis of CRAO or BRAO without CC/MCC	5	1.8	$5,867

This data analysis shows the cases in MS–DRG 123 reporting a principal diagnosis code describing CRAO or BRAO with a procedure code describing the administration of a thrombolytic agent or with a procedure code describing HBOT when distributed based on the presence or absence of a secondary diagnosis designated as a CC or an MCC have average costs lower than the average costs in the FY 2021 MedPAR file for MS–DRGs 061, 062, and 063 respectively, and the average lengths of stay are shorter. Accordingly, we do not believe the data adequately support a potential reassignment of these cases to MS–DRGs 061, 062, and 063 respectively.

Our clinical advisors reviewed this issue and the related data analysis and do not believe that the small subset of patients with a diagnosis of CRAO or BRAO receiving a thrombolytic agent or hyperbaric oxygen therapy warrant a separate MS–DRG or reassignment at this time. Our clinical advisors noted the average costs for cases of patients with a diagnosis of CRAO or BRAO receiving HBOT are only slightly higher than the average costs for all cases in MS–DRG 123 ($6,491 compared to $6,457). The average costs for cases of patients with a diagnosis of CRAO or BRAO receiving a thrombolytic agent are higher than the average costs for all cases in MS–DRG 123 however when distributed based on the presence or absence of a secondary diagnosis designated as a complication or comorbidity (CC) or a major complication or comorbidity (MCC) it is unclear to what degree the higher average costs for these cases are attributable to the severity of illness of the patient and other circumstances of the admission as opposed to the administration of a thrombolytic agent, as the claims data reflects a wide variance with regard to average costs for these cases.

Our clinical advisors further note that ischemia is defined as a condition in which the blood vessels become blocked, and blood flow is stopped or reduced. The condition has many potential causes, including a blockage caused by a blood clot, or due to buildup of deposits, such as cholesterol. Ischemia can occur anywhere in the body, and the different names for the condition depend on the organ or body part affected such as the brain (cerebral ischemia), heart (ischemic heart disease, myocardial ischemia, or cardiac ischemia), and intestines (mesenteric ischemia or bowel ischemia), legs (critical limb ischemia—a form of peripheral artery disease), and skin (cutaneous ischemia), while they are similar in that they all involve a blocked blood vessel.

In ICD–10 the body or organ system is the axis of the classification and diagnosis codes describing ischemia affecting other body parts are classified by the body or organ system affected. For example, codes describing myocardial ischemia are assigned to MDC 05 (Diseases and Disorders of the Circulatory System) and codes describing mesenteric ischemia are assigned to MDC 06 (Diseases and Disorders of the Digestive System). Our clinical advisors disagree with assigning the diagnosis codes describing CRAO and BRAO to MDC 01. Our clinical advisors note the concept of clinical coherence generally requires that the patient characteristics included in the definition of each MS–DRG relate to a common organ system or etiology and that a specific medical specialty should typically provide care to the patients in the DRG. While closely related, the eyes and the brain are different organs. Our clinical advisors state that because the diagnosis codes used to report CRAO and BRAO describe ischemia affecting the retina, these diagnosis codes are appropriately assigned to MDC 02 (Diseases and Disorders of the Eye). The retina is a collection of cells at the back of the eye where the processing of visual information begins. Due to the retina's vital role in vision, damage to it can cause permanent blindness. The presence of CRAO or BRAO requires input from an ophthalmologist and treatment for these diagnoses would be expected to utilize different resources than a diagnosis of cerebral ischemia which may or may not involve visual impairment. Other possible interventions for CRAO or BRAO included attempting to lower the intraocular pressure with medication or by using a small-gauge needle to remove fluid to try to dislodge the embolus or ocular massage to dislodge the clot, which are not interventions generally performed for a diagnosis of acute ischemic stroke.

To explore other mechanisms to address this request, we also reviewed claims data to consider the option of adding another severity level to the current structure of MS–DRG 123 (Neurological Eye Disorders) and assigning the cases with a principal diagnosis of CRAO or BRAO with a procedure code describing the administration of a thrombolytic agent to the highest level. This option would involve modifying the current base MS–DRG to a two-way severity level split or to a three-way severity level split of ''with MCC or thrombolytic agent, with CC, and without CC/MCC.'' Therefore, it would include proposing new MS–DRGs if the data and our clinical advisors supported creation of new MS–DRGs. However, as displayed in the data findings in the table that follows, the data did not support this option. We applied the five criteria as described in section II.D.1.b. of the preamble of this

proposed rule to determine if it would be appropriate to subdivide cases currently assigned to MS–DRG 123 into severity levels. This analysis generally includes two years of MedPAR claims data to compare the data results from one year to the next to avoid making determinations about whether additional severity levels are warranted based on an isolated year's data fluctuation and also, to validate that the established severity levels within a base MS–DRG are supported. However, as discussed in the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25092), our MS–DRG analysis last year was based on ICD–10 claims data from the March 2020 update of the FY 2019 MedPAR file, which contains hospital claims received from October 1, 2018 through March 31, 2020, for discharges occurring through September 30, 2019 and the ICD–10 claims data from the September 2020 update of the FY 2020 MedPAR file, which contains hospital claims received from October 1, 2019 through September 30, 2020, for discharges occurring through September 30, 2020 given the potential impact of the PHE for COVID–19. Therefore, for this FY 2023 IPPS/LTCH PPS proposed rule, we reviewed the claims data for base MS–DRG 123 using the March 2020 update of the FY 2019 MedPAR file and the September 2020 update of the FY 2020 MedPAR file, which were used in our analysis of claims data for MS–DRG reclassification requests for FY 2022. We also reviewed the claims data for base MS–DRG 123 using the September 2021 update of the FY 2021 MedPAR file, which were used in our analysis of claims data for MS–DRG reclassification requests for FY 2023. Our findings are shown in the table:

FY Data	Number of Cases	Number of Cases MCC	Number of Cases CC	Number of Cases NonCC	Average Costs No Split	Average Costs MCC	Average Costs CC	Average Costs NonCC	Average Costs MCC/CC Combo	Average Costs CC/NonCC Combo
2021	2,642	374	1,220	1,048	$6,457	$8,605	$6,738	$5,364	$7,176	$6,103
2020	2,664	345	1,163	1,156	$5,943	$7,710	$6,235	$5,122	$6,573	$5,681
2019	3,100	376	1,393	1,331	$5,659	$8,276	$5,743	$4,832	$6,282	$5,298

We applied the criteria to create subgroups for the three-way severity level split. We refer the reader to section II.D.1.b. of the preamble of this FY 2023 IPPS/LTCH PPS proposed rule, for related discussion regarding our finalization of the expansion of the criteria to include the NonCC subgroup and our proposal to continue to delay application of the NonCC subgroup criteria to existing MS–DRGs with a three-way severity level split to maintain more stability in the current MS–DRG structure. We found that the criterion that there be at least 500 cases for each subgroup was not met, as shown in the table based on the data in the FY 2019, FY 2020, and FY 2021 MedPAR files. Specifically, for the ''with MCC'', ''with CC'', and ''without CC/MCC'' split, there were only 376 cases in the ''with MCC'' subgroup based on the data in the FY 2019 MedPAR file, only 345 cases in the ''with MCC'' subgroup based on the data in the FY 2020 MedPAR file and only 374 cases in the ''with MCC'' subgroup based on the data in the FY 2021 MedPAR file.

We then applied the criteria to create subgroups for the two-way severity level splits. For the ''with MCC'' and ''without MCC'' (CC + NonCC) split, the criterion that there be at least 500 cases for each subgroup failed due to low volume each year, specifically, for the ''with MCC'' subgroup as previously described. For the ''with CC/MCC'' and ''without CC/MCC'' (NonCC) split, we found that the criterion that there be at least a $2,000 difference in average costs between the ''with CC/MCC'' and ''without CC/MCC'' subgroups also failed. In the FY 2019 MedPAR file, our data analysis shows average costs in the hypothetical ''with CC/MCC'' subgroup of $6,282 and average costs in the hypothetical ''without CC/MCC'' subgroup of $4,832, for a difference of only $1,450 ($6,282 minus $4,832 = $1,450). In the FY 2020 MedPAR file, our data analysis shows average costs in the hypothetical ''with CC/MCC'' subgroup of $6,573 and average costs in the hypothetical ''without CC/MCC'' subgroup of $5,122, for a difference of only $1,451 ($6,573 minus $5,122 = $1,451). In the FY 2021 MedPAR file, our data analysis shows average costs in the hypothetical ''with CC/MCC'' subgroup of $7,176 and average costs in the hypothetical ''without CC/MCC'' subgroup of $5,364, for a difference of only $1,812 ($7,176 minus $5,364 = $1,812). Our data analysis indicates that the current base MS–DRG 123 maintains the overall accuracy of the IPPS, and that the claims data do not support a three-way or a two-way severity level split for MS–DRG 123.

Lastly, we explored reassigning cases with a principal diagnosis of CRAO or BRAO that receive the administration of a thrombolytic agent to other MS–DRGs within MDC 02. However, our review did not support reassignment of these cases to any other medical MS–DRGs as these cases would not be clinically coherent with the cases assigned to those other MS–DRGs.

Therefore, based on the various data analyses we performed to explore the possible reassignment of cases with a principal diagnosis of CRAO or BRAO with a procedure code describing the administration of a thrombolytic agent or a procedure code describing hyperbaric oxygen therapy, and the clinical analysis as previously discussed, for FY 2023 we are not proposing any MS–DRG changes for cases with a principal diagnosis of CRAO or BRAO with a procedure code describing the administration of a thrombolytic agent or a procedure code describing hyperbaric oxygen therapy.

5. MDC 04 (Diseases and Disorders of the Respiratory System): Acute Respiratory Distress Syndrome (ARDS)

We received a request to reassign cases reporting diagnosis code J80 (Acute respiratory distress syndrome) as the principal diagnosis from MS–DRG 204 (Respiratory Signs and Symptoms) to MS–DRG 189 (Pulmonary Edema and Respiratory Failure).

According to the requestor, when a patient presents with the condition of acute respiratory failure that progresses to acute respiratory distress syndrome (ARDS) during the hospital stay, official coding guidance instructs to only report the diagnosis code for ARDS (code J80). The requestor stated that in the American Hospital Association's (AHA) *Coding Clinic for ICD–10–CM and ICD–10–PCS,* Fourth Quarter 2020 publication, for a patient who is admitted in acute hypoxic respiratory failure that progresses to ARDS, the advice is to assign code J80, Acute respiratory distress syndrome. Additionally, in the ICD–10–CM Tabular List of Diseases, per the Excludes 1 note under category J96 (Respiratory failure, not elsewhere

classified) only code J80 should be assigned when respiratory failure and ARDS are both documented. The same publication also maintained that ARDS is a life-threatening form of respiratory failure and is not an unrelated condition. Therefore, when acute respiratory failure is documented along with ARDS, only one code is reported to capture the highest level of severity.

The requestor also conveyed the Fourth Quarter 2020 publication's reference to previously published advice from the Fourth Quarter 2017 publication that stated, ''Acute respiratory distress syndrome (ARDS) is a life-threatening condition. ARDS is a rapidly progressive disorder that has symptoms of dyspnea, tachypnea, and hypoxemia. Fluid builds up in the alveoli and lowers the amount of oxygen that is circulated through the bloodstream. Low levels of oxygen in the blood threatens organ function. ARDS is often associated with sepsis, pneumonia, trauma and aspiration. The majority of people who develop ARDS are already in the hospital in critical condition from some other health complication. The focus of treatment is getting oxygen to the organs.''

We examined claims data from the September 2021 update of the FY 2021 MedPAR file for all cases in MS–DRG 204 and the cases reporting ARDS (code J80) as a principal diagnosis. Our findings are shown in the following table.

MS-DRG		Number of Cases	Average Length of Stay	Average Costs
204	All Cases	5,241	2.8	$6,780
	Cases with principal diagnosis code J80 (Acute respiratory distress syndrome)	96	7.6	$15,077
	All other cases	5,145	2.7	$6,625

As shown in the table, the data demonstrate a longer average length of stay (7.6 days versus 2.8 days) and higher average costs ($15,077 versus $6,780) for the 96 cases reporting ARDS (code J80) as a principal diagnosis when compared to all 5,241 cases in MS–DRG 204.

We also examined claims data from the September 2021 update of the FY 2021 MedPAR file for all cases in MS–DRG 189. Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
189	77,626	4.6	$9,780

The data analysis supports that cases reporting ARDS (code J80) are more appropriately aligned with the average length of stay and average costs of the cases in MS–DRG 189 in comparison to MS–DRG 204 when ARDS is reported as a principal diagnosis. We also agree that, consistent with the coding clinic advice, ARDS is a life-threatening form of respiratory failure and the conventions of the ICD–10–CM classification as displayed in the Tabular List of Diseases Excludes note, support the concept that cases reporting ARDS as a principal diagnosis are more clinically coherent with the other conditions currently assigned to MS–DRG 189.

For these reasons, we are proposing to reassign cases reporting ARDS (code J80) as a principal diagnosis from MS–DRG 204 to MS–DRG 189 effective FY 2023.

6. MDC 05 (Diseases and Disorders of the Circulatory System)

a. Percutaneous Transluminal Coronary Angioplasty (PTCA) Logic

We identified a replication issue from the ICD–9 based MS–DRGs to the ICD–10 based MS–DRGs for procedure code 02UG3JE (Supplement mitral valve created from left atrioventricular valve with synthetic substitute, percutaneous approach) that was created effective October 1, 2016 (FY 2017), to identify and describe further interventions that may occur for a patient who had previously undergone cardiac valve surgery to correct a congenital anomaly, such as repair of a complete common atrioventricular canal defect.

We used our established process in the assignment of new procedure code 02UG3JE to the most appropriate MS–DRG(s) for FY 2017. Procedure code 02UG3JE was proposed for assignment to the same MS–DRGs as its predecessor code. The predecessor code for procedure code 02UG3JE as shown in the 2017 ICD–10–PCS conversion table (available via the internet on the CMS web page at *https://www.cms.gov/Medicare/Coding/ICD10/2017-ICD-10-PCS-and-GEMs*) is 02UG3JZ (Supplement mitral valve with synthetic substitute, percutaneous approach). The ICD–9–CM comparable translation for this code (02UG3JZ) is procedure code 35.97 (Percutaneous mitral valve repair with implant), which identifies the use of the MitraClip® technology that has been discussed extensively in prior rulemaking.

In the FY 2017 rulemaking, using our established process, new procedure code 02UG3JE was proposed and finalized for assignment to the following MS–DRGs for FY 2017, as also shown in Table 6B.—New Procedure Codes in association with the FY 2017 IPPS/LTCH PPS proposed and final rules (available via the internet on the CMS web page at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Acute-Inpatient-Files-for-Download*). We note that the listed MS–DRGs also reflect the MS–DRGs that the predecessor code (02UG3JZ) was assigned to at the time of the proposed rule.

MS-DRG	Description
231	Coronary Bypass with PTCA with MCC
232	Coronary Bypass with PTCA without MCC
233	Coronary Bypass with Cardiac Catheterization with MCC
234	Coronary Bypass with Cardiac Catheterization without MCC
235	Coronary Bypass without Cardiac Catheterization with MCC
236	Coronary Bypass without Cardiac Catheterization without MCC
273	Percutaneous Intracardiac Procedures with MCC
274	Percutaneous Intracardiac Procedures without MCC
981	Extensive O.R. Procedures Unrelated to Principal Diagnosis with MCC
982	Extensive O.R. Procedures Unrelated to Principal Diagnosis with CC
983	Extensive O.R. Procedures Unrelated to Principal Diagnosis without CC/MCC

However, as also discussed in the FY 2017 IPPS/LTCH PPS final rule (81 FR 56809 through 56813), in connection with replication efforts between the ICD–9 and ICD–10 based MS–DRGs and the surgical hierarchy, the predecessor procedure code (02UG3JZ) was reassigned from MS–DRGs 273 and 274 to MS–DRG 228 (Other Cardiothoracic Procedures with MCC) and revised MS–DRG 229 (Other Cardiothoracic Procedures without MCC), and was removed from the PTCA logic for MS–DRGs 231 and 232. However, these proposed and finalized MS–DRG changes for procedure code 02UG3JZ were not considered for purposes of the MS–DRG assignments for new procedure code 02UG3JE, which were instead finalized as proposed based on the existing MS–DRG assignments for the predecessor code, and code 02UG3JE continued to remain on the PTCA list in the GROUPER logic for MS–DRGs 231 and 232.

Our clinical advisors stated that procedure code 02UG3JE does not describe a PTCA procedure. We analyzed claims data from the September 2021 update of the FY 2021 MedPAR file for cases in MS–DRGs 231 and 232 to determine if there were any cases reported with procedure code 02UG3JE, and there were no such cases found.

Accordingly, because the procedure described by procedure code 02UG3JE is not clinically consistent with a PTCA procedure and it was initially assigned to the list for PTCA procedures in the GROUPER logic as a result of replication in the transition from ICD–9 to ICD–10 based MS–DRGs, we are proposing to remove procedure code 02UG3JE from the list for PTCA procedures in the GROUPER logic for MS–DRGs 231 and 232 effective FY 2023. We are also proposing to maintain the MS–DRG assignment for procedure code 02UG3JE in MS–DRGs 266 and 267 (Endovascular Cardiac Valve Replacement and Supplement Procedures with and without MCC, respectively) for FY 2023.

b. Neuromodulation Device Implant for Heart Failure (Barostim™ Baroreflex Activation Therapy)

The BAROSTIM NEO™ System is the first neuromodulation device system designed to trigger the body's main cardiovascular reflex to target symptoms of heart failure. The system consists of an implantable pulse generator (IPG) that is implanted subcutaneously in the upper chest below the clavicle, a stimulation lead that is sutured to either the right or left carotid sinus to activate the baroreceptors in the wall of the carotid artery and a wireless programmer system that is used to non-invasively program and adjust BAROSTIM NEO™ therapy via telemetry. The BAROSTIM NEO™ System is indicated for the improvement of symptoms of heart failure in a subset of patients with symptomatic New York Heart Association (NYHA) class II and III heart failure with low cardiac ejection fractions who do not benefit from guideline directed pharmacologic therapy or qualify for Cardiac Resynchronization Therapy (CRT).

The BAROSTIM NEO™ System was approved for new technology add-on payments for FY 2021 (85 FR 58716 through 58717) and FY 2022 (86 FR 44974). We refer readers to section II.F.4.a. of the preamble of this proposed rule for a discussion regarding the proposed FY 2023 status of technologies approved for FY 2022 new technology add-on payments, including the BAROSTIM NEO™ System.

For this FY 2023 IPPS/LTCH PPS proposed rule, we received a request to (1) reassign the ICD–10–PCS procedure codes that describe the implantation of the BAROSTIM NEO™ System from MS–DRGs 252, 253 and 254 (Other Vascular Procedures with MCC, with CC, without MCC respectively) to MS–DRGs 222, 223, 224, 225, 226, and 227 (Cardiac Defibrillator Implant with and without Cardiac Catheterization with and without AMI/HF/Shock with and without MCC, respectively) and (2) reassign the procedure code that describes the placement of a BAROSTIM NEO™ IPG alone from MS–DRGs 252, 253 and 254 to MS–DRG 245 (AICD Generator Procedures).

The following ICD–10–PCS procedure codes uniquely identify the implantation of the BAROSTIM NEO™ System: 0JH60MZ (Insertion of stimulator generator into chest subcutaneous tissue and fascia, open approach) in combination with 03HK3MZ (Insertion of stimulator lead into right internal carotid artery, percutaneous approach) or 03HL3MZ (Insertion of stimulator lead into left internal carotid artery, percutaneous approach). The requestor noted that ICD–10–PCS codes 0JH60MZ, 03HK3MZ and 03HL3MZ are individually assigned to MDC 05 in MS–DRGs 252, 253, and 254 but not mapped to the logic of these MS–DRGs in a code combination or code cluster. According to the requestor this means that cases with a principal diagnosis from MDC 05 with procedure codes describing the implantation of a BAROSTIM NEO™ system (0JH60MZ with 03HL3MZ or 03HK3MZ); with procedure codes describing placement of the stimulator generator alone (0JH60MZ); or with procedure codes describing the placement of a carotid sinus lead only (03HL3MZ or 03HK3MZ) are all assigned to MS–DRGs 252, 253, and 254, despite the significant differences in the clinical coherence and resources required to perform these distinct procedures.

The requestor stated that cases reporting procedure codes describing the implantation of a BAROSTIM NEO™ system are more clinically similar to, and have costs that are more closely aligned to, cases within MS–DRGs 222, 223, 224, 225, 226, and 227. The requestor stated that according to its own analysis, the population of Medicare patients surgically treated with procedures assigned to MS–DRGs 222, 223, 224, 225, 226, and 227 is essentially identical to the population treated with the BAROSTIM NEO™ System. According to the requestor, this congruent patient population accounts for essentially all cases assigned to MS–DRGs 222, 223, 224, 225, 226, and 227. The requestor stated their analysis demonstrated that over 80% of the cases in MS–DRGs 222, 223, 224, 225, 226, and 227 had a diagnosis of heart failure, compared to only 30% of cases with a diagnosis of heart failure assigned to MS–DRGs 252, 253, and 254. The requestor stated that the subset of patients that have an indication for the implantation of a BAROSTIM NEO™ system also have indications for the implantation of Implantable Cardioverter Defibrillators (ICD), Cardiac Resynchronization Therapy Defibrillators (CRT–D) and/or Cardiac Contractility Modulation (CCM) devices, all of which also require the permanent implantation of a programmable, electrical pulse generator and at least one electrical lead. The requestor specifically highlighted that the procedure code combinations describing the implantation of a cardiac contractility modulation (CCM) device system, which consists of a programmable implantable pulse generator (IPG) and three leads, one of which is implanted into the right atrium and the other two leads which are inserted into the right ventricle is assigned to MS–DRGs 222, 223, 224, 225, 226, and 227, and the codes describing the insertion of contractility modulation device generator alone are assigned to MS–DRG 245. The requestor stated that the average resource utilization required to implant the BAROSTIM NEO™ System demonstrates a significant disparity compared to all procedures within MS–DRGs 252, 253, and 254 and noted that the cost of the BAROSTIM NEO™ implantable device is $35,000, which is in range with the cost of the other cardiac implantable devices (for example ICD, CRT–D, and CCM) assigned to MS–DRGs 222, 223, 224, 225, 226, and 227.

The requestor stated that the majority of the procedures assigned to MS–DRGs 252, 253, and 254 are primarily designed to identify, diagnose, clear and restructure veins and arteries, excluding those that require implantable devices. Furthermore, the requestor stated the surgical procedures within MS–DRGs 252, 253, and 254 are not intended to treat or improve the function of the heart, nor treat the symptoms of heart failure.

The requestor acknowledged that there are very few cases within the publicly available Medicare inpatient claims data that potentially includes procedure codes describing the implantation of a BAROSTIM NEO™ system. The requestors' own analysis revealed fewer than 11 cases with procedure codes describing the implantation of a BAROSTIM NEO™ system in the combined FY 2019 and FY 2020 MedPAR data and noted that during much of this time period, the BAROSTIM NEO™ System was only implanted as part of a controlled clinical trial. The requestor stated that this incomplete data should not be used to determine initial MS–DRG assignments, especially for new FDA designated 'breakthrough' medical technologies like the BAROSTIM NEO™ system. Rather, the requestor stated that CMS should use available information and expert knowledge to make initial MS–DRG assignments, while waiting for a substantial number of Medicare covered, post-approved claims from a disperse set of hospitals to reconsider MS–DRG assignments as necessary. The requestor cautioned that upon new technology add-on payments expiration, and if the inadequate MS–DRG assignment for these procedures continues, inpatient admissions to implant the BAROSTIM NEO™ system will be paid less than outpatient admissions to perform the same procedures.

The ICD–10–CM diagnosis codes that describe heart failure are found in the following table. These diagnosis codes are all currently assigned to MDC 05.

BILLING CODE 4120–01–P

ICD-10-CM Code	Description
I09.81	Rheumatic heart failure
I11.0	Hypertensive heart disease with heart failure
I13.0	Hypertensive heart and chronic kidney disease with heart failure and stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease
I13.2	Hypertensive heart and chronic kidney disease with heart failure and with stage 5 chronic kidney disease, or end stage renal disease
I50.1	Left ventricular failure, unspecified
I50.20	Unspecified systolic (congestive) heart failure
I50.21	Acute systolic (congestive) heart failure
I50.22	Chronic systolic (congestive) heart failure
I50.23	Acute on chronic systolic (congestive) heart failure
I50.30	Unspecified diastolic (congestive) heart failure
I50.31	Acute diastolic (congestive) heart failure
I50.32	Chronic diastolic (congestive) heart failure
I50.33	Acute on chronic diastolic (congestive) heart failure
I50.40	Unspecified combined systolic (congestive) and diastolic (congestive) heart failure
I50.41	Acute combined systolic (congestive) and diastolic (congestive) heart failure
I50.42	Chronic combined systolic (congestive) and diastolic (congestive) heart failure
I50.43	Acute on chronic combined systolic (congestive) and diastolic (congestive) heart failure
I50.810	Right heart failure, unspecified
I50.811	Acute right heart failure
I50.812	Chronic right heart failure
I50.813	Acute on chronic right heart failure
I50.814	Right heart failure due to left heart failure
I50.82	Biventricular heart failure
I50.83	High output heart failure
I50.84	End stage heart failure
I50.89	Other heart failure
I50.9	Heart failure, unspecified
I97.130	Postprocedural heart failure following cardiac surgery
I97.131	Postprocedural heart failure following other surgery

First, we examined claims data from the September 2021 update of the FY 2021 MedPAR file for MS–DRGs 252, 253 and 254 to identify cases reporting a diagnosis of heart failure and procedure codes describing the implantation of the BAROSTIM NEO™ system with or without a procedure code describing the performance of a cardiac catheterization as MS–DRGs 222, 223, 224, 225, 226, and 227 are defined by the performance of cardiac catheterization. Our findings are shown in the following table.

MS-DRG		Number of Cases	Average Length of Stay	Average Costs
252	All cases	24,839	7.6	$27,488
	Cases with diagnosis of heart failure with 0JH60MZ and 03HL3MZ or 03HK3MZ with cardiac catheterization	0		
	Cases with diagnosis of heart failure with 0JH60MZ and 03HL3MZ or 03HK3MZ without cardiac catheterization	2	4.5	$67,588
253	All cases	18,373	5.2	$21,978
	Cases with diagnosis of heart failure with 0JH60MZ and 03HL3MZ or 03HK3MZ with cardiac catheterization	0		
	Cases with diagnosis of heart failure with 0JH60MZ and 03HL3MZ or 03HK3MZ without cardiac catheterization	1	1	$19,237

As shown in the table, the data analysis performed indicates that the two cases in MS–DRG 252 reporting procedure codes describing the implantation of a BAROSTIM NEO™ system have an average length of stay that is shorter than the average length of stay for all the cases in MS–DRG 252 (4.5 days versus 7.6 days) and higher average costs when compared to all the cases in MS–DRG 252 ($67,588 versus $27,488). These two cases did not also report a procedure code describing the performance of a cardiac catherization. The one case in MS–DRG 253 reporting procedure codes describing the implantation of a BAROSTIM NEO™ system had a length of stay that is shorter than the average length of stay for all the cases in MS–DRG 253 (1 day versus 5.2 days) and lower costs when compared to all the cases in MS–DRG 253 ($19,237 versus $21,978). This case did not also report a procedure code describing the performance of a cardiac catherization. We found zero cases in MS–DRG 254 reporting procedure codes describing the implantation of a BAROSTIM NEO™ system.

Our clinical advisors reviewed this data and note that is it difficult to detect patterns of complexity and resource intensity based on the three cases that reported procedure codes describing the implantation of a BAROSTIM NEO™ system. The claims data also reflect a wide variance with regard to the length of stay and average costs for the three cases that did report the implantation of a BAROSTIM NEO™ system. The results of the claims analysis demonstrate we do not have sufficient claims data on which to base and evaluate any proposed changes to the current MS–DRG assignment. Our clinical advisors also expressed concern in equating the implantation of a BAROSTIM NEO™ system to the placement of ICD, CRT–D, and CCM devices as these devices all differ in terms of technical complexity and anatomical placement of the electrical lead(s). Our clinical advisors note there is no intravascular component or vascular puncture involved when implanting a BAROSTIM NEO™ system. Our clinical advisors also note the placement of ICD, CRT–D, and CCM devices generally involve a lead being affixed to the myocardium, being threaded through the coronary sinus or crossing a heart valve and are procedures that involve a greater level of complexity than affixing the stimulator lead to either the right or left carotid sinus when implanting a BAROSTIM NEO™ system.

Next, to evaluate the request to reassign the procedure code that describes the placement of a BAROSTIM NEO™ IPG alone from MS–DRGs 252, 253 and 254 to MS–DRG 245 (AICD Generator Procedures), we examined claims data from the September 2021 update of the FY 2021 MedPAR file for all cases in MS–DRGs 252, 253 and 254 and compared the results to cases with a procedure code describing placement of the stimulator generator alone. Our findings are shown in the following table.

MS-DRGs 252-254: Cases Reporting Procedures Describing Placement of a BAROSTIM NEO™ Stimulator Generator

MS-DRG	ICD-10-PCS codes	Number of Cases	Average Length of Stay	Average Costs
252	All cases	24,839	7.6	$27,488
	Cases with procedure code 0JH60MZ alone	12	8.8	$56,622
253	All Cases	18,373	5.2	$21,978
	Cases with procedure code0JH60MZ alone	4	2.5	$30,451

BILLING CODE 4120–01–C

As shown in the table, the data analysis performed indicates that the 12 cases in MS–DRG 252 reporting a procedure code describing placement of the stimulator generator alone have an average length of stay that is longer than the average length of stay for all the cases in MS–DRG 252 (8.8 days versus 7.6 days) and higher average costs when compared to all the cases in MS–DRG 252 ($56,622 versus $27,488). The four cases in MS–DRG 253 reporting a procedure code describing placement of the stimulator generator alone have an average length of stay that is shorter than the average length of stay for all the cases in MS–DRG 253 (2.5 days versus 5.2 days) and higher average costs when compared to all the cases in MS–DRG 253 ($30,451 versus $21,978). We found zero cases in MS–DRG 254 reporting a procedure code describing placement of the stimulator generator alone.

Our clinical advisors reviewed this data, and found, similar to the analysis of the data from the three cases that reported procedure codes describing the implantation of a BAROSTIM NEO™ system, that it is difficult to detect patterns of complexity and resource intensity based on the few cases that reported procedure codes describing placement of the stimulator generator alone. The claims data similarly reflects a wide variance with regard to the length of stay and average costs for these cases that did report the placement of the stimulator generator alone, indicating there may have been other factors contributing to the higher costs. When reviewing the consumption of hospital resources for this small subset of cases, the claims data also suggest that the increased costs may be attributable to the severity of illness of the patient and other circumstances of the admission as the patients tended to have a major complication or co-morbid (MCC) condition reported based on the MS–DRG assigned.

We recognize the average costs of the small numbers of cases reporting a procedure code describing placement of the stimulator generator alone are greater when compared to the average costs of all cases in their respective MS–DRG. The MS–DRG system is a system of averages and it is expected that within the diagnostic related groups, some cases may demonstrate higher than average costs, while other cases may demonstrate lower than average costs. We further note that section 1886(d)(5)(A) of the Act provides for Medicare payments to Medicare-participating hospitals in addition to the basic prospective payments for cases incurring extraordinarily high costs.

In response to the requestor's concerns regarding procedures currently assigned to MS–DRGs 252, 253 and 254, as discussed in section II.D.3.b. of the preamble of this proposed rule, we note that MS–DRGs 252, 253, and 254 (Other Vascular Procedures with MCC, with CC, and without CC/MCC, respectively) are examples of the ''other'' surgical class, and therefore it is expected that there will be procedures not as precisely clinically aligned within the definition (logic) of these MS–DRGs. In regard to the concern about the implications for reimbursement when these procedures are performed in the outpatient setting as opposed to the inpatient setting, we note that the goals of reviewing the MS–DRG assignments of particular procedures are to better clinically represent the resources involved in caring for these patients and to enhance the overall accuracy of the system.

In response to the requestor's statement that CMS should use available information and expert knowledge to make initial MS–DRG assignments, while waiting for a substantial number of Medicare covered, post-approved claims from a disperse set of hospitals to reconsider MS–DRG assignments as necessary, we note that we use our established process for GROUPER assignments for new diagnosis and procedure codes. Specifically, consistent with our established process for assigning new diagnosis and procedure codes, we review the predecessor code and MS–DRG assignment most closely associated with the new diagnosis or procedure code, and in the absence of claims data, we consider other factors that may be relevant to the MS–DRG assignment, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis or treatment of the condition. We note that this process will not automatically result in the new diagnosis or procedure code being assigned to the same MS–DRG or having the same designation as the predecessor code. Members of the public have the opportunity to provide feedback on the assignment and designation of the codes if they disagree. We refer the reader to section II.D.17 of this proposed rule for a more detailed discussion of this process. We note that when BAROSTIM NEO™ applied for new technology add-on payment, it was noted that the technology could be uniquely identified using a combination of existing ICD–10–PCS codes that were already assigned to MS–DRGs, and this circumstance generally would not provide a basis for MS–DRG reassignment.

Lastly, our clinical advisors expressed concern regarding making proposed MS–DRG changes based on a specific, single technology (BAROSTIM NEO™ system), identified by only one unique procedure code combination versus considering proposed changes based on a group of related procedure codes that can be reported to describe that same type or class of technology, which is more consistent with the intent of the MS–DRGs.

We believe that as the number of cases reporting procedure codes describing the implantation of neuromodulation devices for heart failure increases, a better view of the associated costs and lengths of stay on average will be reflected in the data for purposes of assessing any reassignment of these cases. Our clinical advisors stated that it would not be appropriate to reassign cases for patients from MS–DRGs 252, 253 and 254 to MS–DRGs 222, 223, 224, 225, 226, and 227 in the absence of additional data to better determine the resource utilization for this subset of patients to help inform whether a reassignment would be clinically warranted. Therefore, for the reasons stated previously, we are proposing to maintain the assignment of cases reporting procedure codes that describe the implantation of a neuromodulation device in MS–DRGs 252, 253 and 254 for FY 2023. We are also proposing to maintain the assignment of cases reporting a procedure code describing placement of a stimulator generator alone in MS–DRGs 252, 253 and 254 for FY 2023.

During our review of this issue, as we examined the GROUPER logic that would determine an assignment of a case to MS–DRGs 222, 223, 224, 225, 226, and 227, we found two diagnosis codes describing heart failure that are not currently in the listed principal diagnoses in the GROUPER logic for MS–DRGs 222 and 223 (Cardiac Defibrillator Implant with Cardiac Catheterization with AMI, HF or Shock with and without MCC, respectively). These diagnosis codes are listed in the following table.

ICD-10-CM Code	Description
I97.130	Postprocedural heart failure following cardiac surgery
I97.131	Postprocedural heart failure following other surgery

As a result, when either of these codes are coded as a principal diagnosis, MS–DRGs 224 and 225 (Cardiac Defibrillator Implant with Cardiac Catheterization without AMI, HF, or Shock with and without MCC, respectively) are instead assigned when reported with a procedure code combination describing the implantation of a cardiac defibrillator and a procedure describing the performance of a cardiac catherization procedure. We refer the reader to the ICD–10 MS–DRG Definitions Manual Version 39.1, which is available via the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software* for complete documentation of the GROUPER logic for MS–DRGs 222, 223, 224, and 225.

Our clinical advisors reviewed this issue and believe that cases reporting diagnosis code I97.130 or I97.131 as a principal diagnosis are associated with a severity of illness on par with cases reporting a principal diagnosis of a type of heart failure. To code postprocedural heart failure in ICD–10–CM, instructional notes at category I50 direct to ''code first heart failure following surgery'' (that is, I97.130 and I97.131) with a second code from subcategory of I50 listed after the postprocedural heart failure code to specify the type of heart failure. Our clinical advisors recommend adding diagnosis codes I97.130 and I97.131 to the logic list of principal diagnoses that describe heart failure for clinical consistency, recognizing that coding guidelines instruct to code I97.130 and I97.131 before the codes from subcategory of I50 that specify the type of heart failure, as the codes from subcategory of I50 are currently in the listed principal diagnoses in the GROUPER logic for MS–DRGs 222 and 223. Therefore, we are proposing to modify the GROUPER logic to allow cases reporting diagnosis code I97.130 or I97.131 as a principal diagnosis to group to MS–DRGs 222 and 223 when reported with qualifying procedures.

c. Cardiac Mapping

We identified a replication issue from the ICD–9 based MS–DRGs to the ICD–10 based MS–DRGs for procedure code 02K80ZZ (Map conduction mechanism, open approach). Cardiac mapping describes the creation of detailed maps to detect how the electrical signals that control the timing of the heart rhythm move between each heartbeat to identify the location of rhythm disorders. Cardiac mapping is generally performed during open-heart surgery or performed via cardiac catherization.

In the FY 2016 IPPS/LTCH PPS final rule (80 FR 49363 through 49369), we discussed a request to remove the cardiac ablation and other specified cardiovascular procedures from the following MS–DRGs, and to create new MS–DRGs to classify these procedures:

- MS–DRG 246 (Percutaneous Cardiovascular Procedure with Drug-Eluting Stent with MCC or 4+ Vessels/Stents);
- MS–DRG 247 (Percutaneous Cardiovascular Procedure with Drug-Eluting Stent without MCC);
- MS–DRG 248 (Percutaneous Cardiovascular Procedure with Non-Drug-Eluting Stent with MCC or 4+ Vessels/Stents);
- MS–DRG 249 (Percutaneous Cardiovascular Procedure with Non-Drug-Eluting Stent without MCC);
- MS–DRG 250 (Percutaneous Cardiovascular Procedure without Coronary Artery Stent with MCC); and
- MS–DRG 251 (Percutaneous Cardiovascular Procedure without Coronary Artery Stent without MCC).

The requestor recommended that CMS assign the following ICD–9–CM procedure codes that identify and describe cardiac ablation procedures and the other percutaneous intracardiac procedures to the newly created MS–DRGs:

- 35.52 (Repair of atrial septal defect with prosthesis, closed technique);
- 35.96 (Percutaneous balloon valvuloplasty);
- 35.97 (Percutaneous mitral valve repair with implant);
- 37.26 (Catheter based invasive electrophysiologic testing);
- 37.27 (Cardiac mapping);
- 37.34 (Excision or destruction of other lesion or tissue of heart, endovascular approach);
- 37.36 (Excision, destruction, or exclusion of left atrial appendage (LAA)); and
- 37.90 (Insertion of left atrial appendage device).

We stated we agreed that creating these new MS–DRGs would better reflect utilization of resources and clinical cohesiveness for intracardiac procedures in comparison to intracoronary procedures. Therefore, after consideration of the public comments we received, we finalized our proposal to create MS–DRGs 273 (Percutaneous Intracardiac Procedures with MCC) and MS–DRG 274 (Percutaneous Intracardiac Procedures without MCC) for the FY 2016 ICD–10 MS–DRGs Version 33 and finalized the assignment of the procedures performed within the heart chambers using intracardiac techniques to the two new MS–DRGs.

In the FY 2016 rulemaking, we stated that the comparable ICD–10–PCS code translations for ICD–9–CM procedure code 37.27 (Cardiac mapping) were ICD–10–PCS codes 02K83ZZ (Map conduction mechanism, percutaneous approach) and 02K84ZZ (Map conduction mechanism, percutaneous endoscopic approach). However, code 02K80ZZ (Map Conduction Mechanism, Open Approach), which is also a comparable ICD–10–PCS code translation for ICD–9–CM procedure code 37.27, was inadvertently excluded. Consequently, procedure code 02K80ZZ continued to remain in the GROUPER logic for MS–DRGs 246, 247, 248, 249, 250 and 251.

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58477), we finalized a revision to the titles for MS–DRGs 273 and 274 to ''Percutaneous and Other Intracardiac Procedures with and without MCC, respectively'' to better reflect the procedures assigned to them.

In the ICD–10 MS–DRGs Definitions Manual Version 39.1, procedure code 02K80ZZ is currently recognized as a non-O.R. procedure that affects the MS–DRG to which it is assigned. Our clinical advisors reviewed this grouping issue and stated that procedure code 02K80ZZ does not describe a percutaneous cardiovascular procedure. Our clinical advisors support the reassignment of code 02K80ZZ for clinical coherence, noting the procedure should be appropriately grouped along with other procedure codes that describe cardiac mapping currently assigned to MS–DRGs 273 and 274. Accordingly, because the procedure described by procedure code 02K80ZZ is not clinically consistent with percutaneous cardiovascular procedures

and it was initially assigned MS–DRGs 246, 247, 248, 249, 250 and 251 as a result of replication in the transition from ICD–9 to ICD–10 based MS–DRGs, we are proposing the reassignment of procedure code 02K80ZZ from MS–DRGs 246, 247, 248, 249, 250 and 251 to MS–DRGs 273 and 274 (Percutaneous and Other Intracardiac Procedures with and without MCC, respectively) in MDC 05 effective FY 2023.

As discussed in section II.D.1.b. of the preamble of this proposed rule, we are providing a test version of the ICD–10 MS–DRG GROUPER Software, Version 40, so that the public can better analyze and understand the impact of the proposals included in this proposed rule. We note that at the time of the development of the test software this issue was unable to be addressed and therefore, it does not reflect the proposed reassignment of procedure code 02K80ZZ from MS–DRGs 246, 247, 248, 249, 250 and 251 to MS–DRGs 273 and 274 (Percutaneous and Other Intracardiac Procedures with and without MCC, respectively) in MDC 05 for Version 40.

d. Surgical Ablation

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 44836 through 44848), we discussed a two-part request we received to review the MS–DRG assignments for cases involving the surgical ablation procedure for atrial fibrillation. The first part of the request was to create a new classification of surgical ablation MS–DRGs to better accommodate the costs of open concomitant surgical ablations. The requestor identified the following potential procedure combinations that would comprise an ''open concomitant surgical ablation'' procedure.

- Open CABG + open surgical ablation
- Open MVR + open surgical ablation
- Open AVR + open surgical ablation
- Open MVR + open AVR + open surgical ablation
- Open MVR + open CABG + open surgical ablation
- Open MVR + open AVR + open CABG + open surgical ablation
- Open AVR + open CABG + open surgical ablation

As discussed in the FY 2022 IPPS/LTCH PPS final rule, we examined claims data from the March 2020 update of the FY 2019 MedPAR file and the September 2020 update of the FY 2020 MedPAR file for cases reporting procedure code combinations describing open concomitant surgical ablations. We refer the reader to Table 6P.1o associated with the FY 2022 final rule (which is available via the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*) for data analysis findings of cases reporting procedure code combinations describing open concomitant surgical ablations. We stated our analysis showed while the average lengths of stay and average costs of cases reporting procedure code combinations describing open concomitant surgical ablations are higher than all cases in their respective MS–DRG, we found variation in the volume, length of stay, and average costs of the cases. We also stated findings from our analysis indicated that MS–DRGs 216, 217, 218 (Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization with MCC, with CC, and without CC/MCC, respectively) as well as approximately 31 other MS–DRGs would be subject to change based on the three-way severity level split criterion finalized in FY 2021. We refer the reader to section II.D.1.b. of this FY 2023 IPPS/LTCH PPS proposed rule, for related discussion regarding our proposal to continue to delay application of the NonCC subgroup criteria to existing MS–DRGs with three-way severity level split to maintain more stability in the current MS–DRG structure.

In the FY 2022 final rule, we finalized our proposal to revise the surgical hierarchy for the MS–DRGs in MDC 05 (Diseases and Disorders of the Circulatory System) to sequence MS–DRGs 231–236 (Coronary Bypass) above MS–DRGs 228 and 229 (Other Cardiothoracic Procedures with and without MCC, respectively), effective October 1, 2021. In addition, we also finalized the assignment of cases with a procedure code describing coronary bypass and a procedure code describing open ablation to MS–DRGs 233 and 234 and changed the titles of these MS–DRGs to ''Coronary Bypass with Cardiac Catheterization or Open Ablation with and without MCC, respectively'' to reflect this reassignment for FY 2022.

In response to this final policy, for this FY 2023 IPPS/LTCH PPS proposed rule, we received a request to again review the MS–DRG assignment of cases involving open concomitant surgical ablation procedures. The requestor stated they continue to believe that the average hospital costs for surgical ablation for atrial fibrillation demonstrates a cost disparity compared to all procedures within their respective MS–DRGs. The requestor asked that that when open surgical ablation is performed with MVR, or AVR or MVR/AVR + CABG that these procedures are either (1) assigned to a different family of MS–DRGs or (2) assigned to MS–DRGs 216 and 217 (Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization with MCC and with CC, respectively) similar to what CMS did with CABG and open ablation procedures in the FY 2022 rulemaking to better accommodate the added cost of open concomitant surgical ablation.

The change to the surgical hierarchy in MDC 05 and the assignment of cases with a procedure code describing coronary bypass and a procedure code describing open ablation to MS–DRGs 233 and 234 is recent, only becoming effective October 1, 2021. We believe more time is needed before considering to again review the MS–DRG assignment of cases reporting procedure code combinations describing open concomitant surgical ablations as the data from the September 2021 update of the FY 2021 MedPAR file does not reflect our FY 2022 finalization. In addition, our clinical advisors continue to state that in open concomitant surgical ablation procedures, the CABG, MVR, and AVR components of the procedure are more technically complex than the open surgical ablation procedure. They also state that the finalized revision to the surgical hierarchy leads to a grouping that is more coherent and better accounts for the resources expended to address the more complex procedures from other cases redistributed during the hierarchy change. As noted, we believe that additional time is needed to allow for further analysis of the claims data to reflect our FY 2022 finalization, and also to determine to what extent the patient's co-morbid conditions are also contributing to costs and to identify other contributing factors that might exist with respect to the increased length of stay and costs of this subset of cases in these MS–DRGs, as discussed in the FY 2022 IPPS/LTCH PPS final rule.

7. MDC 06 (Diseases and Disorders of the Digestive System): Appendicitis

We received a request to reconsider the MS–DRG assignment for diagnosis code K35.20 (Acute appendicitis with generalized peritonitis, without abscess). According to the requestor, when this code is reported in combination with any one of the corresponding procedure codes that describe an appendectomy, the case is grouping to MS–DRGs 341, 342, and 343 (Appendectomy without Complicated Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively). Alternatively, the requestor stated that when diagnosis code K35.32 (Acute

appendicitis with perforation and localized peritonitis, without abscess) is reported in combination with any one of the corresponding procedure codes that describe an appendectomy, the case is grouping to MS–DRGs 338, 339, and 340 (Appendectomy with Complicated Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively).

The requestor asserted that the difference in MS–DRG assignment suggests that localized peritonitis is more severe or requires an additional level of care over and above that for generalized peritonitis. The requestor stated that clinically, both localized and generalized peritonitis, when treated with an appendectomy require the same level of patient care, including extensive intraoperative irrigation at the surgical site, direct inspection or imaging of the abdomen to look for possible abscess, use of intravenous antibiotics, and prolonged inpatient monitoring. The requestor added that generalized peritonitis can be thought of as a progression of the localized peritonitis condition and that patients progress from localized to generalized peritonitis and not vice versa.

We note that this topic has been discussed previously in our FY 2019 (83 FR 41230) and FY 2021 rulemakings (85 FR 32500 through 32503) and (85 FR 58484 through 58488). Effective FY 2019 (October 1, 2018) diagnosis code K35.2 (Acute appendicitis with generalized peritonitis) was expanded to K35.20 (Acute appendicitis with generalized peritonitis, without abscess); and K35.21 (Acute appendicitis with generalized peritonitis, with abscess). In addition, code K35.3 (Acute appendicitis with localized peritonitis) was expanded to K35.30 (Acute appendicitis with localized peritonitis, without perforation or gangrene); K35.31 (Acute appendicitis with localized peritonitis and gangrene, without perforation); K35.32 (Acute appendicitis with perforation and localized peritonitis, without abscess); and K35.33 (Acute appendicitis with perforation and localized peritonitis, with abscess).

We finalized the severity level designations for these new diagnosis codes in the FY 2019 IPPS/LTCH PPS final rule and stated our clinical advisors believed that the new diagnosis codes for acute appendicitis described as ''with abscess'' or ''with perforation'' were clinically qualified for the MCC severity level designation, while acute appendicitis ''without abscess'' or ''without perforation'' were clinically qualified for the CC severity level designation because cases with abscess or perforation would be expected to require more clinical resources and time to treat while those cases ''without abscess'' or ''without perforation'' are not as severe clinical conditions.

As discussed in our FY 2021 rulemaking, we received the request to add K35.20 (Acute appendicitis with generalized peritonitis, without abscess) to the list of complicated principal diagnoses so that all ruptured/perforated appendicitis codes in MDC 06 group to MS–DRGs 338, 339, and 340 (Appendectomy with Complicated Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) as K35.20 is the only ruptured appendicitis code not included in the list of complicated principal diagnosis codes. At that time, we noted that the inclusion term at subcategory K35.2 (Acute appendicitis with generalized peritonitis) is: ''Appendicitis (acute) with generalized (diffuse) peritonitis following rupture or perforation of the appendix''. The requestor stated that code K35.20 (Acute appendicitis with generalized peritonitis, without abscess) describes a generalized, more extensive form of peritonitis than code K35.32 (Acute appendicitis with perforation and localized peritonitis, without abscess). We noted that our clinical advisors agreed that the presence of an abscess would clinically determine whether a diagnosis of acute appendicitis would be considered a complicated principal diagnosis. As diagnosis code K35.20 is described as ''without'' an abscess, our clinical advisors recommended that K35.20 not be added to the list of complicated principal diagnoses for MS–DRGS 338, 339, and 340. We also proposed to remove diagnosis code K35.32 (Acute appendicitis with perforation and localized peritonitis, without abscess) from the complicated principal diagnosis list.

In response to that proposal, some commenters disagreed. A commenter stated that when ruptured appendicitis results in generalized peritonitis, resources are greater because the infection is not walled off, not localized, and has spread to two or more compartments within the abdominal cavity. According to the commenter, clinical literature supports the statement that generalized peritonitis is a more morbid (severe) presentation than just perforation or localized abscess. After consideration of the comments received and for the reasons discussed in the FY 2021 final rule, we did not finalize our proposals in that final rule. We concurred that the expansion of diagnosis codes K35.2 and K35.3 to introduce additional clinical concepts effective October 1, 2018 significantly changed the scope and complexity of the diagnosis codes for this subset of patients. We also stated NCHS' staff acknowledged the clinical concerns based on the manner in which diagnosis codes K35.2 and K35.3 were expanded and confirmed that they would consider further review of these newly expanded codes with respect to the clinical concepts.

We communicated with the CDC/NCHS staff regarding this repeat request submitted for FY 2023 consideration. The CDC/NCHS staff included these codes describing appendicitis on the agenda and a proposal for further revisions was presented for discussion at the March 8–9, 2022 ICD–10 Coordination and Maintenance Committee meeting. Specifically, the CDC/NCHS staff proposed to expand current diagnosis codes K35.20 and K35.21, making them sub-subcategories and creating new diagnosis codes to identify and describe acute appendicitis with generalized peritonitis, with perforation and without perforation, and unspecified as to perforation, as shown in the following table.

Proposed ICD-10-CM Code	Description
K35.200	Acute appendicitis with generalized peritonitis, without perforation or abscess
K35.201	Acute appendicitis with generalized peritonitis, with perforation, without abscess
K35.209	Acute appendicitis with generalized peritonitis, without abscess, unspecified as to perforation
K35.210	Acute appendicitis with generalized peritonitis, without perforation, with abscess
K35.211	Acute appendicitis with generalized peritonitis, with perforation and abscess
K35.219	Acute appendicitis with generalized peritonitis, with abscess, unspecified as to perforation

We refer the reader to the CDC website at *https://www.cdc.gov/nchs/icd/icd10cm_maintenance.htm* for additional detailed information regarding the proposal, including a recording of the discussion and the related meeting materials.

We note that the deadline for submitting public comments on the diagnosis code proposals discussed at the March 8–9, 2022 ICD–10 Coordination and Maintenance Committee meeting is May 9, 2022 and according to the CDC/NCHS staff, the diagnosis code proposals are being considered for an October 1, 2023 implementation (FY 2024). Any future proposed changes to the MS–DRGs for Appendectomy would be dependent on the diagnosis code revisions that are finalized by the CDC/NCHS. Since it is not clear what code changes may be finalized, including whether public comments would support the proposed changes or provide alternative options for consideration, we believe it is appropriate to delay any possible MS–DRG modifications for future rulemaking. Therefore, we are not proposing a change to the MS–DRG assignment or the current structure for MS–DRGs 338, 339, 340, 341, 342, and 343 at this time. Although we are not proposing a change to the MS–DRG assignments for FY 2023, we are making available the findings from our data analysis for the listed MS–DRGs and the associated diagnosis codes which may help inform future comments. We refer the reader to Table 6P.4a (which is available via the internet on the CMS website at *https://www.cms.gov/medicare/medicare-fee-for-service-payment/acuteinpatientpps*).

8. MDC 07 (Diseases and Disorders of the Hepatobiliary System and Pancreas): Laparoscopic Cholecystectomy with Common Bile Duct Exploration

We received a request to review the MS–DRG assignment when procedure code 0FC94ZZ (Extirpation of matter from common bile duct, percutaneous endoscopic approach) that describes a common bile duct exploration with gallstone removal procedure using a laparoscopic approach, is reported with a laparoscopic cholecystectomy. The procedure codes describing a laparoscopic cholecystectomy are

ICD-10-PCS Code	Description
0F544ZZ	Destruction of gallbladder, percutaneous endoscopic approach
0F548ZZ	Destruction of gallbladder, via natural or artificial opening endoscopic
0FB44ZZ	Excision of gallbladder, percutaneous endoscopic approach
0FB48ZZ	Excision of gallbladder, via natural or artificial opening endoscopic
0FT44ZZ	Resection of gallbladder, percutaneous endoscopic approach

According to the requestor, when a laparoscopic cholecystectomy is reported with any one of the listed procedure codes with a common bile duct exploration and gallstone removal procedure that is performed laparoscopically and reported with procedure code 0FC94ZZ, the resulting assignment is MS–DRGs 417, 418 and 419 (Laparoscopic Cholecystectomy without C.D.E. with MCC, with CC, and without CC/MCC, respectively). This MS–DRG assignment does not recognize that a common bile duct exploration (C.D.E.) was performed. However, the requestor stated that when procedure code 0FC90ZZ (Extirpation of matter from common bile duct, open approach) that describes a common bile duct exploration with gallstone removal procedure using an open approach is reported with any one of the listed procedure codes describing a laparoscopic cholecystectomy, the resulting assignment is MS–DRGs 411, 412, and 413 (Cholecystectomy with C.D.E. with MCC, with CC, and without CC/MCC, respectively). The requestor stated that this MS–DRG assignment appropriately recognizes that a common bile duct exploration was performed. The requestor questioned why only the common bile duct exploration with gallstone removal procedure performed using an open approach (code 0FC90ZZ) grouped appropriately when reported with the laparoscopic cholecystectomy.

We reviewed procedure code 0FC94ZZ and found that it is currently designated as a non-O.R. procedure, therefore, the GROUPER logic does not recognize this procedure for purposes of MS–DRG assignment. We also note that MS–DRGs 411, 412, and 413 include cholecystectomy procedures performed by either an open or a percutaneous endoscopic (laparoscopic) approach. We refer the reader to the V39.1 ICD–10 MS–DRG Definitions Manual, which is available via the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software* for complete documentation of the GROUPER logic for MS–DRGs 411, 412, 413, 417, 418 and 419.

We analyzed claims data from the September 2021 update of the FY 2021 MedPAR file for all cases in MS–DRGs 411, 412, 413, 417, 418, and 419. Because the logic for MS–DRGs 411, 412, and 413 includes cholecystectomy

procedures performed by either an open or percutaneous endoscopic (laparoscopic) approach, we also analyzed the cases reported with each approach separately. The findings from our analysis are shown in the following tables.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
411	116	8.5	$29,332
412	152	6.8	$21,042
413	76	3.6	$12,427
417	10,448	6.3	$19,384
418	17,336	4.1	$13,627
419	9,479	2.7	$10,728

Number of Cases Reporting Open Cholecystectomy in MS-DRGs 411-413			
MS-DRG	Number of Cases	Average Length of Stay	Average Costs
411	56	10.73	$36,135
412	82	7.61	$23,390
413	28	4.3	$12,969
Total	**166**	**8.1**	**$25,932**

Number of Cases Reporting Laparoscopic Cholecystectomy in MS-DRGs 411-413			
MS-DRG	Number of Cases	Average Length of Stay	Average Costs
411	60	6.5	$22,982
412	70	5.8	$18,293
413	48	3.1	$12,110
Total	**178**	**5.3**	**$18,206**

In MS–DRG 411, we found a total of 116 cases with an average length of stay of 8.5 days and average costs of $29,332. Of those 116 cases, there were 56 cases reporting an open cholecystectomy, with an average length of stay of 10.7 days and average costs of $36,135 and 60 cases reporting a laparoscopic cholecystectomy, with an average length of stay of 6.5 days and average costs of $22,982. The data show that the cases reporting an open cholecystectomy have a longer average length of stay (10.7 days versus 6.5 days) and higher average costs ($36,135 versus $22,982) compared to the cases reporting a laparoscopic cholecystectomy. The data also show that the cases reporting an open cholecystectomy have a longer average length of stay (10.7 days versus 8.5 days) and higher average costs ($36,135 versus $29,332) compared to all the cases in MS–DRG 411. Similar findings are demonstrated for MS–DRGs 412 and 413, where the data show that the cases reporting an open cholecystectomy have a longer average length of stay and higher average costs compared to the cases reporting a laparoscopic cholecystectomy, and also, when compared to all the cases in their respective MS–DRGs.

We then analyzed claims data from the September 2021 update of the FY 2021 MedPAR file for cases reporting procedure code 0FC94ZZ in MS–DRGs 417, 418, and 419 to assess how often it was reported. The findings from our analysis are shown in the following table.

Number of Cases Reporting Procedure Code 0FC94ZZ in MS-DRGs 417-419			
MS-DRG	Number of Cases	Average Length of Stay	Average Costs
417	70	6.3	$17,685
418	96	4.4	$14,615
419	65	3.2	$13,914
Total	**231**	**4.6**	**$15,348**

We found a total of 231 cases across MS–DRGs 417, 418, and 419 with an average length of stay of 4.6 days and average costs of $15,348 reporting procedure code 0FC94ZZ. In our review of the cases reporting a laparoscopic cholecystectomy across MS–DRGs 411, 412, and 413, we found a total of 178 cases with an average length of stay of 5.3 days and average costs of $18,206.

We also examined claims data from the September 2021 update of the FY 2021 MedPAR file for cases reporting procedure code 0FC94ZZ across all the MS–DRGs without another O.R. procedure reported, to assess the number of cases and which MS–DRGs procedure code 0FC94ZZ was found. The findings from our analysis are shown in the following table.

Number of Cases Reporting Procedure Code 0FC94ZZ without another O.R. Procedure Across All MS-DRGs

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
438 - Disorders of Pancreas Except Malignancy with MCC	2	14	$26,092
441 - Disorders of Liver Except Malignancy Cirrhosis or Alcoholic Hepatitis with MCC	1	16	$30,076
444 - Disorders of the Biliary Tract with MCC	6	5.2	$10,237
445 - Disorders of the Biliary Tract with CC	11	4	$14,015
446 - Disorders of the Biliary Tract without CC/MCC	5	2.6	$15,036
871 - Septicemia or Severe Sepsis without MV >96 Hours with MCC	6	8.8	$22,737
872 - Septicemia or Severe Sepsis without MV >96 Hours without MCC	1	3	$5,322
Total	**32**	**5.9**	**$16,087**

The data analysis shows procedure code 0FC94ZZ was reported in a total of 32 cases across 7 MS–DRGs with an average length of stay of 5.9 days and average costs of $16,087. While procedure code 0FC94ZZ is designated as non-O.R., we also analyzed the average length of stay and average costs of the cases found within each of the 7 MS–DRGs reporting procedure code 0FC94ZZ against all the cases in their respective MS–DRGs, to determine if there was any indication that the performance of the procedure described by procedure code 0FC94ZZ may have had any impact. For instance, as shown in the table, for MS–DRG 438 we found 2 cases reporting procedure code 0FC94ZZ with an average length of stay of 14 days and average costs of $26,092. In the September 2021 update of the FY 2021 MedPAR file, the total number of cases for MS–DRG 438 is 10,240 with an average length of stay of 6.4 days and average costs of $13,341. The 2 cases reporting procedure code 0FC94ZZ have approximately twice the average length of stay (14 days versus 6.4 days) and approximately twice the average costs ($26,092 versus $13,341) compared to all the cases for MS–DRG 438. In the absence of additional analysis, it is unknown if these differences can be attributed to other factors, such as the MCCs that were reported in these cases. Similar findings were found for MS–DRGs 441, 445, 446, and 871. We will consider if further detailed analysis may be warranted for these cases.

Our clinical advisors agreed that procedure code 0FC94ZZ describes a common bile duct exploration procedure with removal of a gallstone and should be added to the logic for case assignment to MS–DRGs 411, 412, and 413 for clinical coherence with the other procedures that describe a common bile duct exploration. Therefore, for FY 2023, we are proposing to redesignate procedure code 0FC94ZZ from a non-O.R. procedure to an O.R. procedure and add it to the logic list for common bile duct exploration (CDE) in MS–DRGs 411, 412, and 413 (Cholecystectomy with C.D.E. with MCC, with CC, and without CC/MCC, respectively) in MDC 07 to appropriately reflect when this procedure is performed and improve the clinical coherence of the patients assigned to these MS–DRGs.

In addition, we note that MS–DRGs 414, 415, and 416 (Cholecystectomy Except By Laparoscope without C.D.E. with MCC, with CC and without CC/MCC, respectively) also reflect cholecystectomy procedures, however, the logic is specifically defined for open cholecystectomy procedures *without* a common bile duct exploration procedure performed. Since MS–DRGs 411, 412, and 413 reflect cases where an open or laparoscopic cholecystectomy is performed *with* a common bile duct exploration procedure, MS–DRGs 414, 415, and 416 reflect cases where only an open cholecystectomy is performed *without* a common bile duct exploration procedure, and MS–DRGs 417, 418, and 419 reflect cases where only a laparoscopic cholecystectomy is performed *without* a common bile duct exploration procedure, we believe there may be an opportunity to further refine these MS–DRGs once additional analysis is performed for consideration in future rulemaking. For example, we could consider proposing to restructure these cholecystectomy MS–DRGs to reflect the following two concepts, if supported by the data, and relatedly, to determine if severity levels are also supported according to the existing criteria.

- Open Cholecystectomy with or without C.D.E.; and
- Laparoscopic Cholecystectomy with or without C.D.E.

We are interested in receiving feedback from the public on this and any alternative recommendations or options to further refine these MS–DRGs by October 20, 2022 for future consideration. Feedback and other suggestions should be directed to the new electronic intake system, Medicare Electronic Application Request Information System™ (MEARIS™), discussed in section II.D.1.b. of the preamble of this proposed rule at *https://mearis.cms.gov/public/home.*

9. MDC 10 (Diseases and Disorders of the Endocrine System): Eladocagene Exuparvovec Gene Therapy

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 44895), we finalized the redesignation of code XW0Q316 (Introduction of eladocagene exuparvovec into cranial cavity and brain, percutaneous approach, new technology group 6) from a Non-O.R. procedure to an O.R. procedure, assigned to MS–DRGs 628, 629, and 630 (Other Endocrine, Nutritional and Metabolic O.R. Procedures with MCC, with CC, and without CC/MCC, respectively) in MDC 10 (Endocrine, Nutritional and Metabolic Diseases and Disorders) and to MS–DRGs 987, 988,

and 989 (Non-Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC and without MCC/CC, respectively). We received a request to reconsider this assignment for FY 2023. According to the requestor, the clinical characteristics and costs of cases assigned to MS–DRGs 628 through 630 are significantly different from those associated with the administration of eladocagene exuparvovec. The requestor performed its own analysis, using deep brain stimulation for epilepsy and selective dorsal rhizotomy for cerebral palsy as proxies, and stated that based on its findings for the initial cost analysis and clinical comparison, that MS–DRG 23 (Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis with MCC or Chemotherapy Implant or Epilepsy with Neurostimulator), MS–DRG 24 (Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis without MCC) and MS–DRGs 25, 26, and 27 (Craniotomy and Endovascular Intracranial Procedures with MCC, with CC, and without CC/MCC, respectively) may be more appropriate. However, the requestor also stated that while the clinical aspects of eladocagene exuparvovec cases are similar to those of MS–DRGs 23 through 27, the costs are much higher and neither MS–DRGs 628, 629, 630 or MS–DRGs 23 through 27 are appropriate. Therefore, the requestor stated its belief that assigning eladocagene exuparvovec cases to new MS–DRGs is warranted.

Eladocagene exuparvovec is a gene therapy for the treatment of patients with aromatic L-amino acid decarboxylase (AADC) deficiency, a rare genetic and fatal condition identified with ICD–10–CM diagnosis code E70.81. Patients with AADC deficiency are generally observed to have onset of symptoms in the first year of life, most notably hypotonia (muscle weakness), followed by movement disorders, developmental delay and autonomic signs, such as hyperhidrosis (profuse sweating unrelated to heat or exercise). It is understood that the long-term implications of this disease are severe, resulting in severe deficits and limitations in life expectancy. Because the condition is primarily diagnosed in the pediatric population, we would not expect to find any meaningful volume of cases in the MedPAR data.

We analyzed claims data from the September 2021 update of the FY 2021 MedPAR file for MS–DRGs 628, 629, and 630 for cases reporting procedure code XW0Q316 and did not find any cases. We then extended our analysis to all MS–DRGs and found 1 case reporting the administration of this therapy in MS–DRG 829 (Myeloproliferative Disorders or Poorly Differentiated Neoplasms with Other Procedures with CC/MCC) with an average length of stay of 2 days and average costs of $1,544. As we have discussed elsewhere we generally prefer not to create a new MS–DRG unless it would include a substantial number of cases. However, as discussed in section II.D.19.b. of the preamble of this proposed rule, we are seeking public comment on possible mechanisms through which we can address rare diseases and conditions that are represented by low volumes in our claims data. We believe this topic, relating to the administration of treatment to address the rare genetic and fatal condition of AADC deficiency, is appropriately aligned with and should be considered as part of that effort. Therefore, we are maintaining the current structure for MS–DRGs 628, 629, and 630 for FY 2023, but will continue to consider this request in connection with our evaluation of possible mechanisms to address rare diseases and conditions in the MS–DRG structure, as discussed later in this rule.

10. MDC 15 Newborns and Other Neonates With Conditions Originating in Perinatal Period: MS–DRG 795 Normal Newborn

We received a request to review the MS–DRG assignment of newborn encounters with diagnosis codes describing contact with and (suspected) exposure to COVID–19 when the condition is ruled out after clinical evaluation and negative workup. The requestor expressed concern that a newborn encounter coded with a principal diagnosis code from category Z38 (Liveborn infants according to place of birth and type of delivery), followed by codes Z05.1 (Observation and evaluation of newborn for suspected infectious condition ruled out) and Z20.822 (Contact with and (suspected) exposure to COVID–19) is assigned to MS–DRG 794 (Neonate with Other Significant Problems). The requestor stated that this assignment appears to be in error and that the assignment should instead be to MS–DRG 795 (Normal Newborn).

Our analysis of this grouping issue confirmed that, when a principal diagnosis code from category Z38 (Liveborn infants according to place of birth and type of delivery), followed by codes Z05.1 (Observation and evaluation of newborn for suspected infectious condition ruled out) and Z20.822 (Contact with and (suspected) exposure to COVID–19), the case is assigned to MS–DRG 794.

As we examined the GROUPER logic that would determine an assignment of cases to MS–DRG 795, we note the ''only secondary diagnosis'' list under MS–DRG 795 includes the following five ICD–10–CM diagnosis codes from ICD–10–CM category Z20. We refer the reader to the ICD–10 MS–DRG Version 39.1 Definitions Manual (which is available via the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software* for complete documentation of the GROUPER logic for the MS–DRG 795.

ICD-10-CM Code	Description
Z20.09	Contact with and (suspected) exposure to other intestinal infectious diseases
Z20.7	Contact with and (suspected) exposure to pediculosis, acariasis and other infestations
Z20.810	Contact with and (suspected) exposure to anthrax
Z20.818	Contact with and (suspected) exposure to other bacterial communicable diseases
Z20.89	Contact with and (suspected) exposure to other communicable diseases

In reviewing the ICD–10–CM diagnosis code classification and the GROUPER logic list, we note that the 13 ICD–10–CM diagnosis codes, also from category Z20, listed in the following table were inadvertently omitted from the ''only secondary diagnosis'' list under MS–DRG 795.

ICD-10-CM Code	Description
Z20.01	Contact with and (suspected) exposure to intestinal infectious diseases due to Escherichia coli (E. coli)
Z20.1	Contact with and (suspected) exposure to tuberculosis
Z20.2	Contact with and (suspected) exposure to infections with a predominantly sexual mode of transmission
Z20.3	Contact with and (suspected) exposure to rabies
Z20.4	Contact with and (suspected) exposure to rubella
Z20.5	Contact with and (suspected) exposure to viral hepatitis
Z20.6	Contact with and (suspected) exposure to human immunodeficiency virus [HIV]
Z20.811	Contact with and (suspected) exposure to meningococcus
Z20.820	Contact with and (suspected) exposure to varicella
Z20.821	Contact with and (suspected) exposure to Zika virus
Z20.822	Contact with and (suspected) exposure to COVID-19
Z20.828	Contact with and (suspected) exposure to other viral communicable diseases
Z20.9	Contact with and (suspected) exposure to unspecified communicable disease

We reviewed section I.C.21.c.1 of the 2022 ICD–10–CM Official Guidelines for Coding and Reporting which state ''category Z20 indicates contact with, and suspected exposure to, communicable diseases. These codes are for patients who are suspected to have been exposed to a disease by close personal contact with an infected individual or are in an area where a disease is epidemic . . . Contact/exposure codes may be used as a first-listed code to explain an encounter for testing, or, more commonly, as a secondary code to identify a potential risk.'' Per the Excludes1 note at category Z20, when applicable, diagnoses of current infectious or parasitic disease are coded instead of codes from category Z20.

Our clinical advisors reviewed this issue and agree that patients exposed to communicable diseases that are worked up or treated prophylactically or both, and for whom those conditions are later determined after study to not be present, are distinct from patients with identified signs or symptoms of a suspected problem or diagnosed with having that communicable disease. Our clinical advisors supported adding the 13 diagnosis codes listed previously to the logic of MS–DRG 795 for clinical consistency with the five other diagnosis codes describing contact with, and suspected exposure to, communicable diseases currently assigned to the ''only secondary diagnosis'' list under MS–DRG 795.

After review of the coding guidelines and conventions, and discussion with our clinical advisors, we agree with the requestor that in these circumstances, these encounters should not map to MS–DRG 794 (Neonate with Other Significant Problems) and should instead be assigned to MS–DRG 795 (Normal Newborn). Therefore, we are proposing to add the 13 diagnosis codes listed previously that describe contact with and (suspected) exposure to communicable diseases to the ''only secondary diagnosis'' list under MS–DRG 795 (Normal Newborn). Under this proposal, cases with a principal diagnosis described by an ICD–10–CM code from category Z38 (Liveborn infants according to place of birth and type of delivery), following by codes Z05.1 (Observation and evaluation of newborn for suspected infectious condition ruled out) and Z20.822 (Contact with and (suspected) exposure to COVID–19) will be assigned to MS–DRG 795.

As we examined the GROUPER logic that would determine an assignment of cases to MS–DRGs in MDC 15, we noted the logic for MS–DRG 790 (Extreme Immaturity or Respiratory Distress Syndrome Neonate) includes ICD–10–CM diagnosis codes that describe extremely low birth weight newborn, extreme immaturity of newborn and respiratory distress syndrome of newborn. We refer the reader to the ICD–10 MS–DRG Version 39.1 Definitions Manual (which is available via the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software*) for complete documentation of the GROUPER logic for MS–DRG 790. During our review of the diagnosis codes assigned to these MS–DRGs, we identified three diagnosis codes that do not exist in the logic for MS–DRG 790. The three diagnosis codes and their current MS–DRG assignments are listed in the following table.

ICD-10-CM Code	Description	MS-DRG
P07.00	Extremely low birth weight newborn, unspecified weight	791 and 792 (Prematurity with and without Major Problems, respectively)
P07.20	Extreme immaturity of newborn, unspecified weeks of gestation	795 (Normal Newborn)
P07.26	Extreme immaturity of newborn, gestational age 27 completed weeks	791 and 792 (Prematurity with and without Major Problems, respectively)

Our clinical advisors reviewed this grouping issue and noted that while virtually every neonate under 1000 grams, which is the definition of extremely low birth weight (ELBW), will have a weight documented somewhere

in the medical record, in the rare instance that it is not, if the diagnosis documented by the provider is ''ELBW'' the neonate would be in a higher risk category. Our clinical advisors also note that whereas weight is measured with high precision, gestational age is more complicated. With the exception of in vitro fertilization, gestational age is an estimate. Our clinical advisors state similar to documentation of ''ELBW'', if the diagnosis documented by the provider is ''extreme immaturity of newborn'' the neonate would be in a higher risk category. These diagnoses describe conditions that require advanced care and resources similar to other conditions already assigned to the logic of MS–DRG 790 even in cases where the birth weight, or weeks of gestation, are unspecified.

For clinical consistency, our clinical advisors supported the addition of these three diagnosis codes to the GROUPER logic list for MS–DRG 790. Therefore, we are proposing to reassign ICD–10–CM diagnosis codes P07.00, P07.20 and P07.26 to MS–DRG 790, effective October 1, 2022 for FY 2023.

11. Review of Procedure Codes in MS–DRGs 981 Through 983 and 987 Through 989

We annually conduct a review of procedures producing assignment to MS–DRGs 981 through 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) or MS–DRGs 987 through 989 (Non-Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) on the basis of volume, by procedure, to see if it would be appropriate to move cases reporting these procedure codes out of these MS–DRGs into one of the surgical MS–DRGs for the MDC into which the principal diagnosis falls. The data are arrayed in two ways for comparison purposes. We look at a frequency count of each major operative procedure code. We also compare procedures across MDCs by volume of procedure codes within each MDC. We use this information to determine which procedure codes and diagnosis codes to examine.

We identify those procedures occurring in conjunction with certain principal diagnoses with sufficient frequency to justify adding them to one of the surgical MS–DRGs for the MDC in which the diagnosis falls. We also consider whether it would be more appropriate to move the principal diagnosis codes into the MDC to which the procedure is currently assigned.

In addition to this internal review, we also consider requests that we receive to examine cases found to group to MS–DRGs 981 through 983 or MS–DRGs 987 through 989 to determine if it would be appropriate to add procedure codes to one of the surgical MS–DRGs for the MDC into which the principal diagnosis falls or to move the principal diagnosis to the surgical MS–DRGs to which the procedure codes are assigned.

Based on the results of our review of the claims data from the September 2021 update of the FY 2021 MedPAR file, as well as our review of the requests that we received to examine cases found to group to MS–DRGs 981 through 983 or MS–DRGs 987 through 989, we are proposing to move the cases reporting the procedures and/or principal diagnosis codes described in this section of this rule from MS–DRGs 981 through 983 or MS–DRGs 987 through 989 into one of the surgical MS–DRGs for the MDC into which the principal diagnosis or procedure is assigned.

a. Embolization of Portal and Hepatic Veins

We received a request to reassign cases with a principal diagnosis from MDC 07 (Diseases and Disorders of the Hepatobiliary System and Pancreas) when reported with procedures involving the embolization of a hepatic or portal vein from MS–DRGs 981, 982 and 983 (Extensive O.R. Procedures Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) to MS–DRGs 423, 424, and 425 (Other Hepatobiliary or Pancreas Procedures with MCC, with CC, and without CC/MCC, respectively) in MDC 07.

In ICD–10–PCS, the root operation selected to code embolization procedures is dependent on the objective of the procedure. If the objective of an embolization procedure is to completely close a vessel, the root operation Occlusion is coded. ICD–10–PCS procedure codes 06L43DZ (Occlusion of hepatic vein with intraluminal device, percutaneous approach) or 06L83DZ (Occlusion of portal vein with intraluminal device, percutaneous approach) may be reported to describe embolization procedures to completely close off a hepatic or portal vein with an intraluminal device. If the objective of an embolization procedure is to narrow the lumen of a vessel, the root operation Restriction is coded. ICD–10–PCS procedure codes 06V43DZ (Restriction of hepatic vein with intraluminal device, percutaneous approach) or 06V83DZ (Restriction of portal vein with intraluminal device, percutaneous approach) may be reported to describe embolization procedures to narrow or partially occlude a hepatic or portal vein with an intraluminal device.

These four ICD–10–PCS procedure codes, as well as their MDC assignments, are listed in the table:

ICD-10-PCS Code	Description	MDC
06L43DZ	Occlusion of hepatic vein with intraluminal device, percutaneous approach	05, 06, 21, 24
06L83DZ	Occlusion of portal vein with intraluminal device, percutaneous approach	05, 06, 21, 24
06V43DZ	Restriction of hepatic vein with intraluminal device, percutaneous approach	05, 21, 24
06V83DZ	Restriction of portal vein with intraluminal device, percutaneous approach	05, 21, 24

Our analysis of this grouping issue confirmed that when a procedure code describing the percutaneous occlusion or restriction of the hepatic or portal vein with intraluminal device is reported with a principal diagnosis from MDC 07, these cases group to MS–DRGs 981, 982, and 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively). Whenever there is a surgical procedure reported on the claim that is unrelated to the MDC to which the case was assigned based on the principal diagnosis, it results in an MS–DRG assignment to a surgical class referred to as ''unrelated operating room procedures''.

To understand the resource use for the subset of cases reporting procedure codes 06L43DZ, 06L83DZ, 06V43DZ or 06V83DZ with a principal diagnosis from MDC 07 that are currently

grouping to MS–DRGs 981, 982, and 983, we examined claims data from the September 2021 update of the FY 2021 MedPAR file for the average length of stay and average costs for these cases. Our findings are shown in the following table:

MS-DRGs 981-983: Cases Reporting Procedure Describing Percutaneous Occlusion or Restriction of Hepatic or Portal Vein with Intraluminal Device with Principal Diagnosis from MDC 07				
MS-DRG		Number of Cases	Average Length of Stay	Average Costs
981	All cases	22,967	12.1	$35,790
	Cases reporting 06L43DZ; 06L83DZ; 06V43DZ or 06V83DZ with a principal diagnosis from MDC 07	23	13.9	$45,634
982	All cases	10,465	5.9	$19,803
	Cases reporting 06L43DZ; 06L83DZ; 06V43DZ or 06V83DZ with a principal diagnosis from MDC 07	10	8.6	$16,772
983	All cases	1,905	2.7	$13,877
	Cases reporting 06L43DZ; 06L83DZ; 06V43DZ or 06V83DZ with a principal diagnosis from MDC 07	1	1	$15,140

We also examined the data for cases in MS–DRGs 423, 424, and 425, and our findings are shown in the following table:

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
423 – All cases	1,222	10.9	$32,145
424 – All cases	547	6	$19,514
425 – All cases	98	2.9	$12,113

While the claims analysis based on the September 2021 update of the FY 2021 MedPAR file identified only 34 cases for which these procedures were reported with a principal diagnosis from MDC 07 resulting in assignment to MS–DRGs 981 through 983, and the average length of stay and average costs for these cases vary in comparison to the average length of stay and average costs of all cases in MS–DRGs 423, 424, and 425, given the clinical indications for hepatic or portal vein embolization procedures, such as to induce regrowth on one side of the liver in advance of a planned hepatic resection on the other side, we believe it is clinically appropriate to add these procedure codes describing the percutaneous occlusion or restriction of the hepatic or portal vein with intraluminal device to MS–DRGs 423, 424, and 425 in MDC 07. Our clinical advisors state that these procedures are clearly related to the principal diagnoses as they are procedures performed for hepatobiliary diagnoses, namely hepatocellular carcinoma and liver metastases, so it is clinically appropriate for the procedures to group to the same MDC as the principal diagnoses. Our clinical advisors also stated the procedures describing the percutaneous occlusion or restriction of the hepatic or portal vein with intraluminal device are consistent with the existing procedure codes included in the logic for case assignment to MS–DRGs 423, 424, and 425.

Therefore, we are proposing to add ICD–10–PCS procedure codes 06L43DZ, 06L83DZ, 06V43DZ and 06V83DZ to MDC 07 in MS–DRGs 423, 424 and 425. Under this proposal, cases reporting procedure codes 06L43DZ, 06L83DZ, 06V43DZ or 06V83DZ in conjunction with a principal diagnosis code from MDC 07 would group to MS–DRGs 423, 424 and 425.

b. Percutaneous Excision of Hip Muscle

We received a request to examine cases reporting a procedure describing percutaneous biopsies of muscle. The requestor stated that when procedures describing the percutaneous excision of the left hip muscle for diagnostic purposes are reported with a principal diagnosis from MDC 06 (Diseases and Disorders of the Digestive System) such as K68.12 (Psoas muscle abscess), the cases are assigned to MS–DRGs 981, 982, and 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively). However, when procedures describing the percutaneous excision of the retroperitoneum for diagnostic purposes are reported with the same principal diagnosis of psoas muscle abscess, the cases are assigned to medical MS–DRGs 371, 372, and 373 (Major Gastrointestinal Disorders and Peritoneal Infections with MCC, with CC, and without CC/MCC, respectively).

The requestor stated the cases at their facility with a principal diagnosis of psoas muscle abscess when reported with a procedure describing a biopsy of the left muscle had an average length of stay comparable to other cases assigned to MS–DRGs 371, 372, and 373. The requestor provided ICD–10–PCS procedure code 0KBP3ZX (Excision of left hip muscle, percutaneous approach, diagnostic) in its request and asked that CMS evaluate the assignment of procedure code 0KBP3ZX because procedures describing the percutaneous excision of the left hip muscle for diagnostic purposes appear to be related to a diagnosis of psoas muscle abscess.

To analyze this request, we first identified the similar ICD–10–PCS procedure codes that also describe the excision of hip muscle. We note that under the ICD–10–PCS procedure classification, biopsy procedures are identified by the 7th digit qualifier value ''diagnostic'' in the code description. The four ICD–10–PCS procedure codes that describe the excision of hip muscle, as well as their MDC assignments, are listed in the table:

ICD-10-PCS Code	Description	MDC
0KBN3ZX	Excision of right hip muscle, percutaneous approach, diagnostic	08
0KBN3ZZ	Excision of right hip muscle, percutaneous approach	01; 08; 09; 21; 24
0KBP3ZX	Excision of left hip muscle, percutaneous approach, diagnostic	08
0KBP3ZZ	Excision of left hip muscle, percutaneous approach	01; 08; 09; 21; 24

Our analysis of this grouping issue confirmed that when procedure codes 0KBN3ZX, 0KBN3ZZ, 0KBP3ZX or 0KBP3ZZ are reported with a principal diagnosis from MDC 06, such as K68.12, these cases group to MS–DRGs 981, 982, and 983. As noted in the previous discussion, whenever there is a surgical procedure reported on the claim that is unrelated to the MDC to which the case was assigned based on the principal diagnosis, it results in a MS–DRG assignment to a surgical class referred to as ''unrelated operating room procedures''.

We examined the claims data from the September 2021 update of the FY 2021 MedPAR file to identify cases reporting procedure codes 0KBN3ZX, 0KBN3ZZ, 0KBP3ZX, or 0KBP3ZZ with a principal diagnosis of K68.12 (Psoas muscle abscess) that are currently grouping to MS–DRGs 981, 982, and 983. Our findings are shown in this table:

MS-DRGs 981-983: Cases Reporting Procedures Describing Excision of Hip Muscle with a Principal Diagnosis of Psoas Muscle Abscess

MS-DRG		Number of Cases	Average Length of Stay	Average Costs
981	All cases	22,967	12.1	$35,790
	Cases reporting excision of hip muscle with principal diagnosis of K68.12	2	7.5	$12,388
982	All cases	10,465	5.9	$19,803
	Cases reporting excision of hip muscle with principal diagnosis of K68.12	4	9.8	$13,810
983	All cases	1,905	2.7	$13,877
	Cases reporting excision of hip muscle with principal diagnosis of K68.12	1	2	$7,781

As shown, in our analyses of the claims data for MS–DRGs 981 through 983, we found a total of seven cases reporting procedures describing excision of hip muscle with a principal diagnosis of K68.12 in the September 2021 update of the FY 2021 MedPAR file.

To further evaluate this issue, we examined claims data from the September 2021 update of the FY 2021 MedPAR file for cases reporting any one of the four procedure codes (0KBN3ZX, 0KBN3ZZ, 0KBP3ZX, or 0KBP3ZZ) in MS–DRGs 981 through 983 with a principal diagnosis from MDC 06. Our findings are shown in the following table.

MS-DRGs 981-983: Cases Reporting Procedures Describing Excision of Hip Muscle with Principal Diagnosis from MDC 06				
MS-DRG		Number of Cases	Average Length of Stay	Average Costs
981	All cases	22,967	12.1	$35,790
	Cases reporting excision of hip muscle with any principal diagnosis from MDC 06	5	9.6	$15,599
982	All cases	10,465	5.9	$19,803
	Cases reporting excision of hip muscle with any principal diagnosis from MDC 06	8	8.5	$12,346
983	All cases	1,905	2.7	$13,877
	Cases reporting excision of hip muscle with any principal diagnosis from MDC 06	1	2	$7,781

As shown, in our analyses of the claims data for MS–DRGs 981 through 983, we found a total of 14 cases reporting procedures describing excision of hip muscle with a principal diagnosis from MDC 06 in the September 2021 update of the FY 2021 MedPAR file.

We also examined the data for cases in MS–DRGs 371, 372, and 373, and our findings are shown in the following table:

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
371 – All cases	11,415	6.9	$13,284
372 – All cases	15,680	4.6	$8,072
373 – All cases	3,090	3.3	$5,860

We reviewed these procedures and our clinical advisors state that procedures that describe the percutaneous excision of hip muscle are not surgical in nature and would not be the main reason for inpatient hospitalization or be considered the principal driver of resource expenditure. Our clinical advisors state although a correlation cannot usually be made between procedures performed in general anatomic regions, such as the retroperitoneum, and procedures performed in specific body parts, such as muscle, because procedures coded with general anatomic region body parts represent a broader range of procedures that cannot be coded to a specific body part, they agree that in this instance procedures that describe the percutaneous excision of hip muscle should have the same designation as the ICD–10–PCS procedure codes that describe the percutaneous excision of the retroperitoneum that are currently designated as non-O.R. procedures.

Our clinical advisors reviewed this analysis and believe that, for clinical coherence and consistency, it would be appropriate to designate ICD–10–PCS codes 0KBN3ZX, 0KBN3ZZ, 0KBP3ZX, and 0KBP3ZZ as non-O.R. procedures.

Therefore, we are proposing to remove codes 0KBN3ZX, 0KBN3ZZ, 0KBP3ZX, and 0KBP3ZZ from the FY 2023 ICD–10 MS–DRGs Version 40 Definitions Manual in Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index as O.R. procedures. Under this proposal, these procedures would no longer impact MS–DRG assignment. Cases reporting procedure codes 0KBN3ZX, 0KBN3ZZ, 0KBP3ZX, and 0KBP3ZZ in conjunction with a principal diagnosis code from MDC 06 would group to MS–DRGs 371, 372, and 373.

In addition, we also conduct an internal review and consider requests that we receive to examine cases found to group to MS–DRGs 981 through 983 or MS–DRGs 987 through 989 to determine if it would be appropriate for the cases to be reassigned from one of the MS–DRG groups to the other. Based on the results of our review of the claims data from the September 2021 update of the FY 2021 MedPAR file we did not identify any cases for reassignment. We also did not receive any requests suggesting reassignment. Therefore, for FY 2023 we are not proposing to move any cases reporting procedure codes from MS–DRGs 981 through 983 to MS–DRGs 987 through 989 or vice versa.

12. Operating Room (O.R.) and Non-O.R. Issues

a. Background

Under the IPPS MS–DRGs (and former CMS MS–DRGs), we have a list of procedure codes that are considered operating room (O.R.) procedures. Historically, we developed this list using physician panels that classified each procedure code based on the procedure and its effect on consumption of hospital resources. For example, generally the presence of a surgical procedure which required the use of the operating room would be expected to have a significant effect on the type of hospital resources (for example, operating room, recovery room, and anesthesia) used by a patient, and therefore, these patients were considered surgical. Because the claims data generally available do not precisely indicate whether a patient was taken to

the operating room, surgical patients were identified based on the procedures that were performed. Generally, if the procedure was not expected to require the use of the operating room, the patient would be considered medical (non-O.R.).

Currently, each ICD–10–PCS procedure code has designations that determine whether and in what way the presence of that procedure on a claim impacts the MS–DRG assignment. First, each ICD–10–PCS procedure code is either designated as an O.R. procedure for purposes of MS–DRG assignment (''O.R. procedures'') or is not designated as an O.R. procedure for purposes of MS–DRG assignment (''non-O.R. procedures''). Second, for each procedure that is designated as an O.R. procedure, that O.R. procedure is further classified as either extensive or non-extensive. Third, for each procedure that is designated as a non-O.R. procedure, that non-O.R. procedure is further classified as either affecting the MS–DRG assignment or not affecting the MS–DRG assignment. We refer to these designations that do affect MS–DRG assignment as ''non O.R. affecting the MS–DRG.'' For new procedure codes that have been finalized through the ICD–10 Coordination and Maintenance Committee meeting process and are proposed to be classified as O.R. procedures or non-O.R. procedures affecting the MS–DRG, our clinical advisors recommend the MS–DRG assignment which is then made available in association with the proposed rule (Table 6B.—New Procedure Codes) and subject to public comment. These proposed assignments are generally based on the assignment of predecessor codes or the assignment of similar codes. For example, we generally examine the MS–DRG assignment for similar procedures, such as the other approaches for that procedure, to determine the most appropriate MS–DRG assignment for procedures proposed to be newly designated as O.R. procedures. As discussed in section II.D.14. of the preamble of this proposed rule, we are making Table 6B.—New Procedure Codes—FY 2023 available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html.* We also refer readers to the ICD–10 MS–DRG Version 39.1 Definitions Manual at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.html* for detailed information regarding the designation of procedures as O.R. or non-O.R. (affecting the MS–DRG) in Appendix E—Operating Room Procedures and Procedure Code/MS–DRG Index.

In the FY 2020 IPPS/LTCH PPS proposed rule, we stated that, given the long period of time that has elapsed since the original O.R. (extensive and non-extensive) and non-O.R. designations were established, the incremental changes that have occurred to these O.R. and non-O.R. procedure code lists, and changes in the way inpatient care is delivered, we plan to conduct a comprehensive, systematic review of the ICD–10–PCS procedure codes. This will be a multiyear project during which we will also review the process for determining when a procedure is considered an operating room procedure. For example, we may restructure the current O.R. and non O.R. designations for procedures by leveraging the detail that is now available in the ICD–10 claims data. We refer readers to the discussion regarding the designation of procedure codes in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38066) where we stated that the determination of when a procedure code should be designated as an O.R. procedure has become a much more complex task. This is, in part, due to the number of various approaches available in the ICD–10–PCS classification, as well as changes in medical practice. While we have typically evaluated procedures on the basis of whether or not they would be performed in an operating room, we believe that there may be other factors to consider with regard to resource utilization, particularly with the implementation of ICD–10.

We discussed in the FY 2020 IPPS/LTCH PPS proposed rule that as a result of this planned review and potential restructuring, procedures that are currently designated as O.R. procedures may no longer warrant that designation, and conversely, procedures that are currently designated as non-O.R. procedures may warrant an O.R. type of designation. We intend to consider the resources used and how a procedure should affect the MS–DRG assignment. We may also consider the effect of specific surgical approaches to evaluate whether to subdivide specific MS DRGs based on a specific surgical approach. We plan to utilize our available MedPAR claims data as a basis for this review and the input of our clinical advisors. As part of this comprehensive review of the procedure codes, we also intend to evaluate the MS–DRG assignment of the procedures and the current surgical hierarchy because both of these factor into the process of refining the ICD–10 MS–DRGs to better recognize complexity of service and resource utilization.

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58540 through 58541), we provided a summary of the comments we had received in response to our request for feedback on what factors or criteria to consider in determining whether a procedure is designated as an O.R. procedure in the ICD–10–PCS classification system for future consideration. In consideration of the ongoing PHE, we continue to believe it may be appropriate to allow additional time for the claims data to stabilize prior to selecting the timeframe to analyze for this review. Additional time is also necessary as we continue to develop our process and methodology. Therefore, we will provide more detail on this analysis and the methodology for conducting this review in future rulemaking.

We received the following requests regarding changing the designation of specific ICD–10–PCS procedure codes from non-O.R. to O.R. procedures. We summarize these requests in this section of this rule and address why we are not considering a change to the designation of these codes at this time.

- We received a request to change the designation of all ICD–10–PCS procedure codes that describe diagnostic and therapeutic percutaneous endoscopic procedures performed on thoracic and abdominal organs, from non-O.R. to O.R. According to the requestor, thoracoscopic and laparoscopic procedures are always performed in the operating room under general anesthesia. We believe additional time is needed to fully examine the numerous ICD–10–PCS codes in the classification that describe diagnostic and therapeutic percutaneous endoscopic procedures performed on thoracic and abdominal organs as there are over 19,000 ICD–10–PCS codes in the classification that describe procedures performed using a percutaneous endoscopic approach. As we have signaled in prior rulemaking, the designation of an O.R. procedure encompasses more than the physical location of the hospital in which the procedure may be performed. We also examine if, and in what way, the performance of the procedure affects the resource expenditure in those admissions in the inpatient setting, in addition to examining other clinical factors such as procedure complexity, and need for anesthesia administration as well as other types of sedation. We will continue to evaluate the ICD–10–PCS procedure codes that describe diagnostic and therapeutic percutaneous endoscopic procedures performed on

thoracic and abdominal organs as we conduct a comprehensive, systematic review of the ICD–10–PCS procedure codes.

• In the FY 2022 IPPS/LTCH PPS final rule (86 FR 44892 through 44895), CMS finalized the proposal to remove the 22 codes that describe the open drainage of subcutaneous tissue and fascia listed in the following table from the ICD–10 MS–DRGs Version 39.1 Definitions Manual in Appendix E–Operating Room Procedures and Procedure Code/MS–DRG Index as O.R. procedures. Under this finalization, these procedures no longer impact MS–DRG assignment.

ICD-10-PCS Code	Description
0J900ZZ	Drainage of scalp subcutaneous tissue and fascia, open approach
0J910ZZ	Drainage of face subcutaneous tissue and fascia, open approach
0J940ZZ	Drainage of right neck subcutaneous tissue and fascia, open approach
0J950ZZ	Drainage of left neck subcutaneous tissue and fascia, open approach
0J960ZZ	Drainage of chest subcutaneous tissue and fascia, open approach
0J970ZZ	Drainage of back subcutaneous tissue and fascia, open approach
0J980ZZ	Drainage of abdomen subcutaneous tissue and fascia, open approach
0J990ZZ	Drainage of buttock subcutaneous tissue and fascia, open approach
0J9B0ZZ	Drainage of perineum subcutaneous tissue and fascia, open approach
0J9C0ZZ	Drainage of pelvic region subcutaneous tissue and fascia, open approach
0J9D0ZZ	Drainage of right upper arm subcutaneous tissue and fascia, open approach
0J9F0ZZ	Drainage of left upper arm subcutaneous tissue and fascia, open approach
0J9G0ZZ	Drainage of right lower arm subcutaneous tissue and fascia, open approach
0J9H0ZZ	Drainage of left lower arm subcutaneous tissue and fascia, open approach
0J9J0ZZ	Drainage of right hand subcutaneous tissue and fascia, open approach
0J9K0ZZ	Drainage of left hand subcutaneous tissue and fascia, open approach
0J9L0ZZ	Drainage of right upper leg subcutaneous tissue and fascia, open approach
0J9M0ZZ	Drainage of left upper leg subcutaneous tissue and fascia, open approach
0J9N0ZZ	Drainage of right lower leg subcutaneous tissue and fascia, open approach
0J9P0ZZ	Drainage of left lower leg subcutaneous tissue and fascia, open approach
0J9Q0ZZ	Drainage of right foot subcutaneous tissue and fascia, open approach
0J9R0ZZ	Drainage of left foot subcutaneous tissue and fascia, open approach

In the FY 2022 final rule, we noted that the designation of the 22 procedure codes that describe the open drainage of subcutaneous tissue and fascia as O.R. procedures was a result of a replication error in transitioning to ICD–10. This replication error led to ICD–10–PCS procedure codes that describe the open drainage of subcutaneous tissue and fascia being listed as comparable translations for ICD–9–CM code 83.09 (Other incision of soft tissue), which was designated as a non-extensive O.R. procedure under the ICD–9–CM MS–DRGs Version 32, as opposed to being listed as comparable translations for ICD–9–CM code 86.04 (Other incision with drainage of skin and subcutaneous tissue) which was designated as a non-O.R. procedure under the ICD–9–CM MS–DRGs Version 32. We stated in the FY 2022 final rule that designating the 22 procedure codes that describe the open drainage of subcutaneous tissue and fascia as non-O.R. procedures would result in a more accurate replication of the comparable procedure, under the ICD–9–CM MS–DRGs Version 32 which was 86.04, not 83.09 and is more aligned with current shifts in treatment practices.

For this FY 2023 IPPS/LTCH PPS proposed rule, we received a request to re-examine this change in designation. According to the requestor, open procedures for the drainage of subcutaneous tissue and fascia are indeed typically performed in the operating room under general anesthesia and involve making incisions through the subcutaneous tissue into fascia for therapeutic drainage, breaking up of loculations, and irrigation. While our clinical advisors do not disagree with the requestor that these procedures can involve making incisions through the subcutaneous tissue into fascia, they continue to state procedures describing the open drainage of subcutaneous tissue and fascia can now be safely performed in the outpatient setting and when performed during a hospitalization, they are typically performed in conjunction with another O.R. procedure. For the reasons discussed in the FY 2022 final rule, our clinical advisors state that the non-O.R. designation of the 22 procedure codes that describe the open drainage of subcutaneous tissue and fascia as finalized in the FY 2022 final rule better reflects the associated technical complexity and hospital resource use of these procedures.

13. Proposed Changes to the MS–DRG Diagnosis Codes for FY 2023

a. Background of the CC List and the CC Exclusions List

Under the IPPS MS–DRG classification system, we have developed a standard list of diagnoses

that are considered CCs. Historically, we developed this list using physician panels that classified each diagnosis code based on whether the diagnosis, when present as a secondary condition, would be considered a substantial complication or comorbidity. A substantial complication or comorbidity was defined as a condition that, because of its presence with a specific principal diagnosis, would cause an increase in the length-of-stay by at least 1 day in at least 75 percent of the patients. However, depending on the principal diagnosis of the patient, some diagnoses on the basic list of complications and comorbidities may be excluded if they are closely related to the principal diagnosis. In FY 2008, we evaluated each diagnosis code to determine its impact on resource use and to determine the most appropriate CC subclassification (NonCC, CC, or MCC) assignment. We refer readers to sections II.D.2. and 3. Of the preamble of the FY 2008 IPPS final rule with comment period for a discussion of the refinement of CCs in relation to the MS–DRGs we adopted for FY 2008 (72 FR 47152 through 47171).

b. Overview of Comprehensive CC/MCC Analysis

In the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159), we described our process for establishing three different levels of CC severity into which we would subdivide the diagnosis codes. The categorization of diagnoses as a MCC, a CC, or a NonCC was accomplished using an iterative approach in which each diagnosis was evaluated to determine the extent to which its presence as a secondary diagnosis resulted in increased hospital resource use. We refer readers to the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159) for a complete discussion of our approach. Since the comprehensive analysis was completed for FY 2008, we have evaluated diagnosis codes individually when assigning severity levels to new codes and when receiving requests to change the severity level of specific diagnosis codes.

We noted in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19235 through 19246) that with the transition to ICD–10–CM and the significant changes that have occurred to diagnosis codes since the FY 2008 review, we believed it was necessary to conduct a comprehensive analysis once again. Based on this analysis, we proposed changes to the severity level designations for 1,492 ICD–10–CM diagnosis codes and invited public comments on those proposals. As summarized in the FY 2020 IPPS/LTCH PPS final rule, many commenters expressed concern with the proposed severity level designation changes overall and recommended that CMS conduct further analysis prior to finalizing any proposals. After careful consideration of the public comments we received, as discussed further in the FY 2020 final rule, we generally did not finalize our proposed changes to the severity designations for the ICD–10–CM diagnosis codes, other than the changes to the severity level designations for the diagnosis codes in category Z16- (Resistance to antimicrobial drugs) from a NonCC to a CC. We stated that postponing adoption of the proposed comprehensive changes in the severity level designations would allow further opportunity to provide additional background to the public on the methodology utilized and clinical rationale applied across diagnostic categories to assist the public in its review. We refer readers to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42150 through 42152) for a complete discussion of our response to public comments regarding the proposed severity level designation changes for FY 2020.

As discussed in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32550), to provide the public with more information on the CC/MCC comprehensive analysis discussed in the FY 2020 IPPS/LTCH PPS proposed and final rules, CMS hosted a listening session on October 8, 2019. The listening session included a review of this methodology utilized to mathematically measure the impact on resource use. We refer readers to *https://www.cms.gov/Outreach-and-Education/Outreach/OpenDoorForums/Downloads/10082019ListingSessionTrasncriptandQandAsandAudioFile.zip* for the transcript and audio file of the listening session. We also refer readers to *https://www.cms.gov/Medicare/MedicareFee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.html* for the supplementary file containing the mathematical data generated using claims from the FY 2018 MedPAR file describing the impact on resource use of specific ICD–10–CM diagnosis codes when reported as a secondary diagnosis that was made available for the listening session.

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58550 through 58554), we discussed our plan to continue a comprehensive CC/MCC analysis, using a combination of mathematical analysis of claims data as discussed in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19235) and the application of nine guiding principles and plan to present the findings and proposals in future rulemaking. The nine guiding principles are as follows:

- Represents end of life/near death or has reached an advanced stage associated with systemic physiologic decompensation and debility.
- Denotes organ system instability or failure.
- Involves a chronic illness with susceptibility to exacerbations or abrupt decline.
- Serves as a marker for advanced disease states across multiple different comorbid conditions.
- Reflects systemic impact.
- Post-operative/post-procedure condition/complication impacting recovery.
- Typically requires higher level of care (that is, intensive monitoring, greater number of caregivers, additional testing, intensive care unit care, extended length of stay).
- Impedes patient cooperation or management of care or both.
- Recent (last 10 years) change in best practice, or in practice guidelines and review of the extent to which these changes have led to concomitant changes in expected resource use.

We refer readers to the FY 2021 IPPS/LTCH PPS final rule for a complete discussion of our response to public comments regarding the nine guiding principles.

In the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25175 through 25180), as another interval step in our comprehensive review of the severity designations of ICD–10–CM diagnosis codes, we requested public comments on a potential change to the severity level designations for ''unspecified'' ICD–10–CM diagnosis codes that we were considering adopting for FY 2022. Specifically, we noted we were considering changing the severity level designation of ''unspecified'' diagnosis codes to a NonCC where there are other codes available in that code subcategory that further specify the anatomic site. As summarized in the FY 2022 IPPS/LTCH PPS final rule, many commenters expressed concern with the potential severity level designation changes overall and recommended that CMS delay any possible change to the designation of these codes to give hospitals and their physicians time to prepare. After careful consideration of the public comments we received, we maintained the severity level designation of the ''unspecified'' diagnosis codes currently designated as a CC or MCC where there are other codes available in that code subcategory that further specify the anatomic site for

FY 2022. We refer readers to the FY 2022 IPPS/LTCH PPS final rule (86 FR 44916 through 44926) for a complete discussion of our response to public comments regarding the potential severity level designation changes. Instead, for FY 2022, we finalized a new Medicare Code Editor (MCE) code edit for ''unspecified'' codes, effective with discharges on and after April 1, 2022. We stated we believe finalizing this new edit would provide additional time for providers to be educated while not affecting the payment the provider is eligible to receive. We refer the reader to section II.D.14.e. of the FY 2022 IPPS/LTCH PPS final rule (86 FR 44940 through 44943) for the complete discussion.

As this new edit will be effective beginning with discharges on and after April 1, 2022, our clinical advisors believe at this time, it is appropriate to not propose to change the designation of any ICD–10–CM diagnosis codes, including the unspecified codes that are subject to the ''Unspecified Code'' edit, as we continue our comprehensive CC/MCC analysis to allow stakeholders the time needed to become acclimated to the new edit.

We continue to solicit feedback regarding the guiding principles, as well as other possible ways we can incorporate meaningful indicators of clinical severity. We have made available on the CMS website updated impact on resource use files so that the public can review the mathematical data for the impact on resource use generated using claims from the FY 2019 MedPAR file, the FY 2020 MedPAR file and the FY 2021 MedPAR files. The link to these files is posted on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.* When providing additional feedback or comments, we encourage the public to provide a detailed explanation of how applying a suggested concept or principle would ensure that the severity designation appropriately reflects resource use for any diagnosis code. We also continue to be interested in receiving feedback on how we might otherwise foster the documentation and reporting of the most specific diagnosis codes supported by the available medical record documentation and clinical knowledge of the patient's health condition to more accurately reflect each health care encounter and improve the reliability and validity of the coded data.

For new diagnosis codes approved for FY 2023, consistent with our annual process for designating a severity level (MCC, CC or NonCC) for new diagnosis codes, we first review the predecessor code designation, followed by review and consideration of other factors that may be relevant to the severity level designation, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis or treatment of the condition. We note that this process does not automatically result in the new diagnosis code having the same designation as the predecessor code. We refer the reader to section II.D.14 of this proposed rule for the discussion of the proposed changes to the ICD–10–CM and ICD–10–PCS coding systems for FY 2023.

c. Requested Changes to Severity Levels

For this FY 2023 IPPS/LTCH PPS proposed rule, we received several requests to change the severity level designations of specific ICD–10–CM diagnosis codes, including a request to analyze a subset of the social determinants of health (SDOH) diagnosis codes. Our clinical advisors believe it is appropriate to consider these requests in connection with our continued comprehensive CC/MCC analysis in future rulemaking, rather than proposing to change the designation of individual ICD–10–CM diagnosis codes at this time. However, we refer the reader to section II.D.13.d for further discussion related to the diagnosis codes describing social determinants of health. As stated earlier in this section, we plan to continue a comprehensive CC/MCC analysis, using a combination of mathematical analysis of claims data and the application of nine guiding principles. We will consider these individual requests received for changes to severity level designations as we continue our comprehensive CC/MCC analysis and will provide more detail in future rulemaking.

d. Request for Information on Social Determinants of Health Diagnosis Codes

For this FY 2023 IPPS/LTCH PPS proposed rule, we are soliciting public comments on how the reporting of diagnosis codes in categories Z55–Z65 may improve our ability to recognize severity of illness, complexity of illness, and/or utilization of resources under the MS–DRGs as described further in this section. Consistent with the Administration's goal of advancing health equity for all, including members of historically underserved and under-resourced communities, as described in the President's January 20, 2021 Executive Order 13985 on ''Advancing Racial Equity and Support for Underserved Communities Through the Federal Government,'' [10] we are also interested in receiving feedback on how we might otherwise foster the documentation and reporting of the diagnosis codes describing social and economic circumstances to more accurately reflect each health care encounter and improve the reliability and validity of the coded data including in support of efforts to advance health equity.

Social determinants of health (SDOH) are the conditions in the environments where people are born, live, learn, work, play, worship, and age that affect a wide range of health, functioning, and quality-of-life outcomes and risks.[11] These circumstances or determinants influence an individual's health status and can contribute to wide health disparities and inequities. While SDOH do not describe current illnesses or injuries at the individual level, they are widely recognized as important potential predictors of risk for developing medical conditions like heart disease, diabetes, and obesity. In ICD–10–CM, the Z codes found in Chapter 21 represent reasons for encounters, and are provided for occasions when circumstances other than a disease, injury or external cause classifiable to categories A00–Y89 are recorded as 'diagnoses' or 'problems'. The subset of Z codes that describe the social determinants of health are found in categories Z55–Z65 (Persons with potential health hazards related to socioeconomic and psychosocial circumstances). These codes describe a range of issues related—but not limited—to education and literacy, employment, housing, ability to obtain adequate amounts of food or safe drinking water, and occupational exposure to toxic agents, dust, or radiation. Effective October 1, 2021, the Centers for Disease Control and Prevention (CDC) National Center for Health Statistics (NCHS) added 11 new diagnosis codes describing SDOH to provide additional information regarding determinants such as housing, food insecurity, and transportation. In addition, section I.B.14 of the FY 2022 ICD–10–CM Official Guidelines for Coding and Reporting was updated to provide clarification of the term ''clinician'' in reporting codes related to social determinants of health and clarified the documentation that can be

[10] 86 FR 7009 (January 25, 2021). *Available at: https://www.federalregister.gov/documents/2021/01/25/2021-01753/advancing-racial-equity-and-support-for-underserved-communities-through-the-federal-government.*

[11] *Available at: https://health.gov/healthypeople/objectives-and-data/social-determinants-health.*

utilized to assign SDOH codes when included in the official medical record. In this context, ''clinicians'' other than the patient's provider refer to ''healthcare professionals permitted, based on regulatory or accreditation requirements or internal hospital policies, to document in a patient's official medical record.'' [12]

Reporting SDOH Z codes in inpatient claims data could enhance quality improvement activities, track factors that influence people's health, and provide further insight into existing health inequities. [13] [14] [15] More routine collection of SDOH Z codes could also likely improve coordination within hospitals to utilize the data across their clinical care and discharge planning teams, including with post-acute partners. CMS has heard from stakeholders about a number of reasons for why there may be less routine documentation and reporting of SDOH in the inpatient setting. First, Z codes are not required to be reported by inpatient hospitals and generally do not affect MS–DRG assignment. Rather, these codes are currently reported voluntarily by providers when and if supported in the medical record documentation. As such, consistent protocols may not be in place for documenting and reporting. Second, many of the circumstances captured through SDOH Z codes are dependent on the willingness of patients to discuss personal social, economic, or environmental conditions. Providers may or may not be able to reliably document certain circumstances,[16] as a result, in the medical records. There are also questions of how bias can play into screening for SDOH and how systemic bias within the health care system can play a role in this process.[17] CMS has also heard of the significant pressures on provider time, and whether providers have access to comprehensive care and coordination teams, including social workers, who may be more appropriately skilled to assess certain SDOH.

Given that SDOH diagnosis codes describe economic and environmental circumstances faced by patients and often correlate with substantial variance in health outcomes,[18] more widely adopted consistent documentation and reporting in the inpatient setting could better identify non-medical factors affecting health and track progress toward addressing them. Doing so could also aid in work toward formulating more comprehensive and actionable policies to address health equity and promote the highest quality, best-value care for all beneficiaries.

As we discuss more fully later in this section, we believe reporting of SDOH Z codes may also better determine the resource utilization for treating patients experiencing these circumstances to help inform whether a change to the severity designation of these codes would be clinically warranted as we continue a comprehensive CC/MCC analysis, using a combination of mathematical analysis of claims data as discussed in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19235) and the application of nine guiding principles.

There are 96 diagnosis codes that describe the social determinants of health found in categories Z55–Z65. These 96 diagnosis codes for which we are soliciting comments as described in this proposed rule are shown in Table 6P.5a (which is available via the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*). We note we are also making available the data describing the impact on resource use when reported as a secondary diagnosis for all 96 ICD–10–CM Z codes that describe the social determinants of health from categories Z55–Z65. These data are consistent with data historically used to mathematically measure impact on resource use for secondary diagnoses, and the data which we plan to use in combination with application of the nine guiding principles as we continue the comprehensive CC/MCC analysis.

In Table 6P.5a associated with this proposed rule, column C displays the FY 2021 severity level designation for these diagnosis codes in MS–DRG GROUPER Version 38.1. Column D displays CMS's current FY 2022 severity level designation in MS–DRG GROUPER Version 39.1. Columns E—N show data on the impact on resource use generated using discharge claims from the September 2021 update of the FY 2021 MedPAR file and MS–DRG GROUPER Version 39.1. For further information on the data on the impact on resource use as displayed in Columns E—N, we refer readers to the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159) for a complete discussion of the methodology utilized to mathematically measure the impact on resource use. Also, as discussed in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32550), to provide the public with more information on the CC/MCC comprehensive analysis discussed in the FY 2020 IPPS/LTCH PPS proposed and final rules, CMS hosted a listening session on October 8, 2019. The listening session included a review of this methodology utilized to mathematically measure the impact on resource use. We refer readers to *https://www.cms.gov/Outreach-and-Education/Outreach/OpenDoorForums/Downloads/10082019ListingSessionTrasncriptandQandAsandAudioFile.zip* for the transcript and audio file of the listening session. We also refer readers to *https://www.cms.gov/Medicare/MedicareFee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.html* for the supplementary file containing the data describing the impact on resource use of specific ICD–10–CM diagnosis codes when reported as a secondary diagnosis that was made available for the listening session. We note that the supplementary file that was made available for the listening session contains the mathematical data for the impact on resource use generated using claims from the FY 2018 MedPAR file. We have also made available on the CMS website updated impact on resource use files so that the public can review the mathematical data for the impact on resource use generated using claims from the FY 2019 MedPAR file, FY 2020 MedPAR file and the FY 2021 MedPAR files.

In the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159), we described the categorization of diagnoses as an MCC, a CC, or a NonCC, accomplished using an iterative approach in which each diagnosis was evaluated to determine the extent to which its presence as a

[18] Commission on Social Determinants of Health. *Closing the gap in a generation: Health equity through action on the social determinants of health: Final report of the commission on social determinants of health.* World Health Organization, 2008.

secondary diagnosis resulted in increased hospital resource use. As such, the designation of CC or MCC is intended to account for the increased resources required to address a condition as a secondary diagnosis. In Version 39.1, the 96 diagnosis codes that describe the social determinants of health from categories Z55–Z65 have a severity designation of NonCC.

If SDOH Z codes are not consistently reported in inpatient claims data, our methodology utilized to mathematically measure the impact on resource use, as described previously, may not adequately reflect what additional resources were expended by the hospital to address these SDOH circumstances in terms of requiring clinical evaluation, extended length of hospital stay, increased nursing care or monitoring or both, and comprehensive discharge planning. We seek public comment on whether CMS should consider requiring more robust documentation and claims data reporting to inform the impact on resource use these determinants have on caring for patients affected by these circumstances in an inpatient setting and inform our decision-making in a future year in determining the most appropriate CC subclass (NonCC, CC, or MCC) assignment for each SDOH Z code as a secondary diagnosis. We also seek public comment on developing protocols to standardize the screening for SDOH for all patients, and then consistently document and report such codes and on whether such protocols should vary based on certain factors, such as hospital size and type. For instance, we recognize that hospitals have different mixes of patients and volume of patients, and as such, may have different staffing resources to devote to proper documentation and coding of SDOH. In particular, we are interested in hearing the perspectives of different sized hospitals in both urban and rural settings, and hospitals disproportionately serving members of historically underserved and under-resourced communities in regard to their experience with reporting of SDOH. We are additionally interested in learning how reporting SDOH Z codes may be used to inform community health need assessment activities required by non-profit hospitals.

We also recognize that there is a potential for different uses and complexity in appropriately determining and reporting the full range of Z codes. For instance, certain code categories like Z62 (Problems related to upbringing) and Z63 (Other problems related to principal support group, including family circumstances) may require specialized clinical training to diagnose and document, which may not be the primary purpose of the inpatient admission. Category Z57 describes occupational exposure to risk factors, which also may not be apparent in most inpatient admissions and would rely upon the patient providing this information voluntarily. Category Z60 (Problems related to social environment) also describes problems of adjustment to life-cycle transitions, which also may or may not be readily apparent or discussed by the patient in relation to the inpatient admission.

Thus, we are seeking comment on which specific SDOH Z codes are most likely to influence (that is, increase) hospital resource utilization related to inpatient care, including any supporting information that correlates inpatient hospital resource use to specific SDOH Z codes. CMS believes a potential starting point for discussion is consideration of the SDOH Z diagnosis codes describing homelessness. Homelessness can be reasonably expected to have an impact on hospital utilization.[19] Healthcare needs for patients experiencing homelessness may be associated with increased resource utilization compared to other patients due to difficulty finding discharge destinations to meet the patient's multifaceted needs which can result in longer inpatient stays and can have financial impacts for hospitals.[20] Longer hospital stays for these patients [21] can also be associated with increased costs because patients experiencing homelessness are less able to access care at early stages of illness, and also may be exposed to communicable disease and harsh climate conditions, resulting in more severe and complex symptoms by the time they are admitted to hospitals, potentially leading to worse health outcomes. Patients experiencing homelessness can also be disproportionately affected by mental health diagnoses and issues with substance use disorders. In addition, patients experiencing homelessness may have limited or no access to prescription medicines or over-the-counter medicines, including adequate locations to store medications away from the heat or cold,[22] and studies have shown difficulties adhering to medication regimens among persons experiencing homeless.[23] Patients experiencing homelessness may also face challenges in accessing transplants and clinicians may defer care because of the uncertain post-acute discharge.

To further examine the diagnosis codes that describe SDOH, we reviewed the data on the impact on resource use for diagnosis code Z59.0 (Homelessness) when reported as a secondary diagnosis to facilitate discussion for the purposes of this comment solicitation. We note that prior to FY 2022, homelessness was one of the more frequently reported codes that describe social determinants of health. We also note that effective FY 2022, this subcategory has been expanded and now includes codes Z59.00 (Homelessness, unspecified), Z59.01 (Sheltered homelessness), and code Z59.02 (Unsheltered homelessness).

In the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19243 through 19244), as part of our proposal to change the severity level designations for 1,492 ICD–10–CM diagnosis codes, we proposed to change the severity level designation of code Z59.0 (Homelessness) from NonCC to CC. We stated that because the C1 value (C1 = 1.5964) in the table was generally close to 2, the data suggested that when reported as a secondary diagnosis, the resources involved in caring for a patient experiencing homelessness supported increasing the severity level from a NonCC to a CC. In the FY 2020 IPPS/LTCH PPS proposed rule, we also stated our clinical advisors reviewed these data and believed the resources involved in caring for these patients are more aligned with a CC. As noted in section II.D.13.b of this proposed rule, many commenters expressed concern with the proposed severity level designation changes overall and consequently we generally did not finalize our proposed changes to the severity designations for the 1,492 ICD–10–CM diagnosis codes, at that time.

[19] Koh HK, O'Connell JJ. Improving Health Care for Homeless People. JAMA. 2016;316(24):2586–2587. doi:10.1001/jama.2016.18760.

[23] Coe, Antoinette B. Coe et al. ''Medication Adherence Challenges Among Patients Experiencing Homelessness in a Behavioral Health Clinic. *https://journals.lww.com/lww-medicalcare/Fulltext/2019/01000/Trends,_Causes,_and_Outcomes_of_Hospitalizations.4.aspx.*

However, the proposal to change the severity designation of code Z59.0 specifically did receive mostly supportive comments. Many commenters stated that a patient experiencing homelessness requires significant coordination of social services along with their health care. One commenter also recommended that CMS expand the change in designation to all the codes in category Z59, not just code Z59.0. Another commenter, while indicating their support of the proposal, noted that it is unclear that the status/condition would result in increased hospital resource use.

Our proposal in FY 2020 was based on the data for the impact on resource use generated using claims from the FY 2018 MedPAR file. The following table reflects the impact on resource use data generated using claims from the FY 2019 MedPAR file, FY 2020 MedPAR file and the FY 2021 MedPAR file, respectively, for the diagnosis code that describes homelessness as a NonCC. We note there is currently no data for codes Z59.01 (Sheltered homelessness) and code Z59.02 (Unsheltered homelessness) as these codes became effective on October 1, 2021. Again, we refer readers to the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159) for a complete discussion of our historical approach to mathematically evaluate the extent to which the presence of an ICD–10–CM code as a secondary diagnosis resulted in increased hospital resource use, and the explanation of the columns in the table.

FY	ICD-10-CM Code	Description	Tota1 Count	Cnt1	C1	Cnt2	C2	Cnt3	C3
2019	Z59.0	Homelessness	43,405	7,022	1.6723	22,336	2.2963	14,047	3.1374
2020	Z59.0	Homelessness	44,609	6,393	1.8374	22,416	2.1964	15,800	3.0879
2021	Z59.00	Homelessness, unspecified	37,919	5,225	1.4299	18,158	2.0823	14,536	3.0710

As shown in the table, we examined data for the diagnosis code(s) that describe homelessness as a NonCC in FY 2019 through FY 2021. When examining diagnosis code Z59.0 (Homelessness), the value in column C1 is closer to 2.0 than to 1.0 in FY 2019 and FY 2020, though we note that we did not use FY 2020 data for rate setting purposes in light of impacts related to the PHE for COVID–19 as described in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44778). The data suggests that when homelessness is reported as a secondary diagnosis, the resources involved in caring for these patients are more aligned with a CC than a NonCC or an MCC, as explained in the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159). However, in FY 2021, the C1 value is generally closer to 1, which suggest the resources involved in caring for patients experiencing homelessness are more aligned with a NonCC severity level than a CC or an MCC severity level. We also note fluctuations in the C1 values year to year. We are uncertain if the data from FY 2021, in particular, reflect fluctuations that may be a result of the public health emergency or even reduced hospitalizations of certain conditions. We also are uncertain if homelessness may be underreported when there is not an available field on the claim when other diagnoses are reported instead. We seek public comment on these possibilities, particularly to inform our understanding of the trend of the C1 value.

As we have stated in prior rulemaking, these mathematical constructs are used in conjunction with the judgment of our clinical advisors to classify each secondary diagnosis reviewed. We present these data to highlight that the resources expended in caring for patients reported to be affected by a SDOH such as homelessness during an inpatient hospitalization may not be consistently expressed in the inpatient claims data and to demonstrate how reporting the SDOH Z codes could more accurately reflect the health care encounter and improve the reliability and validity of the coded data.

In summary, we appreciate public comment on these issues, including on the following questions:

- How the reporting of certain Z codes—and if so, which Z codes [24]—may improve our ability to recognize severity of illness, complexity of illness, and utilization of resources under the MS–DRGs?
- Whether CMS should require the reporting of certain Z codes—and if so, which ones—to be reported on hospital inpatient claims to strengthen data analysis?
- The additional provider burden and potential benefits of documenting and reporting of certain Z codes, including potential benefits to beneficiaries.
- Whether codes in category Z59 (Homelessness) have been underreported and if so, why? In particular, we are interested in hearing the perspectives of large urban hospitals, rural hospitals, and other hospital types in regard to their experience. We also seek comments on how factors such as hospital size and type might impact a hospital's ability to develop standardized consistent protocols to better screen, document and report homelessness.

The comments we receive on these issues may also be informative as we evaluate whether to develop a proposal in future rulemaking to change the severity level designation of the diagnosis codes describing homelessness from NonCC to CC and whether other SDOH, as described by Z codes, are also appropriate candidates to be proposed for designation as CCs.

We note that examining the severity level designation of diagnosis codes is just one area to possibly support documentation and reporting of SDOH in the inpatient setting. We are also interested in ideas from the public on how the MS–DRG classification can be utilized in agency wide efforts to advance health equity, expand access, drive high-quality, person-centered care, and promote affordability and sustainability in the Medicare program. Specifically, we invite public comment on ways the MS–DRG classification can be useful in addressing the challenges of defining and collecting accurate and standardized self-identified socioeconomic information for the purposes of reporting, measure stratification, and other data collection efforts. We are interested in learning more about the potential benefits and challenges associated with the collection of SDOH data in the inpatient setting. Feedback on the limitations and barriers providers could experience as they consider more robust documentation and reporting would also help inform our development of appropriately tailored efforts that address and mitigate barriers for all hospital types across communities and patient mixes. We will take

[24] *https://www.cms.gov/files/document/zcodes-infographic.pdf.*

commenters' feedback into consideration in future policy development.

e. Proposed Additions and Deletions to the Diagnosis Code Severity Levels for FY 2023

The following tables identify the proposed additions and deletions to the diagnosis code MCC severity levels list and the proposed additions and deletions to the diagnosis code CC severity levels list for FY 2023 and are available via the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html.*

Table 6I.1—Proposed Additions to the MCC List—FY 2023;

Table 6I.2—Proposed Deletions to the MCC List—FY 2023;

Table 6J.1—Proposed Additions to the CC List—FY 2023; and

Table 6J.2—Proposed Deletions to the CC List—FY 2023.

f. Proposed CC Exclusions List for FY 2023

In the September 1, 1987 final notice (52 FR 33143) concerning changes to the DRG classification system, we modified the GROUPER logic so that certain diagnoses included on the standard list of CCs would not be considered valid CCs in combination with a particular principal diagnosis. We created the CC Exclusions List for the following reasons: (1) To preclude coding of CCs for closely related conditions; (2) to preclude duplicative or inconsistent coding from being treated as CCs; and (3) to ensure that cases are appropriately classified between the complicated and uncomplicated DRGs in a pair.

In the May 19, 1987 proposed notice (52 FR 18877) and the September 1, 1987 final notice (52 FR 33154), we explained that the excluded secondary diagnoses were established using the following five principles:

- Chronic and acute manifestations of the same condition should not be considered CCs for one another.
- Specific and nonspecific (that is, not otherwise specified (NOS)) diagnosis codes for the same condition should not be considered CCs for one another.
- Codes for the same condition that cannot coexist, such as partial/total, unilateral/bilateral, obstructed/unobstructed, and benign/malignant, should not be considered CCs for one another.
- Codes for the same condition in anatomically proximal sites should not be considered CCs for one another.
- Closely related conditions should not be considered CCs for one another.

The creation of the CC Exclusions List was a major project involving hundreds of codes. We have continued to review the remaining CCs to identify additional exclusions and to remove diagnoses from the master list that have been shown not to meet the definition of a CC. We refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50541 through 50544) for detailed information regarding revisions that were made to the CC and CC Exclusion Lists under the ICD–9–CM MS–DRGs.

The ICD–10 MS–DRGs Version 39.1 CC Exclusion List is included as Appendix C in the ICD–10 MS–DRG Definitions Manual, which is available via the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html,* and includes two lists identified as Part 1 and Part 2. Part 1 is the list of all diagnosis codes that are defined as a CC or MCC when reported as a secondary diagnosis. For all diagnosis codes on the list, a link is provided to a collection of diagnosis codes which, when reported as the principal diagnosis, would cause the CC or MCC diagnosis to be considered as a NonCC. Part 2 is the list of diagnosis codes designated as a MCC only for patients discharged alive; otherwise, they are assigned as a NonCC.

We are proposing additional changes to the ICD–10 MS–DRGs Version 40 CC Exclusion List based on the diagnosis and procedure code updates as discussed in section II.D.14. of this FY 2023 IPPS/LTCH PPS proposed rule. Therefore, we have developed Table 6G.1.–Proposed Secondary Diagnosis Order Additions to the CC Exclusions List–FY 2023; Table 6G.2.–Proposed Principal Diagnosis Order Additions to the CC Exclusions List–FY 2023; Table 6H.1.–Proposed Secondary Diagnosis Order Deletions to the CC Exclusions List–FY 2023; and Table 6H.2.–Proposed Principal Diagnosis Order Deletions to the CC Exclusions List–FY 2023. For Table 6G.1, each secondary diagnosis code proposed for addition to the CC Exclusion List is shown with an asterisk and the principal diagnoses proposed to exclude the secondary diagnosis code are provided in the indented column immediately following it. For Table 6G.2, each of the principal diagnosis codes for which there is a CC exclusion is shown with an asterisk and the conditions proposed for addition to the CC Exclusion List that will not count as a CC are provided in an indented column immediately following the affected principal diagnosis. For Table 6H.1, each secondary diagnosis code proposed for deletion from the CC Exclusion List is shown with an asterisk followed by the principal diagnosis codes that currently exclude it. For Table 6H.2, each of the principal diagnosis codes is shown with an asterisk and the proposed deletions to the CC Exclusions List are provided in an indented column immediately following the affected principal diagnosis. Tables 6G.1., 6G.2., 6H.1., and 6H.2. associated with this proposed rule are available via the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html.*

14. Proposed Changes to the ICD–10–CM and ICD–10–PCS Coding Systems

To identify new, revised and deleted diagnosis and procedure codes, for FY 2023, we have developed Table 6A.–New Diagnosis Codes, Table 6B.–New Procedure Codes, Table 6C.–Invalid Diagnosis Codes, and Table 6E.–Revised Diagnosis Code Titles for this proposed rule. These tables are not published in the Addendum to this proposed rule, but are available via the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html* as described in section VI. Of the Addendum to this proposed rule. As discussed in section II.D.17. of the preamble of this proposed rule, the code titles are adopted as part of the ICD–10 (previously ICD–9–CM) Coordination and Maintenance Committee meeting process. Therefore, although we publish the code titles in the IPPS proposed and final rules, they are not subject to comment in the proposed or final rules.

We are proposing the MDC and MS–DRG assignments for the new diagnosis codes and procedure codes as set forth in Table 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes. In addition, the proposed severity level designations for the new diagnosis codes are set forth in Table 6A. and the proposed O.R. status for the new procedure codes are set forth in Table 6B. Consistent with our established process, we examined the MS–DRG assignment and the attributes (severity level and O.R. status) of the predecessor diagnosis or procedure code, as applicable, to inform our proposed assignments and designations. Specifically, we review the predecessor code and MS–DRG assignment most closely associated with the new diagnosis or procedure code, and in the absence of claims data, we consider other factors that may be relevant to the MS–DRG assignment, including the

severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis or treatment of the condition. We note that this process does not automatically result in the new diagnosis or procedure code being proposed for assignment to the same MS–DRG or to have the same designation as the predecessor code.

We are making available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html* the following tables associated with this proposed rule:

- Table 6A.—New Diagnosis Codes–FY 2023
- Table 6B.—New Procedure Codes–FY 2023
- Table 6C.—Invalid Diagnosis Codes–FY 2023
- Table 6E.—Revised Diagnosis Code Titles–FY 2023
- Table 6G.1.—Proposed Secondary Diagnosis Order Additions to the CC Exclusions List–FY 2023
- Table 6G.2.—Proposed Principal Diagnosis Order Additions to the CC Exclusions List–FY 2023
- Table 6H.1.—Proposed Secondary Diagnosis Order Deletions to the CC Exclusions List–FY 2023
- Table 6H.2.—Proposed Principal Diagnosis Order Deletions to the CC Exclusions List—FY 2023
- Table 6I.1.—Proposed Additions to the MCC List–FY 2023
- Table 6I.2.—Proposed Deletions to the MCC List–FY 2023
- Table 6J.1.—Proposed Additions to the CC List–FY 2023
- Table 6J.2.—Proposed Deletions to the CC List–FY 2023.

15. Proposed Changes to the Medicare Code Editor (MCE)

The Medicare Code Editor (MCE) is a software program that detects and reports errors in the coding of Medicare claims data. Patient diagnoses, procedure(s), and demographic information are entered into the Medicare claims processing systems and are subjected to a series of automated screens. The MCE screens are designed to identify cases that require further review before classification into an MS–DRG.

As discussed in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44936), we made available the FY 2022 ICD–10 MCE Version 39 manual file. The manual contains the definitions of the Medicare code edits, including a description of each coding edit with the corresponding diagnosis and procedure code edit lists. The link to this MCE manual file, along with the link to the mainframe and computer software for the MCE Version 39 (and ICD–10 MS–DRGs) are posted on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.*

For this FY 2023 IPPS/LTCH PPS proposed rule, we discuss the proposals we are making based on our internal review and analysis. We did not receive any specific MCE requests by the November 1, 2021 deadline.

a. External Causes of Morbidity Codes as Principal Diagnosis

In the MCE, the external cause codes (V, W, X, or Y codes) describe the circumstance causing an injury, not the nature of the injury, and therefore should not be used as a principal diagnosis.

As discussed in section II.D.14. of the preamble of this proposed rule, Table 6C.—Invalid Diagnosis Codes, lists the diagnosis codes that are no longer effective October 1, 2022. Included in this table are codes currently subject to the External causes of morbidity codes as principal diagnosis edit. We are proposing to delete the ICD–10–CM diagnosis codes shown in Table 6P.6a associated with this proposed rule and available via the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS* that are currently subject to the External causes of morbidity codes as principal diagnosis edit since they will no longer be valid for reporting purposes.

b. Age Conflict Edit

In the MCE, the Age conflict edit exists to detect inconsistencies between a patient's age and any diagnosis on the patient's record; for example, a 5-year-old patient with benign prostatic hypertrophy or a 78-year-old patient coded with a delivery. In these cases, the diagnosis is clinically and virtually impossible for a patient of the stated age. Therefore, either the diagnosis or the age is presumed to be incorrect. Currently, in the MCE, the following four age diagnosis categories appear under the Age conflict edit and are listed in the manual and written in the software program:

- Perinatal/Newborn—Age 0 years only; a subset of diagnoses which will only occur during the perinatal or newborn period of age 0 (for example, tetanus neonatorum, health examination for newborn under 8 days old).
- Pediatric—Age is 0–17 years inclusive (for example, Reye's syndrome, routine child health exam).
- Maternity—Age range is 9–64 years inclusive (for example, diabetes in pregnancy, antepartum pulmonary complication).
- Adult—Age range is 15–124 years inclusive (for example, senile delirium, mature cataract).

(1) Maternity Diagnoses

Under the ICD–10 MCE, the Maternity diagnoses category for the Age conflict edit considers the age range of 9 to 64 years inclusive. For that reason, the diagnosis codes on this Age conflict edit list would be expected to apply to conditions or disorders specific to that age group only.

As discussed in section II.D.14. of the preamble of this proposed rule, Table 6A.—New Diagnosis Codes, lists the diagnosis codes that have been approved to date which will be effective with discharges on and after October 1, 2022. We are proposing to add new ICD–10–CM diagnosis codes to the edit code list for the Maternity diagnoses category as shown in Table 6P.6b associated with this proposed rule and available via the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS* under the Age conflict edit.

In addition, as discussed in section II.D.14. of the preamble of this proposed rule, Table 6C.—Invalid Diagnosis Codes, lists the diagnosis codes that are no longer effective October 1, 2022. Included in this table are the following ICD–10–CM diagnosis codes that are currently listed on the edit code list for the Maternity diagnoses category under the Age conflict edit. We are proposing to delete these codes from the Maternity diagnoses edit code list.

BILLING CODE 4120–01–P

ICD-10-CM Code	Description
O35.0XX0	Maternal care for (suspected) central nervous system malformation in fetus, not applicable or unspecified
O35.0XX1	Maternal care for (suspected) central nervous system malformation in fetus, fetus 1
O35.0XX2	Maternal care for (suspected) central nervous system malformation in fetus, fetus 2
O35.0XX3	Maternal care for (suspected) central nervous system malformation in fetus, fetus 3
O35.0XX4	Maternal care for (suspected) central nervous system malformation in fetus, fetus 4
O35.0XX5	Maternal care for (suspected) central nervous system malformation in fetus, fetus 5
O35.0XX9	Maternal care for (suspected) central nervous system malformation in fetus, other fetus
O35.1XX0	Maternal care for (suspected) chromosomal abnormality in fetus, not applicable or unspecified
O35.1XX1	Maternal care for (suspected) chromosomal abnormality in fetus, fetus 1
O35.1XX2	Maternal care for (suspected) chromosomal abnormality in fetus, fetus 2
O35.1XX3	Maternal care for (suspected) chromosomal abnormality in fetus, fetus 3
O35.1XX4	Maternal care for (suspected) chromosomal abnormality in fetus, fetus 4
O35.1XX5	Maternal care for (suspected) chromosomal abnormality in fetus, fetus 5
O35.1XX9	Maternal care for (suspected) chromosomal abnormality in fetus, other fetus

(2) Adult Diagnoses

Under the ICD–10 MCE, the Adult diagnoses category for the Age conflict edit considers the age range of 15 to 124 years inclusive. For that reason, the diagnosis codes on this Age conflict edit list would be expected to apply to conditions or disorders specific to that age group only.

As discussed in section II.D.14. of the preamble of this proposed rule, Table 6A.—New Diagnosis Codes, lists the diagnosis codes that have been approved to date which will be effective with discharges on and after October 1, 2022. We are proposing to add the following new ICD–10–CM diagnosis codes to the edit code list for the Adult diagnoses category under the Age conflict edit.

ICD-10-CM Code	Description
F01.511	Vascular dementia, unspecified severity, with agitation
F01.518	Vascular dementia, unspecified severity, with other behavioral disturbance
F01.52	Vascular dementia, unspecified severity, with psychotic disturbance
F01.53	Vascular dementia, unspecified severity, with mood disturbance
F01.54	Vascular dementia, unspecified severity, with anxiety
F01.A0	Vascular dementia, mild, without behavioral disturbance, psychotic disturbance, mood disturbance, and anxiety
F01.A11	Vascular dementia, mild, with agitation
F01.A18	Vascular dementia, mild, with other behavioral disturbance
F01.A2	Vascular dementia, mild, with psychotic disturbance
F01.A3	Vascular dementia, mild, with mood disturbance
F01.A4	Vascular dementia, mild, with anxiety
F01.B0	Vascular dementia, moderate, without behavioral disturbance, psychotic disturbance, mood disturbance, and anxiety
F01.B11	Vascular dementia, moderate, with agitation
F01.B18	Vascular dementia, moderate, with other behavioral disturbance
F01.B2	Vascular dementia, moderate, with psychotic disturbance
F01.B3	Vascular dementia, moderate, with mood disturbance
F01.B4	Vascular dementia, moderate, with anxiety
F01.C0	Vascular dementia, severe, without behavioral disturbance, psychotic disturbance, mood disturbance, and anxiety
F01.C11	Vascular dementia, severe, with agitation
F01.C18	Vascular dementia, severe, with other behavioral disturbance
F01.C2	Vascular dementia, severe, with psychotic disturbance
F01.C3	Vascular dementia, severe, with mood disturbance
F01.C4	Vascular dementia, severe, with anxiety
F03.911	Unspecified dementia, unspecified severity, with agitation
F03.918	Unspecified dementia, unspecified severity, with other behavioral disturbance
F03.92	Unspecified dementia, unspecified severity, with psychotic disturbance
F03.93	Unspecified dementia, unspecified severity, with mood disturbance
F03.94	Unspecified dementia, unspecified severity, with anxiety
F03.A0	Unspecified dementia, mild, without behavioral disturbance, psychotic disturbance, mood disturbance, and anxiety
F03.A11	Unspecified dementia, mild, with agitation
F03.A18	Unspecified dementia, mild, with other behavioral disturbance
F03.A2	Unspecified dementia, mild, with psychotic disturbance
F03.A3	Unspecified dementia, mild, with mood disturbance
F03.A4	Unspecified dementia, mild, with anxiety
F03.B0	Unspecified dementia, moderate, without behavioral disturbance, psychotic disturbance, mood disturbance, and anxiety
F03.B11	Unspecified dementia, moderate, with agitation
F03.B18	Unspecified dementia, moderate, with other behavioral disturbance
F03.B2	Unspecified dementia, moderate, with psychotic disturbance
F03.B3	Unspecified dementia, moderate, with mood disturbance
F03B4	Unspecified dementia, moderate, with anxiety
F03.C0	Unspecified dementia, severe, without behavioral disturbance, psychotic disturbance, mood disturbance, and anxiety
F03.C11	Unspecified dementia, severe, with agitation
F03.C18	Unspecified dementia, severe, with other behavioral disturbance
F03.C2	Unspecified dementia, severe, with psychotic disturbance
F03.C3	Unspecified dementia, severe, with mood disturbance
F03.C4	Unspecified dementia, severe, with anxiety
I25.112	Atherosclerotic heart disease of native coronary artery with refractory angina pectoris
I25.702	Atherosclerosis of coronary artery bypass graft(s), unspecified, with refractory angina pectoris
I25.712	Atherosclerosis of autologous vein coronary artery bypass graft(s) with refractory angina pectoris
I25.722	Atherosclerosis of autologous artery coronary artery bypass graft(s) with refractory angina pectoris
I25.732	Atherosclerosis of nonautologous biological coronary artery bypass graft(s) with refractory angina pectoris
I25.752	Atherosclerosis of native coronary artery of transplanted heart with refractory angina pectoris
I25.762	Atherosclerosis of bypass graft of coronary artery of transplanted heart with refractory angina pectoris
I25.792	Atherosclerosis of other coronary artery bypass graft(s) with refractory angina pectoris

In addition, as discussed in section II.D.14. of the preamble of this proposed rule, Table 6C.—Invalid Diagnosis Codes, lists the diagnosis codes that are no longer effective October 1, 2022. Included in this table are the following ICD–10–CM diagnosis codes that are currently listed on the edit code list for the Adult diagnoses category under the Age conflict edit. We are proposing to delete these codes from the Adult diagnoses edit code list.

ICD-10-CM Code	Description
F01.51	Vascular dementia with behavioral disturbance
F03.91	Unspecified dementia with behavioral disturbance

c. Sex Conflict Edit

In the MCE, the Sex conflict edit detects inconsistencies between a patient's sex and any diagnosis or procedure on the patient's record; for example, a male patient with cervical cancer (diagnosis) or a female patient with a prostatectomy (procedure). In both instances, the indicated diagnosis or the procedure conflicts with the stated sex of the patient. Therefore, the patient's diagnosis, procedure, or sex is presumed to be incorrect.

(1) Diagnoses for Females Only Edit

As discussed in section II.D.14. of the preamble of this proposed rule, Table 6A.—New Diagnosis Codes, lists the new diagnosis codes that have been approved to date which will be effective with discharges on and after October 1, 2022. We are proposing to add new ICD–10–CM diagnosis codes to the edit code list for the Diagnoses for females only category as shown in Table 6P.6c associated with this proposed rule and available via the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS* under the Sex conflict edit.

In addition, as discussed in section II.D.14. of the preamble of this proposed rule, Table 6C.—Invalid Diagnosis Codes, lists the diagnosis codes that are no longer effective October 1, 2022. Included in this table are the following ICD–10–CM diagnosis codes that are currently listed on the edit code list for the Diagnoses for females only category under the Sex conflict edit. We are proposing to delete these codes from the Diagnoses for females only edit code list.

ICD-10-CM Code	Description
B37.3	Candidiasis of vulva and vagina
N80.0	Endometriosis of uterus
N80.1	Endometriosis of ovary
N80.2	Endometriosis of fallopian tube
N80.3	Endometriosis of pelvic peritoneum
N80.4	Endometriosis of rectovaginal septum and vagina
N80.5	Endometriosis of intestine
O35.0XX0	Maternal care for (suspected) central nervous system malformation in fetus, not applicable or unspecified
O35.0XX1	Maternal care for (suspected) central nervous system malformation in fetus, fetus 1
O35.0XX2	Maternal care for (suspected) central nervous system malformation in fetus, fetus 2
O35.0XX3	Maternal care for (suspected) central nervous system malformation in fetus, fetus 3
O35.0XX4	Maternal care for (suspected) central nervous system malformation in fetus, fetus 4
O35.0XX5	Maternal care for (suspected) central nervous system malformation in fetus, fetus 5
O35.0XX9	Maternal care for (suspected) central nervous system malformation in fetus, other fetus
O35.1XX0	Maternal care for (suspected) chromosomal abnormality in fetus, not applicable or unspecified
O35.1XX1	Maternal care for (suspected) chromosomal abnormality in fetus, fetus 1
O35.1XX2	Maternal care for (suspected) chromosomal abnormality in fetus, fetus 2
O35.1XX3	Maternal care for (suspected) chromosomal abnormality in fetus, fetus 3
O35.1XX4	Maternal care for (suspected) chromosomal abnormality in fetus, fetus 4
O35.1XX5	Maternal care for (suspected) chromosomal abnormality in fetus, fetus 5
O35.1XX9	Maternal care for (suspected) chromosomal abnormality in fetus, other fetus

(2) Procedures for Males Only

As discussed in section II.D.14. of the preamble of this proposed rule, Table 6B.—New Procedure Codes, lists the new procedure codes that have been approved to date which will be effective with discharges on and after October 1, 2022. Included in this table are the following procedure codes we are proposing to add to the edit code list for the Procedures for males only category under the Sex conflict edit.

ICD-10-PCS Code	Code Description
04LE0CV	Occlusion of right prostatic artery with extraluminal device, open approach
04LE0DV	Occlusion of right prostatic artery with intraluminal device, open approach
04LE0ZV	Occlusion of right prostatic artery, open approach
04LE3CV	Occlusion of right prostatic artery with extraluminal device, percutaneous approach
04LE3DV	Occlusion of right prostatic artery with intraluminal device, percutaneous approach
04LE3ZV	Occlusion of right prostatic artery, percutaneous approach
04LE4CV	Occlusion of right prostatic artery with extraluminal device, percutaneous endoscopic approach
04LE4DV	Occlusion of right prostatic artery with intraluminal device, percutaneous endoscopic approach
04LE4ZV	Occlusion of right prostatic artery, percutaneous endoscopic approach
04LF0CW	Occlusion of left prostatic artery with extraluminal device, open approach
04LF0DW	Occlusion of left prostatic artery with intraluminal device, open approach
04LF0ZW	Occlusion of left prostatic artery, open approach
04LF3CW	Occlusion of left prostatic artery with extraluminal device, percutaneous approach
04LF3DW	Occlusion of left prostatic artery with intraluminal device, percutaneous approach
04LF3ZW	Occlusion of left prostatic artery, percutaneous approach
04LF4CW	Occlusion of left prostatic artery with extraluminal device, percutaneous endoscopic approach
04LF4DW	Occlusion of left prostatic artery with intraluminal device, percutaneous endoscopic approach
04LF4ZW	Occlusion of left prostatic artery, percutaneous endoscopic approach

d. Manifestation Code as Principal Diagnosis Edit

In the ICD–10–CM classification system, manifestation codes describe the manifestation of an underlying disease, not the disease itself, and therefore should not be used as a principal diagnosis.

As discussed in section II.D.14. of the preamble of this proposed rule, Table 6A.—New Diagnosis Codes, lists the new diagnosis codes that have been approved to date which will be effective with discharges on and after October 1, 2022. Included in this table are the following new ICD–10–CM diagnosis codes that we are proposing to add to the edit code list for the Manifestation code as principal diagnosis edit, because the disease itself would be required to be reported first.

ICD-10-CM Code	Description
F02.811	Dementia in other diseases classified elsewhere, unspecified severity, with agitation
F02.818	Dementia in other diseases classified elsewhere, unspecified severity, with other behavioral disturbance
F02.82	Dementia in other diseases classified elsewhere, unspecified severity, with psychotic disturbance
F02.83	Dementia in other diseases classified elsewhere, unspecified severity, with mood disturbance
F02.84	Dementia in other diseases classified elsewhere, unspecified severity, with anxiety
F02.A0	Dementia in other diseases classified elsewhere, mild, without behavioral disturbance, psychotic disturbance, mood disturbance, and anxiety
F02.A11	Dementia in other diseases classified elsewhere, mild, with agitation
F02.A18	Dementia in other diseases classified elsewhere, mild, with other behavioral disturbance
F02.A2	Dementia in other diseases classified elsewhere, mild, with psychotic disturbance
F02.A3	Dementia in other diseases classified elsewhere, mild, with mood disturbance
F02.A4	Dementia in other diseases classified elsewhere, mild, with anxiety
F02.B0	Dementia in other diseases classified elsewhere, moderate, without behavioral disturbance, psychotic disturbance, mood disturbance, and anxiety
F02.B11	Dementia in other diseases classified elsewhere, moderate, with agitation
F02.B18	Dementia in other diseases classified elsewhere, moderate, with other behavioral disturbance
F02.B2	Dementia in other diseases classified elsewhere, moderate, with psychotic disturbance
F02.B3	Dementia in other diseases classified elsewhere, moderate, with mood disturbance
F02.B4	Dementia in other diseases classified elsewhere, moderate, with anxiety
F02.C0	Dementia in other diseases classified elsewhere, severe, without behavioral disturbance, psychotic disturbance, mood disturbance, and anxiety
F02.C11	Dementia in other diseases classified elsewhere, severe, with agitation
F02.C18	Dementia in other diseases classified elsewhere, severe, with other behavioral disturbance
F02.C2	Dementia in other diseases classified elsewhere, severe, with psychotic disturbance
F02.C3	Dementia in other diseases classified elsewhere, severe, with mood disturbance
F02.C4	Dementia in other diseases classified elsewhere, severe, with anxiety
I31.31	Malignant pericardial effusion in diseases classified elsewhere

In addition, as discussed in section II.D.14. of the preamble of this proposed rule, Table 6C.—Invalid Diagnosis Codes, lists the diagnosis codes that are no longer effective October 1, 2022. Included in this table is ICD–10–CM diagnosis code F02.81 (Dementia in other diseases classified elsewhere with behavioral disturbance), that is currently listed on the edit code list for the Manifestation code as principal diagnosis edit. We are proposing to delete this code from the Manifestation code as principal diagnosis edit code list.

e. Unacceptable Principal Diagnosis Edit

In the MCE, there are select codes that describe a circumstance which influences an individual's health status but does not actually describe a current illness or injury. There also are codes that are not specific manifestations but may be due to an underlying cause. These codes are considered unacceptable as a principal diagnosis. In limited situations, there are a few codes on the MCE Unacceptable Principal Diagnosis edit code list that are considered ''acceptable'' when a specified secondary diagnosis is also coded and reported on the claim.

As discussed in section II.D.14. of the preamble of this proposed rule, Table 6A.—New Diagnosis Codes, lists the new diagnosis codes that have been approved to date which will be effective with discharges on and after October 1, 2022. We are proposing to add the following new ICD–10–CM diagnosis codes to the Unacceptable Principal Diagnosis edit code list.

As discussed in section II.D.1.b. of the preamble of this proposed rule, we are providing a test version of the ICD–10 MS–DRG GROUPER Software, Version 40, so that the public can better analyze and understand the impact of the proposals included in this proposed rule. We note that at the time of the development of the test software, a subset of the listed codes (F01.511 through F01.C4) proposed for this edit were unable to be included and therefore, the test software does not reflect these codes.

ICD-10-CM Code	Description
F01.511	Vascular dementia, unspecified severity, with agitation
F01.518	Vascular dementia, unspecified severity, with other behavioral disturbance
F01.52	Vascular dementia, unspecified severity, with psychotic disturbance
F01.53	Vascular dementia, unspecified severity, with mood disturbance
F01.54	Vascular dementia, unspecified severity, with anxiety
F01.A0	Vascular dementia, mild, without behavioral disturbance, psychotic disturbance, mood disturbance, and anxiety
F01.A11	Vascular dementia, mild, with agitation
F01.A18	Vascular dementia, mild, with other behavioral disturbance
F01.A2	Vascular dementia, mild, with psychotic disturbance
F01.A3	Vascular dementia, mild, with mood disturbance
F01.A4	Vascular dementia, mild, with anxiety
F01.B0	Vascular dementia, moderate, without behavioral disturbance, psychotic disturbance, mood disturbance, and anxiety
F01.B11	Vascular dementia, moderate, with agitation
F01.B18	Vascular dementia, moderate, with other behavioral disturbance
F01.B2	Vascular dementia, moderate, with psychotic disturbance
F01.B3	Vascular dementia, moderate, with mood disturbance
F01.B4	Vascular dementia, moderate, with anxiety

ICD-10-CM Code	Description
F01.C0	Vascular dementia, severe, without behavioral disturbance, psychotic disturbance, mood disturbance, and anxiety
F01.C11	Vascular dementia, severe, with agitation
F01.C18	Vascular dementia, severe, with other behavioral disturbance
F01.C2	Vascular dementia, severe, with psychotic disturbance
F01.C3	Vascular dementia, severe, with mood disturbance
F01.C4	Vascular dementia, severe, with anxiety
F06.70	Mild neurocognitive disorder due to known physiological condition without behavioral disturbance
F06.71	Mild neurocognitive disorder due to known physiological condition with behavioral disturbance
T43.655A	Adverse effect of methamphetamines, initial encounter
T43.655D	Adverse effect of methamphetamines, subsequent encounter
T43.655S	Adverse effect of methamphetamines, sequela
T43.656A	Underdosing of methamphetamines, initial encounter
T43.656D	Underdosing of methamphetamines, subsequent encounter
T43.656S	Underdosing of methamphetamines, sequela
Z03.83	Encounter for observation for suspected conditions related to home physiologic monitoring device ruled out
Z59.82	Transportation insecurity
Z59.86	Financial insecurity
Z59.87	Material hardship
Z71.87	Encounter for pediatric-to-adult transition counseling
Z71.88	Encounter for counseling for socioeconomic factors
Z72.823	Risk of suffocation (smothering) under another while sleeping
Z79.60	Long term (current) use of unspecified immunomodulators and immunosuppressants
Z79.61	Long term (current) use of immunemodulator
Z79.620	Long term (current) use of immunosuppressive biologic
Z79.621	Long term (current) use of calcineurin inhibitor
Z79.622	Long term (current) use of Janus kinase inhibitor
Z79623	Long term (current) use of mammalian target of rapamycin (mTOR) inhibitor
Z79.624	Long term (current) use of inhibitors of nucleotide synthesis
Z79.630	Long term (current) use of alkylating agent
Z79.631	Long term (current) use of antimetabolite agent
Z79.632	Long term (current) use of antitumor antibiotic
Z79.633	Long term (current) use of mitotic inhibitor
Z79.634	Long term (current) use of topoisomerase inhibitor
Z79.64	Long term (current) use of myelosuppressive agent
Z79.69	Long term (current) use of other immunomodulators and immunosuppressants
Z79.85	Long-term (current) use of injectable non-insulin antidiabetic drugs
Z87.61	Personal history of (corrected) necrotizing enterocolitis of newborn
Z87.68	Personal history of other (corrected) conditions arising in the perinatal period
Z87.731	Personal history of (corrected) tracheoesophageal fistula or atresia
Z87.732	Personal history of (corrected) persistent cloaca or cloacal malformations
Z87.760	Personal history of (corrected) congenital diaphragmatic hernia or other congenital diaphragm malformations
Z87.761	Personal history of (corrected) gastroschisis
Z87.762	Personal history of (corrected) prune belly malformation
Z87.763	Personal history of other (corrected) congenital abdominal wall malformations
Z87.768	Personal history of other specified (corrected) congenital malformations of integument, limbs and musculoskeletal system
Z91.110	Patient's noncompliance with dietary regimen due to financial hardship
Z91.118	Patient's noncompliance with dietary regimen for other reason
Z91.119	Patient's noncompliance with dietary regimen due to unspecified reason
Z91.190	Patient's noncompliance with other medical treatment and regimen due to financial hardship
Z91.198	Patient's noncompliance with other medical treatment and regimen for other reason
Z91.199	Patient's noncompliance with other medical treatment and regimen due to unspecified reason
Z91.A10	Caregiver's noncompliance with patient's dietary regimen due to financial hardship

In addition, as discussed in section II.D.14. of the preamble of this proposed rule, Table 6C.—Invalid Diagnosis Codes, lists the diagnosis codes that are no longer effective October 1, 2022. Included in this table are the following

ICD–10–CM diagnosis codes that are currently listed on the Unacceptable Principal Diagnosis edit code list. We are proposing to delete these codes from the Unacceptable Principal Diagnosis edit code list.

ICD-10-CM Code	Description
Z91.A18	Caregiver's noncompliance with patient's dietary regimen for other reason
Z91.A20	Caregiver's intentional underdosing of patient's medication regimen due to financial hardship
Z91.A28	Caregiver's intentional underdosing of medication regimen for other reason
Z91.A3	Caregiver's unintentional underdosing of patient's medication regimen
Z91.A4	Caregiver's other noncompliance with patient's medication regimen
Z91.A5	Caregiver's noncompliance with patient's renal dialysis
Z91.A9	Caregiver's noncompliance with patient's other medical treatment and regimen

f. Unspecified Code

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 44940 through 44943), we finalized the implementation of a new Unspecified code edit, effective with discharges on and after April 1, 2022. Unspecified codes exist in the ICD–10–CM classification for circumstances when documentation in the medical record does not provide the level of detail needed to support reporting a more specific code. However, in the inpatient setting, there should generally be very limited and rare circumstances for which the laterality (right, left, bilateral) of a condition is unable to be documented and reported.

As discussed in section II.D.14. of the preamble of this proposed rule, Table 6A.—New Diagnosis Codes, lists the new diagnosis codes that have been approved to date which will be effective with discharges on and after October 1, 2022. We are proposing to add the following new ICD–10–CM diagnosis codes to the Unspecified code edit code list.

ICD-10-CM Code	Description
Z87.76	Personal history of (corrected) congenital malformations of integument, limbs and musculoskeletal system
Z91.11	Patient's noncompliance with dietary regimen
Z91.19	Patient's noncompliance with other medical treatment and regimen

g. Future Enhancement

In the FY 2018 IPPS/LTCH PPS final rule (82 FR 38053 through 38054), we noted the importance of ensuring accuracy of the coded data from the reporting, collection, processing, coverage, payment and analysis aspects. Subsequently, in the FY 2019 IPPS/LTCH PPS proposed rule (83 FR 20235), we stated that we engaged a contractor to assist in the review of the limited coverage and non-covered procedure edits in the MCE that may also be present in other claims processing systems that are utilized by our MACs. The MACs must adhere to criteria specified within the National Coverage Determinations (NCDs) and may implement their own edits in addition to what is already incorporated into the MCE, resulting in duplicate edits. The objective of this review is to identify where duplicate edits may exist and to determine what the impact might be if these edits were to be removed from the MCE.

We have also noted that the purpose of the MCE is to ensure that errors and inconsistencies in the coded data are recognized during Medicare claims processing. As we indicated in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41228), we are considering whether the inclusion of coverage edits in the MCE necessarily aligns with that specific goal because the focus of coverage edits is on whether or not a particular service is covered for payment purposes and not whether it was coded correctly.

As we continue to evaluate the purpose and function of the MCE with respect to ICD–10, we encourage public input for future discussion. As we have discussed in prior rulemaking, we recognize a need to further examine the current list of edits and the definitions of those edits.

ICD-10-CM Code	Description
S06.33AA	Contusion and laceration of cerebrum, unspecified, with loss of consciousness status unknown, initial encounter
S06.36AA	Traumatic hemorrhage of cerebrum, unspecified, with loss of consciousness status unknown, initial encounter

BILLING CODE 4120–01–C

We continue to encourage public comments on whether there are additional concerns with the current edits, including specific edits or language that should be removed or revised, edits that should be combined, or new edits that should be added to assist in detecting errors or inaccuracies in the coded data. Comments should be directed to the new electronic intake system, Medicare Electronic Application Request Information System™ (MEARIS™), discussed in section II.D.1.b. of the preamble of this

proposed rule at *https://mearis.cms.gov/public/home* by October 20, 2022.

16. Proposed Changes to Surgical Hierarchies

Some inpatient stays entail multiple surgical procedures, each one of which, occurring by itself, could result in assignment of the case to a different MS–DRG within the MDC to which the principal diagnosis is assigned. Therefore, it is necessary to have a decision rule within the GROUPER by which these cases are assigned to a single MS–DRG. The surgical hierarchy, an ordering of surgical classes from most resource-intensive to least resource-intensive, performs that function. Application of this hierarchy ensures that cases involving multiple surgical procedures are assigned to the MS–DRG associated with the most resource-intensive surgical class.

A surgical class can be composed of one or more MS–DRGs. For example, in MDC 11, the surgical class ''kidney transplant'' consists of a single MS–DRG (MS–DRG 652) and the class ''major bladder procedures'' consists of three MS–DRGs (MS–DRGs 653, 654, and 655). Consequently, in many cases, the surgical hierarchy has an impact on more than one MS–DRG. The methodology for determining the most resource-intensive surgical class involves weighting the average resources for each MS–DRG by frequency to determine the weighted average resources for each surgical class. For example, assume surgical class A includes MS–DRGs 001 and 002 and surgical class B includes MS–DRGs 003, 004, and 005. Assume also that the average costs of MS–DRG 001 are higher than that of MS–DRG 003, but the average costs of MS–DRGs 004 and 005 are higher than the average costs of MS–DRG 002. To determine whether surgical class A should be higher or lower than surgical class B in the surgical hierarchy, we would weigh the average costs of each MS–DRG in the class by frequency (that is, by the number of cases in the MS–DRG) to determine average resource consumption for the surgical class. The surgical classes would then be ordered from the class with the highest average resource utilization to that with the lowest, with the exception of ''other O.R. procedures'' as discussed in this proposed rule.

This methodology may occasionally result in assignment of a case involving multiple procedures to the lower-weighted MS–DRG (in the highest, most resource-intensive surgical class) of the available alternatives. However, given that the logic underlying the surgical hierarchy provides that the GROUPER search for the procedure in the most resource-intensive surgical class, in cases involving multiple procedures, this result is sometimes unavoidable.

We note that, notwithstanding the foregoing discussion, there are a few instances when a surgical class with a lower average cost is ordered above a surgical class with a higher average cost. For example, the ''other O.R. procedures'' surgical class is uniformly ordered last in the surgical hierarchy of each MDC in which it occurs, regardless of the fact that the average costs for the MS–DRG or MS–DRGs in that surgical class may be higher than those for other surgical classes in the MDC. The ''other O.R. procedures'' class is a group of procedures that are only infrequently related to the diagnoses in the MDC, but are still occasionally performed on patients with cases assigned to the MDC with these diagnoses. Therefore, assignment to these surgical classes should only occur if no other surgical class more closely related to the diagnoses in the MDC is appropriate.

A second example occurs when the difference between the average costs for two surgical classes is very small. We have found that small differences generally do not warrant reordering of the hierarchy because, as a result of reassigning cases on the basis of the hierarchy change, the average costs are likely to shift such that the higher-ordered surgical class has lower average costs than the class ordered below it.

Based on the changes that we are proposing to make for FY 2023, as discussed in section II.D. of the preamble of this proposed rule, we are proposing to maintain the existing surgical hierarchy for FY 2023.

17. Maintenance of the ICD–10–CM and ICD–10–PCS Coding Systems

In September 1985, the ICD–9–CM Coordination and Maintenance Committee was formed. This is a Federal interdepartmental committee, co-chaired by the Centers for Disease Control and Prevention's (CDC) National Center for Health Statistics (NCHS) and CMS, charged with maintaining and updating the ICD–9–CM system. The final update to ICD–9–CM codes was made on October 1, 2013. Thereafter, the name of the Committee was changed to the ICD–10 Coordination and Maintenance Committee, effective with the March 19–20, 2014 meeting. The ICD–10 Coordination and Maintenance Committee addresses updates to the ICD–10–CM and ICD–10–PCS coding systems. The Committee is jointly responsible for approving coding changes, and developing errata, addenda, and other modifications to the coding systems to reflect newly developed procedures and technologies and newly identified diseases. The Committee is also responsible for promoting the use of Federal and non-Federal educational programs and other communication techniques with a view toward standardizing coding applications and upgrading the quality of the classification system.

The official list of ICD–9–CM diagnosis and procedure codes by fiscal year can be found on the CMS website at *https://cms.hhs.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/codes.html.* The official list of ICD–10–CM and ICD–10–PCS codes can be found on the CMS website at *https://www.cms.gov/Medicare/Coding/ICD10/index.html.*

The NCHS has lead responsibility for the ICD–10–CM and ICD–9–CM diagnosis codes included in the Tabular List and Alphabetic Index for Diseases, while CMS has lead responsibility for the ICD–10–PCS and ICD–9–CM procedure codes included in the Tabular List and Alphabetic Index for Procedures.

The ICD–10 Coordination and Maintenance Committee holds its meetings in the spring and fall to update the codes and the applicable payment and reporting systems by October 1 of each year. Items are placed on the agenda for the Committee meeting if the request is received at least 3 months prior to the meeting. This requirement allows time for staff to review and research the coding issues and prepare material for discussion at the meeting. It also allows time for the topic to be publicized in meeting announcements in the **Federal Register** as well as on the CMS website.

The Committee encourages participation in the previously mentioned process by health- related organizations. In this regard, the Committee holds public meetings for discussion of educational issues and proposed coding changes. These meetings provide an opportunity for representatives of recognized organizations in the coding field, such as the American Health Information Management Association (AHIMA), the American Hospital Association (AHA), and various physician specialty groups, as well as individual physicians, health information management professionals, and other members of the public, to contribute ideas on coding matters. After considering the opinions expressed during the public meetings and in writing, the Committee formulates recommendations, which then must be approved by the agencies.

A complete addendum describing details of all diagnosis and procedure coding changes, both tabular and index, is published on the CMS and NCHS websites in June of each year. Publishers of coding books and software use this information to modify their products that are used by health care providers.

The Committee presented proposals for coding changes for implementation in FY 2023 at a public meeting held on September 14–15, 2021, and finalized the coding changes after consideration of comments received at the meetings and in writing by November 15, 2021.

The Committee held its 2022 meeting on March 8–9, 2022. The deadline for submitting comments on the procedure code proposals that are being considered for an October 1, 2022 implementation was April 8, 2022. The deadline for submitting comments on the diagnosis code proposals that are being considered for an October 1, 2023 implementation is May 9, 2022. It was announced at this meeting that any new diagnosis and procedure codes for which there was consensus of public support and for which complete tabular and indexing changes would be made by June 2022 would be included in the October 1, 2022, update to the ICD–10–CM diagnosis and ICD–10–PCS procedure code sets. It was also announced at this meeting that we are changing the process for submitting requested updates to the ICD–10–PCS classification, beginning with the procedure code request submitted for consideration for the September 13–14, 2022 ICD–10 Coordination and Maintenance Committee Meeting. As stated in section II.D.1.b. of the preamble of this proposed rule, CMS is in the process of implementing a new electronic application intake system, MEARIS™. Effective January 5, 2022, MEARIS™ became available as an initial release for users to begin gaining familiarity with a new approach and process to submit ICD–10–PCS procedure code requests. Information on this new approach for submitting an ICD–10–PCS code request can be accessed at *https://mearis.cms.gov.* Effective March 1, 2022, the full release of MEARIS™ became active for ICD–10–PCS code request submissions. ICD–10–PCS code request submissions are due no later than June 10, 2022, to be considered for the September 13–14, 2022, ICD–10 Coordination and Maintenance Committee Meeting. Moving forward, CMS will only accept ICD–10–PCS code requests submitted via MEARIS™. Requests submitted through the ICDProcedureCodeRequest mailbox will no longer be considered. Within MEARIS™, we have built in several resources to support users, including a ''Resources'' section (available at *https://mearis.cms.gov/public/resources*) and technical support available under ''Useful Links'' at the bottom of the MEARIS™ site. Questions regarding MEARIS™ can be submitted to CMS using the form available under ''Contact'' at *https://mearis.cms.gov/public/resources.*

As discussed in earlier sections of the preamble of this proposed rule, there are new, revised, and deleted ICD–10–CM diagnosis codes and ICD–10–PCS procedure codes that are captured in Table 6A.—New Diagnosis Codes, Table 6B.—New Procedure Codes, Table 6C.—Invalid Diagnosis Codes, and Table 6E.—Revised Diagnosis Code Titles for this proposed rule, which are available via the internet on the CMS website at *https://www.cms.gov/medicare/medicare-fee-for-service-payment/acuteinpatientpps.* The code titles are adopted as part of the ICD–10 Coordination and Maintenance Committee process. Therefore, although we make the code titles available through tables in association with the IPPS proposed rule, they are not subject to comment in the proposed rule. Because of the length of these tables, they are not published in the Addendum to the proposed rule. Rather, they are available via the internet as discussed in section VI. of the Addendum to the proposed rule.

Recordings for the virtual meeting discussions of the procedure codes at the Committee's September 14–15, 2021, meeting and the March 8–9, 2022, meeting can be obtained from the CMS website at *https://www.cms.gov/Medicare/Coding/ICD10/C-and-M-Meeting-Materials.* The materials for the discussions relating to diagnosis codes at the September 14–15, 2021, meeting and March 8–9, 2022, meeting can be found at *https://www.cdc.gov/nchs/icd/icd10cm_maintenance.html.* These websites also provide detailed information about the Committee, including information on requesting a new code, participating in a Committee meeting, timeline requirements and meeting dates.

We encourage commenters to submit questions and comments on coding issues involving diagnosis codes via Email to *nchsicd10cm@cdc.gov.*

Questions and comments concerning the procedure codes should be submitted via Email to *ICDProcedureCodeRequest@cms.hhs.gov.*

As a result of the ongoing COVID–19 public health emergency, the CDC implemented three new diagnosis codes describing immunization status related to COVID–19 into the ICD–10–CM effective with discharges on and after April 1, 2022. The diagnosis codes are as follows:

ICD-10-CM Code	Description
Z28.310	Unvaccinated for COVID-19
Z28.311	Partially vaccinated for COVID-19
Z28.39	Other under immunization status

We refer the reader to the CDC web page at *https://www.cdc.gov/nchs/icd/icd10cm.htm* for additional details regarding the implementation of these new diagnosis codes.

We provided the MS–DRG assignments for the three diagnosis codes effective with discharges on and after April 1, 2022, consistent with our established process for assigning new diagnosis codes. Specifically, we review the predecessor diagnosis code and MS–DRG assignment most closely associated with the new diagnosis code, and consider other factors that may be relevant to the MS–DRG assignment, including the severity of illness, treatment difficulty, and the resources utilized for the specific condition/diagnosis. We note that this process does not automatically result in the new diagnosis code being assigned to the same MS–DRG as the predecessor code. The assignments for the previously listed diagnosis codes are reflected in Table 6A.—New Diagnosis Codes (which is available via the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*). As with the other new diagnosis codes and MS–DRG assignments included in Table 6A of this proposed

rule, we are soliciting public comments on the most appropriate MDC, MS–DRG, and severity level assignments for these codes for FY 2023, as well as any other options for the GROUPER logic.

In addition, CMS implemented nine new procedure codes describing the introduction or infusion of therapeutics, including vaccines for COVID–19 treatment, into the ICD–10–PCS effective with discharges on and after April 1, 2022. The nine procedure codes listed in this section of this rule are designated as non-O.R. and do not affect any MDC or MS–DRG assignment as shown in the following table.

ICD-10-PCS Code	Description	O.R.	MDC	MS-DRG
XW013V7	Introduction of COVID-19 vaccine dose 3 into subcutaneous tissue, percutaneous approach, new technology group 7	N		
XW013W7	Introduction of COVID-19 vaccine booster into subcutaneous tissue, percutaneous approach, new technology group 7	N		
XW023V7	Introduction of COVID-19 vaccine dose 3 into muscle, percutaneous approach, new technology group 7	N		
XW023W7	Introduction of COVID-19 vaccine booster into muscle, percutaneous approach, new technology group 7	N		
XW023X7	Introduction of tixagevimab and cilgavimab monoclonal antibody into muscle, percutaneous approach, new technology group 7	N		
XW023Y7	Introduction of other new technology monoclonal antibody into muscle, percutaneous approach, new technology group 7	N		
XW0DXR7	Introduction of fostamatinib into mouth and pharynx, external approach, new technology group 7	N		
XW0G7R7	Introduction of fostamatinib into upper GI, via natural orartificial opening, new technology group 7	N		
XW0H7R7	Introduction of fostamatinib into lower GI, via natural or artificial opening, new technology group 7	N		

The ICD–10 MS–DRG assignment for cases reporting any one of the nine procedure codes is dependent on the reported principal diagnosis, any secondary diagnoses defined as a CC or MCC, procedures or services performed, age, sex, and discharge status. The nine procedure codes are reflected in Table 6B—New Procedure Codes (which is available via the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS*). As with the other new procedure codes and MS–DRG assignments included in Table 6B of this proposed rule, we are soliciting public comments on the most appropriate MDC, MS–DRG, and operating room status assignments for these codes for FY 2023, as well as any other options for the GROUPER logic.

We note that Change Request (CR) 12578, Transmittal 11174, titled ''April 2022 Update to the Medicare Severity—Diagnosis Related Group (MS–DRG) Grouper and Medicare Code Editor (MCE) Version 39.1 for the International Classification of Diseases, Tenth Revision (ICD–10) Diagnosis Codes for 2019 Novel Coronavirus (COVID–19) Vaccination Status and ICD–10 Procedure Coding System (PCS) Codes for Introduction or Infusion of Therapeutics and Vaccines for COVID–19 Treatment'', was issued on January 14, 2022 (available via the internet on the CMS website at *https://www.cms.gov/Regulations-and-Guidance/Guidance/Transmittals/Transmittals/r11174cp*) regarding the release of an updated version of the ICD–10 MS–DRG GROUPER and Medicare Code Editor software, Version 39.1, effective with discharges on and after April 1, 2022, reflecting the new diagnosis and procedure codes. The updated software, along with the updated ICD–10 MS–DRG V39.1 Definitions Manual and the Definitions of Medicare Code Edits V39.1 manual is available at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.*

In the September 7, 2001 final rule implementing the IPPS new technology add-on payments (66 FR 46906), we indicated we would attempt to include proposals for procedure codes that would describe new technology discussed and approved at the Spring meeting as part of the code revisions effective the following October.

Section 503(a) of Public Law 108–173 included a requirement for updating

diagnosis and procedure codes twice a year instead of a single update on October 1 of each year. This requirement was included as part of the amendments to the Act relating to recognition of new technology under the IPPS. Section 503(a) of Public Law 108–173 amended section 1886(d)(5)(K) of the Act by adding a clause (vii) which states that the Secretary shall provide for the addition of new diagnosis and procedure codes on April 1 of each year, but the addition of such codes shall not require the Secretary to adjust the payment (or diagnosis-related group classification) until the fiscal year that begins after such date. This requirement improves the recognition of new technologies under the IPPS by providing information on these new technologies at an earlier date. Data will be available 6 months earlier than would be possible with updates occurring only once a year on October 1.

In the FY 2005 IPPS final rule, we implemented section 1886(d)(5)(K)(vii) of the Act, as added by section 503(a) of Public Law 108–173, by developing a mechanism for approving, in time for the April update, diagnosis and procedure code revisions needed to describe new technologies and medical services for purposes of the new technology add-on payment process. We also established the following process for making those determinations. Topics considered during the Fall ICD–10 (previously ICD–9–CM) Coordination and Maintenance Committee meeting were considered for an April 1 update if a strong and convincing case was made by the requestor during the Committee's public meeting. The request needed to identify the reason why a new code was needed in April for purposes of the new technology process. Meeting participants and those reviewing the Committee meeting materials were provided the opportunity to comment on the expedited request. We refer the reader to the FY 2022 IPPS/LTCH PPS final rule (86 FR 44950) for further discussion of the implementation of this prior April 1 update for purposes of the new technology add-on payment process.

However, as discussed in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44950 through 44956), we adopted an April 1 implementation date, in addition to the annual October 1 update, beginning with April 1, 2022. We noted that the intent of this April 1 implementation date is to allow flexibility in the ICD–10 code update process. With this new April 1 update, CMS now uses the same process for consideration of all requests for an April 1 implementation date, including for purposes of the new technology add-on payment process (that is, the prior process for consideration of an April 1 implementation date only if a strong and convincing case was made by the requestor during the meeting no longer applies). We are continuing to use several aspects of our existing established process to implement new codes through the April 1 code update, which includes presenting proposals for April 1 consideration at the September ICD–10 Coordination and Maintenance Committee meeting, requesting public comments, reviewing the public comments, finalizing codes, and announcing the new codes with their assignments consistent with the new GROUPER release information. We note that under our established process, requestors indicate whether they are submitting their code request for consideration for an April 1 implementation date or an October 1 implementation date. The ICD–10 Coordination and Maintenance Committee makes efforts to accommodate the requested implementation date for each request submitted. However, the Committee determines which requests are to be presented for consideration for an April 1 implementation date or an October 1 implementation date. As discussed earlier in this section of the preamble of this proposed rule, there were code proposals presented for an expedited April 1, 2022, implementation at the September 14–15, 2021, Committee meetings that involved treatments related to the COVID–19 PHE. One of these code proposals was also in connection with a request for a new technology add-on payment application. Following the receipt of public comments, the code proposals were approved and finalized, therefore, there were new codes implemented April 1, 2022.

Consistent with the process we outlined for the April 1 implementation date, we announced the new codes in November 2021 and provided the updated code files and ICD–10–CM Official Guidelines for Coding and Reporting in December 2021. In the January 24, 2022, **Federal Register** (87 FR 3549), notice for the March 8–9, 2022, ICD–10 Coordination and Maintenance Committee Meeting was published that includes the tentative agenda and identifies which topics are related to a new technology add-on payment application. By February 1, 2022, we made available the updated V39.1 ICD–10 MS–DRG Grouper software and related materials via the internet on CMS web page at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.*

ICD–9–CM addendum and code title information is published on the CMS website at *https://www.cms.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/addendum.* ICD–10–CM and ICD–10–PCS addendum and code title information is published on the CMS website at *https://www.cms.gov/medicare/coding/icd10.* CMS also sends electronic files containing all ICD–10–CM and ICD–10–PCS coding changes to its Medicare contractors for use in updating their systems and providing education to providers. Information on ICD–10–CM diagnosis codes, along with the Official ICD–10–CM Coding Guidelines, can be found on the CDC website at *https://www.cdc.gov/nchs/icd/icd10cm.htm.* Additionally, information on new, revised, and deleted ICD–10–CM diagnosis and ICD–10–PCS procedure codes is provided to the AHA for publication in the Coding Clinic for ICD–10. The AHA also distributes coding update information to publishers and software vendors.

For FY 2022, there are currently 72,750 diagnosis codes and 78,229 procedure codes. As displayed in Table 6A.—New Diagnosis Codes and in Table 6B.—New Procedure Codes associated with this proposed rule (and available via the internet on the CMS website at *https://www.cms.gov/medicare/medicare-fee-for-service-payment/acuteinpatientpps,* there are 1,176 new diagnosis codes and 45 new procedure codes that have been finalized for FY 2023 at the time of the development of this proposed rule. The code titles are adopted as part of the ICD–10 Coordination and Maintenance Committee process. Thus, although we publish the code titles in the IPPS proposed and final rules, they are not subject to comment in the proposed or final rules. We will continue to provide the October updates in this manner in the IPPS proposed and final rules.

18. Replaced Devices Offered Without Cost or With a Credit

a. Background

In the FY 2008 IPPS final rule with comment period (72 FR 47246 through 47251), we discussed the topic of Medicare payment for devices that are replaced without cost or where credit for a replaced device is furnished to the hospital. We implemented a policy to reduce a hospital's IPPS payment for certain MS–DRGs where the

implantation of a device that subsequently failed or was recalled determined the base MS–DRG assignment. At that time, we specified that we will reduce a hospital's IPPS payment for those MS–DRGs where the hospital received a credit for a replaced device equal to 50 percent or more of the cost of the device.

In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51556 through 51557), we clarified this policy to state that the policy applies if the hospital received a credit equal to 50 percent or more of the cost of the replacement device and issued instructions to hospitals accordingly.

b. Proposed Changes for FY 2023

For FY 2023 we are proposing not to add any MS–DRGs to the policy for replaced devices offered without cost or with a credit. We are proposing to continue to include the existing MS–DRGs currently subject to the policy as displayed in the following table.

MDC	MS-DRG	MS-DRG Title
Pre-MDC	001	Heart Transplant or Implant of Heart Assist System with MCC
Pre-MDC	002	Heart Transplant or Implant of Heart Assist System without MCC
01	023	Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis with MCC or Chemotherapy Implant or Epilepsy with Neurostimulator
01	024	Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis without MCC
01	025	Craniotomy and Endovascular Intracranial Procedures with MCC
01	026	Craniotomy and Endovascular Intracranial Procedures with CC
01	027	Craniotomy and Endovascular Intracranial Procedures without CC/MCC
01	040	Peripheral, Cranial Nerve and Other Nervous System Procedures with MCC
01	041	Peripheral, Cranial Nerve and Other Nervous System Procedures with CC or Peripheral Neurostimulator
01	042	Peripheral, Cranial Nerve and Other Nervous System Procedures without CC/MCC
03	140	Major Head and Neck Procedures with MCC
03	141	Major Head and Neck Procedures with CC
03	142	Major Head and Neck Procedures without CC/MCC
05	215	Other Heart Assist System Implant
05	216	Cardiac Valve and Other Major Cardiothoracic Procedure with Cardiac Catheterization with MCC
05	217	Cardiac Valve and Other Major Cardiothoracic Procedure with Cardiac Catheterization with CC
05	218	Cardiac Valve and Other Major Cardiothoracic Procedure with Cardiac Catheterization without CC/MCC
05	219	Cardiac Valve and Other Major Cardiothoracic Procedure without Cardiac Catheterization with MCC
05	220	Cardiac Valve and Other Major Cardiothoracic Procedure without Cardiac Catheterization with CC
05	221	Cardiac Valve and Other Major Cardiothoracic Procedure without Cardiac Catheterization without CC/MCC
05	222	Cardiac Defibrillator Implant with Cardiac Catheterization with AMI/Heart Failure/Shock with MCC
05	223	Cardiac Defibrillator Implant with Cardiac Catheterization with AMI/Heart Failure/Shock without MCC
05	224	Cardiac Defibrillator Implant with Cardiac Catheterization without AMI/Heart Failure/Shock with MCC
05	225	Cardiac Defibrillator Implant with Cardiac Catheterization without AMI/Heart Failure/Shock without MCC
05	226	Cardiac Defibrillator Implant without Cardiac Catheterization with MCC
05	227	Cardiac Defibrillator Implant without Cardiac Catheterization without MCC
05	242	Permanent Cardiac Pacemaker Implant with MCC
05	243	Permanent Cardiac Pacemaker Implant with CC
05	244	Permanent Cardiac Pacemaker Implant without CC/MCC
05	245	AICD Generator Procedures
05	258	Cardiac Pacemaker Device Replacement with MCC
05	259	Cardiac Pacemaker Device Replacement without MCC
05	260	Cardiac Pacemaker Revision Except Device Replacement with MCC
05	261	Cardiac Pacemaker Revision Except Device Replacement with CC
05	262	Cardiac Pacemaker Revision Except Device Replacement without CC/MCC
05	265	AICD Lead Procedures
05	266	Endovascular Cardiac Valve Replacement and Supplement Procedures with MCC
05	267	Endovascular Cardiac Valve Replacement and Supplement Procedures without MCC
05	268	Aortic and Heart Assist Procedures Except Pulsation Balloon with MCC
05	269	Aortic and Heart Assist Procedures Except Pulsation Balloon without MCC
05	270	Other Major Cardiovascular Procedures with MCC
05	271	Other Major Cardiovascular Procedures with CC
05	272	Other Major Cardiovascular Procedures without CC/MCC
05	319	Other Endovascular Cardiac Valve Procedures with MCC
05	320	Other Endovascular Cardiac Valve Procedures without MCC
08	461	Bilateral or Multiple Major Joint Procedures of Lower Extremity with MCC
08	462	Bilateral or Multiple Major Joint Procedures of Lower Extremity without MCC
08	466	Revision of Hip or Knee Replacement with MCC
08	467	Revision of Hip or Knee Replacement with CC
08	468	Revision of Hip or Knee Replacement without CC/MCC
08	469	Major Hip and Knee Joint Replacement or Reattachment of Lower Extremity with MCC or Total Ankle Replacement
08	470	Major Hip and Knee Joint Replacement or Reattachment of Lower Extremity without MCC
08	521	Hip Replacement with Principal Diagnosis of Hip Fracture with MCC
08	522	Hip Replacement with Principal Diagnosis of Hip Fracture without MCC

The final list of MS–DRGs subject to the IPPS policy for replaced devices offered without cost or with a credit will be included in the FY 2023 IPPS/LTCH PPS final rule and also will be issued to providers in the form of a Change Request (CR).

19. Other Policy Issues

a. Comment Solicitation on Possible Mechanisms To Address Rare Diseases and Conditions Represented by Low Volumes Within the MS–DRG Structure

As discussed in section II.D.13.d. of the preamble of this proposed rule, we are soliciting public comments involving how the reporting of certain diagnosis codes may improve our ability to recognize severity of illness, complexity of illness, and utilization of resources under the MS–DRGs, as well as feedback on mechanisms to improve the reliability and validity of the coded data as part of an ongoing effort across CMS to evaluate and develop policies to reduce health disparities. In concert with that effort, we are also soliciting comments to explore possible mechanisms through which we can address rare diseases and conditions that are represented by low volumes in our claims data.

One subset of our beneficiary population for which we are seeking comment on potential issues related to patient access in the inpatient setting are patients diagnosed with rare diseases and conditions that are represented by low volumes in our claims data. The Orphan Drug Act (ODA) added section 526(a)(2)(B) to the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 360bb(a)(2)(B)), defining a rare disease or condition as ''any disease or condition which (A) affects less than 200,000 persons in the United States, or (B) affects more than 200,000 in the United States and for which there is no reasonable expectation that the cost of developing and making available in the United States a drug for such disease or condition will be recovered from sales in the United States of such drug.'' Most rare diseases, however, affect far fewer people. The Genetic and Rare Diseases Information Center (GARD), which was created in 2002 by the National Institutes of Health (NIH) Office of Rare Diseases Research, estimates that there are as many as 7,000 distinct rare diseases. Rare diseases, which can include genetic diseases, autoimmune conditions, some cancers, and uncommon infections, are highly diverse, may affect many organ systems and have wide variations in the rates and patterns of manifestations and progression.

The ODA created a process for the U.S. Food and Drug Administration (FDA) to identify a drug as a drug developed for the treatment of a rare disease or condition called ''orphan-drug designation''. The sponsor of a drug that has orphan drug designation may be eligible for certain financial incentives, such as tax credits and potentially seven years of market exclusivity after approval, all of which are intended to incentivize developing drugs for small numbers of patients. We have heard from some stakeholders, however, that there may be a number of barriers to providers in treating these patients with these orphan designated drugs in the Medicare hospital inpatient setting.

According to these stakeholders, one significant barrier that continues to present challenges to manufacturers is accessing formulary coverage for potentially high cost therapeutics for rare diseases. These stakeholders have stated that hospitals utilize formularies for inpatient drugs as a cost-management tool that strongly incentivizes physicians to use on-formulary drugs over off-formulary drugs, whenever clinically appropriate to do so. A drug formulary is defined as a list of medications and continually updated related information, that represents the clinical judgment of pharmacists, physicians, and other experts in the diagnosis and treatment of disease or promotion of health. It is often described as a list of medications routinely stocked by the health care system. These stakeholders stated that although certain therapeutics can be associated with better outcomes for patients with rare diseases, the lack of access to hospital formularies represents a hurdle under the IPPS MS–DRGs. According to these stakeholders, when Medicare reimbursement is insufficient to cover the costs of certain therapeutics that treat patients with rare diseases, a disincentive can be created in addressing these conditions.

For the purposes of this comment solicitation we describe in this section three selected requests we have received relating to the MS–DRG classification of rare diseases and conditions that are represented by low volumes in our claims data.

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53311), the FY 2015 IPPS/LTCH PPS final rule (79 FR 49901), and the FY 2019 IPPS/LTCH PPS final rule (83 FR 41200), we discussed requests we received to revise the MS–DRG classification for cases of patients diagnosed with porphyria to recognize the resource requirements in caring for these patients, to ensure appropriate payment for these cases, and to preserve patient access to necessary treatments. Porphyria is defined as a group of rare disorders (''porphyrias'') that interfere with the production of hemoglobin that is needed for red blood cells. While some of these disorders are genetic (inborn) and others are acquired, they all result in the abnormal accumulation of hemoglobin building blocks, called porphyrins, which can be deposited in the tissues where they particularly interfere with the functioning of the nervous system and the skin. Treatment for patients suffering from disorders of porphyrin metabolism consists of an intravenous injection of Panhematin® (hemin for injection).

In the FY 2019 proposed rule, we stated our data analysis showed that cases reporting diagnosis code E80.21 (Acute intermittent (hepatic) porphyria) as the principal diagnosis in MS–DRG 642 (Inborn and Other Disorders of Metabolism) had higher average costs and longer average lengths of stay compared to the average costs and length of stay for all other cases in MS–DRG 642. However, after considering these findings in the context of the current MS–DRG structure, we stated that we were unable to identify an MS–DRG that would more closely parallel these cases with respect to average costs and length of stay that would also be clinically aligned. We further stated that our clinical advisors believed that, in the current MS–DRG structure, the clinical characteristics of patients in these cases are most closely aligned with the clinical characteristics of patients in all cases in MS–DRG 642. Moreover, given the small number of porphyria cases, we stated we did not believe there was justification for creating a new MS–DRG and did not propose to revise the MS–DRG classification for porphyria cases.

In response, some commenters described significant difficulties encountered by patients with acute porphyria attacks in obtaining Panhematin® when presenting to an inpatient hospital, which they attributed to the strong financial disincentives faced by facilities to treat these cases on an inpatient basis. The commenters stated that, based on the lower than expected average cost per case and longer than expected length of stay for acute porphyria attacks, it appeared that facilities were frequently not providing Panhematin® to patients in this condition, and instead attempting to provide symptom relief and transferring patients to an outpatient setting to receive the drug where they can be adequately paid. The commenters stated that this is in contrast to the standard of

care for acute porphyria attacks and could result in devastating long-term health consequences.

In the FY 2019 final rule (83 FR 41200), as we have stated in prior rulemaking, we noted it is not appropriate for facilities to deny treatment to beneficiaries needing a specific type of therapy or treatment that involves increased costs. We further noted the MS–DRG system is a system of averages and it is expected that across the diagnostic related groups that within certain groups, some cases may demonstrate higher than average costs, while other cases may demonstrate lower than average costs. While we recognized the average costs of the small number of porphyria cases were greater than the average costs of the cases in MS–DRG 642 overall, we also noted that an averaged payment system depends on aggregation of similar cases with a range of costs, and that we seek to identify sufficiently large sets of claims data with a resource/cost similarity and clinical similarity in developing diagnostic-related groups rather than smaller subsets of diagnoses. We further stated that we were sensitive to the commenters' concerns about access to treatment for beneficiaries who have been diagnosed with this condition and we would continue to explore mechanisms through which to address rare diseases and low volume DRGs.

Similarly, in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44869), we discussed a request we received to review potential access issues in the inpatient setting for the administration of ANDEXXA®. ANDEXXA® (coagulation factor Xa (recombinant), inactivated-zhzo) is a recombinant decoy protein that rapidly reverses the anticoagulant effects of two direct oral anticoagulants, apixaban and rivaroxaban, when reversal of anticoagulation is needed due to life-threatening or uncontrolled bleeding in indications such as intracranial hemorrhages (ICHs) and gastrointestinal bleeds (GIBs). We noted that while our data findings demonstrated the average costs for the cases reporting the intravenous administration of ANDEXXA® were higher when compared to all cases in their respective MS–DRG, these cases represented a very small percentage of the total number of cases reported in those MS–DRGs. We stated we were unable to identify another MS–DRG that would be a more appropriate MS–DRG assignment for these cases based on the indication for this therapeutic drug. We also stated that while we were sensitive to the requestors' concerns about continued access to treatment for beneficiaries who require the reversal of anticoagulation due to life-threatening or uncontrolled bleeding, we indicated additional time was needed to explore options and other mechanisms through which to address low volume, high-cost drugs outside of the MS–DRGs.

Lastly, we received a request to reconsider how cases reporting the administration of Zulresso® (brexanolone) are recognized for payment under the ICD–10 MS–DRGs in an effort to improve access to treatment for maternal mental health. On March 19, 2019 Zulresso® (brexanolone) became the first Food and Drug Administration (FDA) approved drug, specifically for postpartum depression (PPD) in adults. According to the requestor, PPD is one of the most common complications during and after pregnancy. The requestor stated PPD is a serious but manageable disorder and that with early treatment, the life of the mother, baby, and the entire family could be positively impacted. The requestor indicated it shares CMS's goals of addressing disparities in access to care, and urged CMS to take additional steps to address inequities in women's health by permitting separate payment for Zulresso® (brexanolone), in addition to the MS–DRG payment.

Effective with discharges on and after October 1, 2020, cases reporting the administration of Zulresso® in the inpatient setting are identified by ICD–10–PCS procedure codes XW03306 (Introduction of brexanolone into peripheral vein, percutaneous approach, new technology group 6) or XW04306 (Introduction of brexanolone into central vein, percutaneous approach, new technology group 6). These procedure codes are designated as non-O. R. procedures and do not affect the MS–DRG assignment when reported on an inpatient claim. We note that an application for new technology add-on payment for Zulresso® (brexanolone) was discussed in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32672 through 32676) and was not approved, as discussed in the final rule (85 FR 58709 through 58715).

We analyzed claims from the September 2021 update of the FY 2021 MedPAR file for cases reporting the administration of Zulresso® (brexanolone). Our analysis of the claims data identified only one case reporting the administration of Zulresso® (brexanolone) in MS–DRG 870 (Septicemia or Severe Sepsis with MV >96 Hours) with an average length of stay of 22 days and average costs of $67,812. For all cases in MS–DRG 870, the average costs are $55,459 and the average length of stay is 15.9 days. While the average length of stay for the case reporting the administration of Zulresso® (brexanolone) is greater (22 days versus 15.9 days) and the average costs are higher ($67,812 versus $55,459), than all cases in MS–DRG 870 it is unclear if treatment with Zulresso® (brexanolone) is the underlying reason for these factors, given that the MS–DRG assigned is for sepsis and it is not uncommon for sepsis patients to have multiple co-morbidities and intensive treatment strategies to address this severe, often life threatening condition.

We appreciate the requestor's interest in sharing CMS's goal of advancing women's health, however, we note that the population in which Zulresso® (brexanolone) is indicated generally does not include our inpatient Medicare population. As we have stated in prior rulemaking, (83 FR 41210), we have not adopted the same approach to refine the maternity and newborn MS–DRGs because of the extremely low volume of Medicare patients there are in these MS–DRGs. When there is not a high volume of these cases (for example, maternity and newborn) represented in the Medicare data, we generally advise that other payers should develop DRGs to address the needs of their patients. We believe the same would apply with respect to administration of Zulresso® (brexanolone) for which, as noted, we identified only one case in the FY 2021 MedPAR file.

As discussed in prior rulemaking, the MS–DRGs are a classification system intended to group together diagnoses and procedures with similar clinical characteristics and utilization of resources. Rare diseases and conditions that are represented by low volumes in our claims data however, pose a unique challenge to this methodology as these conditions by definition affect small subsets of the population. It has been difficult to identify other MS–DRGs that would be more appropriate MS–DRG assignments for these rare conditions based on the wide variance in the clinical characteristics and utilization of resources for each condition, depending on the diagnosis. Creating a new MS–DRG for these conditions as a distinct ''related'' group is also challenging for the same reasons.

As previously noted, we generally seek to identify sufficiently large sets of claims data with a resource/cost similarity and clinical similarity in developing diagnostic-related groups rather than smaller subsets. We have been concerned that basing MS–DRG reclassification decisions on small numbers of cases could lead to complexities in establishing the relative payment weights for the MS–DRGs

because several expensive cases could impact the overall relative payment weight. Having larger clinical cohesive groups within an MS–DRG provides greater stability and thus predictability for hospitals for annual updates to the relative payment weights.

As also previously noted, the MS–DRG system is a system of averages and it is expected that within the diagnostic related groups, some cases may demonstrate higher than average costs, while other cases may demonstrate lower than average costs. However, as noted, cases involving treatment of rare diseases may involve more resource use than other cases in their respective MS–DRG. Section 1886(d)(5)(A) of the Act provides for Medicare payments to Medicare-participating hospitals in addition to the basic prospective payments for cases incurring extraordinarily high costs, however we are soliciting feedback on other mechanisms we can explore through which we could address concerns relating to payment for patients with rare diseases and conditions that are represented by low volumes in our claims data. We are also interested in receiving comments on other meaningful ways in which we may potentially improve access to treatment for postpartum depression in certain populations, including through activities pursuant to Vice President Harris's Call to Action to Reduce Maternal Mortality and Morbidity.[25]

To inform decision making, we are also looking for feedback on how to mitigate any unintended negative payment impacts to providers serving patients with rare diseases or conditions that are represented by low volumes in our claims data. In particular, we are interested in hearing the perspectives of large urban hospitals, rural hospitals, and other hospital types in regard to their experience. We also seek comments on how factors such as hospital size and type might impact a hospital's ability to develop protocols to better address these conditions. We will take commenters' feedback into consideration in future policy development.

[25] *Available at: https://www.whitehouse.gov/briefing-room/statements-releases/2021/12/07/fact-sheet-vice-president-kamala-harris-announces-call-to-action-to-reduce-maternal-mortality-and-morbidity/.*

II. Proposed Changes to Medicare Severity Diagnosis-Related Group (MS–DRG) Classifications and Relative Weights

E. Recalibration of the FY 2023 MS–DRG Relative Weights

1. Data Sources for Developing the Relative Weights

Consistent with our established policy, in developing the MS–DRG relative weights for FY 2023, we are proposing to use two data sources: Claims data and cost report data. The claims data source is the MedPAR file, which includes fully coded diagnostic and procedure data for all Medicare inpatient hospital bills. The FY 2021 MedPAR data used in this proposed rule include discharges occurring on October 1, 2020, through September 30, 2021, based on bills received by CMS through December 31, 2021, from all hospitals subject to the IPPS and short-term, acute care hospitals in Maryland (which at that time were under a waiver from the IPPS).

The FY 2021 MedPAR file used in calculating the proposed relative weights includes data for approximately 7,417,999 Medicare discharges from IPPS providers. Discharges for Medicare beneficiaries enrolled in a Medicare Advantage managed care plan are excluded from this analysis. These discharges are excluded when the MedPAR ''GHO Paid'' indicator field on the claim record is equal to ''1'' or when the MedPAR DRG payment field, which represents the total payment for the claim, is equal to the MedPAR ''Indirect Medical Education (IME)'' payment field, indicating that the claim was an ''IME only'' claim submitted by a teaching hospital on behalf of a beneficiary enrolled in a Medicare Advantage managed care plan. In addition, the December 31, 2021 update of the FY 2021 MedPAR file complies with version 5010 of the X12 HIPAA Transaction and Code Set Standards, and includes a variable called ''claim type.'' Claim type ''60'' indicates that the claim was an inpatient claim paid as fee-for-service. Claim types ''61,'' ''62,'' ''63,'' and ''64'' relate to encounter claims, Medicare Advantage IME claims, and HMO no-pay claims. Therefore, the calculation of the proposed relative weights for FY 2023 also excludes claims with claim type values not equal to ''60.'' The data exclude CAHs, including hospitals that subsequently became CAHs after the period from which the data were taken. We note that the proposed FY 2023 relative weights are based on the ICD–10–CM diagnosis codes and ICD–10–PCS procedure codes from the FY 2021 MedPAR claims data, grouped through the ICD–10 version of the proposed FY 2023 GROUPER (Version 40).

The second data source used in the cost-based relative weighting methodology is the Medicare cost report data files from the HCRIS. In general, we use the HCRIS dataset that is 3 years prior to the IPPS fiscal year. Specifically, for this proposed rule, we used the December 31, 2021 update of the FY 2020 HCRIS for calculating the proposed FY 2023 cost-based relative weights. Consistent with our historical practice, for this FY 2023 proposed rule, we are providing the version of the HCRIS from which we calculated these proposed 19 CCRs on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS.* Click on the link on the left side of the screen titled ''FY 2023 IPPS Proposed Rule Home Page'' or ''Acute Inpatient Files for Download.''

2. Methodology for Calculation of the Relative Weights

a. General

We continued to calculate the proposed FY 2023 relative weights based on 19 CCRs. The methodology we are proposing to use to calculate the FY 2023 MS–DRG cost-based relative weights based on claims data in the FY 2021 MedPAR file and data from the FY 2020 Medicare cost reports is as follows:

- To the extent possible, all the claims were regrouped using the proposed FY 2023 MS–DRG classifications discussed in sections II.B. and II.D. of the preamble of this proposed rule.
- The transplant cases that were used to establish the relative weights for heart and heart-lung, liver and/or intestinal, and lung transplants (MS–DRGs 001, 002, 005, 006, and 007, respectively) were limited to those Medicare-approved transplant centers that have cases in the FY 2021 MedPAR file. (Medicare coverage for heart, heart-lung, liver and/or intestinal, and lung transplants is limited to those facilities that have received approval from CMS as transplant centers.)
- Organ acquisition costs for kidney, heart, heart-lung, liver, lung, pancreas, and intestinal (or multivisceral organs) transplants continue to be paid on a reasonable cost basis. Because these acquisition costs are paid separately from the prospective payment rate, it is necessary to subtract the acquisition charges from the total charges on each transplant bill that showed acquisition charges before computing the average

cost for each MS–DRG and before eliminating statistical outliers.

Section 108 of the Further Consolidated Appropriations Act, 2020 provides that, for cost reporting periods beginning on or after October 1, 2020, costs related to hematopoietic stem cell acquisition for the purpose of an allogeneic hematopoietic stem cell transplant shall be paid on a reasonable cost basis. We refer the reader to the FY 2021 IPPS/LTCH PPS final rule for further discussion of the reasonable cost basis payment for cost reporting periods beginning on or after October 1, 2020 (85 FR 58835 through 58842). For FY 2022 and subsequent years, we subtract the hematopoietic stem cell acquisition charges from the total charges on each transplant bill that showed hematopoietic stem cell acquisition charges before computing the average cost for each MS–DRG and before eliminating statistical outliers.

- Claims with total charges or total lengths of stay less than or equal to zero were deleted. Claims that had an amount in the total charge field that differed by more than $30.00 from the sum of the routine day charges, intensive care charges, pharmacy charges, implantable devices charges, supplies and equipment charges, therapy services charges, operating room charges, cardiology charges, laboratory charges, radiology charges, other service charges, labor and delivery charges, inhalation therapy charges, emergency room charges, blood and blood products charges, anesthesia charges, cardiac catheterization charges, CT scan charges, and MRI charges were also deleted.
- At least 92.9 percent of the providers in the MedPAR file had charges for 14 of the 19 cost centers. All claims of providers that did not have charges greater than zero for at least 14 of the 19 cost centers were deleted. In other words, a provider must have no more than five blank cost centers. If a provider did not have charges greater than zero in more than five cost centers, the claims for the provider were deleted.
- Statistical outliers were eliminated by removing all cases that were beyond 3.0 standard deviations from the geometric mean of the log distribution of both the total charges per case and the total charges per day for each MS–DRG.
- Effective October 1, 2008, because hospital inpatient claims include a POA indicator field for each diagnosis present on the claim, only for purposes of relative weight-setting, the POA indicator field was reset to ''Y'' for ''Yes'' for all claims that otherwise have an ''N'' (No) or a ''U'' (documentation insufficient to determine if the condition was present at the time of inpatient admission) in the POA field.

Under current payment policy, the presence of specific HAC codes, as indicated by the POA field values, can generate a lower payment for the claim. Specifically, if the particular condition is present on admission (that is, a ''Y'' indicator is associated with the diagnosis on the claim), it is not a HAC, and the hospital is paid for the higher severity (and, therefore, the higher weighted MS–DRG). If the particular condition is not present on admission (that is, an ''N'' indicator is associated with the diagnosis on the claim) and there are no other complicating conditions, the DRG GROUPER assigns the claim to a lower severity (and, therefore, the lower weighted MS–DRG) as a penalty for allowing a Medicare inpatient to contract a HAC. While the POA reporting meets policy goals of encouraging quality care and generates program savings, it presents an issue for the relative weight-setting process. Because cases identified as HACs are likely to be more complex than similar cases that are not identified as HACs, the charges associated with HAC cases are likely to be higher as well. Therefore, if the higher charges of these HAC claims are grouped into lower severity MS–DRGs prior to the relative weight-setting process, the relative weights of these particular MS–DRGs would become artificially inflated, potentially skewing the relative weights. In addition, we want to protect the integrity of the budget neutrality process by ensuring that, in estimating payments, no increase to the standardized amount occurs as a result of lower overall payments in a previous year that stem from using weights and case-mix that are based on lower severity MS–DRG assignments. If this would occur, the anticipated cost savings from the HAC policy would be lost.

To avoid these problems, we reset the POA indicator field to ''Y'' only for relative weight-setting purposes for all claims that otherwise have an ''N'' or a ''U'' in the POA field. This resetting ''forced'' the more costly HAC claims into the higher severity MS–DRGs as appropriate, and the relative weights calculated for each MS–DRG more closely reflect the true costs of those cases.

In addition, in the FY 2013 IPPS/LTCH PPS final rule, for FY 2013 and subsequent fiscal years, we finalized a policy to treat hospitals that participate in the Bundled Payments for Care Improvement (BPCI) initiative the same as prior fiscal years for the IPPS payment modeling and ratesetting process without regard to hospitals' participation within these bundled payment models (77 FR 53341 through 53343). Specifically, because acute care hospitals participating in the BPCI Initiative still receive IPPS payments under section 1886(d) of the Act, we include all applicable data from these subsection (d) hospitals in our IPPS payment modeling and ratesetting calculations as if the hospitals were not participating in those models under the BPCI initiative. We refer readers to the FY 2013 IPPS/LTCH PPS final rule for a complete discussion on our final policy for the treatment of hospitals participating in the BPCI initiative in our ratesetting process. For additional information on the BPCI initiative, we refer readers to the CMS' Center for Medicare and Medicaid Innovation's website at *https://innovation.cms.gov/initiatives/Bundled-Payments/index.html* and to section IV.H.4. of the preamble of the FY 2013 IPPS/LTCH PPS final rule (77 FR 53341 through 53343).

The participation of hospitals in the BPCI initiative concluded on September 30, 2018. The participation of hospitals in the BPCI Advanced model started on October 1, 2018. The BPCI Advanced model, tested under the authority of section 1115A of the Act, is comprised of a single payment and risk track, which bundles payments for multiple services beneficiaries receive during a Clinical Episode. Acute care hospitals may participate in BPCI Advanced in one of two capacities: As a model Participant or as a downstream Episode Initiator. Regardless of the capacity in which they participate in the BPCI Advanced model, participating acute care hospitals will continue to receive IPPS payments under section 1886(d) of the Act. Acute care hospitals that are Participants also assume financial and quality performance accountability for Clinical Episodes in the form of a reconciliation payment. For additional information on the BPCI Advanced model, we refer readers to the BPCI Advanced web page on the CMS Center for Medicare and Medicaid Innovation's website at *https://innovation.cms.gov/initiatives/bpci-advanced/*. Consistent with our policy for FY 2022, and consistent with how we have treated hospitals that participated in the BPCI Initiative, for FY 2023, we continue to believe it is appropriate to include all applicable data from the subsection (d) hospitals participating in the BPCI Advanced model in our IPPS payment modeling and ratesetting calculations because, as noted previously, these

hospitals are still receiving IPPS payments under section 1886(d) of the Act. Consistent with the FY 2022 IPPS/LTCH PPS final rule, we are also proposing to include all applicable data from subsection (d) hospitals participating in the Comprehensive Care for Joint Replacement (CJR) Model in our IPPS payment modeling and ratesetting calculations.

The charges for each of the 19 cost groups for each claim were standardized to remove the effects of differences in area wage levels, IME and DSH payments, and for hospitals located in Alaska and Hawaii, the applicable cost-of-living adjustment. Because hospital charges include charges for both operating and capital costs, we standardized total charges to remove the effects of differences in geographic adjustment factors, cost-of-living adjustments, and DSH payments under the capital IPPS as well. Charges were then summed by MS–DRG for each of the 19 cost groups so that each MS–DRG had 19 standardized charge totals. Statistical outliers were then removed. These charges were then adjusted to cost by applying the proposed national average CCRs developed from the FY 2020 cost report data, consistent with our proposed FY 2023 ratesetting discussed in section II.A.4. of the Addendum of this proposed rule.

The 19 cost centers that we used in the proposed relative weight calculation are shown in a supplemental data file, Cost Center HCRIS Lines Supplemental Data File, posted via the internet on the CMS website for this proposed rule and available at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS.* The supplemental data file shows the lines on the cost report and the corresponding revenue codes that we used to create the proposed 19 national cost center CCRs. If we receive comments about the groupings in this supplemental data file, we may consider these comments as we finalize our policy.

Consistent with historical practice, we account for rare situations of non-monotonicity in a base MS–DRG and its severity levels, where the mean cost in the higher severity level is less than the mean cost in the lower severity level, in determining the relative weights for the different severity levels. If there are initially non-monotonic relative weights in the same base DRG and its severity levels, then we combine the cases that group to the specific non-monotonic MS–DRGs for purposes of relative weight calculations. For example, if there are two non-monotonic MS–DRGs, combining the cases across those two MS–DRGs results in the same relative weight for both MS–DRGs. The relative weight calculated using the combined cases for those severity levels is monotonic, effectively removing any non-monotonicity with the base DRG and its severity levels. For this FY 2023 proposed rule, this calculation was applied to address non-monotonicity for cases that grouped to MS–DRG 504 and MS–DRG 505, as well as MS–DRG 793 and MS–DRG 794. In the supplemental file titled AOR/BOR File, we include statistics for the affected MS–DRGs both separately and with cases combined.

We are inviting public comments on our proposals related to recalibration of the proposed FY 2023 relative weights and the changes in relative weights from FY 2022.

b. Relative Weight Calculation for MS–DRG 018

As discussed in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58599 through 58600), we created MS–DRG 018 for cases that include procedures describing CAR T-cell therapies, which were reported using ICD–10–PCS procedure codes XW033C3 or XW043C3. Effective for FY 2022, we revised MS–DRG 018 to include cases that report the procedure codes for CAR T-cell and non-CAR T-cell therapies and other immunotherapies (86 FR 44798 through 448106). We refer the reader to section II.D.17. of this proposed rule for discussion of the agenda items for the March 8–9, 2022 ICD–10 Coordination and Maintenance Committee meeting relating to new procedure codes to describe the administration of a CAR T-cell or another type of gene or cellular therapy product, as well as our established process for determining the MS–DRG assignment for codes approved at the March meeting.

For MS–DRG 018, we include a modification to our existing relative weight methodology to ensure that the relative weight for MS–DRG 018 appropriately reflects the relative resources required for providing CAR T-cell and non-CAR T-cell therapies and other immunotherapies outside of a clinical trial, while still accounting for the clinical trial cases in the overall average cost for all MS–DRGs. For cases that group to MS–DRG 018, we do not include claims determined to be clinical trial claims that group to MS–DRG 018 when calculating the average cost for MS–DRG 018 that is used to calculate the relative weight for this MS–DRG, with the additional refinements that (a) when the CAR T-cell, non-CAR T-cell or other immunotherapy product is purchased in the usual manner, but the case involves a clinical trial of a different product, we include the claim when calculating the average cost for MS–DRG 018 to the extent such claims can be identified in the historical data, and (b) when there is expanded access use of the CAR T-cell, non-CAR T-cell or other immunotherapy product, these cases will not be included when calculating the average cost for new MS–DRG 018 to the extent such claims can be identified in the historical data (85 FR 58600). We also calculate an adjustment to account for the CAR T-cell, non-CAR T-cell and other immunotherapy cases determined to be clinical trial cases, as described later in this proposed rule and include revenue center 891 in our calculation of standardized drug charges for MS–DRG 018. We refer the reader to the FY 2021 IPPS/LTCH PPS final rule for further discussion of our modifications to the relative weight calculation for MS–DRG 018.

We are proposing to continue to use the same process to identify clinical trial claims in the FY 2021 MedPAR for purposes of calculating the FY 2023 relative weights. We continue to use the proxy of standardized drug charges of less than $373,000, which was the average sales price of KYMRIAH and YESCARTA, which are the two CAR T-cell biological products in the FY 2021 MedPAR data used for this proposed rule. (As previously noted, effective beginning FY 2022, we revised MS–DRG 018 to include cases that report the procedure codes for CAR T-cell and non-CAR T-cell therapies and other immunotherapies (86 FR 44798 through 448106).) Using the same methodology from the FY 2021 IPPS/LTCH PPS final rule, we are proposing to apply an adjustment to account for the CAR T cell therapy cases identified as clinical trial cases in calculating the national average standardized cost per case that is used to calculate the relative weights for all MS–DRGs:

- Calculate the average cost for cases to be assigned to MS–DRG 018 that contain ICD–10–CM diagnosis code Z00.6 or contain standardized drug charges of less than $373,000.
- Calculate the average cost for all other cases to be assigned to MS–DRG 018
- Calculate an adjustor by dividing the average cost calculated in step 1 by the average cost calculated in step 2.
- Apply the adjustor calculated in step 3 to the cases identified in step 1 as clinical trial cases, then add this adjusted case count to the non-clinical trial case count prior to calculating the average cost across all MS–DRGs.

Additionally, we are continuing our finalized methodology for calculating this payment adjustment, such that: (a)

When the CAR T-cell, non-CAR T-cell or other immunotherapy product is purchased in the usual manner, but the case involves a clinical trial of a different product, the claim will be included when calculating the average cost for cases not determined to be clinical trial cases and (b) when there is expanded access use of immunotherapy, these cases will be included when calculating the average cost for cases determined to be clinical trial cases. However, we continue to believe to the best of our knowledge there are no claims in the historical data (FY 2021 MedPAR) used in the calculation of the adjustment for cases involving a clinical trial of a different product, and to the extent the historical data contain claims for cases involving expanded access use of immunotherapy we believe those claims would have drug charges less than $373,000.

Applying this previously finalized methodology, based on the December 2021 update of the FY 2021 MedPAR file used for this proposed rule, we estimated that the average costs of cases assigned to MS–DRG 018 that are identified as clinical trial cases ($61,356) were 20 percent of the average costs of the cases assigned to MS–DRG 018 that are identified as non-clinical trial cases ($299,460). Accordingly, as we did for FY 2022, we are proposing to adjust the transfer-adjusted case count for MS–DRG 018 by applying the proposed adjustor of .20 to the applicable clinical trial and expanded access use immunotherapy cases, and to use this adjusted case count for MS–DRG 018 in calculating the national average cost per case, which is used in the calculation of the relative weights. Therefore, in calculating the national average cost per case for purposes of this proposed rule, each case identified as an applicable clinical trial or expanded access use immunotherapy case was adjusted by .20. As we did for FY 2022, we are applying this same adjustor for the applicable cases that group to MS–DRG 018 for purposes of budget neutrality and outlier simulations. We are also proposing to update the value of the adjustor based on more recent data for the final rule.

c. Proposed Averaging of Relative Weights for FY 2023

In section I.F. of this proposed rule, we discuss our proposal to use the FY 2021 MedPAR data for purposes of FY 2023 IPPS ratesetting, with certain proposed modifications to our usual methodologies, including a proposed averaging approach for calculating the FY 2023 relative weights. As discussed, we observed that COVID–19 cases were impacting the relative weights as calculated using the FY 2021 claims data for a few COVID–19-related MS–DRGs. For example, for MS–DRG 870 (Septicemia or Severe Sepsis with MV >96 hours), the relative weight calculated using the FY 2021 MedPAR data was approximately 9 percent higher than the relative weight calculated excluding the COVID–19 cases in the FY 2021 data. As also discussed in that section, we believe it is reasonable to assume that there will be fewer COVID–19 hospitalizations among Medicare beneficiaries in FY 2023 than there were in FY 2021. However, we cannot know the precise number of COVID–19 hospitalizations among Medicare beneficiaries in FY 2023. To account for the anticipated decline in COVID–19 hospitalizations of Medicare beneficiaries as compared to FY 2021, we are proposing to determine the MS–DRG relative weights for FY 2023 by averaging the relative weights as calculated with and without COVID–19 cases in the FY 2021 data, as described in greater detail below. Given the uncertainty in the number of COVID–19 hospitalizations in FY 2023, we are proposing to use 50 percent of the relative weights calculated using all applicable cases in the FY 2021 claims data and 50 percent of the relative weights calculated without the COVID–19 cases in the FY 2021 claims data. We believe this proposed approach would appropriately reduce, but not remove entirely, the effect of COVID–19 cases on the relative weight calculations, consistent with our expectation that Medicare inpatient hospitalizations for COVID–19 will continue in FY 2023 at a lower level as compared to FY 2021. By averaging the relative weights in this manner, we believe the result would reflect a reasonable estimation of the case mix for FY 2023 based on the information available at this time, as discussed in section I.F. of the preamble to this proposed rule, and more accurately estimate the relative resource use for the cases treated in FY 2023 than if we were to calculate the proposed relative weights based on 100% of the relative weights as calculated for all applicable cases in the FY 2021 data. For this proposed rule, our proposed calculation is as follows:

- *Step 1:* Calculate a set of relative weights using all applicable cases in the December 2021 update of the FY 2021 MedPAR data, using the methodology as described earlier in this section, and then applying a normalization adjustment factor as described later in this section.
- *Step 2:* Calculate a set of relative weights using the December 2021 update of the FY 2021 MedPAR data excluding cases with a principal or secondary diagnosis of COVID–19 (ICD–10–CM diagnosis code U07.1), and otherwise using the methodology as described earlier in this section, and then applying a normalization adjustment factor as described later in this section.
- *Step 3:* Average the results of step 1 and step 2 to calculate a set of averaged relative weights, geometric mean length of stays, and arithmetic mean length of stays.
- *Step 4:* Calculate the proposed FY 2023 relative weights by applying an additional normalization factor to these averaged relative weights. This additional normalization factor is necessary to ensure that the average case weight as calculated in step 3 of this proposed averaging methodology for recalibration of the FY 2023 relative weights is equal to the average case weight before recalibration. We note that this factor is very close to 1 and is described later in this section.

We note that in Step 5 of this proposed calculation, we apply the proposed 10 percent cap to the relative weights for those MS–DRGs for which the relative weight as calculated in Step 4 would otherwise have declined by more than 10 percent from the FY 2022 relative weight, as discussed more fully later in this section. We also note that we intend to update this calculation for the final rule using the March 2022 update of the FY 2021 MedPAR file.

The proposed relative weights, geometric mean length of stay, and average length of stay as calculated using this proposed methodology are set forth in Table 5 associated with this proposed rule, which is available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS.* We are also making available the relative weights, geometric mean length of stay, and average length of stay as calculated in steps 1 and 2 of this proposed methodology on our website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS.*

As discussed in section I.O. of Appendix A of this proposed rule, as an alternative to our proposed approach, we also considered calculating the FY 2023 MS–DRG relative weights based on all applicable cases in the FY 2021 MedPAR data, without the averaging approach we are proposing to account for COVID–19 cases. We note, as an example, that the proposed relative weight for MS–DRG 871 (Septicemia Or Severe Sepsis Without MV >96 Hours with MCC) as calculated using our

proposed averaging of the relative weights as calculated with and without the COVID–19 cases in the FY 2021 data is 1.9549, while the relative weight as calculated without this proposed averaging would be 1.9954. We are making available supplemental information, including the relative weights, average length of stay, and geometric mean length of stay, calculated both with and without COVID–19 cases as noted previously. We refer the reader to section I.O. of Appendix A of this proposed rule for a discussion of the files that we are making available with regard to our alternative approach.

d. Proposed Cap for Relative Weight Reductions

In the FY 2018 IPPS/LTCH PPS final rule, we summarized comments we had received requesting a transition period for substantial reductions in relative weights in order to facilitate payment stability. Specifically, some commenters asked CMS to establish a cap on the decline in a relative weight from FY 2017 to FY 2018, or a phase-in or multi-year transition period in cases of substantial fluctuation of payment rates (82 FR 38103).

After consideration of these comments, and for the reasons discussed in the FY 2018 final rule, we adopted a temporary one-time measure for FY 2018 for MS–DRGs where the relative weight would have declined by more than 20 percent from the FY 2017 relative weight, consistent with our general authority to assign and update appropriate weighting factors under sections 1886(d)(4)(B) and (C) of the Act (82 FR 38103). Specifically, for these MS–DRGs, the relative weight for FY 2018 was set at 80 percent of the FY 2017 relative weight. In the FY 2019 IPPS/LTCH PPS final rule, in response to similar comments, we adopted a temporary one-time measure for FY 2019 for an MS–DRG where the FY 2018 relative weight declined by 20 percent from the FY 2017 relative weight and the FY 2019 relative weight would have declined by 20 percent or more from the FY 2018 relative weight (83 FR 41273). Specifically, for an MS–DRG meeting this criterion, we set the FY 2019 relative weight equal to the FY 2018 relative weight. In the FY 2020 IPPS/LTCH PPS final rule, in response to similar comments, we adopted a temporary one-time measure for FY 2020 for an MS–DRG where the FY 2018 relative weight declined by 20 percent from the FY 2017 relative weight and the FY 2020 relative weight would have declined by 20 percent or more from the FY 2019 relative weight, which was maintained at the FY 2018 relative weight (84 FR 42167). Specifically, for an MS–DRG meeting this criterion, we set the FY 2020 relative weight equal to the FY 2019 relative weight, which was in turn set equal to the FY 2018 relative weight.

In the FY 2021 IPPS/LTCH PPS proposed rule, we noted the one-time measure adopted for FY 2020 and sought comment on whether we should consider a similar policy for FY 2021, or an alternative approach such as averaging the FY 2020 relative weight and the otherwise applicable FY 2021 relative weight for MS–DRG 215, which was the only MS–DRG impacted by the FY 2020 policy setting the FY 2020 relative weight equal to the FY 2019 relative weight. Commenters generally supported either setting the FY 2021 weight for MS–DRG 215 equal to the FY 2020 relative weight or an averaging approach. Some commenters requested that CMS consider such an approach when the relative weight for an MS–DRG is drastically reduced in a given year, particularly when it follows a significant decline in prior years. After consideration of comments received, and for the reasons discussed in the FY 2021 final rule, we set the FY 2021 relative weight for MS–DRG 215 equal to the average of the FY 2020 relative weight and the otherwise applicable FY 2021 weight. With regard to the concerns raised about other MS–DRGs with significant reductions relative to FY 2020, we noted that these other MS–DRGs were low volume in our claims data, and therefore typically experience a greater degree of year-to-year variation. We acknowledged the longstanding concerns related to low volume MS–DRGs and stated that we would take into consideration the unique issues relating to such MS–DRGs and the stability of their weights for future rulemaking.

We have continued to consider the comments we received in response to prior rulemaking recommending that CMS limit significant declines in the relative weights for the MS–DRGs more broadly, including by establishing a cap on the degree to which the relative weight for an MS–DRG may decline from one fiscal year to the next. For prior fiscal years, as previously discussed, we have adopted limited, temporary measures to address potentially substantial declines in the relative weights in certain outlier circumstances to mitigate the impacts of such declines. However, we have also acknowledged commenters' concerns related to significant reductions in the weights for other MS–DRGs, in particular low volume MS–DRGs. For these low volume MS–DRGs, fluctuations in the volume or mix of cases and/or the presence of a few high cost or low cost cases can have a disproportionate impact on the calculated relative weight, thus resulting in greater year-to-year variation in the relative weights for these MS–DRGs. This variation may reduce the predictability and stability of an individual hospital's Medicare payments from year-to-year. We also recognize that significant declines in the relative weights may occur for higher-volume MS–DRGs, with such fluctuations likewise affecting the predictability and stability of hospital payments.

In light of these concerns, we have further considered requests made by commenters that we address year-to-year fluctuations in relative weights, particularly for low volume MS–DRGs, and to mitigate the financial impacts of significant fluctuations. In consideration of the concerns that commenters have raised about year-to-year fluctuations in relative weights and the financial impacts of significant fluctuations, we believe it would be appropriate to limit such fluctuations by applying a cap on reductions in the relative weight for an MS–DRG for a given fiscal year. Therefore, consistent with our statutory authority under section 1886(d)(4)(B) and (C) of the Act to assign and update appropriate weighting factors, we are proposing a permanent 10-percent cap on the reduction in a MS–DRG's relative weight in a given fiscal year, beginning in FY 2023. This proposal is consistent with our general authority to assign and update appropriate weighting factors as part of our annual reclassification of the MS–DRGs and recalibration of the relative weights under sections 1886(d)(4)(B) and (C)(i) of the Act, as well as the requirements of section 1886(d)(4)(C)(iii) of the Act, which specifies that the annual DRG reclassification and recalibration of the relative weights be made in a manner that ensures that aggregate payments to hospitals are not affected. In addition, we have authority to implement this proposed cap and the associated budget neutrality adjustment under our special exceptions and adjustments authority at section 1886(d)(5)(I)(i) of the Act, which similarly gives the Secretary broad authority to provide by regulation for such other exceptions and adjustments to the payment amounts under section 1886(d) of the Act as the Secretary deems appropriate. As discussed, we believe this cap on declines in the relative weights would be appropriate in order to promote predictability and

stability in hospital payments and to mitigate the financial impacts of significant fluctuations in the weights. That is, by smoothing year-to-year changes in the MS–DRG relative weights, this proposed policy would provide greater predictability to hospitals, allowing time to adjust to significant changes to relative weights. Moreover, consistent with the budget neutrality requirement for annual updates to the relative weights, including our implementation of similar caps on significant declines in the relative weight for prior fiscal years, we believe that application of this proposed 10-percent cap on relative weight reductions should not increase estimated aggregate Medicare payments beyond the payments that would be made had we never applied this cap. Accordingly, we are proposing to apply a budget neutrality adjustment to the standardized amount for all hospitals to ensure that application of the proposed 10-percent cap does not result in an increase or decrease of estimated aggregate payments. For a further discussion of the proposed budget neutrality adjustment, we refer readers to the Addendum of this proposed rule.

Under this proposal, in cases where the relative weight for a MS–DRG would decrease by more than 10 percent in a given fiscal year, we propose to limit the reduction to 10 percent for that fiscal year. For example, if the relative weight for an MS–DRG in FY 2022 is 1.100 and the relative weight for FY 2023 would otherwise be 0.9350, which would represent a decrease of 15 percent from FY 2022, the reduction would be limited to 10 percent, such that the proposed relative weight for FY 2023 for MS–DRG XYZ would be 0.9900 (that is, 0.90 x FY 2022 weight of 1.100). The proposed relative weights for FY 2023 as set forth in Table 5 associated with this proposed rule and available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS* reflect the application of this proposed cap.

As previously summarized, in the past, we have adopted a temporary cap of 20 percent on the decline in an MS–DRG's relative weight to address certain outlier circumstances. However, as also previously discussed, we recognize that hospitals may benefit from the phase-in of smaller declines in the relative weight that may nonetheless contribute to less stability and predictability in hospital payment rates. Accordingly, for purposes of this proposed permanent cap, we considered that a higher cap, such as the twenty percent cap that we have applied previously (see, for example, 82 FR 38103), would limit declines in the relative weights for fewer MS–DRGs (5 MS–DRGs in our analysis of FY 2021 claims), while a lower cap, such as a five percent cap, would limit declines in the relative weights for more MS–DRGs (89 MS–DRGs in our analysis of FY 2021 claims), but with a larger associated budget neutrality adjustment to the standardized amount. On balance, we believe that a 10-percent cap would mitigate financial impacts resulting from significant fluctuations in the relative weights, particularly for low volume MS–DRGs, without the larger budget neutrality adjustment associated with a smaller cap. We note that this proposed policy would limit declines in the relative weight for 27 MS–DRGs, based on the FY 2021 claims data used for this proposed rule.

We note that this proposed 10-percent cap on reductions to a MS–DRG's relative weight would apply only to a given MS–DRG with its current MS–DRG number. In cases where CMS creates new MS–DRGs or modifies the MS–DRGs as part of its annual reclassifications resulting in renumbering of one or more MS–DRGs, we are proposing that this limit on the reduction in the relative weight would not apply to any MS–DRGs affected by the renumbering (that is, the proposed 10 percent cap would not apply to the relative weight for any new or renumbered MS–DRGs for the fiscal year). We propose to modify the regulations at § 412.60(b) to reflect this proposed permanent cap on relative weight reductions. We are seeking comments on our proposal to apply a 10-percent cap on decreases in a MS–DRG relative weight from one fiscal year to the next.

3. Development of Proposed National Average CCRs

We developed the proposed national average CCRs as follows:

Using the FY 2020 cost report data, we removed CAHs, Indian Health Service hospitals, all-inclusive rate hospitals, and cost reports that represented time periods of less than 1 year (365 days). We included hospitals located in Maryland because we include their charges in our claims database. Then we created CCRs for each provider for each cost center (see the supplemental data file for line items used in the calculations) and removed any CCRs that were greater than 10 or less than 0.01. We normalized the departmental CCRs by dividing the CCR for each department by the total CCR for the hospital for the purpose of trimming the data. Then we took the logs of the normalized cost center CCRs and removed any cost center CCRs where the log of the cost center CCR was greater or less than the mean log plus/minus 3 times the standard deviation for the log of that cost center CCR. Once the cost report data were trimmed, we calculated a Medicare-specific CCR. The Medicare-specific CCR was determined by taking the Medicare charges for each line item from Worksheet D–3 and deriving the Medicare-specific costs by applying the hospital-specific departmental CCRs to the Medicare-specific charges for each line item from Worksheet D–3. Once each hospital's Medicare-specific costs were established, we summed the total Medicare-specific costs and divided by the sum of the total Medicare-specific charges to produce national average, charge-weighted CCRs.

After we multiplied the total charges for each MS–DRG in each of the 19 cost centers by the corresponding national average CCR, we summed the 19 ''costs'' across each MS–DRG to produce a total standardized cost for the MS–DRG. The average standardized cost for each MS–DRG was then computed as the total standardized cost for the MS–DRG divided by the transfer-adjusted case count for the MS–DRG. The average cost for each MS–DRG was then divided by the national average standardized cost per case to determine the proposed relative weight.

As discussed earlier in this section, we are proposing to (a) use 50 percent of the relative weights calculated using all cases in the FY 2021 MedPAR data and 50 percent of the relative weights calculated without COVID–19 cases in the FY 2021 MedPAR data to calculate the relative weights for FY 2023 and (b) apply a permanent 10-percent cap on the reduction in a MS–DRG's relative weight in a given fiscal year, beginning in FY 2023.

In developing the proposed relative weights consistent with these proposals, we first created a set of relative weights using all applicable cases in the December 2021 update of the FY 2021 MedPAR data, using the methodology as described earlier in this section (Step 1). These relative weights were then normalized by an adjustment factor of 1.947540 so that the average case weight after recalibration was equal to the average case weight before recalibration. The normalization adjustment is intended to ensure that recalibration by itself neither increases nor decreases total payments under the IPPS, as required by section 1886(d)(4)(C)(iii) of the Act.

Next, we created a set of relative weights using the December 2021 update of the FY 2021 MedPAR data

excluding cases with a principal or secondary diagnosis of COVID–19 (ICD–10–CM diagnosis code U07.1), and otherwise using the methodology as described earlier in this section (Step 2). These relative weights were then normalized by an adjustment factor of 1.915575.

We then averaged the results of Step 1 and Step 2 (Step 3), and normalized these relative weights by applying an adjustment factor of 1.000308 (Step 4). This normalization adjustment is intended to ensure that this proposed averaging methodology for recalibration of the FY 2023 relative weights neither increases nor decreases total payments under the IPPS, as required by section 1886(d)(4)(C)(iii) of the Act.

Finally, we applied the proposed 10 percent cap to the relative weights for those MS–DRGs for which the relative weight as calculated in Step 4 would otherwise have declined by more than 10 percent from the FY 2022 relative weight (Step 5). Specifically, for those MS–DRGs for which the relative weight as calculated in Step 4 declined by more than 10 percent from the FY 2022 relative weight, we set the proposed FY 2023 relative weight equal to 90 percent of the FY 2022 relative weight. The proposed relative weights for FY 2023 as set forth in Table 5 associated with this proposed rule and available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS* reflect the application of this proposed cap. We are also making available a supplemental file setting forth the relative weights as calculated with all cases (Step 1), excluding cases with a principal or secondary diagnosis of COVID–19 (Step 2), following application of the normalization factor and prior to the application of this proposed cap (Step 4), and with the application of this proposed cap (Step 5) along with the other supplemental files for this proposed rule, on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS.* The proposed 19 national average CCRs for FY 2023 are as follows:

BILLING CODE 4120–01–P

Group	CCR
Routine Days	0.421
Intensive Days	0.342
Drugs	0.187
Supplies & Equipment	0.307
Implantable Devices	0.286
Inhalation Therapy	0.15
Therapy Services	0.286
Anesthesia	0.076
Labor & Delivery	0.347
Operating Room	0.168
Cardiology	0.095
Cardiac Catheterization	0.104
Laboratory	0.108
Radiology	0.138
MRIs	0.072
CT Scans	0.035
Emergency Room	0.155
Blood and Blood Products	0.265
Other Services	0.362

Since FY 2009, the relative weights have been based on 100 percent cost weights based on our MS–DRG grouping system.

When we recalibrated the DRG weights for previous years, we set a threshold of 10 cases as the minimum number of cases required to compute a reasonable weight. We are proposing to use that same case threshold in recalibrating the proposed MS–DRG relative weights for FY 2023. Using data from the FY 2021 MedPAR file, there were 7 MS–DRGs that contain fewer than 10 cases. For FY 2023, because we do not have sufficient MedPAR data to set accurate and stable cost relative weights for these low-volume MS–DRGs, we are proposing to compute relative weights for the low-volume MS–DRGs by adjusting their final FY 2022 relative weights by the percentage change in the average weight of the cases in other MS–DRGs from FY 2022 to FY 2023. The crosswalk table is as follows.

Low-Volume MS-DRG	MS-DRG Title	Crosswalk to MS-DRG
789	Neonates, Died or Transferred to Another Acute Care Facility	Final FY 2022 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
790	Extreme Immaturity or Respiratory Distress Syndrome, Neonate	Final FY 2022 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
791	Prematurity with Major Problems	Final FY 2022 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
792	Prematurity without Major Problems	Final FY 2022 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
793	Full-Term Neonate with Major Problems	Final FY 2022 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
794	Neonate with Other Significant Problems	Final FY 2022 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
795	Normal Newborn	Final FY 2022 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)

BILLING CODE 4120–01–C

F. Add-On Payments for New Services and Technologies for FY 2023

1. Background

Sections 1886(d)(5)(K) and (L) of the Act establish a process of identifying and ensuring adequate payment for new medical services and technologies (sometimes collectively referred to in this section as ''new technologies'') under the IPPS. Section 1886(d)(5)(K)(vi) of the Act specifies that a medical service or technology will be considered new if it meets criteria established by the Secretary after notice and opportunity for public comment. Section 1886(d)(5)(K)(ii)(I) of the Act specifies that a new medical service or technology may be considered for new technology add-on payment if, based on the estimated costs incurred with respect to discharges involving such service or technology, the DRG prospective payment rate otherwise applicable to such discharges under this subsection is inadequate. The regulations at 42 CFR 412.87 implement these provisions and § 412.87(b) specifies three criteria for a new medical service or technology to receive the additional payment: (1) The medical service or technology must be new; (2) the medical service or technology must be costly such that the DRG rate otherwise applicable to discharges involving the medical service or technology is determined to be inadequate; and (3) the service or technology must demonstrate a substantial clinical improvement over existing services or technologies. In addition, certain transformative new devices and antimicrobial products may qualify under an alternative inpatient new technology add-on payment pathway, as set forth in the regulations at § 412.87(c) and (d). We note that section 1886(d)(5)(K)(i) of the Act requires that the Secretary establish a mechanism to recognize the costs of new medical services and technologies under the payment system established under that subsection, which establishes the system for paying for the operating costs of inpatient hospital services. The system of payment for capital costs is established under section 1886(g) of the Act. Therefore, as discussed in prior rulemaking (72 FR 47307 through 47308), we do not include capital costs in the add-on payments for a new medical service or technology or make new technology add-on payments under the IPPS for capital-related costs.

In this rule, we highlight some of the major statutory and regulatory provisions relevant to the new technology add-on payment criteria, as well as other information. For further discussion on the new technology add-on payment criteria, we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51572 through 51574), the FY 2020 IPPS/LTCH PPS final rule (84 FR 42288 through 42300), and the FY 2021 IPPS/LTCH PPS final rule (85 FR 58736 through 58742).

a. New Technology Add-On Payment Criteria

(1) Newness Criterion

Under the first criterion, as reflected in § 412.87(b)(2), a specific medical service or technology will no longer be considered ''new'' for purposes of new medical service or technology add-on payments after CMS has recalibrated the MS–DRGs, based on available data, to reflect the cost of the technology. We note that we do not consider a service or technology to be new if it is substantially similar to one or more existing technologies. That is, even if a medical product receives a new FDA approval or clearance, it may not necessarily be considered ''new'' for purposes of new technology add-on payments if it is ''substantially similar'' to another medical product that was approved or cleared by FDA and has been on the market for more than 2 to 3 years. In the FY 2010 IPPS/RY 2010 LTCH PPS final rule (74 FR 43813 through 43814), we established criteria for evaluating whether a new technology is substantially similar to an existing technology, specifically whether: (1) A product uses the same or a similar mechanism of action to achieve a therapeutic outcome; (2) a product is assigned to the same or a different MS–DRG; and (3) the new use of the technology involves the treatment of the same or similar type of disease and the same or similar patient population. If a technology meets all

three of these criteria, it would be considered substantially similar to an existing technology and would not be considered ''new'' for purposes of new technology add-on payments. For a detailed discussion of the criteria for substantial similarity, we refer readers to the FY 2006 IPPS final rule (70 FR 47351 through 47352) and the FY 2010 IPPS/LTCH PPS final rule (74 FR 43813 through 43814).

(2) Cost Criterion

Under the second criterion, § 412.87(b)(3) further provides that, to be eligible for the add-on payment for new medical services or technologies, the MS–DRG prospective payment rate otherwise applicable to discharges involving the new medical service or technology must be assessed for adequacy. Under the cost criterion, consistent with the formula specified in section 1886(d)(5)(K)(ii)(I) of the Act, to assess the adequacy of payment for a new technology paid under the applicable MS–DRG prospective payment rate, we evaluate whether the charges of the cases involving a new medical service or technology will exceed a threshold amount that is the lesser of 75 percent of the standardized amount (increased to reflect the difference between cost and charges) or 75 percent of one standard deviation beyond the geometric mean standardized charge for all cases in the MS–DRG to which the new medical service or technology is assigned (or the case-weighted average of all relevant MS–DRGs if the new medical service or technology occurs in many different MS–DRGs). The MS–DRG threshold amounts generally used in evaluating new technology add-on payment applications for FY 2023 are presented in a data file that is available, along with the other data files associated with the FY 2022 IPPS/LTCH PPS final rule and correction notice, on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index*.

We note that, under the policy finalized in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58603 through 58605), beginning with FY 2022, we use the proposed threshold values associated with the proposed rule for that fiscal year to evaluate the cost criterion for all applications for new technology add-on payments and previously approved technologies that may continue to receive new technology add-on payments, if those technologies would be assigned to a proposed new MS–DRG for that same fiscal year.

As finalized in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41275), beginning with FY 2020, we include the thresholds applicable to the next fiscal year (previously included in Table 10 of the annual IPPS/LTCH PPS proposed and final rules) in the data files associated with the prior fiscal year. Accordingly, the proposed thresholds for applications for new technology add-on payments for FY 2024 are presented in a data file that is available on the CMS website, along with the other data files associated with the FY 2023 proposed rule, by clicking on the FY 2023 IPPS proposed rule home page at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index*.

In the FY 2022 IPPS/LTCH PPS final rule, we finalized our proposal to use the FY 2019 MedPAR claims data where we ordinarily would have used the FY 2020 MedPAR claims data for purposes of FY 2022 ratesetting. Consistent with that final policy, we finalized our proposal to use the FY 2019 claims data to set the thresholds for applications for new technology add-on payments for FY 2023. We note that, for the reasons discussed in section I.F. of the preamble of this proposed rule, we are proposing to use the FY 2021 MedPAR claims data for FY 2023 ratesetting, with certain proposed modifications to our relative weight setting and outlier methodologies. Consistent with this proposal, for the FY 2024 proposed threshold values, we are proposing to use the FY 2021 claims data to set the proposed thresholds for applications for new technology add-on payments for FY 2024. In addition, as discussed in section III.E.1.c. of this proposed rule, we are proposing to use an averaging approach for calculating the FY 2023 relative weights, to account for the anticipated decline in COVID–19 hospitalizations of Medicare beneficiaries as compared to FY 2021. Specifically, we are proposing to average the relative weights as calculated with and without COVID–19 cases in the FY 2021 data to determine the MS–DRG relative weights for FY 2023. Certain steps of calculating the thresholds for applications for new technology add-on payments use the same charge data that is used to calculate the MS–DRG weights. As a result, different average charges per MS–DRG are calculated using the charge data for the relative weights as calculated with and without COVID–19 cases. Therefore, for purposes of calculating the FY 2024 thresholds, we are also proposing to average the data in the steps of the calculation that use charge data from the calculation of the MS–DRG weights. In addition, as discussed in section III.E.1.c. of this proposed rule, we are also considering, as an alternative to our proposal, calculating the FY 2023 MS–DRG relative weights without this proposed averaging approach to account for COVID–19 cases. In connection with this alternative approach, we are making available the threshold values as calculated without this averaged data on the ''FY 2023 Proposed Rule Homepage'' at *https://www.cms.gov/medicare/medicare-fee-for-service-payment/acuteinpatientpps,* as well as other supplemental files as discussed further in section I.O. of Appendix A of this proposed rule.

In the September 7, 2001, final rule that established the new technology add-on payment regulations (66 FR 46917), we discussed that applicants should submit a significant sample of data to demonstrate that the medical service or technology meets the high-cost threshold. Specifically, applicants should submit a sample of sufficient size to enable us to undertake an initial validation and analysis of the data. We also discussed in the September 7, 2001, final rule (66 FR 46917) the issue of whether the Health Insurance Portability and Accountability Act (HIPAA) Privacy Rule at 45 CFR parts 160 and 164 applies to claims information that providers submit with applications for new medical service or technology add-on payments. We refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51573) for further information on this issue.

(3) Substantial Clinical Improvement Criterion

Under the third criterion at § 412.87(b)(1), a medical service or technology must represent an advance that substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries. In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42288 through 42292), we prospectively codified in our regulations at § 412.87(b) the following aspects of how we evaluate substantial clinical improvement for purposes of new technology add-on payments under the IPPS:

- The totality of the circumstances is considered when making a determination that a new medical service or technology represents an advance that substantially improves, relative to services or technologies previously available, the diagnosis or treatment of Medicare beneficiaries.
- A determination that a new medical service or technology represents an advance that substantially improves,

relative to services or technologies previously available, the diagnosis or treatment of Medicare beneficiaries means—

++ The new medical service or technology offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments;

++ The new medical service or technology offers the ability to diagnose a medical condition in a patient population where that medical condition is currently undetectable, or offers the ability to diagnose a medical condition earlier in a patient population than allowed by currently available methods, and there must also be evidence that use of the new medical service or technology to make a diagnosis affects the management of the patient;

++ The use of the new medical service or technology significantly improves clinical outcomes relative to services or technologies previously available as demonstrated by one or more of the following: A reduction in at least one clinically significant adverse event, including a reduction in mortality or a clinically significant complication; a decreased rate of at least one subsequent diagnostic or therapeutic intervention; a decreased number of future hospitalizations or physician visits; a more rapid beneficial resolution of the disease process treatment including, but not limited to, a reduced length of stay or recovery time; an improvement in one or more activities of daily living; an improved quality of life; or, a demonstrated greater medication adherence or compliance; or

++ The totality of the circumstances otherwise demonstrates that the new medical service or technology substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries.

• Evidence from the following published or unpublished information sources from within the United States or elsewhere may be sufficient to establish that a new medical service or technology represents an advance that substantially improves, relative to services or technologies previously available, the diagnosis or treatment of Medicare beneficiaries: Clinical trials, peer reviewed journal articles; study results; meta-analyses; consensus statements; white papers; patient surveys; case studies; reports; systematic literature reviews; letters from major healthcare associations; editorials and letters to the editor; and public comments. Other appropriate information sources may be considered.

• The medical condition diagnosed or treated by the new medical service or technology may have a low prevalence among Medicare beneficiaries.

• The new medical service or technology may represent an advance that substantially improves, relative to services or technologies previously available, the diagnosis or treatment of a subpopulation of patients with the medical condition diagnosed or treated by the new medical service or technology.

We refer the reader to the FY 2020 IPPS/LTCH PPS final rule for additional discussion of the evaluation of substantial clinical improvement for purposes of new technology add-on payments under the IPPS.

We note, consistent with the discussion in the FY 2003 IPPS final rule (67 FR 50015), that although we do not question FDA's regulatory responsibility for decisions related to marketing authorization (for example, approval, clearance, etc.), we do not rely upon FDA criteria in our evaluation of substantial clinical improvement for purposes of determining what drugs, devices, or technologies qualify for new technology add-on payments under Medicare. This criterion does not depend on the standard of safety and effectiveness on which FDA relies but on a demonstration of substantial clinical improvement in the Medicare population.

b. Alternative Inpatient New Technology Add-on Payment Pathway

Beginning with applications for FY 2021 new technology add-on payments, under the regulations at § 412.87(c), a medical device that is part of FDA's Breakthrough Devices Program may qualify for the new technology add-on payment under an alternative pathway. Additionally, under the regulations at § 412.87(d) for certain antimicrobial products, beginning with FY 2021, a drug that is designated by FDA as a Qualified Infectious Disease Product (QIDP), and, beginning with FY 2022, a drug that is approved by FDA under the Limited Population Pathway for Antibacterial and Antifungal Drugs (LPAD), may also qualify for the new technology add-on payment under an alternative pathway. We refer the reader to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42292 through 42297) and the FY 2021 IPPS/LTCH PPS final rule (85 FR 58737 through 58739) for further discussion on this policy. We note that a technology is not required to have the specified FDA designation at the time the new technology add-on payment application is submitted. CMS reviews the application based on the information provided by the applicant only under the alternative pathway specified by the applicant at the time of application submission. However, to receive approval for the new technology add-on payment under that alternative pathway, the technology must have the applicable FDA designation and meet all other requirements in the regulations in § 412.87(c) and (d), as applicable.

(1) Alternative Pathway for Certain Transformative New Devices

For applications received for new technology add-on payments for FY 2021 and subsequent fiscal years, if a medical device is part of FDA's Breakthrough Devices Program and received FDA marketing authorization, it will be considered not substantially similar to an existing technology for purposes of the new technology add-on payment under the IPPS, and will not need to meet the requirement under § 412.87(b)(1) that it represent an advance that substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries. Under this alternative pathway, a medical device that has received FDA marketing authorization (that is, has been approved or cleared by, or had a De Novo classification request granted by, FDA) and that is part of FDA's Breakthrough Devices Program will need to meet the requirements of § 412.87(c). We note that in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58734 through 58736), we clarified our policy that a new medical device under this alternative pathway must receive marketing authorization for the indication covered by the Breakthrough Devices Program designation. We refer the reader to the FY 2021 IPPS/LTCH PPS final rule (85 FR 58734 through 58736) for further discussion regarding this clarification.

(2) Alternative Pathway for Certain Antimicrobial Products

For applications received for new technology add-on payments for certain antimicrobial products, beginning with FY 2021, if a technology is designated by FDA as a QIDP and received FDA marketing authorization, and, beginning with FY 2022, if a drug is approved under FDA's LPAD pathway and used for the indication approved under the LPAD pathway, it will be considered not substantially similar to an existing technology for purposes of new technology add-on payments and will not need to meet the requirement that it represent an advance that substantially improves, relative to technologies previously available, the diagnosis or

treatment of Medicare beneficiaries. Under this alternative pathway for QIDPs and LPADs, a medical product that has received FDA marketing authorization and is designated by FDA as a QIDP or approved under the LPAD pathway will need to meet the requirements of § 412.87(d).

We refer the reader to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42292 through 42297) and FY 2021 IPPS/LTCH PPS final rule (85 FR 58737 through 58739) for further discussion on this policy. We note, in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58737 through 58739), we clarified that a new medical product seeking approval for the new technology add-on payment under the alternative pathway for QIDPs must receive marketing authorization for the indication covered by the QIDP designation. We also finalized our policy to expand our alternative new technology add-on payment pathway for certain antimicrobial products to include products approved under the LPAD pathway and used for the indication approved under the LPAD pathway.

c. Additional Payment for New Medical Service or Technology

The new medical service or technology add-on payment policy under the IPPS provides additional payments for cases with relatively high costs involving eligible new medical services or technologies, while preserving some of the incentives inherent under an average-based prospective payment system. The payment mechanism is based on the cost to hospitals for the new medical service or technology. As noted previously, we do not include capital costs in the add-on payments for a new medical service or technology or make new technology add-on payments under the IPPS for capital-related costs (72 FR 47307 through 47308).

For discharges occurring before October 1, 2019, under § 412.88, if the costs of the discharge (determined by applying operating cost-to-charge ratios (CCRs) as described in § 412.84(h)) exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), CMS made an add-on payment equal to the lesser of: (1) 50 percent of the costs of the new medical service or technology; or (2) 50 percent of the amount by which the costs of the case exceed the standard DRG payment.

Beginning with discharges on or after October 1, 2019, for the reasons discussed in the FY 2020 IPPS/LTCH PPS final rule (84 FR 42297 through 42300), we finalized an increase in the new technology add-on payment percentage, as reflected at § 412.88(a)(2)(ii). Specifically, for a new technology other than a medical product designated by FDA as a QIDP, beginning with discharges on or after October 1, 2019, if the costs of a discharge involving a new technology (determined by applying CCRs as described in § 412.84(h)) exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare will make an add-on payment equal to the lesser of: (1) 65 percent of the costs of the new medical service or technology; or (2) 65 percent of the amount by which the costs of the case exceed the standard DRG payment. For a new technology that is a medical product designated by FDA as a QIDP, beginning with discharges on or after October 1, 2019, if the costs of a discharge involving a new technology (determined by applying CCRs as described in § 412.84(h)) exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare will make an add-on payment equal to the lesser of: (1) 75 percent of the costs of the new medical service or technology; or (2) 75 percent of the amount by which the costs of the case exceed the standard DRG payment. For a new technology that is a medical product approved under FDA's LPAD pathway, beginning with discharges on or after October 1, 2020, if the costs of a discharge involving a new technology (determined by applying CCRs as described in § 412.84(h)) exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare will make an add-on payment equal to the lesser of: (1) 75 percent of the costs of the new medical service or technology; or (2) 75 percent of the amount by which the costs of the case exceed the standard DRG payment. As set forth in § 412.88(b)(2), unless the discharge qualifies for an outlier payment, the additional Medicare payment will be limited to the full MS–DRG payment plus 65 percent (or 75 percent for certain antimicrobial products (QIDPs and LPADs)) of the estimated costs of the new technology or medical service. We refer the reader to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42297 through 42300) for further discussion on the increase in the new technology add-on payment beginning with discharges on or after October 1, 2019.

Section 503(d)(2) of Public Law 108–173 provides that there shall be no reduction or adjustment in aggregate payments under the IPPS due to add-on payments for new medical services and technologies. Therefore, in accordance with section 503(d)(2) of Public Law 108–173, add-on payments for new medical services or technologies for FY 2005 and subsequent years have not been subjected to budget neutrality.

d. Evaluation of Eligibility Criteria for New Medical Service or Technology Applications

In the FY 2009 IPPS final rule (73 FR 48561 through 48563), we modified our regulation at § 412.87 to codify our longstanding practice of how CMS evaluates the eligibility criteria for new medical service or technology add-on payment applications. That is, we first determine whether a medical service or technology meets the newness criterion, and only if so, do we then make a determination as to whether the technology meets the cost threshold and represents a substantial clinical improvement over existing medical services or technologies. We specified that all applicants for new technology add-on payments must have FDA approval or clearance by July 1 of the year prior to the beginning of the fiscal year for which the application is being considered. In the FY 2021 IPPS/LTCH PPS final rule, to more precisely describe the various types of FDA approvals, clearances and classifications that we consider under our new technology add-on payment policy, we finalized a technical clarification to the regulation to indicate that new technologies must receive FDA marketing authorization (such as pre-market approval (PMA); 510(k) clearance; the granting of a De Novo classification request, or approval of a New Drug Application (NDA)) by July 1 of the year prior to the beginning of the fiscal year for which the application is being considered. Consistent with our longstanding policy, we consider FDA marketing authorization as representing that a product has received FDA approval or clearance when considering eligibility for the new technology add-on payment under § 412.87(e)(2) (85 FR 58742).

Additionally, in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58739 through 58742), we finalized our proposal to provide conditional approval for new technology add-on payment for a technology for which an application is submitted under the alternative pathway for certain antimicrobial products at § 412.87(d) that does not receive FDA marketing authorization by the July 1 deadline specified in § 412.87(e)(2), provided that the technology otherwise meets the applicable add-on payment criteria. Under this policy, cases involving

eligible antimicrobial products would begin receiving the new technology add-on payment sooner, effective for discharges the quarter after the date of FDA marketing authorization provided that the technology receives FDA marketing authorization by July 1 of the particular fiscal year for which the applicant applied for new technology add-on payments.

e. New Technology Liaisons

Many stakeholders (including device/biologic/drug developers or manufacturers, industry consultants, others) engage CMS for coverage, coding, and payment questions or concerns. In order to streamline stakeholder engagement by centralizing the different innovation pathways within CMS including new technology add-on payments, CMS has established a team of new technology liaisons that can serve as an initial resource for stakeholders. This team is available to assist with all of the following:

- Help to point stakeholders to or provide information and resources where possible regarding process, requirements, and timelines.
- Coordinate and facilitate opportunities for stakeholders to engage with various CMS components.
- Serve as a primary point of contact for stakeholders and provide updates on developments where possible or appropriate.

We received many questions from stakeholders interested in pursuing new technology add-on payments who may not be entirely familiar with working with CMS. While we encourage stakeholders to first review our resources available at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/newtech,* we know that there may be additional questions about the application process. Stakeholders with further questions about Medicare's coverage, coding, and payment processes, and about how they can navigate these processes, whether for new technology add-on payments or otherwise, can contact the new technology liaison team at *Medicare Innovation@cms.hhs.gov.*

f. Application Information for New Medical Services or Technologies

Applicants for add-on payments for new medical services or technologies for FY 2024 must submit a formal request, including a full description of the clinical applications of the medical service or technology and the results of any clinical evaluations demonstrating that the new medical service or technology represents a substantial clinical improvement (unless the application is under one of the alternative pathways as previously described), along with a significant sample of data to demonstrate that the medical service or technology meets the high-cost threshold. CMS will review the application based on the information provided by the applicant under the pathway specified by the applicant at the time of application submission. Complete application information, along with final deadlines for submitting a full application, will be posted as it becomes available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/newtech.html.* To allow interested parties to identify the new medical services or technologies under review before the publication of the proposed rule for FY 2024, the CMS website also will post the tracking forms completed by each applicant. We note that the burden associated with this information collection requirement is the time and effort required to collect and submit the data in the formal request for add-on payments for new medical services and technologies to CMS. The aforementioned burden is subject to the Paper Reduction Act (PRA) and approved under OMB control number 0938–1347, and has an expiration date of 11/30/2023.

As discussed previously, in the FY 2020 IPPS/LTCH PPS final rule, we adopted an alternative inpatient new technology add-on payment pathway for certain transformative new devices and for Qualified Infectious Disease Products, as set forth in the regulations at § 412.87(c) and (d). The change in burden associated with these changes to the new technology add-on payment application process were discussed in a revision of the information collection requirement (ICR) request currently approved under OMB control number 0938–1347, with an expiration date of November 30, 2023. In accordance with the implementing regulations of the PRA, we detailed the revisions of the ICR and published the required 60-day notice on August 15, 2019 (84 FR 41723), and 30-day notice on December 17, 2019 (84 FR 68936), to solicit public comments.

2. Public Input Before Publication of a Notice of Proposed Rulemaking on Add-On Payments

Section 1886(d)(5)(K)(viii) of the Act, as amended by section 503(b)(2) of Public Law 108–173, provides for a mechanism for public input before publication of a notice of proposed rulemaking regarding whether a medical service or technology represents a substantial clinical improvement. The process for evaluating new medical service and technology applications requires the Secretary to do all of the following:

- Provide, before publication of a proposed rule, for public input regarding whether a new service or technology represents an advance in medical technology that substantially improves the diagnosis or treatment of Medicare beneficiaries.
- Make public and periodically update a list of the services and technologies for which applications for add-on payments are pending.
- Accept comments, recommendations, and data from the public regarding whether a service or technology represents a substantial clinical improvement.
- Provide, before publication of a proposed rule, for a meeting at which organizations representing hospitals, physicians, manufacturers, and any other interested party may present comments, recommendations, and data regarding whether a new medical service or technology represents a substantial clinical improvement to the clinical staff of CMS.

In order to provide an opportunity for public input regarding add-on payments for new medical services and technologies for FY 2023 prior to publication of the FY 2023 IPPS/LTCH PPS proposed rule, we published a notice in the **Federal Register** on September 24, 2021 (86 FR 53056), and held a virtual town hall meeting on December 14, 2021. In the announcement notice for the meeting, we stated that the opinions and presentations provided during the meeting would assist us in our evaluations of applications by allowing public discussion of the substantial clinical improvement criterion for the FY 2023 new medical service and technology add-on payment applications before the publication of the FY 2023 IPPS/LTCH IPPS proposed rule.

Approximately 378 individuals registered to attend the virtual town hall meeting. We posted the recordings of the virtual town hall on the CMS web page at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/newtech.*

We considered each applicant's presentation made at the town hall meeting, as well as written comments received by the December 27, 2021, deadline, in our evaluation of the new technology add-on payment applications for FY 2023 in the development of this FY 2023 IPPS/

LTCH PPS proposed rule. In response to the published notice and the December 14, 2021, New Technology Town Hall meeting, we received written comments regarding the applications for FY 2023 new technology add on payments. As explained earlier and in the **Federal Register** notice announcing the New Technology Town Hall meeting (86 FR 53056 through 53059), the purpose of the meeting was specifically to discuss the substantial clinical improvement criterion with regard to pending new technology add-on payment applications for FY 2023. Therefore, we are not summarizing those written comments in this proposed rule that are unrelated to the substantial clinical improvement criterion. In section II.F.6. of the preamble of this proposed rule, we are summarizing comments regarding individual applications, or, if applicable, indicating that there were no comments received in response to the New Technology Town Hall meeting notice or New Technology Town Hall meeting, at the end of each discussion of the individual applications.

3. ICD–10–PCS Section ''X'' Codes for Certain New Medical Services and Technologies

As discussed in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49434), the ICD–10–PCS includes a new section containing the new Section ''X'' codes, which began being used with discharges occurring on or after October 1, 2015. Decisions regarding changes to ICD–10–PCS Section ''X'' codes will be handled in the same manner as the decisions for all of the other ICD–10–PCS code changes. That is, proposals to create, delete, or revise Section ''X'' codes under the ICD–10–PCS structure will be referred to the ICD–10 Coordination and Maintenance Committee. In addition, several of the new medical services and technologies that have been, or may be, approved for new technology add-on payments may now, and in the future, be assigned a Section ''X'' code within the structure of the ICD–10–PCS. We posted ICD–10–PCS Guidelines on the CMS website at *https://www.cms.gov/medicare/icd-10/2021-icd-10-pcs,* including guidelines for ICD–10–PCS Section ''X'' codes. We encourage providers to view the material provided on ICD–10–PCS Section ''X'' codes.

As discussed in more detail in section II.F.8. of the preamble of this proposed rule, we are proposing to use NDCs instead of ICD–10–PCS Section ''X'' codes to identify cases involving the use of therapeutic agents approved for new technology add-on payments beginning with a transitional period in FY 2023. We refer the reader to section II.F.8. of the preamble of this proposed rule for a full discussion of this proposal.

4. New COVID–19 Treatments Add-On Payment (NCTAP)

In response to the COVID–19 public health emergency (PHE), we established the New COVID–19 Treatments Add-on Payment (NCTAP) under the IPPS for COVID–19 cases that meet certain criteria (85 FR 71157 through 71158). We believe that as drugs and biological products become available and are authorized for emergency use or approved by FDA for the treatment of COVID–19 in the inpatient setting, it is appropriate to increase the current IPPS payment amounts to mitigate any potential financial disincentives for hospitals to provide new COVID–19 treatments during the PHE. Therefore, effective for discharges occurring on or after November 2, 2020 and until the end of the PHE for COVID–19, we established the NCTAP to pay hospitals the lesser of (1) 65 percent of the operating outlier threshold for the claim or (2) 65 percent of the amount by which the costs of the case exceed the standard DRG payment, including the adjustment to the relative weight under section 3710 of the Coronavirus Aid, Relief, and Economic Security (CARES) Act, for certain cases that include the use of a drug or biological product currently authorized for emergency use or approved for treating COVID–19.

In the FY 2022 IPPS/LTCH PPS final rule, we finalized a change to our policy to extend NCTAP through the end of the FY in which the PHE ends for all eligible products in order to continue to mitigate potential financial disincentives for hospitals to provide these new treatments, and to minimize any potential payment disruption immediately following the end of the PHE. We also finalized that, for a drug or biological product eligible for NCTAP that is also approved for new technology add-on payments, we will reduce the NCTAP for an eligible case by the amount of any new technology add-on payments so that we do not create a financial disincentive between technologies eligible for both the new technology add-on payment and NCTAP compared to technologies eligible for NCTAP only (85 FR 45162).

Further information about NCTAP, including updates and a list of currently eligible drugs and biologicals, is available on the CMS website at *https://www.cms.gov/medicare/covid-19/new-covid-19-treatments-add-payment-nctap.*

5. Proposed FY 2023 Status of Technologies Receiving New Technology Add-On Payments for FY 2022

In this section of the proposed rule, we discuss the proposed FY 2023 status of 37 technologies approved for FY 2022 new technology add-on payments, including 2 technologies approved for 2 separate add-on payments for different indications (RECARBRIO™ and FETROJA®), as set forth in the tables that follow. In general, we extend new technology add-on payments for an additional year only if the 3-year anniversary date of the product's entry onto the U.S. market occurs in the latter half of the upcoming fiscal year. We note that, as discussed later in this section, we provided a 1-year extension of new technology add-on payments for FY 2022 for 13 technologies for which the new technology add-on payment would otherwise be discontinued beginning in FY 2022 using our authority under section 1886(d)(5)(I) of the Act.

Additionally, we note that we conditionally approved CONTEPO for FY 2022 new technology add-on payments under the alternative pathway for certain antimicrobial products (86 FR 45155), subject to the technology receiving FDA marketing authorization by July 1, 2022. As of the time of the development of this proposed rule, CONTEPO has not yet received FDA approval. If CONTEPO receives FDA marketing authorization before July 1, 2022, the new technology add-on payment for cases involving the use of this technology would be made effective for discharges beginning in the first quarter after FDA marketing authorization is granted. If FDA marketing authorization is received on or after July 1, 2022, no new technology add-on payments would be made for cases involving the use of CONTEPO for FY 2022. If CONTEPO receives FDA marketing authorization prior to July 1, 2022, we are proposing to continue making new technology add-on payments for CONTEPO for FY 2023. If CONTEPO does not receive FDA marketing authorization by July 1, 2022, then it would not be eligible for new technology add-on payments for FY 2022, and therefore would not be eligible for the continuation of new technology add-on payments for FY 2023. We further note that the applicant for CONTEPO did not submit an application for FY 2023 new technology add on payments and, therefore, the technology also would not be eligible for approval or conditional approval for

new technology add-on payments for FY 2023.

a. Proposed FY 2023 Status of Technologies Approved for FY 2022 New Technology Add-On Payments

As noted previously, we used our authority under section 1886(d)(5)(I) of the Act to allow a 1-year extension of new technology add-on payments for FY 2022 for 13 technologies for which the add-on payments would otherwise be discontinued beginning in FY 2022 because the technologies would no longer be considered ''new'' for FY 2022. In this section, we discuss the proposed FY 2023 status for the remaining 24 technologies approved for FY 2022 new technology add-on payments. Specifically, we present our proposals to continue the new technology add-on payment for FY 2023 for those technologies that were approved for the new technology add-on payment for FY 2022 and which would still be considered ''new'' for purposes of new technology add-on payments for FY 2023. We also present our proposals to discontinue new technology add-on payment for FY 2023 for those technologies that were approved for the new technology add-on payment for FY 2022 and which would no longer be considered ''new'' for purposes of new technology add-on payments for FY 2023.

Our policy is that a medical service or technology may continue to be considered ''new'' for purposes of new technology add-on payments within 2 or 3 years after the point at which data begin to become available reflecting the inpatient hospital code assigned to the new service or technology. Our practice has been to begin and end new technology add-on payments on the basis of a fiscal year, and we have generally followed a guideline that uses a 6-month window before and after the start of the fiscal year to determine whether to extend the new technology add-on payment for an additional fiscal year. In general, we extend new technology add-on payments for an additional year only if the 3-year anniversary date of the product's entry onto the U.S. market occurs in the latter half of the fiscal year (70 FR 47362).

The following table lists the technologies for which we are proposing to discontinue making new technology add-on payments for FY 2023 because they are no longer ''new'' for purposes of new technology add-on payments. This table also presents the newness start date, new technology add-on payment start date, the 3-year anniversary date of the product's entry onto the U.S. market, relevant final rule citations from prior fiscal years, and coding assignments for each technology. We refer readers to the cited final rules in the following table for a complete discussion of the new technology add-on payment application, coding and payment amount for these technologies, including the applicable indications and discussion of the newness start date.

We are inviting public comments on our proposals to discontinue new technology add-on payments for FY 2023 for the technologies listed in the Table BBBB–A1.

BILLING CODE 4120–01–P

BILLING CODE 4120–01–C

Table II.F.–02 lists the technologies for which we are proposing to continue making new technology add-on payments for FY 2023 because they are still considered ''new'' for purposes of new technology add-on payments. This table also presents the newness start date, new technology add-on payment start date, 3-year anniversary date of the product's entry onto the U.S. market, relevant final rule citations from prior

TABLE II.F.-01: PROPOSED DISCONTINUATION OF TECHNOLOGIES APPROVED FOR FY 2022 NEW TECHNOLOGY ADD-ON PAYMENTS NO LONGER CONSIDERED NEW FOR FY 2023 BECAUSE 3-YEAR ANNIVERSARY DATE WILL OCCUR PRIOR TO APRIL 1, 2023

fiscal years, proposed maximum add-on payment amount, and coding assignments for each technology. We refer readers to the cited final rules in the following table for a complete discussion of the new technology add-on payment application, coding and payment amount for these technologies, including the applicable indications and discussion of the newness start date.

We note, as discussed in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45104 through 45107), on May 1, 2020, VEKLURY® (remdesivir) received an Emergency Use Authorization (EUA) from FDA for the treatment of suspected or laboratory confirmed COVID–19 in adults and children hospitalized with severe disease. The applicant asserted that between July 1, 2020 and September 30, 2020, it entered into an agreement with the U.S. Government to allocate and distribute commercially-available VEKLURY® across the country. The applicant stated that under this agreement, the first sale of VEKLURY® was completed on July 10, 2020. The applicant stated that they transitioned to a more traditional, unallocated model of distribution as of October 1, 2020. In the FY 2022 IPPS/LTCH PPS final rule (86 FR 45107), we determined that VEKLURY® meets the newness criterion with an indication for use in adults and pediatric patients (12 years of age and older and weighing at least 40 kg) for the treatment of COVID–19 requiring hospitalization. We stated that consistent with our longstanding policy, we considered the newness period for VEKLURY® to begin on October 22, 2020, when the NDA for VEKLURY® was approved by FDA for adults and pediatric patients (12 years of age and older and weighing at least 40 kg) for the treatment of COVID–19 requiring hospitalization. We also discussed comments solicited regarding the newness period for products available through an EUA for COVID–19 in section II.F.7. of the FY 2022 IPPS/LTCH PPS final rule (86 FR 45159 through 45160), including comments we received regarding the potential variability in cost estimates for technologies available under an EUA due to government price subsidies or variable treatment practices in the context of the global pandemic and comments suggesting that CMS monitor pricing changes for products available under an EUA once a product receives full marketing authorization, instead of basing the newness period on data that may have become available under an EUA, and indicated that we would consider these comments for future rulemaking.

After further review of the information provided by the applicant, we believe that additional information related to VEKLURY®'s commercial availability is relevant to assessing the start of the newness period for VEKLURY®. The applicant stated that once VEKLURY® was issued an EUA, from May through June 2020, the entire existing supply of VEKLURY® was donated worldwide and distributed to hospitals free of charge.[26] The applicant further stated that the commercial list price of the technology was announced when it entered into the agreement with the U.S. Government previously described, in anticipation of the post-donation phase. Under this agreement, the U.S. Government allocated VEKLURY® to each hospital, and the hospitals would then choose to purchase quantities of VEKLURY® directly from the applicant's subsidiary who was the sole distributor.[27] [28]

We continue to believe this issue is complex, particularly as it relates to VEKLURY® as a technology that has been available under both an EUA and an NDA. As discussed in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45159 through 45160), while an EUA is not marketing authorization within the meaning of § 412.87(e)(2) for purposes of eligibility for new technology add-on payments, data reflecting the costs of products that have received an EUA could become available as soon as the date of the EUA issuance and prior to receiving FDA approval or clearance. In the case of VEKLURY®, we believe that there may be unique considerations in determining the start of the newness period in light of the donation period, during which the technology was distributed at no cost. Accordingly, while we continue to believe that data reflecting the costs of a product that has received an EUA could become available as soon as the date of EUA issuance for that product, we believe that with respect to VEKLURY®, such data may not have become available until after the end of the donation period, when the technology became commercially available, on July 1, 2020. For these reasons, after further consideration, we believe the newness period for VEKLURY® may more appropriately begin on July 1, 2020, the date on which the technology became available for sale under the allocation agreement. We note that VEKLURY® would still be considered new for FY 2023 regardless of whether the newness period began on May 1 (the date of the EUA), July 1 (the date the donation phase ended), October 22 (the date of the NDA), or some other date in between, as in all cases the three-year anniversary date would occur after April 1, 2023, and therefore the product would remain eligible for FY 2023 new technology add-on payments.

Therefore, as reflected in the table that follows, we are proposing to continue new technology add-on payments for VEKLURY® for FY 2023. We invite public comments on this proposal, including the newness start date for VEKLURY®. As discussed, while we continue to believe that data reflecting the costs of a product that has received an EUA could become available as soon as the date of EUA issuance for that product, we also recognize that there may be unique considerations in determining the start of the newness period for a product available under an EUA. We are continuing to consider the comments as discussed in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45159) regarding the newness period for products available through an EUA for COVID–19, and we welcome additional comments in this proposed rule.

We further note that we are proposing to continue new technology add-on payments for Caption Guidance for FY 2023, a technology sold on a subscription basis. We continue to welcome comments from the public as to the appropriate method to determine a cost per case for technologies sold on a subscription basis, including comments on whether the cost per case should be estimated based on subscriber hospital data as described previously, and if so, whether the cost analysis should be updated based on the most recent subscriber data for each year for which the technology may be eligible for the new technology add-on payment.

We are inviting public comments on our proposals to continue new technology add-on payments for FY 2023 for the technologies listed in the following table.

*See discussion above, regarding our proposal that the newness period for VEKLURY® should begin on July 1, 2020, when the technology became commercially available.

BILLING CODE 4120–01–C

b. Status of Technologies Provided a One-Year Extension of New Technology Add-On Payments in FY 2022

As stated in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44789), our goal is always to use the best available data overall for ratesetting. The best available MedPAR data would typically be the most recent MedPAR file that contains claims from discharges for the fiscal year that is 2 years prior to the fiscal year that is the subject of the rulemaking.

In the FY 2022 IPPS/LTCH PPS final rule, for the reasons discussed, we finalized that we would use FY 2019 MedPAR data instead of FY 2020 MedPAR data to develop the FY 2022 MS–DRG relative weights (86 FR 44789 through 44793). Because we finalized that we would use FY 2019 MedPAR data instead of FY 2020 MedPAR data for the development of the FY 2022 MS–DRG relative weights, we stated that the costs for a new technology for which the 3-year anniversary date of the product's entry onto the U.S. market occurs prior to the latter half of FY 2022 may not be fully reflected in the MedPAR data used to recalibrate the MS–DRG relative weights for FY 2022. Therefore, in light of this final policy, we finalized our proposal to use our authority under section 1886(d)(5)(I) of the Act to allow for a 1-year extension of new technology add-on payments for FY 2022 for 13 technologies (see table below) for which the new technology add-on payment would have otherwise been discontinued beginning with FY 2022. We refer the reader to the FY 2022 IPPS/LTCH PPS final rule (86 FR 44975 through 44979) for a complete discussion regarding this 1-year extension for FY 2022.

For FY 2023 ratesetting, as we discuss in section I.F. of this proposed rule, we believe the best available data would be the FY 2021 MedPAR file. As discussed in section I.F. of this proposed rule, for FY 2023, we are proposing to use the FY 2021 MedPAR (the best available data at the time of this proposed rule) for FY 2023 ratesetting, including for purposes of developing the FY 2023 relative weights. We refer the reader to section I.F. of this proposed rule for a complete discussion regarding our proposal to use the FY 2021 MedPAR for the FY 2023 ratesetting and recalibration of the FY 2023 MS–DRG relative weights.

As noted previously, our policy is that a medical service or technology may continue to be considered ''new'' for purposes of new technology add-on payments within 2 or 3 years after the point at which data begin to become available reflecting the inpatient hospital code assigned to the new service or technology. For FY 2023, because we are proposing to use FY 2021 MedPAR data to recalibrate the FY 2023 MS–DRG relative weights, we believe the costs of the 13 technologies in the following table, for which the 3-year anniversary date of the product's entry onto the U.S. market occurs prior to FY 2023 (and therefore are no longer ''new''), may now be fully reflected in the MedPAR data used to recalibrate the MS–DRG relative weights for FY 2023. As a result, we are proposing to discontinue new technology add on payments for these 13 technologies in FY 2023.

We are inviting public comments on our proposals to discontinue new technology add-on payments for FY 2023 for these 13 technologies listed in Table BBBB–A3.

BILLING CODE 4120–01–C

6. FY 2023 Applications for New Technology Add-On Payments (Traditional Pathway)

We received 18 applications for new technology add-on payments for FY 2023 under the traditional new technology add-on payment pathway. In accordance with the regulations under § 412.87(e), applicants for new technology add-on payments must have received FDA approval or clearance by July 1 of the year prior to the beginning of the fiscal year for which the application is being considered. Five applicants withdrew their applications prior to the issuance of this proposed rule. We are addressing the remaining 13 applications.

a. CARVYKTI™ (ciltacabtagene autoleucel)

Janssen Biotech, Inc., submitted an application for new technology add-on payments for CARVYKTI™ (ciltacabtagene autoleucel) for FY 2023. CARVYKTI™ is an autologous chimeric-antigen receptor (CAR) T-cell therapy directed against B cell maturation antigen (BCMA) for the treatment of patients with multiple myeloma. We note that Janssen Biotech, Inc. previously submitted an application for new technology add-on payments for CARVYKTI™ for FY 2022 under the name ciltacabtagene autoleucel, as summarized in the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25233 through 25239), but withdrew that application prior to the issuance of the FY 2022 IPPS/LTCH PPS final rule (86 FR 44979).

The applicant stated that ciltacabtagene autoleucel refers to both JNJ–4528, an investigational BCMA-directed CAR T-cell therapy for previously treated patients with multiple myeloma, and LCAR–B38M, the investigational product (ciltacabtagene autoleucel) being studied in China. Both JNJ–4528 and LCAR–B38M are representative of the same CAR T-cell therapy, ciltacabtagene autoleucel.

Multiple myeloma is an incurable blood cancer that affects a type of white blood cell called plasma cells.[29] Plasma cells, found in bone marrow, make the antibodies that help the body attack and kill various pathogens. According to the applicant, when damaged, malignant plasma cells rapidly spread and replace the normal cells in the bone marrow.[30] The applicant asserted the median age of onset is 69 years old and only 3% of patients are less than 45 at the age of diagnosis; it was estimated that in 2021 nearly 35,000 people would be diagnosed and more than 12,000 will die from multiple myeloma in the US.[31] According to the applicant, multiple myeloma is associated with substantial morbidity and mortality [32] and median 5 year survival is 56%.[33]

According to the applicant, introduction of new treatment options in the last 2 decades has extended the median survival of multiple myeloma patients. The applicant asserted that the introduction of proteasome inhibitors (PI) (for example, bortezomib, carfilzomib, and ixazomib), histone deacetylase inhibitors (for example, panobinostat, vorinostat), immunomodulatory agents (IMiD) (for example, thalidomide, lenalidomide, and pomalidomide), monoclonal antibodies (daratumumab and elotuzumab), and stem cell transplantation, have allowed numerous therapeutic options for patients with multiple myeloma (Rajkumar 2020). According to the applicant, the National Comprehensive Cancer Network (NCCN) recommended treatment regimen for first-line therapy of multiple myeloma is bortezomib (a PI), lenalidomide (an IMiD) and dexamethasone.[34] According to the applicant, the strategy of triplet therapies for patients with newly diagnosed multiple myeloma, followed by high-dose chemotherapy and autologous stem-cell transplantation for eligible patients, and subsequently consolidation and maintenance therapy, is the current treatment roadmap for patients.[35] However, despite these treatments, according to the applicant, most patients will relapse after first-line treatment and require further treatment [36] with only 50% survival of relapsed patients after 5 years.[37] [38] The applicant stated that as multiple myeloma progresses, each subsequent line of treatment is associated with shorter progression free survival (PFS) and decreased rate, depth, and durability of response and worsening of quality of life.[39] In addition, cumulative and long-term toxicities are often associated with long-term therapy (Ludwig, 2018). Thus, according to the applicant, there remains an ongoing need for additional therapeutic approaches when the disease is resistant to available therapy.

The applicant asserted that relapsed and refractory (r/r) multiple myeloma (RRMM) constitutes a specific unmet medical need. According to the applicant, patients with r/r disease are defined as those who, having achieved a minor response or better, relapse and then progress while on therapy, or experience progression within 60 days of their last therapy.[40] [41] The applicant stated the introduction of a new class of agents, CD38-targeting monoclonal antibodies (CD38 MoAbs), daratumumab and isatuximab, have improved options in r/r patients.[42] The applicant asserted that given these advances, guideline recommendations following first-line therapy are varied, with treatment options including combinations of novel agents with existing standard of care regimens, and include triplet and quadruplet regimens, creating a complex treatment landscape.[43] According to the applicant, while triplet regimens should be used as the standard therapy for patients with

multiple myeloma, elderly or frail patients may be treated with double regimens.[44] The applicant further states that for patients with RRMM who have received at least three prior lines of therapy, including a PI, an IMiD and an anti-CD38, there does not exist a standard or consensus for treatment at this time, and often, supportive care/palliative care is the only option.[45]

According to the applicant, multiple myeloma remains incurable and most patients eventually relapse, even with the advent of new treatments.[46] The applicant further stated that novel, innovative therapies are needed to improve long-term survival and outcomes. The applicant asserted that CAR T-cell-based therapies offer potential advantages over current therapeutic strategies. According to the applicant, while other therapies require long-term repetitive administration generally until progression of disease, CAR T-cell therapy is a single infusion treatment due to live T-cell expansion in the patient and long-term disease response. The applicant asserted that CARVYKTI™ is an autologous CAR T-cell therapy directed against B cell maturation antigen (BCMA) for the treatment of patients with multiple myeloma. The applicant stated that BCMA, a protein that is highly expressed on myeloma cells [47] and is a member of the tumor necrosis factor (TNF) receptor family, plays a central role in regulating B-cell maturation and differentiation into plasma cells.[48] [49] The applicant stated BCMA is selectively expressed on a subset of B cells (plasma cell neoplasms including myeloma cells) and is more stably expressed specifically on the B cell lineage, compared with key plasma cell marker CD138, which is also expressed on normal fibroblasts and epithelial cells.[50] [51] [52] According to the applicant, these expression characteristics make BCMA an ideal therapeutic target for the treatment of multiple myeloma.[53] [54] CARVYKTI™, according to the applicant, is a unique, structurally differentiated BCMA-targeting chimeric antigen receptor with two distinct BCMA-binding domains that can identify and eliminate myeloma cells.

The applicant asserted that CAR T-cell technology is a form of immunotherapy and is a ''living drug'' that utilizes specially altered T cells, part of the immune system, to fight cancer. According to the applicant, a sample of the patient's T cells are collected from the blood, then modified in a laboratory setting to express a CAR.[55] The applicant stated chimeric antigen receptors are specifically designed receptor proteins that are made up of three distinct features: (1) A target recognition domain (typically derived from a single domain of an antibody) that sits on the cell's exterior; (2) a co-stimulatory domain on the cell's interior that boosts activation, enhances survival and expansion of the modified cells; and (3) an interior stimulatory domain that supports activation and target killing.[56] According to the applicant, the binding domain expressed on the surface of T cells gives them the new ability to target a specific protein. The applicant stated, when the target is recognized, the intracellular portions of the receptor send signals within the T cells to destroy the target cells. The applicant asserted these engineered CAR T-cells are reinfused back into the same patient, which enables these specialized T cells to latch onto the target antigen and abolish the tumor cells.

According to the applicant, CARVYKTI™ is a CAR T-cell immunotherapy designed to recognize myeloma cells and target their destruction. According to the applicant, CARVYKTI™'s CAR T-cell technology consists of harvesting the patient's own T cells, programming them to express a chimeric antigen receptor that identifies BCMA, a protein highly expressed on the surface of malignant multiple myeloma B-lineage cells, and reinfusing these modified cells back into the patient where they bind to and eliminate myeloma tumor cells. The applicant asserted that, unlike the chimeric antigen receptor design of currently approved CAR T-cell immunotherapies, which are composed of a single-domain antibody (sdAbs), CARVYKTI™ is composed of two antibody binding domains that allow for high recognition of human BCMA (CD269) and elimination of BCMA expressing myeloma cells. According to the applicant, the two distinct BCMA-binding domains confer avidity and distinguish CARVYKTI™ from other BCMA-targeting products. The applicant stated the BCMA binding domains are linked to the receptor's interior costimulatory (4–1BB) and signaling (CD3ζ) domains through a transmembrane linker (CD8a). The applicant asserted these intracellular domains are critical components for T cell growth and anti-tumor activity [57] in the body once CAR T-cells are bound to a BCMA target on multiple myeloma cells.

With respect to the newness criterion, according to the applicant, CARVYKTI™ was granted Breakthrough Therapy designation in December 2019 for the treatment of adult patients with relapsed or refractory multiple myeloma, who previously received a proteasome inhibitor, an immunomodulatory agent, and an anti-CD38 antibody. Per the applicant, FDA approved the Biologics License Application (BLA) for CARVYKTI™ on February 28, 2022 for the treatment of adult patients with relapsed or refractory multiple myeloma after four or more prior lines of therapy, including a proteasome inhibitor, an immunomodulatory agent, and an anti-CD38 monoclonal antibody. The applicant stated that procedures involving the administration of CARVYKTI™ can be uniquely identified using the following ICD–10–PCS procedure codes: XW033A7 (Introduction of ciltacabtagene autoleucel into peripheral vein, percutaneous approach, new technology group 7) and XW043A7 (Introduction of ciltacabtagene autoleucel into central vein, percutaneous approach, new technology group 7). The applicant also noted that they will submit a request for a Healthcare Common Procedure Coding

System (HCPCS) code specific to the administration of CARVYKTI™ once the product is eligible for such a code.

As previously stated, if a technology meets all three of the substantial similarity criteria as previously described, it would be considered substantially similar to an existing technology and therefore would not be considered ''new'' for purposes of new technology add-on payments.

With respect to whether a product uses the same or a similar mechanism of action when compared to an existing technology to achieve a therapeutic outcome, the applicant asserted that CARVYKTI™ has a unique mechanism of action because it has two distinct binding domains that confer avidity to the BCMA antigen, a 4–1BB costimulatory domain and a CD3z signaling domain, whereas other CAR T-cell products have only one target binding domain. The applicant asserted that ABECMA® also targets BCMA, but does so by binding to a single BCMA domain. In addition to detail provided in the applicant's FY 2022 application (as discussed in 86 FR 25235 through 25236), the applicant asserted that CARVYKTI™ differs significantly from ABECMA® and other BCMA-targeting agents, including Blenrep, because it targets BCMA with two distinct binding domains. According to the applicant, the distinct BCMA-binding moieties confer avidity and distinguish CARVYKTI™ from other BCMA CAR T-cell constructs providing a novel mechanism of action.[58] The applicant added, the 4–1BB and CD3z domains on the CAR optimize T cell activation and proliferation.[59] According to the applicant, non-clinical pharmacology and toxicology have been used to characterize the biological activity and mechanism of action of CARVYKTI™ and confirm the on-target specificity to BCMA through (1) in vitro binding characterization; (2) in vitro co-culture assays to assess CAR T-cell cytotoxicity and cytokine release; (3) in vivo efficacy studies in mice with human CAR T-cells; and (4) an in vivo safety study. According to the applicant, because CARVYKTI™ has a novel mechanism of action with two distinct BCMA-binding domains that confer binding avidity and unprecedented clinical activity compared with other novel anti-myeloma treatments in comparable study populations, it is unlike any existing technology utilized to treat relapsed/refractory multiple myeloma.

With regard to whether a product is assigned to the same DRG when compared to an existing technology, the applicant asserted that because CMS has suggested that all inpatient hospitalizations involving a CAR T-cell treatment will be assigned to DRG 018 (Chimeric Antigen Receptor (CAR) T-Cell and Other Immunotherapies), CARVYKTI™ is expected to be assigned to the same DRG as other multiple myeloma cases treated with a CAR T-cell therapy. We note that the DRG assignment was finalized to Pre-MDC MS–DRG 018, effective October 1, 2022 and is reflected in the V39.1 ICD–10 MS–DRG Grouper effective April 1, 2022 (86 FR 58021).[60]

With regard to whether the new use of the technology involves the treatment of the same or similar type of disease and the same or similar patient population when compared to an existing technology, the applicant asserted in its application that CARVYKTI™ is indicated for a broader population than other available therapies, specifically multiple myeloma patients having received three prior therapies. The applicant asserted in its application that Blenrep and ABECMA® are indicated only for those with at least 4 prior therapies whereas CARVYKTI™ had a proposed indication for the treatment of patients with 3 or more prior therapies. According to the applicant, CARVYKTI™ could potentially be used in a broader multiple myeloma population, that includes patients after 3 prior therapies as opposed to 4 for Blenrep and ABECMA®.

According to the applicant, FDA is currently reviewing the registrational trial CARTITUDE 1. The applicant stated that in this trial, 17% (a total of 17 patients) of patients had only three prior lines of therapy; results were presented at the American Society of Hematology (ASH) 2021 meeting on fourth line patients. The applicant stated that among those with three prior lines of therapy, the response rate was 100%, the median duration of response (DoR) was 21.8 months, minimal residual disease (MRD) negativity was found in 80%, the 18-month progression free survival (PFS) was 75.6%, and the 18-month overall survival (OS) was 88.2 months. According to the applicant, because the sample size was small (17), median endpoints may not be as rigorous as in the larger population.

According to the applicant, the distinction between three and four previous lines of therapy is important. The applicant asserted with each subsequent therapy patients generally become frailer and their prognosis worsens. The applicant stated that studies comparing fourth line to fifth line are not as common as trials studying earlier lines, but in a real-world study by Yong et al. the percent of myeloma patients who were able to move from third line therapy to fourth line was 15% of all diagnosed myeloma patients, and only 1% of patients moved to a fifth line.[61] The applicant added that in the same study of those patients in first line therapy, approximately 90% of patients were able to discontinue treatment due to remission and/or planned end of treatment while only 13% of those in fifth line ended treatment due to stable disease/remission.

The applicant asserted that for these reasons, CARVYKTI™ does not meet the third criterion and is therefore a new technology with regards to the population having been studied and being targeted for use.

In summary, the applicant asserted that CARVYKTI™ meets the newness criterion because it is not substantially similar to other available therapies due to its unique mechanism of action, with two distinct binding domains that confer avidity to the BCMA antigen, and because it treats a different patient population, RRMM patients who received three prior therapies. As we stated in the FY 2022 proposed rule (86 FR 25236), we note that CARVYKTI™ may have a similar mechanism of action to that of ABECMA®. We note ABECMA® received approval for new technology add-on payments for FY 2022 for the treatment of adult patients with RRMM after four or more prior lines of therapy, including an immunomodulatory agent, a proteasome inhibitor, and an anti-CD38 monoclonal antibody (86 FR 45028 through 45035). Although the number of BCMA binding domains of CARVYKTI™ and ABECMA® differ, it appears that the mechanism of action for both therapies is the binding to BCMA by a CAR

[58] Xu J, Chen LJ, Yang SS, Sun Y, Wu W, Liu YF, Xu J, Zhuang Y, Zhang W, Weng XQ, Wu J, Wang Y, Wang J, Yan H, Xu WB, Jiang H, Du J, Ding XY, Li B, Li JM, Fu WJ, Zhu J, Zhu L, Chen Z, Fan XF, Hou J, Li JY, Mi JQ, Chen SJ. Exploratory trial of a biepitopic CAR T-targeting B cell maturation antigen in relapsed/refractory multiple myeloma. Proc Natl Acad Sci U S A. 2019 May 7;116(19):9543–9551.

[59] Weinkove R, George P, Dasyam N, McLellan AD. Selecting costimulatory domains for chimeric antigen receptors: functional and clinical considerations. Clin Transl Immunology. 2019 May 11;8(5):e1049.

[60] CMS Manual System, Pub 100–04 Medicare Claims Processing, Transmittal 11255. February 4, 2022; *https://www.cms.gov/files/document/r11255cp.pdf*.

[61] Yong et al. 2016. Multiple Myeloma: Patient outcomes in real-world practice. *British Journal of Haematology,* 175; 252–264. doi: 10.1111/bjh.14213.

construct, which results in T-cell activation and killing of malignant myeloma cells. We note that the applicant asserted that CARVYKTI™'s mechanism of action is unique due to its dual binding domain which affects the therapy's clinical activity, as compared to existing technologies with a single binding domain. However, we are unclear how the additional BCMA binding domain represents a change in the mechanism of action of this therapy, or if it may instead relate to an assessment of whether the technology meets the substantial clinical improvement criterion. Because of the potential similarity with the BCMA antigen and other actions, we believe that the mechanism of action for CARVYKTI™ may be the same or similar to that of ABECMA®.

We note that the applicant stated that CARVYKTI™ may serve a new patient population if approved as a fourth line treatment, as existing treatments are approved for fifth line treatment. However, we note that CARVYKTI™'s recent approval states that it is indicated for fifth line treatment and we therefore question whether CARVYKTI™ treats a new patient population.[62]

Accordingly, as it appears that CARVYKTI™ and ABECMA® are purposed to achieve the same therapeutic outcome using the same or similar mechanism of action, are assigned to the same MS–DRG, and treat the same or similar patient population and disease, we believe that these technologies may be substantially similar to each other. We note that if this technology is substantially similar to ABECMA®, we believe the newness period for this technology would begin on March 26, 2021, the date ABECMA® received FDA approval. We are interested in information on how these two technologies may differ from each other with respect to the substantial similarity criteria and newness criterion. We are inviting public comment on whether CARVYKTI™ meets the newness criterion, including whether CARVYKTI™ is substantially similar to ABECMA® for purposes of new technology add-on payments.

With regard to the cost criterion, the applicant searched the FY 2019 MedPAR final rule to identify potential cases representing patients who may be eligible for treatment using CARVYKTI™. In its analysis, the applicant identified a primary cohort to assess whether this therapy met the cost criterion. The following ICD–10–CM diagnosis codes were used to identify claims involving multiple myeloma procedures.

ICD-10-CM	DESCRIPTION
C90.00	Multiple myeloma not having achieved remission
C90.01	Multiple myeloma in remission
C90.02	Multiple myeloma in relapse

The applicant stated that it identified two cohorts for the cost analysis: Cohort A limited the analysis to MS–DRG 016 (Autologous Bone Marrow Transplant W CC/MCC or T-Cell Immunotherapy) because patients receiving autologous bone marrow transplant (BMT) are generally patients with relapsed or refractory multiple myeloma and are most similar to patients who would be eligible to receive CAR T-cell therapy; Cohort B limited the analysis to MS–DRG 018 (CAR T-Cell and Other Immunotherapies). The applicant stated that the claim search resulted in 1,215 claims in Cohort A and 268 claims in Cohort B using the FY 2019 MedPAR. The applicant stated that it used the New Technology Threshold for FY 2023 from the FY 2022 IPPS/LTCH PPS final rule for MS–DRG 018. The applicant stated that it removed all charges in the drug cost center for the prior technology because, according to the applicant, it is not possible to differentiate between different drugs on inpatient claims. Per the applicant, this is likely an overestimate of the charges that would be replaced by the use of CARVYKTI™. The applicant added that it then standardized the charges using the FY 2022 IPPS/LTCH PPS final rule impact file. Next, the applicant applied a 4-year inflation factor of 1.281834 or 28.1834%, based on the inflation factor used in the FY 2022 IPPS/LTCH PPS final rule to update the outlier threshold) (86 FR 45542). To calculate the charges for the new technology for both cohorts, the applicant stated that it first used the inverse of a simulated alternative cost-to-charge ratio (CCR) specifically for CAR T-cell therapies and second used the national average drug CCR. The applicant stated that a simulated alternative CCR was used to account for CAR T-cell therapies' higher costs compared to other drugs and the potential for hospitals' charging practices to differ for these drugs. To determine this alternative CCR for CAR T-cell therapies, the applicant referred to the FY 2021 IPPS final rule After Outliers Removed (AOR)/Before Outliers Removed (BOR) file and calculated an alternative markup percentage by dividing the AOR drug charges within MS–DRG 018 by the number of cases to determine a per case drug charge. The applicant then divided the drug charges per case by $373,000, the acquisition cost of YESCARTA® and KYMRIAH®, the CAR T-cell products used in those claims, to arrive at a CCR of 0.295. The applicant stated that it used the national average drug CCR of 0.187 from the FY 2022 IPPS/LTCH PPS final rule (86 FR 44966). For Cohort A, with the CAR T-cell CCR, the applicant calculated a final inflated average case-weighted standardized charge per case of $1,695,406, which it stated exceeded the average case-weighted threshold amount of $1,256,379. For Cohort A, with the national average drug CCR, the applicant stated that it calculated a final inflated average case-weighted standardized charge per case of $2,595,169, which it stated exceeded the average case-weighted threshold amount of $1,256,379. For Cohort B, with the CAR T-cell CCR, the applicant stated that it calculated a final inflated average case-weighted standardized charge per case of $1,713,723, which it stated exceeded the average case-weighted threshold amount of $1,256,379. The applicant stated that if CARVYKTI™ meets the cost criterion using the more conservative alternate CAR T-cell CCR to inflate the cost of the treatment to charges, then it will also meet the cost criterion using the national average drug CCR to inflate the cost to charges. The applicant stated that because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount, CARVYKTI™ meets the cost criterion.

In regard to the cost criterion, we question whether the ICD–10 codes used to identify potential cases are appropriately representative of those who would receive CARVYKTI™.

[62] *https://www.fda.gov/media/156572/download.*

Specifically, we are uncertain if the applicant's identification of cases using the previously specified ICD–10 codes differentiated between those treated with one, two, three, and four prior lines of therapy. We are also seeking clarification on whether these cases are appropriately representative of the technology. We note that while the applicant provided a cost analysis for Cohort A, with a simulated alternative CCR specifically for CAR T-cell therapies, the applicant did not provide the cost analyses for Cohort B or Cohort A with the national average drug CCR. We request these cost analyses as we are unable to evaluate these analyses based on the information provided by the applicant. As we have noted in previous discussions (86 FR 25237, 86 FR 25279), the submitted costs for CAR T-cell therapies vary widely due to differences in provider billing and charging practices for this therapy, and we are continuing to consider the use of this submitted cost data for purposes of calculating a CAR T-cell CCR for use in the applicant's cost analyses given this potential for variability. Therefore, we request submission of the cost analyses with the national average drug CCR, which the applicant referenced, but did not submit, for cost criterion consideration.

We invite public comment on whether CARVYKTI™ meets the cost criterion.

With regard to the substantial clinical improvement criterion, the applicant asserted that it believes that CARVYKTI™ represents a substantial clinical improvement over existing technologies because it: (1) Treats a new and expanded patient population, (2) offers a treatment for a patient population with limited options and continued disease progression, despite having been treated with multiple prior therapies; and (3) provides a significantly improved clinical outcome relative to other therapies, either approved or still under FDA review, used in the relapsed and refractory multiple myeloma setting.

With regard to the applicant's assertion that CARVYKTI™ treats a new and expanded patient population, the applicant stated that other multiple myeloma therapies, such as Blenrep and ABECMA®, are indicated for patients with at least four prior therapies including a PI, an IMiD, and a CD38 antibody. In its application, the applicant asserted that CARVYKTI™ may receive an indication for patients with only three prior lines of therapy. The applicant cited the CARTITUDE–1 trial where 17% of patients had three prior lines of therapy.

With regard to the applicant's assertion that CARVYKTI™ offers a treatment for a patient population with limited options and continued disease progression, despite having been treated with multiple prior therapies, the applicant cited results from the CARTITUDE–1 STUDY, a Phase 1b/2, open-label, multicenter, multi-national (including US) study (n=113) to evaluate the safety and efficacy of ciltacabtagene autoleucel in adult patients who have RRMM who have previously received a PI, an IMiD, and an anti-CD38 antibody. The applicant asserted that ciltacabtagene autoleucel was granted Breakthrough Therapy designation for patients who have RRMM who have previously received a PI, an IMiD, and an anti-CD38 antibody, based on data from the Phase 1b/2 CARTITUDE–1 study. According to the applicant, of the 113 enrolled patients, 16 discontinued the study, including 9 patients who died due to progressive disease. Ninety-seven patients received ciltacabtagene autoleucel. The Phase 1b portion of the study included 29 of the 97 patients.

Two patients died during the study: One due to cytokine release syndrome (CRS) and one due to acute myeloid leukemia (not treatment-related). According to the applicant, 24 patients were ongoing in the phase 1b dose confirmation period with an additional 59 patients ongoing in the phase 2 portion. The applicant stated the primary objective of the Phase 1b portion of the trial was to confirm the safety of the selected dose based on the data from the ongoing Phase 1 trial in China (Legend-2), as discussed later in this section. The applicant asserted the primary objective of the Phase 2 portion of the trial is to evaluate the efficacy of ciltacabtagene autoleucel.

The applicant asserted that at median follow-up of 18 months, ciltacabtagene autoleucel led to a 98% overall response rate (ORR) in all 97 study patients who received ciltacabtagene autoleucel.[63] [64] The applicant asserted that this unprecedented overall response rate of (98%), represents early, deep, and durable responses in all patients, minimal residual disease negativity (meaning minimal residual cancer cells after treatment to the -nth degree) in the majority of patients who achieved a complete response (CR) and a very manageable toxicity profile. The applicant provided a comparison of the ORR in phase 1 studies for other therapies used to treat RRMM and noted the following: Idecabtagene vicleucel ORR 60%, daratumumab ORR 31%, Selinexor ORR 26%, and Blenrep ORR 31%.[65] According to the applicant, in addition to the CARTITUDE–1 trial ORR, the Legend-2 study demonstrated an ORR of 87.8% (95% CI: 78.2, 94.3) at a 2 year follow up time period. The applicant asserted that both of these studies are ongoing and the depth and duration of response continues to improve over time.[66]

The applicant further asserted that ciltacabtagene autoleucel led to early and deep clinical responses in the phase1b/2 portion of the CARTITUDE–1 study at median follow up of 18 months. The applicant stated that results of CARTITUDE–1 showed 80% of patients attaining a stringent complete response (sCR) and 93% of patients attaining a very good partial response (VGPR) or better. According to the applicant, ORR and depth of response were independent of BCMA expression on myeloma cells at baseline. The median time to first response was one month (range, 1–9).[67] [68]

The applicant also asserted that most patients attained a status of MRD-negativity by the time they were evaluable for a CR. According to the applicant, of evaluable patients, 93.0% achieved MRD 10^{-5} negativity.[69]

[69] Usmani SZ, et al. Ciltacabtagene Autoleucel, a B B-Cell Maturation Antigen Antigen-Directed

According to the applicant, 58% of patients were both MRD negative and in sCR at MRD detection level of 10^{-5}. According to the applicant, the median time to MRD 10^{-5} negativity was 1 month (0.8–7.7).[70] The applicant stated, among patients with 6 months individual follow-up, most had ciltacabtagene autoleucel CAR+ T-cells below the level of quantification (2 cells/μL) in peripheral blood.[71]

The applicant added that PFS at 12 months was 77% (95% CI; 66.0–84.37) with median PFS not having been reached.[72] According to the applicant, at median follow-up of 12.4 months, there were 14 deaths during the Phase 1b/2 study: One due to CRS and hemophagocytic lymphohistiocytosis (HLH), one due to neurotoxicity, and 12 due to other causes.[73] The applicant asserted that the CRS was manageable in most patients; CRS was the most common adverse event (AE) (94.8%) observed in the CARTITUDE–1 study. According to the applicant, the median time to onset of CRS was 7 days (range 1–12 days) post ciltacabtagene autoleucel infusion with a median duration of 4 days. The applicant asserted that 90% of patients experienced Grade 1–2 CRS and 5 patients (5%) experienced grade 3 or greater CRS.[74] According to the applicant there were 3 Grade 3 CRS, 1 Grade 4, and 1 aforementioned death due to CRS/HLH Grade 5 event.

The applicant noted that in the CARTITUDE–1 trial, neurotoxicity with immune effector cell-associated neurotoxicity syndrome (ICANS) was infrequently observed in the context of CRS and was generally low grade. Neurotoxicity with ICANS was observed in 20 patients (20.6%) including 10 patients (10.3%) with Grade 3 or above toxicity.

According to the applicant, the LEGEND–2 study[75] is an ongoing Phase 1, single-arm, open-label, multicenter, first-in-human trial to determine the safety and efficacy of ciltacabtagene autoleucel (LCAR–B38M in China) in the treatment of patients with relapsed or refractory multiple myeloma. The applicant stated enrollment in this investigator-initiated study (study proposed, initiated, and conducted by an investigator that is funded by industry) completed in November 2017; a total of 74 patients with RRMM have been treated with ciltacabtagene autoleucel CAR T-cell therapy. The applicant stated the clinical cutoff for the analysis of these 74 patients was February 6, 2018 with updated survival and efficacy data as of November 26, 2019 (which represents 2 years of follow-up from the date of the last subject's infusion). The applicant stated in the LEGEND–2 study, at a median follow up of 25 months, the median PFS for all patients was 19.9 months and 28.2 months for patients with CR. According to the applicant, 17 patients (17/57—29%) died during the study and follow up period (19 months) mostly due to progressive disease. The applicant asserted that none were related to CRS or neurotoxicity, the two most common adverse events associated with CAR T-cell therapy. At data cutoff, 57 patients had received LCAR–B38M CAR T-cells.

The applicant further asserted that outcomes from the LEGEND–2 study show that ciltacabtagene autoleucel provides a significantly improved clinical outcome relative to other therapies, either approved or still under FDA review, used in the RRMM setting. According the applicant, at a median follow up of 19 months, the overall response rate for ciltacabtagene autoleucel was 88%.[76] The applicant stated the overall survival (OS) rate at 18 months was 68% (54–79%) with a median duration of response (mDOR) of 22 months (13–29). The applicant stated that of MRD-negative patients with CR, 91% were still alive at data cut, with a 27-month (95% CI, 14.3–NE) mDOR. The applicant added that the median time to first response was 1.1 months. The applicant asserted there was no relationship between best response and baseline BCMA expression level or weight-adjusted CAR T-cells infused. We note some inconsistencies between the citation provided and what the applicant stated. Specifically, per the citation, the median time to follow-up was 25 months, with a median overall survival among all patients of 36.1 months (95% CI, 26.4–NE), and a MDOR of 29.1 months (95% CI, 19.9–NE).[77]

The applicant asserted that of patients in the LEGEND–2 study with CR, 39 of 42 were minimal residual disease negative (MRD-neg) and remained RRMM progression-free.[78] According to the applicant, the median PFS rate for all treated patients was 20 months (10–28); median PFS for MRD-neg patients with CR was 28 months (20–31).[79] The applicant stated that at 18 months, the PFS rate was 50 (36–63%) for all patients and 71% (52–84%) for MRD-neg patients with CR.[80] The applicant stated that 17 patients died during the study and the follow-up period. The causes of death included progressive disease (PD; n=11), disease relapse, PD with lung infection, suicide after PD, esophageal carcinoma, infection, pulmonary embolism and acute coronary syndrome (n=1 each). Of these, 4 did not achieve partial response (PR) or better; and 1 was not evaluable.

According to the applicant, from the LEGEND–2 study, the median time to onset of CRS was 9 days (range, 1–19) with a median duration of 9 days (range, 3–57); all but 1 CRS events resolved.[81] Tocilizumab (46%), oxygen (35%), vasopressor (11%), and intubation (1 patient) were used to treat CRS.[82] Neurotoxicity with Grade 1 aphasia, agitation and seizure-like activity was

observed in 1 patient in the LEGEND–2 study.[83] The applicant believes that since ciltacabtagene autoleucel displayed a manageable CRS safety profile that it represents a substantial clinical improvement over existing therapies.

The applicant lastly discussed multiple unpublished studies which used matching-adjusted indirect treatment comparison (MAIC) and other matching techniques to compare ciltacabtagene autoleucel to other existing therapies. The applicant stated that while there are no randomized head-to-head trials comparing ciltacabtagene autoleucel to ABECMA®, there is a peer-reviewed, published MAIC where individual patient data from CARTITUDE–1 (ciltacabtagene autoleucel) and published summary-level data for ABECMA® from the KarMMA trial are compared.[84] According to the applicant, the authors concluded that ciltacabtagene autoleucel demonstrated clinically superior results for all outcomes studied (ORR, CR rate, DoR, PFS, and OS), and these were robust across all sensitivity analyses. The applicant provided, as an example, results from one study by Martin et al. (2021) which, when comparing ciltacabtagene autoleucel to ABECMA®, found that the former had a 34% higher chance of response, a 220% higher chance of a CR, a hazard ratio of 0.5 for the DoR, 0.37 for PFS, and 0.55 for OS.[85] The applicant asserted that based on these findings, ciltacabtagene autoleucel offers substantial clinical benefits for patients with triple-class exposed RRMM compared to ABECMA®.

According to the applicant, there are several unpublished studies employing MAIC and other matching techniques comparing clinical outcomes for patients receiving ciltacabtagene autoleucel and the standard of care, or other conventional therapies, such as belantamab mafadotin or selinexor and dexamethasone.[86] [87] [88] The applicant stated that in a comparison to patients receiving various conventional therapies, the authors conclude that treatment with ciltacabtagene autoleucel is associated with higher response rate and superior PFS and OS.[89] The applicant stated that in a comparison with treatment with selinexor and dexamethasone, the study authors conclude that the analysis shows that ciltacabtagene autoleucel ''offers substantially more clinical benefit'' for patients with triple-class exposed RRMM.[90] The applicant also asserted that in a study that assessed the comparative effectiveness of ciltacabtagene autoleucel to physician's choice of treatment (PCT) using an external real-world control arm from the Flatiron Health multiple myeloma cohort registry, authors found that ciltacabtagene autoleucel offers substantial clinical benefits for PFS, time to next treatment (TTNT), and OS over PCT for patients with triple class exposed RRMM.[91] According to the applicant, patients receiving ciltacabtagene autoleucel were 3.2 times more likely to achieve overall response than patients receiving belantamab mafodotin after adjusting for refractory status, cytogenetic profile, International Staging System (ISS) stage, and extramedullary disease.

Lastly, the applicant summarized data from 22 months follow-up for CARTITUDE–1, which was presented at ASH 2021.[92] The applicant asserted that compared to the previous 12-month and 18-month data, 2-year data showed responses deepening over time. The applicant stated the ORR continued at 98% (up from 96% at 12 months) and the sCR at 22 months was 82.5%, compared to 67% at 12 months and 80.4% at 18 months. According to the applicant, at 22 months, 92% of the patients with MRD status noted were MRD negative, which is consistent with 18-month data (92%) and 12-month data (93%), illustrating persistent ability for the treatment to maintain MRD negativity over time. According to the applicant, the two-year PFS was 60.5% and 71% when a sCR was achieved and the two-year OS for all patients was 74%. The applicant stated that at the 2-year median follow up, no new treatment-related deaths had occurred since the median approximately 1-year follow-up, and there were no new safety signals reported. The applicant added that adverse events were generally low grade, well tolerated and managed with standard treatment algorithms employing drugs such as tocilizumab, corticosteroids, and anakinra.

After reviewing the information submitted by the applicant as part of its FY 2023 application for new technology add-on payments for CARVYKTI™, we have the following concerns regarding the substantial clinical improvement criterion. We note that in the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25238 through 25239), we expressed concern regarding a lack of comparisons between CARVYKTI™ and other existing therapies. We note that the applicant provided new references in its FY 2023 application to compare CARVYKTI™ to other therapies.[93] [94] However, we further note that many of the references provided are in abstract or presentation format with limited data on the overall study design and methodology used to achieve the presented results. With respect to the LEGEND–2 study, the authors stated that for the initial patient sample (n=57), the median number of prior lines of therapy was 3, with a range of 1 to 9.[95] Furthermore, we note that in the LEGEND–2 study only 11 (19%) of the respondents were 65 and older in the sample. As only 60% of this patient sample had received both a proteasome inhibitor and an immunomodulatory agent, and no patients had received a CD38 antibody, we question the true refractoriness of the test population in the LEGEND–2 study and whether the results are generalizable to the Medicare population for which this treatment is intended.

In addition, we request clarification on any potential inconsistencies between the statements in the

applicant's new technology add-on payment application and the citation which explains the LEGEND–2 study, including inconsistencies in median time to follow-up, median OS, and mDOR, as previously noted.[96]

Finally, while the applicant has asserted that CARVYKTI™ treats a new and expanded patient population since existing treatments are indicated for patients with at least four prior therapies, we note that CARVYKTI™ was recently approved with an indication for patients with at least four prior lines of therapy as well. Therefore, we would appreciate additional clarification on any differences between CARVYKTI™ and existing therapies with respect to the patient populations indicated for treatment.

We are inviting public comment on whether CARVYKTI™ meets the substantial clinical improvement criterion.

We did not receive any written comments in response to the New Technology Town Hall meeting notice published in the **Federal Register** regarding the substantial clinical improvement criterion for CARVYKTI™.

b. DARZALEX FASPRO® (daratumumab and hyaluronidase-fihj)

Janssen Biotech, Inc., submitted an application for new technology add-on payments for DARZALEX FASPRO® for FY 2023. DARZALEX FASPRO® is a combination of daratumumab (a monoclonal CD38-directed cytolytic antibody), and hyaluronidase (an endoglycosidase) indicated for the treatment of light chain (AL) amyloidosis in combination with bortezomib, cyclophosphamide and dexamethasone (CyBorD) in newly diagnosed patients and is administered through a subcutaneous injection.

According to the applicant, AL amyloidosis is a life-threatening blood disorder caused by increased production of misfolded immunoglobulin light chains by an abnormal proliferation of malignant CD38+ plasma cells. Per the applicant, these deficient immunoglobulin light chains aggregate into highly ordered amyloid fibrils that deposit in tissues, eventually resulting in progressive organ dysfunction and damage due to the toxic effect of the misfolded proteins (proteotoxicity) and the distortion of the normal tissue architecture by the amyloid deposits.[97] The applicant stated that the most frequently affected organs are the heart, kidney, liver, spleen, gastrointestinal tract and nervous system. Per the applicant, patients often have a poor prognosis, and as many as 30% of patients with AL amyloidosis die within the first year after diagnosis. The applicant stated that approximately 4,500 people in the US develop AL amyloidosis each year.[98] The applicant stated that while there were no FDA approved therapies prior to daratumumab, a number of therapies were used clinically to treat AL amyloidosis including combination therapies like cyclophosphamide-bortezomib-dexamethasone (CyBorD), bortezomib-lenalidomide-dexamethasone (VRd), bortezomib-melphalan-dexamethasone (VMd), melphalan-dexamethasone (Md), and bortezomib-dexamethasone (Vd). The applicant further noted that none of these combination regimens are approved for use by FDA in this specific indication.

According to the applicant, DARZALEX FASPRO® is the first and only FDA-approved treatment for patients with AL amyloidosis and is also approved for multiple indications for treatment of patients with multiple myeloma. The applicant stated that the indication for the technology for which it is submitting a new technology add-on payment application is for the treatment of adult patients with AL amyloidosis in combination with bortezomib, cyclophosphamide and dexamethasone in newly diagnosed patients. The applicant noted that DARZALEX FASPRO® is not indicated nor recommended to be used in patients with AL amyloidosis who have NYHA Class IIIB or Class IV cardiac disease or Mayo Stage IIIB, except in the context of controlled clinical trials.

According to the applicant, DARZALEX FASPRO® is the subcutaneous formulation of daratumumab, which is a human IgG-kappa monoclonal antibody that targets CD38, an enzymatic protein that is uniformly expressed on human plasma cells. Per the applicant, in DARZALEX FASPRO®, daratumumab is co-formulated with recombinant human hyaluronidase (rHuP20), which critically allows daratumumab to be administered in a volume of 15 mL by a 3–5 minute injection under the skin, compared to the 500–1000 mL volume and 3–7 hour administration time required for IV daratumumab. The applicant further noted that given the cardiac and renal dysfunction which afflicts many AL amyloidosis patients and makes them poor candidates for large volume IV administration, rHuP20 is a critical component of DARZALEX FASPRO®. Per the applicant, daratumamab binds to the CD38 protein on the surface of the malignant plasma cells which are responsible for abnormal amyloid protein production in AL amyloidosis, directly killing the malignant CD38+ plasma cells and/or directing the immune system to destroy them. The immunomodulatory response consists of CD8+ clonal expansion, CD38 enzymatic inhibition, complement activation and cell recruitment to enable antibody dependent cellular phagocytosis (ADPC) and antibody dependent cellular cytotoxicity (ADCC). Per the applicant, the mechanism of actions of daratumumab in AL amyloidosis are the same as the mechanisms of action of daratumumab in multiple myeloma, since both disease entities are disorders of malignant CD38+ plasma cells.[99] [100] [101]

The applicant stated that without hyaluronidase, it is not possible to inject more than 2–3 mL of drug directly into the subcutaneous tissue under the skin. Per the applicant rHuPH20 naturally mimics natural hyaluronidase and increases the permeability of subcutaneous tissue by degrading hyaluronan. By co-formulating daratumumab with rHuPH20, it becomes possible for 15 mL containing 1,800 mg of daratumamab to be administered subcutaneously in approximately 3 to 5 minutes. The applicant stated that the ability to administer daratumumab subcutaneously reduces the reaction rate to daratumumab, may improve convenience and patient satisfaction, and greatly reduces the volume of administration, which is critical in light of the cardiac dysfunction and kidney dysfunction which afflict many patients with AL amyloidosis.

[96] Wang. Bai-Yan. 2019. Long-term follow-up of a phase 1, first-in-human open-label study of LCAR–B38M, a structurally differentiated chimeric antigen receptor T (CAR–T) cell therapy targeting B-cell maturation antigen (BCMA), in patients (pts) with relapsed/refractory multiple myeloma (RRMM). Abstract #579, Presented at ASH Annual Meeting.

[101] Krejcik J, Casneuf T, Nijhof IS, et al. Daratumumab depletes CD38+ immune regulatory cells, promotes T-cell expansion, and skews T-cell repertoire in multiple myeloma. Blood 2016; 128: 384–94.

With respect to the newness criterion, the applicant stated that DARZALEX FASPRO® was granted accelerated approval from FDA on January 15, 2021, indicated for the treatment of adult patients with light chain (AL) amyloidosis in combination with bortezomib, cyclophosphamide and dexamethasone in newly diagnosed patients. Per the applicant, DARZALEX FASPRO® is not indicated and recommended for the treatment of patients with AL amyloidosis who have NYHA Class IIIB or Class IV cardiac disease or Mayo Stage IIIB outside of controlled clinical trials.[102] The applicant also stated that DARZALEX FASPRO® received FDA approval on September 26, 2019, for the treatment of adult patients with multiple myeloma as part of a combination therapy in newly diagnosed patients eligible for autologous stem cell transplant, and on May 1, 2020, for the treatment of patients with multiple myeloma. As stated previously, the indication for which the applicant submitted an application for new technology add-on payments is for the treatment of adult patients with AL amyloidosis in combination with bortezomib, cyclophosphamide and dexamethasone in newly diagnosed patients. The applicant stated that DARZALEX FASPRO® for newly diagnosed AL amyloidosis was commercially available immediately following the accelerated approval granted by FDA. The recommended dosage for DARZALEX FASPRO® for newly diagnosed AL amyloidosis is 1,800 mg of daratumumab and 30,000 units of hyaluronidase administered subcutaneously over approximately 3 to 5 minutes in combination with bortezomib, cyclophosphamide and dexamethasone. According to the applicant, patients receiving DARZALEX FASPRO® for this indication receive a weekly dose for the first 8 weeks (week 1 to week 8), one dose every 2 weeks from week 9 to week 24, followed by one dose monthly from week 25 onward until disease progression for a maximum of 2 years.

The applicant stated that ICD–10–PCS code 3E013GC (Introduction of other therapeutic substance into subcutaneous tissue, percutaneous approach) may currently be used to identify DARZALEX FASPRO® under the ICD–10–PCS coding system but that there are currently no ICD–10–PCS procedure codes that uniquely identify the use of DARZALEX FASPRO®. The applicant submitted a request for a unique ICD–10–PCS code to identify procedures involving the administration of DARZALEX FASPRO®. The applicant stated that E85.81 (Light chain (AL) amyloidosis) may be used to currently identify the indication for DARZALEX FASPRO® under the ICD–10–CM coding system but that there is no ICD–10–CM diagnosis code that is specific to DARZALEX FASPRO® for newly diagnosed AL amyloidosis.

As previously discussed, if a technology meets all three of the substantial similarity criteria under the newness criterion, it would be considered substantially similar to an existing technology and would not be considered ''new'' for the purposes of new technology add-on payments.

With respect to the first criterion, whether a technology uses the same or similar mechanism of action to achieve a therapeutic outcome, the applicant stated that it does not use the same or similar mechanism of action as existing technologies. The applicant stated that DARZALEX FASPRO® was the first drug approved by FDA for treatment of AL amyloidosis and its mechanism of action is different from that of any other drug previously used to treat AL amyloidosis. According to the applicant, the other therapies currently used to treat amyloidosis off-label (for example, bortezomib, cyclophosphamide, melphalan, lenlidomide) all have different mechanisms of action; none of them are monoclonal antibodies that specifically bind to CD38 on malignant plasma cells. The applicant stated that bortezomib induces cell death of the malignant plasma cell by inhibition of the 26S proteasome which plays a key role in cell survival by regulating protein breakdown in a controlled fashion. The applicant further stated that when bortezomib inhibits proteasome function, the normal balance within a cell is disrupted, resulting in a buildup of cell cycle and regulatory proteins which eventually leads to cell death.[103] [104] Per the applicant, lenalidomide is an immunomodulator which modulates the E3 ubiquitin ligase complex. Modulation of this E3 ubiquitin ligase complex by lenalidomide eventually leads to enhanced function of specific immune cells and induction of cell death and the exact mechanism of action of lenalidomide is still not fully understood.[105] [106] The applicant stated that both melphalan and cyclophosphamide are alkylating chemotherapy drugs that add an alkyl group to the guanine base of the DNA molecule, preventing the strands of the double helix from linking, which causes breakage of the DNA strands, affecting the ability of the cancer cell to multiply. Per the applicant, like bortezomib and lenalidomide, melphalan and cyclophosphamide are not approved by FDA for the use in patients with AL amyloidosis. The applicant also noted that while the National Comprehensive Cancer Network® (NCCN®) Guidelines for Systemic Light Chain Amyloidosis state that both IV and SQ daratumumab can be used to treat previously treated amyloidosis,[107] IV daratumumab is not approved by FDA for the treatment of patients with amyloidosis (newly diagnosed and previously treated). The applicant also stated that DARZALEX FASPRO® is the more appropriate option in the AL amyloidosis patient population due to the fact that subcutaneous dosing has a negligible volume administration (15 ml for SC vs up to 1000ml for IV), which is particularly important in patients with AL amyloidosis who often have compromised cardiac and renal function due to the amyloid deposition in cardiac and kidney tissue.

With respect to the second criterion, whether a product is assigned to the same or a different MS–DRG, the applicant stated that this product is not expected to change the DRG assignment of a case when used for the treatment of AL amyloidosis.

With respect to the third criterion, whether the new use of technology involves the treatment of the same or similar type of disease and the same or similar patient population when compared to an existing technology, the applicant stated that DARZALEX FASPRO® does not meet this criterion because it was the first approved drug to treat patients with AL amyloidosis. The applicant also stated that the NCCN® Guidelines for Systemic Light Chain Amyloidosis reflect the limited treatment options for this specific disease. The applicant further stated that DARZALEX FASPRO® in combination with CyBorD is the only

[102] According to the applicant, continued approval for this indication may be contingent upon verification and description of clinical benefit in confirmatory trials.

treatment with a Category 1 recommendation [108] in the NCCN® Guidelines for patients with newly diagnosed AL amyloidosis.[109]

In summary, the applicant believes that DARZALEX FASPRO® is not substantially similar to other currently available therapies and/or technologies because it has a unique mechanism of action and because it is the first FDA approved treatment for AL amyloidosis.

We are inviting public comments on whether DARZALEX FASPRO® is substantially similar to existing technologies and whether DARZALEX FASPRO® meets the newness criterion.

With respect to the cost criterion, the applicant presented the following analysis to demonstrate that DARZALEX FASPRO® meets the cost criterion. To identify cases representing patients who may be eligible for treatment with DARZALEX FASPRO®, the applicant searched the FY 2019 MedPAR database released with the FY 2022 IPPS final rule and stated that it used fee-for-service IPPS discharges, plus Maryland hospital discharges. The applicant searched for claims reporting ICD–10–CM diagnosis code E85.81 (Light chain amyloidosis) in conjunction with at least one of the following additional ICD–10–CM diagnosis codes:

BILLING CODE 4120–01–P

ICD-10-CM	DESCRIPTION
C90.00	Multiple myeloma not having achieved remission
D63.1	Anemia in chronic kidney disease
E85.4	Organ-limited amyloidosis
G62.9	Polyneuropathy, unspecified
I11.0	Hypertensive heart disease with heart failure
I12.0	Hypertensive chronic kidney disease with stage 5 chronic kidney disease or end stage renal disease
I12.9	Hypertensive chronic kidney disease with stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease
I13.0	Hypertensive heart and chronic kidney disease with heart failure and stage 1 through stage 4 chronic kidney disease, or unspecified chronic kidney disease
I13.2	Hypertensive heart and chronic kidney disease with heart failure and with stage 5 chronic kidney disease, or end stage renal disease
I43	Cardiomyopathy in diseases classified elsewhere
I48.0	Paroxysmal atrial fibrillation
I50.32	Chronic diastolic (congestive) heart failure
I50.33	Acute on chronic diastolic (congestive) heart failure
I95.1	Orthostatic hypotension
I95.9	Hypotension, unspecified
N17.9	Acute kidney failure, unspecified
N18.3	Chronic kidney disease, stage 3 (moderate)
N18.4	Chronic kidney disease, stage 4 (severe)
N18.6	End stage renal disease
Z99.2	Dependence on renal dialysis

The applicant excluded cases with a length of stay greater than 7 days from the analysis. According to the applicant, administration of DARZALEX FASPRO® would likely be delayed if a patient becomes seriously ill during the course of treatment, so it is unlikely a patient would receive DARZALEX FASPRO® during an inpatient stay lasting longer than 7 days. The applicant indicated that based on the advice of clinical experts, it also excluded cases mapped to the following MS–DRGs, as DARZALEX FASPRO® would not be an appropriate treatment for patients receiving treatment for such conditions:

[108] Per the NCCN®, a Category 1 recommendation is ''Based upon high-level evidence, there is uniform NCCN® consensus that the intervention is appropriate.''

[109] NCCN Clinical Practice Guidelines in Oncology (NCCN Guidelines®): Systemic Light Chain amyloidosis (Version 1.2022). National Comprehensive Cancer Network. *www.nccn.org.* Published August 29 June 2021. Accessed July 21, 2021.

BILLING CODE 4120–01–C

The applicant determined an average unstandardized case weighted charge per case of $47,599.

The applicant did not remove charges for related or prior technologies because, per the applicant, DARZALEX FASPRO® would not replace other therapies a patient may receive during an inpatient stay. Next, the applicant standardized the charges using the FY 2022 IPPS/LTCH PPS final rule impact file and applied a 4-year inflation factor of 1.281834 or 28.1834% based on the inflation factor used in the FY 2022 IPPS/LTCH PPS final rule to update the outlier threshold (86 FR 45542). The applicant then added charges for the new technology by multiplying the per treatment cost of DARZALEX FASPRO® by the inverse of the national average drug CCR of 0.187 from the FY 2022 IPPS/LTCH PPS final rule (86 FR 44966).

The applicant calculated a final inflated average case-weighted standardized charge per case of $92,916, which exceeded the average case-weighted threshold amount of $61,426. Because the final inflated average case-weighted standardized charge per case exceeded the average case-weighted threshold amount, the applicant maintained that DARZALEX FASPRO® meets the cost criterion.

We are inviting public comment on whether DARZALEX FASPRO® meets the cost criterion.

With regard to the substantial clinical improvement criterion, the applicant asserted that DARZALEX FASPRO® represents a substantial clinical improvement over existing technologies because it offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments. The applicant also asserted that DARZALEX FASPRO® demonstrates significant improvement in a number of clinical outcomes including hematologic complete response (hemCR), prolonged survival free from major organ deterioration, increased cardiac and renal response rates, with a demonstrated safety and tolerability profile and no negative impact to health-related quality of life based on patient-reported outcomes.

With regard to the claim that DARZALEX FASPRO® offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments, the applicant stated that the initial standard of therapy (CyBorD) is considered inadequate, as most patients do not respond adequately to the CyBorD regimen alone. Furthermore, according to the applicant, the ANDROMEDA data shows that >80% of patients do not achieve a hemCR, >75% of patients with cardiac disease do not have an organ response, and >75% of patients with renal disease do not have an organ response when treated with the initial standard of therapy CyBorD. Per the applicant, there is a high unmet need to improve treatment for AL amyloidosis patients. The applicant stated that rapid and deep response like hemCR are critical and are strongly associated with organ response and improved survival in AL amyloidosis.[110] Per the applicant, adding DARZALEX FASPRO® to CyBorD increases the hemCR rate by three-fold and doubles the cardiac and renal response rates, thereby addressing this high unmet medical need.

With regard to the claim that the use of DARZALEX FASPRO® significantly improves clinical outcomes for a patient population as compared to currently available treatments, as stated previously, the applicant asserted that DARZALEX FASPRO® represents a substantial clinical improvement over existing technologies because it: (1) Demonstrates a consistent safety profile; (2) significantly improves hematologic complete response (hemCR rates); (3) maintains the increased hemCR rates for pre-specified subgroups; (4) shortens the time to hemCR; (5) improves very good partial response (VGPR) or better rates; (6) substantially improves cardiac response at 6 and at 12 months; (7) improves renal response at 6 and at 12 months; (8) improves major-organ deterioration or progression-free survival (MOD–PFS); (9) improves Global Health status and fatigue as of cycle 6 of treatment, and maintains health-related quality of life (HRQoL); and (10) provides important advantages for the population with AL.

In support of these claims, the applicant submitted the ANDROMEDA phase 3 trial as well as presentations related to these trials. The applicant stated that data in the ANDROMEDA study demonstrated that DARZALEX FASPRO® led to significantly better outcomes both at the time of the primary analysis [111] as well as at the time of updated analyses which were presented at the 2021 ASCO annual meeting and 2021 EHA annual meeting.[112]

ANDROMEDA was a randomized, open-label, phase 3 study of 388 patients with newly diagnosed AL amyloidosis randomized 1:1 to receive 6 cycles of CyBorD, either alone (control group, n=193) or in combination with daratumumab SC (that is, DARZALEX FASPRO®), followed by DARZALEX FASPRO® monotherapy every 4 weeks for up to 24 additional cycles (daratumumab group, n=195). The study enrolled patients between May 3, 2018 and August 15, 2019. Median age was 64 (range 34–87). The study reported a median 11.4 month follow-up for the published trial, and 20.3 months for the follow-up data. The primary endpoint was hemCR, defined as having negative serum and urine immunofixation and a free light chain ratio (FLCr) within the reference range or abnormal free light-chain ratio if the uninvolved free light chain (uFLC) is higher than the involved free light chain (iFLC). According to the applicant, this definition of hemCR is in line with a recent clarification of the Internal Society of Amyloidosis guidelines.[113] Secondary endpoints were survival free from major organ deterioration or hematologic progression (composite end point that included end-stage cardiac or renal failure,

[112] Kastritis E, et al., Subcutaneous Daratumumab + Cyclophosphamide, Bortezomib, and Dexamethasone (CyBorD) in Patients with Newly Diagnosed Light Chain (AL) Amyloidosis: Updated Results from the Phase 3 ANDROMEDA Study, Oral presentation at: American Society for Oncology (ASCO) Annual Virtual Meeting; June 4–8, 2021 & Oral presentation at: European Hematology Association (EHA) Annual Virtual Meeting; June 9–17, 2021.

[113] Palladini et al. Daratumumab plus CyBord for patients with newly diagnosed AL amyloidosis: safety run-in results of ANDROMEDA. Blood.2020;136:71–80.

hematologic progression), or death, organ response, overall survival, hematologic complete response at 6 months, VGPR or better, time to and duration of hematologic complete response, time to next treatment, and reduction in fatigue. The applicant noted that the safety population in the ANDROMEDA study consisted of 193 patients in the daratumumab arm and 188 patients in the control arm.

The applicant also cited an oral presentation, presented at the American Society of Clinical Oncology (ASCO) 2021 and European Hematology Association (EHA) 2021 annual meetings, with updated data from the ANDROMEDA study after 20.3 months of follow-up, which described sustained primary outcome of higher rates of hemCR across subgroups as well as improved secondary endpoints of cardiac and renal response rate at 12 months. In the intent to treat population, there were 11 deaths in the CyBorD group compared to 7 deaths in the control group.[114]

In support of its assertion that DARZALEX FASPRO® demonstrates a consistent safety profile, the applicant cited Kastritis et al., discussed previously, stating that the safety profiles of daratumumab and bortezomib, cyclophosphamide, and dexamethasone in the ANDROMEDA trial were consistent with their known profiles and the underlying disease from previous trials.[115] To support its assertion that DARZALEX FASPRO® significantly improves hemCR rate, the applicant stated that the trial results showed that patients treated with DARZALEX FASPRO® demonstrated a statistically significant increase in hemCR compared to control (53.3% versus 18.1%; relative risk ratio, 2.9; 95% CI, 2.1 to 4.1; odds ratio, 5.1; 95% CI, 3.2 to 8.2; p<0.001 for both comparisons) at the 11.4 month median follow-up. To support its assertion that DARZALEX FASPRO® results in a shorter time to hemCR, the applicant noted that in the trial, median time to hemCR was 60 days in the daratumumab group and 85 days in the control group. In support of its assertion that the increased hemCR rate was maintained for pre-specified subgroups, the applicant also stated that hemCR remained consistent in most prespecified subgroups (for example, sex, age, weight, race, cardiac stage, etc.) receiving daratumumab.[116] The applicant also cited results from the oral presentation, discussed previously, stating that after a median follow up of 20.3 months, the percentage of patients who achieved hemCR increased to 59% in the daratumumab group vs 19% in the control group (odds ratio: 5.9; 95% CI, 3.7 to 9.4; P<0.001), and that this advantage was seen consistently across all prespecified subgroups.[117] The applicant stated that rapid and deep hematologic responses are critical and are strongly associated with organ response and improved survival in AL amyloidosis.[118]

In support of its assertion that DARZALEX FASPRO® improved VGPR or better rates, the applicant also stated that the trial demonstrated that the secondary endpoint of VGPR or better was 78.5% in the daratumumab group and 49.2% in the control group (relative risk ratio, 1.6; 95% CI, 1.4 to 1.9; odds ratio, 3.8; 95% CI, 2.4 to 5.9).[119] Per the applicant, the substantial improvements in hematologic response rates and other endpoints like cardiac and renal response and MOD–PFS indicate the clinical meaningfulness of these efficacy results.

In support of its assertion that DARZALEX FASPRO® substantially improves cardiac response at 6 and at 12 months, according to the applicant, of the subgroup that was evaluated for cardiac response (118 in the daratumumab group and 117 in the control group), 41.5% in the daratumumab group and 22.2% in the control group (odds ratio, 2.44; 95% CI: 1.35 to 4.42) demonstrated a cardiac response at 6 months.[120] The applicant noted that at a median follow up of 20.3 months, cardiac response rates were higher with in the daratumumab group compared to CyBorD alone at 6 months (42% versus 22%, odds ratio 2.4, 95% CI 1.4 to 4.4; P=0.0029) and at 12 months (57% versus 28%, odds ratio 3.5 95% CI 2.0 to 6.2; P<0.0001).[121] In addition, in support of its assertion that DARZALEX FASPRO® improves renal response at 6 and at 12 months, the applicant noted that in the subgroup evaluated for renal response (117 in the daratumumab group and 113 in the control group), 53.0% of patients in the daratumumab group and 23.9% in the control group (odds ratio, 3.34; 95% CI:1.88 to 5.94) demonstrated a renal response at 6 months.[122] The applicant noted that at a median follow up of 20.3 months, renal response rates were higher with in the daratumumab group compared to CyBorD alone at 6 months (54% vs 27%; odds ratio 3.3 95% CI 1.9 to 5.9; P<0.0001) and at 12 months (57% vs 27%; odds ratio 4.1 95% CI 2.3 to 7.3; P<0.0001).[123] The applicant noted that the percentages of patients who had a cardiac or renal response were substantially higher in the daratumumab group than in the control group, which it stated was an important finding given that organ responses are also a predictor of improved survival.
