Under this proposal, hospitals would bill the OPO for these services in accordance with § 413.418(b), and the OPO would record those billed amounts as organ acquisition costs on its Medicare cost report. Because these services are intended to determine or maintain the viability of organs for transplant, the patient's health insurance would not be billed for the organ acquisition costs, and the patient or patient's family would not be responsible for those amounts. Stakeholders were concerned that without this clarification, if services authorized by the OPO and provided by the hospital could not be included as organ acquisition costs, hospitals may bill the donor's family or a third-party payor. Doing so could create a barrier to organ donation based on economic means, by forcing costs associated with organ acquisition to be borne by the donor's family or a third-party payor. Making the donor's family responsible for these costs could preclude those of lesser economic means from fulfilling their wishes to donate organs and would be inequitable. It could also be a deterrent to deceased donor organ donation and as a result reduce the supply of organs available for transplant. We are committed to supporting organ donation in an equitable fashion and believe that not including in organ acquisition costs certain donor management costs incurred by a donor whose death is imminent, but who has not been declared dead, creates a potential barrier to organ donation and could compromise organ viability. We believe our proposal to modify § 413.418(a) to allow a donor community hospital or TH to incur costs for certain hospital services attributable to a donor prior to declaration of death, but when death is imminent supports organ donation and organ procurement costs and addresses a potential inequity in the transplant ecosystem.

Comment: All the commenters were supportive of this proposal. Many commenters agreed with our proposal because they believed it would result in reimbursement that appropriately supports clinical situations where failure to provide hospital services to a donor whose death is imminent may compromise the viability of organs, limit organ donation, and fail to honor the donor or donor family's wishes to donate organs.

Response: We thank commenters for their support of our proposal to modify § 413.418(a) to be more inclusive of incurred costs for certain hospital services attributable to a deceased donor or a donor whose death is imminent.

Comment: Several commenters were concerned that OPOs should provide proper authorization before hospitals incur costs for providing certain donor management services prior to death, but when death is imminent, which hospitals will then bill to OPOs. These commenters asked that we work to ensure that the costs of these services are appropriately authorized by the OPO.

Response: We appreciate these comments and note that our existing regulation at § 413.418(a) requires OPO authorization. We believe that best practices also include authorization by the OPO for hospitals to provide certain donor management services prior to death, but when death is imminent, being in place prior to a donor community hospital or TH incurring costs for these donor management services. Because the hospital will then bill the OPO for those services provided prior to declaration of death, but when death is imminent, the hospital and

[297] OPTN Policy Manual, Policy 2, available at *https://optn.transplant.hrsa.gov/media/eavh5bf3/optn_policies.pdf*, accessed February 4, 2022.

OPO will want to ensure that their financial/business arrangements include providing that authorization prior to the hospital's incurring costs. Based on these comments, we have amended the regulation at § 413.418(a) to emphasize the authorization requirement by stating that these services ''must be authorized by the OPO''.

Comment: We received a few comments related to § 413.418(b) from commenters who asked that payments by the OPO to the TH reflect donor management costs incurred prior to death, but when death is imminent. Some commenters asked us to confirm that hospitals and OPOs can renegotiate their case rates paid to donor hospitals to account for these additional allowable costs, to facilitate the proper recording of these costs as organ acquisition costs. Some commenters noted that the costs would be included in the OPO's standard acquisition charge calculation. A few commenters asked that we clarify which cost-to-charge ratio (CCR) donor community hospitals and THs must use if they bill OPOs for donor services by reducing their charges to cost. Specifically, these commenters asked whether the hospital-specific overall operating CCR or the hospital-specific overall operating and capital CCR should be used.

Response: Donor community hospitals and THs that bill OPOs a negotiated rate are free to renegotiate those rates to account for these added costs. OPOs will be able to include the cost of these donor management services in their organ acquisition costs used in calculating their SACs. Regarding CCRs, we clarify that donor community hospitals and THs must use the hospital-specific inpatient operating CCR to reduce their charges to cost. In this final rule with comment period, we are finalizing § 413.418(b) to specify that when a donor community hospital or TH incurs costs for services furnished to a deceased donor, or a donor whose death is imminent as described in § 413.418(a), as authorized by the OPO, the donor community hospital or TH must bill the OPO the lesser of its customary charges that are reduced to cost by applying its most recently available hospital specific inpatient operating CCR for the period in which the service was rendered, or a negotiated rate.

Comment: A commenter asked that we codify in the regulations that certain expenses incurred prior to brain death declaration are reimbursable by Medicare.

Response: The regulation text that we are finalizing in this final rule with comment period at § 413.418 allows a donor community hospital or TH to incur costs for hospital services attributed to a deceased donor or a donor whose death is imminent. The regulation does not specify the type of donor death, but includes all deaths (cardiac deaths and brain deaths). Therefore, we do not see a need to modify the regulation text to refer to brain death specifically.

Comment: A few commenters asked whether our proposed amendment to § 413.418(a) to allow a donor community hospital or TH to incur costs for certain hospital services attributable to a donor prior to declaration of death, but when death is imminent would be effective for any open OPO cost reports.

Response: For cost reporting periods beginning prior to February 25, 2022,[298] providers should follow the policy given in sub-regulatory guidance (see Provider Reimbursement Manual 15–1, chapter 31, section 3108.C). Effective for cost reporting periods beginning on or after February 25, 2022, and in accordance with our current regulation at § 413.418(a), a donor community hospital (a Medicare-certified non-transplant hospital) and a TH can incur organ acquisition costs for donor organ procurement services authorized by the OPO, but those costs are limited to costs incurred following declaration of death and consent to donate. Our proposed amendments to § 413.418(a) to permit organ acquisition costs to include certain donor management costs incurred prior to declaration of death, but when death is imminent, would only be effective for cost reporting periods beginning on or after the effective date of this final rule with comment period.

After consideration of the public comments we received, we are finalizing our proposal to amend § 413.418(a), effective for cost reporting periods beginning on or after the effective date of this final rule with comment period, to specify that a donor community hospital (a Medicare-certified non-TH) and a TH incur costs for hospital services attributable to a deceased donor or a donor whose death is imminent. We note that the regulation text we are finalizing in this final rule with comment period modifies the proposed regulation text, which specified that, in the case of a potential organ donor whose death is imminent, organ acquisition costs only include those hospital services that ''must be provided prior to declaration of death'' to instead include the condition that ''it is necessary that the services be provided prior to declaration of death in order to avoid compromising the viability of the organs for transplant.'' Based on comments received, we also strengthened the regulation so that it specifies that these services ''must be authorized by the OPO.'' Specifically, the regulation text that we are finalizing in this final rule with comment period would provide that a donor community hospital (a Medicare-certified non-TH) and a TH incur costs for hospital services attributable to a deceased donor or a donor whose death is imminent. These services must not be part of medical treatment that primarily offers a medical benefit to the patient as determined by the healthcare team, must be authorized by the OPO, and are included as organ acquisition costs when: (1) there is consent to donate and (2) a declaration of death has been made or, if a declaration of death has not been made, death is imminent and it is necessary that the services be provided prior to declaration of death in order to avoid compromising the viability of the organs for transplant. In response to comments, in this final rule with comment period, we are also finalizing § 413.418(b) to include the instructions for amounts billed for organ acquisition costs for donors whose declaration of death has not been made, but whose death is imminent, and to more clearly specify the CCR to be used in reducing charges to costs. Specifically, we are finalizing § 413.418(b) to specify that when a donor community hospital or TH incurs costs for services furnished to a deceased donor, *or a donor whose death is imminent as described in paragraph (a)*, as authorized by the OPO, the donor community hospital or TH must bill the OPO the lesser of its customary charges that are reduced to cost by applying its most recently available hospital specific *inpatient operating* CCR for the period in which the service was rendered, or a negotiated rate.

D. Technical Corrections and Clarifications to 42 CFR 405.1801, 412.100, 413.198, 413.402, 413.404, and 413.420 and Nomenclature Changes to 42 CFR 412.100 and 42 CFR Part 413, Subpart L

Technical Corrections and Clarifications. In the FY 2022 IPPS/LTCH PPS final rule with comment period, § 413.200 was reserved and redesignated as § 413.420 with revisions. In the CY 2023 OPPS/ASC proposed rule (87 FR 44768), we proposed to make a technical correction to § 405.1801(b)(2)(ii), by removing the reference to § 413.200(g) and replacing it

[298] February 25, 2022 was the effective date of the FY 2022 IPPS final rule with comment period (Part 2).

with a reference to § 413.420(g). We also proposed to make a technical correction to § 413.198(b)(4)(ii), by removing the reference to ''Section 413.200, Reimbursement of OPAs and histocompatibility laboratories'' and replacing it with a reference to ''Section 413.420,'' and that section's heading, ''Payment to independent organ procurement organizations and histocompatibility laboratories for kidney acquisition costs.''

We also proposed to clarify §§ 412.100(b) and 413.402(a) by removing ''as appropriate'' and instead specifying that organ acquisition costs are allowable costs incurred in the acquisition of organs from a living donor or a deceased donor by a hospital, or from a deceased donor by an OPO.

We proposed to revise § 413.404(c)(2)(i)(C) so that it is written in the active voice and not the passive voice. In addition, we proposed to revise this provision to clarify that the kidney SAC amount is the interim payment made by the TH or other OPO to the IOPO, as set forth in § 413.420(d)(1).

We proposed to amend § 413.420(a)(1) by striking ''after September 30, 1978,'' as we believe it is no longer necessary that the regulations specify that the reasonable cost reimbursement principles in part 413 only apply to covered services furnished after that date; and to replace the acronym ''OPOs'' with ''IOPOs''. We proposed to amend § 413.420(a)(2) to correct a typographical error by changing ''HOPOs'' to ''IOPOs''.

We proposed to amend § 413.420(c)(1)(v) to correct the statutory reference to section 1861 of the Act so that it instead refers to section 1881 of the Act; the original regulation text was in § 413.178, and was redesignated as § 413.200 in 1997 [299] before being redesignated as § 413.420 in the FY 2022 IPPS/LTCH PPS final rule with comment period.[300] The original regulation at § 413.178 referred to section 1881 of the Act, but a typographical error changed ''1881'' to ''1861'' when other changes to the regulation were proposed in 1987 (52 FR 28674) and finalized in 1988 (53 FR 6548).

Nomenclature Changes. In the CY 2023 OPPS/ASC proposed rule (87 FR 44768), we proposed to amend §§ 412.100(b); 413.402(a), (b)(3), (4), and (7), and (e)(8)(ii); 413.404(a)(2), (b)(3), and (c)(1)(i) and (ii); and 413.418 (the section heading and paragraph (b)), by replacing the term ''cadaveric'' with ''deceased'', to be consistent with terminology used within the transplant community when referring to deceased donors, and to promote sensitivity regarding the process and decision of donating organs from deceased donors. In § 413.404(b)(3)(ii), we proposed to replace ''cadaveric SAC'' with ''deceased donor SAC'' and ''cadaveric organ(s)'' with ''deceased donor organ(s)''; and in § 413.404(c)(2), we proposed to replace ''cadaveric kidneys'' with ''deceased donor kidneys''.

We proposed to amend §§ 413.404(c)(2)(i)(A), (B), and (D) and 413.414(c)(1) by replacing references to ''Medicare contractor'' with ''contractor'', to conform to terminology changes made in the FY 2015 IPPS final rule (79 FR 49854 at 50199) and in accordance with the definition at 42 CFR 405.201(b).[301]

In the CY 2023 OPPS/ASC proposed rule (87 FR 44768), we also proposed to remove the term ''discarded'' from § 413.412(d) and replace it with ''unusable'', to promote sensitivity in scenarios where donated organs are unused because they are unsuitable for transplantation.

Finally, in the CY 2023 OPPS/ASC proposed rule (87 FR 44768), we proposed to amend § 413.400 by adding ''TH'' in parentheses after the defined term ''transplant hospital''. Throughout subpart L, we proposed to replace the term ''transplant hospital'' with ''TH''. We did not receive any public comments on our proposed technical corrections and nomenclature changes, and therefore, we are finalizing our proposals as proposed.

E. Clarification of Allocation of Administrative and General Costs

When a TH procures organs for transplantation, it is required to allocate administrative and general (A&G) costs to the appropriate organ acquisition cost centers on its Medicare hospital cost report (MCR).[302] This practice is in accordance with Medicare's reasonable cost principles under section 1861(v) of the Act and the regulations at §§ 413.20 and 413.24. When a TH receives an organ from an OPO or other TH, it makes payment to the OPO or TH that furnished the organ for the cost incurred to procure the organ. We are aware that some THs that receive organs place the ''purchase cost'' for the organs they receive in the accumulated cost statistic by which A&G is allocated. Under § 413.24(d)(6), including a statistical cost which does not relate to the allocation of A&G expenses causes an improper distribution of overhead and could result in improper Medicare payment. In this scenario, when the receiving TH includes the purchase cost of the organ it received in the statistical cost by which A&G is allocated, overhead is improperly distributed to the receiving TH organ acquisition cost center.

To ensure the appropriate allocation of A&G costs on a TH's MCR, we proposed to clarify that when a TH receives organs from an OPO or other TH, the receiving TH must exclude from its accumulated cost statistic the purchase cost for these organs because these costs already include A&G costs. In accordance with § 413.24(d)(6), purchased services for a department that are directly assigned to the department that include A&G costs result in an excessive allocation of overhead. This duplication of A&G costs results in improper Medicare payment to the provider. In accordance with MCR instructions,[303] if some of the costs in the department that received this direct assignment of purchased services should receive A&G costs, the TH must remove the directly assigned costs (purchased services) from its allocation statistic to assure a proper allocation of overhead. This process facilitates appropriate Medicare payment and ensures that the receiving TH's organ acquisition cost center does not receive an improper distribution of overhead costs that it did not incur. These longstanding Medicare cost finding principles are in accordance with § 413.24(d)(6), and specifically expressed in the MCR instructions for THs.[304]

Comment: Many commenters disagreed with our proposal to clarify Medicare's longstanding cost finding principles on the prohibition of cost duplication relative to a TH's allocation of overhead costs associated with their direct costs for purchased services that would instruct THs to remove from their allocation statistics the amounts for purchased services from OPOs. Some commenters asserted that § 413.24(d)(6) was inapplicable to a TH allocating its overhead costs to a purchased service amount from OPOs (or, in the case of

[303] Provider Reimbursement Manual, 15–2, chapter 40, section 4020, *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Paper-Based-Manuals-Items/CMS021935*.

[304] Provider Reimbursement Manual, 15–2, chapter 40, section 4020, *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Paper-Based-Manuals-Items/CMS021935*.

living donor paired exchanges, from the donor TH) because this regulation provides an example of the allocation of a hospital's A&G to a management contract for a hospital based rural health clinic. Some commenters asserted that there is no basis for treating the ''purchase price of an organ'' differently from other items and services purchased by the hospital, and said that CMS allows other cost centers to include the full cost of supplies and purchased services. Some commenters suggested that our proposed clarification inappropriately assumes that 100 percent of costs associated with the purchased services from an OPO and a TH's A&G costs are ''like costs.'' These commenters suggested that IOPOs and THs each have separate and distinct administrative overhead structures where ''like costs'' would be non-existent or very minimal; whereas ''like costs'' may be found between a HOPO and its TH. A few commenters said that where ''like costs'' for A&G definitively exist and can be documented, those duplicative costs should be removed from the TH's accumulated cost statistic. A few commenters said that a hospital that acquires a high-cost medical device for implantation into a patient is similar to an organ furnished by an OPO to a TH. These commenters asserted that the device company has its own overhead cost structure that differs from the TH's overhead costs and there is no cost reporting instruction to remove the cost of the high-cost medical device from a hospital's accumulated cost statistic. Many commenters also said that there is no duplication of cost for the TH to allocate A&G when the TH receives the organ from the OPO because the TH bears the administrative expense of processing complex invoices from the OPO, the procuring surgeon, the transportation company and many other stakeholders in the transplant process. Commenters believe that the TH's A&G associated with these efforts must be included in the TH's organ acquisition calculation. Many commenters believed that the application of § 413.24(d)(6) to THs would result in the underreporting and under reimbursement of what commenters assert are valid A&G reasonable costs incurred by a TH that is acting as a prudent buyer of goods and services. Most commenters said they would experience a considerable or significant financial loss.

Response: We thank commenters for their comments and appreciate their comments and concerns. We disagree that there is no duplication of A&G costs from the OPO that provides the organ and the TH that receives it. Because organ acquisition costs are not included in the transplant DRG that Medicare pays to THs for Medicare covered transplants, Medicare pays THs for organ acquisition costs at cost, based upon Medicare's reasonable cost principles. Cost finding, as set forth in § 413.24, is a longstanding Medicare reasonable cost principle, and is the process of allocating and prorating the data derived from the accounts ordinarily kept by a provider to determine the provider's costs of the various services provided. Cost finding is applied to items and services that are paid on a reasonable cost basis. An OPO is a supplier of organ acquisition services to the TH that includes providing the TH with the organ for transplant, and is a separate entity from the TH. We agree with commenters that an OPO and a TH each have their own A&G costs. However, as set forth in § 413.24(d)(6), where a provider purchases services and directly assigns the cost to a cost center for that provider, there is a risk of having excess costs in that cost center resulting from the directly assigned costs plus a share of overhead improperly allocated to the cost center which duplicates the directly assigned costs. We believe this can similarly occur when a TH purchases an organ from an OPO (which inherently includes services provided by the OPO) and directly assigns those costs to the TH's cost center for that specific organ resulting in excess overhead from the TH also being allocated. For example, an OPO furnishes a liver to the TH and the TH assigns to the TH's liver acquisition cost center the invoice amount it paid to the OPO. The issue becomes what, if any, A&G costs of the TH are appropriate to allocate to the liver cost center for the invoice amount it paid to the OPO. Specifically, what indirect costs are being allocated based on a beneficial, causal relationship to the projects, contracts or cost objectives to which they are allocated. When costs within a department are composed of subcontracted efforts or purchased services, the allocation of traditional A&G expenses becomes non-compliant. There is no beneficial or causal relationship of the amount of A&G expense allocated to the base over which these expenses are being allocated. We disagree with commenters who believe all of the TH's A&G costs should be allocated to the liver cost center equally based on the purchased service cost incurred. We agree with the few commenters who said that where ''like'' A&G costs definitively exist and can be documented, those duplicative costs should be removed from the TH's accumulated cost statistic. In this regard, removing the ''like costs'' that are duplicative of the directly assigned costs (*i.e.,* purchased services from OPOs) from a TH's allocation statistic is necessary to remove a duplication of overhead costs from the TH and the OPO, to achieve an appropriate allocation of overhead, and thus an appropriate payment from Medicare.

After consideration of the public comments we received, we are withdrawing our proposal to clarify that in accordance with § 413.24(d)(6), a TH must remove the directly assigned costs (purchased services) from its allocation statistic to assure a proper allocation of overhead. We believe that clarifying the appropriate allocation of A&G for THs' purchase costs from OPOs will require additional analysis, evaluation and provider education to ensure indirect costs are being allocated based on a beneficial, causal relationship to the purchased service to which they are allocated, in accordance with Medicare reasonable cost principles. As such, we may revisit the clarification of this issue in future rulemaking.

F. Organ Payment Policy—Request for Information on Counting Organs for Medicare's Share of Organ Acquisition Costs, IOPO Kidney SACs, and Reconciliation of All Organs for IOPOs

In the CY 2023 OPPS/ASC proposed rule (87 FR 44769), we requested information on an alternative methodology for counting organs for purposes of calculating Medicare's share of organ acquisition costs; IOPOs' kidney SACs; and Medicare's reconciliation of all organs for IOPOs. While we are not responding to specific comments submitted in response to this RFI in this final rule with comment period, we intend to use this input to inform future policy development.

XVIII. Rural Emergency Hospitals (REH): Payment Policies, Conditions of Participation, Provider Enrollment, Use of the Medicare Outpatient Observation Notice, and Physician Self-Referral Law Updates

A. Rural Emergency Hospitals (REH) Payment Policies

1. Introduction

Americans who live in rural areas of the nation make up about 20 percent of the United States (U.S.) population, and they often experience shorter life expectancy, higher all-cause mortality, higher rates of poverty, fewer local doctors, and greater distances to travel to see health care providers, compared

to their urban and suburban counterparts.[305] In addition, one in five rural residents identifies as Black, Hispanic, American Indian/Alaska Native (AI/AN), Asian American/Pacific Islander (AA/PI), or a combination of ethnic backgrounds. Compared to the non-Hispanic White rural population, these rural minority groups often and regularly experience several disadvantageous social determinants of health.

The health care inequities that many rural Americans face raise serious concerns that the trend for poor health care access and worse outcomes overall in rural areas will continue unless the potential causes of such health care inequities are addressed.

There have been growing concerns over the closures of rural hospitals and critical access hospitals (CAHs). Between 2010 and February 2022, 138 rural hospitals stopped providing inpatient services, 44 of which were Critical Access Hospitals. There were 75 complete hospital closures where all services ended and 63 hospital conversions where inpatient services ended but some type of health care service continued. Rural hospitals report they continue to face the threat of closure because they lack sufficient patient volume to offer traditional hospital inpatient acute care services required for Medicare payment; however, the demand still exists for emergency and outpatient services in areas served by these hospitals. Rural hospitals are essential to providing health care to their communities and the closure of these hospitals limits access to care for the communities they once served and reduces employment opportunities, further impacting local economies. Barriers such as workforce shortages can impact health care access in rural communities and can lead to unmet health needs, delays in receiving appropriate care, inability to get preventive services, financial burdens, and preventable hospitalizations.[306]

The Consolidated Appropriations Act (CAA), 2021, was signed into law on December 27, 2020. In this legislation, Congress established a new rural Medicare provider type: Rural Emergency Hospitals (REHs). These providers will furnish emergency department and observation care, and other specified outpatient medical and health services, if elected by the REH, that do not exceed an annual per patient average of 24 hours. Hospitals may convert to REHs if they were CAHs or rural hospitals with not more than 50 beds participating in Medicare as of the date of enactment of the CAA.

REHs are expected to help address the barriers in access to health care, particularly emergency services and other outpatient services that result from rural hospital closures, and by doing so, may help address observed inequities in health care in rural areas.

On January 20 and 21, 2021, President Biden issued three executive orders related to issues of health equity: Executive Order 13985 ''Advancing Racial Equity and Support for Underserved Communities Through the Federal Government;'' [307] Executive Order 13988, ''Preventing and Combating Discrimination on the Basis of Gender Identity or Sexual Orientation;'' [308] and Executive Order 13995 ''Ensuring an Equitable Pandemic Response and Recovery.'' [309]

Executive Order 13985, ''Advancing Racial Equity and Support for Underserved Communities Through the Federal Government'' requires the Federal Government to pursue a comprehensive approach to advancing equity for all, including people of color and others who have been historically underserved, marginalized, and adversely affected by persistent poverty and inequality by recognizing and working to redress inequities in its policies and programs that serve as barriers to equal opportunity. In accordance with this executive order, persons who live in rural areas are identified as belonging to underserved communities that have been adversely affected by inequality.

Executive Order 13988, ''Preventing and Combating Discrimination on the Basis of Gender Identity or Sexual Orientation'' requires the Federal Government to prevent and combat discrimination, including when accessing health care, on the basis of gender identity or sexual orientation, and to fully enforce Title VII of the Civil Rights Act. This executive order also requires the Federal Government to fully enforce other laws that prohibit discrimination on the basis of gender identity or sexual orientation, all of which impact all persons, including those in rural communities.

In accordance with Executive Order 13995, ''Ensuring an Equitable Pandemic Response and Recovery,'' the Federal Government must identify and eliminate health and social inequities resulting in disproportionately higher rates of exposure, illness, and death related to COVID–19 and take swift action to prevent and remedy differences in COVID–19 care and outcomes within communities of color and other underserved populations. The executive order highlights the observed inequities in rural and Tribal communities, territories, and other geographically isolated communities. We believe the services furnished by REHs, could be one means of addressing some of the issues raised in these orders, particularly, barriers to access health care in rural communities.

Consistent with these executive orders, in implementing the new REH provider type, we are committed to advancing equity for all, including racial and ethnic minorities, members of the lesbian, gay, bisexual, transgender, and queer/questioning (LGBTQ) community, people with limited English proficiency, people with disabilities, rural populations, and people otherwise adversely affected by persistent poverty or inequality.

2. Statutory Authority and Establishment of Rural Emergency Hospitals as a Medicare Provider Type

Section 125 of Division CC of the CAA was signed into law on December 27, 2020 and establishes REHs as a new Medicare provider type. Section 125 of the CAA added section 1861(kkk) to the Social Security Act (the Act), which sets forth the requirements for REHs. Section 1861(kkk)(2) of the Act defines an REH as a facility that is enrolled in the Medicare program as an REH; does not provide any acute care inpatient services (other than post-hospital extended care services furnished in a distinct part unit licensed as a skilled nursing facility (SNF)); has a transfer agreement in effect with a level I or level II trauma center; meets certain licensure requirements; meets requirements of a staffed emergency department; meets staff training and

[309] The White House. (2021). Briefing Room: Executive Order on Ensuring an Equitable Pandemic Response and Recovery. *https://www.whitehouse.gov/briefing-room/presidentialactions/2021/01/21/executive-order-ensuring-anequitable-pandemic-response-and-recovery/.*

certification requirements established by the Secretary of the Department of Health and Human Services (the Secretary); and meets certain conditions of participation (CoPs) applicable to hospital emergency departments and CAHs with respect to emergency services.

Additionally, section 125(a)(1) of the CAA added section 1861(kkk)(1) of the Act, which requires that REHs provide emergency department services and observation care and, at the election of the REH, other medical and health services furnished on an outpatient basis, as specified by the Secretary through rulemaking. The REH must also have a staffed emergency department 24 hours a day, 7 days a week, have a physician, nurse practitioner, clinical nurse specialist, or physician assistant available to furnish rural emergency hospital services in the facility 24 hours a day, and meet applicable staffing requirements similar to those for CAHs.[310]

In order to become an REH, section 1861(kkk)(3) of the Act requires that the facility, on the date of enactment of the CAA, 2021 (December 27, 2020), was a CAH or a rural hospital with not more than 50 beds. For the purpose of REH designation, section 1861(kkk)(3)(B) defines rural hospital as a subsection (d) hospital (as defined in section 1886(d)(1)(B) with not more than 50 beds located in a county (or equivalent unit of local government) in a rural area (as defined in section 1886(d)(2)(D) of the Act)), or treated as being located in a rural area pursuant to section 1886(d)(8)(E) of the Act.

Starting on January 1, 2023, an REH that provides rural emergency hospital services (as defined in section 1861(kkk)(1) of the Act and in this final rule) will receive a Medicare payment for those services pursuant to section 1834(x)(1) of the Act, as added by section 125 of the CAA, that is equal to the amount of payment that would otherwise apply under the Medicare Hospital Outpatient Prospective Payment System (OPPS) for covered outpatient department (OPD) services increased by 5 percent. The beneficiary co-payments for these services will be calculated the same way as under the OPPS for the service, excluding the 5 percent payment increase. In addition, section 1834(x)(2) of the Act provides an additional monthly facility payment to an REH.

To participate in the Medicare program and receive payment for services furnished to Medicare beneficiaries, providers of services such as hospitals, home-health agencies, hospices, SNFs, and now REHs must enter into a provider agreement with CMS, in accordance with section 1866 of the Act. Medicaid providers, likewise, must enter into provider agreements with State Medicaid agencies to be eligible for participation in that program as described in section 1902(a)(27) of the Act. By entering into a provider agreement, a facility agrees that it will comply with the applicable requirements of the Medicare and Medicaid statutes and the regulations that the Secretary issues under the respective statute.

Section 1861(kkk)(7) of the Act requires the Secretary to establish quality measurement reporting requirements for REHs, which may include claims-based outcome measures and/or patient experience surveys. An REH must submit quality measure data to the Secretary with respect to each year beginning in 2023 (or each year beginning on or after the date that is one year after one or more measures are first specified), and the Secretary is required to establish procedures to make the data available to the public on the CMS website. As discussed further in section XVI of the CY 2023 OPPS/ASC proposed rule (87 FR 44755), CMS requested information on certain quality measures and quality reporting requirements for REHs.

The Quality Improvement Organization requirements of the Act shall apply to REHs in the same manner that they apply to hospitals and CAHs, in accordance with section 1866(a) of the Act (as amended by section 125(b)(1) of the CAA). In addition, the requirements established at section 1864 of the Act for hospitals and CAHs to be surveyed for compliance with the CoPs shall apply to REHs in the same manner as other hospitals and CAHs, in accordance with section 125(d)(2) of the CAA.

In accordance with section 1864 of the Act, CMS uses State surveyors to determine whether a provider or supplier subject to certification qualifies for an agreement to participate in Medicare. Additionally, under section 1865 of the Act, some providers or suppliers subject to certification have the option to instead elect to be accredited by private accrediting organizations (AOs) whose Medicare accreditation programs have been approved by CMS as having standards and survey procedures that meet or exceed all applicable Medicare requirements. The survey process for Medicare and Medicaid participating providers and suppliers provides an opportunity for these providers and suppliers to demonstrate compliance with all of the applicable CoPs, conditions for coverage (CfCs) or requirements. The methods used by CMS to determine compliance with the regulations include surveys conducted by a State survey agency, surveys conducted by AOs that have deeming authority for Medicare providers and suppliers, and self-attestation. CMS would require REHs participating in Medicare to demonstrate and maintain compliance with the provisions included in the CY 2023 OPPS/ASC final rule with comment period.

3. Summary of Comments by Interested Parties in Response to REH Request for Information

In preparation for developing proposed standards and to gain a clear understanding of the challenges faced by facilities providing health care services in rural communities, we published a Request for Information (RFI) on REHs in the proposed rule ''Medicare Program: Hospital Outpatient Prospective Payment and Ambulatory Surgical Center Payment Systems and Quality Reporting Programs; Price Transparency of Hospital Standard Charges; Radiation Oncology Model; Request for Information on Rural Emergency Hospitals'' (86 FR 42018) on August 4, 2021. CMS sought public input on a broad range of issues to inform our policymaking in establishing this new provider type. The RFI solicited public input on the concerns of rural providers, including in the areas of health and safety standards, health equity, payment policies, quality measures and quality reporting, and additional considerations and unintended consequences that should be considered during the development of standards for REHs.

Commenters on the RFI generally noted that CMS should take into consideration the challenges associated with the provision of health care services in rural communities. Some commenters noted that, while Congress did not specify the exact steps that CMS should take to calculate the annual facility payment, CMS should do so in a manner that maximizes potential payment to REHs to ensure these hospitals can continue to operate. Other commenters cautioned CMS against calculating the monthly facility payment in a way that leads to excessive payment. Commenters also encouraged CMS to set forth the details of the payment calculation in rulemaking, so

[310] *Congress.gov*. (2020). H.R. 133—Consolidated Appropriations Act, 2021. *https://www.congress.gov/116/bills/hr133/BILLS-116hr133enr.pdf.*

that interested parties could replicate the calculation. With regard to the services provided by REHs, commenters recommended that REHs should provide maternal health, behavioral/mental health services, and telehealth services to further support the communities that they will serve. Commenters recommended that CMS pay for all REH services at the OPPS rate plus 5 percent. A few commenters also suggested that CMS should pay for all services furnished by an REH, including those that are not designated as REH services, at the applicable rate plus 5 percent. With regard to health equity, several interested parties commented that REHs could have significant value for underserved, rural populations by maintaining local access to care, reducing travel times for care, and serving as leaders for community health improvement efforts including efforts to address the social determinants of health. We note that CMS is committed to reducing inequities in rural communities and we are considering the best approach to address health equity in the standards for all Medicare and Medicaid participating providers and suppliers, including REHs.

We reviewed all comments from interested parties and took them into consideration while drafting the CY 2023 OPPS/ASC proposed rule. We appreciate the interested parties' input and responses to our outreach efforts.

During the development of the policies to implement this new provider type, we reviewed the public comments received on the REH RFI, and held public listening sessions with national stakeholder organizations as well as tribal communities. We also gave presentations at CMS's hospital, rural health, and SNF open door forums and sought public feedback.

4. Payment for Services Performed by REHs

a. Covered Outpatient Department (OPD) Services Performed by REHs

(1) Defining ''REH Services''

Section 1861(kkk)(1)(A) defines the term ''REH services'' as emergency department and observation services as well as, at the election of the REH, other medical and health services furnished on an outpatient basis as specified by the Secretary through rulemaking.

We considered how to determine what other covered outpatient medical and health services should be considered ''REH services'' for purposes of payment under section 1834(x)(1). Section 1834(x)(1) provides that the amount of payment for REH services shall be equal to the amount of payment that would otherwise apply under section 1833(t) of the Act for covered OPD services (as defined in section 1833(t)(1)(B) (other than clause (ii) of such section, which are inpatient hospital services paid under the OPPS)), increased by 5 percent. We interpret this statutory language to mean that the scope of covered OPD services as defined in 1833(t)(1)(B) of the Act (excluding 1833(t)(1)(B)(ii)) represents the outer limit of services that CMS may specify as ''REH services.'' 1834(x)(1) frames the services that may receive the 5 percent increase provided under the statute for ''REH services'' exclusively in terms of covered OPD services, which we believe precludes including any services that are not ''covered OPD services'' in this definition. Although we interpret 1834(x)(1) to limit the potential scope of REH services to what is included within the definition of ''covered OPD services,'' we are not suggesting that REHs would be unable to furnish, and receive payment for, other services. Rather, we are stating that only services that are covered OPD services can be paid as specified under Section 1834(x)(1). For further discussion of CMS's proposals pertaining to payment for other services performed by REHs, please see discussion in the below section titled ''Services performed by REHs that are not specified REH services.''

Within the universe of covered OPD services, in its broadest interpretation, ''REH services'' could be defined to encompass all services included in the definition of ''covered OPD services,'' as provided in section 1833(t)(1)(B) of the Act, when furnished by an REH, with the exception of services described in clause (ii) of such section, which are hospital inpatient services, as REHs are precluded by section 1861(kkk)(2)(B) of the Act from providing acute inpatient services. Alternatively, CMS could define ''REH services'' to include only a smaller subset of services. For instance, we considered limiting ''REH services'' to services that are emergent in nature, such as those services described by the specific HCPCS codes describing emergency department visits and observation services.

We had some concerns, however, about narrowly defining the covered OPD services for which REHs may receive payment as REH services to only services that are emergent in nature. For one, if CMS were to limit the definition of REH services to strictly emergency services, this might cause REHs to cease to furnish other covered OPD services previously provided by the facility upon conversion of the facility to an REH, which could limit access to such services for some beneficiaries. This would seem antithetical to the purpose of section 125 of the CAA, which was created with the goal of ensuring greater access to outpatient services in rural areas. Further, a narrower definition could exclude services that may be desirable for REHs to provide in order to expand or maintain access to outpatient services in rural areas, including behavioral health, routine imaging, or clinic visits.

In light of our concerns with narrowly defining ''REH services'' and our interest in allowing maximum flexibility for REHs to tailor the services provided to the needs of their individual communities, for purposes of payment, we proposed to define ''REH services,'' at 42 CFR 419.91, as all covered outpatient department services, as defined in section 1833(t)(1)(B) of the Act, excluding services described in section 1833(t)(1)(B)(ii), furnished by an REH that would be paid under the OPPS when provided in a hospital paid under the OPPS for outpatient services, provided that the REH meets the various applicable REH CoPs. In other words, all services that are paid under the OPPS when furnished in an OPPS hospital, with the exception of acute inpatient services, would be REH services when furnished in a REH. We noted that this definition of REH services excludes services described in section 1833(t)(1)(B)(ii) of the Act, which cannot be considered REH services because they are inpatient services, which REHs are not permitted to furnish pursuant to section 1861(kkk)(2)(B) of the Act.

Additionally, we solicited comments on whether CMS should adopt a narrower definition of REH services than the definition we proposed, and if so, how commenters believe we should define these services and what methodology commenters suggest CMS use to determine whether a service meets this definition.

Comment: Multiple commenters supported CMS's proposal to designate all hospital outpatient services furnished by an REH as REH services, provided these services are furnished consistent with the applicable REH COPs. Commenters appreciated CMS taking a more expansive approach to the definition of REH services and accordingly, did not support narrowly limiting the definition of REH services. A few commenters, while supporting the proposed definition, cautioned CMS about the possible unintended consequences of such a broad definition, specifically that REHs could potentially become a point-of-service in larger systems who use the designation

as a means of generating higher payment for services that would otherwise be available at lower prices. The commenter encouraged CMS to monitor the REH program for this concern as the program develops.

A few commenters expressed concerns that the proposed definition of REH services excluded services not paid under the OPPS, particularly services paid off the physician fee schedule. Some commenters specifically requested that, when a CAH converts to an REH, that the REH continue to be able to bill for physician services under the CAH method II payment methodology.

Response: We appreciate commenters' support for our proposal. With regard to classification of services that are not hospital outpatient services paid under the OPPS as REH services, we believe that the statutory language in section 1834(x)(1) means that the scope of covered OPD services as defined in 1833(t)(1)(B) of the Act (excluding 1833(t)(1)(B)(ii)) represents the outer limit of services that CMS may specify as ''REH services'', and as this is the outer limit of the services CMS may specify as ''REH services'', we do not have the authority to expand this definition further. Given that the reimbursement for CAH method II billing is statutorily defined in Section 1834(g)(2) to only apply to CAHs, we likewise believe that we do not have the authority to apply the same policy to REHs as, once a CAH converts to an REH, it will no longer be a CAH, and therefore the CAH method II billing methodology would no longer be applicable. Instead, consistent with CMS's proposed approach to payment for outpatient services other than covered OPD services furnished by REHs discussed in Section XVIII.A.2.b of the proposed rule, physician services furnished in REHs would be paid off the Physician Fee Schedule. We also appreciate the concern over unintended consequences of adopting a broad definition of REH services, specifically concerns regarding the financial incentives for the provision of services in a REH rather than another hospital given the higher payment for REH services, and we will monitor utilization of REH services going forward.

After consideration of the public comments we received, and for the reasons described here and in the proposed rule, we are finalizing our definition of REH services at 42 CFR 419.91 as proposed.

(2) Payment for REH Services

Section 1834(x)(1) of the Act states that payment for REH services ''. . . shall be equal to the amount of payment that would otherwise apply under section 1833(t) for covered OPD services (as defined in section 1833(t)(1)(B) (other than clause (ii) of such section)), increased by 5 percent to reflect the higher costs incurred by such hospitals, and shall include the application of any copayment amount determined under section 1833(t)(8) as if such increase had not occurred.'' As a result, we proposed that payments for REH services would be calculated using existing OPPS payment policies and rules. The only differences between the payment for a covered OPD service furnished by an OPPS provider and the payment for an REH service furnished by an REH provider would be that the service payment to the REH would be equal to the applicable OPPS payment for the same service plus an additional 5 percent. Accordingly, we proposed to codify, at 42 CFR 419.92(a)(1), that the payment rate for an REH service would be calculated using the OPPS prospective payment rate for the equivalent covered OPD service increased by 5 percent.

Because we proposed to utilize OPPS payment policies and rules to effectuate payment rates for REH services equivalent to the OPPS payment rates plus five percent, we believed it would be most efficient from a claims processing perspective for the REHs to utilize the OPPS claims processing system to process REH payments. We proposed updating the OPPS claims processing logic to include an REH-specific payment flag, which an REH provider would utilize to indicate that the provider is an REH and should not be paid at the OPPS payment rates, but should instead be paid at the REH payment rates. Claims from REH providers for REH services would be processed within the OPPS claims processing system. However, when a REH submits a facility claim with the REH-specific payment flag, this payment flag would trigger payment for REH services on the claim at the REH services payment rate, which is the OPPS payment rate plus 5 percent.

We also proposed, consistent with the requirement in section 1834(x)(1) of the Act, that the copayment amount for an REH service would be determined as if the 5 percent payment increase had not occurred. That is, the additional 5 percent payment for REH services, above the amount that would be paid for covered OPD services, would not be subject to a copayment. Therefore, we proposed to codify in the REH payment regulation, at 42 CFR 419.92(a)(2), that the beneficiary copayment amounts for an REH service would be the amounts determined under the OPPS for the equivalent covered OPD service, pursuant to section 1833(t)(8) of the Act, and would exclude the 5 percent payment increase that applies to the REH service payment.

Finally, we noted that section 1834(x)(5)(A) of the Act states that ''. . . except as provided in subparagraph (B), payments under this subsection shall be made from the Federal Supplementary Medical Insurance Trust Fund under section 1841.'' The statute makes clear that payments for services rendered by REHs receive payment from the Federal Supplementary Medical Insurance Trust Fund under section 1841. We noted, however, that payments for REH services would have no impact on OPPS budget neutrality because REH services are not covered OPD services under section 1833(t) of the Act to which the OPPS budget neutrality requirements apply. This also means that REH claims would not be used for OPPS rate setting purposes. Consistent with section 1834(x)(5)(A) of the Act, REH service payments will be paid from the Federal Supplementary Medical Insurance Trust Fund under section 1841 of the Act.

Comment: Multiple commenters supported excluding payment for REH services from OPPS budget neutrality requirements.

Response: We appreciate the commenters' support of this policy.

Comment: Commenters requested that CMS implement additional measures to support IHS facilities that convert to REHs. Policies suggested by commenters include providing supplemental payments to former IHS facilities that experience a revenue loss after their REH conversion, or allowing IHS facilities that convert to REHs to receive payment for services at the IHS all-inclusive encounter rate plus a 5 percent premium payment to substitute for the OPPS payment rate plus 5 percent additional payment rate for other REH providers. Commenters also requested that IHS facilities that have converted to REHs receive the REH monthly facility payment in addition to the IHS all-inclusive rate payment.

Response: We appreciate the suggestions by the commenters. IHS facilities have limited staff and financial resources, factors which increase the risk of changing payment methodologies for medical services, especially if the new payment approach generates less revenue than anticipated. We understand that targeted supplemental payments or retaining familiar payment methodologies may encourage IHS facilities eligible to become REHs to convert. However, these payment suggestions for IHS facilities that

convert to REHs were neither proposed nor discussed in the CY 2023 OPPS/APC proposed rule. Therefore, we will consider policy suggestions for alternative payment methodologies for IHS facilities that convert to REHs in future rulemaking along with consulting with interested tribal parties regarding these policies.

Comment: Multiple commenters asked that eligibility requirements for the 340B Drug Pricing Program (340B Program) be modified so that REHs can participate in the program. Commenters are concerned that excluding REHs from being eligible for the 340B Program will discourage providers from converting to REHs because providers that are currently eligible for the 340B Program would no longer be able to purchase drugs through the 340B Program when they convert to REHs.

Response: These comments are out-of-scope as HRSA, and not CMS regulates the 340B Program. HRSA is responsible for determining whether a healthcare provider is eligible for the 340B Program, and managing the 340B-eligible provider types that are listed in the 340B statute.

Comment: One commenter requested that CMS designate REHs as graduate medical education (GME) eligible facilities similar to the GME designation for CAHs.

Response: We appreciate the commenter's concern regarding residency training at REHs, however, we did not propose a policy to designate REHs as GME eligible facilities. We do not think it would be appropriate to adopt such a policy without describing it in a proposed rule and obtaining public comments from all interested parties. However, we will consider this comment for future rulemaking.

After consideration of the public comments we received, and for the reasons described here and in the proposed rule, we are finalizing our proposals for the payment of REH services without modification. These proposals include:

- Calculating the payment rate for an REH service using the OPPS prospective payment rate for the equivalent covered OPD service increased by 5 percent. We will codify this policy in regulation at 42 CFR 419.92(a)(1);
- Updating the OPPS claims processing logic to include an REH-specific payment flag, which REH providers will utilize to indicate that the provider is an REH and should not be paid at the OPPS payment rates, but instead will be paid at the REH payment rates. Claims from REH providers for REH services will be processed within the OPPS claims processing system; and
- Beneficiary copayment amounts for REH services will be the amounts determined under the OPPS for the equivalent covered OPD service, pursuant to section 1833(t)(8) of the Act, and will exclude the 5 percent payment increase that applies to the REH service payment. We will codify this policy in regulation, at 42 CFR 419.92(a)(2).

b. Services Performed by REHs That Are Not Specified REH Services

Section 1834(x)(1) specifically addresses the payment rate that applies for ''REH services,'' which, as discussed above, include at most the full range of covered OPD services for which payment can be made under the OPPS. Likewise, as discussed further below, sections 1834(x)(3) and 1834(x)(4) of the Act specifically address payment for ambulance services and post-hospital extended care services that are furnished by an REH. However, section 125 of the CAA is silent on how CMS should pay for other services furnished by an REH, such as services paid under the Clinical Laboratory Fee Schedule (CLFS) or outpatient therapy services, that may be provided on an outpatient basis by hospital outpatient departments, but that are not covered OPD services, as defined under section 1833(t)(1)(B) of the Act, and thus, pursuant to the limiting language in 1834(x)(1) of the Act, would not be payable as REH services when furnished by an REH.

In order for a REH to fulfill the statutory requirements set forth in section 1861(kkk)(2) of the Act, as well as the proposed CoPs for REHs described in the proposed rule ''Medicare and Medicaid Programs; Conditions of Participation (CoPs) for Rural Emergency Hospital (REH) and Critical Access Hospital CoP Updates,'' which appeared in the **Federal Register** on July 6, 2022 (87 FR 40350), REHs must be capable of providing certain types of outpatient services that are not covered OPD services, such as basic laboratory services and certain diagnostic services. Additionally, the proposed REH CoPs state that the REH may provide outpatient and medical health diagnostic and therapeutic items and services that are commonly furnished in a physician's office or at another entry point into the health care delivery system that include, but are not limited to, radiology, laboratory, outpatient rehabilitation, surgical, maternal health, and behavioral health services. For further discussion of the REH COPs, please see section XVIII.B. of this final rule.

As discussed above, section 1834(x)(1) of the Act provides that the amount CMS shall pay for REH services furnished by an REH shall be the same amount that would otherwise apply under section 1833(t) of the Act for covered OPD services plus five percent. However, section 125 of the CAA does not indicate that the additional 5 percent payment described in 1834(x)(1) of the Act would apply to any services other than those within the definition of ''REH services.'' While some of the services described by the proposed REH CoPs would meet the definition of an REH service because they are also covered OPD services under section 1833(t)(1)(B) of the Act and would therefore be eligible for the 5 percent additional payment specified in 1834(x)(1) of the Act, others—such as laboratory services paid off of the CLFS, and outpatient rehabilitation services—are outside the scope of covered OPD services and therefore, for the reasons previously discussed, could not meet the definition of a REH service. However, CMS believes that it is consistent with the statutory requirements for rural emergency hospitals set forth in section 1861(kkk)(2) of the Act for these services to be paid when they are furnished in an REH. As a result, we proposed to codify, at 42 CFR 419.92(c), that any outpatient service furnished by an REH consistent with the statutory requirements governing this provider type and the proposed REH CoPs, that does not meet the proposed definition of REH services, would be paid at the same rate the service would be paid if performed in a hospital outpatient department and paid under a fee schedule other than the OPPS, provided the requirements for payment under that system are met.

As noted above, section 1834(x)(3) of the Act states that ''. . . for provisions relating to payment for ambulance services furnished by an entity owned and operated by a rural emergency hospital, see section 1834(l).'' Section 1834(l) of the Act establishes the Medicare ambulance fee schedule. Therefore, consistent with section 1834(x)(3) of the Act, we proposed to codify, at 42 CFR 419.92(c)(1), that an entity that is owned and operated by an REH that provides ambulance services will receive payment for such services under the ambulance fee schedule as described in section 1834(l) of the Act and, as described in section VIII.A.7.b of the CY 2023 OPPS/ASC proposed rule (87 FR 44786 through 44787), to revise § 410.40(f) to include an REH as a covered origin and destination for ambulance transport.

Section 1861(kkk)(6)(A) of the Act provides discretion for REHs to include

a unit that is a distinct part of the facility licensed as a skilled nursing facility to furnish post-hospital extended care services. Further, section 1834(x)(4) of the Act states that ''. . . for provisions relating to payment for post-hospital extended care services furnished by a rural emergency hospital that has a unit that is a distinct part licensed as a skilled nursing facility, see section 1888(e).'' Section 1888(e) of the Act establishes the skilled nursing facility prospective payment system. Consistent with section 1834(x)(4), we therefore proposed to codify, at 42 CFR 419.92(c)(2), that post-hospital extended care services provided by an REH in such a unit receive payment through the skilled nursing facility prospective payment system as described at section 1888(e) of the Act.

Comment: Many commenters requested that CMS pay the additional 5 percent for services furnished in an REH that do not meet the definition of REH services, such as laboratory services paid off of the CLFS, and outpatient rehabilitation services. A few commenters supported CMS's proposal, stating that they recognized that CMS was limited in applying the additional 5 percent payment to those services described in section 1833(t)(1)(B) of the Act.

One commenter asked CMS to clarify that its packaging policy for laboratory services will continue to apply to the adjusted OPPS payment made to an REH. The commenter noted that beginning in 2014, CMS packaged most laboratory tests into its OPPS payments on the basis that laboratory tests are integral, ancillary, supportive, dependent or adjunctive to a primary service or services when provided on the same day and ordered by the same physician for a hospital outpatient.

Response: We agree with the commenters that CMS's ability to pay an additional 5 percent for services furnished by an REH that are not designated as REH services is precluded by the statute. Section 125 of the CAA 2021 does not indicate that the additional 5 percent payment described in 1834(x)(1) of the Act would apply to any services other than those within the definition of ''REH services'' (*e.g.,* covered OPD services other than those described in 1833(t)(1)(B)(ii)). The statute, in particular 1834(x)(3) and 1834(x)(4), as well as the proposed REH CoPs, anticipate that REHs will furnish certain types of services that do not fall within the definition of REH services. CMS believes that it is consistent with the statutory requirements for REHs that these facilities receive payment when they furnish such other services, and therefore that we proposed that such services would be paid at the same rate the service would be paid if performed in a hospital outpatient department and paid under a fee schedule other than the OPPS, provided the requirements for payment under that system are met. With regard to packaging of laboratory services, the same rules apply for REHs as for OPPS hospitals. If a lab service would be packaged into an OPPS payment for a primary service or services furnished by a hospital that is paid under OPPS, then it will be packaged into the REH payment for the analogous primary service or services when furnished by a REH. If the lab service would have been paid separately under the CLFS if furnished by a hospital that is paid under OPPS, it likewise will be paid under the CLFS at the CLFS rate when furnished by a REH.

Comment: Multiple commenters requested that CAHs with skilled nursing facilities that want to continue to provide skilled nursing services after conversion to an REH should have a transition period of up to 18 months before the skilled nursing facility is required to receive payment for skilled nursing services through the patient driven payment model (PDPM). These commenters suggested that during the transition period the skilled nursing facility should continue to receive payment at prior rates for swing bed payment.

Response: As noted above, section 1834(x)(4) refers, with respect to payment for post-hospital extended care services furnished by an REH, to the provisions relating to payment for such services described in section 1888(e) of the Act. For the reasons previously discussed, CMS reads that provision to require that a skilled nursing facility that is a distinct part unit of an REH, including such a facility that was previously part of a CAH that has converted to a REH, to be paid through the skilled nursing facility prospective payment system. The statute makes no provision for skilled nursing facilities of former CAHs that convert to REHs to receive a period of transition from their former payment rates to payment under the skilled nursing facility prospective payment system. Nor was such a transitional period contemplated in the proposed rule.

Because the commenter's request for CMS to establish transition payments for a skilled nursing facility that was previously a part of CAH if that CAH converts to an REH goes beyond the scope of the proposed framework for payment for services furnished by an REH, and does not appear to be supported by the REH statute, we are finalizing the policy for payment of post-hospital extended care services furnished by a distinct part unit within an REH as proposed, without a transition period for services furnished by the SNF units of former CAHs. After consideration of the public comments we received, and for the reasons described here and in the proposed rule, we are finalizing our proposals for payment of services performed by REHs that are not specified REH services, as set forth in 42 CFR 419.92(c), without modification.

c. Payment for an Off-Campus Provider-Based Department of an REH

As discussed above, section 1834(x)(1) of the Act sets forth the amounts that shall be paid for REH services in terms of amounts that would be otherwise apply for ''covered OPD services'' under 1833(t). Section 1833(t)(1)(B)(v) of the Act, which was added by section 603 of the Bipartisan Budget Act of 2015 (Pub. L. 114–74), enacted on November 2, 2015, (''BBA''), specifically excludes from the definition of ''covered OPD services'' applicable items and services furnished by an off-campus outpatient department of a provider as defined by sections 1833(t)(21)(A) and (B) of the Act. In light of the exclusion contained in 1833(t)(1)(B)(v) of the Act, CMS has carefully considered how an REH will be paid for items and services furnished by in an off-campus outpatient department of the REH. Section 1861(kkk)(8) of the Act appears to speak to this issue, stating that nothing in that provision, section 1833(a)(10), or section 1834(x) shall affect the application of paragraph (1)(B)(v) of section 1833(t), relating to applicable items and services (as defined by 1833(t)(21)(A)) that are furnished by an off-campus outpatient department of a provider (as defined by 1833(t)(21)(B)). For the reasons discussed in this section, CMS proposed to interpret this language as stipulating that the new provisions governing payments for services furnished by REHs are not intended to change the existing scope and applicability of the section 603 amendments to section 1833(t) of the Act, and that, as a result, the section 603 amendments would not apply to the determination of the payment rates for services furnished by an off-campus outpatient department of a REH.

Section 603 of the BBA amended section 1833(t)(1)(B) of the Act by adding a new clause (v), which excludes from the definition of ''covered OPD services'' applicable items and services (defined in paragraph (21)(A) of the section) that are furnished on or after

January 1, 2017, by an off-campus outpatient department of a provider, as defined in paragraph (21)(B) of the section. Section 603 also added a new paragraph (21) to section 1833(t) of the Act, which defines the terms ''applicable items and services'' and ''off-campus outpatient department of a provider,'' and requires the Secretary to make payments for such applicable items and services furnished by an off-campus outpatient department of a provider under an applicable payment system (other than the OPPS). In defining the term ''off-campus outpatient department of a provider,'' section 1833(t)(21)(B)(i) of the Act specifies that the term means a department of a provider (as defined at 42 CFR 413.65(a)(2) as that regulation was in effect on November 2, 2015) that is not located on the campus (as defined in § 413.65(a)(2)) of the provider, or within the distance (as described in the definition of campus) from a remote location of a hospital facility (as defined in section § 413.65(a)(2)). We note that, in order to be considered part of a hospital, an off-campus department of a hospital must meet the provider-based criteria established under 42 CFR 413.65. Accordingly, in the CY 2023 OPPS/ASC proposed rule (87 FR 44502), we refer to an ''off-campus outpatient department of a provider,'' which is the term used in section 603, as an ''off-campus outpatient provider-based department'' or an ''off-campus PBD.''

Sections 1833(t)(21)(B)(ii) through (vi) of the Act except from the definition of ''off-campus outpatient department of a provider,'' for purposes of paragraphs (1)(B)(v) and (21)(B) of the section, an off-campus PBD that was billing under section 1833(t) of the Act with respect to covered OPD services furnished prior to November 2, 2015, as well as off-campus PBDs that meet the ''mid build'' requirement described in section 1833(t)(21)(B)(v) of the Act and the departments of certain cancer hospitals. Likewise, the department of a provider located on the campus of such provider or within the distance (described in the definition of campus at § 413.65(a)(2)) from a remote location of a hospital facility (as defined in § 413.65(a)(2)), is also excepted from the definition of ''off-campus outpatient department of a provider'' pursuant to section 1833(t)(21)(B)(i). The items and services furnished on or after January 1, 2017 (or during 2018 or a subsequent year for off-campus PBDs that qualify for the mid-build exception), by the various types of excepted off-campus PBDs described in 1833(t)(21)(B) continue to be paid under the OPPS. In addition, we note that in defining ''applicable items and services,'' section 1833(t)(21)(A) of the Act specifically excludes items and services furnished by a dedicated emergency department as defined at 42 CFR 489.24(b).

In the CY 2017 OPPS/ASC final rule with comment period (81 FR 79699 through 79720), we established a number of policies to implement the section 603 amendments. Broadly, we: (1) defined applicable items and services in accordance with section 1833(t)(21)(A) of the Act for purposes of determining whether such items and services are covered OPD services under section 1833(t)(1)(B)(v) of the Act or whether payment for such items and services will instead be made under the applicable payment system designated under section 1833(t)(21)(C) of the Act; (2) defined off-campus PBD for purposes of sections 1833(t)(1)(B)(v) and (t)(21) of the Act; and (3) established policies for payment for applicable items and services furnished by an off-campus PBD (nonexcepted items and services) under section 1833(t)(21)(C) of the Act. We specified the Medicare Physician Fee Schedule (PFS) as the applicable payment system for most nonexcepted items and services furnished by nonexcepted off-campus PBDs. Nonexcepted items and services furnished by nonexcepted off-campus PBDs are generally paid under the PFS at the applicable OPPS payment rate adjusted by the PFS Relativity Adjuster of 40 percent (82 FR 53030).

Section 125(a)(1) of the CAA added regarding the application of the section 603 amendments to REHs that clarifies the application of provisions relating to off-campus outpatient department of a provider. The section states nothing in section 1886(kkk), section 1833(a)(10) or section 1834(x) shall affect the application of paragraph (1)(B)(v) of section 1833(t), relating to applicable items and services that are furnished by an off-campus outpatient department of a provider (as defined in subparagraph (B) of such paragraph).

While we proposed to define REH services as the covered OPD services furnished by an REH, REHs are not paid under the OPPS; we do not interpret the language in section 1861(kkk)(8) to indicate that the section 603 amendments to section 1833(t) should apply to off-campus PBDs of a REH. Rather, we believe section 1861(kkk)(8) can reasonably be interpreted as demonstrating an intent that the creation of the REH provider type would not change the existing scope and applicability of the section 603 amendments, such that the exclusion of items and services furnished by nonexcepted off-campus PBDs from the definition of covered outpatient department services under the section 603 amendments continues to apply only to items and services furnished by the nonexcepted off-campus PBDs of subsection (d) hospitals paid under the OPPS and does not apply to items and services furnished by an off-campus PBD of an REH, because REHs are a different provider type and are not paid under the OPPS.

We noted that interpreting section 1861(kkk)(8) of the Act to instead mean that the section 603 amendments should apply to items and services furnished by off-campus PBDs of REHs appears to be contrary to the Congressional intent for creating this new provider type, as this interpretation would potentially disincentivize some otherwise eligible facilities from choosing to convert to REHs. Specifically, we noted that section 603 does not apply to items and services furnished by the off-campus PBDs of CAHs. However, if the section 603 amendments applied to the off-campus PBDs of a former CAH that becomes an REH, these off-campus PBDs would appear to meet the statutory definition of ''off-campus outpatient department of a provider,'' and items and services furnished by these entities would be excluded from the definition of ''covered OPD services'' and paid at the alternative applicable payment system as provided under section 1833(t)(21)(C). Thus, if a CAH becomes an REH and as a result becomes subject to the section 603 amendments, it would experience a significant decrease in payment for items and services furnished by its off-campus PBDs, relative to the amount paid for such services when the entity was a CAH (where it is generally paid at 101 percent of reasonable cost). This would create a financial disincentive for CAHs to convert to REHs and would seem to be contrary to the Congressional intent for creating this new provider type.

We proposed to codify in the REH payment regulation, at 42 CFR 419.93(a), that items and services furnished by off-campus PBDs of REHs are not applicable items and services under sections 1833(t)(1)(B)(v) or (t)(21) of the Act, and thus that items and services furnished by these off-campus PBDs that otherwise meet the definition of ''REH services'' will receive the REH services payment amount of the OPPS payment plus 5 percent, as provided in section 1834(x)(1) of the Act and described in the proposed regulation text at 42 CFR 419.92(a)(1). Likewise, items and services furnished by the off-campus PBD of a REH that do not meet

the definition of ''REH services'' would be paid under the payment system applicable to that item or service, provided the requirements for payment under the relevant system are met, as described in the proposed regulation text at 42 CFR 419.92(c).

We solicited comment on alternative payment approaches for items and services furnished by the off-campus PBDs of REHs that may be supported by the REH statute, including section 1861(kkk)(8) of the Act. For example, CMS solicited comment on whether application of the section 603 amendments to an off-campus PBD of an REH should depend on whether that provision applied to the entity before it converted to an REH. Under that framework, if a CAH converts to a REH, because section 1833(t)(1)(B)(v) of the Act did not apply to the CAH before converting, REH services furnished by any existing off-campus PBDs of the CAH would be paid at 105 percent of the OPPS rate, rather than at the PFS-equivalent rate required by section 1833(t)(1)(B)(v) and (t)(21) of the Act. However, because sections 1833(t)(1)(B)(v) and (t)(21) of the Act would have applied to any nonexcepted off-campus PBDs of small rural hospital paid under the OPPS before that entity converted to an REH, any existing nonexcepted off-campus PBDs of the small rural hospital would continue to be considered nonexcepted off-campus PBDs and would continue to receive the PFS-equivalent rate under section 1833(t)(21)(C) of the Act. Under this framework, any new off-campus PBDs created by the REH would be subject to the section 603 amendments. We solicited comment on our proposed approach for paying for items and services furnished by the off-campus PBDs of REHs, as well as any alternative approaches to this issue that interested parties may have.

Comment: Many commenters supported CMS's proposal to exempt both existing off-campus PBDs of entities converting to REHs and any off-campus PBDs created post conversion to an REH from the section 603 amendments to section 1833(t). These commenters encouraged CMS to finalize this proposal, and to not finalize the alternative payment approach.

Response: We thank commenters for their support.

Comment: We received multiple requests to clarify whether certain provider-based rural health clinics (RHCs) will maintain their excepted status under section 1861(kkk)(6)(B) of the Act after their associated hospital or CAH converts to an REH. Provider-based RHCs that meet specified criteria under this statute are entitled to special payment rules. Beginning April 1, 2021, an excepted RHC had their payment-limit per-visit established on their all-inclusive rate instead of the national statutory payment-limit of $100.

Response: We agree with the commenters and believe that section 1861(kkk)(6)(B) of the Act may be read to mean that if a provider-based RHC was entitled to ''grandfathering'' by virtue of being in existence on December 31, 2020 and forward, then that RHC could continue to utilize the exceptions set out in section 1833(f) of the Act if its associated hospital converts to an REH. We are finalizing our policy that provider-based RHCs may maintain their excepted status under section 1861(kkk)(6)(B) of the Act when their associated hospital converts to an REH.

After consideration of the public comments we received, and for the reasons discussed here, we are finalizing our proposals for payment of services furnished by an off-campus Provider-Based Department of an REH, as set forth in 42 CFR 419.93, as proposed, while clarifying that provider-based RHCs that were previously entitled to excepted status under section 1833(f) of the Act may maintain this status when their associated hospital converts to an REH.

5. Monthly REH Facility Payment

a. Overview of the Monthly REH Facility Payment

Section 1834(x)(2) of the Act establishes an additional facility payment that is paid monthly to an REH. Section 1834(x)(5)(B) specifies that this monthly facility payment shall be made from the Federal Hospital Insurance Trust Fund under section 1817. Sections 1834(x)(2)(B) and 1834(x)(2)(C) of the Act require that, for 2023, the monthly payment is determined by first calculating the total amount that CMS determines was paid to all CAHs under Title 18 of the Act in 2019 minus the estimated total amount that would have been paid under Title 18 to CAHs in 2019 if payment were made for inpatient hospital, outpatient hospital, and skilled nursing facility services under the applicable prospective payment systems for such services during 2019. The difference is divided by the number of CAHs enrolled in Medicare in 2019 to calculate the annual amount of this additional facility payment per individual REH for 2023. The annual payment amount is then divided by 12 to calculate the monthly facility payment that each REH will receive. For 2024 and subsequent years, the monthly facility payment will be the amount of the monthly facility payment for the previous year increased by the hospital market basket percentage increase as described under section 1886(b)(3)(B)(iii) of the Act.

We interpreted the references to the year 2019 in sections 1834(x)(2)(C)(i) and 1834(x)(2)(C)(ii) of the Act to mean calendar year 2019 (CY 2019) rather than fiscal year 2019 (FY 2019) because, in the absence of language implicitly or explicitly denoting the year as fiscal, we believe calendar year is the most logical reading. The REH payment system is based on the OPPS, which sets its payment rates and rules on a CY schedule. Additionally, section 1834(x)(1) of the Act states that payments for REH services will begin on January 1, 2023, which is the first day of the CY. Accordingly, we proposed to codify the calculation of the REH monthly facility payment, under 42 CFR 419.92(b)(1), to specifically refer to the amounts that were and would have been paid to CAHs in calendar year 2019. Under this proposal, we would apply the CY schedule even when the sections refer to the inpatient hospital prospective payment system or the skilled nursing facility prospective payment system where substantial policy changes are implemented on a fiscal year schedule. Therefore, when we calculate the total amount that would have been paid to CAHs if inpatient hospital services, outpatient hospital services, and skilled nursing facility services were paid under their respective prospective payment systems, we would use claims data from the last nine months of FY 2019 and the first three months of FY 2020 to calculate payment data for CY 2019 for both inpatient hospital services and skilled nursing facility services and claims data from CY 2019 for outpatient hospital services.

When determining ''the total amount that . . . was paid under this title to all critical access hospitals,'' as described in section 1834(x)(2)(C)(i)(I) of the Act, we proposed to include both amounts paid to CAHs from the Medicare program and from beneficiary copayments. Likewise, we proposed to include both projected payments from the Medicare program and projected beneficiary copayments when determining the estimated total amount that would have been paid to CAHs had they been paid on a prospective basis, as described in section 1834(x)(2)(C)(i)(II) of the Act. By including both Medicare trust fund payments and beneficiary copayments, we believe that the resulting

calculations will reflect the actual payments CAHs received for services provided in CY 2019 and ensure that the full amount of additional payments made to CAHs are reflected in the determination of the monthly REH facility payment. Because CAHs are generally paid at 101 percent of reasonable cost, a 2014 report found that in 2012 beneficiary copayments consisted of around 47 percent of the total Medicare-related outpatient hospital spending for CAHs.[311]

As discussed in the proposed rule, excluding around 47 percent of the payment CAHs received in 2019 for Medicare services from the REH monthly facility payment calculation would generate a monthly facility payment that would cover a substantially smaller share of the costs REHs face. We believed that if the calculation of the monthly facility payment does not reflect payments from beneficiaries, CAHs and small rural hospitals could be discouraged from converting into REHs because the monthly facility payment would be too small.

Using our calculations, which we will discuss in more detail in sections XVIII.A.5.b and XVIII.A.5.c of this final rule with comment period, [312] we estimated in the proposed rule that the estimated prospective payment for CAHs in 2019 is 58.2 percent of total CAH spending in 2019 when copayments are included for both total CAH spending and the estimated prospective payment for CAHs. Thus, in the proposed rule we estimated that the aggregate REH monthly facility payment would be 72 percent of the estimated prospective payment for CAHs in 2019. The combination of the estimated prospective payment for CAHs and the aggregate REH monthly facility payment where copayments are included in the calculation for an REH would be close to the amount that an REH would have received from Medicare if it had decided to stay as a CAH and not convert to an REH. Therefore, it less likely that a CAH would lose revenue if it converted to an REH in the future, which may encourage a CAH to convert to an REH. In the proposed rule, we also estimated that if copayments are removed from both the total amount of CAH spending in 2019 and the estimated prospective payment for CAHs in 2019, the aggregate monthly facility payment for all providers only would be 11.1 percent of the estimated prospective payment for CAHs in 2019 where the estimated prospective payment amount includes copayments. That means a CAH converting to an REH would face a substantial reduction in Medicare payment if it converted to an REH. Please see the detailed calculations from the proposed rule below:

Step 1: Total estimated CAH spending in CY 2019 with copayments: $12,083,666,636.

Total estimated prospective payment for CAHs in CY 2019 with copayments: $7,033,248,418.

Difference: $12,083,666,636 − $7,033,248,418 = $5,050,418,218.

Aggregate REH monthly facility payment with copayments: $5,050,418,218.

Share of the aggregate REH monthly facility payment with copayments of the total estimated prospective payment for CAHs in CY 2019 with copayments: $5,050,418,218/$7,033,248,418 = 72 percent.

Step 2: Total estimated CAH spending in CY 2019 removing copayments: $12,083,666,636 × 0.53 = $6,404,343,317.

Total estimated prospective payment for CAHs in CY 2019 removing copayments: $5,626,598,734.

Difference: $6,404,343,317 − $5,626,598,734 = $777,744,583.

Aggregate REH monthly facility payment without copayments: $777,744,583.

Total estimated prospective payment for CAHs in CY 2019 with copayments: $7,033,248,418.

Share of the aggregate REH monthly facility payment without copayments of the total estimated prospective payment for CAHs in CY 2019 with copayments: $777,744,583/$7,033,248,418 = 11.1 percent.

We believed that including both Medicare trust fund payments and beneficiary copayments in the calculation of the monthly facility payment reflected the intent of the statute to provide incentives for CAHs and small rural hospitals that might otherwise close to convert to REHs and continue to provide outpatient hospital care in rural communities. We proposed to codify including payments from the Medicare program and beneficiary copayments for CAHs to calculate the monthly facility payment under 42 CFR 419.92(b)(1)(i) and (ii).

Finally, section 1834(x)(2)(D) of the Act states that ''[a] rural emergency hospital receiving the additional facility payment under this paragraph shall maintain detailed information as specified by the Secretary as to how the facility has used the additional facility payments. Such information shall be made available to the Secretary upon request.'' Accordingly, we proposed to codify this reporting requirement, under 42 CFR 419.92(b)(3), to state that an REH receiving the additional monthly facility payment must maintain detailed information as to how the facility has used the monthly facility payments and must make this information available upon request. We believe that this requirement can be met using existing cost reporting requirements for outpatient hospital facilities that would include REHs. The cost reports track spending on outpatient hospital services as a part of overall provider spending. This information will show if a sufficient share of revenue to the REH, which includes the monthly facility payment, is being directed to outpatient care. For CY 2023, we therefore did not propose to establish any new reporting or data collection requirements for REHs related to their use of the REH monthly facility payments. However, we will monitor this issue in CY 2023 to see if we may need to propose new reporting or data collection requirements for REHs in future rulemaking.

Comment: Multiple commenters, including MedPAC, noticed that we reported two different amounts for the total estimated prospective payment for CAHs in CY 2019. For the comparison of the monthly facility payment aggregate amount as a share of total estimated prospective payment when including or excluding copayments, we reported a total estimated prospective payment for CAHs in CY 2019 of $7.03 billion. For the calculation of the monthly facility payment for an individual REH, we reported a total

[311] Office of Inspector General, Department of Health and Human Services. 2014. Medicare beneficiaries paid nearly half of the costs for outpatient services at critical access hospitals. OEI–05–12–00085. Washington, DC: OIG.

[312] In the CY 2023 OPPS proposed rule, we provided calculations for the total amount paid under title XVIII to CAHs in CY 2019 (as described in section 1834(x)(2)(C)(I)), which assumed that the beneficiary copayment share of CAH payment for Medicare services was 47 percent. As discussed further below, commenters noted in response to the proposed rule that although around 47 percent of CAH outpatient hospital payment spending consists of beneficiary copayment dollars, the beneficiary copayment share for inpatient hospital services and skilled nursing services in CAHs is around 20 percent of total spending rather than the around 47 percent of total Medicare spending for these services that we claimed in the CY 2023 OPPS proposed rule. In addition, commenters noted that CMS's estimate of total estimated prospective payment for CAHs in CY 2019 in our copayment discussion incorrectly excluded inpatient hospital supplemental payments that CAHs would receive if they were paid on a prospective basis. In response to these comments, CMS has provided revised calculations in this final rule that more accurately reflect the beneficiary copayment share of spending for inpatient hospital services and skilled nursing services furnished by CAHs in CY 2019, as well as the estimated total prospective payment for CAHs in CY 2019.

estimated prospective payment for CAHs in CY 2019 of $7.68 billion. The commenters wanted know which number was the correct amount, and for us to correct the calculation with the incorrect amount.

In addition, one commenter, MedPAC, disagreed with our determination that 47 percent of total Medicare payments to CAHs are beneficiary copayments. MedPAC stated that the 47 percent figure only applies to hospital outpatient services, and that copayment percentages for inpatient hospital services and skilled nursing services are much lower than outpatient hospitals services for CAHs. MedPAC noted that the copayment amounts for inpatient hospital and skilled nursing services are same for a CAH as it would be for a hospital receiving prospective payment.

Response: The correct amount of total estimated prospective payment for CAHs in CY 2019 is $7.68 billion. The $7.03 billion amount mistakenly excluded supplemental inpatient hospital payments that are made to prospectively paid hospitals. In response to this comment, CMS has updated the calculations comparing the monthly facility payment aggregate amount as a share of total estimated prospective payment when including or excluding copayments presented in the CY 2023 OPPS/ASC proposed rule, as provided below.

In addition, we agree with the copayment information stated by MedPAC, and have revised the calculations on this topic that were provided in the CY 2023 OPPS/ASC proposed rule, as shown below. For our revised calculations that compare the monthly facility payment aggregate amount as a share of total estimated prospective payment when including or excluding copayments we have made the below revised assumptions:

(1) The copayment percentage of CAH outpatient hospital payment is approximately 47 percent;

(2) The copayment percentage of prospective payment outpatient hospital payment is slightly under 20 percent because some preventive services have no copayment, and the copayment for a few high-cost outpatient services is capped at the cost of the inpatient hospital deductible; and

(3) The copayment amounts for inpatient hospital services and skilled nursing services are the same whether the provider is a CAH or a prospectively-paid provider. Therefore, the copayment amounts cancel each other out in the equation.

We revised our assumptions to be in agreement with the beneficiary copayment share of CAH Medicare spending and the beneficiary copayment share of Medicare spending for prospectively paid hospitals described by MedPAC.

Our revised calculations are based on the detailed methodology presented in the CY 2023 OPPS/ASC proposed rule (87 FR 44781). These calculations do not include any updates to the detailed methodology that were made in this final rule. Our revised calculations are as follows:

Step 1: Total estimated CAH spending in CY 2019 with copayments: $12,083,666,636.

Total estimated prospective payment for CAHs in CY 2019 with copayments: $7,679,358,171.

Difference: $12,083,666,636 − $7,679,358,171 = $4,404,308,465.

Aggregate REH monthly facility payment with copayments: $4,404,308,465.

Share of the aggregate REH monthly facility payment with copayments of the total estimated prospective payment for CAHs in CY 2019 with copayments: $4,404,308,465/$7,679,358,171 = 57 percent.

Step 2: Total estimated CAH spending in CY 2019 removing copayments: $9,078,931,318.

Total estimated prospective payment for CAHs in CY 2019 removing copayments: $7,002,437,498.

Difference: $9,078,931,318 − $7,002,437,498 = $2,076,493,820.

Aggregate REH monthly facility payment without copayments: $2,076,493,820.

Total estimated prospective payment for CAHs in CY 2019 with copayments: $7,679,358,171.

Share of the aggregate REH monthly facility payment without copayments of the total estimated prospective payment for CAHs in CY 2019 with copayments: $2,076,493,820/$7,679,358,171 = 27 percent.

Our revised calculations, using updated assumptions about the percentage of total Medicare spending for CAHs in CY 2019 from beneficiary copayments and corrected estimates about of prospective payment for CAHs in 2019, indicate that the aggregate REH monthly facility payment including copayments would be 57 percent of the estimated prospective payment for CAHs in 2019. In comparison, our prior calculations from the CY 2023 OPPS/ASC proposed rule found that the aggregate REH monthly facility payment including copayments was 72 percent of the estimated prospective payment for CAHs in 2019.

In our revised calculations, the combination of the estimated prospective payment for CAHs and the aggregate REH monthly facility payment where copayments are included in the calculation for an REH is more than twice the share of the estimated prospective payment amount than if copayments are removed from both the total amount of CAH spending in 2019 and the estimated prospective payment for CAHs in 2019 to calculate the aggregate monthly facility payment. In comparison, our prior calculations from the CY 2023 OPPS/ASC proposed rule found that the combination of the estimated prospective payment for CAHs and the aggregate REH monthly facility payment where copayments are included in the calculation for an REH is more than 6 times the share of the estimated prospective payment amount than if copayments are removed from both the total amount of CAH spending in 2019 and the estimated prospective payment for CAHs in 2019 to calculate the aggregate monthly facility payment.

Our updated calculations found a substantially smaller difference between an aggregate monthly facility payment calculated using both Medicare program spending and beneficiary copayment spending and an aggregate monthly facility payment calculated using only Medicare program spending and excluding beneficiary copayment spending than what we calculated in the CY 2023 OPPS/ASC proposed rule. However, the aggregate monthly facility payment calculated using both Medicare program spending and beneficiary copayment spending was still more than twice as large as the aggregate monthly facility payment calculated using only Medicare program spending and excluding beneficiary copayment spending. We believe the intent of creating the REH provider type was to provide financial support to hospitals that want to maintain outpatient hospital services in areas where it is no longer economically feasible to continue providing inpatient services. In order to do this, we believe the monthly facility payment was intended to help cover the difference in payment for services that a CAH would experience if it transitioned from receiving 101 percent of reasonable costs under the CAH payment methodology to prospective payment under the REH methodology. We believe an aggregate monthly facility payment that is calculated by factoring in both Medicare program spending and beneficiary copayment spending is the best way to address this difference.

Comment: One commenter, MedPAC, stated that the REH monthly facility payment should be calculated by

removing copayment dollars from the both the total amount of CAH spending in 2019 and the estimated prospective payment for CAHs in 2019. MedPAC determined that removing copayment dollars from the calculation of the aggregate monthly facility payment would result in a $1.5 million aggregate monthly payment per facility per year, instead of a proposed $3.2 million aggregate monthly payment per facility per year. MedPAC believes the smaller, $1.5 million aggregate monthly payment per facility per year will provide sufficient financial stability for REHs while also demonstrating that Medicare is a prudent payer of program funds. MedPAC believes a higher aggregate monthly payment is not the best policy considering that REHs will not be required to have a 24/7 emergency department staffed with a clinician as MedPAC believes one of the main purposes of the monthly facility payment would be to staff and support such a department. MedPAC is concerned that the higher monthly aggregate payment amount may result in too many facilities converting to REHs and further limiting access to inpatient hospital care in rural areas.

Response: We thank MedPAC for their comment. We believe the intent of the REH legislation was to provide financial assistance to support existing outpatient hospital and emergency department care in rural areas when it may not be feasible in the future to maintain an inpatient hospital capacity. We note, based on a July 2021 policy brief from the NC Rural Health Research Program,[313] that the majority of REHs are expected to be former CAHs. We believe the intent of the monthly facility payment was to address the gap in outpatient payment a CAH would experience in converting from receiving 101 percent of reasonable costs to receiving prospective payment. As such, we believe that an REH monthly facility payment that is calculated from both the total amount of Medicare program dollars and beneficiary copayments better reflects the potential gap in outpatient payment a REH would face after converting from a CAH, as the REH would receive not just lower Medicare payments for services, but also lower beneficiary copayments.

Comment: Multiple commenters supported our decision to calculate the REH monthly facility payment using both Medicare program dollars and beneficiary copayment funds.

Response: We appreciate the commenters' support of our proposal.

Comment: Multiple commenters supported our proposal to increase the REH monthly facility payment calculated in CY 2023 by the hospital market basket in subsequent years. However, many of the commenters were concerned that the hospital market basket increase may not be sufficient to capture all of the increased labor, supplies, and equipment costs that REHs may face in the future. These commenters strongly encourage us to monitor the annual market basket increase to ensure it is adequately covering the increased costs REHs are facing year over year.

Some commenters also were concerned that the monthly facility payment was based on CY 2019 payments to CAHs and CY 2019 estimated prospective payments if CAHs were paid like prospective payment hospitals with no market basket adjustment to the payment amounts for the period of 2020 through 2022. These commenters requested that we adjust the REH monthly payment calculated from CY 2019 data by the change in the market basket percentage from 2020 through 2022.

Response: We appreciate the support of the commenters for our proposal to increase the REH monthly facility payment calculated in CY 2023 by the hospital market basket in subsequent years. As described above, section 1834(x)(2)(B)(ii) of the Act requires that we increase the initial monthly facility payment calculated for CY 2023 by the hospital market basket amount in CY 2024 and subsequent years. We intend to regularly monitor the annual increases to the REH monthly payment to ensure the adequacy of the payment in future years. With respect to the request to adjust the REH monthly facility payment amount for CY 2023 by the market basket increase for the period of 2020 through 2022, we note that sections 1834(x)(2)(B)(i) and (C)(i) of the Act specify that the monthly facility payment for CY2023 should be based on the 2019 payment data and includes no provision for adjusting the payment amount to account for payment increases that CAHs and OPPS hospitals have received in the intervening years. Likewise, such an adjustment was not proposed in the proposed rule. Because the commenters' request goes beyond the scope of the proposed framework for calculation of the CY 2023 REH monthly facility payment and is not supported by the REH statute, we are finalizing the policy for calculation of the CY 2023 REH monthly facility payment based on CY payment 2019 data as proposed, without adjusting this data by the market basket increase for the period of 2020 through 2022.

Comment: Multiple commenters supported our use of 2019 calendar year claims rather than 2019 fiscal year claims to calculate the REH monthly facility payment.

Response: We appreciate the commenters' support for this decision.

Comment: Commenters requested additional cost reporting guidance from us. A commenter wants us to develop a cost report for REH providers. The commenter implies that the REH provider cost report should be finalized in time for reporting CY 2023 provider cost data. The commenter suggests that an REH cost report be based on the cost reporting structure for CAHs. The commenter wants interested parties to have time to review the specifications for an REH cost report and provide feedback before an REH cost report is implemented. Another commenter wants guidance on how to report the cost of observation services performed by REHs and whether the cost of emergency care would be separated from the cost of observation services in a cost report.

Response: We appreciate the commenters' suggestions regarding REH-specific cost reporting. However, we are concerned that new reporting requirements might create an additional burden for providers and discourage eligible providers from converting to an REH. For now, we will follow our proposed policy to monitor cost reporting for REHs for CY 2023 and future years. We will allow REH providers to continue to use their current cost reporting formats to report costs. If REH-specific cost reporting is determined to be necessary, we will consider this issue, including the commenters' policy suggestions, in future rulemaking.

Comment: Multiple commenters supported our proposal to not establish new cost reporting requirements for REHs for CY 2023. Some of the commenters also supported our decision not to propose specific requirements for the spending of REH monthly facility payments.

Response: We appreciate commenters' support of our proposals.

After consideration of the public comments we received, we are finalizing our monthly facility payment proposals without modification. We are required by statute, for CY 2023, to calculate the REH monthly facility payment by first calculating the total amount that CMS determines was paid to all CAHs under Title 18 of the Act in 2019 minus the estimated total amount

[313] Pink GH, Thompson KW, Howard HA, Holmes GM. *How Many Hospitals Might Convert to a Rural Emergency Hospital (REH)?* NC Rural Health Research Program, UNC Sheps Center. July 2021.

that would have been paid under Title 18 to CAHs in 2019 if payment were made for inpatient hospital, outpatient hospital, and skilled nursing facility services under the applicable prospective payment systems for such services during 2019. The difference is divided by the number of CAHs enrolled in Medicare in 2019 to calculate the annual amount of this additional facility payment per individual REH for 2023. The annual payment amount is then divided by 12 to calculate the monthly facility payment that each REH will receive. For 2024 and subsequent years, the monthly facility payment will be, as required by statute, the amount of the monthly facility payment for the previous year increased by the hospital market basket percentage increase.

We are finalizing our policy to use both Medicare program spending and beneficiary copayments to calculate the monthly facility payment after correcting errors with our original calculations which gave a more accurate picture of the amount of the aggregate monthly facility payment calculated using both Medicare program spending and beneficiary copayments as compared to the amount of the aggregate monthly facility payment using Medicare program spending alone. We will calculate the monthly facility payment using claims data from calendar year 2019. We will not establish any new reporting or data collection requirements for REHs related to their use of the monthly facility payments for CY 2023. However, we will monitor this issue in CY 2023 to see if we may need to propose new reporting or data collection requirements for REHs in future rulemaking.

b. Methodology To Estimate Medicare CAH Spending in CY 2019

Section 1834(x)(2)(C)(i)(I) of the Act requires that CMS use ''the total amount that the Secretary determines was paid under this title to all critical access hospitals in 2019'' as part of the calculation used to determine the monthly facility payment that each REH will receive in 2023. Although the statute provides that this amount shall be an amount determined by the Secretary, the statute is silent regarding what data source the Secretary should use in making such determination. We considered whether CAH claims or cost reports would be the most appropriate data source from which to determine the payments made to CAHs in 2019.

Because CAHs are generally paid at 101 percent of their reasonable costs in furnishing services to Medicare beneficiaries and receive an annual cost settlement for all services covered by Medicare, we did not initially believe that CAH claims would reflect all payments that Medicare may have made to CAHs under Title 18 of the Act. We were most concerned about modelling the annual cost settlement using CAH claims data, because the cost settlement is an accounting action that is not linked to payments reported on individual claims. It was not clear how we would identify the payment or recoupment performed for the cost settlement. By contrast, hospital cost reports track not only payments for claims when they are first submitted to Medicare but also track the annual cost settlements made with CAHs. However, some hospital cost report data can take up to 3 years to be received and processed which raises concerns whether the cost report data for CY 2019 is fully complete. We compared our calculation of Medicare CAH spending in CY 2019 using CAH claims data to our calculation of Medicare CAH spending in CY 2019 using CAH cost report data.

We found that CAH claims data reported approximately $450 million more in CAH Medicare spending ($12,083,666,636) compared to CAH cost report data ($11,631,762,706). Also, the CAH claims data identified 42 more CAHs than the CAH hospital cost report data. Both findings indicated that the CAH claims data may have a more complete report of CAH spending than the CAH cost report data. Finally, we would need to use CAH claims data to estimate prospective Medicare spending for CAHs. CAH claims data is the only payment data source that allows service-specific payment rates to be linked to individual services, which is necessary to estimate Medicare prospective spending. When comparing data for two different sets of calculations, it is generally preferred to use the same data source for both calculations unless an alternate source is clearly superior. Since we are using CAH claims data to estimate prospective Medicare spending for CAHs, we determined that CAH claims data are the best available resource to fulfill the requirements of section 1834(x)(2)(C)(i)(I) of the Act to determine the amount of Medicare payments to all CAHs in CY 2019.

We proposed to use CAH claims data with service dates in CY 2019 to calculate the actual Medicare spending for CAHs for CY 2019 as required under section 1834(x)(2)(C)(i)(I) of the Act. Our calculation of CAH Medicare spending will include CAH claims data for inpatient hospital services, inpatient rehabilitation services, inpatient psychiatric services, outpatient hospital services, and skilled nursing services including both hospital-based and swing bed services. As discussed above, we interpret the references to the year 2019 in sections 1834(x)(2)(C)(i) of the Act to mean calendar year 2019 (CY 2019) rather than fiscal year 2019 (FY 2019) because, in the absence of language implicitly or explicitly denoting the year as fiscal, we believe calendar year is the most logical reading. Additionally, section 1834(x)(1) of the Act states that payments for REH services will begin on January 1, 2023, which is the first day of the CY. Therefore, we are using CY 2019 CAH claims data to align with our interpretation of the statute that references to the year 2019 are for the calendar year, and to avoid unintended discrepancies by combining calendar year and fiscal year data. Once we identify the claims that we will use for the calculation, we will calculate the total CAH Medicare spending for CY 2019 by getting the total of the provider payment, coinsurance amounts, and deductible amounts for all of the claims. We proposed to codify the calculation of total CAH Medicare spending in CY 2019 to create the monthly facility payment for CY 2023 under 42 CFR 419.92(b)(1)(i).

Comment: Multiple commenters wanted to know whether the amount calculated for total Medicare CAH spending in CY 2019 from CAH claims data included data of any Medicare cost report settlements.

Response: The amount calculated for total Medicare CAH spending came from CAH claims data which does not have Medicare cost settlement data. Data on Medicare cost settlements only is found through Medicare cost reports. However as discussed in this section, we compared CAH claims data and Medicare cost report data for CY 2019 and found that the CAH claims data reported more than $450 million in Medicare spending than the Medicare cost report data, and the CAH claims data identified 42 more CAHs for CY 2019 than the Medicare cost report data. These findings indicate the CAH claims data are more complete than the Medicare cost report data even though the CAH claims data do not have cost settlement data.

Comment: Commenters agreed with our decision to use 100 percent Medicare claims data to calculate the Medicare CAH spending amount and the estimated prospective payment amount for CY 2019.

Response: We thank commenters for their support.

After consideration of the public comments we received, we are finalizing this proposal without modification. We will use CAH claims data with service dates in CY 2019 to calculate the actual Medicare spending for CAHs for CY 2019. Our calculation of CAH Medicare spending will include CAH claims data for inpatient hospital services, inpatient rehabilitation services, inpatient psychiatric services, outpatient hospital services, and skilled nursing services including both hospital-based and swing bed services. As discussed above, we interpret the references to the year 2019 in sections 1834(x)(2)(C)(i) of the Act to mean calendar year 2019 (CY 2019) rather than fiscal year 2019 (FY 2019) Additionally, section 1834(x)(1) of the Act states that payments for REH services will begin on January 1, 2023, which is the first day of the calendar year. We will calculate the total CAH Medicare spending for CY 2019 by including the total of the provider payment, coinsurance amounts, and deductible amounts for all of the claims. We will codify the calculation of total CAH Medicare spending in CY 2019 to create the monthly facility payment for CY 2023 under 42 CFR 419.92(b)(1)(i).

Methodology To Estimate the Projected Prospective Medicare Payment for CAHs for CY 2019

Section 1834(x)(2)(C)(i)(II) of the Act directs CMS to use ''the estimated total amount that the Secretary determines would have been paid under this title to such hospitals in 2019 if payment were made for inpatient hospital, outpatient hospital, and skilled nursing facility services under the applicable prospective payment systems for such services during such year'' as part of the calculation used to determine the monthly facility payment that each REH will receive in 2023. The statute clearly directs us to use policy and payment rules from the IPPS, the Inpatient Rehabilitation Facility (IRF)-PPS, the IPF–PPS, the OPPS, and the Skilled Nursing Facility PPS (SNF PPS) as they applied in CY 2019 to determine the projected prospective Medicare payment for CAHs for CY 2019.

To determine the estimated prospective Medicare payment that CAHs would have received for CY 2019, CMS will need to use data reflecting the Medicare-covered services rendered by CAHs in CY 2019. However, the statute does not specify what data source should be used for generating this estimation. We researched this issue and determined that CAH claims would be the only resource available to estimate projected prospective payment as directed by section 1834(x)(2)(C)(i)(II). We are aware of no other data sources that report individual services received by Medicare beneficiaries in CAHs, and the amounts paid to CAHs for those services, that could be used to estimate projected prospective payment for Medicare CAH services. To estimate Medicare CAH spending if CAHs were paid on a prospective basis, we therefore proposed to use CAH claims for inpatient hospital, inpatient rehabilitation, inpatient psychiatric, skilled nursing facilities, and outpatient hospital services. We also proposed to include services and items that are paid through other payment subsystems including clinical lab services; physician services; ambulance services; parenteral and enteral nutrition services; durable medical equipment, prosthetics/orthotics; and supplies; and vaccines and Medicare Part B drugs if those services and items are reported on an inpatient CAH claim, an outpatient CAH claim, or a skilled nursing CAH claim. We proposed to model prospective Medicare payment for CAHs by processing the CAH claims data through the IPPS, IRF–PPS, IPF–PPS, OPPS, or SNF–PPS in a test environment as appropriate following the detailed methodologies described in either section XVIII.A.5.c.(1) of the proposed rule for all claims except for skilled nursing facility claims or section XVIII.A.5.c.(2) of the proposed rule for skilled nursing facility claims.

In response to our request for information in the CY 2022 OPPS/ASC proposed rule, which discussed REH payment policies (86 FR 42288 through 42289), MedPAC expressed concerns that, since CAHs are paid based on procedure cost for inpatient hospital services, they have less incentive to fully document a patient's comorbidities than if the inpatient hospital services were paid prospectively where only documented diagnoses can generate payment for a provider. MedPAC was concerned that if the claims used to document CAH inpatient hospital services do not fully report all relevant patient diagnoses, the amount of projected Medicare prospective payment assigned to CAHs under the IPPS could be underestimated, which would cause the monthly REH facility payment to be larger than the amount that would be paid if CMS made this calculation using a projected Medicare prospective payment that more accurately reflected all relevant diagnoses of patients that received inpatient hospital services from CAHs assuming CAHs have the same distribution of reported primary diagnoses as hospitals receiving prospective payment.[314]

However, we had concerns about adopting a methodology that assigns additional diagnoses for CAH inpatient hospital claims so that these claims are consistent with the distribution of reported primary diagnoses for hospitals receiving prospective payment. The relative health levels of CAH patients compared to patients of hospitals receiving prospective payment would be needed to be able to confirm MedPAC's hypothesis that CAH inpatient hospital claims may be missing some primary diagnosis information because the information is not required for CAHs to receive full payment for the services they render.

As discussed in the proposed rule, we did not have immediately available data describing in aggregate whether Medicare patients receiving care at CAHs are healthier, less healthy, or have a similar level of health compared to Medicare patients receiving care in facilities receiving prospective payment. Also, it would not be feasible to gather these data before the implementation of the REH provider type. Obtaining such data would likely involve identifying a representative sample of the patients of CAHs and hospitals receiving prospective payment to determine if there are similar or different distributions of patients based on health status, age, income, and race, which is beyond the scope of this rulemaking process. Therefore, when calculating the projected prospective Medicare payment for CAHs, we did not propose to adjust the distribution of reported primary diagnoses on the CAH inpatient hospital claims to reflect the distribution of reported primary diagnoses for hospitals receiving prospective payment.

Another issue with relying on inpatient hospital and outpatient hospital CAH claims to estimate the prospective Medicare payment that CAHs would have received in CY 2019 is that these claims do not report the Medicare supplemental payments that hospitals receive through the inpatient and outpatient prospective payment systems. Supplemental payments include IPPS new technology payments, outlier claims payments, clotting factor payments, indirect medical education (IME) payments, disproportionate-share hospital (DSH) payments, including uncompensated care payments under

[314] Medicare Payment Advisory Commission. September 10, 2021. Comment Letter. *https://www.medpac.gov/wp-content/uploads/2021/10/09102021_OPPS_ASC_2022_MEDPAC_COMMENT_SEC.pdf*. Accessed April 4, 2022.

section 1886(r) of the Act, low-volume hospital payments, hospital value-based purchasing program (VBP) payments, and hospital readmissions reduction program (HRRP) adjustments. However, to accurately model how much CAHs would have received if they had instead been paid for applicable services under the inpatient and outpatient prospective payment systems, as provided by section 1834(x)(2)(C)(i)(II) of the Act, we must estimate the various supplemental payments that CAHs would have received under these prospective payment systems.

We therefore proposed, in addition to medical claims service data, that CAH payment information used to calculate the projected Medicare prospective payment for CAHs include IPPS new technology payments, outlier claims payments in both the IPPS and the OPPS, clotting factor payments, indirect medical education (IME) payments, DSH payments, uncompensated care payments, and low-volume hospital payments. We chose these supplemental payments because these payments are used to determine the payment amount for claims in either the IPPS or the OPPS.

We are able to estimate new technology add-on payments, outlier payments, and clotting factor payments from the existing CAH claims data.

For IME and DSH adjustments, CAHs generally do not have up-to-date entries in the Provider Specific File. Therefore, the IME and DSH adjustments would almost always be zero in the actual calculation. We estimated an aggregate projected prospective payment amount for CAHs, and therefore, we did not need to calculate IME and DSH for each individual CAH. Instead, we estimated an aggregate amount of IME and DSH spending for all CAHs. Our proposed approach was the following:

- First, identify all IPPS hospitals that are classified as rural and calculate the average percentage of additional DSH payment and the average percentage of IME payment for these rural hospitals. We use rural IPPS hospitals as a proxy to estimate the percentage of additional DSH payment and the average percentage of IME payment. Rural IPPS hospitals are more likely to have complete and timely data to allow the calculation of DSH and IME payments than CAHs, because rural IPPS hospitals need to report their data to receive payment. CAHs, where all services are paid at 101 percent of cost, do not have an incentive to report data to generate DSH and IME payments.
- Second, for each CAH, find the closest IPPS hospital to that CAH, even if the IPPS hospital is located in an urban area, and link the additional DSH payment percentage and additional IME payment percentage of the nearby IPPS hospital to the CAH.
- Finally, average the overall rural IPPS DSH payment percentage and IME payment percentage with the modelled DSH payment percentage and IME payment percentage for each individual CAH. These individual average additional DSH and IME payments for each CAH can be aggregated to get a national estimate of DSH and IME spending for CAHs.

We used the methodology described in the CY 2019 IPPS/LTCH PPS final rule to estimate the low-volume hospital adjustment for CAHs (83 FR 41399). For discharges occurring in FYs 2019 through 2022, the low-volume hospital payment adjustment was determined using a continuous, linear sliding scale ranging from an additional 25 percent payment adjustment for low-volume hospitals with 500 or fewer discharges (both Medicare and non-Medicare discharges) to a zero percent additional payment for low-volume hospitals with more than 3,800 discharges in the fiscal year.

For uncompensated care payments, we used a similar approach to the approach we have described earlier in this section for calculating estimated DSH and IME payments for CAHs. The difference was that, for uncompensated care payments, we estimated the share of uninsured patients in each CAH receiving uncompensated care based on a nearby IPPS hospital and adjusted by the average share of uncompensated care patients for all rural IPPS hospitals. These calculations will be performed in addition to calculating the percentage of Medicare inpatient days attributed to patients eligible for both Medicare Part A and Supplemental Security Income (SSI) and the percentage of total inpatient days attributable to patients eligible for Medicaid but not Medicare Part A. We then aggregated the estimated uncompensated care payments for individual CAHs into a national estimate and included that estimate in the CAH estimated projected prospective payment amount.

We also considered modelling hospital value-based purchasing program (VBP) payments, hospital readmissions reduction program (HRRP) adjustments, and hospital-acquired condition (HAC) reduction program. However, we identified no feasible way to estimate these adjustments for either individual CAHs or for all CAHs in aggregate. These payments are made based on the actions of individual hospitals, and there are no trends regarding these payments based on whether the hospital is located in a rural or urban area or on the size of the hospital. CAHs do not participate in the VBP, HRRP, or HAC reduction program themselves. So, the only way to model these payments would be to identify trends in comparable hospitals. Since there are no payment trends with the VBP, HRRP, and HAC reduction program, we decided to not include these adjustments in the estimate of projected prospective payment for CAHs.

We proposed to codify our proposal to estimate the prospective spending for CAHs in 2019 under 42 CFR 419.92(b)(1)(ii).

Detailed Methodology To Estimate CY 2019 Prospective Payment for CAHs for Inpatient Hospital and Outpatient Hospital Services

In the proposed rule we provided a detailed methodology using inpatient hospital and outpatient hospital CAH claims and estimated supplemental payments to estimate the projected Medicare prospective payment for CAHs for inpatient hospital and outpatient hospital services. For more detailed information regarding the methodology for estimating the projected aggregate prospective payment for inpatient and outpatient CAH services, please refer to the supplementary document ''Calculation of Rural Emergency Hospital (REH) Monthly Additional Facility Payment for 2023'' on the CMS website (*https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/Hospital-Outpatient-Regulations-and-Notices*). That proposed methodology included the following steps:

Step 1: CAH Inpatient Prospective Payment (IPPS) Calculation

Preparing Inpatient Claims for CAHs:

- Identify CAH inpatient hospital claims by using the provider CCN number.
- Exclude Medicare Advantage encounter claims and claims where Medicare is not the primary payer from the analysis file.
- Feed CAH claims through MS–DRG grouper software to assign MS–DRG code. If the DRG code field on the claim is empty, take the grouper-assigned MS–DRG code as input to calculate payment. Otherwise, take the claim MS–DRG code as input.
- Group CAH claims that have the same Provider CCN, Admission Date, and Beneficiary ID combination into inpatient stays.[315] Take the benefit

[315] PPS payment is made at the stay level instead of the claim level, that is, there will be up to one

Continued

exhaust date (if present and earlier than discharge date) or discharge date of the last claim in the grouping as the discharge date of the stay. Take the calendar year of the stay discharge date as the calendar year of the stay (and claims making up the stay).

• Identify paid CAH stays by checking if there is at least one paid claim (Type-of-Bill not being ''110'') within the stay. The non-paid stays or non-discharging claims will be assigned zero payment, and the discharging claim (last claim) will be assigned total PPS payment for the stay.

Calculating PPS Payment for Each Component:

The Medicare PPS payment includes the components described in the following sections.

DRG Payment

DRG payment is calculated as the sum of operating base rate and capital base rate multiplied by DRG weight and Transfer Fraction and their respective geographic adjustment factor.

• The *operating* and *capital base rates* and *DRG weight* are taken from the relevant final rule/correction notification for either FY 2019 or FY 2020;

• *Transfer Fraction* is calculated by the covered days of stay and the Geometric *Mean Length* of Stay of the DRG code, per post-acute-care transfer adjustment policy;

• *Operating geographic adjustment factor* is calculated as the weighted sum of wage index and operation cost-of-living adjustment, the weights being the labor share and one minus labor share;

• *Capital geographic adjustment* for inpatient hospital services is the wage index raised to the power of 0.6848,[316] multiplied by capital cost-of-living adjustment;

• *Wage index* is taken from the CMS provider wage index file or impact file. If not found, take wage index from CBSA wage index file or inpatient provider specific file;

• The *covered length of stay* is calculated as the maximum of utilization days and cost report days. If either is 0, take the discharge date minus admission date plus one as the covered days.

New Technology Add-On Payments

Check the applicable relevant Diagnosis, Procedure, and Drug code on the claim to determine if the claim is eligible to receive new-tech add-on payment.

Calculate the new-tech payment as the maximum amount for the new-tech or the operating loss multiplied by the new-tech factor, whichever is smaller.

The operating loss is defined as operation cost minus operating DRG payment (defined in the ''DRG Payment'' section above).

Perform New-Tech add-on calculation for all applicable new technologies found on claim and sum all eligible New-Tech add-ons as total new-tech add-on.

3. Outlier Payments

• Calculate outlier payment as the excess cost over outlier threshold multiplied by the cost sharing factor. *Cost* is defined as the sum of operating cost and capital cost;

• *Operating cost* is estimated by total covered charges multiplied by operating cost-to-charge ratio;

• *Capital cost* is estimated by total covered charges multiplied by capital cost-to-charge ratio, divided by wage index of provider raised to the power of 0.6848.

4. Clotting Factor Payments

Calculate the clotting factor payment as the multiplication of revenue unit of clotting factor line and the clotting factor payment rate from the Part B drug ASP file.

5. Adjusting PPS Payment

The following sections describe adjustments to the payment calculation. This methodology includes Disproportionate Share Hospital (DSH) payment, Uncompensated Care Payment (UCP), Indirect Medical Education (IME) payment, and Low-Volume Adjustment (LVA) payment. Performance-based payment adjustments, such as Value-based Purchasing, Hospital Readmission Reduction Program, and Hospital-Acquired Condition Reduction Program, are not included. These performance programs typically exclude CAHs and are of smaller magnitude than IME, DSH, UCP and LVA. As stated previously, there are no payment trends with the VBP, HRRP, and HAC reduction program in the rural IPPS hospital data, and we decided to not include these adjustments in the estimate of projected prospective payment for CAHs.

a. Disproportionate Share Hospital (DSH) and Uncompensated Care Payment (UCP)

The DSH payment adjustment and UCP are both provider-specific add-on payments for IPPS claims. In order to apply these two adjustments to CAHs, we must assess how they are calculated for IPPS hospitals. DSH is a percentage-based adjustment to the IPPS DRG payment that is determined by the sum of: (1) the percentage of Medicare inpatient days attributed to patients eligible for both Medicare Part A and Supplemental Security Income (SSI), and (2) the percentage of total inpatient days attributable to patients eligible for Medicaid but not Medicare Part A. UCP is determined by the percent of individuals under 65 who are uninsured, and hospitals' amounts of uncompensated care. These calculations are performed in addition to calculating the percentage of Medicare inpatient days attributed to patients eligible for both Medicare Part A and Supplemental Security Income (SSI), and the percentage of total inpatient days attributable to patients eligible for Medicaid but bot Medicare Part A. All of the factors used in determining DSH/UCP are ultimately determined by the demographics of the patient populations hospitals serve. Operationally, CMS collects and calculates these factors from hospitals' cost report data from prior years. If CAHs' cost report data were as complete and timely as that of IPPS hospitals, DSH and UCP could be calculated for CAHs in the same way. However, because CAHs are reimbursed based on reasonable cost, they do not have the same incentives to complete their cost reports as IPPS hospitals. Because of the data availability and validity concerns, we did not propose to calculate DSH/UCP directly from cost report data.

To simplify the calculations, define the DSH UCP ratio as the ratio of a hospital's total DSH and UCP payment amount over its core payment (*i.e.,* inpatient hospital DRG payment before the inclusion of supplemental payments) for 2019. The goal is to calculate a reasonable DSH UCP ratio for CAHs. Starting from the premise that DSH/UCP are determined by the demographics the hospitals serve, we take the following steps:

• Select IPPS hospitals that are located in rural areas.

• For each CAH, identify the IPPS hospital that is closest based on distance from the CAH.

• Identify the closest rural IPPS hospital and then calculate the average DSH UCP ratio for that hospital.

As a validation, we run a linear regression model that predicts an IPPS hospital's DSH UCP ratio using urban/rural indicator, the percentage of population below the poverty line (at zip code level, obtained from American Community Survey) and the percentage

---

final claim per inpatient stay. CAHs can split-bill an inpatient stay, that is, multiple claims that make up one stay can have positive payment. In order to calculate PPS payment for CAH claims, stay grouping is necessary.

[316] This value is set by statute and is the same value every year.

of dually enrolled inpatient beneficiaries (calculated from claims and enrollment data). Then, apply the parameter estimates of the model to the CAHs (*i.e.,* out of sample prediction) and calculate the average predicted DSH UCP ratio. The results show all the covariates are significant predictors of DSH UCP ratio. Furthermore, the validation produces very similar DSH UCP ratios for CAHs as the proposed method.

After we calculate and validate the DSH UCP ratios for the CAHs, we multiply the ratios by the core payment amount for each CAH to determine the estimate amount of DSH and UCP payments the CAH would receive. We then add the DSH and UCP payment amounts to the estimated prospective payment for the CAH.

b. Indirect Medical Education (IME)

The IME payment is a provider-specific add-on payment for IPPS claims. The IME adjustment factor is determined by a hospital's ratio of residents to beds. Operationally, CMS collects and calculates the adjustment from hospitals' cost report data from prior years. Because of the data availability and validity concerns (stated above), we did not propose to calculate IME payment directly from cost report data.

Instead, we proposed to define the IME ratio as the ratio of a hospital's total IME payment over its core payment (*i.e.* DRG payment) for 2019. The goal is to calculate a reasonable IME ratio for CAHs. We take the following steps:

- Select IPPS hospitals that are located in rural areas.
- For each CAH, identify the IPPS hospital that is closest to it.
- Identify the closest rural IPPS hospital and then calculate the IME ratio for the rural IPPS hospital for 2019.

As validation, run a linear regression model that predicts an IPPS hospital's IME ratio using urban/rural indicator and the average IPPS DRG weight per discharge (calculated from claims data). The urban/rural indicator is assumed to be correlated to the likelihood of a hospital to run an approved graduate medical education (GME) program and attractiveness of such program to medical school graduates; the average IPPS DRG weight is a measurement of level of complexity of inpatient care a hospital provides and is assumed to be correlated to the size of and need for GME. The results show both urban/rural indicator and average IPPS DRG weight per discharge are significant predictors of IME ratio.

c. Low Volume Adjustment

The Low-Volume Hospital Payment Adjustment is an additional payment adjustment based on the per discharge amount (including capital, DSH, IME, and outlier payments) to the qualifying IPPS hospitals during CY 2019. For discharges occurring in FYs 2019 through 2022, the qualifying criteria are: (1) the hospital is more than 15 road miles from another subsection (d) hospital, and (2) the hospital has less than 3,800 total discharges during the fiscal year. If these qualifying criteria for the Low-Volume Hospital payment adjustment were also applied to CAHs, they meet the first criterion, as CAHs must be located either more than 35-miles from the nearest hospital or more than 15 miles in areas with mountainous terrain or with only secondary roads. We then check the number of total discharges from each CAH to determine if the CAH has less than 3,800 total discharges. The adjustment factor is calculated using the following formula for hospitals between 500 and 3,800 total discharges:

Low-Volume Hospital Payment Adjustment = $0.25 - [0.25/3300] \times$ (number of total discharges $- 500$) = $(95/330) -$ (number of total discharges/13,200)

If a hospital has less than 500 total discharges, then the low-volume hospital payment adjustment is 25 percent. The number of total discharges of CAHs is obtained from Hospital Cost Report Data, Worksheet S–3, Part I, Line 14, and Column 15.

6. Other Adjustments

- Device credit (if applicable) is deducted from the claims payment.
- Sequestration:

++ Subtract the actual coinsurance and deductible amount from PPS payment, and

++ Remove 2 percent as sequester reduction.

Subtract the sequester reduction from the PPS payment.

Step 2: CAH Inpatient Rehabilitation Facility (IRF) and Inpatient Psychiatric Facility (IPF) PPS Payment Calculation

- IRF PPS rules that applied in FY 2019 or FY 2020 based on date of service to claims furnished by the rehabilitation units of CAHs.
- IPF PPS rules that applied in FY 2019 or FY 2020 based on date of service to claims furnished by the psychiatric units of CAHs.
- The Rehabilitation and Psychiatric Units of CAH are actually paid by IRF PPS and IPF PPS payment rules; therefore, we calculate their PPS payment by summing up their actual payment.

Step 3: Outpatient PPS Payment Calculation

Preparing Outpatient Claims for CAHs

Identify CAH outpatient hospital claims. Feed CAH claim lines to the IOCE grouper software to assign Status Indicator, Ambulatory Payment Classification (APC) code,[317] and Discount Formula Indicator.

Calculating OPPS Payment for CAHs

- Flag claim lines that have OPPS payable status indicator.[318] For claim lines that have APC assignment, obtain relevant APC payment rate from the OPPS final rule/correction notification data files. Apply the following APC adjustments, as applicable:

†† Device Credit, taken from value code ''FD'', is deducted from payment;

†† Off-campus Provider Based Department deduction indicated by modifier PO;

†† Computed tomography reduction (indicated by modifier CT and HCPCS code);

†† Reduction of X-rays taken with film (indicated by modifier FX);

†† 22.5 percent ASP rate reduction for Part B drugs (indicated by modifier JG and status indicator K).

- Adjust APC payment rate with OPPS discount factor based on the Discount Formula Indicator.
- Multiply adjusted APC payment rate with the number of revenue units to get APC payment.
- Adjust APC payment with geographic adjustment factor.

†† Geographic adjustment factor is the sum of labor share multiplied by wage index and non-labor share;

†† Wage index is determined by the wage index file, CBSA code, and provider specific record of the provider.

- Calculate line outlier payment by multiplying excess line cost over line multiple threshold with OPPS loss share ratio, if line estimated cost is greater than line multiple threshold and line fixed threshold.

†† Estimate claim line cost by adding line covered charge and charges from packaged services;

†† Line fixed threshold is the line OPPS payment plus the OPPS fix threshold of the calendar year

[317] Since CAH outpatient claims have type of bill ''85x'', the IOCE software will not assign status indicator or APC code. In order to use the software properly, change the type of bill to ''131'' (the same bill type OPPS hospitals use to bill) before feeding the claims to the software.

[318] First digit of status indicator to be ''F'', ''G'', ''H'', ''J'', ''K'', ''L'', ''P'', ''Q'', ''R'', ''S'', ''T'', ''U'', ''V'', and ''X''.

†† Line multiple threshold is line OPPS payment multiplied by the OPPS outlier factor of the calendar year

Aggregate claim line level payment to claim level and apply sequester reduction to calculate final PPS payment for CAHs.

Calculating Payment for Other Claim Lines

Calculate payment for other claim lines with applicable fee schedule rules (OPPS Status Indicator ''A'').

- Clinical Lab Fee Schedule lines.
- Physician Fee Schedule lines.
- Ambulance Fee Schedule lines.
- Parenteral and Enteral Nutrition Fee Schedule lines.
- Durable Medical Equipment, Prosthetics/Orthotics, and Supplies Fee (DMEPOS) Schedule lines.
- Vaccine and Part B drug lines.

Detailed Methodology to Estimate CY 2019 Prospective Payment for CAHs for Provision of Skilled Nursing Facility Services

We also proposed to use CAH claims to make estimates of the prospective payment amounts for skilled nursing swing bed payments. Under the SNF PPS, facilities are paid a pre-determined daily rate for each day of SNF care for each individual provided services, adjusted by each patient's unique medical needs and diagnoses. In order to calculate PPS payment for CAH claims that were not paid under PPS, we proposed to assign a PPS equivalent daily rate to CAH claims factoring in patient case mix. CAH swing bed claims generally do not have minimum data set (MDS) records (that is, assessment data), which are the critical input to the Grouper software for Resource Utilization Group (RUG)/Patient Driven Payment Model (PDPM) code assignment. Therefore, RUG/PDPM codes for the CAH claims cannot be generated by the RUG/PDPM Grouper software. The RUG codes (which have been phased out of the SNF PPS, to be replaced by the PDPM) are determined mainly by the number of therapy minutes provided or expected to be provided to the beneficiary. However, the therapy minute variable is reported only through the MDS and not recorded on claims. Because of the lack of MDS data, RUG/PDPM rates cannot be directly obtained from the CAH swing bed claims. However, RUG/PDPM rates of CAH swing-bed claims can be predicted by modeling the RUG/PDPM per-diem-rates of claims that were actually paid under PPS rules. Under the statute, the SNF benefit must generally be qualified by a preceding inpatient stay. The information on the qualifying inpatient claim can be used to predict the RUG/PDPM per-diem-rate.

On October 1, 2019, a new case-mix classification model, the PDPM, under SNF PPS began. The use of RUG coding assignments ended, and the use of PDPM coding assignments started. We proposed to apply RUG PPS rules for claims with service dates between January 1, 2019, and September 30, 2019, and we proposed to apply PDPM rules for those with service dates between October 1, 2019, and December 31, 2019. The primary steps to estimate the projected prospective skilled nursing payment for CAHs are as follows:

Step 1: Use the PPS payment calculation formula to estimate payment for skilled nursing facility PPS claims.

Step 2: Process claims using the RUG/PDPM rate prediction model.

Step 3: Use the PPS payment calculation formula to estimate payment for CAH swing-bed claims.

For more detailed information regarding the methodology for each of the steps listed to estimate the aggregate projected prospective payment for CAH skilled nursing services, please refer to the supplementary document ''Calculation of Rural Emergency Hospital (REH) Monthly Additional Facility Payment for 2023'' on the CMS website.

Comment: Commenters wanted us to clarify whether spending for clinical lab, physician services, ambulance services, parenteral and enteral nutrition, durable medical equipment, prosthetics/orthotics, and supplies, and vaccines and Medicare Part B drugs were included in the reported amount for CAH Medicare spending for CY 2019.

Response: As stated in the CY 2023 OPPS/ASC proposed rule, we included all of the services cited by the commenters, including clinical lab, physician services, ambulance services, parenteral and enteral nutrition, durable medical equipment, prosthetics/orthotics, supplies, vaccines, and Medicare Part B drugs, in the Medicare CAH spending amount for CY 2019, for the calculation of the monthly REH facility payment as provided by section 1834(x)(2)(C)(i)(I). However, the calculation of the estimated prospective payment for CAHs in CY 2019, as described by section 1834(x)(2)(C)(i)(II), does not mention a different payment methodology for all of the services identified by the commenters except for Medicare Part B drugs administered in the outpatient hospital setting which are payable in the OPPS when paid prospectively. We interpret the omission of a different methodology to pay for clinical lab, physician services, ambulance services, parenteral and enteral nutrition, durable medical equipment, prosthetics/orthotics, supplies, and vaccines to mean that for the estimate of prospective payment for CAHs in CY 2019, as described by section 1834(x)(2)(C)(i)(II), the payment amount for these services will be same amount as the payment for these services used in the calculation of actual Medicare CAH spending for CY 2019, as described in section 1834(x)(2)(C)(i)(I). In the description of our detailed methodology provided in the CY 2023 OPPS/ASC proposed rule we did not specifically address the effect that these equal payment amounts would have on the calculation of the REH monthly facility payment. We are providing additional detail regarding this aspect of our methodology in this final rule in response to these comments. Specifically, payment for the services noted above will cancel each other out when calculating the REH monthly facility payment, which means the spending on these services will not affect the amount of the REH monthly facility payment.

Comment: Commenters agreed with our decision not to attempt to adjust the CAH inpatient hospital claims to account for potential underreporting of patient co-morbidities on those claims. Commenters also agreed with our statement that there is not readily available data to compare the amount of co-morbidities between CAH inpatient hospital population with the prospective payment inpatient hospital population, and they agreed there was not time prior to the implementation of the REH provider type to obtain this data.

Response: We appreciate the support of the commenters regarding this issue.

Comment: Multiple commenters requested that we include Medicare Advantage (MA) payments in our calculation of CY 2019 Medicare CAH spending and CY 2019 estimated prospective payment for CAHs.

Response: Although we did not explicitly address the treatment of MA payments in the description of the detailed methodology used to generate the monthly facility payment the CY 2023 OPPS/ASC proposed rule, we are providing additional detail regarding this aspect of our methodology in this final rule in response to these comments.

Consistent with section 1834(x)(2)(C)(i) of the Act, CMS was required to determine the monthly facility payment based on the difference between the amount paid under Medicare to all CAHs in 2019 and the

amount that would have been paid to CAHs if payment had been made for inpatient hospital, outpatient hospital, and skilled nursing facility services under the applicable prospective payment systems. MA payments are payments made by private health plans for the care CAHs provide to Medicare beneficiaries enrolled in Medicare Advantage. Medicare pays a per beneficiary capitation amount to the private health plans which in turn are responsible for paying the CAHs. Medicare Advantage organizations are not required to use the Medicare fee-for-service payment methodology to determine payments to CAHs. Rather, the amount of these payments is based upon the arrangement between the MA organization and the CAH. Thus, the amount of MA payments to CAHs would not be affected by a change in the payment methodology under fee-for-service Medicare. Because the amount of Medicare Advantage payments would be the same for both CY 2019 Medicare CAH spending and for the estimate of CY 2019 prospective payments to CAHs, the Medicare Advantage payments were cancelled out and had no impact on the determination of the REH monthly facility payment.

Comment: Commenters requested that we include payments for professional services made to those CAHs that elected Method II billing.

Response: As noted above, Method II billing is a payment approach available to CAHs, which allows physicians employed at CAHs to assign payment for their professional services to be paid to the CAH instead. The commenters imply that because a CAH receives 115 percent of the MPFS rate for professional services reported using Method II billing, we should include the additional 15 percent of the MPFS payment add-on as a part of the calculation to determine the monthly facility payment. However, since the REH statute only mentions prospective payment systems, we believe it is appropriate to limit the scope of the calculation to services that are paid on a prospective basis. Thus, as with other payment items mentioned in this section, the additional 15 percent payment to the CAH for service billed through Method II would be unaffected whether a CAH received reimbursement at 101 percent of cost or received reimbursement through prospective payment. That means the additional 15 percent payment would cancel out in the calculation to determine the REH monthly facility payment, and would have no impact on the final amount.

Comment: Commenters believe that we failed to reduce the CY 2019 CAH estimated prospective payment amount to account for the fact that CAHs are not subject to the 72-hour rule regarding the conversion of an observational service to an inpatient hospital service while hospitals paid on a prospective basis are subject to this rule.

Response: We acknowledge that the 72-hour rule is part of prospective payment system requirements for both inpatient hospital and outpatient hospital payment. The 72-hour requires that payment for all outpatient services that occur with a 72-hour window of an associated inpatient service shall be packaged with the cost of the prospectively-paid inpatient hospital service.

An example would be a patient who has an inpatient admission for heart surgery, but 48 hours before their hospital admission received a series of imaging services in the outpatient hospital setting. With at-cost payment at the CAH, the outpatient imaging services would be separately paid along with the inpatient heart surgery. With prospective payment, the outpatient imaging services would be packaged with the DRG payment for inpatient heart surgery. Our current methodology to calculate the CY 2019 prospective payment amount for the REH monthly payment does not package the payment for the outpatient hospital imaging services which increases the prospective payment amount and reduces the amount of the monthly facility payment.

CMS has not identified a feasible approach that could be used to model the extent to which an outpatient service furnished by CAHs within 72 hours of an inpatient admission is an associated service that would be packaged under the 72-hour rule if the CAHs were paid prospectively for inpatient hospital and outpatient hospitals services under the IPPS and OPPS. For example, a diagnostic service closely related to the inpatient service received by a patient is quite likely to be associated with the inpatient service and should be packaged. However, there may be limited information on whether a therapeutic outpatient hospital service within the 72-hour window should be associated with the inpatient admission. We were not able to develop a reliable algorithm that works with CAH claims data to determine whether an outpatient service is admission-related or not. Therefore, we decided not to use the 72-hour rule to adjust the amount of the CY 2019 CAH estimated prospective payment as a part of our calculations for the monthly REH facility payment.

Comment: Commenters requested that we clarify and publish our calculations for projecting supplemental payments under the IPPS and OPPS. Commenters noted that because CAHs are paid based on a cost-basis, their claims do not include supplemental payments that are normally paid under IPPS, such as indirect medical education (IME), disproportionate share hospital (DSH), and uncompensated care payments, and we need to estimate those payments to more accurately reflect the estimated prospective payment amount for CAH providers.

Response: We have proposed a detailed methodology describing how we will model inpatient hospital supplemental payments for prospectively-paid hospitals to generate a more representative estimate of the payment CAHs would receive if these providers were paid on a prospective basis. Our detailed methodology spells out the steps we have taken to calculate the REH monthly facility payment. We reviewed the rules to pay inpatient hospital services on a prospective basis to identify the supplemental payments applied to base service payment rates including low-volume adjustments, quality measures reporting, DSH and uncompensated care payments, and the use of electronic health records. Commenters provided multiple suggestions on how our detailed methodology could be improved. These suggestions will be addressed in the upcoming comments in this section. We have provided the final amount of the monthly facility payment along with the aggregate payment amounts for both Medicare CAH spending for CY 2019 and the estimated prospective payment amount for CAHs for 2019, which allows interested parties to compare the final results of their analyses with our final results. Estimates of the inpatient hospital supplemental payments are included in the total estimated prospective payment amount for CAHs.

Comment: Commenters stated that it appears that we assumed all CAHs would have met the Hospital Inpatient Quality Reporting (IQR) Program. The commenters feel that it would be appropriate to assume all CAHs would be subject to the hospital inpatient quality reporting reduction because CAHs are not covered by the quality reporting requirements, and would not be familiar with how to submit the reports.

Response: We do not believe it would be appropriate to assume CAHs would not comply with the IQR program because CAHs were not subject to the Quality Reporting program. The share of IPPS hospitals that are subject to the quality reporting program penalty is low, and we anticipate that CAHs would have had a similar level of compliance

to IPPS hospitals for the Quality Reporting program had they been subject to the program. We assume that the number of CAHs that would fail to comply with the Quality Reporting program would be very low and the reduction in CY 2019 CAH estimated prospective payment would not be significant enough to have a substantial impact on the REH monthly facility payment. Therefore, we believe it is more appropriate to assume CAHs would comply with the Quality Reporting program requirements, and would not experience a reduction in their estimated prospective inpatient hospital payments.

Comment: Commenters noted that we did not consider reducing the CY 2019 CAH estimated prospective payment to account for payment reductions associated with the Promoting Interoperability Program. The commenters support assuming that every CAH would not be a meaningful electronic health records user and would be subject to a 2 percent decrease in the amount of their inpatient hospital payment if receiving prospective payment.

Response: The Promoting Interoperability Program is an initiative to incentivize hospitals to be meaningful electronic health records (EHR) users. Providers whose EHR systems do not meet the requirements of the Promoting Interoperability Program are subject to a 2 percent decrease to their inpatient hospital payments. We disagree with the commenters' recommendation to update our proposed calculation of the REH monthly facility payment based on the assumption that every CAH would not be a meaningful electronic health user and would be subject to the Promoting Interoperability Program 2 percent decrease to their projected inpatient hospital payments. It is challenging to anticipate CAH behavior regarding meaningful use of electronic health records when these providers are not subject to this performance requirement. However, we believe that if CAHs relied on prospective payment to pay for inpatient hospital services, most CAHs would comply with the meaningful use requirements for electronic health records as providers generally try to comply with incentive programs to avoid payment penalties. In addition, CAHs would be more likely to qualify for existing hardship exemptions to the payment reductions than subsection (d) hospitals because CAHs are small providers with limited financial resources. These hardship exemptions are available where an eligible facility can show that compliance with the requirement for being a meaningful EHR user would result in a significant hardship for reasons including the facility's use of decertified EHR technology, insufficient internet connectivity, and extreme and uncontrollable circumstances.[319] These hardships are more likely to occur for CAHs than most hospitals because their limited financial resources make it more challenging for CAHs to obtain up-to-date EHR technology. Also, internet connectivity issues are more common in rural areas where CAHs are located. We assume that the number of CAHs that would fail to comply with the Promoting Interoperability Program would be very low and the reduction in CY 2019 CAH estimated prospective payment would not be significant enough to have a substantial impact on the REH monthly facility payment. For these reasons, we believe that it is more reasonable to assume that all CAHs would comply with the meaningful use requirements for electronic health records for our calculations for the monthly facility payment.

Comment: Commenters wanted us to confirm that we did not reduce the DRG payment if the beneficiary was transferred to a swing bed and that the transfer fraction was applied only for those DRGs to which the post-acute transfer adjustment policy applies.

Response: We can confirm that the transfer fraction was applied only for those DRGs to which the post-acute transfer adjustment policy applies; we checked if the discharge status code and DRG on the claim satisfy the condition of the adjustment.

Comment: Commenters stated that the low-volume adjustment should not apply to CAHs that are within 15 miles of another provider, regardless of whether that facility is presently a CAH or subsection (d) hospital. They encouraged CMS to identify the CAHs that do not meet the criteria and eliminate the low-volume adjustment applied to those CAHs.

Response: As the commenters note, our proposed methodology does not consider whether a CAH is within 15 miles of another CAH or subsection (d) hospital, and thus under the proposed methodology the low-volume adjustment was applied to all CAHs, regardless of whether the facility is located within 15 miles of another provider. It was our understanding is that few CAHs are likely to be within 15 miles of another hospital provider because in order for a hospital to become a CAH, a provider has to be more than 35 miles away from another hospital. In response to the commenters' request, we attempted to identify CAHs that were less than 15 road miles from another CAH or subsection (d) hospital. We found that some CAHs were within 15 road miles from other CAHs or subsection (d) hospitals and not eligible for the low-volume adjustment. Based on our analysis, we will revise our estimate of the low-volume adjustment to exclude CAHs that do not meet the 15 road miles distance requirement. This revision to our detailed methodology will increase, by a few thousand dollars, the REH monthly facility payment. We analyze the financial impact of this change in detail in section XVIII.A.5.e. of this final rule with comment period.

Comment: Commenters raised concerns with our proposal to project the amount of DSH and uncompensated care add-on payments CAHs would have received if paid prospectively, noting that factors other than demographics determine the amount of DSH and uncompensated care. They recommend excluding the amount of DSH and uncompensated care add-on payments from the estimated prospective payment amount since there is not a reliable method to make projections. They believe only small rural hospitals that receive prospective payment and have less than 50 beds with a geographic location assignment in a rural area should be identified for this purpose.

Response: We acknowledge that interested parties are concerned about possible distinctions between rural subsection (d) hospitals versus CAHs for purposes of projecting the amount of DSH and uncompensated care add-on payments that CAHs would receive if they were paid prospectively. As discussed in the CY 2023 OPPS/ASC proposed rule (87 FR 44784), our proposed methodology includes elements intended to accurately reflect the amount of such add-on payments that CAHs would receive. We identified the subsection (d) hospital that was closest to an individual CAH and determined its ratio of DSH and uncompensated care payments to core inpatient hospital payments excluding any supplemental payments. We also identified the closest subsection (d) rural hospital to an individual CAH and determined the rural hospital's ratio of DSH and uncompensated care payments to core inpatient hospital payments excluding any supplemental payments. Then we averaged the two percentages to estimate the share of DSH and

[319] ''Medicare Promoting Interoperability Program Frequently Asked Questions (FAQs).'' Centers for Medicare and Medicaid Services. Accessed October 20, 2022.

uncompensated care payments for the CAH. This calculation is repeated for all CAHs throughout the United States to generate a national average percentage of DSH and uncompensated care payments for CAHs. Additionally, to further corroborate the proposed approach, Acumen also created a model that predicts the percentage of a prospective payment hospital's DSH and uncompensated care from its DRG payment. Three predictors were included in the model:

- A hospital's rural/urban indicator based on actual geographic location;
- The percentage of population below poverty line of the hospital's zip code area; and
- The percentage of the hospital's dually eligible Medicare beneficiaries.

The three coefficients are all statistically significant. A location in a rural area reduces the amount of DSH and uncompensated care a hospital receives. According to MACPAC, only 11.5 percent of DSH spending in 2016 was for rural hospitals.[320] Having a larger percentage of the population of a hospital's zip code area living below the poverty level increases the amount of DSH and uncompensated care a hospital receives. Likewise, having more dually eligible Medicare beneficiaries receive care at a hospital increases the amount of DSH and uncompensated care the hospital receives. Both of these variables are predictive of the share of people in a community who may lack the resources to pay for their medical care, and where hospitals would need more DSH and uncompensated care payments to make up for lost patient revenue. When applying this model to CAHs, the projected DSH and uncompensated care payment is very similar to the result based on proximity to providers in rural areas. Based on this analysis, we believe that the approach described in the proposed rule will produce a reasonably accurate projection of the amount of DSH and uncompensated care add-on payments that CAHs would have received if they had been paid prospectively in CY 2019.

Comment: Commenters stated that no IME add-on payments should be included for any CAH that did not have a residency program in CY 2019. Commenters believe that cost report data can be used to identify which CAHs had IME payments in 2019.

Response: As we discussed in the CY 2023 OPPS/ASC proposed rule (87 FR 44784), cost report data are not a reliable source to determine IME spending by CAHs. CAHs are paid by reasonable cost and there is limited incentive for CAHs to report their medical education spending. To address issues with the completeness of CAH cost report data for IME spending, we used IME spending from nearby rural subsection (d) hospitals to model CAH IME spending. Similar to our approach to DSH and uncompensated care payments, we calculate an estimate share of IME spending for each individual CAH. We then repeat this calculation for all CAHs throughout the United States to generate a national average percentage of IME payments for CAHs.

Even though IME add-on payment is determined by the size of a residency program, rural/urban status and proximity to CAHs are highly associated with the percentage of IME payments that subsection (d) hospitals receive. CAHs are rural hospitals and few rural hospitals offer medical education programs. In the comparable group of rural subsection (d) hospitals, less than 10 percent of hospitals receive any IME payment. In other words, the projected IME add-on payment already factors the concerns of the commenters and treats most CAHs as if they do not receive IME payment. Our model of CAH IME spending estimates that IME spending is less than 1 percent of overall CAH spending.

Comment: Multiple commenters supported our decision not to require CAHs to submit additional information in order to help us project payments for skilled nursing facilities such as the Minimum Data Set (MDS) 3.0 assessments for their SNF swing bed patients. The commenters agreed with our proposal to predict per-diem rates of claims through modeling.

Response: We appreciate the support of our proposal by the commenters.

After consideration of the public comments we received, and for the reasons discussed, we are implementing most of our proposals without modification. We modified our proposal regarding how we model the use of the low-volume adjustment to estimate the CY 2019 estimated prospective payment for CAHs to exclude from the low-volume adjustment any CAH within 15 road miles of another CAH or subsection (d) hospital. We use the detailed methodology described in this section to calculate the estimated prospective payment amount for CAHs for the REH monthly facility payment calculation.

d. Determination of the Total Number of CAHs in CY 2019

We proposed to use the CAH claims data to determine the total number of CAHs in CY 2019, which is required to determine the amount of the monthly facility payment pursuant to section 1834(x)(2)(C)(ii) of the Act. We proposed that the number of CAHs in 2019 should be calculated as the distinct count of CAH CMS certification numbers (CCNs) that have any paid Medicare FFS claims from January 1, 2019 to December 31, 2019, based on service date. We proposed that the number of distinct CAH CCNs includes providers that may have either been open or closed during CY 2019. We proposed that CAHs that were open for only part of the year in CY 2019 will be reported as full providers in our count of distinct CAHs and will not be weighted in the count by the portion of the year they were open. Section 1834(x)(2)(C)(ii) of the Act provides that we use the total number of CAHs in 2019 and does not make any provision for counting CAHs only open for a part of the year differently from CAHs open the entire year. We proposed to check the CCNs to ensure that if a CAH reports claims data from rehabilitation, psychiatric, skilled nursing facility or swing bed units in addition to the primary hospital unit, that only one facility is included in the count of total CAHs. We proposed to codify our methodology to calculate the number of CAHs in CY 2019 under 42 CFR 419.92(b)(1)(iii).

Comment: Commenters requested that we adjust the count of the number of CAHs to remove any CAHs that either opened or closed during CY 2019 and do not have a full year of data. Commenters are concerned that including CAHs that were only open for a part of 2019 when the monthly facility payment calculation is based on an annual payment total will lead to an REH facility payment that may underestimate monthly costs.

Response: As noted above, section 1834(x)(2)(C)(ii) of the Act provides that CMS use the total number of CAHs in 2019 to calculate the monthly facility payment. In the proposed rule, we therefore proposed to determine the number of CAHs in 2019 for purposes of the monthly facility payment calculation described in 1834(x)(2)(C) by tallying the total number of CAH CMS certification numbers (CCNs) that have any paid Medicare FFS claims from January 1, 2019 to December 31, 2019, based on service date. As the commenters note, this approach includes any CAHs that operated during

[320] Report to Congress on Medicaid and CHIP. ''Chapter 5: Annual Analysis of Disproportionate Share Hospital Allotments to States''. Medicaid and CHIP Payment and Access Commission. March 2021. Accessed October 20, 2022.

2019 in the total described in section 1834(x)(2)(C)(ii), including such facilities that only operated for part of the year. This approach complies with the plain language of the statute which has no special provisions for counting CAHs that opened or closed during 2019. Accordingly, we are finalizing this aspect of our policy as proposed.

After consideration of the public comments we received, and for the reasons discussed, we are finalizing our proposal for determining the total number of CAHs in CY 2019, as codified in 42 CFR 419.92(b)(1)(iii), without modification.

e. Calculation of the Monthly REH Facility Payment for CY 2023

As stated above, section 1834(x)(2) of the Act requires an additional facility payment be paid monthly to an REH. For CY 2023, we proposed that this facility payment be determined, per the requirements of the CAA and consistent with our proposed regulation text at 42 CFR 419.92(b)(1), using the following calculation:

Step 1: The total amount of Medicare spending for CAHs in CY 2019 (as described in section 1834(x)(2)(C)(i)(I) of the Act) minus the projected Medicare spending for CAHs in CY 2019 if inpatient hospital services, outpatient hospital services, and skilled nursing services had been paid on a prospective basis rather than at 101 percent of total cost (as described in section 1834(x)(2)(C)(i)(II) of the Act) and calculated according to the methodology described above.

Total Amount of Medicare Spending for CAHs in CY 2019: $12.08 billion.

Total Projected Amount of Medicare Spending for CAHs if Paid Prospectively in CY 2019: $7.68 billion.

Step 1 Difference: $12.08 billion − $7.68 billion = $4.40 billion.

Step 2: The difference in Step 1 would be divided by the number of CAHs enrolled in Medicare in CY 2019 to calculate the annual payment per individual REH. The annual payment amount would be divided by 12 to calculate the monthly REH facility payment. Each REH would receive the same facility payment.

Step 1 Difference: $4,404,308,465.

Number of Medicare CAHs in CY 2019: 1,368.

REH Monthly Facility Payment: ($4,404,308,465/1,368)/12 = $268,294.

Using this calculation, we proposed that the monthly facility payment for REHs for CY 2023 would be $268,294. We requested public comments on our methodology to determine the total amount was paid by Medicare to all critical access hospitals in 2019, our methodology to estimate the total amount that would have been paid to CAHs in 2019 for inpatient hospital, outpatient hospital, and skilled nursing facility services under the applicable prospective payment systems, and our overall methodology to calculate the monthly REH facility payment for CY 2023.

Comment: Commenters stated that the low-volume adjustment should not apply to CAHs that are within 15 miles of another provider, regardless of whether that facility is presently a CAH or subsection (d) hospital. They encouraged CMS to identify the CAHs that do not meet the criteria and eliminate the low-volume adjustment applied to those CAHs.

Response: As we stated previously in this final rule, in response to the request of the commenters, we will revise our estimate of the low-volume adjustment to exclude CAHs that do not meet the 15 road miles distance requirement. This revision to our detailed methodology will decrease the estimated prospective payment for CAHs in CY 2019 by $75.1 million and will increase the REH monthly facility payment by $4,573.

Comment: Commenters requested that we include in this final rule more detail regarding our calculations for the monthly REH facility payment for CY 2023. Commenters requested that we report CAH Medicare spending amounts and estimated prospective payment amounts by individual provider categories including: inpatient hospital, inpatient rehabilitation hospital, inpatient psychiatric hospital, outpatient hospital, and skilled nursing facility. Commenters requested we report these spending amounts in addition to the total overall spending amounts for CAH Medicare spending and estimated prospective payments that were reported in the CY 2023 OPPS/ASC proposed rule. The commenters believe that breaking down Medicare spending by each provider category will help interested parties evaluate our calculations for the monthly facility payment.

Response: In the proposed rule we included a detailed calculation showing the key steps to establish the REH monthly facility payment. We provided the proposed final amount of the monthly facility payment along with the aggregate payment amounts for both Medicare CAH spending for CY 2019 and the estimated prospective payment amount for CAHs for CY 2019. By providing these figures, along with the detailed description of CMS's methodology included in the proposed rule, which further described e how we proposed to calculate Medicare CAH spending and the estimated prospective payment values described in sections 183(x)(2)(C)(i)(I) and (II) of the Act, as well as the additional clarification about specific aspects of CMS's methodology described in this final rule, we believe we are providing sufficient information for interested parties to assess our calculation of the REH monthly facility payment.

Comment: Multiple commenters requested that all REH payments, or at least the REH monthly facility payment, be exempted from sequestration. The commenters state the sequestration cuts are harmful to future REH providers, and play a role in reducing access to hospital care in rural areas.

Response: Consistent with 2 U.S.C. 906(d)(1), sequestration will apply to all REH payments including the monthly facility payment. We note that the application of sequestration to the monthly facility payment is consistent with the application of sequestration to other types of Medicare payments that are not payments for services furnished to a single beneficiary, including GME and uncompensated care payments to hospitals, and shared savings payments under the Medicare Shared Savings Program.

Comment: One commenter suggested that the monthly facility payment should not be a fixed amount. The commenter said the size of the payment should vary based on the size of the REH facility.

Response: The methodology for determining the amount of the REH monthly facility payment provided by the REH statute at section 1834(x)(2)(B) and (C) of the Act provides for CMS to determine a single amount for this monthly payment that shall apply to all REH providers, and makes no provision for CMS to change the amount of the payment based on the size of the provider. Likewise, such an adjustment was not proposed in the proposed rule. Because the commenter's request goes beyond the scope of the proposed framework for calculation of the CY 2023 REH monthly facility payment and is not supported by the REH statute, we are finalizing this aspect of our proposed calculation of the CY 2023 REH monthly facility payment as proposed.

Comment: Multiple commenters supported our proposal for the REH monthly facility payment.

Response: We appreciate the support of the commenters for our policy.

After consideration of the public comments we received, and for the reasons described here and in the proposed rule, we are finalizing our

proposed calculation of the monthly REH facility payment for CY 2023 with the modification described here. Specifically, we are modifying our calculation of the monthly REH facility payment for CY 2023 to reflect the change in our detailed methodology used to calculated the estimated prospective payment amount for CAHs in CY 2019, to exclude CAH inpatient services from the low-volume adjustment if a CAH was within 15 road miles of another CAH or subsection (d) hospital.

Our revised calculations of the monthly REH facility payment for CY 2023 are as follows:

Step 1: The total amount of Medicare spending for CAHs in CY 2019 (as described in section 1834(x)(2)(C)(i)(I) of the Act) minus the projected Medicare spending for CAHs in CY 2019 if inpatient hospital services, outpatient hospital services, and skilled nursing services had been paid on a prospective basis rather than at 101 percent of total cost (as described in section 1834(x)(2)(C)(i)(II) of the Act) and calculated according to the methodology described above.

Total Amount of Medicare Spending for CAHs in CY 2019: $12.08 billion.

Total Projected Amount of Medicare Spending for CAHs if Paid Prospectively in CY 2019: $7.60 billion.

Step 1 Difference: $12.08 billion − $7.60 billion = $4.48 billion.

Step 2: The difference in Step 1 would be divided by the number of CAHs enrolled in Medicare in CY 2019 to calculate the annual payment per individual REH. The annual payment amount would be divided by 12 to calculate the monthly REH facility payment. Each REH would receive the same facility payment.

Step 1 Difference: $4,479,370,835.

Number of Medicare CAHs in CY 2019: 1,368.

REH Monthly Facility Payment: ($4,479,370,835/1,368)/12 = $272,866.

Using our finalized calculations, the REH monthly facility payment for CY 2023 will be $272,866.

f. Calculation of the Monthly REH Facility Payment for CY 2024 and Subsequent Calendar Years

Section 1834(x)(2)(B) of the Act states that ''[t]he annual additional facility payment amount specified in this subparagraph is . . . for 2024 and each subsequent year, the amount determined under this subparagraph for the preceding year, increased by the hospital market basket percentage increase.'' Accordingly, we proposed to codify, at 42 CFR 419.92(b)(2), that for CY 2024 and each subsequent calendar year, the amount of the additional annual facility payment is the amount of the preceding year's additional annual facility payment, increased by the hospital market basket percentage increase as described under section 1886(b)(3)(B)(iii) of the Act.

Comment: Commenters supported our proposal to codify the increase the REH monthly facility payment calculated in CY 2023 by the hospital market basket in subsequent years.

Response: We appreciate the support of the commenters for our proposal.

After consideration of the public comments we received, we are finalizing without modification our proposal to codify at 42 CFR 419.92(b)(2) the calculation of the REH monthly facility payment in CY 2024 and subsequent years based on the value of the preceding year increased by the hospital market basket percentage increase.

6. Preclusion of Administrative or Judicial Review

Section 1861(kkk)(9) of the Act explicitly precludes administrative or judicial review under section 1869 of the Act, section 1878 of the Act, or otherwise of (1) the establishment of requirements by the Secretary under subsection 1861(kkk) of the Act; (2) the determination of payment amounts under section 1834(x) of the Act, including the determination of additional facility payments; and (3) the determination of whether a rural emergency hospital meets the requirements of subsection 1861(kkk) of the Act.

Consequently, we proposed to codify, at § 419.94, the preclusion of administrative or judicial review under section 1869 of the Act, section 1878 of the Act, or otherwise of (1) the determination of whether a rural emergency hospital meets the requirements established by CMS's proposed regulations at 42 CFR part 419, subpart K (''subpart K''); (2) the determination of payment amounts under proposed subpart K; and (3) the requirements of proposed subpart K.

Comment: One commenter requested that we not codify the preclusion of administrative or judicial review of the requirements established by proposed subpart K, the determination of payment amounts under proposed subpart K, and the determination of whether an REH meets the requirements of proposed subpart K at this time. The commenter maintains that that the preclusion established by the statute constitutes a ''complete hands-off approach'' which is highly unusual for a new program and which does not foster a transparent, accountable, and equitable system. The commenter believes this creates a precarious position for CMS and for REHs because aspects of the program such as the REH monthly facility payment, other payment provisions and conditions of participation will likely be subject to future review and possible revisions.

Response: As acknowledged by the commenter, the preclusion of administrative and judicial review that we proposed to codify at § 419.94 derives from section 1861(kkk)(9) of the Act, which states that there shall be no administrative or judicial review of the establishment of requirements under 1861(kkk) by the Secretary, the determination of whether a REH meets the requirements of 1861(kkk) or the determination of payment amounts under section 1834(x), including additional facility payments. The proposed regulatory text at § 419.94 simply codifies the statutorily mandated preclusion, and would apply to subpart K whether we codify it or not.

After consideration of the public comment we received, we are finalizing our proposal, without modification, to codify, at § 419.94, the preclusion of administrative or judicial review under section 1869 of the Act, section 1878 of the Act, or otherwise of (1) the determination of whether an REH meets the requirements established by proposed subpart K; (2) the determination of payment amounts under proposed subpart K; and (3) the requirements of proposed subpart K.

7. Conforming Revisions to 42 CFR Part 410 and 413

In addition to proposing to codify the requirements of section 1861(kkk) and 1834(x) of the Act at 42 CFR part 419 as described above, we proposed to make conforming changes to 42 CFR part 410, which describes the origin and destination requirements for the coverage of ambulance services, and 42 CFR part 413, which specifies principles of reasonable cost reimbursement.

a. Rural Emergency Hospitals Ambulance Services Background

Section 1861(s)(7) of the Act establishes an ambulance service as a Medicare Part B service where the use of other methods of transportation is contraindicated by the individual's condition, but only to the extent provided in regulations. The House Ways and Means Committee and Senate Finance Committee Reports that accompanied the 1965 Social Security Amendments suggests that the Congress intended:

• The ambulance benefit cover transportation services only if other means of transportation are contraindicated by the beneficiary's medical condition; and

• Only ambulance service to local facilities be covered unless necessary services are not available locally, in which case, transportation to the nearest facility furnishing those services is covered (H.R. Rep. No. 213, 89th Cong., 1st Sess. 37 and Rep. No. 404, 89th Cong., 1st Sess. Pt 1, 43 (1965)).

The reports indicate that transportation may also be provided from one hospital to another, to the beneficiary's home, or to an extended care facility. Since April 1, 2002, payment for ambulance services is made under the ambulance fee schedule (AFS), which the Secretary established under section 1834(l) of the Act.

We have established regulations at § 410.40 that govern Medicare coverage of ambulance services. Under § 410.40(e)(1), Medicare Part B covers ground (land and water) and air ambulance transport services only if they are furnished to a Medicare beneficiary whose medical condition is such that other means of transportation are contraindicated. The beneficiary's condition must require both the ambulance transportation itself and the level of service provided for the billed services to be considered medically necessary. The origin and destination requirements for coverage of ambulance services are addressed in our regulations at § 410.40(f).

b. Revision to the Origin and Destination Requirements Under the AFS (42 CFR 410.40(f))

Section 125 of the Consolidated Appropriations Act, 2021, added section 1834(x)(3) of the Act for payment for ambulance services. Specifically, newly added section 1834(x)(3) of the Act states: ''For provisions relating to payment for ambulance services furnished by an entity owned and operated by a rural emergency hospital, see section 1834(l) of the Act.'' Accordingly, the statute makes clear that the ambulance provisions under section 1834(l) of the Act apply to REHs that owns and operates an ambulance transportation in the same manner that they do for other ambulance providers and suppliers that receive AFS payment for ambulance services. The previous section includes a discussion about this provision, including CMS's proposal, consistent with section 1834(x)(3) of the Act, to codify, at 42 CFR 419.92(c)(1), that an entity that is owned and operated by an REH that provides ambulance services will receive payment for such services under the ambulance fee schedule as described in section 1834(l) of the Act.

The REH is an appropriate destination for an ambulance transport if furnished to a Medicare beneficiary whose medical condition is such that other means of transportation are contraindicated. the beneficiary's condition must require both the ambulance transportation itself and the level of service provided for the billed services to be considered medically necessary. We proposed to revise our regulations at § 410.40(f) to include REH as a covered origin and destination for ambulance transport.

There are several different types of ambulance providers and suppliers that are enrolled in Medicare and furnished ambulance services payable under the AFS, such as a hospital provider. We proposed that an REH that owns and operates an ambulance transportation may enroll in Medicare as an ambulance provider and receive payment under the AFS if all coverage and payment requirements are met.

We invited comments on our proposals to include REHs as a covered origin and destination for ambulance transport under the AFS and that an REH that owns and operates an ambulance transportation may enroll in Medicare as an ambulance provider and receive payment under the AFS if all coverage and payment requirements are met.

Comment: We received several comments in support of our proposal to include REHs as a covered origin and destination for ambulance transport under the AFS. A commenter supported our proposal that an REH that owns and operates an ambulance transportation may enroll in Medicare as an ambulance provider and receive payment under the AFS if coverage and payment requirements are met. The commenter further stated that high quality ambulance service is an essential component of emergency medical services and rural hospitals, and by extension, REHs often are the sole providers of those services in their communities.

Response: We appreciate the commenters' support.

Comment: Several commenters recommended two additional paragraphs be added to the regulation at § 410.40(f): (1) A new paragraph addressing coverage for facility-to-facility transfers for emergency services: ''From a hospital, CAH, or REH to a hospital or CAH for emergency services not available at the hospital, CAH, or REH to which the patient came'' and (2) a new paragraph addressing coverage for hospital-to-SNF transfers: ''For a beneficiary who qualifies for SNF or swing bed services following an inpatient stay, from a hospital or CAH to a hospital, CAH, or SNF in the beneficiary's home community for SNF or swing bed services.''

Response: The first recommended subsection seems to be subsumed in what the regulation already states so adding the recommendation is duplicative. Our regulations at § 410.40(f) includes coverage of ambulance services from any point of origin to the nearest hospital, CAH, or SNF and we proposed to add REH that is capable of furnishing the required level and type of care for the beneficiary's illness or injury. The hospital or CAH must have available the type of physician or physician specialist needed to treat the beneficiary's condition. This requirement would cover a medically necessary ambulance transport for a beneficiary that needs to be transported from a hospital, CAH, or REH to a hospital or CAH for emergency services not available at the hospital, CAH, or REH to which the patient came.

The second recommended subsection does not include REHs, and is out of scope because we didn't propose any new ambulance coverage requirements for hospital-to-SNF transports. This recommended subsection seems to circumvent the nearest appropriate facility requirement if the beneficiary gets ill and is hospitalized not near the beneficiary's home. Under the AFS, Medicare Part B covers ambulance services furnished to a Medicare beneficiary that meet the following requirements: There is medically necessary transportation of the beneficiary to the nearest appropriate facility that can treat the patient's condition and any other methods of transportation are contraindicated, meaning that traveling to the destination by any other means would endanger the health of the beneficiary. The beneficiary's condition must require both the ambulance transportation itself and the level of service provided in order for the billed service to be considered medically necessary.

After consideration of the public comments we received, and for the reasons stated here and in the proposed rule, we are finalizing our proposals to revise our regulations at § 410.40(f) to include an REH as a covered origin and destination for ambulance transport under the AFS, and that an REH that owns and operates an ambulance transportation may enroll in Medicare as an ambulance provider and receive payment under the AFS if all coverage and payment requirements are met.

c. Conforming Revisions to 42 CFR 413.1, 413.13, and 413.24

We also proposed to make conforming changes to the regulation text specifying principles of reasonable cost reimbursement in 42 CFR part 413 to incorporate references to REHs. Specifically, we proposed to modify § 413.1(a)(1)(ii) by adding paragraph (a)(1)(ii)(L), to state that section 1834(x) of the Act authorizes payment for services furnished by REHs and establishes the payment methodology. We also proposed to modify § 413.1(a)(2)(i) to add REHs to the listing of provider types covered by the regulations in 42 CFR part 413. Additionally, we proposed to amend § 413.13(c)(2) by adding paragraph (c)(2)(vii) to the listing of services not subject to the lesser of costs or charges principle, to specify that services furnished by REHs are subject to the payment methodology set forth in part 419, subpart K.

Furthermore, we proposed to amend § 413.24(f)(4)(i) to specify that an REH is required to file annual cost reports, and to amend § 413.24(f)(4)(ii) to specify that effective for cost reporting periods beginning on or after January 1, 2023, REHs are required to submit their cost reports in a standardized electronic format. Finally, we proposed to amend § 413.24(f)(4)(iv)(A), which requires providers to submit a hard copy of a settlement summary, if applicable, and the certification statement described in § 413.24(f)(4)(iv)(B), by adding paragraph (f)(4)(iv)(A)(5) to state that for REHs, these requirements are effective for cost reporting periods beginning on or after January 1, 2023.

We did not receive any public comments on our proposal and, therefore, we are finalizing, without modification, our proposed conforming revisions to 42 CFR 413.1, 413.13, and 413.24.

B. REH Conditions of Participation (CoP) and Critical Access Hospital (CAH) CoP Updates (CMS–3419–F)

Section 125 of Division CC of the Consolidated Appropriations Act, 2021 (CAA) added a new section 1861(kkk) to establish REHs as a new Medicare provider type to address Congress's growing concern over closures of rural hospitals. According to a report by the United States Government Accountability Office published in 2020, over 100 rural hospitals closed from January 2013-February 2020 (Rural Hospital Closures: Affected Residents Had Reduced Access to Health Care Services; GAO–21–93, *https://www.gao.gov/products/gao-21-93*). The CAA created a pathway for certain critical access hospitals (CAHs) and certain rural hospitals to convert to this new provider type, allowing for continued access to emergency care in rural areas. In accordance with the statute, a facility is eligible to be an REH if it was a CAH or rural hospital with not more than 50 beds as of the date of enactment of the CAA (December 27, 2020). REHs must provide emergency services and observation care and they may not provide inpatient services. Additionally, REHs may provide skilled nursing facility services in a separately certified distinct part skilled nursing facility unit. The statute also allows the Secretary discretion to establish additional requirements for REHs in the interest of health and safety.

1. Provisions of the Proposed Regulations and Responses to Public Comments and Incorporation by Reference

We published a Request for Information (RFI) for REHs in the CY 2022 OPPS/ASC proposed rule (86 FR 42018, 42285) on August 4, 2021, and used this information to inform development of the REH health and safety, payment, quality measures, and enrollment policies. The proposed health and safety standards (that is, the Conditions of Participation) for REHs were published in the **Federal Register** on July 6, 2022, in a proposed rule titled ''Medicare and Medicaid Programs; Conditions of Participation (CoPs) for Rural Emergency Hospitals (REHs) and Critical Access Hospital CoP Updates'' (87 FR 40350). All of the final health and safety policies for REHs and the CAH CoP updates are being published in this final rule with comment period.

Incorporation by Reference

This final rule incorporates by reference the NFPA 101® 2012 edition of the Life Safety Code (LSC), issued August 11, 2011, and all Technical Interim Amendments (TIA) issued prior to April 16, 2014; the NFPA 99® 2012 edition of the Health Care Facilities Code, issued August 11, 2011; NFPA 110® 2010 edition of the Standard for Emergency and Standby Power Systems, issued August 6, 2009; and all TIA issued prior to April 16, 2014. This includes: (1) NFPA 101, LSC, 2012 edition, issued August 11, 2011; (i) TIA 12–1 to NFPA 101, issued August 11, 2011; (ii) TIA 12–2 to NFPA 101, issued October 30, 2012; (iii) TIA 12–3 to NFPA 101, issued October 22, 2013; (iv) TIA 12–4 to NFPA 101, issued October 22, 2013; (2) NFPA 99, Health Care Facilities Code, 2012 edition, issued August 11, 2011; (i) TIA 12–2 to NFPA 99, issued August 11, 2011; (ii) TIA 12–3 to NFPA 99, issued August 9, 2012; (iii) TIA 12–4 to NFPA 99, issued March 7, 2013; (iv) TIA 12–5 to NFPA 99, issued August 1, 2013; (v) TIA 12–6 to NFPA 99, issued March 3, 2014; and (3) NFPA 110® 2010 edition of the Standard for Emergency and Standby Power Systems, issued August 6, 2009, including TIAs to Chapter 7, issued August 6, 2009. A summary of these standards incorporated by reference can be found in sections XVIII.B.1.a.(21) and XVIII.B.1.a.(22) of this rule. The materials we incorporate by reference are available to interested parties and can be inspected at the CMS and the National Archives and Records Administration (NARA). Contact CMS at: CMS Information Resource Center, 7500 Security Boulevard, Baltimore, MD, email: *scott.cooper@cms.hhs.gov* or call (410) 786–9465. For information on the availability of this material at NARA, email *fr.inspection@nara.gov*, or go to: *www.archives.gov/federal-register/cfr/ibr-locations.html*. Copies may be obtained from the National Fire Protection Association, 1 Batterymarch Park, Quincy, MA 02169, *www.nfpa.org*, 1 (617) 770–3000. If CMS wishes to adopt any changes in this edition of the Code, it would submit the revised document to notice and comment rulemaking.

The comments and our responses to those comments are set forth below.

Comments Out of the Scope of This Rulemaking

Comment: We received many comments regarding issues that were out of scope of this rulemaking, addressing subjects such as Medicare Advantage, home health payments, and Medicare coverage for all.

Response: We have reviewed all of the comments, including those that were out of the scope of this rule. We will not be addressing them in this final rule with comment period; however, we will consider them for future rulemaking.

a. Rural Emergency Hospital Conditions for Participation (Proposed Part 485, Subpart E)

We proposed to add a new subpart E in 42 CFR part 485, to incorporate the REH CoPs. Proposed subpart E would include all the health and safety standards for REHs. Overall, the proposed requirements were modeled closely after the CoPs for CAHs. In some instances, we have also proposed requirements that are similar to the CoPs for hospitals and CfCs for Ambulatory Surgical Centers (ASCs). In each of the sections below, we specify the existing requirements for CAHs,

hospitals, or ASCs that we used to guide the proposed requirements.

(1) Basis and Scope (§ 485.500)

We proposed to set forth the basis and scope of part 485, subpart E, at § 485.500. As previously noted, proposed part 485, subpart E, would implement section 1861(kkk) of the Act, which establishes the requirements that an REH must meet in order to participate in the Medicare program. Section 1833(a) of the Act serves as the basis for the establishment of payment of benefits covered under Medicare for REHs.

Technical assistance (TA) is available to hospitals and CAHs seeking REH designation from the Health Resources and Services Administration's REH TA Center. The REH TA Center, which has been awarded to the Rural Health Redesign Center (*https://www.rhrco.org/reh-tac*), provides TA to rural hospitals and CAHs exploring REH designation. Their aim is to assist facilities to financially model and assess the feasibility of an REH conversion; helping them complete the application process to CMS for REH designation; assist with strategic planning for REH conversion and identifying alternative care pathways to continue to meet the needs of their community; and provide ongoing support while new REHs implement service changes as a result of the conversion.

We did not receive any public comments on our proposal and therefore, we are finalizing this provision as proposed.

(2) Definitions (§ 485.502)

At § 485.502, we proposed to define certain terms that would be used throughout the REH CoPs. We proposed to define the term ''Rural Emergency Hospital or REH'' in accordance with the definition set forth in section 1861(kkk) of the Act. In accordance with the Act, we proposed to define ''Rural Emergency Hospital or REH'' as an entity that operates for the purpose of providing emergency department services, observation care, and other outpatient medical and health services specified by the Secretary in which the annual per patient average length of stay does not exceed 24 hours. The REH must not provide inpatient services, except those furnished in a unit that is a distinct part licensed as a skilled nursing facility to furnish post-REH or post-hospital extended care services.

Comment: We received several comments on the REH RFI recommending that the average length of stay be increased in certain instances, such as when the REH is providing services to a patient who is need of inpatient psychiatric or inpatient rehabilitation services. The commenters stated that placement of these patients in an inpatient facility could be difficult with some patients potentially remaining in the REH for observation services for weeks. Commenters noted further that attending to these patients could produce an average length of stay that would exceed the proposed 24-hour annual per patient average length of stay. Other commenters requested that CMS be flexible in recognizing bed capacity issues for those patients awaiting placement in an inpatient facility and practice enforcement discretion related to the proposed length-of-stay requirement. Other commenters asked that CMS increase the length of stay, noting that in some instances patients may require a longer stay, potentially affecting compliance with this requirement.

Response: We appreciate the comments received on this provision. The 24-hour annual per patient average length of stay is a statutory requirement and cannot be modified. We note that this is an annual average per patient requirement for all patients, and we expect that some patients will receive services for longer periods of time, while others will receive services there for a minimal amount of time throughout the year.

Comment: Commenters suggested that we allow exemptions for the length of stay, particularly for low-risk labor and delivery, behavioral health and surgical services. Commenters stated that in some situations, a patient may require a longer stay or may not be able to be transferred in a timely fashion, if necessary. Allowing for exemptions will help to avoid non-compliance due to occasional situations in which the patient may require a longer stay. Some commenters also recommended that we exclude the length of stay for a patient whose transfer was delayed for more than 12 hours.

Response: We understand that there may be situations in which a patient may have to stay in the facility for longer periods of time. However, since this is a statutory requirement we do not have the ability to make exceptions. We recommend that facilities maintain documentation of instances in which a patient is unable to be transferred timely or when there are specific situations in which the patient's stay may exceed 24 hours. If for any reason the REH exceeds an average annual per patient length of stay of 24 hours, the REH is expected to have documentation showing instances in which there were attempt(s) to transfer or reasons for an extended length of stay so that the information can be reviewed and considered by CMS when making determinations regarding the REH's compliance with the length of stay requirement. If the services being provided by the REH are appropriate for this provider type (such as outpatient low-risk labor and delivery and outpatient behavioral health services), the REH should not routinely exceed the length of stay. If more complex patients present to the REH, they would be expected to be transferred to a facility that is able to provide a higher level of care. We also reiterate that the length of stay requirement is an average, such that if an REH exceeds the length of stay requirement with greater frequency, it might suggest that the facility is not in compliance with the definition of an REH.

Comment: Many commenters asked that we clarify how the length of stay will be calculated.

Response: The method used to calculate the average annual per patient length of stay in an REH takes into account the outpatient-only nature of the REH. The time calculation for determining the length of stay of a patient receiving services at the REH is similar to the approach used in ASCs and begins with the registration, check-in or triage of the patient (whichever occurs first) and ends with the discharge of the patient from the REH. The discharge occurs when the physician or other appropriate clinician has signed the discharge order, or at the time the outpatient service is completed and documented in the medical record. The REH length of stay requirement is applicable to all patients receiving services provided by the REH.

After consideration of the public comments we received, we are finalizing § 485.502 with modifications. We are revising § 485.502 by incorporating the methodology used to determine the annual per patient average length of stay for the REH.

(3) Basic Requirements (§ 485.504)

At § 485.504, we proposed to set forth the basic requirements for REHs in accordance with section 1861(kkk) of the Act. Participating REHs would be limited to those facilities that meet the definition in proposed § 485.502 and have in effect a provider agreement as defined at 42 CFR 489.3. This final rule adds REHs to the list of providers required to obtain a provider agreement at § 489.2(b) in the ''Conforming Amendments and Technical Corrections'' section of this rule.

Comment: Section 1861(kkk)(4)(A)(i) requires that a hospital or CAH seeking REH conversion submit a detailed

transition plan at the time of the submission of their revised CMS Form 855–A. Several commenters suggested that CMS clarify in the final rule the process for submitting the transition plan.

Response: Details regarding submission of the transition plan and the transition plan requirements will be published in future rulemaking.

We did not receive any public comments on our proposal and therefore, we are finalizing our proposal.

(4) Designation and Certification of REHs (§ 485.506)

At § 485.506, we proposed to set forth the criteria for CMS certification of an REH in accordance with section 1861(kkk) of the Act. We proposed to establish that CMS would certify a facility as an REH if the facility was, as of the date of enactment of the CAA, a CAH, or a hospital as defined in section 1886(d)(1)(B) of the Act with not more than 50 beds located in a county (or equivalent unit of local government) considered rural (as defined in section 1886(d)(2)(D) of the Act), or treated as being located in a rural area pursuant to section 1886(d)(8)(E) of the Act. In addition, to be treated as being located in a rural area for the purpose of REH eligibility, we proposed that a hospital located in a metropolitan county that applies to be an REH must have had an active reclassification from urban to rural status, as specified in section 42 CFR 412.103, as of December 27, 2020.

Comment: Commenters asked if either a rural hospital with not more than 50 beds or a CAH were certified for participation in Medicare and Medicaid as of the date of enactment of the CAA (December 27, 2020), which subsequently closed after that date, would continue to be eligible to seek designation as an REH.

Response: Section 1861(kkk)(3) describes an eligible facility that was a CAH or a rural hospital with not more than 50 beds as of the date of enactment of the CAA (December 27, 2020). Therefore, facilities that were CAHs or rural hospitals with not more than 50 beds as of the date of enactment of the CAA and then subsequently closed after that date, would be eligible to seek REH designation after the closure of the facility. However, the facility would have to meet all the CoPs for REHs in order to re-open as an REH.

Comment: Commenters additionally inquired about the methodology used to determine if a rural hospital with not more than 50 beds meets the bed count requirement to seek REH designation.

Response: The bed count will be determined by calculating the number of available bed days during the most recent cost reporting period divided by the number of days in the most recent cost reporting period. We use this methodology to determine if Medicare-dependent small rural hospitals meet the required bed count for that program. We believe this is an appropriate methodology for determining if a rural hospital meets the bed count requirement to seek REH designation, as this is a known and existing methodology for small rural hospitals seeking to determine bed count for eligibility in Medicare programs.

After consideration of the public comments we received, we are finalizing § 485.506 as proposed.

(5) Compliance With Federal, State, and Local Laws and Regulations (§ 485.508)

Consistent with the requirements for all Medicare- and Medicaid-participating providers and suppliers, we proposed to require REHs to comply with Federal, state, and local laws and regulations. At § 485.508(a), we proposed to require the REH to be in compliance with applicable Federal laws, state, and local laws and regulations. In accordance with section 1861(kkk)(5) of the Act, we also proposed to require at § 485.508(b) that the REH be located in a state that provides for the licensing of such hospitals under state or applicable local law. In addition, under § 485.508(b)(1) and (2), we proposed that the REH be licensed in the state as an REH or be approved as meeting standards for licensing by the agency in the state or locality responsible for licensing hospitals. We note that in many instances, states and localities, have more stringent laws and regulations than the Federal requirements. In cases in which state law or regulations are more stringent, the REH would need to comply with the more stringent state or local requirements to meet the proposed requirements at § 485.508(a).

At § 485.508(c), we proposed to require that the REH ensure that personnel are licensed or meet other applicable standards required by state or local laws to provide services within their respective applicable scope of practice.

Comment: Some commenters on the REH RFI recommended that CMS encourage licensure portability among health care practitioners. Commenters on the RFI indicated that allowing practitioners to practice in multiple states would greatly support both in-person and virtual care models in rural areas where the closest health care provider could be across the state line.

Response: This proposed standard does not prohibit a practitioner that is licensed in one state from providing care at an REH in another state; state laws govern whether this is permissible. Other than the comment provided in response to the RFI, e did not receive any public comments on our proposal and therefore, we are finalizing our proposal without change.

(6) Condition of Participation: Governing Body and Organizational Structure of the REH (§ 485.510)

To ensure appropriate oversight of the REH, we proposed at § 485.510 to require the REH to have an effective governing body, or responsible individual or individuals, that is legally responsible for the conduct of the REH. This aligns with the CAH CoP for organizational structure at § 485.627(a). In addition to oversight, we expect the responsibilities of the governing body or responsible individual to include ensuring that the REH is effectively executing its policies and decision-making about the REH's vision, mission, and strategies. If an REH does not have an organized governing body, we proposed to require that the person or persons legally responsible for the conduct of the REH carry out the functions specified in this part that pertain to the governing body.

Consistent with the hospital governing body CoPs at § 482.12, we proposed at § 485.510(a)(1) to require the governing body, in accordance with state law, to determine which categories of practitioners are eligible candidates for appointment to the medical staff. Additionally, consistent with the interpretive guidelines for CAHs in Appendix W of the State Operations Manual for the standard for *Governing Body or Responsible Individual* at § 485.627(a), we proposed to require that the governing body of the REH appoint members of the medical staff after considering the recommendations of the existing members of the medical staff. The role of the medical staff is the promotion of patient safety and the quality of care. This proposal would give maximum flexibility to an REH in determining and granting staff privileges and organizing its medical staff, and it would allow the REH to grant specific privileges related to patient care to various other types of licensed practitioners as needed, in addition to the privileges it would choose to grant to doctors of medicine or osteopathy. For example, an REH could choose to grant medical staff privileges to nurse practitioners and physician assistants if

permissible under state law. We also proposed to require that the REH's governing body ensure that its medical staff be accountable to the governing body for the quality of patient care provided by the REH; organize itself under bylaws; and ensure that the criteria for selection to the medical staff are individual character, competence, training, experience, and judgment.

Many rural populations suffer from limited access to care due to a shortage of health care professionals, especially physicians. Often, clinicians other than physicians provide important care services to rural communities with physicians providing oversight. This may occur in different ways, including via the use of mobile health, video and audio technologies, digital photography and remote patient monitoring. With the development of technology that facilitates ''telemedicine,'' a physician could utilize a variety of methods to provide health care services, including being on-site at a facility or at a distant site furnishing services remotely to a patient located at an originating site.

Commenters on the REH RFI noted that REHs should be able to act as an originating site (that is, the location where a Medicare patient receives medical services from a physician or other clinician through a telecommunications system) for the provision of telehealth services. As noted in the CY 2022 Medicare Physician Fee Schedule final rule (86 FR 65057), section 125(c) of the CAA amended section 1834(m)(4)(C)(ii) of the Act to add REHs to the list of permissible telehealth originating sites. In accordance with section 1834(m)(4)(C)(ii)(XI) of the Act, as added by section 125(c) of the CAA, we have already finalized a revision to § 410.78(b)(3) of our regulations to add REH, as defined in section 1861(kkk)(2) of the Act, as a permissible originating site for telehealth services furnished on or after January 1, 2023.

For the purposes of this rule, similar to our interpretation in the policy set out in our 2011 final rule, ''Medicare and Medicaid Programs; Changes Affecting Hospital and Critical Access Hospital Conditions of Participation: Telemedicine Credentialing and Privileging'' (76 FR 25550, May 5, 2011), we see telemedicine as encompassing the overall delivery of health care to the patient through the practice of patient assessment, diagnosis, treatment, consultation, transfer and interpretation of medical data, and patient education all via a telemedicine link (for example, audio, video, and data telecommunications as may be utilized by distant-site physicians and practitioners). Therefore, in order to make clear that the credentialing and privileging provisions proposed for REHs were not limited to the narrower subset of services and sites eligible for Medicare telehealth payment, we chose to use the term, ''telemedicine,'' throughout this rule instead of ''telehealth.'' As noted previously, payment policies for REHs, including for services furnished via telehealth/telemedicine, will be addressed in separate notice and comment rulemaking.

In recognition of the important role that telemedicine can play in the provision of care in rural communities, we believe it is necessary to establish a more efficient process for REHs to credential and privilege clinicians who provide telemedicine services for the REH's patients. We proposed requirements similar to the telemedicine credentialing and privileging process requirements established for hospitals and CAHs that would allow for an optional and more streamlined credentialing and privileging process that REHs may use for practitioners providing telemedicine services for their patients. We believe that REHs might lack the resources to fully carry out the traditional credentialing and privileging process for all of the physicians and practitioners that may be available to provide telemedicine services. Small hospitals and CAHs seeking to provide enhanced access to care through the use of telemedicine services for their patients have already encountered this issue. In addition to the costs and administrative staff needed for this process, REHs would also most likely not have in-house medical staff with the clinical expertise to adequately evaluate and privilege the wide range of specialty physicians that larger hospitals can provide their patients through the use of telemedicine services.

Therefore, at § 485.510(a)(8) we proposed that the REH's governing body ensure that when telemedicine services are furnished to the REH's patients through an agreement with a Medicare-participating hospital (the ''distant-site''—the site at which the physician or practitioner is located at the time the service is provided via a communications system, as defined at section 1834(m)(4)(A) of the Act), the agreement must specify that the governing body of the distant-site hospital providing the telemedicine services must meet the requirements in § 485.510(a)(1) through (7) with regard to its physicians and practitioners who are providing telemedicine services. These provisions cover the distant-site hospital's governing body responsibilities for its medical staff that all Medicare-participating hospitals must currently meet and that REHs would be required to meet when this rule is finalized. The proposed requirements at § 485.510(a)(8) would allow the governing body of the REH whose patients are receiving the telemedicine services to grant privileges based on the recommendations of its medical staff, who would rely on information provided by the distant-site hospital, as a more efficient means of privileging the individual distant-site physicians and practitioners. This provision would be accompanied by the proposed requirement in the ''Medical staff'' CoP at § 485.510(a), which would provide the basis on which the REH's governing body, through its agreement as noted above, can choose to have its medical staff rely upon information furnished by the distant-site hospital when making recommendations on privileges for the individual physicians and practitioners providing such services. This option would not prohibit an REH's medical staff from continuing to perform its own periodic appraisals of telemedicine members of its staff, nor would it bar them from continuing to use the proposed traditional credentialing and privileging process proposed at § 485.512(a)(2). The intent of this proposed requirement is to relieve burden for REHs by providing for a less duplicative and more efficient privileging scheme with regard to physicians and practitioners providing telemedicine services. However, in an effort to ensure accountability to the process, we also proposed at (§ 485.512(a)(3) that the REH, in order to choose this less burdensome option for privileging, would have to ensure that (1) the distant-site hospital providing the telemedicine services was a Medicare-participating hospital; (2) the individual distant-site physician or practitioner was privileged at the distant-site hospital providing telemedicine services, and that this distant-site hospital provided a current list of the physician's or practitioner's privileges; (3) the individual distant-site physician or practitioner held a license issued or recognized by the state in which the REH, whose patients are receiving the telemedicine services, was located; and (4) with respect to a distant-site physician or practitioner granted privileges by the REH, the REH had evidence of an internal review of the distant-site physician's or practitioner's performance of these privileges and send the distant-site hospital this information for use in its periodic appraisal of the individual

distant-site physician or practitioner. We also proposed that, at a minimum, the information sent for use in the periodic appraisal would have to include a description of all adverse events that could result from telemedicine services provided by the distant-site physician or practitioner to the REH's patients and all complaints the REH had received about the distant-site physician or practitioner. We proposed at § 485.512(c)(5) to require that REH's medical staff bylaws include criteria for determining privileges and a procedure for applying the criteria to individuals requesting privileges. We proposed to add language to stipulate that in cases where distant-site physicians and practitioners requested privileges to furnish telemedicine services through an agreement with an REH, the criteria for determining those privileges and the procedure for applying the criteria would be subject to the proposed requirements at §§ 485.510(a)(8) and (9) and 485.512(a)(3) and (4).

Similar to the revisions we made in the ''Changes Affecting Hospital and Critical Access Hospital Conditions of Participation'' final rule (76 FR 25556), we also concluded that it would be important that the medical staff of a distant-site telemedicine entity, which might not be a Medicare-participating hospital, also be included in an optional and streamlined credentialing and privileging process for those REHs electing to enter into agreements for telemedicine services with such entities. However, similar to the situation we faced for hospitals and CAHs in the May 2011 final rule (that is, the inclusion of distant-site telemedicine entities into this streamlined process without CMS having any regulatory or oversight authority over them, we realized that the proposed requirements for REHs would need to hold distant-site telemedicine entities accountable to the originating-site REH for meeting CMS practitioner credentialing and privileging standards. And like the current requirements for hospitals and CAHs using telemedicine services, REHs would need to provide, upon request when surveyed, the most current telemedicine services agreement showing that the distant-site entities providing the services were required to comply with the CMS standards (even though CMS has no direct authority over those entities) in order for the REH to make use of the more streamlined process when credentialing and privileging practitioners from these distant-site telemedicine entities. Similar to our regulations proposed for REHs using the telemedicine services of distant-site Medicare-participating hospitals, the written agreement between the REH and the distant-site telemedicine entity would be the foundation for ensuring accountability on both sides. However, due to the differences already discussed between Medicare-participating distant-site hospitals providing telemedicine services and distant-site practitioners under section 1834(m) of the Act providing similar services, there would also have to be differences in the way the regulations were written.

Therefore, we also proposed requirements that would apply to the credentialing and privileging process and the agreements between REHs and distant-site telemedicine entities (§§ 485.510(a)(9) and 485.512(a)(4)). These provisions would require the governing body of the REH (or responsible individual), through its written agreement with the distant-site telemedicine entity, to ensure that the distant-site telemedicine entity, acting as a contractor of services, furnished its services in a manner that would enable the REH to comply with all applicable CoPs and standards. For the contracted services, the applicable CoPs and standards would include, but are not limited to, the credentialing and privileging requirements for distant-site physicians and practitioners furnishing telemedicine services.

Comment: Commenters were generally supportive of the provisions in this proposed section. Several commenters suggested that local physicians and/or physicians with rural emergency care experience serve on the governing board of the REHs. Other commenters suggested that a physician with board certification in emergency medicine oversee the care and services provided by the REH given their primary function of providing emergency care.

Response: We want to promote a high degree of flexibility in how REHs handle staffing decisions, including in how REH staff helps in deciding the Board or responsible individual. While we do not speak to whether local physicians or physicians with rural emergency experience must serve on the governing boards of REHs, the REHs themselves have the discretion to develop their own set of best practices regarding the specifics of governance. We appreciate the suggestion, but do not believe at this time that there should be requirements of which credentials physicians must have to qualify for appointment to an REH's governing board.

Comment: Some commenters wanted to ensure that CMS would not obstruct the ability for REHs to provide services via telemedicine, while other commenters suggested that CMS take steps to ensure that telemedicine was not used in a wasteful or inappropriate manner to substitute for visitation with a local physician.

Response: We thank commenters for their statements regarding telemedicine. The proposed requirements mirror the CAH and hospital requirements regarding telemedicine. The aim of the requirements is to ensure that REHs, like CAHs and hospitals, have a written agreement regarding the provision of services via telemedicine. We will require that the REH have a credentialing and privileging process in place, holding the REH responsible for telemedicine services provided under arrangement and agreement. The requirement includes process to allow for the use of telemedicine by another Medicare-participating facility or a non-Medicare participating entity in the provision of services by the REH.

After consideration of the public comments we received, we are finalizing these provisions as proposed.

(7) Condition of Participation: Provision of Services (§ 485.514)

Consistent with the CAH CoPs at § 485.635(a)(1), we proposed at § 485.514(a) to require that the REH's health care services be furnished in accordance with appropriate written policies consistent with applicable state law and at § 485.514(b) that the REH must have policies that are developed with the advice of members of the REH's professional health care staff, including one or more doctors of medicine or osteopathy and one or more physician assistants, nurse practitioners, or clinical nurse specialists, if they are on staff (as defined at § 485.528(b)(1)). This requirement would align with the CAH CoPs at § 485.635(a)(2).

At § 485.514(c) we proposed requirements for the written policies to include a description of the services the REH furnishes (including those furnished through agreement or arrangement), policies and procedures for emergency medical services, guidelines for the medical management of health problems, and policies and procedures that address the post-acute care needs of all patients receiving services furnished by an REH. Because the statute prohibits REHs from providing of inpatient services (with the exception of patients receiving SNF services in a distinct part SNF), post-acute care for an REH patient is any care the REH patient receives once they are discharged from the REH. Lastly, at § 485.514(d), we proposed to require the

policies to be reviewed at least biennially by the group of professional personnel required at § 485.514(b) and updated as necessary by the REH. These requirements align with the CAH CoPs at § 485.635(a)(3).

Comment: Commenters were supportive of our proposals. After consideration of the public comments we received, we are finalizing as proposed.

(8) Condition of Participation: Emergency Services (§ 485.516)

In accordance with section 1861(kkk)(2)(D)(iv) of the Act, REHs must comply with the CAH emergency services requirements at § 485.618 as well as the hospital emergency services requirements, which are located at § 482.55, as determined to be applicable. As such, at § 485.516 we proposed to require that the REH must provide the emergency care necessary to meet the needs of its patients in accordance with acceptable standards of practice.

Additionally, because the primary function of an REH is to provide emergency services, we proposed at § 485.516(a) that the REH must have emergency services that are organized under the direction of a qualified member of the medical staff and are integrated with other departments of the REH, similar to the requirements for hospitals. We anticipate that there will be instances in which a patient is receiving outpatient services other than emergency services and may unexpectedly require care in the emergency department. In this instance, having emergency services that are integrated with the other departments of the REH will facilitate care coordination and promote patient-centered care.

At § 485.516(b), we proposed that there be adequate medical and nursing personnel qualified in emergency care to meet the needs of the facility. To comply with this requirement, we would expect the REH to conduct an analysis based on the anticipated staffing needs and once the REH begins to provide services, the analysis would include actual staffing needs. Lastly, at § 485.516(c), we proposed to require the REH to provide emergency services that meet the CAH requirements specified at § 485.618(a) through (e), as required by section 1861(kkk)(2)(D)(iv)(I) of the Act.

Comment: Commenters noted that REHs should be required to have at least one physician, nurse practitioner, clinical nurse specialist, or physician assistant with training or experience in emergency care staffing their emergency department at all times and that these clinicians should be required to be physically located on the REH's campus (or in adjacent buildings) to meet the REH staffing requirement. Some commenters noted that because the primary purpose of the REH is emergency access, the facility needs to have a clinician with board certification or at a minimum, training in emergency medicine immediately available to provide the care or oversee the care delivered by non-physician practitioners. Other commenters supported the proposal, noting the appropriateness of not requiring a practitioner to be on-site at the REH at all times given the expected low volume of patients and services in the rural communities they serve.

Response: We are appreciative of these comments. We believe that given the workforce challenges faced by healthcare facilities providing care and services in rural communities, it would be overly burdensome to require specific expertise of the practitioners who are providing services to patients presenting to the REH for emergency care. However, REHs are expected to have staff that meet the needs of the community they serve. We would also like to highlight that that we are finalizing the requirements for Staffing and Staff Responsibilities at § 485.528 with modification, such that the individual who fulfills the requirement that the REH must be staffed at all times must be an individual who is competent in the skills needed to address emergency medical care. This individual must be able to receive patients and activate the appropriate medical resources to meet the care needed by the patient. We believe that in doing so, we have sufficiently address the commenters' concerns that the REH's emergency department be appropriately staffed.

Comment: One commenter asks that CMS to provide a waiver that allows REHs to divert patients to a higher-level facility on the continuum if the clinical staff at the REH does not believe the facility can provide the appropriate level of care and the patient is stable enough to transport, with the commenter noting that they believe that CMS has the ability to modify the Emergency Medical Treatment and Labor Act (EMTALA) regulations to provide this flexibility to REHs.

Response: Consistent with the requirements for hospitals and CAHs with emergency departments, we note that section 1867(e)(5) applies the EMTALA requirements to REHs. EMTALA requires hospitals with emergency departments to provide a medical screening examination to any individual who comes to the emergency department and requests such an examination, and prohibits hospitals with emergency departments from refusing to examine or treat individuals with an emergency medical condition. We note that REHs will be familiar with the EMTALA requirements because they complied with them as either a hospital with an emergency department or a CAH. Section 125 of the CAA does not allow for a waiver of the EMTALA requirements for REHs.

After consideration of the public comments we received, we are finalizing § 485.516 as proposed.

(9) Condition of Participation: Laboratory Services (§ 485.518)

We proposed at § 485.518 that REHs, similar to CAHs (§ 485.635(b)(2)), would be required to provide basic laboratory services essential to the immediate diagnosis and treatment of the patient. The CAH requirements cite specific laboratory services that should be provided by the CAH, such as chemical examination of urine, hemoglobin or hematocrit, blood glucose, examination of stool specimens for occult blood, pregnancy tests, and primary culturing for transmittal to a certified laboratory. However, we believe that given the REH's nature of primarily providing emergency services, it is appropriate that REHs provide laboratory services that are consistent with nationally recognized standards of care for emergency services. In addition to the laboratory services identified in the CAH CoPs, we encourage the REH to provide laboratory services that include a complete blood count, basic metabolic panel (also known as a ''chem 7''), magnesium, phosphorus, liver function tests, amylase, lipase, cardiopulmonary tests (troponin, brain natriuretic peptide, and d-dimer), lactate, coagulation studies (prothrombin time, partial thromboplastin time, and international normalized ratio), arterial blood gas, venous blood gas, quantitative human chorionic gonadotropin, and urine toxicology. In accordance with the Clinical Laboratory Improvement Amendments of 1988 (CLIA), at § 485.518(a), we proposed to require that the REH must ensure that all laboratory services provided to its patients are performed in a facility certified in accordance with the CLIA requirements at 42 CFR part 493. Furthermore, at § 485.518(b) we proposed that REHs must have emergency laboratory services available that would be essential to the immediate diagnosis of the patient, 24 hours a day. This proposal is appropriate given the provision that REHs must provide emergency services 24 hours a day.

Comment: Commenters were generally supportive of our proposals. However, some commenters suggested that the laboratory services provided by REHs should not exceed the laboratory services that must be provided by a CAH. Other commenters suggested that REHs be required to provide specific laboratory services that include those suggested in the preamble, as well as laboratory services that include that blood, urine, cerebrospinal fluid (CSF), and other body fluid cultures; CSF analysis and synovial fluid analysis; serum and urine pregnancy tests; and ammonia level tests.

Response: The proposed standard for laboratory services for REHs requires the REH to provide basic laboratory services essential to the immediate diagnosis and treatment of the patient consistent with nationally recognized standards of care for emergency services. We did not propose to require that the REH provide specific laboratory services beyond ensuring that they are providing such services that are consistent with nationally recognized standards of practice. We believe that REHs should have the flexibility to determine the laboratory services that are appropriate for their scope of services and patient population. Specific laboratory services were highlighted in the proposed rule and include a complete blood count, basic metabolic panel (also known as a ''chem 7''), magnesium, phosphorus, liver function tests, amylase, lipase, cardiopulmonary tests (troponin, brain natriuretic peptide, and d-dimer), lactate, coagulation studies (prothrombin time, partial thromboplastin time, and international normalized ratio), arterial blood gas, venous blood gas, quantitative human chorionic gonadotropin, and urine toxicology. Based on the current nationally recognized standards for practice, the scope of services provided by the REH, and the patient population receiving REH services, the REH may determine the laboratory services that meet the needs of the community it serves.

After consideration of the public comments we received, we are finalizing this provision with modification by incorporating language into the requirement at § 485.518 that specifically notes that the laboratory services must be consistent with the patient population and services offered.

(10) Condition of Participation: Radiologic Services (§ 485.520)

Radiologic services play an integral role in the provision of emergency services. Commenters on the REH RFI noted that radiologic services, also referred to as imaging services, should be provided at REHs. A study in the American Journal of Roentgenology noted that, ''The use of imaging in the emergency department (ED) has increased over time, and by 2010 nearly half of all ED visits in the U.S. included at least one imaging test.'' These imaging tests include computed tomography (CT), also known as a computerized axial tomography (CAT) scan, magnetic resonance imaging (MRI), and ultrasound. These tests can be used to diagnose bone fractures, infections, arthritis, injuries from trauma, tumors and cancers. They can also be used to monitor and evaluate the growth and development of a fetus, and offer a way to examine many of the body's internal organs such as the liver, gallbladder, kidneys, and bladder.

We expect that REHs will need to provide radiologic services given their focus on emergency services and given the number of emergency department patients who receive imaging services. Therefore, we proposed that the REH radiologic requirements mirror the hospital radiologic requirements found at § 482.26, which is consistent with the current CAH standard at § 485.635(b)(3) and interpretative guidelines for CAHs in Appendix W of the State Operations Manual (SOM).

The CAH standard for radiology services found at § 485.635(b)(3) requires that these services be furnished by personnel qualified under state law, and that such services do not expose patients or staff to radiation hazards. In addition, we note that the interpretative guidelines for § 485.635(b)(3) in Appendix W of the SOM provides guidance for designating qualified radiologic personnel, developing policies and procedures that ensure safety from radiation hazards, inspecting and maintaining radiologic equipment, and maintaining CAH radiology records.

We proposed to align the REH requirements with the hospital requirements for radiologic services and proposed additional standards related to safety, personnel responsibilities, and record keeping. We believe that facilities that transition to an REH would need to perform these activities to support the delivery of radiology services. We also believe that these proposed requirements are in accordance with the interpretative guidelines that CAHs currently follow for the provision radiological services. We do not expect these requirements to create additional burden for REHs over those applicable to CAHs.

As such, at § 485.520, we proposed to require that the REH provide diagnostic radiologic services. At § 485.520(a), we proposed to require that all radiologic services furnished by the REH be provided by qualified personnel in accordance with state law; such services could expose REH patients or personnel to radiation hazards. As with hospitals, we also proposed to require that the REH must have radiologic services that meet the needs of their patients. For example, we expect an REH that is located in a mining community to offer x-ray services due to the effects of mining on one's lungs or an REH being able to furnish ultrasounds to evaluate the growth and health of a fetus.

At § 485.520(b), we proposed basic factors relating to safety hazard standards for patients and personnel by specifying that the REH must institute proper safety precautions, perform periodic inspections of equipment, periodically check radiation workers for exposure, and only provide radiologic services based on the order of practitioners with clinical privileges or authorization by the medical staff and governing body. We proposed the personnel standard at § 485.520(c) to require that a qualified radiologist, or other personnel qualified under state law either full-time, part-time, or on a consulting basis interpret radiologic tests that require specialized knowledge. This requirement can be fulfilled through arrangements with off-site providers via telehealth. Like hospitals, we proposed that the radiologist in an REH must sign reports only of their interpretations. We proposed to allow the medical staff and the individual responsible for radiological services to designate who is qualified to use radiological equipment. Lastly, at § 485.520(d), we also proposed to require that records of departmental activities be maintained and that radiological reports and films be preserved for 5 years, consistent with the proposed requirements for the maintenance and retention of the REH medical records.

Comment: Most commenters supported this requirement. Some commenters stated that radiologic services should not have separate requirements, but should instead be included in the Provision of Services CoP.

Response: We appreciate the comments stating that radiological services should not be a separate requirement. However, Hospital and CAHs requirements have separate provisions for radiological services so for consistency across providers we will keep them as separate requirements.

After consideration of the public comments we received, we are finalizing as proposed.

(11) Condition of Participation: Pharmaceutical Services (§ 485.522)

While the current CAH requirements do not have a separate CoP for pharmaceutical services, there are standards throughout the CAH CoPs for the oversight, storage, and administration of drugs and biologicals. Regulations at § 485.623(b)(3) requires the CAH to store drugs and biologicals properly, and § 485.635(a)(3)(iv) requires the CAH to develop rules for the storage, handling, dispensation, and administration of drugs and biologicals including a drug storage area administered in accordance with accepted principles. In addition, there are standards throughout the CAH CoPs regarding provisions for infection prevention and control and antibiotic stewardship programs that reference pharmacy leadership and pharmacy services. Therefore, we believe that CAHs and hospitals that transition to an REH would already be in compliance with REH requirements to support the delivery of pharmaceutical services; we do not expect these requirements to create additional burden for REHs.

At § 485.522, we are requiring that the REH's pharmaceutical services meet the needs of the patients. According to the American Society of Health-System Pharmacists Guidelines on Emergency Medicine Pharmacy Services, some factors that an ED is expected to consider when determining how the pharmaceutical services can best meet the needs of the patients include the type and setting of the ED (for example, academic, community, urban, or rural), the size of the ED, the number of annual visits, the patient population served, and any specialty services available. At § 485.522(a), we proposed to require the REH to have a pharmacy or drug storage area administered in accordance with accepted professional principles and state and Federal laws. Additionally, we proposed to require at § 485.522(a)(1) that a registered pharmacist or other qualified individual in accordance with state scope of practice laws direct the pharmaceutical services or, when appropriate, have a drug storage area that is supervised by an individual who is competent to do so. Rural communities are often challenged by the lack of pharmacists willing to move to rural areas and for this reason, we recognize that there may be REHs that can provide pharmaceutical services only by having a drug storage area that is under the supervision of a qualified individual. In these instances, the facility must establish qualifications for the individual with oversight of the drug storage area for competency purposes and ensure that someone who meets those requirements is fulfilling the role. This is consistent with the interpretive guidelines for the CAH CoPs contained in Appendix W of the SOM for § 485.635(a)(3). We proposed that this individual be available for a sufficient time to provide such oversight based on the scope and complexity of the services offered at the REH. This individual would not be required to be a full-time pharmacist. We believe that requiring ''sufficient time'' in the regulatory language provides the REH with the flexibility to determine how frequently the pharmacist or other qualified individual is available.

In addition, the CAH interpretive guidelines for § 485.635(a)(3) state that the compounding, packaging, and dispensing of drugs should be consistent with accepted professional principles. In accordance with guidance issued by the Food and Drug Administration, accepted professional principles for compounding, packaging, and dispensing of drugs include having a licensed pharmacist, or in some cases a physician, perform these activities (or having them performed under the supervision of a licensed pharmacist, when appropriate) (*https://www.fda.gov/drugs/guidance-compliance-regulatory-information/human-drug-compounding#:~:text=Compounding%20is%20generally%20a%20practice,needs%20of%20an%20individual%20patient*). As such, we proposed at § 485.522(b)(1) that all compounding, packaging, and dispensing of drugs must be done by a licensed pharmacist or a licensed physician, or under the supervision of a pharmacist or other qualified individual acting in accordance with state scope of practice laws and be performed consistent with state and Federal laws. In addition, we proposed that all drugs and biologicals must be kept in secure areas, and locked when appropriate. All drugs listed in Schedules II, III, IV, and V as outlined in the Comprehensive Drug Abuse Prevention and Control Act of 1970 (Pub. L. 91–513, as amended), must be locked within a secure area and only authorized personnel may have access to locked areas. We proposed that outdated, mislabeled, or otherwise unusable drugs and biologicals must not be available for patient use and drugs and biologicals can only be removed from the pharmacy or storage area by personnel designated in the policies of the medical staff and pharmaceutical service, in accordance with state and Federal law. These proposed requirements are also consistent with the CAH interpretive guidelines for § 485.635(a)(3).

Lastly, at § 485.522(c), we proposed to set forth the standards for the administration of drugs. We note that the existing CAH CoP at § 485.635(a)(3)(iv) requires that the CAH have written policies that include the rules for the storage, handling, dispensation, and administration of drugs and biologicals. The CAH CoPs continue to require that these rules provide that there is a drug storage area that is administrated in accordance with accepted professional principles. Similarly, we proposed to require that drugs be prepared and administered in an REH according to established policies and acceptable standards of practice and consistent with the CAH requirement at § 485.635(a)(3)(v), we proposed to require that any adverse reactions be reported to the physician responsible for the patient and documented in the record. While the CAH CoPs require that the CAH have procedures for reporting adverse drug reactions and errors in the administration of drugs, we recognize that a nationally recognized standard of practice is to report adverse drug reactions to the physician responsible for the care of the patient. We proposed, that the REH be required to administer blood transfusions, blood products and intravenous medications in accordance with state law and approved medical staff policies and procedures, and that orders given orally for drugs and biologicals be followed by a written order, signed by the prescribing physician or other authorized prescriber at § 485.522(c)(2) and (3) respectively. We also proposed at § 485.522(c)(4) to require that the REH have a procedure for reporting transfusion reactions, adverse drug reactions, and errors in administration of drugs.

Comment: Several commenters supported this proposed requirement and noted that it afforded flexibilities for providing pharmaceutical services in REHs. We also received some comments stating that this proposed CoP is based on the hospital CoP for pharmaceutical services at 42 CFR 482.25 and requested that the proposal instead only include the provisions of the CAH CoPs at §§ 485.623(b)(3) and 485.635(a)(3)(iv) and (v).

Response: As previously noted, we believe that small hospitals and CAHs that transition to the REH provider-type would currently be complying with the proposed REH requirements to support the delivery of pharmaceutical services

when they changed provider-type. We do not expect the requirements we are finalizing to create additional burden for REHs. We also note that the proposed REH pharmaceutical services requirements incorporates the CAH requirements at §§ 485.623(b)(3) and 485.635(a)(3)(iv) and (v). We have maintained flexibilities afforded to CAHs such as allowing qualified individuals, other than pharmacists, to operate and oversee drug storage areas and allowing physicians to compound, package, and dispense drugs in place of a pharmacist. Therefore, we do not believe it that we should revise the proposed REH requirements for pharmaceutical services.

After consideration of the public comments we received, we are finalizing § 485.522 as proposed.

(12) Condition of Participation: Additional Outpatient Medical and Health Services (§ 485.524)

We proposed at § 485.524 that if the REH chooses to provide additional outpatient medical and health services, that the services would be required to be appropriately organized and to meet the needs of the patients in accordance with acceptable standards of practice. Additionally, at § 485.524(a)(1) we proposed to require that the provision of the additional service be based on nationally recognized guidelines and standards of practice, aligning the proposed requirement with the hospital CoPs for outpatient services at § 482.54. Given that the REH does not provide inpatient services, patients requiring a higher level of care would be required to be transferred to an acute care hospital or CAH. As a result of this, and based on comments received on the REH RFI, we further proposed to require that the REH have a system in place for referral from the REH to different levels of care, including follow-up care, as appropriate. Some of the REH RFI comments also indicated that REHs should be required to have established relationships with hospitals that have the resources and capacity available to deliver care that is beyond the scope of care delivered at the REH. Hospital admissions and transfers account for roughly 20 percent of all patient dispositions from emergency departments across the U.S. As a result, we can expect that REHs will transfer at least 20 percent of their patients; we agreed with commenters and proposed to require that REHs have established relationships with hospitals that have the resources and capacity available to deliver care beyond the scope delivered at the REH.

Ensuring effective communication between providers of health care services and patients and their family is a critical element in the provision of care and the discharge or transfer of patients. We proposed to require that the REH have effective communication systems in place between the REH and patients (or responsible individuals) and their families, ensuring that the REH would be responsive to their needs and preferences. We believe this will assist with effective care coordination as well as improved patient outcomes.

At § 485.524(b), we proposed personnel requirements for REHs that choose to provide additional outpatient medical and health services. These requirements ensure that the additional services provided by the REH are overseen by at least one responsible individual, have appropriate professional and nonprofessional personnel available at each location where outpatient services are offered, and are provided by a physician or other clinician with experience and training in the specialty service area.

At § 485.524(c), we proposed to specify standards that REHs must have for ordering outpatient medical and health services; such standards would be consistent with the hospital requirements at 42 CFR 482.54(c). Specifically, we proposed to require outpatient medical and health services to only be ordered by a practitioner who: (1) is responsible for the care of the patient; (2) is licensed in the state where they provide care to the patient; (3) is acting within their scope of practice under state law; and (4) is authorized in accordance with state law and policies adopted by the medical staff, and approved by the governing body, to order the applicable outpatient services. We also proposed that these requirements would apply to those practitioners who are appointed to the REH's medical staff and who have been granted privileges to order the applicable outpatient services; and those practitioners not appointed to the medical staff, but who satisfy the above criteria for authorization by the REH for ordering the applicable outpatient services and for referring patients for such services.

Lastly, the importance of allowing REHs to provide outpatient surgical services was especially noted by commenters in response to the REH RFI. A 2011 rural policy brief by the Rural Policy Research Institute (RUPRI) Center for Rural Health Policy Analysis states that, ''Like residents of any community, rural residents have surgical needs that range from the predictable (for example, cataract procedures) to the emergent (for example, appendectomy). Innovations in surgery over the past several decades have made possible the provision of many surgical procedures on an outpatient basis, reducing inpatient admissions.'' [17] The policy brief found that across four states (Colorado, North Carolina, Vermont, and Wisconsin) in 2011, surgeries were performed across 107 CAHs with an average of 522 outpatient procedures performed per year. This is 75 to 80 percent of the total surgical procedure volume in the state for that year and demonstrates that there will be a need for outpatient surgical services in communities in which CAHs convert to an REH. Therefore, we proposed at § 485.524(d) to set forth standards for an REH performing outpatient surgical services that are consistent with the CAH requirements for surgical services at § 485.639. These include proposed standards for ensuring that the services are conducted in a safe manner by qualified practitioners with specific protocols for administering anesthesia.

Given that in accordance with the statutory provision at section1861(kkk)(1)(A) of the Act services furnished by the REH must not exceed an annual per patient average of 24 hours in the REH, we expect REHs, like ASCs, to provide surgical services to patients not requiring hospitalization and in which the expected duration of services would not exceed 24 hours following an admission.

Comment: Many commenters supported the proposals related to the provision of outpatient and medical health diagnostic and therapeutic items and services in an REH and stated that REHs should be allowed flexibility in determining the outpatient services that meet the needs of their communities. Commenters also believed that allowing REHs to provide outpatient services could improve the health of rural communities and reduce the reliance on emergency departments for primary care services. Commenters specifically mentioned that REHs should be able to provide services such as outpatient surgeries, behavioral and mental health services, case management and social services, substance use disorder services (including detoxification, counseling, and medication assisted therapy) and post-hospital care and coordination. Numerous commenters mentioned the need for maternal health services to be provided in REHs due to the lack of access to these resources in rural areas. These commenters supported REHs providing pre-natal care, low-risk labor and delivery services, and any outpatient surgical procedures associated with labor and delivery, as

appropriate, with the necessary staff, equipment and medications to ensure that the patient can be treated or stabilized and transferred if necessary. Other commenters stated that providing low-risk deliveries and a surgical team to handle these cases would put a financial burden on REHs.

Response: We thank the interested parties for their comments. Section 1861(kkk)(1)(A)(ii) of the Act allows REHs to provide additional outpatient medical and health services as specified by the Secretary through rulemaking. In the proposed rule (87 FR 40391), we specifically mentioned the REH providing outpatient services commonly furnished in a physician's office or at another entry point into the health care delivery system such as radiology, laboratory, outpatient rehabilitation, surgical, maternal health, and behavioral health services. We also noted that the REH could provide additional outpatient medical and health services, if the services aligned with the health needs of the community served by the REH as required by § 485.524(a). We agree with the numerous commenters who highlighted the need for comprehensive maternal health services to be provided in REHs. This aligns with a priority of the Biden-Harris Administration to improve access to maternal health care services. Therefore, we expect that REHs will provide various outpatient services suggested by commenters including, but not limited to services such as, low-risk labor and delivery supported by any emergency surgical procedures necessary and substance use disorder treatment, if identified by a health needs assessment of their community and in accordance with the CoPs for additional outpatient medical and health services finalized in this rule.

Comment: We received some comments requesting that REHs be allowed to establish a distinct part inpatient psychiatric and/or inpatient rehabilitation facility to treat patients requiring these services, similar to the allowance for REHs to have distinct part unit licensed as a SNF. These commenters noted that they have experienced difficulty in locating facilities where these patients may be transferred.

Response: Section 1861(kkk)(2)(B) of the Act defines an REH as not providing any inpatient services (other than SNFs distinct part units). Therefore, REHs, are not allowed to operate a distinct part inpatient psychiatric or rehabilitation unit. We would expect the REH to transfer patients requiring these inpatient services to a provider who could offer the appropriate level of care. As stated previously, we recommend that facilities maintain documentation of instances in which a patient is unable to be transferred timely or when there are specific situations where the patient's stay may exceed 24 hours.

Comment: Some commenters requested clarity regarding whether an REH is allowed to operate a provider-based rural health clinic (RHC).

Response: As stated in the CAA of 2021, a rural emergency hospital may be considered a hospital with less than 50 beds for purposes of the exception to the payment limit for rural health clinics under section 1833(f) of the Act. Therefore, the statute implicitly states that an REH may continue its operation of provider-based RHCs that meet the qualifications detailed under section 1833(f) of the Act.

Comment: We received over 3,000 comments from the CRNA community opposing the proposal that CRNAs be required to be supervised by an operating practitioner.

Response: We thank the CRNA community for their comments. The proposed CRNA supervision requirement is consistent with the hospital, CAH and ambulatory surgical center requirements. Furthermore, the proposal, consistent with the hospital, CAH and ambulatory surgical center requirements, included a requirement that allows states to opt-out of the CRNA supervision requirement. To be exempt from this requirement, CMS requires a letter from the governor of the state requesting the exemption. In the letter, the governor must attest to the following:

- The governor has consulted with State Boards of Medicine and Nursing about issues related to access to and the quality of anesthesia services in the State, and
- The governor has concluded that it is in the best interests of the State's citizens to opt-out of the current physician supervision requirement, and that the opt-out is consistent with State law.

Lastly, please note the provision of surgical services are optional for REHs and are not are required service in accordance with the CAA.

After consideration of the public comments we received, we are finalizing § 485.524 as proposed.

(13) Condition of Participation: Infection Prevention and Control and Antibiotic Stewardship Programs (§ 485.526)

Similar to the requirements that we finalized with regard to infection prevention and control and antibiotic stewardship programs for hospitals and CAHs in the September 30, 2019 final rule ''Medicare and Medicaid Programs; Regulatory Provisions To Promote Program Efficiency, Transparency, and Burden Reduction; Fire Safety Requirements for Certain Dialysis Facilities; Hospital and Critical Access Hospital (CAH) Changes To Promote Innovation, Flexibility, and Improvement in Patient Care'' (84 FR 51732), we proposed in this rule that each REH has facility-wide infection prevention and control and antibiotic stewardship programs that are coordinated with the REH quality assessment and performance improvement (QAPI) program, for the surveillance, prevention, and control of HAIs and other infectious diseases and for the optimization of antibiotic use through stewardship. Further, we proposed in this rule at § 485.526(a)(1) that the REH ensure that an individual (or individuals), who are qualified through education, training, experience, or certified in infection, prevention and control, are appointed by the governing body, or responsible individual, as the infection preventionist(s)/infection control professional(s) responsible for the infection prevention and control program at the REH and that the appointment is based on the recommendations of medical staff and nursing leadership.

At § 485.526(a)(2), we proposed that the infection prevention and control program, as documented in its policies and procedures, employ methods for preventing and controlling the transmission of infections within the REH and between the REH and other health care settings. The program, as documented in its policies and procedures, would have to employ methods for preventing and controlling the transmission of infection within the REH setting (for example, among patients, personnel, and visitors) as well as between the REH (including outpatient services) and other institutions and health care settings. At § 485.526(a)(3) we proposed that the infection prevention and control program include surveillance, prevention, and control of HAIs, including maintaining a clean and sanitary environment to avoid sources and transmission of infection, and that the program also address any infection control issues identified by public health authorities. We proposed at § 485.526(a)(4) that the infection prevention and control program reflect the scope and complexity of the services provided by the REH.

At § 485.526(b), we proposed to set standards for the organization and policies of the antibiotic stewardship

program. Specifically, we proposed at § 485.526(b)(1) to require that the REH's governing body ensure that an individual, who is qualified through education, training, or experience in infectious diseases and/or antibiotic stewardship is appointed as the leader of the antibiotic stewardship program and that the appointment is based on the recommendations of medical staff and pharmacy leadership. The proposed requirements at § 485.526(b)(2)(i) through (iii) would ensure that certain goals for an antibiotic stewardship program are met. These include: (i) demonstrating coordination among all components of the REH responsible for antibiotic use and resistance, including, but not limited to, the infection prevention and control program, the QAPI program, the medical staff, and nursing and pharmacy services; (ii) documenting the evidence-based use of antibiotics in all departments and services of the REH; and (iii) documenting improvements, including sustained improvements, in proper antibiotic use. We believe that these three components are essential for an effective program.

The provisions at § 485.526(b)(3) and (4) would require the REH to ensure that the antibiotic stewardship program adhered to nationally recognized guidelines, as well as best practices, for improving antibiotic use, and that the REH's stewardship program reflects the scope and complexity of services offered. We believe these proposed requirements are necessary to promote a facility-wide culture of quality improvement. We reiterate that these requirements mirror the hospital and CAH requirements for infection prevention and control and antibiotic stewardship and we note that in the proposed rule for those requirements, published on June 16, 2016 (81 FR 39455), our intention to build flexibility into the regulation by requiring hospitals to demonstrate adherence to nationally recognized guidelines rather than any specific guideline or set of guidelines for infection prevention and control and for antibiotic stewardship. While the CDC guidelines represent one set, there are other sets of nationally recognized guidelines from which facilities might choose, such as those established by the Society for Healthcare Epidemiology of America and the Infectious Diseases Society of America. We believe this approach will provide hospitals the flexibility they need to select and integrate those standards that best suit their individual infection prevention and control and antibiotic stewardship programs. We also believe this approach will allow hospitals the flexibility to adapt their policies and procedures in concert with any updates in the guidelines they have elected to follow. This rationale applies to REHs.

We require that the governing body or responsible individual ensure that the infection prevention and control issues identified by the infection prevention and control professionals be addressed in collaboration with REH leadership. Therefore, at § 485.526(c)(1)(i) and (ii), we proposed certain requirements that the governing body or responsible individual must adhere to including—

- Ensuring systems are in place and operational for the tracking of all infection surveillance, prevention, and control, and antibiotic use activities to demonstrate the implementation, success, and sustainability of such activities; and
- Ensuring all HAIs and other infectious diseases identified by the infection prevention and control program and antibiotic use issues identified by the antibiotic stewardship program are addressed in collaboration with REH QAPI leadership.

At § 485.526(c)(2)(i) through (vi), we proposed that the responsibilities of the infection prevention and control professionals would include the development and implementation of facility-wide infection surveillance, prevention, and control policies and procedures that adhere to nationally recognized guidelines. The infection preventionist(s)/infection control professional(s) would be responsible for all documentation, written or electronic, of the infection prevention and control program and its surveillance, prevention, and control activities.

Additionally, the infection preventionist(s)/infection control professional(s) would be responsible for the following—

- Communication and collaboration with the REH's QAPI program on infection prevention and control issues;
- Competency-based training and education of REH personnel and staff including professional health care staff and, as applicable, personnel providing services in the REH under agreement or arrangement, on the practical applications of infection prevention and control guidelines, policies and procedures;
- Prevention and control of HAIs, including auditing of adherence to infection prevention and control policies and procedures by REH personnel; and
- Communication and collaboration with the antibiotic stewardship program.

At § 485.526(c)(3), we proposed requirements for the leader(s) of the antibiotic stewardship program that are similar, but not identical, to the proposed responsibilities for the REH's designated infection preventionist(s)/infection control professional(s) at proposed § 485.526(c)(2). We believe that an REH's antibiotic stewardship program is the most effective means for ensuring appropriate antibiotic use. We also believe that such a program requires a leader who is responsible and accountable for its success. Therefore, we proposed that the leader of the antibiotic stewardship program would be responsible for the development and implementation of a facility-wide antibiotic stewardship program, based on nationally recognized guidelines, to monitor and improve the use of antibiotics. We do not expect that each new leader would develop a new antibiotic stewardship program, unless it is determined that a new program is necessary. We also proposed that the leader of the antibiotic stewardship program would be responsible for all documentation, written or electronic, of antibiotic stewardship program activities. The leader would also be responsible for communicating and collaborating with medical and nursing staff, pharmacy leadership, and the REH's infection prevention and control and QAPI programs, on antibiotic use issues.

We also proposed that the leader would be responsible for the competency-based training and education of REH personnel and staff, including medical staff, and, as applicable, personnel providing contracted services in the REH, on the practical applications of antibiotic stewardship guidelines, policies, and procedures.

Similar to a standard in the hospital CoPs, we proposed a standard at § 485.526(d) for REHs that would allow for the governing body of an REH that is part of a system consisting of multiple, separately certified hospitals, CAHs, and/or REHs using a single system governing body that is legally responsible for the conduct of two or more hospitals, CAHs, and/or REHs, to elect to have unified and integrated infection prevention and control and antibiotic stewardship programs for all of its member facilities, including any REHs, after determining that such a decision is in accordance with all applicable state and local laws. We proposed a similar standard for CAHs at § 485.640(g). The system's single governing body would be responsible for ensuring that each of its separately certified REHs met the requirements of

this section. We note that each separately certified REH subject to the system's single governing body would need to demonstrate that the unified and integrated infection prevention and control and antibiotic stewardship programs:

- Were established in a manner that takes into account each member REH's unique circumstances and any significant differences in patient populations and services offered in each REH;
- Established and implemented policies and procedures to ensure that the needs and concerns of each of its separately certified REHs, regardless of practice or location, are given due consideration; and
- Had mechanisms in place to ensure that issues localized to particular REHs were duly considered and addressed.

The REH would also need to demonstrate that it had designated a qualified individual (or individuals) with expertise in infection prevention and control and in antibiotic stewardship at the REH to be responsible for:

- Communicating with the system's unified infection prevention and control and antibiotic stewardship programs;
- Implementing and maintaining the policies and procedures governing infection prevention and control and antibiotic stewardship as directed by the unified infection prevention and control and antibiotic stewardship programs; and
- Providing education and training on the practical applications of infection prevention and control and antibiotic stewardship to REH staff.

Finally, in response to the COVID–19 pandemic, on September 2, 2020, CMS published an interim final rule with comment period to track the incidence and impact of COVID–19 to assist public health officials in detecting outbreaks and saving lives (85 FR 54820). CMS then published a final rule with comment containing reporting requirements for hospitals and CAHs to report acute respiratory illness during the public health emergency (PHE) for COVID–19 (85 FR 86304) on December 4, 2020. Lastly, on November 5, 2021, CMS published an interim final rule with comment establishing COVID–19 vaccination requirements for most Medicare- and Medicaid-certified providers and suppliers (86 FR 61623). Consistent with the recent changes we made to the hospital and CAH infection control CoPs related to COVID–19 (87 FR 28108) and the declared PHE, we proposed the following three standards for REHs:

- Reporting of data related to viral and bacterial pathogens and infectious diseases of pandemic or epidemic potential, which would require an REH to electronically report information on Acute Respiratory Illness (including, but not limited to, Seasonal Influenza Virus, Influenza-like Illness, and Severe Acute Respiratory Infection), SARS–CoV–2/COVID–19, and other viral and bacterial pathogens and infectious diseases of pandemic or epidemic potential only when the Secretary has declared a Public Health Emergency, directly related to such specific pathogens and infectious diseases.
- COVID–19 reporting, which would require an REH to electronically report information about COVID–19 and seasonal influenza in a standardized format specified by the Secretary, including the REH's current inventory supplies of any COVID–19-related therapeutics that have been distributed and delivered to the REH and the current usage rate for those therapeutics beginning at the conclusion of the COVID–19 PHE, and continuing until April 30, 2024, unless the Secretary specifies an earlier end date.
- COVID–19 Vaccination of REH staff, which would require the REH to develop and implement policies and procedures to ensure that all staff, with the exception of those with valid exemptions, are fully vaccinated for COVID–19 until November 4, 2024, unless the Secretary specifies an earlier end date for the requirements of this paragraph. Section 902 of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 establishes a general 3-year timeline for publishing a Medicare final regulation after a proposed regulation or an interim final regulation has been published. The referenced November 4, 2024 date aligns with the statutory 3-year ''Section 902'' deadline for the IFC that implemented the COVID–19 staff vaccination requirements for the provider and supplier types covered under that rule. Even though this final rule is not itself subject to the section 902 deadline, we are finalizing a policy that will terminate this vaccination requirement at the same time and under the same circumstances as the vaccination requirement applicable to all other provider-types.

Comment: Commenters were very supportive of this proposal. Several commenters did request we consider delaying implementation to allow for additional time to train staff and develop better QAPI standards.

Response: The proposed standards currently mirror those for CAHs and hospitals and have become an industry standard over the years, especially since the COVID–19 pandemic helped spur innovations in infection control nationwide. We believe that a delay in implementation is unnecessary as REHs should be familiar with the infection control standards and techniques given their previous status as a CAH or hospital and the requirement that they comply with the provisions.

After consideration of the public comments we received, we are finalizing these provisions as proposed.

(14) Condition of Participation: Staffing and Staff Responsibilities (§ 485.528)

Sections 1861(kkk)(1)(B)(i) and (ii) of the Act require that the emergency department of the REH be staffed 24 hours a day, 7 days a week. We proposed to implement this requirement at § 485.528(a). The statute does not speak to the type of staff at the REH that is required to fulfill this role. As such, we believe that REHs should have the flexibility to determine how to staff the emergency department at the REH 24 hours, 7 days a week. We expect that the individual(s) staffing the emergency department is competent to receive patients and activate the appropriate medical resources for the treatment of the patient. In our proposed rule, we noted that such staff may include a nurse, nursing assistant, clinical technician, or an emergency medical technician, (EMT).

We proposed for REHs to meet the applicable CAH requirements at § 485.631 for staffing and staff responsibilities. We believe that many of the CAH staffing requirements are appropriate for application to REHs and as a result, at § 485.528(b) through (e), we set for the proposed standards for staffing, responsibilities of the doctor of medicine or osteopathy, physician assistant, nurse practitioner, and clinical nurse specialist responsibilities similar to CAHs. For instance, the CAH CoPs require at § 485.631(a)(5) that a registered nurse, clinical nurse specialist, or licensed practical nurse is on duty whenever the CAH has one or more inpatients. Since REHs are required to furnish emergency services and observation care, we proposed a similar requirement as CAHs to require that a registered nurse, clinical nurse specialist, or licensed practical nurse be on duty whenever the REH has one or more patients receiving emergency services or observation care.

We also proposed to require standards for the periodic review of clinical privileges and performance that are also identical to the CAH standards at § 485.631, with the exception of the CAH standard at § 485.631(b)(1)(iv),

which requires that a doctor of medicine or osteopathy periodically review and sign the records of all inpatients cared for by nurse practitioners, clinical nurse specialists, certified nurse midwives, or physician assistants. We did not propose this standard for REHs given that the REHs are providers of outpatient services exclusively.

We did not believe that it was necessary to apply the CAH requirement that a doctor of medicine or osteopathy, nurse practitioner, clinical nurse specialist, or physician assistant is available to furnish patient care services at all times the CAH operates (§ 485.631(a)(4)) to REHs. Instead, we proposed to require that the REH standards align with the CAH emergency services requirements at § 485.618. The CAH provision at § 485.618(d) requires that there be a doctor of medicine or osteopathy, a physician assistant, a nurse practitioner, or a clinical nurse specialist, with training or experience in emergency care, on call and immediately available by telephone or radio contact, and available on site within specified timeframes. This allows for the alignment of the REH proposed provisions with the CAH emergency services standards, as required by the statute.

In response to the REH RFI, commenters indicated that CMS should require board-certified emergency physicians to serve as medical directors of the REH. While we agree that having a board-certified emergency physician serving as the medical director of the REH would benefit patients by ensuring that the REH is overseen by a highly qualified physician with a high level of expertise in emergency medicine, we believe that requiring this of REHs would be unduly burdensome due to the challenges faced by rural communities in obtaining and retaining medical professionals to provide health care services. While we did not propose to require that REHs have a board-certified emergency physician serve as the medical director, we would encourage REHs to have such a physician serve in the capacity of medical director if possible.

Comment: Some commenters agreed with our proposed policy of only having a physician or other practitioner on-call and available on-site within specified timeframes. Other commenters believed a clinician should be on-site at all times and that an EMT or a nurse would not provide sufficient staffing to meet the requirement that an REH be staffed 24 hours a day, 7 days a week. These commenters felt that that this role should be filled by a physician, nurse practitioner, clinical nurse specialist, or physician assistant with training or experience in emergency care.

Response: The statute does not explicitly specify who needs to fill this role. We believe that the intent of the legislation is to ensure that REHs have the flexibility to determine who best meets the needs of their community while ensuring the provision of safe, quality patient care. We expect REHs to determine who is best to fill this role based on the scope of services provided by the REH and the population served.

After consideration of the public comments suggesting that a staff with certain training or experience in emergency care fill the requirement that the emergency department be staffed at all times, we are finalizing our proposal at § 485.528 with modification. We will require that the REH be staffed at all times by an individual who is competent in the skills needed to address emergency medical care. This individual must be able to receive patients and activate the appropriate medical resources to meet the care needed by the patient. We believe that this focus on skills needed to address emergency medical care will ensure that the individual staffing the REH at all times is appropriate. We expect that this individual has the ability to effectively communicate information regarding the condition of patients presenting to the emergency department for treatment to the physician or other practitioner notified of the patient's arrival. We remind readers that the Emergency Services provision at § 485.516 will require the REH to comply with the CAH Emergency Services CoP at § 485.618, such that the REH must have a physician or other practitioner on-call at all times and available on-site within 30 or 60 min (depending on if the facility is located in a frontier area). We also expect the individual staffing the emergency department of the REH to have the ability to recognize life-threatening emergencies and provide cardiopulmonary resuscitation to patients presenting to the emergency department, if necessary.

As noted in the discussion of the Emergency Services requirements at § 485.516, we believe that these revisions sufficiently address commenters concern regarding ensuring the REH's emergency department is appropriately staffed.

(15) Condition of Participation: Nursing Services (§ 485.530)

The CoPs for hospitals and CAHs include a provision for nursing services. However, given that each of these providers offers acute care inpatient services, we do not believe that all nursing services requirements for hospitals and CAHs are appropriate for REHs, which are outpatient-only providers. In evaluating the appropriateness of nursing services requirements for REHs, we also took into consideration the CfCs for ambulatory surgery centers at 42 CFR part 416 since they, like REHs, only offer outpatient services.

Consistent with the hospital requirements, we proposed at § 485.530 to require that REHs have an organized nursing service that is available to provide 24-hour nursing services for the provision of patient care. We believe that the REH should have a sufficient number of nurses available to provide services, based on the number of patients receiving services in the REH and the level of care required to be provided to those patients.

Similar to the standard for hospitals set out at § 482.23(a), we proposed at § 485.530(a) to require that patient care responsibilities must be delineated for all nursing service personnel and that nursing services must be provided in accordance with recognized standards of practice. Also consistent with the hospital standards for nursing services, we proposed to require at § 485.530(b) that the REH have a director of nursing who is a licensed registered nurse and who is responsible for the operation of the nursing services.

Comment: Commenters were generally supportive of the proposal. One commenter suggested that an RN always be available on-site at the REH.

Response: This provision was modeled after the CAH requirement at § 485.631(a)(5) that a registered nurse, clinical nurse specialist, or licensed practical nurse be on duty whenever the CAH has one or more inpatients. Although REHs are outpatient-only facilities, they are required to provide emergency services and observation care. As a result, we believe it is appropriate for them to have a registered nurse, clinical nurse specialist, or licensed practical nurse on duty whenever the REH is providing emergency services and observation care to one or more patients, as required at § 485.528(b)(4). We are also requiring the REH to have nursing services that are available to be provided 24-hours a day for the provision of patient care. In cases in which there is not a patient receiving emergency services or observation care, but a patient subsequently presents to the REH for such services or care, the REH would be required to provide nursing services for the patient.

Additionally, the statute requires that the REH be staffed at all times. As discussed in the section for Staffing and Staff Responsibilities (§ 485.528), we are requiring that the individual(s) who fulfills the requirement that the REH must be staffed at all times must be an individual(s) who is competent in the skills needed to address emergency medical care. This individual(s) must be able to receive patients and activate the appropriate medical resources to meet the care needed by the patient. Furthermore, we are incorporating staffing into the REH's QAPI program at § 485.536(a)(1) to further address commenters concerns related to the REH staff and staff responsibilities.

After consideration of the public comments we received, we are finalizing as proposed.

(16) Condition of Participation: Discharge Planning (§ 485.532)

Hospitals and CAHs have very similar discharge planning requirements at §§ 482.43 and 485.642, respectively. These requirements were revised in the final rule entitled ''Medicare and Medicaid Programs; Revisions to Requirements for Discharge Planning for Hospitals, Critical Access Hospitals, and Home Health Agencies, and Hospital and Critical Access Hospital Changes to Promote Innovation, Flexibility, and Improvement in Patient Care'' (84 FR 51836). Many commenters on the REH RFI noted the importance of having in-depth discharge planning requirements for REHs, highlighting the need for REH patients to have safe, well-coordinated discharge processes due to the availability of fewer health care resources in rural environments. As a result, we proposed to closely align the proposed discharge planning requirements for REHs with the requirements for hospitals and CAHs. Specifically, proposed at § 485.532 to require that the patient's discharge plan address the patient's goals of care and treatment preferences. During the discharge planning process, we would expect that the appropriate medical staff would discuss the patient's post-acute care goals and treatment preferences with the patient, the patient's family or their caregiver/support persons (or both) and subsequently document these goals and preferences in the medical record. We would expect these documented goals and treatment preferences to be taken into account throughout the entire discharge planning process. We note that as a provider of emergency services, the REH may receive patients from nursing homes who require emergency care. Having a robust discharge planning process in place is imperative for this patient population. There may be instances in which a patient comes to the REH from a nursing home and the nursing home either expresses an intent not to accept the patient or delays the patient's return back to the nursing home after the completion of emergency care by the REH. Under these circumstances, we would encourage the REH to contact their State's long-term care ombudsman or State Survey Agency. We also encourage the REH to inform patients who arrive from or are discharged to a long-term care facility about how to contact the Ombudsman and State Survey Agency, if a patient is having quality of care or quality of life concerns. The Administration of Community Living's Long-Term Care Ombudsman Programs, ''. . . work to resolve problems related to the health, safety, welfare, and rights of individuals who live in LTC facilities, such as nursing homes, board and care and assisted living facilities, and other residential care communities. Ombudsman programs promote policies and consumer protections to improve long-term services and supports at the facility, local, state, and national levels.''

At § 485.532(a) introductory text and (a)(1), we proposed to require that REHs implement a discharge planning process to begin identifying, early in the provision of services, the anticipated post-discharge goals, preferences, and needs of the patient and begin to develop an appropriate discharge plan for patients who are likely to suffer adverse health consequences upon discharge in the absence of adequate discharge planning. Timely identification of the patient's goals, preferences, and needs and development of the discharge plan would reduce delays in the overall discharge process. Patient referrals to or consultation with community care organizations will be a key step, for some, in assuring successful patient outcomes. Therefore, we believe that discharge planning for patients is a process that involves the consideration of the patient's unique circumstances, treatment preferences, and goals of care, and is not solely a documentation process.

In addition, in order to encourage patient engagement and understanding of their discharge plan or instructions, we recommend that providers follow the National Standards for Culturally and Linguistically Appropriate Services (CLAS) in Health and Health Care (*https://www.thinkculturalhealth.hhs.gov/class/standards*), which provide guidance on providing instructions in a culturally and linguistically appropriate manner. We remind providers of their obligations to take reasonable steps to provide meaningful access to individuals with limited English proficiency in accordance with Title VI of the Civil Rights Act of 1964 and section 1557 of the Patient Protection and Affordable Care Act (the Affordable Care Act). In addition, providers are reminded to take appropriate steps to ensure effective communication with individuals with disabilities, including the provision of auxiliary aids and services, in accordance with section 504 of the Rehabilitation Act, the Americans with Disabilities Act (ADA), and section 1557 of the Affordable Care Act (see, *https://www.hhs.gov/civil-rights* and *https://www.ada.gov* for more information on these requirements). Discharge planning would be of little value to patients who cannot understand or appropriately follow the discharge plans discussed in this rule. Without appropriate language assistance or auxiliary aids and services, discharge planners would not be able to fully involve the patient and caregiver/support person in the development of the discharge plan. Furthermore, the discharge planner would not be fully aware of the patient's goals for discharge.

Additionally, effective discharge planning would assist REHs in complying with the U.S. Supreme Court's holding in *Olmstead* v. *L.C.* (527 U.S. 581 (1999)), which found that the unjustified segregation of people with disabilities is a form of unlawful discrimination under the ADA. We note that effective discharge planning may assist REHs in ensuring that individuals being discharged who would otherwise be entitled to institutional services, have access to community-based services when—(1) such placement is appropriate; (2) the affected person does not oppose such treatment; and (3) the placement can be reasonably accommodated. As noted by comments received in response to the REH RFI, discharge planning should focus on returning the patient to a home or community-based setting to the fullest extent possible with necessary supports and service. These proposed discharge planning standards are aimed at achieving this goal.

At § 485.532(a)(2), we proposed to require an REH to perform a discharge planning evaluation which would have to include an evaluation of a patient's likely need for appropriate services following care that has been furnished by an REH, including, but not limited to, hospice care services, post-REH extended care services, home health services, and non-health care services

and community-based care providers, and must also include a determination of the availability of the appropriate services as well as of the patient's access to those services.

At § 485.532(a)(3), we proposed to require that the patient's discharge needs evaluation and discharge plan be documented and completed on a timely basis, based on the patient's goals, preferences, strengths, and needs, so that appropriate arrangements for post-REH care could be made before discharge. This requirement would prevent the patient's discharge or transfer from being unduly delayed. We expect that in response to this requirement, REHs would establish more specific time frames for completing the evaluation and discharge plans based on the needs of their patients and their own operations. All relevant patient information would be incorporated into the discharge plan to facilitate its implementation and the discharge plan would have to be included in the patient's medical record. The results of the evaluation would also have to be discussed with the patient or patient's representative. Furthermore, we believe that REHs would use their evaluation of the discharge planning process, with solicitation of feedback from other providers and suppliers in the community, as well as from patients and caregivers, to revise their timeframes, as needed. We encourage REHs to make use of available health information technology, such as electronic health records, as well as entities that can facilitate exchange, such as health information exchanges, to enhance the efficiency and effectiveness of their discharge process.

At § 485.532(a)(4), we proposed to require the REH to arrange for the development and initial implementation of a discharge plan for those patients so identified as well as for other patients upon the request of the patient's physician. We proposed at § 485.532(a)(5) to require that a registered nurse, social worker, or other personnel qualified in accordance with the REH's discharge planning policy coordinate the discharge needs evaluation and the development of the discharge plan.

At § 485.532(a)(6), we proposed to require that the REH's discharge planning process ensure an ongoing patient evaluation throughout the patient's REH stay or visit to identify any changes in the patient's condition that would require modifications to the discharge plan. The evaluation to determine a patients continued stays at the REH (or in other words, their readiness for discharge or transfer), is a current standard of medical practice.

We proposed to require at § 485.532(a)(7) that the hospital assess its discharge planning process on a regular basis and include, as part of the assessment, an ongoing review of a representative sample of discharge plans. We expect that this would include patients who were emergency department revisits or presented to the emergency department within 30 days of a previous visit, to ensure that the REH is responsive to the discharge needs of patients.

In addition to standards for evaluating the discharge needs of patients and the development of discharge plans, the hospital and CAH discharge planning provisions also require that the hospital and CAH assist patients, their families, or the patient's representative in selecting a post-acute care provider by using and sharing data that includes, but is not limited to, home health agency (HHA), SNF, inpatient rehabilitation facility (IRF), or long-term care hospital (LTCH) data on quality measures and data on resource use measures. Furthermore, the CoPs for those facility-types require the hospital and CAH to ensure that the post-acute care data on quality measures and data on resource use measures is relevant and applicable to the patient's goals of care and treatment preferences. We believe these requirements are applicable to REHs, given that we expect some patients of the REH to be discharged to a post-acute care provider. As result, we proposed at § 485.532(a)(8) to require REHs to share data on quality measures and resource use measures of local post-acute care providers with patients to assist them in selecting a post-acute care provider.

We proposed at § 485.532(b) to require that the REH would be required to discharge the patient, and also transfer or refer the patient where applicable, along with all necessary medical information pertaining to the patient's course of illness and treatment, post-discharge goals of care, and treatment preferences, at the time of discharge, to the appropriate post-acute care service providers and suppliers, facilities, agencies, and other outpatient service providers and practitioners responsible for the patient's follow-up or ancillary care.

The Agency for Healthcare Research and Quality (AHRQ) released an environmental scan report on Improving the Emergency Department Discharge Process, that evaluated the state of the emergency department discharge process and ways in which it could be improved.[20] The report found that a high-quality emergency department discharge incorporates the following:

- Informs and educates patients on their diagnosis, prognosis, treatment plan, and expected course of illness. This includes informing patients of the details of their visit (treatments, tests, procedures).
- Supports patients in receiving post-emergency department discharge care. This might include medications, home care of injuries, use of medical devices/equipment, further diagnostic testing, and further health care provider evaluation; and
- Coordinates emergency department care within the context of the health care system (other health care providers, social services, etc.).

We believe discharge planning requirements proposed for REHs address the goals identified in the report.

Comment: Commenters were generally supportive and appreciated the robust requirements proposed for REHs given the rural communities they serve, highlighting the importance of care coordination and transitional care in these communities. One commenter suggested that CMS require REHs to comply with the hospital discharge planning standard at § 482.43(c)(2), which requires that the hospital, as part of the discharge planning process, inform the patient or the patient's representative of their freedom to choose among participating Medicare providers and suppliers of post-discharge services and must, when possible, respect the patient's or the patient's representative's goals of care and treatment preferences, as well as other preferences they express.

Response: We appreciate the commenters' support of our proposal. In response to the commenters' suggestion that CMS require REHs to comply with the hospital discharge planning standard at § 482.43(c)(2), this requirement is applicable to hospitals only, and is not applied to CAHs or REHs. The hospital discharge planning statutory requirements for patient choice are located at sections 1861(ee)(2)(H) and 1861(ee)(3) of the Act, under the definition of ''Discharge Planning Process.''

We also note that we proposed at § 485.532 to require that REHs have an effective discharge planning process that focused on the patient's goals and treatment preferences and includes the patient and their caregivers/support person(s) as active partners in the discharge planning for post-discharge care. The discharge planning process and the discharge plan must be consistent with the patient's goals for

care and their treatment preferences, ensure an effective transition of the patient from the REH to post-discharge care, and reduce the factors leading to preventable hospital admissions or readmissions. We highlight that this requirement is intended to ensure that the patient and their caregiver/support person(s) are an integral part of the discharge planning process and we expect that to include making the patient aware of their freedom to choose among participating Medicare providers and suppliers of post-discharge services.

After consideration of the public comments we received, we are finalizing this provision as proposed.

(17) Condition of Participation: Patient's Rights (§ 485.534)

It is imperative for patients to have the ability to exercise certain rights and protections while seeking and receiving necessary care and services at an REH. As previously mentioned, the appropriate provision of behavioral health is very important in the treatment and safety of patients and staff. Behavioral health is a challenge in rural areas, due to the accessibility, affordability, acceptability and availability of these services. The demand for mental health is increasing, with 67 percent of organizations seeing an increase in the demand for services (National Council for Mental Wellbeing: *https://www.thenationalcouncil.org/press-releases/new-report-40-of-mental-health-and-addiction-treatment-organizations-will-survive-less-than-a-year-without-additional-financial-support/*). According to a 2017 report from the National Council for Behavioral Health, there is a shortage of mental health professionals leading to a gap of up to 15,000 practitioners by 2025. This lack of access to psychiatric services is contributing to an increase in the unitization of hospital emergency departments. Therefore, we anticipate that some patients may rely on REH's to access behavioral health care services, and we believe it is important to have policies and procedures in place for REHs and CAHs (discussed later in this rule) in the event of a mental health crisis and the need for the use of restraints and seclusions. We proposed to establish a CoP for patient's rights at § 485.534 that would set forth the rights of all patients to receive care in a safe setting, and would require the facility to protect the patient's emotional and physical health and safety. Furthermore, we proposed to establish the patient's rights CoP for REHs closely to the patient's rights CoP for hospitals at § 482.13. The REH would be required to inform patients of and permit them to exercise their rights; address privacy and safety; adhere to the confidentiality of patient records; abide by restrictions on the use of restraint and seclusion; and adhere to patient visitation rights. We proposed to add these same patient's rights CoPs for CAHs, as well. Some of these requirements are currently in the SOM for CAHs while some are not explicitly required. We believe that these patient rights provisions are important for hospitals, CAHs, and REHs. However, some of the provisions proposed for REHs and CAHs are less prescriptive than those for hospitals because we proposed to allow for these providers to develop policies and procedures based on the scope of services they provide and patient populations that they serve. For example, we believe that REHs, like CAHs, would have a lower volume of patients than hospitals and the use of restraints and seclusion would not be as frequent as with other providers. REHs would not be providing inpatient services and if a patient presented at the REH in crisis or needing a level of care so acute that restraints or seclusions became necessary, we would expect the REH to arrange for the transfer of the patient to a higher level of care.

Notice of Rights

At § 485.534(a), we proposed that an REH inform each patient or patient's representative (as allowed under state law), of the patient's rights, in advance of furnishing or discontinuing patient care whenever possible. This included a proposal to require the REH to establish a process for the oversight and prompt resolution of patient grievances and for informing each patient whom to contact to file a grievance.

Exercise of Rights

At § 485.534(b), we proposed to specify those rights a patient has regarding their medical care, which includes the right to make informed decisions regarding their care, to be fully informed about such care, and the right to request or refuse treatment. We noted that this right was not to be construed as a mechanism to demand the provision of treatment or services deemed medically unnecessary or inappropriate. In addition, we proposed to specify that the patient also has the right to formulate advance directives and to have REH staff and practitioners who provide care in the REH comply with these directives.

Privacy, Safety, and Confidentiality of Patient Records

At § 485.534(c), we proposed to specify that the patient has the right to personal privacy, receive care in a safe setting, and be free from all forms of abuse or harassment. At § 485.534(d), we proposed to specify that the patient has the right to the confidentiality of their medical records and the right to access their medical records. We also proposed that the REH be required to provide the patient with their records in a form and format requested by the patient, and within a reasonable timeframe, so as not to frustrate the legitimate efforts of individuals to gain access to their own medical records.

Use of Restraints and Seclusion

At § 485.534(e), we proposed rules relating to the use of restraints and seclusion that would be less burdensome than those for hospitals, because we believe that the likelihood of an REH needing to utilize restraints and seclusion would be relatively low. In addition, in the event that there were patients requiring restraint and seclusion, we would expect them to be transferred quickly to a higher level of care. We note that we have similar expectations for CAHs and are finalizing similar requirements for CAHs in this rule. We proposed to specify that all patients have the right to be free from physical or mental abuse, from corporal punishment, and from restraint or seclusion, of any form, imposed as a means of coercion, discipline, convenience, or retaliation by staff. We proposed that restraint or seclusion would only be imposed to ensure the immediate physical safety of the patient, a staff member, or others, and would have to be discontinued at the earliest possible time. We proposed to define ''restraint'' as any manual method, physical or mechanical device, material, or equipment that immobilizes or reduces the ability of a patient to move their arms, legs, body, or head freely; or a drug or medication when it is used as a restriction to manage the patient's behavior or restrict the patient's freedom of movement and is not a standard treatment or dosage for the patient's condition. A restraint does not include devices, such as orthopedically prescribed devices, surgical dressings or bandages, protective helmets, or other methods that involve the physical holding of a patient for the purpose of conducting routine physical examinations or tests, or to protect the patient from falling out of bed, off of a stretcher, or out of a chair, or to permit the patient to participate in activities without the risk of physical harm (this does not include a physical escort). We proposed to define ''seclusion'' as the involuntary confinement of a patient alone in a room or area from which the

patient is physically prevented from leaving. Seclusion could only be used for the management of violent or self-destructive behavior.

At § 485.534(e)(2), we proposed to require that the restraint or seclusion only be used when less restrictive interventions had been determined to be ineffective to protect the patient, a staff member, or others from harm, and at § 485.534(e)(3) that the type or technique of restraint or seclusion used would have to be the least restrictive intervention that will be effective to protect the patient, staff member, or others from harm. At § 485.534(e)(4), we proposed that the REH would have to have written policies and procedures regarding the use of restraint and seclusion consistent with current standards of practice. These requirements would allow for the REH to use restraints and seclusion in the event that it was necessary and as a last resort to respond to immediate safety concerns, but would present a lesser burden and allow for more flexibility than existing hospital CoPs. We believe that allowing the REH the flexibility to develop their own policies and procedures for restraints and seclusion based on the scope of services they provide is necessary given their patient volumes, populations, and access to resources. We proposed to require that such policies and procedures be consistent with current standards of practice.

Staff Training Requirements for the Use of Restraints or Seclusion

The following staff training requirements are not as prescriptive as the existing hospital requirements, and we proposed these same requirements for CAHs in the REH NPRM. At § 485.534(f), we proposed to establish staff training requirements for the use of restraints and seclusion. Specifically, we proposed that the patient has the right to safe implementation of restraint or seclusion, when necessary, by trained staff. We proposed at § 485.534(f)(1) that the REH would have to provide competency-based training and education of REH personnel and staff, including medical staff and contractors, on the use of restraint and seclusion. We proposed to require that the training be patient-centered, meaning that t staff are able to ensure that the use of restraint and seclusion for patients receiving services in an REH is respectful of, and responsive to, individual patient preferences, needs and values. Additionally, to ensure that staff are educated and trained on using the least restrictive intervention necessary for the safety of the patients and REH staff, we proposed at § 485.534(f)(2) to require that the REH staff train their staff in alternatives to the use of restraint and seclusion. For example, we proposed that staff have trauma-informed knowledge competencies and be aware of effective de-escalation techniques that could be used to avoid the use of restraint and seclusion and the trauma that may be associated with their use. Trained peer workers (people who share similar experiences of being diagnosed with mental health conditions, substance use disorders, or both) and community health workers (CHWs) could also serve a useful role in assisting patients and other staff. This could include helping to monitor use of restraint and seclusion, deescalating interactions with patients and contributing to a positive and supportive environment for patients, family members, and REH staff. REHs are encouraged to consider the use of peer workers and CHWs in their staffing plans. For further information, please see the 2007 guidance on use of peers in the Medicaid program (*https://www.medicaid.gov/federal-policy-guidance/downloads/SMD081507A.pdf*) and resources from the Substance Abuse and Mental Health Services Administration (*https://www.samhsa.gov/brss-tacs/recovery-support-tools/peers*). In addition, facilities are encouraged to consider any nutritional needs while a patient is restrained, such as a need to provide food and water.

Death Reporting Requirements

The REH death reporting requirements are similar to the hospital requirements at § 482.13. At § 485.534(g), we proposed to establish requirements that REHs must follow when reporting deaths associated with the use of seclusion or restraint. Specifically, we proposed to require that the REH report to CMS, by telephone, facsimile, or electronically, as determined by CMS, no later than the close of business on the next business day the following information—(1) Each death that occurs while a patient is in restraint or seclusion; (2) Each death that occurs within 24 hours after the patient has been removed from restraint or seclusion; (3) Each death known to the REH that occurs within 1 week after restraint or seclusion where it is reasonable to assume that use of restraint or placement in seclusion contributed directly or indirectly to a patient's death, regardless of the type(s) of restraint used on the patient during this time. We note that ''reasonable to assume'' in this context would include, but is not limited to, deaths related to restrictions of movement for prolonged periods of time, or death related to chest compression, restriction of breathing, or asphyxiation.

For instances when no seclusion had been used and when the only restraints used on the patient were those applied exclusively to the patient's wrist(s), and which are composed solely of soft, non-rigid, cloth-like materials, the REH staff would have to record in an internal log or other system, the following information: (1) Any death that occurs while a patient was in such restraints; (2) Any death that occurred within 24 hours after a patient had been removed from such restraints. Furthermore, we proposed that staff document in the patient's medical record the date and time the death was reported to CMS or recorded in the internal log or other system. Also, for instances when no seclusion had been used and when the only restraints used on the patient were those applied exclusively to the patient's wrist(s),we proposed to require that entries into the internal log or other system must be documented no later than seven days after the date of death of the patient, include the patient's name, date of birth, date of death, name of attending physician or other licensed practitioner who is responsible for the care of the patient, medical record number, and primary diagnosis(es), and to be made available in either written or electronic form to CMS immediately upon request.

Patient Visitation Rights

At § 485.534(h), we proposed to establish requirements related to a patient's visitation rights. These requirements would be consistent with the current hospital and CAH regulations. Specifically, we proposed that an REH have written policies and procedures regarding the visitation rights of patients, including those setting forth any clinically necessary or reasonable restriction or limitation that the REH may need to place on such rights and the reasons for the clinical restriction or limitation. An REH would have to inform patients (or support persons, where appropriate) of their visitation rights, including any clinical restriction or limitation on such rights, when they were informed of their other rights. Each patient would be informed (or support persons, where appropriate) of the right, subject to their consent, to receive the visitors whom they designated, including, but not limited to, a spouse, a domestic partner (including a same-sex domestic partner), another family member, or a friend. The patient would also have the right to withdraw or deny such consent at any

time. The facility could not restrict, limit, or otherwise deny visitation privileges on the basis of race, color, national origin, religion, sex, gender identity, sexual orientation, or disability, and ensure that all visitors enjoy full and equal visitation privileges consistent with patient preferences.

Comment: Most commenters supported the proposed patient's rights requirements for REHs. Commenters stated that REHs should have the same patient rights requirements as hospitals. A commenter suggested that we follow HIPAA requirements for patient confidentiality rights and privacy to avoid any confusion.

Response: We appreciate the support and suggestions from interested parties. Our goal was to establish patient's rights that would set forth the rights of all patients to receive care in a safe setting and provide protection for a patient's emotional health and safety as well as their physical safety. We believe that we have done that and allowed the flexibility for REHs to develop their own policies and procedures in response to the use of restraints and seclusions, in the event that they are necessary.

After consideration of the public comments we received, we are finalizing these provisions as proposed.

(18) Condition of Participation: Quality Assessment and Performance Improvement Program (QAPI Program) (§ 485.536)

An effective QAPI program that is engaged in continuous improvement efforts is essential to a provider's ability to deliver high quality and safe care to its patients, while reducing the incidence of medical errors and adverse events. Therefore, we believe the QAPI programs for REHs should conform to the current health care industry standards that require providers to proactively design quality improvement into each program at the outset, monitor data (indicators, measures and reports of staff/residents/families), determine root causes of problems, develop and implement plans that affect system improvement, and monitor the success of this systematic approach to improving quality.

At § 485.536, we proposed to require that every REH develop, implement, and maintain an effective, ongoing, REH-wide, data-driven QAPI program. This requirement ensures that the REH systematically reviews its operating systems and processes of care to identify and implement opportunities to deliver effective care to its patients focusing on improving health outcomes and preventing and reducing medical errors.

In the development of the proposed requirements for the REH QAPI program, we reviewed the CAH QAPI requirements at § 485.641, which we note are also closely aligned with the hospital QAPI requirements at § 482.21. We also took into account the comments on the REH RFI and input from other interested parties who requested that CMS consider the clinical and administrative limitations that rural providers experience and, where appropriate, we have proposed requirements that minimize burden while maintaining the ability of the REH to proactively maximize quality improvement activities and programs.

The proposed QAPI program contained the following five parts: (a) Program and scope; (b) Program data collection and analysis; (c) Program activities; (d) Executive responsibilities; and (e) Unified and integrated QAPI program for an REH in a multi-hospital system.

Similar to the program scope standard for hospitals at § 482.21(a)(1) and (2), at § 485.536(a)(1), we proposed to require the REH to have an ongoing QAPI program that reflects improvement in quality indicators related to health outcomes and reductions in medical errors. In proposed paragraph § 485.536(a)(2) we would require REHs to measure, analyze, and track these quality indicators. At § 485.536(b), we proposed to mirror the program data collection and analysis standard for CAHs at § 485.641(e) and require that the REH's QAPI program incorporate quality indicator data including patient care data, quality measures data, and other relevant data in order to attain quality improvement.

Similar to the program activities standard for hospitals at § 482.21(c), at § 485.536(c)(1), we proposed to require the REH to set priorities for its performance improvement activities focused on high-risk, high-volume, or problem-prone areas. We also proposed to require the REH to consider the incidence, prevalence, and severity of problems in those identified areas and that the set priority areas affect health outcomes, patient safety, and quality of care. At § 485.536(c)(2) and (3), we proposed to require the REH's performance improvement activities to track medical errors and adverse events, analyze their causes, and implement preventive actions. We would expect the REH to conduct analyses at regular intervals to track performance and ensure that improvements were sustained.

We proposed at § 485.536(d), similar to the standard for executive responsibilities for hospitals at § 482.21(e), that the responsibilities for the REH's governing body (or organized group or individual who assumes full legal authority and responsibility for operations of the REH), medical staff, and administrative officials include ensuring that the QAPI program is implemented and maintained, properly evaluated, and appropriately resourced.

Lastly, consistent with the standard included at § 482.21(f) in the hospital CoPs for QAPI programs, we proposed at § 485.536(e) to allow REHs that are part of a multi-facility system consisting of multiple separately certified hospitals, CAHs, and/or REHs to elect to have a unified and integrated QAPI program if in accordance with all applicable state and local laws. Specifically, we proposed to specify that the system's governing body would be responsible and accountable for ensuring that each of its separately certified REHs met the proposed QAPI program requirements. We expect this policy would be beneficial to REHs that may lack time, resources or staff to implement an REH-specific QAPI program. The REH would be able to benefit from the resources and expertise of a multi-hospital system in implementing their QAPI program, as well as potentially reduce the time and labor investments required to enact and maintain the program.

We were interested in input from the public regarding possible unintended consequences that could occur as a result of allowing REHs to participate in a unified and integrated QAPI program. We were interested in feedback regarding how the integrated health system's governing body would ensure that they consider the REH's unique circumstances and any significant differences in patient populations and services offered at the REH. We also sought comments regarding how the integrated health system's governing body would ensure that an REH participating in a unified and integrated QAPI program provided the appropriate level of care to patients being treated in the REH, including being appropriately transferred to another facility when necessary.

Comment: Commenters were generally supportive of the proposals for QAPI programs for REHs. Some commenters specifically noted their support of the proposal to allow REHs that are part of a multi-facility system to elect to have a unified and integrated QAPI program stating that it could help relive administrative burden for REHs. Other commenters noted that REHs may not have the resources to gather and analyze data to inform a QAPI program.

Response: We thank the commenters for their feedback. With regard to providers lacking the resources to implement a QAPI program, as we stated in the proposed rule, the proposed requirements for REH QAPI programs were developed with the intent of being consistent with the CAH QAPI requirements at § 485.641. Many hospitals who may convert to an REH currently adhere to these standards. Therefore, we believe our finalized QAPI requirements will not overburden the REH staff.

Comment: We received two comments regarding the proposed standard at § 485.536(d) for Executive Responsibilities. These commenters noted that this standard mirrored the QAPI standard for Executive Responsibilities at § 482.21(e) for hospitals and requested that we instead mirror the CAH standard for Governance and Leadership at § 485.641(c) for REHs.

Response: As stated in the proposed rule, when developing the proposed QAPI requirements for REHs we reviewed both the CAH QAPI requirements at § 485.641 and the hospital QAPI requirements at § 482.21. We chose not to mirror the CAH standard for Governance and Leadership at § 485.641(c) for REHs because this standard references a requirement that the CAH's governing body be ultimately responsible for addressing outcome indicators related to readmissions, which is not relevant for REHs because they do not provide inpatient services. Therefore, we instead aligned this requirement with the hospital QAPI regulations at § 482.21 that require the governing body (or organized group or individual who assumes full legal authority and responsibility for operations of the REH), medical staff, and administrative officials include to ensure that the QAPI program is implemented and maintained, properly evaluated, and appropriately resourced. We believed this standard was reasonable for REHs as well and fairly similar to the CAH requirement at § 485.641(c).

Comment: As discussed in the Staffing and Staff Responsibilities section, some commenters noted concerns regarding the staffing of an REH. Some commenters believed that an EMT or a nurse would not provide sufficient staffing to meet the requirement that an REH be staffed 24 hours a day, 7 days a week. These commenters felt that that this role should be filled by a physician, nurse practitioner, clinical nurse specialist, or physician assistant with training or experience in emergency care. Other commenters stated that if the REH was not sufficiently staffed, it could impact the ability to respond to an obstetrical emergency.

Response: As noted at § 485.528, we are requiring that the individual(s) who fulfills the requirement that the REH must be staffed at all times must be an individual(s) who is competent in the skills needed to address emergency medical care. This individual(s) must be able to receive patients and activate the appropriate medical resources to meet the care needed by the patient. We believe that incorporating staffing into the REH's QAPI program will further address commenters concerns related to the REH staff and staff responsibilities. Therefore, we are revising the standard at § 485.536(a)(2) to specifically require the REH to measure, analyze, and track staffing as a quality indicator to assesses processes of care, REH service and operations.

After consideration of the public comments we received, we are finalizing § 485.536(a)(2) with a modification to require the REH to specifically measure, analyze, and track staffing as a quality indicator.

(19) Condition of Participation: Agreements (§ 485.538)

Section 1861(kkk)(2)(C) of the Act, as added by the CAA, requires an REH to have in effect a transfer agreement with a level I or level II trauma center. In accordance with section 1861(kkk)(2)(C) of the Act, at § 485.538 we proposed to require that REHs have in effect an agreement with at least one Medicare-certified hospital that is a level I or level II trauma center for the referral and transfer of patients requiring emergency medical care beyond the capabilities of the REH. We would require that the level I or level II trauma center meets certain licensure requirements including being licensed as a hospital in a state that provides for the licensing of hospitals under state or applicable local law or approved by the agency of such state or locality responsible for licensing hospitals, as meeting standards established for licensing established by the agency of the state. It is also acceptable for the level I or II trauma center to be located in a state other than the state where the REH is located. In addition, we proposed to require that the level I or level II trauma center must also be licensed or designated by the state or local government authority as level I or level II trauma center or is verified by the American College of Surgeons as a level I or level II trauma center.

We received several comments to the REH RFI regarding transfer agreements between REHs and hospitals that are not designated as a level I or II trauma center. Specifically, commenters stated that due to distance, or the possibility that level I or level II trauma centers may not have available beds, many rural CAHs currently transfer patients to level III or level IV trauma centers based on the patient's specific needs. Commenters requested that CMS allow these facilities to retain these agreements, should they convert to REHs. We would expect REHs to comply with the CoP detailed at § 485.538 and to have a transfer agreement in place with a level I or II trauma center. However, we do not believe that the statute precludes an REH from also having a transfer agreement with a hospital that is not designated as a level I or II trauma center. An REH may have pre-existing relationships with hospitals that are not designated as level I or level II trauma centers. In these instances, the proposed requirement would not preclude them from maintaining those relationships and leveraging resources and capacity that may be available to deliver care that is beyond the scope of care delivered at the REH.

Comment: Many commenters were supportive of the proposed requirement for an REH to have in effect a transfer agreement with at least one Medicare-certified hospital that is a level I or level II trauma center. Commenters noted that agreements with level I or level II trauma centers are vital to ensure that patients requiring serious medical care are able to receive it. Some commenters suggested that REHs that are located more than 50 miles distance from a level I or II trauma center be allowed to meet this requirement by maintaining agreements with closer facilities that may not be designated as a level I or level II trauma center.

Response: We previously noted that REHs are required by section 1861(kkk)(2)(C) of the Act to have in effect a transfer agreement with a level I or level II trauma center. We stated in the proposed rule that we did not believe that the statute precluded an REH from also having a transfer agreement with a hospital that is not designated as a level I or II trauma center. However, we do not have the authority to exempt REHs from this requirement or allow the requirement to be met by only maintaining arrangements with other types of facilities that are not designated as level I or level II trauma centers. Further, we believe that even if an REH rarely transfers a patient to a level I or level II trauma center, having an agreement in place will save critical time and

resources if the transfer of a patient is medically necessary.

Comment: One commenter recommended that CMS require REHs to include the capacity for telemedicine capabilities with a physician with, at the minimum, experience in the practice of emergency medicine in the transfer agreement with a level I or level II trauma center. Another commenter recommended that REHs be required to have transfer agreements with a trauma center that has pediatric trauma capability. Other commenters recommended that CMS require REHs to enter into transfer agreements with the closest inpatient psychiatric facility in order to transfer patients who require behavioral health services.

Response: We believe that REHs should have the flexibility to determine the content of the agreements with a level I or level II trauma center based on what will best meet the needs of the patients in their communities as well as the providers involved in the agreement. With regard to transfer agreements with facilities that offer specialties such as pediatric trauma care and inpatient psychiatric services, we also believe that the REH is in the best position to determine the necessity for these agreements without establishing a CoP to require such.

After consideration of the public comments we received, we are finalizing § 485.538 as proposed.

(20) Condition of Participation: Medical Records (§ 485.540)

The maintenance of a medical records system is a longstanding requirement in both the hospital and CAH CoPs. In the development of proposed requirements for medical records for REHs, we reviewed the CoPs for medical records for CAHs established at § 485.638, including the requirements finalized in the May 2020 final rule, ''Medicare and Medicaid Programs; Patient Protection and Affordable Care Act; Interoperability and Patient Access'' (85 FR 25510 through 25585), focused on electronic patient event notifications of a patient's admission, discharge, and/or transfer to another health care facility or to another community provider. We also considered the comments from the REH RFI that encouraged CMS to closely align the CoPs for REHs with currently established requirements for CAHs. After reviewing the CoPs for medical records for CAHs at § 485.638, we believed that the requirements established for medical records for CAHs are also appropriate for REHs. We also would expect that many facilities that may elect to convert to an REH would presently have these systems in place, which may minimize administrative burden. Therefore, at § 485.540(a), we proposed to require that the REH maintain a medical records system in accordance with written policies and procedures; that such records be legible, complete, accurately documented, readily accessible, and systematically organized and that a designated member of the professional staff be responsible for maintaining the records. We also proposed to require that for each patient receiving health care services, the REH would be required to maintain a record that would include, as applicable, identification and social data, evidence of properly executed informed consent forms, pertinent medical history, assessment of the health status and health care needs of the patient, and a brief summary of the episode, disposition, and instructions to the patient. We proposed that the record requirements include reports of physical examinations; diagnostic and laboratory test results, including clinical laboratory services; consultative findings and all orders of doctors of medicine or osteopathy or other practitioners; reports of treatments and medications; nursing notes and documentation of complications; and other pertinent information necessary to monitor the patient's progress, such as temperature graphics or progress notes describing the patient's response to treatment. Lastly, we proposed that the record include dated signatures of the doctor of medicine or osteopathy or other health care professional.

At § 485.540(b) and (c), we proposed to require the REH to maintain the confidentiality of patients' medical record information and to ensure that such records would be retained for at least 5 years from date of last entry, and longer if required by state statute, or if the records may be needed in any pending proceeding.

Lastly, at § 485.540(d), we proposed a standard for electronic notifications if the REH utilizes an electronic medical records system or other electronic administrative system that conforms with the content exchange standard at 45 CFR 170.205(d)(2). This requirement was intended to limit the applicability of this CoP to those REHs which currently possess an EHR or other electronic administrative system with the technical capacity to generate information for electronic patient event notifications. As discussed in the CMS Interoperability and Patient Access final rule (85 FR 25585), electronic patient event notifications can be an effective tool for improving care coordination across settings, especially when patients are discharged. We proposed to require the REH to demonstrate that the system's notification capacity was fully operational and sends notifications with at least specified patient information, as appropriate, and facilitates the exchange of health information when the patient is registered, discharged, or transferred from the REH's emergency department. Finally, we proposed to require that the REH make a reasonable effort to ensure that the system would send notifications to specific recipients, including the patient's applicable post-acute care and primary care services providers.

Comment: Commenters supported the proposed requirement for the maintenance of medical records. One commenter asked whether a physician or other health care professional would be required to sign the medical record for patients receiving observation services.

Response: We appreciate the commenters' input. At § 485.540(a)(4)(iv), the REH is required to maintain records that are dated and signed by the doctor of medicine or osteopathy or other health care professional for each patient receiving health care services, including observation services.

After consideration of the public comments we received, we are finalizing § 485.540 as proposed.

(21) Condition of Participation: Emergency Preparedness (§ 485.542)

Over the past several years, the U.S. has been challenged by several natural and man-made disasters. As a result of the September 11, 2001 terrorist attacks, the subsequent anthrax attacks, the catastrophic hurricanes in the Gulf Coast states in 2005, flooding in the Midwestern states in 2008, tornadoes and floods in the spring of 2011, the 2009 H1N1 influenza pandemic, and Hurricane Sandy in 2012 and most recently, the COVID–19 pandemic, readiness for public health emergencies has been put on the national agenda. On September 16, 2016, we published a final rule, ''Medicare and Medicaid Programs; Emergency Preparedness Requirements for Medicare and Medicaid Participating Providers and Suppliers'' (81 FR 63860), to establish emergency preparedness requirements for Medicare and Medicaid participating providers and suppliers to plan adequately for both natural and man-made disasters, and coordinate with Federal, state, tribal, regional, and local emergency preparedness systems. Disasters can disrupt the health care environment and change the demand for health care services. This makes it essential that health care providers and

suppliers ensure that emergency management is integrated into their daily functions and values.

Thus, we proposed emergency preparedness requirements to establish a comprehensive, consistent, flexible, and dynamic regulatory approach to emergency preparedness for REHs that would align with the existing emergency preparedness standards for other Medicare and Medicaid participating providers and suppliers. These proposed requirements mirrored the existing CAH emergency preparedness requirements. The emergency preparedness requirements for all Medicare-participating providers and suppliers are generally consistent, with some differences based on the provider type (such as inpatient versus outpatient).

Consistent with the standards for most other Medicare and Medicaid participating providers and suppliers, we proposed to require REHs to comply with all applicable Federal, state, and local emergency preparedness requirements. In addition, we proposed to require that the REH establish and maintain an emergency preparedness program that addressed four core elements that we believe are central to an effective emergency preparedness system. The four elements are: (1) risk assessment and planning; (2) policies and procedures; (3) communication; and (4) training and testing.

At § 485.542(a), we proposed to require that REHs develop and maintain an emergency preparedness plan that would have to be reviewed and updated at least every 2 years. Specifically, we proposed to require that the REHs emergency plan—(1) Be based on and include a documented, facility-based and community-based risk assessment, utilizing an all-hazards approach; (2) include strategies for addressing emergency events identified by the risk assessment; (3) address the patient population, including, but not limited to, the type of services the REH has the ability to provide in an emergency; and continuity of operations, including delegations of authority and succession plans; and (4) include a process for cooperation and collaboration with local, tribal, regional, state, and Federal emergency preparedness officials' efforts to maintain an integrated response during a disaster or emergency situation.

At § 485.542(b), we proposed to require REHs to develop and implement policies and procedures, based on the emergency plan, risk assessment, and communication plan, which would be reviewed and updated at least every 2 years. Specifically, we proposed to require that the policies and procedures would have to address the following:

- Provision of subsistence needs for staff and patients, whether they evacuate or shelter in place, including, but not limited to food, water, medical and pharmaceutical supplies, other sources of energy to maintain temperatures, emergency lighting, fire detection and sewage and waste disposal;
- A system to track the location of on-duty staff and sheltered patients in the REH's care during an emergency; if staff were being relocated the REH would have to document the specific name and location of the receiving facility or other location;
- Safe evacuation from the REH, to include consideration of care and treatment needs of the evacuees, staff responsibilities and transportation and identification of the evacuation location(s);
- A means to shelter in place for any patients, staff and volunteers that remain at the REH;
- A system of medical documentation that would preserve patient information, protects confidentiality of all patient information and secures and maintains the availability of the records;
- The use of volunteers in an emergency and other staffing strategies, including the process and role for integration of state and federally designated health care professionals to address surge needs during an emergency; and
- The role of the REH under a waiver declared by the Secretary, in accordance with section 1135 of the Act, in the provision of care and treatment at an alternate care site identified by emergency management officials.

We believe that small, rural REHs would be able to develop an appropriate emergency preparedness plan and develop policies and procedures in accordance with our proposed requirements with the assistance of resources in their state and local community guidance.

At § 485.542(c), we proposed to require REHs to develop and maintain an emergency preparedness communication plan that would comply with both Federal and state law; the plan would have to be reviewed and updated at least every 2 years. The communication plan would be required to include the following:

- Names and contact information for staff, entities providing services under agreement, patients' physicians and volunteers;
- Contact information for Federal, state, tribal, regional, and local emergency preparedness staff and other sources of assistance;
- Primary and alternate means for communicating with the REH's staff and Federal, state, tribal, regional, and local emergency management agencies;
- A method for sharing information and medical documentation for patients under the REH's care, as necessary, with other health care providers to maintain the continuity of care;
- A means, in the event of an evacuation, to release patient information;
- A means of providing information about the general condition and location of patients under the facility's care; and
- A means of providing information about the REH's needs, and its ability to provide assistance, to the authority having jurisdiction, the Incident Command Center, or designee.

We would expect patient care to be well-coordinated within the REH, across healthcare providers, and with state and local public health departments and emergency management agencies and systems to protect patient health and safety in the event of a disaster. The following link is to the Federal Emergency Management Agency's (FEMA's) comprehensive preparedness guide to develop and maintain emergency operations plans: *https://www.fema.gov/sites/default/files/2020-05/CPG_101_V2_30NOV2010_FINAL_508.pdf.* During an emergency, it would be critical for REHs to have a system to contact appropriate staff, patients' treating physicians, and other necessary persons in a timely manner to ensure continuation of patient care functions throughout the facilities and to ensure that these functions were carried out in a safe and effective manner.

At § 485.542(d), we proposed to require the REH to develop and maintain an emergency preparedness training and testing program based on the emergency plan, policies and procedures and communication plan, and reviewed and updated at least every 2 years. We proposed to require at § 485.542(d)(1) that the training program include initial training in the emergency preparedness policies and procedures for new and existing staff, individuals providing on-site services under arrangement, and volunteers, consistent with their expected roles. We also proposed to require the facility to provide emergency preparedness training at least every 2 years, maintain documentation of all emergency preparedness training, demonstrate staff knowledge of emergency procedures, and if the emergency preparedness policies and procedures were significantly updated, conduct training

on the updated policies and procedures. The Homeland Security Exercise and Evaluation Program (HSEEP), developed by FEMA, includes a section on the establishment of a Training and Exercise Planning Workshop (TEPW). The TEPW section provides guidance to organizations in conducting an annual TEPW and developing a Multi-year Training and Exercise Plan (TEP) in line with the HSEEP (*https://www.fema.gov/sites/default/files/2020-04/Homeland-Security-Exercise-and-Evaluation-Program-Doctrine-2020-Revision-2-2-25.pdf*).

We proposed at § 485.542(d)(2) to require that the REH conduct exercises to test the emergency plan at least annually. Specifically, we proposed to require that the REH conduct two testing exercises, a full-scale or functional exercise and an additional exercise of its choice, every 2 years. First, the REH would be required to participate in a full-scale community-based exercise. If a community-based exercise was not accessible, we proposed that the REH would have to conduct a facility-based functional exercise; or, if the REH experienced an actual natural or man-made emergency that required activation of the emergency plan, the REH would be exempt from engaging in its next required community-based or individual, facility-based functional exercise following the onset of the emergency event. Second, the REH would have to conduct an additional exercise, opposite the year the full-scale or functional exercise was conducted, that could include, but would not be limited to, a second full-scale community-based exercise or an individual, facility-based functional exercise, a mock disaster drill, or a tabletop exercise or workshop led by a facilitator, including a group discussion using a narrated, clinically-relevant emergency scenario, and a set of problem statements, directed messages, or prepared questions designed to challenge an emergency plan. Lastly, we proposed to require that the REH analyze its response to and maintain documentation of all drills, tabletop exercises, and emergency events and revise the REH's emergency plan, as needed.

We proposed at § 485.642(e) that REHs be required to store emergency fuel and associated equipment and systems as required by the 2000 edition of the Life Safety Code (LSC) of the NFPA®. In addition to the emergency power system inspection and testing requirements found in NFPA® 99 and NFPA® 110 and NFPA® 101, we proposed that REHs test their emergency and stand-by-power systems for a minimum of 4 continuous hours every 12 months at 100 percent of the power load the REH anticipates it will require during an emergency. The NFPA 101® 2012 edition of the LSC (including the technical interim amendments (TIAs)) provides minimum requirements, with due regard to function, for the design, operation and maintenance of buildings and structures for safety to life from fire. Its provisions also aid life safety in similar emergencies. The NFPA 99® 2012 edition of the Health Care Facilities Code (including the TIAs) provides minimum requirements for health care facilities for the installation, inspection, testing, maintenance, performance, and safe practices for facilities, material, equipment, and appliances, including other hazards associated with the primary hazards. The NFPA 110 covers performance requirements for emergency and standby power systems providing an alternate source of electrical power in buildings and facilities in the event that the normal electrical power source fails. Systems include power sources, transfer equipment, controls, supervisory equipment, and accessory equipment needed to supply electrical power to the selected circuits.

Finally, at § 485.542(f), we proposed to specify that if an REH was part of a healthcare system consisting of multiple separately certified healthcare facilities that elected to have a unified and integrated emergency preparedness program, the REH could choose to participate in the healthcare system's coordinated emergency preparedness program. If the REH elected this, we proposed that the unified and integrated emergency preparedness program would have to demonstrate that each separately certified facility within the system actively participated in the development of the unified and integrated emergency preparedness program and be developed and maintained in a manner that took into account each separately certified facility's unique circumstances, patient populations, and services offered.

In addition, we proposed that each separately certified REH in the system would have to be capable of actively using the unified and integrated emergency preparedness program and was in compliance with the program's requirements. We also proposed that the unified and integrated emergency preparedness program would have to include a unified and integrated emergency plan that is based on a documented community-based risk assessment, utilizing an all-hazards approach and a documented individual facility-based risk assessment for each separately certified REH within the health system, utilizing an all-hazards approach. Lastly, we proposed that the unified and integrated emergency preparedness program would have to have integrated policies and procedures, a coordinated communication plan, and training and testing programs.

Comment: We received few comments regarding the emergency preparedness requirements. However, the few that we received were supportive and suggested that we continue to review the EP requirements based on experience from the most recent pandemic.

Response: CMS appreciates the support for the EP requirements that we set forth for REHs. CMS has held several listening sessions with interested parties on the existing EP requirements and will use this information to inform any future updates, as needed.

After consideration of the public comments we received, we are finalizing these provisions as proposed.

(22) Condition of Participation: Physical Environment (§ 485.544)

The LSC is a compilation of fire safety requirements for new and existing buildings, and is updated and published every 3 years by the National Fire Protection Association (NFPA), a private, nonprofit organization dedicated to reducing loss of life due to fire. The Medicare and Medicaid regulations have historically incorporated these requirements by reference, along with Secretarial waiver authority. The statutory basis for incorporating NFPA's LSC into the regulations we apply to Medicare and, as applicable, Medicaid providers and suppliers is the Secretary's facility-specific authority to stipulate health and safety regulations for each type of Medicare and (if applicable) Medicaid-participating facility. For REHs, that statutory authority is set out at new section 1861(kkk)(2)(D)(v) of the Act. The following provisions we have proposed are similar to the Hospital, CAH, and ASC LSC and Health Care Facilities Code requirements.

The NFPA 101®2012 edition of the LSC (including the technical interim amendments (TIAs)) provides minimum requirements, with due regard to function, for the design, operation and maintenance of buildings and structures for safety to life from fire. Its provisions also aid life safety in similar emergencies. The NFPA 99® 2012 edition of the Health Care Facilities Code (including the TIAs) provides minimum requirements for health care facilities for the installation, inspection, testing, maintenance, performance, and safe practices for facilities, material,

equipment, and appliances, including other hazards associated with the primary hazards. The NFPA 110 2010 edition covers performance requirements for emergency and standby power systems providing an alternate source of electrical power in buildings and facilities in the event that the normal electrical power source fails. Systems include power sources, transfer equipment, controls, supervisory equipment, and accessory equipment needed to supply electrical power to the selected circuits.

We review each new edition of the NFPA 101 and NFPA 99, which are issued every 3 years, to see if there are any significant provisions that we need to adopt. We will continue to review these documents every 3 years to see if there are relevant or updated provisions that we need to adopt. The 2012 edition of the LSC includes provisions that we believe are vital to the health and safety of all patients and staff. Our intention is to ensure that patients and staff continue to experience the highest degree of fire safety possible. All Medicare and Medicaid participating providers and suppliers are currently subject to the requirements of the 2012 edition of the LSC and the 2012 edition of the Health Care Facilities Code as adopted by CMS (with some minor expectations which are set out in the various facilities' ''physical environment'' regulations).

In order to ensure the minimum level of protection afforded by NFPA 99 is applicable to all patient and resident care areas within a health care facility, we proposed to adopt the 2012 edition of NFPA 99, with the exception of chapters 7—Information Technology and Communications Systems for Health Care Facilities; 8—Plumbing; 12—Emergency Management; and 13—Security Management.

At § 485.544(a), we proposed that the REH be constructed, arranged, and maintained to ensure the safety of the patient and to provide facilities for diagnosis and treatment and for special hospital services appropriate to the needs of the community. Specifically, we proposed that the condition of the physical plant and the overall REH environment would have to be developed and maintained in such a manner that the safety and well-being of patients would be assured. This would include emergency power and lighting in at least all areas serviced by the emergency supply source, including but not limited to, the operating, recovery, and emergency rooms, and stairwells. In all other areas not serviced by the emergency supply source the REH would be required to have battery lamps and flashlights available. In addition, we proposed to require the REH to have facilities for emergency gas and water supply and a safe and sanitary environment, that is properly constructed, equipped and maintained to protect the health and safety of all patients.

At § 485.544(b), we proposed that the REH be required to maintain adequate facilities for its services that includes diagnostic and therapeutic facilities that are located in a manner that ensures the safety of patients. We also would require the REH to maintain facilities, supplies, and equipment in a manner that ensures an acceptable level of safety and quality. We proposed further that the facility be designed and maintained to reflect the scope and complexity of the services it offers in accordance with accepted standards of practice and that there must be proper ventilation, light, and temperature controls in pharmaceutical, food preparation, and other appropriate areas.

At § 485.544(c), we proposed that REHs meet the provisions applicable to Ambulatory Health Care Occupancies in the 2012 edition of the LSC, regardless of the number of patients the facility serves. We believe the protection provided in the Ambulatory Health Care Occupancies chapter is necessary to protect the health and safety of patients who are incapable of caring for themselves at any point in time. We proposed at § 485.544(c)(2) to implement requirements related to the Secretary's waiver authority for periods deemed appropriate, which would result in unreasonable hardship, but only if the waiver will not adversely affect the health and safety of patients. We proposed at § 485.544(c)(3) that the provisions of the LSC would not apply in a state if CMS finds that a fire and safety code imposed by state law adequately protected patients. We also proposed at § 485.544(c)(4) requirements related to protection against inappropriate access for alcohol-based hand rub dispensers. At § 485.544(c)(5), we proposed to require that a REH with a sprinkler system that was out of service for more than 10 hours in a 24-hour period would be required to evacuate the building or portion of the building affected by the system outage, or establish a fire watch until the system was back in service, notwithstanding the lower standard of the 2012 LSC.

Lastly, at § 485.544(d) we proposed to require REHs to comply with the 2012 edition of the NFPA 99. We proposed that chapters 7, 8, 12, and 13 would not apply to REHs. We also proposed to allow for waivers of these provisions under the same conditions and procedures that we currently use for waivers of applicable provisions of the LSC.

Comment: We received minimal comments regarding the NFPA 101 and NFPA 99. The comments that we did receive were supportive. We did receive a few comments asking if we anticipated adopting a newer version of the 101 and 99 NFPA codes, since CMS currently requirements the use of the 2012 editions. Some commenters suggested that we follow the same ''Physical Environment'' requirements as Hospitals or CAHs, as they are similar providers as REHs.

Response: As noted previously, we review any new LSC codes every 3 years to determine if there are substantive changes that would warrant the adoption of these updates through rulemaking. There have not been significant changes to adopt a newer version since the 2012 edition. We plan to review the 2024 edition within the next year and determine whether to adopt the new 2024 NFPA 101 and 99 as a part of future rulemaking. We appreciate the comments about using hospital and CAH requirements for REHs; however, REHs are not inpatient facilities; therefore, ASC requirements are more appropriate for REHs.

After consideration of the public comments we received, we are finalizing these provisions as proposed.

(23) Condition of Participation: Skilled Nursing Facility Distinct Part Unit (§ 485.546)

Section 1861(kkk)(2)(D)(vi) of the Act allows REHs to establish a unit that is a distinct part licensed as a SNF to furnish post-REH or post-hospital (in the event the services were provided at a hospital or a CAH) extended care services (or SNF services). A distinct part SNF is an area that is separately licensed and certified to provide SNF services at all times. A distinct part SNF must be physically distinguishable from the REH, must be fiscally separate for cost reporting purposes, and the beds in the certified distinct part SNF unit of an REH must meet the requirements applicable to distinct part SNFs at 42 CFR part 483, subpart B. Medicare payment for SNF services furnished in these distinct part SNFs of an REH would be under the SNF prospective payment system as required under section 1834(x)(4) of the Act. We note that a distinct part SNF of an REH is not subject to the REH's length of stay limits of less than an annual per patient average of 24 hours.

We highlight that a distinct part SNF unit is not the same as a CAH or

hospital utilizing swing-beds. CAHs and hospitals may provide swing-bed services, allowing them to use their beds for acute inpatient care or for post-hospital or CAH SNF care. These facilities must be certified by CMS to provide swing-bed services. CAHs or hospitals utilizing swing-beds are not required to have their swing-beds in a special unit or area within the facility.

To implement that statutory provision allowing REHs to establish distinct part SNFs, we proposed at § 485.546 to require REHs choosing to establish such a distinct part unit to meet the requirements for long-term care facilities at 42 CFR part 483, subpart B.

Comment: Commenters were supportive of this proposal. Some commenters requested clarification regarding how Medicare beneficiaries can qualify for services in a REH's distinct part SNF unit given that a 3-day prior inpatient care stay is required for beneficiaries to receive Medicare SNF services and an REH visit does not constitute an acute inpatient stay.

Response: In order to receive services in an REH's distinct part SNF unit, a beneficiary must have a 3-day prior inpatient stay at a provider such as an acute care hospital or CAH. Following the 3-day inpatient stay, the patient can be transferred to the REH's distinct part SNF unit for the provision of SNF services.

After consideration of the public comments we received, we are finalizing § 485.546 as proposed. We are adding clarifying language to the regulatory requirement to indicate that the distinct part SNF must be separately licensed and certified, in addition to complying with the requirements of participation for long-term care facilities specified in part 483, subpart B of this subchapter. This is not an additional requirement and was presented in the discussion for this requirement in our proposed rule. The addition of this requirement in the CoP is for clarification only.

b. Changes for Critical Access Hospital Conditions of Participation (Part 485, Subpart F)

(1) Condition of Participation: Status and Location (§ 485.610(c))

(a) Adding the Definition of ''Primary Roads''

Generally, a CAH must meet certain criteria for designation, as set out in section 1820(c)(2)(B) of the Act. These criteria specify certain ''distance requirements'' relative to other hospitals or CAHs, and specifically require that a CAH be (1) ''located more than a 35-mile drive (or, in the case of mountainous terrain or in areas with only secondary roads available, a 15-mile drive) from a hospital'' or (2) ''certified before January 1, 2006, by the State as being a necessary provider of health care services to residents in the area''. The current regulatory requirement at § 485.610(c) sets forth the distance requirements for CAHs relative to other CAHs and hospitals, and specific definitions as related to the distance requirements are found in the SOM, Chapter 2, Section 2256A.

We proposed to incorporate the definition of a ''primary road'' in the CAH distance requirement regulations, both as part of the 35-mile drive requirement, and as applicable through the ''secondary roads'' definition for the 15-mile drive requirement. Specifically, we proposed to revise § 485.610(c) to clarify that the location distance for a CAH is one for more than a 35-mile drive on primary roads (or, in the case of mountainous terrain or in areas with only secondary roads available, a 15-mile drive) from a hospital or another CAH. In addition, at § 485.610(c)(2), we proposed to specify that primary road of travel for determining the driving distance of a CAH and its proximity to other providers as a numbered Federal highway, including interstates, intrastates, expressways or any other numbered Federal highway; or a numbered State highway with two or more lanes each way. We also solicited comments regarding the description of a numbered Federal highway in this proposed definition. Specifically, we requested feedback on whether the definition of ''primary roads'' should include numbered Federal highways with two or more lanes, similar to the description of numbered State highways, and exclude numbered Federal highways with only one lane in each direction.

We stated that codifying the definition of ''primary roads'' in the regulations would provide clarity and consistency regarding the distance requirements.

Furthermore, to support these regulatory changes we are planning to establish a centralized, data-driven review procedure that focuses on hospitals being certified in proximity to a CAH, rather than focusing specifically on road classifications. CMS will review all hospitals and CAHs within a 50-mile radius of each CAH during each review of eligibility, and then subsequently on a 3-year cycle. Following the initial review of distance and location, further investigations would focus primarily on expanded healthcare capacity and access to care within the 35-mile radius of the CAH being examined and less on the actual roadway designations used in making the calculations. Those CAHs with no new hospitals within 50 miles would be immediately recertified. Those CAHs with new hospitals within 50 miles will receive additional review based on the distance from the new hospital and the definitions for ''primary roads'' and ''mountainous terrain''. To facilitate this review, the CAH Distance Analysis Committee and the CMS Survey Operations Group (SOG) Locations will utilize the geocoding of hospitals to identify those CAHs that are located within 50 miles of another certified hospital. Those CAHs that do not meet the regulatory distance and location requirements at the time of review would be identified as no longer qualified and may lose their CAH status. We believe this change will help surveyors to make evidence-based and objective determinations of continued CAH eligibility. We expect the new distance review procedure, coupled with regulatory clarity on the proposed primary roads definition, will provide greater consistency in evaluating if CAHs meet the statutory 35 or 15-mile distance requirements from other acute care hospitals and CAHs as well greater adherence to statutory language by ensuring that CAHs operate under the CAH designation until, or unless, a hospital moves within 35 miles or 15 miles of the existing CAH.

Comment: Many commenters supported refining the current definition of ''primary roads'' and codifying the definition in the regulations. We received numerous comments stating that proposed definition of ''primary roads'' should be revised to require numbered Federal highways to have two or more lanes each way, similar to the description of numbered State highways, and exclude numbered Federal highways with only one lane in each direction from the ''primary roads'' definition. These commenters stated that including one-lane numbered Federal highways as primary roads in the CAH distance requirements could prevent their facility from gaining or maintaining eligibility for the CAH designation. We received comments from small, rural hospitals that stated that defining one-lane numbered Federal highways as ''primary roads'' would impact their ability to pursue a CAH designation because including these roads in the distance calculations puts other hospitals or CAHs within the required 35-mile drive radius. We also received numerous comments from existing CAHs that were concerned that their

eligibility for CAH designation could be in jeopardy if numbered Federal highways with only one lane in each direction were included in the ''primary roads'' definition. Commenters also claimed that many one-lane numbered Federal highways are not well maintained, difficult to travel on, and more similar to one-lane state highways, which are not included in the ''primary roads'' definition. Some commenters also suggested that we include a definition of ''secondary roads'' in the regulations text.

Response: We appreciate the feedback from interested parties regarding the definition of primary roads in the CAH distance requirements. After further review, we agree with the commenters that the proposed definition may have unintended consequences for hospitals interested in applying for CAH designation as well as existing CAHs that could prevent these providers from being eligible to operate as a CAH. Our goal for codifying the definition of primary roads in the regulations language at § 485.610(c) was to provide greater flexibility, consistency and clarity to providers with regards to CAH designations. Therefore, we are finalizing the definition of ''primary roads'' at § 485.610(c) to include numbered Federal highways with two or more lanes each way, similar to the description of numbered State highways, and exclude numbered Federal highways with only one lane in each direction.

With regard to adding a ''secondary roads'' definition in the CAH distance requirements regulations, we do not believe that it is necessary to include a definition of ''secondary roads'' in the regulations text at this time. As stated, we remain committed to providing reducing burden for providers in meeting the distance criteria. Currently, we believe the language at § 485.610(c) coupled with guidance in the SOM, Chapter 2, Section 2256A regarding the application of the 15-mile drive standard based on secondary roads adequately describes how we determine what constitutes a secondary road. Specifically, this language states that to be eligible for the lesser distance standard due to the secondary road criteria under § 485.610(c), the CAH would have to document that there is a drive of more than 15 miles between the CAH and any hospital or other CAH where there are no primary roads. We also plan to continue to allow a CAH to qualify for application of the ''secondary roads'' criterion if there is a combination of primary and secondary roads between it and any hospital or other CAH, so long as more than 15 of the total miles from the hospital or other CAH consists of areas in which only secondary roads are available. We will continue to monitor this issue to determine if further refinements to the description of secondary roads are necessary for future rulemaking.

Comment: We received comments requesting clarification about the CAH eligibility review process. Commenters questioned the method that will be used to determine the mileage calculation. One commenter stated that CMS should use a 35-mile radius for the basis of the calculation.

Response: In accordance with § 485.610(c), the CAH review process will measure the driving distance between a CAH-main campus and any other CAH or hospital within a 35-mile distance, using definition of primary roads established in this rule, or a 15-mile distance using secondary roads or mountainous terrain. These regulatory requirements will also continue to be used for initial and recertification reviews for all CAHs.

Comment: We received several comments requesting clarification regarding whether the establishment of an REH could prevent an existing or potential CAH from meeting the CAH distance requirements, given that a CAH must be located more than a 35-mile drive (or more than a 15-mile drive on in areas with only secondary roads available or in mountainous terrain) from a hospital or another CAH.

Response: We would like to clarify that an existing or potential CAH may still be eligible for a CAH designation if there is an REH established within less than a 35-mile drive (or less than a 15-mile drive in areas with only secondary roads available or in mountainous terrain). We note that an REH cannot, by statute, provide inpatient services, therefore we believe that the services provided by an REH would not duplicate or overlap with those provided at a CAH and an REH would serve a distinct purpose in the community.

Comment: Some commenters requested that CMS allow existing CAHs to be exempt from the proposed primary roads definition and instead ''grandfather in'' the CAH designation of existing CAHs based on meeting the distance requirements with the current definition of primary roads. Other commenters stated that CAHs that are certified as ''necessary providers'' should continue to be exempt from the CAH distance and location requirements.

Response: As stated previously, by statute, the CAH distance requirements must continually be met in order for the hospital to maintain its status as a CAH. While we strive to allow CAHs flexibility in meeting these requirements, we do not believe it is within the statutory authority at section 1820(h)(3) of the Act to allow all existing CAHs, other than those certified as necessary providers, to have their CAH designation grandfathered. Therefore, existing CAHs will be subject to CAH distance requirements, including the primary roads definition, as finalized in this rule. CAHs that are certified as ''necessary providers'' will continue to be exempt from the distance requirement relative to other CAHs and hospitals as noted at § 485.610(c). ''Necessary provider'' CAHs are still required to meet the rural location requirement at § 485.610(b).

Comment: We received several other comments related to the CAH distance and location requirements that were separate from the definition of primary roads proposal. We received a request to codify in the regulations text the guidance from the SOM Chapter 2, at 2256A that the proximity of IHS and Tribal hospitals or CAHs and non-IHS or Tribal hospitals or CAHs to each other is not considered when assessing CAH distance requirements and requests to allow exceptions for hospitals to qualify for CAH designation that do not meet the current or proposed CAH distance requirements.

Response: We thank these commenters for their input, however, we did not propose any changes to these policies. Therefore, these comments are out of scope of this rule.

After consideration of the public comments, we are finalizing the language at § 485.610(c) as proposed. In addition, we are finalizing the language at § 485.610(c)(2) with a modification, to specify a primary road of travel for determining the driving distance of a CAH and its proximity to other providers is a numbered Federal highway, including interstates, intrastates, expressways or any other numbered Federal highway with two or more lanes each way; or a numbered State highway with two or more lanes each way.

(2) Condition of Participation: Patient's Rights (§ 485.614)

We proposed to establish a CoP for patient's rights for CAHs at § 485.614 that would set forth the rights of all patients to receive care in a safe setting and provide protection for a patient's emotional health and safety as well as their physical safety. This would include proposed requirements for the CAH to inform patients of and exercise their rights; address privacy and safety;

adhere to the confidentiality of patient records; responsibilities for the use of restraint and seclusion; and adherence to patient visitation rights.

Notice of Rights

At § 485.614(a), we proposed that a CAH must inform each patient, or when appropriate, the patient's representative (as allowed under state law), of the patient's rights, in advance of furnishing or discontinuing patient care whenever possible. This includes a proposal to require the CAH to establish a process for the oversight and prompt resolution of patient grievances and for informing each patient whom to contact to file a grievance.

Exercise of Rights

At § 485.614(b), we proposed to specify those rights a patient has regarding their medical care, which includes the right to participate in the development and implementation of their plan of care, to make informed decisions regarding their care, to be fully informed about such care, and the right to request or refuse treatment, and finally the right to have a family member or representative of their choice and their own physician notified promptly of their admission to the hospital. We note that this right must not be construed as a mechanism to demand the provision of treatment or services deemed medically unnecessary or inappropriate. In addition, we proposed to specify that the patient also has the right to formulate advance directives and to have CAH staff and practitioners who provide care in the CAH comply with these directives.

Privacy, Safety, and Confidentiality of Patient Records

At § 485.614(c), we proposed to specify that the patient has the right to personal privacy, receive care in a safe setting, and be free from all forms of abuse or harassment. At § 485.614(d), we proposed to specify that patients have the right to the confidentiality of their medical records and the right to access their medical records. We proposed that the CAH must provide the patients with their records in a form and format requested by the requestor when requested and within a reasonable timeframe, as not to frustrate the legitimate efforts of individuals to gain access to their own medical records.

Use of Restraints and Seclusion

At § 485.614(e), we proposed patients' rights relating to the use of restraints and seclusion less burdensome than those for hospitals because given the level of services provided by CAHs and their patient volume, we expect the likelihood of their need to utilize restraints and seclusion to be relatively low.

Specifically, we proposed to specify that all patients would have the right to be free from physical or mental abuse, and from corporal punishment and from restraint or seclusion, of any form, imposed as a means of coercion, discipline, convenience, or retaliation by staff. We proposed that restraint or seclusion could only be imposed to ensure the immediate physical safety of the patient, a staff member, or others and would have to be discontinued at the earliest possible time. We proposed to define ''restraint'' as any manual method, physical or mechanical device, material, or equipment that immobilizes or reduces the ability of a patient to move their arms, legs, body, or head freely; or a drug or medication when it is used as a restriction to manage the patient's behavior or restrict the patient's freedom of movement, and is not a standard treatment or dosage for the patient's condition. A restraint does not include devices, such as orthopedically prescribed devices, surgical dressings or bandages, protective helmets, or other methods that involve the physical holding of a patient for the purpose of conducting routine physical examinations or tests, or to protect the patient from falling out of bed, off of a stretcher, or out of a chair, or to permit the patient to participate in activities without the risk of physical harm (this does not include a physical escort). We proposed to define ''seclusion'' as the involuntary confinement of a patient alone in a room or area from which the patient is physically prevented from leaving. Seclusion may only be used for the management of violent or self-destructive behavior.

At § 485.614(e)(2), we proposed to require that the restraint or seclusion could only be used when less restrictive interventions had been determined to be ineffective to protect the patient a staff member or others from harm. At § 485.614(e)(3), we proposed to require that the type or technique of restraint or seclusion used would have to be the least restrictive intervention that would be effective to protect the patient, a staff member, or others from harm. At § 485.614(e)(4) we proposed to require the CAH to have written policies and procedures regarding the use of restraint and seclusion that are consistent with current standards of practice. These requirements will allow for the CAH to use restraints and seclusion in the event that either or both were necessary, and only as a last resort to respond to immediate safety concerns. However, the CAH provision would reduce the burden and allow for more flexibility than the current hospital CoP. We believe that allowing the CAH the flexibility to develop their own policies and procedures for restraints and seclusion based on the scope of services they provide is necessary given their patient volumes, populations, and access to resources. The policies and procedures would have to be consistent with current standards of practice.

Staff Training Requirements for the Use of Restraints or Seclusion

At § 485.614(f), we proposed to establish that the patient would have the right to safe implementation of restraint or seclusion by trained staff. We proposed that the CAH would have to provide competency-based training and education of CAH personnel and staff, including medical staff, and, as applicable, personnel providing contracted services in the CAH, on the use of restraint and seclusion. To ensure that the use of restraint and seclusion for patients receiving services in a CAH would be respectful of, and responsive to, individual patient preferences, needs and values, we proposed to require that the training be patient-centered. Additionally, to ensure that staff would be educated and trained on using the least restrictive intervention necessary for the safety of the patients and CAH staff, we proposed at § 485.614(f)(2) to require that the CAH train their staff in alternatives to the use of restraint and seclusion. Staff should have trauma-informed knowledge competencies and be aware of effective de-escalation techniques that could be used to avoid the use of restraint and seclusion so not to trigger any previous mental health issues because of the use of restraints and seclusion. Trained peer workers (people who share similar experiences of being diagnosed with mental health conditions, substance use disorders, or both) and CHWs could also serve a useful role in assisting patients and other staff. This could include helping to monitor use of restraint and seclusion, deescalating interactions with patients and contributing to a positive and supportive environment for patients, family members, and CAH staff. CAHs are encouraged to consider the use of peer workers and CHWs in their staffing plans. For further information, please see the 2007 guidance on use of peers in the Medicaid program (*https://www.medicaid.gov/federal-policy-guidance/downloads/SMD081507A.pdf*) and resources from the Substance Abuse and Mental Health Services

Administration (*https://www.samhsa.gov/brss-tacs/recovery-support-tools/peers*). In addition, facilities are encouraged to consider any nutritional needs while a patient is restrained, such as a need to provide food and water.

Death Reporting Requirements

The proposed CAH death reporting requirements were similar to the hospital requirements at § 482.13. At § 485.614(g), we proposed to establish requirements that CAHs must follow when reporting deaths associated with the use of seclusion or restraint. Specifically, we proposed to require that the CAH report to CMS, by telephone, facsimile, or electronically, as determined by CMS, no later than the close of business on the next business day the following information—(1) Each death that occurs while a patient is in restraint or seclusion; (2) Each death that occurs within 24 hours after the patient has been removed from restraint or seclusion; (3) Each death known to the CAH that occurs within 1 week after restraint or seclusion, where it is reasonable to assume that use of restraint or placement in seclusion contributed directly or indirectly to a patient's death, regardless of the type(s) of restraint used on the patient during this time. We note that ''reasonable to assume'' in this context would include, but is not limited to, deaths related to restrictions of movement for prolonged periods of time, or death related to chest compression, restriction of breathing, or asphyxiation.

For instances when no seclusion had been used and when the only restraints used on the patient were those applied exclusively to the patient's wrist(s), and composed solely of soft, non-rigid, cloth-like materials, the CAH staff would have to record in an internal log or other system, the following information—(1) Any death that occurred while a patient was in such restraints; (2) Any death that occurred within 24 hours after a patient had been removed from such restraints. Furthermore, we proposed that staff also document in the patient's medical record the date and time the death was reported to CMS or recorded in the internal log or other system. Also, for instances when no seclusion had been used and when the only restraints used on the patient were those applied exclusively to the patient's wrist(s),we proposed to require that entries into the internal log or other system would have to be documented no later than seven days after the date of death of the patient, and include the patient's name, date of birth, date of death, name of attending physician or other licensed practitioner who is responsible for the care of the patient, medical record number, and primary diagnosis(es), and be made available in either written or electronic form to CMS immediately upon request.

Patient Visitation Rights

We proposed to redesignate § 485.635(f) as § 485.614(h). At § 485.614(h), we proposed to establish new requirements in addition to the existing requirements for CAHs related to a patient's visitation rights. Specifically, we proposed to require that a CAH would have to have written policies and procedures regarding the visitation rights of patients, including those setting forth any clinically necessary or reasonable restriction or limitation that the CAH may need to place on such rights and the reasons for the clinical restriction or limitation. However, we note that the requirements at § 485.614(f) are existing requirements for CAHs and our intent is to redesignate these existing requirements for patient visitation as § 485.614(h).

Comment: Most commenters supported the new proposed patient's rights CoP for CAHs. Commenters stated that CAHs should have the same patient rights requirements as hospitals, as they are similar. One commenter stated that since the CAH patient rights provisions are brand new, we should delay the effective date to give facilities the time to establish processes and train staff.

Response: We appreciate all the support for this new provision in CAHs. Our goal was to establish patient's rights that would set forth the rights of all patients to receive care in a safe setting and provide protection for a patient's emotional health and safety as well as their physical safety. We are aware that these are new requirements for CAHs and will take time to establish policies, procedures and train staff, therefore this does not take effect until 60 days from the publication date. We did receive information from some commenters stating that some CAHs have already incorporated patient rights into their daily practices.

After consideration of the public comments we received, we are finalizing as proposed.

(3) Condition of Participation: Staffing and Staff Responsibilities (§ 485.631)

Unified and Integrated Medical Staff for a CAH in a Multi-Facility System

In alignment the current standards for hospitals, we proposed at § 485.631(e) to allow for either a unique medical staff for each CAH or for a unified and integrated medical staff shared by multiple hospitals, CAHs, and REHs within a health care system. We proposed to require that a CAH ensure that the medical staff members of each separately certified CAH in the system (that is, all medical staff members who hold specific privileges to practice at that CAH) have voted by majority, in accordance with medical staff bylaws, either to accept a unified and integrated medical staff structure or to opt out of such a structure and to maintain a separate and distinct medical staff for their respective CAH.

In addition, we proposed to require that the unified and integrated medical staff have bylaws, rules, and requirements that described its processes for self-governance, appointment, credentialing, privileging, and oversight, as well as its peer review policies and due process rights guarantees, and which include a process for the members of the medical staff of each separately certified CAH (that is, all medical staff members who hold specific privileges to practice at that CAH) to be advised of their rights to opt out of the unified and integrated medical staff structure after a majority vote by the members of that specific certified CAH to maintain a separate and distinct medical staff for their CAH. We proposed that the unified and integrated medical staff be established in a manner that would take into account each CAH's unique circumstances, and any significant differences in patient populations and services offered in each CAH. Lastly, we proposed that the unified and integrated medical staff give due consideration to the needs and concerns of individual members of the medical staff, regardless of practice or location, and the CAH has mechanisms in place to ensure that issues specific to particular CAHs are duly considered and addressed.

In proposing this allowance for CAHs in the requirements here, we considered this past rulemaking experience with those multi-hospital systems using the single governing body and unified and integrated medical staff model for separately certified hospitals within their systems, as well as our decision to also propose this flexibility for REHs, and applied the same model to CAHs within single governing body systems. As we continue to do with hospitals, we thought it is in the best interest of CAHs, medical staff members, and patients to proposed this requirement allowing for the use of a unified and integrated medical staff for a multi-facility system and its member CAHs, in order to enable the medical staff of each

CAH to voluntarily integrate itself into a larger system medical staff.

Comment: Commenters were supportive of our proposals.

Response: We did not receive any comments suggesting edits or changes to our proposal. After consideration of the public comments we received, we are finalizing as proposed.

(4) Condition of Participation: Infection Prevention and Control and Antibiotic Stewardship Programs (§ 485.640)

Unified and Integrated Infection Prevention and Control and Antibiotic Stewardship Programs for a CAH in a Multi-Facility System

Similar to our standard in the hospital CoPs, we proposed a standard at § 485.649(h) for CAHs that would allow for the governing body of a CAH that is part of a system consisting of multiple separately certified hospitals, CAHs, and/or REHs using a single system governing body that is legally responsible for the conduct of two or more hospitals, CAHs, and/or REHs, to elect to have unified and integrated infection prevention and control and antibiotic stewardship programs for all of its member facilities, including any CAHs, after determining that such a decision would be in accordance with all applicable state and local laws. The system's single governing body would be responsible for ensuring that each of its separately certified CAHs meets all of the requirements of this section. We note that each separately certified CAH subject to the system's single governing body would need to demonstrate that the unified and integrated infection prevention and control and antibiotic stewardship programs:

- Were established in a manner that takes into account each member CAH's unique circumstances and any significant differences in patient populations and services offered in each CAH;
- Established and implemented policies and procedures to ensure that the needs and concerns of each of its separately certified CAHs, regardless of practice or location, were given due consideration; and
- Had mechanisms in place to ensure that issues localized to particular CAHs were duly considered and addressed.

The CAH would also need to demonstrate that it had designated a qualified individual (or individuals) with expertise in infection prevention and control and in antibiotic stewardship at the CAH to be responsible for:

- Communicating with the system's unified infection prevention and control and antibiotic stewardship programs;
- Implementing and maintaining the policies and procedures governing infection prevention and control and antibiotic stewardship as directed by the unified infection prevention and control and antibiotic stewardship programs; and
- Providing education and training on the practical applications of infection prevention and control and antibiotic stewardship to CAH staff.

Comment: Commenters suggested that we work with Congress to implement support/funding for electronic surveillance systems in infection control. They believed that the automated systems could help in decreasing costs while helping to follow the infection control standards in the regulation.

Response: Comments regarding the use of electronic systems for infection control fall outside the scope of the rulemaking. We support their use in improving patient care standards, but note that there are flexibilities offered to providers. REHs are responsible maintaining patient care standards which comply with the regulations.

After consideration of the public comments we received, we are finalizing the provisions as proposed.

(5) Condition of Participation: Quality Assessment and Performance Improvement Program (§ 485.641)

Unified and Integrated QAPI Program for a CAH in a Multi-Facility System

Consistent with the standard included at § 482.21(f) in the hospital CoPs for QAPI programs, we proposed at § 485.641(f) to allow CAHs that are part of a multi-facility system consisting of multiple separately certified hospitals, CAHs, and/or REHs to elect to have a unified and integrated QAPI program after determining that such a decision is in accordance with all applicable state and local laws. Specifically, we proposed to specify that the system's governing body is responsible and accountable for ensuring that each of its separately certified CAHs meets the proposed QAPI program requirements. We expected that this would be beneficial to CAHs that may lack time, resources, or staff to implement a QAPI program. The CAH would be able to benefit from the resources and expertise of a multi-hospital system in implementing their QAPI program, as well as potentially reducing the time and labor investments required to enact and maintain the program.

We did not receive any public comments on our proposal and therefore, we are finalizing our proposal.

c. Conforming Amendments and Technical Corrections

(1) Technical Correction to § 485.635(b)(2)

We proposed to make a technical correction to the laboratory services CAH CoP at § 485.635(b)(2). In the September 1, 1994, final rule entitled ''Medicare Program; Changes to the Hospital Inpatient Prospective Payment Systems and Fiscal Year 1995 Rates'' (59 FR 45403), we revised the CAH laboratory services requirement to require the CAH laboratory services to meet the standards imposed under section 353 of the Public Health Service Act (42 U.S.C. 236a). We inadvertently included an error in the referenced Public Health Service Act standard. The referenced standard at § 485.635(b)(2) should read, ''. . .353 of the Public Health Service Act (42 U.S.C. 263a).''

(2) Conforming Amendments §§ 489.2(b) and 489.24(b)

The provider agreement and supplier approval requirements for Medicare participating providers and suppliers are located at 42 CFR part 489. Section 489.2 sets forth the basic requirements for submittal and acceptance of a provider agreement under Medicare, with the providers that are subject to the provisions of this part listed at § 489.2(b). We proposed to add REHs to the list of applicable providers at § 489.2(b) and therefore require REHs to adhere to the requirements for submittal and acceptance of provider agreements under Medicare as defined by § 489.3. The requirements at 42 CFR part 489 also set forth requirements for Medicare hospitals in emergency cases. These provisions apply to hospitals that have emergency departments. Under this section, a hospital includes a critical access hospital as defined in section 1861(mm)(1) of the Act. The CAA amends section 1867(e)(5) of the Act by including REHs, as defined in 1861(kkk)(2), as hospitals that have emergency departments. As a result, we are proposed to add REHs to the definitions at § 489.24(b) for Medicare hospitals in emergency cases under the hospital definition and to the definition of a participation hospital.

C. REH Provider Enrollment

Section 1866(j)(1)(A) of the Act requires the Secretary to establish a process for the enrollment of providers and suppliers in the Medicare program. The overall purpose of the enrollment process is to help confirm that providers and suppliers seeking to bill Medicare for services and items furnished to Medicare beneficiaries meet all Federal

and state requirements to do so. The process is, to an extent, a ''gatekeeper'' that prevents unqualified and potentially fraudulent individuals and entities from being able to enter and inappropriately bill Medicare. Since 2006, we have taken steps via rulemaking to outline our enrollment procedures. These regulations are generally incorporated in 42 CFR part 424, subpart P (currently §§ 424.500 through 424.570 and hereafter occasionally referenced as subpart P). They address, among other things, requirements that providers and suppliers must meet to obtain and maintain Medicare billing privileges. All enrolling and enrolled Medicare providers and suppliers, irrespective of type and including REHs, must comply with these regulatory provisions.

Section 1861(kkk)(2)(A) of the Act states that REHs must be enrolled under section 1866(j) of the Act. We proposed several regulatory provisions that identify the enrollment requirements with which REHs must comply as part of the enrollment process.

1. General Compliance With Part 424, Subpart P

In addition to the previously mentioned requirement for REHs to enroll in Medicare, section 1861(kkk)(4)(B) of the Act states that an REH's enrollment remains in effect until: (1) the REH elects to convert back to its prior designation as a CAH or a hospital (as defined in section 1886(d)(1)(B) of the Act, hereafter occasionally referenced as a ''section 1886(d)(1)(B) hospital''); or (2) the Secretary determines that the facility does not meet the requirements for REHs under this subsection. To clarify that our enrollment authority under subpart P applies to REHs to the same extent it does to all other Medicare provider and supplier types, we proposed to add a new § 424.575 to subpart P. Paragraph (a) of § 424.575 would state that an REH (as that term is defined in 42 CFR 485.502) must comply with all applicable provisions and requirements in subpart P in order to enroll and maintain enrollment in Medicare. We noted that these requirements include, but are not limited to, the following:

- Per § 424.510(a)(1) and (d)(1), completion and submission of the applicable enrollment application, which, for REHs, is the Form CMS–855A (Medicare Enrollment Application: Institutional Providers; OMB control number 0938–0685).
- Submission of all required supporting documentation with the enrollment application per § 424.510(d)(1) and (d)(2)(iii).
- Per § 424.510(d)(5), completion of any applicable State surveys, certifications, and provider agreements.
- Reporting changes to any of the REH's enrollment information per § 424.516.
- Revalidation of enrollment per § 424.515.
- Undergoing risk-based screening per § 424.518.

We did not receive any public comments regarding proposed new § 424.575(a). We are therefore finalizing this proposal.

2. Application Fees, Submission of the Form CMS–855A, and Screening Levels

Another requirement in subpart P pertains to application fees. Section 424.514 states that institutional providers submitting an initial or revalidation application, or adding a new practice location, must submit either or both of the following: (1) the applicable application fee (which, for CY 2022, is $631); or (2) a request for a hardship exception to the application fee. The term ''institutional provider'' is defined (for purposes of the application fee) in § 424.502. It means any provider or supplier that submits a paper Medicare enrollment application using the Form CMS–855A, Form CMS–855B (not including physician and non-physician practitioner organizations) (Medicare Enrollment Application: Clinics/Group Practices and Certain Other Suppliers; OMB control number 0938–1377), Form CMS–855S (Medicare Enrollment Application—Durable Medical Equipment, Prosthetics, Orthotics, and Supplies (DMEPOS) Suppliers; OMB control number: 0938–1056), or an associated internet-based PECOS enrollment application.

Although an REH must submit a Form CMS–855A to enroll as such, it would not have to pay an application fee with its application. This is because we proposed at new § 424.575(b) that the REH would submit a Form CMS–855A change of information under § 424.516 instead of an initial enrollment application. In other words, the facility would merely be reporting its conversion from a CAH or a section 1886(d)(1)(B) hospital to an REH (as well as submitting any other required information and documentation); it would not be newly enrolling in the Medicare program. We explained in the proposed rule our belief that this would alleviate the burden on prospective REHs and expedite the processing of their Form CMS–855As, for change of information applications typically take less time for Medicare Administrative Contractors (MAC) to process than initial applications. Since this particular REH enrollment transaction would not be an initial enrollment, revalidation, or practice location addition, the fee payment requirement in § 424.514 would not apply.

In addition, we note that § 424.518 outlines provider enrollment screening categories and requirements based on our assessment of the risk of fraud, waste, and abuse posed by a particular category of provider or supplier. In general, the higher the level of risk that a certain provider or supplier type poses, the greater the degree of scrutiny with which we will screen and review enrollment applications submitted by providers or suppliers within that category. There are three levels of screening addressed in § 424.518: limited; moderate; and high. Hospitals currently fall within the limited screening category per § 424.518(a)(1)(viii). This also includes, as stated in § 424.518(a)(1)(viii), CAHs, Department of Veterans Affairs hospitals, and other federally-owned hospital facilities. We have no evidence to suggest that REHs as a category of provider type would present a risk of fraud, waste, and abuse warranting placement in the moderate or high screening level. Accordingly, we proposed to revise § 424.518(a)(1)(viii) to incorporate REHs therein.

3. Effective Date of Billing Privileges

We also mentioned in the proposed rule that 42 CFR 424.520 lists the effective dates of billing privileges for enrolling Medicare providers and suppliers. For surveyed, certified, or accredited providers and suppliers, § 424.520(a) states that the effective date of billing privileges is that specified in 42 CFR 489.13. Paragraph (b) of the latter section states, in part, that the provider agreement or approval is effective on the date the state agency, CMS, or CMS contractor survey is completed (or on the effective date of the accreditation decision, as applicable) if, on that date, the provider or supplier meets all applicable Federal requirements. Among these Federal requirements are the previously referenced enrollment requirements in part 424, subpart P; as mentioned in 42 CFR 489.13(b), CMS determines the date on which all enrollment requirements have been met.

Hospitals and CAHs are among the provider types that fall within the scope of § 424.520(a). Since REHs, like other hospitals, would also come within the purview of § 424.520(a), it was unnecessary to revise § 424.520(a) to specifically reference them. We

discussed this issue in the proposed rule so that prospective REHs would understand what their effective date of billing privileges would be.

We received the following comments regarding this proposal:

Comment: Numerous commenters expressed support for our proposals to: (1) permit a Form CMS–855A change of information submission rather than an initial enrollment application (and, with this, the inapplicability of the application fee requirement); and (2) revise § 424.518(a) to include REHs within the limited screening category.

Response: We appreciate the commenters' support.

Comment: Several commenters asked whether an REH could convert back to a CAH or a section 1886(d)(1)(B) hospital via a Form CMS–855A change of information application.

Response: We explained in the proposed rule our general, longstanding policy that a provider or supplier that is changing its provider or supplier type (for example, a home health agency (HHA) switching to a home infusion therapy supplier) must terminate its existing enrollment and initially enroll as the new provider or supplier type. Specifically, and using the example in the previous sentence, the entity must submit: (1) a Form CMS–855A application to terminate its existing HHA enrollment; and (2) a separate Form CMS–855B initial enrollment application to enroll as a HIT supplier. While we proposed in § 424.575(b) to permit the submission of a Form CMS–855A change of information for the initial conversion of a CAH or section 1886(d)(1)(B) hospital to an REH, § 424.575(b) does not (and was not intended to) apply to any future conversion back to a CAH or a section 1886(d)(1)(B) hospital. Once the CAH or section 1886(d)(1)(B) hospital has converted to an REH, any subsequent change to a different provider or supplier type would require an initial enrollment application as well as adherence to all requirements in subpart P associated therewith, such as payment of an application fee.

We stated in the proposed rule that ''section 1861(kkk)(4)(B)(i) of the Act references a 'conversion' from an REH back to a CAH or a section 1886(d)(1)(B) hospital (rather than termination as an REH and initial enrollment as a CAH or section 1886(d)(1)(B) hospital)'' (87 FR 44788). Upon further reflection, we believe this language could convey the erroneous impression that conversions back to a CAH or section 1886(d)(1)(B) hospital merely require a Form CMS–855A change of information application. This statement was not meant to pronounce such a policy. Instead, we cited section 1861(kkk)(4)(B)(i) merely to illustrate the sufficiently close nexus between REHs and CAHs/section 1886(d)(1)(B) hospitals as justification for our proposal to permit a Form CMS–855A change of information application for the initial conversion to an REH. We did not propose anywhere in new § 424.575 to permit Form CMS–855A changes of information for conversions back to CAHs or section 1886(d)(1)(B) hospitals because it was not our intention to do so. To the contrary, § 424.575(a) was specifically meant to apply to such situations, meaning, as stated in the previous paragraph, that an initial Form CMS–855A application would be required consistent with Part 424, subpart P.

We also wish to clarify that although a CAH or section 1886(d)(1)(B) hospital converting to an REH need not submit a separate Form CMS–855A application to voluntarily terminate its enrollment as a CAH or section 1886(d)(1)(B) hospital, its CAH or section 1886(d)(1)(B) hospital enrollment is terminated as part of the REH conversion process. Put another way, merely because the CAH or section 1886(d)(1)(B) hospital need not submit a Form CMS–855A voluntary termination application does not mean it can remain enrolled as such after its conversion to an REH. The facility cannot be enrolled as both an REH and a CAH or section 1886(d)(1)(B) hospital.

Comment: A commenter asked whether a prospective payment rural hospital can enroll as an REH by submitting a Form CMS–855A change of information rather than an initial application.

Response: If, by the term ''prospective payment rural hospital,'' the commenter is referencing a facility that (1) is a CAH or a section 1886(d)(1)(B) hospital and (2) is otherwise eligible to convert to an REH under section 1861(kkk) of the Act and all applicable Medicare regulations, the hospital may submit a Form CMS–855A change of information. Comment: A commenter asked whether a CAH or section 1886(d)(1)(B) hospital that closed after December 27, 2020 but is otherwise eligible under section 1861(kkk) of the Act and all applicable Medicare regulations to convert to an REH can submit a Form CMS–855A change of information rather than an initial application.

Response: As previously discussed, the statute does not prohibit a facility that was eligible to seek REH designation as of the date of enactment of the CAA (December 27, 2020) but subsequently closed after that date from seeking REH designation after the facility's closure. As such, under the circumstances the commenter describes, the facility may submit a Form CMS–855A change of information instead of an initial enrollment. To clarify this, we will revise the opening of our proposed regulatory text of § 424.575(b). The current language reads, ''A provider that is currently enrolled in Medicare as a critical access hospital or a hospital (as defined in section 1886(d)(1)(B) of the Act) converts its existing enrollment to that of a rural emergency hospital. . . .''. We will change ''is currently enrolled in Medicare'' to ''was enrolled in Medicare as of December 27, 2020''. We believe this revision is consistent with the opening language of 1861(kkk)(3), which explains that 1861(kkk) applies to facilities that were CAHs or section 1886(d)(1)(B) hospitals ''as of December 27, 2020''.

Comment: Several commenters requested that CMS: (1) disseminate detailed guidance and provide in-depth training to the MACs regarding the REH enrollment process; and (2) identify specific individuals who can assist these facilities regarding any enrollment issues arising with the MACs.

Response: CMS will post information on its website and issue detailed guidance to the MACs regarding the processing of REH enrollment applications. We will also issue a Medicare Learning Network ® Matters article explaining: (1) the enrollment process to prospective REHs; and (2) where REHs can direct any questions they have concerning this process.

Comment: A commenter stated that REH enrollment requirements must be sufficiently broad and flexible to accommodate the diverse needs of rural communities.

Response: We appreciate this comment. We noted previously that our proposal to permit Form CMS–855A change of information submissions was intended in large part to alleviate the burden on REHs and to afford them flexibility in this regard.

After consideration of the public comments we received, we are finalizing our proposals with one minor exception. As a mere technical elucidation, we are inserting the following language in § 424.575(b) immediately following the parenthetical referencing section 1886(d)(1)(B) of the Act: ''with not more than 50 beds located in a county (or equivalent unit of local government) in a rural area (as defined in section 1886(d)(2)(D) of the Act), or treated as being located in a rural area pursuant to section 1886(d)(8)(E) of the Act''. This language is taken from section 1861(kkk)(3)(B) of the Act, and we believe it will further

clarify for readers the types of rural hospitals that are eligible to convert to an REH.

D. Use of the Medicare Outpatient Observation Notice by REHs

REHs are prohibited by section 1866(kkk)(2)(B) of the Act from providing inpatient services, other than those that are provided in a distinct part SNF. Section 2 of the Notice of Observation Treatment and Implication for Care Eligibility Act (NOTICE Act) (Pub. L. 114–42), amended section 1866(a)(1) of the Act by adding a new subparagraph (Y) that requires hospitals and CAHs to provide written notification and an oral explanation of such notification to individuals receiving observation services as outpatients for more than 24 hours. The notification must explain the status of the individual as an outpatient, not an inpatient, and the implications of such status. We implemented section 1866(a)(1)(Y), as added by section 2 of the NOTICE Act, in the FY 2017 IPPS/LTCH final rule (81 FR 57037 through 57052).

REHs will furnish emergency department and observation care, and other specified outpatient medical and health services, if elected by the REH, that do not exceed an annual per patient average of 24 hours. There may be instances in which REH patients receive observation services at an REH for a period exceeding 24 hours, but REHs are not required to provide required notification under the NOTICE Act, known as the Medicare Outpatient Observation Notice (MOON), because REHs are excluded from the definition of ''hospital'' in section 1861(e) and the requirements at section 1866(a)(1)(Y) of the Act apply only to hospitals and CAHs. We understand that there may be occasional circumstances in which a facility is not immediately available to provide a higher level of care, resulting in patients receiving services at an REH for more than 24 hours. Notwithstanding the inapplicability of the NOTICE Act requirements at section 1866(a)(1)(Y) to REHs and the expected infrequency of individuals receiving observation services in REHs for more than 24 hours, CMS solicited comments on the potential need for REHs to notify beneficiaries of their status as outpatients, the implications of such status, and whether the MOON would be the appropriate notice for communicating this information.

We did not receive any public comments on the use of the MOON by REHs, and given the inapplicability of the NOTICE Act requirements to this new provider type, we are not requiring that the MOON be used by REHs.

E. Physician Self-Referral Law Update

1. Background

Section 1877 of the Act, also known as the physician self-referral law: (1) prohibits a physician from making referrals for certain designated health services payable by Medicare to an entity with which he or she (or an immediate family member) has a financial relationship, unless the requirements of an applicable exception are satisfied; and (2) prohibits the entity from filing claims with Medicare (or billing another individual, entity, or third-party payer) for any improperly referred designated health services. A financial relationship may be an ownership or investment interest in the entity or a compensation arrangement with the entity. The statute establishes a number of specific exceptions and grants the Secretary the authority to create regulatory exceptions for financial relationships that do not pose a risk of program or patient abuse. Section 1903(s) of the Act extends aspects of the physician self-referral prohibitions to Medicaid. (For additional information about section 1903(s) of the Act, see 66 FR 857 through 858.)

The following discussion provides a chronology of our more significant and comprehensive rulemakings; it is not an exhaustive list of all rulemakings related to the physician self-referral law. After the passage of section 1877 of the Act, we proposed rulemakings in 1992 (related only to referrals for clinical laboratory services) (57 FR 8588) (the 1992 proposed rule) and 1998 (addressing referrals for all designated health services) (63 FR 1659) (the 1998 proposed rule). We finalized the proposals from the 1992 proposed rule in 1995 (60 FR 41914) (the 1995 final rule) and issued final rules following the 1998 proposed rule in three stages. The first final rulemaking (Phase I) was a final rule with comment period published in the January 4, 2001 **Federal Register** (66 FR 856). The second final rulemaking (Phase II) was an interim final rule with comment period (69 FR 16054) published in the March 26, 2004 **Federal Register**. Due to a printing error, a portion of the Phase II preamble was omitted from the March 26, 2004 **Federal Register** publication. That portion of the preamble, which addressed reporting requirements and sanctions, was published in the April 6, 2004 **Federal Register** (69 FR 17933). The third final rulemaking (Phase III) was a final rule published in the September 5, 2007 **Federal Register** (72 FR 51012).

After passage of the Patient Protection and Affordable Care Act of 2010 (Pub. L. 111–148) (Affordable Care Act), we issued final regulations on November 29, 2010, in the CY 2011 PFS final rule with comment period that codified a disclosure requirement established by the Affordable Care Act for the in-office ancillary services exception (75 FR 73443). We also issued final regulations on November 24, 2010, in the CY 2011 OPPS final rule with comment period (75 FR 71800), on November 30, 2011, in the CY 2012 OPPS final rule with comment period (76 FR 74122), and on November 10, 2014, in the CY 2015 OPPS final rule with comment period (79 FR 66987) that established or revised certain regulatory provisions concerning physician-owned hospitals to codify and interpret the Affordable Care Act's revisions to section 1877 of the Act.

On November 16, 2015, in the CY 2016 PFS final rule, we issued regulations to reduce burden and facilitate compliance (80 FR 71300 through 71341). In that rulemaking, we established two new exceptions to the physician self-referral law, clarified certain provisions of the physician self-referral regulations, updated regulations to reflect changes in terminology, and revised definitions related to physician-owned hospitals. In the December 2, 2020 **Federal Register**, we published a final rule entitled ''Modernizing and Clarifying the Physician Self-Referral Regulations'' (the ''MCR final rule'') (85 FR 77492) that established three new exceptions to the physician self-referral law applicable to compensation arrangements that qualify as ''value-based arrangements,'' established exceptions for limited remuneration to a physician and the donation of cybersecurity technology and services, and revised or clarified several existing exceptions. The MCR final rule also provided guidance and updated or established regulations related to the fundamental terminology used in many provisions of the physician self-referral law. Most notably, we defined the term ''commercially reasonable'' in regulation, established an objective test for evaluating whether compensation varies with the volume or value of referrals or other business generated between the parties, and revised the definitions of ''fair market value'' and ''general market value.'' The MCR final rule also revised the definition of ''indirect compensation arrangement,'' which was further revised in the CY 2022 PFS final rule (86 FR 65343 through 65353).

2. Application of the Physician Self-Referral Law to REHs

The referral and billing prohibitions of the physician self-referral law are implicated only when all six of the following elements are present: a physician makes a referral for designated health services payable by Medicare to an entity with which the physician (or an immediate family member of the physician) has a financial relationship. Where all six elements exist, the physician self-referral law prohibits the physician from making a referral for designated health services to the entity with which he or she has the financial relationship unless an exception applies and its requirements are satisfied.

Our regulations at § 411.351 define ''entity'' to mean a person, sole proprietorship, public or private agency or trust, corporation, partnership, limited liability company, foundation, nonprofit corporation, or unincorporated association that furnishes designated health services. Section 1877(h)(6) of the Act defines ''designated health services'' to mean any of the following items or services: clinical laboratory services; physical therapy services; occupational therapy services; outpatient speech-language pathology services; radiology services, including magnetic resonance imaging, computerized axial tomography, and ultrasound services; radiation therapy services and supplies; durable medical equipment and supplies; parenteral and enteral nutrients, equipment, and supplies; prosthetics, orthotics, and prosthetic devices and supplies; home health services; outpatient prescription drugs; and inpatient and outpatient hospital services. Under the regulation at § 411.351, only services payable in whole or in part by Medicare are designated health services. Services that are paid by Medicare as part of a composite rate are excluded from the definition of ''designated health services.''

The Conditions of Participation (CoPs) for rural emergency hospitals (REH), as finalized in this final rule with comment period, require an REH to furnish radiology and certain imaging services, clinical laboratory services, and outpatient prescription drugs, all of which are designated health services under section 1877(h) of the Act. An REH may elect to provide other designated health services as well. Therefore, with respect to such services furnished to Medicare beneficiaries, an REH would be an *entity* that furnishes *designated health services* payable (in whole or in part) by *Medicare* for purposes of the physician self-referral law.

For purposes of the physician self-referral law, a physician has the meaning set forth in section 1861(r) of the Act. A physician makes a referral when the physician requests or orders a designated health service, certifies or recertifies the need for a designated health service, or establishes a plan of care that includes the provision of a designated health service. (If the physician personally performs or provides the designated health service, the physician has not made a referral.) Under the regulations at § 411.354, a physician (or an immediate family member of a physician) has a financial relationship with an entity if the physician (or immediate family member) has a direct or indirect ownership or investment interest in the entity or has a direct or indirect compensation arrangement with the entity.

Once an entity is enrolled in Medicare as an REH, the physician self-referral law would prohibit a *physician* from making a *referral* for designated health services to the REH if the physician (or an immediate family member of the physician) has a *financial relationship* with the REH unless an exception to the law's referral and billing prohibitions applies and all its requirements are satisfied. There are numerous statutory and regulatory exceptions to the physician self-referral law's prohibitions.

Although there are more than 40 exceptions to the physician self-referral law's prohibitions, only five permit all specified referrals by a physician to an entity in which the physician (or an immediate family member of the physician) has an ownership or investment interest when all requirements of the exception are satisfied. These are the exceptions for publicly traded securities, mutual funds, rural providers (commonly referred to as the ''rural provider exception''), hospitals in Puerto Rico, and hospitals outside of Puerto Rico (commonly referred to as the ''whole hospital exception''). Nine additional ''services'' exceptions in § 411.355, when applicable, may permit a physician's referral on a service-by-service basis, but the protection from the law's prohibitions requires an analysis of each referral by the physician and the resulting designated health service furnished by the entity.

We believe that most physician-owned entities that are not publicly traded or hospitals located in Puerto Rico rely on the rural provider and whole hospital exceptions in section 1877(d)(2) and (3) of the Act and in our regulations at § 411.356(c)(1) and (3), respectively. An entity that is a ''hospital'' for purposes of the physician self-referral law, including a critical access hospital or small rural hospital, may use either the rural provider exception (if applicable) or the whole hospital exception to avoid the law's referral and billing prohibitions, provided that all requirements of the selected exception are satisfied, including requirements set forth in the Affordable Care Act and included in our regulations at § 411.362.

The rural provider exception requires that the designated health services are furnished in a rural area and that the entity furnishes not less than 75 percent of the designated health services that it furnishes to residents of a rural area. For purposes of the physician self-referral law, a rural area is an area that is not an urban area, a term further defined elsewhere in CMS regulations to include certain areas defined by the Executive Office of Management and Budget (OMB). OMB regularly publishes updates to the list of areas that CMS considers to be urban areas. The whole hospital exception is available only to entities that are ''hospitals'' for purposes of the physician self-referral law. Under § 411.351, a hospital is an entity that qualifies as a ''hospital'' under section 1861(e) of the Act, as a ''psychiatric hospital'' under section 1861(f) of the Act, or as a ''critical access hospital'' under section 1861(mm)(1) of the Act.

Whether an entity furnishes designated health services in a rural area is subject to change as OMB updates the list of areas that CMS considers to be urban areas. Therefore, the continuous applicability of the rural provider exception to a particular entity is not guaranteed. Reliance on the rural provider exception also requires the entity to monitor the residence of the patients to whom it furnishes designated health services in order to ensure that the entity furnishes not less than 75 percent of the designated health services that it furnishes to residents of a rural area. As with the location where designated health services are furnished, whether an individual resides in a rural area is subject to change as OMB updates the list of areas that CMS considers to be urban areas, which may increase the monitoring burden.

Satisfaction of the requirements of the whole hospital exception is not dependent on whether the entity—which must be a hospital for purposes of the exception—furnishes designated health services in a rural area or where its patients reside. However, section

1861(e) of the Act, as amended by section 125 of the CAA, expressly excludes REHs from qualifying as a hospital for most Medicare purposes. Although critical access hospitals and small rural hospitals meet the definition of ''hospital'' in § 411.351, once a critical access hospital or small rural hospital converts to an REH, it will no longer be a ''hospital'' for purposes of the physician self-referral law and, therefore, the whole hospital exception will no longer be available to it. Although we considered deeming REHs to be hospitals for purposes of the physician self-referral law, which would have continued access to the whole hospital exception for such entities, for the reasons explained in the CY 2023 OPPS/ASC proposed rule (87 FR 44798–44799), we did not propose to do so.

In the CY 2023 OPPS/ASC proposed rule, we stated that we were concerned that, without a broadly-applicable exception to its referral and billing prohibitions for ownership or investment in REHs, the physician self-referral law could inhibit access to medically necessary designated health services furnished by REHs that are owned or invested in by physicians (or their immediate family members) and thwart the underlying goal of section 125 of the CAA to safeguard or expand such access. For this reason, using the Secretary's authority under section 1877(b)(4) of the Act to establish exceptions to the physician self-referral law for financial relationships that do not pose a risk or program or patient abuse, we proposed a new exception at § 411.356(c)(4) for ownership or investment interests in an REH for purposes of the designated health services furnished by the REH. For purposes of this preamble, we refer to this exception as ''the proposed REH exception.'' We solicited comment on the proposed exception, including whether we should apply more or fewer of the requirements related to physician-owned hospitals to physician ownership of or investment in an REH. We also solicited comment regarding the appropriateness of such requirements in the context of an REH and whether they are necessary to protect against program and patient abuse.

We did not propose any new exceptions for specific designated health services or for compensation arrangements between REHs and physicians (or immediate family members of physicians). We stated our belief that, for the most part, the existing exceptions in §§ 411.355 and 411.357 are sufficiently comprehensive to allow for nonabusive referrals and compensation arrangements between REHs and physicians (or immediate family members of physicians). We noted, however, that certain of the exceptions in existing § 411.357 are applicable only to compensation arrangements between a hospital (or other specific type of entity) and a physician (or an immediate family member of a physician). Because an REH is not considered a hospital for purposes of the physician self-referral law and is not one of the other specific types of entities to which the exceptions currently apply, for the reasons explained in section XVIII.E.5 of the CY 2023 OPPS/ASC proposed rule (87 FR 44799–44800), and using the Secretary's authority under section 1877(b)(4) of the Act, we proposed to amend our regulations to permit an REH to use these exceptions where doing so would not be a risk of program or patient abuse and solicited comments on this approach.

3. Proposed Exception for REHs (Proposed § 411.356(c)(4))

a. Scope and Structure of the Proposed REH Exception

The proposed REH exception would have been available only to entities that are ''rural emergency hospitals.'' To delineate the scope of the applicability of the proposed REH exception, we proposed to amend § 411.351 to add a definition of ''rural emergency hospital'' for purposes of the physician self-referral law. Under proposed § 411.351, the term ''rural emergency hospital'' would have the meaning set forth in section 1861(kkk)(2) of the Act and § 419.91. As proposed, § 419.91 cross-references § 485.502, which was proposed in a separate rulemaking to define ''rural emergency hospital'' to mean an entity that operates for the purpose of providing emergency department services, observation care, and other outpatient medical and health services specified by the Secretary in which the annual per patient average length of stay does not exceed 24 hours. In addition, under that proposal, the entity must not provide inpatient services, except those in connection with a distinct part unit licensed as a skilled nursing facility to furnish post-hospital extended care services.

We did not receive any comments on the proposed definition of ''rural emergency hospital.'' Although, as explained in our response to comments below, we are not finalizing the proposed REH exception due to our concern that the exception, as proposed, does not satisfy the standard under section 1877(b)(4) of the Act that financial relationships permitted under exceptions established by the Secretary do not pose a risk of program or patient abuse, the term ''rural emergency hospital'' is incorporated into the revisions to the exceptions at § 411.357(e), (r), (t), (v), (x), and (y) that we are finalizing in this CY 2023 OPPS/ASC final rule with comment period. Therefore, we are finalizing the definition of ''rural emergency hospital'' as proposed.

In the CY 2023 OPPS/ASC proposed rule, we explained that section 1877(d) of the Act and § 411.356(c) establish exceptions for ownership of or investment in specific types of providers: rural providers, hospitals located in Puerto Rico, and hospitals located outside of Puerto Rico. These exceptions apply only with respect to referrals for and billing of the specific services identified in the relevant exception. For example, the exception at section 1877(d)(1) of the Act and § 411.356(c)(2) applies to all referrals and billing for designated health services furnished by a hospital located in Puerto Rico. In contrast, the exception at section 1877(d)(2) of the Act and § 411.356(c)(1) applies only to referrals and billing for designated health services that the entity furnishes in a rural area. The proposed REH exception followed the established construct of the existing exceptions for other specific providers and we proposed that it would have applied to all referrals and billing for designated health services furnished by an REH. Thus, if all the requirements of the proposed REH exception were satisfied, the referral and billing prohibitions of the physician self-referral law would not have applied with respect to designated health services referred by a physician who has (or whose immediate family member has) an ownership or investment interest in the REH.

Because all REHs would have been critical access hospitals or small rural hospitals prior to their enrollment in Medicare as an REH, we stated in the CY 2023 OPPS/ASC proposed rule that we believed it was appropriate to include in the proposed REH exception program integrity requirements similar to those that apply to hospitals, including critical access hospitals and small rural hospitals, under the rural provider and whole hospital exceptions at § 411.356(c)(1) and (c)(3)(iv). We proposed that these requirements would have applied to an REH even if it was not owned or invested in by physicians (or their immediate family members) when it was a critical access hospital or small rural hospital. We did not propose to include every requirement of existing § 411.362 in the proposed REH

exception; rather, our focus was on certain requirements in existing § 411.362(b)(4) that relate to ensuring *bona fide* investment as they would apply to an REH. We stated that, in our view, requirements that relate to disclosure of conflicts of interest, prohibition on facility expansion, and prohibition on increasing aggregate physician ownership or investment levels are program integrity policies that the Congress applied specifically to physician-owned hospitals under the Affordable Care Act. If the Congress had intended all of these requirements to also apply to REHs, it could have considered an REH to be a hospital for purposes of section 1877 of the Act or expressly applied them to REHs under section 1877 of the Act. We expressed concern that limitations on facility expansion or the amount of physician investment or ownership in an REH could negatively impact access to needed services in rural and other underserved areas. We noted that the requirement at existing § 411.362(b)(3)(ii)(B), which states that a hospital must not condition any physician ownership or investment interests either directly or indirectly on the physician owner or investor making or influencing referrals to the hospital or otherwise generating business for the hospital, is included under the statutory and regulatory set of requirements related to disclosure of conflict of interests. However, as explained in the Conference Committee report for the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152), this requirement was seen as a requirement to ensure *bona fide* ownership and investment (Conference Committee report, H. Rept. No. 443, 111th Cong., 2nd Sess. 354 (2010)). We agreed that it is a requirement to ensure *bona fide* ownership and investment and proposed to include a similar requirement at proposed § 411.356(c)(4)(iii).

b. Entity Enrolled as an REH

We proposed that the entity must be enrolled in Medicare as an REH. If finalized, the requirement at proposed § 411.356(c)(4)(i) would ensure that a hospital (for purposes of the physician self-referral law) that may technically meet the definition of ''rural emergency hospital'' but is not enrolled in Medicare as such may not avail itself of the proposed REH exception. We stated that a hospital must instead use the rural provider or whole hospital exception, and all of the requirements in § 411.362 would apply, including the prohibitions on facility expansion and exceeding the aggregate percentage of investment interests held by physicians (and their immediate family members) as of March 23, 2010.

c. Ownership in the Entire REH

We proposed to require at proposed § 411.356(c)(4)(ii) that the physician's (or immediate family member's) ownership or investment interest is in the entire REH and not merely in a distinct part or department of the REH. This requirement is similar to the requirement at § 411.356(c)(3)(iii) in the whole hospital exception, and we stated that we would interpret it in the same manner for REHs. When the physician self-referral law was first enacted and later amended to apply to referrals of designated health services beyond clinical laboratory services, the Congress included the whole hospital exception to allow physician ownership or investment in hospitals because, at the time, there were a number of rural hospitals in particular where physicians held ownership interests, and avoiding barriers to accessible health care for patients in rural areas was imperative. These hospitals were usually the only hospitals in the area and provided a breadth of services, and therefore, the Congress did not view ownership or investment in the hospital as a significant incentive for self-referral. Even so, the whole hospital exception explicitly prohibited ownership in a subdivision of a hospital because of the concern that if physicians owned only the particular part of a hospital to which they referred—such as a cardiac wing or department—there would be an incentive for self-referral. (*See* Opening Statement of the Honorable Bill Thomas, Physician Ownership and Referral Arrangements and H.R. 345, ''The Comprehensive Physician Ownership and Referral Act of 1993,'' House of Representatives, Committee on Ways and Means, Subcommittee on Health, April 20, 1993, 145–146; Comments of the Honorable Pete Stark, Hearing before the Committee on Ways and Means of the U.S. House of Representatives 109th Cong., 1st Sess., 4–5 (Mar. 8, 2005) (Ser. No. 109–37); and House Committee on Budget Report on H.R. 3200 and H.R. 4872, H. Rep. No. 443, pt.1, 111th Cong., 2nd Sess., 355–356 (2010).). We stated our similar belief that ownership or investment in only a distinct part or department of an REH—such as an imaging center—would be an incentive for self-referral, and, therefore, that proposed § 411.356(c)(4)(ii) would be necessary to protect against the harms the physician self-referral law was enacted to address, namely, overutilization and patient steering to less convenient, lower quality, or more expensive services and facilities.

d. Conditioning Ownership or Investment on Making or Influencing Referrals or Generating Business for the REH

In line with requirements for hospitals under the rural provider and whole hospital exceptions, we proposed to require at § 411.356(c)(4)(iii) that the REH not directly or indirectly condition any ownership or investment interest held or to be held by a physician (or an immediate family member of a physician) on the physician making or influencing referrals to the REH or otherwise generating business for the REH. This proposed requirement is essentially identical to the requirement at existing § 411.362(b)(3)(ii)(B), which applies to hospitals that use the rural provider and whole hospital exceptions, and we stated that we would interpret the requirements applicable to REHs and hospitals in the same way.

In the CY 2023 OPPS/ASC proposed rule, we noted our position that an REH might fail to satisfy this proposed requirement if it requires a specified action or achievement with respect to referrals to or the generation of business for the REH prior to the purchase or receipt of the ownership or investment interest, or requires divestiture of an ownership or investment interest following the occurrence or nonoccurrence of a specified action or achievement with respect to referrals to or the generation of business for the REH. We stated that, for example, we would consider an REH to condition the ownership or investment interest to be held by a physician on the physician making or influencing referrals to the REH or otherwise generating business for the REH if the physician was permitted to purchase an ownership interest in the REH only if the physician had ordered a specific number of advanced imaging services during each of the 2 years prior to the purchase date of the ownership interest. We stated that we would also consider an REH to condition an ownership or investment interest held by a physician on the physician making or influencing referrals to the REH or otherwise generating business for the REH if the REH required the physician to sell their ownership interest back to the REH in the event that they failed to perform a specific percentage of their outpatient surgeries at the REH during the current year or reduced the hours that they work in their private practice below 75 percent of the prior year. Similarly, we stated that the REH may not condition the amount of an ownership or

investment interest that a physician (or an immediate family member of a physician) may purchase, receive, or maintain on the occurrence or nonoccurrence of a specified action or achievement under proposed § 411.356(c)(4)(iii). For example, if a physician who performs at least 80 percent of their surgeries at an REH would be permitted to purchase and maintain 20 shares in the REH, while a physician who performs only 25 percent of their surgeries at the REH would be permitted to purchase and maintain only 5 shares in the REH, we would consider the REH to condition an ownership or investment interest held or to be held by a physician on the physician making or influencing referrals to the REH or otherwise generating business for the REH. The examples provided in the CY 2023 OPPS/ASC proposed rule were for illustrative purposes only and were not intended to indicate, nor do they indicate, that any particular absolute number, percentage, or other standard is acceptable or unacceptable. We solicited comment on our interpretation of what it means to ''condition'' an ownership or investment interest held or to be held by a physician (or an immediate family member of a physician) on the physician making or influencing referrals to the REH or otherwise generating business for the REH under proposed § 411.356(c)(4)(iii). We also solicited comment specifically on whether we should consider an REH's policy or other mandate that a physician (or an immediate family member of a physician) must relinquish their ownership or investment interest in an REH upon the physician's full retirement from the practice of medicine or the relocation of the physician's medical practice to a location outside the REH's service area to fail to satisfy the proposed requirement at § 411.356(c)(4)(iii), as well as other examples of conduct that we should consider to ''condition'' an ownership or investment interest held or to be held by a physician (or an immediate family member of a physician) on the physician making or influencing referrals to the REH or otherwise generating business for the REH under proposed § 411.356(c)(4)(iii).

Like existing § 411.362(b)(3)(ii)(B), which applies to hospitals that use the rural provider and whole hospital exceptions, the requirement at proposed § 411.356(c)(4)(iii), if finalized, would have prohibited policies and conduct that directly or indirectly condition ownership or investment interests held or to be held by a physician (or an immediate family member of a physician) on the physician making or influencing referrals to the REH or otherwise generating business for the REH. We stated that, for purposes of this requirement, an REH directly conditions ownership or investment interests by adopting policies that require a specific number, volume, or value of referrals to or other business for the REH during a particular time period. For example, a requirement that a physician owner of an REH must have ordered at least 50 clinical laboratory tests during three of the prior four quarters to maintain their ownership (or level of ownership) would not satisfy the requirement at proposed § 411.356(c)(4)(iii). We further stated that a policy that permits an immediate family member to purchase an ownership or investment interest in an REH only if their child, who is a physician in private practice, increases the number of patients that they refer to the REH by 25 percent during the calendar year prior to the purchase would not satisfy the proposed requirement. We continued that, if the REH directs the referrals of the physician under a bona fide employment relationship, personal service arrangement, or managed care contract between the REH and the physician, and the directed referral requirement meets all the conditions of § 411.354(d)(4), we would not consider the directed referral requirement to constitute directly or indirectly conditioning an ownership or investment interest held or to be held by a physician (or an immediate family member of a physician) on the physician making or influencing referrals to the REH or otherwise generating business for the REH.

For purposes of this proposed requirement, we stated that we would consider an REH to indirectly condition ownership or investment interests if it adopted policies or standards of another person or organization to establish qualification criteria for purchasing or maintaining ownership or investment interests in the REH and those policies or standards required the physician to make or influence referrals to or generate business for the REH. For example, if an REH required that a physician have active medical staff privileges at the REH to hold an ownership or investment interest in the REH, and also approved the medical staff bylaws that required a minimum of 50 outpatient therapeutic services per year performed or supervised by the physician, the REH would likely not satisfy the requirement at proposed § 411.356(c)(4)(iii). This is because the REH would indirectly adopt the policy mandating a minimum of 50 outpatient therapeutic services per year as the REH's own criteria for qualification to hold an ownership or investment interest in the REH. We recognized that the medical staff of an entity, although accountable to the entity's governing body for the quality of patient care provided by medical staff members to the entity's patients, is independently organized under its own bylaws and establishes the criteria for appointment to the medical staff, credentialing, privileging, and oversight. We also recognized that an entity's medical staff is responsible for peer review, which, to be effective, requires the review of a minimum body of a medical staff member's work in order to determine whether to grant or continue active (or some other category of) medical staff privileges. We did not propose, nor would we be able, to establish a bright-line rule applicable in all instances defining an acceptable number of referrals to or amount of business generated for an entity that a medical staff could require in order to complete effective peer review activities. We stated that such medical staff requirements must directly relate to its peer review obligations—including the evaluation of a physician's (or other practitioner's) individual character, competence, training, experience, and judgment—and not be a proxy for referrals to or the generation of business for the entity. We cautioned that, if an REH adopted a requirement that a physician owner of or investor in the REH must have active privileges at the REH, we would consider it to have effectively (albeit indirectly) adopted a condition that the physician owner must make the same number of referrals to or generate the same amount of business for the REH for purposes of the requirement at proposed § 411.356(c)(4)(iii) as the number of referrals to or amount of business for the REH that is required by the medical staff to hold active privileges at the REH. To illustrate, we stated that, if the REH requires all physician owners or investors to maintain active medical staff privileges, and the REH's medical staff requires a physician to admit and treat a minimum of five patients per year to maintain active privileges, we would consider the REH to require a minimum of five admissions per year for physician owners to hold their ownership interests in the REH. Whether the requirement constitutes prohibited indirect conditioning of ownership or investment in the REH under proposed § 411.356(c)(4)(iii)

would have required a case-by-case determination, including a review of the underlying purpose of, need for, and available alternatives to the minimum requirement.

We also stated that there are many ways that an REH could indirectly condition an ownership or investment interest held or to be held by a physician (or an immediate family member of a physician) on the physician making or influencing referrals to the REH or otherwise generating business for the REH. For example, an REH could require a physician to earn a minimum number of ''points'' in a year to maintain the physician's (or an immediate family member's) ownership interest or level of ownership. We noted that this would not per se be prohibited under proposed § 411.356(c)(4)(iii), but if the required points are merely a proxy for referrals to or the generation of business for the REH (for example, if the physician is awarded one point for each designated health service that they order), we would consider the REH to indirectly condition an ownership or investment interest held or to be held by a physician (or an immediate family member of a physician) on the physician making or influencing referrals to the REH or otherwise generating business for the REH. In the CY 2023 OPPS/ASC proposed rule, we stated that an REH could also indirectly condition ownership or investment interests under a points system if it awards points only for a physician's personally performed services but the personally performed services also result in the furnishing of designated health services by the REH. Whether a point system or other condition for ownership or investment in an REH runs afoul of proposed § 411.356(c)(4)(iii) would have required a case-by-case determination. A point system that allows the awarding of only one point per patient closely ties the referral of the patient or the generation of the business to the physician who ordered the designated health service or other REH service and, therefore, would likely not be permissible. In contrast, a point system that awards points for a variety of physician activities, including activities that are not tied to the physician's own referral of the patient or business generated for the REH (such as points for chairing a committee of the REH, serving as an assistant at surgery, or providing a professional consultation for another physician's patient), may be permissible under proposed § 411.356(c)(4)(iii).

As we explained in the MCR final rule, our policies with respect to determining whether compensation is determined in any manner that takes into account the volume or value of a physician's referrals (the ''volume or value standard'') or the other business generated by a physician (the ''other business generated standard'') have never applied and do not to apply for purposes of analyzing ownership or investment interests for compliance with the physician self-referral law, as none of our exceptions in § 411.356 include a requirement identical or analogous to the volume or value standard or other business generated standard (85 FR 77541). Any guidance regarding our interpretation of the volume or value standard or other business generated standard is not relevant for purposes of applying the exceptions at § 411.356(c)(1) and (3), both of which incorporate the requirements of § 411.362, including the requirement at § 411.362(b)(3)(ii)(B) that a hospital must not condition any physician ownership or investment interests either directly or indirectly on the physician owner or investor making or influencing referrals to the hospital or otherwise generating business for the hospital (85 FR 77541). In the CY 2023 OPPS/ASC proposed rule, we expressly stated that the same is true with respect to the proposed REH exception—our interpretation of the volume or value standard and the other business generated standard is not relevant. Likewise, the interpretations with respect to the proposed REH exception explained in the CY 2023 OPPS/ASC proposed rule (87 FR 44795) are not relevant for purposes of applying the special rules at § 411.354(d)(6) when analyzing compensation arrangements for compliance with the physician self-referral law.

As proposed § 411.356(c)(4)(iii) would have prohibited an REH conditioning any ownership or investment interests held or to be held by a physician (or an immediate family member of a physician) on the physician making or influencing referrals to the REH (or otherwise generating business for the REH). For purposes of the physician self-referral law generally, a physician makes a referral (as defined in § 411.351) by ordering the designated health service, writing a prescription for a designated health service, including the provision of a designated health service in a plan of care, certifying or recertifying the need for a designated health service, or otherwise requesting the designated health service. A physician also makes a referral when the physician requests a consultation with another physician and the consulting physician orders a designated health service to be performed by (or under the supervision of) the consulting physician. (A physician who transfers the care of a patient, in whole or in part, to another physician for specialty or other care to be provided by the other physician—as opposed to a request for a consultation with the other physician—does not make a referral for designated health services ordered or otherwise referred by the other physician.) A physician may make a referral orally, in writing, electronically, or in any other form. We stated that, for purposes of proposed § 411.356(c)(4)(iii), we would have interpreted the making of referrals to an REH in the same way.

In the CY 2023 OPPS/ASC proposed rule, we noted that, with respect to the influencing of referrals to an REH under proposed § 411.356(c)(4)(iii), impactful pressure or persuasion to refer, or an enforceable requirement for or control over the referrals of another, would demonstrate a physician's influence over the referrals of another physician to an REH. We highlighted that, under § 411.351, ''referral'' is defined in the context of a physician's action or conduct, and stated that we would interpret the term ''referral'' consistent with its meaning throughout the physician self-referral regulations, and interpret the requirement at proposed § 411.356(c)(4)(iii) to relate only to the influencing of referrals by a physician to the REH. For example, an REH would not satisfy the requirement at proposed § 411.356(c)(4)(iii) if it withheld the opportunity to purchase an ownership or investment interest in the REH from the physician owners of a physician practice unless the practice required all of its employed and contracted physicians to refer all of their patients to the REH for diagnostic testing and clinical laboratory services, or required them to perform all outpatient surgeries at the REH. (We noted that, with respect to the employed and contracted physicians' referrals for designated health services furnished by the physician practice, the requirement for referrals to the REH may be permissible, provided that all requirements of § 411.354(d)(4) are satisfied.)

We proposed that § 411.356(c)(4)(iii) also would prohibit an REH conditioning any ownership or investment interests held or to be held by a physician (or an immediate family member of a physician) on the physician *otherwise generating business* for the REH. We stated that we would interpret the phrase ''otherwise generating business'' in proposed § 411.356(c)(4)(iii) consistent with our

interpretation of the same and similar phrases in our other regulations. We addressed our interpretation of the phrase ''other business generated'' and its variations, such as ''otherwise generating business,'' in several of our prior rulemakings. We indicated that other business generated does not include a physician's personally performed services, but does include a referred technical component that corresponds to a physician's personally performed service (69 FR 16067 through 16068). We also indicated that other business generated by a physician includes Federal and private pay business (other than Medicare) (66 FR 877), as well as non-Federal health care business (69 FR 16068). We noted that it is important to highlight that these statements are examples of what is and is not ''other business generated'' for purposes of the physician self-referral law. Our longstanding interpretation of the phrase ''other business generated'' is that it means *any* other business or revenues generated by a physician (66 FR 877) (emphasis added). Although such business or revenues may be generated through the furnishing of health care services by the entity, our interpretation is not limited to business or revenue generated through the furnishing of health care services.

In the CY 2023 OPPS/ASC proposed rule, we stated our position that a physician may generate business for an REH in a variety of ways, including, but not limited to, ordering services to be furnished or billed by the REH, writing a prescription for a service to be furnished or billed by the REH, establishing a plan of care for services to be furnished or billed by the REH, certifying or recertifying the need for services to be furnished or billed by the REH, or otherwise requesting services to be furnished or billed by the REH. A physician may also generate business for an REH that is unrelated to the REH's furnishing of health care services. We stated that we interpret the generation of business by a physician to include the physician's direct actions and the actions of others whom the physician directs or otherwise influences to generate business for the REH.

e. Offer of Ownership or Investment on More Favorable Terms

We proposed to require at § 411.356(c)(4)(iv) that the REH does not offer any ownership or investment interests to a physician (or an immediate family member of a physician) on terms more favorable than the terms offered to a person that is not a physician (or an immediate family member of a physician). This proposed requirement is essentially identical to the requirement at existing § 411.362(b)(4)(ii), which applies to hospitals that use the rural provider and whole hospital exceptions, and we stated that we would interpret the requirements applicable to REHs and hospitals in the same way. For example, an REH that permits a physician owner or investor to pay for purchased shares in the REH over 5 years while requiring non-physicians to pay the full purchase price in advance of the purchase would not satisfy the proposed requirement. Similarly, an REH could not permit a physician to purchase additional shares in the REH every year while allowing non-physicians to purchase shares only once every 3 years.

We noted that, in the requirement at existing § 411.362(b)(4)(ii) from which this proposed requirement was drawn, the word ''who'' follows ''person.'' We stated our belief that the statutory requirement on which that regulation is based is intended to prohibit the offering of ownership or investment interests to physicians (or immediate family members of physicians) on terms more favorable than any other owner of or investor in a hospital. For this reason, we proposed to use the word ''that'' following ''person'' to indicate that the person to which less favorable terms are offered could be a natural person (that is, an individual) or a non-natural person (that is, a corporation, partnership, or similar organization).

f. Providing Loans or Financing for Ownership or Investment

We proposed at § 411.356(c)(4)(v) to prohibit an REH and the owners of or investors in the REH from directly or indirectly providing loans or financing for any investment in the REH by a physician (or an immediate family member of a physician). This proposed requirement is essentially identical to the requirement at existing § 411.362(b)(4)(iii), which applies to hospitals that use the rural provider and whole hospital exceptions, and we stated that we would interpret the requirements applicable to REHs and hospitals in the same way. For purposes of this proposed requirement, an REH directly provides loans or financing by lending the funds or other assets of the REH for use in purchasing the physician's (or immediate family member's) ownership or investment interest in the REH. In such a case, the REH is the lender. Similarly, an individual or corporate owner of or investor in an REH directly provides loans or financing by lending their own funds or other assets for use in purchasing the physician's (or immediate family member's) ownership or investment interest in the REH.

We also stated that, under our interpretation of the proposed exception, an REH indirectly provides loans or financing for investment in the REH by controlling or meaningfully influencing another person's decision to lend funds or assets for use in purchasing the physician's (or immediate family member's) ownership or investment interest in the REH. In such a case, the REH is not the lender. For example, if an REH is the sole owner of the corporation that loans money to a physician to purchase an ownership or investment interest in the REH, we would consider the REH to indirectly provide the loan because the REH exercises control over its wholly-owned subsidiary corporation. In contrast, merely introducing a physician (or an immediate family member of a physician) to an individual or corporation that might lend funds or assets for use in purchasing an ownership or investment interest in an REH, in the absence of actual control or meaningful influence over the lender's decision whether a loan will be provided, would not constitute the indirect provision of a loan or financing for investment in the REH.

g. Guarantee, Make a Payment on, or Otherwise Subsidize a Loan

At proposed § 411.356(c)(4)(vi), we proposed to prohibit an REH and the owners of or investors in the REH from directly or indirectly guaranteeing a loan, making a payment toward a loan, or otherwise subsidizing a loan for a physician (or an immediate family member of a physician) that is related to acquiring any ownership or investment interest in the REH. This proposed requirement is essentially identical to the requirement at existing § 411.362(b)(4)(iv), which applies to hospitals that use the rural provider and whole hospital exceptions, and we stated that we would interpret the requirements applicable to REHs and hospitals in the same way. We noted that existing § 411.362(b)(4)(iv) extends the prohibition on guaranteeing, making a payment toward, or otherwise subsidizing a loan to such activities when they are for a group of physician owners or investors, whereas proposed § 411.356(c)(4)(vi) prohibits these activities as they relate to individual physicians (and immediate family members). A group of physician owners or investors is made up of individual physicians and, therefore, the proposed requirement would have also prohibited guaranteeing, making a payment toward,

or otherwise subsidizing a loan for a group of physician owners or investors.

In the CY 2023 OPPS/ASC proposed rule, we stated that, for purposes of proposed § 411.356(c)(4)(vi), an REH, individual owner of or investor in an REH, or corporate owner of or investor in an REH guarantees a loan when the REH, owner, or investor formally or informally promises the lender that, should a physician (or an immediate family member of a physician) fail to make a required payment on a loan related to the physician's (or immediate family member's) acquisition of any ownership or investment interest in the REH, the REH, owner, or investor, respectively, will make or otherwise ensure that the payment will be made to the lender. A direct guarantee would include pledging the guarantor's own funds or assets as collateral for the guaranteed loan, whereas an indirect guarantee would include pledging or arranging for the pledge of the funds or assets of another individual or corporate entity as collateral for the guaranteed loan. We stated that we would also consider the pledge of funds or assets of an REH, individual owner of or investor in an REH, or corporate owner of or investor in an REH to guarantee a loan for property that serves as collateral for the loan related to acquiring the physician's (or immediate family member's) ownership or investment interest in the REH to be an indirect guarantee of such loan.

We further stated that we would interpret the direct or indirect making of a payment toward a loan similarly. That is, a person directly makes a payment toward a loan by using the person's own funds or assets to make the payment, and indirectly makes a payment toward a loan by using or arranging for the use of the funds or assets of another individual or corporate entity to make the payment. An REH would not have been prohibited from garnishing the wages or other compensation due to a physician (or an immediate family member of a physician) to make loan payments on behalf of the physician (or immediate family member).

Finally, for purposes of proposed § 411.356(c)(4)(vi), we stated that an REH, individual owner of or investor in an REH, or corporate owner of or investor in an REH otherwise subsidizes a loan when the REH, owner, or investor pays part of the cost of a loan for a physician (or an immediate family member of a physician). Subsidies would include, for example, payments to reduce the principal amount of the loan, reduce the interest rate applied to the loan, or cover the cost of fees, such as origination fees, late fees, or early payoff penalties. We stated that, as with guaranteeing or making payments toward a loan, we would interpret directly and indirectly subsidizing a loan to mean that a person directly subsidizes a loan by using the person's own funds or assets to pay part of the cost of the loan, and indirectly subsidizes a loan by using or arranging for the use of funds or assets of another individual or corporate entity to pay part of the cost of the loan.

h. Proportional Distributions

We proposed to require at § 411.356(c)(4)(vii) that ownership or investment returns are distributed to each owner of or investor in an REH in an amount that is directly proportional to the ownership or investment interest in the REH of such owner or investor. This proposed requirement is essentially identical to the requirement at existing § 411.362(b)(4)(v), which applies to hospitals that use the rural provider and whole hospital exceptions, and we stated that we would interpret the requirements applicable to REHs and hospitals in the same way. Simply put, distributions of profits, dividend payments, and other payouts on equity may only be tied to the number of shares owned by an investor, and not to their referrals or the other business the investor generates for the REH. We stated that we would interpret ''proportional'' as it is defined in the dictionary: corresponding in size or amount.

Under the proposed REH exception, to ensure that the ownership or investment return to each owner of or investor in the REH is directly proportional to the particular owner's or investor's interest in the REH, we would have required that all owners and investors must be treated the same. That is, if any owner or investor is eligible to receive or actually receives an ownership or investment return, all other owners or investors must be eligible to receive or actually receive an ownership or investment return, respectively. For example, an REH wholly-owned by physicians would not satisfy this proposed requirement if the REH made distributions only to physicians who generate a minimum amount of business for the REH during the ownership or investment period. In addition, an REH could not exclude owners or investors that are not physicians (or their immediate family members) from eligibility for ownership or investment returns for the purpose of making distributions only to owners or investors who are physicians in a position to generate business for the REH or their immediate family members. This would be the case even if the distributions were in amounts that are directly proportional to the physician's (or immediate family member's) ownership or investment interest in the REH.

i. Guaranteed Receipt of or Right To Purchase Other Business Interests

We also proposed to require that any physician (or immediate family member of a physician) who has an ownership or investment interest in an REH does not directly or indirectly receive any guaranteed receipt of or right to purchase other business interests related to the REH, including the purchase or lease of any property under the control of any other owner of or investor in the REH or located near the premises of the REH. This requirement at proposed § 411.356(c)(4)(viii) is essentially identical to the requirement at existing § 411.362(b)(4)(vi), which applies to hospitals that use the rural provider and whole hospital exceptions. We stated that we would interpret the requirements applicable to REHs and hospitals in the same way.

For purposes of this proposed requirement, we stated that other business interests related to the REH would include a wide array of investment opportunities, ventures, and interests, as well as the examples of the purchase and lease of property under the control of any other owner of or investor in the REH that are listed in the statutory and regulatory requirements applicable to hospitals that use the rural provider and whole hospital exceptions. We stated that we would consider the business interests of any owner of or investor in the REH to be business interests related to the REH. For example, under the proposed requirement at § 411.356(c)(4)(viii), a physician owner of or investor in an REH may not directly or indirectly receive an interest in another component of the health care system that includes an REH upon the physician's purchase of their ownership or investment interest in the REH, nor may the physician owner directly or indirectly be guaranteed the right to invest in a venture in which another owner of the REH is also an investor. In these examples, the physician owner would directly receive an interest or be guaranteed the right to invest in a business interest related to an REH if the interest is held or would be held, if purchased, in the physician's name. We further stated that, in contrast, the physician owner would indirectly receive an interest or be guaranteed the right to invest in a business interest related to an REH if the interest is

received by, held in the name of, or, if purchased, would be held in the name of a person or corporate entity over which the physician exercises meaningful control or influence, such as a partnership or limited liability company in which the physician holds a substantial interest.

j. Offer To Purchase or Lease Other Property on More Favorable Terms

Finally, at proposed § 411.356(c)(4)(ix), we proposed to require that an REH does not offer a physician (or an immediate family member of a physician) the opportunity to purchase or lease any property under the control of the REH or any other owner of or investor in the REH on more favorable terms than the terms offered to a person that is not a physician (or an immediate family member of a physician). This proposed requirement is essentially identical to the requirement at existing § 411.362(b)(4)(vii), which applies to hospitals that use the rural provider and whole hospital exceptions, and we stated that we would interpret the requirements applicable to REHs and hospitals in the same way.

We highlighted that there are two main differences between the requirements at proposed § 411.356(c)(4)(viii) and (ix). The former applies to any business interests related to the REH and prohibits the guaranteed receipt of or right to purchase such other business interests. The latter applies only to property under the control of the REH, an owner of the REH, or an investor in the REH, and prohibits the offering of the opportunity to purchase or lease such property on terms more favorable than the terms offered to a person that is not a physician (or an immediate family member of a physician).

With respect to the prohibition on offering an opportunity to purchase or lease property on terms more favorable than the terms offered to a person that is not a physician (or an immediate family member of a physician), we stated that we would interpret this requirement in the same way as proposed § 411.356(c)(4)(iv), which, would prohibit an REH from offering any ownership or investment interests to a physician (or an immediate family member of a physician) on terms more favorable than those offered to a person that is not a physician (or an immediate family member of a physician). We noted that the requirement at existing § 411.362(b)(4)(vii), from which this proposed requirement is drawn, states that the physician owner may not be offered the opportunity to purchase or lease certain property on more favorable terms than those offered to an ''individual'' who is not a physician owner or investor, in contrast to the requirement at existing § 411.362(b)(4)(ii), which references ''persons'' in a similar manner. We stated our belief that the statutory requirement on which existing § 411.362(b)(4)(vii) is based is intended to prohibit the offering of the opportunity to purchase or lease the specified property on terms more favorable than any other owner of or investor in a hospital. For this reason, proposed § 411.356(c)(4)(ix) included the words ''person that'' in the same way as proposed § 411.356(c)(4)(iv) to indicate that the person to which less favorable terms are offered could be a natural person (that is, an individual) or a non-natural person (that is, a corporation, partnership, or similar organization).

k. Alternative to Proposed REH Exception Considered but not Proposed

Section 1861(e) of the Act excludes critical access hospitals (formerly referred to as rural primary care hospitals) from the definition of ''hospital'' for most purposes of Title XVIII of the Act unless the context otherwise requires. However, as we explained in the 1998 proposed rule, we believe that the reference to context in this statutory provision indicates that critical access hospitals may be deemed to be hospitals where, in specific contexts, it is consistent with the purpose of the legislation to do so (63 FR 1681). For that reason, we included such entities in our definition of ''hospital'' at § 411.351 (66 FR 954). We based this policy on our belief that a physician who has a financial relationship with a critical access hospital is in as much of a position to profit from overutilizing referrals to the critical access hospital as they would be if the financial relationship was with an ordinary hospital. In addition, a critical access hospital provides services that are very similar to inpatient hospital services (63 FR 1681).

Section 125 of the CAA amended section 1861(e) of the Act to also exclude REHs from the definition of ''hospital'' for most Medicare purposes, unless the context otherwise requires. We considered whether to include REHs in the definition of ''hospital'' in § 411.351 for purposes of the physician self-referral law similar to our treatment of critical access hospitals. We did not propose to do so for two primary reasons. First, REHs are not the same as critical access hospitals (or other hospitals that furnish inpatient care). By definition, an REH may not furnish inpatient care, a fundamental attribute of and requirement for a hospital for purposes of Medicare. (See section 1861(e) of the Act.) Second, if we were to consider an REH to be a hospital for purposes of the physician self-referral law, in order for an REH to avoid the law's referral and billing prohibitions, the ownership or investment interests of physicians (and their immediate family members) would have to satisfy the requirements of one of the existing exceptions applicable to such ownership or investment interests, which could prove challenging, thus limiting the ability of such potential investors to bring needed resources to underserved and rural communities. We explained that, if we had proposed to include REHs as ''hospitals'' for purposes of the physician self-referral law, we would not have proposed to establish the exception for ownership or investment in an REH with the requirements described in the proposed rule because we do not believe that the Secretary's authority under section 1877(b)(4) of the Act would permit us to establish an exception that applies to only one type of hospital (for purposes of the physician self-referral law) without including the same (or equally stringent) program integrity requirements established by the Congress in statute.

To avoid the physician self-referral law's referral and billing prohibitions under the rural provider or whole hospital exception, an ownership or investment interest must satisfy the requirements of the applicable exception at the time of the physician's referral and the hospital must meet the requirements of section 1877(i) of the Act and § 411.362 no later than September 23, 2011. Section 1877(i)(1)(A) of the Act and § 411.362(b)(1) require that the hospital had physician ownership or investment on December 31, 2010, and a provider agreement under section 1866 of the Act on that date (emphasis added). Put another way, for a hospital to bill Medicare (or another individual, entity, or third-party payer) for a designated health service furnished as a result of a physician owner's referral today, the hospital must have had both physician ownership or investment and a Medicare provider agreement on December 31, 2010. Thus, the hospital submitting the claim today must be the same hospital that had both physician ownership or investment and a Medicare provider agreement on December 31, 2010. We stated that, if we were to include REHs as hospitals for

purposes of the physician self-referral law, certain REHs would be presumptively excluded from using the rural provider or whole hospital exceptions: REHs that had no physician owners or investors, as defined at § 411.362(a), on March 23, 2010 or December 31, 2010, and REHs that did not have a Medicare provider agreement in effect on December 31, 2010.

Critical access hospitals and small rural hospitals that had physician ownership on March 23, 2010 and December 31, 2010 and a Medicare provider agreement in effect on December 31, 2010 may avail themselves of the rural provider and whole hospital exceptions, provided that all other requirements of the applicable exception are satisfied. This would continue after conversion to an REH if we deemed REHs to be hospitals for purposes of the physician self-referral law. However, as noted above, the REH/hospital would have to be the same hospital that had physician ownership on March 23, 2010 and December 31, 2010 and a Medicare provider agreement in effect on December 31, 2010 (the ''original hospital''). We would consider many factors when determining whether an REH would qualify as the same hospital that had physician ownership on March 23, 2010 and December 31, 2010 and a Medicare provider agreement in effect on December 31, 2010 including, but not limited to: status of, type of, and party to the State license for both the REH and the original hospital, including any lapses in State licensure or operation of either the REH or the original hospital; status of and party to the Medicare provider agreement, including any lapses in Medicare participation of either the REH or the original hospital; whether the REH has the same Medicare provider number as the original hospital; the location and structure of the REH building(s) and those of the original hospital; whether the REH is under the same State's licensure regime as the original hospital; whether the REH serves the same community as the original hospital; whether the REH provides the same scope of services as the original hospital; REH ownership and that of the original hospital; and the number of operating rooms, procedure rooms, and beds operated by the REH and that of the original hospital. No one factor would be dispositive.

Provisions of the Final Rule

As noted above, we are finalizing the definition of ''rural emergency hospital'' as proposed. For the reasons explained in the following responses to public comments, we are not finalizing our proposal to establish an exception at § 411.356(c)(4) for ownership or investment in an REH.

Comment: Several commenters strongly objected to the establishment of the REH exception and urged CMS not to finalize the exception at all or without modification. The commenters were particularly concerned that the REH exception would not protect against the specific types of patient and program abuse that the physician self-referral law is intended to deter, including overutilization, mis-utilization, and patient steering to lower quality, higher cost, or less convenient services. One of these commenters suggested that the exception, if finalized, could actually worsen problems with access to the full range of necessary care in rural areas because CAHs and small rural hospitals may abandon inpatient services in favor of higher Medicare reimbursement and potential physician-owner control over referrals for designated health services if they convert to an REH. This commenter, along with others, highlighted the potential impact of financial self-interest on medical decision-making by physicians who invest in REHs.

Some of the commenters that urged CMS not to finalize the REH exception raised concerns regarding the adequacy of the program integrity protections of the proposed REH exception. These commenters asserted that the REH exception, as proposed, falls outside the Secretary's authority under section 1877(b)(4) of the Act to establish regulatory exceptions only for financial relationships that do not pose a risk of program or patient abuse. The commenters disagreed with our rationale for not including certain of the program integrity requirements imposed on hospitals that use the whole hospital and rural provider exceptions, and opined that the proposed exception would impose less of a burden on REHs than the whole hospital and rural provider exceptions pose for physician ownership or investment in hospitals. One of the commenters maintained that, when relying on the authority provided in section 1877(b)(4) of the Act, CMS should not create an exception for ownership or investment in an REH with requirements that are less rigorous than those set forth by the Congress for the type of entity from which the REH converted. This commenter urged that, if CMS adopts an REH-specific exception for physician ownership or investment, we should include in the final exception all requirements applicable to physician ownership or investment in hospitals under the whole hospital and rural provider exceptions, including prohibitions on facility expansion, transparency requirements, and patient safety requirements. This recommendation was endorsed by other commenters. None of the commenters suggested potential program integrity requirements alternative to the existing requirements in the statute and our regulations applicable to physician ownership or investment in hospitals, although some noted that the REH exception as proposed would not prevent physician-owned REHs from limiting the services they offer to those most likely to be highly reimbursed or profitable (''cherry-picking''), choosing not to offer less profitable services or treat sicker and costlier patients (''lemon dropping''), and engaging in other behaviors that would have negative effects on care for beneficiaries in rural areas. Despite their opposition to the REH-specific exception for ownership or investment in an REH, the commenters did not object to CMS treating REHs as ''hospitals'' for purposes of the physician self-referral law instead of finalizing the proposed REH exception.

Response: After reviewing comments on a broad array of proposed REH policies, including comments on the physician self-referral law proposals, we are persuaded that financial relationships permitted under the REH exception, as it was proposed, may present a risk of patient or program abuse. As we noted in the CY 2023 OPPS/ASC proposed rule, REHs may provide a broad range of outpatient services, including various types of designated health services. As one of the commenters suggested, the lure of financial reward from referrals for highly-reimbursed or profitable services could influence the medical decision-making of an REH's physician owners and investors. In light of the flexibilities afforded REHs under the payment and other policies set forth in this final rule with comment period, we agree with the commenters that the potential for cherry-picking and lemon-dropping, as well as other harms the physician self-referral law aims to deter, may persist in the REH context, particularly for REHs with service areas that include a mix of rural and urban areas. We share the commenters' concerns that the ability to capture the referrals of physician owners or investors may provide an incentive for existing CAHs and small rural hospitals that are economically capable of sustaining inpatient beds to nonetheless convert to REHs and avoid

the physician self-referral law's more stringent requirements for hospitals.

Any exception to the physician self-referral law established by the Secretary under section 1877(b)(4) of the Act that permits physician ownership or investment in REHs must include sufficient program integrity requirements to ensure that such ownership or investment interests do not pose a risk of program or patient abuse. After reviewing the comments on the CY 2023 OPPS/ASC proposed rule, we believe that the REH exception—as proposed—may not meet the requirement of section 1877(b)(4) of the Act that the physician ownership or investment interests it would permit do not pose no risk of patient or program abuse. We considered the comments that encouraged CMS to include existing requirements for physician-owned hospitals in any final REH exception. We decline to do so because we continue to believe that certain of the requirements that are currently applicable to hospitals, such as the limitation on expansion of the aggregate number of operating rooms, procedure rooms, and beds for which the hospital was licensed on March 23, 2010, are not suitable for application to REHs. Commenters did not suggest alternative program integrity criteria that, if included in the exception, would satisfy the statutory requirement that permitted financial relationships do not pose a risk of program or patient abuse. Therefore, we are not finalizing the proposed REH exception at this time.

Because they are not ''hospitals,'' REHs located in rural areas, as defined in § 411.351, may use the rural provider exception in section 1877(d)(2) of the Act and codified at § 411.356(c)(1), without application of the additional requirements for hospitals in § 411.362. As set forth in statute and incorporated into our regulations without additional requirements, the rural provider exception is available to entities located in rural areas and has only one substantive requirement. Specifically, the entity must furnish substantially all (not less than 75 percent) of the designated health services it provides to residents of rural areas. We emphasize that the ''substantially all'' requirement at § 411.356(c)(1) applies only to designated health services furnished by an entity. As applied to an REH, this means that the REH must furnish not less than 75 percent of the designated health services that it furnishes (such as radiology and other imaging services) to residents of a rural area, but would not need to monitor the residence of patients to whom it provides any services that are not considered designated health services under § 411.351.

In the proposed rule, we recognized that monitoring the residence of beneficiaries receiving designated health services could be burdensome for REHs. Even so, we believe that REHs that are located in rural areas and primarily serve beneficiaries who reside in rural areas will have no difficulty meeting this threshold. The monitoring burden would most likely be limited to REHs that are located in rural areas but have service areas that encompass urban areas as well. As described in section XXIV.G and H of this CY 2023 OPPS/ASC final rule with comment period, we expect only a limited number of CAHs and small rural hospitals will convert to REHs; therefore, any monitoring burden under the rural provider exception would be limited to only those few REHs located in rural areas but that have service areas that encompass urban areas.

Comment: Several commenters offered general support permitting physician ownership of REHs, but did not address specific provisions of the proposal. Some commenters that supported the proposed REH exception recognized the need for program integrity protections in exceptions to the physician self-referral law. None of the commenters expressly addressed whether the requirements of the proposed REH exception are sufficient to ensure that physician ownership or investment in an REH would not pose a risk of program or patient abuse.

Response: We appreciate the commenters' support of policies designed to promote access to care in underserved rural areas. However, based on the concerns raised by other commenters, which were not addressed by the commenters that supported the proposal to establish an exception for ownership or investment in an REH, we are not finalizing the proposed exception. As explained in the response to the previous comment, the rural provider exception remains available to most, if not all, REHs.

Applicability of Certain Exceptions in § 411.357 for Compensation Arrangements Involving REHs

Section 1877(e) of the Act and § 411.357 set forth exceptions to the physician self-referral law's referral and billing prohibitions for compensation arrangements between entities and physicians (or immediate family members of physicians) that satisfy all requirements of the exception. Some of these exceptions apply only to specified types of compensation, specified types of entities, or both. The exceptions in § 411.357 that are applicable only to compensation arrangements to which one party is a hospital, federally qualified health center, or rural health clinic would not be available to an REH because it is not a hospital under section 1861(e) of the Act or our regulations at § 411.351. We believe that many of these party-limited exceptions could be important to ensuring access to necessary designated health services and other care furnished by an REH. Therefore, using the Secretary's authority under section 1877(b)(4) of the Act, we proposed to revise the exceptions at § 411.357(e), (r), (t), (v), (x), and (y) to make them applicable to compensation arrangements to which an REH is a party.

The existing exceptions for physician recruitment (§ 411.357(e)), obstetrical malpractice insurance subsidies (§ 411.357(r)), retention payments in underserved areas (§ 411.357(t)), and assistance to compensate a nonphysician practitioner (§ 411.357(x)) are available to hospitals, federally qualified health centers, and rural health clinics. We proposed to revise these exceptions to also permit an REH to provide remuneration to a physician if all requirements of the applicable exception are satisfied because we believe that REHs will face the same challenges as hospitals, federally qualified health centers, and rural health clinics in recruiting and retaining qualified physicians and other practitioners in their service areas. Consistent with our rationale when expanding the statutory exception for physician recruitment to federally qualified health centers (69 FR 16095), we proposed the extension of these exceptions to REHs to help ensure that the physician self-referral law does not impede efforts by REHs, which will provide substantial services to underserved populations, to recruit, assist with the recruitment of, and retain adequate staffs. We do not believe that a compensation arrangement between an REH and a physician (or an immediate family member of a physician) that is properly structured to satisfy all the requirements of these exceptions would pose a risk of program or patient abuse. We also proposed a technical amendment at proposed § 411.357(t)(5) to cross-reference the definition of the geographic area served by a federally qualified health center or rural health clinic that was previously omitted from this paragraph. As proposed, the cross-referenced definition would also apply to REHs under this proposal.

The existing exception for electronic prescribing items and services at

§ 411.357(v) is available only to hospitals, group practices that meet the requirements in § 411.352, PDP sponsors, and MA organizations and applies to hardware, software, or information technology and training services necessary and used solely to receive and transmit electronic prescription information that is provided to physicians specified in the regulation. For the reasons set forth in the proposed rule and many of our prior rulemakings regarding the benefits of electronic prescribing, we believe that allowing REHs to use the exception at § 411.357(v) would advance our goals to expand the use of electronic prescribing. We do not believe that a compensation arrangement between an REH and a physician (or an immediate family member of a physician) that is properly structured to satisfy all the requirements of the exception would pose a risk of program or patient abuse.

The existing exception for timeshare arrangements at § 411.357(y) is available only to hospitals and certain physician organizations (as defined in § 411.351) and applies to arrangements for the use of premises, equipment, personnel, items, supplies, and services. One of the underlying policy considerations for establishing this exception was to facilitate access to care in rural and other underserved areas (80 FR 71326). We believe that timeshare arrangements between REHs and physicians (or physician organizations in whose shoes such physicians stand under § 411.354(c)) may similarly increase access to necessary care for patients in underserved areas, and that it would be appropriate to extend the availability of the exception for timeshare arrangements to REHs. We do not believe that a compensation arrangement between an REH and a physician (or an immediate family member of a physician) that is properly structured to satisfy all the requirements of the exception would pose a risk of program or patient abuse.

We are finalizing without modification our proposal to revise the exceptions at § 411.357(e), (r), (t), (v), (x), and (y) to make them applicable to compensation arrangements to which an REH is a party. Our responses to the public comments we received on these proposals are below.

Comment: A few commenters addressed the proposed changes to the exceptions at § 411.357(e), (r), (t), (v), (x), and (y) that would make these exceptions applicable to compensation arrangements involving REHs. These commenters generally supported the proposed revisions to the exceptions. No commenters identified any concerns related to the proposed revisions, despite specific requests for comments regarding the need for an REH to recruit physicians to establish or join a medical practice in the geographic area served by the REH (and how to define such a service area), provide assistance to compensate a nonphysician practitioner, or offer obstetrical malpractice insurance subsidies.

Response: As we stated in the proposed rule, we believe that many of the party-limited exceptions could be important to ensuring access to necessary designated health services and other care furnished by an REH, as well as advance our goals to expand the use of electronic prescribing and the adoption of electronic health records. We remind parties that all requirements of an applicable exception must be satisfied to avoid the referral and billing prohibitions of the physician self-referral law. We do not believe that making the exceptions at § 411.357(e), (r), (t), (v), (x), and (y) available to compensation arrangements involving REHs would pose a risk of program or patient abuse, and we are finalizing the revisions to the noted exceptions as proposed.

Revised Cross-Reference in Definition of ''Rural Area'' for Purposes of the Physician Self-Referral Law

As discussed in section XVIII.E of this final rule with comment period, the rural provider exception applies to designated health services furnished in a rural area. Section 1877(d)(2) of the Act defines ''rural area'' by reference to section 1886(d)(2)(D) of the Act. In the 1992 proposed rule, we proposed to define ''rural area'' as an area that is not an ''urban area,'' as the term is the term is defined at § 412.62(f)(1)(ii) (57 FR 8598). Section 412.62 established the Federal rates for inpatient operating costs for fiscal year 1984. We finalized the definition of ''rural area,'' including the reference § 412.62(f)(1)(ii), in the 1995 final rule (60 FR 41980). In the FY 2005 IPPS final rule, CMS revised the definitions of urban and rural areas based on OMB's revised standards for defining Metropolitan Statistical Areas (MSAs) (69 FR 49077). The revised definitions of urban and rural areas were codified at § 412.64(b). Section 412.64 establishes Federal rates for inpatient operating costs for Federal fiscal year 2005 and subsequent fiscal years. Despite the revised definition of rural and urban areas in the FY 2005 IPPS final rule, the definition of ''rural area'' as codified in § 411.351 for purposes of the physician self-referral law was never updated to reflect OMB's revised standards for defining MSAs. As a consequence, the current definition of ''rural area'' in § 411.351 includes, by reference to § 412.62(f)(1)(ii), terminology that is no longer employed by OMB, such as ''New England County Metropolitan Area (NECMA)'' (see, for example, 65 FR 51065). To ensure that the definition of ''rural area'' for purposes of the physician self-referral law is aligned with CMS' updated definitions of rural and urban areas at § 412.64 and takes into account OMB's revised standards for defining MSAs, we proposed to modify the definition of ''rural area'' in § 411.351 to reference § 412.64(b) instead of § 412.62(f). Specifically, we proposed to define ''rural area'' as an area that is not an urban area as defined at § 412.64(b) of this chapter. We believe that this technical change will have no effect on the entities that qualify as ''rural providers'' under § 411.356(c)(1). We solicited comment on this proposal.

We did not receive any public comments on our proposal. We are finalizing without modification the proposed technical change to the definition of ''rural area'' at § 411.351.

XIX. Request for Information on Use of CMS Data to Drive Competition in Healthcare Marketplaces

In the CY 2023 OPPS/ASC proposed rule (87 FR 44800 through 44802), we included a Request for Information (RFI) related to the use of CMS data to drive competition in healthcare marketplaces. We received approximately 21 timely pieces of correspondence that were submitted in response to the Competition RFI questions. Additionally, we received 180 pieces of correspondence (176 of the 180 submissions were form letters) related to CMS' hospital price transparency efforts and its role in driving competition, generally. We thank all interested parties for their comments and will take them into consideration in the future.

XX. Addition of a New Service Category for Hospital Outpatient Department (OPD) Prior Authorization Process

A. Background

In the CY 2020 OPPS/ASC final rule with comment period, we established a prior authorization process for certain hospital OPD services (84 FR 61142, 61446 through 61456) using our authority under section 1833(t)(2)(F) of the Act, which allows the Secretary to develop ''a method for controlling unnecessary increases in the volume of covered OPD services.'' [321] As part of the CY 2021 OPPS/ASC final rule with

[321] See also correction notification issued January 3, 2020 (85 FR 224).

comment period, we added two additional service categories to the prior authorization process for certain hospital OPD services (85 FR 85866, 86236 through 86248). The regulations governing the prior authorization process for certain hospital OPD services are located in subpart I of 42 CFR part 419, specifically at §§ 419.80 through 419.89, with the specific service categories listed in § 419.83.

Paragraph (a)(1) of § 419.83 lists the specific service categories for which prior authorization must be obtained for service dates on or after July 1, 2020, which are: (i) Blepharoplasty; (ii) Botulinum toxin injections; (iii) Panniculectomy; (iv) Rhinoplasty; and (v) Vein ablation. Paragraph (a)(2) of § 419.83 lists two additional service categories for which prior authorization must be obtained for service dates on or after July 1, 2021, which are: (i) Cervical Fusion with Disc Removal; and (ii) Implanted Spinal Neurostimulators. Paragraph (b) states that CMS will adopt the list of hospital outpatient department service categories requiring prior authorization and any updates or geographic restrictions through formal notice-and-comment rulemaking. Additionally, paragraph (c) describes the circumstances under which CMS may elect to exempt a provider from the prior authorization process, and paragraph (d) states that CMS may suspend the prior authorization process generally or for a particular service at any time by issuing a notification on the CMS website.

B. Controlling Unnecessary Increases in the Volume of Covered OPD Services

1. Addition of a New Service Category

In accordance with § 419.83(b), we proposed to require prior authorization for a new service category: Facet Joint Interventions. We proposed adding the new service category at § 419.83(a)(3). We also proposed that the prior authorization process for this additional service category would be effective for dates of services on or after March 1, 2023. As explained more fully below, the proposed addition of this service category is consistent with our authority under section 1833(t)(2)(F) of the Act and is based upon our determination that there has been an unnecessary increase in the volume of these services. Because we proposed that prior authorization would be required for this service category at a later date than for the first seven service categories, we proposed to revise paragraph (a)(3) to include this new service category and reflect the March 1, 2023 implementation date for the prior authorization requirement for this additional service category. Specifically, we proposed that paragraph (a)(3) would read, ''[t]he Facet Joint Interventions service category requires prior authorization beginning for service dates on or after March 1, 2023.'' We also proposed that existing paragraph (a)(3) be moved to paragraph (b), and that paragraph (b) be revised by modifying the heading to read, ''Adoption of the list of services and technical updates.'' We also proposed to re-designate the current paragraph (b) as paragraph (b)(1). We proposed that paragraph (b)(1) would provide that CMS will adopt the list of hospital outpatient department service categories requiring prior authorization and any updates or geographic restrictions through formal notice-and-comment rulemaking. We proposed that current paragraph (a)(3) would be moved to new paragraph (b)(2) and provide that technical updates to the list of services, such as changes to the name of the service or CPT code, will be published on the CMS website.

We proposed that the Facet joint interventions service category would consist of facet joint injections, medial branch blocks, and facet joint nerve destruction. Facet joint injections are procedures in which a practitioner injects medication into the facet joints (the connections between the bones of the spine) to help diagnose the cause and location of pain and also to provide pain relief. Medial branch block is a procedure in which a medication is injected near the medial branch nerve connected to a specific facet joint to achieve pain relief. Facet joint nerve destruction (also known as nerve denervation) is a procedure that uses heat to destroy the small area of the facet joint nerve for pain management.

We proposed that the list of proposed additional OPD services in the Facet joint interventions service category that would require prior authorization beginning on March 1, 2023, are those identified by the CPT codes in Table 103. For ease of review and brevity, we only included in the regulation text in proposed new § 419.83(a)(3) the name of the service category, but not the CPT codes that fall into that service category, which are listed in Table 103. Note that this is the same approach we took in establishing the initial five service categories in § 419.83(a)(1) and two additional service categories in § 419.83(a)(2). Again, we proposed that the prior authorization process for the proposed additional service category would be effective for dates of service on or after March 1, 2023. We proposed an effective date slightly earlier in the calendar year (compared to July 1, 2020, and July 1, 2021, effective dates for the service categories previously added to the prior authorization regulation) because Medicare Contractors, CMS, and the OPD providers already have knowledge of and experience with the prior authorization process. Also, this new service category can be performed by some of the same provider types who furnish other services currently subject to the OPD prior authorization process, such as implanted spinal neurostimulators and cervical fusion with disc removal.

2. Basis for Adding a New Service Category

As part of our responsibility to protect the Medicare Trust Funds, we noted in the proposed rule that we continue our routine analysis of data associated with all aspects of the Medicare program. This responsibility includes monitoring the total amount or types of claims submitted by providers and suppliers; analyzing the claims data to assess the growth in the number of claims submitted over time (for example, monthly and annually, among other intervals); and conducting comparisons of the data with other relevant data, such as the total number of Medicare beneficiaries served by providers, to help ensure the continued appropriateness of payment for services furnished in the hospital OPD setting.

In the proposed rule, we noted that we reviewed approximately 1 billion claims related to OPD services during the 10-year period from 2012 through 2021. We determined that the overall rate of OPD claims submitted for payment to the Medicare program increased each year by an average rate of 0.6 percent. This equated to an increase from approximately 105 million OPD claims submitted for payment in 2012 to approximately 111 million claims submitted for payment in 2021. The 0.6 percent rate reflects a decrease when compared to the 2.8 percent rate identified in the CY 2021 OPPS/ASC proposed rule when we looked at the period from 2007 through 2018. Our analysis also showed an average annual rate-of-increase in the Medicare allowed amount (the amount that Medicare would pay for services regardless of external variables, such as beneficiary plan differences, deductibles, and appeals) of 4.2 percent. Again, this is a decrease when compared to the 7.8 percent rate identified in the CY 2021 OPPS/ASC proposed rule for a slightly earlier timeframe. The decrease in the average annual increase in the claim volume and allowed amount from the increases

noted in the CY 2021 OPPS/ASC proposed rule is likely due in part to the PHE, as discussed in more detail below. We found that the total Medicare allowed amount for the OPD services claims processed in 2012 was approximately $48 billion and increased to $73 billion in 2021, while during this same 10-year period, the average annual increase in the number of Medicare beneficiaries per year was only 0.4 percent.

In the proposed rule, we noted that our analysis of Integrated Data Repository (IDR) [322] data showed that, with regard to the Facet joint interventions, CPT codes 64490–64495 and 64633–64636, claims volume increased by 47 percent between 2012 and 2021, reflecting a 4 percent average annual increase, which is higher than the 0.6 percent annual increase for all OPD services. For the facet joint injection and medial branch block services, CPT codes 64490–64495, we observed an increase of 27 percent between 2012 and 2021, reflecting a 2.5 percent average annual increase. This reflects an increase from approximately 136,000 claims submitted for payment in 2012 to approximately 173,775 claims submitted for payment in 2021. For the nerve destruction services, CPT codes 64633 through 64636, we observed an increase in volume of 102 percent between 2012 and 2021, which was an average annual increase of 7 percent. This accounts for an increase from approximately 48,000 claims submitted for payment in 2012 to approximately 97,000 claims submitted for payment in 2021. Both the facet joint injections/medial branch block CPT codes and nerve destruction CPT codes, with 2.5 and 7 percent annual increases, respectively, demonstrated higher average annual increases in claim submissions between 2012 and 2021 than the 0.6 percent annual increase for all OPD services over the same time period.

As noted in the proposed rule, when analyzing the data, we took the COVID–19 Public Health Emergency (PHE) into consideration. As a result of the PHE, healthcare use and spending dropped sharply due to cancellations of elective and non-emergency care to increase hospital capacity and social distancing measures to reduce the community spread of the coronavirus. Consequently, the claims data for CY 2020 showed a significant decrease in volume compared to the previous year, which is likely due to the PHE. However, over the 9-year period of our analysis, services for Facet joint interventions demonstrated increases. These volume increases led us to further research the reasons behind them to determine if they were unnecessary.

We also noted in the proposed rule that the Department of Health and Human Services' Office of the Inspector General (OIG) had published multiple reports indicating questionable billing practices, improper Medicare payments, and questionable utilization of Facet joint interventions. An OIG report published in 2020 identified $748,555 in improper payments out of $3.3 million in paid Medicare claims for facet joint injections with an audit period from January 1, 2017, through May 31, 2019. The OIG recommended that CMS and its contractors provide additional oversight on claims for facet joint injections to prevent additional improper payments.[323] In 2021, the OIG published a report on facet denervation procedures. During the audit period from January 2019 through 2020, the OIG reported that Medicare improperly paid physicians $9.5 million for selected facet joint denervation procedures. According to the OIG, these improper payments occurred because CMS's oversight was not adequate to prevent or detect improper payments for selected facet joint denervation procedures.[324] Further, in March 2022, the Department of Justice reported on a $250 million healthcare fraud scheme that took place from 2007 to 2018 involving physicians from multiple states who allegedly subjected their patients to medically unnecessary facet joint injections in order to obtain illegal prescriptions for opioids. The physicians required patients to receive facet joint injections due to their high reimbursement rates.[325] CMS' data analysis and research show that the increases in volume for these procedures are unnecessary, and further program integrity action is warranted.

In the proposed rule, we said that our conclusion that increases in volume for facet joint services are unnecessary was based not only on the data specific to this service category but also on a comparison of the rate of increase for the service category to the overall trends for all OPD services. We noted our belief that comparing the utilization rate for the particular service category to the overall rate of growth for Medicare OPD services generally is an appropriate method for identifying unnecessary increases in volume, particularly where there are no legitimate clinical or coding reasons for the changes. We researched possible causes for the increases in volume that would indicate the services are increasingly necessary, but we did not find any explanations that would cause us to believe that was the case. In the proposed rule, we reaffirmed our belief that prior authorization is an effective mechanism to ensure Medicare beneficiaries receive medically necessary care while protecting the Medicare Trust Funds from unnecessary increases in volume by virtue of improper payments without adding onerous new documentation requirements. A broad program integrity strategy must use a variety of tools to best account for potential fraud, waste, and abuse, including unnecessary increases in volume. We believe prior authorization for these services will be an effective method for controlling unnecessary increases in the volume of these services and expect that it will reduce the instances in which Medicare pays for services that are determined not to be medically necessary. We solicited comments on the addition of this service category and specifically requested comments on the potential for any unintended clinical consequences from the addition of this service category.

We received 69 comments on this proposal, including comments from healthcare providers, professional and trade organizations, and device manufacturers. The following is a summary of the comments we received and our responses.

Comment: We received comments in support of the addition of a new service category to the prior authorization process to ensure the appropriateness of payment for Medicare services.

Response: We appreciate the positive responses on the addition of a new service category to our prior authorization process and agree that prior authorization is an effective method for controlling unnecessary increases in the volume of the new service category.

Comment: Commenters conveyed that prior authorization processes can add burden and costs, unnecessary delays or denials of appropriate care, and directly impact the patient's access to timely proper medical care. Additionally, some commenters stated that prior

[322] The IDR is a high-volume data warehouse integrating Medicare Parts A, B, C, and D, and DME claims, beneficiary and provider data sources, along with ancillary data such as contract information and risk scores. Additional information is available at: *https://www.cms.gov/Research-Statistics-Data-and-Systems/Computer-Data-and-Systems/IDR/index.html.*

authorization is contrary to CMS's Patients Over Paperwork initiative.

Response: We remain fully committed to the agency's initiative to reduce unnecessary burden while still protecting our programs' sustainability by serving as a responsible steward of public funds. We continue to believe that the hospital outpatient department (HOPD) prior authorization process can expand to include additional services without the referenced delays in patient care. We believe that we have structured the prior authorization processes to effectively account for concerns associated with processing timeframes, patient care, and other administrative concerns. We recognize apprehension resulting from problems with prior authorization in other settings related to the burden, cost, and patient access, but as with our other Medicare Fee-For-Service prior authorization processes, we believe that the HOPD prior authorization process for the new Facet joint interventions service category will not have these problems. We have established timeframes for contractors to render decisions on prior authorization requests, as well as an expedited review process when the regular review timeframe could seriously jeopardize the beneficiary's health, which enables hospitals to receive timely provisional affirmations.

Additionally, we note that our prior authorization policy does not create any new documentation requirements. Instead, it requires hospitals to submit the same documents needed to support claim payments, just earlier in the process. Therefore, HOPDs should not need to divert resources from patient care. We note that prior authorization has the added benefit of giving hospitals some assurance of payment for services for which they received a provisional affirmation. In addition, beneficiaries have information regarding coverage prior to receiving the service and benefit from knowing in advance of receiving the service if they will incur financial liability because the service is non-covered. CMS will continue tracking MAC timeliness metrics and is confident that the MACs will continue to meet the required review and decision timeframes to avoid causing an additional burden for HOPDs or delaying medically necessary services.

Comment: Several commenters expressed concern about expanding the program while the COVID–19 public health emergency (PHE) is ongoing, noting that as hospitals return to full operations, CMS may not have the necessary resources to handle the increased volume of prior authorization requests. We received several comments recommending extending the March 1, 2023 implementation date until at least July 1, 2023, consistent with the timeline CMS has used when implementing prior authorization for other service categories so that providers, CMS, and MACs have more time to prepare for the process.

Response: CMS provides necessary resources to the MACs and maintains a robust oversight process to ensure the accuracy and consistency of their review decisions. We are confident that MACs have sufficient resources and the clinical expertise necessary to administer the prior authorization process effectively. Also, no new documentation requirements are created as a result of this process. Instead, currently required documents are submitted earlier in the process.

Although we believe CMS and MACs have sufficient resources to manage additional prior authorization requests, we acknowledge the commenters' concerns about the proposed March 1, 2023, implementation date for the new service category. While we explained in the proposed rule that the effective date for the new service category would be March 1, 2023, because MACs, CMS, and HOPDs already have knowledge of and experience with the prior authorization process, we recognize that all participants would benefit from additional time to prepare for the addition of Facet joint interventions service category to the prior authorization processes. Accordingly, we are finalizing an implementation date for prior authorization for the Facet joint interventions service category of July 1, 2023, which is consistent with previous July 1 implementation dates for current service categories.

Comment: Some commenters specifically said that prior authorization of the Facet joint interventions service category could cause delays in appropriate care and lead patients toward alternative pain relief options like opioids. One commenter stated that Facet joint interventions should not be added as a new category because the services in the proposed category are not cosmetic or elective and are used to treat spinal diagnoses that cannot often be addressed with other procedures or address chronic pain that has been refractory to other conservative treatments.

Response: We thank the commenters for their input. We believe the proposal is in alignment with the Department of Health and Human Services (HHS) Pain Management Best Practices Inter-Agency Task Force Report [326] that encourages Medicare and other payers to provide timely insurance coverage of such procedures. We continue to believe that the 10-day timeframe for obtaining a decision on a prior authorization request is not significant considering that these are non-emergency procedures that require the beneficiary to undergo conservative treatment prior to the procedure. Additionally, providers may request expedited review of a prior authorization request under the regulation at 42 CFR 419.82(c)(2), where the processing of the request must be expedited due to the beneficiary's life, health, or ability to regain maximum function being in jeopardy. We also note that under the regulation at 42 CFR 419.83(c), CMS may elect to exempt a provider from the prior authorization process upon the provider's demonstration of compliance with Medicare coverage, coding, and payment rules.

Commenters are correct that many services in other categories for which we require prior authorization are cosmetic, while services in the Facet joint intervention service category are not. We also acknowledge the benefits that Facet joint intervention services offer for chronic pain. However, we reiterate that these are non-emergency procedures that require the beneficiary to undergo at least 3 months of conservative treatment prior to the procedure. For that reason, these procedures generally are elective.

Comment: Some of the commenters were also concerned the time estimate provided in the proposed rule only considers the time required by the surgeon's clerical staff.

Response: We typically use a clerical staff rate because the documentation being submitted is the same documentation that should be regularly maintained in support of claims submitted for payment. The prior authorization process does not require anything new with regard to documentation. The prior authorization process merely requires the documentation to be provided earlier in the process. With regard to the time burden, we included 3 hours of training in our burden estimate for each provider. During this time, the staff can be educated on the services that require prior authorization under this program and what documentation is needed as part of the prior authorization request. Moreover, we included the 3 hours each year so that new staff can be trained and current staff can have a refresher course.

[326] *https://www.hhs.gov/sites/default/files/pmtf-final-report-2019-05-23.pdf.*

Given that this process does not create any new documentation requirements and merely necessitates the submission of the documentation earlier in the claims process, we believe the amount estimated is appropriate. As we have noted, we have endeavored to minimize the burden associated with this prior authorization process, and this burden is more than outweighed by the need to control unnecessary increases in the volume of these services.

Comment: Some of the commenters stated that the data for the Facet joint interventions service category do not truly represent ''an unnecessary increase in the volume'' of these services and that there could be many reasons for the increase in their utilization. The commenters also questioned the methodologies we used to calculate the percentage increase in utilization of these services. Additionally, some commenters asked CMS to release the MACs' prior authorization data, such as how many HOPDs have achieved the exemption, the accuracy rate for exempt providers, average processing timeframes for initial and resubmission requests, and whether there are any changes in the volume of utilization for the services that are required prior authorization.

Response: We thank the commenters for their input. We continue to believe that comparing the utilization rate for services in the proposed service category to the baseline growth rate for all Medicare HOPD services is an appropriate method for identifying unnecessary increases in volume. After reviewing all possible causes, including questionable billing practices discussed in published in OIG reports, we found no evidence suggesting other plausible reasons for the increases. We believe financial motivation, as opposed to medical necessity reasons, is the most likely cause. With regard to the providers' data, the number of exempt providers varies among MAC jurisdictions. Among all MACs, the average volume of exempt OPD providers is 16.7 percent, with one MAC having as many as 35 percent of OPD providers exempt. While we require the MACs to make decisions within 10 days, the average initial review timeframe is 4.4 days, and the average resubmission review timeframe is 4.3 days. CMS will consider sharing data regarding the changes in the volume of utilization of the HOPD services that require prior authorization. We are unclear what the commenter meant by the accuracy rate for exempt providers, but in order to be exempt, all exempt providers must achieve a provisional affirmation rate threshold of at least 90 percent based on their submitted initial prior authorization requests.

Comment: Several comments asked us to clarify the process for removing and suspending services from the prior authorization requirements.

Response: As stated in paragraph (d), CMS may suspend the prior authorization process requirements generally or for a particular service at any time by issuing a notification on the CMS website. We communicate and collaborate with interested parties, and when notified of a concern with a specific procedure, we research their concerns. Following feedback from providers, in June 2020, we removed CPT code 21235 (obtaining ear cartilage for grafting) from the list of codes that require prior authorization as a condition of payment because it was more commonly associated with procedures unrelated to rhinoplasty that are not likely to be cosmetic in nature. Similarly, after reviewing the claim processing requirements for CPT codes 63685 (insertion or replacement of spinal neurostimulator pulse generator or receiver, direct or inductive coupling) and 63688 (revision or removal of implanted spinal neurostimulator pulse generator or receiver) in response to interested parties' feedback, we temporarily removed them from the list of OPD services that require prior authorization in May 2021. OPD providers are required to submit one prior authorization request either for trial or permanent insertion procedures. CPT codes 63685 and 63688 would only apply to the permanent insertion procedure, and leaving them on the list would cause claim denials if a provider submits a prior authorization request for the trial procedure (CPT 63650) only. In January 2022, after communications with the interested party, we removed CPT 67911 (correction of lid retraction) from the list of codes that require prior authorization because this service commonly occurred secondary to another condition and medical review criteria applicable to the services under blepharoplasty service category do not apply to CPT 67911.

Comment: Some commenters continue to question our policy to require prior authorization for Botulinum toxin injections, implanted neurostimulators, and cervical fusion with disc removal and urge CMS to remove the prior authorization requirement finalized in the CY 2020 and CY 2021 OPPS/ASC final rules with comment for these services.

Response: We thank the commenters for their feedback. Our rationale for subjecting Botulinum toxin injections and implanted neurostimulator and cervical fusion with disc removal to prior authorization that is included in the CY 2020 OPPS/ASC final rule with comment period [327] and CY 2021 OPPS/ASC final rule with comment period,[328] respectively, still applies to the continued prior authorization requirement for these service categories. We refer the commenter to those final rules with comment period for further information about why we believe prior authorization is an effective method to control unnecessary volume increases for these service categories.

Comment: Some commenters suggested that prior authorization is unnecessary and we should use the existing tools, such as Local Coverage Determinations (LCDs) and Articles, to inform providers when services can be used. The commenters do not believe our proposal accounts for them.

Response: LCDs are contractor determinations about whether a particular item or service is covered on a contractor-wide basis in accordance with the ''reasonable and necessary'' standard in section 1862(a)(1) of the Act. Articles are contractor publications that provide relevant coding and billing information. The existence of these documents does not, in and of itself, guarantee compliance with Medicare's coverage requirements. Instead, a broad program integrity strategy must use a variety of tools to reduce overpayments and combat fraud, waste, and abuse. Among other methods, we use prior authorization, prepayment, and postpayment reviews to check for compliance with these policies. Thus, we believe that the use of prior authorization in the HOPD setting is and will continue to be an effective tool in controlling unnecessary increases in the volume of covered HOPD services by ensuring that the correct payments are made for medically necessary HOPD services while at the same time being consistent with our overall strategy of protecting the Medicare Trust Fund from improper payments, reducing the number of Medicare appeals, and improving provider compliance with Medicare program requirements.

Comment: Some commenters continue to question whether section 1833(t)(2)(F) of the Act grants CMS the authority to establish a prior authorization process. They contend that CMS should not add a new service category as the commenters believe we have not demonstrated that increases in the volume of services for which we proposed to require prior authorization are unnecessary and have not shown

[327] See 84 FR 61448–61449.

[328] See 85 FR 86237–86238.

there are no other necessary reasons for the increases in Facet joint interventions.

Response: As we conveyed in the CY 2020 OPPS/ASC and CY 2021 OPPS/ASC final rules with comment period, section 1833(t)(2)(F) of the Act gives us the discretion to determine the appropriate methods to control unnecessary increases in the volume of covered OPD services. We carefully considered all available options in choosing to propose the prior authorization process, which has already been shown to be an effective tool in Medicare Fee-for-Service, and which we believe will be effective at controlling unnecessary increases for Facet joint interventions. Our extensive data analysis included in this year's proposed rule demonstrates that there have been unnecessary increases for this proposed service category and that we did not identify other legitimate reasons for the sustained increases.

Comment: A commenter expressed difficulty dealing with third-party auditors, such as Recovery Auditors, retrospectively denying payment for procedures that were granted prior authorization. The comment also mentions that these reviews and denials create a substantial administrative and financial burden for hospitals.

Response: We agree that, generally, claims receiving a provisional affirmation decision should not be subject to additional medical reviews, including by Recovery Auditors. However, claims may be reviewed by the Comprehensive Error Rate Testing (CERT) contractor if chosen as part of the random sample to calculate the improper payment rate or by the Unified Program Integrity Contractor (UPIC) if there are concerns of fraud, waste, and abuse. We encourage hospitals to contact us with specific examples of postpayment reviews of claims with a provisional affirmation prior authorization decision, so we can investigate further.

Comment: We received comments with concerns that reimbursement should not be withheld when the service performed is different from the one that was originally submitted for prior authorization.

Response: We recognize that sometimes a procedure's necessity could not be anticipated before it was furnished; however, when a service requiring prior authorization as a condition of payment is billed without an affirmation decision, it will be denied. Providers may submit prior authorization requests for multiple potential procedures if they believe that this could be a possibility. It may be best to submit a prior authorization request with several potential service codes; however, providers should be aware that this may result in a partial affirmation decision if the documentation does not support the need for all of the services requested.

Comment: Some commenters recommended that CMS include further guidance or information on what must be included in the proposed prior authorization request for facet joint injections in the final rule and asked CMS to clarify specific methodologies used to calculate the affirmation rate for non-exempt providers and the approval rate for the exempt providers if the Facet joint interventions are added to the prior authorization list. Another commenter asked for further clarification about whether, if the Facet joint intervention receives provisional affirmation, would associated anesthesia care also automatically receive provisional affirmation.

Response: We thank the commenter for the recommendation. As we noted above, our prior authorization policy does not create any new documentation or administrative requirements. Instead, it just requires the same documents that are currently required to be submitted earlier in the process. Medicare contractors will calculate the compliance rate by dividing the total number of initial requests with provisional affirmations by the total number of initial requests for all eight service categories and notify providers with a compliance rate of 90 percent or greater. To calculate the claim approval rate, contractors will divide the total number of approved claims in sample by the total number of the claims in that sample for all eight service categories for exempt providers and notify providers with approval rate of 90 percent or greater. Detailed information on the process of submitting documents in support of the final claim and specifics regarding the calculation of the affirmation and approval rates can be found in subregulatory guidance such as OPD Operational Guide, which is available on the CMS OPD Prior Authorization and Pre-claim Review Initiatives website.[329] A provider's MAC may request additional, optional elements for submission of the prior authorization request. While the associated claim for anesthesia care would follow standard claim review guidelines and does not require prior authorization, in accordance with § 419.82(b)(2), CMS or its contractor may deny a claim that has received a provisional affirmation based on either of the following: (i) Technical requirements that can only be evaluated after the claim has been submitted for formal processing; or (ii) Information not available at the time of a prior authorization request. Additionally, in accordance with § 419.83(b)(3), CMS or its contractor may deny claims for services related to services on the list of hospital outpatient department services for which the provider has received a denial. The codes for the associated services can be found in the table located in Appendix B (OPD PA Part B Associated Codes List) of the Operational Guide.

Comment: One commenter emphasized the need to ensure that review of prior authorization requests for Facet joint interventions service category is conducted by board-certified pain medicine specialists. Some commenters suggested that CMS should explore requiring electronic approvals across all payers, thereby increasing the speed of the prior authorization process and curtailing unnecessary delays in care provision.

Response: In all Medicare Fee-for-Service medical review programs, we require that MACs utilize clinicians, specifically, registered nurses when reviewing medical documentation. We also require the oversight of a Medical Director and additional clinician engagement if necessary. Medical Directors are physicians from different medical specialties, including anesthesiology and pain management. We are confident that MACs have the requisite expertise to review prior authorization requests effectively. We are committed to incorporating automation into our prior authorization processes and recognize the value of automation in shortening the receipt of prior authorization requests and our response time. We recognize that not all providers have the same level of technology and allow various methods of submission of a prior authorization request. With regard to the hospital OPD prior authorization process, the majority of providers so far continue to submit requests and medical information to the MACs via facsimile. Other providers submit the requests through the United States (U.S.) postal service. We also support a variety of electronic mechanisms used by providers in submitting prior authorization requests, including individual MAC portals and CMS's electronic submission of medical documentation (esMD) system. We continue to monitor other Federal and industry initiatives in order to improve

[329] *https://www.cms.gov/research-statistics-data-systems/medicare-fee-service-compliance-programs/prior-authorization-and-pre-claim-review-initiatives/prior-authorization-certain-hospital-outpatient-department-opd-services.*

the efficiency of our prior authorization processes, increase provider willingness to submit requests electronically, reduce provider burden, decrease delays in patient care, and promote high-quality, affordable health care.

In sum, we continue to believe prior authorization is an effective mechanism to ensure Medicare beneficiaries receive medically necessary care while protecting the Medicare Trust Funds from unnecessary increases in volume by virtue of improper payments without adding onerous new documentation requirements. A broad program integrity strategy must use a variety of tools to best account for potential fraud, waste, and abuse, including unnecessary increases in volume. We believe prior authorization for these services will be an effective method for controlling unnecessary increases in the volume of these services and expect that it will reduce the instances in which Medicare pays for services that are determined not to be medically necessary.

After consideration of the public comments we received, we are finalizing our proposal to add the Facet joint interventions service category to the list of hospital outpatient department services requiring prior authorization with modification. In particular, we are finalizing an implementation date for prior authorization for the Facet joint interventions service category of July 1, 2023, rather than the March 1, 2023 implementation date we proposed and making this change in the proposed regulation text at § 419.83(a)(3). Other than this change in the implementation date, we are finalizing the proposed regulation text changes as proposed.

BILLING CODE 4120–01–P

TABLE 103: FINAL LIST OF OUTPATIENT DEPARTMENT SERVICES THAT REQUIRE PRIOR AUTHORIZATION

Beginning for service dates on or after July 1, 2020	
Code	(i) Blepharoplasty, Blepharoptosis Repair, and Brow Ptosis Repair[330]
15820	Blepharoplasty, lower eyelid
15821	Blepharoplasty, lower eyelid; with extensive herniated fat pad
15822	Blepharoplasty, upper eyelid
15823	Blepharoplasty, upper eyelid; with excessive skin weighting down lid
67900	Repair of brow ptosis (supraciliary, mid-forehead or coronal approach)
67901	Repair of blepharoptosis; frontalis muscle technique with suture or other material (eg, banked fascia)
67902	Repair of blepharoptosis; frontalis muscle technique with autologous fascial sling (includes obtaining fascia)
67903	Repair of blepharoptosis; (tarso) levator resection or advancement, internal approach
67904	Repair of blepharoptosis; (tarso) levator resection or advancement, external approach
67906	Repair of blepharoptosis; superior rectus technique with fascial sling (includes obtaining fascia)
67908	Repair of blepharoptosis; conjunctivo-tarso-Muller's muscle-levator resection (eg, Fasanella-Servat type)
Code	(ii) Botulinum Toxin Injection
64612	Chemodenervation of muscle(s); muscle(s) innervated by facial nerve, unilateral (eg, for blepharospasm, hemifacial spasm)
64615	Chemodenervation of muscle(s); muscle(s) innervated by facial, trigeminal, cervical spinal and accessory nerves, bilateral (eg, for chronic migraine)
J0585	Injection, onabotulinumtoxina, 1 unit
J0586	Injection, abobotulinumtoxina, 5 units
J0587	Injection, rimabotulinumtoxinb, 100 units
J0588	Injection, incobotulinumtoxin a, 1 unit

Code	(iii) Panniculectomy, Excision of Excess Skin and Subcutaneous Tissue (Including Lipectomy), and related services
15830	Excision, excessive skin and subcutaneous tissue (includes lipectomy); abdomen, infraumbilical panniculectomy
15847	Excision, excessive skin and subcutaneous tissue (includes lipectomy), abdomen (eg, abdominoplasty) (includes umbilical transposition and fascial plication)
15877	Suction assisted lipectomy; trunk
Code	(iv) Rhinoplasty, and related services[331]
20912	Cartilage graft; nasal septum
21210	Graft, bone; nasal, maxillary or malar areas (includes obtaining graft)
30400	Rhinoplasty, primary; lateral and alar cartilages and/or elevation of nasal tip
30410	Rhinoplasty, primary; complete, external parts including bony pyramid, lateral and alar cartilages, and/or elevation of nasal tip
30420	Rhinoplasty, primary; including major septal repair
30430	Rhinoplasty, secondary; minor revision (small amount of nasal tip work)
30435	Rhinoplasty, secondary; intermediate revision (bony work with osteotomies)
30450	Rhinoplasty, secondary; major revision (nasal tip work and osteotomies)
30460	Rhinoplasty for nasal deformity secondary to congenital cleft lip and/or palate, including columellar lengthening; tip only
30462	Rhinoplasty for nasal deformity secondary to congenital cleft lip and/or palate, including columellar lengthening; tip, septum, osteotomies
30465	Repair of nasal vestibular stenosis (eg, spreader grafting, lateral nasal wall reconstruction)
30520	Septoplasty or submucous resection, with or without cartilage scoring, contouring or replacement with graft
Code	(v) Vein Ablation, and related services
36473	Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, mechanochemical; first vein treated
36474	Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, mechanochemical; subsequent vein(s) treated in a single extremity, each through separate access sites
36475	Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, radiofrequency; first vein treated
36476	Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, radiofrequency; subsequent vein(s) treated in a single extremity, each through separate access sites
36478	Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, laser; first vein treated
36479	Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, laser; subsequent vein(s) treated in a single extremity, each through separate access sites

36482	Endovenous ablation therapy of incompetent vein, extremity, by transcatheter delivery of a chemical adhesive (eg, cyanoacrylate) remote from the access site, inclusive of all imaging guidance and monitoring, percutaneous; first vein treated
36483	Endovenous ablation therapy of incompetent vein, extremity, by transcatheter delivery of a chemical adhesive (eg, cyanoacrylate) remote from the access site, inclusive of all imaging guidance and monitoring, percutaneous; subsequent vein(s) treated in a single extremity, each through separate access sites
Beginning for service dates on or after July 1, 2021	
Code	(i) Cervical Fusion with Disc Removal
22551	Arthrodesis, anterior interbody, including disc space preparation, discectomy, osteophytectomy and decompression of spinal cord and/or nerve roots; cervical below C2
22552	Arthrodesis, anterior interbody, including disc space preparation, discectomy, osteophytectomy and decompression of spinal cord and/or nerve roots; cervical below C2, each additional interspace
Code	(ii) Implanted Spinal Neurostimulators[332]
63650	Percutaneous implantation of neurostimulator electrode array, epidural
Beginning for service dates on or after July 1, 2023	
Code	Facet Joint Interventions
64490	Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), cervical or thoracic; single level
64491	Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), cervical or thoracic; second level
64492	Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), cervical or thoracic; third and any additional level(s)
64493	Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), lumbar or sacral; single level
64494	Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), lumbar or sacral; second level
64495	Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), lumbar or sacral; third and any additional level(s)
64633	Destruction by neurolytic agent, paravertebral facet joint nerve(s), with imaging guidance (fluoroscopy or CT); cervical or thoracic, single facet joint

64634	Destruction by neurolytic agent, paravertebral facet joint nerve(s), with imaging guidance (fluoroscopy or CT); cervical or thoracic, each additional facet joint
64635	Destruction by neurolytic agent, paravertebral facet joint nerve(s), with imaging guidance (fluoroscopy or CT); lumbar or sacral, single facet joint
64636	Destruction by neurolytic agent, paravertebral facet joint nerve(s), with imaging guidance (fluoroscopy or CT); lumbar or sacral, each additional facet joint

BILLING CODE 4120–01–C

XXI. Overall Hospital Quality Star Rating

A. Background

The Overall Hospital Quality Star Rating provides a summary of certain existing hospital quality information based on publicly available quality measure results reported through CMS programs in a way that is simple and easy for patients to understand, by assigning hospitals between one and five stars (85 FR 86193). The Overall Hospital Quality Star Rating was first introduced and reported on our Hospital Compare website in July 2016 [333] (now reported on its successor website at *https://www.medicare.gov/care-compare* and referred to as Care Compare) and has been refreshed multiple times, with the most current refresh planned for 2022.[334] [335] [336] [337] [338] [339] [340] In the CY 2021 OPPS/ASC final rule with comment period (85 FR 86182), we finalized a methodology to calculate the Overall Hospital Quality Star Rating. We refer readers to section XVI (Overall Hospital Quality Star Rating Methodology for Public Release in CY 2021 and Subsequent Years) of the CY 2021 OPPS/ASC final rule with comment period and 42 CFR 412.190 for details.

In the CY 2023 OPPS/ASC proposed rule (87 FR 44807–44809), we: (1) provided information on the previously finalized policy for inclusion of quality measure data from Veterans Health Administration (VHA) hospitals; (2) proposed to amend the language of § 412.190(c) to state that we would use publicly available measure results on Hospital Compare or its successor websites from a quarter within the prior twelve months; and (3) conveyed that although CMS intends to publish Overall Hospital Quality Star Ratings in 2023, we may apply the suppression policy if applicable.

B. Veterans Health Administration Hospitals

In the CY 2021 OPPS/ASC final rule with comment period (85 FR 86197 and 86198), we finalized a policy to include Veterans Health Administration hospitals' (VHA hospitals) quality measure data for the purpose of calculating the Overall Hospital Quality Star Ratings beginning with the 2023 refresh. In that final rule, we also stated that we intended to provide more information about the statistical impact of adding VHA hospitals to the Overall Star Rating and discuss procedural aspects in a future rule (85 FR 48999). Since the publication of the CY 2021 OPPS/ASC final rule, we conducted an internal analysis from February 28, 2022, through March 30, 2022, with measure data from all VHA hospitals in the calculation of the Overall Hospital Quality Star Ratings methodology. The internal analysis included a period of confidential reporting and feedback during which VHA hospitals reviewed their Overall Hospital Quality Star Ratings internal analysis results, and in addition, further familiarized themselves with the Overall Hospital Quality Star Ratings methodology and had the opportunity to ask questions. All VHA hospitals were made aware of the internal analysis and were provided the opportunity to participate. For the internal analysis, the Overall Hospital Quality Star Ratings were calculated using VHA hospital measure data along with subsection (d) hospitals and CAHs. The internal analysis included the same measures used for the April 2021 refresh of Overall Hospital Quality Star Ratings on our public reporting website, Care Compare. At the time of the 2022 VHA internal analysis, VHA hospitals in each peer group reported a similar number of measures when compared to non-VHA hospitals for most measure groups. VHA hospitals in the five-measure group peer group reported a lower median number of Safety and Readmission measures. VHA hospitals in all three peer groups reported fewer measures in the Timely and Effective Care measure group. The measurement periods for VHA and non-VHA hospitals were the same, except for the HAI–1, HAI–2, PSI 04, PSI 90, and OP–22 measures. The specific performance periods for these measures were provided to VHA hospitals during the internal analysis. The reasons for the differing measure reporting periods are:

- The HAI–1 and HAI–2 measures were first publicly reported for VHA hospitals in July 2021, but only included one quarter of measure data. Therefore, we chose to use the next public reporting, April 2022, which included four quarters of these measures' data.
- For the PSI 04 and PSI 90 measures, we used measure data that were publicly reported in July 2021. VHA hospitals first publicly reported these measures in October 2020; however, a different software was used for the measure calculations than the software used to calculate subsection (d) hospitals and CAHs measure data. We

[330] CPT 67911 (Correction of lid retraction) was removed on January 7, 2022.

[331] CPT 21235 (Obtaining ear cartilage for grafting) was removed on June 10, 2020.

[332] CPT codes 63685 (Insertion or replacement of spinal neurostimulator pulse generator or receiver) and 63688 (Revision or removal of implanted spinal neurostimulator pulse generator or receiver) were temporarily removed from the list of OPD services that require prior authorization, as finalized in the CY 2021 OPPS/ASC final rule comment period.

chose to use measure data publicly reported in 2021 for better comparison.

- For the OP–22 measure, VHA hospitals began submitting their measure data in January 2021 for public reporting.
- For the HIP/KNEE measures (total hip arthroplasty (THA) and total knee arthroplasty (TKA)), we used measure data that were publicly reported in October 2020. These data did not initially include VHA hospitals, so we recalculated to include them. The recalculated results including VHA hospitals was not publicly reported until July 2021.

Using these data from the internal analysis, we compared 2021 Overall Hospital Quality Star Ratings scores for non-VHA hospitals before and after adding VHA hospitals to Overall Hospital Quality Star Ratings. 119 out of 171 VHA hospitals met the requirements to receive a Star Rating. This increased the number of hospitals receiving a star rating from 3,355 to 3,474. The distribution of Star Ratings was nearly identical for VHA and non-VHA hospitals. As part of the Overall Hospital Quality Star Ratings methodology, hospitals are assigned to peer groups based on the number of measure groups with at least three measures. Peer group assignments were similar across VHA and non-VHA hospitals. In Peer Group 3, assignments were 12 percent VHA vs. 10 percent non-VHA; in Peer Group 4, assignments were 25 percent VHA vs. 16 percent non-VHA; and in Peer Group 5, assignments were 63 percent VHA vs. 74 percent non-VHA). 3,119 (93 percent) non-VHA hospitals maintained the same number of stars after adding VHA hospitals to 2021 Overall Hospital Quality Star Ratings. For the 236 non-VHA hospitals with a different star rating, 23 gained a star and 213 lost a star. No hospital gained or lost more than one star. As with any update to either the underlying measures or the Overall Hospital Quality Star Ratings methodology, we expect that some hospitals would shift star rating categories. However, for this internal analysis, over 90 percent of non-VHA hospitals did not experience a change in their Overall Hospital Quality Star Ratings score, which is consistent with prior changes to the measures or methodology in our experience. As previously finalized, we intend to include VHA hospitals in future Overall Hospital Quality Star Ratings.

While we did not make any proposals for VA hospital data in the proposed rule, we received some comments, which we are summarizing below.

Comment: A few commenters provided support to include Veterans Health Administration (VHA) hospitals in Overall Star Ratings and one commenter expressed support for providing VHA hospitals with increased access to quality measurement data that they can use to compare to non-VHA hospitals.

Response: We thank commenters for their support of including VHA Hospitals in Overall Star Ratings.

Comment: Some commenters expressed opposition to including VHA hospitals in Overall Star Ratings. A few commenters noted concern about how VHA hospitals and non-VHA hospitals can be meaningfully compared due to a distinct case mix and the differing services that are provided to patients at VHA and non-VHA hospitals. Another commenter noted that the fewer number of measures reported by VHA hospitals, particularly in the Safety and Readmission measure groups, prevents comparability among these measures between VHA and non-VHA hospitals. A commenter stated that including VHA hospitals in Overall Star Ratings may cause confusion for VHA patients who are also Medicare beneficiaries and that including VHA hospitals in Overall Star Ratings may not be the best method of providing VHA quality data. Another commenter expressed concern about how peer grouping was affected when VHA hospitals were added to Overall Star Ratings and suggested phasing the VHA hospitals into Overall Star Ratings over many years to attain increased measure reporting and a less sizeable peer group shift. The commenter also noted that creating cohorts of like facilities is important for Overall Star Ratings and the commenter is concerned about how the integration of VHA hospitals affects the overall goal of peer grouping. Similarly, a commenter suggested another alternative approach to including VHA hospital quality data in Overall Star Ratings by recommending that Critical Access Hospitals and VHA hospitals are assigned to their own peer groups specifically for their hospital types. A few other commenters suggested similar approaches where VHA hospitals would be situated in their own cohort as a result of categorizing hospitals through other types of peer grouping.

Response: We acknowledge commenters' concerns, but we believe it is important for veterans to have information about hospital quality for non-VHA hospitals in addition to VHA hospitals to inform their care decisions. Medicare beneficiaries who are also veterans may choose to seek care outside the VHA system. When we initially considered options for peer grouping in the CY 2021 OPPS/ASC proposed rule (85 FR 49024), we discussed the potential to peer group by hospital characteristics, recognizing that some types of hospitals offer different sets of services. After extensive outreach with our Provider Leadership and Patient & Advocate Workgroups, as well as our Technical Expert Panel, we determined that the best approach to peer grouping was to use measure group count as measure group reporting was closely correlated with hospital type (85 FR 86229). We maintain that VA hospitals should be compared to other hospitals that report similar numbers of measures and we recognize that hospitals may still differ within each peer group regarding the types of services they offer. Additionally, VHA hospital data are already included in individual measure calculations and publicly reported on Care Compare for 15 measures.

While the results of the VHA hospital Star Rating internal analyses demonstrated that VHA hospitals report fewer measures on average, 63 percent of VHA hospitals still reported at least three measures in all five measure groups, which landed them in the five-measure group peer group (87 FR 44808). Many hospitals that report fewer measures than VHA hospitals are included in Overall Star Ratings, and we believe it is important for the public to have access to Overall Star Ratings for as many hospitals as possible, while still adhering to the Overall Star Ratings guiding principles to:

- Use scientifically valid methods that are inclusive of hospitals and measure information and able to accommodate underlying measure changes;
- Align with Care Compare or its successor website and CMS programs;
- Provide transparency of the methods for calculating the Overall Star Rating; and
- Be responsive to stakeholder input.

We also disagree that including Overall Star Ratings scores for VHA hospitals will cause confusion among VHA patients who are also Medicare beneficiaries. Publishing Overall Star Ratings for VHA hospitals will allow dual VHA/Medicare beneficiaries to have more complete information about the quality of care for hospitals in their area and empower them to make health care decisions, in part, based on performance on the underlying Overall Star Ratings measures. In our internal analysis, 3,119 (93 percent) of non-VHA hospitals maintained the same number of stars after adding VHA hospitals to the 2021 Overall Star Ratings (87 FR

44808). As with any update to either the underlying measures or the Overall Hospital Quality Star Ratings methodology, we expect that some hospitals will shift Star Ratings with the addition of peer group members. The small shift in the Overall Star Ratings scores observed with the addition of VHA hospitals is consistent with prior changes to the measures or methodology in our experience. Instead of grouping VHA hospitals separately, incorporating them into Overall Star Ratings allows VHA hospitals to be compared to other hospitals with similar measure group reporting rates.

Comment: One commenter appreciated the VHA impact analysis provided in the CY 2023 OPPS/ASC proposed rule while a few commenters recommended that more detailed information about the VHA impact analysis is shared with stakeholders, specifically focused on how non-VA hospitals will be affected with the inclusion of VHA hospitals.

Response: We thank the commenters for their support of the VHA impact analyses. As part of regular Overall Star Ratings work, we routinely conduct analyses to ensure the continued reliability and validity of Overall Star Ratings. Part of this work will include close monitoring of differences in VHA and non-VHA reporting rates and scores for the 2023 Overall Star Ratings and beyond. If for some reason results would require updates to Overall Star Ratings, we would address this topic through future rulemaking.

Comment: A few commenters provided alternatives to including VHA hospitals in Overall Star Ratings. A few commenters suggested the implementation of a filter on Care Compare where users would choose to include VHA hospitals in the Overall Star Ratings data. Another commenter proposed a similar alternative where VHA hospitals would not receive an Overall Star Rating, but VHA hospitals would still be included in the measure data in order to have access to comparisons between VHA hospitals and non-VHA hospitals.

Response: We thank the commenters for their suggestion and recognize the appeal of being able to tailor Overall Star Ratings to certain types of patients or hospitals. We acknowledge that some individuals or organizations may wish to compare Overall Star Ratings to a very specific group of hospitals, like the VHA, as opposed to all hospitals. However, filtering by VHA versus non-VHA hospitals would pose several implementation and communications challenges that prevent us from incorporating this suggestion. The Overall Star Ratings methodology utilizes a clustering algorithm to assign Overall Star Ratings based on a hospital's performance compared to all other hospitals included in Overall Star Ratings. When a specific group or type of hospital is removed from Overall Star Ratings, the hospitals to which the clustering algorithm is applied to changes and in turn hospitals are compared to different hospitals and some may receive a different Overall Star Rating. As such, adding a filter for VHA hospitals would lead to hospitals having three different Overall Star Ratings scores: (1) Overall Star Ratings for non-VHA hospitals and VHA hospitals when both are included; (2) Overall Star Ratings for non-VHA hospitals only; and (3) Overall Star Ratings for VHA hospitals only. Therefore, the same hospital may appear as 4-star, 3-star, or 5-star depending on which comparison group is selected. We believe that this would be confusing to consumers and hospitals. Moreover, it would also necessitate sending hospitals three different hospital specific reports that may confuse local quality improvement efforts. Lastly, adopting this suggestion may lead to additional requests to filter by other types of hospitals, resulting in an even greater numbers of Star Ratings scores depending on which filter was applied.

Comment: A commenter suggested that the VHA could potentially implement its own Overall Star Ratings program but acknowledged that this alternative likely falls outside of the scope of CMS's Overall Star Ratings Program.

Response: The VHA previously used its own rating system, however, it was discontinued in 2020 as part of a broader effort to support veteran's health access and choice beyond VHA hospitals alone. Approximately 50 percent of veterans enrolled in the VHA healthcare system are eligible for Medicare. The goal of this collaboration between us and the VHA healthcare system is to present the VHA's quality and safety data to veterans, their families, and the public in a useful and understandable format. Section 206(c) of The Veteran's Access, Choice, and Accountability Act of 2014 requires the Secretary of VA to enter into an agreement with the Secretary of HHS to report and make publicly available patient quality and outcome information concerning the VA medical centers.

While we did not make any proposals for VHA hospital data in the proposed rule, we appreciate related stakeholder feedback that we received.

C. Frequency of Publication and Data Used

In the CY 2023 OPPS/ASC proposed rule (87 FR 44807), we proposed to amend our policy regarding the data periods used to refresh Overall Hospital Quality Star Ratings. In the CY 2021 OPPS final rule with comment period, we stated that ''we would use publicly available measure results on Hospital Compare or its successor websites from a quarter within the prior year'' to refresh Overall Hospital Quality Star Ratings (85 FR 86202). As discussed in the CY 2023 OPP/ASC proposed rule, since adopting that policy, it has come to our attention that this wording could be confusing. We intended for the phrase ''within the prior year'' to refer to any time within the prior 12 months, and not to a Care Compare refresh from the prior calendar year. Therefore, we proposed to change § 412.190(c) to provide that the Overall Star Rating are published once annually using data publicly reported on Hospital Compare or its successor website from a quarter within the previous 12 months. For example, for the Overall Hospital Quality Star Ratings in July 2023, we would use any Care Compare refreshes from the previous 12 months: July 2023, April 2023, January 2023, October 2022, or July 2022.

We invited public comments on this proposal.

Comment: A few commenters supported the clarification of data period refreshes in the CY 2023 OPPS/ASC proposed rule. Several commenters expressed that the clarifications of the potential measurement reporting periods for use in Overall Star Ratings would allow for more consistent and timely Overall Star Ratings releases. A few commenters added that Overall Star Ratings being released different months each calendar year was not ideal, and that consistent annual or biannual Overall Star Ratings releases should be considered. Another commenter noted that the unpredictability of Overall Star Rating releases cause difficulty in projecting trends and suggested that CMS release Overall Star Ratings more consistently, specifically the same month each year.

Response: We thank the commenters for their support of our proposal. We would like to reiterate that we are not finalizing a change in the Care Compare refreshes available to use for any given Overall Star Ratings release. Rather, we are specifying the specific Care Compare data that would be available and used for any given Overall Star Ratings release. We intend to release Overall Star Ratings at the same time every year

but need to be able to accommodate unforeseen circumstances.

Comment: A commenter emphasized the importance of informing the public in a timely manner which dataset will be used for a given Overall Star Ratings release in order for providers to optimize their use of the program. A commenter also thought that the ability for Overall Star Ratings releases to utilize the data period simultaneously refreshed that same exact month as outlined in the proposed rule (for example, a July 2023 Overall Star Ratings release can use July 2023 data) does not allow enough advanced notice for providers to first digest the underlying measure results; an intention that was expressed in the CY 2021 OPPS/ASC final rule with comment period. A few commenters recommended that further clarification is provided regarding which data are used for Overall Star Ratings releases. More specifically, a few commenters also stated that the wording of ''previous 12 months'' causes confusion because 1 of 5 individual quarterly refreshes could be used for any given Overall Star Ratings release and 4 quarters is traditionally thought of as one full year.

Response: We appreciate these comments and recognize the importance of providing hospitals and the public with as much notice as possible regarding an upcoming Star Ratings release. We would also like to note that while the regulation allows us to use data from the same month the Star Ratings are released, in practice there is usually at least a 6-month delay between the Care Compare data and when Star Ratings are released. This gap between individual measure refreshes and Overall Star Ratings is intentional and is based upon prior public comment in which stakeholders acknowledged the lack of alignment but noted the benefit of allowing for any Care Compare corrections as well as hospital preparation prior to Overall Star Ratings releases (85 FR 86203). We agree with commenters that the prior language did not make it clear which specific Care Compare refreshes could be used for any Star Ratings release. We would like to acknowledge that the CY 2023 OPPS/ASC proposed rule incorrectly referenced the January 2022 refresh in the example of data that could be used for July 2023 Overall Hospital Quality Star Ratings, when it should have referenced the January 2023 refresh. We believe this contributed to some of the confusion mentioned. We are confirming our interpretation of ''previous 12 months'' to include Care Compare refreshes that occur in either the first or last month of that 12-month period, and any time in between. For example, for a 2023 Overall Star Ratings release there are five data refreshes that can be used: July 2022, October 2022, January 2023, April 2023, and July 2023.

Comment: A commenter expressed that the use of older data (up to a year old) in calculating Overall Star Ratings has the potential to limit its value to hospitals in addition to possibly leading to misunderstandings among patients. Similarly, another commenter stated their belief that the lag between data collection and public availability prevents patients from making timely decisions related to choosing a facility.

Response: We understand the need for data that are as up to date as possible when reporting on quality of care. However, Overall Star Ratings must balance this goal with the fact that Overall Star Ratings include measures with various measurement periods and refresh cycles. Moreover, there are times where we are required to use less recent Care Compare data due to situations where measure scores or programs are compromised due to unforeseen circumstances like the COVID–19 PHE. Historically, Overall Star Ratings were published simultaneously with Care Compare refreshes, however, since the institution of a lag between Care Compare refreshes and Overall Star Ratings releases, such challenges have been fewer or absent.

After consideration of the public comments we received, we are finalizing the proposal as proposed and thank the commenters for their input.

D. Overall Hospital Quality Star Ratings Suppression

During development of the Overall Hospital Quality Star Ratings, we established guiding principles to use methods that are scientifically valid, inclusive of hospitals and measure information, account for the heterogeneity of available measures and hospital reporting, and accommodate changes in the underlying measures (85 FR 86193).[341] Overall Hospital Quality Star Ratings aggregates performance on underlying measures adopted under certain CMS quality programs, so any changes or updates to the measures from those programs are already included (85 FR 86194).[342] We continue to believe that the robustness of Overall Hospital Quality Star Ratings to changes in the underlying measures enables the methodology to maintain validity even when there are changes in the health system or underlying measure data (85 FR 86203 through 86205).

We discussed in the CY 2023 OPPS/ASC proposed rule (87 FR 44807) that we recognize there may be some concerns with publishing Overall Hospital Quality Star Ratings if the underlying measures reflect some aspect of extenuating circumstances, for example, skewed data or performance related to treating patients with COVID–19. However, we want to balance that with providing important quality information to Medicare beneficiaries and the public during times when hospital care is critical. The goal of the Overall Hospital Quality Star Ratings is to summarize hospital quality information in a way that is simple and easy for patients to understand to increase transparency and empower patients to make more informed decisions about their healthcare.

Although Overall Hospital Quality Star Ratings will have been refreshed twice (that is, in 2021 and 2022) since the emergence of COVID–19, almost all measures included in both Overall Hospital Quality Star Ratings refreshes used pre-COVID–19 data to calculate both the 2021 and 2022 Overall Star Ratings. This is because we issued a nationwide Extraordinary Circumstance Exception (ECE) for hospitals and other facilities participating in our quality reporting and value-based purchasing programs in response to the COVID–19 Public Health Emergency (PHE). The ECE can be found at this website: *https://www.cms.gov/files/document/guidance-memo-exceptions-and-extensions-quality-reporting-and-value-based-purchasing-programs.pdf.* Among other requirements, this ECE exempted data reporting requirements for Q1 and Q2 2020 data, including excluding the use of claims data and data collected through the Centers for Disease Control and Prevention's (CDC) National Healthcare Safety Network (NHSN) for this data period.[343] Because the ECE

[342] Centers for Medicare & Medicaid Services. (2017, November). Star Methodology Enhancement for December 2017 Public Release. Retrieved from *www.qualitynet.org*: *https://qualitynet.org/outpatient/public-reporting/overall-ratings/resources.*

[343] CMS, Exceptions and Extensions for Quality Reporting Requirements for Acute Care Hospitals, PPS-Exempt Cancer Hospitals, Inpatient Psychiatric Facilities, Skilled Nursing Facilities, Home Health Agencies, Hospices, Inpatient Rehabilitation Facilities, Long-Term Care Hospitals, Ambulatory Surgical Centers, Renal Dialysis Facilities, and MIPS Eligible Clinicians Affected by COVID–19 (Mar. 27, 2020), *https://www.cms.gov/files/document/guidance-memo-exceptions-and-extensions-quality-reporting-and-value-based-purchasing-programs.pdf.*

only applied through Q2 2020, beginning July 1, 2020, any subsequent measure data collected from these programs would be incorporated into the Overall Hospital Quality Star Ratings. This would include measurement periods that are either partially or fully concurrent with the COVID–19 PHE.

If a measure is considered valid and reliable enough to be reported on Care Compare then it meets the criteria to be included in Overall Hospital Quality Star Ratings calculations (85 FR 86193 through 86236). This remains true even for measures that were suppressed in certain pay-for-performance programs due to the impact of COVID–19 (86 FR 45301 through 45304). Consistent with this policy, we will continue to include measures in the Overall Hospital Quality Star Ratings that might have been suppressed in the Hospital Value-Based Purchasing, Hospital-Acquired Condition Reduction, and Hospital Readmissions Reduction Programs but are still publicly reported (86 FR 44778 through 44779).

In the CY 2021 OPPS/ASC final rule with comment period (85 FR 48996 through 49027), we finalized that we will allow for suppression, but only in limited circumstances. Specifically, for the Overall Hospital Quality Star Rating beginning with the CY 2021 and for subsequent years, we adopted a policy that we would consider suppressing the Overall Star Rating only under extenuating circumstances that affect numerous hospitals (as in, not an individualized or localized issue) as determined by CMS or when CMS is at fault, including but not limited to when—

There is an Overall Star Rating calculation error by CMS;

There is a systemic error at the CMS quality program level that substantively affects the Overall Hospital Star Rating calculation. For example, there is a CMS quality program level error for one or more measures included within the Overall Star Rating due to incorrect data processing or measure calculations that affects a substantial number of hospitals reporting those measures. We note that we would strive to first correct systemic errors at the program level per program policies and then recalculate the Overall Star Rating, if possible; or

A Public Health Emergency substantially affects the underlying measure data.

This is codified at § 412.190(f)(1). Although we intend to publish the Overall Hospital Quality Star Rating in 2023, we may exercise the authority described above should the COVID–19 PHE substantially affect the underlying measure data.

While we did not make any proposals in this section, we are summarizing comments received below.

Comment: A few commenters noted appreciation for CMS's clarification of the potential circumstances that could warrant suppression of Overall Star Ratings, particularly in the case of a PHE that ''substantially affects the underlying measure data'' (87 FR 44809). A commenter further expressed their support for CMS's acknowledgement that programs should not be negatively affected by factors unrelated to quality of care provided.

Response: We thank commenters for their support regarding the potential suppression of 2023 Overall Star Ratings in the case of a PHE that ''substantially affects the underlying measure data'' (87 FR 44809).

Comment: A few commenters expressed approval of the language to enable CMS to suppress the Overall Star Ratings when appropriate. Another commenter voiced support of Overall Star Ratings suppression if the impact of COVID–19 significantly affects quality measurement. Multiple commenters requested continued transparency in any future impacts to Overall Star Ratings and one commenter sought further clarification on circumstances where suppression of Overall Star Ratings would be appropriate.

Response: We thank the commenters for their input on the potential suppression of 2023 Overall Star Ratings. We will continue to evaluate the impacts of COVID–19 and the PHE on 2023 Overall Star Ratings and maintain transparency regarding the results. If future data continue to be significantly affected by COVID–19 and the PHE, we will consider exercising the suppression policy to suppress 2023 Overall Star Ratings. We will continue to assess changes in our methodology to improve its robustness and in the future continue to communicate when suppression of Overall Star Ratings may be necessary.

Comment: A commenter expressed the importance of analyzing measures and policies in Medicare that are tied to payment and publicly reported programs given the impact of the COVID–19 pandemic on measures in terms of data suppression and measure reliability.

Response: We agree with the commenter on the importance of continuing to analyze the data, and we continue to assess the impact of the COVID–19 pandemic on quality measures that are tied to payment and publicly reported programs. Different policies have long had impact on healthcare delivery and could impact individual measure score data or calculations. We conduct regular reevaluation of measures as well as ongoing stakeholder engagement for individual measures to support reporting. While Overall Star Ratings are calculated using measure scores publicly reported on Care Compare, Overall Star Ratings does not separately modify measures to further adjust for patient or hospital-level factors. We will continue to conduct analyses examining the reliability and validity of 2023 Overall Star Ratings and we reserve the right to suppress them.

Comment: Several commenters emphasized the importance of CMS transparency related to impacts of COVID–19 on Overall Star Ratings if Overall Star Ratings are released in 2023. More specifically, a few commenters suggested that alongside 2023 Overall Star Ratings, data be provided that demonstrates exact COVID–19 impacts to the Ratings, such as the number of hospitals that no longer meet the minimum threshold to receive an Overall Star Rating, or the number of hospitals that have reduced measurement periods available due to COVID–19 impact, emphasizing reliability concerns. The commenters also suggested that if that Overall Star Ratings are published in 2023, it would be important to gather feedback from beneficiaries about their interpretation of the impact of COVID–19 on Overall Star Ratings to better understand the patient perspective in this context. A commenter expressed concern about how CMS will determine whether underlying measure data are ''substantially affected'' to warrant suppression of Overall Star Ratings. The commenter suggested that an analysis to show this effect on Overall Star Ratings is communicated through stakeholder engagement efforts. The commenter emphasized that beneficiaries are still interested in accessing hospital performance data provided through the Overall Star Ratings program during the COIVD–19 pandemic.

Response: We did not propose to publicly post detailed analyses on the COVID–19 impact on Care Compare and are not planning to do so. Should we discover that the impact of COVID–19 on the underlying measures meets the suppression criteria, then we will suppress 2023 Overall Star Ratings.

Comment: Multiple commenters conveyed the importance of reviewing the suppression policy and understanding the effects of the COVID–19 PHE on data prior to making a final decision on 2023 Overall Star Ratings.

One commenter opposed suppression of 2023 Overall Star Ratings, suggesting instead that the methodology mature to withstand adverse events, such as public health emergencies. A few commenters disagreed with the approach to include quality measures in Overall Star Ratings that are suppressed for payment programs but still reported on Care Compare. One of the commenters believed that the misalignment of quality measures reported for payment programs and Care Compare will cause confusion and warrants suppression of the 2023 Overall Star Ratings.

Response: We understand that there may be confusion regarding the decision to include quality measures that are reported on Care Compare but suppressed in payment programs. However, as stated in the CY 2021 OPPS final rule (85 FR 86195), the goal of Overall Star Ratings is to include measures that ''are publicly reported on Hospital Compare or its successor websites.'' Overall Star Ratings are meant to be a consumer-friendly tool that summarizes measure scores reported on Care Compare, and as such do not take into consideration the status of these measures in payment programs. Since the inception of Overall Star Ratings, many measures not included in payment programs, such as the Hospital Value-Based Purchasing or Hospital Readmissions Reduction Programs, have been publicly reported as part of the Hospital Inpatient Quality Reporting or Outpatient Quality Reporting Programs on Care Compare, and have been included in Overall Star Ratings based on Technical Expert input and Work Group input. The primary goal of the Overall Star Rating is to ''use an established, evidence-based statistical approach to summarize hospital quality measure results reported on Care Compare'' (85 FR 86194). Thus, measures that are reported on Care Compare will continue to be included in Overall Star Ratings, even if they have been suppressed in payment programs.

While we did not make any proposals for the suppression of Overall Star Ratings in the proposed rule, we appreciate related stakeholder feedback that we received.

XXII. Finalization of Certain COVID–19 Interim Final Rules With Comment Period Provisions

A. Medicare and Medicaid Programs; Policy and Regulatory Revisions in Response to the COVID–19 Public Health Emergency (CMS–1744–IFC)

In this final rule with comment, we are responding to public comments and stating our final policies for certain provisions in the IFC titled ''Medicare and Medicaid Programs; Policy and Regulatory Revisions in Response to the COVID–19 Public Health Emergency'' (CMS–1744–IFC), which appeared in the April 6, 2020 **Federal Register** (85 FR 19230; hereinafter referred to as the April 6, 2020 IFC).

1. Inpatient Hospital Services Furnished Under Arrangements Outside the Hospital During the Public Health Emergency (PHE) for the COVID–19 Pandemic

For purposes of Medicare payment, section 1861(b) of the Act defines inpatient hospital services in part as the following items and services furnished to an inpatient of a hospital and (except as provided in paragraph (3)) by the hospital: (1) bed and board; (2) such nursing services and other related services, such use of hospital facilities, and such medical social services as are ordinarily furnished by the hospital for the care and treatment of inpatients, and (3) such other diagnostic or therapeutic items or services, furnished by the hospital or by others under arrangements with them made by the hospital, as are ordinarily furnished to inpatients either by such hospital or by others under such arrangements.

Routine services in the hospital setting are those described in sections 1861(b)(1) and (b)(2) of the Act, under the definition of ''inpatient hospital services.'' Under our historical policy for hospital services furnished under arrangements that we adopted in the FY 2012 IPPS/LTCH PPS rulemaking (76 FR 51714), routine services cannot be provided under arrangement outside the hospital. Only the therapeutic and diagnostic services described in section 1861(b)(3) of the Act can be provided under arrangement outside the hospital.

In the April 6, 2020 IFC (85 FR 19278), we provided an overview of the FY 2012 IPPS/LTCH PPS rulemaking, which set forth the rationale and statutory basis for our under arrangements policy. In particular, we stated in the FY 2012 rulemaking that we believe this policy is consistent with the statute because the statutory language specifying that the routine services described in sections 1861(b)(1) and (b)(2) of the Act be provided ''by the hospital'' suggests that the hospital is required to exercise professional responsibility over the services, including quality controls. In situations in which certain routine services are provided through arrangement ''in the hospital,'' for example, contracted nursing services, we stated that we believe the arrangement generally results in the hospital exercising the same level of control over those services as the hospital does in situations in which the services are provided by the hospital's salaried employees.

Therefore, if routine services are provided in the hospital to its inpatients, we consider the service as being provided by the hospital. However, if these services are provided to its patients outside the hospital, the services are considered as being provided under arrangement, and not by the hospital. Therefore, consistent with the statute, we stated that only therapeutic and diagnostic services can be provided under arrangement outside the hospital.

Furthermore, we noted that, at the time of the FY 2012 rulemaking, we were aware that some hospitals were furnishing certain routine services, including ICU services, under arrangement, which we believed might result in inappropriate and potentially excessive Medicare payments for such services in certain circumstances. We explained that limiting the furnishing of routine services under arrangements to situations in which the services are furnished in the hospital would reduce the opportunity for gaming and ensure that the hospital exercises sufficient control over the use of hospital resources when furnishing these services.

For additional details on our prior rulemaking, refer to the discussion in section II.CC.2 of the April 6, 2020 IFC (85 FR 19278) and the FY 2012 IPPS/LTCH PPS final rule (76 FR 51711).

As we noted in the April 6, 2020 IFC (85 FR 19279), while we continue to believe that our historical policy is consistent with the statute and appropriate for the reasons discussed in the FY 2012 IPPS/LTCH PPS rulemaking, we wished to give hospitals that provide services to Medicare beneficiaries additional flexibilities to respond effectively to the serious public health threats posed by the spread of COVID–19. Recognizing the urgency of this situation, and understanding that some pre-existing Medicare payment rules might inhibit use of capacity that might otherwise be effective in the efforts to mitigate the impact of the pandemic on Medicare beneficiaries and the American public, we changed our ''under arrangements'' policy during the PHE for the COVID–19 pandemic beginning March 1, 2020, so that hospitals could be allowed broader flexibilities to furnish inpatient services, including routine services outside the hospital's campus or premises.

We believe that our concerns articulated in the FY 2012 rulemaking

regarding gaming of routine services provided outside the hospital for payment reasons are significantly mitigated by the existence of the PHE. As we explained in the April 6, 2020 IFC, we expected that during the PHE for the COVID–19 pandemic, hospitals would be treating patients in locations outside the hospital for a variety of reasons, including limited beds and/or limited specialized equipment such as ventilators, and for a limited time period, and that during this time hospitals would not be treating patients outside the hospital for gaming reasons.

Moreover, we stated that we did not believe that the statute would preclude this temporary change in policy to allow routine services to be provided under arrangements outside the hospital, in light of the compelling circumstances and the need for additional, short-term flexibility during the current PHE for the COVID–19 pandemic. Consistent with this, we noted that we received comments during the FY 2012 rulemaking stating that our policy to limit the services a hospital may provide under arrangements is not required by the statute and that CMS' reading of the statutory definition of ''inpatient hospital services'' is only one possible interpretation of the statute.

While we changed our under arrangements policy during the PHE for the COVID–19 pandemic to allow hospitals broader flexibilities in furnishing inpatient services, we emphasized in the April 6, 2020 IFC that we were not changing our policy that a hospital needs to exercise sufficient control and responsibility over the use of hospital resources in treating patients, as discussed in the FY 2012 IPPS/LTCH PPS final rule and Section 10.3 of Chapter 5 of the Medicare General Information, Eligibility, and Entitlement Manual (Pub. 100–01). Nothing in the current PHE for the COVID–19 pandemic has changed our policy or thinking with respect to this issue and we made no modifications to this aspect of the policy. We emphasized that hospitals need to continue to exercise sufficient control and responsibility over the use of hospital resources in treating patients regardless of whether that treatment occurs in the hospital or outside the hospital under arrangements. If a hospital cannot exercise sufficient control and responsibility over the use of hospital resources under arrangements, the hospital should not provide those services outside the hospital under arrangements.

Comment: Commenters expressed support for the modification to our policy concerning routine services provided under arrangements outside the hospital during the COVID–19 PHE. Several commenters noted that these flexibilities would promote patient access to safe alternative care settings while minimizing risk of exposure to COVID–19.

Response: We appreciate the commenters' support for our policy.

Comment: A number of commenters recommended that CMS extend the modification to our under arrangements policy for a reasonable period after the termination of the PHE, for example one year, stating that this would give hospitals time to revert to normal operations while being prepared to respond to a potential subsequent wave of the virus. A few commenters requested that CMS adopt the modification permanently.

Response: As we noted in the April 6, 2020 IFC (85 FR 19278), we adopted this modification to our under arrangements policy in recognition of the urgent and compelling circumstances associated with the COVID–19 PHE and the understanding that some pre-existing Medicare payment rules might inhibit use of capacity that might otherwise be effective in the efforts to mitigate the impact of the pandemic. We continue to believe that outside of the context of the COVID–19 PHE, our policy prohibiting routine services from being provided under arrangements outside the hospital is consistent with the statute and appropriate for the reasons discussed in the FY 2012 IPPS/LTCH PPS rulemaking. With respect to the recommendation that we maintain these flexibilities for a limited period of time after the termination of the COVID–19 public health emergency, we note that CMS has regularly updated the provider community on the status of the various COVID–19-related flexibilities and reiterated that these flexibilities will expire once the PHE ends. We also believe that, in the absence of widespread capacity issues such as those experienced earlier during the pandemic, the majority of hospitals are experiencing more typical patterns of inpatient care. Thus, we believe that providers will have had time to prepare for a return to normal operations and to wind down those flexibilities that are no longer critical in nature, and that an extension of the modifications to our policy beyond the end of the PHE is unnecessary. In the event that circumstances in a future PHE warrant additional flexibilities, we will address this issue in future rulemaking. For these reasons, we are not adopting the commenters' suggestions that we make this modification permanent or extend the modification past the end of the COVID–19 PHE.

After consideration of the comments received, and for the reasons discussed, we are finalizing without modification our policy that, effective for services provided for discharges for patients admitted to the hospital during the PHE for COVID–19 beginning March 1, 2020 until the end of the PHE, if routine services are provided under arrangements outside the hospital to its inpatients, these services are considered as being provided by the hospital. We are not changing our policy that a hospital needs to exercise sufficient control and responsibility over the use of hospital resources in treating patients regardless of whether that treatment occurs in the hospital or outside the hospital under arrangements. When the COVID–19 PHE ends, and consistent with the policy adopted in the FY 2012 IPPS/LTCH PPS rulemaking, for purposes of Medicare payment, only the therapeutic and diagnostic items and services described in section 1861(b)(3) of the Act may be furnished under arrangements outside the hospital. If routine services are provided in the hospital to its inpatients, these services will be considered as being provided by the hospital. However, if these services are provided to patients outside the hospital, the services will be considered as being provided under arrangement, and not by the hospital.

2. Counting Resident Time During the PHE for the COVID–19 Pandemic

In the April 6, 2020–IFC (85 FR 19269), we included provisions revising 42 CFR 415.172, 415.174, 415.180, 415.184, and 415.208 for the duration of the PHE that allowed a hospital to claim a resident for indirect medical education (IME) or direct graduate medical education (DGME) if the resident is performing patient care activities within the scope of his or her approved program via telecommunications, in his or her own home, or in a patient's home. This allowed medical residents to perform their duties in alternate locations, including their own home or a patient's home, as long as the activities meet appropriate physician supervision requirements, which could also be met via telecommunications participation.

In this section of this final rule, we are responding to the public comments that we received on these provisions in the April 6, 2020 IFC and finalizing the interim policies.

Comment: We received overwhelming support for the provisions allowing teaching hospitals to claim DGME and IME for the time a resident performs

patient care activities within the scope of their approved program in their own home, or in an established patient's home for the duration of the PHE. A few commenters requested making this change permanent.

Response: We appreciate the commenters' support of this policy during the COVID–19 PHE. Outside of the context of the COVID–19 PHE, performing patient care activities in a patient's home, or in a resident's home for the purpose of a hospital claiming IME or DGME payment is not permissible under the statute's definition of nonprovider setting [344] and the hospital conditions of participation under 42 CFR part 482. Therefore, once the COVID–19 PHE ends we do not believe it would be appropriate to continue to permit a hospital to claim a resident for IME or DGME if the resident is performing patient care activities in his or her own home, or in a patient's home either on a temporary or permanent basis. In the event circumstances in a future PHE warrant additional flexibilities, we will address this issue in future rulemaking.

In this final rule with comment period, we are finalizing the provisions of the April 6, 2020 IFC without modification, to allow a hospital to claim a resident for IME or DGME if the resident is performing patient care activities within the scope of his or her approved program in his or her own home, or in a patient's home for the duration of the COVID–19 PHE. We note, when the COVID–19 PHE ends, a hospital may not count a resident for purposes of Medicare DGME payments or IME payments if the resident is performing activities with the scope of his/her approved program in his/her own home, or a patient's home. This policy does not require any changes to the regulations text.

3. Modification of the Inpatient Rehabilitation Facility (IRF) Face-to-Face Requirement for the PHE During the COVID–19 Pandemic

Under 42 CFR 412.622(a)(3)(iv), for an inpatient rehabilitation facility (IRF) claim to be considered reasonable and necessary under section 1862(a)(1) of the Act, there must be a reasonable expectation at the time of the patient's admission to the IRF that the patient requires physician supervision by a rehabilitation physician, defined as a licensed physician with specialized training and experience in inpatient rehabilitation. The requirement for medical supervision means that the rehabilitation physician must conduct face-to-face visits with the patient at least 3 days per week throughout the patient's stay in the IRF to assess the patient both medically and functionally, as well as modify the course of treatment as needed to maximize the patient's capacity to benefit from the rehabilitation process. The purpose of the physician supervision requirement is to ensure that the patient's medical and functional statuses are being continuously monitored as the patient's overall plan of care is being carried out.

We note that, in the FY 2021 IRF PPS final rule (85 FR 48450 through 48453), we amended the IRF coverage requirements to allow, beginning with the second week of admission to the IRF, a nonphysician practitioner who is determined by the IRF to have specialized training and experience in inpatient rehabilitation to conduct 1 of the 3 required face-to-face visits with the patient per week, provided that such duties are within the non-physician practitioner's scope of practice under applicable state law.

We continue to believe that it is in the patient's best interest to be seen in person by a rehabilitation physician (or, in accordance with the revised regulations, a nonphysician practitioner) to assess their medical and functional statuses while at the IRF, and we encourage rehabilitation physicians (or, in accordance with the revised regulations, nonphysician practitioners) to continue to visit IRF patients in person as long as all necessary precautions, including the use of PPE, are taken to ensure the health and safety of the patient and the physician. However, in the April 6, 2020 IFC (85 FR 19252), we stated that we would temporarily allow the face-to-face visit requirements at §§ 412.622(a)(3)(iv) and 412.29(e) to be conducted via telehealth to safeguard the health and safety of Medicare beneficiaries and the rehabilitation physicians (or, in accordance with the revised regulations, the nonphysician practitioners) treating them during the PHE for the COVID–19 pandemic. This provision allowed rehabilitation physicians (or, in accordance with the revised regulations, nonphysician practitioners) to use telehealth services, as defined in section 1834(m)(4)(F) of the Act, to conduct the required 3 physician visits per week during the PHE for the COVID–19 pandemic. By increasing access to telehealth, we believe that this provision has provided the necessary flexibility for Medicare beneficiaries to be able to receive medically necessary services without jeopardizing their health or the health of those who are providing those services, while minimizing the overall risk to public health.

We received several comments on the flexibility allowing rehabilitation physicians (or, in accordance with the revised regulations, nonphysician practitioners) to use telehealth services as defined in section 1834(m)(4)(F) of the Act to conduct the required 3 physician visits per week during the COVID–19 PHE, which are addressed below.

Comment: Commenters expressed support for the modification to our policy to allow rehabilitation physicians (or, in accordance with the revised regulations, nonphysician practitioners) to use telehealth services as defined in section 1834(m)(4)(F) of the Act to conduct the required 3 physician visits per week during the COVID–19 PHE. The commenters thanked CMS for our rapid response to the pandemic.

Response: We appreciate the commenters' support for our policy, and are finalizing the policy for the duration of the PHE.

Comment: One commenter said that this temporary flexibility should not be made permanent.

Response: We agree with the commenter that this temporary flexibility should expire when the PHE ends. As we said in the IFC, we believe it is in the patient's best interest to be seen in person by a rehabilitation physician (or, in accordance with the revised regulations, a nonphysician practitioner) to assess their medical and functional statuses while at the IRF. Accordingly, this policy will automatically terminate with the end of the PHE, and rehabilitation physicians (or, in accordance with the revised regulations, nonphysician practitioners) will be required to visit IRF patients face-to-face at least 3 times per week.

After carefully considering the comments we received, and for the reasons discussed, we are finalizing without modification our policy that during the COVID–19 PHE, rehabilitation physicians (or, in accordance with the revised regulations, nonphysician practitioners) may use telehealth services as defined in section 1834(m)(4)(F) of the Act to conduct the 3 physician visits required under §§ 412.622(a)(3)(iv) and 412.29(e). When the COVID–19 PHE ends, rehabilitation physicians (or, in accordance with the revised regulations, nonphysician practitioners) will be required to visit IRF patients face-to-face at least 3 times per week. To effectuate these changes, we are finalizing without modification the revisions to the regulations at §§ 412.622(a)(3)(iv) and 412.29(e) described within the April 6, 2020 IFC.

[344] Section 1886(h)(5)(K) of the Act.

4. Direct Supervision by Interactive Telecommunications Technology

In the April 6, 2020 IFC (85 FR 19245 through 19246) we altered, for the duration of the PHE, the definition of direct supervision at §§ 410.32(b)(3)(ii) and 410.28(e), to state that the necessary presence of the physician includes virtual presence through audio/video real-time communications technology when use of such technology was indicated to reduce exposure risks for the beneficiary or health care provider. We similarly altered the definition of direct supervision of pulmonary, cardiac and intensive rehabilitation at § 410.27(a)(1)(iv)(D), to state that the necessary presence of the physician includes virtual presence through audio/video real-time communications technology when use of such technology is indicated to reduce exposure risks for the beneficiary or health care provider.

In the CY 2021 PFS final rule (85 FR 84538 through 84540), we revised § 410.32(b)(3)(ii) to extend the duration of the altered definition of direct supervision until the later of December 31st, 2021, or the end of the calendar year in which the PHE ends. In the CY 2021 OPPS final rule (85 FR 86110 through 86113), we revised § 410.27(a)(1)(iv)(D) to extend the duration of the altered definition of direct supervision of pulmonary, cardiac and intensive rehabilitation until the later of December 31st, 2021 or the end of the calendar year in which the PHE ends.

In the CY 2023 OPPS proposed rule (87 FR 44834 through 44835), we proposed to revise § 410.28(e) to extend the duration of the altered definition of direct supervision from the end of the PHE to the end of the calendar year in which the PHE ends for consistency with §§ 410.32(b)(3)(ii) and 410.27(a)(1)(iv)(D). In section X.E of this final rule with comment period, we are finalizing the revisions to § 410.28(e) as proposed.

In the CY 2023 OPPS proposed rule (87 FR 44679 through 87 FR 44680), we solicited comment as to whether we should extend the duration of the altered definition of direct supervision of pulmonary, cardiac and intensive rehabilitation through the end of CY 2023. Based on the comments we received in response to our solicitation, in section X.C of this final rule with comment period, we are finalizing revisions to § 410.27(a)(1)(iv)(D) to extend the duration of the altered definition of direct supervision of pulmonary, cardiac and intensive rehabilitation until the later of December 31st, 2023, or the end of the calendar year in which the PHE ends.

We refer readers to the April 6, 2020 IFC (85 FR 19245 through 19246), CY 2021 PFS final rule (85 FR 84538 through 84540), CY 2021 OPPS final rule (85 FR 86110 through 86113) and the above referenced sections of this CY 2023 OPPS final rule for a more detailed discussion of the reasoning behind our revisions to §§ 410.32(b)(3)(ii), 410.28(e), and 410.27(a)(1)(iv)(D).

Comment: We received public comments on the direct supervision definitions that we adopted on an interim basis in the IFC provisions related to §§ 410.32(b)(3)(ii), 410.28(e), and 410.27(a)(1)(iv)(D). Many commenters supported the alteration of the definition of direct supervision at §§ 410.32(b)(3)(ii), 410.28(e), and 410.27(a)(1)(iv)(D) to include the virtual presence of the physician through audio/video real-time communications technology for the duration of the PHE. Several of these commenters encouraged CMS to make the revisions to these definitions permanent. Several commenters expressed appreciation for CMS's acknowledgement in the April 6, 2020 IFC (85 FR 19245 through 19246) that virtual direct supervision facilitates the provision of telehealth services by clinical staff of physicians and other practitioners incident to their own professional services and cited this as a reason for CMS to make the revisions to direct supervision permanent. Finally, a few commenters expressed concern about the safety of allowing virtual supervision of home infusion therapy services.

Response: We appreciate commenters' input on this policy and will consider these comments for future rulemaking. In this final rule with comment period, we are finalizing the proposal to revise the definition of direct supervision in § 410.28(e) for consistency with §§ 410.32(b)(3)(ii) and 410.27(a)(1)(iv)(D). We are also finalizing revisions to § 410.27(a)(1)(iv)(D) to extend the duration of the altered definition of direct supervision of pulmonary, cardiac and intensive rehabilitation until the later of December 31st, 2023 or the end of the calendar year in which the PHE ends. This means that for §§ 410.32(b)(3)(ii), 410.28(e), and 410.27(a)(1)(iv)(D), virtual direct supervision will conclude on December 31st of the calendar year in which the PHE ends. We also note that the Secretary renewed the PHE for the COVID–19 pandemic for a 90-day period beginning on October 13, 2022,[345] which will expire on January 11, 2023, absent another renewal of the PHE by the Secretary. As such, direct supervision through a virtual presence will continue to be permitted through at least the end of CY 2023 under our finalized policies.

B. Medicare and Medicaid Programs, Basic Health Program, and Exchanges; Additional Policy and Regulatory Revisions in Response to the COVID–19 Public Health Emergency and Delay of Certain Reporting Requirements for the Skilled Nursing Facility Quality Reporting Program (CMS–5531–IFC)

In this final rule with comment we are also responding to public comments and stating our final policies for certain provisions in the IFC titled ''Medicare and Medicaid Programs, Basic Health Program, and Exchanges; Additional Policy and Regulatory Revisions in Response to the COVID–19 Public Health Emergency and Delay of Certain Reporting Requirements for the Skilled Nursing Facility Quality Reporting Program'' (CMS–5531–IFC), which appeared in the May 8, 2020 **Federal Register** (85 FR 27550; hereinafter referred to as the May 8, 2020 IFC).

1. Medical Education Payments

a. Indirect Medical Education

(1) Holding Hospitals Harmless From Reductions in Indirect Medical Education (IME) Payments Due to Increases in Bed Counts

In the May 8, 2020 IFC (85 FR 27567 through 27568), we implemented several policies on an interim final basis related to holding hospitals harmless from reductions in IME payments due to increases in bed counts during the COVID–19 PHE. As discussed later in this section of this CY 2023 OPPS/ASC final rule, we also implemented a policy to hold IRFs and IPFs harmless from reductions to teaching status adjustment payments due to COVID–19. We refer readers to the May 8, 2020 IFC, for an overview of IME (85 FR 27567).

We received public comments on the policies that we adopted on an interim basis in the IFC provisions related to the holding hospitals harmless from reductions in IME payments due to increases in bed counts due to COVID–19 (85 FR 27567 through 27568). The following is a summary of the comments we received and our responses.

Comment: Commenters overwhelming supported the provision allowing the hospital's available bed count to be considered the same as it was on the

[345] *https://aspr.hhs.gov/legal/PHE/Pages/covid19-13Oct2022.aspx.*

day before the COVID–19 PHE was declared. A few commenters recommended making the provision a permanent policy whenever there is a PHE declaration.

Response: We appreciate the commenters' support of this policy during the COVID–19 PHE. In the event circumstances in a future PHE warrant additional flexibilities, we will address this issue in future rulemaking.

In this final rule with comment period, we are finalizing the provisions of the May 8, 2020 IFC without modification, allowing a hospital to maintain the same available bed count as it was on the day before the COVID–19 PHE was declared, for the duration of the COVID–19 PHE. When the COVID–19 PHE ends, any added beds will be considered in determining the hospital's IME payments.

(2) Holding IRFs and IPFs Harmless From Reductions to Teaching Status Adjustment Payments Due to COVID–19

As we discussed in the May 8, 2020 IFC (85 FR 27567 through 27568), we were asked by IRFs and IPFs if CMS can hold facilities harmless from a reduction in teaching status adjustment payments resulting from the temporary increase in facilities' ADC due to the influx of COVID–19 patients. We were concerned that, if a teaching IRF or IPF accepts patients from the inpatient acute care hospital to alleviate bed capacity during the PHE for the COVID–19 pandemic, the IRF's or IPF's ADC would increase, which would artificially decrease the IRF's or IPF's ratio of number of interns and residents to ADC and thereby decrease the facility's teaching status adjustment. To ensure that teaching IRFs or teaching IPFs could alleviate bed capacity issues by taking patients from the inpatient acute care hospitals without being penalized by lower teaching status adjustments, we established an interim final policy to freeze the IRFs' or IPFs' teaching status adjustment payments at their values prior to the COVID–19 PHE. Therefore, we stated that for the duration of the COVID–19 PHE, an IRF's or an IPF's teaching status adjustment payment amount would be the same as it was on the day before the COVID–19 PHE was declared.

Comment: We received 6 comments in response to this interim final policy. Commenters generally supported this policy and noted that it would enable hospitals, including IRFs and IPFs, to expand capacity while continuing to support medical education. One commenter requested that CMS clarify that academic medical centers and other facilities who are eligible for teaching status adjustments will not have their IME payments reduced after the PHE, noting that CMS could provide a transition policy to support hospitals as they prepare for future potential surges or attempt to adapt to more regular practices. Another commenter requested that CMS implement the policy in a manner that achieves the intent without potentially subjecting IRFs and IPFs to unintended consequences as a result of freezing a facility's teaching status adjustment at the level that it was immediately before the COVID–19 PHE, which in some cases could potentially reflect an unusually low ratio of interns and residents to ADC. This commenter requested that CMS allow IRFs and IPFs the option to utilize the cumulative resident full-time equivalent (FTE) count and average daily census count from July 1, 2019 through January 26, 2020 and apply that ratio until the end of the PHE. In addition, this commenter requested that CMS allow IPFs and IRFs that send residents to work in another hospital to claim such resident FTE time spent at another hospital.

Response: We appreciate the support from commenters about this interim final policy. As we explained in the May 8, 2020 IFC, this policy will apply for the duration of the COVID–19 PHE, after which time any IRF's or IPF's teaching adjustment will be based on the ratio of the number of interns and residents to the IRF's or IPF's ADC. We did not establish a transition policy as part of this interim final policy, and we are not finalizing a transition policy in this final rule, as we believe that sufficient time has passed to allow IPFs and IRFs to adapt their business practices at the end of the COVID–19 PHE.

In response to the request that we implement the policy in a manner that achieves the intent without potentially subjecting IRFs and IPFs to unintended consequences, we note that our intent was to hold IRFs and IPFs harmless and not to limit their teaching adjustments to the level prior to the PHE. IPF and IRF teaching status adjustments are made on a claim basis as an interim payment, and the final payment in full for the claim is made during the final settlement of the cost report. In accordance with this hold harmless policy, we intend to clarify in the cost reporting instructions that for cost reporting periods ending on or after March 1, 2020 and beginning before the end of the COVID–19 Public Health Emergency, if an IRF's or IPF's calculated teaching adjustment factor is below the teaching adjustment factor that was applicable on February 29, 2020, then the IRF's or IPF's teaching adjustment factor is equal to the teaching adjustment factor that was applicable on February 29, 2020.

Lastly, regarding the suggestion that we allow IPFs and IRFs that send residents to work in another hospital to claim such resident FTE time spent at another hospital, we note that we did not include this as part of our interim final policy for IRF and IPF teaching adjustments, and we are not finalizing such a policy in this final rule with comment period.

After consideration of the public comments we received, we are confirming as final this interim final policy to hold IRF and IPF teaching status adjustments harmless for the duration of the COVID–19 PHE. Therefore, we are finalizing that for the duration of the COVID–19 PHE, an IRF's or an IPF's teaching status adjustment payment amount will not be less than it was on the day before the COVID–19 PHE was declared.

b. Time Spent by Residents at Another Hospital During the PHE

In the May 8, 2020 IFC (85 FR 27568 through 27569), we implemented several policies on an interim final basis related to time spent by residents at another hospital during the COVID–19 PHE. We refer readers to the May 8, 2020 IFC, for an overview of GME (85 FR 27568).

We received public comments on policies that we adopted on an interim basis in the IFC provisions related to time spent by residents at another hospital during the COVID–19 PHE (85 FR 27568 through 27569). The following is a summary of the comments we received and our responses.

Comment: All commenters supported allowing teaching hospitals during the COVID–19 PHE to claim for purposes of IME and DGME payments the time spent by residents training at other hospitals. A few commenters suggested making the provision permanent. Additional commenters requested a grace period for hospitals to resume and be subject to existing FTE counting policies, in order to not disrupt patient care activities.

Response: We appreciate the commenters' support of this policy during the COVID–19 PHE. We continue to believe that outside of the context of the COVID–19 PHE our policy that a hospital cannot claim the time spent by residents training at another hospital is consistent with the statute. Therefore, once the COVID–19 PHE ends we do not believe it would be appropriate to continue permitting a hospital to claim the time spent by residents training at another hospital on a permanent basis.

In the event circumstances in a future PHE warrant additional flexibilities, we will address this issue in future rulemaking.

Comment: One commenter requested confirmation that the sending hospital can only claim the resident time if both the sending and receiving hospital agree that the sending hospital will claim the time. In addition, the commenter requested confirmation that a new teaching hospital can accept residents as a receiving hospital from a sending hospital without having to include them on its cost report.

Response: While we believe our statements have been clear on this point, we confirm for the duration of the COVID–19 PHE, both the sending and receiving hospital agree that the sending hospital will claim the time and new teaching hospitals can accept residents as a receiving hospital from a sending hospital without having to include them on its cost report. We refer readers to the May 8, 2020 IFC where we discuss requirements for this provision (85 FR 27568 through 27569).

Comment: One commenter stated that the third requirement, which requires the resident be at the sending hospital prior to going to the receiving hospital and return to the sending hospital at the end of PHE is unnecessary, and instead sending and receiving hospitals should be allowed to enter into arrangements on when a resident goes back to the sending hospital.

Response: We disagree with the commenter and continue to believe that the third requirement is necessary. A hospital is required under 42 CFR 413.75(d) to submit supporting documentation in order to receive payment for GME. These documentation requirements apply to hospitals entering into a GME affiliation agreement, therefore, despite the commenters suggestion, the sending and receiving hospital will need to provide documentation listed § 413.75(d). For a detailed discussion on documentation requirements, we refer readers to the September 29, 1989 final rule (54 FR 40291 and 40304) and the August 18, 2006 IPPS final rule (71 FR 48077 through 48080).

In this final rule with comment period, we are finalizing the provisions of the May 8, 2020 IFC without modification, allowing teaching hospitals during the COVID–19 PHE to claim for purposes of IME and DGME payments the time spent by residents training at other hospitals during the COVID–19 PHE. It is important to note that when the COVID–19 PHE ends, the presence of residents in non-teaching hospitals will trigger establishment of IME and/or DGME FTE resident caps at those non-teaching hospitals (and for DGME will trigger establishment of per resident amounts (PRAs) at those non-teaching hospitals).

2. CARES Act Waiver of the ''3-Hour Rule''

As a condition of payment for IRF services, § 412.622(a)(3)(ii) generally requires that a beneficiary requires and can be reasonably expected to actively participate in, and benefit from, an intensive rehabilitation therapy program on admission to the IRF. Under current industry standards, this intensive rehabilitation therapy program generally consists of at least 3 hours of therapy (physical therapy, occupational therapy, speech-language pathology, or prosthetics/orthotics therapy) per day at least 5 days per week. In certain well-documented cases, this intensive rehabilitation therapy program might instead consist of at least 15 hours of intensive rehabilitation therapy within a 7-consecutive day period, beginning with the date of admission to the IRF. Benefit from this intensive rehabilitation therapy program is demonstrated by measurable improvement that will be of practical value to the patient in improving the patient's functional capacity or adaptation to impairments. The required therapy treatments must begin within 36 hours from midnight of the day of admission to the IRF.

On March 27, 2020, the CARES Act was enacted. Section 3711(a) of the CARES Act requires the Secretary to waive § 412.622(a)(3)(ii) during the emergency period described in section 1135(g)(1)(B) of the Act (the COVID–19 PHE). This waiver was issued on April 15, 2020. The waiver required by section 3711(a) of the CARES Act was not limited to particular IRFs or patients, and therefore, is available during the emergency period described in section 1135(g)(1)(B) of the Act regardless of whether a patient was admitted for standard IRF care or to relieve acute care hospital capacity. In the May 8, 2020 IFC (85 FR 27572), we therefore waived § 412.622(a)(3)(ii) for all patients during the COVID–19 PHE to reflect the waiver required by section 3711(a) of the CARES Act.

We received several comments on the CARES Act waiver of the ''3-hour rule,'' which are addressed below.

Comment: Commenters generally expressed support for the waiver of the ''3-hour rule'' during the PHE. However, a commenter expressed concern that this waiver, applied without exception, could harm beneficiaries and their families and increase costs for the Medicare program, and urged CMS to place additional limits on the use of the waiver.

Response: We appreciate the commenters' support for this temporary waiver to assist IRFs in providing relief to acute care hospitals for the duration of the PHE. As we noted in the IFC, the waiver required by section 3711(a) of the CARES Act is not limited to particular IRFs or patients, and therefore, is available during the emergency period described in section 1135(g)(1)(B) of the Act regardless of whether a patient was admitted for standard IRF care or to relieve acute care hospital capacity. We do not believe that the CARES Act authorizes any exceptions.

Comment: A commenter requested that we provide a ''glide path'' or transition at the end of this waiver by continuing the waiver for IRF admissions occurring at least 2 months after the end of the PHE. Conversely, another commenter requested that we terminate this waiver at the end of the PHE to ensure that beneficiaries receive the care that they need when the pandemic is over.

Response: As the PHE has lasted for over 2½ years, we believe that IRFs have had sufficient time to prepare for the end of the PHE and the corresponding expiration of this waiver. Thus, we do not agree that it is necessary to continue to provide this waiver for 2 months after the end of the PHE. In addition, we agree with the commenter who said that this policy is important to ensuring that beneficiaries receive the care that they need in an IRF after the PHE ends. However, to ensure that beneficiaries who are admitted under the waiver do not have requirements suddenly changed in the middle of their IRF stay, we are terminating the waiver for all IRF admissions occurring after the PHE expires. Thus, patients who are admitted to the IRF under this waiver will continue to benefit from this waiver until they are discharged.

After carefully considering the comments we received, and for the reasons discussed, we are finalizing the waiver of the requirements in § 412.622(a)(3)(ii) during the COVID–19 PHE, as authorized by section 3711(a) of the CARES Act. We will terminate this waiver for all IRF admissions occurring after the end of the COVID–19 PHE, so that patients who are admitted to IRFs during the PHE will be able to remain under the waiver until they are discharged from the IRFs.

3. Modification of IRF Coverage and Classification Requirements for Freestanding IRF Hospitals for the PHE During the COVID–19 Pandemic

IRF care is only considered by Medicare to be reasonable and necessary under section 1862(a)(1) of the Act if the patient meets all of the IRF coverage requirements outlined in § 412.622(a)(3), (4), and (5). These requirements include requiring 2 or more types of therapy, being sufficiently stable to tolerate an intensive rehabilitation therapy program typically provided in IRFs, needing close medical supervision by a rehabilitation physician, and requiring an interdisciplinary approach to care. Failure to meet the IRF coverage criteria in a particular case results in denial of the IRF claim.

We note that the April 6, 2020 IFC removed the requirement at § 412.622(a)(4)(ii) to complete a postadmission physician evaluation during the COVID–19 PHE, as defined in § 400.200. In follow up to this temporary removal of the waiver, the FY 2021 IRF PPS final rule (85 FR 48445 through 48446) removed this requirement permanently, effective for all IRF discharges beginning on or after October 1, 2020.

While we generally believe that all IRFs should have to comply with the requirements at §§ 412.29(d), (e), (h), and (i) and 412.622(a)(3), (4), and (5), we recognize that there are certain institutional differences between freestanding IRF hospitals and IRF distinct part units of hospitals that may impose barriers on freestanding IRF hospitals seeking to admit patients to relieve acute care hospital capacity during the COVID–19 PHE. Specifically, freestanding IRF hospitals do not have the same close affiliations with acute care hospitals that IRF distinct part units of hospitals have, and are not as able to establish billing procedures under the IPPS that IRF distinct part units have established, by virtue of the fact that the distinct part units have access to (or at least affiliations with) their parent hospitals' billing departments. Therefore, in the May 8, 2020 IFC, we amended the requirements at §§ 412.29(d), (e), (h), and (i) and 412.622(a)(3), (4), and (5) to add an exception for care furnished to patients admitted to freestanding IRF hospitals (identified as those facilities with the last 4 digits of their Medicare provider numbers between 3025 through 3099) solely to relieve acute care hospital capacity during the COVID–19 PHE.

We believe that freestanding IRF hospitals have needed the flexibility during the COVID–19 PHE to determine the best care for each patient who is admitted solely to relieve acute care hospital capacity. For the purposes of exercising these IRF flexibilities that are intended to provide broad flexibility for freestanding IRF hospitals to provide surge capacity in support of acute care hospitals in their state or community, CMS considers surge to be alleviated with regard to exercising these flexibilities when the state (or region, as applicable) in which the freestanding IRF is located has moved beyond phase 1 of reopening. Thus, these flexibilities are no longer available to the freestanding IRF hospital when the state is in phase 2 or phase 3 of reopening. In the Guidelines for Opening Up America Again, Phase 1 of reopening is defined specifically as a state (or region, as applicable) that satisfies all of the following, as determined by applicable state and local officials:

- All vulnerable individuals continue to shelter in place.
- Individuals continue social distancing.
- Individuals avoid socializing in groups of more than 10.
- Non-essential travel is minimized.
- Visits to senior living facilities and hospitals are prohibited.
- Schools and organized youth activities remain closed.

These flexibilities apply to specific patients who must be discharged from the acute care hospitals to the freestanding IRFs to provide surge capacity for the acute care hospitals, and therefore apply only when those specific patients are admitted to the freestanding IRF hospitals and continue for the duration of that patient's care. We believe this allows for continuity of care and care planning consistency at admission and throughout a patient's stay if the same flexibilities apply for the duration of a patient's IRF stay. These limitations only apply to the provisions stated in the IFC and not to any blanket waivers issued, which have their own conditions. Freestanding IRF hospitals must document the particular phase for the state when admitting the patient and electing to exercise these flexibilities.

For billing purposes, we have required freestanding IRF hospitals to append the ''DS'' modifier to the end of the IRF's unique patient identifier number (used to identify the patient's medical record in the IRF) to identify patients who are being treated in a freestanding IRF hospital solely to alleviate inpatient bed capacity in a state that is experiencing a surge during the PHE for the COVID–19 pandemic. The modifier has also been used to identify those patients for whom the requirements in § 412.622(a)(3)(i), (iii), and (iv) and (a)(4) and (5) do not apply. Freestanding IRF hospitals are paid at the IRF PPS rates for patients with the ''DS'' modifier.

We have expected freestanding IRF hospitals to take advantage of these flexibilities for those beneficiaries who are surge patients from inpatient hospitals, while continuing to provide standard IRF-level care for those beneficiaries who would benefit from IRF-level care and would otherwise receive such care in the absence of the COVID–19 PHE. This has provided crucial flexibility to allow freestanding IRF hospitals to aid in the response to the COVID–19 pandemic in several ways. First, some of the patients that freestanding IRF hospitals have cared for during the COVID–19 PHE in states experiencing a surge would need high-acuity clinical care but may not need or be able to tolerate the intensive rehabilitation therapy typically provided in an IRF, such as at least two types of therapy. Second, waiving the documentation requirements in § 412.622(a)(4) and (5) for patients alleviating inpatient hospital bed capacity has allowed freestanding IRF hospitals to concentrate on providing care for surge patients from the acute care hospitals in a state that is experiencing a surge, instead of completing documentation that may not be applicable to these acute patients during the PHE. Third, this flexibility has allowed freestanding IRF hospitals to maximize their available beds to take advantage of space where COVID–19 patients or surge patients could be safely managed. We believe this policy has allowed freestanding IRF hospitals to make a clinical determination about what level of care each individual patient needs during the PHE for the COVID–19 pandemic.

We received several comments on the modification of IRF coverage and classification requirements for freestanding IRF hospitals for the PHE during the COVID–19 pandemic, which are addressed below.

Comment: All of the commenters expressed support for CMS's flexibility in waiving these requirements to help freestanding IRFs alleviate acute care hospital capacity during the PHE. A few commenters expressed concern about the fact that this waiver is restricted to states or regions in Phase 1 (or prior to Phase 1) of reopening, especially given the diversity of the states' reopening plans, and requested that we consider applying the waiver to any freestanding IRF patients admitted to alleviate COVID–19 surge capacity.

Response: We appreciate the commenters' support for these temporary flexibilities to assist IRFs in providing relief to acute care hospitals for the duration of the PHE. These flexibilities were specifically targeted to helping alleviate acute care hospital surge capacity issues during the height of the PHE, when the PHE was most significantly testing the capacity of acute care hospitals in state or regions that were overwhelmed with the surge of COVID–19 patients. We believe that the conditions placed on the waiver were effective in targeting the precise hospitals that were in most urgent need of help, and we therefore believe that the limitations that we placed on the waiver were appropriate.

Comment: A few commenters also requested that CMS provide additional guidance on this waiver, to ensure that providers and contractors have a clear understanding of how it is applied.

Response: We appreciate the commenters' suggestions to provide additional guidance on this waiver. In response to their concerns, we issued Technical Direction Letter #200515 to our contractors and additional information on our COVID–19 flexibilities and waivers website at *https://www.cms.gov/coronavirus-waivers*.

Comment: One commenter suggested that we consider implementing additional oversight of this waiver to ensure that it is not abused.

Response: We believe that we tailored this waiver narrowly enough to only those states (or regions, as applicable) that were in phase 1 or prior to entering phase 1 of reopening, to minimize the potential for abuse. In addition, we have monitored the use of this waiver during the PHE and have not found any evidence to date of any abuse. We thank the commenter for the suggestion, and we will continue to ensure that we have adequate safeguards in place to minimize abuses of these policies.

Comment: One commenter requested that we terminate this waiver at the end of the PHE to ensure that beneficiaries receive the care that they need when the pandemic is over.

Response: We thank the commenter for this suggestion and agree that the waiver is no longer needed after the PHE ends.

After carefully considering the comments we received, and for the reasons discussed, we are finalizing without modification the waiver of the requirements at §§ 412.29(d), (e), (h), and (i) and 412.622(a)(3), (4), and (5) during the COVID–19 PHE for freestanding IRF hospitals admitting patients in support of acute care hospitals when the state (or region, as applicable) is in phase 1 or prior to entering phase 1 of reopening described in the May 8, 2020 IFC. Patients who are admitted to IRFs during the PHE will remain under these waivers until they are discharged from the IRFs. However, these waivers will no longer apply to patients who are admitted to IRFs after the end of COVID–19 PHE.

To effectuate these changes, we are finalizing without modification the revisions to §§ 412.29(d), (e), (h), and (i) and 412.622(a)(3), (4), and (5) described in the May 8, 2020 IFC. Specifically, in § 412.622(a)(3)(i), (ii), (iii), and (iv) we are finalizing language providing that these IRF coverage criteria continue to be required, except for care furnished to patients in a freestanding IRF hospital solely to relieve acute care hospital capacity in a state (or region, as applicable) that is experiencing a surge during the PHE, as defined in § 400.200. Similarly, in § 412.622(a)(4), we are finalizing this paragraph to state that the IRF documentation requirements must be present in the IRF medical record, except for care furnished to patients in a freestanding IRF hospital solely to relieve acute care hospital capacity in a state (or region, as applicable) that is experiencing a surge during the PHE, as defined in § 400.200. In § 412.622(a)(5), we are finalizing this paragraph to state that an interdisciplinary team approach to care is required, except for care furnished to patients in a freestanding IRF hospital solely to relieve acute care hospital capacity in a state (or region, as applicable) that is experiencing a surge during the PHE, as defined in § 400.200. We are also finalizing the revisions to § 412.29(d), (e), (h), and (i) to align the provisions we have waived in § 412.622 with the classification criteria for payment to freestanding IRF hospitals under the IRF prospective payment system. Finally, we are finalizing the revisions to § 412.622(c) to add a definition of state (or region, as applicable) that are experiencing a surge and § 412.29 to cross-reference that definition where applicable.

4. Furnishing Outpatient Services in Temporary Expansion Locations of a Hospital or a Community Mental Health Center (CMHC) (Including the Patient's Home)

a. Hospital Outpatient and CMHC Therapy, Education, and Training Services

Partial Hospitalization Program (PHP)

A PHP is an intensive outpatient program of psychiatric services provided as an alternative to inpatient psychiatric care for individuals who have an acute mental illness, which includes, but is not limited to, conditions such as depression and schizophrenia. Section 1861(ff)(1) of the Act defines partial hospitalization services as the items and services described in paragraph (2) prescribed by a physician and provided under a program described in paragraph (3) under the supervision of a physician pursuant to an individualized, written plan of treatment established and periodically reviewed by a physician (in consultation with appropriate staff participating in such program), which sets forth the physician's diagnosis, the type, amount, frequency, and duration of the items and services provided under the plan, and the goals for treatment under the plan. Section 1861(ff)(2) of the Act describes the items and services included in partial hospitalization services. Section 1861(ff)(3)(A) of the Act specifies that a PHP is a program furnished by a hospital to its outpatients or by a CMHC, as a distinct and organized intensive ambulatory treatment service, offering less than 24-hour-daily care, in a location other than an individual's home or inpatient or residential setting. Section 1861(ff)(3)(B) of the Act defines a CMHC for purposes of this benefit.

In the May 8, 2020 IFC (85 FR 27563 through 27566), we stated that infection control was a primary goal of CMS initiatives undertaken during the COVID–19 PHE. We also stated that we believe continuity of behavioral health services is critical for those participating in a PHP, particularly at a time of heightened anxiety and uncertainty. As we noted in the May 8, 2020 interim final rule (85 FR 27562), we issued numerous blanket waivers under section 1135 of the Act, including for hospitals and CMHCs providing PHP services, to give health care providers needed flexibility to address the COVID–19 PHE and support the goal of infection control while maintaining access to partial hospitalization services and ensuring continuity of care for patients. Effective as of March 1, 2020, and for the duration of the COVID–19 PHE, we established an interim final policy that a temporary expansion location where the beneficiary may be located, including a beneficiary's home, may be a provider-based department (PBD) of the hospital, or may be a temporary extension of the CMHC (discussed in more detail below).

Consistent with the goals of infection control and maintaining access, for the duration of the COVID–19 PHE only, we established that providers could furnish certain partial hospitalization services remotely to patients in a temporary

expansion location of the hospital or CMHC, which could include the patient's home to the extent it was made provider-based to the hospital or an extension of the CMHC. PHP services consist of unique combinations of services designated at section 1861(ff)(2) of the Act, including individual psychotherapy, patient education, and group psychotherapy. We further noted that certain PHP services such as these require communication and interaction, but do not require the clinical staff or patient to be in the same location, nor do clinical staff need to be in the hospital or CMHC when furnishing these PHP services. Therefore, we established that the following types of services—to the extent they were already billable as PHP services in accordance with existing coding requirements prior to the COVID–19 PHE—could be furnished to beneficiaries by facility staff using telecommunications technology during the COVID–19 PHE: (1) Individual psychotherapy; (2) patient education; and (3) group psychotherapy. Because of the intensive nature of PHP, we stated that we expect PHP services to be furnished using telecommunications technology involving both audio and video. However, we recognized that in some cases beneficiaries might not have access to video communication technology. In order to maintain beneficiary access to PHP services, we stated that only in the case that both audio and video are not possible can the service be furnished exclusively with audio. We further clarified that services that required drug administration could not be furnished using telecommunications technology. To facilitate public understanding of the types of PHP services that could be furnished using telecommunications technology by the hospital to a patient in the hospital (including the patient's home if it was a PBD of the hospital) or by the CMHC to a patient in an expanded CMHC location, we provided on our website [346] a list of the individual psychotherapy, patient education, and group psychotherapy services that hospital or CMHC staff could furnish during the COVID–19 PHE to a beneficiary in their home or other temporary expansion location that functions as a PBD of the hospital or expanded CMHC when the beneficiary was registered as an outpatient. We noted that this list may not have included every service that fell into this category and that we intended to update the list periodically, to the extent that would be helpful for public awareness.

We further explained that although these services can be furnished remotely, all other PHP requirements were unchanged and still in effect, including that all services furnished under the PHP still required an order by a physician, had to be supervised and certified by a physician, and had to be furnished in accordance with coding requirements by a clinical staff member working within his or her scope of practice. We stated that in accordance with the longstanding requirements that are detailed in the Medicare Benefit Policy Manual, Pub 100–02, chapter 6, section 70.3, documentation in the medical record of the reason for the visit and the substance of the visit would continue to be required. We further explained that when these services are provided by clinical staff of the physician or other practitioner and furnished incident to their professional services, and are not provided by staff of the hospital or CMHC, the hospital or CMHC would not bill for the services. The physician or other practitioner would bill for such services incident to their own services and would be paid under the PFS.

(a) Hospital-Based PHP Providers

As detailed in the May 8, 2020 IFC (85 FR 27564), as part of the initiative to promote infection control and maintain access to PHP services, we waived the requirements for being a PBD of the hospital in § 413.65, as well as certain requirements under the Medicare conditions of participation in §§ 482.41 and 485.623, to facilitate the availability of temporary expansion locations. As we noted in that IFC, for purposes of the COVID–19 PHE and effective as of March 1, 2020, a temporary expansion location where the beneficiary may be located, including a beneficiary's home, may be a PBD of the hospital where the location meets the non-waived conditions of participation. We stated that together, these waivers allow hospitals to consider a temporary expansion location where the beneficiary may be located, including their homes, an HOPD only in the context of the COVID–19 PHE. Thus, we explained that for the duration of the COVID–19 PHE, we would consider the PHP services furnished by hospital clinical staff, when the beneficiary was registered as an outpatient of the hospital and in accordance with the supervising practitioner's scope of practice, to have been furnished in the hospital to the beneficiary in a temporary expansion location, including a beneficiary's home, so long as such temporary expansion location was made provider-based to the hospital. We noted that the hospital was instructed to bill for these services as if they were furnished in the hospital and consistent with any specific requirements for billing Medicare during the COVID–19 PHE.

(b) Community Mental Health Centers

A CMHC is a provider of PHP services defined under section 1861(ff)(3)(B) of the Act. As we discussed in the May 8, 2020 IFC (85 FR 27564), for the duration of the COVID–19 PHE, we waived the restriction at § 485.918(b)(1)(iii) for the purpose of providing PHP services to CMHC patients in their homes, which we stated would be considered a temporary expansion location of a CMHC. Certain therapeutic services by CMHC staff would be paid when provided for beneficiaries registered as outpatients, in accordance with the supervising practitioner's scope of practice, consistent with any specific requirements for billing Medicare during the COVID–19 PHE.

Comment: We received four comments in response to this interim final policy. One commenter, a national nonprofit organization, expressed support for this flexibility to ensure services were available safely to people with Medicare. Another commenter, a healthcare services company, encouraged CMS to ensure that temporary expansion location policies did not abruptly end at the end of the PHE, and supported a flexible transition policy to better ensure continuity of care as hospitals and communities continue to fight the spread of COVID–19 and recover from the impacts of the virus.

One national insurance company voiced support for the flexibilities, stating that these flexibilities were necessary to ensure that PHP beneficiaries continue to have access to the level of care they required and prevent potential relapse and overdose. This commenter noted that structured patient engagement is an important component of PHP and they believe the remote and audio-only flexibilities did not diminish this important component. They further noted that for PHP patients and providers, these flexibilities also reduced the risk of contracting or spreading the coronavirus. This commenter also expressed concern about clerical staff lacking the qualifications to provide the services described, and requested further language to clarify the scope of this allowance. Another national insurance company expressed support for the use of live-two-way video interactions via remote technology for PHP services,

[346] *https://www.cms.gov/coronavirus-waivers.*

stating it is comparable to in-person interaction. However, this commenter expressed concern about the use of only audio communication to provide PHP services. The commenter explained that audio-only delivery of services does not lend itself to the structure of group therapy or ongoing assessments. Consequently, the commenter stated that audio-only therapeutic services impede the ability to achieve the clinical benefits of the programs, and cautioned that if PHP services are delivered ineffectively via audio-only communication, the patient risks relapse and inpatient readmission.

Response: We appreciate the support from commenters about this interim final policy. In response to the concerns about audio-only therapeutic services, we noted in the May 8, 2020 IFC that due to the intensive nature of PHP we expected PHP services to be furnished using telecommunications technology involving both audio and video. However, we recognized that in some cases beneficiaries might not have access to video communication technology. In order to maintain beneficiary access to PHP services, we stated that only in the case that both audio and video are not possible could the service be furnished exclusively with audio (85 FR 27564).

Regarding the concern about clerical staff lacking the qualifications to provide the services described, we note that we explained in the May 8, 2020 IFC that, although these services can be furnished remotely, all other PHP requirements are unchanged and still in effect, including that all services furnished under the PHP still require an order by a physician, must be supervised by a physician, must be certified by a physician, and must be furnished in accordance with coding requirements by a clinical staff member working within his or her scope of practice (85 FR 27564).

Lastly, regarding the commenter's suggestion of a transition policy, as we explained in the May 8, 2020 IFC, this interim final policy depends on numerous blanket waivers under section 1135 of the Act, and will apply for the duration of the COVID–19 PHE. After those blanket waivers expire at the end of the COVID–19 PHE, section 1861(ff)(3)(A) of the Act limits Medicare's ability to pay for partial hospitalization services furnished to beneficiaries in a home or residential setting.

After consideration of the public comments we received, we are confirming as final this interim final policy. Therefore, for the duration of the COVID–19 PHE only, providers can furnish certain partial hospitalization services remotely to patients in a temporary expansion location of the hospital or CMHC, which may include the patient's home to the extent it is made provider-based to the hospital or an extension of the CMHC.

5. Furnishing Hospital Outpatient Services Remotely for Services Other Than Mental Health

As we explained in the May 8, 2020 IFC (85 FR 27562 through 27566), outpatient education and training services require communication and interaction between the patient and the clinical staff providing the service. We stated that facility staff can effectively furnish these services using telecommunications technology and, unlike many hospital services, the clinical staff and patient are not required to be in the same location to furnish them.

We further explained that blanket waivers in effect during the COVID–19 PHE allow temporary expansion locations, including beneficiaries' homes, to become provider-based departments (PBDs) of the hospital during the COVID–19 PHE and therapeutic outpatient hospital services furnished to beneficiaries in these provider-based locations can meet the requirement that these services be furnished in the hospital so long as all other requirements are met, including the hospital conditions of participation, to the extent not waived, during the COVID–19 PHE. . In light of the need for infection control and a desire for continuity of care, we recognized the ability of the hospital's clinical staff to continue to deliver these services even when the beneficiary is not physically located in the hospital. Therefore, in the May 8, 2020 IFC (85 FR 27564), we made clear that when a hospital's clinical staff are furnishing hospital outpatient services (such as drug administration, education, and training services) to a patient in the hospital (which can include the patient's home so long as it is provider-based to the hospital), and the patient is registered as an outpatient of the hospital, we will consider the requirements of the regulations at § 410.27(a)(1) to be met. We referred to this policy as Hospitals without Walls (HWW). Further, we clarified that when a patient is receiving a professional service via telehealth in a location that is considered a hospital PBD, and the patient is a registered outpatient of the hospital, the hospital in which the patient is registered may bill the originating site facility fee for the service. Finally, we also clarified the applicability of section 603 of the BBA 2015 to hospitals furnishing care in the beneficiaries' homes (or other temporary expansion locations), and whether those locations are considered relocated, partially relocated, or new PBDs.

We reminded readers that the physician supervision level for the vast majority of hospital outpatient therapeutic services is currently general supervision under § 410.27. This means a service must be furnished under the physician's overall direction and control, but the physician's presence is not required during the performance of the service.

In section X.A.1 of this final rule with comment period we are finalizing the IFC policy with respect to mental health services furnished remotely to beneficiaries in their homes, through an alternate regulatory authority that does not rely upon the HWW framework.

Comment: We received a number of comments supporting this policy. Commenters stated that this flexibility helps reduce the spread of COVID–19 by allowing beneficiaries to receive outpatient education and training services in their homes when furnished by hospital staff. A few commenters requested that CMS clarify the intersection of Hospitals Without Walls and the expansion of Medicare telehealth services paid under the Physician Fee Schedule.

Response: We thank commenters for their support. With regard to the intersection of Hospitals Without Walls and Medicare telehealth, we have stated in subregulatory guidance issued since the publication of the May 8, 2020 IFC that if a Medicare distant site practitioner furnishes a Medicare telehealth service to a beneficiary whose home has been reclassified as a temporary provider-based department of a hospital, the hospital should bill for the originating site facility fee. However, if the hospital furnishes services to the beneficiary without the involvement of a distant site practitioner furnishing a Medicare telehealth service, the hospital should accordingly bill for whatever service is being furnished as though it occurred within the four walls of the hospital.

Comment: Some commenters requested additional clarification regarding compliance with conditions of participation and life safety code requirements.

Response: We appreciate the requests for clarification. We have continued to update our guidance online and through CMS Office Hours to address provider questions and concerns in real time.

In this final rule, we are finalizing the provisions of the May 8, 2020 IFC (85 FR 27562 through 27566), without

modification, including that when a hospital's clinical staff are furnishing hospital outpatient services to a patient in the hospital (which can include the patient's home so long as it is provider-based to the hospital), and the patient is registered as an outpatient of the hospital, we will consider the requirements of the regulations at § 410.27(a)(1) to be met for the duration of the PHE for COVID–19. We are finalizing that when a patient is receiving a professional Medicare telehealth service in a location that is considered a hospital PBD, and the patient is a registered outpatient of the hospital, the hospital in which the patient is registered may bill the originating site facility fee for the service. We are also finalizing the applicability of section 603 of the BBA 2015 to hospitals furnishing care in the beneficiaries' homes (or other temporary expansion locations). Once the PHE for COVID–19 ends, these flexibilities will end as well.

6. Treatment of New and Certain Relocating Provider-Based Departments During the PHE

In the May 8, 2020 IFC (85 FR 27567 through 27568), we implemented a policy on an interim final basis related to treatment of new and certain relocating provider-based departments (PBDs) during the PHE. We refer readers to the May 8, 2020 IFC for an overview of that policy (85 FR 27567).

Comment: Many commenters expressed their support for allowing on and off-campus PBDs to temporarily relocate while maintaining their eligibility to bill as excepted off-campus PBDs. Several commenters requested that CMS expand the extraordinary circumstances policy after the PHE. Commenters wrote that excepted PBDs forced to relocate due to unforeseen circumstances beyond their control should be allowed to relocate without losing their excepted status. Other commenters felt that hospital operations may not return to normal on the date the PHE is lifted as many will need to transition back to normal operations and will need to implement new operating policies to address patient treatment and safety in a post COVID–19 world. They recommended that CMS consider extending the ability of temporarily relocated PBDs to bill at the OPPS rate for at least three months following the conclusion of the PHE. This, commenters argued, would help to facilitate their transition back to traditional billing rates and would allow them to transition care of patients as needed.

Response: We thank the commenters for their support. We continue to believe that our current extraordinary circumstance relocation policy is appropriate when the COVID–19 PHE is no longer in effect. We noted in the May 8, 2020 IFC (85 FR 27567 through 27568) that this temporary extraordinary circumstances relocation policy is time-limited to the PHE for COVID–19 to enable short-term hospital relocation of excepted off-campus and on-campus departments to improve access to care for patients during this time. The temporary extraordinary circumstances relocation policy established in the May 8, 2020 IFC (85 FR 27567 through 27568) will end when the PHE for the COVID–19 pandemic ends, and we anticipate that most, if not all, PBDs that relocated during the COVID–19 PHE will relocate back to their original location prior to, or soon after, the end of the COVID–19 PHE. PBDs that hospitals choose to permanently relocate off-campus would be considered new off-campus PBDs billing after November 2, 2015, and, therefore, would be required to bill using the ''PN'' modifier for hospital outpatient services furnished from that PBD location and would be paid the PFS-equivalent rate once the COVID–19 PHE ends. Following the COVID–19 PHE, hospitals may seek an extraordinary circumstances relocation exception for excepted off-campus locations that have permanently relocated, but these hospitals would need to follow the standard extraordinary circumstances application process we adopted in CY 2017 and file an updated CMS–855A enrollment form to reflect the new address(es) of the PBD(s). We note that our standard relocation exception policy only applies to excepted off-campus PBDs that relocate; on-campus PBDs that wish to permanently relocate off-campus will not be able to receive an extraordinary circumstances relocation exception under the standard extraordinary circumstances relocation request process after the conclusion of the COVID–19 PHE. We also note that hospitals should not rely on having relocated the off-campus PBD during the COVID–19 PHE as the reason the off-campus PBD should be permanently excepted following the end of the COVID–19 PHE. In other words, the fact that the off-campus PBD relocated in response to the pandemic will not, by itself, be considered an ''extraordinary circumstance'' for purposes of a permanent relocation exception, although CMS Regional Offices will continue to have discretion to approve or deny relocation requests for hospitals that apply after the COVID–19 PHE, depending on whether the relocation request meets the requirements for the extraordinary circumstances exception. Following the COVID–19 PHE, if temporarily relocated off-campus PBDs do not go back to their original location, they will be considered to be non-excepted PBDs and paid the PFS-equivalent rate.

Comment: Many commenters felt additional clarification was needed on the documentation required on when a PBD relocates to a beneficiary's home. Commenters expressed the burden of having to provide individual beneficiary addresses to the CMS RO. Commenters requested that CMS further streamline the process and outline the steps and documents needed to establish a temporary PBD at a beneficiary's home during the COVID–19 PHE.

Response: We believe that the process as outlined in the May 8, 2020 IFC (85 FR 27567 through 27568) sufficiently addresses the flexibility needed by providers while maintaining some program integrity safeguards. We do not believe it is overly burdensome for providers. We have continued to update our guidance online and through CMS Office Hours to address provider questions and concerns in real time.

Comment: The Medicare Payment Advisory Commission (MedPAC) commented that they fully recognize the benefit of modifying regulations to provide hospitals with flexibility to effectively address the COVID–19 PHE. They also commended CMS for creating an application process that allows hospitals to quickly transfer resources to new off-campus locations and also provides CMS with the data necessary to identify the locations of new off-campus PBDs. However, they expressed their concern that most, if not all, PBDs that relocated might not return to their original location when the COVID–19 PHE is over. They encouraged CMS to maintain the information from the application about the excepted PBDs that relocated and to be diligent in identifying which of these excepted PBDs return to their original location and which remain in their new location to ensure these providers are paid at rates that are consistent with Section 603 of BBA 2015.

Response: We thank MedPAC for their support. As the PHE ends, we will monitor those PBDs that submitted relocation requests to ensure that these providers are paid at rates that are consistent with section 603 of BBA 2015 given their post-PHE location.

In this final rule with comment period, we are finalizing the provisions of the May 8, 2020 IFC (85 FR 27567

through 27568) without modification, including a temporary extraordinary circumstances relocation exception policy for excepted off-campus PBDs that relocate off-campus during the COVID–19 PHE. Additionally, we are finalizing without modification the extension of the temporary policy for on-campus PBDs that relocate off-campus during the COVID–19 PHE that permits the relocating PBDs to continue to be paid under the OPPS during the PHE. Finally, we are finalizing without modification the streamlining of the process for relocating PBDs to obtain the temporary extraordinary circumstances policy exception. All of these flexibilities will end when the PHE for COVID–19 ends.

C. OPPS Separate Payment for New COVID–19 Treatments Policy for the Remainder of the PHE (CMS–9912–IFC)

In this final rule with comment period we are also responding to public comments and stating our final policy for a provision titled ''Additional Policy and Regulatory Revisions in Response to the COVID–19 Public Health Emergency'' (CMS–9912–IFC), which appeared in the November 6, 2020 **Federal Register** (85 FR 71142; hereinafter referred to as the November 6, 2020 IFC regarding separate payment under the OPPS for new COVID–19 treatments for the remainder of the PHE (85 FR 71158 through 71160)).

Under the OPPS Comprehensive APC (C–APC) policy, when a service that we have designated as a primary C–APC service is reported on a hospital outpatient claim, with certain exceptions, we make payment for all other items and services reported on the claim as being integral, ancillary, supportive, dependent, and adjunctive to the primary service and representing components of a complete comprehensive service. This results in a single prospective payment for each of the primary comprehensive services based on the costs of all reported services at the claim level. Under our current policy, payment for drugs or biological products with emergency authorization or approved to treat COVID–19 in the outpatient setting would be packaged into the payment for a primary service when billed on the claim for that service.

In the November 9, 2020 IFC, we stated that although many beneficiaries would likely not receive both a primary C–APC service and a drug or biological for treating COVID–19, we nonetheless believed that, as drugs or biologicals became available and were authorized or approved for the treatment of COVID–19 in the outpatient setting, it would be appropriate to mitigate any potential financial disincentives for hospitals to provide these new treatments during the PHE for COVID–19. Accordingly, effective for services furnished on or after the effective date of the November 9, 2020 IFC and until the end of the PHE for COVID–19, we created an exception to our OPPS C–APC policy to ensure new COVID–19 treatments that meet two criteria would, for the remainder of the PHE for COVID–19, always be separately paid and not packaged into a C–APC when they appear on the same claim as the primary C–APC service.

The first criterion is that the treatment must be a drug or biological product (which could include a blood product) authorized to treat COVID–19, as indicated in section ''I. Criteria for Issuance of Authorization'' of the letter of authorization for the drug or biological product, or the drug or biological product must be approved by the FDA for treating COVID–19. The second criterion is that the EUA for the drug or biological product (which could include a blood product) must authorize the use of the product in the outpatient setting or not limit its use to the inpatient setting, or the product must be approved by the FDA to treat COVID–19 disease and not limit its use to the inpatient setting. We refer readers to the November 6, 2020 IFC for a full overview of this policy (85 FR 71158 through 71160).

Comment: We received a few comments that supported this policy. Generally, commenters appreciated CMS's recognition of the significant cost associated with new COVID–19 therapies provided to Medicare beneficiaries in the HOPD setting. Commenters believed this would ensure access to these therapies.

Response: We thank the commenters for their support.

Comment: Commenters had some suggestions related to this policy. They requested CMS confirm the exact payment methodology it would use to calculate separate payment for qualifying COVID–19 therapies. Generally, commenters advocated that qualifying COVID–19 therapies be excluded from the OPPS 340B payment adjustment. Commenters also recommended CMS waive the co-insurance associated with COVID–19 therapies Finally, commenters requested CMS make this C–APC exemption permanent and extending it beyond the end of the PHE.

Response: We appreciate the commenters' support of this policy during the COVID–19 PHE. Since this IFC was published, there have been significant changes to the OPPS 340B payment policy and the commenter request for excluding qualifying COVID–19 therapies from the 340B payment adjustment would no longer be applicable for CY 2023. We refer readers to section V.B.6 in this final rule with comment period for further information about the 340B policy changes. Regarding the request to waive co-insurance associated with COVID–19 therapies, we do not believe that CMS has the statutory authority to waive coinsurance for these therapies, as suggested by the commenter. We believe that outside of the context of the COVID–19 PHE, our standard and longstanding policy of packaging adjunctive items and services into payment for primary C–APC services is appropriate for COVID–19 treatments, as they are similar to other treatments that currently can have their payment packaged into the payment for a primary service under the OPPS. Therefore, once the COVID–19 PHE ends, we do not believe it would be appropriate to continue paying separately for new COVID–19 treatments provided on the same claim as a C–APC on a permanent basis. In the event that future circumstances warrant additional flexibilities, we will reconsider this issue in future rulemaking.

Given the public comments we received, we are finalizing this policy as implemented in the November 6, 2020 IFC. Accordingly, this policy will end with the end of the PHE.

XXIII. Files Available to the Public via the Internet

The Addenda to the OPPS/ASC proposed rules and final rules with comment period are published and available via the internet on the CMS website. In the CY 2019 OPPS/ASC final rule with comment period (83 FR 59154), for CY 2019, we changed the format of the OPPS Addenda A, B, and C by adding a column titled ''Copayment Capped at the Inpatient Deductible of $1,364.00'' where we flag, through use of an asterisk, those items and services with a copayment that is equal to or greater than the inpatient hospital deductible amount for any given year (the copayment amount for a procedure performed in a year cannot exceed the amount of the inpatient hospital deductible established under section 1813(b) of the Act for that year). For CY 2023, we proposed to retain these columns, updated to reflect the amount of the 2023 inpatient deductible. In the CY 2022 OPPS/ASC final rule with comment period (85 FR 86266), we updated the format of the OPPS Addenda A, B, and C by adding

a column titled ''Drug Pass-Through Expiration during Calendar Year'' where we flagged, through the use of an asterisk, each drug for which pass-through payment was expiring during the calendar year on a date other than December 31. For CY 2023, we proposed to retain these columns that are updated to reflect the drug codes for which pass-through payment is expiring in CY 2023.

In addition, for CY 2023, we proposed to update the column titled ''Drug Pass-Through Expiration during Calendar Year'' to include devices, so that the column reads: ''Drug and Device Pass-Through Expiration during Calendar Year'' where we proposed to flag, through the use of an asterisk, each drug and device for which pass-through payment would be expiring during the calendar year on a date other than December 31. For CY 2023, we did not receive any public comments and, therefore, are finalizing our proposal to update the column to include devices, so that the column reads: ''Drug and Device Pass-Through Expiration during Calendar Year'' where we would flag, through the use of an asterisk, each drug and device for which pass-through payment would be expiring during the calendar year on a date other than December 31.

To view the Addenda to the CY 2023 OPPS/ASC proposed rule pertaining to proposed CY 2023 payments under the OPPS, we refer readers to the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/Hospital-Outpatient-Regulations-and-Notices.html*; select ''CMS–1772–FC'' from the list of regulations. All OPPS Addenda to this proposed rule are contained in the zipped folder titled ''2023 NFRM OPPS Addenda'' in the related links section at the bottom of the page. To view the Addenda to the CY 2023 OPPS/ASC proposed rule pertaining to CY 2023 payments under the ASC payment system, we refer readers to the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ASCPayment/ASC-Regulations-and-Notices.html*; select ''CMS–1772–FC'' from the list of regulations. The ASC Addenda to the CY 2023 OPPS/ASC proposed rule are contained in a zipped folder titled ''2023 NFRM Addendum AA, BB, DD1, DD2, EE, and FF'' in the related links section at the bottom of the page.

XXIV. Collection of Information Requirements

A. Statutory Requirement for Solicitation of Comments

Under the Paperwork Reduction Act of 1995 (PRA), we are required to provide 60-day notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of title 44 of the U.S. Code, as added by section 2 of the Paperwork Reduction Act of 1995, requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

We solicited public comment on each of these issues for the following sections of this document that contain information collection requirements (ICRs):

B. ICRs for the Hospital OQR Program

1. Background

The Hospital Outpatient Quality Reporting (OQR) Program is generally aligned with the CMS quality reporting program for hospital inpatient services known as the Hospital Inpatient Quality Reporting (IQR) Program. We refer readers to the CY 2011 through CY 2022 OPPS/ASC final rules (75 FR 72111 through 72114; 76 FR 74549 through 74554; 77 FR 68527 through 68532; 78 FR 75170 through 75172; 79 FR 67012 through 67015; 80 FR 70580 through 70582; 81 FR 79862 through 79863; 82 FR 59476 through 59479; 83 FR 59155 through 59156; 84 FR 61468 through 61469; 85 FR 86266 through 86267; and 86 FR 63961 through 63968, respectively) for detailed discussions of the previously finalized Hospital OQR Program ICRs. The ICRs associated with the Hospital OQR Program are currently approved under OMB control number 0938–1109, which expires on February 28, 2025.

In the CY 2022 OPPS/ASC final rule with comment period, our burden estimates were based on an assumption of 3,300 hospitals (86 FR 63961). For the CY 2023 OPPS/ASC final rule, we have updated our assumption to 3,350 hospitals based on recent data from the CY 2022 payment determination which reflects a closer approximation of the total number of hospitals reporting data for the Hospital OQR Program.

In the CY 2018 OPPS/ASC final rule with comment period (82 FR 52617), we finalized to utilize the median hourly wage rate for Medical Records and Health Information Technicians, in accordance with the Bureau of Labor Statistics (BLS), to calculate our burden estimates for the Hospital OQR Program. In BLS' most recent set of National Occupational Employment and Wage Estimates published on March 31, 2022, this occupation title has been removed. As a result, we now utilize the ''Medical Records Specialists'' occupation title. The BLS describes Medical Records Specialists as those responsible for compiling, processing, and maintaining medical records of hospital and clinic patients in a manner consistent with medical, administrative, ethical, legal, and regulatory requirements of the healthcare system and classifying medical and healthcare concepts, including diagnosis, procedures, medical services, and equipment, into the healthcare industry's numerical coding system;[347] therefore, we believe it is reasonable to assume that these individuals will be tasked with abstracting clinical data for submission to the Hospital OQR Program. The latest data from the BLS' May 2021 Occupational Employment and Wages data reflects a median hourly wage of $23.23 per hour for a Medical Records Specialists. We have finalized a policy to calculate the cost of overhead, including fringe benefits, at 100 percent of the mean hourly wage (82 FR 52617). This is necessarily a rough adjustment, both because fringe benefits and overhead costs can vary significantly from employer-to-employer and because methods of estimating these costs vary widely from study-to-study. Nonetheless, we believe that doubling the hourly wage rate ($23.23 × 2 = $46.46) to estimate the total cost is a reasonably accurate estimation method and allows for a conservative estimate of hourly costs.

2. Summary

In section XIV.B.4 of this final rule with comment period, we are finalizing to: (1) change the Cataracts: Improvement in Patient's Visual Function within 90 days Following

[347] *https://www.bls.gov/oes/current/oes292072.htm* (Accessed June 23, 2022). The hourly rate of $46.46 includes an adjustment of 100 percent of the median hourly wage to account for the cost of overhead, including fringe benefits.

Cataract Surgery measure (OP–31) to voluntary beginning with the CY 2025 reporting period/CY 2027 payment determination; (2) add an additional targeting criterion to the validation selection policy beginning with the CY 2023 reporting period; and (3) align the patient encounter quarters with the calendar year and update the data submission deadlines for each of these quarters beginning with the Q2 2023 reporting period.

3. Estimated Burden of Hospital OQR Program Requirements for the CY 2025 Payment Determination and Subsequent Years

a. Information Collection Burden Estimate for OP–31: Cataracts—Improvement in Patient's Visual Function Within 90 Days Following Cataract Surgery Measure

In the CY 2022 OPPS/ASC final rule with comment period (86 FR 63845 through 63846), we finalized to require this measure with mandatory reporting beginning with the CY 2025 reporting period/CY 2027 payment determination. We previously finalized voluntary reporting of this measure in the CY 2015 OPPS/ASC final rule with comment period (79 FR 66947 through 66948) and estimated that 20 percent of hospitals would elect to report it annually (79 FR 67014). As discussed in section XIV.B.5.b of this final rule with comment period, we are finalizing to change this measure to voluntary beginning with the CY 2025 reporting period/CY 2027 payment determination. We continue to estimate it will require hospitals 10 minutes once annually to report this measure using a CMS web-based tool. As a result, we estimate only 20 percent of hospitals will voluntarily submit data, which results in a total annual burden estimate of 112 hours (3,350 hospitals × 20 percent × 0.1667 hours) at a cost of $5,188 (112 hours × $46.46/hour). In addition to reporting the measure, for hospitals that chose to voluntarily submit, we also require hospitals to perform chart abstraction and estimate that each hospital will spend 2.92 minutes (0.049 hours) per case per measure to perform this activity. In the CY 2022 OPPS/ASC final rule with comment period, we used an estimate of 25 minutes per case per measure (86 FR 63963). Upon review, this estimate was erroneous, therefore we are correcting our assumption to 2.92 minutes (0.049 hours) per case per measure as finalized in the CY 2016 OPPS/ASC final rule (80 FR 70582). The currently approved burden estimate assumes 242 cases per measure. For chart abstraction, we estimate an annual burden of 12 hours (0.049 hours × 242 cases) at a cost of $549 (12 hours × $46.46/hour) per hospital and a total annual burden of 7,891 hours (3,350 hospitals × 20 percent × 12 hours) at a cost of $368,028 (7,891 hours × $46.46/hour) for all participating hospitals. In aggregate, we estimate a total annual burden of 8,003 hours (112 hours + 7,891 hours) at a cost of $373,216 ($5,188 + $368,028) for all hospitals. This is a decrease of 325,847 hours and $15,138,852 per year from the currently approved estimate due to the 80 percent of hospitals we assume will no longer report this measure, the updated assumption of the number of hospitals participating in the Hospital OQR Program, the updated burden estimate for chart abstraction, and the updated wage rate.

The information collection requirement and the associated burden will be submitted as part of a revision of the information collection request currently approved under OMB control number 0938–1109, which expires on February 28, 2025.

b. Information Collection Burden Estimate for the Addition of an Additional Targeting Criterion to the Validation Selection Policy

In section XIV.B.4 of this final rule with comment period, we are finalizing to adopt an additional targeting criterion to the validation selection policy beginning with the CY 2023 reporting period/CY 2025 payment determination. We also are finalizing to codify this targeting criterion at § 419.46(f)(3). We do not believe this policy will increase reporting burden, because it changes neither the total number of hospitals required to submit data nor the amount of data hospitals selected for validation would be required to submit.

c. Information Collection Burden Estimate for the Alignment of Patient Encounter Quarters With the Calendar Year

In section XIV.B.4.b of this final rule with comment period, we are finalizing to align patient encounter quarters with the calendar year (January through December), beginning with the CY 2026 payment determination and subsequent years. This finalized period will not result in any increase in information collection burden because it will not change the amount of data hospitals will be required to submit.

d. Summary of Information Collection Burden Estimates for the Hospital OQR Program

In summary, under OMB control number 0938–1109 which expires on February 28, 2025 we estimate that the updated assumptions and policies promulgated in this final rule with comment period will result in a decrease of 325,847 hours annually for 3,350 OPPS hospitals for the CY 2025 reporting period/CY 2027 payment determination and subsequent years. The total cost decrease related to this information collection is approximately -$15,138,852 (325,847 hours × $46.46/hour) (which also reflects use of an updated hourly wage rate as previously discussed). Table 104 summarizes the estimated total burden change compared to our currently approved information collection burden estimates. We will submit the revised information collection estimates to OMB for approval under OMB control number 0938–1109. We did not finalize any changes for the CY 2024 reporting period/CY 2026 payment determination, therefore the previously finalized burden estimates for the CY 2024 reporting period/CY 2026 payment determination remain unchanged.

TABLE 104: SUMMARY OF FINALIZED HOSPITAL OQR PROGRAM INFORMATION COLLECTION BURDEN CHANGE FOR THE CY 2025 REPORTING PERIOD/CY 2027 PAYMENT DETERMINATION AND SUBSEQUENT YEARS

	Annual Recordkeeping and Reporting Requirements Under OMB Control Number 0938-1109 for the CY 2027 Payment Determination and Subsequent Years							
Activity	**Estimated time per record (minutes)**	**Number reporting quarters per year**	**Number of OPPS hospitals reporting**	**Average number records per hospital per quarter**	**Annual burden (hours) per hospital**	**Finalized annual burden (hours) across OPPS hospitals**	**Previously finalized annual burden (hours) across OPPS hospitals**	**Net difference in annual burden hours**
Voluntary Reporting of OP-31 Measure	10	1	670	1	0.167	112	550	-438
Chart Abstraction for OP-31 Measure	2.9	1	670	242	12	7,891	333,300	-325,409
	Total Change in Information Collection Burden Hours: -325,847							
	Total Cost Estimate: Updated Hourly Wage ($46.46) x Change in Burden Hours (-325,847) = **-$15,138,852**							

C. ICRs for the ASCQR Program

1. Background

We refer readers to the CY 2012 OPPS/ASC final rule (76 FR 74554), the FY 2013 IPPS/LTCH PPS final rule (77 FR 53672), and the CY 2013, CY 2014, CY 2015, CY 2016, CY 2017, CY 2018, CY 2019, CY 2020, CY 2021, and CY 2022 OPPS/ASC final rules (77 FR 68532 through 68533; 78 FR 75172 through 75174; 79 FR 67015 through 67016; 80 FR 70582 through 70584; 81 FR 79863 through 79865; 82 FR 59479 through 59481; 83 FR 59156 through 59157; 84 FR 61469; 85 FR 86267; and 86 FR 63968 through 63971, respectively) for detailed discussions of the Ambulatory Surgical Center Quality Reporting (ASCQR) Program ICRs we have previously finalized. The ICRs associated with the ASCQR Program for the CY 2014 through CY 2023 payment determinations are currently approved under OMB control number 0938–1270, which expires on July 31, 2024.

In the CY 2018 OPPS/ASC final rule with comment period (82 FR 52619 through 52620), we finalized to utilize the median hourly wage rate for Medical Records and Health Information Technicians, in accordance with the BLS, to calculate our burden estimates for the ASCQR Program. In BLS' most recent set of National Occupational Employment and Wage Estimates published on March 31, 2022, this occupation title has been removed. As a result, we now utilize the ''Medical Records Specialists'' occupation title. The BLS describes Medical Records Specialists as those responsible for compiling, processing, and maintaining medical records of hospital and clinic patients in a manner consistent with medical, administrative, ethical, legal, and regulatory requirements of the healthcare system and classifying medical and healthcare concepts, including diagnosis, procedures, medical services, and equipment, into the healthcare industry's numerical coding system;[348] therefore, we believe it is reasonable to assume that these individuals will be tasked with abstracting clinical data for submission to the ASCQR Program. The latest data from the BLS' May 2021 Occupational Employment and Wages data reflects a median hourly wage of $23.23 per hour for a Medical Records Specialists. We have finalized a policy to calculate the cost of overhead, including fringe benefits, at 100 percent of the mean hourly wage (82 FR 52619 through 52620). This by necessity is a rough adjustment, both because fringe benefits and overhead costs can vary significantly from employer-to-employer and because methods of estimating these costs vary widely from study-to-study. Nonetheless, we believe that doubling the hourly wage rate ($23.23 × 2 = $46.46) to estimate the total cost is a reasonably accurate estimation method and allows for a conservative estimate of hourly costs.

Based on an analysis of the CY 2020 payment determination data, we found that of the 6,651 ASCs that met eligibility requirements for the ASCQR Program, 3,494 were required to participate in the Program and did so. In addition, 689 ASCs that were not required to participate due to having low Medicare claims volume (less than 240), did so, for a total of 4,183 participating facilities. As noted in section XXV.C.5.a of the ''Regulatory Impact Analysis'', for the CY 2021 payment determination, all 6,811 ASCs that met eligibility requirements for the ASCQR Program received the annual payment update due to data submission requirements being excepted under the ASCQR Program's ECE policy in consideration of the COVID–19 PHE; 3,957 of these ASCs would have been required to participate without the PHE exception. Therefore, we estimate that 3,957 plus 689, or 4,646, ASCs will submit data for the ASCQR Program for the CY 2023 payment determination unless otherwise noted.

[348] *https://www.bls.gov/oes/current/oes292072.htm* (Accessed June 23, 2022). The hourly rate of $42.40 includes an adjustment of 100 percent of the median hourly wage to account for the cost of overhead, including fringe benefits.

2. Summary

In section XV.B.4 of this final rule with comment period, we are finalizing to change the Cataracts: Improvement in Patient's Visual Function within 90 days Following Cataract Surgery measure (ASC–11) to voluntary beginning with the CY 2025 reporting period/CY 2027 payment determination.

3. Estimated Burden of ASCQR Program Requirements for the CY 2025 Payment Determination and Subsequent Years

a. Information Collection Burden Estimate for Proposal To Change ASC–11: Cataracts—Improvement in Patient's Visual Function Within 90 Days Following Cataract Surgery Measure From Mandatory to Voluntary

In the CY 2022 OPPS/ASC final rule with comment period (86 FR 63886 through 63887), we finalized to require this measure with mandatory reporting beginning with the CY 2025 reporting period/CY 2027 payment determination. We previously finalized voluntary reporting of this measure in the CY 2015 OPPS/ASC final rule with comment period (79 FR 66985) and estimated that 20 percent of ASCs would elect to report it annually (79 FR 67016). As discussed in section XV.B.5.b of this final rule with comment period, we are finalizing to change the ASC–11 measure to voluntary beginning with the CY 2025 reporting period/CY 2027 payment determination. We continue to estimate it will require ASCs 10 minutes once annually to report this measure using a CMS web-based tool. As a result of our finalized policy, we estimate only 20 percent of ASCs will voluntarily submit data, which results in a total annual burden estimate for all participating ASCs of 155 hours (4,646 ASCs × 20 percent × 0.1667 hours) at a cost of $7,194 (115 hours × $46.46/hour). In addition to reporting the measure, for ASCs that chose to voluntarily submit, we also require ASCs to perform chart abstraction for a minimum required sample size of 63 cases. In the CY 2022 OPPS/ASC final rule with comment period, we estimated that each ASC would spend 15 minutes (0.25 hours) per case to perform this activity (86 FR 63969). However, upon review, we believe the effort involved with this activity is similar to what is required for the OP–31 measure in the Hospital OQR Program, therefore, we are updating our assumption to 2.92 minutes (0.049 hours) per case per measure. Therefore, we estimate an annual burden of 3.1 hours (0.049 hours × 63 cases) at a cost of $142 (3.1 hours × $46.46/hour) per ASC and a total annual burden of 2,848 hours (4,646 ASCs × 20 percent × 3.1 hours) at a cost of $132,333 (2,848 hours × $46.46/hour) for all participating ASCs. In aggregate, we estimate a total annual burden of 3,003 hours (155 hours + 2,848 hours) at a cost of $139,527 ($7,194 + $132,333) for all ASCs. This is a decrease of 72,107 hours and $3,350,091 per year from the currently approved estimate due to the 80 percent of ASCs we assume will no longer report this measure, the updated burden estimate per case per measure, and the updated wage rate.

b. Summary of Information Collection Burden Estimates for the ASCQR Program

In summary, under OMB control number 0938–1270 which expires on July 31, 2024, we estimate that the policies promulgated in this final rule with comment period will result in a decrease of 72,107 hours annually for 4,646 ASCs for the CY 2025 reporting period/CY 2027 payment determination and subsequent years. The total cost decrease related to this information collection is approximately $3,350,091 (72,107 hours × $46.46/hour). Table 105 summarizes the total burden change compared to our currently approved information collection burden estimates. We will submit the revised information collection estimates to OMB for approval under OMB control number 0938–1270.

TABLE 105: SUMMARY OF FINALIZED ASCQR PROGRAM INFORMATION COLLECTION BURDEN CHANGE FOR THE CY 2025 REPORTING PERIOD/CY 2027 PAYMENT DETERMINATION AND SUBSEQUENT YEARS

	Annual Recordkeeping and Reporting Requirements Under OMB Control Number 0938-1270 for the CY 2025 Payment Determination and Subsequent Years							
Activity	**Estimated time per record (minutes)**	**Number reporting quarters per year**	**Number of ASCs reporting**	**Average number records per ASC per quarter**	**Annual burden (hours) per ASC**	**Finalized annual burden (hours) across ASCs**	**Previously finalized annual burden (hours) across ASCs**	**Net difference in annual burden hours**
Voluntary Reporting of ASC-11 Measure	10	1	929	1	0.167	155	774	-619
Chart Abstraction for ASC-11 Measure	2.9	1	929	63	3.1	2,848	74,336	-71,488
	Total Change in Information Collection Burden Hours: -72,107							
	Total Cost Estimate: Updated Hourly Wage ($46.46) x Change in Burden Hours (-72,107) = **-$3,350,091**							

D. ICRs for Rural Emergency Hospitals (REH) Physician Self-Referral Law Update

As discussed in section XVIII.E of this final rule with comment period, we are finalizing our proposal to revise certain existing exceptions applicable to compensation arrangements involving specific types of providers to make them applicable to compensation arrangements to which an REH is a party. Specifically, we are finalizing our proposal to revise the exceptions for physician recruitment at § 411.357(e), obstetrical malpractice insurance subsidies at § 411.357(r), retention payments in underserved areas at § 411.357(t), electronic prescribing items and services at § 411.357(v), assistance to compensate a nonphysician practitioner at § 411.357(x), and timeshare arrangements at § 411.357(y) to also permit an REH to provide remuneration to a physician (or an immediate family member of a physician) if all requirements of the applicable exception are satisfied. All of the finalized proposals will ensure that exceptions that may already be utilized by existing hospitals eligible to undergo conversion to an REH remain available to REHs.

The existing exceptions at § 411.357(e), (r), (t), (v), (x), and (y) each require that the compensation arrangements to which the exceptions apply be documented in a writing signed by the parties. The existing exception at § 411.357(t)(2) also requires a written certification that the physician has a bona fide opportunity for future employment by a hospital, academic medical center, or physician organization that requires the physician to move the location of his or her medical practice at least 25 miles and outside the geographic area served by the hospital. The existing exception at § 411.357(x) also requires that records of the actual amount of remuneration provided by the hospital to the physician, and by the physician to the nonphysician practitioner, must be maintained for a period of at least 6 years. We did not propose, and are not finalizing, any changes to the existing writing, signature, or record retention requirements. The burden associated with writing and signature requirements will be the time and effort necessary to prepare written documents and obtain signatures of the parties. The burden associated with record retention requirements is the time and effort necessary to compile and store the records.

As noted in the CY 2023 OPPS/ASC proposed rule, while the writing, signature, and record retention requirements are subject to the PRA, we believe the associated burden is exempt under 5 CFR 1320.3(b)(2). We believe that the time, effort, and financial resources necessary to comply with these requirements would be incurred by persons without Federal regulation during the normal course of their activities. Specifically, we believe that, for normal business operations purposes, health care providers and suppliers document their financial arrangements with physicians and others and retain these documents in order to identify and be able to enforce the legal obligations of the parties. Therefore, we believe that the writing, signature, and record retention requirements should be considered usual and customary business practices.

We did not receive any public comments regarding our position that the burden associated with these requirements is a usual and customary business practice that is exempt from the PRA.

E. ICRs for Addition of a New Service Category for Hospital Outpatient Department (OPD) Prior Authorization Process

In the CY 2020 OPPS/ASC final rule with comment period, we established a prior authorization process for certain hospital OPD services using our authority under section 1833(t)(2)(F) of the Act, which allows the Secretary to develop a method for controlling unnecessary increases in the volume of covered OPD services (84 FR 61142, 61446 through 61456).[349] As part of the CY 2021 OPPS/ASC final rule with comment period we added additional service categories to the prior authorization process (85 FR 85866, 86236 through 86248). The regulations governing the prior authorization process are located in subpart I of 42 CFR part 419, specifically at §§ 419.80 through 419.89.

In accordance with § 419.83(b), we are finalizing our proposal to require prior authorization for a new service category: Facet joint interventions. We are adding the service category to § 419.83(a)(3). We also are finalizing that the prior authorization process for the additional service category will be effective for dates of services on or after July 1, 2023. The ICR associated with prior authorization requests for these covered outpatient department services is the required documentation submitted by providers. The prior authorization request must include all relevant documentation necessary to show that the service meets applicable Medicare coverage, coding, and payment rules and the request must be submitted before the service is provided to the beneficiary and before the claim is submitted for processing.

The burden associated with the prior authorization process for the new category, Facet joint interventions, will be the time and effort necessary for the submitter to locate and obtain the relevant supporting documentation to show that the service meets applicable coverage, coding, and payment rules, and to forward the information to CMS or its contractor (MAC) for review and determination of a provisional affirmation. We expect that this information will generally be maintained by providers within the normal course of business and that this information will be readily available. We estimate that the average time for office clerical activities associated with this task will be 30 minutes, which is equivalent to that for normal prepayment or post payment medical review. We anticipate that most prior authorization requests will be sent by means other than mail. However, we estimate a cost of $5 per request for mailing medical records. Due to July 1, 2023 start date, the first year of the prior authorization for the new service category will only include 6 months. Based on CY 2019 data, we estimate that for those first 6 months there will be 41,701initial requests mailed during the year. In addition, we estimate there will be 13,683 resubmissions of a request mailed following a non-affirmed decision. Therefore, the total mailing cost is estimated to be $276,920 (55,384 mailed requests × $5). Based on CY 2019 data for the new service category, we estimate that annually there will be 83,401 initial requests mailed during a year. In addition, we estimate there will be 27,366 resubmissions of a request mailed following a non-affirmed decision. Therefore, the total annual mailing cost is estimated to be $553,838 (110,786 mailed requests × $5). We also estimate that an additional 3 hours per provider will be required for attending educational meetings, training staff on what services require prior authorization, and reviewing training documents.

The average labor costs (including 100 percent fringe benefits) used to estimate the costs were calculated using data available from the Bureau of Labor Statistics (BLS). Based on the BLS information, we estimate an average clerical hourly rate of $17.13 with a loaded rate of $34.26. The prior authorization program for the new

[349] See also correction notification issued January 3, 2020 (85 FR 224).

service category will not create any new documentation requirements. Instead, it will just require the same documents needed to support claim payments to be submitted earlier in the claim process. The estimate uses the clerical rate since we do not believe that clinical staff will need to spend more time on completing the documentation than will be needed in the absence of the prior authorization policy. The hourly rate reflects the time needed for the additional clerical work of submitting the prior authorization request itself. CMS believes providers will have provided education to their staff on what services are included in the prior authorization process. Following this education, the staff will know which services need prior authorization and will not need additional time or resources to determine if a service requires prior authorization. We estimate that the total number of submissions for the first year (6 months) will be 184,613(129,229 submissions through fax or electronic means + 55,384 mailed submissions). Therefore, we estimate that the total burden for the first year (6 months) for the new service category, allotted across all providers, will be 99,768 hours (0.5 hours × 184,613 submissions plus 3 hours × 2,487 providers for education). The burden cost for the first year (6 months) is $3,694,954 (99,768 hours × $34.26 plus $276,920 for mailing costs). In addition, we estimate that the total annual number of submissions will be 369,225 (258,458 submissions through fax or electronic means + 110,768 mailed submissions). The annual burden hours for the new service category, allotted across all providers, will be 192,074 hours (0.5 hours × 369,225 submissions plus 3 hours × 2,487 providers for education). The annual burden cost will be $7,134,276 (192,074 hours × $34.26 plus $553,838 for mailing costs). For the total burden and associated costs for the new service category, we estimate the annualized burden to be 161,305 hours and $5,987,835 million. The annualized burden is based on an average of 3 years, that is, 1 year at the 6-month burden and 2 years at the 12-month burden. The ICR approved under OMB control number 0938–1368 will be revised and submitted to OMB for approval.

Table 106 below is a chart reflecting the total burden and associated costs for the provisions included in this final rule with comment period.

TABLE 106: TOTAL BURDEN FOR NEW SERVICE CATEGORY

Information Collection Requests	Burden Hours Increase/Decrease (+/-)*	Cost (+/-)*
Addition of a New Service Category for Hospital Outpatient Department (OPD) Prior Authorization Process	+161,305	+$5.9 million

* Numbers rounded.

F. ICRs for Payment Adjustments for Domestic NIOSH-Approved Surgical N95 Respirators

In section X.H of this final rule with comment period, we are finalizing IPPS and OPPS payment adjustments for the additional resource costs of domestic NIOSH-approved surgical N95 respirators for cost reporting periods beginning on or after January 1, 2023. The payment adjustments will be based on the IPPS and OPPS shares of the estimated difference in the reasonable costs of a hospital to purchase domestic NIOSH-approved surgical N95 respirators compared to non-domestic ones. As discussed in section X.H of this final rule with comment period, in order to calculate the N95 payment adjustment for each eligible cost reporting period, we created a new cost report worksheet to collect additional information from hospitals.

Specifically, the new cost report worksheet will collect the following: (1) total quantity of domestic NIOSH-approved surgical N95 respirators purchased by hospital; (2) total aggregate cost of domestic NIOSH-approved surgical N95 respirators purchased by hospital; (3) total quantity of non-domestic NIOSH-approved surgical N95 respirators purchased by hospital; and (4) total aggregate cost of non-domestic NIOSH-approved surgical N95 respirators purchased by hospital.

This new information will be used along with other information already collected on the Hospitals and Health Care Complex Cost Report (Form CMS–2552–10) approved under OMB control number 0938–0050 to calculate an IPPS payment adjustment amount and an OPPS payment adjustment amount. This new cost report worksheet may be submitted by a provider of service as part of the annual filing of the cost report and make available to its contractor and CMS, documentation to substantiate the data included on this Medicare cost report worksheet. The documentation requirements are based on the recordkeeping requirements at current § 413.20, which require providers of services to maintain sufficient financial records and statistical data for proper determination of costs payable under Medicare.

The burden associated with filling out this new N95 cost report worksheet will be the time and effort necessary for the provider to locate and obtain the relevant supporting documentation to report the quantity and aggregate costs of domestic NIOSH-approved surgical N95 respirators and non-domestic NIOSH-approved surgical N95 respirators purchased by hospital for the period. We estimate the number of respondents to be 4,662. This number is comprised of 3,240 Medicare certified 1886(d) hospitals eligible for the payment adjustment under Part A and Part B (including 30 Indian Health Services Hospitals excluded from the Part B payment adjustment as they are paid an all-inclusive rate for Part B services) plus 1,422 additional hospitals paid for outpatient services under the hospital OPPS.[350] We estimate the average burden hours per facility to be 0.50 hours which breaks down to approximately 0.40 hours per provider for recordkeeping and 0.10 hours per provider for reporting. We recognize this average varies depending on the provider size and complexity.

We estimate the associated labor costs as follows. The estimated 0.40 hours for recordkeeping includes time for bookkeeping activities. Based on the most recent Bureau of Labor Statistics (BLS) in its 2021 Occupation Outlook

[350] Data sourced from the System for Tracking Audit and Reimbursement (STAR), an internal CMS data system maintained by the Office of Financial Management (OFM).

Handbook, the mean hourly wage for Category 43–3031 is $21.70.[351] We added 100 percent of the mean hourly wage to account for fringe and overhead benefits, which calculates to $43.40 ($21.70 + $21.70) and multiplied it by 0.40 hours, to determine the annual recordkeeping costs per hospital to be $17.36 ($43.40 per hour multiplied by 0.40 hours). The estimated 0.10 hours for reporting includes time for accounting and audit professionals' activities. The mean hourly wage for Category 13–2011 [352] is $40.37. We added 100% of the mean hourly wage to account for fringe and overhead benefits, which calculates to $80.74 ($40.37 plus $40.37) and multiplied it by 0.10 hours, to determine the annual reporting costs per hospital to be $8.07 ($80.74 per hour multiplied by 0.10 hours). We calculated the total average annual cost per hospital of $25.43 by adding the recordkeeping costs of $17.36 plus the reporting costs of $8.07. We estimated the total annual cost to be $118,555 ($25.43 cost per hospital multiplied by 4,662 hospitals). In addition to the announcement in this final rule, we will publish a separate 30-day notice in the **Federal Register** to solicit additional comments on this topic. The information collection request is identified as CMS–10821 and titled ''Supplemental to Form CMS–2552–10, Payment Adjustment for Domestic NIOSH-Approved Surgical N95 Respirators.'' The notice will inform the public on where to find the information collection request for which we are seeking OMB approval and how to submit comments on it.

G. ICRs for REH Provider Enrollment Requirements

As stated earlier in section XIX.C.1 of this final rule with comment period, we are finalizing our proposal at § 424.575, as well as existing § 424.510(a)(1) and (d)(1), which require REHs to complete and submit the applicable enrollment application, which, for REHs, will be the Form CMS–855A (OMB control number 0938–0685). The only impacts associated with our REH enrollment policies are those concerning the submission of a Form CMS–855A change of information application to convert from a CAH or hospital (as defined in section 1886(d)(1)(B) of the Act) to an REH. Per a North Carolina Rural Health Research Program [353] study (and as stated in the CMS proposed rule titled ''Medicare and Medicaid Programs; Conditions of Participation (CoPs) for Rural Emergency Hospitals (REHs) and Critical Access Hospital CoP Updates,'' published in the **Federal Register** on July 6, 2022 (87 FR 40350), we estimate that 68 REHs would convert from either a CAH or section 1886(d)(1)(B) hospital. (However, as we did in the aforementioned July 6, 2022 proposed rule, we acknowledge that the number of conversions could be less than or significantly greater than this estimate.) For purposes of these calculations, we assume that all of these facilities will do so within the first year of our proposed requirements.

Form CMS–855A applications are typically completed by the provider's office or administrative staff. According to the most recent BLS wage data for May 2021, the mean hourly wage for the general category of ''Office and Administrative Support Workers, All Other'' (the most appropriate BLS category for owners) is $20.47 (see *https://www.bls.gov/oes/current/oes_nat.htm#43-0000*). With fringe benefits and overhead, the figure is $40.94. This will result in an estimated Year 1 burden involving final policy at § 424.575 of 68 hours (68 applications × 1 hour) at a cost of $2,784.

The burden associated with this requirement will be included as part of a resubmission of the information collection previously approved under 0938–0685. In addition to the announcement in this rule, we will also be publishing the required 60-day and 30-day notices to formally announce the aforementioned resubmission request and to both inform the public on where to find the revised PRA package for review and where to submit comments.

H. ICRs for Rural Emergency Hospitals and CAHs CoPs

1. Factors Influencing ICR Burden Estimates

Under this final rule with comment period, an REH's ICR may differ from that of a hospital or CAH, given that REHs would be providers of outpatient services and would not provide inpatient services. We based the ICRs for REHs on the ICRs for hospitals and CAHs in some cases because, in accordance with section 1861(kkk) of the Act, REHs must convert from either a rural hospital with not more than 50 beds or a CAH. In the discussion that follows, we rely heavily on the study of the North Carolina Rural Health Research Program's (NC RHRP's) study titled ''How Many Hospitals Might Convert to a Rural Emergency Hospital (REH)?'' [354] This study examined data on existing rural hospitals (Medicare-funded through both the prospective payment system and cost-reimbursements to CAHs) to determine how many might meet three key criteria (1) 3 years of negative total financial margins; (2) average daily census of acute and swing beds of less than three persons; and (3) net patient revenue of less than $20 million annually. The study further assumed that all the statutory and regulatory requirements would be met by every REH. The NC RHRP study assumes that hospitals and CAHs meeting the necessary requirements would apply for election of coverage under the new REH program. The study did not address the potential caseload, cost, or revenue changes from electing conversion and implicitly assumed that the net effects would be positive.

We note that another study from consulting firm CLA also examines the number of facilities likely to convert to REHs titled ''A Path Forward: CLA's Simulations on Rural Emergency Hospital Designation.'' [355] The CLA study estimated that between 11 and 600 CAHs would benefit from conversion to REH status—based on estimated REH reimbursement and several financial assumptions (estimated average facility payment, estimated outpatient fee schedule payment, estimated average skilled nursing facility payment rates by state, presence or loss of swing bed payments, and continuance or cessation of 340B eligibility) and four simulation methods. A key takeaway from both studies is that available data support a possible wide range of conversion decisions. In addition, we note that these results and the calculations on which they rely are subject to a wide range of uncertainty as illustratively shown in the CLA study's summary estimate and the NC RHRP study makes the same point in describing its central estimate set of results. In the analysis that follows, we use for simplicity of exposition the NC RHRP study results, which depend on data and calculations presented in the study at a level of detail that allows reader analysis and present our summary estimates based on the NC RHRP study's central estimate.

[355] CLA, ''A Path Forward: CLA's Simulations on Rural Emergency Hospital Designation'', February 8, 2022, at *https://www.claconnect.com/resources/articles/2022/a-path-forward-clas-simulations-on-rural-emergency-hospital-designation.*

In total, the NC RHRP study estimated that there are 1,673 hospitals (mostly CAHs) eligible to convert to an REH and of these, 68 would convert to REH status. The reasons why some would convert are presented in the NC RHRP study and include low levels of inpatient revenue, low levels of swing bed nursing care revenue, and negative financial margins over a period of years.

The finances of individual rural hospitals and CAHs vary widely, as do the local economic and demographic circumstances of the communities served by these facilities (for example some rural areas are gaining population even as most face declining populations). Competition from other hospitals either in the rural area or in nearby cities also varies widely, with the only certainty in forecasting REH conversion is that seemingly similar hospitals and CAHs will make widely different decisions. What the NC RHRP did, in essence, was predict that the hospitals and CAHs facing the most severe financial difficulties would be the most likely to convert.

For purposes of our analysis, we use the NC RHRP estimate of 68 conversions though acknowledge that the number of conversions could be less than or significantly greater than this estimate. In addition, when considering the PRA burden for REHs, given that the CoPs align closely with existing standards, we considered both the existing burden estimates for CAHs and hospitals, as well as our ongoing experience with these provider types. We also considered that REHs would only be furnishing outpatient services, which would lessen their burden.

2. Sources of Data Used in Estimates of Burden Hours and Cost Estimates

For the estimated costs contained in the analysis below, we used data from the U.S. Bureau of Labor Statistics (BLS) to determine the mean hourly wage for the positions used in this analysis.[356] For the total hourly cost, we doubled the mean hourly wage for a 100 percent increase to cover overhead and fringe benefits, according to standard HHS estimating procedures. If the total cost after doubling resulted in 0.50 or more, the cost was rounded up to the next dollar. If it was 0.49 or below, the total cost was rounded down to the next dollar. The total costs used in this analysis are indicated in Table 107.

BILLING CODE 4120–01–P

TABLE 107: Summary Information of Estimated Mean Hourly and Adjusted Hourly Wages

Occupation Code	BLS Occupation Title	Associated Position Title in this Regulation	Mean Hourly Wage ($/hour)	Adjusted Hourly Wage (with 100% markup for fringe benefits & overhead) ($/hour) (rounded to nearest dollar)
29-1228	Physicians, All Others; and Ophthalmologist, except Pediatric) (General Medical and Surgical Hospitals)	Physician	$105.22	$210
29-1141	Registered Nurses	Registered Nurse, Clinical Trainer	$39.27	$79
11-9111	Medical and Health Services Managers (General Medical and Surgical Hospitals)	Administrator, Medical director, Director of nursing	$61.22	$122
29-1071	Physician Assistants	Physician Assistant	$55.34	$111
29-1171	Nurse Practitioners	Nurse Practitioner	$53.51	$107
43-6013	Medical Secretaries and Administrative Assistants	Clerical Staff	$18.75	$38
11-3010	Administrative Services and Facilities Managers	Facilities Director	$51.98	$104
29-1000	Healthcare Diagnosing or Treating Practitioners	Mid-Level Practitioner	$50.58	$101

BILLING CODE 4120–01–C

3. Rural Emergency Hospitals

a. ICRs Regarding Condition of Participation: Provision of Services (§ 485.514)

Section 485.514(a) would require REHs to furnish health care services in accordance with appropriate written policies that are consistent with applicable state law. In addition, § 485.514(b) would require REHs to develop the policies with the advice of members of the REH's professional health care staff, while § 485.514(d) would require REHs to conduct a biennial review of all its policies and procedures. We have not designated any specific process or format for REHs to use in developing their policies or conducting a review of their policies because we believe they need the flexibility to determine how best to accomplish these tasks.

In accordance with the section 1861(kkk)(3) of the Act, REHs must have been either a CAH or a rural hospital with not more than 50 beds as of the date of enactment of the CAA, December 27, 2020, to convert to an REH. We estimate that 68 facilities will convert to an REH and we believe that they will be developing REH-specific policies that are based on policies that were utilized when the facility was a rural hospital or CAH. As a result, we estimate that it would take an REH approximately 80 hours for administrative and clinical staff to develop policies. If there are 68 REHs to comply with the policy development requirement and each REH uses 80 hours to comply: (16 hours for a physician + 16 hours for an administrator + 16 hours for a mid-level practitioner + 16 hours for a nurse + 16 hours for a clerical staff person), then the burden hours are 5,440 (68 REHs × 80 hours). The cost is $8,800 per REH ($3,360 for a physician (16 hours × $210) + $1,952 for an administrator (16 hours × $122) + $1,616 for a mid-level practitioner (16 hours × $101) + $1,264 for a nurse (16 hours × $79) + $608 for a clerical staff person (16 hours × $38)). The total cost is 598,400 (68 REHs × $8,800). We estimate that it would take an REH's professional personnel 16 hours to review and make changes to policies and procedures biennially. Therefore, for all 68 REHs to comply with the policy review requirement it would require an estimated 16 burden hours biennially, or 8 hours annually

(1.5 hours for a physician + 2 hours for an administrator + 1.5 hours for a mid-level practitioner + 1.5 hours for a nurse + 1.5 hours for a clerical staff person). The burden hours are 544 (8 hours × 68 REHs). The cost per REH is $886 ($315 for a physician (1.5 hours × $210) + $244 for an administrator (2 hours × $122) + $151.50 for a mid-level practitioner (1.5 hours × $101) + $118.50 for a nurse (1.5 hours × $79) + $57 for a clerical staff person (1.5 hours × $38)). The total cost is $60,248 ($886 × 68 REHs). Therefore, the total cost for each REH to comply with these requirements would be $658,648 annually and 5,984 burden hours.

b. ICRs Regarding Condition of Participation: Infection Prevention and Control and Antibiotic Stewardship Programs (§ 485.526)

COVID–19 and Seasonal Influenza Reporting

Consistent with the recent changes we made to the hospital and CAH infection control CoPs related to COVID–19 and the declared public health emergency (PHE), we proposed to require REHs, after the conclusion of the current COVID–19 PHE, to report COVID–19 and seasonal influenza-related reporting. The requirements would apply upon conclusion of the COVID–19 PHE and would continue until April 30, 2024, unless the Secretary establishes an earlier ending date. The data elements align closely with those COVID–19 reporting requirements for long-term care (LTC) facilities that were finalized on November 9, 2021 (86 FR 62421) and are representative of the guidance provided to hospitals and CAHs for reporting. Therefore, we do not expect that these categories of data elements would require REHs to report any information beyond that which they have already been reporting as existing rural hospitals or CAHs. Furthermore, similar to the requirements for LTC facilities, this requirement would also allow for the scope and frequency of data collection to be reduced and limited responsive to the evolving clinical and epidemiological circumstances.

Based on our experience with those existing hospitals and CAHs and the current COVID–19 and related reporting requirements, we believe that this will primarily be the responsibility of a registered nurse and we have used this position in this analysis at an average hourly salary of $79. According to the most recent COVID–19 hospital reporting guidance (available at *https://www.hhs.gov/sites/default/files/covid-19-faqs-hospitals-hospital-laboratory-acute-care-facility-data-reporting.pdf*), hospitals are reporting COVID–19 and influenza-related data on a daily basis, with backdating permitted for weekends and holidays, except psychiatric and rehabilitation hospitals who report weekly. Some data element reporting fields are inactive for data collection, and therefore, hospitals can optionally report data for these fields. The inactive fields and active fields together reflect what is listed in this rule for COVID–19 and influenza-related reporting as well as future reporting in the event of a declared PHE, which we discuss next. We do not expect, nor did we propose, daily reporting for COVID–19 or influenza outside of a declared PHE.

If we were to assume a weekly reporting frequency, we would anticipate that there are reduced cases and fewer data elements (with no line level patient data) being reported. Based on these assumptions, we estimate that total annual burden hours for REHs to comply with these requirements would be 5,304 hours based on weekly reporting of the required information by 68 REHs × 52 weeks per year and at an average weekly response time of 1.5 hours for a registered nurse with an average hourly salary of $79. Therefore, the estimate for total annual costs for all hospitals and CAHs to comply with the required reporting provisions weekly would be $419,016 or approximately $6,162 per facility annually. We acknowledge that the data elements and reporting frequency could increase or decrease over the next two years, and those changes would impact this burden estimate.

We note that this estimate is assumed to be a one-day snapshot of reporting information as opposed to a cumulative weekly report accounting for information based on each day of that week. If we assumed a cumulative weekly account, we can assume reduced burden related to the actual reporting time, but anticipate that the estimate would be slightly higher to account for the need to track closely to daily reporting. We also acknowledge that respondents may have to track and invest in infrastructure in order to timely and accurately report on the specified frequency. Thus, respondents may face ongoing burdens associated with this collection even in the case of reduced frequency of submissions. We solicit comment on this potentiality.

Furthermore, we note that this estimate likely overestimates the costs associated with reporting because it assumes that all REHs will report manually. Efforts are underway to automate reporting that have the potential to significantly decrease reporting burden and improve reliability.

Future Reporting in the Event of a Future PHE Declaration

In addition, we proposed to establish reporting requirements for future PHEs related to epidemics and pandemics by requiring REHs to electronically report information on Acute Respiratory Illness (including, but not limited to, Seasonal Influenza Virus, Influenza-like Illness, and Severe Acute Respiratory Infection), SARS–CoV–2/COVID–19, and other viral and bacterial pathogens or infectious diseases of pandemic or epidemic potential only when the Secretary has declared a PHE directly related to such specific pathogens and infectious diseases. Specifically, when the Secretary has declared a PHE, we proposed to require REHs to report specific data elements to the CDC's National Health Safety Network (NHSN), or other CDC-supported surveillance systems, as determined by the Secretary. The final requirements of this section would apply to local, state, and national PHEs as declared by the Secretary. Relevant to the declared PHE, the categories of data elements that this report would include are as follows: suspected and confirmed infections of the relevant infectious disease pathogen among patients and staff; total deaths attributed to the relevant infectious disease pathogen among patients and staff; personal protective equipment and other relevant supplies in the facility; capacity and supplies in the facility relevant to the immediate and long term treatment of the relevant infectious disease pathogen, such as ventilator and dialysis/continuous renal replacement therapy capacity and supplies; total REH bed and intensive care unit bed census, capacity, and capability; staffing shortages; vaccine administration status of patients and staff for conditions monitored under this section and where a specific vaccine is applicable; relevant therapeutic inventories and/or usage; isolation capacity, including airborne isolation capacity; and key co-morbidities and/or exposure risk factors of patients being treated for the pathogen or disease of interest in this section that are captured with interoperable data standards and elements.

We also proposed to require that, unless the Secretary specifies an alternative format by which a REH must report each applicable infection (confirmed and suspected) and the applicable vaccination data in a format that provides person-level information, to include medical record identifier, race, ethnicity, age, sex, residential

county and zip code, and relevant comorbidities for affected patients, unless the Secretary specifies an alternative format by which the REH would be required report these data elements. We also proposed in this provision to limit any person-level, directly or potentially individually identifiable, information for affected patients and staff to items outlined in this section or otherwise specified by the Secretary. We note that the provided information obtained in this surveillance system that would permit identification of any individual or institution is collected with a guarantee that it will be held in strict confidence, will be used only for the purposes stated, and will not otherwise be disclosed or released without the consent of the individual, or the institution in accordance with sections 304, 306, and 308(d) of the Public Health Service Act (42 U.S.C. 242b, 242k, and 242m(d)). Lastly, we proposed that a REH would provide the information specified on a daily basis, unless the Secretary specifies a lesser frequency, to the Centers for Disease Control and Prevention's National Healthcare Safety Network (NHSN) or other CDC-supported surveillance systems as determined by the Secretary.

For purposes of this burden collection, we acknowledge the unknown and the ongoing burdens that may exist even if CMS is not collecting information outside of a declared PHE. We recognize that considerations such as building and maintaining the infrastructure to support readiness are necessary to ensure compliance with this requirement.

CMS will pursue an emergency review of the collection of information in the case of a declared PHE and, if approved, use such burden estimate to inform its approach at that time. CMS will also publish an accompanying **Federal Register** Notice concurrent with its submission of a request to collect information, in addition to all other actions in accordance with the implementing regulations of the PRA at 5 CFR 1320.13. CMS commits to ensuring that respondents are well aware in advance of the intention to collect such information and solicits comment on the appropriate timeline and notification process for such actions.

c. ICRs Regarding Condition of Participation: Staffing and Staff Responsibilities (§ 485.528)

We proposed that the emergency department of the REH be staffed 24 hours a day, 7 days a week, and we propose this requirement at § 485.6528(a) and that a doctor of medicine or osteopathy, nurse practitioner, clinical nurse specialist, or physician assistant must be available to furnish services in the REH in the facility 24 hours a day. The burden associated with this requirement is the time it takes to review the REH's written policies and make appropriate changes or updates regarding its staffing and staff responsibilities for the services it furnishes. In conjunction with a mid-level practitioner, the physician develops, executes, and periodically reviews the REH's written policies governing the services it furnishes. We estimate that it will take the physician and mid-level practitioner 1 hour each to review the REH written policies and make the appropriate changes. We also estimate that a REH will utilize the services of one clerical person for half an hour to process any changes or updates, for a total of 2.5 burden hours and an estimated cost per REH of $ 330 ((1 hour × $210 for a physician) + (1 hour × $101 for a mid-level practitioner) + (0.5 hours × $38 for clerical staff)). Therefore, the burden associated with this requirement is an estimated 170 burden hours (2.5 hours × 68 REHs) at an estimated cost of $22,440 ($330 × 68 REHs).

d. ICRs Regarding Condition of Participation: Patient's Rights (§ 485.534)

(1) Standard: Notice of Rights: § 485.534(a)(1) and (2)

Proposed § 485.534(a) would require REHs to notify a patient of their rights and of whom to contact to file a grievance. We allow REHs the flexibility to use different approaches to meet this CoP. We have set forth general elements that should be common to all grievance processes, but have not delineated strategies and policies for implementing this system. We believe that in large measure, REHs would be able to use existing systems for providing patients with information and handling complaints, and the elements listed in the regulation only serve to give basic assurance that these systems are responsive to patient grievances and act effectively. A less specific approach would permit a nominal, non-functional system that in essence did not serve the very purpose intended by the regulation. Costs associated with formalizing a process and modifying any existing notices or processes will most likely be partially offset by a reduction in patient-initiated lawsuits regarding care, and should provide a valuable tool for targeting internal quality assurance mechanisms.

We asked that the patient be provided with written notice containing a contact person's name, the steps taken on behalf of the patient to investigate the grievance, the results of the grievance process, and the date of completion. Steps taken on behalf of the patient need not include a detailed description of who was spoken to and when. It might merely be that the appropriate staff were interviewed and that records were reviewed to investigate the grievance, and that the investigation found the grievance to be either unsubstantiated or substantiated. Second, the figures represented are estimates. We know of no existing system that tracks how many complaints are lodged in aggregate in hospitals or CAHs each year; however, for REHs, we believe that the grievance response can largely rely on standardized language with only relevant information filled in, or could be created in a check-sheet format, or in many other ways.

Thus, the burden associated with this requirement is the time and effort necessary to modify any existing notices to include the proposed grievance process requirements. We believe that an office assistant may be tasked with drafting or updating the notices and distributing or posting, as appropriate, the information. We estimate that this would require no more than two hours of the clerical staff time. Based on this we estimate that this will create a one-time cost of $5,168 (68 REHs × 2 hours × $38 clerical staff hourly wage). In addition, we estimate that it will require the office assistant 2 minutes (.0333 hours) to provide the notice per REH patient on an annual basis. The number of notices required will depend on the number of patients received at the REH. Therefore, the per facility burden associated with providing the notice will vary based on the unique factors of the REH. According to an OIG report, there were 2,316,675 outpatient visits in 2011 at CAHs.[357] Based on this estimate, we assume that the REH will have an average of 1,743 outpatient/emergency department visits per year that would require informing each patient of their rights which would take 58 hours (.0333 hours × 1,743 notices). The cost is $149,872 ($38 clerical staff wage × 58 hours × 68 REHs).

In its resolution of a grievance, a REH must provide the patient with written notice of its decision that contains the name of the REH contact person, the steps taken on behalf of the patient to investigate the grievance, the results of

[357] *https://oig.hhs.gov/oei/reports/oei-05-12-00081.pdf.*

the grievance process, and the date of completion.

The burden associated with this requirement is the time and effort necessary to disclose the written notice to each patient who filed a grievance. We estimate that on average it will take each REH 15 minutes to develop and disseminate the required notice and estimate that an REH may have to provide 50 notices on an annual basis for a total annual burden. The burden hours would be 13 hours (0.25 hours × 50 notices). The total burden hours would be 884 hours (13 hours × 68 REHs) at the cost of $33,592 ($38 × 884 hours). Therefore, the total burden associated with this requirement is $188,632 ($5,168 to update notices, $149,872 to provide the notices, and $33,592 to provide the results of a grievance investigation).

(2) Standard: Confidentiality of Patient Records (§ 485.534(d))

Section 485.534(d), which sets forth the patient's right to access information in their records, will involve minimal burden as many states' existing laws cover this point. We have not proposed to require disclosure of all records, inasmuch as we recognize that there are situations where such a release could be harmful to the patient or another individual. Furthermore, we have not taken a prescriptive approach in specifying how quickly this information must be provided to the patient, or by setting a rate that the REH can charge. In the absence of state law, the REH should charge whatever is reasonable and customary in its community for duplication services (based on rates at local commercial copy centers, post offices, or other venues in which one could make photocopies). Therefore, while this requirement is subject to the PRA, we believe that the burden associated with this requirement is exempt from the PRA, as defined in 5 CFR 1320.3(b)(2) and (3) because this requirement is considered standard industry practice and/or is required under state or local law.

(3) Standard: Restraint and Seclusion (§ 485.534(e))

Section 485.534(e) requires that REH must have written policies and procedures regarding the use of restraint and seclusion that are consistent with current standards of practice. While the requirement is subject to the PRA, we believe the associated burden is exempt in accordance with 5 CFR 1320.3(b)(2) because the time, and effort, and financial resources necessary to comply with this requirement would be incurred by persons in the normal course of their activities. These are reasonable and customary state practices based on current standards of practice and the state would impose this standard for efficient utilization of Medicare or Medicaid services in the absence of a Federal requirement. However, we are soliciting comment on whether this is a customary business practice or whether this would impose an additional burden on those providers eligible to convert to an REH.

(4) Standard: Restraint and Seclusion: Staff Training Requirements (§ 485.534(f))

Section 485.534(f) requires facilities to establish staff training requirements for the use of restraints and seclusion. The REH must provide competency-based training and education of REH personnel and staff, including medical staff, and, as applicable, personnel providing contracted services in the REH, on the use of restraint and seclusion. While these information collection requirements are subject to the PRA, we believe the burden associated with them are exempt as defined in 5 CFR 1320.3(b)(2) because the time, effort, and financial resources necessary to comply with the requirement are incurred by persons in the normal course of their activities. However, we are soliciting comment on whether this is a customary business practice or whether this would impose an additional burden on those providers eligible to convert to an REH.

(5) Standard: Death Reporting Requirements (§ 485.534(g))

Section 485.534(g) requires the facility to report the death of a resident associated with restraint or seclusion to the CMS regional office. A report must include the name of the resident involved in the serious occurrence, a description of the occurrence, and the name, street address, and telephone number of the facility.

We estimate it will take 5 minutes to report each death to the CMS regional office and to document that report. We estimate fewer than 10 deaths annually for all 68 facilities. Five (5) minutes × 10 deaths annually would equate to a national burden of 50 minutes per year. The hourly adjusted rate for a Medical and Health Service Manager responsible for notifying the CMS regional office of a death a documenting the report is $122/hour. Multiplying the total burden of 0.83 hours by the hourly wage yields an associated cost of about $101.67.

(6) Standard: Patient Visitation Rights (§ 485.534(h))

Section 485.534(h) requires a REH to have written policies and procedures regarding the visitation rights of patients, including any clinically necessary or reasonable restriction or limitation that the REH may need to place on such rights and the reasons for the clinical restriction or limitation. Specifically, the written policies and procedures must contain the information listed in § 485.534(h)(1) through (4). Given that the statute requires a REH to have been either a CAH or rural hospital as of the date of enactment of the CAA, we expect these facilities to already have a visitation policy in accordance with the CAH and hospital CoPs at §§ 485.635(f) and 482.13(h), respectively. Therefore, the ICR burden associated with this requirement would be the time and effort necessary for a REH to review and make any necessary updates given its conversion to an REH and to distribute that information to patients. We expect that an office secretary or other clerical staff would update and distribute, or post as appropriate, the information and could accomplish this task in 15 minutes for an estimated one-time burden total of 17 hours (0.25 hours × 68 REHs) and at the cost of $646 ($38 × 17 hours).

e. ICRs Regarding Condition of Participation: Transfer Agreements (Proposed § 485.538)

At § 485.538, we proposed that each REH must have a transfer agreement in effect with at least one certified hospital that is a level I or level II trauma center for the referral and transfer of patients requiring emergency medical care beyond the capabilities of the REH. We estimate that it would require an REH administrator and a clerical person 2 hours each to develop the initial agreement and obtain the appropriate approvals. According to Table 1, the REH administrator's total hourly cost is $122 per hour. The clerical staff person's total hourly cost is $38. We estimate that for each REH to comply with the requirements in this section it would require 4 burden hours which would be a total of 272 hours (4 hours × 68 REHs). The cost is $320 ($244 (2 hours × $122 for an administrator) + $76 (2 hours × $38 for a clerical staff person)) for each REH. The total cost is $21,760 ($320 × 68 REHs). This is a one-time cost.

f. ICRs Regarding Condition of Participation: Medical Records (Proposed § 485.540)

There is no burden attributed to this task. The REH's health care services are furnished in accordance with appropriate written policies that are consistent with applicable state law. The policies include a description of the services the REH furnishes directly and those furnished through agreement or arrangement; policies and procedures for emergency medical services and guidelines for medical management of health problems that include the conditions requiring medical consultation and/or patient referral and the maintenance of health care records.

We are not including burden associated with certain patient related activities such as health care plans, patient records, medical records, etc., because prudent institutions already incur this burden in the course of doing everyday business. As stated in 5 CFR 1320.3(b)(2), the burden associated with usual and customary business practices is exempt from the PRA. However, we are soliciting comment on whether this is a customary business practice or whether this would impose an additional burden on those providers eligible to convert to an REH. Further, state laws require providers to maintain patient records. (For example, the annotated Code of Maryland (10.11.03.13) requires a provider to be responsible for maintaining patient records for services that it provides.) State law requires record information that should include: documentation of personal interviews; diagnosis and treatment recommendations; records of professional visits and consultations; and consultant notes which shall be appropriately initialed or signed.

g. ICRs Regarding Condition of Participation: Quality Assessment and Performance Improvement Program (QAPI) (Proposed § 485.536)

At § 485.536, we require REHs to develop, implement, and maintain an effective, ongoing, REH-wide, data-driven quality assessment and performance improvement (QAPI) program. The REH's governing body must ensure that the program reflects the complexity of the REH's organization and services; involves all REH departments and services (including those services furnished under contract or arrangement); and focuses on indicators related to improved health outcomes and the prevention and reduction of medical errors. The REH must maintain and demonstrate evidence of its QAPI program for review by CMS. In addition, REHs must comply with all of the requirements set forth in proposed § 485.536(a) through (e). We believe that the REH QAPI leadership (consisting of a physician, and/or administrator, mid-level practitioner, and a nurse) would need to have at least one and potentially two meetings to ensure that the current QAPI program that the provider has established is in accordance with the proposed requirements at § 485.536. The first meeting would be to discuss the current QAPI program and what, if anything, needs to be revised based on the proposed QAPI requirements at § 485.536. The second meeting, if needed, would be to discuss strategies to update the current policies, and then to discuss the process for incorporating those changes. We believe that these meetings would take approximately 2 hours each. We estimate that the physician would have a limited amount of time, approximately 1 hour to devote to the QAPI activities. Additionally, we estimate these activities would require 4 hours of an administrator's time, 4 hours of a mid-level practitioner's time, 8 hours of a nurse's time, and 2 hours of a clerical staff person's time for a total of 19 burden hours. We believe that the REH's QAPI leadership would need to meet periodically to review and discuss the changes that would need to be made to their program. We also believe that a nurse would likely spend more time developing the program with the mid-level practitioner. The physician would likely review and approve the program. The clerical staff member would probably assist with the program's development and ensure that the program was disseminated to all of the necessary parties in the REH.

Based on these factors, we estimate that for each REH to comply with the requirements in this section it would require annually 19 burden hours (1 hour for a physician + 4 hours for an administrator + 4 hours for a mid-level practitioner + 8 hours for a nurse + 2 hours for a clerical staff person) at a cost of $1,810 ($210 for a physician (1 hour × $210) + $488 for an administrator (4 hours x $122) + $404 for a mid-level practitioner (4 hours × $101) + $632 for a nurse (8 hours × $79) + $76 for a clerical staff person (2 hours × $38)). Therefore, for all 68 REHs to comply with these requirements, it would require 1,292 burden hours (19 hours × 68 REHs) at a cost of approximately $123,080 ($1,810 × 68 REHs).

h. ICRs Regarding Condition of Participation: Emergency Preparedness (§ 485.542)

Section 485.542 sets forth the emergency preparedness requirements for REHs. We note that these emergency preparedness standards are consistent national parameters that all Medicare and Medicaid participating providers and suppliers must meet. This includes both rural hospitals and CAHs and therefore facility that converts to an REH would have already incurred the costs to develop and implement their emergency preparedness plan. Based on this, the burden associated with these requirements would be the on-going costs to review, maintain and implement the emergency preparedness program to ensure ongoing compliance with the requirements and as such we have developed this COI section based largely on the existing COI burden for CAHs and hospitals.

i. Standard: Risk Assessment and Planning (§ 485.542(a))

We proposed to require REHs to develop and maintain an emergency preparedness plan that must be reviewed and updated at least biennially. We expect that each REH facilities director ($104 per hour) would conduct a thorough risk assessment that will consider its location and geographical area; patient population, including those with special needs; and the type of services they have the ability to provide in an emergency (12 hours biennially or 6 hours annually) based on the services that they are now providing as an REH. They each would also need to review the measures needed to ensure continuity of its operation, including delegations and succession plans. We estimate that ongoing compliance with this requirement would require 6 burden hours annually (12 biennially) from the REH facilities director. Therefore, for all 68 REHs to comply with this requirement, it would require 408 burden hours (6 × 68 REHs) at a cost of approximately $42,432 (408 hours × $104).

(1) Standard: Policies and Procedures (§ 485.542(b))

REHs are required to maintain emergency preparedness policies and procedures in accordance with their emergency plan, risk assessment, and communication plan. Each needs to review their emergency preparedness policies and procedures and revise, or in some cases, develop new policies and procedures that would ensure that the emergency preparedness plans address

the specific requirements of the regulations.

We believe that the requirement for REHs to review and update their policies and procedures annually constitutes a usual and customary business practice and is not subject to the PRA in accordance with 5 CFR 1320.3(b)(2). However, we are soliciting comment on whether this is a customary business practice or whether this would impose an additional burden on those providers eligible to convert to an REH.

(2) Standard: Communication Plan (§ 485.542(c))

REHs are required to develop and maintain an emergency preparedness communication plan that complies with both Federal and state law and must be reviewed and updated at least annually. The burden associated with this requirement would be the time and effort necessary to review, revise, and if necessary, develop a new communications plan to ensure that it complies with the requirements of this regulation. However, we believe that most REHs have some type of emergency preparedness communication plan based on their prior status as a CAH or rural hospital. It is standard practice in the health care industry to have and maintain contact information for both staff and outside sources of assistance; alternate means of communications in case there is an interruption in phone service to the facility, such as cell phones; and a method for sharing information and medical documentation with other health care providers to ensure continuity of care for their patients.

If any revisions or additions are necessary to satisfy the requirements as an REH, we expect the revisions or additions would be those incurred during the course of normal business and thereby impose no additional burden. Thus, the ICRs related to the communication plan would constitute a usual and customary business practice as stated in the implementing regulations of the PRA at 5 CFR 1320.3(b)(2) and we did not include this activity in the burden analysis. We are soliciting comment on whether this is a customary business practice or whether this would impose an additional burden on those providers eligible to convert to an REH.

(3) Standard: Training and Testing (§ 485.542(d))

REHs are required to develop and maintain an emergency preparedness training and testing program. The training program must include initial training in emergency preparedness policies and procedures for all new and existing staff, individuals providing services under arrangement, and volunteers, consistent with their expected roles and must be documented. The testing program must include participation in a full-scale exercise that is community-based or when a community-based exercise is not accessible, an individual, facility-based. If an actual natural or man-made emergency that requires activation of the emergency plan is experienced, then this requirement is exempt for 1 year following the onset of the actual event. In addition, the testing program must include one additional testing exercise, which may be determined by the REH. The training must be provided biennially and two testing exercises must be conducted annually.

We expect that all REHs will review their current training programs in their current capacity as hospitals or CAHs, and compare them to their risk assessments and emergency preparedness plans, emergency policies and procedures, and emergency communication plans. The CAHs will need to revise and, if necessary, develop new sections or materials to ensure their training and testing programs complied with our requirements. We anticipate that ongoing compliance with this requirement will require the involvement of an administrator, the mid-level practitioner, the facilities director, and clerical staff. We expect that a mid-level practitioner will perform the initial review of the training program (4 hours), brief the administrator and the director of facilities (2 hours), and clerical staff to revise or develop new sections for the training program (1 hour), based on the group's decisions, if necessary. This will result in a cost of $894 ($404 for a mid-level practitioner (4 hours × $101) + $244 for an administrator (2 hours × $122) + $208 for a director of facilities (2 hours × $104) + $38 for a clerical staff person (1 hour × $38)) for each REH. Therefore, for all REHs to comply with this requirement it will require an estimated 476 burden hours (7 hours × 68 REHs) at a cost of $60,792 ($894 × 68 REHs).

j. ICRs Regarding Conditions of Participation: Physical Environment (§ 485.544)

(1) Standard: Life Safety Code (§ 485.544)

The REH must meet the applicable provisions of the 2012 edition of the Life Safety Code (LSC) of the National Fire Protection Association. If CMS finds that the state has a fire and safety code imposed by the state law that adequately protects patients, CMS may allow the state survey agency to apply the state's fire and safety code instead of the LSC if waiving the provisions of the LSC does not adversely affect the health and safety of patients. This regulation requires a REH to maintain written evidence of regular inspections and approval by state fire control agencies. We estimate that the burden associated with maintaining written evidence of state inspections and approval would be an average of 30 minutes for clerical personnel to file the documentation, for a total of 34 burden hours (0.5 hours × 68 REHs) and a cost of $1,292 (34 hours × $38). The burden will be accounted for in a new information collection request (request for a new OMB control number) submitted for OMB approval.

Table 108 that follows summarizes our estimates of burden hours and costs for REHs. We emphasize that these estimates assume 68 conversions and that the number actually converting could be a fraction of this figure, or much higher, which as discussed earlier is an uncertainty addressed in both the NC RHRP and CLA study that estimated likely conversions. Our estimates of the cost per entity, however, would not be affected by the number of conversions.

BILLING CODE 4120–01–P

TABLE 108: Total COI Burden for Rural Emergency Hospitals

COI Requirement	Burden Hours	Costs
Condition of Participation: Provision of Services (§ 485.514)	5,984	$658,648
Condition of Participation: Infection prevention and control and antibiotic stewardship programs (§ 485.526)	5,304	$419,016
Condition of Participation: Staffing and Staff Responsibilities (§ 485.528)	170	$22,400
Standard: Notice of Rights: (§ 485.534(a)(1) and (2))	4,981	$188,632
Standard: Restraint and Seclusion (§485.534(e))	0	$0
Standard: Restraint and seclusion: Staff training requirements (§ 485.534(f))	0	$0
Standard: Death reporting requirements (§ 485.534(g))	0.83 hours	$101.67
Standard: Patient visitation rights (§ 485.534(h))	17	$646
Condition of participation: Agreements (Proposed § 485.538)	272	$21,760
Condition of Participation: Quality assessment and performance improvement program (QAPI) (Proposed § 485.536)	1292	$123,080
Standard: Risk Assessment and Planning (§485.542(a))	408	$42,432
Standard: Training and testing (§485.542(d))	476	$60,792
Standard: Life Safety Code (§ 485.544)	34	$1,292
TOTALS	18,939	$1,538,800

BILLING CODE 4120–01–C

4. Critical Access Hospitals

a. ICRs Regarding Condition of Participation: Patient's Rights (§ 485.614)

(1) Standard: Notice of Rights: § 485.614(a)(1) and (2)

Section 485.614(a) proposed to require CAHs to notify the patient of their rights and of whom to contact to file a grievance. We allow REHs the flexibility to use different approaches to meet this CoP. We have set forth general elements that should be common to all grievance processes, but have not delineated strategies and policies for implementing this system. We believe that in large measure, CAHs would be able to use existing systems for providing patients with information and handling complaints, and the elements listed in the regulation only serve to give basic assurance that these systems are responsive to patient grievances and act effectively. A less specific approach would permit a nominal, non-functional system that in essence did not serve the very purpose intended by the regulation. Costs associated with formalizing a process and modifying any existing notices or processes will most likely be offset by a reduction in patient-initiated lawsuits regarding care, and should provide a valuable tool for targeting internal quality assurance mechanisms.

We proposed that the patient be provided with written notice containing a contact person's name, the steps taken on behalf of the patient to investigate the grievance, the results of the grievance process, and the date of completion. Steps taken on behalf of the patient need not include a detailed description of who was spoken to and when. It might merely be that the appropriate staff were interviewed and that records were reviewed to investigate the grievance, and that the investigation found the grievance to be either unsubstantiated or substantiated. Second, the figures represented are estimates. We know of no existing system that tracks how many complaints are lodged in aggregate in CAHs each year; however, we believe that the grievance response can largely rely on standardized language with only relevant information filled in, or could be created in a check-sheet format, or in many other ways.

Thus, the burden associated with this requirement is the time and effort necessary to modify any existing notices to include the grievance process requirements. We believe that an office assistant may be tasked with drafting or updating the notices and distributing or posting, as appropriate, the information. We estimate that this would require no more than two hours of the clerical staff time. The burden hours are 2,720 (2 hours × 1,360). Based on this we estimate that this will create a one-time cost of $103,360 (2,720 hours × $38). In addition, we estimate that it will require the office assistant 2 minutes (.0333 hours) to provide the notice per CAH patient on an annual basis. The number of notices required will depend on the number of patients received at the CAH. Therefore, the per facility burden associated with providing the notice will vary based on the unique factors of the CAH. According to a 2013 OIG report, there were approximately 1,753 patient visits per CAH in 2011.[358] Based on this estimate, the burden hours would be 58 hours (.0333 hours × 1,753 notices). The total burden hours would be 78,880 hours (58 hours × 1,360 CAHs). Therefore, we estimate that the CAH would have had to inform each of these patient of their rights at a cost of $2,997,440 ($38 × 78,880 hours).

In its resolution of a grievance, a CAH must provide the patient with written notice of its decision that contains the name of the CAH contact person, the steps taken on behalf of the patient to investigate the grievance, the results of the grievance process, and the date of completion.

The burden associated with this requirement is the time and effort necessary to disclose the written notice to each patient who filed a grievance. We estimate that on average it will take each REH 15 minutes to develop and disseminate the required notice and estimate that a CAH may have to provide 50 notices on an annual basis. The burden hours for each CAH will be 12.5 (0.25 hour × 50 notices) for a total of 17,000 burden hours (12.5 hours × 1,360 CAHs). The total annual burden cost is $646,000 ($38 × 17,000).

Therefore, the total burden hours are 98,600 (78,880 + 17,000 + 2,720) and the total cost associated with this requirement is $3,746,800 ($103,360 to update notices, $2,997,440 to provide the notices, and $646,000 to provide the results of a grievance investigation).

(2) Standard: Confidentiality of Patient Records (§ 485.614(d))

Section 485.614(d), which sets forth the patient's right to access information in their records, will involve minimal burden as many states' existing laws cover this point. We did not propose to require disclosure of all records, inasmuch as we recognize that there are situations where such a release could be harmful to the patient or another individual. Furthermore, we have not taken a prescriptive approach in specifying how quickly this information must be provided to the patient, or by setting a rate that the CAH can charge. In the absence of state law, the REH should charge whatever is reasonable and customary in its community for duplication services (based on rates at local commercial copy centers, post offices, or other venues in which one could make photocopies). Therefore, while this requirement is subject to the PRA, we believe that the burden associated with this requirement is exempt from the PRA, as defined in 5 CFR 1320.3(b)(2) and (3) because this requirement is considered standard industry practice and/or is required under state or local law.

(3) Standard: Restraint and Seclusion (§ 485.614 (e))

Section 485.614(e) requires that each CAH have written policies and procedures regarding the use of restraint and seclusion that are consistent with current standards of practice. While the requirement is subject to the PRA, we believe the associated burden is exempt in accordance with 5 CFR 1320.3(b)(2) because the time, and effort, and financial resources necessary to comply with this requirement would be incurred by persons in the normal course of their activities. These are reasonable and customary state practices and the state would impose this standard for efficient utilization of Medicare and Medicaid services in the absence of a Federal requirement. However, we are soliciting comment on whether this is a customary business practice or whether this would impose an additional burden.

(4) Standard: Restraint and Seclusion: Staff Training Requirements (§ 485.614(f))

Section 485.614(f) requires facilities to establish staff training requirements for the use of restraints and seclusion. The CAH must provide competency-based training and education of CAH personnel and staff, including medical staff, and, as applicable, personnel providing contracted services in the CAH, on the use of restraint and seclusion. While these information collection requirements are subject to the PRA, we believe the burden associated with them are exempt as defined in 5 CFR 1320.3(b)(2) because the time, effort, and financial resources necessary to comply with the requirement are incurred by persons in

[358] *https://oig.hhs.gov/oei/reports/oei-05-12-00081.pdf.*

the normal course of their activities. However, we are soliciting comment on whether this is a customary business practice or whether this would impose an additional burden.

(5) Standard: Death Reporting Requirements (§ 485.614(g))

Section 485.614(g) requires the facility to report the death of a resident associated with seclusion or restraint to the CMS regional office. A report must include the name of the resident involved in the serious occurrence, a description of the occurrence, and the name, street address, and telephone number of the facility.

We estimate it will take 5 minutes to report each death to the CMS regional office and to document that report. We estimate fewer than 10 deaths annually for all 1,360 facilities. Five (5) minutes × 10 deaths annually would equate to a national burden of 50 minutes per year. The hourly adjusted rate for a Medical and Health Service Manager responsible for notifying the CMS regional office of a death a documenting the report is $122/hour. Multiplying the total burden of 0.83 hours by the hourly wage yields an associated cost of about $101.26.

TABLE 109: Total COI Burden for Critical Access Hospitals

COI Requirement	Burden Hours	Costs
Standard: Notice of Rights: § 485.614(a)(1) and (2)	98,600	$3,746,800
Standard: Restraint and Seclusion (§ 485.614 (e))	0	$0
Standard: Restraint and seclusion: Staff training requirements (§ 485.614(f))	0	$0
Standard: Death reporting requirements (§ 485.614(g))	0.83 hours	$101
TOTALS	98,601	$3,746,901

The burden for the proposed CAH provisions will be accounted for under OMB control number 0938–1043.

XXV. Response to Comments

Because of the large number of public comments we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We consider all comments we received by the date and time specified in the **DATES** section of this preamble and responded to the comments in the preamble of this final rule with comment period.

XXVI. Economic Analyses

A. Statement of Need

This final rule with comment period is necessary to make updates to the Medicare hospital OPPS rates. It is necessary to make changes to the payment policies and rates for outpatient services furnished by hospitals and CMHCs in CY 2023. We are required under section 1833(t)(3)(C)(ii) of the Act to update annually the OPPS conversion factor used to determine the payment rates for APCs. We also are required under section 1833(t)(9)(A) of the Act to review, not less often than annually, and revise the groups, the relative payment weights, and the wage and other adjustments described in section 1833(t)(2) of the Act. We must review the clinical integrity of payment groups and relative payment weights at least annually. We are revising the APC relative payment weights using claims data for services furnished on and after January 1, 2021, through and including December 31, 2021, and processed through June 30, 2022, and June 2020 HCRIS information with cost reporting periods prior to the PHE, consistent with our final policy of using data prior to the start of the PHE.

This final rule with comment period also is necessary to make updates to the ASC payment rates for CY 2023, enabling CMS to make changes to payment policies and payment rates for covered surgical procedures and covered ancillary services that are performed in ASCs in CY 2023. Because ASC payment rates are based on the OPPS relative payment weights for most of the procedures performed in ASCs, the ASC payment rates are updated annually to reflect annual changes to the OPPS relative payment weights. In addition, we are required under section 1833(i)(1) of the Act to review and update the list of surgical procedures that can be performed in an ASC, not less frequently than every 2 years.

In the CY 2019 OPPS/ASC final rule with comment period (83 FR 59075 through 59079), we finalized a policy to update the ASC payment system rates using the hospital market basket update instead of the CPI–U for CY 2019 through 2023. We believe that this policy will help stabilize the differential between OPPS payments and ASC payments, given that the CPI–U has been generally lower than the hospital market basket, and encourage the migration of services to lower cost settings as clinically appropriate.

In this final rule with comment period, we received comments on the Request for Information included in the CY 2023 OPPS/ASC proposed rule on possible alternative methodologies for counting organs for transplant hospitals and organ procurement organizations to calculate Medicare's share of organ acquisition costs. We will consider those comments in developing possible future rulemaking or other guidance.

Additionally, we are finalizing our proposal to exclude research organs from total usable organs used in the ratio to calculate Medicare's share of

organ acquisition costs, and finalizing with modification our proposal to require an offset of costs for research organs, to provide more flexibility in how THs and OPOs remove or reduce costs associated with research organs. We are unable to estimate the extent to which the final research organ policy may impact the costs to Medicare. We are also finalizing our proposal to clarify that certain costs incurred prior to declaration of death, but when death is imminent, are included as organ acquisition costs; we do not anticipate any significant impact from this final policy. Therefore, there is no impact from the organ acquisition proposals in this final rule with comment period.

B. Overall Impact of Provisions of This Final Rule With Comment Period

We have examined the impacts of this final rule with comment period, as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (January 18, 2011), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995, Pub. L. 104–4), Executive Order 13132 on Federalism (August 4, 1999), and the Congressional Review Act (5 U.S.C. 804(2)). This section of this final rule with comment period contains the impact and other economic analyses for the provisions we are finalizing for CY 2023.

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Section 3(f) of Executive Order 12866 defines a ''significant regulatory action'' as an action that is likely to result in a rule: (1) having an annual effect on the economy of $100 million or more in any 1 year, or adversely and materially affecting a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local or tribal governments or communities (also referred to as ''economically significant''); (2) creating a serious inconsistency or otherwise interfering with an action taken or planned by another agency; (3) materially altering the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raising novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the Executive order. Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility.

A regulatory impact analysis (RIA) must be prepared for major rules with significant regulatory action/s and/or with economically significant effects ($100 million or more in any 1 year). This final rule with comment period has been designated as an economically significant rule under section 3(f)(1) of Executive Order 12866 and hence also a major rule under Subtitle E of the Small Business Regulatory Enforcement Fairness Act of 1996 (also known as the Congressional Review Act). Accordingly, this final rule with comment period has been reviewed by the Office of Management and Budget. We have prepared a regulatory impact analysis that, to the best of our ability, presents the costs and benefits of the provisions of this final rule with comment period. We solicited public comments on the regulatory impact analysis in the CY 2023 OPPS/ASC proposed rule, and we address any public comments we received in this final rule with comment period, as appropriate.

We estimate that the total increase in Federal Government expenditures under the OPPS for CY 2023, compared to CY 2022, due to the changes to the OPPS in this final rule with comment period, will be approximately $2.53 billion. Taking into account our estimated changes in enrollment, utilization, and case-mix for CY 2023, we estimate that the OPPS expenditures, including beneficiary cost-sharing, for CY 2023 will be approximately $86.5 billion, which is approximately $6.5 billion higher than estimated OPPS expenditures in CY 2022. Because the provisions of the OPPS are part of a final rule with comment period that is economically significant, as measured by the threshold of an additional $100 million in expenditures in 1 year, we have prepared this regulatory impact analysis that, to the best of our ability, presents its costs and benefits. Table 110 of this final rule with comment period displays the distributional impact of the CY 2023 changes in OPPS payment to various groups of hospitals and for CMHCs.

We note that under our final CY 2023 policy, drugs and biologicals that are acquired under the 340B Program will generally be paid at ASP plus 6 percent, WAC plus 6 percent, or 95 percent of AWP, as applicable. The impacts on hospital rates as a result of this final policy are reflected in the discussion of the estimated effects of this final rule with comment period. Because we are reverting to our previous policy of generally paying ASP plus 6 percent for drugs acquired under the 340B program, we are removing the increase to the OPPS conversion factor that was adopted as part of the budget neutral implementation of the 340B policy, consistent with our longstanding policy of offsetting increases or decreases in particular payments through an adjustment to the OPPS conversion factor.

We estimate that the final update to the conversion factor and other budget neutrality adjustments will increase total OPPS payments by 4.8 percent in CY 2023. The changes to the APC relative payment weights, the changes to the wage indexes, the continuation of a payment adjustment for rural SCHs, including EACHs, and the payment adjustment for cancer hospitals will not increase total OPPS payments because these changes to the OPPS are budget neutral. However, these updates will change the distribution of payments within the budget neutral system. We estimate that the total change in payments between CY 2022 and CY 2023, considering all budget-neutral payment adjustments, changes in estimated total outlier payments, the application of the frontier State wage adjustment, in addition to the application of the OPD fee schedule increase factor after all adjustments required by sections 1833(t)(3)(F), 1833(t)(3)(G), and 1833(t)(17) of the Act, the exception for rural sole community hospitals from the clinic visit policy when provided at off-campus provider based departments, and the payment adjustment for the additional resource costs for domestic NIOSH-approved surgical N95 respirators will increase total estimated OPPS payments by 4.5 percent.

We estimate the total increase (from changes to the ASC provisions in this final rule with comment period, as well as from enrollment, utilization, and case-mix changes) in Medicare expenditures (not including beneficiary cost-sharing) under the ASC payment system for CY 2023 compared to CY 2022, to be approximately $230 million. Tables 111 and 112 of this final rule with comment period display the redistributive impact of the CY 2023 changes regarding ASC payments, grouped by specialty area and then grouped by procedures with the greatest ASC expenditures, respectively.

C. Detailed Economic Analyses

1. Estimated Effects of OPPS Changes in This Final Rule With Comment Period

a. Limitations of Our Analysis

The distributional impacts presented here are the projected effects of the final CY 2023 policy changes on various hospital groups. We post our hospital-specific estimated payments for CY 2023 on the CMS website with the other supporting documentation for this final rule with comment period. To view the hospital-specific estimates, we refer readers to the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/index.html*. On the website, select ''Regulations and Notices'' from the left side of the page and then select ''CMS–1772–FC'' from the list of regulations and notices. The hospital-specific file layout and the hospital-specific file are listed with the other supporting documentation for this final rule with comment period. We show hospital-specific data only for hospitals whose claims were used for modeling the impacts shown in Table 110 of this final rule with comment period. We do not show hospital-specific impacts for hospitals whose claims we were unable to use. We refer readers to section II.A of this final rule with comment period for a discussion of the hospitals whose claims we do not use for ratesetting or impact purposes.

We estimate the effects of the individual policy changes by estimating payments per service, while holding all other payment policies constant. We use the best data available, but do not attempt to predict behavioral responses to our policy changes in order to isolate the effects associated with specific policies or updates, but any policy that changes payment could have a behavioral response. In addition, we have not made any adjustments for future changes in variables, such as service volume, service-mix, or number of encounters.

b. Estimated Effects of the Payment Policy for Drugs and Biologicals Obtained Under the 340B Program

In section V.B of this final rule with comment period, we discuss our final policy to adjust the payment amount for nonpass-through, separately payable drugs acquired by certain 340B participating hospitals through the 340B Program. In this final rule with comment period for CY 2023, for hospitals paid under the OPPS, payment for separately payable drugs and biologicals that are obtained with a 340B discount will generally be ASP plus 6 percent. Additionally, we are decreasing the OPPS conversion factor by the same percentage that we increased the OPPS conversion factor in CY 2018 to implement the 340B policy in a budget neutral manner. After applying this payment methodology for drugs and biologicals purchased under the 340B Program, we currently estimate that we would apply a budget neutrality adjustment of 0.9691 to the OPPS conversion factor to remove the original CY 2018 OPPS budget neutrality adjustment for 340B acquired drugs. More information on the comments received on the 340B policy can be found in section V.B.6 of this final rule with comment period.

c. Effects of the IPPS and OPPS Payment Adjustment for Domestic NIOSH-Approved Surgical N95 Respirators

As discussed in section X.H of this final rule with comment period, we are finalizing IPPS and OPPS payment adjustments for the additional resource costs that hospitals incur in procuring domestic NIOSH-approved surgical N95 respirators. The payment adjustments will commence for cost reporting periods beginning on or after January 1, 2023.

For the IPPS, we are making this payment adjustment for the additional resource costs of domestic NIOSH-approved surgical N95 respirators under section 1886(d)(5)(I) of the Act. To further support the strategic policy goal of sustaining a level of supply resilience for domestic NIOSH-approved surgical N95 respirators that is critical to protect the health and safety of personnel and patients in a public health emergency, we are not making the IPPS payment adjustment budget neutral under the IPPS. The data currently available to calculate a spending estimate for CY 2023 under the IPPS is limited. However, we believe the methodology described next to calculate this spending estimate under the IPPS for CY 2023 is reasonable based on the information available.

To calculate the estimated total spending associated with this policy under the IPPS we multiplied together estimates of the following:

(1) Estimate of the total number of NIOSH-approved surgical N95 respirators used in the treatment of IPPS patients in CY 2023.

(2) Estimate of the difference in the average unit cost of domestic and non-domestic NIOSH-approved surgical N95 respirators

(3) Estimate of the percentage of NIOSH-approved surgical N95 respirators used in the treatment of IPPS patients in CY 2023 that are domestic.

For purposes of this estimate, we believe it is reasonable to assume that on average approximately one NIOSH-approved surgical N95 respirator is used for every day a beneficiary is in the hospital. The FY 2021 MedPAR claims data used for ratesetting in the FY 2023 IPPS/LTCH final rule accounted for approximately 7.3 million IPPS discharges and 38.4 million Medicare covered days. Therefore, for CY 2023, we are estimating that the total number of NIOSH-approved surgical N95 respirators (both domestic and non-domestic) used in the treatment of IPPS patients will be 38.4 million. Based on available data, our best estimate of the difference in the average unit costs of domestic and non-domestic NIOSH-approved surgical N95 respirators is $0.20.

It is particularly challenging to estimate the percentage of NIOSH-approved surgical N95 respirators that will be used in the treatment of IPPS patients in CY 2023 that will be domestic. The OMB's Made in America Office recently conducted a data call on capacity in which several entities attested to being able to supply 3.6 billion NIOSH-approved and Berry-compliant surgical N95 respirators annually in the future if there were sufficient demand. We recognize that it may take time for this capacity to be fully reflected in hospital purchases. Therefore, although this would be sufficient capacity to supply the entire hospital industry if it were to be available and focused on this segment of the marketplace in 2023, we believe it is reasonable to assume that this will not happen instantaneously and hospitals in aggregate may in fact be able to purchase less than half of their NIOSH-approved surgical N95 respirators as domestic in 2023. Therefore, for purposes of this IPPS spending estimate, we set the percentage of NIOSH-approved surgical N95 respirators used in the treatment of IPPS patients in CY 2023 that are domestic to 40 percent, or slightly less than half. We estimate that total CY 2023 IPPS payments associated with this policy will be $3.1 million (or 38.4 million covered days * $0.20 * 40 percent).

For the OPPS, we are making this payment adjustment for the additional resource costs of domestic NIOSH-approved surgical N95 respirators under section 1833(t)(2)(E) of the Act, which authorizes the Secretary to establish, in a budget neutral manner, other adjustments as determined to be necessary to ensure equitable payments. Consistent with this authority, the final OPPS payment adjustment will be

budget neutral. In section X.H of this final rule with comment period, we estimate that total CY 2023 OPPS payments associated with this policy will be $8.7 million. This represents approximately 0.01 percent of the OPPS, which we are budget neutralizing through an adjustment to the OPPS conversion factor.

d. Estimated Effects of OPPS Changes on Hospitals

Table 110 shows the estimated impact of this final rule with comment period on hospitals. Historically, the first line of the impact table, which estimates the change in payments to all facilities, has always included cancer and children's hospitals, which are held harmless to their pre-Balanced Budget Act (BBA) amount. We also include CMHCs in the first line that includes all providers. We include a second line for all hospitals, excluding permanently held harmless hospitals and CMHCs.

We present separate impacts for CMHCs in Table 110, and we discuss them separately below, because CMHCs are paid only for partial hospitalization services under the OPPS and are a different provider type from hospitals. In CY 2023, we are continuing to pay CMHCs for partial hospitalization services under APC 5853 (Partial Hospitalization for CMHCs) and to pay hospitals for partial hospitalization services under APC 5863 (Partial Hospitalization for Hospital-Based PHPs).

The estimated increase in the total payments made under the OPPS is determined largely by the increase to the conversion factor under the statutory methodology. The distributional impacts presented do not include assumptions about changes in volume and service-mix. The conversion factor is updated annually by the OPD fee schedule increase factor, as discussed in detail in section II.B of this final rule with comment period.

Section 1833(t)(3)(C)(iv) of the Act provides that the OPD fee schedule increase factor is equal to the market basket percentage increase applicable under section 1886(b)(3)(B)(iii) of the Act, which we refer to as the IPPS market basket percentage increase. The IPPS market basket percentage increase applicable to the OPD fee schedule for CY 2023 is 4.1 percent. Section 1833(t)(3)(F)(i) of the Act reduces that 4.1 percent by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act, which is 0.3 percentage point for CY 2023 (which is also the productivity adjustment for FY 2023 in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49056)), resulting in the CY 2023 OPD fee schedule increase factor of 3.8 percent. We are using the OPD fee schedule increase factor of 3.8 percent in the calculation of the CY 2023 OPPS conversion factor. Section 10324 of the Affordable Care Act, as amended by HCERA, further authorized additional expenditures outside budget neutrality for hospitals in certain frontier States that have a wage index less than 1.0000. The amounts attributable to this frontier State wage index adjustment are incorporated in the estimates in Table 110 of this final rule with comment period.

To illustrate the impact of the CY 2023 changes, our analysis begins with a baseline simulation model that uses the CY 2022 relative payment weights, the FY 2022 final IPPS wage indexes that include reclassifications, and the final CY 2022 conversion factor. Table 110 shows the estimated redistribution of the increase or decrease in payments for CY 2023 over CY 2022 payments to hospitals and CMHCs as a result of the following factors: the impact of the APC reconfiguration and recalibration changes between CY 2022 and CY 2023 (Column 2); the wage indexes and the provider adjustments (Column 3); the combined impact of all of the changes described in the preceding columns plus the 3.8 percent OPD fee schedule increase factor update to the conversion factor (Column 4); the estimated differential impact of the rural SCH exception to the Off Campus Provider Based Department Visits Policy (Column 5); the estimated impact taking into account all payments for CY 2023 relative to all payments for CY 2022, including the impact of changes in estimated outlier payments, changes to the pass-through payment estimate, the change to except rural sole community hospitals from the clinic visit policy when provided at campus provider based departments, and the payment adjustment for the additional resource costs to hospitals of acquiring domestic NIOSH-approved surgical N95 respirators (Column 6).

We did not model an explicit budget neutrality adjustment for the rural adjustment for SCHs because we are maintaining the current adjustment percentage for CY 2023. Because the updates to the conversion factor (including the update of the OPD fee schedule increase factor), the estimated cost of the rural adjustment, and the estimated cost of projected pass-through payment for CY 2023 are applied uniformly across services, observed redistributions of payments in the impact table for hospitals largely depend on the mix of services furnished by a hospital (for example, how the APCs for the hospital's most frequently furnished services will change), and the impact of the wage index changes on the hospital. However, total payments made under this system and the extent to which this final rule with comment period will redistribute money during implementation also will depend on changes in volume, practice patterns, and the mix of services billed between CY 2022 and CY 2023 by various groups of hospitals, which CMS cannot forecast.

Overall, we estimate that the rates for CY 2023 will increase Medicare OPPS payments by an estimated 4.5 percent. Removing payments to cancer and children's hospitals because their payments are held harmless to the pre-OPPS ratio between payment and cost and removing payments to CMHCs results in an estimated 4.7 percent increase in Medicare payments to all other hospitals. These estimated payments will not significantly impact other providers.

Column 1: Total Number of Hospitals

The first line in Column 1 in Table 110 shows the total number of facilities (3,508), including designated cancer and children's hospitals and CMHCs, for which we were able to use CY 2021 hospital outpatient and CMHC claims data to model CY 2022 and CY 2023 payments, by classes of hospitals, for CMHCs and for dedicated cancer hospitals. We excluded all hospitals and CMHCs for which we could not plausibly estimate CY 2022 or CY 2023 payment and entities that are not paid under the OPPS. The latter entities include CAHs, all-inclusive hospitals, and hospitals located in Guam, the U.S. Virgin Islands, Northern Mariana Islands, American Samoa, and the State of Maryland. This process is discussed in greater detail in section II.A of this final rule with comment period. At this time, we are unable to calculate a DSH variable for hospitals that are not also paid under the IPPS because DSH payments are only made to hospitals paid under the IPPS. Hospitals for which we do not have a DSH variable are grouped separately and generally include freestanding psychiatric hospitals, rehabilitation hospitals, and long-term care hospitals. We show the total number of OPPS hospitals (3,414), excluding the hold-harmless cancer and children's hospitals and CMHCs, on the second line of the table. We excluded cancer and children's hospitals because section 1833(t)(7)(D) of the Act permanently holds harmless cancer hospitals and children's hospitals to their ''pre-BBA amount'' as specified under the terms of the statute, and

therefore, we removed them from our impact analyses. We show the isolated impact on the 27 CMHCs at the bottom of the impact table (Table 110) and discuss that impact separately below.

Column 2: APC Recalibration—All Changes

Column 2 shows the estimated effect of APC recalibration. Column 2 also reflects any changes in multiple procedure discount patterns or conditional packaging that occur as a result of the changes in the relative magnitude of payment weights. As a result of APC recalibration, we estimate that urban hospitals will experience a 0.1 increase, with the impact ranging from a decrease of 0.2 percent to an increase of 0.5, depending on the number of beds. Rural hospitals will experience an estimated decrease of 0.1 overall. Major teaching hospitals will experience an estimated decrease of 0.3 percent.

Column 3: Wage Indexes and the Effect of the Provider Adjustments

Column 3 demonstrates the combined budget neutral impact of the APC recalibration; the updates for the wage indexes with the FY 2023 IPPS post-reclassification wage indexes; the rural adjustment; the frontier adjustment, and the cancer hospital payment adjustment. We modeled the independent effect of the budget neutrality adjustments and the OPD fee schedule increase factor by using the relative payment weights and wage indexes for each year, and using a CY 2022 conversion factor that included the OPD fee schedule increase and a budget neutrality adjustment for differences in wage indexes.

Column 3 reflects the independent effects of the updated wage indexes, including the application of budget neutrality for the rural floor policy on a nationwide basis, as well as the CY 2023 changes in wage index policy, discussed in section II.C of this final rule with comment period. We did not model a budget neutrality adjustment for the rural adjustment for SCHs because we are continuing the rural payment adjustment of 7.1 percent to rural SCHs for CY 2023, as described in section II.E of this final rule with comment period. We also did not model a budget neutrality adjustment for the proposed cancer hospital payment adjustment because the proposed payment-to-cost ratio target for the cancer hospital payment adjustment in CY 2023 is 0.89, the same as the ratio that was reported for the CY 2022 OPPS/ASC final rule with comment period (85 FR 85914). We note that, in accordance with section 16002 of the 21st Century Cures Act, we are applying a budget neutrality factor calculated as if the cancer hospital adjustment target payment-to-cost ratio was 0.90, not the 0.89 target payment-to-cost ratio we are applying in section II.F of this final rule with comment period.

We modeled the independent effect of updating the wage indexes by varying only the wage indexes, holding APC relative payment weights, service-mix, and the rural adjustment constant and using the CY 2023 scaled weights and a CY 2022 conversion factor that included a budget neutrality adjustment for the effect of the changes to the wage indexes between CY 2022 and CY 2023.

Column 4: Removal of 340b Drug Payment Policy

Column 4 demonstrates the impact of paying for 340B-acquired drugs at ASP+6 percent and removing the 3.19 percent increase to the conversion factor that was made in CY 2018 to implement the 340B policy in a budget neutral manner.

Column 5: All Budget Neutrality Changes Combined With the Market Basket Update

Column 5 demonstrates the combined impact of all of the changes previously described and the update to the conversion factor of 3.8 percent. Overall, these changes will increase payments to urban hospitals by 5.3 percent and to rural hospitals by 2.7 percent. Sole community hospitals receive an estimated increase of 1.7 percent while other rural hospitals receive an estimated increase of 4.3 percent.

Column 6: Rural SCH Exception to Off-Campus PBD Clinic Visit Payment Policy

Column 6 displays the estimated effect of the exception for rural sole community hospitals to the volume control method to pay for clinic visit HCPCS code G0463 (Hospital outpatient clinic visit for assessment and management of a patient) when billed with modifier ''PO'' by an excepted off-campus PBD at 40 percent of the OPPS rate for a clinic visit service for CY 2023. This exception is estimated to increase payments to rural sole community hospitals by 1.1 percent.

Column 7: All Changes for CY 2023

Column 7 depicts the full impact of the final CY 2023 policies on each hospital group by including the effect of all changes for CY 2023 and comparing them to all estimated payments in CY 2021. Column 7 shows the combined budget neutral effects of Columns 2 and 3; the OPD fee schedule increase; the impact of estimated OPPS outlier payments, as discussed in section II.G of this final rule with comment period; the change in the Hospital OQR Program payment reduction for the small number of hospitals in our impact model that failed to meet the reporting requirements (discussed in section XIV of this final rule with comment period); the change to except rural sole community hospitals from the clinic visit policy when provided at excepted off-campus provider-based departments, and the adjustment for the additional resource costs of acquiring domestic NIOSH-approved surgical N95 respirators.

Of those hospitals that failed to meet the Hospital OQR Program reporting requirements for the full CY 2022 update (and assumed, for modeling purposes, to be the same number for CY 2023), we included 20 hospitals in our model because they had both CY 2021 claims data and recent cost report data. We estimate that the cumulative effect of all changes for CY 2023 will increase payments to all facilities by 4.5 percent for CY 2022. We modeled the independent effect of all changes in Column 7 using the final relative payment weights for CY 2022 and the final relative payment weights for CY 2023. We used the final conversion factor for CY 2023 of $85.585 and the final CY 2022 conversion factor of $84.177 discussed in section II.B of this final rule with comment period. While the calculation to determine the conversion factor includes the differences between the amounts carved out for pass-through payment in CYs 2022 and 2023, as this change is implemented in a budget neutral manner, we have excluded it from the impact calculations displayed in Table 110 below because it has no estimated overall effect on OPPS total payments.

Column 7 contains simulated outlier payments for each year. We used the 1-year charge inflation factor used in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49427) of 6.4 percent (1.06404) to increase charges on the CY 2021 claims, and we used the overall CCR in the July 2022 Outpatient Provider-Specific File (OPSF) to estimate outlier payments for CY 2022. Using the CY 2021 claims and a 6.4 percent charge inflation factor, we currently estimate that outlier payments for CY 2022, using a multiple threshold of 1.75 and a fixed-dollar threshold of $6,175, will be approximately 1.26 percent of total payments. The estimated current outlier payments of 1.26 percent are incorporated in the comparison in Column 5. We used the same set of claims and a charge inflation

factor of 13.2 percent (1.13218) and the CCRs in the July 2022 OPSF, with an adjustment of 0.974495 (87 FR 49427), to reflect relative changes in cost and charge inflation between CY 2021 and CY 2023, to model the final CY 2023 outliers at 1.0 percent of estimated total payments using a multiple threshold of 1.75 and a fixed-dollar threshold of $8,625. The charge inflation and CCR inflation factors are discussed in detail in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49422 through 49429).

Overall, we estimate that facilities will experience an increase of 4.5 percent under this final rule in CY 2023 relative to total spending in CY 2022. This projected increase (shown in Column 7) of Table 110 of this final rule with comment period reflects the 3.8 percent OPD fee schedule increase factor, the change to except rural sole community hospitals from the clinic visit policy when provided at excepted off-campus provider-based departments, and the adjustment for the additional resource costs of acquiring domestic NIOSH-approved surgical N95 respirators, minus the difference in estimated outlier payments between CY 2022 (1.26 percent) and CY 2023 (1.0 percent). We estimate that the combined effect of all changes for CY 2023 will increase payments to urban hospitals by 4.9 percent. Overall, we estimate that rural hospitals will experience a 2.9 percent increase as a result of the combined effects of all the changes for CY 2023.

Among hospitals, by teaching status, we estimate that the impacts resulting from the combined effects of all changes will include an increase of 6.8 percent for major teaching hospitals and an increase of 3.1 percent for nonteaching hospitals. Minor teaching hospitals will experience an estimated increase of 4.2 percent.

In our analysis, we also have categorized hospitals by type of ownership. Based on this analysis, we estimate that voluntary hospitals will experience an increase of 4.9 percent, proprietary hospitals will experience an increase of 1.3 percent, and governmental hospitals will experience an increase of 5.9 percent.

CMHCs		27	-9.1	0.0	-3.1	-8.6	0.0	0.0

	Column (1) shows total hospitals and/or CMHCs.
	Column (2) includes all final CY 2023 OPPS policies and compares those to the CY 2022 OPPS.
	Column (3) shows the budget neutral impact of updating the wage index by applying the final FY 2023 hospital inpatient wage index. The final rural SCH adjustment would continue our current policy of 7.1 percent so the budget neutrality factor is 1. The final budget neutrality adjustment for the cancer hospital adjustment is 1.0000 because the final CY 2023 target payment-to-cost ratio is the same as the CY 2022 PCR target (0.89)
	Column (4) shows the impact of paying for 340B-acquired drugs at ASP+6 percent and making the adjustment to remove the 3.19 percent CY 2018 OPPS budget neutrality adjustment from payment for non-drug services.
	Column (5) shows the impact of all budget neutrality adjustments and the addition of the 3.8 percent OPD fee schedule update factor (4.1 percent reduced by 0.3 percentage points for the productivity adjustment).
	Column (6) shows the differential impact of the proposed exception for rural sole community hospitals from the clinic visits policy when furnished at off campus provider based departments.
	Column (7) shows the additional adjustments to the conversion factor, including the change to except rural sole community hospitals from the clinic visit policy when provided at excepted off campus provider-based departments and estimated outlier payments. Note that previous years included the frontier adjustment in this column, but we have the frontier adjustment to Column 3 in this table.
	These 3,508 providers include children and cancer hospitals, which are held harmless to pre-BBA amounts, and CMHCs.
	** Complete DSH numbers are not available for providers that are not paid under IPPS, including rehabilitation, psychiatric, and long-term care hospitals.

BILLING CODE 4120–01–C

e. Estimated Effects of OPPS Changes on CMHCs

The last line of Table 110 demonstrates the isolated impact on CMHCs, which furnish only partial hospitalization services under the OPPS. In CY 2022, CMHCs are paid under APC 5853 (Partial Hospitalization (3 or more services) for CMHCs). We modeled the impact of this APC policy assuming CMHCs will continue to provide the same number of days of PHP care as seen in the CY 2021 claims used for ratesetting in the final rule. We excluded days with one or two services because our policy only pays a per diem rate for partial hospitalization when three or more qualifying services are provided to the beneficiary. We note that under our final policy, in order to pay appropriately and protect access to PHP services in CMHCs, for CY 2023 but not for subsequent years, we are applying an equitable adjustment, under the authority set forth in section 1833(t)(2)(E) of the Act, to the CY 2023 CMHC APC payment rate by maintaining the CY 2022 CMHC APC payment rate. As a result, we estimate that CMHCs will experience no change in CY 2023 payments relative to their CY 2022 payments.(shown in Column 7). For a detailed discussion of our final PHP policies, please see section VIII of this final rule with comment period.

Column 3 shows the estimated impact of adopting the final FY 2023 wage index values which result in an increase of 0.0 percent to CMHCs. Column 4 shows that combining the OPD fee schedule increase factor, along with the final changes in APC policy for CY 2023 and the final FY 2023 wage index updates, will result in an estimated decrease of—3.1 percent. Column 7 reflects no change, per our final policy to maintain the CY 2022 CMHC APC payment rates in CY 2023.

f. Estimated Effect of OPPS Changes on Beneficiaries

For services for which the beneficiary pays a copayment of 20 percent of the payment rate, the beneficiary's payment would increase for services for which the OPPS payments will rise and will decrease for services for which the OPPS payments will fall. For further discussion of the calculation of the national unadjusted copayments and minimum unadjusted copayments, we refer readers to section II.H of this final rule with comment period. In all cases, section 1833(t)(8)(C)(i) of the Act limits beneficiary liability for copayment for a procedure performed in a year to the hospital inpatient deductible for the applicable year.

We estimate that the aggregate beneficiary coinsurance percentage would be approximately 18.1 percent for all services paid under the OPPS in CY 2023. The estimated aggregate beneficiary coinsurance reflects general system adjustments, including the Final CY 2023 comprehensive APC payment policy discussed in section II.A.2.b of this final rule with comment period. We note that the individual payments, and therefore copayments, associated with services may differ based on the setting in which they are furnished. However, at the aggregate system level, we do not currently observe significant impact on beneficiary coinsurance as a result of those policies.

g. Estimated Effects of OPPS Changes on Other Providers

The relative payment weights and payment amounts established under the OPPS affect the payments made to ASCs, as discussed in section XIII of this final rule with comment period. No types of providers or suppliers other than hospitals, CMHCs, and ASCs will

be affected by the changes in this final rule with comment period.

h. Estimated Effects of OPPS Changes on the Medicare and Medicaid Programs

The effect on the Medicare program is expected to be an increase of $2.53 billion in program payments for OPPS services furnished in CY 2023. The effect on the Medicaid program is expected to be limited to copayments that Medicaid may make on behalf of Medicaid recipients who are also Medicare beneficiaries. We estimate that the changes in this final rule with comment period will increase these Medicaid beneficiary payments by approximately $150 million in CY 2023. Currently, there are approximately 10 million dual-eligible beneficiaries, which represent approximately 30 percent of Medicare Part B fee-for-service beneficiaries. The impact on Medicaid was determined by taking 30 percent of the beneficiary cost-sharing impact. The national average split of Medicaid payments is 57 percent Federal payments and 43 percent State payments. Therefore, for the estimated $150 million Medicaid increase, approximately $85 million will be from the Federal Government and $65 million will be from State governments.

i. Alternative OPPS Policies Considered

Alternatives to the OPPS changes we proposed and the reasons for our selected alternatives are discussed throughout this final rule with comment period.

- Alternatives Considered for the Claims Data used in OPPS and ASC Ratesetting due to the PHE.

We refer readers to section X.B of this final rule with comment period for a discussion of our final policy of using cost report data prior to the PHE. We note, in that section we discuss the alternative proposal we considered regarding applying the standard ratesetting process, in particular the selection of cost report data used, which would include claims and cost report data including the timeframe of the PHE. We note that there are potential issues related to that data, including the effect of the PHE on the provider departmental CCRs that would be used to estimate cost. In this final rule with comment period, as discussed in section X.D, we are finalizing a policy of using updated CY 2021 claims data in CY 2023 OPPS ratesetting, while using cost report CCRs with reporting periods prior to the PHE.

We note that these policy considerations also have ASC implications since the relative weights for certain surgical procedures performed in the ASC setting are developed based on the OPPS relative weights and claims data.

2. Estimated Effects of CY 2023 ASC Payment System Changes

Most ASC payment rates are calculated by multiplying the ASC conversion factor by the ASC relative payment weight. As discussed fully in section XIII of this final rule with comment period, we are setting the CY 2023 ASC relative payment weights by scaling the final CY 2023 OPPS relative payment weights by the final ASC scalar of 0.8594. The estimated effects of the updated relative payment weights on payment rates are varied and are reflected in the estimated payments displayed in Tables 111 and 112.

Beginning in CY 2011, section 3401 of the Affordable Care Act requires that the annual update to the ASC payment system (which, in CY 2019, we adopted a policy to be the hospital market basket update for CY 2019 through CY 2023) after application of any quality reporting reduction be reduced by a productivity adjustment. Section 1886(b)(3)(B)(xi)(II) of the Act defines the productivity adjustment to be equal to the 10-year moving average of changes in annual economy-wide private nonfarm business multifactor productivity (as projected by the Secretary for the 10-year period, ending with the applicable fiscal year, year, cost reporting period, or other annual period). For ASCs that fail to meet their quality reporting requirements, the CY 2023 payment determinations would be based on the application of a 2.0 percentage point reduction to the annual update factor, which would be the hospital market basket update for CY 2023. We calculated the CY 2023 ASC conversion factor by adjusting the CY 2022 ASC conversion factor by 1.0008 to account for changes in the pre-floor and pre-reclassified hospital wage indexes between CY 2022 and CY 2023 and by applying the CY 2023 productivity-adjusted hospital market basket update factor of 3.8 percent (which is equal to the projected hospital market basket update of 4.1 percent reduced by a productivity adjustment of 0.3 percentage point). The CY 2023 ASC conversion factor is $51.854 for ASCs that successfully meet the quality reporting requirements.

a. Limitations of Our Analysis

Presented here are the projected effects of the final changes for CY 2023 on Medicare payment to ASCs. A key limitation of our analysis is our inability to predict changes in ASC service-mix between CY 2021 and CY 2023 with precision. We believe the net effect on Medicare expenditures resulting from the final CY 2023 changes will be small in the aggregate for all ASCs. However, such changes may have differential effects across surgical specialty groups, as ASCs continue to adjust to the payment rates based on the policies of the revised ASC payment system. We are unable to accurately project such changes at a disaggregated level. Clearly, individual ASCs would experience changes in payment that differ from the aggregated estimated impacts presented below.

b. Estimated Effects of ASC Payment System Policies on ASCs

Some ASCs are multispecialty facilities that perform a wide range of surgical procedures from excision of lesions to hernia repair to cataract extraction; others focus on a single specialty and perform only a limited range of surgical procedures, such as eye, digestive system, or orthopedic procedures. The combined effect on an individual ASC of the final update to the CY 2023 payments will depend on a number of factors, including, but not limited to, the mix of services the ASC provides, the volume of specific services provided by the ASC, the percentage of its patients who are Medicare beneficiaries, and the extent to which an ASC provides different services in the coming year. The following discussion includes tables that display estimates of the impact of the final CY 2023 updates to the ASC payment system on Medicare payments to ASCs, assuming the same mix of services, as reflected in our CY 2021 claims data. Table 111 depicts the estimated aggregate percent change in payment by surgical specialty or ancillary items and services group by comparing estimated CY 2022 payments to estimated CY 2023 payments, and Table 112 shows a comparison of estimated CY 2022 payments to estimated CY 2023 payments for procedures that we estimate would receive the most Medicare payment in CY 2022.

In Table 111, we have aggregated the surgical HCPCS codes by specialty group, grouped all HCPCS codes for covered ancillary items and services into a single group, and then estimated the effect on aggregated payment for surgical specialty and ancillary items and services groups. The groups are sorted for display in descending order by estimated Medicare program payment to ASCs. The following is an explanation of the information presented in Table 111.

- Column 1—Surgical Specialty or Ancillary Items and Services Group

indicates the surgical specialty into which ASC procedures are grouped and the ancillary items and services group which includes all HCPCS codes for covered ancillary items and services. To group surgical procedures by surgical specialty, we used the CPT code range definitions and Level II HCPCS codes and Category III CPT codes, as appropriate, to account for all surgical procedures to which the Medicare program payments are attributed.

- Column 2—Estimated CY 2022 ASC Payments were calculated using CY 2021 ASC utilization data (the most recent full year of ASC utilization) and CY 2022 ASC payment rates. The surgical specialty groups are displayed in descending order based on estimated CY 2022 ASC payments.
- Column 3—Estimated CY 2023 Percent Change is the aggregate percentage increase or decrease in Medicare program payment to ASCs for each surgical specialty or ancillary items and services group that is attributable to proposed updates to ASC payment rates for CY 2023 compared to CY 2022.

As shown in Table 111, for the six specialty groups that account for the most ASC utilization and spending, we estimate that the final update to ASC payment rates for CY 2023 will result in a 3 percent increase in aggregate payment amounts for eye and ocular adnexa procedures, a 4 percent increase in aggregate payment amounts for nervous system procedures, 7 percent increase in aggregate payment amounts for musculoskeletal system procedures, a 5 percent increase in aggregate payment amounts for digestive system procedures, a 2 percent increase in aggregate payment amounts for cardiovascular system procedures, and a 4 percent increase in aggregate payment amounts for genitourinary system procedures. We note that these changes can be a result of different factors, including updated data, payment weight changes, and changes in policy. In general, spending in each of these categories of services is increasing due to the 3.8 percent payment rate update. After the payment rate update is accounted for, aggregate payment increases or decreases for a category of services can be higher or lower than a 3.8 percent increase, depending on if payment weights in the OPPS APCs that correspond to the applicable services increased or decreased or if the most recent data show an increase or a decrease in the volume of services performed in an ASC for a category. For example, we estimate a 7 percent increase in aggregate musculoskeletal procedure payments. The increase in payment rates for musculoskeletal procedures as a result of increased OPPS relative weights and device portions is further increased by the 3.8 percent ASC rate update for these procedures. Conversely, we estimate only a 3 percent increase in aggregate eye and ocular adnexa procedures related to a decrease in OPPS relative weights partially offsetting the 3.8 percent ASC rate update. For estimated changes for selected procedures, we refer readers to Table 111 provided later in this section.

BILLING CODE 4120–01–P

TABLE 111: ESTIMATED IMPACT OF THE CY 2023 UPDATE TO THE ASC PAYMENT SYSTEM ON AGGREGATE CY 2022 MEDICARE PROGRAM PAYMENTS BY SURGICAL SPECIALTY OR ANCILLARY ITEMS AND SERVICES GROUP

Surgical Specialty Group (1)	Estimated CY 2022 ASC Payments (in Millions) (2)	Estimated CY 2023 Percent Change (3)
Total	$5,859	4
Eye	$1,789	3
Nervous System	$1,200	4
Musculoskeletal	$999	7
Gastrointestinal	$896	5
Cardiovascular	$287	2
Genitourinary	$215	4

Table 111 shows the estimated impact of the updates to the revised ASC payment system on aggregate ASC payments for selected surgical procedures during CY 2023. The table displays 30 of the procedures receiving the greatest estimated CY 2022 aggregate Medicare payments to ASCs. The HCPCS codes are sorted in descending order by estimated CY 2022 program payment.

- Column 1—CPT/HCPCS code.
- Column 2—Short Descriptor of the HCPCS code.
- Column 3—Estimated CY 2022 ASC Payments were calculated using CY 2021 ASC utilization (the most recent full year of ASC utilization) and the CY 2022 ASC payment rates. The estimated CY 2022 payments are expressed in millions of dollars.
- Column 4—Estimated CY 2023 Percent Change reflects the percent differences between the estimated ASC payment for CY 2022 and the estimated payment for CY 2023 based on the final update.

TABLE 112: ESTIMATED IMPACT OF THE FINAL CY 2023 UPDATE TO THE ASC PAYMENT SYSTEM ON AGGREGATE PAYMENTS FOR SELECTED PROCEDURES

CPT/HCPCS Code (1)	Short Descriptor (2)	Estimated CY 2022 ASC Payment (in millions) (3)	Estimated CY 2023 Percent Change (4)

c. Estimated Effects of ASC Payment System Policies on Beneficiaries

We estimate that the CY 2023 update to the ASC payment system will be generally positive (that is, result in lower cost-sharing) for beneficiaries with respect to the new procedures to be designated as office-based for CY 2023. First, other than certain preventive services where coinsurance and the Part B deductible is waived to comply with sections 1833(a)(1) and (b) of the Act, the ASC coinsurance rate for all procedures is 20 percent. This contrasts with procedures performed in HOPDs under the OPPS, where the beneficiary is responsible for copayments that range from 20 percent to 40 percent of the procedure payment (other than for certain preventive services), although the majority of HOPD procedures have a 20-percent copayment. Second, in almost all cases, the ASC payment rates under the ASC payment system are lower than payment rates for the same procedures under the OPPS. Therefore, the beneficiary coinsurance amount under the ASC payment system will almost always be less than the OPPS copayment amount for the same services. (The only exceptions will be if the ASC coinsurance amount exceeds the hospital inpatient deductible since the statute requires that OPPS copayment amounts not exceed the hospital inpatient deductible. Therefore, in limited circumstances, the ASC coinsurance amount may exceed the hospital inpatient deductible and, therefore, the OPPS copayment amount for similar services.) Beneficiary coinsurance for services migrating from physicians' offices to ASCs may decrease or increase under the ASC payment system, depending on the particular service and the relative payment amounts under the MPFS compared to the ASC. While the ASC payment system bases most of its payment rates on hospital cost data used to set OPPS relative payment weights, services that are performed a majority of the time in a physician office are generally paid the lesser of the ASC amount according to the standard ASC ratesetting methodology or at the nonfacility practice expense based amount payable under the PFS. For those additional procedures that we proposed to designate as office-based in CY 2023, the beneficiary coinsurance amount under the ASC payment system generally will be no greater than the

beneficiary coinsurance under the PFS because the coinsurance under both payment systems generally is 20 percent (except for certain preventive services where the coinsurance is waived under both payment systems).

Accounting Statements and Tables for OPPS and ASC Payment System

As required by OMB Circular A–4 (available on the Office of Management and Budget website at: *https://www.whitehouse.gov/sites/whitehouse.gov/files/omb/assets/OMB/circulars/a004/a-4.html*), we have prepared accounting statements to illustrate the impacts of the OPPS and ASC changes in this final rule with comment period. The first accounting statement, Table 113, illustrates the classification of expenditures for the CY 2023 estimated hospital OPPS incurred benefit impacts associated with the final CY 2023 OPD fee schedule increase. The second accounting statement, Table 114, illustrates the classification of expenditures associated with the 3.8 percent CY 2023 update to the ASC payment system, based on the provisions of this final rule with comment period and the baseline spending estimates for ASCs. Both tables classify most estimated impacts as transfers. Table 115 includes the annual estimated impact of hospital OQR and ASCQR programs, and the prior authorization process.

TABLE 113: ACCOUNTING STATEMENT: CY 2023 ESTIMATED HOSPITAL OPPS TRANSFERS FROM CY 2022 TO CY 2023 ASSOCIATED WITH THE CY 2023 HOSPITAL OUTPATIENT OPD FEE SCHEDULE INCREASE

Category	Transfers
Annualized Monetized Transfers	$2,530 million
From Whom to Whom	Federal Government to outpatient hospitals and other providers who receive payment under the hospital OPPS

TABLE 114: ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED TRANSFERS FROM CY 2022 TO CY 2023 AS A RESULT OF THE FINALCY 2023 UPDATED TO THE ASC PAYMENT SYSTEM

Category	Transfers
Annualized Monetized Transfers	$150 million
From Whom to Whom	Federal Government to Medicare Providers and Suppliers
Total	$150 million

TABLE 115: ESTIMATED COSTS IN CY 2023

CATEGORY	Costs
Burden	$-11,688,943 million*
Regulatory Familiarization	$17.204 million**

*The annual estimate includes the impact of Hospital OQR and ASCQR Programs, and the Prior Authorization Process.

** Regulatory familiarization costs occur upfront only.

4. Effects of Changes in Requirements for the Hospital OQR Program

a. Background

We refer readers to the CY 2018 OPPS/ASC final rule (82 FR 59492 through 59494) for the previously estimated effects of changes to the Hospital Outpatient Quality Reporting (OQR) Program for the CY 2018, CY 2019, and CY 2021 payment determinations. Of the 3,356 hospitals that met eligibility requirements for the CY 2022 payment determination, we determined that 88 hospitals did not meet the requirements to receive the full annual Outpatient Department (OPD) fee schedule increase factor.

b. Impact of CY 2023 OPPS/ASC Finalized Rule Policies

We do not anticipate that the CY 2023 Hospital OQR Program policies will impact the number of facilities that will receive payment reductions. In this final rule with comment period, we are finalizing to: (1) add an additional targeting criterion to the validation selection policy beginning with the CY 2023 reporting period; (2) align the patient encounter quarters with the calendar year beginning with the CY 2024 reporting period; and (3) change reporting for the OP–31 measure from mandatory to voluntary beginning with the CY 2025 payment determination.

As shown in Table 104 in section XXIII.B.4 (Collection of Information) of this final rule with comment period, we estimate a total information collection burden decrease for 3,350 OPPS hospitals of −325,847 hours at a cost of

−$15,138,852 annually associated with our finalized policies and updated burden estimates for the CY 2025 reporting period/CY 2027 payment determination and subsequent years, compared to our currently approved information collection burden estimates. We refer readers to section XXIII.B of this final rule with comment period (information collection requirements) for a detailed discussion of the calculations estimating the changes to the information collection burden for submitting data to the Hospital OQR Program. We do not believe the finalized policies will have any further economic impact beyond information collection burden.

5. Effects of Requirements for the ASCQR Program

a. Background

In section XV of this final rule with comment period, we discuss our finalized policies affecting the Ambulatory Surgical Center Quality Reporting (ASCQR) Program. For the CY 2022 payment determination, of the 5,386 ASCs that met eligibility requirements, we determined that 290 ASCs did not meet the requirements to receive the full annual payment update under the ASC fee schedule.

b. Impact of CY 2023 OPPS/ASC Finalized Policies

In section XVI of this final rule with comment period, we are finalizing to change the reporting for the ASC–11 measure from mandatory to voluntary beginning with the CY 2023 reporting period. As shown in Table 105 in section XXIII.C.3.e (Collection of Information) of this final rule with comment period, we estimate a total information collection burden decrease for 4,646 ACSs of −72,107 hours at a cost of −$3,350,091 annually associated with our finalized policies and updated burden estimates for the CY 2025 reporting period/CY 2027 payment determination and subsequent years, compared to our currently approved information collection burden estimates. We refer readers to section XXIII.C of this final rule with comment period (information collection requirements) for a detailed discussion of the calculations estimating the changes to the information collection burden for submitting data to the ASCQR Program. We do not believe the finalized policy will have any further economic impact beyond information collection burden.

6. Effects of Requirements for the Rural Emergency Hospitals (REH) Program

a. Background

In section XVIII.A of this final rule with comment period, we discuss our finalized policies to provide payment to REHs, including the following finalized proposals: (1) the payment rate for an REH service would be calculated using the OPPS prospective payment rate for the equivalent covered OPD service increased by 5 percent; (2) the additional 5 percent payment for REH services, above the amount that would be paid for covered OPD services, would not be subject to a copayment; (3) for CY 2023, the monthly facility payment that each REH will receive would be determined by first calculating the total amount that CMS determines was paid to all CAHs under Title 18 of the Act in CY 2019 minus the estimated total amount that would have been paid under Title 18 to CAHs in CY 2019 if payment were made for inpatient hospital, outpatient hospital, and skilled nursing facility services under the applicable prospective payment systems for such services during CY 2019. The difference is divided by the number of CAHs enrolled in Medicare in CY 2019 to calculate the annual amount of this additional facility payment per individual REH. The annual payment amount is then divided by 12 to calculate the monthly facility payment that each REH will receive.

b. Impact of CY 2023 OPPS/ASC Final Rule With Comment Period REH Policies

For CY 2023, we have determined there are 1,716 CAHs and rural subsection (d) hospitals with 50 or fewer beds that are eligible to convert to become an REH in the nation. A study [359] estimated that 68 eligible providers or approximately 4 percent of all eligible providers would become a REH in CY 2023, and we use this number of REHs for our impact analyses. We acknowledge that the number of conversions could be less than or significantly greater than this estimate.

We developed a percentile analysis estimating how much revenue from rendering medical services a provider would lose or gain during CY 2023 if it decided to convert to a REH. We estimated that a provider in the 95th percentile of total annual REH medical service payment would receive an additional $2,089,700 in Medicare payments. We estimated that a provider in the 100th percentile of total annual REH medical service payment would receive an additional $3,362,560 in Medicare payments. Since a REH provider conversion rate of 4 percent falls between the 95th percentile and the 100th percentile of total annual REH medical service payment spending, we took the average of the additional spending for the 95th and 100th percentiles to determine the additional medical service spending for each provider converting to a REH in CY 2023 would be $2,726,130. Since we do not have any information on individual providers that may convert, nor do we have any information on characteristics of regions where REH conversions may be more likely, our best assumption regarding the impact of the REH policy is that providers who anticipate the most financial benefit from converting to an REH would be the most likely providers to convert.

Next, we determined the annual facility payment amount for a provider that converts to an REH in CY 2023. The finalized monthly facility payment for CY 2023 is $272,866. When this amount is multiplied by 12 months, the total annual facility payment is equal to $3,274,392. To determine the total impacts of the REH policy, we need to multiply the additional medical service spending amount of $2,726,130 by 68 providers which equals $185,376,820. Next, we multiply the total annual facility payment amount of $3,274,392 by 68 providers which equals $222, 658, 656. Finally, we combine the two amounts together, and we obtain a final estimate of the impacts of the REH provider policy of an additional $408,035,476 in Medicare payments.

7. Effects of Rural Emergency Hospitals (REH) Physician Self-Referral Law Updates

The discussion of the physician self-referral law provisions related to REHs appears in section XVIII.E of this final rule with comment period. As discussed in section XVIII.A.4 of this final rule with comment period, we are finalizing our proposal to revise certain existing exceptions to the physician self-referral law applicable to compensation arrangements involving specific types of providers to make them applicable to compensation arrangements to which an REH is a party. Specifically, we are revising the exceptions for physician recruitment at § 411.357(e), obstetrical malpractice insurance subsidies at § 411.357(r), retention payments in underserved areas at § 411.357(t), electronic prescribing items and services at § 411.357(v), assistance to

[359] ''How Many Hospitals Might Convert to a Rural Emergency Hospital (REH)?'' July 2021. Pink, GH et al. Findings Brief—NC Rural Health Research Program.

compensate a nonphysician practitioner at § 411.357(x), and timeshare arrangements at § 411.357(y) to also permit an REH to provide remuneration to a physician (or an immediate family member of a physician) if all requirements of the applicable exception are satisfied. All the revisions will ensure that exceptions applicable to compensation arrangements that may already be used by existing CAHs and small rural hospitals eligible to undergo conversion to an REH remain available to REHs. We believe that the continued availability of these exceptions could be important to ensuring access to necessary designated health services and other care furnished by an REH.

8. REH Provider Enrollment

The only impacts of our finalized REH enrollment policies are the information collection requirements associated with the facility's completion and submission of a Form CMS–855A change of information application to convert from a CAH or hospital (as defined in section 1886(d)(1)(B) of the Act) to an REH. These are addressed in detail in section XXIII.G of this final rule with comment period. As explained in that section, we estimate a Year 1 burden of 68 hours (68 applications × 1 hour per application) at a cost of $2,784 (based on an hourly wage estimate of $40.94).

9. Effects of Addition of a New Service Category for Hospital Outpatient Department (OPD) Prior Authorization Process

a. Overall Impact

In the CY 2020 OPPS/ASC final rule with comment period, we established a prior authorization process for certain hospital OPD services using our authority under section 1833(t)(2)(F) of the Act, which allows the Secretary to develop ''a method for controlling unnecessary increases in the volume of covered OPD services'' (84 FR 61142, November 12, 2019).[360] As part of the CY 2021 OPPS/ASC final rule with comment period, we added additional service categories to the prior authorization process (85 FR 85866, December 29, 2020). The regulations governing the prior authorization process are located in 42 CFR part 419, subpart I, specifically at §§ 419.80 through 419.89.

In accordance with § 419.83(b), we are finalizing our proposal to require prior authorization for a new service category: Facet joint interventions. We are adding the service category to § 419.83(a)(3). We are also requiring that the prior authorization process for the additional service category will be effective for dates of services on or after July 1, 2023. The addition of the service category is consistent with our authority under section 1833(t)(2)(F) of the Act and is based upon our determination that there has been an unnecessary increase in the volume of these services.

The overall economic impact on the health care sector to require prior authorization for the additional service category is dependent on the number of claims affected. Table 116, Overall Economic Impact on the Health Sector, lists an estimate of the overall economic impact on the health sector for the new service category. The values populating this table were obtained from the cost reflected in Table 117, Annual Private Sector Costs, and Table 118, Estimated Annual Administrative Costs to CMS. Together, Tables 117 and 118 combine to convey the overall economic cost impact to the health sector for the new service category, which is illustrated in Table 116. It should be noted that due to the July start date for prior authorization for the new service category, year one includes only 6 months of prior authorization requests.

Based on the estimate, the overall economic cost impact is approximately $13.3 million in the first year based on 6 months for the new service category. The 5-year impact is approximately $118.7 million, and the 10-year impact is approximately $250.4 million. The 5- and 10-year impacts account for year one, including only 6 months. Additional administrative paperwork costs to private sector providers and an increase in Medicare spending to conduct reviews combine to create the financial impact; however, this impact is offset by Medicare savings. Annually, we estimate an overall Medicare savings of $65.3 million. We believe there are likely to be other benefits that result from the prior authorization requirement for the new service category, though many of those benefits are difficult to quantify. For instance, we expect to see savings in the form of reduced unnecessary utilization, fraud, waste, and abuse, including a reduction in improper Medicare fee-for-service payments (we note that not all improper payments are fraudulent). We solicited public comments on the potential increased costs and benefits associated with this proposed provision for the new service category.

TABLE 116: OVERALL ECONOMIC COST IMPACT ON THE HEALTH SECTOR

Economic Impact Costs	Year 1	5 Years	10 Years
Private Sector Costs	$3,694,954	$32,232,056	$67,903,435
Medicare Costs	$9,625,364	$86,488,072	$182,566,457
Total Economic Impact to Health Sector	$13,320,318	$118,720,128	$250,469,892

According to the RFA's use of the term, most suppliers and providers are small entities. Likewise, the vast majority of physician and nurse practitioner (NP) practices are considered small businesses according to the SBA's size standards of having total revenues of $10 million or less in any 1 year. While the economic costs and benefits are substantial in the aggregate, the economic impact on individual entities compliant with Medicare program coverage and utilization rules and regulations will be relatively small. We estimate that 90 to 95 percent of providers who provide these services are small entities under the RFA definition. The rationale behind requiring prior authorization is to control unnecessary increases in the volume of covered OPD services. The impact on providers not in compliance with Medicare coverage, coding, and payment rules and regulations could be significant, as the final rule with comment period will change the billing practices of those providers. We believe that the purpose of the statute and this rule is to avoid unnecessary increases in utilization of OPD services. Therefore,

[360] See also correction notification issued January 3, 2020 (85 FR 224).

we do not view decreased revenues from the additional OPD service category subject to unnecessary utilization by providers to be a condition that we must mitigate. We believe that the effect will be minimal on providers who are compliant with Medicare coverage, coding, and payment rules and requirements. Adding the new service category will offer additional protection to a provider's cash flow as the provider would know in advance if the Medicare requirements are met.

b. Anticipated Specific Cost Effects

1. Private Sector Costs

We do not believe that this rule will significantly affect the number of legitimate claims submitted for the new service category. However, we do expect a decrease in the overall amount paid for the services resulting from a reduction in unnecessary utilization of the services requiring prior authorization.

We estimate that the private sector's per-case time burden attributed to submitting documentation and associated clerical activities in support of a prior authorization request for the additional service category will be equivalent to that of submitting documentation and clerical activities associated with prepayment review, which is 0.5 hours. We apply this time burden estimate to initial submissions and resubmissions.

TABLE 117: YEAR 1 (6 MONTH) PRIVATE SECTOR COSTS

Activity	Responses Per Year (i.e. number of reviewed claims)	Time Per Response (hours) or Dollar Cost	Total Burden Per Year (hours)	Total Burden Costs Per Year Using Loaded Rate
Fax and Electronic Submitted Requests- Initial Submissions	97,301	0.5	48,651	$1,666,773
Fax and Electronic Submitted Requests- Resubmissions	31,928	0.5	15,964	$546,922
Mailed in Requests- Initial Submissions	41,701	0.5	20,850	$714,331
Mailed in Requests- Resubmissions	13,683	0.5	6,842	$234,395
Mailing Costs	55,384	5		$276,920
Provider Demonstration- Education	2,487	3	7,461	$255,614
Total			99,768	$3,694,954

2. Administrative Costs to CMS

CMS will incur additional costs associated with processing the prior authorization requests for the new service category. We use the range of potentially affected cases (submissions and resubmissions) and multiply it by $50, the estimated cost to review each request. The combined cost also includes other elements such as appeals, education, outreach, and system changes.

TABLE 118: YEAR 1 (6 MONTH) ESTIMATED ADMINISTRATIVE COSTS TO CMS

Service Category	Estimated Year One Administrative Cost (6 Months)
Facet Joint Interventions- 10 Codes	$9,625,364

BILLING CODE 4120–01–C

3. Estimated Beneficiary Costs

We expect a reduction in the utilization of the new Medicare OPD service category when such utilization does not comply with one or more of Medicare's coverage, coding, and payment rules. While there may be an associated burden on beneficiaries while they wait for the prior authorization decision; we are unable to quantify that burden. Although the rule permits utilization that is medically necessary, OPD services that are not medically necessary may still provide convenience or usefulness for beneficiaries; any rule-induced loss of such convenience or usefulness constitutes a cost of the rule that we lack data to quantify. Additionally, beneficiaries may have out-of-pocket costs for those services that are determined not to comply with Medicare requirements and thus, are not eligible for Medicare payment. We lack the data to quantify these costs as well.

c. Estimated Benefits

There will be quantifiable benefits for this rule because we expect a reduction in the unnecessary utilization of the new Medicare OPD service category subject to prior authorization. It is difficult to project the exact decrease in unnecessary utilization; however, based on a 25 percent savings percentage, we estimate that for the first 6 months, there will be savings of $32.6 million overall. Annually, we estimate an overall gross savings of $65.3 million. These savings represent a Medicare benefit from more efficient use of health care resources while still maintaining the same health outcomes for necessary services. We will closely monitor utilization and billing practices. The expected benefits will also include changed billing practices that would also enhance the coordination of care for the beneficiary. For example, requiring prior authorization for the additional OPD services category will ensure that the primary care practitioner recommending the service and the facility collaborate more closely to provide the most appropriate OPD services to meet the needs of the beneficiary. The practitioner recommending the service would evaluate the beneficiary to determine what services are medically necessary based on the beneficiary's condition. This would require the facility to collaborate closely with the practitioner early on in the process to ensure the services are truly necessary and meet all requirements and that their supporting documentation is complete and correct. Improper payments made because the practitioner did not evaluate the patient or the patient does not meet the Medicare requirements will likely be reduced by the requirement that a provider submits clinical documentation created as part of its prior authorization request.

10. Rural Emergency Hospitals CoPs

This final rule with comment period addresses the CoPs required for REH designation, which in accordance with the statute, may be sought by CAHs and small rural hospitals. It also finalizes several new CAH requirements that we believe are appropriate under the existing program as well as to REHs. However, note that the costs of these CAH requirements are not attributable to the new REH program (except where such costs are experienced by entities that remain open due to the REH option but would have closed otherwise). The baseline for the estimates of REH costs is the status quo had the new program had not been created. The final CoPs for the new REH provider type are similar to those already met by the facilities that will potentially convert to REH status, and for collection of information purposes we did not subtract offsetting savings from providers who would already meet these standards and who decide to make little change when updating their status.

The RFA requires agencies to analyze options for regulatory relief of small entities, if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Most hospitals and most other healthcare providers and suppliers are small entities, either by nonprofit status or by having revenues of less than $8.0 million to $41.5 million in any 1 year. Individuals and states are not included in the definition of a small entity. We estimate that almost all of the new REH facilities, and the great majority of CAHs, are or would be small entities on the basis of legal status, revenues, or both. The North American Industry Classification System Code for the converting hospitals is 622110 (General Medical and Surgical Hospitals), and for the REHs to which they convert the closest Code is 621493 (Freestanding Ambulatory Surgical and Emergency Centers). HHS uses an increase in costs or decrease in revenues of more than 3 percent as its threshold for ''significant economic impact''. Our collection of information estimates are that the 68 facilities converting to REH status (as estimated by the NC RHRP study referenced in the COI section) would face average annual costs of about $22,600 each (68 × $22,600 = $1,537,000 (COI burden estimate)). The North Carolina Rural Health Research Program estimated that the 68 hospitals it thought most likely to convert to REH status had average patient revenues of $7.3 million. For these facilities, the 3 percent threshold would be about $219,000, almost ten times our estimated cost of information collection. The CLA study does not present average facility revenues. However, we note that while it reaches a broad range of conversion estimates, we do not believe that it would have reached different conclusions had it presented such calculations. These relationships between revenues and costs would not be substantially different if the number of conversions was substantially fewer or substantially greater in number. More importantly, these facilities would be converting voluntarily to the new program. We expect that the costs any facility faces would be less than the anticipated gains of conversion, or it would not convert. This positive relationship of expected gains from conversion compared to current costs and revenues is explicit in the CLA modeling. The effects of the final policy changes on CAHs are even smaller. The average annual cost per CAH for the new Conditions of Participation would

be about $2,755 each (1,360 facilities × $2,755 = the $3,747,000 COI estimate), a tiny fraction of 1 percent of annual patient revenues estimated in the NC RHRP study at about $24 million a year. Moreover, the final change in the definition of primary roads could prevent the loss of the CAH designation for 3 to 4 CAHs. We note that we proposed no change in rural hospital standards, so they are not directly regulated by this final rule with comment period. For these reasons, an Initial Regulatory Flexibility Analysis is not required for the REH CoP provisions. Furthermore, as described provision by provision earlier in this preamble, we carefully sought to keep regulatory burdens on REH providers to a reasonable minimum, taking into account our obligation to reduce health care inequities, their small size, and the statutory and practical limitations on their status as providers. For example, we proposed to allow systems composed of multiple and separately certified hospitals, CAHs, and/or REHs to have unified or integrated governing bodies, unified infection prevention and control and antibiotic stewardship programs, and unified and integrated medical staff.

D. Regulatory Review Costs

If regulations impose administrative costs on private entities, such as the time needed to read and interpret this rule, we should estimate the cost associated with regulatory review. Due to the uncertainty involved with accurately quantifying the number of entities that will review the rule, we assumed that the number of commenters on this year's proposed rule will be the number of reviewers of this final rule. We acknowledge that this assumption may understate or overstate the costs of reviewing this rule. It is possible that not all commenters reviewed this year's proposed rule in detail, and it is also possible that some reviewers choose not to comment on the proposed rule. For these reasons, we thought that the number of commenters on the CY 2023 OPPS/ASC proposed rule would be a fair estimate of the number of reviewers of this final rule.

We also recognize that different types of entities are, in many cases, affected by mutually exclusive sections of the proposed rule, and therefore, for the purposes of our estimate, we assume that each reviewer reads approximately 50 percent of the rule.

Using the wage information from the BLS for medical and health service managers (Code 11–9111), we estimated that the cost of reviewing this rule is $115.22 per hour, including overhead and fringe benefits (*https://www.bls.gov/oes/current/oes_nat.htm*). Assuming an average reading speed, we estimate that it would take approximately 8 hours for the staff to review half of this final rule. For each entity that reviews the rule, the estimated cost is $921.76 (8 hours × $115.22). Therefore, we estimate that the total cost of reviewing this regulation is $1,473,89 4 ($921.76 × 1,599 reviewers on the CY 2023 OPPS/ASC proposed rule).

E. Regulatory Flexibility Act (RFA) Analysis

The RFA requires agencies to analyze options for regulatory relief of small entities, if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, many hospitals are considered small businesses either by the Small Business Administration's size standards with total revenues of $41.5 million or less in any single year or by the hospital's not-for-profit status. Most ASCs and most CMHCs are considered small businesses with total revenues of $16.5 million or less in any single year. For details, we refer readers to the Small Business Administration's ''Table of Size Standards'' at *https://www.sba.gov/content/table-small-business-size-standards*. As its measure of significant economic impact on a substantial number of small entities, HHS uses a change in revenue of more than 3 to 5 percent. We do not believe that this threshold will be reached by the requirements in this final rule with comment period. As a result, the Secretary has determined that this rule will not have a significant impact on a substantial number of small entities.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a metropolitan statistical area and has 100 or fewer beds. We estimate that this final rule with comment period will increase payments to small rural hospitals by approximately 2.5 percent. Therefore, it should not have a significant impact on the approximately 549 small rural hospitals. We note that the estimated payment impact for any category of small entity will depend on both the services that they provide as well as the payment policies and/or payment systems that may apply to them. Therefore, the most applicable estimated impact may be based on the specialty, provider type, or payment system.

The analysis above, together with the remainder of this preamble, provides a regulatory flexibility analysis and a regulatory impact analysis. We note that the policies established in this rule apply more broadly to OPPS providers and do not specifically focus on small rural hospitals. As a result, the impact on those providers may depend more significantly on their case mix of services provided, since the broader impact on the hospital category is more dependent on the OPD update factor, as indicated in the impact table.

F. Unfunded Mandates Reform Act Analysis

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2022, that threshold level is currently approximately $165 million. This final rule with comment period does not mandate any requirements for State, local, or tribal governments, or for the private sector.

G. Conclusion

The changes we are finalizing in this final rule with comment period will affect all classes of hospitals paid under the OPPS as well as affect both CMHCs and ASCs. We estimate that most classes of hospitals paid under the OPPS would experience a modest increase or a minimal decrease in payment for services furnished under the OPPS in CY 2023. Table 110 demonstrates the estimated distributional impact of the OPPS budget neutrality requirements that will result in a 4.5 percent increase in payments for all services paid under the OPPS in CY 2023, after considering all of the changes to APC reconfiguration and recalibration, as well as the OPD fee schedule increase factor, wage index changes, including the frontier State wage index adjustment, estimated payment for outliers, changes to the pass-through payment estimate, exception for rural SCHs from the clinic visit policy for services furnished at off campus PBDs, and adjustment for the additional resource costs of acquiring domestic NIOSH-approved surgical N95 respirators. However, some classes of providers that are paid under the OPPS will experience more significant gains or losses in OPPS payments in CY 2023.

The updates we are making to the ASC payment system for CY 2023 will

affect each of the approximately 5,900 ASCs currently approved for participation in the Medicare program. The effect on an individual ASC will depend on its mix of patients, the proportion of the ASCs patients who are Medicare beneficiaries, the degree to which the payments for the procedures offered by the ASC are changed under the ASC payment system, and the extent to which the ASC provides a different set of procedures in the coming year than in previous years. Table 111 demonstrates the estimated distributional impact among ASC surgical specialties of the productivity-adjusted hospital market basket update factor of 2.7 percent for CY 2023.

H. Federalism Analysis

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct costs on State and local governments, preempts State law, or otherwise has federalism implications. We have examined the OPPS and ASC provisions included in this final rule with comment period in accordance with Executive Order 13132, Federalism, and have determined that they will not have a substantial direct effect on State, local, or tribal governments, preempt State law, or otherwise have a federalism implication. As reflected in Table 110 of this final rule with comment period, we estimate that OPPS payments to governmental hospitals (including State and local governmental hospitals) will increase by 5.9 percent under this final rule with comment period. While we do not know the number of ASCs or CMHCs with government ownership, we anticipate that it is small. The analyses we have provided in this section of this final rule with comment period, in conjunction with the remainder of this document, demonstrate that this final rule with comment period is consistent with the regulatory philosophy and principles identified in Executive Order 12866, the RFA, and section 1102(b) of the Act.

This final rule with comment period will affect payments to a substantial number of small rural hospitals and a small number of rural ASCs, as well as other classes of hospitals, CMHCs, and ASCs, and some effects may be significant. However, as noted in section XXIII of this final rule with comment period, this rule should not have a significant effect on small rural hospitals.

I. Congressional Review

This final regulation is subject to the Congressional Review Act provisions of the Small Business Regulatory Enforcement Fairness Act of 1996 (5 U.S.C. 801 *et seq.*) and has been transmitted to the Congress and the Comptroller General for review.

Chiquita Brooks-LaSure, Administrator of the Centers for Medicare & Medicaid Services, approved this document on October 26, 2022.

List of Subjects

42 CFR Part 405

Administrative practice and procedure, Health facilities, Health professions, Kidney diseases, Medicare, Reporting and recordkeeping, Rural areas, X-rays.

42 CFR Part 410

Diseases, Health facilities, Health professions, Laboratories, Medicare, Reporting and recordkeeping requirements, Rural areas, X-rays.

42 CFR Part 411

Diseases, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 412

Administrative practice and procedure, Health facilities, Medicare, Puerto Rico, Reporting and recordkeeping requirements.

42 CFR Part 413

Diseases, Health facilities, Medicare, Puerto Rico, Reporting and recordkeeping requirements.

42 CFR Part 416

Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 419

Hospitals, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 424

Emergency medical services, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 485

Grant programs—health, Health facilities, Incorporation by reference, Medicaid, Privacy, Reporting and recordkeeping requirements.

42 CFR Part 489

Health facilities, Medicare, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services amend 42 CFR chapter IV as set forth below:

PART 405—FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED

■ 1. The authority citation for part 405 continues to read as follows:

Authority: 42 U.S.C. 263a, 405(a), 1302, 1320b–12, 1395x, 1395y(a), 1395ff, 1395hh, 1395kk, 1395rr, and 1395ww(k).

■ 2. Section 405.1801 is amended by revising paragraph (b)(2)(ii) to read as follows:

§ 405.1801 Introduction.

* * * * *

(b) * * *

(2) * * *

(ii) Some of these nonprovider entities are required to file periodic cost reports and are paid on the basis of information furnished in these reports. Except as provided at § 413.420(g) of this chapter, these nonprovider entities may not obtain a contractor hearing or a Board hearing under section 1878 of the Act or this subpart.

* * * * *

PART 410—SUPPLEMENTARY MEDICAL INSURANCE (SMI) BENEFITS

■ 3. The authority citation for part 410 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395m, 1395hh, 1395rr, and 1395ddd.

■ 4. Section 410.27 is amended by:

■ a. Revising paragraphs (a)(1)(iii) and (a)(1)(iv)(A) and (B); and

■ b. Removing paragraph (a)(1)(iv)(D).

The revisions read as follows:

§ 410.27 Therapeutic outpatient hospital or CAH services and supplies incident to a physician's or nonphysician practitioner's service: Conditions.

(a) * * *

(1) * * *

(iii) In the hospital or CAH or in a department of the hospital or CAH, as defined in § 413.65 of this subchapter, except for mental health services furnished to beneficiaries in their homes through the use of communication technology;

(iv) * * *

(A) For services furnished in the hospital or CAH, or in an outpatient department of the hospital or CAH, both on and off-campus, as defined in § 413.65 of this subchapter, or through the use of communication technology for mental health services, general supervision means the procedure is furnished under the physician's or nonphysician practitioner's overall

direction and control, but the physician's or nonphysician practitioner's presence is not required during the performance of the procedure.

(B) Certain therapeutic services and supplies may be assigned either direct supervision or personal supervision.

(*1*) For purposes of this section, direct supervision means that the physician or nonphysician practitioner must be immediately available to furnish assistance and direction throughout the performance of the procedure. It does not mean that the physician or nonphysician practitioner must be present in the room when the procedure is performed. For pulmonary rehabilitation, cardiac rehabilitation, and intensive cardiac rehabilitation services, direct supervision must be furnished by a doctor of medicine or a doctor of osteopathy, as specified in §§ 410.47 and 410.49, respectively. Until the later of the end of the calendar year in which the PHE as defined in § 400.200 of this subchapter ends or December 31, 2023, the presence of the physician for the purpose of the supervision of pulmonary rehabilitation, cardiac rehabilitation, and intensive cardiac rehabilitation services includes virtual presence through audio/video real-time communications technology (excluding audio-only); and

(*2*) Personal supervision means the physician or nonphysician practitioner must be in attendance in the room during the performance of the procedure.

* * * * *

■ 5. Section 410.28 is amended by revising paragraph (e) to read as follows:

§ 410.28 Hospital or CAH diagnostic services furnished to outpatients: Conditions.

* * * * *

(e) Medicare Part B makes payment under section 1833(t) of the Act for diagnostic services furnished by or under arrangements made by the participating hospital only when the diagnostic services are furnished under one of the three levels of supervision (as defined in paragraphs (e)(1) through (3) of this section) specified by CMS for the particular service by a physician or, to the extent that they are authorized to do so under their scope of practice and applicable State law, by a nonphysician practitioner (physician assistant, nurse practitioner, clinical nurse specialist, certified nurse-midwife or certified registered nurse anesthetist).

(1) *General supervision.* General supervision means the procedure is furnished under the physician's or nonphysician practitioner's overall direction and control, but the physician's or nonphysician practitioner's presence is not required during the performance of the procedure. Under general supervision at a facility accorded provider-based status, the training of the nonphysician personnel who actually perform the diagnostic procedure and the maintenance of the necessary equipment and supplies are the continuing responsibility of the facility.

(2) *Direct supervision.* (i) For services furnished directly or under arrangement in the hospital or in an on-campus or off-campus outpatient department of the hospital, as defined in § 413.65 of this chapter, ''direct supervision'' means that the physician or nonphysician practitioner must be immediately available to furnish assistance and direction throughout the performance of the procedure. It does not mean that the physician or nonphysician practitioner must be present in the room where the procedure is performed.

(ii) For services furnished under arrangement in nonhospital locations, ''direct supervision'' means the physician or nonphysician practitioner must be present in the office suite and immediately available to furnish assistance and direction throughout the performance of the procedure. It does not mean that the physician or nonphysician practitioner must be present in the room when the procedure is performed.

(iii) Until the later of the end of the calendar year in which the PHE as defined in § 400.200 of this chapter ends or December 31, 2021, the presence of the physician or nonphysician practitioner under paragraphs (e)(2)(i) and (ii) of this section includes virtual presence through audio/video real-time communications technology (excluding audio-only).

(3) Personal supervision. Personal supervision means the physician or nonphysician practitioner must be in attendance in the room during the performance of the procedure.

* * * * *

■ 6. Section 410.40 is amended by revising paragraphs (f)(1), (2), and (5) to read as follows:

§ 410.40 Coverage of ambulance services.

* * * * *

(f) * * *

(1) From any point of origin to the nearest hospital, CAH, rural emergency hospital (REH), or SNF that is capable of furnishing the required level and type of care for the beneficiary's illness or injury. The hospital or CAH or REH must have available the type of physician or physician specialist needed to treat the beneficiary's condition.

(2) From a hospital, CAH, REH, or SNF to the beneficiary's home.

* * * * *

(5) During a Public Health Emergency, as defined in § 400.200 of this chapter, a ground ambulance transport from any point of origin to a destination that is equipped to treat the condition of the patient consistent with any applicable state or local Emergency Medical Services protocol that governs the destination location. Such destinations include, but are not limited to, alternative sites determined to be part of a hospital, critical access hospital, REH (effective January 1, 2023), or skilled nursing facility, community mental health centers, federally qualified health centers, rural health clinics, physician offices, urgent care facilities, ambulatory surgical centers, any location furnishing dialysis services outside of an ESRD facility when an ESRD facility is not available, and the beneficiary's home.

* * * * *

PART 411—EXCLUSIONS FROM MEDICARE AND LIMITATIONS ON MEDICARE PAYMENT

■ 7. The authority citation for part 411 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395w–101 through 1395w–152, 1395hh, and 1395nn.

■ 8. Section 411.351 is amended by revising the definition ''Rural area'' and adding the definition ''Rural emergency hospital'' in alphabetical order to read as follows:

§ 411.351 Definitions.

* * * * *

Rural area means an area that is not an urban area as defined at § 412.64(b) of this chapter.

Rural emergency hospital has the meaning set forth in section 1861(kkk)(2) of the Act and § 419.91 of this chapter.

* * * * *

■ 9. Section 411.357 is amended by revising paragraphs (e)(6), (r)(2) introductory text, (r)(2)(ii) through (v), (t)(5), (v)(1)(i), and (x)(7) and (8) and adding paragraph (y)(10) to read as follows:

§ 411.357 Exceptions to the referral prohibition related to compensation arrangements.

* * * * *

(e) * * *

(6)(i) This paragraph (e) applies to remuneration provided by a federally qualified health center, rural health

clinic, or rural emergency hospital in the same manner as it applies to remuneration provided by a hospital.

(ii) The ''geographic area served'' by a federally qualified health center, rural health clinic, or rural emergency hospital is the area composed of the lowest number of contiguous or noncontiguous zip codes from which the federally qualified health center, rural health clinic, or rural emergency hospital draws at least 90 percent of its patients, as determined on an encounter basis. The geographic area served by the federally qualified health center, rural health clinic, or rural emergency hospital may include one or more zip codes from which the federally qualified health center, rural health clinic, or rural emergency hospital draws no patients, provided that such zip codes are entirely surrounded by zip codes in the geographic area described in the preceding sentence from which the federally qualified health center, rural health clinic, or rural emergency hospital draws at least 90 percent of its patients.

* * * * *

(r) * * *

(2) A payment from a hospital, federally qualified health center, rural health clinic, or rural emergency hospital that is used to pay for some or all of the costs of malpractice insurance premiums for a physician who engages in obstetrical practice as a routine part of his or her medical practice, if all of the following conditions are met:

* * * * *

(ii) The arrangement is set out in writing, is signed by the physician and the hospital, federally qualified health center, rural health clinic, or rural emergency hospital providing the payment, and specifies the payment to be made by the hospital, federally qualified health center, rural health clinic, or rural emergency hospital and the terms under which the payment is to be provided.

(iii) The arrangement is not conditioned on the physician's referral of patients to the hospital, federally qualified health center, rural health clinic, or rural emergency hospital providing the payment.

(iv) The hospital, federally qualified health center, rural health clinic, or rural emergency hospital does not determine the amount of the payment in any manner that takes into account the volume or value of referrals by the physician or any other business generated between the parties.

(v) The physician is allowed to establish staff privileges at any hospital(s), federally qualified health center(s), rural health clinic(s), or rural emergency hospital(s) and to refer business to any other entities (except as referrals may be restricted under an employment arrangement or services arrangement that complies with § 411.354(d)(4)).

* * * * *

(t) * * *

(5) Application to other entities. This paragraph (t) applies to remuneration provided by a federally qualified health center, rural health clinic, or rural emergency hospital in the same manner as it applies to remuneration provided by a hospital. For purposes of this paragraph (t), the geographic area served by a federally qualified health center, rural health clinic, or rural emergency hospital has the meaning set forth in paragraph (e)(6)(ii) of this section.

* * * * *

(v) * * *

(1) * * *

(i) Hospital or rural emergency hospital to a physician who is a member of its medical staff;

* * * * *

(x) * * *

(7)(i) This paragraph (x) may be used by a hospital, federally qualified health center, rural health clinic, or rural emergency hospital only once every 3 years with respect to the same referring physician.

(ii) Paragraph (x)(7)(i) of this section does not apply to remuneration provided by a hospital, federally qualified health center, rural health clinic, or rural emergency hospital to a physician to compensate a nonphysician practitioner to provide NPP patient care services if—

(A) The nonphysician practitioner is replacing a nonphysician practitioner who terminated his or her employment or contractual arrangement to provide NPP patient care services with the physician (or the physician organization in whose shoes the physician stands) within 1 year of the commencement of the employment or contractual arrangement; and

(B) The remuneration provided to the physician is provided during a period that does not exceed 2 consecutive years as measured from the commencement of the compensation arrangement between the nonphysician practitioner who is being replaced and the physician (or the physician organization in whose shoes the physician stands).

(8)(i) This paragraph (x) applies to remuneration provided by a federally qualified health center, rural health clinic, or rural emergency hospital in the same manner as it applies to remuneration provided by a hospital.

(ii) The ''geographic area served'' by a federally qualified health center, rural health clinic, or rural emergency hospital has the meaning set forth in paragraph (e)(6)(ii) of this section.

(y) * * *

(10) This paragraph (y) applies to remuneration provided by a rural emergency hospital in the same manner as it applies to remuneration provided by a hospital.

* * * * *

PART 412—PROSPECTIVE PAYMENT SYSTEMS FOR INPATIENT HOSPITAL SERVICES

■ 10. The authority citation for part 412 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 11. Section 412.1 is amended by revising paragraph (a)(1)(iv) to read as follows:

§ 412.1 Scope of part.

(a) * * *

(1) * * *

(iv) Additional payments are made for outlier cases, bad debts, indirect medical education costs, for serving a disproportionate share of low-income patients, and for the additional resource costs of domestic National Institute for Occupational Safety and Health approved surgical N95 respirators.

* * * * *

■ 12. Section 412.2 is amended by adding paragraph (f)(10) to read as follows:

§ 412.2 Basis of payment.

* * * * *

(f) * * *

(10) A payment adjustment for the additional resource costs of domestic National Institute for Occupational Safety and Health approved surgical N95 respirators as specified in § 412.113.

* * * * *

■ 13. Section 412.100 is amended by revising paragraph (b) to read as follows:

§ 412.100 Special treatment: Kidney transplant programs.

* * * * *

(b) Costs of kidney acquisition. Kidney acquisition costs include allowable costs incurred in the acquisition of a kidney from a living or a deceased donor by the hospital, or from a deceased donor by an organ procurement organization. These costs are listed in § 413.402(b) of this chapter.

■ 14. Section 412.113 is amended by adding paragraph (f) to read as follows:

§ 412.113 Other payments.

* * * * *

(f) Additional resource costs of domestic National Institute for Occupational Safety and Health approved surgical N95 respirators. (1) For cost reporting periods beginning on or after January 1, 2023, a payment adjustment to a hospital for the additional resource costs of domestic National Institute for Occupational Safety and Health approved surgical N95 respirators is made as described in paragraph (f)(2) of this section.

(2) The payment adjustment is based on the estimated difference in the reasonable cost incurred by the hospital for domestic National Institute for Occupational Safety and Health approved surgical N95 respirators purchased during the cost reporting period as compared to other National Institute for Occupational Safety and Health approved surgical N95 respirators purchased during the cost reporting period.

■ 15. Section 412.190 is amended by revising paragraph (c) to read as follows:

§ 412.190 Overall Hospital Quality Star Rating.

* * * * *

(c) Frequency of publication and data used. The Overall Star Rating are published once annually using data publicly reported on Hospital Compare or its successor website from a quarter within the previous 12 months.

* * * * *

PART 413—PRINCIPLES OF REASONABLE COST REIMBURSEMENT; PAYMENT FOR END-STAGE RENAL DISEASE SERVICES; PROSPECTIVELY DETERMINED PAYMENT RATES FOR SKILLED NURSING FACILITIES; PAYMENT FOR ACUTE KIDNEY INJURY DIALYSIS

■ 16. The authority citation for part 413 is revised to read as follows:

Authority: 42 U.S.C. 1302, 1395d(d), 1395f(b), 1395g, 1395l(a), (i), and (n), 1395m, 1395x(v), 1395x(kkk), 1395hh, 1395rr, 1395tt, and 1395ww.

■ 17. Section 413.1 is amended by adding paragraph (a)(1)(ii)(L) and revising paragraph (a)(2)(i) to read as follows:

§ 413.1 Introduction.

(a) * * *

(1) * * *

(ii) * * *

(L) Section 1834(x) of the Act authorizes payment for services furnished by rural emergency hospitals (REHs) and establishes the payment methodology.

(2) * * *

(i) Hospitals, critical access hospitals (CAHs), and rural emergency hospitals (REHs);

* * * * *

■ 18. Section 413.13 is amended by adding paragraph (c)(2)(vii) to read as follows:

§ 413.13 Amount of payment if customary charges for services furnished are less than reasonable costs.

* * * * *

(c) * * *

(2) * * *

(vii) Services furnished by a rural emergency hospital (REH). Services furnished by a rural emergency hospital are subject to the payment methodology set forth in part 419, subpart J, of this chapter.

* * * * *

■ 19. Section 413.24 is amended by revising paragraphs (f)(4)(i) and (ii) and (f)(4)(iv)(A) to read as follows:

§ 413.24 Adequate cost data and cost finding.

* * * * *

(f) * * *

(4) * * *

(i) As used in this paragraph (f)(4), ''provider'' means a hospital, rural emergency hospital, skilled nursing facility, home health agency, hospice, organ procurement organization, histocompatibility laboratory, rural health clinic, federally qualified health center, community mental health center, or end-stage renal disease facility.

(ii) Effective for cost reporting periods beginning on or after October 1, 1989, for hospitals; cost reporting periods ending on or after February 1, 1997, for skilled nursing facilities and home health agencies; cost reporting periods ending on or after December 31, 2004, for hospices, and end-stage renal disease facilities; cost reporting periods ending on or after March 31, 2005, for organ procurement organizations, histocompatibility laboratories, rural health clinics, federally qualified health centers, and community mental health centers; and cost reporting periods beginning on or after January 1, 2023, for rural emergency hospitals, a provider is required to submit cost reports in a standardized electronic format. The provider's electronic program must be capable of producing the CMS standardized output file in a form that can be read by the contractor's automated system. This electronic file, which must contain the input data required to complete the cost report and to pass specified edits, must be forwarded to the contractor for processing through its system.

* * * * *

(iv)(A) Effective as specified in paragraphs (f)(4)(iv)(A)(1) through (5) of this section and except as provided in paragraph (f)(4)(iv)(C) of this section, a provider must submit a hard copy of a settlement summary, if applicable, which is a statement of certain worksheet totals found within the electronic file, and the certification statement described in paragraph (f)(4)(iv)(B) of this section signed by its administrator or chief financial officer certifying the accuracy of the electronic file or the manually prepared cost report.

(*1*) For hospitals, effective for cost reporting periods ending on or after September 30, 1994;

(*2*) For skilled nursing facilities and home health agencies, effective for cost reporting periods ending on or after February 1, 1997;

(*3*) For hospices and end-stage renal disease facilities, effective for cost reporting periods ending on or after December 31, 2004;

(*4*) For organ procurement organizations, histocompatibility laboratories, rural health clinics, federally qualified health centers, and community mental health centers, effective for cost reporting periods ending on or after March 31, 2005; and

(5) For rural emergency hospitals, effective for cost reporting periods beginning on or after January 1, 2023.

* * * * *

■ 20. Section 413.198 is amended by revising paragraph (b)(4)(ii) to read as follows:

§ 413.198 Recordkeeping and cost reporting requirements for outpatient maintenance dialysis.

* * * * *

(b) * * *

(4) * * *

(ii) Section 413.420, Payment to independent organ procurement organizations and to histocompatibility laboratories for kidney acquisition costs;

* * * * *

■ 21. Section 413.400 is amended by revising the definitions of ''Hospital-based organ procurement organization (HOPO)'', ''Transplant hospital'', ''Transplant hospital/HOPO (TH/HOPO)'', and ''Transplant program'' to read as follows:

§ 413.400 Definitions.

* * * * *

Hospital-based organ procurement organization (HOPO) means an organ procurement organization that is considered a department of the TH and reports organ acquisition costs it incurs on the TH's Medicare cost report.

* * * * *

Transplant hospital (TH) means a hospital that furnishes organ transplants and other medical and surgical specialty services required for the care of transplant patients.

Transplant hospital/HOPO (TH/HOPO) refers to a TH, or a TH that operates a HOPO (as previously defined in this section) and performs organ procurement activities as one entity reported on the TH's Medicare cost report.

Transplant program means an organ-specific transplant program within a TH (as defined in this section).

■ 22. Section 413.402 is amended by revising paragraphs (a), (b)(3), (4), and (7), (b)(8)(i) and (ii), and (d)(2)(ii) to read as follows:

§ 413.402 Organ acquisition costs.

(a) *Costs related to organ acquisition.* Costs recognized in paragraph (b) of this section are allowable costs incurred in the acquisition of organs intended for transplant, including those organs that are subsequently determined unsuitable for transplant and furnished for research from a living donor or a deceased donor by the hospital, or from a deceased donor by an OPO. Additionally, there are administrative and general costs that may be allowable and included on the cost report for an OPO or a TH.

(b) * * *

(3) Other costs associated with excising organs, such as general routine and special care services (for example, intensive care unit or critical care unit services), provided to the living or deceased donor.

(4) Operating room and other inpatient ancillary services applicable to the living or deceased donor.

* * * * *

(7) Surgeons' fees for excising deceased organs (currently limited to $1,250 for kidneys).

(8) * * *

(i) Excised organ to the TH; and

(ii) Deceased donor to procure organs when it is necessary to preserve clinical outcomes or to avoid loss of potentially transplantable organs.

* * * * *

(d) * * *

(2) * * *

(ii) Transportation costs of the deceased donor after organ procurement for funeral services or for burial.

* * * * *

■ 23. Section 413.404 is amended by revising paragraphs (a)(2), (b)(2), (b)(3) introductory text, (b)(3)(i) heading, (b)(3)(i)(A) through (C), (b)(3)(ii) heading, (b)(3)(ii)(A) and (B), (b)(3)(ii)(C) introductory text, (b)(3)(ii)(C)(1) through (3), (c)(1)(i) and (ii), (c)(2)(i) through (iv), and (c)(3) to read as follows:

§ 413.404 Standard acquisition charge.

(a) * * *

(2) The SAC represents the average of the total organ acquisition costs associated with procuring either deceased donor organs or living donor organs, by organ type.

* * * * *

(b) * * *

(2) When a TH/HOPO furnishes an organ to another TH or IOPO, it must bill the receiving TH or IOPO its SAC by organ type, or the hospital's standard departmental charges that are reduced to cost.

(3) A TH must establish SACs for living donor organs. A TH/HOPO must establish SACs for deceased donor organs.

(i) *Living donor SAC for THs–(A) Definition.* The living donor SAC is an average organ acquisition cost that a TH incurs to procure an organ from a living donor.

(B) *Establishment of living donor SAC.* A TH must establish a living donor SAC before the TH bills its first living donor transplant to Medicare.

(C) *Calculating the living donor SAC—(1) Initial living donor SAC.* A TH calculates its initial living donor SAC for each living donor organ type as follows:

(i) By estimating the reasonable and necessary organ acquisition costs it expects to incur for services furnished to living donors, and pre-admission services furnished to recipients of living donor organs during the hospital's cost reporting period.

(ii) By dividing the estimated amount described in paragraph (b)(3)(i)(C)(1)(i) of this section by the projected number of usable living donor organs to be procured by the TH during the TH's cost reporting period.

(2) *Subsequent living donor SAC.* A TH calculates its subsequent years' living donor SAC for each living donor organ type as follows:

(i) By using the TH's actual organ acquisition costs for the living donor organ type from the prior year's Medicare cost report, adjusted for any changes in the current year.

(ii) Dividing the costs in paragraph (b)(3)(i)(C)(2)(i) of this section by the actual number of usable living donor organs procured by the TH during that prior cost reporting period.

* * * * *

(ii) Deceased donor SAC for TH/HOPOs—(A) Definition. The deceased donor SAC is an average cost that a TH/HOPO incurs to procure a deceased donor organ.

(B) Calculating the deceased donor SAC—(1) Initial deceased donor SAC. A TH/HOPO calculates its initial deceased donor SAC for each deceased donor organ type as follows:

(i) By estimating the reasonable and necessary costs it expects to incur to procure deceased donor organs, combined with the expected costs of acquiring deceased donor organs from OPOs or other THs.

(ii) By dividing the estimated amount described in paragraph (b)(3)(ii)(B)(1)(i) of this section by the projected number of usable deceased donor organs to be procured by the TH/HOPO within the TH's cost reporting period.

(2) *Subsequent deceased donor SAC.* A TH/HOPO calculates its subsequent years' deceased donor SAC for each deceased donor organ type as follows:

(i) By using the TH's actual organ acquisition costs for the deceased donor organ type from the prior year's Medicare cost report, adjusted for any changes in the current year.

(ii) By dividing the costs in paragraph (b)(3)(ii)(B)(2)(i) of this section by the actual number of usable deceased donor organs procured by the TH/HOPO during that prior cost reporting period.

(C) Costs to develop the deceased donor SAC. Costs that may be used to develop the deceased donor SAC include, but are not limited to the following:

(1) Costs of organs acquired from other THs or OPOs.

(2) Costs of transportation as specified in § 413.402(b)(8).

(3) Surgeons' fees for excising deceased donor organs (currently limited to $1,250 for kidneys).

* * * * *

(c) * * *

(1) * * *

(i) Estimating the reasonable and necessary costs it expects to incur for services furnished to procure deceased donor non-renal organs during the IOPO's cost reporting period; and

(ii) Dividing the amount estimated in paragraph (c)(1)(i) of this section by the projected number of deceased donor non-renal organs the IOPO expects to procure within its cost reporting period.

* * * * *

(2) * * *

(i) General. An IOPO's contractor establishes the kidney SAC based on an estimate of,

initial year projected or subsequent years' actual, reasonable and necessary costs the IOPO expects to incur to procure deceased donor kidneys during the IOPO's cost reporting period, divided by the, initial year projected or subsequent years' actual, number of

usable deceased donor kidneys the IOPO expects to procure.

(ii) Initial year. The contractor develops the IOPO's initial kidney SAC based on the

IOPO's budget information.

(iii) Subsequent years. The contractor computes the kidney SAC for subsequent years using the IOPO's costs related to kidney acquisition that were incurred in the prior cost reporting period and dividing those costs by the number of usable deceased donor kidneys procured during that cost reporting period. The kidney SAC amount is the interim payment made by the TH or other OPO to the IOPO, as set forth in § 413.420(d)(1).

(iv) SAC adjustments. The IOPO's contractor may adjust the kidney SAC during the year, if necessary, for cost changes.

* * * * *

(3) Billing SACs for organs generally. When an IOPO obtains an organ from another IOPO, the receiving IOPO is responsible for paying the procuring IOPO's SAC. The receiving IOPO uses its SAC for each organ type and not the procuring IOPO's SAC when billing the TH receiving the organ.

■ 24. Section 413.412 is revised to read as follows:

§ 413.412 Intent to transplant, intent for research, counting en bloc, and unusable organs.

(a) *Principles for organs intended for transplant for organ acquisition payment purposes.* (1) An organ is intended for transplant when the OPO or TH designates it for transplant prior to the time the donor enters the hospital's operating room for surgical excision/recovery of the organ(s).

(2) OPOs and THs must identify the costs associated with the recovered and unrecovered organs and apportion those costs to the appropriate cost centers by organ type. These costs include the costs associated with an organ intended for transplant, but subsequently determined unsuitable for transplant and furnished for research.

(3) An organ intended for transplant but subsequently determined unsuitable for transplant and instead furnished for research is not counted as a Medicare usable organ or as a total usable organ in the ratio used to calculate Medicare's share of organ acquisition costs.

(4) Subject to paragraph (a)(4)(iii) of this section, OPOs and THs must reduce total organ acquisition costs, when the organ is intended for transplant but determined unsuitable for transplant and instead furnished for research, as follows:

(i) By deducting the costs to furnish organs for research from total organ acquisition costs; or

(ii) By offsetting the total organ acquisition costs by the revenue received for these organs.

(iii) In no event may the reduction in total organ acquisition costs as a result of application of paragraph (a)(4) of this section exceed the costs incurred to furnish organs for research.

(5) When the costs to furnish organs for research are not included in total organ acquisition costs but are included in a non-reimbursable cost center, no offset is necessary.

(b) *Principles for organs intended for research for organ acquisition payment purposes.* (1) An organ is intended for research when the OPO or TH designates it for research

prior to the time the donor enters the hospital's operating room for surgical removal of the organ.

(2) Medicare does not share in the acquisition costs of an organ intended for research and

costs to procure these organs must not be included in organ acquisition costs (except pancreata for islet cell transplants as specified in § 413.406(a)).

(3) An organ intended for research is not counted as a Medicare usable organ or as a total usable organ in the ratio used to calculate Medicare's share of organ acquisition costs (except pancreata for islet cell transplants as specified in § 413.406(a)).

(c) *Counting en bloc organs.* En bloc organs can be en bloc lungs or en bloc kidneys. For Medicare cost allocation purposes, OPOs and THs count -

(1) En bloc lungs or en bloc kidneys procured and transplanted en bloc (two organs transplanted as one unit) as one total usable organ. En bloc organs transplanted into a Medicare beneficiary count as one Medicare usable organ or one Medicare usable kidney.

(2) En bloc lungs and en bloc kidneys procured en bloc but separated and transplanted into two different recipients as two total usable organs. For each organ transplanted into a Medicare beneficiary, count each as one Medicare usable organ or one Medicare usable kidney.

(d) *Unusable organs.* (1) An organ is not counted as a Medicare usable organ or a total usable organ in the ratio used to calculate Medicare's share of organ acquisition costs if a physician determines, upon initial inspection or after removal of the organ, that the organ is not viable and not medically suitable for transplant and is therefore unusable.

(2) OPOs and THs include the cost to procure unusable organs, as described in paragraph (d)(1) of this section, in total organ acquisition costs reported on their Medicare cost report.

■ 25. Section 413.414 is amended by revising paragraphs (a), (b), (c) introductory text, (c)(1) and (2), and (c)(3)(i) and (ii) to read as follows:

§ 413.414 Medicare secondary payer and organ acquisition costs.

(a) *General principle.* If a Medicare beneficiary has a primary health insurer other than Medicare and that primary health insurer has primary liability for the transplant and organ acquisition costs, the Medicare Program may share a liability for organ acquisition costs as a secondary payer to the TH that performs the transplant in certain instances. To determine whether Medicare has liability to the TH that performs the transplant as a secondary payer for organ acquisition costs, it is necessary for the TH that performs the transplant to review the TH's agreement with the primary insurer.

(b) *Medicare has no secondary payer liability for organ acquisition costs.* If the primary insurer's agreement requires the TH to accept the primary insurer's payment as payment in full for the transplant and the associated organ acquisition costs, Medicare has zero liability as a secondary payer with no payment obligation for the transplantation costs or the organ acquisition costs, and the organ at issue is not a Medicare usable organ.

(c) *Medicare may have secondary payer liability for organ acquisition costs.* When the primary insurer's agreement does not require the TH that performs the transplant to accept the payment from the primary insurer as payment in full, and the payment the TH receives from the primary insurer for the transplant and organ acquisition costs is insufficient to cover the entire cost, Medicare may have a secondary payer liability to the TH that performs the transplant for the organ acquisition costs.

(1) To determine whether Medicare has a secondary payer liability for the organ acquisition costs, it is necessary for the TH that performs the transplant to submit a bill to its contractor and to compare the total cost of the transplant, including the transplant DRG amount and the organ acquisition costs, to the payment received from the primary payer.

(2) If the payment from the primary payer is greater than the cost of the transplant DRG and the organ acquisition costs, there is no Medicare liability and the TH must not count the organ as a Medicare usable organ.

(3) * * *

(i) The TH must pro-rate the payment from the primary payer between the transplant DRG payment and the organ acquisition payment.

(ii) Only the TH that performs the transplant counts the organ as a Medicare usable organ.

* * * * *

■ 26. Section 413.416 is amended by revising paragraphs (a), (b), (c) introductory text, (c)(2) through (4), (d) introductory text, and (d)(1) to read as follows:

§ 413.416 Organ acquisition charges for kidney-paired exchanges.

(a) Initial living donor evaluations. When a recipient and donor elect to participate in a kidney paired exchange, the costs of the initial living donor evaluations are incurred by the originally intended recipient's TH, regardless of whether the living donor actually donates to their originally intended recipient, a kidney paired exchange recipient, or does not donate at all.

(b) *Additional tests after a match.* In a kidney paired exchange, regardless of whether an actual donation occurs, once the donor and recipient are matched, any additional tests requested by the recipient's TH and performed by the donor's TH, are billed to the recipient's TH as charges reduced to cost (using the donor's TH's cost to charge ratio) and included as acquisition costs on the recipient TH's Medicare cost report.

(c) *Procurement and transport of a kidney.* When a donor's TH procures and furnishes a kidney to a recipient's TH all of the following are applicable:

* * * * *

(2)(i) The donor's TH bills the recipient's TH.

(ii) The donor's TH bills its charges reduced to cost, or bills its applicable kidney SAC for the reasonable costs associated with procuring, packaging, and transporting the kidney.

(3) The donor's TH records the costs described in paragraph (c)(2)(ii) of this section on its Medicare cost report as kidney acquisition costs and offsets any payments received from the recipient's TH against its kidney acquisition costs.

(4) The recipient's TH records as part of its kidney acquisition costs -

(i) The amounts billed by the donor's TH for the reasonable costs associated with procuring, packaging, and transporting the organ; and

(ii) Any additional testing performed and billed by the donor's TH.

(d) Donor's procurement occurs at recipient TH. In a kidney-paired exchange—

(1) When a donor's TH does not procure a kidney, but the donor travels to the recipient's TH for the organ procurement, the reasonable costs associated with the organ procurement are included on the Medicare cost report of the recipient's TH; and

* * * * *

■ 27. Section 413.418 is revised to read as follows:

§ 413.418 Amounts billed to organ procurement organizations for hospital services provided to deceased donors and included as organ acquisition costs.

(a) *General.* A donor community hospital (a Medicare-certified non-TH) and a TH incur costs for hospital services attributable to a deceased donor or a donor whose death is imminent. These services must not be part of medical treatment that primarily offers a medical benefit to the patient as determined by a healthcare team, must be authorized by the OPO, and are included as organ acquisition costs when:

(1) There is consent to donate; and

(2) Declaration of death has been made, or if a declaration of death has not been made, death is imminent and it is necessary that the services be provided prior to declaration of death in order to avoid compromising the viability of the organs for transplant.

(b) *Amounts billed for organ acquisition costs.* When a donor community hospital or TH incurs costs for services furnished to a deceased donor, or a donor whose death is imminent as described in paragraph (a) of this section, as authorized by the OPO, the donor community hospital or TH must bill the OPO the lesser of its customary charges that are reduced to cost by applying its most recently available hospital specific inpatient operating cost-to-charge ratio for the period in which the service was rendered, or a negotiated rate.

■ 28. Section 413.420 is amended by revising paragraphs (a), (c)(1)(ii), (iv), and (v), (d), and (e)(2)(i) and (ii) to read as follows:

§ 413.420 Payment to independent organ procurement organizations and histocompatibility laboratories for kidney acquisition costs.

(a) *Principle.* (1) Covered services furnished by IOPOs and histocompatibility laboratories in connection with kidney acquisition and transplantation are reimbursed under the principles for determining reasonable cost contained in this part.

(2) Services furnished by IOPOs and histocompatibility laboratories, that have an agreement with the Secretary in accordance with paragraph (c) of this section, are paid directly by the TH using a kidney SAC (for an IOPO) or contractor-established rates (for a histocompatibility laboratory). (The reasonable costs of services furnished by IOPOs or laboratories are reimbursed in accordance with the principles contained in §§ 413.60 and 413.64.)

* * * * *

(c) * * *

(1) * * *

(ii) To permit CMS to designate a contractor to determine the interim reimbursement rate, payable by the THs for services provided by the IOPO or laboratory, and to determine Medicare's reasonable cost based upon the cost report filed by the IOPO or laboratory.

* * *

(iv) To pay to CMS amounts that have been paid by CMS to THs and that are determined to be in excess of the reasonable cost of the services provided by the IOPO or laboratory.

(v) Not to charge any individual for items or services for which that individual is entitled to have payment made under section 1881 of the Act.

* * * * *

(d) Interim reimbursement. (1) THs with approved kidney transplant programs pay the IOPO or histocompatibility laboratory for their pre-transplantation services on the basis of an interim rate established by the contractor for that IOPO or laboratory.

(2) The interim rate is a kidney SAC or contractor established rates, based on costs associated with procuring a kidney for transplantation, incurred by an IOPO or laboratory respectively, during its previous fiscal year. If there is not adequate cost data to determine the initial interim rate, the contractor determines it according to the IOPO's or laboratory's estimate of its projected costs for the fiscal year.

(3) Payments made by THs on the basis of interim rates are reconciled directly with the IOPO or laboratory after the close of its fiscal year, in accordance with paragraph (e) of this section.

(4) Information on the interim rate for all IOPOs and histocompatibility laboratories must be disseminated to all THs and contractors.

(e) * * *

(2) * * *

(i) *Retroactive adjustment.* A retroactive adjustment in the amount paid under the interim rate is made in accordance with § 413.64(f).

(ii) *Lump sum adjustment.* If the determination of reasonable cost reveals an overpayment or underpayment resulting from the interim reimbursement rate paid to THs, a lump sum adjustment is made directly

between that contractor and the IOPO or laboratory.

* * * * *

PART 416—AMBULATORY SURGICAL SERVICES

■ 29. The authority citation for part 416 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 30. Section 416.166 is amended by revising paragraph (d)(1) to read as follows:

§ 416.166 Covered surgical procedures.

* * * * *

(d) * * *

(1) *Pre-proposed rule covered procedures list (CPL) recommendation process.* On or after January 1, 2024, an external party may recommend a surgical procedure by March 1 of a calendar year for the list of ASC covered surgical procedures for the following calendar year.

* * * * *

■ 31. Section 416.172 is amended by adding paragraph (h) to read as follows:

§ 416.172 Adjustments to national payment rates.

* * * * *

(h) *Special payment for certain code combinations*—(1) *Eligibility.* A code combination is eligible for the payment specified in paragraph (h)(2) of this section if the code combination is—

(i) Eligible for a comprehensive APC (C–APC) complexity adjustment under the OPPS; and

(ii) Comprised of a separately payable surgical procedure, that is listed on the ASC Covered Procedures list (§ 416.166), and one or more packaged add-on codes that are listed on the ASC covered procedures or ancillary services lists (§ 416.164(b)).

(2) *Calculation of payment.* (i) Except as specified in paragraph (h)(2)(ii) of this section, CMS calculates the payment for code combinations that meet the eligibility requirements in paragraph (h)(1) of this section by applying the methodology specified in § 416.171(a) to the OPPS C–APC complexity-adjusted relative weights.

(ii) For primary procedures assigned device-intensive status that are a component of a code combination that is eligible for payment under paragraph (h)(2) of this section, the primary procedure of the code combination retains its device-intensive status, and—

(A) The device portion is equivalent to the device portion of the device-intensive APC under the OPPS (§ 419.44(b) of this subchapter); and

(B) The non-device portion is calculated in accordance with the methodology specified in § 416.171(a).

■ 32. Section 416.174 is amended by revising paragraph (a) to read as follows:

§ 416.174 Payment for non-opioid pain management drugs and biologicals that function as supplies in surgical procedures.

(a) *Eligibility for separate payment for non-opioid pain management drugs and biologicals.* Beginning on or after January 1, 2022, a non-opioid pain management drug or biological that functions as a surgical supply is eligible for separate payment for an applicable calendar year if CMS determines it meets the following requirements through that year's rulemaking:

(1) The drug is approved under a new drug application under section 505(c) of the Federal Food, Drug, and Cosmetic Act (FDCA), under an abbreviated new drug application under section 505(j), or, in the case of a biological product, is licensed under section 351 of the Public Health Service Act. The product has an FDA approved indication for pain management or analgesia.

(2) The per-day cost of the drug or biological estimated by CMS for the year exceeds the OPPS drug packaging threshold set for such year through notice and comment rulemaking.

(3) The drug or biological does not have transitional pass-through payment status under § 419.64 of this subchapter. In the case where a drug or biological otherwise meets the requirements under this section and has transitional pass-through payment status that expires during the calendar year, the drug or biological will qualify for separate payment as specified in this paragraph (a) during such calendar year on the first day of the next calendar year quarter following the expiration of its pass-through status.

(4) The drug or biological is not already separately payable in the OPPS or ASC payment system under a policy other than the one specified in this section.

PART 419—PROSPECTIVE PAYMENT SYSTEMS FOR HOSPITAL OUTPATIENT DEPARTMENT SERVICES

■ 33. The authority citation for part 419 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395l(t), and 1395hh.

■ 34. Part 419 is amended by revising the heading to read as set forth above.

■ 35. Section 419.43 is amended by adding paragraph (j) to read as follows:

§ 419.43 Adjustments to national program payment and beneficiary copayment amounts.

* * * * *

(j) *Additional resource costs of domestic National Institute for Occupational Safety and Health approved surgical N95 respirators*—(1) *General rule.* For cost reporting periods beginning on or after January 1, 2023, CMS provides for a payment adjustment for the additional resource costs of domestic National Institute for Occupational Safety and Health approved surgical N95 respirators as described in paragraph (j)(2) of this section.

(2) *Amount of adjustment.* The payment adjustment is based on the estimated difference in the reasonable cost incurred by the hospital for domestic National Institute for Occupational Safety and Health approved surgical N95 respirators purchased during the cost reporting period as compared to other National Institute for Occupational Safety and Health approved surgical N95 respirators purchased during the cost reporting period.

(3) *Budget neutrality.* CMS establishes the payment adjustment under paragraph (j)(2) of this section in a budget neutral manner.

■ 36. Section 419.46 is amended by revising paragraph (f)(3)(iv) and adding paragraph (f)(3)(v) to read as follows:

§ 419.46 Participation, data submission, and validation requirements under the Hospital Outpatient Quality Reporting (OQR) Program.

* * * * *

(f) * * *

(3) * * *

(iv) Any hospital that passed validation in the previous year but had a two-tailed confidence interval that included 75 percent; or

(v) Any hospital with a two-tailed confidence interval that is less than 75 percent, and that had less than four quarters of data due to receiving an extraordinary circumstance exception (ECE) for one or more quarters.

* * * * *

■ 37. Section 419.47 is added to read as follows:

§ 419.47 Coding and Payment for Category B Investigational Device Exemption (IDE) Studies

(a) *Creation of a new HCPCS code for Category B IDE Studies.* CMS will create a new HCPCS code, or revise an existing HCPCS code, to describe a Category B IDE study, which will include both the treatment and control arms, related device(s) of the study, as well as routine

care items and services, as specified under § 405.201 of this chapter, when CMS determines that:

(1) The Medicare coverage IDE study criteria in § 405.212 of this chapter are met; and

(2) A new or revised code is necessary to preserve the scientific validity of such a study, such as by preventing the unblinding of the study.

(b) *Payment for Category B IDE Studies.* Where CMS creates a new HCPCS code or revises an existing HCPCS code under paragraph (a) of this section, CMS will:

(1) Make a single packaged payment for the HCPCS code that includes payment for the investigational device, placebo control, and routine care items and services of a Category B IDE study, as specified under § 405.201 of this chapter; and

(2) Calculate the single packaged payment rate for the HCPCS code based on the average resources utilized for each study participant, including the frequency with which the investigational device is used in the study population.

■ 38. Section 419.83 is amended by revising paragraphs (a)(3) and (b) to read as follows:

§ 419.83 List of hospital outpatient department services requiring prior authorization.

(a) * * *

(3) The Facet Joint Interventions service category requires prior authorization beginning for service dates on or after July 1, 2023.

(b) *Adoption of the list of services and technical updates.* (1) CMS will adopt the list of hospital outpatient department service categories requiring prior authorization and any updates or geographic restrictions through formal notice-and-comment rulemaking.

(2) Technical updates to the list of services, such as changes to the name of the service or Current Procedural Terminology (CPT) code, will be published on the CMS website.

* * * * *

■ 39. Subpart J is added to read as follows:

Subpart J—Payments to Rural Emergency Hospitals (REHs)

Sec.

419.90 Basis and scope of subpart.
419.91 Definitions.
419.92 Payment to rural emergency hospitals.
419.93 Payment for an off-campus provider-based department of a rural emergency hospital.
419.94 Preclusion of administrative and judicial review.

Subpart J—Payments to Rural Emergency Hospitals (REHs)

§ 419.90 Basis and scope of subpart.

(a) *Basis.* This subpart implements sections 1861(kkk) and 1834(x) of the Act, which establish the rural emergency hospital Medicare provider type and the payment requirements applying to such entities.

(b) *Scope.* This subpart describes the methodologies used to determine payment for REH services and the monthly facility payment amount paid to REHs.

§ 419.91 Definitions.

As used in this subpart—

Rural emergency hospital or REH means an entity as defined in § 485.502 of this chapter.

Rural emergency hospital (REH) services means all covered outpatient department (OPD) services, as defined in section 1833(t)(1)(B) of the Act, excluding services described in section 1833(t)(1)(B)(ii), furnished by an REH that would be paid under the outpatient prospective payment system (OPPS) when provided in a hospital paid under the OPPS for outpatient services, provided that such services are furnished consistent with the conditions of participation at §§ 485.510 through 485.544 of this chapter.

§ 419.92 Payment to rural emergency hospitals.

(a) *Payment for REH services*—(1) *Medicare payment.* A rural emergency hospital that furnishes a REH service on or after January 1, 2023, is paid an amount equal to the amount of payment that would otherwise apply under section 1833(t) of the Act for the equivalent covered OPD service, increased by 5 percent.

(2) *Beneficiary copayment.* The beneficiary copayment for a REH service is the amount determined under section 1833(t)(8) of the Act for the equivalent covered OPD service, excluding the 5 percent payment increase described in paragraph (a)(1) of this section.

(b) *Monthly facility payment.* Effective January 1, 2023, REHs are paid a monthly facility payment equal to 1/12 of the annual additional facility payment amount described in paragraphs (b)(1) and (2) of this section.

(1) *Calculation of monthly facility payment for 2023.* For calendar year 2023, the annual additional facility payment amount is:

(i) The total amount that the Secretary determines was paid by the Medicare program and from beneficiary copayments to all critical access hospitals in calendar year 2019; minus

(ii) The estimated total amount that the Secretary determines would have been paid by the Medicare program and from beneficiary copayments to critical access hospitals in calendar year 2019 if payment were made for inpatient hospital, outpatient hospital, and skilled nursing facility services under the applicable prospective payment systems for such services during calendar year 2019; divided by

(iii) The total number of critical access hospitals enrolled in Medicare in calendar year 2019.

(2) *Calculation of monthly facility payment for 2024 and subsequent years.* For calendar year 2024 and each subsequent calendar year, the amount of the additional annual facility payment is the amount of the preceding year's additional annual facility payment, increased by the hospital market basket percentage increase as described under section 1886(b)(3)(B)(iii) of the Act.

(3) *Recording and Reporting the use of the monthly facility payment.* A rural emergency hospital receiving the monthly facility payment must maintain detailed information as specified by the Secretary as to how the facility has used the monthly facility payments and must make this information available to the Secretary upon request.

(c) *Payment for services furnished by an REH that do not meet the definition of REH services.* A service furnished by an REH that does not meet the definition of an REH service under § 419.91, including a hospital service that is excluded from payment under the OPPS as described in § 419.22, is paid for under the payment system applicable to the service, provided the requirements for payment under that system are met.

(1) *Payment for ambulance services.* Ambulance services furnished by an entity owned and operated by a rural emergency hospital are paid under the ambulance fee schedule as described at section 1834(l) of the Act.

(2) *Payment for post-hospital extended care services.* Post-hospital extended care services furnished by a rural emergency hospital that has a unit that is a distinct part licensed as a skilled nursing facility are paid under the skilled nursing facility prospective payment system described at section 1888(e) of the Act.

§ 419.93 Payment for an off-campus provider-based department of a rural emergency hospital.

(a) Items and services furnished by an off-campus provider-based department of an REH, as defined in paragraph (b) of this section, are not applicable items and services under sections

1833(t)(1)(B)(v) and (t)(21) of the Act and are paid as follows:

(1) REH services furnished by an off-campus provider-based department of an REH are paid as described in § 419.92(a)(1).

(2) Services that do not meet the definition of REH services under § 419.91 that are furnished by an off-campus provider-based department of an REH are paid as described under § 419.92(c).

(b) For the purpose of this section, ''off-campus provider-based department of an REH'' means a ''department of a provider'' (as defined at § 413.65(a)(2) of this chapter) that is not located on the campus (as defined in § 413.65(a)(2) of this chapter) or within the distance described in such definition from a ''remote location of a hospital'' (as defined in § 413.65(a)(2) of this chapter) that meets the requirements for provider-based status under § 413.65 of this chapter.

§ 419.94 Preclusion of administrative and judicial review.

There is no administrative or judicial review under section 1869 of the Act, section 1878 of the Act, or otherwise of the following:

(a) The determination of whether a rural emergency hospital meets the requirements of this subpart.

(b) The determination of payment amounts under this subpart.

(c) The requirements established by this subpart.

PART 424—CONDITIONS FOR MEDICARE PAYMENT

■ 40. The authority for part 424 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 41. Section 424.518 is amended by revising paragraph (a)(1)(viii) to read as follows:

§ 424.518 Screening levels for Medicare providers and suppliers.

* * * * *

(a) * * *

(1) * * *

(viii) Hospitals, including critical access hospitals, rural emergency hospitals, Department of Veterans Affairs hospitals, and other federally owned hospital facilities.

* * * * *

■ 42. Add § 424.575 to read as follows:

§ 424.575 Rural emergency hospitals.

(a) A rural emergency hospital (as defined in § 485.502 of this chapter) must comply with all applicable provisions in this subpart in order to enroll and maintain enrollment in Medicare.

(b) A provider that was enrolled in Medicare as of December 27, 2020, as a critical access hospital or a hospital (as defined in section 1886(d)(1)(B) of the Social Security Act) with not more than 50 beds located in a county (or equivalent unit of local government) in a rural area (as defined in section 1886(d)(2)(D) of the Social Security Act) (or treated as being located in a rural area pursuant to section 1886(d)(8)(E) of the Social Security Act) converts its existing enrollment to that of a rural emergency hospital (as defined in § 485.502 of this chapter) via a Form CMS–855A change of information application per § 424.516 rather than a Form CMS–855A initial enrollment application.

PART 485—CONDITIONS OF PARTICIPATION: SPECIALIZED PROVIDERS

■ 43. The authority citation for part 485 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395(hh).

■ 44. Subpart E is added to read as follows:

Subpart E—Conditions of Participation: Rural Emergency Hospitals (REHs)

Sec.

485.500 Basis and scope.
485.502 Definitions.
485.504 Basic requirements.
485.506 Designation and certification of REHs.
485.508 Condition of participation: Compliance with Federal, state, and local laws and regulations.
485.510 Condition of participation: Governing body and organizational structure of the REH.
485.512 Condition of participation: Medical staff.
485.514 Condition of participation: Provision of services.
485.516 Condition of participation: Emergency services.
485.518 Condition of participation: Laboratory services.
485.520 Condition of participation: Radiologic services.
485.522 Condition of participation: Pharmaceutical services.
485.524 Condition of participation: Additional outpatient medical and health services.
485.526 Condition of participation: Infection prevention and control and antibiotic stewardship programs.
485.528 Condition of participation: Staffing and staff responsibilities.
485.530 Condition of participation: Nursing services.
485.532 Condition of participation: Discharge planning.
485.534 Condition of participation: Patient's rights.
485.536 Condition of participation: Quality assessment and performance improvement program.
485.538 Condition of participation: Agreements.
485.540 Condition of participation: Medical records.
485.542 Condition of participation: Emergency preparedness.
485.544 Condition of participation: Physical environment.
485.546 Condition of participation: Skilled nursing facility distinct part unit.

Subpart E—Conditions of Participation: Rural Emergency Hospitals (REHs)

§ 485.500 Basis and scope.

Section 1861(kkk) of the Act requires the Secretary to establish the conditions REHs must meet in order to participate in the Medicare program and which are considered necessary to ensure the health and safety of patients receiving services at these entities.

§ 485.502 Definitions.

As used in this subpart, *rural emergency hospital or REH* means an entity that operates for the purpose of providing emergency department services, observation care, and other outpatient medical and health services specified by the Secretary in which the annual per patient average length of stay does not exceed 24 hours. The time calculation for determining the length of stay of a patient receiving REH services begins with the registration, check-in or triage of the patient (whichever occurs first) and ends with the discharge of the patient from the REH. The discharge occurs when the physician or other appropriate clinician has signed the discharge order, or at the time the outpatient service is completed and documented in the medical record. The entity must not provide inpatient services, except those furnished in a unit that is a distinct part licensed as a skilled nursing facility to furnish post-hospital extended care services.

§ 485.504 Basic requirements.

Participation as an REH is limited to facilities that—

(a) Meet the definition in § 485.502.

(b) Have in effect a provider agreement as defined at § 489.3 of this chapter to provide services.

(c) Meet the conditions of participation set out in this subpart.

§ 485.506 Designation and certification of REHs.

CMS certifies a facility as an REH if the facility was, as of December 27, 2020—

(a) A critical access hospital; or

(b) A hospital as defined in section 1886(d)(1)(B) of the Act with not more than 50 beds located in a county (or equivalent unit of local government)

that is considered rural (as defined in section 1881(d)(2)(D) of the Act); or

(c) A hospital as defined in section 1881(d)(1)(B) of the Act with not more than 50 beds that was treated as being located in a rural area that has had an active reclassification from urban to rural status as specified in § 412.103 of this chapter as of December 27, 2020.

§ 485.508 Condition of participation: Compliance with Federal, state, and local laws and regulations.

(a) The REH must be in compliance with applicable Federal laws related to the health and safety of patients.

(b) The REH must be located in a state that provides for the licensing of such hospitals under state or applicable local law; and is

(1) Licensed in the state as an REH; or

(2) Approved as meeting standards for licensing established by the agency of the state or locality responsible for licensing hospitals.

(c) The REH must assure that personnel are licensed or meet other applicable standards that are required by state or local laws to provide services within the applicable scope of practice.

§ 485.510 Condition of participation: Governing body and organizational structure of the REH

There must be an effective governing body, or responsible individual or individuals, that is legally responsible for the conduct of the REH. If an REH does not have an organized governing body, the person or persons legally responsible for the conduct of the REH must carry out the functions specified in this subpart that pertain to the governing body.

(a) *Standard: Medical staff.* The governing body must:

(1) Determine, in accordance with state law, which categories of practitioners are eligible candidates for appointment to the medical staff.

(2) Appoint members of the medical staff after considering the recommendations of the existing members of the medical staff.

(3) Ensure that the medical staff has bylaws.

(4) Approve medical staff bylaws and other medical staff rules and regulations.

(5) Ensure that the medical staff is accountable to the governing body for the quality of care provided to patients.

(6) Ensure the criteria for selection are individual character, competence, training, experience, and judgment.

(i) Members of the medical staff must be legally and professionally qualified for the positions to which they are appointed and for the performance of privileges granted. The REH grants privileges in accordance with recommendations from qualified medical personnel.

(ii) Medical staff privileges must be periodically reappraised by the REH. The scope of procedures performed in the REH must be periodically reviewed and amended as appropriate.

(iii) If the REH assigns patient care responsibilities to practitioners other than physicians, it must have established policies and procedures, approved by the governing body, for overseeing and evaluating their clinical activities.

(7) Ensure that under no circumstances is the accordance of staff membership or professional privileges in the REH dependent solely upon certification, fellowship, or membership in a specialty body or society.

(8) Ensure that, when telemedicine services are furnished to the REH's patients through an agreement with a distant-site hospital, the agreement is written and that it specifies that it is the responsibility of the governing body of the distant-site hospital to meet the requirements in paragraphs (a)(1) through (7) of this section with regard to the distant-site hospital's physicians and practitioners providing telemedicine services. The governing body of the REH whose patients are receiving the telemedicine services may, in accordance with § 485.512(a)(3), grant privileges based on its medical staff recommendations that rely on information provided by the distant-site hospital.

(9) Ensure that when telemedicine services are furnished to the REH's patients through an agreement with a distant-site telemedicine entity, the written agreement specifies that the distant-site telemedicine entity is a contractor of services to the REH and as such, in accordance with paragraph (b) of this section, furnishes the contracted services in a manner that permits the REH to comply with all applicable conditions of participation for the contracted services, including, but not limited to, the requirements in paragraphs (a)(1) through (7) of this section with regard to the distant-site telemedicine entity's physicians and practitioners providing telemedicine services. The governing body of the REH whose patients are receiving the telemedicine services may, in accordance with § 485.512(a)(4), grant privileges to physicians and practitioners employed by the distant-site telemedicine entity based on such REH's medical staff recommendations; such staff recommendations may rely on information provided by the distant-site telemedicine entity.

(10) Consult directly with the individual assigned the responsibility for the organization and conduct of the REH's medical staff, or their designee. At a minimum, this direct consultation must occur periodically throughout the fiscal or calendar year and include discussion of matters related to the quality of medical care provided to patients of the REH. For a multi-facility system, including a multi-hospital or multi-REH system, using a single governing body, the single multi-facility or multi-REH system governing body must consult directly with the individual responsible for the organized medical staff (or their designee) of each hospital or REH within its system in addition to the other requirements of this paragraph (a).

(b) *Standard: Contracted services.* The governing body must be responsible for services furnished in the REH whether or not they are furnished under contracts. The governing body must ensure that a contractor of services (including one for shared services and joint ventures) furnishes services that permit the REH to comply with all applicable conditions of participation and standards for the contracted services.

(1) The governing body must ensure that the services performed under a contract are provided in a safe and effective manner.

(2) The REH must maintain a list of all contracted services, including the scope and nature of the services provided.

§ 485.512 Condition of participation: Medical staff.

The REH must have an organized medical staff that operates under bylaws approved by the governing body, and which is responsible for the quality of medical care provided to patients by the REH.

(a) *Standard: Eligibility and process for appointment to medical staff.* The medical staff must be composed of doctors of medicine or osteopathy. In accordance with state law, including scope-of-practice laws, the medical staff may also include other categories of physicians (as listed at § 482.12(c)(1) of this chapter and non-physician practitioners who are determined to be eligible for appointment by the governing body.

(1) The medical staff must periodically conduct appraisals of its members.

(2) The medical staff must examine the credentials of all eligible candidates for medical staff membership and make

recommendations to the governing body on the appointment of these candidates in accordance with state law, including scope-of-practice laws, and the medical staff bylaws, rules, and regulations. A candidate who has been recommended by the medical staff and who has been appointed by the governing body is subject to all medical staff bylaws, rules, and regulations, in addition to the requirements contained in this section.

(3) When telemedicine services are furnished to the REH's patients through an agreement with a distant-site hospital, the governing body of the REH whose patients are receiving the telemedicine services may choose, in lieu of the requirements in paragraphs (a)(1) and (2) of this section, to have its medical staff rely upon the credentialing and privileging decisions made by the distant-site hospital when making recommendations on privileges for the individual distant-site physicians and practitioners providing such services, if the REH's governing body ensures, through its written agreement with the distant-site hospital, that all of the following provisions are met:

(i) The distant-site hospital providing the telemedicine services is a Medicare-participating hospital.

(ii) The individual distant-site physician or practitioner is privileged at the distant-site hospital providing the telemedicine services, which provides a current list of the distant-site physician's or practitioner's privileges at the distant-site hospital.

(iii) The individual distant-site physician or practitioner holds a license issued or recognized by the state in which the REH whose patients are receiving the telemedicine services is located.

(iv) With respect to a distant-site physician or practitioner, who holds current privileges at the REH whose patients are receiving the telemedicine services, the REH has evidence of an internal review of the distant-site physician's or practitioner's performance of these privileges and sends the distant-site hospital such performance information for use in the periodic appraisal of the distant-site physician or practitioner. At a minimum, this information must include all adverse events that result from the telemedicine services provided by the distant-site physician or practitioner to the REH's patients and all complaints the REH has received about the distant-site physician or practitioner.

(4) When telemedicine services are furnished to the REH's patients through an agreement with a distant-site telemedicine entity, the governing body of the REH whose patients are receiving the telemedicine services may choose, in lieu of the requirements in paragraphs (a)(1) and (2) of this section, to have its medical staff rely upon the credentialing and privileging decisions made by the distant-site telemedicine entity when making recommendations on privileges for the individual distant-site physicians and practitioners providing such services, if the REH's governing body ensures, through its written agreement with the distant-site telemedicine entity, that the distant-site telemedicine entity furnishes services that, in accordance with paragraph (d) of this section, permit the REH to comply with all applicable conditions of participation for the contracted services. The REH's governing body must also ensure, through its written agreement with the distant-site telemedicine entity, that all of the following provisions are met:

(i) The distant-site telemedicine entity's medical staff credentialing and privileging process and standards at least meet the standards at § 485.510(a)(1) through (7) and paragraphs (a)(1) and (2) of this section.

(ii) The individual distant-site physician or practitioner is privileged at the distant-site telemedicine entity providing the telemedicine services, which provides the REH with a current list of the distant-site physician's or practitioner's privileges at the distant-site telemedicine entity.

(iii) The individual distant-site physician or practitioner holds a license issued or recognized by the state in which the REH whose patients are receiving such telemedicine services is located.

(iv) With respect to a distant-site physician or practitioner, who holds current privileges at the REH whose patients are receiving the telemedicine services, the REH has evidence of an internal review of the distant-site physician's or practitioner's performance of these privileges and sends the distant-site telemedicine entity such performance information for use in the periodic appraisal of the distant-site physician or practitioner. At a minimum, this information must include all adverse events that result from the telemedicine services provided by the distant-site physician or practitioner to the REH's patients, and all complaints the REH has received about the distant-site physician or practitioner.

(b) *Standard: Medical staff organization and accountability.* The medical staff must be well organized and accountable to the governing body for the quality of the medical care provided to patients.

(1) The medical staff must be organized in a manner approved by the governing body.

(2) If the medical staff has an executive committee, a majority of the members of the committee must be doctors of medicine or osteopathy.

(3) The responsibility for organization and conduct of the medical staff must be assigned only to one of the following:

(i) An individual doctor of medicine or osteopathy.

(ii) A doctor of dental surgery or dental medicine, when permitted by state law of the state in which the hospital is located.

(iii) A doctor of podiatric medicine, when permitted by state law of the state in which the hospital is located.

(4) If an REH is part of a system consisting of multiple separately certified hospitals, critical access hospitals, and/or REHs, and the system elects to have a unified and integrated medical staff for its member hospitals, critical access hospitals, and/or REHs after determining that such a decision is in accordance with all applicable state and local laws, each separately certified REH must demonstrate that:

(i) The medical staff members of each separately certified REH in the system (that is, all medical staff members who hold specific privileges to practice at that REH) have voted by majority, in accordance with medical staff bylaws, either to accept a unified and integrated medical staff structure or to opt out of such a structure and to maintain a separate and distinct medical staff for their respective REH;

(ii) The unified and integrated medical staff has bylaws, rules, and requirements that describe its processes for self-governance, appointment, credentialing, privileging, and oversight, as well as its peer review policies and due process rights guarantees, and which include a process for the members of the medical staff of each separately certified REH (that is, all medical staff members who hold specific privileges to practice at that REH) to be advised of their rights to opt out of the unified and integrated medical staff structure after a majority vote by the members to maintain a separate and distinct medical staff for their REH;

(iii) The unified and integrated medical staff is established in a manner that takes into account each member REH's unique circumstances and any significant differences in patient populations and services offered in each hospital, critical access hospital (CAH), and REH; and

(iv) The unified and integrated medical staff establishes and implements policies and procedures to ensure that the needs and concerns expressed by members of the medical staff, at each of its separately certified hospitals, CAHs, and REHs, regardless of practice or location, are given due consideration, and that the unified and integrated medical staff has mechanisms in place to ensure that issues localized to particular hospitals, CAHs, and REHs are duly considered and addressed.

(c) *Standard: Medical staff bylaws.* The medical staff must adopt and enforce bylaws to carry out its responsibilities. The bylaws must:

(1) Be approved by the governing body.

(2) Include a statement of the duties and privileges of each category of medical staff (for example, active, courtesy, etc.).

(3) Describe the organization of the medical staff.

(4) Describe the qualifications to be met by a candidate in order for the medical staff to recommend that the candidate be appointed by the governing body.

(5) Include criteria for determining the privileges to be granted to individual practitioners and a procedure for applying the criteria to individuals requesting privileges. For distant-site physicians and practitioners requesting privileges to furnish telemedicine services under an agreement with the REH, the criteria for determining privileges and the procedure for applying the criteria are also subject to the requirements in § 485.510(a)(8) and (9) and paragraphs (a)(3) and (4) of this section.

§ 485.514 Condition of participation: Provision of services.

(a) The REH's health care services must be furnished in accordance with appropriate written policies that are consistent with applicable state law.

(b) The policies must be developed with the advice of members of the REH's professional health care staff, including one or more doctors of medicine or osteopathy and one or more physician assistants, nurse practitioners, or clinical nurse specialists, if they are on staff under the provisions of § 485.528(b)(1).

(c) The policies must include the following:

(1) A description of the services the REH furnishes, including those furnished through agreement or arrangement.

(2) Policies and procedures for emergency medical services.

(3) Guidelines for the medical management of health problems that include the conditions requiring medical consultation and/or patient referral, the maintenance of health care records, and procedures for the periodic review and evaluation of the services furnished by the REH.

(4) Policies and procedures that address the post-acute care needs of patients receiving services in the REH.

(d) The policies must be reviewed at least biennially by the group of professional personnel required under paragraph (b) of this section and updated as necessary by the REH.

§ 485.516 Condition of participation: Emergency services.

The REH must provide the emergency care necessary to meet the needs of its patients in accordance with acceptable standards of practice.

(a) *Standard: Organization and direction.* The emergency services of the REH must be—

(1) Organized under the direction of a qualified member of the medical staff; and

(2) Integrated with other departments of the REH.

(b) *Standard: Personnel.* There must be adequate medical and nursing personnel qualified in emergency care to meet the written emergency procedures and needs anticipated by the facility.

(c) *Standard: Compliance with CAH requirements.* The REH must meet the requirements specified in § 485.618, with respect to:

(1) 24-hour availability of emergency services (§ 485.618(a)).

(2) Equipment, supplies, and medication (§ 485.618(b)).

(3) Blood and blood products (§ 485.618(c)).

(4) Personnel (§ 485.618(d)).

(5) Coordination with emergency response systems (§ 485.618(e)).

§ 485.518 Condition of participation: Laboratory services.

The REH must provide basic laboratory services essential to the immediate diagnosis and treatment of the patient consistent with nationally recognized standards of care for emergency services, patient population, and services offered. The REH must ensure that—

(a) Laboratory services are available, either directly or through a contractual agreement with a certified laboratory that meets requirements of part 493 of this chapter.

(b) Emergency laboratory services are available 24 hours a day.

§ 485.520 Condition of participation: Radiologic services.

The REH must maintain, or have available, diagnostic radiologic services. If therapeutic services are also provided, the therapeutic services, as well as the diagnostic services, must be furnished by the REH and provided by personnel qualified under state law. The REH must ensure that REH patients or personnel are not exposed to radiation hazards.

(a) *Standard: Radiologic services.* The REH must maintain, or have available, radiologic services according to needs of the patients.

(b) *Standard: Safety for patients and personnel.* The radiologic services, particularly ionizing radiology procedures, must be free from hazards for patients and personnel.

(1) Proper safety precautions must be maintained against radiation hazards. This includes adequate shielding for patients, personnel, and facilities, as well as appropriate storage, use, and disposal of radioactive materials.

(2) Periodic inspection of equipment must be made and hazards identified must be promptly corrected.

(3) Radiation workers must be checked periodically, by the use of exposure meters or badge tests, for amount of radiation exposure.

(4) Radiologic services must be provided only on the order of practitioners with clinical privileges or, consistent with state law, of other practitioners authorized by the medical staff and the governing body to order the services.

(c) *Standard: Personnel.* (1) The REH must have a full-time, part-time, or consulting qualified radiologist, or other personnel qualified under State law, to interpret only those radiologic tests that are determined by the medical staff to require specialized knowledge. For purposes of this section, a radiologist is a doctor of medicine or osteopathy who is qualified by education and experience in radiology.

(2) Only personnel designated as qualified by the medical staff may use the radiologic equipment and administer procedures.

(d) *Standard: Records.* Records of radiologic services must be maintained.

(1) The radiologist or other practitioner who performs radiology services must sign reports of their interpretations.

(2) The REH must maintain the following for at least 5 years:

(i) Copies of reports and printouts.

(ii) Films, scans, and other image records, as appropriate.

§ 485.522 Condition of participation: Pharmaceutical services.

The REH must have pharmaceutical services that meet the needs of its patients. The REH must have a pharmacy or a drug storage area that is directed by a registered pharmacist or other qualified individual in accordance with state scope of practice laws. The medical staff is responsible for developing policies and procedures that minimize drug errors. This function may be delegated to the REH's registered pharmacist or other qualified individual.

(a) *Standard: Pharmacy management and administration.* The pharmacy or drug storage area must be administered in accordance with accepted professional principles and in accordance with state and Federal laws.

(1) A pharmacist or competent individual in accordance with state scope of practice laws must be responsible for developing, supervising, and coordinating all the activities of the pharmacy services. The pharmacist or competent individual in accordance with state law and scope of practice must be available for a sufficient time to provide oversight of the REH's pharmacy services based on the scope and complexity of the services offered at the REH.

(2) The pharmaceutical service must have an adequate number of personnel to ensure quality pharmaceutical services for the provision of all services provided by the REH.

(3) Current and accurate records must be kept of the receipt and disposition of all scheduled drugs.

(b) *Standard: Delivery of services.* Drugs and biologicals must be controlled and distributed in accordance with applicable standards of practice, consistent with Federal and state law, to ensure patient safety.

(1) All compounding, packaging, and dispensing of drugs must be done by a licensed pharmacist or a licensed physician, or under the supervision of a pharmacist or competent individual in accordance with state law and scope of practice and performed consistent with state and Federal laws.

(2) All drugs and biologicals must be kept in a secure area, and locked when appropriate.

(i) All drugs listed in Schedules II, III, IV, and V of the Comprehensive Drug Abuse Prevention and Control Act of 1970 (21 U.S.C. 801 *et seq.*) must be kept locked within a secure area.

(ii) Only authorized personnel may have access to locked areas.

(3) Outdated, mislabeled, or otherwise unusable drugs and biologicals must not be available for patient use.

(4) Drugs and biologicals must be removed from the pharmacy or storage area only by personnel designated in the policies of the medical staff and pharmaceutical service, in accordance with Federal and state law.

(c) *Standard: Administration of drugs.* Drugs must be prepared and administered according to established policies and acceptable standards of practice.

(1) Adverse reactions must be reported to the physician responsible for the patient and must be documented in the record.

(2) Blood transfusions, blood products, and intravenous medications must be administered in accordance with state law and approved medical staff policies and procedures.

(3) Orders given orally for drugs and biologicals must be followed by a written order, signed by the prescribing physician or other authorized prescriber.

(4) There must be an REH procedure for reporting transfusion reactions, adverse drug reactions, and errors in administration of drugs.

§ 485.524 Condition of participation: Additional outpatient medical and health services.

If the REH provides outpatient medical and health services in addition to providing emergency services and observation care, the medical and health services must be appropriately organized and meet the needs of the patients in accordance with acceptable standards of practice.

(a) *Standard: Patient services.* The REH may provide outpatient and medical health diagnostic and therapeutic items and services that are commonly furnished in a physician's office or at another entry point into the health care delivery system that include, but are not limited to, radiology, laboratory, outpatient rehabilitation, surgical, maternal health, and behavioral health services. If the REH provides outpatient and medical health diagnostic and therapeutic items and services, those items and services must align with the health needs of the community served by the REH. If the REH provides outpatient medical and health services in addition to providing emergency services, the REH must—

(1) Provide items and services based on nationally recognized guidelines and standards of practice;

(2) Have a system in place for referral from the REH to different levels of care, including follow-up care, as appropriate;

(3) Have effective communication systems in place between the REH and the patient (or responsible individual) and their family, ensuring that the REH is responsive to their needs and preferences;

(4) Have established relationships with hospitals that have the resources and capacity available to deliver care that is beyond the scope of care delivered at the REH; and

(5) Have personnel providing these services who meet the requirements at paragraph (b) of this section.

(b) *Standard:* Personnel for additional outpatient and medical health services. The REH must—

(1) Assign one or more individuals to be responsible for outpatient services.

(2) Have appropriate professional and nonprofessional personnel available at each location where outpatient services are offered, based on the scope and complexity of outpatient services.

(3) For any specialty services offered at the REH, have a doctor of medicine or osteopathy, nurse practitioner, clinical nurse specialist, or physician assistant providing services with experience and training in the specialty service area and in accordance with their scope of practice.

(c) Standard: Orders for outpatient medical and health services. Outpatient medical and health services must be ordered by a practitioner who meets the following conditions:

(1) Is responsible for the care of the patient.

(2) Is licensed in the state where they provide care to the patient.

(3) Is acting within their scope of practice under state law.

(4) Is authorized in accordance with state law and policies adopted by the medical staff, and approved by the governing body, to order the applicable outpatient services. This applies to the following:

(i) All practitioners who are appointed to the REH's medical staff and who have been granted privileges to order the applicable outpatient services.

(ii) All practitioners not appointed to the medical staff, but who satisfy the requirements of paragraphs (c)(1) through (4) of this section for authorization by the medical staff and the REH for ordering the applicable outpatient services for their patients.

(d) *Standard: Surgical services.* If the REH provides outpatient surgical services, surgical procedures must be performed in a safe manner by qualified practitioners who have been granted clinical privileges by the governing body, or responsible individual, of the REH in accordance with the designation requirements under paragraph (a) of this section.

(1) *Designation of qualified practitioners.* The REH designates the practitioners who are allowed to perform surgery for REH patients, in accordance with its approved policies and procedures, and with state scope of practice laws. Surgery is performed only by—

(i) A doctor of medicine or osteopathy, including an osteopathic practitioner recognized under section 1101(a)(7) of the Act;

(ii) A doctor of dental surgery or dental medicine; or

(iii) A doctor of podiatric medicine.

(2) Anesthetic risk and evaluation. (i) A qualified practitioner, as specified in paragraph (a) of this section, must examine the patient immediately before surgery to evaluate the risk of the procedure to be performed.

(ii) A qualified practitioner, as specified in paragraph (d)(3) of this section, must examine each patient before surgery to evaluate the risk of anesthesia.

(iii) Before discharge from the REH, each patient must be evaluated for proper anesthesia recovery by a qualified practitioner, as specified in paragraph (d)(3) of this section.

(3) *Administration of anesthesia.* The REH designates the person who is allowed to administer anesthesia to REH patients in accordance with its approved policies and procedures and with state scope-of-practice laws.

(i) Anesthesia must be administered by only—

(A) A qualified anesthesiologist;

(B) A doctor of medicine or osteopathy other than an anesthesiologist; including an osteopathic practitioner recognized under section 1101(a)(7) of the Act;

(C) A doctor of dental surgery or dental medicine;

(D) A doctor of podiatric medicine;

(E) A certified registered nurse anesthetist (CRNA), as defined in § 410.69(b) of this chapter;

(F) An anesthesiologist's assistant, as defined in § 410.69(b) of this chapter; or

(G) A supervised trainee in an approved educational program, as described in § 413.85 or §§ 413.76 through 413.83 of this chapter.

(ii) In those cases in which a CRNA administers the anesthesia, the anesthetist must be under the supervision of the operating practitioner except as provided in paragraph (e) of this section. An anesthesiologist's assistant who administers anesthesia must be under the supervision of an anesthesiologist.

(4) *Discharge.* All patients are discharged in the company of a responsible adult, except those exempted by the practitioner who performed the surgical procedure.

(5) *Standard: State exemption.* (i) An REH may be exempted from the requirement for physician supervision of CRNAs as described in paragraph (d)(3) of this section, if the state in which the REH is located submits a letter to CMS signed by the Governor, following consultation with the state's Boards of Medicine and Nursing, requesting exemption from physician supervision for CRNAs. The letter from the Governor must attest that they have consulted with the state Boards of Medicine and Nursing about issues related to access to and the quality of anesthesia services in the state and has concluded that it is in the best interests of the state's citizens to opt-out of the current physician supervision requirement, and that the opt-out is consistent with state law.

(ii) The request for exemption and recognition of state laws and the withdrawal of the request may be submitted at any time, and are effective upon submission.

§ 485.526 Condition of participation: Infection prevention and control and antibiotic stewardship programs.

The REH must have active facility-wide programs for the surveillance, prevention, and control of healthcare-associated infections (HAIs) and other infectious diseases, and for the optimization of antibiotic use through stewardship. The programs must demonstrate adherence to nationally recognized infection prevention and control guidelines, as well as to best practices for improving antibiotic use where applicable, and for reducing the development and transmission of HAIs and antibiotic-resistant organisms. Infection prevention and control problems and antibiotic use issues identified in the programs must be addressed in collaboration with the facility-wide quality assessment and performance improvement (QAPI) program.

(a) *Standard: Infection prevention and control program organization and policies.* The REH must demonstrate that:

(1) An individual (or individuals), who is qualified through education, training, experience, or certification in infection prevention and control, is appointed by the governing body, or responsible individual, as the infection preventionist(s)/infection control professional(s) responsible for the infection prevention and control program and that the appointment is based on the recommendations of medical staff leadership and nursing leadership;

(2) The infection prevention and control program, as documented in its policies and procedures, employs methods for preventing and controlling the transmission of infections within the REH and between the REH and other health care settings;

(3) The infection prevention and control program include surveillance, prevention, and control of HAIs, including maintaining a clean and sanitary environment to avoid sources and transmission of infection, and that the program also addresses any infection control issues identified by public health authorities; and

(4) The infection prevention and control program reflects the scope and complexity of the services furnished by the REH.

(b) *Standard: Antibiotic stewardship program organization and policies.* The REH must demonstrate that —

(1) An individual (or individuals), who is qualified through education, training, or experience in infectious diseases and/or antibiotic stewardship, is appointed by the governing body, or responsible individual, as the leader(s) of the antibiotic stewardship program and that the appointment is based on the recommendations of medical staff leadership and pharmacy leadership;

(2) The facility-wide antibiotic stewardship program:

(i) Demonstrates coordination among all components of the REH responsible for antibiotic use and resistance, including, but not limited to, the infection prevention and control program, the QAPI program, the medical staff, nursing services, and pharmacy services;

(ii) Documents the evidence-based use of antibiotics in all departments and services of the REH; and

(iii) Documents any improvements, including sustained improvements, in proper antibiotic use;

(3) The antibiotic stewardship program adheres to nationally recognized guidelines, as well as best practices, for improving antibiotic use; and

(4) The antibiotic stewardship program reflects the scope and complexity of the services furnished by an REH.

(c) *Standard: Leadership responsibilities.* (1) The governing body, or responsible individual, must ensure all of the following:

(i) Systems are in place and operational for the tracking of all infection surveillance, prevention and control, and antibiotic use activities, in order to demonstrate the

implementation, success, and sustainability of such activities.

(ii) All HAIs and other infectious diseases identified by the infection prevention and control program as well as antibiotic use issues identified by the antibiotic stewardship program are addressed in collaboration with the REH's QAPI leadership.

(2) The infection prevention and control professional(s) are responsible for:

(i) The development and implementation of facility-wide infection surveillance, prevention, and control policies and procedures that adhere to nationally recognized guidelines.

(ii) All documentation, written or electronic, of the infection prevention and control program and its surveillance, prevention, and control activities.

(iii) Communication and collaboration with the REH's QAPI program on infection prevention and control issues.

(iv) Competency-based training and education of REH personnel and staff, including medical staff, and, as applicable, personnel providing contracted services in the REH, on the practical applications of infection prevention and control guidelines, policies and procedures.

(v) The prevention and control of HAIs, including auditing of adherence to infection prevention and control policies and procedures by REH personnel.

(vi) Communication and collaboration with the antibiotic stewardship program.

(3) The leader(s) of the antibiotic stewardship program is responsible for:

(i) The development and implementation of a facility-wide antibiotic stewardship program, based on nationally recognized guidelines, to monitor and improve the use of antibiotics.

(ii) All documentation, written or electronic, of antibiotic stewardship program activities.

(iii) Communication and collaboration with medical staff, nursing, and pharmacy leadership, as well as the REH's infection prevention and control and QAPI programs, on antibiotic use issues.

(iv) Competency-based training and education of REH personnel and staff, including medical staff, and, as applicable, personnel providing contracted services in the REH, on the practical applications of antibiotic stewardship guidelines, policies, and procedures.

(d) *Standard:Unified and integrated infection prevention and control and antibiotic stewardship programs for multi-facility systems.* If a REH is part of a system consisting of multiple separately certified hospitals, CAHs, and/or REHs using a system governing body that is legally responsible for the conduct of two or more hospitals, CAHs, and/or REHs, the system governing body can elect to have unified and integrated infection prevention and control and antibiotic stewardship programs for all of its member facilities after determining that such a decision is in accordance with all applicable state and local laws. The system governing body is responsible and accountable for ensuring that each of its separately certified REHs meets all of the requirements of this section. Each separately certified REH subject to the system governing body must demonstrate that:

(1) The unified and integrated infection prevention and control and antibiotic stewardship programs are established in a manner that takes into account each member REH's unique circumstances and any significant differences in patient populations and services offered in each REH;

(2) The unified and integrated infection prevention and control and antibiotic stewardship programs establish and implement policies and procedures to ensure that the needs and concerns of each of its separately certified REHs, regardless of practice or location, are given due consideration;

(3) The unified and integrated infection prevention and control and antibiotic stewardship programs have mechanisms in place to ensure that issues localized to particular REHs are duly considered and addressed; and

(4) A qualified individual (or individuals) with expertise in infection prevention and control and in antibiotic stewardship has been designated at the REH as responsible for communicating with the unified infection prevention and control and antibiotic stewardship programs, for implementing and maintaining the policies and procedures governing infection prevention and control and antibiotic stewardship as directed by the unified infection prevention and control and antibiotic stewardship programs, and for providing education and training on the practical applications of infection prevention and control and antibiotic stewardship to REH staff.

(e) *COVID–19 and seasonal influenza reporting.* Beginning at the conclusion of the COVID–19 Public Health Emergency, as defined in § 400.200 of this chapter, and continuing until April 30, 2024, except when the Secretary specifies an earlier end date for the requirements of this paragraph (e), the REH must electronically report information about COVID–19 and seasonal influenza in a standardized format specified by the Secretary.

(1) Related to COVID–19, to the extent as required by the Secretary, this report must include the following data elements:

(i) Suspected and confirmed COVID–19 infections among patients and staff.

(ii) Total COVID–19 deaths among patients and staff.

(iii) Personal protective equipment and testing supplies.

(iv) Ventilator use, capacity, and supplies.

(v) Total patient census and capacity.

(vi) Staffing shortages.

(vii) COVID–19 vaccine administration data of patients and staff.

(viii) Relevant therapeutic inventories or usage, or both.

(2) Related to seasonal influenza, to the extent as required by the Secretary, this report must include the following data elements:

(i) Confirmed influenza infections among patients and staff.

(ii) Total influenza deaths among patients and staff.

(iii) Confirmed co-morbid influenza and COVID–19 infections among patients and staff.

(f) *Standard: Reporting of data related to viral and bacterial pathogens and infectious diseases of pandemic or epidemic potential.* The REH must electronically report information on acute respiratory illness (including, but not limited to, seasonal influenza virus, influenza-like illness, and severe acute respiratory infection), SARS-CoV–2/COVID–19, and other viral and bacterial pathogens and infectious diseases of pandemic or epidemic potential only when the Secretary has declared a Public Health Emergency (PHE), as defined in § 400.200 of this chapter, directly related to such specific pathogens and infectious diseases. The requirements of this paragraph (f) will be applicable to local, state, regional, or national PHEs as declared by the Secretary.

(1) The REH must electronically report information about the infectious disease pathogen, relevant to the declared PHE, in a standardized format specified by the Secretary. To the extent as required by the Secretary, this report must include, the following:

(i) Suspected and confirmed infections of the relevant infectious disease pathogen among patients and staff.

(ii) Total deaths attributed to the relevant infectious disease pathogen among patients and staff.

(iii) Personal protective equipment and other relevant supplies in the REH.

(iv) Capacity and supplies in the REH relevant to the immediate and long term treatment of the relevant infectious disease pathogen, such as ventilator and dialysis/continuous renal replacement therapy capacity and supplies.

(v) Total patient census, capacity, and capability.

(vi) Staffing shortages.

(vii) Vaccine administration data of patients and staff for conditions monitored under this section and where a specific vaccine is applicable.

(viii) Relevant therapeutic inventories or usage, or both.

(ix) Isolation capacity, including airborne isolation capacity.

(x) Key co-morbidities or exposure risk factors, or both, of patients being treated for the pathogen or disease of interest in this section that are captured with interoperable data standards and elements.

(2) Unless the Secretary specifies an alternative format by which the REH must report these data elements, the REH must report the applicable infection (confirmed and suspected) and vaccination data in a format that provides person-level information, which must include medical record identifier, race, ethnicity, age, sex, residential county and zip code, and relevant comorbidities for affected patients. Facilities must not report any directly or potentially individually-identifiable information for affected patients (for example, name, social security number) that is not set out in this section or otherwise specified by the Secretary.

(3) The REH must provide the information specified in this paragraph (f) on a daily basis, unless the Secretary specifies a lesser frequency, to the Centers for Disease Control and Prevention's (CDC) National Healthcare Safety Network or other CDC-supported surveillance systems as determined by the Secretary.

(g) *Standard: COVID–19 vaccination of REH staff.* Until November 4, 2024, unless the Secretary specifies an earlier end date for the requirements of this paragraph (g), the REH must develop and implement policies and procedures to ensure that all staff are fully vaccinated for COVID–19. For purposes of this section, staff are considered fully vaccinated if it has been 2 weeks or more since they completed a primary vaccination series for COVID–19. The completion of a primary vaccination series for COVID–19 is defined here as the administration of a single-dose vaccine, or the administration of all required doses of a multi-dose vaccine.

(1) Regardless of clinical responsibility or patient contact, the policies and procedures must apply to the following REH staff, who provide any care, treatment, or other services for the REH and/or its patients:

(i) REH employees;

(ii) Licensed practitioners;

(iii) Students, trainees, and volunteers; and

(iv) Individuals who provide care, treatment, or other services for the REH and/or its patients, under contract or by other arrangement.

(2) The policies and procedures of this section do not apply to the following REH staff:

(i) Staff who exclusively provide telehealth or telemedicine services outside of the REH setting and who do not have any direct contact with patients and other staff specified in paragraph (f)(1) of this section; and

(ii) Staff who provide support services for the REH that are performed exclusively outside of the REH setting and who do not have any direct contact with patients and other staff specified in paragraph (f)(1) of this section.

(3) The policies and procedures must include, at a minimum, the following components:

(i) A process for ensuring all staff specified in paragraph (f)(1) of this section (except for those staff who have pending requests for, or who have been granted, exemptions to the vaccination requirements of this section, or those staff for whom COVID–19 vaccination must be temporarily delayed, as recommended by the CDC, due to clinical precautions and considerations) have received, at a minimum, a single-dose COVID–19 vaccine, or the first dose of the primary vaccination series for a multi-dose COVID–19 vaccine prior to staff providing any care, treatment, or other services for the REH and/or its patients;

(ii) A process for ensuring that all staff specified in paragraph (f)(1) of this section are fully vaccinated for COVID–19, except for those staff who have been granted exemptions to the vaccination requirements of this section, or those staff for whom COVID–19 vaccination must be temporarily delayed, as recommended by the CDC, due to clinical precautions and considerations;

(iii) A process for ensuring the implementation of additional precautions, intended to mitigate the transmission and spread of COVID–19, for all staff who are not fully vaccinated for COVID–19;

(iv) A process for tracking and securely documenting the COVID–19 vaccination status of all staff specified in paragraph (f)(1) of this section;

(v) A process for tracking and securely documenting the COVID–19 vaccination status of any staff who have obtained any booster doses as recommended by the CDC;

(vi) A process by which staff may request an exemption from the staff COVID–19 vaccination requirements based on an applicable Federal law;

(vii) A process for tracking and securely documenting information provided by those staff who have requested, and for whom the REH has granted, an exemption from the staff COVID–19 vaccination requirements based on recognized clinical contraindications or applicable Federal laws;

(viii) A process for ensuring that all documentation, which confirms recognized clinical contraindications to COVID–19 vaccines and which supports staff requests for medical exemptions from vaccination, has been signed and dated by a licensed practitioner, who is not the individual requesting the exemption, and who is acting within their respective scope of practice as defined by, and in accordance with, all applicable state and local laws, and for further ensuring that such documentation contains:

(A) All information specifying which of the authorized COVID–19 vaccines are clinically contraindicated for the staff member to receive and the recognized clinical reasons for the contraindications; and

(B) A statement by the authenticating practitioner recommending that the staff member be exempted from the REH's COVID–19 vaccination requirements for staff based on the recognized clinical contraindications;

(ix) A process for ensuring the tracking and secure documentation of the vaccination status of staff for whom COVID–19 vaccination must be temporarily delayed, as recommended by the CDC, due to clinical precautions and considerations, including, but not limited to, individuals with acute illness secondary to COVID–19, and individuals who received monoclonal antibodies or convalescent plasma for COVID–19 treatment; and

(x) Contingency plans for staff who are not fully vaccinated for COVID–19.

§ 485.528 Condition of participation: Staffing and staff responsibilities.

(a) *Standard: Emergency department staffing.* The emergency department of the REH must be staffed 24 hours a day, 7 days a week by an individual or individuals competent in the skills needed to address emergency medical care. This individual(s) must be able to receive patients and activate the

appropriate medical resources to meet the care needed by the patient.

(b) *Standard: Staffing.* (1) The REH must have a professional health care staff that includes one or more doctors of medicine or osteopathy, and may include one or more physician assistants, nurse practitioners, or clinical nurse specialists.

(2) Any ancillary personnel are supervised by the professional staff.

(3) The staff is sufficient to provide the services essential to the operation of the REH.

(4) A registered nurse, clinical nurse specialist, or licensed practical nurse is on duty whenever the REH has one or more patients receiving emergency care or observation care.

(c) *Standard: Responsibilities of the doctor of medicine or osteopathy.* (1) The doctor of medicine or osteopathy must —

(i) Provide medical direction for the REH's health care activities and consultation for, and medical supervision of, the health care staff.

(ii) In conjunction with the physician assistant and/or nurse practitioner member(s), participate in developing, executing, and periodically reviewing the REH's written policies governing the services it furnishes.

(iii) In conjunction with the physician assistant and/or nurse practitioner members, periodically review the REH's patient records, provide medical orders, and provide medical care services to the patients of the REH.

(iv) Periodically review and sign a sample of outpatient records of patients cared for by nurse practitioners, clinical nurse specialists, certified nurse midwives, or physician assistants only to the extent where state law requires record reviews or co-signatures, or both, by a collaborating physician.

(2) A doctor of medicine or osteopathy must be present for sufficient periods of time to provide medical direction, consultation, and supervision for the services provided in the REH, and is available through direct radio or telephone communication or electronic communication for consultation, assistance with medical emergencies, or patient referral.

(d) *Standard: Physician assistant, nurse practitioner, and clinical nurse specialist responsibilities.* (1) The physician assistant, the nurse practitioner, or clinical nurse specialist members of the REH's staff must —

(i) Participate in the development, execution and periodic review of the written policies governing the services the REH furnishes; and

(ii) Participate with a doctor of medicine or osteopathy in a periodic review of the patients' health records.

(2) The physician assistant, nurse practitioner, or clinical nurse specialist performs the following functions to the extent they are not being performed by a doctor of medicine or osteopathy:

(i) Provides services in accordance with the REH's policies.

(ii) Arranges for, or refers patients to, needed services that cannot be furnished at the REH, and assures that adequate patient health records are maintained and transferred as required when patients are referred.

(3) Whenever a patient is placed in observation care at the REH by a nurse practitioner, physician assistant, or clinical nurse specialist, a doctor of medicine or osteopathy on the staff of the REH is notified of the patient's status.

(e) *Standard: Periodic review of clinical privileges and performance.* The REH requires that —

(1) The quality and appropriateness of the diagnosis and treatment furnished by nurse practitioners, clinical nurse specialists, and physician assistants at the REH must be evaluated by a member of the REH staff who is a doctor of medicine or osteopathy or by another doctor of medicine or osteopathy under contract with the REH.

(2) The quality and appropriateness of the diagnosis and treatment furnished by doctors of medicine or osteopathy at the REH must be evaluated by one of the following —

(i) One Quality Improvement Organization (QIO) or equivalent entity.

(ii) In the case of distant-site physicians and practitioners providing telemedicine services to the REH's patient under an agreement between the REH and a distant-site hospital, the distant-site hospital; or

(iii) In the case of distant-site physicians and practitioners providing telemedicine services to the REH's patients under a written agreement between the REH and a distant-site telemedicine entity, one Quality Improvement Organization (QIO) or equivalent entity.

(3) The REH staff consider the findings of the evaluation and make the necessary changes as specified in paragraphs (b) through (d) of this section.

§ 485.530 Condition of participation: Nursing services.

The REH must have an organized nursing service that is available to provide 24-hour nursing services for the provision of patient care. The nursing services must be furnished and supervised by a registered nurse. Nursing services must meet the needs of patients.

(a) *Standard: Organization and staffing.* Patient care responsibilities must be delineated for all nursing service personnel. Nursing services must be provided in accordance with recognized standards of practice.

(b) *Standard: Nursing leadership.* The director of the nursing service must be a licensed registered nurse. The individual is responsible for the operation of the service, including determining the types and numbers of nursing personnel and staff necessary to provide nursing care for all areas of the REH.

§ 485.532 Condition of participation: Discharge planning.

An REH must have an effective discharge planning process that focuses on the patient's goals and treatment preferences and includes the patient and their caregivers/support person(s) as active partners in the discharge planning for post-discharge care. The discharge planning process and the discharge plan must be consistent with the patient's goals for care and their treatment preferences, ensure an effective transition of the patient from the REH to post-discharge care, and reduce the factors leading to preventable hospital admissions or readmissions.

(a) *Standard: Discharge planning process.* The REH's discharge planning process must identify, at an early stage of the provision of services, those patients who are likely to suffer adverse health consequences upon discharge in the absence of adequate discharge planning and must provide a discharge planning evaluation for those patients so identified as well as for other patients upon the request of the patient, patient's representative, or patient's physician.

(1) Any discharge planning evaluation must be made on a timely basis to ensure that appropriate arrangements for post-REH care will be made before discharge and to avoid unnecessary delays in discharge.

(2) A discharge planning evaluation must include an evaluation of a patient's likely need for appropriate services following those furnished by the REH, including, but not limited to, hospice care services, post-REH extended care services, home health services, and non-health care services and community-based care providers, and must also include a determination of the availability of the appropriate services as well as of the patient's access to those services.

(3) The discharge planning evaluation must be included in the patient's

medical record for use in establishing an appropriate discharge plan and the results of the evaluation must be discussed with the patient (or the patient's representative).

(4) Upon the request of a patient's physician, the REH must arrange for the development and initial implementation of a discharge plan for the patient.

(5) Any discharge planning evaluation or discharge plan required under this paragraph (a) must be developed by, or under the supervision of, a registered nurse, social worker, or other appropriately qualified personnel.

(6) The REH's discharge planning process must require regular re-evaluation of the patient's condition to identify changes that require modification of the discharge plan. The discharge plan must be updated, as needed, to reflect these changes.

(7) The REH must assess its discharge planning process on a regular basis. The assessment must include ongoing periodic review of a representative sample of discharge plans.

(8) The REH must assist patients, their families, or the patient's representative in selecting a post-acute care provider by using and sharing data that includes, but is not limited to, home health agency (HHA), skilled nursing facility (SNF), inpatient rehabilitation facility (IRF), or long term care hospital (LTCH) data on quality measures and data on resource use measures. The REH must ensure that the post-acute care data on quality measures and data on resource use measures is relevant and applicable to the patient's goals of care and treatment preferences.

(b) *Standard: Discharge of the patient and provision and transmission of the patient's necessary medical information.* The REH must discharge the patient, and also transfer or refer the patient where applicable, along with all necessary medical information pertaining to the patient's current course of illness and treatment, post-discharge goals of care, and treatment preferences, at the time of discharge, to the appropriate post-acute care service providers and suppliers, facilities, agencies, and other outpatient service providers and practitioners responsible for the patient's follow-up or ancillary care.

§ 485.534 Condition of participation: Patient's rights.

An REH must protect and promote each patient's rights.

(a) *Standard: Notice of rights.* (1) An REH must inform each patient, or when appropriate, the patient's representative (as allowed under state law), of the patient's rights, in advance of furnishing or discontinuing patient care whenever possible.

(2) The REH must establish a process for prompt resolution of patient grievances and must inform each patient whom to contact to file a grievance. The REH's governing body or responsible individual must approve and be responsible for the effective operation of the grievance process and must review and resolve grievances, unless it delegates the responsibility in writing to a grievance committee. The grievance process must include a mechanism for timely referral of patient concerns regarding quality of care or premature discharge to the appropriate Utilization and Quality Control Quality Improvement Organization. At a minimum:

(i) The REH must establish a clearly explained procedure for the submission of a patient's written or verbal grievance to the REH.

(ii) The grievance process must specify time frames for review of the grievance and the provision of a response.

(iii) In its resolution of the grievance, the REH must provide the patient with written notice of its decision that contains the name of the REH contact person, the steps taken on behalf of the patient to investigate the grievance, the results of the grievance process, and the date of completion.

(b) *Standard: Exercise of rights.* The patient has the right to—

(1) Participate in the development and implementation of their plan of care.

(2) Make informed decisions regarding their care, including being informed of their health status, and being able to request or refuse treatment. This right must not be construed as a mechanism to demand the provision of treatment or services deemed medically unnecessary or inappropriate.

(3) Formulate advance directives and to have REH staff and practitioners who provide care in the REH comply with these directives, in accordance with §§ 489.100, 489.102, and 489.104 of this chapter.

(c) *Standard: Privacy and safety.* The patient has the right to—

(1) Personal privacy.

(2) Receive care in a safe setting.

(3) Be free from all forms of abuse or harassment.

(d) *Standard: Confidentiality of patient records.* (1) The patient has the right to the confidentiality of their medical records.

(2) The patient has the right to access their medical records, including current medical records, upon an oral or written request.

(i) The records must be provided in the form and format requested by the individual, if it is readily producible in such form and format. This includes in an electronic form or format when such medical records are maintained electronically or if not, in a readable hard copy form or such other form and format as agreed to by the facility and the individual.

(ii) The records must be provided within a reasonable time frame. The REH must not frustrate the legitimate efforts of individuals to gain access to their own medical records and must actively seek to meet these requests as quickly as its record keeping system permits.

(e) *Standard: Restraint or seclusion.* All patients have the right to be free from physical or mental abuse, and corporal punishment. All patients have the right to be free from restraint or seclusion, of any form, imposed as a means of coercion, discipline, convenience, or retaliation by staff. Restraint or seclusion may only be imposed to ensure the immediate physical safety of the patient, a staff member, or others and must be discontinued at the earliest possible time.

(1)(i) A *restraint is*—

(A) Any manual method, physical or mechanical device, material, or equipment that immobilizes or reduces the ability of a patient to move their arms, legs, body, or head freely; or

(B) A drug or medication when it is used as a restriction to manage the patient's behavior or restrict the patient's freedom of movement and is not a standard treatment or dosage for the patient's condition.

(C) A restraint does not include devices, such as orthopedically prescribed devices, surgical dressings or bandages, protective helmets, or other methods that involve the physical holding of a patient for the purpose of conducting routine physical examinations or tests, or to protect the patient from falling out of bed, off of a stretcher, or out of a chair, or to permit the patient to participate in activities without the risk of physical harm (this does not include a physical escort).

(ii) *Seclusion* is the involuntary confinement of a patient alone in a room or area from which the patient is physically prevented from leaving. Seclusion may only be used for the management of violent or self-destructive behavior.

(2) Restraint or seclusion may only be used when less restrictive interventions have been determined to be ineffective to protect the patient, a staff member or others from harm.

(3) The type or technique of restraint or seclusion used must be the least restrictive intervention that will be effective to protect the patient, a staff member, or others from harm.

(4) The REH must have written policies and procedures regarding the use of restraint and seclusion that are consistent with current standards of practice.

(f) *Standard: Restraint or seclusion: Staff training requirements.* The patient has the right to safe implementation of restraint or seclusion by trained staff.

(1) The REH must provide patient-centered competency-based training and education of REH personnel and staff, including medical staff, and, as applicable, personnel providing contracted services in the REH, on the use of restraint and seclusion.

(2) The training must include alternatives to the use of restraint/seclusion.

(g) *Standard: Death reporting requirements.* REHs must report deaths associated with the use of seclusion or restraint.

(1) With the exception of deaths described under paragraph (g)(2) of this section, the REH must report the following information to CMS by telephone, facsimile, or electronically, as determined by CMS, no later than the close of business on the next business day following knowledge of the patient's death:

(i) Each death that occurs while a patient is in restraint or seclusion.

(ii) Each death that occurs within 24 hours after the patient has been removed from restraint or seclusion.

(iii) Each death known to the REH that occurs within 1 week after restraint or seclusion where it is reasonable to assume that use of restraint or placement in seclusion contributed directly or indirectly to a patient's death, regardless of the type(s) of restraint used on the patient during this time. ''Reasonable to assume'' in this context includes, but is not limited to, deaths related to restrictions of movement for prolonged periods of time, or death related to chest compression, restriction of breathing, or asphyxiation.

(2) When no seclusion has been used and when the only restraints used on the patient are those applied exclusively to the patient's wrist(s), and which are composed solely of soft, non-rigid, cloth-like materials, the REH staff must record in an internal log or other system, the following information:

(i) Any death that occurs while a patient is in such restraints.

(ii) Any death that occurs within 24 hours after a patient has been removed from such restraints.

(3) The staff must document in the patient's medical record the date and time the death was:

(i) Reported to CMS for deaths described in paragraph (g)(1) of this section; or

(ii) Recorded in the internal log or other system for deaths described in paragraph (g)(2) of this section.

(4) For deaths described in paragraph (g)(2) of this section, entries into the internal log or other system must be documented as follows:

(i) Each entry must be made not later than seven days after the date of death of the patient.

(ii) Each entry must document the patient's name, date of birth, date of death, name of attending physician or other licensed practitioner who is responsible for the care of the patient, medical record number, and primary diagnosis(es).

(iii) The information must be made available in either written or electronic form to CMS immediately upon request.

(h) *Standard: Patient visitation rights.* An REH must have written policies and procedures regarding the visitation rights of patients, including those setting forth any clinically necessary or reasonable restriction or limitation that the REH may need to place on such rights and the reasons for the clinical restriction or limitation. An REH must meet the following requirements:

(1) Inform each patient (or support person, where appropriate) of their visitation rights, including any clinical restriction or limitation on such rights, when they are informed of their other rights under this section.

(2) Inform each patient (or support person, where appropriate) of the right, subject to their consent, to receive the visitors whom they designate, including, but not limited to, a spouse, a domestic partner (including a same-sex domestic partner), another family member, or a friend, and their right to withdraw or deny such consent at any time.

(3) Not restrict, limit, or otherwise deny visitation privileges on the basis of race, color, national origin, religion, sex, gender identity, sexual orientation, or disability.

(4) Ensure that all visitors enjoy full and equal visitation privileges consistent with patient preferences.

§ 485.536 Condition of participation: Quality assessment and performance improvement program.

The REH must develop, implement, and maintain an effective, ongoing, REH-wide, data-driven quality assessment and performance improvement (QAPI) program. The REH's governing body must ensure that the program reflects the complexity of the REH's organization and services; involves all REH departments and services (including those services furnished under contract or arrangement); and focuses on indicators related to improved health outcomes and the prevention and reduction of medical errors. The REH must maintain and demonstrate evidence of its QAPI program for review by CMS.

(a) *Standard: Program scope.* (1) The program must include, but not be limited to, an ongoing program that shows measurable improvement in indicators for which there is evidence that it will improve health outcomes and identify and reduce medical errors.

(2) The REH must measure, analyze, and track quality indicators, including adverse patient events, staffing, and other aspects of performance that assess processes of care including REH service and operations.

(b) *Standard: Program data collection and analysis.* The program must incorporate quality indicator data including patient care data, and other relevant data, in order to achieve the goals of the QAPI program.

(c) *Standard: Program activities.* (1) The REH must set priorities for its performance improvement activities that—

(i) Focus on high-risk, high-volume, or problem-prone areas;

(ii) Consider the incidence, prevalence, and severity of problems in those areas; and

(iii) Affect health outcomes, patient safety, and quality of care.

(2) Performance improvement activities must track medical errors and adverse patient events, analyze their causes, and implement preventive actions and mechanisms that include feedback and learning throughout the REH. An adverse patient event means an untoward, undesirable, and usually unanticipated event that causes death or serious injury or the risk thereof. Medical error means an error that occurs in the delivery of health care services.

(3) The REH must take actions aimed at performance improvement and, after implementing those actions, the REH must measure its success, and track performance to ensure that improvements are sustained.

(d) *Standard: Executive responsibilities.* The REH's governing body (or organized group or individual who assumes full legal authority and responsibility for operations of the REH), medical staff, and administrative

officials are responsible and accountable for ensuring the following:

(1) That an ongoing program for quality improvement and patient safety, including the reduction of medical errors, is defined, implemented, and maintained.

(2) That the REH-wide quality assessment and performance improvement efforts address priorities for improved quality of care and patient safety; and that all improvement actions are evaluated.

(3) That clear expectations for safety are established.

(4) That adequate resources are allocated for measuring, assessing, improving, and sustaining the REH's performance and reducing risk to patients.

(e) *Standard: Unified and integrated QAPI program for an REH in a multi-facility system.* If an REH is part of a system consisting of multiple separately certified hospitals, CAHs, and/or REHs using a system governing body that is legally responsible for the conduct of two or more hospitals, CAHs, and/or REHs, the system governing body can elect to have a unified and integrated QAPI program for all of its member facilities after determining that such a decision is in accordance with all applicable state and local laws. The system governing body is responsible and accountable for ensuring that each of its separately certified REHs meets all of the requirements of this section. Each separately certified REH subject to the system governing body must demonstrate that—

(1) The unified and integrated QAPI program is established in a manner that takes into account each member REH's unique circumstances and any significant differences in patient populations and services offered in each REH; and

(2) The unified and integrated QAPI program establishes and implements policies and procedures to ensure that the needs and concerns of each of its separately certified REHs, regardless of practice or location, are given due consideration, and that the unified and integrated QAPI program has mechanisms in place to ensure that issues localized to particular REHs are duly considered and addressed.

§ 485.538 Condition of participation: Agreements.

The REH must have in effect an agreement with at least one certified hospital that is a level I or level II trauma center for the referral and transfer of patients requiring emergency medical care beyond the capabilities of the REH that is—

(a) Licensed as a hospital in a state that provides for the licensing of hospitals under state or applicable local law or approved by the agency of such state or locality responsible for licensing hospitals, as meeting standards established for licensing established by the agency of the state; and

(b) Licensed or designated by the state or local government authority as level I or level II trauma center or is verified by the American College of Surgeons as a level I or level II trauma center.

§ 485.540 Condition of participation: Medical records.

(a) *Standard: Records system.* (1) The REH must maintain a medical records system in accordance with written policies and procedures.

(2) The records must be legible, complete, accurately documented, readily accessible, and systematically organized.

(3) A designated member of the professional staff is responsible for maintaining the records and for ensuring that they are completely and accurately documented, readily accessible, and systematically organized.

(4) For each patient receiving health care services, the REH must maintain a record that includes, as applicable—

(i) Identification and social data, evidence of properly executed informed consent forms, pertinent medical history, assessment of the health status and health care needs of the patient, and a brief summary of the episode, disposition, and instructions to the patient;

(ii) Reports of physical examinations, diagnostic and laboratory test results, including clinical laboratory services, and consultative findings;

(iii) All orders of doctors of medicine or osteopathy or other practitioners, reports of treatments and medications, nursing notes and documentation of complications, and other pertinent information necessary to monitor the patient's progress, such as temperature graphics, progress notes describing the patient's response to treatment; and

(iv) Dated signatures of the doctor of medicine or osteopathy or other health care professional.

(b) *Standard: Protection of record information.* (1) The REH must maintain the confidentiality of record information and provides safeguards against loss, destruction, or unauthorized use.

(2) The REH must have written policies and procedures that govern the use and removal of records from the REH and the conditions for the release of information.

(3) The patient's written consent is required for release of information not required by law.

(c) *Standard: Retention of records.* The records must be retained for at least 5 years from date of last entry, and longer if required by state statute, or if the records may be needed in any pending proceeding.

(d) *Standard: Electronic notifications.* If the REH utilizes an electronic medical records system or other electronic administrative system, which is conformant with the content exchange standard at 45 CFR 170.205(d)(2), then the REH must demonstrate that—

(1) The system's notification capacity is fully operational and the REH uses it in accordance with all state and Federal statutes and regulations applicable to the REH's exchange of patient health information.

(2) The system sends notifications that must include at least patient name, treating practitioner name, and sending institution name.

(3) To the extent permissible under applicable Federal and state law and regulations, and not inconsistent with the patient's expressed privacy preferences, the system sends notifications directly, or through an intermediary that facilitates exchange of health information, at the time of the patient's registration in the REH's emergency department.

(4) To the extent permissible under applicable Federal and state law and regulations, and not inconsistent with the patient's expressed privacy preferences, the system sends notifications directly, or through an intermediary that facilitates exchange of health information, either immediately prior to, or at the time the patient's discharge or transfer from the REH's emergency department.

(5) The REH has made a reasonable effort to ensure that the system sends the notifications to all applicable post-acute care services providers and suppliers, as well as to any of the following practitioners and entities, which need to receive notification of the patient's status for treatment, care coordination, or quality improvement purposes:

(i) The patient's established primary care practitioner;

(ii) The patient's established primary care practice group or entity; or

(iii) Other practitioner, or other practice group or entity, identified by the patient as the practitioner, or practice group or entity, primarily responsible for their care.

§ 485.542 Condition of participation: Emergency preparedness.

The REH must comply with all applicable Federal, state, and local emergency preparedness requirements. The REH must establish and maintain an emergency preparedness program that meets the requirements of this section. The emergency preparedness program must include, but not be limited to, the following elements:

(a) *Emergency plan.* The REH must develop and maintain an emergency preparedness plan that must be reviewed, and updated at least every 2 years. The plan must do the following:

(1) Be based on and include a documented, facility-based and community-based risk assessment, utilizing an all-hazards approach.

(2) Include strategies for addressing emergency events identified by the risk assessment.

(3) Address patient population, including, but not limited to, the type of services the REH has the ability to provide in an emergency; and continuity of operations, including delegations of authority and succession plans.

(4) Include a process for cooperation and collaboration with local, tribal, regional, state, and Federal emergency preparedness officials' efforts to maintain an integrated response during a disaster or emergency situation.

(b) *Policies and procedures.* The REH must develop and implement emergency preparedness policies and procedures, based on the emergency plan set forth in paragraph (a) of this section, risk assessment at paragraph (a)(1) of this section, and the communication plan at paragraph (c) of this section. The policies and procedures must be reviewed and updated at least every 2 years. At a minimum, the policies and procedures must address the following:

(1) The provision of subsistence needs for staff and patients, whether they evacuate or shelter in place, include, but are not limited to—

(i) Food, water, medical, and pharmaceutical supplies;

(ii) Alternate sources of energy to maintain:

(A) Temperatures to protect patient health and safety and for the safe and sanitary storage of provisions;

(B) Emergency lighting;

(C) Fire detection, extinguishing, and alarm systems; and

(D) Sewage and waste disposal.

(2) A system to track the location of on-duty staff and sheltered patients in the REH's care during an emergency. If on-duty staff or sheltered patients are relocated during the emergency, the REH must document the specific name and location of the receiving facility or other location.

(3) Safe evacuation from the REH, which includes the following:

(i) Consideration of care and treatment needs of evacuees.

(ii) Staff responsibilities.

(iii) Transportation.

(iv) Identification of evacuation location(s).

(v) Primary and alternate means of communication with external sources of assistance.

(4) A means to shelter in place for patients, staff, and volunteers who remain in the REH.

(5) A system of medical documentation that does the following:

(i) Preserves patient information.

(ii) Protects confidentiality of patient information.

(iii) Secures and maintains the availability of records.

(6) The use of volunteers in an emergency and other staffing strategies, including the process and role for integration of state and federally designated health care professionals to address surge needs during an emergency.

(7) The role of the REH under a waiver declared by the Secretary, in accordance with section 1135 of the Act, in the provision of care and treatment at an alternate care site identified by emergency management officials.

(c) *Communication plan.* The REH must develop and maintain an emergency preparedness communication plan that complies with Federal, state, and local laws and must be reviewed and updated at least every 2 years. The communication plan must include all of the following:

(1) Names and contact information for the following:

(i) Staff.

(ii) Entities providing services under arrangement.

(iii) Patients' physicians.

(iv) Volunteers.

(2) Contact information for the following:

(i) Federal, state, tribal, regional, and local emergency preparedness staff.

(ii) Other sources of assistance.

(3) Primary and alternate means for communicating with the following:

(i) REH's staff.

(ii) Federal, state, tribal, regional, and local emergency management agencies.

(4) A method for sharing information and medical documentation for patients under the REH's care, as necessary, with other health care providers to maintain the continuity of care.

(5) A means, in the event of an evacuation, to release patient information as permitted under 45 CFR 164.510(b)(1)(ii).

(6) A means of providing information about the general condition and location of patients under the facility's care as permitted under 45 CFR 164.510(b)(4).

(7) A means of providing information about the REH's needs, and its ability to provide assistance, to the authority having jurisdiction, the Incident Command Center, or designee.

(d) *Training and testing.* The REH must develop and maintain an emergency preparedness training and testing program that is based on the emergency plan set forth in paragraph (a) of this section, risk assessment at paragraph (a)(1) of this section, policies and procedures at paragraph (b) of this section, and the communication plan at paragraph (c) of this section. The training and testing program must be reviewed and updated at least every 2 years.

(1) *Training program.* The REH must do all of the following:

(i) Provide initial training in emergency preparedness policies and procedures to all new and existing staff, individuals providing on-site services under arrangement, and volunteers, consistent with their expected roles.

(ii) Provide emergency preparedness training at least every 2 years.

(iii) Maintain documentation of all emergency preparedness training.

(iv) Demonstrate staff knowledge of emergency procedures.

(v) If the emergency preparedness policies and procedures are significantly updated, the REH must conduct training on the updated policies and procedures.

(2) *Testing.* The REH must conduct exercises to test the emergency plan at least annually. The REH must do the following:

(i) Participate in a full-scale exercise that is community-based every 2 years.

(A) When a community-based exercise is not accessible, conduct a facility-based functional exercise every 2 years; or

(B) If the REH experiences an actual natural or man-made emergency that requires activation of the emergency plan, the REH is exempt from engaging in its next required community-based or individual, facility-based functional exercise following the onset of the emergency event.

(ii) Conduct an additional exercise at least every 2 years, opposite the year the full-scale or functional exercise under paragraph (d)(2)(i) of this section is conducted, that may include, but is not limited to the following:

(A) A second full-scale exercise that is community-based, or an individual, facility-based functional exercise; or

(B) A mock disaster drill; or

(C) A tabletop exercise or workshop that is led by a facilitator and includes a group discussion using a narrated, clinically-relevant emergency scenario, and a set of problem statements, directed messages, or prepared questions designed to challenge an emergency plan.

(iii) Analyze the REH's response to and maintain documentation of all drills, tabletop exercises, and emergency events and revise the REH's emergency plan, as needed.

(e) *Emergency and standby power systems.* The CAH must implement emergency and standby power systems based on the emergency plan set forth in paragraph (a) of this section.

(1) *Emergency generator location.* The generator must be located in accordance with the location requirements found in the Health Care Facilities Code (NFPA 99 and Tentative Interim Amendments TIA 12–2, TIA 12–3, TIA 12–4, TIA 12–5, and TIA 12–6), Life Safety Code (NFPA 101 and Tentative Interim Amendments TIA 12–1, TIA 12–2, TIA 12–3, and TIA 12–4), and NFPA 110, when a new structure is built or when an existing structure or building is renovated.

(2) *Emergency generator inspection and testing.* The CAH must implement emergency power system inspection and testing requirements found in the Health Care Facilities Code, NFPA 110, and the Life Safety Code.

(3) *Emergency generator fuel.* CAHs that maintain an onsite fuel source to power emergency generators must have a plan for how it will keep emergency power systems operational during the emergency, unless it evacuates.

(f) *Integrated healthcare systems.* If an REH is part of a healthcare system consisting of multiple separately certified healthcare facilities that elects to have a unified and integrated emergency preparedness program, the REH may choose to participate in the healthcare system's coordinated emergency preparedness program. If elected, the unified and integrated emergency preparedness program must—

(1) Demonstrate that each separately certified facility within the system actively participated in the development of the unified and integrated emergency preparedness program.

(2) Be developed and maintained in a manner that takes into account each separately certified facility's unique circumstances, patient populations, and services offered.

(3) Demonstrate that each separately certified facility is capable of actively using the unified and integrated emergency preparedness program and is in compliance.

(4) Include a unified and integrated emergency plan that meets the requirements of paragraphs (a)(2), (3), and (4) of this section. The unified and integrated emergency plan must also be based on and include the following:

(i) A documented community-based risk assessment, utilizing an all-hazards approach.

(ii) A documented individual facility-based risk assessment for each separately certified facility within the health system, utilizing an all-hazards approach.

(5) Include integrated policies and procedures that meet the requirements set forth in paragraph (b) of this section, a coordinated communication plan and training and testing programs that meet the requirements of paragraphs (c) and (d) of this section, respectively.

(g) *Incorporation by reference.* The material listed in this paragraph (g) is incorporated by reference into this section with the approval of the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. To enforce any edition other than that specified in this section, CMS must publish a document in the **Federal Register** and the material must be available to the public. All approved material is available for inspection at CMS and the National Archives and Records Administration (NARA). Contact CMS at: CMS Information Resource Center, 7500 Security Boulevard, Baltimore, MD, email: *scott.cooper@cms.hhs.gov* or call (410) 786–9465. For information on the availability of this material at NARA, email: *fr.inspection@nara.gov*, or go to: *www.archives.gov/federal-register/cfr/ibr-locations.html*. (2) [Reserved]

§ 485.544 Condition of participation: Physical environment.

The REH must be constructed, arranged, and maintained to ensure the safety of the patient, and to provide facilities for diagnosis and treatment and for special services appropriate to the needs of the community.

(a) *Standard: Buildings.* The condition of the physical plant and the overall REH environment must be developed and maintained in such a manner that the safety and well-being of patients are ensured.

(1) There must be emergency power and lighting in at least the operating, recovery, and emergency rooms, and stairwells. In all other areas not serviced by the emergency supply source, battery lamps and flashlights must be available.

(2) There must be facilities for emergency gas and water supply.

(3) The REH must have a safe and sanitary environment, properly constructed, equipped, and maintained to protect the health and safety of patients.

(b) *Standard: Facilities.* The REH must maintain adequate facilities for its services.

(1) Diagnostic and therapeutic facilities must be located for the safety of patients.

(2) Facilities, supplies, and equipment must be maintained to ensure an acceptable level of safety and quality.

(3) The extent and complexity of facilities must be determined by the services offered.

(4) There must be proper ventilation, light, and temperature controls in patient care, pharmaceutical, food preparation, and other appropriate areas.

(c) *Standard: Safety from fire.* (1) Except as otherwise provided in this section, the REH must meet the provisions applicable to Ambulatory Health Care Occupancies, regardless of the number of patients served, and must proceed in accordance with the Life Safety Code (NFPA 101 and Tentative Interim Amendments TIA 12–1, TIA 12–2, TIA 12–3, and TIA 12–4).

(2) In consideration of a recommendation by the state survey

agency or accrediting organization or at the discretion of the Secretary, CMS may waive, for periods deemed appropriate, specific provisions of the Life Safety Code, which would result in unreasonable hardship upon an REH, but only if the waiver will not adversely affect the health and safety of the patients.

(3) The provisions of the Life Safety Code do not apply in a state if CMS finds that a fire and safety code imposed by state law adequately protects patients in an REH.

(4) An REH may place alcohol-based hand rub dispensers in its facility if the dispensers are installed in a manner that adequately protects against inappropriate access.

(5) When a sprinkler system is shut down for more than 10 hours, the REH must:

(i) Evacuate the building or portion of the building affected by the system outage until the system is back in service, or

(ii) Establish a fire watch until the system is back in service.

(d) *Standard: Building safety.* Except as otherwise provided in this section, the REH must meet the applicable provisions and must proceed in accordance with the 2012 edition of the Health Care Facilities Code (NFPA 99, and Tentative Interim Amendments TIA 12–2, TIA 12–3, TIA 12–4, TIA 12–5 and TIA 12–6).

(1) Chapters 7, 8, 12, and 13 of the adopted Health Care Facilities Code do not apply to an REH.

(2) If application of the Health Care Facilities Code required under paragraph (d) of this section would result in unreasonable hardship for the REH, CMS may waive specific provisions of the Health Care Facilities Code, but only if the waiver does not adversely affect the health and safety of patients.

(e) *Incorporation by reference.* The material listed in this paragraph (e) is incorporated by reference into this section with the approval the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. To enforce any edition other than that specified in this section, CMS must publish a document in the **Federal Register** and the material must be available to the public. All approved material is available for inspection at CMS and the National Archives and Records Administration (NARA). Contact CMS at: CMS Information Resource Center, 7500 Security Boulevard, Baltimore, MD, email *scott.cooper@cms.hhs.gov* or call (410) 786–9465. For information on the availability of this material at NARA, email *fr.inspection@nara.gov* or go to: *www.archives.gov/federal-register/cfr/ibr-locations.html*. The material may be obtained from the following source(s) in this paragraph (e).

(1) National Fire Protection Association, 1 Batterymarch Park, Quincy, MA 02169, *www.nfpa.org*, 1.617.770.3000.

(i) NFPA 99, Health Care Facilities Code, 2012 edition, issued August 11, 2011.

(ii) Technical interim amendment (TIA) 12–2 to NFPA 99, issued August 11, 2011.

(iii) TIA 12–3 to NFPA 99, issued August 9, 2012.

(iv) TIA 12–4 to NFPA 99, issued March 7, 2013.

(v) TIA 12–5 to NFPA 99, issued August 1, 2013.

(vi) TIA 12–6 to NFPA 99, issued March 3, 2014.

(vii) NFPA 101, Life Safety Code, 2012 edition, issued August 11, 2011;

(viii) TIA 12–1 to NFPA 101, issued August 11, 2011.

(ix) TIA 12–2 to NFPA 101, issued October 30, 2012.

(x) TIA 12–3 to NFPA 101, issued October 22, 2013.

(xi) TIA 12–4 to NFPA 101, issued October 22, 2013.

(2) [Reserved]

§ 485.546 Condition of participation: Skilled nursing facility distinct part unit.

If the REH provides skilled nursing facility services in a distinct part unit, the services furnished by the distinct part unit must be separately licensed and certified and comply with the requirements of participation for long-term care facilities specified in part 483, subpart B, of this chapter.

■ 3. Section 485.610 is amended by revising paragraph (c) to read as follows:

§ 485.610 Condition of participation: Status and location.

* * * * *

(c) *Standard: Location relative to other facilities or necessary provider certification.* (1) The CAH is located more than a 35-mile drive on primary roads (or, in the case of mountainous terrain or in areas with only secondary roads available, a 15-mile drive) from a hospital or another CAH, or before January 1, 2006, the CAH is certified by the State as being a necessary provider of health care services to residents in the area. A CAH that is designated as a necessary provider on or before December 31, 2005, will maintain its necessary provider designation after January 1, 2006.

(2) Primary roads of travel for determining the driving distance of a CAH and its proximity to other providers is defined as:

(i) A numbered Federal highway, including interstates, intrastates, expressways, or any other numbered Federal highway with 2 or more lanes each way; or

(ii) A numbered State highway with 2 or more lanes each way.

* * * * *

■ 45. Section 485.614 is added to read as follows:

§ 485.614 Condition of participation: Patient's rights.

A CAH must protect and promote each patient's rights.

(a) *Standard: Notice of rights.* (1) A hospital must inform each patient, or when appropriate, the patient's representative (as allowed under state law), of the patient's rights, in advance of furnishing or discontinuing patient care whenever possible.

(2) The hospital must establish a process for prompt resolution of patient grievances and must inform each patient whom to contact to file a grievance. The hospital's governing body must approve and be responsible for the effective operation of the grievance process and must review and resolve grievances, unless it delegates the responsibility in writing to a grievance committee. The grievance process must include a mechanism for timely referral of patient concerns regarding quality of care or premature discharge to the appropriate Utilization and Quality Control Quality Improvement Organization. At a minimum:

(i) The hospital must establish a clearly explained procedure for the submission of a patient's written or verbal grievance to the hospital.

(ii) The grievance process must specify time frames for review of the grievance and the provision of a response.

(iii) In its resolution of the grievance, the hospital must provide the patient with written notice of its decision that contains the name of the hospital contact person, the steps taken on behalf of the patient to investigate the grievance, the results of the grievance process, and the date of completion.

(b) *Standard: Exercise of rights.* (1) The patient has the right to participate in the development and implementation of their plan of care.

(2) The patient or their representative (as allowed under state law) has the right to make informed decisions regarding their care. The patient's rights include being informed of their health status, being involved in care planning and treatment, and being able to request or refuse treatment. This right must not

be construed as a mechanism to demand the provision of treatment or services deemed medically unnecessary or inappropriate.

(3) The patient has the right to formulate advance directives and to have hospital staff and practitioners who provide care in the hospital comply with these directives, in accordance with §§ 489.100, 489.102, and 489.104 of this chapter.

(4) The patient has the right to have a family member or representative of their choice and their own physician notified promptly of their admission to the hospital.

(c) *Standard: Privacy and safety.* (1) The patient has the right to personal privacy.

(2) The patient has the right to receive care in a safe setting.

(3) The patient has the right to be free from all forms of abuse or harassment.

(d) *Standard: Confidentiality of patient reco*rds. (1) The patient has the right to the confidentiality of their clinical records.

(2) The patient has the right to access their medical records, including current medical records, upon an oral or written request, in the form and format requested by the individual, if it is readily producible in such form and format (including in an electronic form or format when such medical records are maintained electronically); or, if not, in a readable hard copy form or such other form and format as agreed to by the facility and the individual, and within a reasonable time frame. The hospital must not frustrate the legitimate efforts of individuals to gain access to their own medical records and must actively seek to meet these requests as quickly as its record keeping system permits.

(e) *Standard: Restraint or seclusion.* All patients have the right to be free from physical or mental abuse, and corporal punishment. All patients have the right to be free from restraint or seclusion, of any form, imposed as a means of coercion, discipline, convenience, or retaliation by staff. Restraint or seclusion may only be imposed to ensure the immediate physical safety of the patient, a staff member, or others and must be discontinued at the earliest possible time.

(1)(i) A restraint is—

(A) Any manual method, physical or mechanical device, material, or equipment that immobilizes or reduces the ability of a patient to move their arms, legs, body, or head freely; or

(B) A drug or medication when it is used as a restriction to manage the patient's behavior or restrict the patient's freedom of movement and is not a standard treatment or dosage for the patient's condition.

(C) A restraint does not include devices, such as orthopedically prescribed devices, surgical dressings or bandages, protective helmets, or other methods that involve the physical holding of a patient for the purpose of conducting routine physical examinations or tests, or to protect the patient from falling out of bed, or to permit the patient to participate in activities without the risk of physical harm (this does not include a physical escort).

(ii) *Seclusion* is the involuntary confinement of a patient alone in a room or area from which the patient is physically prevented from leaving. Seclusion may only be used for the management of violent or self-destructive behavior.

(2) Restraint or seclusion may only be used when less restrictive interventions have been determined to be ineffective to protect the patient a staff member or others from harm.

(3) The type or technique of restraint or seclusion used must be the least restrictive intervention that will be effective to protect the patient, a staff member, or others from harm.

(4) The CAH must have written policies and procedures regarding the use of restraint and seclusion that are consistent with current standards of practice.

(f) *Standard: Restraint or seclusion: Staff training requirements.* The patient has the right to safe implementation of restraint or seclusion by trained staff.

(1) The CAH must provide patient-centered, trauma informed competency-based training and education of CAH personnel and staff, including medical staff, and, as applicable, personnel providing contracted services in the CAH, on the use of restraint and seclusion.

(2) The training must include alternatives to the use of restraint/seclusion.

(g) *Standard: Death reporting requirements.* Hospitals must report deaths associated with the use of seclusion or restraint.

(1) With the exception of deaths described under paragraph (g)(2) of this section, the hospital must report the following information to CMS by telephone, facsimile, or electronically, as determined by CMS, no later than the close of business on the next business day following knowledge of the patient's death:

(i) Each death that occurs while a patient is in restraint or seclusion.

(ii) Each death that occurs within 24 hours after the patient has been removed from restraint or seclusion.

(iii) Each death known to the hospital that occurs within 1 week after restraint or seclusion where it is reasonable to assume that use of restraint or placement in seclusion contributed directly or indirectly to a patient's death, regardless of the type(s) of restraint used on the patient during this time. ''Reasonable to assume'' in this context includes, but is not limited to, deaths related to restrictions of movement for prolonged periods of time, or death related to chest compression, restriction of breathing, or asphyxiation.

(2) When no seclusion has been used and when the only restraints used on the patient are those applied exclusively to the patient's wrist(s), and which are composed solely of soft, non-rigid, cloth-like materials, the hospital staff must record in an internal log or other system, the following information:

(i) Any death that occurs while a patient is in such restraints.

(ii) Any death that occurs within 24 hours after a patient has been removed from such restraints.

(3) The staff must document in the patient's medical record the date and time the death was:

(i) Reported to CMS for deaths described in paragraph (g)(1) of this section; or

(ii) Recorded in the internal log or other system for deaths described in paragraph (g)(2) of this section.

(4) For deaths described in paragraph (g)(2) of this section, entries into the internal log or other system must be documented as follows:

(i) Each entry must be made not later than seven days after the date of death of the patient.

(ii) Each entry must document the patient's name, date of birth, date of death, name of attending physician or other licensed practitioner who is responsible for the care of the patient, medical record number, and primary diagnosis(es).

(iii) The information must be made available in either written or electronic form to CMS immediately upon request.

■ 46. Section 485.631 is amended by adding paragraph (e) to read as follows:

§ 485.631 Condition of participation: Staffing and staff responsibilities.

* * * * *

(e) *Standard: Unified and integrated medical staff for a CAH in a multi-facility system.* If a CAH is part of a system consisting of multiple separately certified hospitals, CAHs, and/or REHs, and the system elects to have a unified

and integrated medical staff for its member hospitals, CAHs, and/or REHs after determining that such a decision is in accordance with all applicable state and local laws, each separately certified CAH must demonstrate that:

(1) The medical staff members of each separately certified CAH in the system (that is, all medical staff members who hold specific privileges to practice at that CAH) have voted by majority, in accordance with medical staff bylaws, either to accept a unified and integrated medical staff structure or to opt out of such a structure and to maintain a separate and distinct medical staff for their respective CAH;

(2) The unified and integrated medical staff has bylaws, rules, and requirements that describe its processes for self-governance, appointment, credentialing, privileging, and oversight, as well as its peer review policies and due process rights guarantees, and which include a process for the members of the medical staff of each separately certified CAH (that is, all medical staff members who hold specific privileges to practice at that CAH) to be advised of their rights to opt out of the unified and integrated medical staff structure after a majority vote by the members to maintain a separate and distinct medical staff for their CAH;

(3) The unified and integrated medical staff is established in a manner that takes into account each member CAH's unique circumstances and any significant differences in patient populations and services offered in each hospital, CAH, and REH; and

(4) The unified and integrated medical staff establishes and implements policies and procedures to ensure that the needs and concerns expressed by members of the medical staff, at each of its separately certified hospitals, CAHs, and REHs, regardless of practice or location, are given due consideration, and that the unified and integrated medical staff has mechanisms in place to ensure that issues localized to particular hospitals, CAHs, and REHs are duly considered and addressed.

§ 485.635 [Amended]

■ 47. Section 485.635 is amended—

■ a. In paragraph (b)(2) introductory text by removing the reference ''42 U.S.C. 236a'' and adding in its place the reference ''42 U.S.C. 263a''; and

■ b. By redesignating paragraph (f) as § 485.614(h).

■ 48. Section 485.640 is amended by adding paragraph (g) to read as follows:

§ 485.640 Condition of participation: Infection prevention and control and antibiotic stewardship programs.

* * * * *

(g) *Standard: Unified and integrated infection prevention and control and antibiotic stewardship programs for a CAH in a multi-facility system.* If a CAH is part of a system consisting of multiple separately certified hospitals, CAHs, and/or REHs using a system governing body that is legally responsible for the conduct of two or more hospitals, CAHs, and/or REHs, the system governing body can elect to have unified and integrated infection prevention and control and antibiotic stewardship programs for all of its member facilities after determining that such a decision is in accordance with all applicable state and local laws. The system governing body is responsible and accountable for ensuring that each of its separately certified CAHs meets all of the requirements of this section. Each separately certified CAH subject to the system governing body must demonstrate that:

(1) The unified and integrated infection prevention and control and antibiotic stewardship programs are established in a manner that takes into account each member CAH's unique circumstances and any significant differences in patient populations and services offered in each CAH;

(2) The unified and integrated infection prevention and control and antibiotic stewardship programs establish and implement policies and procedures to ensure that the needs and concerns of each of its separately certified CAHs, regardless of practice or location, are given due consideration;

(3) The unified and integrated infection prevention and control and antibiotic stewardship programs have mechanisms in place to ensure that issues localized to particular CAHs are duly considered and addressed; and

(4) A qualified individual (or individuals) with expertise in infection prevention and control and in antibiotic stewardship has been designated at the CAH as responsible for communicating with the unified infection prevention and control and antibiotic stewardship programs, for implementing and maintaining the policies and procedures governing infection prevention and control and antibiotic stewardship as directed by the unified infection prevention and control and antibiotic stewardship programs, and for providing education and training on the practical applications of infection prevention and control and antibiotic stewardship to CAH staff.

■ 49. Section 485.641 is amended by adding paragraph (f) to read as follows:

§ 485.641 Condition of participation: Quality assessment and performance improvement program.

* * * * *

(f) *Standard: Unified and integrated QAPI program for a CAH in a multi-facility system.* If a CAH is part of a system consisting of multiple separately certified hospitals, CAHs, and/or REHs using a system governing body that is legally responsible for the conduct of two or more hospitals, CAHs, and/or REHs, the system governing body can elect to have a unified and integrated QAPI program for all of its member facilities after determining that such a decision is in accordance with all applicable state and local laws. The system governing body is responsible and accountable for ensuring that each of its separately certified CAHs meets all of the requirements of this section. Each separately certified CAH subject to the system governing body must demonstrate that:

(1) The unified and integrated QAPI program is established in a manner that takes into account each member CAH's unique circumstances and any significant differences in patient populations and services offered in each CAH; and

(2) The unified and integrated QAPI program establishes and implements policies and procedures to ensure that the needs and concerns of each of its separately certified CAHs, regardless of practice or location, are given due consideration, and that the unified and integrated QAPI program has mechanisms in place to ensure that issues localized to particular CAHs are duly considered and addressed.

PART 489—PROVIDER AGREEMENTS AND SUPPLIER APPROVAL

■ 50. The authority citation for part 489 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395i–3, 1395x, 1395aa(m), 1395cc, 1395ff, and 1395hh.

■ 51. Section 489.2 is amended by adding paragraph (b)(11) to read as follows:

§ 489.2 Scope of part.

* * * * *

(b) * * *

(11) Rural emergency hospitals (REHs).

* * * * *

■ 52. Section 489.24 is amended in paragraph (b) by revising the definitions of ''Hospital'' and ''Participating hospital'' to read as follows:

§ 489.24 Special responsibilities of Medicare hospitals in emergency cases.

* * * * *

Hospital includes a critical access hospital as defined in section 1861(mm)(1) of the Act and a rural emergency hospital as defined in section 1861(kkk)(2).

* * * * *

Participating hospital means:

(i) A hospital;

(ii) A critical access hospital as defined in section 1861(mm)(1) of the Act that has entered into a Medicare provider agreement under section 1866 of the Act; or

(iii) A rural emergency hospital as defined in section 1861(kkk)(2) of the Act.

* * * * *

Dated: October 31, 2022.

Xavier Becerra,

Secretary, Department of Health and Human Services.

RIN 2060–AU69

Control of Air Pollution From Aircraft Engines: Emission Standards and Test Procedures

AGENCY: Environmental Protection Agency (EPA)

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is finalizing particulate matter (PM) emission standards and test procedures applicable to certain classes of engines used by civil subsonic jet airplanes (engines with rated output of greater than 26.7 kilonewtons (kN)) to replace the existing smoke standard for those engines. The EPA is adopting these standards under our authority in the Clean Air Act (CAA). These standards and test procedures are equivalent to the engine standards adopted by the United Nations' International Civil Aviation Organization (ICAO) in 2017 and 2020 and will apply to both new type design aircraft engines and in-production aircraft engines. The EPA, as well as the U.S. Federal Aviation Administration (FAA), actively participated in the ICAO proceedings in which the ICAO requirements were developed. These standards reflect the importance of the control of PM emissions and U.S. efforts to secure the highest practicable degree of uniformity in aviation regulations and standards. Additionally, the EPA is migrating, modernizing, and streamlining the existing regulations into a new part in the Code of Federal Regulations. As part of this update, the EPA is also aligning with ICAO by applying the smoke number standards to engines less than or equal to 26.7 kilonewtons rated output used on supersonic airplanes.

DATES: This final rule is effective on December 23, 2022. The incorporation by reference of certain material listed in this rule is approved by the Director of the Federal Register as of December 23, 2022.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA–HQ–OAR–2019–0660. All documents in the docket are listed on the *www.regulations.gov* website. Although listed in the index, some information is not publicly available, *e.g.,* confidential business information or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available either electronically through *www.regulations.gov* or in hard copy at the EPA Docket Center, WJC West Building, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The Docket Center's hours of operations are 8:30 a.m.–4:30 p.m., Monday–Friday (except Federal Holidays). For further information on the EPA Docket Center services and the current status, see: *https://www.epa.gov/dockets.*

I. General Information

A. Does this action apply to me?

This action will potentially affect companies that design and/or manufacture civil subsonic jet aircraft engines with a rated output of greater than 26.7 kN and those that design and/or manufacture civil jet engines with a rated output at or below 26.7 kN for use on supersonic airplanes. These potentially affected entities include the following:

Category	NAICS code [a]	Examples of potentially affected entities
Industry	336412	Manufacturers of new aircraft engines.

[a] North American Industry Classification System (NAICS).

This table lists the types of entities that the EPA is now aware could potentially be affected by this action. Other types of entities not listed in the table could also be regulated. To determine whether your activities are regulated by this action, you should carefully examine the relevant applicability criteria in 40 CFR parts 87, 1030, and 1031. If you have any questions regarding the applicability of this action to a particular entity, consult the person listed in the preceding **FOR FURTHER INFORMATION CONTACT** section.

For consistency purposes across the U.S. Code of Federal Regulations (CFR), common definitions for the words ''airplane,'' ''aircraft,'' ''aircraft engine,'' and ''civil aircraft'' are found at 14 CFR 1.1 and are used as appropriate throughout this new regulation under 40 CFR parts 87, 1030, and 1031.

B. Executive Summary

1. Summary of the Major Provisions of the Regulatory Action

The EPA is regulating PM emissions from certain aircraft engines through the adoption of domestic PM regulations that match the ICAO PM standards, which will be implemented and enforced in the United States. The covered engines are subsonic turbofan and turbojet aircraft engines with rated output (maximum thrust available for takeoff) of greater than 26.7 kN. These aircraft engines are used by civil subsonic jet airplanes generally for the purpose of commercial passenger and freight aircraft, as well as larger business jets. The EPA is adopting three different forms of PM standards: a PM mass standard in milligrams per kilonewton (mg/kN), a PM number standard in number of particles per kilonewton (#/kN), and a PM mass concentration standard in micrograms per cubic meter ($\mu g/m^3$). The applicable dates and coverage of these standards vary, as described in the following paragraphs, and more fully in sections IV.A, IV.B, and IV.C respectively.

First, the EPA is finalizing PM engine emission standards, in the form of both PM mass (mg/kN) and PM number (#/kN), for both new type design and in-production covered engines. The standards for in-production engines apply to those engines that are manufactured on or after January 1, 2023. The standards for new type designs apply to those engines whose initial type certification application is submitted on or after January 1, 2023. The in-production standards have different emission levels limits than the standards for new type designs. The different emission limits for new type designs and in-production engines depend on the rated output of the engines. Compliance with the PM mass and number standards will be done in accordance with the standard landing and take-off (LTO) test cycle, which is currently used for demonstrating compliance with gaseous emission standards (oxides of nitrogen (NO_X), hydrocarbons (HC), and carbon monoxide (CO) standards) for the covered engines.

Second, the EPA is adopting a PM engine emission standard in the form of maximum mass concentration ($\mu g/m^3$) for covered engines manufactured on or after January 1, 2023.[1] Compliance with the PM mass concentration standard will be done using the same test data that is developed to demonstrate compliance with the LTO-based PM mass and number standards. The PM mass concentration standard applies to the highest concentration of PM measured across the engine operating thrust range, not just at one of the four LTO thrust settings.

The PM mass concentration standard was developed by ICAO to provide, through a PM mass measurement, the equivalent smoke opacity or visibility control as afforded by the existing smoke number standard for the covered engines. Thus, the EPA is no longer applying the existing smoke number standard for new engines that will be subject to the PM mass concentration standard after January 1, 2023, but the EPA is maintaining smoke number standards for new engines not covered by the PM mass concentration standard (*e.g.,* in-production aircraft turbofan and turbojet engines with rated output less than or equal to 26.7 kN) and for engines already manufactured. This approach will essentially change the existing standard for covered engines from being based on a smoke measurement to a PM measurement.

Third, the EPA is finalizing testing and measurement procedures for the PM emission standards and various updates to the existing gaseous exhaust emissions test procedures. These test procedure provisions will implement the recent additions and amendments to the ICAO's regulations, which are codified in ICAO Annex 16, Volume II. As we have historically done, we are incorporating these test procedure additions and amendments to the ICAO Annex 16, Volume II into our regulations by reference.

The aircraft engine PM standards, test procedures and associated regulatory requirements are equivalent to the international PM standards and test procedures adopted by ICAO in 2017 and 2020 and promulgated in Annex 16, Volume II.[2] The United States and other member States of ICAO, as well as the world's aircraft engine manufacturers and other interested stakeholders, participated in the deliberations leading up to ICAO's adoption of the international aircraft engine PM emission standards.

In addition to the PM standards just discussed, the EPA is migrating most of the existing aircraft engine emissions regulations from 40 CFR part 87 to a new 40 CFR part 1031, and all the aircraft engine standards and requirements are specified in this new 40 CFR part 1031. Along with this migration, the EPA is restructuring the regulations to allow for better ease of use and allow for more efficient future updates. The EPA is also deleting some unnecessary definitions and regulatory provisions. Finally, the EPA is adopting several other minor technical amendments to the regulations, including applying smoke number standards to engines of less than or equal to 26.7 kilonewtons (kN) rated output used in supersonic airplanes.

2. Purpose of the Regulatory Action

In developing these standards, the EPA took into consideration the Agency's legal authority and the explicit requirements under CAA section 231, including those relating to safety, noise, lead time and costs. The EPA further considered the importance of controlling PM emissions, international harmonization of aviation requirements, and the international nature of the aircraft industry and air travel. In addition, the EPA gave significant weight to the United States' treaty obligations under the Chicago Convention, as discussed in Section II.B, in determining the need for and appropriate levels of PM standards. These considerations led the EPA to conclude that adopting standards for PM emissions from certain classes of

[1] The implementation date for ICAO's PM maximum mass concentration standards is on or after January 1, 2020. The PM maximum mass concentration standards finalized in this action will have an implementation date of January 1, 2023 (instead of January 1, 2020).

[2] ICAO, 2017: *Aircraft Engine Emissions,* International Standards and Recommended Practices, Environmental Protection, Annex 16, Volume II, Fourth Edition, July 2017. Available at *https://www.icao.int/publications/catalogue/cat_2022_en.pdf* (last accessed October 31, 2022). The ICAO Annex 16 Volume II is found on page 17 of the ICAO Products & Services Catalog, English Edition of the 2022 catalog, and it is copyright protected; Order No. AN16–2. The ICAO Annex 16, Volume II, Fourth Edition, includes Amendment 10 of January 1, 2021. Amendment 10 is also found on page 17 of this ICAO catalog, and it is copyright protected; Order No. AN 16–2/E/12.

covered aircraft engines that are equivalent in scope, stringency, and effective date to the PM standards adopted by ICAO are appropriate at this time.

One of the core functions of ICAO is to adopt Standards and Recommended Practices on a wide range of aviation-related matters, including aircraft emissions. As a member State of ICAO, the United States actively participates in the development of new environmental standards, within ICAO's Committee on Aviation Environmental Protection (CAEP), including the PM standards adopted by ICAO in both 2017 and 2020. Due to the international nature of the aviation industry, there is an advantage to working within ICAO to secure the highest practicable degree of uniformity in international aviation regulations and standards. Uniformity in international aviation regulations and standards is a goal of the Chicago Convention, because it ensures that passengers and the public can expect similar levels of protection for safety and human health and the environment regardless of manufacturer, airline, or point of origin of a flight. Further, it helps reduce barriers in the global aviation market, benefiting both U.S. aircraft engine manufacturers and consumers.

When developing new emission standards, ICAO/CAEP seeks to capture the technological advances made in the control of emissions through the adoption of anti-backsliding standards reflecting the current state of technology. The PM standards that the EPA is adopting were developed using this approach. Thus, the adoption of these aviation standards into U.S. law will simultaneously prevent aircraft engine PM levels from increasing beyond their current levels, align U.S. domestic standards with the ICAO standards for international harmonization, and meet the United States' treaty obligations under the Chicago Convention.

These standards will also allow U.S. manufacturers of covered aircraft engines to remain competitive in the global marketplace (as described in Section IV). In the absence of U.S. standards implementing the ICAO aircraft engine PM emission standards, U.S. civil aircraft engine manufacturers could be forced to seek PM emissions certification from an aviation certification authority of another country (not the FAA) to market and operate their aircraft engines internationally. U.S. manufacturers could be at a significant disadvantage if the United States fails to adopt standards that are at least as stringent as the ICAO standards for PM emissions. The ICAO aircraft engine PM emission standards have been adopted by other ICAO member states that certify aircraft engines.[3] The action to adopt in the U.S. PM standards that match the ICAO standards will help ensure international consistency and acceptance of U.S.-manufactured engines worldwide.

3. Environmental Justice

The EPA defines environmental justice as the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies. Section III.G discusses the potential environmental justice concerns associated with exposure to aircraft PM near airports.

Studies have reported that many communities in close proximity to airports are disproportionately represented by people of color and low-income populations (as described in Section III.G). Separate from this rulemaking, the EPA is conducting an analysis of communities residing near airports where jet aircraft operate to more fully understand disproportionately high and adverse human health or environmental effects on people of color, low-income populations, and/or Indigenous peoples. The results of this analysis could help inform additional policies to reduce pollution in communities living in close proximity to airports.

As described in Section V.C, while newer aircraft engines typically have significantly lower emissions than existing aircraft engines, the standards in this final rule are technology-following to align with ICAO's standards and are not expected to, in and of themselves, result in further reductions in PM from these engines. Therefore, we do not anticipate the standards to result in an improvement in air quality for those who live near airports where these aircraft operate.

C. EPA Future Work on Aircraft Engine PM Standards Beyond the Scope of This Final Rule

While the EPA believes that adopting PM standards that match those developed and adopted by ICAO is the proper course of action in this final rule, the EPA views the standards adopted in this action as just one appropriate step in our efforts to control PM emissions from aircraft engines. Consistent with our statutory authority, which directs the EPA to issue, and permits the EPA to revise, standards ''from time to time,'' CAA section 231(a)(2)(A) and (a)(3), after consultation with the FAA (CAA section 231(a)(2)(B)(i)), the EPA views our regulation of aircraft PM emissions as a long-term process, with the potential for successive standards of increasing stringency. Future stringencies may include technology-forcing standards, where appropriate, provided that such standards do not significantly increase noise and adversely affect safety in accordance with CAA section 231(a)(2)(B)(ii). The EPA intends to continue to assess available emission control technologies and associated lead times, so that if the EPA were to pursue more stringent standards in the future, the EPA would provide the necessary time to permit the development and application of the requisite technology—giving appropriate consideration to the cost of compliance within such period.

The EPA continues to believe that ICAO is the most appropriate venue in which to undertake such work. To that end, the U.S. delegation to ICAO/CAEP, with significant input from EPA, developed a position paper to the CAEP/12 meeting in February 2022.[4] In this paper, the United States proposed several topics for CAEP to consider for future work on emissions items. Among the U.S. proposals was a call to update the PM standards beyond those already adopted by CAEP that would reflect best available technologies for future, to-be-developed, standards. The United States also proposed work to develop an updated metric to improve the effectiveness of future NO_X emission standards, as well as an integrated standards-setting process to simultaneously update both PM and NO_X standards for aircraft engines given the strong interdependency between engine NO_X and PM levels.[5] The EPA also advocated for improved modeling techniques that would better reflect the costs and emission reductions and better inform decision making around proposed CAEP emission standard levels.

[3] Aside from the FAA in the United States, the only other civil aviation authorities that routinely certify airplane engines are Transport Canada and the European Union Aviation Safety Agency, both of which have already adopted the ICAO airplane engine particulate matter emission standards.

[4] U.S. EPA, Mueller, J. Memorandum to Docket ID No. EPA–HQ–OAR–2019–0660, ''United States Position Papers to CAEP/12 Meeting,'' August 19, 2022.

[5] In this context, the metric is the form of the standard (in this case, mass of pollutant per unit of thrust), as well as the form of the regulatory limit line and any correlating parameters included. In the case of aircraft engine NO_X, the regulatory limit line is a function of engine overall pressure ratio.

CAEP did not accept the U.S. request to work on updated aircraft engine NO_X and PM standards during the current CAEP/13 cycle due to concerns that the resources needed for such work would negatively impact efforts to update the international airplane CO_2 and noise standards. However, work on an improved NO_X metric was approved and is underway this CAEP cycle, with an understanding that it is laying the groundwork for a potential update of the NO_X and PM standards during the next CAEP cycle.[6] Further, improving the cost and emission reduction modeling methodology has been agreed to as a work item for this CAEP cycle. The EPA is actively working within CAEP on both these efforts, and the EPA will continue to advocate for efforts in CAEP that will result in the development of future PM emission standards which reflect best available technologies.

D. Judicial Review, Administrative Reconsideration, and Severability

This final action is ''nationally applicable'' within the meaning of CAA section 307(b)(1) because it is expressly listed in the section (*i.e.,* ''any standard under section [231] of this title''). Under CAA section 307(b)(1), petitions for judicial review of this action must be filed in the U.S. Court of Appeals for the District of Columbia Circuit within 60 days from the date this final action is published in the **Federal Register**. Filing a petition for reconsideration by the Administrator of this final action does not affect the finality of the action for the purposes of judicial review, nor does it extend the time within which a petition for judicial review must be filed and shall not postpone the effectiveness of such rule or action. Under CAA section 307(b)(2), the requirements established by this final rule may not be challenged separately in any civil or criminal proceedings brought by the EPA to enforce the requirements.

CAA section 307(d)(7)(B) further provides that only an objection to a rule or procedure which was raised with reasonable specificity during the period for public comment (including any public hearing) may be raised during judicial review. This section also provides a mechanism for the EPA to reconsider the rule if the person raising an objection can demonstrate to the Administrator that it was impracticable to raise such objection within the period for public comment or if the grounds for such objection arose after the period for public comment (but within the time specified for judicial review) and if such objection is of central relevance to the outcome of the rule. Any person seeking to make such a demonstration should submit a Petition for Reconsideration to the Office of the Administrator, U.S. EPA, Room 3000, WJC South Building, 1200 Pennsylvania Ave. NW, Washington, DC 20460, with a copy to both the person listed in the **FOR FURTHER INFORMATION CONTACT** section, and the Associate General Counsel for the Air and Radiation Law Office, Office of General Counsel (Mail Code 2344A), U.S. EPA, 1200 Pennsylvania Ave. NW, Washington, DC 20460. In addition, the EPA requests that an electronic copy of the Petition for Reconsideration also be sent to the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

The following portions of this rulemaking are mutually severable from each other: (1) the PM mass concentration standard in Section IV.C; (2) the PM mass and number standards in sections IV.A and IV.B; (3) the test and measurement procedures in Section IV.D; (4) the reporting requirements in Section IV.E; (5) those changes to 40 CFR parts 87 and 1031 described in Section VII that are not intended solely to implement the new PM standards; and (6) the changes to 40 CFR part 1030 described in Section VII.C.[7] The PM mass concentration standard and the PM mass and number standards serve different purposes, as described in more detail in Section IV. The reporting requirements (including those for PM) in Section IV.E predate this final rule as they were established by a prior Information Collection Request and are simply being added to the CFR in this action for the convenience of the entity required to provide a production report. Similarly, while the test and measurement procedures in Section IV.D will be used in determining compliance with the new PM standards, they are not dependent on the PM standards, and they are also required to be used to comply with the reporting requirements separate from the actual PM standards. The regulatory migration and other technical amendments in Section VII are not related to the implementation of the new PM standards. If any of the portions of this rule the EPA has identified as mutually severable from each other are vacated by a reviewing court, the EPA intends for the portions of this rule which are not vacated by a reviewing court to remain effective, and would only take action to remove the portions of the rule which are vacated from the CFR, leaving the other portions of the rule in effect.[8] Finally, if a reviewing court were to vacate the PM mass concentration standard in Section IV.C, the EPA intends to reinstate the smoke number standard contained in 40 CFR 1031.60(a)(5) for engines with a rated output of greater than 26.7 kN, such that the smoke number standard would go back into effect for those engines.

II. Introduction: Context for This Action

The EPA has been regulating PM emissions from aircraft engines since the 1970s when the first smoke number standards were adopted. This section provides context for the final rule, which adopts three PM standards for aircraft engines (a PM mass standard, a PM number standard, and a PM mass concentration standard). This section includes a description of the EPA's statutory authority, the U.S. role in ICAO and developing international emission standards, and the relationship between the U.S. standards and the ICAO international standards.

A. The EPA's Statutory Authority and Responsibilities Under the Clean Air Act

CAA section 231(a)(2)(A) directs the Administrator of the EPA to, from time to time, propose aircraft engine emission standards applicable to the emission of any air pollutant from classes of aircraft engines which in his or her judgment causes or contributes to air pollution that may reasonably be anticipated to endanger public health or welfare.[9] CAA section 231(a)(2)(B) directs the EPA to consult with the Administrator of the Federal Aviation Administration (FAA) on such standards, and it prohibits the EPA from changing aircraft emission standards if such a change would significantly increase noise and adversely affect safety.[10] CAA section 231(a)(3) provides that after we provide notice and an opportunity for a public hearing on standards, the Administrator shall issue such standards ''with such modifications as he deems

[6] ICAO, 2022: Committee on Aviation Environmental Protection (CAEP), Report of the Twelfth Meeting, Montreal, February 7–17, 2022, Doc 10176, CAEP/12.

[7] Certain portions may also be internally severable.

[8] The EPA considers those sections of regulatory text which are included only to implement the new PM standards to all be within 40 CFR part 1031. Specifically, the regulatory text solely related to implementing the PM mass concentration standard is contained in §§ 1031.30(a)(2)(ii), 1031.60(a)(6), and 1031.130(c)(1)(v), as well as the phrase ''before January 1, 2023'' in § 1031.60(a)(5), while the regulatory text solely related to implementing the PM mass and number standards is contained in §§ 1031.30(a)(2)(iii) and (iv), 1031.60(b), and 1031.130(c)(1)(vi) and (vii). All other regulatory changes are severable from the PM standards and are intended to remain in effect if any of the PM standards were to be set aside by a reviewing court.

[9] 42 U.S.C. 7571(a)(2)(A).

[10] 42 U.S.C. 7571(a)(2)(B)(i)–(ii).

appropriate.'' [11] In addition, under CAA section 231(b) the EPA is required to ensure, in consultation with the U.S. Department of Transportation (DOT), that the effective date of any standard provides the necessary time to permit the development and application of the requisite technology, giving appropriate consideration to the cost of compliance within such period.[12]

Consistent with its longstanding approach [13] and the District of Columbia (D.C.) Circuit precedent,[14] the EPA interprets its authority under CAA section 231 as providing the Administrator wide discretion in determining what standards are appropriate, after consideration of the statute and other relevant factors, such as applicable international standards. While the statutory language of CAA section 231 is not identical to other provisions of Title II of the CAA that direct the EPA to establish technology-based standards for various types of mobile sources, the EPA interprets its authority under CAA section 231 to be similar to those provisions that authorize us to identify a reasonable balance of specified emissions reduction, cost, safety, noise, and other factors.[15] However, we are not compelled under CAA section 231 to obtain the ''greatest degree of emission reduction achievable'' as per CAA sections 202(a)(3)(A) and 213(a)(3). The EPA does not interpret the Act as requiring the agency to give subordinate status to other factors such as cost, safety, and noise in determining what standards are reasonable for aircraft engines.[16] Rather, the EPA has great flexibility under CAA section 231 in determining what standard is most reasonable for aircraft engines. Moreover, in light of the U.S. ratification of the Chicago Convention, EPA has historically given significant weight to uniformity with international requirements as a factor in setting aircraft engine standards. The fact that most airplanes already meet the standards does not in itself mean that the standards are inappropriate, provided the agency has a reasonable basis after considering all the relevant factors. By the same token, a technology-forcing standard would not be precluded by CAA section 231, in light of the forward-looking language of CAA section 231(b).[17]

Thus, as in past rulemakings, the EPA notes its authority under the CAA to issue reasonable aircraft engine standards with either technology-following or technology-forcing results, provided that, in either scenario, the Agency has a reasonable basis after considering all the relevant factors for setting the standard.[18] Once the EPA adopts standards, CAA section 232 then directs the Secretary of Transportation to prescribe regulations to ensure compliance with the EPA's standards.[19] Finally, CAA section 233 vests the authority to promulgate emission standards for aircraft or aircraft engines only in the Federal Government. States are preempted from adopting or enforcing any standard respecting aircraft or aircraft engine emissions unless such standard is identical to the EPA's standards.[20]

B. The Role of the United States in International Aircraft Agreements

The Convention on International Civil Aviation (commonly known as the Chicago Convention) was signed in 1944 at the Diplomatic Conference held in Chicago. It was ratified by the United States on August 9, 1946. The Chicago Convention establishes the legal framework for the development of international civil aviation. The primary objective is ''that international civil aviation may be developed in a safe and orderly manner and that international air transport services may be established on the basis of equality of opportunity and operated soundly and economically.'' [21] In 1947, ICAO was established, and later in that same year, ICAO became a specialized agency of the United Nations (UN). ICAO sets international standards for aviation safety, security, efficiency, capacity, and environmental protection and serves as the forum for cooperation in all fields of international civil aviation. ICAO works with the Chicago Convention's member States and global aviation organizations to develop international Standards and Recommended Practices (SARPs), which member States reference when developing their domestic civil aviation regulations. The United States is one of 193 currently participating ICAO member States.[22] [23] ICAO standards are not self-implementing. They must first be adopted into domestic law to be legally binding in any member State.

In the interest of global harmonization and international air commerce, the Chicago Convention urges its member States to ''collaborate in securing the highest practicable degree of uniformity in regulations, standards, procedures and organization in relation to aircraft, [. . .] in all matters which such uniformity will facilitate and improve air navigation.'' [24] The Chicago Convention also recognizes that member States may adopt national standards that are more or less stringent than those agreed upon by ICAO or standards that are different in character or that comply with the ICAO standards by other means. Any member State that finds it impracticable to comply in all respects with any international standard or procedure, or that determines it is necessary to adopt regulations or practices differing in any particular respect from those established by an international standard, is required to give notification to ICAO of the differences between its own practice and that established by the international standard.[25]

ICAO's work on the environment focuses primarily on those problems that benefit most from a common and coordinated approach on a worldwide basis, namely aircraft noise and engine emissions. SARPs for the certification of aircraft noise and aircraft engine emissions are covered by Annex 16 of the Chicago Convention. To continue to address aviation environmental issues, in 2004, ICAO established three environmental goals: (1) limit or reduce the number of people affected by significant aircraft noise; (2) limit or reduce the impact of aviation emissions

[13] See 70 FR 69664, 69676 (November 17, 2005); 86 FR 2136, 2157 (January 11, 2021).

[14] The U.S. Court of Appeals for the D.C. Circuit has held that CAA section 231 confers an unusually ''broad'' degree of discretion on EPA to ''weigh various factors'' and adopt aircraft engine emission standards as the Agency determines are reasonable. *Nat'l Ass'n of Clean Air Agencies* v. *EPA,* 489 F.3d 1221, 1229–30 (D.C. Cir. 2007).

[15] *See, e.g., Husqvarna AB* v. *EPA,* 254 F.3d 195 (D.C. Cir. 2001) (upholding the EPA's promulgation of technology-based standards for small non-road engines under CAA section 213(a)(3)).

[16] *Cf. Sierra Club* v. *EPA,* 325 F.3d 374, 378–380 (D.C. Cir. 2003) (holding that even a Clean Air Act provision requiring the ''greatest emission reduction achievable'' did not bind the Agency to weigh ''pure technological capability'' to the exclusion of other factors like cost, lead time, safety nor ''resolve how [the EPA] should weigh all these factors'').

[17] *See* 38 FR19088 (July 17, 1973); 41 FR 34722 (August 16, 1976); *see also NACAA,* 489 F.3d at 1229–30.

[22] Members of ICAO's Assembly are generally termed member States or contracting States.

[23] There are currently 193 contracting States (member States) according to ICAO's website. The list of ICAO member States is available in the docket for this rulemaking under document identification number EPA–HQ–OAR–2019–0660–0011.

[24] ICAO, 2006: Convention on International Civil Aviation, Article 37, Ninth Edition, Document 7300/9.

[25] Id.

on local air quality; and (3) limit or reduce the impact of aviation greenhouse gas (GHG) emissions on the global climate.

The Chicago Convention has a number of other features that govern international commerce. First, member States that wish to use aircraft in international transportation must adopt emission standards that are at least as stringent as ICAO's standards if they want to ensure recognition of their airworthiness certificates by other member States. Member States may ban the use of any aircraft within their airspace that does not meet ICAO standards.[26] Second, the Chicago Convention indicates that member States are required to recognize the airworthiness certificates issued or rendered valid by the contracting State in which the aircraft is registered provided the requirements under which the certificates were issued are equal to or above ICAO's minimum standards.[27] Third, to ensure that international commerce is not unreasonably constrained, a member State that cannot meet or deems it necessary to adopt regulations differing from the international standard is obligated to notify ICAO of the differences between its domestic regulations and ICAO standards.[28]

ICAO's Committee on Aviation Environmental Protection (CAEP), which consists of members and observers from States as well as intergovernmental and non-governmental organizations representing the aviation industry and environmental interests, undertakes ICAO's technical work in the environmental field. The Committee is responsible for evaluating, researching, and recommending measures to the ICAO Council that address the environmental impacts of international civil aviation. CAEP's terms of reference indicate that ''CAEP's assessments and proposals are pursued taking into account: technical feasibility; environmental benefit; economic reasonableness; interdependencies of measures (for example, among others, measures taken to minimize noise and emissions); developments in other fields; and international and national programs.'' [29] The ICAO Council reviews and adopts the recommendations made by CAEP. It then reports to the ICAO Assembly, the highest body of the organization, where the main policies on aviation environmental protection are adopted and translated into Assembly Resolutions. If ICAO adopts a CAEP proposal for a new environmental standard, it then becomes part of ICAO standards and recommended practices (Annex 16 to the Chicago Convention).[30] [31]

The FAA plays an active role in ICAO/CAEP, including serving as the representative (member) of the United States at annual ICAO/CAEP Steering Group meetings, as well as the ICAO/CAEP triennial meetings, and contributing technical expertise to CAEP's working groups. The EPA serves as an advisor to the U.S. member at the annual ICAO/CAEP Steering Group and triennial ICAO/CAEP meetings, while also contributing technical expertise to CAEP's working groups and assisting and advising the FAA on aviation emissions, technology, and environmental policy matters. In turn, the FAA assists and advises the EPA on aviation environmental issues, technology, and airworthiness certification matters.

CAEP's predecessor at ICAO, the Committee on Aircraft Engine Emissions (CAEE), adopted the first international SARPs for aircraft engine emissions which were proposed in 1981.[32] These standards limited aircraft engine emissions of HC, CO, and NO_X. The 1981 standards applied to newly manufactured engines, which are those engines manufactured after the effective date of the regulations—also referred to as in-production engines. In 1993, ICAO adopted a CAEP/2 proposal to tighten the original NO_X standard by 20 percent and amend the test procedures.[33] These 1993 standards applied both to newly certificated turbofan engines (those engine models that received their initial type certificate after the effective date of the regulations, also referred to as new type design engines) and to in-production engines; the standards had different effective dates for newly certificated engines and in-production engines. In 1995, CAEP/3 recommended a further tightening of the NO_X standards by 16 percent and additional test procedure amendments, but in 1997 the ICAO Council rejected this stringency proposal and approved only the test procedure amendments. At the CAEP/4 meeting in 1998, the Committee adopted a similar 16 percent NO_X reduction proposal, which ICAO approved in 1998. Unlike the CAEP/2 standards, the CAEP/4 standards applied only to new type design engines after December 31, 2003, and not to in-production engines, leaving the CAEP/2 standards applicable to in-production engines. In 2004, CAEP/6 recommended a 12 percent NO_X reduction, which ICAO approved in 2005.[34] [35] The CAEP/6 standards applied to new engine designs certificated after December 31, 2007, again leaving the CAEP/2 standards in place for in-production engines before January 1, 2013. In 2010, CAEP/8 recommended a further tightening of the NO_X standards by 15 percent for new engine designs certificated after December 31, 2013.[36] [37] The Committee also recommended that the CAEP/6 standards be applied to in-production engines on or after January 1, 2013, which cut off the production of CAEP/2 and CAEP/4 compliant engines with the exception of spare engines; ICAO adopted these as standards in 2011.[38]

At the CAEP/10 meeting in 2016, the Committee agreed to the first airplane

The ICAO Annex 16, Volume II, Fourth Edition, includes Amendment 10 of January 1, 2021. Amendment 10 is also found on page 17 of this ICAO catalog, and it is copyright protected; Order No. AN 16–2/E/12.

[31] CAEP develops new emission standards based on an assessment of the technical feasibility, cost, and environmental benefit of potential requirements.

[32] ICAO, 2017: *Aircraft Engine Emissions: Foreword,* International Standards and Recommended Practices, Environmental Protection, Annex 16, Volume II, Fourth Edition, July 2017. The ICAO Annex 16, Volume II, Fourth Edition, includes Amendment 10 of January 1, 2021.

[33] CAEP conducts its work triennially. Each 3-year work cycle is numbered sequentially, and that identifier is used to differentiate the results from one CAEP meeting to another by convention. The first technical meeting on aircraft emission standards was CAEP's predecessor, *i.e.,* CAEE. The first meeting of CAEP, therefore, is referred to as CAEP/2.

[34] CAEP/5 did not address new aircraft engine emission standards.

[35] ICAO, 2017: *Aircraft Engine Emissions,* International Standards and Recommended Practices, Environmental Protection, Annex 16, Volume II, Fourth Edition, July 2017. The ICAO Annex 16, Volume II, Fourth Edition, includes Amendment 10 of January 1, 2021.

[36] CAEP/7 did not address new aircraft engine emission standards.

[37] ICAO, 2010: Committee on Aviation Environmental Protection (CAEP), Report of the Eighth Meeting, Montreal, February 1–12, 2010, CAEP/8–WP/80. Available in Docket EPA–HQ–OAR–2010–0687.

[38] ICAO, 2017: *Aircraft Engine Emissions,* International Standards and Recommended Practices, Environmental Protection, Annex 16, Volume II, Fourth Edition, July 2017, Amendment 10. CAEP/8 corresponds to Amendment 7 effective on July 18, 2011. The ICAO Annex 16, Volume II, Fourth Edition, includes Amendment 10 of January 1, 2021.

carbon dioxide (CO_2) emission standards, which ICAO approved in 2017. The CAEP/10 CO_2 standards apply to new type design airplanes for which the application for a type certificate will be submitted on or after January 1, 2020, some modified in-production airplanes on or after January 1, 2023, and all applicable in-production airplanes manufactured on or after January 1, 2028.

At the CAEP/10 and CAEP/11 meetings in 2016 and 2019, the Committee agreed to three different forms of international PM standards for aircraft engines. Maximum PM mass concentration standards were agreed to at CAEP/10, and PM mass and number standards were agreed to at CAEP/11. ICAO adopted the PM maximum mass concentration standards in 2017 and the PM mass and number standards in 2020. The CAEP/10 PM standards apply to in-production engines on or after January 1, 2020, and the CAEP/11 PM standards apply to new-type and in-production engines on or after January 1, 2023. In addition to CAEP/10 agreeing to a maximum PM mass concentration standard, CAEP/10 adopted a reporting requirement where aircraft engine manufacturers were required to provide PM mass concentration, PM mass, and PM number emissions data—and other related parameters—by January 1, 2020 for in-production engines.[39]

C. The Relationship Between the EPA's Regulation of Aircraft Engine Emissions and International Standards

Domestically, as required by the CAA, the EPA has been engaged in reducing harmful air pollution from aircraft engines for over 40 years, regulating gaseous exhaust emissions, smoke, and fuel venting from engines.[40] We have periodically revised these regulations.[41] The EPA's actions to regulate certain pollutants emitted from aircraft engines come directly from the authority in CAA section 231, and we have aligned the U.S. emission requirements with those adopted by ICAO. As described in Section II.B, the ICAO/CAEP terms of reference includes technical feasibility.[42] Technical feasibility has been interpreted by CAEP as technology demonstrated to be safe and airworthy and available for application over a sufficient range of newly certificated aircraft.[43] This interpretation resulted in all previous ICAO emission standards, and the EPA's standards reflecting them, being anti-backsliding standards (*i.e.,* the standards would not reduce aircraft PM emissions below current engine emission levels), which are technology-following.

For many years the EPA has regulated aircraft engine PM emissions with smoke number standards.[44] Since setting the original smoke number standards in 1973, the EPA has periodically revised these standards. The EPA amended its smoke standards to align with ICAO's smoke standards in 1982 [45] and again in 1984.[46] Additionally, the EPA has amended the test procedures for measuring smoke emissions [47] and modified the effective dates and compliance schedule for smoke emission standards periodically.[48] Now, we are adopting three different forms of aircraft engine PM standards: a PM mass concentration standard ($\mu g/m^3$), a PM mass standard (mg/kN), and PM number standard (#/kN). These aircraft engine PM emission standards are a different way of regulating and/or measuring [49] aircraft engine PM emissions in comparison to smoke number emission standards.

Internationally, the EPA and the FAA have worked within the standard-setting process of ICAO (CAEP and its predecessor, CAEE) since the 1970s to help establish international emission standards and related requirements, which individual member States adopt into domestic law and regulations. Historically, under this approach, international emission standards have first been adopted by ICAO, and subsequently the EPA has initiated rulemakings under CAA section 231 to establish domestic standards that are harmonized with ICAO's standards. After the EPA promulgates aircraft engine emission standards, CAA section 232 requires the FAA to issue regulations to ensure compliance with the EPA aircraft engine emission standards when certificating aircraft pursuant to its authority under title 49 of the U.S. Code. This rulemaking will continue this historical rulemaking approach.

The EPA and FAA worked from 2009 to 2019 within the ICAO/CAEP standard-setting process on the development of the three different forms of international aircraft engine PM emission standards (a PM mass concentration standard, a PM mass standard, and a PM particle number standard). In this action, we are adopting PM standards equivalent to ICAO's three different forms of aircraft engine PM emission standards. Adoption of these standards will meet

[39] More specifically, the international PM maximum mass concentration standard applies to all turbofan and turbojet engines of a type or model, and their derivative versions, with a rated output greater than 26.7 kN and whose date of manufacture of the individual engine is on or after January 1, 2020 (or those engines manufactured on or after January 1, 2020).

[46] Control of Air Pollution From Aircraft and Aircraft Engines; Smoke Emission Standard, Final Rule, 49 FR 31873 (August 9, 1984) (bifurcating EPA's smoke standard for new engines into two regimes—one for engines with rated output less than 26.7 kilonewtons and one for engines with rated output equal to or greater than 26.7 kilonewtons).

[47] 62 FR 25356 (harmonizing EPA procedures with recent amendments to ICAO test procedures); 70 FR 69664 (same); 77 FR 36342.

[48] Amendment to Standards, Final Rule, 43 FR 12614 (March 24, 1978) (setting back by two years the effective date for all gaseous emission standards for newly manufactured aircraft and aircraft gas turbine engines); Control of Air Pollution from Aircraft and Aircraft Engines; Extension of Compliance Date for Emission Standards Applicable to JT3D Engines, Final Rule, 44 FR 64266 (November 6, 1979) (extending the final compliance date for smoke emission standards applicable to the JT3D aircraft engines by roughly 3.5 years); Control of Air Pollution from Aircraft; Amendment to Standards, Final Rule, 45 FR 86946, (December 31, 1980) (setting back by two years the effective date for all gaseous emission standards which would otherwise have been effective on January 1,1981, for aircraft gas turbine engines); Control of Air Pollution from Aircraft and Aircraft Engines, Final Rule, 46 FR 2044 (January 8, 1981) (extending the applicability of the temporary exemption provision of the standards for smoke and fuel venting emissions from some in-use aircraft engines); Control of Air Pollution From Aircraft and Aircraft Engines; Smoke Emission Standard, Final Rule, 48 FR 46481 (October 12, 1983) (staying the smoke regulations for new turbojet and turbofan engines rated below 26.7 kN thrust).

[49] Also, as described in Section IV.D, the final PM standards employ a different method for measuring aircraft engine PM emissions compared to the historical smoke number emission standards.

the United States' obligations under the Chicago Convention and will also help ensure global acceptance of FAA airworthiness certification.

In December 2018, the EPA issued an information collection request (ICR) that matches the CAEP/10 PM reporting requirements described in Section II.B.[50] In addition to the PM standards, this rulemaking codifies the reporting requirements implemented by this 2018 EPA ICR into the EPA regulations, as described in Section IV.E. Also, in a similar time frame as this rulemaking, the EPA will be renewing this ICR (the ICR needs to be renewed triennially).

III. Particulate Matter Impacts on Air Quality and Health

A. Background on Particulate Matter

Particulate matter (PM) is a highly complex mixture of solid particles and liquid droplets distributed among numerous atmospheric gases which interact with solid and liquid phases. Particles range in size from those smaller than 1 nanometer (10^{-9} meter) to over 100 micrometers (μm, or 10^{-6} meter) in diameter. For reference, a typical strand of human hair is 70 μm in diameter and a grain of salt is about 100 μm. Atmospheric particles can be grouped into several classes according to their aerodynamic and physical sizes. Generally, the three broad classes of particles include ultrafine particles (UFPs, generally considered as particulates with a diameter less than or equal to 0.1 μm (typically based on physical size, thermal diffusivity or electrical mobility)), ''fine'' particles ($PM_{2.5}$; particles with a nominal mean aerodynamic diameter less than or equal to 2.5 μm), and ''thoracic'' particles (PM_{10}; particles with a nominal mean aerodynamic diameter less than or equal to 10 μm). Particles that fall within the size range between $PM_{2.5}$ and PM_{10}, are referred to as ''thoracic coarse particles'' ($PM_{10-2.5}$, particles with a nominal mean aerodynamic diameter less than or equal to 10 μm and greater than 2.5 μm).

Particles span many sizes and shapes and may consist of hundreds of different chemicals. Particles are emitted directly from sources and are also formed through atmospheric chemical reactions between PM precursors; the former are often referred to as ''primary'' particles, and the latter as ''secondary'' particles. Particle concentration and composition varies by time of year and location, and, in addition to differences in source emissions, is affected by several weather-related factors, such as temperature, clouds, humidity, and wind. Ambient levels of PM are also impacted by particles' ability to shift between solid/liquid and gaseous phases, which is influenced by concentration, meteorology, and especially temperature.

Fine particles are produced primarily by combustion processes and by transformations of gaseous emissions (*e.g.,* sulfur oxides (SO_X), NO_X and volatile organic compounds (VOCs)) in the atmosphere. The chemical and physical properties of $PM_{2.5}$ may vary greatly with time, region, meteorology, and source category. Thus, $PM_{2.5}$ may include a complex mixture of different components including sulfates, nitrates, organic compounds, elemental carbon, and metal compounds. These particles can remain in the atmosphere for days to weeks and travel through the atmosphere hundreds to thousands of kilometers.

Particulate matter is comprised of both volatile and non-volatile PM. PM emitted from the engine is known as non-volatile PM (nvPM), and PM formed from transformation of an engine's gaseous emissions are defined as volatile PM.[51] Because of the difficulty in measuring volatile PM, which is formed in the engine's exhaust plume and is significantly influenced by ambient conditions, the EPA is adopting standards only for the emission of nvPM.

B. Health Effects of Particulate Matter

Scientific studies show exposure to ambient PM is associated with a broad range of health effects. These health effects are discussed in detail in the U.S. EPA's Integrated Science Assessment for Particulate Matter (PM ISA), which was finalized in December 2019 (2019 PM ISA), with a more targeted evaluation of studies published since the literature cutoff date of the 2019 PM ISA in the Supplement to the Integrated Science Assessment for PM (Supplement).[52] [53] Further discussion of PM-related health effects can also be found in the 2022 Policy Assessment for the review of the PM National Ambient Air Quality Standards (NAAQS).[54] [55]

The 2019 PM ISA concludes that human exposures to ambient $PM_{2.5}$ are associated with a number of adverse health effects and characterizes the weight of evidence for broad health categories (*e.g.,* cardiovascular effects, respiratory effects, etc.).[56] The 2019 PM ISA additionally notes that stratified analyses (*i.e.,* analyses that directly compare PM-related health effects across groups) provide strong evidence for racial and ethnic differences in $PM_{2.5}$ exposures and in $PM_{2.5}$-related health risk. Recent studies evaluated in the Supplement support the conclusion of the 2019 PM ISA with respect to disparities in both $PM_{2.5}$ exposure and health risk by race and ethnicity and provide additional support for

''During the combustion of hydrocarbon-based fuels, aircraft engines generate gaseous and particulate matter (PM) emissions. At the engine exhaust, particulate emissions consist mainly of ultrafine soot or black carbon emissions. These particles, referred to as ''non-volatile'' PM (nvPM), are present at high temperatures, in the engine exhaust. Compared to conventional diesel engines, gas turbine engines emit non-volatile particles of smaller mean diameter. Their characteristic size ranges roughly from 15 to 60 nanometers. . . . These particles are invisible to the human eye and are ultrafine.'' (page 98.)

''Additionally, gaseous emissions from engines can also condense to produce new particles (*i.e.,* volatile particulate matter—vPM) or coat the emitted soot particles. Gaseous emissions species react chemically with ambient chemical constituents in the atmosphere to produce the so-called secondary particulate matter. Volatile particulate matter is dependent on these gaseous precursor emissions. While these precursors are controlled by gaseous emissions certification and the fuel composition (*e.g.,* sulfur content) for aircraft gas turbine engines, the volatile particulate matter is also dependent on the ambient air background composition.'' (pages 100 and 101.)

[54] U.S. EPA. Policy Assessment for the Reconsideration of the National Ambient Air Quality Standards for Particulate Matter (Final Report, 2022). U.S. Environmental Protection Agency, Washington, DC, EPA–452/R–22–004, 2022.

[55] U.S. EPA. Integrated Science Assessment (ISA) for Particulate Matter (Final Report, 2019). U.S. Environmental Protection Agency, Washington, DC, EPA/600/R–19/188, 2019.

[56] The causal framework draws upon the assessment and integration of evidence from across epidemiological, controlled human exposure, and toxicological studies, and the related uncertainties that ultimately influence our understanding of the evidence. This framework employs a five-level hierarchy that classifies the overall weight of evidence and causality using the following categorizations: causal relationship, likely to be causal relationship, suggestive of a causal relationship, inadequate to infer a causal relationship, and not likely to be a causal relationship (U.S. EPA. (2009). Integrated Science Assessment for Particulate Matter (Final Report). U.S. Environmental Protection Agency, Washington, DC, EPA/600/R–08/139F, Table 1–3).

disparities for lower socioeconomic status populations. As described in Section III.D, concentrations of PM increase with proximity to an airport. Further, studies described in Section III.G report that many communities in close proximity to airports are disproportionately represented by people of color and low-income populations.

The EPA has concluded that recent evidence in combination with evidence evaluated in the 2009 PM ISA supports a ''causal relationship'' between both long- and short-term exposures to $PM_{2.5}$ and mortality and cardiovascular effects and a ''likely to be causal relationship'' between long- and short-term $PM_{2.5}$ exposures and respiratory effects.[57] Additionally, recent experimental and epidemiologic studies provide evidence supporting a ''likely to be causal relationship'' between long-term $PM_{2.5}$ exposure and nervous system effects, and long-term $PM_{2.5}$ exposure and cancer. Because of remaining uncertainties and limitations in the evidence base, the EPA determined a ''suggestive of, but not sufficient to infer, a causal relationship'' for long-term $PM_{2.5}$ exposure and reproductive and developmental effects (*i.e.,* male/female reproduction and fertility; pregnancy and birth outcomes), long- and short-term exposures and metabolic effects, and short-term exposure and nervous system effects.

More detailed information on the health effects of PM can be found in a memorandum to the docket.[58] The EPA is reconsidering a 2020 decision to retain the PM NAAQS.[59]

C. Environmental Effects of Particulate Matter

Environmental effects that can result from particulate matter emissions include visibility degradation, plant and ecosystem effects, deposition effects, and materials damage and soiling. These effects are briefly summarized here and discussed in more detail in the memo to the docket cited in Section III.B.

$PM_{2.5}$ emissions also adversely impact visibility.[60] In the Clean Air Act Amendments of 1977, Congress recognized visibility's value to society by establishing a national goal to protect national parks and wilderness areas from visibility impairment caused by manmade pollution.[61] In 1999, the EPA finalized the regional haze program to protect the visibility in Mandatory Class I Federal areas.[62] There are 156 national parks, forests and wilderness areas categorized as Mandatory Class I Federal areas.[63] These areas are defined in CAA section 162 as those national parks exceeding 6,000 acres, wilderness areas and memorial parks exceeding 5,000 acres, and all international parks which were in existence on August 7, 1977. The EPA has also concluded that $PM_{2.5}$ causes adverse effects on visibility in other areas that are not targeted by the Regional Haze Rule, such as urban areas, depending on $PM_{2.5}$ concentrations and other factors such as dry chemical composition and relative humidity (*i.e.,* an indicator of the water composition of the particles). The secondary (welfare-based) PM NAAQS provide protection against visibility effects. In recent PM NAAQS reviews, EPA evaluated a target level of protection for visibility impairment that is expected to be met through attainment of the existing secondary PM standards.[64]

1. Deposition of Metallic and Organic Constituents of PM

Several significant ecological effects are associated with deposition of chemical constituents of ambient PM such as metals and organics.[65] Like all internal combustion engines, turbine engines covered by this rule may emit trace amounts of metals due to fuel contamination or engine wear. Ecological effects of PM include direct effects to metabolic processes of plant foliage; contribution to total metal loading resulting in alteration of soil biogeochemistry and microbiology, plant and animal growth and reproduction; and contribution to total organics loading resulting in bioaccumulation and biomagnification.[66]

2. Materials Damage and Soiling

Deposition of PM is associated with both physical damage (materials damage effects) and impaired aesthetic qualities (soiling effects). Wet and dry deposition of PM can physically affect materials, adding to the effects of natural weathering processes, by potentially promoting or accelerating the corrosion of metals, by degrading paints and by deteriorating building materials such as stone, concrete and marble.[67]

D. Near-Source Impacts on Air Quality and Public Health

Airport activity can adversely impact air quality in the vicinity of airports. Furthermore, these adverse impacts may disproportionately impact sensitive subpopulations. A recent study by Yim et al (2015) assessed global, regional, and local health impacts of civil aviation emissions, using modeling tools that address environmental impacts at different spatial scales.[68] The study attributed approximately 16,000 premature deaths per year globally to global aviation emissions, with 87 percent attributable to $PM_{2.5}$. The study concludes that about a third of these mortalities are attributable to $PM_{2.5}$ exposures within 20 kilometers of an airport. Another study focused on the continental United States estimated 210 deaths per year attributable to $PM_{2.5}$ from aircraft activity at airports.[69] While there are considerable uncertainties associated with such estimates, these results suggest that in addition to the contributions of $PM_{2.5}$ emissions to regional air quality, impacts on public health of these emissions in the vicinity of airports are an important public health concern.

A significant body of research has addressed pollutant levels and potential health effects in the vicinity of airports. Much of this research was synthesized in a 2015 report published by the Airport Cooperative Research Program (ACRP), conducted by the Transportation Research Board.[70] The

[57] Short term exposures are usually defined as less than 24 hours duration.

[70] Kim, B., Nakada, K., Wayson, R., Christie, S., Paling, C., Bennett, M., Raper, D., Raps, V., Levy, J., Roof, C. 2015. Understanding Airport Air Quality

report concluded that $PM_{2.5}$ concentrations in and around airports vary considerably, ranging from ''relatively low levels to those that are close to the NAAQS, and in some cases, exceeding the standards.'' [71]

Furthermore, the report states that ''existing studies indicate that ultrafine particle concentrations are highly elevated at an airport (*i.e.,* near a runway) with particle counts that can be orders of magnitude higher than background with some persistence many meters downwind (*e.g.,* 600 m).'' [72] Finally, the report concludes that $PM_{2.5}$ dominates overall health risks posed by airport emissions.[73] Moreover, one recently published study concluded that emissions from aircraft play an etiologic role in pre-term births, independent of noise and traffic-related air pollution exposures.[74]

Since the publication of the 2015 ACRP literature review, a number of studies conducted in the United States have been published which concluded that ultrafine particle number concentrations were elevated downwind of commercial airports, and that proximity to an airport also increased particle number concentrations within residences. Hudda et al. investigated ultrafine particle number concentrations (PNC) inside and outside 16 residences in the Boston metropolitan area. They found elevated outdoor PNC within several kilometers of the airport. They also found that aviation-related PNC infiltrated indoors and resulted in significantly higher indoor PNC.[75] In another study in the vicinity of Logan airport, Hudda et al. analyzed PNC impacts of aviation activities.[76] They found that, at sites 4.0 and 7.3 km from the airport, average PNCs were 2 and 1.33-fold higher, respectively, when winds were from the direction of the airport compared to other directions, indicating that aviation impacts on PNC extend many kilometers downwind of Logan airport. Stacey (2019) conducted a literature survey and concluded that the literature consistently reports that particle numbers close to airports are significantly higher than locations distant and upwind of airports, and that the particle size distribution is different from traditional road traffic, with more extremely fine particles.[77] Similar findings have been published from European studies.[78] [79] [80] [81] [82] [83] Results of a monitoring study of communities near Seattle-Tacoma International Airport also found higher levels of ultrafine PM near the airport, and an impacted area larger than at near-roadway sites.[84] The PM associated with aircraft landing activity was also smaller in size, with lower black carbon concentrations than near-roadway samples. As discussed in Section III.B, $PM_{2.5}$ exposures are associated with a number of serious, adverse health effects. Further, the PM attributable to aircraft emissions has been associated with potential adverse health impacts.[85] [86] For example, He et al. (2018) found that particle composition, size distribution and internalized amount of particles near airports all contributed to promotion of reactive organic species in bronchial epithelial cells.

Because of these potential impacts, a systematic literature review was recently conducted to identify peer-reviewed literature on air quality near commercial airports and assess the quality of the studies.[87] The systematic review identified seventy studies for evaluation. These studies consistently showed that particulate matter, in the form of UFP, is elevated in and around airports. Furthermore, many studies showed elevated levels of black carbon, criteria pollutants, and polycyclic aromatic hydrocarbons as well. Finally, the systematic review, while not focused on health effects, identified a limited number of references reporting adverse health effects impacts, including increased rates of premature death, pre-term births, decreased lung function, oxidative deoxyribonucleic acid (DNA) damage and childhood leukemia. As indicated in the proposal, more research is needed linking particle size distributions to specific airport activities, and proximity to airports, characterizing relationships between different pollutants, evaluating long-term impacts, and improving our understanding of health effects.

A systematic review of health effects associated with exposure to jet engine emissions in the vicinity of airports was also recently published.[88] This study concluded that literature on health effects was sparse, but jet engine emissions have physicochemical properties similar to diesel exhaust particles, and that exposure to jet engine emissions is associated with similar adverse health effects as exposure to diesel exhaust particles and other traffic emissions. A 2010 systematic review by the Health Effects Institute (HEI) concluded that evidence was sufficient to support a causal relationship between exposure to traffic-related air pollution and exacerbation of asthma among children, and suggestive of a causal relationship for childhood asthma, non-asthma respiratory symptoms, impaired lung function and cardiovascular mortality.[89]

E. Contribution of Aircraft Emissions to PM in Selected Areas

This section provides background on the contribution of aircraft engine emissions to local PM concentrations. In some areas with large commercial airports, turbine engine aircraft can make a significant contribution to ambient $PM_{2.5}$. To evaluate these potential impacts, we identified the 25 airports where commercial aircraft operations are the greatest, based on data for 2017 from the FAA Air Traffic Data System (ATADS). These 25 commercial airports are located in 24 counties and 22 metropolitan statistical areas (MSAs). We compared the contributions of these airports to emissions at both the county and MSA levels. Comparisons at both scales provide a fuller picture of how airports are impacting local air quality. Figure III–1 depicts the contribution to county-level $PM_{2.5}$ direct emissions from all turbine aircraft in that county with rated output of greater than 26.7 kN. Emissions data were obtained from the EPA 2017 National Emissions Inventory (NEI).[90] Inventory estimates for turbine engine aircraft were adjusted to account for an improved methodology for estimating PM from nvPM measurements. This adjustment is described in detail in Section V.B. The contributions of engines greater than 26.7 kN rated output to total turbine engine emissions at individual airports were estimated based on FAA data.[91] At the county level, contributions to total mobile source $PM_{2.5}$ emissions range from less than 1 to about 16 percent. However, it should be noted that two airports cross county lines—Hartsfield-Jackson Atlanta International Airport (Clayton and Fulton counties) and O'Hare (Cook and DuPage counties). For those airports, percentages are calculated for the sum of the two counties. In addition, five of these counties are in nonattainment for either the $PM_{2.5}$ or PM_{10} standard. When emissions from these airports are considered as part of the entire MSA, the contribution is much smaller. Figure III–2 depicts the contributions at the metropolitan statistical area (MSA) instead of the county level, and contributions across airports range from about 0.5 to 3 percent. Details of this analysis are described in a memorandum to the docket.[92]

BILLING CODE 6560–50–P

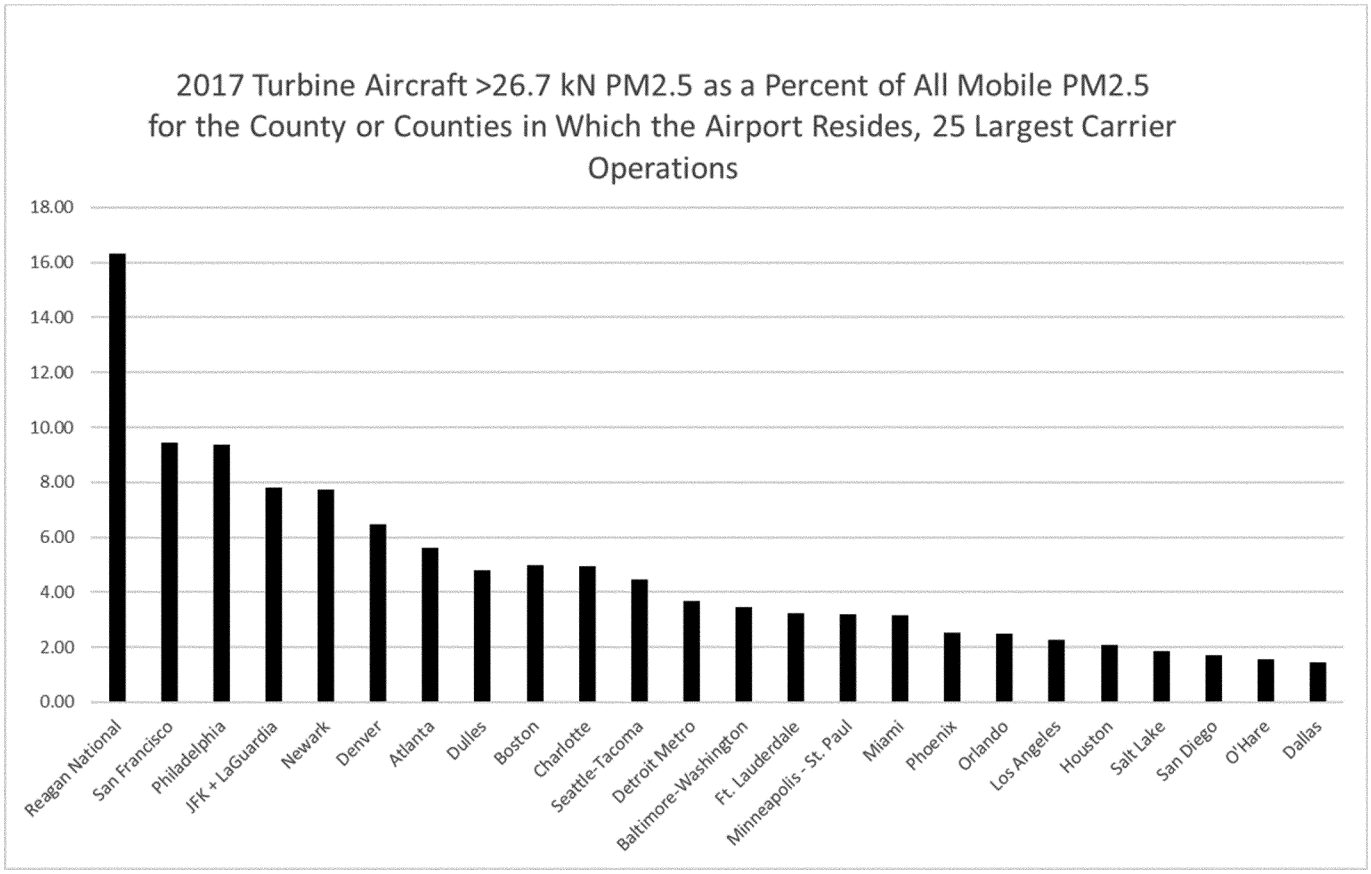

Figure III–1

[90] 2017 National Emissions Inventory: Aviation Component, Eastern Research Group, Inc., June 25, 2020, EPA Contract No. EP–C–17–011, Work Order No. 2–19. See section 3.2 for airports and aircraft related emissions in the Technical Supporting Document for the 2017 National Emissions Inventory, January 2021 Updated Release. It should be noted that while identification of the 25 airports with the greatest commercial activity uses 2017 ATADS data, the 2017 NEI relies on 2014 ATADS data.

[91] These data were obtained using radar-informed data from the FAA Enhanced Traffic Management System (ETMS). The annual fuel burn and emissions inventories at selected top US airports were based on the 2015 FAA flight operations database. The fraction of total PM emissions from aircraft covered by the final PM standards is based on the ratio of total PM emissions from flights by engines with thrust rating greater than 26.7 kN compared to PM emissions from the whole fleet at each airport.

Figure III–2

F. Other Pollutants Emitted by Aircraft

In addition to particulate matter, a number of other criteria pollutants are emitted by the aircraft subject to this final rule. These pollutants, which are not covered by the rule, include NO_X, including nitrogen dioxide (NO_2), VOC, CO, and sulfur dioxide (SO_2). Aircraft also contribute to ambient levels of hazardous air pollutants (HAP), compounds that are known or suspected human or animal carcinogens, or that have noncancer health effects. These compounds include, but are not limited to, benzene, 1,3-butadiene, formaldehyde, acetaldehyde, acrolein, polycyclic organic matter (POM), and certain metals. Some POM and HAP metals are components of $PM_{2.5}$ mass measured in turbine engine aircraft emissions.[93]

The term polycyclic organic matter (POM) defines a broad class of compounds that includes the polycyclic aromatic hydrocarbon compounds (PAHs). POM compounds are formed primarily from combustion and are present in the atmosphere in gas and particulate form. Metal compounds emitted from aircraft turbine engine combustion include chromium, manganese, and nickel. Several POM compounds, as well as hexavalent chromium, manganese compounds and nickel compounds are included in the National Air Toxics Assessment, based on potential carcinogenic risk.[94] In addition, as mentioned previously, deposition of metallic compounds can have ecological effects. Impacts of POM and metals are further discussed in the memorandum to the docket referenced in Section III.B.

G. Environmental Justice

The EPA's June 2016 ''Technical Guidance for Assessing Environmental Justice in Regulatory Analysis'' provides recommendations on conducting the highest quality analysis feasible, recognizing that data limitations, time and resource constraints, and analytic challenges will vary by media and regulatory context.[95] The EPA defines environmental justice as the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies.[96]

When assessing the potential for disproportionately high and adverse health or environmental impacts of regulatory actions on minority populations, low-income populations, tribes, and/or Indigenous peoples, the EPA strives to answer three broad questions: (1) Is there evidence of potential EJ concerns in the baseline (the state of the world absent the regulatory action)? Assessing the baseline will allow the EPA to

[93] Kinsey, J.S., Hays, M.D., Dong, Y., Williams, D.C. Logan, R. 2011. Chemical characterization of the fine particle emissions from commercial aircraft engines during the aircraft particle emissions experiment (APEX) 1–3. Environ. Sci. Technol. 45:3415–3421.

[94] U.S. EPA, Air Toxics Screening Assessment.

[95] ''Technical Guidance for Assessing Environmental Justice in Regulatory Analysis.'' Environmental Protection Agency (June 2016).

[96] Fair treatment means that ''no group of people should bear a disproportionate burden of environmental harms and risks, including those resulting from the negative environmental consequences of industrial, governmental and commercial operations or programs and policies.'' Meaningful involvement occurs when ''(1) potentially affected populations have an appropriate opportunity to participate in decisions about a proposed activity [*e.g.,* rulemaking] that will affect their environment and/or health; (2) the public's contribution can influence [the EPA's rulemaking] decision; (3) the concerns of all participants involved will be considered in the decision-making process; and (4) [the EPA will] seek out and facilitate the involvement of those potentially affected''. A potential EJ concern is defined as ''the actual or potential lack of fair treatment or meaningful involvement of minority populations, low-income populations, tribes, and Indigenous peoples in the development, implementation and enforcement of environmental laws, regulations and policies.'' See ''Guidance on Considering Environmental Justice During the Development of an Action.'' Environmental Protection Agency.

determine whether pre-existing disparities are associated with the pollutant(s) under consideration (*e.g.,* if the effects of the pollutant(s) are more concentrated in some population groups). (2) Is there evidence of potential EJ concerns for the regulatory option(s) under consideration? Specifically, how are the pollutant(s) and its effects distributed for the regulatory options under consideration? And, (3) do the regulatory option(s) under consideration exacerbate or mitigate EJ concerns relative to the baseline? It is not always possible to quantitatively assess these questions.

The EPA's 2016 Technical Guidance does not prescribe or recommend a specific approach or methodology for conducting an environmental justice analysis, though a key consideration is consistency with the assumptions underlying other parts of the regulatory analysis when evaluating the baseline and regulatory options. Where applicable and practicable, the Agency endeavors to conduct such an analysis. Going forward, the EPA is committed to conducting environmental justice analysis for rulemakings based on a framework similar to what is outlined in the EPA's Technical Guidance, in addition to investigating ways to further weave environmental justice into the fabric of the rulemaking process.

Numerous studies have found that environmental hazards such as air pollution are more prevalent in areas where people of color and low-income populations represent a higher fraction of the population compared with the general population, including near transportation sources.[97] [98] [99] [100] [101]

As described in Section III.D, concentrations of PM increase with proximity to an airport. Air pollution can disproportionately impact sensitive subpopulations near airports. Henry et al. (2019) studied impacts of several California airports on surrounding schools and found that over 65,000 students spend 1 to 6 hours a day during the academic year being exposed to airport pollution, and the percentage of impacted students was higher for those who were economically disadvantaged.[102] Rissman et al. (2013) studied $PM_{2.5}$ at the Hartsfield-Jackson Atlanta International Airport and found that the relationship between minority population percentages and aircraft-derived PM was found to grow stronger as concentrations increased.[103]

Additional studies have reported that many communities in close proximity to airports are disproportionately represented by minorities and low-income populations. McNair (2020) describes nineteen major airports that underwent capacity expansion projects between 2000 and 2010, thirteen of which met characteristics of race, ethnicity, nationality and/or income that indicate a disproportionate impact on these residents.[104] Woodburn (2017) reports on changes in communities near airports from 1970–2010, finding suggestive evidence that at many hub airports over time, the presence of marginalized groups residing in close proximity to airports increased.[105]

Although not being conducted as part of this rulemaking, the EPA is conducting a demographic analysis to explore whether populations living nearest the busiest runways show patterns of racial and socioeconomic disparity.[106] This will help characterize the state of environmental justice concerns and inform potential future actions. Finely resolved population data (*i.e.,* 30 square meters) will be paired with census block group demographic characteristics to evaluate if people of color, children, Indigenous populations, and low-income populations are disproportionately living near airport runways compared to populations living further away. The results of this analysis could help inform additional policies to reduce pollution in communities living in close proximity to airports.

The final in-production standards for both PM mass and PM number are levels that all aircraft engines in production currently meet to align with ICAO's standards. Thus, the final standards are not expected to result in emission reductions, beyond the business-as-usual fleet turnover that would occur absent the final standards. Therefore, we do not anticipate an improvement in air quality for those who live near airports where these aircraft operate, beyond what may occur as a result of fleet turnover and from any reductions in emissions from other sectors contributing to air quality near airports.

Response to comments on Section III of this action can be found in the Response to Comments document. In addition, all website addresses for references cited in this section are provided in a memorandum to the docket.[107]

IV. Details of the Final Rule

In determining what final PM standards are appropriate under CAA section 231 and after consultation with FAA, the EPA considered the level of standards that could be met with the application of requisite technology within the necessary period of time that would allow the United States to meet its obligations under the Chicago Convention to at least match the ICAO standards, and gave appropriate consideration to the cost of compliance within this period. This determination also took into account the requirement that EPA's revised standards not significantly increase noise and adversely affect safety. The EPA considered the statutory requirements in CAA section 231 and other relevant factors as described in Section VI of both the proposed rule and this final rule, and we concluded that it was reasonable and appropriate to finalize the new PM standards that match the international standards in scope, stringency, and effective date. The EPA has consulted with FAA and believes sufficient lead time has been provided since the technology has already been developed and implemented by manufacturers to comply with the new PM standards. Also, as described in Section IV.F.1, the EPA is confident that the final standards will not significantly increase noise and adversely affect

safety. Further, as described in Section VI.D, the EPA does not project any costs associated with these standards because all in-production engines meet the in-production standards, nearly all in-production engines meet the new type design standard, and future new type designs are expected to meet the new type design standard. In addition to the statutory requirements of CAA section 231, the EPA, after consultation with FAA, also took into consideration the importance of controlling PM emissions, international harmonization of aviation requirements, and the international nature of the aircraft industry. The EPA gave significant weight to the United States' treaty obligations under the Chicago Convention in determining the need for and appropriate levels of PM standards. U.S. manufacturers could be at a significant disadvantage if the United States fails to adopt standards by the international implementation date. Also, given the short timeframe from this final action and the international implementation date, there would not be enough lead time for manufacturers to respond to more stringent standards that would require them to develop and implement new technologies.

These considerations led the EPA to determine that adopting aircraft engine PM standards based on engine standards adopted by ICAO is appropriate at this time. When developing the PM standards, ICAO adopted three different methods of measuring the amount of PM emitted. The first is PM mass, or a measure of the total weight of the particles produced over the test cycle. This is how the EPA has historically set PM emission standards for other sectors. The second is PM number, or the number of particles produced by the engine over the test cycle. These are two different methods of measuring the same pollutant, PM, but each provides distinct and valuable information. Third, ICAO developed PM mass concentration standards, as a replacement to the existing standards based on smoke number.

The EPA's final action will apply to subsonic turbofan and turbojet engines of a type or model with a rated output (maximum thrust available for takeoff) greater than 26.7 kN, hereinafter referred to as covered engines, and consists of three key parts: (1) PM mass and number emission standards for covered engines, (2) a change in test procedure and form of the existing standards for covered engines—from smoke number to PM mass concentration, and (3) new testing and measurement procedures for the PM emission standards and various updates to the existing gaseous exhaust emissions test procedures.

Sections IV.A through IV.C describe the final mass, number, and mass concentration standards for aircraft engines. Section IV.D describes the test procedures and measurement procedures associated with the PM standards. Section IV.E presents information related to the reporting requirements.

As discussed in Section III.A, $PM_{2.5}$ consists of both volatile and non-volatile PM (nvPM), although only non-volatile PM will be covered by the adopted standards. Only non-volatile PM is present at the engine exit because the exhaust temperature is too high for volatile PM to form. The volatile PM (or secondary PM) is formed as the engine exhaust plume cools and mixes with the ambient air. The result of this is that the volatile PM is significantly influenced by the ambient conditions (or ambient air background composition). Because of this complexity, a test procedure to measure volatile PM has not yet been developed for aircraft engines. To directly measure non-volatile PM, ICAO agreed to adopt a measurement procedure, as described in Section IV.D, which is based on conditions that prevent the formation of volatile PM upstream of the measurement instruments. The intent of this approach is to improve the consistency and repeatability of the non-volatile PM measurement procedure.

Due to the international nature of the aviation industry, there is an advantage to working within ICAO to secure the highest practicable degree of uniformity in international aviation regulations and standards. Uniformity in international aviation regulations and standards is a goal of the Chicago Convention, because it ensures that passengers and the public can expect similar levels of protection for safety and human health and the environment regardless of manufacturer, airline, or point of origin of a flight. Further, it helps prevent barriers in the global aviation market, benefiting both U.S. aircraft engine manufacturers and consumers.

When developing new emission standards, ICAO/CAEP seeks to capture the technological advances made in the control of emissions through the adoption of anti-backsliding standards reflecting the current state of technology. The PM standards the EPA is adopting were developed using this approach. Thus, the adoption of these aircraft engine standards into U.S. law will simultaneously prevent aircraft engine PM levels from increasing beyond their current levels, align U.S. domestic standards with the ICAO standards for international harmonization, meet the United States' treaty obligations under the Chicago Convention.

These standards will also allow U.S. manufacturers of covered aircraft engines to remain competitive in the global marketplace. The ICAO aircraft engine PM emission standards have been, or are being, adopted by other ICAO member states that certify aircraft engines. In the absence of U.S. standards implementing the ICAO aircraft engine PM emission standards, the United States would not be able to certify aircraft engines to the PM standards. In this case, U.S. civil aircraft engine manufacturers could be forced to seek PM emissions certification from an aviation certification authority of another country to market and operate their aircraft engines internationally. Foreign certification authorities may not have the resources to certify aircraft engines from U.S. manufacturers in a timely manner, which could lead to delays in these engines being certified. Thus, U.S. manufacturers could be at a disadvantage if the United States does not adopt standards that are at least as stringent as the ICAO standards for PM emissions. This action to adopt, in the United States, PM standards that match the ICAO standards will help ensure international consistency and acceptance of U.S.-manufactured engines worldwide.

The EPA considered whether to propose standards more stringent than the ICAO standards. See 87 FR 6324, 6337 (February 3, 2022). As noted in the preceding paragraphs, the EPA, after consultation with FAA, considered the statutory requirements under CAA section 231, the importance of controlling PM emissions, international harmonization of aviation requirements, the international nature of the aircraft industry and air travel, and the United States' obligations under the Chicago Convention in evaluating which stringency of standards to propose. These considerations have historically led the EPA to adopt international standards developed through ICAO. The EPA concluded that proposing and now adopting standards equivalent to the ICAO PM standards in place of more stringent standards is appropriate in part because international uniformity and regulatory certainty are important elements of these standards. This is especially true for these final standards because they change our approach to regulating aircraft PM emissions from past smoke measurements to the measurement of nvPM mass concentration, nvPM mass, and nvPM number for the first time. It is

appropriate to gain experience from the implementation of these nvPM standards before considering whether to adopt more stringent nvPM mass and/or nvPM number standards, or whether another approach to PM regulation would better address the health risks of PM emissions from aircraft engines. Additionally, the U.S. Government, through the FAA, State Department, and the EPA, played a significant role in the development of these standards through a multi-year process. The EPA believes that international cooperation on aircraft emissions brings substantial benefits overall to the United States. Given that the EPA and FAA invested significant effort and considerable resources to develop these standards and obtain international consensus for ICAO to adopt these standards, a decision by the United States to deviate from them might well undermine future efforts by the United States to seek international consensus on aircraft emission standards. For these reasons, the EPA placed significant weight on international regulatory uniformity and certainty and is finalizing standards that match the standards which the EPA worked to develop and adopt at ICAO.

A. PM Mass Standards for Aircraft Engines

1. Applicability of Standards

These standards for PM mass, like the ICAO standards, will apply to covered engines whose date of manufacture is on or after January 1, 2023.[108] These standards will not apply to engines manufactured prior to this applicability date.

The level of the standard will vary based on when the initial type certification application is submitted.[109] Covered engines for which the type certificate application was first submitted on or after January 1, 2023 will be subject to the new type level in Section IV.A.2. These engines are new engines that have not been previously certificated.

Covered engines manufactured on or after January 1, 2023 will be subject to the in-production level, in Section IV.A.3.

2. New Type nvPM Mass Numerical Emission Limits for Aircraft Engines

Covered engines whose initial type certification application is submitted to the FAA on or after January 1, 2023 shall not exceed the level, as defined by Equation IV–1. As described in Section IV.D, the nvPM mass limit is based on milligram (mg) of PM, as determined over the LTO cycle, divided by kN of rated output (rO).

Equation IV-1

$$nvPM_{Mass} = \begin{cases} 1251.1 - 6.914 * rO, & 26.7 < rO \leq 150kN \\ 214.0, & rO > 150kN \end{cases}$$

3. In Production nvPM Mass Numerical Emission Limits for Aircraft Engines

Covered engines that are manufactured on or after January 1, 2023 shall not exceed the level, as defined by Equation IV–2.

Equation IV-2

$$nvPM_{Mass} = \begin{cases} 4646.9 - 21.497 * rO, & 26.7 < rO \leq 200kN \\ 347.5, & rO > 200kN \end{cases}$$

in-production engines. Data shown in this figure is from the ICAO Engine Emissions Databank (EEDB) [110].

BILLING CODE 6560–50–P

4. Graphical Representation of nvPM Mass Numerical Emission Limits

Figure IV–1 shows how the nvPM mass emission limits compare to known

[108] ICAO, 2017: *Aircraft Engine Emissions,* International Standards and Recommended Practices, Environmental Protection, Annex 16, Volume II, Fourth Edition, July 2017, III–4–3 & III–4–4pp. The ICAO Annex 16, Volume II, Fourth Edition, includes Amendment 10 of January 1, 2021.

[109] In most cases, the engine manufacturer applies to the FAA for the type certification; however, in some cases the applicant may be different than the manufacturer (*e.g.,* designer).

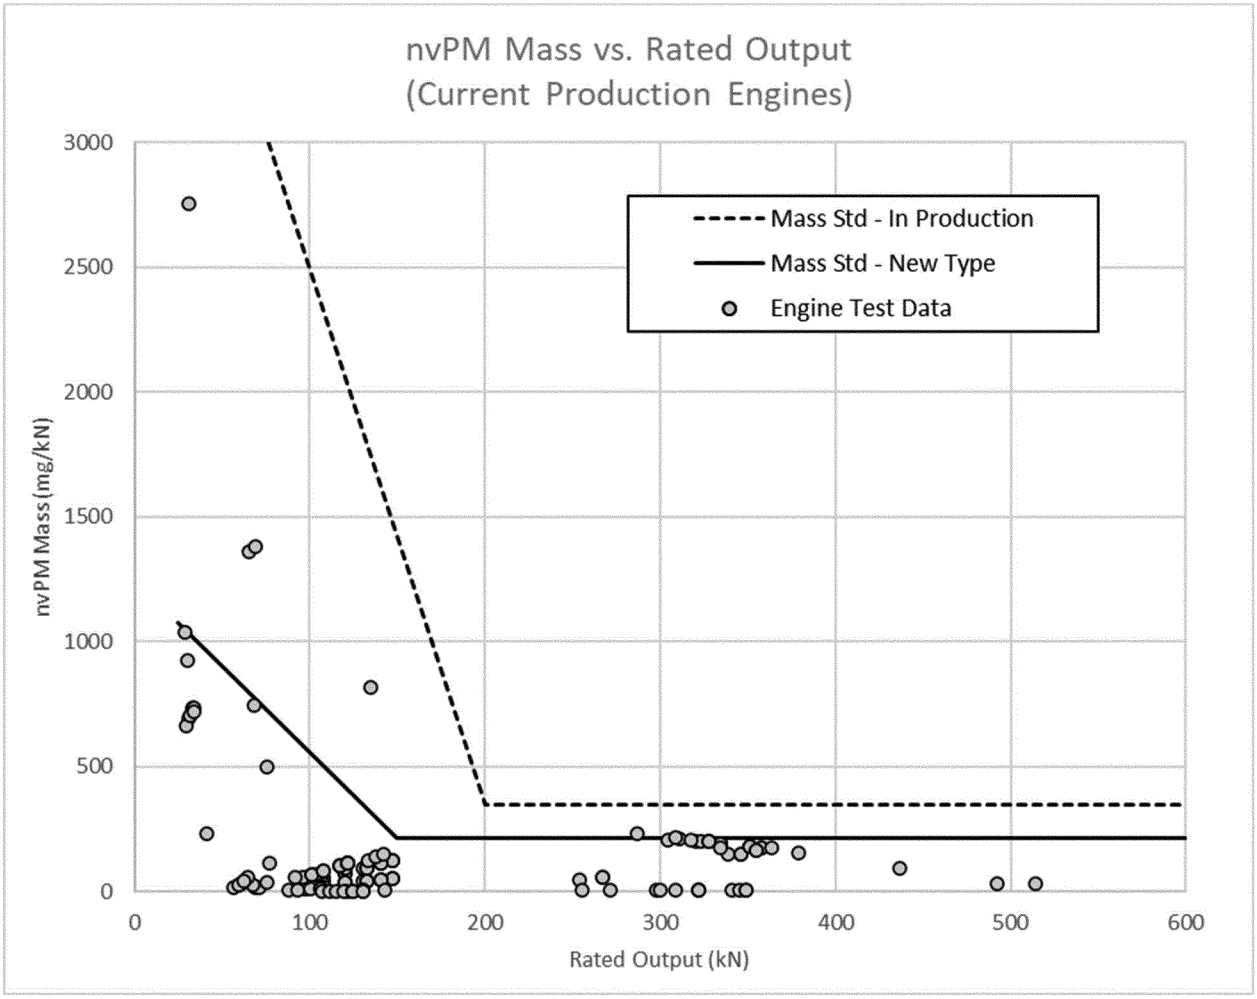

Figure IV–1—nvPM mass standards compared to in-production engine LTO emission rates

B. PM Number Standards for Aircraft Engines

1. Applicability of Standards

These standards for PM number, like the ICAO standards, will apply to covered engines whose date of manufacture is on or after January 1, 2023.[111] These standards will not apply to engines manufactured prior to this applicability date.

The level of the standard will vary based on when the initial type certification application is submitted. Covered engines for which the type certificate application was first submitted on or after January 1, 2023 will be subject to the new type level in Section IV.B.2. These are new engines that have not been previously certificated.

Covered engines manufactured on or after January 1, 2023 will be subject to the in-production level, in Section IV.B.3.

2. New Type nvPM Number Numerical Emission Limits for Aircraft Engines

Covered engines whose initial type certification application is submitted to the FAA on or after January 1, 2023 shall not exceed the level, as defined by Equation IV–3. As described in Section IV.D, the nvPM number limit is based on number of particles, as determined over the LTO cycle, divided by kN of rO.

Equation IV-3

$$nvPM_{num} = \begin{cases} 1.490 * 10^{16} - 8.080 * 10^{13} * rO, & 26.7 < \mathrm{rO} \leq 150kN \\ 2.780 * 10^{15}, & rO > 150kN \end{cases}$$

3. In Production nvPM Number Numerical Emission Limits for Aircraft Engines

Covered engines that are manufactured on or after January 1, 2023 shall not exceed the level, as defined by Equation IV–4.

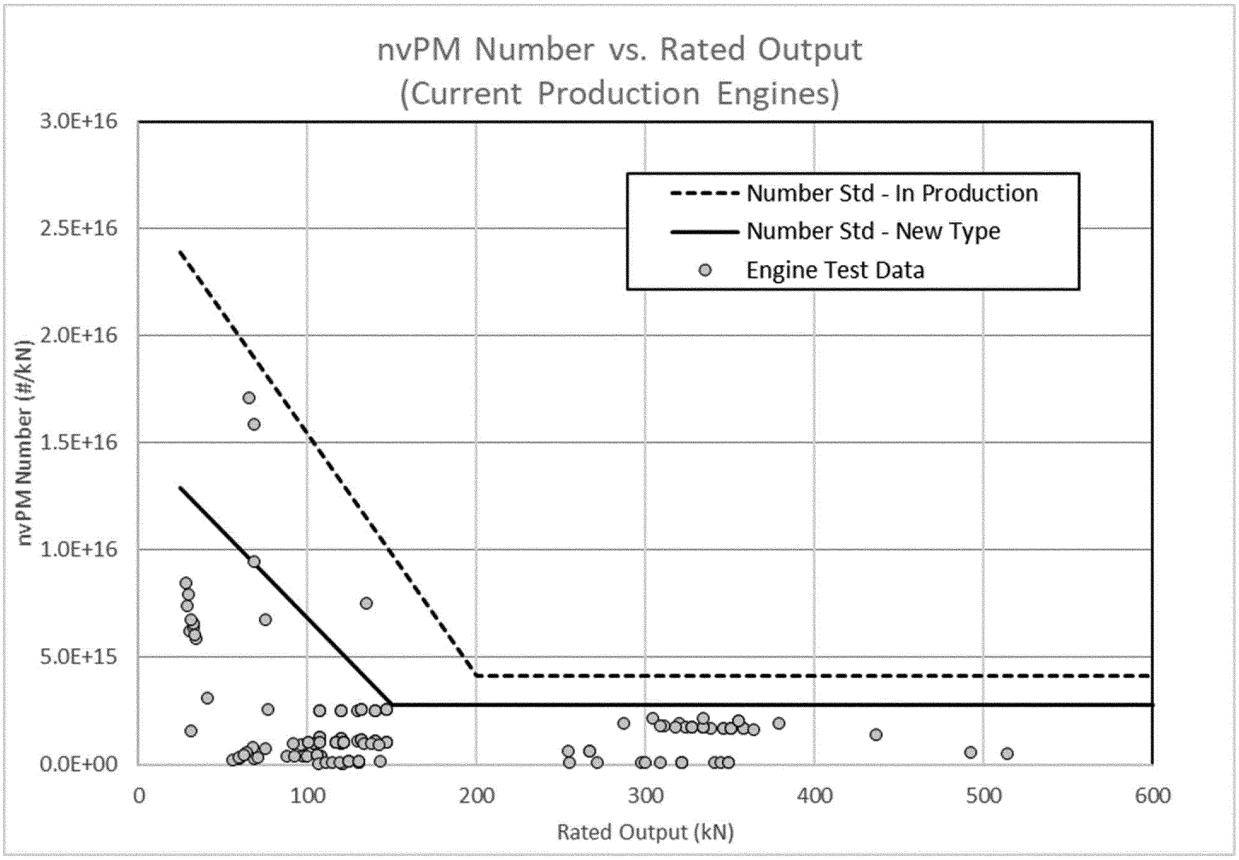
[111] ICAO, 2017: *Aircraft Engine Emissions,* International Standards and Recommended Practices, Environmental Protection, Annex 16, Volume II, Fourth Edition, July 2017, III–4–4pp. The ICAO Annex 16, Volume II, Fourth Edition, includes Amendment 10 of January 1, 2021.

Equation IV-4

$$nvPM_{num} = \begin{cases} 2.669 * 10^{16} - 1.126 * 10^{14} * rO, & 26.7 < rO \leq 200kN \\ 4.170 * 10^{15}, & rO > 200kN \end{cases}$$

4. Graphical Representation of nvPM Number Numerical Emission Limits

Figure IV–2 shows how the nvPM number emission limits compare to known in-production engines. Data shown in this figure is from the ICAO Engine Emissions Databank (EEDB).[112]



BILLING CODE 6560–50–C

Figure IV–2—nvPM number standards compared to in-production engine LTO emission rates

C. PM Mass Concentration Standard for Aircraft Engines

The previous smoke number-based standards were adopted to reduce the visible smoke emitted by aircraft engines. Smoke number is quantified by measuring the opacity of a filter after soot has been collected upon it during the test procedure. Another means of quantifying the smoke from an engine exhaust is through PM mass concentration (PM_{mc}).

ICAO developed a PM mass concentration standard during the CAEP/10 cycle and adopted it in 2017.[113] This PM mass concentration standard was developed to provide equivalent exhaust visibility control as the existing smoke number standard starting on January 1, 2020. With the EPA's involvement, the ICAO PM mass concentration limit line was developed using measured smoke number and PM mass concentration data from several engines to derive a smoke number-to-PM mass concentration correlation. This correlation was then used to transform the existing smoke number-based limit line into a generally equivalent PM mass concentration limit line, which was ultimately adopted by ICAO as the CAEP/10 p.m. mass concentration standard. The intention when the equivalent PM mass concentration standard was adopted was that equivalent visibility control would be maintained and testing would coincide with the PM mass and PM number measurement, thus removing the need to separately test and measure smoke number. In addition to CAEP/10 agreeing to a maximum PM mass concentration standard, CAEP/10 adopted a reporting requirement where aircraft engine manufacturers were required to provide PM mass concentration, PM mass, and PM number emissions data—and other related parameters—by January 1, 2020 for in-production engines.

While the ICAO PM mass concentration standard was intended to have equivalent visibility control as the existing smoke number standard, the method used to derive it was based on limited data and needed to be confirmed for regulatory purposes. Additional analysis was conducted during the CAEP/11 cycle to confirm this equivalence. The EPA followed this work as it progressed, provided input

[112] ICAO Aircraft Engine Emissions Databank, July 20, 2021, ''edb-emissions-databank v28C (web).xlsx,'' European Union Aviation Safety Agency (EASA).

[113] ICAO, 2016: Tenth Meeting Committee on Aviation Environmental Protection Report, Doc 10069, CAEP/10.

during the process, and ultimately concurred with the results.[114] The analysis, based on aerosol optical theory and visibility criterion, demonstrated with a high level of confidence that the ICAO PM mass concentration standard did indeed provide equivalent visibility control as the existing smoke number standard. This provided the justification for ICAO to agree to end applicability of the existing smoke number standard for engines subject to the PM mass concentration standard, effective January 1, 2023.

1. PM Mass Concentration Standard

The EPA is adopting a PM mass concentration standard for all covered engines manufactured on or after January 1, 2023.[115] This standard has the same form, test procedures, and stringency as the CAEP/10 p.m. mass concentration standard adopted by ICAO in 2017. Note, the applicability date of the mass concentration standard, finalized in this action, represents a delay from the January 1, 2020 date agreed to by ICAO [116]. The PM mass concentration standard is based on the maximum concentration of PM emitted by the engine at any thrust setting, measured in micrograms (μg) per meter cubed (m^3). This is similar to the previous smoke standard, which is also based on the measured maximum at any thrust setting. Section IV.D describes the measurement procedure. Like the LTO-based PM mass and PM number standards discussed in Section IV.A and Section IV.B (and described in the introductory paragraphs of Section IV), this is based on the measurement of nvPM only, not total PM emissions.

To determine compliance with the PM mass concentration standard, the maximum nvPM mass concentration [$\mu g/m^3$] will be obtained from measurements at sufficient thrust settings such that the emission maximum can be determined. The maximum value will then be converted to a characteristic level in accordance with the procedures in ICAO Annex 16, Volume II, Appendix 6. The resultant characteristic level must not exceed the regulatory level determined from the following formula:

Equation IV-5

$$nvPM\ mass\ concentration = 10^{3 + 2.9\ rO^{-0.274}}$$

Engines certificated under the new PM mass concentration standard will not need to certify smoke number values and will not be subject to in-use smoke standards. It is important to note that other smoke number standards remain in effect for turbofan and turbojet aircraft engines at or below 26.7 kN rated output and for turboprop engines. Also, the in-use smoke standards will continue to apply to some already manufactured aircraft engines that were certified to smoke number standards. In this final rule, the EPA did not reexamine or reopen the existing smoke number standards. Any comments we received on the existing smoke number standards are beyond the scope of this rulemaking.[117]

2. Graphical Representation of nvPM Mass Concentration Numerical Emission Limit

Figure IV–3 shows how the nvPM mass concentration emission limits compare to known in-production engines, which all were certified to the previous smoke standard. Data shown in this figure is from the ICAO Engine Emissions Databank (EEDB).[118]

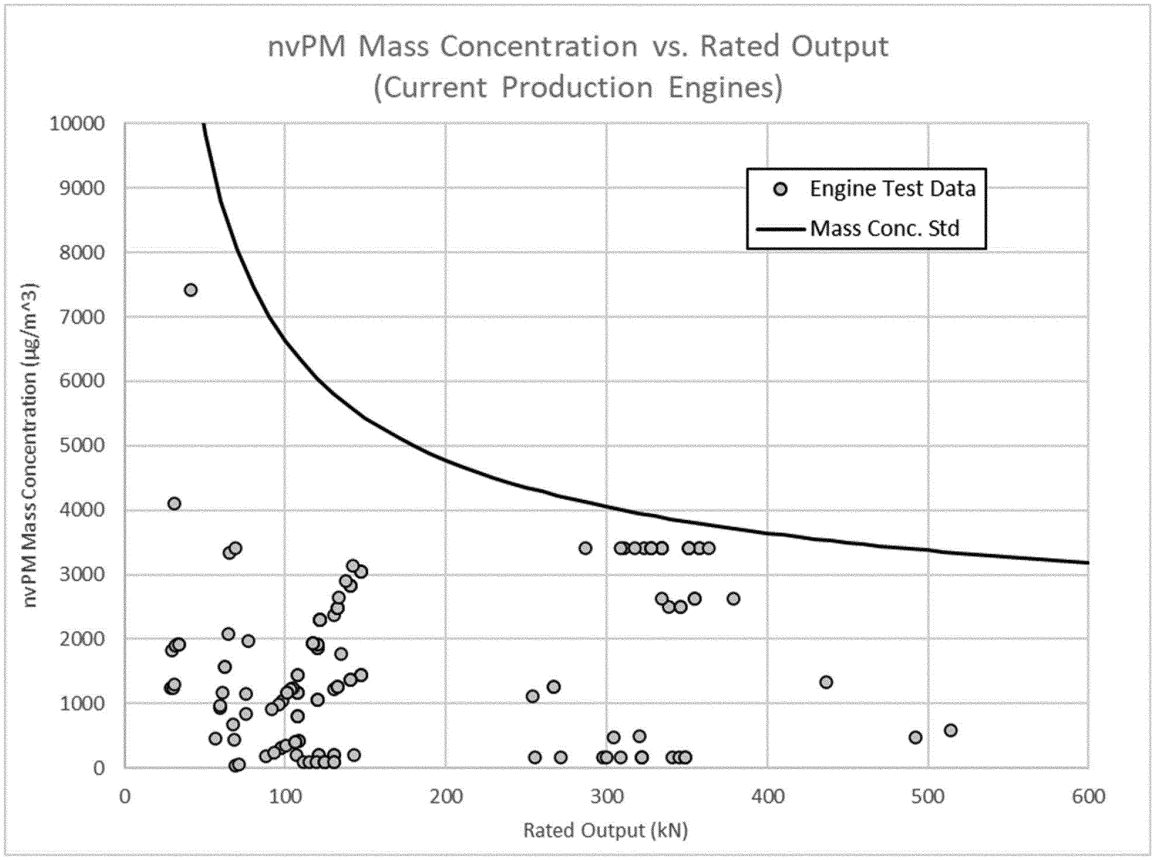
[114] ICAO, 2019: *Report of Eleventh Meeting, Montreal, 4–15 February 2019, Committee on Aviation Environmental Protection,* Document 10126, CAEP/11. The analysis performed to confirm the equivalence of the PM mass concentration standard and the SN standard is located in Appendix C (starting on page 3C–33) of this report.

[115] ICAO, 2017: *Aircraft Engine Emissions,* International Standards and Recommended Practices, Environmental Protection, Annex 16, Volume II, Fourth Edition, July 2017, III–4–3. The ICAO Annex 16, Volume II, Fourth Edition, includes Amendment 10 of January 1, 2021.

[116] A second component of the CAEP/10 agreement was data collection by January 1, 2020, so the EPA implemented domestically by updating the Aircraft Engine Emission ICR (EPA ICR Number 2427.04, OMB Control Number 2060–0680) on December 31, 2018 to include PM emission data.

[117] The EPA proposed to extend the applicability of the smoke standards to engines of less than or equal to 26.7 kilonewtons (kN) rated output used in supersonic airplanes, and so the single comment received on the extended applicability is within the scope of this rulemaking and is responded to in the Response to Comments document.

[118] ICAO Aircraft Engine Emissions Databank, July 20, 2021, ''edb-emissions-databank v28C (web).xlsx,'' European Union Aviation Safety Agency (EASA).



BILLING CODE 6560–50–C

Figure IV–3—nvPM Mass Concentration Standard

D. Test and Measurement Procedures

1. Aircraft Engine PM Emissions Metrics

When developing the PM standards, ICAO adopted three different methods of measuring the amount of PM emitted. The first is PM mass, or a measure of the total weight of the particles produced over the test cycle. This is how the EPA has historically measured PM emissions subject to standards for other sectors. The second is PM number, or the number of particles produced by the engine over the test cycle. These are two different methods of measuring the same pollutant, PM, but each provides valuable information. Third, ICAO developed PM mass concentration standards, as an alternative to the existing visibility standards based on smoke.

The EPA is incorporating by reference the metrics agreed at ICAO and incorporated into Annex 16 Volume II, to measure PM mass (Equation IV–6) and PM number (Equation IV–7). These metrics are based on a measurement of the nvPM emissions, as measured at the instrument, over the LTO cycle and is normalized by the rated output of the engine (rO).

Equation IV-6

$$nvPM_{mass} = \frac{\sum nvPM_{Mass}}{rO}\left[{}^{mg}/_{kN}\right]$$

Equation IV-7

$$nvPM_{num} = \frac{\sum nvPM_{number}}{rO}\left[{}^{\#}/_{kN}\right]$$

The EPA is adopting the PM mass concentration standard based on the maximum mass concentration, in micrograms per meter cubed, produced by the engine at any thrust setting.

Regulatory compliance with the emission standards is based on the product of Equation IV–6 or Equation IV–7 or mass concentration divided by the appropriate factor from Table IV–2, to obtain the characteristic level that is used to determine compliance with emission standards (see Section IV.D.4).

2. Test Procedure

The EPA is incorporating by reference the PM test and measurement procedures in ICAO Annex 16, Volume II. These procedures were developed in conjunction with the Society of Automotive Engineers (SAE) E–31 Aircraft Exhaust Emissions

Measurement Committee [119] in close consultation between government and industry, and subsequently they were adopted by ICAO and incorporated into ICAO Annex 16, Volume II.

These procedures build off the existing ICAO Annex 16, Volume II aircraft engine measurement procedures for gaseous pollutants. As described in the Annex 16, at least three engine tests need to be conducted to determine the emissions rates. These tests can be conducted on a single engine or multiple engines.[120] A representative sample of the engine exhaust is sampled at the engine exhaust exit. The exhaust then travels through a heated sample line where it is diluted and kept at a constant temperature prior to reaching the measurement instruments.

The methodology for measuring PM from aircraft engines differs from certain other EPA test procedures for mobile source $PM_{2.5}$ standards in two ways. First, as discussed in the introductory paragraphs of Section IV, the procedure is designed to measure only the non-volatile component of PM. The measurement of volatile PM is very dependent on the environment where it is measured. The practical development of a standardized method of measuring volatile PM from aircraft engines has proved challenging. Therefore, the development of a procedure for measuring nvPM was prioritized by ICAO and SAE E–31and the result is adopted in this final rule.

Second, the sample is measured continuously rather than being collected on a filter and measured after the test. This approach was taken primarily for the practical reasons that, due to high dilution rates leading to relatively low concentrations of PM in the sample, collecting enough particulate on a filter to analyze has the potential to take hours. Given the high fuel flow rates of these engines, such lengthy test modes would be very expensive. Additionally, because of the high volume of air required to run a jet engine and the extreme engine exhaust temperatures, it is not possible to collect the full exhaust stream in a controlled manner as is done for other mobile source $PM_{2.5}$ measurements.

Included in the procedures now incorporated by reference by the EPA are measurement system specifications and requirements, instrument specifications and calibration requirements, fuel specifications, and corrections for fuel composition, dilution, and thermophoretic losses in the collection part of the sampling system.

To create a uniform sampling system design that works across gas turbine engine testing facilities, the test procedure calls for a 35-meter sample line. This results in a significant portion of the PM being lost in the sample lines, on the order of 50 percent for PM mass and 90 percent for PM number. These particle losses in the sampling system are not corrected for in the standards. Compliance with the standard is based on the measurement at the instruments rather than the exit plane of the engine (instruments are 35 meters from engine exit). This is due to the lack of robustness of the sampling system particle loss correction methodology and that a more stringent standard at the instrument will lead to a reduction in the nvPM emissions at the engine exit plane. A correction methodology has been developed to better estimate the actual PM emitted into the atmosphere. This correction is described in Section V.A.2.

3. Test Duty Cycles

Mass and number PM emissions are measured over the LTO cycle shown in Table IV–1. This is the same duty cycle used to measure gaseous emissions from aircraft engines and is intended to represent operations and flight under an altitude of 3,000 feet near an airport. Emissions rates for each mode can be calculated by testing the engine(s) over a sufficient range of thrust settings such that the emission rates at each condition in Table IV–1 can be determined.

TABLE IV–1—LANDING AND TAKE-OFF CYCLE THRUST SETTINGS AND TIME IN MODE [121]

LTO operating mode	Thrust setting percent rO	Time in operating mode minutes
Take-off	100	0.7
Climb	85	2.2
Approach	30	4.0
Taxi/ground idle	7	26.0

The previous smoke number standard was adopted to reduce the visible smoke emitted from aircraft engines. Smoke number has been determined by measuring the visibility or opacity of a filter after soot has been collected upon it during the test procedure. Another means of measuring this visibility is by direct measurement of the particulate matter mass concentration. By measuring visibility based on mass concentration rather than smoke number, the number of tests needed can be reduced, and mass concentration data can be collected concurrently with other PM measurements. Like the previous smoke standard, the PM mass concentration standard is be based on the maximum value at any thrust setting. The engine(s) will be tested over a sufficient range of thrust settings that the maximum can be determined. This maximum could be at any thrust setting and is not limited to the LTO thrust points in Table IV–1.

The EPA is incorporating by reference ICAO's Annex 16 to the Convention on International Civil Aviation, Environmental Protection, Volume II—Aircraft Engine Emissions, Fourth Edition, July 2017.

4. Characteristic Level

EPA is incorporating by reference Appendix 6 to ICAO Annex 16, Volume II—International Standards and Recommended Practices for correcting engine measurements to characteristic value. Like existing gaseous standards, compliance with the PM standards adopted in this action is based on the characteristic level of the engine. The characteristic level is a statistical

[119] The E–31 Committee develops and maintains standards for measurement of emissions from aircraft engines. (See *https://www.sae.org/works/committeeHome.do?comtID=TEAE31,* last accessed October 31, 2022).

[120] For example, all three tests could be conducted on a single engine. Or two tests could be conducted on one engine and one test on a second engine. Or three separate engines could each be tested a single time.

[121] ICAO, 2017: *Aircraft Engine Emissions,* International Standards and Recommended Practices, Environmental Protection, Annex 16, Volume II, Fourth Edition, July 2017, III–4–2. The ICAO Annex 16, Volume II, Fourth Edition, includes Amendment 10 of January 1, 2021.

method of accounting for engine-to-engine variation in the measurement based on the number of engines tested. A minimum of three engine emissions tests is needed to determine the engine type's emissions rates for compliance with emission standards. The more engines that are used for testing increases the confidence that the emissions rate measured is from a typical engine rather than a high or low engine.

Table IV–2 is reproduced from Annex 16 Volume II Appendix 6 Table A6–1 and shows how these factors change based on the number of engines tested.[122] As the number of engines tested increases, the factor also increases resulting in a smaller adjustment and reflecting the increased confidence that the emissions rate is reflective of the average engine off the production line. In this way, there is an incentive to test more engines to reduce the characteristic adjustment while also increasing confidence that the measured emissions rate is representative of the typical production engine.

Table IV-2 – Factors to determine characteristic values

Number of engines tested (i)	CO	HC	NOx	SN	nvPM mass concentration	nvPM LTO mass	nvPM LTO number
1	0.814 7	0.649 3	0.862 7	0.776 9	0.776 9	0.719 4	0.719 4
2	0.877 7	0.768 5	0.909 4	0.852 7	0.852 7	0.814 8	0.814 8
3	0.924 6	0.857 2	0.944 1	0.909 1	0.909 1	0.885 8	0.885 8
4	0.934 7	0.876 4	0.951 6	0.921 3	0.921 3	0.901 1	0.901 1
5	0.941 6	0.889 4	0.956 7	0.929 6	0.929 6	0.911 6	0.911 6
6	0.946 7	0.899 0	0.960 5	0.935 8	0.935 8	0.919 3	0.919 3
7	0.950 6	0.906 5	0.963 4	0.940 5	0.940 5	0.925 2	0.925 2
8	0.953 8	0.912 6	0.965 8	0.944 4	0.944 4	0.930 1	0.930 1
9	0.956 5	0.917 6	0.967 7	0.947 6	0.947 6	0.934 1	0.934 1
10	0.958 7	0.921 8	0.969 4	0.950 2	0.950 2	0.937 5	0.937 5
more than 10	$1-\frac{0.13059}{\sqrt{i}}$	$1-\frac{0.24724}{\sqrt{i}}$	$1-\frac{0.09678}{\sqrt{i}}$	$1-\frac{0.15736}{\sqrt{i}}$	$1-\frac{0.15736}{\sqrt{i}}$	$1-\frac{0.19778}{\sqrt{i}}$	$1-\frac{0.19778}{\sqrt{i}}$

For PM mass and PM number, the characteristic level is based on the mean of all engines tested, and appropriately corrected, divided by the factor corresponding to the number of engine tests performed in Table IV–1. For PM mass concentration, the characteristic level is based on the mean of the maximum values of all engines tested, and appropriately corrected, divided by the factor corresponding to the number of engine tests performed in Table IV–2.

For example, an engine type where three measurements were obtained from the same engine has an nvPM mass metric value of 100 mg/kN (mean metric value of all engine tests). The nvPM LTO mass factor (or nvPM mass characteristic factor) from Table IV–2 for three engines is 0.7194. The metric value, with applicable corrections applied, is then divided by the factor to obtain the characteristic level of the engine. Therefore, the resulting characteristic level for this engine type, to determine compliance with the nvPM mass standard is 139.005 mg/kN. If instead three engines are each tested once, the characteristic factor would be 0.8858 and the nvPM mass characteristic level to determine compliance with the standard would be 112.892 mg/kN.

An engine type's characteristic level can also be further improved by testing additional engines. For example, if 10 separate engines were tested of the same type, the nvPM mass characteristic factor becomes 0.9375. The resulting characteristic level (assuming the average nvPM mass metric value remains 100 mg/kN) would be 106.667 mg/kN. This approach could be used if an engine exceeds the standard at the time it is initially tested or there is a desire to increase the margin to the standard for whatever reason. Table IV–3 shows these three different examples for nvPM LTO Mass.

TABLE IV–3—IMPACT OF THE NUMBER OF ENGINES TESTED ON RESULTING CHARACTERISTIC LEVEL

Number of engines tested	Number of tests per engine	Measured nvPM LTO Mass (mg/kN)	Characteristic factor	Characteristic level (mg/kN)
1	3	100	0.7194	139.005
3	1	100	0.8858	112.892
10	1	100	0.9375	106.667

[122] ICAO, 2017: *Aircraft Engine Emissions,* International Standards and Recommended Practices, Environmental Protection, Annex 16, Volume II, Fourth Edition, July 2017, App 6–2pp. The ICAO Annex 16, Volume II, Fourth Edition, includes Amendment 10 of January 1, 2021.

5. Derivative Engines for Emissions Certification Purposes

Aircraft engine types can remain in production for many years and be subject to numerous modifications during their production life. As part of the certification process for any change, the type certificate applicant will need to show if the change will have an impact the engine emissions. While some of these changes could impact engine emissions rates, many of them will not. To simplify the certification process and reduce burden on both type certificate applicant and certification authorities, ICAO developed criteria to determine whether there has been an emissions change that requires new testing. Such criteria already exist at ICAO and in the EPA regulations for gaseous and smoke standards.

ICAO recommends [123] that if the characteristic level for an engine was type certificated at a level that is at or above 80 percent of the PM mass, PM number, or PM mass concentration standard, the type certificate applicant would be required to test the proposed derivative engine. If the engine is below 80 percent of the standard, engineering analysis can be used to determine new emission rates for the proposed derivative engines. The EPA is implementing these ICAO recommended practices in this final rule as the regulatory standard in the United States.

ICAO evaluated the measurement uncertainty to develop criteria for determining if a proposed derivative engine's emissions are similar to the previously certificated engine's emissions. The EPA is adopting these ICAO criteria in this final rule.[124]

For PM mass measurements described in Section IV.A, the following values apply:

- 80 mg/kN if the characteristic level for $nvPM_{mass}$ emissions is below 400 mg/kN.
- ±20% of the characteristic level if the characteristic level for $nvPM_{mass}$ emissions is greater than or equal to 400 mg/kN.

For PM number measurements, described in Section IV.B, the following values apply:

- 4×10^{14} particles/kN if the characteristic level for $nvPM_{num}$ emissions is below 2×10^{15} particles/kN.
- ±20% of the characteristic level if the characteristic level for $nvPM_{num}$ emissions is greater than or equal to 2×10^{15} particles/kN.

For PM mass concentration measurements described in Section IV.C, the following values apply:

- ±200 $\mu g/m^3$ if the characteristic level of maximum nvPM mass concentration is below 1,000 $\mu g/m^3$.
- ±20% of the characteristic level if the characteristic level for maximum nvPM mass concentration is at or above 1,000 $\mu g/m^3$.

If a type certificate applicant can demonstrate that the engine's emissions are within these ranges, then new emissions rates will not need to be developed and the proposed derivative engine for emissions certification purposes will keep the existing emissions rates.

If the engine is not determined to be a derivative engine for emissions certification purposes, the type certificate applicant will need to certify the new emission rates for the engine.

E. Annual Reporting Requirement

In 2012, the EPA adopted an annual reporting requirement as part of a rulemaking to adopt updated aircraft engine NO_X standards.[125] This provision, adopted into 40 CFR 87.42, requires the manufacturers of covered engines to annually report data to the EPA which includes information on engine identification and characteristics, emissions data for all regulated pollutants, and production volumes. In 2018, the EPA issued an information collection request (ICR) which renewed the existing ICR and added PM information to the list of required data.[126] [127] However, that 2018 ICR was not part of a rulemaking effort, and the new PM reporting requirements were not incorporated into the CFR at that time. Further, that 2018 ICR is currently being renewed (in an action separate from this rulemaking), and the EPA is including as part of that effort some additional data elements to the ICR (specifically, the emission indices for HC, CO, and NO_X at each mode of the LTO cycle).[128] [129] The EPA is now formally incorporating all aspects of that ICR, as proposed to be renewed, into 40 CFR 1031.150. It is important to note that the incorporation of the PM reporting requirements into the CFR will not create a new requirement for the manufacturers of aircraft engines. Rather, it will simply incorporate the existing reporting requirements (as proposed to be amended and renewed in a separate action) into the CFR for ease of use by having all the reporting requirements readily available in the CFR.

The EPA uses the collection of information to help conduct technology assessments, develop aircraft emission inventories (for current and future inventories), and inform our policy decisions—including future standard-setting actions. The information enables the EPA to further understand the characteristics of aircraft engines that are subject to emission standards—and engines subject to the PM emission standards—and engines' impact on emission inventories. In addition, the information helps the EPA set appropriate and achievable emission standards and related requirements for aircraft engines. Annually updated information helps in assessing technology trends and their impacts on national emissions inventories. Also, it assists the EPA to stay abreast of developments in the aircraft engine industry.

As discussed in Section VII, the EPA is finalizing the proposal to migrate the existing 40 CFR part 87 regulatory text to a new 40 CFR part 1031. This effort includes clarifying portions of the regulatory text for ease of use. In the old 40 CFR 87.42(c)(6), the regulatory text did not specifically spell out some required data, but instead relied on incorporation by reference of ICAO Annex 16, Volume II's data reporting requirements and listed the data from this Annex that is not required by the EPA's reporting requirement. For future ease of use, 40 CFR 1031.150 explicitly lists all the required items rather than continuing the incorporation by reference approach in the existing reporting regulations. Finally, the EPA is incorporating by reference Appendix 8 of Annex 16, Volume II, which outlines procedures used to estimate measurement system losses, which are a required element of the reporting provisions.

F. Response to Key Comments

The EPA received numerous comments on the proposed rulemaking

[129] Documentation and Public comments are available at: *https://www.regulations.gov/docket/EPA-HQ-OAR-2016-0546,* last accessed June 8, 2022.

which are summarized in the Response to Comments document along with the EPA's responses to those comments. Comments in their entirety are available in the docket for this rulemaking action. The following sections summarize the comments related to the stringency of the standards and the EPA's response to these comments. Some adverse comments are addressed more fully in the Response to Comments document.

1. Comments in Support of the Proposed Standards

Comment summary: Some commenters stated that the proposed standards adhere to the statutory requirements of CAA section 231. They say that the proposed standards are well supported by an extensive administrative record. The commenters point out that the D.C. Circuit ruled in 2007 that CAA section 231 confers a broad degree of discretion on the EPA in setting aircraft engine emission standards.[130]

Response: EPA is finalizing the standards as proposed. We agree that the proposed standards, as well as the final standards, satisfy our statutory obligations and are well-supported. The EPA acknowledges that the D.C. Circuit recognized the EPA's broad authority in CAA section 231 *in National Association of Clean Air Agencies* v. *EPA,* 489 F.3d 1221, 1229–30 (D.C. Cir. 2007) (*NACAA*).

Comment summary: Several commenters expressed their support of the EPA adopting PM standards that match the international PM standards because doing so is vital to the competitiveness of U.S. industry and regulatory certainty. They say it would protect U.S. jobs and strengthen the U.S. aviation industry by ensuring the global acceptance of U.S.-manufactured aircraft engines. They also say it will make sure U.S.-manufactured aircraft engines are available to aircraft manufacturers and U.S. airlines, while enabling U.S. airlines to obtain aircraft and aircraft engines at market-driven, competitive prices.

Response: The EPA agrees this rule has the benefit of helping to ensure the acceptance of U.S.-manufactured aircraft engines by member States, aircraft (airframe) manufacturers, and airlines around the world. The EPA notes that under the terms of the Chicago Convention, ICAO member States must recognize as valid certificates of airworthiness issued by other ICAO member States, provided the requirements under which such certificates were issued are as least as stringent as the minimum ICAO standards.[131]

Comment summary: Some commenters urged the EPA to promptly issue the final rule with the standards matching the international standards. They say that this EPA rulemaking and the subsequent FAA certification rulemaking must be completed to start the certification process in the United States. Thus, they believe that prompt EPA action is necessary to provide sufficient time for FAA to promulgate their certification rulemaking and U.S. aircraft engine manufacturers to conduct the lengthy and expensive steps to demonstrate compliance with the standards, for all aircraft engines that will be in-production in 2023. They note that January 1, 2023, is the implementation date for the ICAO standards.

Response: The EPA acknowledges that the international effective date for the ICAO mass concentration standards was January 1, 2020, and that the international effective date for the mass and number standards is January 1, 2023. The EPA also acknowledges that FAA will need to conduct a separate, subsequent certification rulemaking process to implement the EPA's PM standards finalized in this action.

In this action, the EPA is aiming to minimize disruption by finalizing this action before the January 1, 2023, the international effective date of the PM mass and number standards.

For comparison, the EPA notes the EPA finalized the domestic GHG standards for airplanes on January 11, 2021, after the international effective date for new type planes;[132] however, disruption was avoided in practice because no manufacturers applied to FAA for a type certificate for a new type design airplane between January 1, 2020, and January 11, 2021.

Comment summary: Some commenters state that the proposed standards are identical to ICAO's aircraft engine PM standards and that adopting them is consistent with the 1944 Chicago Convention treaty obligations. They say that these standards continue the long collaborative tradition between the EPA and ICAO. The commenters say that the objective of the Chicago Convention is to foster global cooperation and encourage an atmosphere where international civil aviation could be developed in a safe and orderly manner, while being operated soundly and economically. The commenters say that, with both the FAA and the EPA playing key leadership roles, it was only after significant deliberation and technical and economic analyses that CAEP agreed to the ICAO PM standards. The commenters say that the EPA's adoption of standards that align with ICAO standards supports international harmonization and regulatory uniformity.

Response: The EPA agrees adopting the PM standards in this action satisfies the United States' treaty obligations under the Chicago Convention. The EPA also agrees that the EPA and the FAA had key leadership roles in the ICAO PM standard-setting process, and the EPA recognizes the significant deliberations and economic analyses that occurred in CAEP. The EPA agrees that this action promotes international cooperation and harmonization.

Comment summary: Some commenters say that the standards are consistent with the CAEP terms of reference which provide that standards be technologically feasible, economically reasonable, environmentally beneficial, and balanced against interdependencies (aircraft noise and competing emission reductions of other pollutants, such as NO_X). The commenters say that the CAEP terms of reference align well with the considerations in CAA section 231, and ICAO's assessment of each of the criteria of the terms of reference is directly related to the decisions the EPA must make when issuing aircraft engine emission standards. The commenters assert that CAA section 231(b) requires that aircraft engine emission standards allow sufficient lead time for the development of the necessary technology, while giving consideration of the cost to comply within this time period.

Response: The EPA agrees that the final standards are consistent with the CAEP terms of reference and that the standards also meet the requirements of CAA section 231. The EPA would not adopt ICAO standards domestically without exercising the Agency's own independent evaluation of appropriate domestic standards under CAA section 231, which is what the EPA has done in

[130] *National Association of Clean Air Agencies* v. *EPA,* 489 F.3d 1221, 1229–30 (D.C. Cir. 2007) (''When Congress enacted § 231 providing that the Administrator could, 'from time to time,' act 'in his judgment,' as 'he deems appropriate,' it conferred broad discretion to the Administrator to weigh various factors in arriving at appropriate standards.'').

[131] ICAO, 2006: *Convention on International Civil Aviation,* Article 33, Ninth Edition, Document 7300/9.

[132] CAEP/10 airplane CO_2 standards apply to new type design airplanes for which the application for a type certificate was or will be submitted on or after January 1, 2020, some modified in-production airplanes on or after January 1, 2023, and all applicable in-production airplanes manufactured on or after January 1, 2028.

this rulemaking. Any domestic aircraft engine standards adopted by the EPA must comport with the requirements in CAA section 231.

Comment summary: Some commenters say that CAA section 231(a)(2)(B)(ii) expressly prohibits changes in aircraft engine emission standards that ''would significantly increase noise and adversely affect safety.'' The commenters point out that, as the EPA describes in the proposed rulemaking, ICAO/CAEP evaluates ''technological feasibility'' using the Technology Readiness Level (''TRL'') scale and deems technologies that have attained TRL8 (defined as the ''actual system completed and 'flight qualified' through test and demonstration'') to be ''technologically feasible.'' Therefore, the commenters conclude, the use of TRL8 to evaluate ''technological feasibility'' makes sure aircraft engine emission standards reflect what technologies can safely deliver, instead of hypothetical ''technology forcing'' standards that could pose a potential threat to air safety.[133]

Response: The EPA agrees that TRL8 [134] is an adequate and appropriate criteria for identifying proven technologies that are demonstrably safe and of an acceptable noise level for purposes of this rulemaking. The EPA relies on TRL8 to support the PM standards finalized in this rule because TRL8 was used to justify the PM standards by ICAO, as described in Section VI.B. ICAO treats TRL8 as a proxy for what is technologically feasible in the course of establishing new international standards. This conservative approach allows ICAO to ensure that all technology being considered is safe and of acceptable noise level without having to conduct additional evaluation of specific technologies. The EPA agrees this use of TRL8 is a valid means for ICAO to develop standards that will, by definition, be based on technologies that have been proven safe, of acceptable noise level, and technologically feasible. The EPA also agrees that ICAO's use of TRL8 means that technologies considered have been proven safe and of an acceptable noise level, and therefore, that the final PM standards do not adversely affect safety and do not significantly increase noise. In setting the international standards, ICAO considered the emissions performance of aircraft engines assumed to be in-production on the implementation date for the PM mass and number standards, January 1, 2023. Thus, the technology was already demonstrated to be safe and of acceptable noise levels for these standards, and ICAO did not view that a new safety and noise analysis was necessary.

However, in the EPA's view, ICAO's use of TRL8 to define technological feasibility is not the only means to ensure a standard does not adversely affect safety and does not significantly increase noise. The EPA does not view TRL8 to represent the most stringent level of technology that could be required in an EPA aircraft standard setting rulemaking. Nor does the EPA agree with the premise that standards based on technology below TRL8 would necessarily be technology forcing or inherently have a negative effect on safety and noise. In establishing U.S. aircraft engine emission standards, the EPA is not constrained to ICAO's definition of technological feasibility in assessing appropriate aircraft engine standards under CAA section 231(a). *See NACAA,* 489 F.3d at 1229–30. In fact, the EPA has adopted technology-forcing standards under CAA section 231 in the past and found them to be safe and not to significantly increase noise.[135] In the future, if the EPA were to consider setting emission standards based on technology that was not yet at TRL8 or not expected to be at TRL8 by the implementation date of the standards,[136] the Agency, just as it did in this action, in consultation with the FAA, would evaluate the safety and noise impact (also lead time and cost) of such standards before making a determination in this regard. CAA section 231(a)(2)(B) and (a)(3). Any assessment of safety and noise (also lead time and cost) in the context of hypothetical technology-forcing standards would have to occur in the context of the specific standards under consideration.

2. Comments in Support of More Stringent Standards

Comment summary: Several commenters were dissatisfied with the level of stringency of the PM standards. One commenter argued that CAA section 231 requires the EPA to adopt technology-forcing standards. Other comments argued CAA section 231 requires the EPA to set standards according to expectations of the development of technology over time. Some commenters say that, at a minimum, the EPA should establish standards that reduce emissions based on available engine technology. A number of commenters supported these arguments by pointing to the text of the statute, the underlying legislative intent, legislative history, and the purpose of the CAA.

Response: The statutory-based arguments presented by commenters that the level of stringency of the PM standards are not authorized by CAA section 231 import requirements into the statute that do not exist.

As described in Section II.A, CAA section 231(a)(2)(A) directs the Administrator of the EPA to, from time to time, propose aircraft engine emission standards applicable to the emission of any air pollutant from classes of aircraft engines which in the Administrator's judgment causes or contributes to air pollution that may reasonably be anticipated to endanger public health or welfare. CAA section 231(a)(3) provides that after the EPA proposes standards, the Administrator shall issue such standards ''with such modifications as he deems appropriate.'' CAA section 231(b) requires that any emission standards ''take effect after such period as the Administrator finds necessary . . . to permit the development and application of the requisite technology, giving appropriate consideration to the cost of compliance during such period.'' The D.C. Circuit has held that the delegation of authority in CAA section 231 ''is both explicit and extraordinarily broad'' and that the text confers ''broad discretion . . . to weigh various factors in arriving at appropriate standards.'' *NACAA,* 489 F.3d 1221, 1229–30.

The statutory language of CAA section 231 is not identical to other provisions in the CAA that direct the EPA to establish technology-based standards. CAA section 231(a) states that the EPA must ''issue proposed emission standards applicable to the emission of any air pollutant'' from aircraft engines

[133] Any reference to technology-forcing standards in this rulemaking is not based on the level of the final PM standards, but it is intended to respond to comments.

[134] As described in Section VI.B, TRL is a measure of Technology Readiness Level. CAEP has defined TRL8 as the ''actual system completed and 'flight qualified' through test and demonstration.'' TRL is a scale from 1 to 9, TRL1 is the conceptual principle, and TRL9 is the ''actual system 'flight proven' on operational flight.'' The TRL scale was originally developed by NASA. ICF International, *CO_2 Analysis of CO_2-Reducing Technologies for Aircraft,* Final Report, EPA Contract Number EP–C–12–011, see page 40, March 17, 2015.

[135] *See* 38 FR 19088 (July 17, 1973); 41 FR 34722 (August 16, 1976).

[136] As described in Section VI.B, for the ICAO PM standard setting, ICAO referred to technical feasibility as any technology demonstrated to be safe and airworthy proven to Technology Readiness Level 8 and available for application over a sufficient range of newly certificated aircraft. This means that the ICAO analysis that informed the international standard considered the emissions performance of aircraft engines assumed to be in-production on the ICAO implementation date for the PM mass and number standards, January 1, 2023.

and to finalize ''such regulations'' with those modifications the EPA ''deems appropriate.'' CAA section 231(a)(2)(A) and (a)(3). This language is in contrast to Congress' direction in other parts of the Act, where it required the EPA to set standards that achieve a particular degree of emission reduction or environmental or public health protection. For example, in setting technology-based emission standards for hazardous air pollutants under CAA section 112(d)(2) and (3), the EPA must ''require the maximum degree of reduction . . . that the Administrator . . . determines is achievable,'' taking into account cost and non-air quality health and environmental impacts. CAA section 112(d)(2). Those standards also ''shall not be less stringent than'' explicitly prescribed levels. CAA section 112(d)(3). Health- and environmental quality-based NAAQS under CAA section 109 must be set at levels ''requisite to protect the public health'' and ''requisite to protect the public welfare from any known or anticipated adverse effects associated with the presence of [the] air pollutant in the ambient air.'' CAA section 109(b)(1) and (2). When regulating certain pollutants from motor vehicles and nonroad engine emissions under CAA sections 202(a)(3) and 213(a)(3) and (5), the EPA's standards must ''reflect the greatest degree of emission reduction achievable . . . , giving appropriate consideration to cost, energy, and safety factors associated with the application of such technology.'' CAA sections 202(a)(3) and 213(a)(3) and (5).

CAA section 231 lacks comparable language requiring it to meet a particular threshold of protectiveness, emission reduction, or technological stringency, despite this clear evidence that Congress knew how to impose such obligations when it wished. *See generally* CAA section 231. ''Where Congress uses certain language in one part of a statute and different language in another, it is generally presumed that Congress acts intentionally.'' *Nat'l Fed'n of Indep. Bus.* v. *Sebelius,* 567 U.S. 519, 544 (2012); *Sosa* v. *Alvarez-Machain,* 542 U.S. 692, 711 n.9 (2004) (citing a treatise on statutory construction and calling this principle the ''usual rule'' of judicial interpretation). In certain respects, the EPA's authority is broader than it is under other CAA provisions, in that the EPA is not required in setting aircraft emission standards to achieve a specified degree of emissions reduction.

Some commenters also presented a textual comparison of the House and Senate bills to conclude that Congress intended for CAA section 231 to be based on a consideration of pollution impacts and technological feasibility because the final CAA section 231(a)(1) required the EPA to conduct a study within 90 days after December 31, 1970 of air pollutants from aircraft to determine impact on air quality and technological feasibility of controlling such pollutants. S. Rep. No. 91–1196, at 24, 1 Leg. Hist. at 424; H.R. Rep. No. 91–1783, at 55 (Conf. Rep.). One commenter alleged this means ''the necessary premise [is] that such study should inform the standards themselves.'' [137] However, the study requirement in CAA section 231(a)(1) does not establish a requirement for aircraft engine standards to be forward-looking technology-based regulation. That provision required EPA to conduct a one-time ''study and investigation'' ''to determine'' the extent of aircraft emissions' impacts on air quality and the feasibility of controlling them ''[w]ithin 90 days after December 31, 1970.'' The single study required in CAA section 231(a)(1) is not a continuing obligation that pertains to each exercise of the standard-setting authority under CAA section 231(a)(2) and (3), which contain no discussion of technological feasibility and under which standards are set and may be revised ''from time to time.'' *Cf. Sierra Club,* 325 F.3d 374, 377 (D.C. Cir. 2003) (holding that a provision requiring EPA to set standards ''based on'' such a study did not make the validity of the standards dependent on their connection to that study).

The commenters also quoted to a Senate report accompanying the CAA 1970 amendment Senate bill to suggest CAA section 231 requires standards to be based on the degree of harm caused by aircraft pollution and the technology that can be developed in the future to reduce it. The statement cited by commenters from the Senate Report does not constrain the EPA where the plain text of the statute does not, and where Congress knew how, but declined, to make such constraints mandatory on the Agency. ''Congress' authoritative statement is the statutory text, not the legislative history.'' *Chamber of Com. Of U.S.* v. *Whiting,* 563 U.S. 582, 599 (2011) (quoting *Exxon Mobil Corp.* v. *Allapattah Services, Inc.,* 545 U.S. 546, 568 (2005) (internal quotation marks omitted). Further, the *NACAA* Court rejected an argument that similar statements in the 1970 Senate Report established Congress' intent that the EPA prioritize forward-looking standards. *NACAA,* 489 F.3d at 1229–30; *Sierra Club* v. *EPA,* 325 F.3d 374, 379–380 (D.C. Cir. 2003).

The EPA's interpretation of CAA section 231 is not categorically at odds with the Clean Air Act's general protective purpose. The Act's general goal of reducing air pollution does not, in itself, prescribe regulatory factors for specific programs, nor does it restrict the EPA's discretion as to how best effectuate that goal in a specific action or in a regulatory program over time. Accordingly, while the EPA's discretion under CAA section 231 would allow it to select more stringent standards when appropriate, it does not mandate that the EPA elevate pollution reduction over all relevant factors in the consideration of any particular aircraft standard. *See NACAA,* 489 F.3d at 1229–30.

The final PM standards fall squarely within the EPA's statutory authority under CAA section 231 to promulgate. As described in Section I.B.2 and the introductory text of Section IV, in proposing and adopting the final PM standards, the EPA considered the statutory requirements of CAA section 231. The EPA also took into account the need to control PM emissions, the importance of international harmonization, avoiding adverse impacts that could result from delaying adoption of PM standards at least as stringent as ICAO's PM standards, and gaining experience from the novel approach to implementing PM standards. Further, based on the EPA's independent view that technology at the TRL8 has been demonstrated to be safe and of an acceptable noise-level, the EPA is confident that the final standards will not significantly increase noise or adversely affect safety. The EPA reached the same conclusion as ICAO that a new noise and safety analysis was not necessary. For the same reasons, the EPA believes sufficient lead time has been provided since the technology has already been developed. Costs information for the standards is described in Section VI.D. Based on this assessment, the EPA concludes that it is reasonable to finalize PM standards that match the international standards in scope, stringency, and effective date.

Additional legal issues raised by these comments are addressed in the Response to Comments document.

Comment summary: Some commenters claim the EPA has an obligation to consider the feasibility, costs, and benefits of more stringent standards, including technology-forcing standards, or at least explain why it did

[137] Comments of California, Connecticut, Illinois, Maryland, Massachusetts, New Jersey, New York, Oregon, Pennsylvania, Vermont, Washington, and Wisconsin at 13. See also Comment of Sierra Club at 7–8.

not do so. A few commenters proposed suggestions to alternative PM controls such as de-rated takeoff, accelerated implementation of Optimized Profile Descents, reduced power during taxiing, improved taxi time, and reduced usage of auxiliary power units (APUs).

Response: The focused scope of the EPA's proposed PM standards was informed by the January 1, 2023, international effective date for the mass and number PM standards, as well as the other considerations identified elsewhere throughout this preamble. The EPA does not believe it would be feasible to repropose more stringent PM standards and also meet the international effective date of the new mass and number standards. Should the United States miss the January 1, 2023, deadline, U.S. airplane and engine manufacturers could be forced to seek PM emissions certification from an aviation certification of another country to market and operate their airplanes and engines internationally. The United States would also miss its obligations under the Chicago Convention.

The EPA believes that the limited scope of the proposal is permissible under CAA section 231 and, based on the plain language of the statute, disagrees with the premise that the statute requires the Agency to propose multiple levels of stringency of standards. To the extent commenters identified specific alternative levels of stringency they would prefer, the comments did not provide sufficient information about safety, noise, lead time, and costs of those alternatives to support the EPA finalizing more stringent standards in this rulemaking. In light of the reasons the EPA has provided for adopting the PM standards as proposed, the EPA does not view these ''modifications'' requested by commenters to be ''appropriate'' to incorporate into the PM standards adopted in this rulemaking. See CAA section 231(a)(3). The EPA's current and intended future work related to addressing PM emissions from aircraft engines is described in Section I.C.

A number of commenters also provided suggested ideas for alternative methods to regulating PM emissions (*e.g.,* de-rated takeoff, reduced power during taxiing, and improved taxi time). The EPA has carefully reviewed the alternatives raised by the commenters, but has decided not to adopt them in this final rulemaking. The EPA does not believe it would be feasible to assess the legal, technical, and policy issues raised by suggested alternatives put forward by commenters; repropose standards; take public comment; and meet the international effective date of January 1, 2023. More specific comments related to suggested alternative PM controls are addressed in the Response to Comments document.

Comment summary: According to some commenters, the EPA impermissibly factored international harmonization, adverse impacts on U.S. industry, or other non-statutory considerations into its rationale supporting the PM standards.

Response: The EPA's past practice and the D.C. Circuit's holding in *NACAA* that the EPA's historical approach of taking international harmonization into account in setting domestic standards as not ''manifestly contrary to the statute'', *NACAA,* 489 F.3d at 1230, affirm that the EPA's broad discretion includes the ability to weigh considerations such as international harmonization and the competitive effects of the EPA's standards on international aviation. Nothing in CAA section 231 precludes such considerations. Aircraft and their engines are manufactured and sold around the world, and routinely operate in international airspace. Furthermore, CAA section 231 does not list or dictate the EPA's consideration of particular factors and enables the EPA to identify and apply relevant considerations in determining what standards are ''appropriate''. CAA section 231(a)(3). The D.C. Circuit rejected an argument similar to the commenters' in *NACAA:* ''Finding nothing in the text or structure of the statute to indicate that the Congress intended to preclude the EPA from considering '[factors other than air quality],' we refused to infer from congressional silence an intention to preclude the agency from considering factors other than those listed in a statute.'' 489 F.3d at 1230 (quoting *George E. Warren Corp.* v. *EPA,* 159 F.3d 61, 623–24 (D.C. Cir. 1998)). Moreover, the Chicago Convention, ratified by the United States, has the force of Federal law, and therefore, the EPA acts appropriately in implementing our Clean Air Act authorities in a manner that is harmonious and consistent with the Chicago Convention and the United States' international obligations under the treaty.

Having invested significant effort and resources, working with the FAA and the Department of State, to gain international consensus within ICAO to adopt the international PM standards for aircraft engines, the EPA believes that meeting the United States' obligations under the Chicago Convention by aligning domestic standards with the ICAO standards, rather than adopting more stringent standards, will have substantial benefits for future international cooperation on aircraft engine emission standards, and such cooperation is the key for achieving worldwide emission reductions. Deviating from the international PM standards could undermine future efforts by the United States to seek international consensus on aircraft emission standards in general, including more stringent future standards for PM. Reaching this conclusion is not tantamount to a determination that it would never be appropriate for the EPA to adopt more stringent PM standards than ICAO's standards. However, at this time, the EPA finds it appropriate to finalize the standards as proposed.

In addition, the ICAO applicability date of the mass and number standards of January 1, 2023, is fast approaching. The U.S. aircraft engine manufacturers, aircraft manufacturers, and airlines are urging the EPA to promptly promulgate this final rulemaking to adopt ICAO's standards, which were adopted back in 2017 and 2020, so they can build (and sell) or have access to U.S. engines to remain competitive in the global marketplace. Furthermore, the EPA understands that U.S. aircraft engine manufacturers need time to certify their products, after the subsequent FAA rulemaking to enforce the standards, to ensure the aircraft engines comply with standards. Also, the EPA did not conduct the analyses needed to support more stringent standards in the proposed rulemaking, or otherwise develop a sufficient record for more stringent standards, that would be necessary to support finalizing such standards in this final rule. We do not believe we could finalize more stringent standards without conducting significant additional analyses and undertaking a new round of notice and comment, which would certainly cause a significant delay in meeting the United States' obligations under the Chicago Convention. We have decided that the most appropriate course, under CAA section 231, is to adopt aircraft engine PM standards that are harmonized with the standards adopted by ICAO in 2017 and 2020.

In determining what final PM standards are appropriate under CAA section 231 and after consultation with FAA, the EPA considered the level of standards that could be met with the application of requisite technology within the necessary period of time that would allow the United States to meet its obligations under the Chicago Convention to at least match the ICAO standards, and gave appropriate consideration to the cost of compliance within this period. This determination also took into account the requirement

that EPA's revised standards not significantly increase noise and adversely affect safety.

Comment summary: Some commenters argued that the EPA's position that it would be appropriate to gain experience from implementation of the novel approach to implementing PM standards before considering whether to adopt more stringent regulations is arbitrary and capricious.

Response: As described the introductory paragraphs of Section IV, these final standards change the approach to regulating aircraft engine PM emissions from past smoke measurements to the measurement of mass and number for the first time for U.S. manufacturers, and international regulatory uniformity and certainty are key elements for these manufacturers as they become familiar with adhering to these standards and test procedures. Further, some manufacturers are still adapting to how best control aircraft engine PM since they designed recent in-production engines to optimize NO_X control, as explained in the succeeding paragraphs.[138] We think that considering the novelty of these approaches and the industry's response to them falls well within our discretion. Moreover, they also pertain to the statutory directive to consider the lead time necessary for the development and application of the requisite technology. See CAA section 231(b).

Comment summary: Some commenters say that proposed standards are far less stringent than PM emission levels that existing aircraft engine technologies already achieve. Some commenters assert that more stringent PM standards compared to the proposed standards are feasible for in-production and new type design aircraft engines. Some commenters argue that the proposed PM standards are not anti-backsliding. These comments say that all in-production engines already meet the proposed standards for in-production engines and most meet the proposed standards for new type design engines by a considerable margin; therefore, no backsliding could reasonably happen absent these standards.

Response: While it may be true that more stringent PM standards compared to the final standards are feasible for some in-production and new type design aircraft engines, for the reasons explained in the proposal and again in this final rule the EPA does not consider more stringent standards than those adopted in this action, applicable to all in-production and new type design engines, to be appropriate at this time. Additionally, the EPA did not propose more stringent standards, and the existing record that has been developed does not support finalizing more stringent standards absent significant additional analyses.

The EPA disagrees that the standards are not anti-backsliding. Although the PM mass concentration standard is replacing the smoke standard for some engines, the PM mass and number standards are the first of their kind. In that regard, PM mass and number are currently unregulated from aircraft engines and the standards finalized in this action represent a new regulatory backstop of those two forms of previously uncontrolled PM emissions. Further, all three PM standards will prevent backsliding by ensuring that all new type design and in-production aircraft engines will not exceed those regulatory levels in the future.

CAEP meets triennially, and in the future, we anticipate ICAO/CAEP considering more stringent aircraft engine PM standards. The U.S. Interagency Group on International Aviation (IGIA) facilitates coordinated recommendations to the Secretary of State on issues pertaining to international aviation (and ICAO/CAEP), and the FAA is the chair of IGIA. Representatives of domestic states, non-governmental organizations, and industry can participate in IGIA to provide input into future standards for ICAO/CAEP. U.S. manufacturers will be better prepared for any future standard change due to their experience with measuring nvPM mass and number for the first time for these final standards. The PM standards adopted in this rulemaking, within the larger context of international aircraft standard-setting, send an important signal that PM emissions is a factor that manufacturers need to consider when building aircraft engines now and going forward—with the anticipation that ICAO/CAEP will consider more stringent PM standards in the future.

In response to the comments that the standards are far less stringent than PM emission levels of existing aircraft engine technologies, the EPA notes that there is a wide range of PM levels for in-production aircraft engines. As described in Section VI.C, for some manufacturers new technologies aimed at reducing aircraft engine NO_X, which were implemented for in-production engines that were recently built, also resulted in an order of magnitude reduction in PM in comparison to most in-service engines. Specifically, the current lean-burn engines and some advanced Rich-Quench-Lean (RQL) engines developed for the purpose of achieving low NO_X emissions coincidentally provided order of magnitude reductions in PM emissions in comparison to existing RQL engines.[139] Other manufacturers did not develop or implement such technologies that resulted in such PM reduction, and thus, their recent in-production aircraft engines are not achieving similar PM control. The final PM standards are anti-backsliding for these aircraft engines by ensuring that they will not exceed the final standards in the future. Further, this information shows that available engine technology includes a wide range of technologies, and the EPA's final standards are standards that can be met by all engines expected to be in production by the implementation date of the PM mass and number standards, January 1, 2023.

Comment summary: Some commenters argued that the EPA is not bound by the Chicago Convention to adopt standards equivalent to ICAO's standards, and relatedly some commenters asserted the EPA is not prohibited from adopting standards more stringent than ICAO's standards. Some comments argued that the EPA cannot allow international agreements to dictate its domestic regulation of PM from aircraft engines.

Response: As explained in the introductory text of Section IV and in Section VI, and reiterated throughout the responses to comments, the EPA conducted its independent assessment of the appropriateness of the ICAO standards for domestic application in the United States and finds it appropriate to adopt domestic PM standards aligned with the international PM standards in this action. The EPA agrees that the United States could adopt standards at a different stringency than ICAO's, even more stringent standards. Under the terms of the Chicago Convention, ICAO member States must recognize as valid certificates of airworthiness issued by other ICAO member States, provided the requirements under which such certificates were issued are as least as

[138] ICAO, 2019: *Independent Expert Integrated Technology Goals Assessment and Review for Engines and Aircraft,* Document 10127. It is found on page 34 of the English Edition of the ICAO Products & Services 2022 Catalog and is copyright protected; Order No. 10127.

[139] ICAO, 2019: *Independent Expert Integrated Technology Goals Assessment and Review for Engines and Aircraft,* Document 10127. It is found on page 34 of the English Edition of the ICAO Products & Services 2022 Catalog and is copyright protected; Order No. 10127.

stringent as the minimum ICAO standards.[140]

The need for direct cooperation between countries gave rise to ICAO, an active regulatory body that sets and revises standards. As described in Section II.B, ICAO's work on the environment focuses primarily on those problems that benefit most from a common and coordinated approach on a worldwide basis, namely aircraft noise and engine emissions. Compliance with ICAO's standards, including its emission standards, is essential to ensure acceptance by other countries as people, aircraft, and cargo move in international commerce. The EPA recognizes nations have authority to vary from ICAO standards, provided they give the required notice. Also, the EPA has not concluded that the unique features of the aviation industry necessitate a policy to never adopt more stringent emission standards compared to ICAO standards. However, adopting more stringent PM standards than ICAO's PM standards, which change the approach to regulating aircraft engine PM emissions, would risk disruption to international cooperation. The EPA considered the timing of the ICAO PM mass and number standards for new type design and in-production engines, which have a January 1, 2023 implementation date. Given the limited time frame and potential implications of the EPA not adopting a standard, the EPA has acted reasonably in this rulemaking by giving significant weight to the value of international harmonization and to the fact that, in the EPA's judgment, international harmonization would promote ongoing cooperation to control global pollution of PM.

Comment summary: Some commenters urged the EPA to withdraw the proposed rule and issue a proposed rule that would assess the full range of feasible stringency options and propose emission standards that reduce aircraft PM emissions.

Response: The EPA is finalizing the PM standards as proposed. However, as explained in Section I.C, the EPA remains committed to analyzing this issue and will continue to work with the United States' international partners to revisit these standards in the future. We do not believe it would be appropriate to withdraw the proposed rule and issue a new proposal for the reasons stated in the preceding paragraphs.

[140] ICAO, 2006: *Convention on International Civil Aviation,* Article 33, Ninth Edition, Document 7300/9.

V. Aggregate PM Inventory Methodology and Impacts

The PM emissions inventory is presented here to provide information on the contribution of aircraft engine emissions to local inventories as context for this regulatory effort. This PM emissions inventory is from the aviation portion of the EPA's 2017 National Emissions Inventory (NEI).[141] [142] [143] The NEI contains comprehensive emissions data for criteria pollutants and hazardous air pollutants for mobile, point, and nonpoint sources covering both natural and anthropogenic contribution to the overall national PM emissions inventory. For this PM rulemaking, we updated the aviation portion of the PM emissions inventory using newly available measured data reported for most in-production engines and an improved approximation method for engines without measurement data, as described in this section.

The inventory is developed from using actual operations at airports. The number of aircraft operations or landings and takeoffs affects PM emissions that contribute to the local air quality near airports. The landing and take-off (LTO) emissions are defined as emissions between ground level and an altitude of about 3,000 feet. These LTO emissions directly affect the ground level air quality at the vicinity of the airport since they are within the local mixing height. They are composed of emissions during departure operations (taxi-out movement from gate to runway, aircraft take-off run and climb-out to 3,000 feet), and during arrival operations (approach at or below 3,000 feet down to landing on the ground and taxi-in from runway to gate). Depending on the meteorological conditions, the emissions will be mixed with ambient air down to ground level, dispersed, and transported to areas downwind from the airport with elevated concentration levels.[144]

[141] 2017 National Emissions Inventory: Aviation Component, Eastern Research Group, Inc., June 25, 2020, EPA Contract No. EP–C–17–011, Work Order No. 2–19.

[142] See section 3.2 for airports and aircraft related emissions in the Technical Supporting Document for the 2017 National Emissions Inventory, January 2021 Updated Release.

[143] U.S. EPA, 2017 National Emissions Inventory (NEI) Data.

[144] A local air quality ''emissions inventory for aircraft focuses on the emission characteristics of this source relative to the vertical column of air that ultimately affects ground level pollutant concentrations. This portion of the atmosphere, which begins at the earth's surface and is simulated in air quality models, is often referred to as the mixing zone'' or mixing height. (page 137.) The air in this mixing height is completely mixed and pollutants emitted anywhere within it will be carried down to ground level. (page 143.) ''The aircraft operations of interest within the [mixing height] are defined as the [LTO] cycle.'' (page 137.) The default mixing height in the U.S. is 3,000 feet. (EPA, 1992: Procedures for Emission Inventory Preparation—Volume IV: Mobile Sources, EPA420–R–92–009.

As described in Section III.A, aircraft PM emissions are composed of both volatile and non-volatile PM (nvPM) components.[145] With a precisely controlled air-fuel mixture, a typical aircraft engine yields combustion products on the order of 27.6 percent water (H_2O), 72 percent CO_2, about 0.02 percent SO_X, and only about 0.4 percent incomplete residual products. These incomplete residual products can be broken down to 84 percent NO_X, 11.8 percent CO, 4 percent unburned hydrocarbons (UHC), 0.1 percent PM, and trace amounts of other products.[146] Although the PM emissions are a small fraction of total engine exhaust, the composition and morphology of PM are complex and dynamic. While the emissions certification test procedures focus only on measuring non-volatile PM (black carbon), our emissions inventory includes estimates for volatile PM (organic, lubrication oil residues and sulfuric acid) as well.

A. Aircraft Engine PM Emissions Modeling Methodologies

This section describes the nvPM approximation method we used in the proposed rulemaking, the use of newly available measured nvPM data, and

[145] ICAO: 2019, ICAO Environmental Report. A copy of this document is available in the docket for this rulemaking under document identification number EPA–HQ–OAR–2019–0660–0022. See pages 100 and 101 for a description of non-volatile PM and volatile PM.

''At the engine exhaust, particulate emissions mainly consist of ultrafine soot or black carbon emissions. Such particles are called 'non-volatile' (nvPM). They are present at the high temperatures at the engine exhaust and they do not change in mass or number as they mix and dilute in the exhaust plume near the aircraft. The geometric mean diameter of these particles is much smaller than $PM_{2.5}$ (geometric mean diameter of 2.5 Microns) and ranges roughly from 15nm to 60nm (0.06 Microns). These are classified as ultrafine particles (UFP).'' (See page 100.) ''The new ICAO standard is a measure to control the ultrafine non-volatile particulate matter emissions emitted at the engine exit[.]'' (See page 101.)

''Additionally, gaseous emissions from engines can also condense to produce new particles (*i.e.,* volatile particulate matter—vPM), or coat the emitted soot particles. Gaseous emissions species react chemically with ambient chemical constituents in the atmosphere to produce the so called secondary particulate matter. Volatile particulate matter is dependent on these gaseous precursor emissions. While these precursors are controlled by gaseous emissions certification and the fuel composition (*e.g.,* sulfur content) for aircraft gas turbine engines, the volatile particulate matter is also dependent on the ambient air background composition.'' (See pages 100 and 101.)

[146] European Monitoring and Evaluation Programme/European Environment Agency, Air Pollutant Emission Inventory Guidebook 2019.

improvement to the nvPM approximation method for the final rulemaking.

1. PM Emission Indices Used in the Rulemaking

Measured PM data were not available when the EPA first developed the 2017 inventory. Thus, to calculate the baseline aircraft engine PM emissions, we used the First Order Approximation Version 3.0 (FOA3) method defined in the Society of Automotive Engineers (SAE) Aerospace Information Report, AIR5715.[147] For nvPM mass, the FOA3 method is based on an empirical correlation of Smoke Number (SN) values and the nvPM mass concentrations of aircraft engines. The nvPM mass concentration (g/m^3) derived from SN can then be converted into an nvPM mass emission index (EI) in gram of nvPM per kg fuel using the method developed by Wayson et al.[148] based on a set of empirically determined Air Fuel Ratios (AFR) and engine volumetric flow rates at the four ICAO LTO thrust settings (see Table IV–1). Subsequently, the nvPM mass EI can be used to calculate the nvPM mass for the four LTO modes with engine fuel flow rate and time-in-mode information. As the name suggests, the FOA3 method is a rough estimate, and it is only for PM mass (not number).

In addition, as described in sections III.A and IV, volatile PM and nvPM together make up total PM. The FOA3 method for volatile PM is based on the jet fuel organics [149] and sulfur content. Since the total PM is the emission inventory we are estimating for this rulemaking, we are including the volatile PM emission estimates from the FOA3 method in our emission inventory.

2. Measured nvPM Emission Indices for Inventory Modeling

The measurement and reporting of engine EIs allows for improved accuracy of engine emission inventories. As mentioned in Section IV.D.2, the regulatory compliance level is based on the amount of particulate that is directly measured by the instruments. The test procedures specify a sampling line that can be up to 35 meters long. This length results in significant particle loss in the measurement system, on the order of 50 percent for nvPM mass and 90 percent for nvPM number.[150] Further the particle loss is size dependent, and thus the losses will be dependent on the engine operating condition (*e.g.,* idle vs take-off thrust), engine combustor design, and technology. To assess the emissions contribution of aircraft engines for inventory and modeling purposes, and subsequently for human health and environmental effects, it is necessary to know the emissions rate at the engine exit. Thus, the measured PM mass and PM number values must be corrected for system losses to determine the engine exit emissions rate.

The EPA led the effort within the SAE E–31 committee to develop the methodology to correct for system losses. The EPA led the development of two SAE standards publications, AIR 6504 [151] and Aerospace Recommended Practice (ARP) 6481,[152] describing this methodology to correct for system losses. Also, the EPA funded and led test campaigns that verified the methodology.[153] ICAO has incorporated this same procedure into Annex 16 Volume II Appendix 8.

The engine exit emissions rate, which is corrected for system losses, is specific to each measurement system and to each engine. The calculation is an iterative function based upon the measured nvPM mass and nvPM number values and the geometry of the measurement system. Manufacturers provide the corrected emissions values to the ICAO EEDB and to the EPA.

When calculating emissions inventories, these corrected EIs are used rather than the values used to show compliance with emission standards as they are more reflective of what is emitted into the atmosphere. These measured EIs are only for the non-volatile component of PM, and an approximation method is still required for quantifying the volatile PM inventory.

3. Improvements to Calculated Emission Indices

As described in Section V.A, an improved approximation method has also been developed since the EPA's 2017 NEI was first published. This new approximation method is needed for modeling PM emissions of in-service engines that do not have measured PM data. The new version of the approximation method, known as FOA4, has been developed by CAEP to improve nvPM mass estimation and to extend the methodology to nvPM number based on the newly available PM measurement data.[154] The simultaneously collected data of nvPM mass concentration and smoke number from test engines help define a better correlation between nvPM mass concentration and smoke number.[155] The FOA4 estimated nvPM mass concentration tracks closely with FOA3's for some smoke numbers, but it is much higher for other smoke numbers. Overall, we found that fleetwide nvPM mass emissions using the new method (FOA4 and measured data when available) increase by 27 percent over the nvPM mass emissions reported in 2017 NEI using the FOA3 method. Note that the data has significant variation at the individual airport level. For the top airports modeled the effect on total PM ranges from a 3 percent decrease to a 14 percent increase relative to the modeling in the proposed rulemaking.

Recognizing that the development of the first order approximation method is not static and continues to evolve, while more accurate measurement data and better understanding of the underlying mechanisms will certainly help to improve the estimate further, FOA4 represents the state of the science today. It has been used to update the nvPM baseline emission rates for this final rule.

The calculation of volatile PM has not changed between FOA3 and FOA4 because no improved data or method has become available to inform improvements.

B. PM Emission Inventory

As discussed in the introductory paragraphs of Section V, the PM

emissions inventory used for this rule is from the aviation portion of the EPA's 2017 National Emissions Inventory (NEI).[156] [157] [158] The NEI is compiled by the EPA triennially based on comprehensive emissions data for criteria pollutants and hazardous air pollutants for mobile, point, and nonpoint sources. The mobile sources in the NEI include aviation, marine, railroad, on-road vehicles, and nonroad engines. As described in Section V.A, the aircraft emission estimates in the EPA's 2017 NEI (or the baseline PM emissions inventory) are based on the FOA3 method instead of the newly developed FOA4 or measured PM emissions data. For the final rulemaking, we have updated the baseline PM emissions inventory based on measured data reported to the EPA or the European Union Aviation Safety Agency (EASA) for most in-production engines and FOA4 for engines without measurement data.

The aviation emissions developed for the NEI include emissions associated with airport activities in commercial aircraft, air taxi aircraft,[159] general aviation aircraft, military aircraft, auxiliary power units, and ground support equipment. All emissions from aircraft with gas turbine engines of rated output greater than 26.7 kN, except military aircraft, are used in the emissions inventory for this final rule (which is only a subset of the aviation emissions inventory in the 2017 NEI). To estimate emissions, 2017 activity data by states were compiled and supplemented with publicly available FAA data. The FAA activity data included 2017 T–100 [160] dataset, 2014 Terminal Area Forecast (TAF) [161] data, 2014 Air Traffic Activity Data System (ATADS) [162] data, and 2014 Airport Master Record (form 5010) [163] data.[164] The NEI used the FAA's Aviation Environmental Design Tool (AEDT) [165] version 2d to estimate emissions for aircraft that were in the AEDT database. The NEI used a more general estimation methodology to account for emissions from aircraft types not available in AEDT by multiplying the reported activities by fleet-wide average emission factors of generic aircraft types (or by aircraft category, such as general aviation or air taxi).[166]

For aircraft PM contribution in 2017 to total mobile PM emissions in counties and MSAs for the top 25 airports (inventories for aircraft with engines >26.7 kN), see Figure III–1 and Figure III–2 in Section III.E.

We respond to comments on the emissions inventory in Section 7 of the Response to Comments document.

C. Projected Reductions in PM Emissions

Due to the technology-following nature of the PM standards, the final in-production and new type design standards will not result in emission reductions below current levels of engine emissions. The in-production standards for both PM mass and PM number, which are set at levels where all in-production engines meet the standards, will not affect any in-production engines as shown in Figure IV–1 and Figure IV–2. Thus, the in-production standards are not expected to produce emission reductions, beyond the business-as-usual fleet turn over that would occur in the absence of the standards. The EPA projects that all future new type design engines will meet the new type design standards. There are a few in-production engines that do not meet the new type design standards, but because in-production engines will not be subject to these new type design standards, engine manufacturers will not be required to make improvements to these engines to meet the standards. Therefore, the EPA also does not anticipate emission reductions from the new type design standards.

Most of the in-production engines that do not meet the new type design standards are older engines that already have replacement engines that will meet the new type design standards. There is only one newer in-production engine (an engine that recently started being manufactured) that does not meet the new type design standards, and it does not currently have a replacement engine. Since the new type design standards will not apply to in-production engines, the manufacturer of this engine could continue producing and selling its one in-production engine that does not meet the new type design standards. Market forces might drive the manufacturer of this in-production engine to make some improvements to meet the new type design standards, or chose to bring forward its next generation new type design engine to the market a few years earlier than currently planned. The manufacturer has announced plans to develop the next generation of engines to improve emission levels compared to the previous generation of engines.[167] [168] We expect that these next generation engines from this manufacturer will meet the new type design standards. Further details on market forces are provided in Section VI.A. In conclusion, when considering the final new type design standards in the context of the in-production engines that already have a replacement engine or the one in-production engine that does not, the EPA expects no emission reductions from the new type design standards.

VI. Technological Feasibility and Economic Impacts

As described in Section IV, we are adopting PM mass concentration, PM mass, and PM number standards that match ICAO's standards. As discussed in Section V.C, for in-production aircraft engines, the 2017 ICAO PM maximum mass concentration standard and the 2020 ICAO PM mass and number

standards are set at emission levels where all in-production engines meet these standards. Thus, there will not be costs or emission reductions associated with the final standards for in-production engines. For new type design engines, the 2020 ICAO PM mass and number standards are set at more stringent emission levels compared to the PM mass and number standards for in-production engines, but nearly all in-production engines meet these new type design standards. In addition, in-production engines will not be required to meet these new type design standards. Only new type design engines will need to comply with the new type design standards. The EPA projects that all new type design engines entering into service into the future will meet these PM mass and number standards. Thus, the EPA expects that there will not be costs and emission reductions from the standards for new type design engines, although the standards would likely prevent backsliding for some new type design engines. In addition, following this final rulemaking for the PM standards, the FAA will issue a rulemaking to enforce compliance to these standards, and any anticipated certification costs for the PM standards will be accounted for in the FAA rulemaking.

As described in Section I.B.2, when developing new emission standards, ICAO/CAEP seeks to capture the technological advances made in the control of emissions through the adoption of anti-backsliding standards reflecting the current state of technology. The final standards that match ICAO's standards are anti-backsliding standards that prevent aircraft engine PM levels from increasing beyond their current levels. As discussed in Section IV.F.2, in that regard, PM mass and number are currently unregulated from aircraft engines and the standards finalized in this action represent a new regulatory backstop of those two new standards. Further, all three PM standards will prevent backsliding by ensuring that all new type design and in-production aircraft engines will not exceed those regulatory levels in the future.

As described in Section IV.F.2, for some manufacturers, new technologies aimed at reducing aircraft engine NO_X, which were implemented for in-production engines that were recently built, also resulted in significant PM reductions. Other manufacturers did not develop or implement technologies that resulted in such PM reductions. In either case, the final PM standards ensure that PM emissions do not increase beyond the levels of these PM standards. In addition, the final PM standards send an important signal to manufacturers that they need to consider PM emissions when producing aircraft engines now and going forward—with the anticipation that more stringent PM standards will be adopted by ICAO/CAEP in the future.

U.S. manufacturers could be at a significant disadvantage if the United States fails to adopt standards by the international implementation date, January 1, 2023. Also, given the short timeframe from this final action and the international implementation date, there would not be enough lead time for manufacturers to respond to more stringent standards that would require them to develop and implement new technologies.

A. Market Considerations

Aircraft and aircraft engines are sold around the world, and international aircraft emission standards help ensure the worldwide acceptability of these products. Aircraft and aircraft engine manufacturers make business decisions and respond to the international market by designing and building products that conform to ICAO's international standards. However, ICAO's standards need to be implemented domestically for products to prove such conformity. Domestic action through the EPA rulemaking and subsequent FAA rulemaking enables U.S. manufacturers to obtain internationally recognized U.S. certification, which for the final PM standards will ensure type certification consistent with the requirements of the international PM emission standards. This is important, as compliance with the international standards (via U.S. type certification) is a critical consideration in aircraft manufacturer and airlines' purchasing decisions. By implementing the requirements in the United States that align with ICAO standards, any question regarding the compliance of aircraft engines certificated in the United States will be removed. The rulemaking will help ensure the acceptance of U.S. aircraft engines by member States, aircraft manufacturers, and airlines around the world. Conversely, without this domestic action, U.S. aircraft engine manufacturers would likely be at a competitive disadvantage compared with their international competitors.

In considering the aviation market, it is important to understand that the international PM emission standards were predicated on demonstrating ICAO's concept of technological feasibility; *i.e.,* that manufacturers have already developed or are developing improved technology that meets the ICAO PM standards, and that the new technology will be integrated in aircraft engines throughout the fleet in the time frame provided before the standards' effective date. Therefore, the EPA projects that these final standards will impose no additional burden on manufacturers.

B. Conceptual Framework for Technology

The long-established ICAO/CAEP terms of reference were taken into account when deciding the international PM standards, principal among these being technical feasibility. For the ICAO PM standard setting, technical feasibility refers to any technology demonstrated to be safe and airworthy proven to Technology Readiness Level [170] (TRL) 8 and available for application over a sufficient range of newly certificated aircraft.[171] This means that the analysis that informed the international standard considered the emissions performance of aircraft engines assumed to be in-production on the ICAO/CAEP implementation date for the PM mass and number standards, January 1, 2023.[172] The analysis included the current in-production fleet and engines scheduled for entry into the fleet by this date. (ICAO/CAEP's analysis was completed in 2018 and considered at the February 2019 ICAO/CAEP meeting.)

C. Technological Feasibility

The EPA and FAA participated in the ICAO analysis that informed the adoption of the international aircraft engine PM emission standards. A summary of that analysis was published in the report of ICAO/CAEP's eleventh meeting (CAEP/11),[173] which occurred in February 2019. However, due to the commercial sensitivity of much of the data used in the ICAO analysis, the publicly available, published version of the ICAO report of the CAEP/11 meeting

[170] TRL is a measure of Technology Readiness Level. CAEP has defined TRL8 as the ''actual system completed and 'flight qualified' through test and demonstration.'' TRL is a scale from 1 to 9, TRL1 is the conceptual principle, and TRL9 is the ''actual system 'flight proven' on operational flight.'' The TRL scale was originally developed by NASA. [173] Id.

only provides limited supporting data for the ICAO analysis. Separately from this ICAO analysis and the CAEP/11 meeting report, information on technology for the control of aircraft engine PM emissions is provided in an Independent Expert Review document on technology goals for engines and aircraft, which was published in 2019.[174] Although this ICAO document is primarily used for setting goals, and is not directly related to ICAO's adoption of the PM emission standards, information from the Independent Expert Review is helpful in understanding the state of aircraft engine technology.

The 2019 ICAO Independent Expert Review document indicates that new technologies aimed at reducing aircraft engine NO_X also resulted in an order of magnitude reduction in non-volatile PM (nvPM) mass and nvPM number in comparison to most in-service engines.[175] (As described in Section IV.D.2, only nvPM emissions will be measured in the final test procedure for the final standards.) Specifically, the current lean-burn engines and some advanced Rich-Quench-Lean (RQL) engines [176] [177] developed for the purpose of achieving low NO_X emissions coincidentally provide order of magnitude reductions in nvPM emissions in comparison to existing RQL engines.[178] However, achieving these levels of nvPM emissions is more difficult for physically smaller-sized engines due to technical constraints.[179] In addition, some previous generation engines that are in production meet the final new type design standards, which match the ICAO standards, with considerable margin. When considering the nvPM emission levels for current in-production engines and those engines expected to be in production by the effective date of the ICAO standard, January 1, 2023, the lean-burn, advanced RQL, and some previous generation technologies (with relatively low levels of nvPM emissions) of many of the engines demonstrate that the final standards, which match ICAO standards, are technologically feasible.

D. Costs Associated With the Rule

The EPA does not anticipate new technology costs (non-recurring costs) due to the final rule. As described in the introductory paragraph of Section VI, since all in-production engines meet the in-production standards and nearly all in-production engines meet these new type design standards, we project there will not be costs, nor emission reductions, from the final rule. Also, because current in-production engines will not be required to make any changes under this final rule, there will not be any adverse impact on noise and safety of these engines. Likewise, the noise and safety of future type designs should not be adversely impacted by compliance with these final new type design standards since all manufacturers currently have engines that meet that level.

Following this final rulemaking for the PM standards, the FAA will issue a rulemaking to enforce compliance to these standards, and any anticipated certification costs for the PM standards will be estimated by FAA.

As described in Section VI.A, manufacturers have already developed or are developing technologies to respond to ICAO standards that are equivalent to the final standards, and they will comply with the ICAO standards in the absence of U.S. regulations. Also, domestic implementation of the ICAO standards will potentially provide for cost savings to U.S. manufacturers since it will enable them to certify their aircraft engine (via subsequent FAA rulemaking) domestically instead of having to certificate with a foreign authority (which will occur without this EPA rulemaking). If the final PM standards, which match the ICAO standards, are not ultimately adopted in the United States, U.S. civil aircraft engine manufacturers will have to certify to the ICAO standards at higher costs because they will have to move their entire certification program(s) to a non-U.S. certification authority.[180] Any potential costs or cost savings related to certification will be estimated by FAA.

For the same reasons there will be no non-recurring and certification costs for the rule, there also will be no recurring costs (recurring operating and maintenance costs) for the rule. The elements of recurring costs include additional maintenance, material, labor, and tooling costs.

As described in Section IV.E, the EPA is formally incorporating the PM aspects of the existing information collection request (ICR) into the CFR (or regulations) in 40 CFR 1031.150 and 1031.160. This action will not create a new requirement for the manufacturers of aircraft engines. Instead, it will simply incorporate the existing reporting requirements into the CFR for ease of use by having all the reporting requirements readily available in the CFR. Thus, this action will not create new costs.

E. Summary of Benefits and Costs

The final standards match the ICAO standards, and as discussed in Section II.C and Section IV.F.1 of this preamble, ICAO intentionally established its standards at a level which is technology following. The final rule takes an appropriate step in controlling aircraft engine PM emissions and prevents backsliding by ensuring that all in-production and new type design engines have at least the PM emission levels of today's aircraft engines. Additionally, this final rule maintains consistency or harmonizes with the international standards and meets the United States' treaty obligations under the Chicago Convention. Also, it allows U.S. manufacturers of covered aircraft engines to remain competitive in the global marketplace by ensuring the acceptance of their engines worldwide (which benefits U.S. manufacturers and consumers), provides uniformity and

[174] ICAO, 2019: *Independent Expert Integrated Technology Goals Assessment and Review for Engines and Aircraft,* Document 10127. It is found on page 34 of the English Edition of the ICAO Products & Services 2022 Catalog and is copyright protected; Order No. 10127.

[175] See id. at 8.

[176] See id. at 47 and 48. For lean-burn engines (or combustors), enough air is introduced with the fuel from the injector so it is never overall rich. For aviation combustors, the fuel is not premixed and pre-vaporized, and in the microscopic region around each droplet, the mixture can be near to stoichiometric. Yet, the mixture remains lean throughout the combustor, and the temperature does not approach the stoichiometric value. For a lean-burn combustor, the peak temperatures are not as high, and thus, the NO_X is low.

[177] See id. at 47. For Rich-Quench-Lean (RQL) engines (or combustors), the fuel first burns rich, and thus, there is little oxygen free to form NO_X. Dilution air is introduced to take the mixture as quickly as possible through the stoichiometric region (when it briefly becomes very hot) to a cooler, lean state.

[178] See id. at 57 and 58. From previous generation rich-burn to lean-burn technology, an order of magnitude improvement in nvPM mass and nvPM number is likely for the LTO cycle. Also, potentially, an order of magnitude improvement in nvPM mass and nvPM number could be achieved for the LTO cycle from previous generation rich-burn to advanced rich-burn combustor technology.

[179] For example, the relatively small combustor space and section height of these engines creates constraints on the use of low NO_X combustor concepts, which inherently require the availability of greater flow path cross-sectional area than conventional combustors. Also, fuel-staged combustors need more fuel injectors, and this need is not compatible with the relatively smaller total fuel flows of lower thrust engines. (Reductions in fuel flow per nozzle are difficult to attain without having clogging problems due to the small sizes of the fuel metering ports.) In addition, lower thrust engine combustors have an inherently greater liner surface-to combustion volume ratio, and this requires increased wall cooling air flow. Thus, less air will be available to obtain acceptable turbine inlet temperature distribution and for emission control. *See* 77 FR 36342, 36353 (June 18, 2012).

[180] In addition, European authorities charge fees to aircraft engine manufacturers for the certification of their engines, but FAA does not charge fees for certification.

certainty to U.S. manufacturers as they become familiar with the new approach to adhering to these PM standards and test procedures,[181] and prevents U.S. manufacturers from having to seek PM emissions certification from an aviation certification authority of another country (not the FAA) to market and operate their aircraft engines internationally. All engines currently manufactured will meet the ICAO in-production standards, and nearly all these same engines will meet the new type design standards—even though these new type design standards do not apply to in-production engines. Therefore, as further described in the introductory paragraph of Section VI and in Section VI.C, there will be no costs and no emission reductions from complying with these final standards.

VII. Technical Amendments

In addition to the PM-related regulatory provisions discussed in Section IV, the EPA is finalizing technical amendments to the regulatory text that apply more broadly than to just the new PM standards. First, the EPA is migrating the existing aircraft engine emissions regulations from 40 CFR part 87 to a new 40 CFR part 1031. Along with this migration, the EPA is restructuring the regulations to allow for better ease of use and allow for more efficient future updates. The EPA is also deleting some regulatory provisions and definitions that are unnecessary, as well as making several other minor technical amendments to the regulations. Finally, the EPA is also revising 40 CFR part 87 to provide continuity during the transition of 40 CFR part 87 to 40 CFR part 1031. In this final rule, the EPA did not reexamine or reopen the substantive provisions of 40 CFR part 87 that were merely migrated to the new 40 CFR part 1031 and streamlined or the substantive provisions of 40 CFR part 1030 and 40 CFR part 1031 beyond those specially discussed in the proposed rule. Any comments we received on the substance of the provisions migrated from 40 CFR part 87 to 40 CFR part 1031 provisions, as opposed to comments pointing out typos or inadvertent impacts on substantive provisions caused by the regulatory streamlining, are beyond the scope of this rulemaking.

A. Migration of Regulatory Text to New Part

In the 1990s, the EPA began an effort to migrate all transportation-related air emissions regulations to new parts, such that all mobile source regulations are contained in a single group of contiguous parts of the CFR. In addition to the migration, that effort has included clarifications to regulations and improvements to the ease of use through plain language updates and restructuring. To date, the aircraft engine emission regulations contained in 40 CFR part 87 are the only mobile source emission regulations which have not undergone this migration and update process.

The current 40 CFR part 87 was initially drafted in the early 1970s and has seen numerous updates and revisions since then. This has led to a set of aircraft engine emission regulations that is difficult to navigate and contains numerous unnecessary provisions. Further, the current structure of the regulations would make the adoption of the PM standards finalized in this document, as well as any future standards the EPA may adopt, difficult to incorporate.

Therefore, the EPA is migrating the existing aircraft engine regulations from 40 CFR part 87 to a new 40 CFR part 1031, directly after the airplane GHG standards contained in 40 CFR part 1030. In the process, the EPA is restructuring, streamlining, and clarifying the regulatory provisions for ease of use and to facilitate more efficient future updates. Finally, the EPA is deleting unnecessary regulatory provisions, which are discussed in detail in the next section. This regulatory migration and restructuring effort is not intended to change any substantive provision of the existing regulatory provisions.

As noted in the amendatory instructions in the regulations, the EPA is making this transition effective on January 1, 2023. The new 40 CFR part 1031 will become effective (*i.e.,* be incorporated into the Code of Federal Regulations) 30 days following the publication of this final rule in the **Federal Register**. However, the applicability language in 40 CFR 1031.1 indicates that the new 40 CFR part 1031 will apply to engines subject to the standards beginning January 1, 2023. Prior to January 1, 2023, the existing 40 CFR part 87 will continue to apply. On January 1, 2023, the existing 40 CFR part 87 will be replaced with a significantly abbreviated version of 40 CFR part 87 whose sole purpose will be to direct readers to the new 40 CFR part 1031. Additionally, a reference in the current 40 CFR part 1030 to 40 CFR part 87 will be updated to reference 40 CFR part 1031 at that time. The purpose of the abbreviated 40 CFR part 87 is to accommodate any references to 40 CFR part 87 that currently exist in the type certification documentation and advisory circulars issued by the FAA, as well as any other references to 40 CFR part 87 that currently exist elsewhere. Since it would be extremely difficult to identify and update all such documents prior to January 1, 2023, the EPA is instead adopting language in 40 CFR part 87 that simply states the provisions relating to a particular section of 40 CFR part 87 apply as described in a corresponding section of the new 40 CFR part 1031.

The EPA received a comment regarding some existing equations being incorrectly migrated from 40 CFR part 87 to the new 40 CFR part 1031. Specifically, the equations in the proposed 40 CFR 1031.40(a)(1), 1031.50(a)(1), and 1031.90(a)(1), (b) and (c) contained terms that should have been exponents but were instead expressed as multiplicative terms. Given that the EPA's stated intent with the proposed migration from 40 CFR part 87 to 40 CFR part 1031 was to move, restructure, streamline and clarify the existing regulations without changing the underlying regulatory requirements, the equations contained in the paragraphs in 40 CFR part 1031 should have aligned with the corresponding equations in 40 CFR part 87. Thus, these equations in 40 CFR part 1031 have been accordingly corrected in this final rule.

B. Deletion of Unnecessary Provisions

As previously mentioned, the existing aircraft engine emission regulations contain some unnecessary provisions which the EPA is deleting. These deletions include transitional exemption provisions that are no longer available, several definitions, and some unnecessary language regarding the Secretary of the Department of Transportation, as detailed in the following paragraphs.

The EPA is not migrating the current 40 CFR 87.23(d)(1) and (3) to the new 40 CFR part 1031. Both these paragraphs contain specific phase-in provisions available for a short period after the Tier 6 NO_X standards began to apply, and their availability as compliance provisions ended on August 31, 2013. Thus, they are no longer needed. It should be noted that while the EPA is effectively deleting these provisions by not migrating them to the new 40 CFR part 1031, the underlying standards referred to in these provisions (*i.e.,* the Tier 4 and 6 NO_X standards) remain unchanged. Thus, the underlying certification basis for any engines

[181] The final standards change the approach to regulating aircraft engine PM emissions from past smoke measurements to the measurement of mass and number for the first time for U.S. manufacturers.

certificated under these provisions will remain intact.

The EPA is also deleting several definitions from the current 40 CFR part 87 as it is migrated to the new 40 CFR part 1031 for two reasons. First, in the effort to streamline and clarify the regulations, some of these definitions have effectively been incorporated directly into the regulatory text where they are used, making a stand-alone definition unnecessary. Second, some of these definitions are simply not needed for any regulatory purpose and are likely artifacts of previous revisions to the regulations (*e.g.,* where a regulatory provision was deleted but the associated definition was not).

The definitions that the EPA is deleting and the reasons for the deletions are listed in Table VII–1.

TABLE VII–1—LIST OF TERMS FOR WHICH DEFINITIONS WILL BE DELETED FROM THE CFR

Term	Reason for deletion
Act	Not used in the regulatory text.
Administrator	No longer needed as not used in revised and streamlined regulatory text.
Class TP	No longer needed as definition was effectively incorporated into regulatory text during migration.
Class TF	No longer needed as definition was effectively incorporated into regulatory text during migration.
Class T3	No longer needed as definition was effectively incorporated into regulatory text during migration.
Class T8	No longer needed as definition was effectively incorporated into regulatory text during migration.
Class TSS	No longer needed as definition was effectively incorporated into regulatory text during migration.
Commercial aircraft	No longer needed as not used in revised and streamlined regulatory text.
Commercial aircraft gas turbine engine	No longer needed as not used in revised and streamlined regulatory text.
Date of introduction	Unnecessary definition that is not used in existing regulatory text and not needed in revised regulatory text.
Engine	For regulatory purposes, definition of engine not needed given existing definitions of Aircraft engine, Engine model, and Engine sub-model.
In-use aircraft gas turbine engine	No longer needed in light of deletion of unnecessary provisions and technical amendments to fuel venting requirements.
Military aircraft	Not needed as regulatory text applies to commercial engines.
Operator	No longer needed as not used in revised and streamlined regulatory text.
Production cutoff or the date of production cutoff	No longer needed with deletion of unnecessary exemption provisions and streamlining of exemption regulatory text.
Tier 0	No longer needed as definition was effectively incorporated into regulatory text during migration.
Tier 2	No longer needed as definition was effectively incorporated into regulatory text during migration.
Tier 4	No longer needed as definition was effectively incorporated into regulatory text during migration.
Tier 6	No longer needed as definition was effectively incorporated into regulatory text during migration.
Tier 8	No longer needed as definition was effectively incorporated into regulatory text during migration.
U.S.-registered aircraft	Unnecessary term that is not used in the regulatory text.

The EPA is also not migrating the current 40 CFR 87.3(b) to the new 40 CFR part 1031, which in effect results in its deletion. This paragraph is simply a restatement of an obligation directly imposed under the Clean Air Act that the Secretary shall issue regulations to assure compliance with the regulations issued under the Act. This is not a regulatory requirement related to the rest of the part, and as such it is not needed in 40 CFR part 1031.

C. Other Technical Amendments and Minor Changes

In addition to the migration of the regulations to a new part and the removal of unnecessary provisions just discussed, the EPA is adopting some minor technical amendments to the regulations.

The EPA is adding definitions for ''Airplane'' and ''Emission index.'' Both these terms are used in the current aircraft engine emissions regulations, but they are currently undefined. The new definitions will help provide clarity to the provisions that utilize those terms.

The EPA is modifying the definitions for ''Exception'' and ''Exemption.'' The current definitions of these terms in 40 CFR 87.1 go beyond simply defining the terms and contain what could more accurately be described as regulatory requirements stating what provisions an excepted or exempted engine must meet. These portions of the definitions, which are more accurately described as regulatory requirements, are being moved to the introductory text in 1031.15 and 1031.20, as applicable. These changes are in no way intended to change any regulatory requirement applicable to excepted or exempted engines. Rather, they are intended simply to more clearly separate definitions from the related regulatory requirements.

The EPA is not migrating the existing 40 CFR 87.42(d) to the new 40 CFR part 1031, which in effect results in the deletion of this provision. This paragraph related to the annual production report regards the identification and treatment of confidential business information (CBI) in manufacturers' annual production reports. The EPA is instead relying on the existing CBI regulations in 40 CFR 1068.10 (as referenced in 40 CFR 1031.170). This change will have no impact on the ability of manufacturers to make claims of CBI, or in the EPA's handling of such claims. However, it will assure a more consistent treatment of CBI across mobile source programs.

The EPA is adopting a minor change to the existing emission requirements

for spare engines, as found in the existing 40 CFR 87.50(c)(2). In the regulatory text for 40 CFR 1031.20(a), the EPA is deleting the existing provision that a spare engine is required to meet standards applicable to Tier 4 or later engines (currently contained in 40 CFR 87.50(c)(2)). The EPA is retaining and migrating to 40 CFR part 1031 the requirement in 40 CFR 87.50(c)(3) such that a spare engine will need to be certificated to emission standards equal to or lower than those of the engines they are replacing, for all regulated pollutants. This deletion of 40 CFR 87.50(c)(2) aligns with ICAO's current guidance on the emissions of spare engines and is consistent with U.S. efforts to secure the highest practicable degree of uniformity in aviation regulations and standards. The EPA does not believe this change will have any impact on current industry practices. Deleting the provision currently in 40 CFR 87.50(c)(2) will leave in place the requirement that any new engine manufactured as a spare will need to be at least as clean as the engine it is replacing (as stated in the current 40 CFR 87.50(c)(3)), but with no requirement that it meet standards applicable to Tier 4 or later engines. Thus, under this deletion a new spare engine could, in theory, be manufactured that only met pre-Tier 4 standards. The Tier 4 standards became effective in 2004, so the deletion will only impact spare engines manufactured to replace engines manufactured roughly before 2004. It is extremely unlikely that a manufacturer would build a new engine as a replacement for such an old design as it would be very disruptive to the manufacturing of current designs for new aircraft. Rather, it is common practice that spares for use in replacing older engines would not be newly manufactured engines of an old design, but engines that have been taken from similar aircraft that have been retired. The EPA does not believe that any engines would be manufactured to pre-Tier 4 designs for use as spare engines given current practices. Thus, the EPA does not believe that this effective deletion of 40 CFR 87.50(c)(2) for the purposes of uniformity will have any practical impact on current industry practices.

The EPA is aligning the applicability of smoke number standards for engines used in supersonic airplanes with ICAO's applicability. The EPA adopted emission standards for engines used on supersonic airplanes in 2012.[182] Those standards were equivalent to ICAO's existing standards with one exception. ICAO's emission standards fully apply to all engines to be used on supersonic airplanes, regardless of rated output. In an apparent oversight, the EPA only applied the smoke number standards to engines of greater than or equal to 26.7 kN rated output in that 2012 action. Thus, the EPA is applying smoke number standards to include engines below 26.7 kN rated output for use on supersonic airplanes which are equivalent to ICAO's provisions. This change is consistent with U.S. efforts to secure the highest practicable degree of uniformity in aviation regulations and standards and will have no practical impact on engine manufacturers. The EPA is currently unaware of any engines in production which could be used on supersonic airplanes, and those being developed for application to future supersonic airplanes are expected to be well above 26.7 kN rated output, and thus, they will be covered by the existing smoke number standard. Throughout its regulations, the EPA is aligning with ICAO regarding a common rated output threshold for emission regulations. The applicability and stringency of several aircraft engine emission standards can be different depending on whether an engine's rated output is above or below 26.7 kN. In the ICAO regulations, the threshold is consistently stated as either greater than, or less than or equal to 26.7 kN. In the current 40 CFR part 87, the equal to portion of the threshold is applied inconsistently. In some cases, it is expressed as less than, and greater than or equal to. In other cases, it is expressed as greater than, and less than or equal to. The EPA is making all instances in the new 40 CFR part 1031 consistent with ICAO, *i.e.,* greater than, and less than or equal to. As there are no current engines with a rated output of exactly at 26.7 kN, this change will have no practical impact. However, it is consistent with U.S. efforts to secure the highest practicable degree of uniformity in aviation regulations and standards.

The EPA is incorporating by reference Appendix 1 of ICAO Annex 16, Volume II. This appendix deals with the determination of a test engine's reference pressure ratio, and its exclusion from the U.S. regulations was an oversight. Other Annex 16, Volume II appendices which contain test procedures, fuel specifications, and other compliance-related provisions have been incorporated by reference into the U.S. regulations for many years, and it is important to correct this oversight so the complete testing and compliance provisions are clear.

The EPA is streamlining, restructuring, and updating the exemption provisions currently in 40 CFR 87.50. First, this section contains provisions regarding exemptions, exceptions, and annual reporting provisions relating to exempted and excepted engines. The EPA is migrating the exceptions section concerning spare engines (40 CFR 87.50(c)) to 40 CFR 1031.20(a), with the changes discussed in the preceding paragraphs. The provisions regarding the annual reporting of exempted and excepted engines are being incorporated into the new annual reporting 40 CFR 1031.150. These reporting provisions otherwise remain unchanged. Section 87.50(a), regarding engines installed on new aircraft, and 40 CFR 87.50(b), regarding temporary exemptions based on flights for short durations at infrequent intervals, are being migrated to a new 40 CFR 1031.15. The temporary exemptions provisions remain unchanged, with the exception of adding ''of Transportation'' after ''Secretary'' in 40 CFR 1031.15(b)(4) to improve clarity. The changes to the exemptions for engines installed on new aircraft are a bit more extensive, as discussed in the next paragraph.

In 2012, the EPA adopted new exemption provisions specifically to provide flexibility during the transition to Tier 6 and Tier 8 NO_X standards.[183] These provisions were only available through December 31, 2016, and they are being deleted in this action. However, during the adoption of those transitional flexibilities, the EPA inadvertently replaced the existing exemption provisions with the new transitional provisions rather than appending the transitional provisions to the existing ones. This left 40 CFR 87.50 with no general exemption language, only those provisions specific to the newly adopted NO_X standards. Given that the transitional NO_X exemption provisions have expired and are now obsolete, the EPA is deleting them rather than migrating them to the new 40 CFR 1031.15. The EPA is further restoring the general exemption provisions that were inadvertently removed in 2012. In a recent action which established GHG standards for airplanes, the EPA adopted much more streamlined exemption provisions for airplanes in consultation with the FAA.[184] The EPA is adopting similarly streamlined general exemption provisions for aircraft engines as well, as contained in 40 CFR 1031.15(a).

The EPA is adopting some changes relative to the prohibition on fuel venting. The fuel venting standard is

[182] 77 FR 36342 (June 18, 2012).

[183] 77 FR 36342 (June 18, 2012).

[184] 86 FR 2136 (January 11, 2021).

intended to prevent the discharge of fuel to the atmosphere following engine shutdown, as explicitly stated in 40 CFR 87.11(a). The existing definition for fuel venting emissions in 40 CFR 87.1 defines fuel venting emissions as fuel discharge during all normal ground and flight operations. As the standard section itself limits the applicability only to venting that occurs following engine shutdown, consistent with ICAO's fuel venting provisions, the EPA is deleting the definition for fuel venting emissions as both unnecessary and contradictory to the actual requirement.

The EPA is adding the word 'liquid' in front of the phrase ''fuel emissions'' in 40 CFR 1031.30(b)(2). That phrase has been interpreted internationally in significantly different ways. Some have interpreted the word ''emissions'' to mean any emission of pollutants from the combustion process. The EPA's rule that promulgated the requirement to control fuel venting emissions, however, dates to 1973 and was intended to address the issue of liquid fuel being released from an aircraft engine after engine shutdown when no combustion processes are occurring.[185] This term addresses both liquid fuel that reaches the ground, and liquid fuel released from the engine after shutdown that comes into contact with hot engine parts and begins to vaporize or evaporate into the atmosphere rather than combust. In the latter situation, fuel venting emissions may be observed visually and may look like an engine is smoking. To reduce confusion, the EPA is adding the word ''liquid'' to this description. Nothing about the intent of the fuel venting rule is changed by this addition. The change is intended only to better describe the phenomenon of fuel venting emissions and will harmonize U.S. regulations with the term as used in ICAO Annex 16 Volume II.

The EPA is modifying the applicability date language associated with the standards applicable to Tier 8 engines, as contained in 1031.60(e)(2). The applicability of new type design standards has traditionally been linked to the date of the first individual production engine of a given type, both for the EPA regulations and ICAO regulations. This approach has been somewhat cumbersome in the past because a manufacturer would have to estimate what standards would be in effect when actual production of a new type design began to determine to what standards a new type design engine would be subject. Given that the engine type certification process can take up to three years, this approach has proven problematic during periods of transition from one standard to another. To address this concern, ICAO agreed at the CAEP/11 meeting in 2019 to transition from the date of manufacture of the first production engine to the date of application for a type certificate to determine standards applicability for new type designs. The EPA was actively involved in the deliberations that led to this agreement and supported the transition from date of first individual production model to date of application to establish the certification basis for type certification in the future. This approach is reflected in the applicability date provisions of the PM standards being adopted in this action, consistent with ICAO. The EPA is also adopting it in 40 CFR 1031.60(e)(5) for existing standards applicable to Tier 8 engines as well. This change will only impact engines for which an application for an original or amended type certificate is submitted to the FAA in or after January 1, 2023. This change will have no impact on manufacturers as the existing standards applicable to Tier 8 engines have been in place since 2014, and there are no new gaseous or smoke number standards set to take effect for such engines. Thus, this change in applicability will not result in a change in standards for any engines, and it is solely intended to improve consistency with ICAO and to structure the regulations such that the adoption of any future standards using this applicability date approach will be straightforward.

The EPA is revising the definition of ''date of manufacture'' by replacing ''competent authority'' with ''recognized airworthiness authority'' in two places. The term ''competent'' has no specific meaning in the context of either the EPA's or the FAA's regulations. However, the FAA does verify compliance of engines certificated outside the United States, as indicated through existing bilateral agreements with such authorities. Also, the EPA is updating its definition of ''supersonic'' by replacing it with a new definition of ''supersonic airplane.'' The new definition for ''supersonic airplane'' is based on a revised definition for such proposed by the FAA in a recent proposed action regarding noise regulations for supersonic airplanes.[186] This new definition will provide greater assurance that the standards applicable to engines used on supersonic airplanes will apply to the engines for which they are intended.

The EPA is updating several definitions and aligning them with definitions included in the recent airplane GHG regulations.[187] The definitions being updated are for ''Aircraft,'' ''Aircraft engine,'' ''Airplane,'' ''Exempt,'' and ''Subsonic.'' These definitions are being updated in the aircraft engine regulations simply for consistency with the airplane GHG regulations and with FAA regulations. The changes being adopted will not have any impact on the regulatory requirements related to the definitions.

The EPA is also addressing an unintentional applicability gap related to the EPA's airplane GHG standards that could potentially exclude some airplanes from being subject to the standards. The intention of the international standards was to cover all jet airplanes with a maximum takeoff mass (MTOM) greater than 5,700 kg. At ICAO it was agreed that airplanes with an MTOM less than 60,000 kg and with 19 seats or fewer could have extra time to comply with the standards (incorporated at 40 CFR 1030.1(a)(2)). With that in mind, 40 CFR 1030.1(a)(1) was written to cover airplanes with 20 or more seats and an MTOM greater than 5,700 kg. However, this means that airplanes with 19 seats or fewer and an MTOM greater than 60,000 kg are not covered by the current regulations but would be covered by the ICAO CO_2 standard. While the EPA is not aware of any airplanes in this size range, the intent of the EPA's GHG rule was to cover all jet airplanes with MTOM greater than 5,700 kg. The EPA is adopting new language at 40 CFR 1030.1(a)(1)(ii) to cover these airplanes, should they be produced. This change will expand the current applicability of the GHG standards on the date this final rulemaking goes into effect. However, airplanes in this size category were considered in ICAO's GHG standard-setting process and had been intended to be subject to the EPA's GHG standards as well. The structure of 40 CFR 1030.1(a)(1) being finalized is somewhat different than the structure that was proposed to conform to numbering conventions used by the Office of the Federal Register. This renumbering does not change the meaning or requirements from the language that was proposed.

The EPA is correcting the effective date of new type design GHG standards for turboprop airplanes (with a maximum takeoff mass greater than 8,618 kg), which is currently specified in 40 CFR 1030.1(a)(3)(ii) as January 1, 2020. The EPA did not intend to

[185] See 38 FR 19088 (July 17, 1973).

[186] Noise Certification of Supersonic Airplanes, 85 FR 20431 (April 13, 2020).

[187] 86 FR 2136 (January 11, 2021).

retroactively apply these standards using the ICAO new type design start date for these airplanes. Rather, this effective date should have been January 11, 2021, to be consistent with the effective date of new type design standards for other categories of airplanes in this part (*e.g.,* 40 CFR 1030.1(a)(1)). Based on consultations with the FAA, this change to 40 CFR part 1030 will not impact any airplanes.

The EPA is adopting a minor word change to the existing applicability language in 40 CFR part 1030 to make it consistent with the current applicability language in the EPA's airplane engine regulations as well as FAA regulations. Specifically, the current language in 40 CFR 1030.1(c)(7) refers to airplanes powered with piston engines. The EPA is replacing the word ''piston'' with ''reciprocating'' in 40 CFR 1030.1(c)(7) to align it with the existing 40 CFR 87.3(a)(1), the language in 40 CFR 1031.1(b)(1), and existing FAA regulations in 14 CFR parts 1 and 33. This change is for consistency among Federal regulations and to avoid any confusion that may be caused by using two different terms. This change will have no material impact on the meaning of the regulatory text.

Following consultation with FAA, the EPA is finalizing some clarifying changes to the proposed provisions related to derivative engines for emissions certification purposes. None of these edits change the fundamental regulatory provisions at hand, but rather serve to clarify the requirements and improve consistency between EPA and FAA regulations. Thus, these changes will have no effect on obligations of regulated parties or on implementing these regulations. In 40 CFR 87.48, the EPA inserted ''for emissions certification purposes'' to properly direct the reader to the correct section of the new 40 CFR part 1031. Most of these changes are in 40 CFR 1031.130(a), and include replacing ''type certificate holder'' with ''applicant'' to better reflect who would request a designation as a derivative engine for emissions certification purposes (this change was also made to 40 CFR 1031.130(c)), a change from ''the FAA may approve'' to ''a type certificate holder may request'' to better reflect the actual process, the inclusion of the phrase ''derived from'' which was in both 14 CFR 34.48 and 40 CFR 87.48, but was inadvertently left out of this paragraph in the proposed migration of the regulatory text, inclusion of the word ''type'' to clarify the design that is being referred to, and the replacement of ''previously certificated (original) engine for purposes of compliance with exhaust emission standards'' with ''an engine that has a type certificate issued in accordance with 14 CFR part 33'' to more precisely indicate that these provisions apply to engines previously certificated under the FAA's engine certification regulations. The EPA is also clarifying 40 CFR 1031.130(c)(2) by adding ''for individual certification applications'' and ''beyond those,'' and clarifying that the FAA should make determinations on using ranges beyond those specified in the regulation consistent with good engineering judgement rather than following consultation with the EPA. Finally, the EPA is revising the proposed definition for ''derivative engine for emissions certification purposes'' in 40 CFR 1031.205 by replacing a description of the requirements of 40 CFR 1031.130 with an actual reference to 40 CFR 1031.130, and other editorial changes to make it consistent with the changes to 40 CFR 1031.130 discussed in this paragraph.

The EPA is making a correction to the proposed regulatory text of 40 CFR 87.50. In the NPRM, an incorrect reference was included to 40 CFR 1031.11. The correct reference is 40 CFR 1031.20. The text of 40 CFR 87.50 has been updated accordingly.

Finally, the EPA is finalizing minor changes to the proposed regulatory text in 40 CFR 1031.140(f)(1) and (f)(2)(i). As stated in the preamble to the proposed rule, the existing smoke standards and the proposed PM mass concentration standard are all based on the maximum value measured at any thrust level across and engine's entire operating thrust range.[188] While it is clear from this preamble language that these standards refer to the maximum value measured at any thrust level across an engine's operating thrust range, and not just at one of the four LTO points, the regulatory text referenced in this paragraph is perhaps less clear on this point. Thus, the EPA is finalizing slight modifications to the regulatory text in these sections to further clarify the regulatory requirement. Specifically, the EPA is adding ''across the engine operating thrust range'' to the end of 40 CFR 1031.140(f)(1) and is replacing the phrase ''at any thrust setting'' with ''across the engine operating thrust range'' in 40 CFR 1031.140(f)(2)(i). Also in 40 CFR 1031.140, the EPA is adding ''percent of'' to 40 CFR 1031.140(f)(2)(ii) and (f)(3) to provide additional clarity without changing the underlying meaning of the regulatory text.

VIII. Statutory Authority and Executive Orders Reviews

Additional information about these statutes and Executive orders can be found at *https://www.epa.gov/laws-regulations/laws-and-executive-orders.*

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

This final action is not a significant regulatory action and was therefore not submitted to the Office of Management and Budget (OMB) for review.

B. Paperwork Reduction Act (PRA)

This action does not impose any new information collection burden under the PRA. OMB has previously approved the information collection activities contained in the existing regulations and has assigned OMB control number 2060–0680. This rule codifies that existing collection by including the current nvPM data collection in the regulatory text, but it will not add any new reporting requirements.

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA. Among the potentially affected entities (manufacturers of aircraft engines) there is only one small entity, and that aircraft engine manufacturer does not make engines in the category subject to the new provisions contained in this document (*i.e.,* engines greater than 26.7 kN rated output). Therefore, this action will not impose any requirements on small entities. Supporting information can be found in the docket.[189]

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain any unfunded mandate as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. The action imposes no enforceable duty on any State, local, or Tribal governments or the private sector.

[188] As stated in the proposal to this rule: ''Like the existing smoke standard, the proposed PM mass concentration standard would be based on the maximum value at any thrust setting. The engine(s) would be tested over a sufficient range of thrust settings that the maximum can be determined. This maximum could be at any thrust setting and is not limited to the LTO thrust points.'' 87 FR 6343 (February 3, 2022).

[189] U.S. EPA, Mueller, J. Memorandum to Docket ID No. EPA–HQ–OAR–2019–0660, ''Determination of no SISNOSE for Final Aircraft Engine Emission Standards,'' August 19, 2022. This memorandum describes that the only small entity is Williams Int'l, which only make engines below 26.7 kN, and does not make engines for use in civil supersonic airplanes. Thus, they are not subject to the final standards.

E. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have Tribal implications as specified in Executive Order 13175. This action regulates the manufacturers of aircraft engines and will not have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. Thus, Executive Order 13175 does not apply to this action.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

This action is not subject to Executive Order 13045 because it is not economically significant as defined in Executive Order 12866. The EPA believes that the environmental health risks or safety risks of particulate matter, which is addressed by this action, may have a disproportionate effect on children. The 2021 Policy on Children's Health also applies to this action. This action's health and risk assessments are contained in Section III. Children make up a substantial fraction of the U.S. population, and often have unique factors that contribute to their increased risk of experiencing a health effect from exposures to ambient air pollutants because of their continuous growth and development. Children are more susceptible than adults to many air pollutants because they have (1) a developing respiratory system, (2) increased ventilation rates relative to body mass compared with adults, (3) an increased proportion of oral breathing, particularly in boys, relative to adults, and (4) behaviors that increase chances for exposure.

H. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution or Use

This action is not subject to Executive Order 13211, because it is not a significant regulatory action under Executive Order 12866.

I. National Technology Transfer and Advancement Act (NTTAA) and 1 CFR Part 51

This action involves technical standards for testing emissions from aircraft gas turbine engines. The EPA is adopting test procedures contained in ICAO's Annex 16 to the Convention on International Civil Aviation, Environmental Protection, Volume II—Aircraft Engine Emissions, Fourth Edition, July 2017, along with the modifications contained in this rulemaking as described in Section IV. These procedures are currently used by all manufacturers of aircraft gas turbine engines to demonstrate compliance with ICAO emission standards.

In accordance with the requirements of 1 CFR 51.5, we are incorporating by reference the use of test procedures contained in ICAO's International Standards and Recommended Practices Environmental Protection, Annex 16, Volume II, along with the modifications contained in this rulemaking. This includes the following standards and test methods:

Standard or Test Method	Regulation	Summary
ICAO 2017, *Aircraft Engine Emissions,* Annex 16, Volume II, Fourth Edition, July 2017, as amended by Amendment 10, January 1, 2021.	40 CFR 1031.140(a) and 1031.205	Test method describes how to measure PM, gaseous, and smoke emissions from aircraft engines.

The version of the ICAO Annex 16, Volume II, that is being incorporated into the new 40 CFR part 1031 is the same version that is currently incorporated by reference in 40 CFR 87.1, 40 CFR 87.42(c), and 40 CFR 87.60(a) and (b). This final rule removes those references to ICAO Annex 16, Volume II.

The referenced standards and test methods may be obtained through the International Civil Aviation Organization, Document Sales Unit, 999 University Street, Montreal, Quebec, Canada H3C 5H7, (514) 954–8022, *www.icao.int,* or *sales@icao.int.*

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

Executive Order 12898 (59 FR 7629, February 16, 1994) directs Federal agencies, to the greatest extent practicable and permitted by law, to make environmental justice part of their mission by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects of their programs, policies, and activities on minority populations (people of color and/or Indigenous peoples) and low-income populations.

The EPA believes that the human health or environmental conditions that exist prior to this action result in or have the potential to result in disproportionate and adverse human health or environmental effects on people of color, low-income populations and/or Indigenous peoples. The EPA provides a summary of the evidence for potentially disproportionate and adverse effects among people of color and low-income populations residing near airports in Section III.G.

The EPA believes that this action is not likely to change existing disproportionate and adverse effects on people of color, low-income populations and/or Indigenous peoples, as specified in Executive Order 12898. The information supporting this Executive Order review is contained in Section III.G, and all supporting documents have been placed in the public docket for this action.

This action will not achieve emission reductions and will therefore result in no improvement in per-aircraft emissions for all communities living near airports. The EPA describes in Section III.G the existing literature reporting on disparities in potential exposure to aircraft emissions for people of color and low-income populations. The EPA, in an analysis separate from this rulemaking, is conducting an analysis of the communities residing near airports where jet aircraft operate to more fully understand disproportionately high and adverse human health or environmental effects on people of color, low-income populations, and/or Indigenous peoples, as specified in Executive Order 12898. The results of this analysis could help inform additional policies to reduce pollution in communities living in close proximity to airports.

The EPA additionally engaged with Environment Justice organizations in several ways for this rulemaking, including: (1) contacting members of Environmental Justice organizations to provide information on pre-registration for the public hearings for the proposed rule; (2) contacting members of Environmental Justice organizations when the proposed rule was published in the **Federal Register** to provide an overview of the proposed action and to explain methods for commenting on the proposal; this outreach included sessions during evening hours; (3) providing information on our website in both Spanish and English, as well as providing access to Spanish translation during the public hearings for the rule, if requested.

K. Congressional Review Act

This action is subject to the CRA, and the EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

List of Subjects

40 CFR Part 9

Reporting and recordkeeping requirements.

40 CFR Part 87

Environmental protection, Aircraft, Air pollution control.

40 CFR Part 1030

Environmental protection, Aircraft, Air pollution control, Greenhouse gases.

40 CFR Part 1031

Environmental protection, Aircraft, Air pollution control, Incorporation by reference.

Michael S. Regan,

Administrator.

For the reasons set forth in the preamble, the EPA is amending title 40, chapter I of the Code of Federal Regulations as set forth below.

PART 9—OMB APPROVALS UNDER THE PAPERWORK REDUCTION ACT

■ 1. The authority citation for part 9 continues to read as follows:

Authority: 7 U.S.C. 135 *et seq.,* 136–136y; 15 U.S.C. 2001, 2003, 2005, 2006, 2601–2671; 21 U.S.C. 331j, 346a, 31 U.S.C. 9701; 33 U.S.C. 1251 *et seq.,* 1311, 1313d, 1314, 1318, 1321, 1326, 1330, 1342, 1344, 1345 (d) and (e), 1361; E.O. 11735, 38 FR 21243, 3 CFR, 1971–1975 Comp. p. 973; 42 U.S.C. 241, 242b, 243, 246, 300f, 300g, 300g–1, 300g–2, 300g–3, 300g–4, 300g–5, 300g–6, 300j–1, 300j–2, 300j-3, 300j–4, 300j–9, 1857 *et seq.,* 6901–6992k, 7401–7671q, 7542, 9601–9657, 11023, 11048.

■ 2. Amend § 9.1 in the table by adding the undesignated center heading entitled ''Control of Air Pollution From Aircraft Engines'' and entries for sections ''1031.150'' and ''1031.160'' in numerical order to read as follows:

§ 9.1 OMB approvals under the Paperwork Reduction Act.

* * * * *

40 CFR citation	OMB control No.
* * * * * * *	
Control of Air Pollution From Aircraft Engines	
1031.150	2060–0680
1031.160	2060–0680
* * * * *	

■ 3. Revise part 87 to read as follows:

PART 87—CONTROL OF AIR POLLUTION FROM AIRCRAFT AND AIRCRAFT ENGINES

Sec.
87.1 Definitions.
87.2 Abbreviations.
87.3 General applicability and requirements.
87.10 Applicability—fuel venting.
87.11 Standard for fuel venting emissions.
87.20 Applicability—exhaust emissions.
87.21 Exhaust emission standards for Tier 4 and earlier engines.
87.23 Exhaust emission standards for Tier 6 and Tier 8 engines.
87.31 Exhaust emission standards for in-use engines.
87.48 Derivative engines for emissions certification purposes.
87.50 Exemptions and exceptions.
87.60 Testing engines.

Authority: 42 U.S.C. 7401 *et seq.*

§ 87.1 Definitions.

Definitions apply as described in 40 CFR 1031.205.

§ 87.2 Abbreviations.

Abbreviations apply as described in 40 CFR 1031.200.

§ 87.3 General applicability and requirements.

Provisions related to the general applicability and requirements of aircraft engine standards apply as described in 40 CFR 1031.1.

§ 87.10 Applicability—fuel venting.

Fuel venting standards apply to certain aircraft engines as described in 40 CFR 1031.30(b).

§ 87.11 Standard for fuel venting emissions.

Fuel venting standard apply as described in 40 CFR 1031.30(b).

§ 87.20 Applicability—exhaust emissions.

Exhaust emission standards apply to certain aircraft engines as described in 40 CFR 1031.40 through 1031.90.

§ 87.21 Exhaust emission standards for Tier 4 and earlier engines.

Exhaust emission standards apply to new aircraft engines as described in 40 CFR 1031.40 through 1031.90.

§ 87.23 Exhaust emission standards for Tier 6 and Tier 8 engines.

Exhaust emission standards apply to new aircraft engines as follows:

(a) New turboprop aircraft engine standards apply as described in 40 CFR 1031.40.

(b) New supersonic engine standards apply as described in 40 CFR 1031.90.

(c) New subsonic turbofan or turbojet aircraft engine standards apply as follows:

(1) Standards for engines with rated output at or below 26.7 kN thrust apply as described in 40 CFR 1031.50.

(2) Standards for engines with rated output above 26.7 kN thrust apply as described in 40 CFR 1031.60.

(d) NOX standards apply based on the schedule for new type and in-production aircraft engines as described in 40 CFR 1031.60.

§ 87.31 Exhaust emission standards for in-use engines.

Exhaust emission standards apply to in-use aircraft engines as described in 40 CFR 1031.60.

§ 87.48 Derivative engines for emissions certification purposes.

Provisions related to derivative engines for emissions certification purposes apply as described in 40 CFR 1031.130.

§ 87.50 Exemptions and exceptions.

Provisions related to exceptions apply as described in 40 CFR 1031.20. Provisions related to exemptions apply as described in 40 CFR 1031.10.

§ 87.60 Testing engines.

Test procedures for measuring gaseous emissions and smoke number apply as described in 40 CFR 1031.140.

PART 1030—CONTROL OF GREENHOUSE GAS EMISSIONS FROM ENGINES INSTALLED ON AIRPLANES

■ 4. The authority citation for part 1030 continues to read as follows:

Authority: 42 U.S.C. 7401–7671q.

■ 5. Amend § 1030.1 by revising paragraphs (a) introductory text, (a)(1), (a)(3)(ii), and (c)(7) to read as follows:

§ 1030.1 Applicability.

(a) Except as provided in paragraph (c) of this section, when an aircraft engine subject to 40 CFR part 1031 is installed on an airplane that is described in this section and subject to 14 CFR chapter I, the airplane may not exceed the Greenhouse Gas (GHG) standards of this part when original civil certification under 14 CFR chapter I is sought.

(1) A subsonic jet airplane that has —

(i) Either—

(A) A type-certificated maximum passenger seating capacity of 20 seats or more,

(B) A maximum takeoff mass (MTOM) greater than 5,700 kg, and

(C) An application for original type certification that is submitted on or after January 11, 2021;

(ii) Or—

(A) A type-certificated maximum passenger seating capacity of 19 seats or fewer,

(B) A MTOM greater than 60,000 kg, and

(C) An application for original type certification that is submitted on or after December 23, 2022.

* * * * *

(3) * * *

(ii) An application for original type certification that is submitted on or after January 11, 2021.

* * * * *

(c) * * *

(7) Airplanes powered by reciprocating engines.

■ 6. Add part 1031 to read as follows:

PART 1031—CONTROL OF AIR POLLUTION FROM AIRCRAFT ENGINES

Subpart A—Scope and Applicability

Sec.

1031.1 Applicability.
1031.5 Engines installed on domestic and foreign aircraft.
1031.10 State standards and controls.
1031.15 Exemptions.
1031.20 Exceptions.

Subpart B—Emission Standards and Measurement Procedures

1031.30 Overview of emission standards and general requirements.
1031.40 Turboprop engines.
1031.50 Subsonic turbojet and turbofan engines at or below 26.7 kN thrust.
1031.60 Subsonic turbojet and turbofan engines above 26.7 kN thrust.
1031.90 Supersonic engines.
1031.130 Derivative engines for emissions certification purposes.
1031.140 Test procedures.

Subpart C—Reporting and Recordkeeping

1031.150 Production reports.
1031.160 Recordkeeping.
1031.170 Confidential business information.

Subpart D—Reference Information

1031.200 Abbreviations.
1031.205 Definitions.
1031.210 Incorporation by reference.

Authority: 42 U.S.C. 7401–7671q.

Subpart A—Scope and Applicability

§ 1031.1 Applicability.

This part applies to aircraft gas turbine engines on and after January 1, 2023. Emission standards apply as described in subpart B of this part.

(a) Except as provided in paragraph (b) of this section, the regulations of this part apply to aircraft engines subject to 14 CFR part 33.

(b) The requirements of this part do not apply to the following aircraft engines:

(1) Reciprocating engines (including engines used in ultralight aircraft).

(2) Turboshaft engines such as those used in helicopters.

(3) Engines used only in aircraft that are not airplanes.

(4) Engines not used for propulsion.

§ 1031.5 Engines installed on domestic and foreign aircraft.

The Secretary of Transportation shall apply these regulations to aircraft of foreign registry in a manner consistent with obligations assumed by the United States in any treaty, convention or agreement between the United States and any foreign country or foreign countries.

§ 1031.10 State standards and controls.

No State or political subdivision of a State may adopt or attempt to enforce any aircraft or aircraft engine standard with respect to emissions unless the standard is identical to a standard that applies to aircraft or aircraft engines under this part.

§ 1031.15 Exemptions.

Individual engines may be exempted from current standards as described in this section. Exempted engines must conform to regulatory conditions specified for an exemption in this part and other applicable regulations. Exempted engines are deemed to be ''subject to'' the standards of this part even though they are not required to comply with the otherwise applicable requirements. Engines exempted with respect to certain standards must comply with other standards as a condition of the exemption.

(a) Engines installed in new aircraft. Each person seeking relief from compliance with this part at the time of certification must submit an application for exemption to the FAA in accordance with the regulations of 14 CFR parts 11 and 34. The FAA will consult with the EPA on each exemption application request before the FAA takes action. Exemption requests under this paragraph (a) are effective only with FAA approval and EPA's written concurrence.

(b) Temporary exemptions based on flights for short durations at infrequent intervals. The emission standards of this part do not apply to engines that power aircraft operated in the United States for short durations at infrequent intervals. Exemption requests under this paragraph (b) are effective with FAA approval. Such operations are limited to:

(1) Flights of an aircraft for the purpose of export to a foreign country, including any flights essential to demonstrate the integrity of an aircraft prior to its flight to a point outside the United States.

(2) Flights to a base where repairs, alterations or maintenance are to be performed, or to a point of storage, and flights for the purpose of returning an aircraft to service.

(3) Official visits by representatives of foreign governments.

(4) Other flights the Secretary of Transportation determines to be for short durations at infrequent intervals. A request for such a determination shall be made before the flight takes place.

§ 1031.20 Exceptions.

Individual engines may be excepted from current standards as described in this section. Excepted engines must conform to regulatory conditions specified for an exception in this part and other applicable regulations. Excepted engines are deemed to be ''subject to'' the standards of this part even though they are not required to comply with the otherwise applicable requirements. Engines excepted with respect to certain standards must comply with other standards from which they are not excepted.

(a) *Spare engines.* Newly manufactured engines meeting the definition of ''spare engine'' are automatically excepted as follows:

(1) This exception allows production of a newly manufactured engine for installation on an in-use aircraft. It does not allow for installation of a spare engine on a new aircraft.

(2) Spare engines excepted under this paragraph (a) may be used only if they are certificated to emission standards equal to or lower than those of the

engines they are replacing, for all regulated pollutants.

(3) Engine manufacturers do not need to request approval to produce spare engines, but must include information about spare engine production in the annual report specified in § 1031.150(d).

(4) The permanent record for each engine excepted under this paragraph (a) must indicate that the engine was manufactured as an excepted spare engine.

(5) Engines excepted under this paragraph (a) must be labeled with the following statement: ''EXCEPTED SPARE''.

(b) [Reserved]

Subpart B—Emission Standards and Measurement Procedures

§ 1031.30 Overview of emission standards and general requirements.

(a) *Overview of standards.* Standards apply to different types and sizes of aircraft engines as described in §§ 1031.40 through 1031.90. All new engines and some in-use engines are subject to smoke standards (either based on smoke number or nvPM mass concentration). Some new engines are also subject to standards for gaseous emissions (HC, CO, and NO_X) and nvPM (mass and number).

(1) Where there are multiple tiers of standards for a given pollutant, the named tier generally corresponds to the meeting of the International Civil Aviation Organization's (ICAO's) Committee on Aviation Environmental Protection (CAEP) at which the standards were agreed to internationally. Other standards are named Tier 0, Tier 1, or have names that describe the standards.

(2) Where a standard is specified by a formula, determine the level of the standard as follows:

(i) For smoke number standards, calculate and round the standard to the nearest 0.1 smoke number.

(ii) For maximum nvPM mass concentration standards, calculate and round the standard to the nearest 1 μg/m^3.

(iii) For LTO nvPM mass standards, calculate and round the standard to three significant figures.

(iv) For LTO nvPM number standards calculate and round the standard to three significant figures.

(v) For gaseous emission standards, calculate and round the standard to three significant figures, or to the nearest 0.1 g/kN for turbojet and turbofan standards at or above 100 g/kN.

(3) Perform tests using the procedures specified in § 1031.140 to measure emissions for comparing to the standard. Engines comply with an applicable standard if test results show that the engine type certificate family's characteristic level does not exceed the numerical level of that standard.

(4) Engines that are covered by the same type certificate and are determined to be derivative engines for emissions certification purposes under the requirements of § 1031.130 are subject to the emission standards of the previously certified engine. Otherwise, the engine is subject to the emission standards that apply to a new engine type.

(b) *Fuel venting.* (1) The fuel venting standard in paragraph (b)(2) of this section applies to new subsonic and supersonic aircraft engines subject to this part. This fuel venting standard also applies to the following in-use engines:

(i) Turbojet and turbofan engines with rated output at or above 36 kN thrust manufactured after February 1, 1974.

(ii) Turbojet and turbofan engines with rated output below 36 kN thrust manufactured after January 1, 1975.

(iii) Turboprop engines manufactured after January 1, 1975.

(2) Engines may not discharge liquid fuel emissions into the atmosphere. This standard is directed at eliminating intentional discharge of liquid fuel drained from fuel nozzle manifolds after engines are shut down and does not apply to normal fuel seepage from shaft seals, joints, and fittings. Certification for the fuel venting standard will be based on an inspection of the method designed to eliminate these emissions.

§ 1031.40 Turboprop engines.

The following standards apply to turboprop engines with rated output at or above 1,000 kW:

(a) *Smoke.* Engines of a type or model for which the date of manufacture of the individual engine is on or after January 1, 1984, may not have a characteristic level for smoke number exceeding the following value:

$SN = 187 \cdot rO^{-0.168}$

(b) [Reserved]

§ 1031.50 Subsonic turbojet and turbofan engines at or below 26.7 kN thrust.

The following standards apply to new turbofan or turbojet aircraft engines with rated output at or below 26.7 kN thrust that are installed in subsonic aircraft:

(a) *Smoke.* Engines of a type or model for which the date of manufacture of the individual engine is on or after August 9, 1985 may not have a characteristic level for smoke number exceeding the lesser of 50 or the following value:

$SN = 83.6 \cdot rO^{-0.274}$

(b) [Reserved]

§ 1031.60 Subsonic turbojet and turbofan engines above 26.7 kN thrust.

The following standards apply to new turbofan or turbojet aircraft engines with rated output above 26.7 kN thrust that are installed in subsonic aircraft:

(a) *Smoke.* (1) *Tier 0.* Except as specified in (a)(2) of this section, engines of a type or model with rated output at or above 129 kN, and for which the date of manufacture of the individual engine after January 1, 1976 and is before January 1, 1984 may not have a characteristic level for smoke number exceeding the following emission standard:

$SN = 83.6 \cdot rO^{-0.274}$

(2) *JT8D and JT3D engines.* (i) Engines of the type JT8D for which the date of manufacture of the individual engine is on or after February 1, 1974, and before January 1, 1984 may not have a characteristic level for smoke number exceeding an emission standard of 30.

(ii) Engines of the type JT3D for which the date of manufacture of the individual engine is on or after January 1, 1978 and before January 1, 1984 may not have a characteristic level for smoke number exceeding an emission standard of 25.

(3) *Tier 0 in-use.* Except for engines of the type JT8D and JT3D, in-use engines with rated output at or above 129 kN thrust may not exceed the following smoke number standard:

$SN = 83.6 \cdot rO^{-0.274}$

(4) *JT8D in-use.* In-use aircraft engines of the type JT8D may not exceed a smoke number standard of 30.

(5) *Tier 1.* Engines of a type or model for which the date of manufacture of the individual engine is on or after January 1, 1984 and before January 1, 2023 may not have a characteristic level for smoke number exceeding an emission standard that is the lesser of 50 or the following:

$SN = 83.6 \cdot rO^{-0.274}$

(6) *Tier 10.* Engines of a type or model for which the date of manufacture of the individual engine is on or after January 1, 2023 may not have a characteristic level for the maximum nvPM mass concentration in μg/m^3 exceeding the following emission standard:

$nvPM_{MC} = 10^{(3 + 2.9 \cdot rO \cdot 0.274)}$

(b) *LTO nvPM mass and number.* An engine's characteristic level for nvPM mass and nvPM number may not exceed emission standards as follows:

(1) *Tier 11 new type.* The following emission standards apply to engines of a type or model for which an application for original type certification is submitted on or after January 1, 2023 and for engines covered by an earlier type certificate if they do

not qualify as derivative engines for emission purposes as described in § 1031.130:

TABLE 1 TO § 1031.60(b)(1)—TIER 11 NEW TYPE nvPM STANDARDS

Rated output (rO) in kN	$nvPM_{mass}$ in milligrams/kN	$nvPM_{num}$ in particles/kN
$26.7 < rO \leq 150$	$1251.1 - 6.914 \cdot rO$	$1.490 \cdot 10^{16} - 8.080 \cdot 10^{13} \cdot rO$
$rO > 150$	214.0	$2.780 \cdot 10^{15}$

(2) *Tier 11 in-production.* The following emission standards apply to engines of a type or model for which the date of manufacture of the individual engine is on or after January 1, 2023:

TABLE 2 TO § 1031.60(b)(2)—TIER 11 IN-PRODUCTION nvPM STANDARDS

Rated output (rO) in kN	$nvPM_{mass}$ in milligrams/kN	$nvPM_{num}$ in particles/kN
$26.7 < rO \leq 200$	$4646.9 - 21.497 \cdot rO$	$2.669 \cdot 10^{16} - 1.126 \cdot 10^{14} \cdot rO$
$rO > 200$	347.5	$4.170 \cdot 10^{15}$

(c) *HC.* Engines of a type or model for which the date of manufacture of the individual engine is on or after January 1, 1984, may not have a characteristic level for HC exceeding an emission standard of 19.6 g/kN.

(d) *CO.* Engines of a type or model for which the date of manufacture of the individual engine is on or after July 7, 1997, may not have a characteristic level for CO exceeding an emission standard of 118 g/kN.

(e) *NO_X.* An engine's characteristic level for NO_X may not exceed emission standards as follows:

(1) *Tier 0.* The following NO_X emission standards apply to engines of a type or model for which the date of manufacture of the first individual production model was on or before December 31, 1995, and for which the date of manufacture of the individual engine was on or after December 31, 1999, and before December 31, 2003:

$NO_X = 40+2 \cdot rPR$ g/kN

(2) *Tier 2.* The following NO_X emission standards apply to engines of a type or model for which the date of manufacture of the first individual production model was after December 31, 1995, or for which the date of manufacture of the individual engine was on or after December 31, 1999, and before December 31, 2003:

$NO_X = 32+1.6 \cdot rPR$ g/kN

(3) *Tier 4 new type.* The following NO_X emission standards apply to engines of a type or model for which the date of manufacture of the first individual production model was after December 31, 2003, and before July 18, 2012:

TABLE 3 TO § 1031.60(e)(3)—TIER 4 NEW TYPE NO_X STANDARDS

If the rated pressure ratio (rPR) is—	and the rated output (kN) is—	the NO_X emission standard (g/kN) is—
(i) $rPR \leq 30$	(A) $26.7 < rO \leq 89$	$37.572 + 1.6 \cdot rPR - 0.2087 \cdot rO$
	(B) $rO > 89$	$19 + 1.6 \cdot rPR$
(ii) $30 < rPR < 62.5$	(A) $26.7 < rO \leq 89$	$42.71 + 1.4286 \cdot rPR - 0.4013 \cdot rO + 0.00642 \cdot rPR \cdot rO$
	(B) $rO > 89$	$7 + 2 \cdot rPR$
(iii) $rPR \geq 82.6$	All	$32 + 1.6 \cdot rPR$

(4) *Tier 6 in-production.* The following NO_X emission standards apply to engines of a type or model for which the date of manufacture of the individual engine is on or after July 18, 2012:

TABLE 4 TO § 1031.60(e)(4)—TIER 6 IN-PRODUCTION NO_X STANDARDS

If the rated pressure ratio (rPR) is—	and the rated output (kN) is—	the NO_X emission standard (g/kN) is—
(i) $rPR \leq 30$	(A) $26.7 < rO \leq 89$	$38.5486 + 1.6823 \cdot rPR - 0.2453 \cdot rO - 0.00308 \cdot rPR \cdot rO$
	(B) $rO > 89$	$16.72 + 1.4080 \cdot rPR$
(ii) $30 < rPR < 82.6$	(A) $26.7 < rO \leq 89$	$46.1600 + 1.4286 \cdot rPR - 0.5303 \cdot rO + 0.00642 \cdot rPR \cdot rO$
	(B) $rO > 89$	$-1.04 + 2.0 \cdot rPR$
(iii) $rPR \geq 82.6$	All	$32 + 1.6 \cdot rPR$

(5) *Tier 8 new type.* The following NO_X standards apply to engines of a type or model for which the date of manufacture of the first individual production model was on or after January 1, 2014; or for which an application for original type certification is submitted on or after January 1, 2023; or for engines covered

by an earlier type certificate if they do not qualify as derivative engines for emission purposes as described in § 1031.130:

TABLE 5 TO § 1031.60(e)(5)—TIER 8 NEW TYPE NO_X STANDARDS

If the rated pressure ratio (rPR) is—	and the rated output (kN) is—	the NO_X emission standard (g/kN) is—
(i) rPR ≤ 30	(A) 26.7 < rO ≤ 89	40.052 + 1.5681·rPR − 0.3615·rO − 0.0018·rPR·rO
	(B) rO > 89	7.88 + 1.4080·rPR
(ii) 30 < rPR < 104.7	(A) 26.7 < rO ≤ 89	41.9435 + 1.505·rPR − 0.5823·rO + 0.005562·rPR·rO
	(B) rO > 89	−9.88 + 2.0·rPR
(iii) rPR ≥ 104.7	All	32 + 1.6·rPR

§ 1031.90 Supersonic engines.

The following standards apply to new engines installed in supersonic airplanes:

(a) *Smoke.* Engines of a type or model for which the date of manufacture was on or after January 1, 1984, may not have a characteristic level for smoke number exceeding an emission standard that is the lesser of 50 or the following:

$SN = 83.6 \cdot rO^{-0.274}$

(b) [Reserved]

(c) *HC.* Engines of a type or model for which the date of manufacture was on or after January 1, 1984, may not have a characteristic level for HC exceeding the following emission standard in g/kN rated output:

$HC = 140 \cdot 0.92^{rPR}$

(d) *CO.* Engines of a type or model for which the date of manufacture was on or after July 18, 2012, may not have a characteristic level for CO exceeding the following emission standard in g/kN rated output:

$CO = 4550 \cdot rPR^{-1.03}$

(e) *NO_X* Engines of a type or model for which the date of manufacture was on or after July 18, 2012, may not have a characteristic level for NO_X engines exceeding the following emission standard in g/kN rated output:

$NO_X = 36 + 2.42 \cdot rPR$

§ 1031.130 Derivative engines for emissions certification purposes.

(a) *Overview.* For purposes of compliance with exhaust emission standards of this part, a type certificate applicant may request from the FAA a determination that an engine configuration be considered a derivative engine for emissions certification purposes. The applicant must demonstrate that the configuration is derived from and similar in type design to an engine that has a type certificate issued in accordance with 14 CFR part 33, and at least one of the following circumstances applies:

(1) The FAA determines that a safety issue requires an engine modification.

(2) All regulated emissions from the proposed derivative engine are lower than the corresponding emissions from the previously certificated engine.

(3) The FAA determines that the proposed derivative engine's emissions are similar to the previously certificated engine's emissions as described in paragraph (c) of this section.

(b) *Determining emission rates.* To determine new emission rates for a derivative engine for demonstrating compliance with emission standards under § 1031.30(a)(4) and for showing emissions similarity in paragraph (c) of this section, testing may not be required in all situations. If the previously certificated engine model or any associated sub-models have a characteristic level before modification that is at or above 95% of any applicable standard for smoke number, HC, CO, or NO_X or at or above 80% of any applicable nvPM standard, you must test the proposed derivative engine. Otherwise, you may use engineering analysis to determine the new emission rates, consistent with good engineering judgment. The engineering analysis must address all modifications from the previously certificated engine, including those approved for previous derivative engines.

(c) *Emissions similarity.* (1) A proposed derivative engine's emissions are similar to the previously certificated engine's emissions if the type certificate applicant demonstrates that the engine meets the applicable emission standards and differ from the previously certificated engine's emissions only within the following ranges:

(i) ±3.0 g/kN for NO_X.

(ii) ±1.0 g/kN for HC.

(iii) ±5.0 g/kN for CO.

(iv) ±2.0 SN for smoke number.

(v) The following values apply for $nvPM_{MC}$:

(A) ±200 μg/m^3 if the characteristic level of maximum $nvPM_{MC}$ is below 1,000 μg/m^3.

(B) ±20% of the characteristic level if the characteristic level for maximum $nvPM_{MC}$ is at or above 1,000 μg/m^3.

(vi) The following values apply for $nvPM_{mass}$:

(A) 80 mg/kN if the characteristic level for $nvPM_{mass}$ emissions is below 400 mg/kN.

(B) ±20% of the characteristic level if the characteristic level for $nvPM_{mass}$ emissions is greater than or equal to 400 mg/kN.

(vii) The following values apply for $nvPM_{num}$:

(A) 4×10^{14} particles/kN if the characteristic level for $nvPM_{num}$ emissions is below 2×10^{15} particles/kN.

(B) ±20% of the characteristic level if the characteristic level for $nvPM_{num}$ emissions is greater than or equal to 2×10^{15} particles/kN.

(2) In unusual circumstances, the FAA may, for individual certification applications, adjust the ranges beyond those specified in paragraph (c)(1) of this section to evaluate a proposed derivative engine, consistent with good engineering judgment.

§ 1031.140 Test procedures.

(a) *Overview.* Measure emissions using the equipment, procedures, and test fuel specified in Appendices 1 through 8 of ICAO Annex 16 (incorporated by reference, see § 1031.210) as described in this section (referenced in this section as ''ICAO Appendix #''). For turboprop engines, use the procedures specified in ICAO Annex 16 for turbofan engines, consistent with good engineering judgment.

(b) *Test fuel specifications.* Use a test fuel meeting the specifications described in ICAO Appendix 4. The test fuel must not have additives whose purpose is to suppress smoke, such as organometallic compounds.

(c) *Test conditions.* Prepare test engines by including accessories that are available with production engines if they can reasonably be expected to influence emissions.

(1) The test engine may not extract shaft power or bleed service air to provide power to auxiliary gearbox-

mounted components required to drive aircraft systems.

(2) Test engines must reach a steady operating temperature before the start of emission measurements.

(d) *Alternate procedures.* In consultation with the EPA, the FAA may approve alternate procedures for measuring emissions. This might include testing and sampling methods, analytical techniques, and equipment specifications that differ from those specified in this part. An applicant for type certification may request this approval by sending a written request with supporting justification to the FAA and to the Designated EPA Program Officer. Such a request may be approved only in the following circumstances:

(1) The engine cannot be tested using the specified procedures.

(2) The alternate procedure is shown to be equivalent to or better (*e.g.,* more accurate or precise) than the specified procedure.

(e) *LTO cycles.* The following landing and take-off (LTO) cycles apply for emission testing and calculating weighted LTO values:

TABLE 1 TO § 1031.140(e)—LTO TEST CYCLES

Mode	Subsonic				Supersonic	
	Turboprop		Turbojet and turbofan		Percent of rO	Time in mode (minutes)
	Percent of rO	Time in mode (minutes)	Percent of rO	Time in mode (minutes)		
Take-off	100	0.5	100	0.7	100	1.2
Climb	90	2.5	85	2.2	65	2.0
Descent	NA	NA	NA	NA	15	1.2
Approach	30	4.5	30	4.0	34	2.3
Taxi/ground idle	7	26.0	7	26.0	5.8	26.0

(f) *Pollutant-specific test provisions.* Use the following provisions to demonstrate whether engines meet the applicable standards:

(1) *Smoke number.* Use the equipment and procedures specified in ICAO Appendix 2 and ICAO Appendix 6. Test the engine at sufficient thrust settings to determine and compute the maximum smoke number across the engine operating thrust range.

(2) *nvPM.* Use the equipment and procedures specified in ICAO Appendix 7 and ICAO Appendix 6, as applicable:

(i) *Maximum nvPM mass concentration.* Test the engine at sufficient thrust settings to determine and compute the maximum nvPM mass concentration produced by the engine across the engine operating thrust range, according to the procedures of ICAO Appendix 7.

(ii) *LTO nvPM mass and number.* Test the engine at sufficient thrust settings to determine the engine's nvPM mass and nvPM number at the percent of rated output identified in table 1 to paragraph (e) of this section.

(3) *HC, CO, and NO_X.* Use the equipment and procedures specified in ICAO Appendix 3, ICAO Appendix 5, and ICAO Appendix 6, as applicable. Test the engine at sufficient thrust settings to determine the engine's HC, CO, and NO_X emissions at the percent of rated output identified in table 1 to paragraph (e) of this section.

(4) *CO_2.* Calculate CO_2 emission values from fuel mass flow rate measurements in ICAO Appendix 3 and ICAO Appendix 5 or, alternatively, according to the CO_2 measurement criteria in ICAO Appendix 3 and ICAO Appendix 5.

(g) *Characteristic level.* The compliance demonstration consists of establishing a mean value from testing some number of engines, then calculating a ''characteristic level'' by applying a set of statistical factors in ICAO Appendix 6 that take into account the number of engines tested. Round each characteristic level to the same number of decimal places as the corresponding standard. Engines comply with an applicable standard if the testing results show that the engine type certificate family's characteristic level does not exceed the numerical level of that standard.

(h) *System loss corrected nvPM emission indices.* Use the equipment and procedures specified in ICAO Appendix 8, as applicable, to determine system loss corrected nvPM emission indices.

Subpart C—Reporting and Recordkeeping

§ 1031.150 Production reports.

Engine manufacturers must submit an annual production report for each calendar year in which they produce any engines subject to emission standards under this part.

(a) The report is due by February 28 of the following calendar year. Include emission data in the report as described in paragraph (c) of this section. If you produce exempted or excepted engines, submit a single report with information on exempted/excepted and normally certificated engines.

(b) Send the report to the Designated EPA Program Officer.

(c) In the report, specify your corporate name and the year for which you are reporting. Include information as described in this section for each engine sub-model subject to emission standards under this part. List each engine sub-model manufactured or certificated during the calendar year, including the following information for each sub-model:

(1) The type of engine (turbofan, turboprop, etc.) and complete sub-model name, including any applicable model name, sub-model identifier, and engine type certificate family identifier.

(2) The certificate under which it was manufactured. Identify all the following:

(i) The type certificate number. Specify if the sub-model also has a type certificate issued by a certificating authority other than FAA.

(ii) Your corporate name as listed in the certificate.

(iii) Emission standards to which the engine is certificated.

(iv) Date of issue of type certificate (month and year).

(v) Whether or not this is a derivative engine for emissions certification purposes. If so, identify the previously certificated engine model.

(vi) The engine sub-model that received the original type certificate for an engine type certificate family.

(3) Identify the combustor of the sub-model, where more than one type of combustor is available.

(4) The calendar-year production volume of engines from the sub-model that are covered by an FAA type certificate. Record zero for sub-models with no engines manufactured during the calendar year, or state that the

engine model is no longer in production and list the date of manufacture (month and year) of the last engine manufactured. Specify the number of these engines that are intended for use on new aircraft and the number that are intended for use as non-exempt engines on in-use aircraft. For engines delivered without a final sub-model status and for which the manufacturer has not ascertained the engine's sub-model when installed before submitting its production report, the manufacturer may do any of the following in its initial report, and amend it later:

(i) List the sub-model that was shipped or the most probable sub-model.

(ii) List all potential sub-models.

(iii) State ''Unknown Sub-Model.''

(5) The number of engines tested and the number of test runs for the applicable type certificate.

(6) Test data and related information required to certify the engine sub-model for all the standards that apply. Round reported values to the same number of decimal places as the standard. Include the following information, as applicable:

(i) The engine's rated pressure ratio and rated output.

(ii) The following values for each mode of the LTO test cycle:

(A) Fuel mass flow rate.

(B) Smoke number.

(C) nvPM mass concentration.

(D) mass of CO_2

(E) Emission Indices for HC, CO, NO_X, and CO_2.

(F) The following values related to nvPM mass and nvPM number:

(*1*) Emission Indices as measured.

(*2*) System loss correction factor.

(*3*) Emissions Indices after correcting for system losses.

(iii) Weighted total values calculated from the tested LTO cycle modes for HC, CO, NO_X, CO_2, and nvPM mass and nvPM number. Include nvPM mass and nvPM number values with and without system loss correction.

(iv) The characteristic level for HC, CO, NO_X, smoke number, nvPM mass concentration, nvPM mass, and nvPM number.

(v) The following maximum values:

(A) Smoke number.

(B) nvPM mass concentration.

(C) nvPM mass Emission Index with and without system loss correction.

(D) nvPM number Emission Index with and without system loss correction.

(d) Identify the number of exempted or excepted engines with a date of manufacture during the calendar year, along with the engine model and sub-model names of each engine, the type of exemption or exception, and the use of each engine (for example, spare or new installation). For purposes of this paragraph (d), treat spare engine exceptions separate from other new engine exemptions.

(e) Include the following signed statement and endorsement by an authorized representative of your company: ''We submit this report under 40 CFR 1031.150. All the information in this report is true and accurate to the best of my knowledge.''

(f) Where information provided for the previous annual report remains valid and complete, you may report your production volumes and state that there are no changes, without resubmitting the other information specified in this section.

§ 1031.160 Recordkeeping.

(a) You must keep a copy of any reports or other information you submit to us for at least three years.

(b) Store these records in any format and on any media, as long as you can promptly send us organized, written records in English if we ask for them. You must keep these records readily available. We may review them at any time.

§ 1031.170 Confidential business information.

The provisions of 40 CFR 1068.10 apply for information you consider confidential.

Subpart D—Reference Information

§ 1031.200 Abbreviations.

This part uses the following abbreviations:

TABLE 1 TO § 1031.200—ABBREVIATIONS

°	Degree
%	Percent
CO	carbon monoxide
CO_2	carbon dioxide
EI	emission index
G	Gram
HC	hydrocarbon(s)
Kg	Kilogram
kN	Kilonewton
kW	Kilowatt
LTO	landing and takeoff
M	Meter
Mg	Milligram
µg	Microgram
NO_X	oxides of nitrogen
Num	Number
nvPM	non-volatile particulate matter
$nvPM_{mass}$	non-volatile particulate matter mass
$nvPM_{num}$	non-volatile particulate matter number
$nvPM_{MC}$	non-volatile particulate matter mass concentration
rO	rated output
rPR	rated pressure ratio
SN	smoke number

§ 1031.205 Definitions.

The following definitions apply to this part. Any terms not defined in this section have the meaning given in the Clean Air Act (42 U.S.C. 7401–7671q). The definitions follow:

Aircraft has the meaning given in 14 CFR 1.1, a device that is used or intended to be used for flight in the air.

Aircraft engine means a propulsion engine that is installed on or that is manufactured for installation on an airplane for which certification under 14 CFR chapter I is sought.

Aircraft gas turbine engine means a turboprop, turbojet, or turbofan aircraft engine.

Airplane has the meaning given in 14 CFR 1.1, an engine-driven fixed-wing aircraft heavier than air, that is supported in flight by the dynamic reaction of the air against its wings.

Characteristic level has the meaning given in Appendix 6 of ICAO Annex 16 (incorporated by reference, *see* § 1031.210). The characteristic level is a calculated emission level for each pollutant based on a statistical assessment of measured emissions from multiple tests.

Date of manufacture means the date on which a manufacturer is issued documentation by FAA (or other recognized airworthiness authority for engines certificated outside the United States) attesting that the given engine conforms to all applicable requirements. This date may not be earlier than the date on which engine assembly is complete. Where the manufacturer does not obtain such documentation from FAA (or other recognized airworthiness authority for engines certificated outside the United States), date of manufacture means the date of final engine assembly.

Derivative engine for emissions certification purposes means an engine that is derived from and similar in type design to an engine that has a type certificate issued in accordance with 14 CFR part 33, and complies with the requirements of § 1031.130.

Designated EPA Program Officer means the Director of the Assessment and Standards Division, 2000 Traverwood Drive, Ann Arbor, Michigan 48105.

Emission index means the quantity of pollutant emitted per unit of fuel mass used.

Engine model means an engine manufacturer's designation for an engine grouping of engines and/or

engine sub-models within a single engine type certificate family, where such engines have similar design, including being similar with respect to the core engine and combustor designs.

Engine sub-model means a designation for a grouping of engines with essentially identical design, especially with respect to the core engine and combustor designs and other emission-related features. Engines from an engine sub-model must be contained within a single engine model. For purposes of this part, an original engine model configuration is considered a sub-model. For example, if a manufacturer initially produces an engine model designated ABC and later introduces a new sub-model ABC–1, the engine model consists of two sub-models: ABC and ABC–1.

Engine type certificate family means a group of engines (comprising one or more engine models, including sub-models and derivative engines for emissions certification purposes of those engine models) determined by FAA to have a sufficiently common design to be grouped together under a type certificate.

EPA means the U.S. Environmental Protection Agency.

Except means to routinely allow engines to be manufactured and sold that do not meet (or do not fully meet) otherwise applicable standards. Note that this definition applies only with respect to § 1031.20 and that the term ''except'' has its plain meaning in other contexts.

Exempt means to allow, through a formal case-by-case process, an engine to be certificated and sold that does not meet the applicable standards of this part.

Exhaust emissions means substances emitted to the atmosphere from exhaust discharge nozzles, as measured by the test procedures specified in § 1031.140.

FAA means the U.S. Department of Transportation, Federal Aviation Administration.

Good engineering judgment involves making decisions consistent with generally accepted scientific and engineering principles and all relevant information, subject to the provisions of 40 CFR 1068.5.

ICAO Annex 16 means Volume II of Annex 16 to the Convention on International Civil Aviation (*see* § 1031.210 for availability).

New means relating to an aircraft or aircraft engine that has never been placed into service.

Non-volatile particulate matter (nvPM) means emitted particles that exist at a gas turbine engine exhaust nozzle exit plane that do not volatilize when heated to a temperature of 350 °C.

Rated output (rO) means the maximum power or thrust available for takeoff at standard day conditions as approved for the engine by FAA, including reheat contribution where applicable, but excluding any contribution due to water injection. Rated output is expressed in kilowatts for turboprop engines and in kilonewtons for turbojet and turbofan engines to at least three significant figures.

Rated pressure ratio (rPR) means the ratio between the combustor inlet pressure and the engine inlet pressure achieved by an engine operating at rated output, expressed to at least three significant figures.

Round has the meaning given in 40 CFR 1065.1001.

Smoke means the matter in exhaust emissions that obscures the transmission of light, as measured by the test procedures specified in § 1031.140.

Smoke number means a dimensionless value quantifying smoke emissions as calculated according to ICAO Annex 16.

Spare engine means an engine installed (or intended to be installed) on an in-use aircraft to replace an existing engine. See § 1031.20.

Standard day conditions means the following ambient conditions: temperature = 15 °C, specific humidity = 0.00634 kg H2O/kg dry air, and pressure = 101.325 kPa.

Subsonic means relating to an aircraft that has not been certificated under 14 CFR chapter I to exceed Mach 1 in normal operation.

Supersonic airplane means an airplane for which the maximum operating limit speed exceeds a Mach number of 1.

System losses means the loss of particles during transport through a sampling or measurement system component or due to instrument performance. Sampling and measurement system loss is due to various deposition mechanisms, some of which are particle-size dependent. Determining an engine's actual emission rate depends on correcting for system losses in the nvPM measurement.

Turbofan engine means a gas turbine engine designed to create its propulsion from exhaust gases and from air that bypasses the combustion process and is accelerated in a ducted space between the inner (core) engine case and the outer engine fan casing.

Turbojet engine means a gas turbine engine that is designed to create its propulsion entirely from exhaust gases.

Turboprop engine means a gas turbine engine that is designed to create most of its propulsion from a propeller driven by a turbine, usually through a gearbox.

Turboshaft engine means a gas turbine engine that is designed to drive a rotor transmission system or a gas turbine engine not used for propulsion.

We (us, our) means the EPA Administrator and any authorized representatives.

§ 1031.210 Incorporation by reference.

Certain material is incorporated by reference into this part with the approval of the Director of the Federal Register under 5 U.S.C. 552(a) and 1 CFR part 51. To enforce any edition other than that specified in this section, the EPA must publish a document in the **Federal Register** and the material must be available to the public. All approved material is available for inspection at EPA and at the National Archives and Records Administration (NARA). Contact EPA at: U.S. EPA, Air and Radiation Docket Center, WJC West Building, Room 3334, 1301 Constitution Ave. NW, Washington, DC 20004; *www.epa.gov/dockets;* (202) 202–1744. For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations.html* or email *fr.inspection@nara.gov.* The material may be obtained from International Civil Aviation Organization, Document Sales Unit, 999 University Street, Montreal, Quebec, Canada H3C 5H7; (514) 954–8022; *sales@icao.int; www.icao.int.*

(a) Annex 16 to the Convention on International Civil Aviation, Environmental Protection, Volume II—Aircraft Engine Emissions, Fourth Edition, July 2017 (including Amendment No. 10, applicable January 1, 2021); IBR approved for §§ 1031.140; 1031.205.

LIST OF PUBLIC LAWS

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion in today's **List of Public Laws**.

Last List October 20, 2022

Public Laws Electronic Notification Service (PENS)

PENS is a free email notification service of newly enacted public laws. To subscribe, go to *https://portalguard.gsa.gov/__*layouts/PG/register.aspx.

Note: This service is strictly for email notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
